- Perform technical evaluations and document the source selection findings on received requests for proposals, requests for information, or requests for quotations.
- Prepare and execute contract award kick-off meetings and integrated baseline reviews.
- Update US-VISIT program management execution plans (configuration management, schedule management, risk management, and document management) to strengthen execution activities across the US-VISIT program.
- Prepare for, and participate in, an acquisition review board with DHS Acquisition and Program Management Division.
- Perform SEI-led incremental appraisals of organizational level-2 maturity against the acquisition model and addressing weaknesses in the assessment findings.
- Establish the US-VISIT QM Strategy and QA Plan and continue to conduct quality audits on critical US-VISIT products and processes.
- Update the “Biometric Standards Requirements for US-VISIT” document to include new and emerging biometric technologies, capabilities, and services affecting interoperability.
- Procure and oversee program IV&V activities and incorporate findings into quality and PIP.
- Implement an instance of the SMS, developed by DHS Science and Technology Directorate, and continue workforce alignment efforts to increase Federal staff.
- Optimize business support function staffing efforts to achieve 85 percent or better on-board-to-vacancy ratio.
- Achieve the goal of 75 percent of all new supervisors participating in required supervisory leadership training within 12 months of entry on duty (per the Office of Personnel Management (OPM) Code of Federal Regulations Chapter 5, Section 412).
- Achieve the goal of 85 percent of identified positions to complete information sharing environment core awareness training as defined in the Secretary’s memorandum of May 12, 2010.
- Develop a career-laddering communication initiative and enhance the career development program and the success management process, which includes cascading goals and new competencies.

- Continue IV&V review of cost, schedule, and technical baselines for leadership priorities, important project initiatives, and progress with identified problem areas.
- Implement the enhanced Requirements Development and Management Process (RDMP) and evaluate the effectiveness of the improved process.
- Develop the business service architecture to include the service description, workflow, and associated functional requirements for the core set of business services.
- Identify performance measures and metrics for collecting and reporting on business initiation through requirements development phases.
- Achieve a score of “green”, the highest security rating from OMB based on criteria provided in FISMA.

FY 2012 Projected Accomplishments – Business Support Services

In FY 2012, US-VISIT projects to accomplish the following:

- Enhance processes for providing senior leadership with near real-time access to program status information.
- Align portfolio management of US-VISIT investments to ensure compliance with the program-level acquisition program baseline to maintain compliance with DHS acquisition policies.
- Develop and implement records management capabilities for the creation of file plans, training, records scheduling, and transition to an electronic records management program based on the policies of DHS and the National Archives and Records Administration.
- Participate in the annual National Capital Region Continuity Exercise and Eagle Horizon regarding mission and operational continuity during a national disaster.
- Maintain a program cost performance index and schedule performance index within 10 percent variance of target in alignment with OMB guidance.
- Adhere to a target of prompt payment of 98.5 percent of invoices within 30 days as mandated by the Prompt Payment Act.
- Achieve quarterly obligation targets and an annual carryover of not more than 10 percent of available program funding.
- Update the US-VISIT Five Year Strategic Plan for FY 2013 – 2017, continuing to expand as the DHS biometric identification service provider.
- Update the RDMP for a more agile and service delivery methodology consistent with service oriented architecture.
- Apply the business service architecture including the service description, workflow, and associated functional requirements for the core set of business services to further decompose the services consistent with a service-oriented architecture.

- Review performance measures and metrics for collecting and reporting on business initiation through requirements development phases and identifying the process areas for achieving CMMI.
- Implement a global public education program to maintain and expand awareness, understanding, and acceptance of US-VISIT and the value of biometric technology to enhance immigration and border management among travelers, the news media, and stakeholders, domestically and abroad.
- Achieve a goal of 75 percent of all new supervisors participating in required supervisory leadership training within 12 months of entry on duty, as defined in the OPM (Code of Federal Regulations Chapter 5, Section 412).
- Achieve a goal of 85 percent of identified positions to complete information sharing environment core awareness training as defined in the Secretary's memorandum of May 12, 2010.
- Perform program QA and IV&V audits of one major project for the acquisition review and systems engineering life cycle products and processes, and continue the performance of other quality audits on selected critical products and processes.
- Implement a PIP to remediate quality deficiencies and IV&V findings and recommendations.
- Continue the performance of CMMI for Acquisition, Maturity Level 2, incremental appraisals to prepare for the comprehensive SEI-led appraisal.
- Provide specialized engineering and process skills in the areas of capacity planning and management process, system availability management process, service-level management process, performance and service quality analysis, system and workload modeling and simulation, and statistical analysis. These activities support US-VISIT in achieving service quality and performance goals relative to business, service, and technical requirements.
- Provide technical assistance to foreign government stakeholders on the implementation of biometric screening capabilities focused on compatible standards and technology to ensure interoperability with US-VISIT.
- Integrate engineering services by implementing high-quality IT solutions that provide business continuity in support of the US-VISIT mission, and support and guide all program areas in implementing and aligning to the engineering and system lifecycles and technical architecture references.
- Define US-VISIT architectural and development standards and best practices, along with monitoring and enforcing compliance throughout the release lifecycle.
- Achieve a score of "green", the highest security rating from OMB based on criteria provided in FISMA.

Systems Operations and Maintenance (O&M)

<i>In thousands</i>	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request
Systems Operations and Maintenance	\$128,126	\$128,126	\$128,126

US-VISIT operates and maintains the IDENT and ADIS systems, providing essential biometric and biographic identity management services to US-VISIT customers in a reliable and timely manner. US-VISIT maintains these systems to ensure that they meet significant annual increases in transaction and gallery sizes (fingerprints stored in IDENT), and maintain established response times through service-level agreements.

Systems O&M is critical to the immigration and border management enterprise. US-VISIT technologies support the missions of CBP, ICE, USCIS, USCG, DOD, DOS, DOJ, TSA, and the law enforcement and intelligence communities. A failure to maintain the deployed systems and capabilities will adversely impact data searching and response times critical to the mission success of US-VISIT customers.

O&M includes application support for adaptive, preventive, and perfective maintenance; release management; architecture support; interface support; configuration management; security certifications and accreditations; software licenses; and appropriate technology refreshes. The primary components are IDENT, ADIS, and US-VISIT equipment and internal use systems (corporate systems). Technology services are delivered in compliance with DHS enterprise architecture standards and include platforms for users, program interfaces, data center operations, network communications integration and support, and related technical support services. Data center operations include the physical layout of equipment, hardware maintenance, searchable online (memory) capability, storage capacity, data and recovery management, and operating system services. Network support provides data center network and circuit maintenance, controlled access to other DHS components, specific interfaces to DOS, and the US-VISIT program office. A centralized help desk provides support to US-VISIT and users, as well as database administration, and local area networks within the metropolitan Washington, D.C. area.

US-VISIT operations are large and complex for IDENT and ADIS, requiring uninterrupted operations, maintenance, and application support. In FY 2011, US-VISIT systems will be hosted in two DHS data centers. DHS enterprise hosting includes physical areas, rack supports, service support, hardware maintenance, memory and storage capacity, data and backup management, operating systems-level support, disaster/failover recovery, and network fiber optics and cabling infrastructures.

IDENT operations are composed of approximately 600 servers and more than 140 highly specialized matchers. ADIS operations consist of 16 high end-servers across the two data centers and processes more than one million transactions a day.

Both of these systems are growing. There are two primary factors driving growth in IDENT gallery size and ADIS transaction volumes: (1) internal growth, which is attributable to servicing existing customers; and (2) external growth, which arises from new capabilities and new customers.

IDENT is growing because of increasing service demands by existing customers and increasing performance requirements. New requirements, such as 10-print capture and IDENT interoperability initiatives continue to require expansion and improvement of IDENT to meet customer service-level agreements.

ADIS is growing at more than 25 million unique person records annually. Additional data sources for arrival/departure information are being scheduled to be implemented; two key systems are the Electronic System for Travel Authorization (ESTA) and the Western Hemisphere Travel Initiative (WHTI), resulting in an additional 300 million observations per year and more than doubling the existing transactions, volume input, and throughput. This results in impacts to both database storage and network requirements. The customer base is expected to increase with the addition of DOS users in foreign consulates as this data is used to determine visa eligibility, provide a profile of violators, and identify fraudulent activities for obtaining visas. These factors will add to the existing field-user base in the US-VISIT DIG, ICE Compliance Enforcement Unit (ICE/CEU), and CBP Office of Field Operations. As the ADIS database and the identity-matching candidate pool grow for travelers with duplicative names, ADIS requires faster processing capabilities to adhere to established customer service levels. In fact, due to an increase in CBP processing demand, the database has been allotted an additional three terabytes of storage. Based on projected growth of the database, this will accommodate ADIS for an estimated 30 to 36 months.

US-VISIT Projected O&M Growth

There is a 75-year record retention policy for both IDENT and ADIS. The IDENT system is comprised of two components—annual transactions and gallery size (records). Transaction volumes consist of enrollments, queries, and responses. The gallery contains biometric information that is queried for verification and possible subsequent enrollment.

US-VISIT IDENT Projected Growth

(in millions)	FY 2010	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Annual Transaction Volumes	60	63	65	67	70	73	76
Gallery Size (records)	120	139	157	175	192	210	228

The table illustrates IDENT’s projected growth, which is based on the anticipated increases in customer requirements combined with the potential addition of new customers. In FY 2010, there were approximately 60 million transactions and 120 million enrollments in the IDENT fingerprint gallery. This growth in transactions and enrollments consist of law enforcement transactions, entry transactions originating from enrollments, POE inspections, and visa issuances.

The ADIS system is comprised of three components: person identity, events, and observations (transactions). Person identity is the unique identifier that groups ADIS event-based biographic immigration data with a biometric identifier from the IDENT fingerprint identification number to form a person-centric identity for an overstay indicator status. Events are arrivals, departures and alterations in immigration status based on data feeds from the USCIS CLAIMS3 and ICE

SEVIS databases. Observations are a series of messages that comprise an ADIS event based on the specific event type, which is determined and documented by interface control agreements. The following table illustrates growth projections for ADIS.

US-VISIT ADIS Projected Growth

(in millions)	FY 2010	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Person Identity	170	192	221	254	292	336	386
Events	1,115	1,428	1,827	2,339	2,994	3,832	4,905
Observations	2,030	2,598	3,326	4,257	5,449	6,975	8,928

As the table illustrates, US-VISIT anticipates that ADIS could increase by approximately 29 million person identities in FY 2012 and is forecasted to increase by 165 million over the next five years. Correspondingly, the projected increases for both events and observations are forecasted to increase approximately 28 percent per year from FY 2012 through FY 2016. This is predominately due to ADIS being the only information system in the Federal Government that can provide visa overstay data and also due to demands created by ESTA and WHTI. In addition, ICE, CBP, USCIS, and the FBI use ADIS' biographic data. In fact, customer demands for increased inbound and outbound data interfaces create the need for routinely upgrading ADIS to maintain performance and reliability.

FY 2010 Accomplishments – O&M

In FY 2010, US-VISIT adhered to service-level agreements with its customers while accommodating IDENT's 17 percent growth in transaction volumes and a 14 million record increase in gallery size over the FY 2009 level. The growth in gallery size, in particular, challenges the accuracy and timeliness of IDENT responses. In addition, the volume increases experienced by ADIS were more than 17 percent for person identities and 28 percent for events and observations.

A summary of FY 2010 performance, against established target levels:

- *Port of Entry (POE) Average IDENT Biometric Watchlist Search Time* – average number of seconds it takes the IDENT system to return a response about a traveler at any POE. The target time is 10 seconds or less. The actual time was 6.01 seconds.
- *BioVisa (DOS) IDENT Biometric Watchlist Average Search Time* – average time for IDENT, when initially queried, to return a response about a visa applicant at any consular office is 5 minutes or less. The actual time was 3.14 minutes.
- *Law Enforcement Average IDENT Biometric Watchlist Search Time* – average time for IDENT to complete a search of all of IDENT when CBP and ICE agents make an enforcement request is 2 minutes or less. The actual time was 1.08 minutes.
- *IDENT Operational Availability* – ratio of the time that the IDENT system is available to process end-user transactions during the period divided by the total scheduled up-time for that period. The target is 99.7 percent or greater. The actual time was 99.69 percent.

- *Maintain ADIS Operational Availability* – ratio of the time that ADIS is available to process end-user transactions during the period divided by the total scheduled up-time for that period. The target is 97 percent or better. The actual time was 99.89 percent.
- *Deviation From Predicted Error Rate in Biometric Screening (e.g., Accuracy)* – measures the success of US-VISIT's biometric matching system in minimizing false matches with an index between +1 and -1. The actual variance was 0.14030.

IDENT

In FY 2010, O&M funds enabled IDENT to overcome challenges posed by increasing gallery size and transaction volumes and to continue adherence to previously established performance targets. IDENT workload increased as a result of the rollout of additional 10-print and IDENT/IAFIS interoperability, including support for the Secure Communities initiative, expansion of mobile capabilities supporting law enforcement interaction with IDENT, expansion of state and local support requests, and compliance with Homeland Security Presidential Directive 12.

Significant IDENT O&M accomplishments for FY 2010 were:

- Completed IDENT hardware refresh in DHS Clarksville Data Center including upgrading and modernizing matchers, the database, and storage hardware.
- Implemented a modernized data storage and tape backup/recovery solution for production database systems. The modernized database platform project migrated US-VISIT from old, unsupported end-of-life hardware and software to a modernized platform with room for expansion to handle expected future needs for the next four to five years.
- Implemented configuration management pilot processes that provide the ability to monitor, generate alerts, and correct problems prior to users being impacted by unscheduled downtime.
- Deployed the tools and processes required to provide consolidated help desk support covering O&M operations and systems. The help desk now provides for the consolidated and systematic management of related incident tickets and decreased related incident tickets by more than 33 percent.
- Deployed a commercial monitoring solution providing US-VISIT with an integrated view of system performance and data to enable it to shift the operational paradigm from responding to production incidents to proactively taking action that prevents stakeholder impact.
- Initiated deployment and integration of the enterprise monitoring and software management toolset. All primary phases of the monitoring strategy are complete. New hardware was deployed over a 6-month period during FY 2010.

ADIS

The most notable ADIS workload driver will be incorporating data from WHTI, ESTA, and DOS to provide a complete nonimmigrant travel record. ADIS is required to maintain and achieve established performance parameters that include planned release management, hardware and software maintenance renewals, IV&V support, database support, data center and network operations support, and break-and-fix support. As a part of its capability, ADIS performs five types of services:

- User services that implement the ADIS web interface
- Business services that encapsulate business logic and rules
- Data service that creates, reads, updates, and deletes data in the database
- Interface services that interact with external partners
- Security service that controls the authentication and authorization of users and other services, along with services for user and system activity logging

Significant ADIS accomplishments for FY 2010 were:

- Implemented US-VISIT tools for configuration management and IT asset management removing the dependency on ICE, which is discontinuing support for US-VISIT.
- Deployed ADIS Release 3.4 responding to user requests for access to entry photographs in the Secondary Inspection Tool to assist with identification. Release 3.4 marked the initial release of functionality designed to link traveler departure records for the CBP stakeholder, in support of the DHS ESTA Program.
- Deployed ADIS Release 3.5 aligning ADIS architecture components with US-VISIT and DHS Enterprise Architecture guidelines. This important component upgrade enabled ADIS to transition off of Oracle 9i which is no longer supported, and also increased reliability and reduced downtime.
- Deployed ADIS Release 3.6 establishing connectivity and data exchange between the US-VISIT ADIS and DOS Consolidated Consular Database permitting a critical exchange of information.
- ADIS Technical Assessment and the Lawrence Livermore National Laboratory (LLNL) Assessment provided a review, analysis, prioritization, and an estimated schedule of recommendations to be implemented based on the assessment findings.

Corporate Systems

US-VISIT corporate systems funding for FY 2010 maintained e-mail and web-enabled telephones (hardware and service), laptop computers, aircards, and assorted peripherals required to support the growing US-VISIT Federal workforce. Corporate systems includes all annual software licenses and advisory services, including those for Microsoft, Oracle, Gartner, Corporate Executive Board, ICE network connectivity, IT support services, and help desk support.

The significant corporate systems accomplishment for FY 2010 was the implementation of the storage area network at the alternate operating facility. This provides the ability to access and utilize replicated data available at US-VISIT main operations. The storage network provided a secure, redundant environment to store data necessary to operate and perform core functions, such as maintaining the US-VISIT watchlist.

Other accomplishments included the planning, analysis, and implementation of general support system upgrades, enabling the fulfillment of newly developed requirements by business users.

FY 2011 Planned Accomplishments – O&M

US-VISIT plans to accomplish the following in FY 2011.

IDENT

- Scale down of servers and improve efficiencies by creating multiple operating environments through virtual server consolidation, which will reduce hardware and support maintenance costs. Virtualization is a method of running multiple independent virtual operating systems on a single physical computer to maximize physical resources while reducing hardware costs.
- Obtain skilled resources to identify servers to be consolidated, purchase virtualization software licenses, and identify machines to virtualize.
- Research and implement an instant recovery strategy to support the US-VISIT mission by maintaining a 24/7/365 environment that provides constant up-time to all domestic and international partners.
- Develop a synthetic transaction strategy that monitors end-to-end system process flows for US-VISIT applications, allowing US-VISIT to mimic user transactions and identify service impacts from the user community, such as POEs.

ADIS

- Maintain ADIS as required to meet the established performance parameters that include planned release management, hardware and software maintenance and renewal agreements, IV&V support, database support, data center and network operations support and preventative and adaptive maintenance.
- Migrate ADIS to Enterprise Service Bus Phase 3.
- Review and analyze applicable recommendations from the ADIS technical assessment and LLNL technology assessments as well as planning potential implementation strategies.

Corporate Systems

- Conduct a planned infrastructure refresh to include e-mail and web-enabled telephones, workstations, laptop computers, printers, scanners, and software tools. The refresh applies only to those hardware items purchased in FY 2008 or earlier.
- Develop a server consolidation plan consisting of a schedule and milestones to reduce the number of servers by 50 percent in the DHS data center.

FY 2012 Projected Accomplishments – O&M

US-VISIT is projecting to accomplish the following in FY 2012:

- Maintain FY 2011 IDENT and ADIS current service levels and identify and implement efficiencies to accommodate increases in transaction volumes and gallery sizes.
- Continue steady-state O&M required to maintain performance standards, including general break and fix, planned release management, software license renewal, hardware

maintenance agreement renewal, IV&V support, database support, and data center and network operations support.

- Complete a minor hardware refresh for the underlying infrastructure supporting IDENT and ADIS.
- Initiate server consolidation as planned in FY 2011.
- Implement applicable recommendations from the ADIS technical assessment and the LLNL technology assessments.

Identity Management and Screening Services

<i>In thousands</i>	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request
Identity Management and Screening Services	\$29,017	\$31,000	\$32,600

US-VISIT is the DHS central point for providing identity management and screening services support. US-VISIT biometric and biographic matching functions improve the capabilities to manage and screen against watchlist records that include KSTs, persons of interest, and immigration violators. These capabilities strengthen national security; international, Federal, state, local, and tribal government collaboration; and meet other user needs.

Identity Management and Screening Services provide IDENT and ADIS systems business management and oversight, real-time human biometric verification services, overstay analysis, and updates and management of the US-VISIT biometric watchlist. US-VISIT meets its mission requirements through efforts in four areas: (1) positively confirming biometric identity by operating IDENT, supplemented with fingerprint analyses conducted by examiners in the BSC; (2) operating ADIS and analysis by the DIG, enhancing biometric identification through biographic, overstay, and data integrity analysis; (3) coordinating law enforcement and intelligence operational activities to improve the accuracy and usefulness of US-VISIT-maintained identities; and (4) providing technical assistance to foreign government authorities engaged in developing biometric capabilities to secure and manage their border and immigration management programs. Collectively, these services uniquely identify individuals by providing person-centric, actionable information to US-VISIT customers. In FY 2011, contractor positions which support Identity Management and Screening Services are being converted to Federal positions.

FY 2010 Accomplishments – Identity Management and Screening Services

In FY 2010, US-VISIT was able to maintain existing service levels for the following:

Biometric Support Center

US-VISIT employs approximately 73 full-time contractors providing expert fingerprint verification, latent processing, and lookout enrollment services in the two biometric centers on the East and West Coasts. These centers provide around-the-clock expert fingerprint matching services to the immigration and border management enterprise and enforcement communities.

Although IDENT fingerprint matching technology is among the fastest and most accurate in the world, manual fingerprint verifications are necessary to analyze poor-quality prints and to ensure that derogatory data is not erroneously associated with an individual.

The BSC continued to support existing end users at the same service levels as reported for FY 2009. To ensure that legitimate travel is not impeded and officer safety is not negatively impacted, it is critical to continue providing fingerprint verification decisions on urgent requests in 10 minutes or less, nonurgent verifications within 24 hours, and enrollment and verification of terrorism-related prints in 2 hours or less. Anticipated organic volume increases and anticipated incremental volumes coming from investments will continue to increase workloads. These increases include future enhanced interoperability with additional DHS components, other agencies, such as DOJ and foreign governments; and significant increases in latent print workloads.

BSC performance targets for FY 2010:

- *Provide fingerprint verification decisions on urgent requests in 10 minutes or less.* The average response time of 4.01 minutes for urgent fingerprint verifications was consistent with that of recent months and remains well below the targeted limit. These efforts are critical to ensuring that DHS officers are quickly notified of watchlist hits, that legitimate travel is not adversely impacted, and that the integrity of biometric identity is maintained.
- *Provide fingerprint verification decisions on non-urgent requests within 24 hours.* Non-urgent fingerprint verification requests had an average response time of 2.87 hours. These efforts are important to maintaining the integrity of biometric data by linking previous DHS biometric encounters so that IDENT stakeholders have a complete biometric history of an individual.
- *Provide enrollment and verification of terrorism-related prints in 2 hours or less.* Enrollment and verifications requests had an average response time of 1 hour 36 minutes. These efforts are critical to ensuring that known/suspected terrorism data is available in IDENT to DHS officers as quickly as possible so that appropriate action may be taken if these individuals attempt to enter the United States; apply for visas, immigration benefits, or registered traveler credentials; or are arrested or otherwise encountered by DHS.

BSC Fingerprint Verification Breakout for FY 2007–2010

Category	FY 2007	FY 2008	FY 2009	FY 2010
Latent Fingerprint Comparisons	626,943	2,502,934	4,616,604	5,169,509
Manual Fingerprint Verifications	1,692,187	631,574	643,091	637,366
Field Submitted IDENT Enrollments	28,121	28,694	22,281	6,327
Urgent Fingerprint Verifications (response required in 10 minutes or less)	185,589	230,354	180,123	185,866
National Security Entry-Exit Registration Enrollments	3,194	2,957	4,498	2,642
Identified Unknown Individuals	141	339	397	242
Total	2,536,175	3,396,852	5,466,994	6,001,952

Of particular note was the continued increase in latent fingerprint work being accomplished by the BSC due to enhanced data-sharing efforts between US-VISIT and both DOD and DOJ. In FY 2010, the BSC processed and enrolled 25,476 latent prints into its unsolved latent database for screening against fingerprints captured in the IDENT database, which represented an increase of approximately 22 percent over FY 2009. US-VISIT was able to eliminate a backlog of 1.5 million latent-print comparisons that existed prior to FY 2010. This elimination enabled a more timely screening of latent fingerprints with fingerprints submitted by POEs and DOS consular offices worldwide. US-VISIT was able to expand to additional populations serving USCIS, ICE, and the CBP Border Patrol. US-VISIT latent examinations have resulted in more than 500 identifications since US-VISIT began its latent-print program, and some of those aided significantly in terrorism and criminal investigations.

For example, in December 2009 the BSC matched a latent print received from a Thornton, Colorado, homicide case against a print in IDENT. The agency that submitted the print then issued an arrest warrant that was then automatically added to IDENT via interoperability efforts between the IDENT and IAFIS. Other latent matches over the course of the year include cases involving national security incidents and other serious criminal cases that have resulted in individuals being promoted to the watchlist.

In FY 2010, manual fingerprint verifications for both urgent and nonurgent requests remain consistent with FY 2009 levels. However, field-submitted IDENT lookout enrollments have decreased from FY 2009 due in part to decreases in CBP apprehensions. These efforts are critical to ensuring that DHS officers are quickly notified of watchlist hits, that legitimate travel

is not adversely impacted, that officers are notified of other previous DHS encounters, and that the integrity of biometric identity is maintained.

Identifications of unknown individuals (typically deceased) in FY 2010 has decreased when compared with FY 2009 figures. These requests are typically submitted to the BSC from state and local medical examiners, coroners, and law enforcement agencies. Some key cases in FY 2010 include the identification of victims of the earthquake in Haiti and a January 2010 identification that reopened a 22-year-old homicide case from Texas.

Data Integrity Group

The DIG analyzes records of interest that have been generated by ADIS and provides validated overstay information to DHS operational units (e.g., CBP and ICE) that use US-VISIT entry, exit, and status data to enforce immigration law. The DIG also identifies system- or human-generated data integrity issues to improve the quality of US-VISIT information in both IDENT and ADIS to provide customers with actionable and accurate information.

Additionally, the DIG prioritizes its workload according to criteria provided by ICE. The workload increased because the DIG's coverage expanded from solely reviewing traveler records from ICE priority countries of interest to include all nonimmigrant visitors to the United States. In FY 2010, the DIG focused on vetting the backlog of all unvetted (non-priority) overstay records in order to reduce the backlog by 50 percent by the end of FY 2010, after having eliminated the Visa Waiver Program (VWP) overstay backlog in FY 2009. Non-priority records at that time numbered 1 million and have increased as current non-priority overstay records have accumulated. In FY 2010, the DIG increased its contractor staff by 30 FTEs to focus on vetting the backlog of all unvetted (nonpriority) overstay records. At the time of commitment, the backlog numbered 1 million. The DIG was able to reduce that backlog by just over 50 percent by the end FY 2010. However, the backlog continued to increase as current nonpriority overstay records accumulated. As of FY 2010, the DIG had vetted more than 580,000 records and hired or selected 50 analysts for Government positions as part of the process of reducing the unvetted backlog even further.

In addition to reducing the backlog, the DIG focused attention on improving the integrity of ADIS records to achieve a better match rate of exit-to-entry and accurate overstay identification of VWP participants. The DIG also focused on maintaining its in-country overstay lead credibility rate of 98 percent or greater. This measures the probability that leads submitted by the DIG to ICE/CEU represent travelers who are currently in the United States and have overstayed their authorized periods of admission.

The DIG reviews biometric watchlist encounters and adjudicates (authorizes) the promotion or demotion of persons to/from the watchlist on the basis of the most current information associated with the individual. The adjudications are conducted to ensure that the watchlist continues to be accurate and actionable for all US-VISIT stakeholders.

Additionally, the DIG focused on keeping the cost per overstay records processed at \$52 or less. This measured the average cost to vet in-country and out-of-country records. These three measures are reported in the following section.

DIG performance targets for FY 2010:

- *In-Country Overstay Lead Credibility Rate* – Probability that leads submitted by the DIG to ICE/CEU represent travelers who are currently in the United States and have overstayed their authorized periods of admission. This measure of quality was revised for FY 2010 to remove external factors, such as investigative priority changes beyond US-VISIT’s control that have adversely affected its managerial usefulness. The updated metric measures the internal quality control of DIG production and has a credibility performance target of 98 percent. The cumulative result was 98.54 percent.
- *Out-of-Country Overstay Lead Credibility Rate* – Probability that vetted overstay leads are correctly promoted to the lookout list and actually represent travelers who are overstaying their authorized periods of admission by more than 180 days. This measure has a performance target of 98 percent. The cumulative result was 99.81 percent.
- *Maintain ADIS Records Integrity* – Improve ADIS records integrity to achieve an exit-to-entry match rate of 95 percent or greater. High record integrity has a direct impact on record-processing costs and lead credibility. The cumulative performance rate was 84.06 percent. The under-target performance results from the receipt of multiple departure records from CBP with duplicated biographic information, causing a large number of onboard messages to appear without corresponding previous arrivals. Efforts are under way to address the problem.
- *Cost per Overstay Lead* – This consolidated efficiency measure reflects the average cost for analysts to work both in-country and out-of-country leads. The average cost per lead target for FY 2010 is \$52. The cumulative result was \$74.97 per lead. The higher average costs are attributed to staff turnover associated with a new contract award and new staff coming up to speed.

In addition to performance targets, the DIG tracks workload statistics. In FY 2010, the DIG made continued advances in efforts to identify potential overstays. This ability led to a significant increase in adverse actions at POEs and overseas consular offices. The following table illustrates the number of cases in which out-of-country lookouts and in-country referrals to ICE have resulted in arrests, denials of visas, or refusal of admission.

DIG Historical Production Trends

Fiscal Year	Referred to ICE	Admitted Watchlist Lead Recommendations sent to ICE / CEU	Arrests Based on Referrals	Out of Country Lookouts	Port of Entry / Visa Refusals Based on Lookouts
2010	30,406*	66	564	14,269	2,811
2009	16,117	262	568	16,640	2,502
2008	13,343	869	715	13,276	1,441
2007	12,681	281	338	7,357	451

*Includes 11,082 minor records (records of individuals under the age of 18 that are sent directly to CEU once identified).

Law Enforcement and Intelligence

Through its LE&I section, US-VISIT provides value-added identity management services with a focus on biometrics in support of analytical, investigative, and operational needs. LE&I reviews biometric watchlist encounters and adjudicates (authorizes) the promotion or demotion of persons to and from the watchlist on the basis of the most current information associated

with individuals. These adjudications are conducted to ensure that the watchlist continues to be accurate and actionable for all US-VISIT stakeholders.

To enable a greater information exchange, US-VISIT has actively pursued the development and deployment of 10-print interoperability. This capability provides data sharing (interoperability) between IDENT, IAFIS, and DOD's Automated Biometric Identification System (ABIS) biometric databases; the sharing of data with state, local, and tribal law enforcement organizations; the sharing of data with international stakeholders; and additional capabilities to expand the use of biometrics. The US-VISIT objective is to facilitate travel by reducing the number of travelers sent to secondary processing by providing more data and reducing the likelihood of misidentifying a traveler on a US-VISIT watchlist. LE&I is involved in several global projects with foreign partners to detect and deter malafide aliens from entering the United States and applying for immigration benefits. Further deployment of interoperability with IAFIS, support of DOD initiatives regarding high-threat subjects, and the formalization of processes and procedures with DHS components for assorted projects increased the workload of reviewed watchlist hits.

Significant LE&I accomplishments for FY 2010 include:

- Formalized a biometric data exchange with Australia, Canada, and the United Kingdom through the High Value Data Sharing Protocol (HVDSP), formerly the Five Country Conference. The HVDSP is the sharing of asylum/refugee biometric information among the United States, Canada, Australia, and the United Kingdom. Data sharing with New Zealand will begin in the future. In FY 2010, LE&I exchanged more than 170 records for this data-sharing initiative. Given that the project is in its initial stages, this number represents only individuals for whom US-VISIT has records in IDENT. As the project matures, the number of individual records could increase due to the data sharing among these five countries.
- Remained current on research and coordination of the UKvisa project. The UKvisa project is a sharing initiative between the United Kingdom Border Agency (UKBA) and DHS. In FY 2010 LE&I provided information to UKBA on 203 identities. DHS information is being exchanged to aid the UKvisa screening of applicants attempting to obtain visas to enter the United Kingdom. Original estimates were projected that only 100 matches to existing IDENT watchlist identities would occur — a match rate of only 1 percent of the UKvisa applications filed. The actual match rate is double the estimate. On average, LE&I provides information on 18 identities a month to UKBA. These matches and the resulting reports to UKBA take approximately four days to process. In FY 2010, UKBA indicated that 33 of these visa applications had been withdrawn and the applicants refused entry based on the information shared by LE&I.
- Reduced the watchlist encounter backlog by more than 74 percent for watchlist encounters.

LE&I Watchlist Statistics

Activity	FY 2007	FY 2008	FY 2009	FY 2010
Watchlist Encounters Received	10,419	42,035	120,600	266,848
Watchlist Matches Adjudicated	9,422	27,555	23,586	143,737
Watchlist Demotions	4,928	24,274	50,954	60,296

As the above table illustrates, workload activity and efficiency increased during FY 2010. The increase in LE&I’s productivity was due to the addition of more adjudicators. In the first quarter of FY 2010, LE&I had three new adjudicators onboard and fully trained compared to FY 2009, when the bulk of adjudication responsibilities were being covered by one adjudicator. This action allowed for more records to be resolved and provided for a more efficient adjudication of watchlist encounters and multiple encounters.

Information Sharing and Technical Assistance

In FY 2010, US-VISIT’s ISTA branch continued to build partnerships with like-minded countries to support their implementation of biometrics in the border and immigration control areas. This included the United Kingdom, Canada, New Zealand, Australia, India, South Africa, the Republic of Korea, and the Dominican Republic. ISTA provided in-depth technical assistance to Citizenship and Immigration Canada (CIC) including review of requirements for the establishment of its biometric visas program. ISTA tested and evaluated iris and facial recognition capabilities to build a platform to test in an operational environment in FY 2011. This work was coordinated with the DHS Science and Technology Directorate, National Institute of Standards and Technology, National Security Agency, DOD, and CBP. The Biometrics Standards Coordinator produced a report that explains the integration of iris capture devices with existing applications for the US-VISIT stakeholder-CBP.

ISTA accomplishments for FY 2010 include:

- ISTA engaged international partners under agreements for preventing and combating serious crime (PCSCs). ISTA coordinated the implementation of the PCSC with Germany within US-VISIT and with its partner at the FBI. These activities are serving as the standard for future engagements with international partners. Germany implementation continues and LE&I is coordinating the process of exchanging biometric information with DOJ and the Bundeskriminalamt (BKA), the German federal police. The German Minister of Interior continues to work to secure German ratification of the original criminal information-sharing agreement. Officials from the United States and the Republic of Korea met for preliminary discussions relating to implementation of the PCSC agreement.
- Provided technical assistance to the CIC’s Temporary Resident Biometric Project in support of their acquisition of biometrics capabilities. US-VISIT and CIC have exchanged subject matter experts to review the technical architecture of the United States and Canadian biometrics systems and ensure interoperability of such systems to create new biometric data sharing opportunities.

- Developed a strategy with Canada Border Services Agency to exchange biographic entry information in order to establish exit from the United States to Canada over the land border environment.
- Provided technical assistance to the Government of Mexico's National Migration Institute to facilitate the incorporation of biometrics into the Integrated System for Migration Operations as envisioned under the Mérida Initiative, a collaborative effort under the Security Prosperity Partnership among the United States, Canada, and Mexico. The partnership focuses on combating transnational crime and confronting organizations whose illicit actions undermine public safety, erode the rule of law, and threaten the national security of the United States. Mexico is in the process of developing a biometric collection and storage system for use at its ports of entry. Through sustained collaboration with US-VISIT, Mexico will be in a position to exchange actionable biometric information in the future. This will require a memorandum of understanding between the United States and Mexico.

In addition, ISTA continued to support the expanded use of temporary onsite technical experts (secondments) overseas. The technical experts posted to the United Kingdom and Australia performed the following:

- Supported the UKBA's new patch to client capture code which dramatically improved fingerprint capture time at the border, from a previous 7 seconds capture time per fingerprint to a 2-3 second per fingerprint capture time.
- Developed framework to create a new UKBA Identity Management Directorate that would bring responsibility for identity management within a single unified UKBA office, similar in scope and operation to US-VISIT.
- Analyzed current and future biometric capabilities throughout both countries' border and immigration infrastructure.
- Assisted with planning biometric processes and systems within the national government in relation to the ports of entry.
- Recommended improvements based on expert biometric business process and technical experience.
- Provided expert knowledge and guidance on biometric standards, methods, and products.
- Developed and deployed quality assurance measures for biometric implementations.
- Identified and mitigated deployment risks, including cultural and business process change implications.
- Ensured the interoperability of systems adherence to international standards.

US-VISIT is advancing the adoption of compatible biometric systems by border and immigration authorities internationally through information sharing and technical assistance. Currently, US-VISIT experts are working with United Kingdom and Australian authorities. US-VISIT technical assistance to CIC will continue to support the Government of Canada's integration of biometric collection and matching capabilities in its visa issuance operations. US-VISIT's technical assistance to Canada will result in the provision of best practices and lessons learned related to US-VISIT's expertise as the world's largest biometric identity screening repository as well as the creation of new data sharing opportunities.

FY 2011 Planned Accomplishments – Identity Management and Screening Services

US-VISIT will continue to provide the same level of service to stakeholders as in FY 2010, while operating more efficiently to handle anticipated increases in workload.

Biometric Support Center

In FY 2011, the BSC will continue supporting existing end users at the same service levels achieved in FY 2010. To ensure that legitimate travel is not impeded and officer safety is not negatively impacted, it is critical to provide fingerprint verification decisions on urgent requests in 10 minutes or less, non-urgent verifications within 24 hours, and enrollment and verification of terrorism-related prints in 2 hours or less.

Data Integrity Group

In FY 2011, the DIG will continue to focus attention on improving the integrity of ADIS records to achieve a 95 percent match rate of exits to entries and the accurate overstay identification of non-immigrants. The projected number of records to be manually verified in FY 2011 is estimated at 100,000, with approximately one-fifth to one-third being forwarded to ICE/CEU for law enforcement action. The estimate was based on historical data and anticipated growth. For example, the DIG processed 80,528 records in FY 2009 and 91,923 records in FY 2010, which was more than a 12 percent increase over the previous fiscal year. The FY 2011 estimate is an approximate eight percent increase over the number of records processed in FY 2010.

The hiring and training of additional contractors in FY 2010 will allow analysts to manually verify the increased number of records. With the increased staff, the DIG expects to promote more than 50,000 records to the out-of-country watchlist in FY 2011 and to perform Federal reviews on over 100,000 validated in-country overstay records, resulting in quality investigative referrals to ICE. The DIG will maintain FY 2010 performance targets in FY 2011.

Law Enforcement and Intelligence

In FY 2011, LE&I will continue to provide research and coordination for all international and domestic programs that affect the IDENT watchlist. By the end of FY 2011, LE&I will provide up-to-date and comprehensive watchlist adjudication on all entry matches, and—as resources permit—to provide biometric intelligence reporting to DHS and the intelligence and law enforcement communities. LE&I will initiate a robust training program to train and develop Border and Transportation Security officers' to increase awareness of the DHS border security enterprise.

LE&I will continue to support the full-time operational support environment at FY 2010 levels. This unit will consist of LE&I analysts capable of researching biometrically verified hits against IDENT data submitted by the FBI, contributing agencies, DHS entities, access control to critical infrastructure facilities, and others to leverage biometric and biographic capabilities. Capabilities developed in FY 2010 will continue as growing demand for analytical support of Criminal Master File driven inquiries increases. This centralized decision center, providing one source of information for operational and tactical support, all linked to a biometric, will consolidate and expand resources to compile overstay and watchlist encounter research. This

will allow US-VISIT to provide more effective analysis, including trending, fraud detection, and risk-based decision support.

Information Sharing and Technical Assistance

In FY 2011, the United States and the Republic of Korea will continue discussions on the implementation of the PCSC agreement. ISTA is working to expand the number of agreements with PCSC partners, specifically Austria, Czech Republic, Denmark, Finland, Latvia, Lithuania, Hungary, Slovakia, Estonia, Malta, Italy, the Netherlands, and Portugal through cooperation with FBI Criminal Justice Information Services (CJIS) and ICE. These agreements will enrich the US-VISIT watchlist and provide its stakeholders useful information to make risk and eligibility decisions.

Information exchanges with foreign governments enrich the US-VISIT watchlist, as experience with the United Kingdom, Australia, and Canada has demonstrated under the HVDSP. Since Stage 2 of HVDSP went live in February 2010, there have been 24 matches on US-VISIT's outgoing requests. For FY 2010, there were 1,835 biometric submissions by the United States, which provided 11 matches with a rate of 0.6 percent. In FY 2011, there have been 2,100 biometric submissions by the United States, which has provided 13 matches with a rate of 0.6 percent. Conversely, the United Kingdom, Australia, and Canada combined have had 615 total matches against US-VISIT's database.

ISTA will expand efforts to develop information sharing opportunities with countries actively developing biometric capabilities, specifically Mexico, the Dominican Republic, South Africa, Thailand, Israel, Malaysia, Saudi Arabia, India, and the United Arab Emirates. US-VISIT is working with other Federal agencies to pursue potential information-sharing agreements using biometrics.

ISTA will test and evaluate iris and facial recognition technologies for combating determined, fraudulent efforts to defeat biometric identity verification systems as part of its ongoing participation in the Multi-Modal Integrated Project. This will involve testing with CBP in an operational environment along the southern border of the United States. It will support US-VISIT's acquisition of multimodal capabilities and next-generation technologies. Increasing biometric capabilities through technology innovation and standards development (fingerprint, iris, face, vascular, and deoxyribonucleic acid (DNA)) will expand potential data-sharing opportunities with countries that employ iris and facial recognition as their primary biometrics for identity management. A final report will be submitted at the conclusion of the test with CBP.

ISTA will contribute to the development of the American National Standards Institute/National Institute of Standards and Technology standards including the 2011 data format for the Interchange of Fingerprint, Facial, and Other Biometric Information Standards. ISTA will lead the development of standards relating to the use of biometrics in electronic passports through its participation in the New Technologies Working Group of the International Civil Aviation Organization.

FY 2012 Projected Accomplishments – Identity Management and Screening Services

Projected accomplishments in identity-screening services include:

- The BSC will continue to maintain service levels by providing urgent fingerprint verifications within 10 minutes or less, non-urgent fingerprint verifications within 24 hours or less, and terrorism-related fingerprint enrollments and verifications within 2 hours or less.
- The DIG will maintain service levels as measured in the following:
 - *In-Country Overstay Lead Credibility Rate* – The probability that leads submitted by the DIG to ICE/CEU represent travelers who are currently in the United States and have overstayed their authorized periods of admission – 98 percent or greater.
 - *Out-of-Country Overstay Lead Credibility Rate* – The probability that vetted overstay leads are correctly promoted to the lookout list and actually represent travelers who are overstaying their authorized periods of admission by more than 180 days – 98 percent or greater.
 - *Maintain cost-per-overstay records processed of \$52 or less – average cost to vet in-country and out-of-country records* – US-VISIT is revising its method for analyzing DIG efficiency to address weaknesses detected in its efficiency measures (cost per in-country overstay lead and out-of-country overstay lead), which failed to capture operational realities, masked important performance trends, and introduced data distortions from outside factors. The new consolidated efficiency measure reflects the fact that analysts work both in-country and out-of-country overstay records.
 - *Maintain ADIS records integrity* – Improve ADIS records integrity to improve the exit-to-entry match rate to 95 percent or greater.
- LE&I will produce three Homeland Intelligence Reports collected from the HVDS and additional international and domestic US-VISIT projects. Homeland Intelligence Reports (HIR) facilitate and expand the sharing of DHS-compiled data regarding terrorist information (e.g., biographical, travel, and activities) with internal and external partners of the Department. HIRs also provide other data, such as information on criminal investigations, border encounters, illegal alien activity, identity document fraud, and suspicious activities with homeland security implications.
- ISTA will maintain FY 2011 service levels for three secondments, one working with the UKBA in London, United Kingdom, working with the Department of Immigration and Citizenship in Canberra, Australia, and one working with CIC in Ottawa, Canada.

Data Center Mirroring and Migration

<i>In thousands</i>	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request
Data Center Mirroring and Migration	\$48,903	\$45,244	\$0

US-VISIT data center operations represent an integral element of the US-VISIT service delivery framework. In FY 2011, US-VISIT systems, which were previously hosted in two DOJ data centers, will be hosted in two DHS data centers. This includes physical area and rack

space, service support, hardware maintenance, memory and storage capacity, data and backup management, operating system-level support, disaster recovery, and fiber/cabling. US-VISIT data center environments are not 100 percent redundant and currently operate at 50 percent redundancy. As IDENT and ADIS systems are critical to the Nation's safety and security, redundancy is required to replicate current data center operations and to maintain continuous reliable service in both of the two DHS enterprise data centers.

DHS will deploy into these two enterprise data centers to achieve the goal of IT infrastructure consolidation. For US-VISIT to assist in the Department's goal, it must relocate systems and hosting services from the DOJ data centers in Dallas, TX and Rockville, MD. US-VISIT systems hosted in these data centers are not 100 percent redundant and so a "mirroring" approach is required before existing operations can be decommissioned. This approach required the establishment (i.e., "go-live") of equivalent DOJ data center capabilities within one of the two DHS enterprise data centers prior to the decommissioning of hosting services at a DOJ data center. DCMM efforts enable US-VISIT to comply with the DHS policy to establish consolidated data centers.

FY 2010 Accomplishments – Data Center Mirroring and Migration

US-VISIT executed a high-priority effort to overcome limited physical data storage growth within the existing data centers and to establish critical IDENT redundancies for workload leveling and disaster recovery during the first phase of mirroring and migration to the DHS enterprise data centers. DCMM also supported the data capture growth of both IDENT and ADIS and implemented system and processing reliabilities. DCMM also met critical deficiencies within the current IT infrastructure regarding transition from 2-print to 10-print capture as implemented in FY 2009.

Specific 2010 accomplishments were:

- Added remaining two-print matchers to the DHS Clarksville Data Center which contributed to significantly reduction of time to perform watchlist matching.
- Completed deployment of the US-VISIT matcher cluster to the DHS Clarksville Data Center, including the establishment of connectivity between the data center and the legacy DOJ Rockville Data Center. This also contributed to reduced watchlist-matching time.
- Completed the final configuration and installation of the database at the DHS Clarksville Data Center in tandem with the DOJ Rockville Data Center technical refresh and the Oracle 11g migration, providing improved data availability and reliability.
- Established data replication to legacy databases in the DOJ Rockville Data Center, including the establishment of monitoring capabilities for the expanded US-VISIT processing infrastructure regarding connectivity, transactions, and applications, contributing to improved data reliability and availability.

FY 2011 Planned Accomplishments – Data Center Mirroring and Migration

DCMM will sustain the same level of effort as in FY 2010. The activities are similar in that the process for migration of the first data center, which occurred in the FY 2009 and FY 2010 timeframe, is repeated for the second data center. Specific activities planned for FY 2011 include the following.

- Complete the DHS Clarksville Data Center migration and production processing cutover from the DOJ Dallas Data Center.
- Build and test the DHS Stennis Data Center core infrastructure.
- Test and deploy at the DHS data centers in Clarksville, VA and Stennis, MS the local area and wide area network connectivity; a modernized data infrastructure; 2-print matcher systems; IDENT and ADIS production database replication services; and database monitoring and management tools. Latent processing will be migrated to both data centers.
- Redirect US-VISIT customers from the two DOJ data centers to the DHS data centers and begin to plan for disaster recovery at the DHS data centers. This planning will include the development of a failover plan and detailed disaster recovery procedures. Storage capacity requirements at the two DHS data centers will be modeled and forecasted for future years.
- Decommission DOJ data centers in Dallas, TX and Rockville, MD. The remaining equipment after decommissioning, including matchers and reusable hardware, will be redeployed, repurposed, or retired.

Unique Identity

<i>In thousands</i>	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request
Unique Identity	\$32,429	\$28,700	\$28,700

The Unique Identity (UI) initiative includes integrated workstreams for achieving interoperability between IDENT and the FBI’s IAFIS and DOD’s ABIS, as well as development of enhancements of a multimodal biometric capability. The objective of additional biometric modalities is to provide more data with which to verify an individual’s identity, subsequently reducing false positive identifications. In addition, with IDENT’s capability to utilize up to 10 fingerprints and multiple biometrics—a unique identity—for matching, there are greater opportunities to identify persons of interest since 10-prints are more likely to match latent fingerprints in criminal and intelligence biometric data stores of fingerprints collected at crime scenes or terrorist locations. This will enhance the ability to identify high-risk persons through its development of the ability to receive, link, store, and share information associated with an individual identity among DHS, DOJ, and DOD systems, as well as with biometric data from foreign governments.

Interoperability with both foreign and domestic partners enriches the biometric database used by border management and intelligence, as well as Federal, state, and local law enforcement agencies. In addition, US-VISIT’s funding supports the continued delivery of 10-print

interoperability between the DHS IDENT biometric database, the IAFIS biometric database, and with ABIS.

DHS/DOJ interoperability has been a three-phased approach. Both the interim Data Sharing Model and initial operational capability were deployed on time and as planned. Full operational capability (FOC) is more complex and coincides with DOJ's deployment timeline for its Next Generation Identification (NGI) project. FOC has many capabilities and interdependencies that create a need for effective timing to establish many of the new capabilities with DOJ's NGI system. US-VISIT will continue to incrementally deploy in concert with the NGI deployment schedule. As previously mentioned, interoperability is being achieved in three phases:

- 2006: interim Data Sharing Model completed
- 2009: Initial operational capability with IAFIS completed
- 2016: FOC with IAFIS targeted for completion

Once completed, FOC will provide real-time services and data sharing between IDENT and IAFIS and will include the following functionality:

- *Shared data component.* Under FOC, the authorized user will be able to search the entire IDENT database and receive a response appropriate to the user and intended use. Additionally authorized users will be able to initiate a search of the IAFIS database through IDENT and receive a response appropriate to the user and intended use.
- *Wrap-back functionality.* This functionality notifies authorized agencies of subsequent criminal and/or civil data to an existing biometric record. This allows for:
 - Authorized agencies to receive notifications of subsequent criminal activities of an individual after the initial encounter with the individual and to notify the responsible agency regarding criminal activity of an individual in sensitive positions.
 - The automatic transmission of files between civil and criminal repositories.

This work requires designing, implementing, and maintaining new system processes through software enhancements and adding IDENT system resources, including system processing, storage, and network services.

- *IDENT data response.* IDENT data response (IDR) has been deployed and stands as a functional capability. US-VISIT continues to monitor the performance of the capability and to evaluate future system requirements. Going forward, US-VISIT will maintain the capability by applying system adjustments.
- *Maintaining/improving accuracy and timeliness in the face of rising transaction volumes.* The increasing volume of transactions and the amount of stored biometric data adversely affects the accuracy and timeliness of biometric searches. The accuracy and timeliness of biometric searches are critically important and need to be maintained or improved. New biometric search algorithms, system transaction management techniques, and data access methods must be implemented to support maximum IDENT accuracy and responsiveness. This work will include enhancements to current software, the transaction management systems within IDENT, and the design and implementation of additional hardware and network systems to support increased data volumes. Unique Identity capabilities include adding improved system service requests, messaging, and

compliance with the DHS/DOJ National Information Exchange Model enterprise-wide messaging standard.

FY 2010 Accomplishments – Unique Identity

FY 2010 accomplishments for Unique Identity include:

- Deployed Enterprise Service Bus (ESB) Phase 1, providing service to USCIS, and began planning for Phase 2 of the full ESB. Implementation of the ESB provides a more secure interface to IDENT, standard integration of stakeholders, improved reliability, increased scalability, and compatibility with future technologies. The planning and requirements review for Phase 2 deployment will focus on integrating and collapsing three external point-to-point interfaces, re-factor the IDENT exchange messaging component, implement monitoring capabilities at the messaging layer, provide high-availability messaging in one data center, and deliver the associated security layer.
- Provided funding and collaborated with CJIS to upgrade IAFIS in preparation for the deployment of enhanced response to CBP at primary inspection. Began planning and design for the IDENT and CBP Traveler Primary Air Client upgrades required to support this capability.
- Completed the deployment of an enhanced IDR, which provides State and local law enforcement biometrically verified identities and notification to the ICE Law Enforcement Support Center for further analysis and potential action.

FY 2011 Planned Accomplishments – Unique Identity

Planned accomplishments for Unique Identity in FY 2011 include.

- Deploy 10-print matching capability, which enhances the matching capability from the current 2-print standard to the ability to match based on 10-prints enhancing the verification of an individual's biometrics.
- Develop implementation protocols of the PCSC agreement with Germany for enriching IDENT/ADIS with new biometric and biographic actionable information and deployed mechanisms enabling Germany's use of US-VISIT services. This data sharing will aid in the resolution of open immigration cases, detection of identity fraud, and improvement in database accuracy.
- Plan, analyze, and perform the initial design for the interface between IDENT and ABIS that will permit the communication of transactions between the two systems. This will allow searching each system for matches against stored biometric data and returning a message with the search results. These efforts will include the development of requirements for capabilities to conduct latent searches.
- Initiate the development of the capability to compare partial sets of prints captured at crime scenes or other locations and comparing them to the biometrics retained in IDENT. This capability will provide a more automated approach for processing latent prints as well as increase capacity to permit large volumes of latent print transactions.
- Initiate the plan and analyze stage for US-VISIT Integrated Enterprise Web Reporting (US-VIEWR) Phase 2 to enhance ad hoc reporting capabilities as well as administrative tools, in addition to the development of additional standardized reports to the US-VISIT enterprise reporting capability.

- Deploy the multi-modal pilot and launch new capabilities that can support identity services using multiple biometrics.
- Deploy the enhanced response from a full search of the Criminal Master File (CMF) to CBP primary inspection.
- Deploy ESB Phase 2 to integrate and collapse three external point-to-point interfaces, refactor the IDENT exchange messaging component, implement monitoring capabilities at the messaging layer, provide high availability messaging in one data center and deliver the associated layer of security.
- Deploy ESB Phase 3 to provide a more secure IDENT interface, new customers with greater accessibility, as well as modernize and integrate the two systems-IDENT and ADIS.
- Initiate record-linking requirements development. This functionality allows for the retrieval of information from both IDENT and IAFIS with a single submission, minimizing the number of identification searches. This will allow for more efficient system searches which will improve operational efficiencies and response times.
- Plan and analyze Phase 2 of the Technical Reconciliation Analysis Classification System (TRACS) to establish the necessary base level of automated support required for executing LE&I critical business functions (i.e., review and update of the IDENT watchlist and the analysis of watchlist matches and associated identity information).
- Deploy Phase 1 (inbound) of the data-sharing agreement with Germany, which is the receipt of requests from Germany to be matched against the records in IDENT.
- Deploy Phase 2 (outbound) of the data-sharing agreement with Germany, which permits DHS stakeholders to send requests through US-VISIT for matching against Germany's law enforcement database.
- Implement PCSC agreements with two additional VWP member countries, the Republic of Korea and Spain. These agreements will enrich IDENT/ADIS with new biometric and biographic actionable information and will deploy mechanisms enabling the use of US-VISIT services by these countries. These deployments will aid in the resolution of open immigration cases, detection of identity fraud, and improvement in database accuracy.

FY 2012 Projected Accomplishments – Unique Identity

Projected accomplishments for Unique Identity in FY 2012 include:

- Initiate system life cycle for a multiple biometric search, store, and match capability services, which enhances DHS operational screening processes based on the results of the multi-modal pilot.
- Continue development of a record-linking capability that will allow retrieval of information from both IDENT and IAFIS from a single query, minimizing the number of identification searches.
- Deploy US-VIEWR Phase 2 to enhance ad hoc reporting capabilities as well as administrative tools, in addition to the development of additional standardized reports to the US-VISIT enterprise reporting capability.
- Deploy Phase 2 of TRACS.
- Establish interoperability with one additional strategic partner and continuing to share biometric and/or biographic information with current foreign government partners

under the HVDSP, PCSC, the Terms of Reference (Memorandum of Understanding) with Canada, DHS Science and Technology Directorate, and other United States Government agreements as appropriate. This will continue to expand US-VISIT’s access to relevant information sources.

- Develop data-sharing agreements with three additional VWP member countries, enriching IDENT/ADIS with new biometric and biographic actionable information and deploying mechanisms that will enable the use of US-VISIT services by other countries. This will aid in the resolution of open immigration cases, detection of identity fraud, and improvement in database accuracy.

US-VISIT 1.0

<i>In thousands</i>	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request
US-VISIT 1.0	\$0	\$0	\$4,869

The US-VISIT 1.0 initiative is taking steps to address system performance limitations and rising O&M costs by analyzing multiple approaches to re-architecting the current system to optimize performance and gain efficiencies. The current biometric identity-matching system has grown and continues to increase in scale because each new traveler to the United States must provide fingerprints as a condition of entry. US-VISIT projects the IDENT fingerprint gallery (the fingerprint images available to the matchers) will continue to grow beyond the projected number of identities and will reach a critical point of diminishing capability. Likewise, ADIS will be facing scalability challenges as system requirements continue to grow into the future. The challenges will be significant as they will create constraints on functional growth, the ability to meet customer needs, and cost.

Current approaches to scaling the IDENT system require costly modification to the entire system each time an enhancement is needed, involve costly proprietary components, and incur large and increasing costs for support hardware and O&M that are not sustainable. Cost growth is attributable to the current approach to adding system scale, requiring the continuous acquisition and maintenance of servers and fingerprint matchers to keep pace with transactional and storage size growth. Each time system scale is added, there is a need for development support to accommodate new requirements and additional data center space to accommodate more IT infrastructure. This scenario will increasingly prevent further investment in innovation and efficiency, as investment dollars will be consumed by O&M at an increasing rate each year, especially as the size and speed of these systems are scaled up.

To mitigate this impact, US-VISIT plans to leverage a modernized, “building block” architecture to evaluate and integrate the newest technologies while planning for the implementation of future technologies. US-VISIT will also determine the capability gap between today’s architecture and the architecture required to support future operational requirements as well as customer service agreements. The vision for US-VISIT 1.0 potential solutions and enhancements will be based on US-VISIT’s mission, effectiveness, and suitability requirements. US-VISIT 1.0 will enable the program to fulfill its mission and requirements for effectiveness and suitability going forward. US-VISIT 1.0 represents a major effort to ensure

that US-VISIT can continue to meet growing and evolving biometric and biographic identity services for its customers.

FY 2012 Projected Accomplishments – US-VISIT 1.0

US-VISIT plans to initiate solution engineering and planning phase activities, including completion of operational requirements, a life cycle cost estimate, an analysis of alternatives, and target architecture validation. US-VISIT will develop a project initiation paper, project mission needs statement, acquisition and capability development plans, and initially identify implementation requirements.

Biometric Air Exit

This request includes the cancellation of \$25.642 million in prior-year funds for biometric air exit. US-VISIT proposes to realign the remaining \$24.358 million from carryover funds to hire the temporary staff to eliminate the existing overstay backlog. US-VISIT has also realigned \$1.6 million of its base budget to the Identity Management and Screening Services function, which will provide the permanent staffing required to review all overstay records as they are identified, once the backlog is eliminated.

Funding the US-VISIT effort will enable the program to screen all overstay records. This will provide immediate operational benefits in detecting and identifying all immigrants who have potentially overstayed their periods of admission.

The proposed funding changes represent a highly effective use of resources, supporting the elimination of the backlog of 1.5 million in-country overstays. This proposal allows for an immediate improvement in that it allows US-VISIT to identify all potential overstays and is a prerequisite for any future biometric exit program.

IV. Program Justification of Changes

**Department of Homeland Security
National Protection and Programs Directorate
US-VISIT
Justification of Program Changes
(Dollars in Thousands)**

Program Increase 1: Identity Management and Screening Services

Strategic Goal(s) & Objective(s): Goal 2.1 Effectively Control U.S. Air, Land, and Sea Borders
Goal 2.2 Safeguard Lawful Trade and Travel
Goal 3.2 Prevent Unlawful Immigration

PPA: US-VISIT

Program Increase: Positions 0 FTE 0 Dollars \$1,600

Funding Profile

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							83	83	\$31,000
Program Increase							0	0	1,600
Total Request	0	0	\$29,017	83	83	\$31,000	83	83	\$32,600

Description of Item

US-VISIT’s identity management and screening services provide biometric identity-management services to DHS, Federal, State, local, tribal, and foreign government stakeholders to improve the identification of known and unknown individuals. By matching biometric records against watchlists that include KSTs, criminals, and immigration violators, US-VISIT enhances DHS’ ability to perform screening, which strengthens national security and facilitates legitimate travel and trade.

Justification

Additional funding will allow the DIG to process all incoming unvetted overstay records.

Impact on Performance

This program increase will enable US-VISIT to screen all new incoming overstay records. This coupled with the request to repurpose \$24.358 million to clear the existing backlog will allow US-VISIT to screen 100 percent of overstay records.

National Protection and Programs Directorate
US-VISIT**

Justification of Program Changes

(Dollars in Thousands)

Program Increase 2: US-VISIT 1.0

Strategic Goal(s) & Objective(s): Goal 2.1 Effectively Control U.S. Air, Land, and Sea Borders
Goal 2.2 Safeguard Lawful Trade and Travel
Goal 3.2 Prevent Unlawful Immigration

PPA: US-VISIT

Program Increase: Positions 0 FTE 0 Dollars \$4,869

Funding Profile

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$0
Program Increase							0	0	4,869
Total Request	0	0	\$0	0	0	\$0	0	0	\$4,869

Description of Item

With this initiative, US-VISIT is taking steps toward addressing system performance limitations and rising O&M costs by analyzing multiple approaches to re-architecting the current system to optimize performance and gain efficiencies. US-VISIT projects that the IDENT fingerprint gallery (i.e., the fingerprint images available to the matchers) will continue to grow beyond the projected number of identities and will reach a critical point of diminishing capability. Likewise, ADIS will be facing scalability challenges as the system requirements continue to grow into the future. The challenges will be significant as they will create constraints on functional growth, ability to meet customer needs, and cost.

To mitigate this impact, US-VISIT plans to leverage a modernized, “building block” architecture to evaluate and integrate the newest technologies while planning for the implementation of future technologies. US-VISIT will also determine the capability gap between today’s architecture and the architecture required to support future operational requirements as well as customer service agreements. US-VISIT will proactively address its next-generation architecture and capabilities. The vision for US-VISIT 1.0 potential solutions and enhancements will be based on US-VISIT’s mission, effectiveness, and suitability requirements. These solutions and enhancements will enable the program to fulfill its mission and requirements for effectiveness and suitability going forward. US-VISIT 1.0 represents a major effort to ensure that US-VISIT can continue to meet growing and evolving biometric and biographic identity services for its customers.

Justification

US-VISIT 1.0 responds to the immediate and urgent need for a focused research, development, prototyping, and testing effort to find a way to meet the need for increased capacity and speed in mission systems with much lower acquisition and O&M costs. The requested resources will enable US-VISIT to develop a complete requirements base for fingerprints and other

multibiometric high-speed matching and a model target architecture, and to validate the targeted architecture with specific prototypes. When completed, the requirements will be used to develop a business case and economic analysis.

Impact on Performance

US-VISIT 1.0 will increase the capacity to provide identity-matching services to facilitate travel and trade by handling more transactions with additional biometric modalities more quickly (a goal of uniform service-level agreements of 10 seconds for all transaction types) than US-VISIT is able to accommodate today. US-VISIT anticipates a reduction in server acquisition and maintenance costs, substantially reducing the total cost of ownership of US-VISIT identity services support systems while supporting more transactions to meet existing and new policy requirements. The combination of increased capacity and reduced costs will yield a much lower cost per match than is seen with current systems. US-VISIT 1.0 will allow for more comprehensive searches of the biometric gallery in shorter timeframes than is possible today. In addition, the architecture plan for US-VISIT 1.0 includes hosting both capabilities: - biometric and biographic. The entire gallery will also be subject to every search, in contrast to current segmented searches.

US-VISIT**

Justification of Program Changes

(Dollars in Thousands)

Program Increase 3: Acquisition Workforce

Strategic Goal(s) & Objective(s): Goal 2.1 Effectively Control U.S. Air, Land, and Sea Borders
Goal 2.2 Safeguard Lawful Trade and Travel
Goal 3.2 Prevent Unlawful Immigration

PPA: US-VISIT

Program Increase: Positions 1 FTE 1 Dollars \$138

Funding Profile

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$0
Program Increase							1	1	138
Total Request	0	0	\$0	0	0	\$0	1	1	\$138

Description of Item

Successful acquisition outcomes are the direct result of having the appropriate personnel with the requisite skills managing various aspects of the acquisition process. Between FY 2000 and FY 2008, acquisition spending by civilian agencies increased by 56 percent (in inflation-adjusted dollars). The Department of Homeland Security is working to ensure its major acquisitions are effectively managed to ensure that the Department maximizes the value of every homeland security dollar and that major programs are implemented in the most responsible and efficient manner possible. This includes having disciplined oversight processes and robust acquisition program management teams in place. DHS has assessed the current resident skills against a set of core acquisition management skills: a program manager, a systems engineer, a life cycle logistician, a business/financial manager and a contracting officer's technical representative, and determined that many of our major acquisition programs are deficient in several of these areas.

Justification

The President's March 4, 2009 memorandum on Government Contracting required agencies to improve acquisition practices and performance by maximizing competition and value, minimizing risk, and reviewing the ability of the acquisition workforce to develop, manage, and oversee acquisitions appropriately. Subsequent guidance from the Office of Management and Budget, including memorandum M-09-25 Improving Government Acquisition issued July 29, 2009, and Office of Federal Procurement Policy's Memorandum of October 27, 2009 Acquisition Workforce Development Strategic Plan for Civilian Agencies – FY2010-2014, provided guidance to agencies to strengthen the acquisition workforce and increase the civilian agency workforce by 5 percent to more effectively manage acquisition performance. These funds will help ensure the future programmatic growth requirements for training, recruitment,

and retention activities while helping us to attract and hire qualified members of the acquisition workforce as defined by the Office of Federal Procurement Policy Act.

In support of the administration's emphasis on strengthening the Federal acquisition workforce, US-VISIT requests \$0.138 million to increase its acquisition workforce capacity and capabilities. The increase will mitigate the risks associated with gaps in either capacity or capability of the acquisition workforce and improve its effectiveness. The resources requested for US-VISIT will be used to:

- Increase the capability of the acquisition workforce by investing in training to close identified gaps in such areas as project management, negotiations, requirements development, contract management, and other key topics;
- Increase the effectiveness of the acquisition workforce by investing in improvements to systems that support the contracting function;
- Conduct an assessment of options for creating systems to maintain comprehensive acquisition workforce data and selecting the appropriate system; and
- Increase the effectiveness of the Department's centralized acquisition workforce training program comprised of certification and targeted/continuous learning developmental training opportunities.

Impact on Performance

The FY 2012 funding request will help ensure:

- The future programmatic growth capacity for training, recruitment, and retention activities while attracting and hiring qualified members of the acquisition workforce as defined by the Office of Federal Procurement Policy Act. These funds allow DHS the ability to train, recruit, and retain at acceptable standards.
- The sustainability and availability of information technology systems and equipment in support of acquisition workforce effectiveness or for management solutions to improve acquisition management.

**Department of Homeland Security
National Protection and Programs Directorate
US-VISIT**

Justification of Program Changes

(Dollars in Thousands)

Program Decrease 1: Business Support Services

Strategic Goal(s) & Objective(s): Goal 2.1 Effectively Control U.S. Air, Land, and Sea Borders
Goal 2.2 Safeguard Lawful Trade and Travel
Goal 3.2 Prevent Unlawful Immigration

PPA: US-VISIT

Program Decrease: Positions 0 FTE 0 Dollars -\$1,299

Funding Profile

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							329	316	\$109,137
Program Decrease							0	0	(1,299)
Total Request	212	199	\$118,692	329	316	\$118,692	329	316	\$107,838

Description of Item

Business Support Services are comprised of an array of budget expenditures that are fundamental to US-VISIT’s success. These budget expenditures provide funding for Federal staff for all mission activities, such as systems O&M, identity management and screening services, project support to US-VISIT customers, and program support-based activities. In addition, these services provide resources to achieve mission goals and objectives, enable program planning and servicing, and ensure appropriate strategic and operational activities.

Business Support Services fund recurring costs such as facilities, rent, and the working capital fund. These resources also provide funding for the US-VISIT enterprise architecture and IT security efforts in support of DHS policy direction.

Justification

The FY 2012 President’s Budget provides \$107.8 million for Business Support Services. This includes funds for increased working capital fund costs related to two new office locations, one in the National Capital Region and the other in San Diego, CA. The additional space in the National Capital Region will provide approximately 43,961 square feet of space for US-VISIT’s identity management and screening services along with supporting logistical and IT infrastructures. The San Diego location will provide approximately 11,000 square feet of space to support the BSC West Coast staff. This funding level also realigns funds to Identity Management and Screening Services to provide for the sustainment of unvetted overstay backlog processing.

Impact on Performance

The net program decrease will enable US-VISIT to comply with DHS a policy, existing mandates, and meets customer service-level agreements for providing biometric and biographic identity management services. Other beneficial impacts from this program change are the

upgrading of data center operations, improved systems reliability, and Continuity of Operations Plan capabilities.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
National Protection and Programs Directorate
Justification of Proposed Changes in
United States Visitor and Immigrant Status Indicator Technology
Appropriation Language**

For necessary expenses for the development of the United States Visitor and Immigrant Status Indicator Technology project, as authorized by section 110 of the Illegal Immigration Reform and Immigration Responsible Act of 1996 (8 U.S.C. 1365a), \$302,271,000 to remain available until expended[.]: Provided, that of the funds made available under this heading, \$138,100 shall be for strengthening the capacity and capabilities of the acquisition workforce (as defined by the Office of Federal Procurement Policy Act, as amended (41 U.S.C. 401 et seq.)), including the recruitment, hiring, training, and retention of such workforce and information technology in support of acquisition workforce effectiveness or for management solutions to improve acquisition management; Provided further, That of the unobligated balances available under this heading appropriated for biometric air exit programs in prior year appropriations, \$25,642,000 are hereby permanently cancelled; Provided further, That no amounts may be cancelled from amounts that were designated by the Congress as an emergency requirement pursuant to the Concurrent Resolution on the Budget or the Balanced Budget and Emergency Deficit Control Act of 1985, as amended.

Note.—A full-year 2011 appropriation for this account was not enacted at the time the budget was prepared; therefore, this account is operating under a continuing resolution (P.L. 111–242, as amended). The amounts included for 2011 reflect the annualized level provided by the continuing resolution.

PPA Mission Statement

The mission of US-VISIT program is to provide biometric identification through the collection, maintenance, and sharing of biometric information and selected biographic data to authorized DHS, Federal, State, local government and law enforcement agencies, and with other countries through international data sharing agreements in support of the DHS mission. Through its use of biometrics, US-VISIT collects, stores, and shares digital fingerscans and digital photographs for subsequent verification. This biometric information is paired with biographic information used to establish and verify an individual's identity, as well as match that identity against criminal and immigration violator watchlist. US-VISIT analyzes biographic data for identification of potential overstays.

Summary Justification and Explanation of Changes

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Salaries and Benefits	\$26,719	\$53,756	\$53,894	\$138

The salaries and benefits request includes funding of \$53,894,000 for 413 FTPs and 400 FTEs, which includes employment and medical benefits and other mandatory personnel entitlements.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Travel	\$465	\$400	\$255	(\$145)

The travel and transportation of persons request includes funding of \$255,000 for travel and transportation costs of Government employees and other persons, while in an authorized travel status, which are subject to regulations governing travel, and includes incidental travel expenses such as baggage transfer, telephone expenses, and other expenses as authorized.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Transportation of things	\$164	\$155	\$592	\$437

The transportation of things request includes funding of \$592,000 for the care of things while being transported, and includes other related expenses such as freight and express charges, transportation handling, and mail charges for express package services and postage.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
GSA rent	\$4,255	\$4,857	\$4,916	\$59

The rental payments to General Services Agency request includes funding of \$4,916,000 for all payments for rental of office space and rent related services.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Other rent	\$1,925	\$2,800	\$3,823	\$1,023

The rental payments to others include funding of \$3,823,000 for payments to a non-Federal sources for rental space in support of the US-VISIT mission.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Communication, utilities, and other miscellaneous charges	\$288	\$600	\$9,877	\$9,277

The communications, utilities, and miscellaneous charges request includes funding of \$9,877,000 for payments for information technology, utilities, and miscellaneous changes in support of the US-VISIT mission such as hardware, software, data storage, transmission, and related services.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Printing and reproduction	\$0	\$0	\$304	\$304

The initial request for printing and reproduction funding of \$304,000 for payments to either the Government Printing Office, other agencies, or to commercial printers or photographers.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Advisory and assistance services				
	\$149,824	\$24,000	\$25,112	\$1,112

The advisory and assistance services request includes funding of \$25,112,000 for services acquired by contract from non-Federal sources and other Federal government services for studies, analysis, and evaluations.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Other services				
	\$43,492	\$77,341	\$70,426	(\$6,915)

The other services request includes funding of \$70,426,000 for contractual services with non-Federal sources for program office support, interagency agreements for services.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Purchases of goods and services from Gov't accts				
	\$3,958	\$230	\$14,361	\$14,131

The other purchases of good and services from Government accounts request includes funding of \$14,361,000 for interagency agreements for contractual services for the purchase of goods and services and the expenditure transfers between Federal government accounts for jointly-funded projects.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Operation and maintenance of facilities				
	\$1,167	\$2,200	\$412	(\$1,788)

The operations and maintenance of facilities request includes funding of \$412,000 for the operation and maintenance of facilities done by contract with the private sector or interagency agreement for routine repairs and upkeep.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Operation and maintenance of equipment				
	\$90,254	\$95,000	\$90,545	(\$4,455)

The operation and maintenance of equipment request includes funding of \$90,545,000 for operation, maintenance, repair and storage of equipment done under contract with the private sector or through interagency agreement for information technology systems, license agreements, and other contract based equipment maintenance and operation.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Supplies and materials				
	\$290	\$425	\$353	(\$72)

The supplies and materials request includes funding of \$353,000 for commodities such as office supplies, publications, information technology supplies, and materials such as manuals and data storage media, and toner cartridges for laser printers.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Equipment				
	\$35,322	\$140,212	\$51,759	(\$88,453)

The equipment request includes funding of \$51,759,000 for the purchase of personal property of a durable nature that is expected to have service life of one year or more and includes the initial installation of equipment performed under contract. This request also includes funds for data center mirroring and migration equipment purchases.

K. DHS Balanced Workforce Strategy

In order to establish a high performing workforce comprised of a strong internal core of federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS and US-VISIT is committed to establishing the appropriate mix of in-house and contract skills, experience and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment the Department will realign contractor and/or federal positions as necessary to achieve a balanced workforce. Assessing the workforce allows managers to understand how contract employees are deployed throughout their organization and integrated with Federal employees to better realize the full potential of the total workforce – both contracted and Federal. A strong internal core of Federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for Federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into tiered ranking. The results of Tier 1 contract review are listed below. The results of the lower-priority contracts will post-date this budget submission and will be included in the FY 2013 budget.

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Protective Service

I. Appropriation Overview

A. Mission Statement:

The Federal Protective Service (FPS) is the Federal law enforcement and security agency with the responsibility for the protection of buildings, owned by the General Services Administration (GSA), and the people in them, pursuant to the Secretary's authority in accordance with 40 U.S.C. 1315. FPS executes this mission by providing law enforcement services, management of contract Protective Security Officers (PSOs), and security countermeasure services for approximately 9,000 GSA owned, leased or operated facilities housing 1.1 million occupants.

FPS operations focus on security and law enforcement activities that reduce vulnerability to criminal and terrorist threats, while ensuring facilities are secure and occupants are safe. FPS protects Federal facilities and the employees and visitors within them by providing services such as all hazards-based risk assessments, countermeasures placement, law enforcement response, stakeholder facility security assistance, and emergency and safety education. FPS also partners with Federal agencies to provide additional required security services. FPS employs approximately 1,225 Law Enforcement Officers (LEOs) and non-LEO employees, as well as the services of 13,000 contract Protective Security Officers strategically located throughout the Nation to protect facilities in its purview.

FPS transferred to the National Protection and Programs Directorate (NPPD) in FY 2010 from Immigration and Customs Enforcement (ICE). As the Sector-specific agency for the Government Facilities sector, FPS actively partners with NPPD's Office of Infrastructure Protection to further enhance NPPD's role as the Department's lead for critical infrastructure protection. FPS and NPPD work together on many initiatives, including the National Infrastructure Protection Plan (NIPP)—under which FPS leads the protection activities of the Government Facilities Sector—and the Interagency Security Committee-led establishment of government-wide Federal building security policy.

B. Budget Activities:

Basic Security - The Basic Security services include law enforcement services on federally controlled property, preliminary investigations of incidents, and capture and arrest suspects. This security also includes the 24-hour security alarm monitoring, nationwide dispatch services, facility security assessments, assistance to Facility Security Committees.

Building Specific Security - Building Specific Security is based on security countermeasure requirements specific to a particular building based on a FPS vulnerability assessment. The two components are the contract Protective Security Officers (PSOs) and Security Systems programs. The PSO Services include access control, control center operations, patrol and response,

screening, and visitor processing. The Security Systems program includes the purchase, installation, and maintenance of security equipment, such as cameras, alarms, magnetometers, and x-ray machines. FPS acquires security equipment assets based on their need, as identified through security assessments, and manages standard replacement schedules.

Reimbursable Agency Specific Security, or Security Work Authorizations (SWAs) - FPS enters into SWAs with customer agencies to procure security measures beyond those included within Basic Security and Building Specific Security. The additional security services and contract guards are determined by the operational security needs of the customer agencies (e.g., an additional contract guard and closed circuit television (CCTV) cameras within a U.S. Citizenship and Immigration Services waiting room in a multi-tenant Federal building).

C. Budget Request Summary:

FPS requests 1,371 positions/FTE and \$1,261,537,000 for the FY 2012 President's Budget.¹

¹ The decision was made to reflect increased offsetting collections authority in the Congressional Budget Justification after the Budget Appendix was published. The increase will be updated during Mid-Session Review.

*FY 2010 actual includes carry forward, revenue, and prior year recoveries allocated during the year.

FPS requests \$247,478,000 in FY 2012 Basic Security offsetting collections for ongoing operations.

CURRENT SERVICES PROGRAM DESCRIPTION:

Basic Security

Basic Security enables FPS to provide law enforcement services and security countermeasure services for approximately 9,000 General Services Administration (GSA) owned, leased or operated facilities housing 1.1 million occupants.

Law Enforcement Services

Law Enforcement services enforce laws on Federal property through engagement and appropriate response.

- Investigation. Investigates crimes to identify and prosecute perpetrators, and mitigate vulnerabilities.

FPS criminal investigators conduct criminal, internal misconduct, integrity, and threat investigations related to alleged or suspected criminal violations of Federal laws at GSA facilities as well as administrative investigations. Duties include Criminal Investigations (threat & criminal), Joint Terrorism Task Force Assignments or Compliance Cases.

- Response. Responds to, investigates, and documents reports of crime, threats, alarms and suspicious or unusual activities and effect arrests when necessary. Responses may involve the use of K-9, HAZMAT, or other specialized law enforcement capabilities depending on the nature of the call.

Security Services

- Facility Assessments. Assesses facility threats, vulnerabilities and consequences of a successful threat event and recommend countermeasures, such as Protective Security Officers (PSO) and/or Technical Security Equipment, to mitigate risk and potential reoccurrence.

FPS provides a comprehensive Facility Security Assessment (FSA) of GSA facilities. The risk assessment determines the protective posture of the facility based on applicable standards, building or FSC input and funding, and recommends specific countermeasures to mitigate risk. In addition to the normal recurring assessment, there are specialized risk assessments including New Construction / Modernization Assessments, Pre-Lease Assessments, and Special Risk Assessments.

- Security Testing includes measures of the effectiveness (MOE) of the PSO force and other security countermeasures.
- FPS Law Enforcement Security Officers (LESOs) provide technical assistance to protected facilities in developing and testing their Occupant Emergency Plans (OEP). OEP assistance includes: needs analysis, planning and coordination, monitoring the OEP exercise, and after action report.

Taken together, these services form a portion of the foundation for FPS' efforts to meet the Secretary's statutory obligations to protect the people, buildings, grounds, and property that are owned, occupied, or secured by the Federal Government.

In order to provide the above services, FPS collects a Basic Security Fee from customer agencies based on the number of square feet an agency occupies. For FY 2012, FPS requests a Basic Security Fee increase of \$0.08 per square foot, from \$0.66 per square foot to \$0.74 per square foot, in order to recover the costs associated with maintaining an additional 146 positions/FTE.

Program Performance Justification**
(Dollars in Thousands)

PPA: Building Specific Security

	Perm. Pos	FTE	Amount
2010 Actual	-	-	425,132
2011 C.R.	-	-	420,000
2012 Adjustments-to-Base	-	-	81,039
2012 Current Services	-	-	501,039
2012 Program Change	-	-	-
2012 Total Request	-	-	501,039

FPS requests \$501,039,000 in FY 2012 offsetting collections authority for ongoing Building Specific operations. This request includes \$81,039,000 as a technical adjustment to increase offsetting collections authority.

CURRENT SERVICES PROGRAM DESCRIPTION:

Building Specific Security

Building Specific Security, consisting of Protective Security Officer (PSO) services and Technical Countermeasures, is based on security countermeasure requirements specific to a particular building based on the FPS vulnerability assessment.

Protective Security Officer Services

The contract PSO management services provided by FPS are a key component of the security foundation provided by the agency. The security posts staffed by PSOs are placed at facilities based on individual risk assessments and are charged with minimizing specific vulnerabilities to identified credible threats. This is accomplished through one or more of the following functions provided by PSOs:

- Access Control. Ensures access to secured areas in accordance to access control procedures.
- Facility Control Center Operations. Integrates multiple countermeasures through monitoring of security equipment and facilitating communication with other posts or law enforcement as necessary.

- PSO Patrol and Response. Patrols and monitors the facility for safety, security, and enforcement purposes.
- Screening. Identifies and interdicts unlawful, dangerous, or prohibited items to ensure they do not enter a secured area.
- Visitor Processing. Identifying and documenting visits of individuals with no recurring visits.

To provide these Building Specific services in an effective and efficient manner, FPS monitors and directs PSO operations. The administration and oversight of these activities are funded through the Basic Security Fees. The activities include:

- Develop. Collaborates with facility tenants to compose post orders specific to the facility and post to specify the actions taken by PSOs.
 - **PSO Certifications:** Certifications ensure that the PSO is medically cleared and properly trained to staff the post. This includes the background investigation(s), completion of all required forms, medical evaluation and weapons qualifications, first aid/CPR, and agency specific training.
- Verification and Validation. Incorporates a robust program for FPS to monitor PSO performance and qualifications ensuring compliance with contract requirements.
 - **Post Inspections** of the PSO force ensures that each individual PSO is performing within their company's contractual obligations in support of the overarching FPS mission. Inspections can be announced or unannounced and can occur at any time, ensuring 24/7 contract compliance. Inspections may include: post inspection; verification of certificates; corrective action; preparation of deficiency report; post order development; meetings with vendor, Contracting Officer Technical Representative (COTR), Contracting Officer (CO); and follow-up.
 - **Administrative audits:** A compliance review of the respective PSO contractor's administrative records, including training certifications, licenses, permits, personnel files, and other business-related deliverables required by the contract. FPS conducts administrative audits monthly, or more frequently as stipulated in the contract, of each PSO to ensure required licenses, certifications, and documentation are available, complete, and up to date.
 - **Site Inspection.** An on-site assessment of a PSO contractor's space (government or corporate), and the equipment and procedures, including safety and security equipment and procedures, administrative reports, inventories, and other onsite elements required by the contract. FPS

conducts site inspections at a minimum once every quarter or more frequently as needed.

- **Annual Performance Evaluation.** The use of the findings from the post, site, and administrative audits to complete the Contractor Performance Report Standard Evaluation form in accordance with current DHS and component policy.

Countermeasure Services

Technical Security Equipment countermeasures allow FPS to provide an integrated and cost effective level of protection. FPS achieves this through its national countermeasures program which includes design, implementation and oversight as well as collaborative efforts with Federal partners, such as DHS Science and Technology and Transportation Security Administration. To provide these services in an effective and efficient manner, FPS implementation strategy includes:

- Technical Security Program Manager (TSPM). The TSPM is responsible for administering the regional program for countermeasure implementation and maintenance and for providing technical expertise in initiation and leading projects involving the evaluation of related security programs and operations.
- Planning. FPS will interact with all parties to ensure that required security measures are fully integrated into the configuration of the site and/or building design
- Design. FPS will identify the highest scored risk(s) associated with the site and/or facility and recommend design strategies to be integrated into and implemented during construction or build out of space and collaborates with facility tenants to address building specific needs and requirements.
- Implementation. FPS is responsible for ensuring that each individual countermeasure is implemented and installed to effectively and efficiently mitigate the FSA identified threat.
- Verification and Validation. FPS is responsible for the testing and oversight of recommended countermeasures. Before any countermeasure is accepted it must be tested to ensure that it meets the operational specifications as determined by FPS. FPS will provide project oversight and tests the specific countermeasure to ensure operational compliance within the required standards to include MOE testing after installation.
- Contract Officer's Technical Representative (COTR). Monitors contractor activities and levels of service provided.

Offsetting Collections Authority

In FY 2012 FPS requests \$81,039,000 as a technical adjustment to increase offsetting collections authority. This increase is requested to address contract security cost escalation related to increased requests for service, labor rate adjustments that were either

projected or exceeded, and collective bargaining-related cost increases. FPS requires additional offsetting collections authority to provide the countermeasures identified during the Facility Security Assessment (FSA) cycle.

Without an increase in offsetting collections authority, FPS will be unable to provide all security services FPS is requested to provide. While requests for security services and the cost of those services have increased over the last three years, FPS has not requested a change in offsetting collections authority. Because the requested offsetting collections authority can only be used to provide security services and support, if estimated contract requirements are less than the authority requested, any unused authority will automatically expire at the end of the fiscal year.

**Department of Homeland Security
National Protection & Programs Directorate
Federal Protective Service
Reimbursable Agency Specific Security
Program Performance Justification**
(Dollars in Thousands)

PPA: Reimbursable Agency Specific Security

	Perm. Pos	FTE	Amount
2010 Actual	-	-	401,865
2011 C.R.	-	-	475,000
2012 Adjustments-to-Base	-	-	38,020
2012 Current Services	-	-	513,020
2012 Program Change	-	-	-
2012 Total Request	-	-	513,020

FPS requests \$513,020,000 in FY 2012 offsetting collections authority for ongoing Reimbursable Agency Specific Security operations. This request includes \$38,020,000 as a technical adjustment to increase offsetting collections authority.

CURRENT SERVICES PROGRAM DESCRIPTION:

Reimbursable Agency Specific Security

FPS enters into Security Work Authorizations (SWA) with customer agencies to procure security measures beyond those included within Basic Security and Building Specific Security. Similar to Building Specific Security, Reimbursable Agency Specific consists of PSO services and Technical Countermeasures, based on security countermeasure requirements specific to a particular tenant in a building as compared to all tenants in a building as is the case with Building Specific.

Offsetting Collections Authority

In FY 2012 FPS requests \$38,020,000 as a technical adjustment to increase offsetting collections authority. Offsetting collections authority requested for Reimbursable Agency Specific Security is used primarily to contract for PSO and Technical Countermeasures, based on security countermeasure requirements specifically requested by a particular tenant. This adjustment will address increased tenant-specific requirements and contract security cost escalation related to increased requests for service, wage rate increases, and collective bargaining-related cost increases.

Without an increase in offsetting collection authority, FPS will be unable to provide all security services approved, requested and funded by the Federal agencies that FPS is responsible to protect. Because the requested offsetting collections authority can only be

used to provide security services and support, if estimated contract requirements are less than the authority requested, any unused authority will automatically expire at the end of the fiscal year.

ACHIEVED AND PLANNED ACCOMPLISHMENTS:

FPS is the Federal law enforcement organization responsible for the protection and security of GSA buildings, and the personnel in those buildings across the Nation. FPS security operations include regular facility security assessments of Federal facilities, nationwide communications, alarm monitoring, and dispatching services, and administration of contract guards within Federal facilities.

FPS is focused on the protection of Federal property as required by section 1315 of Title 40 United States Code and as the sector-specific agency for the National Infrastructure Protection Plan (NIPP). Relying on the work of FPS Law Enforcement Security Officers (Inspectors), the protection focus is driven by the guiding principles of stakeholder service, technical expertise, and organizational excellence. FPS highlights these principles through efficient stakeholder-oriented law enforcement and security services; sound standards, consistent compliance, and innovative techniques; strengthening overall organizational performance and business processes; and continuously enhancing the protection of Federal facilities under a risk-based approach.

The FPS strategic goal, “*Secure Facilities, Safe Occupants,*” continues to focus on the protection of Federal facilities and employees through a comprehensive law enforcement and security program. FPS security operations include regular Federal facility security assessments, nationwide communications, alarm monitoring and dispatching services, and administration of contract guards within Federal facilities.

Below are the achieved and planned accomplishments for FPS. They are achieved collaboratively through the Basic Security, Building Specific, and Reimbursable Agency Specific Security.

Key Accomplishments

FY 2010 FPS accomplishments include:

- FY 2010 FPS Workload included:
 - Executing 1,644 arrests on Federal property;
 - Mitigating 272 weapons violations;
 - Interdicting 707,935 prohibited items/weapons;
 - Responding to 2,296,814 calls for service;
 - Monitoring 1,242 demonstrations and disturbances;
 - Conducting 738 facility security assessments.

- Realigning the mission, workforce, and resources to further strengthen the protection of Federal property through collaborative partnerships and effective communication with stakeholders, efficient stakeholder-oriented law enforcement and security services, and sound security procedures with consistent compliance and innovative techniques through a highly skilled and operationally aligned workforce;

- Providing law enforcement and security services at national security events posing increased threats at or in the vicinity of Federal facilities;
- Ensuring protective and security measures are in accordance with the standards and criteria established by the Interagency Security Committee (ISC), a component of the NPPD's Office of Infrastructure Protection;
- Developing and implementing a capital plan to utilize current balances to modernize FPS infrastructure.

In FY 2011, FPS will:

- Improve the strategic methods used in identifying and reducing actual and potential threats directed at FPS-protected facilities;
- Ensure protective and security measures are in accordance with the standards and criteria established by the Interagency Security Committee (ISC), a component of the NPPD's Office of Infrastructure Protection;
- Continue to refine business practices to ensure full collection of revenue through positive stakeholder interface;
- Continue to implement a capital plan that will result in improved security and customer service.

In FY 2012, FPS will:

- Implement improved strategic methods used to identify and reduce actual and potential threats directed at FPS-protected facilities;
- Establish post inspection requirements by security level and frequency requirements for administrative audits and site inspections;
- Improve oversight and management of the FPS protective security officer force through acquisition strategies and intensive monitoring and coaching;
- Continue to refine business practices to ensure full collection of revenue through positive stakeholder interface.

IV. Justification of Program Changes

**Department of Homeland Security
National Protection & Programs Directorate
Federal Protective Service**

Justification of Program Changes
(Dollars in Thousands)

Program Increase #1: Staffing Increase to Support Transition from ICE to NPPD
PPA: Basic Security
Program Increase: Positions 58 FTE 58 Dollars \$10,081

Funding Profile

	FY 2010 Actual			FY 2011 Continuing Resolution			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level	-	-	-	-	-	-	1,225	1,225	220,000
Program Increase	-	-	-	-	-	-	58	58	10,081
Total Request	1,225	1,199	304,810	1,225	1,225	220,000	1,283	1,283	230,081

Description of Item

For FY 2012, FPS is requesting a total of 58 positions to support the FY 2010 transition from Immigration and Customs Enforcement (ICE) to National Protection & Programs Directorate (NPPD).

Justification

The transfer aligns the FPS mission of Federal facilities infrastructure protection within the NPPD mission of critical infrastructure protection. These positions will enable FPS to continue to receive the headquarters services previously provided by ICE. The transfer of FPS to NPPD provides DHS with a single component responsible for establishing and ensuring compliance with a comprehensive infrastructure security program. NPPD chairs the operations of the Interagency Security Committee, a group that includes the physical security leads for all major Federal agencies and whose key responsibility is the establishment of Government-wide security policies for Federal facilities. These missions are complementary and mutually supportive, and the alignment resulting from the transfer improves and advances the mission effectiveness of both FPS and NPPD (*Transition Plan, August 2009*). These positions will enable FPS to be fully integrated into NPPD with the necessary support, oversight, and management.

Impact on Performance

The additional positions will enable NPPD to continue to provide the headquarters services previously provided by ICE. These management and administrative support services are critical to insure that the frontline law enforcement and security services can continue uninterrupted.

**Department of Homeland Security
National Protection & Programs Directorate
Federal Protective Service**

Justification of Program Changes
(Dollars in Thousands)

Program Increase #2: Staffing Increase of FPS Law Enforcement Security Officers
PPA: Basic Security
Program Increase: Positions 88 FTE 88 Dollars \$17,397

Funding Profile

	FY 2010 Actual			FY 2011 Continuing Resolution			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level	-	-	-	-	-	-	1,225	1,225	220,000
Program Increase	-	-	-	-	-	-	88	88	17,397
Total Request	1,225	1,199	304,810	1,225	1,225	220,000	1,313	1,313	237,397

Description of Item

For FY 2012, FPS is requesting an additional 88 Law Enforcement Security Officers (LESOs) positions, a 13 percent increase to the LESOs will address the significant challenges that FPS faces with protecting Federal facilities.

Justification

Based on the number of facilities, security posts, security level and size of facilities, and number of current workforce, it was determined that 88 LESOs would help to bring the regions that that have the highest risk-based need in alignment with other regions of similar scope and more evenly distribute the workforce allocation.

The determination for additional LESOs was guided by the National Infrastructure Protection Plan (NIPP) and the Government Facilities Sector-Specific Plan. FPS maximized the effective use of its resources and allocated them where they will have the greatest impact on mitigating risk to Federal facilities and their occupants, with attention focused on high and very-high risk facilities. Based on risk and geographic distribution, the additional workforce needs are based on identified risk consistent with a high concentration of Federal facilities, large populations, and designation as an Urban Area Security Initiative (UASI) city.

Impact on Performance

- *Contract security force performance monitoring* to ensure contract compliance – In FY 2011, the total FPS contract and employee workforce is projected at approximately 13,000. The projected Federal employee to contractor ratio of 1:10 does not provide sufficient capability to assure contractor performance, particularly the 13,000 contract PSOs located at over 9,000 buildings across the nation. The FY 2012 request will result in a Federal employee to contractor ratio of 1:9 which is the optimal ratio. Currently, FPS is developing enhanced tools to successfully track the status of countermeasures to determine whether FPS has mitigated the risk of facilities to the threat of crime or terrorist attack. Specific structured output measures to reduce the risk of contract non-compliance and assure PSOs effectively perform their critical missions include ensuring outcome based program effectiveness measurements are achieved through a robust centrally directed overt and covert testing program.
- *Verifying the status of countermeasures* – The current FY 2011 output level coincides with recurring risk assessments on a three or five year interval and provides minimal assurance of the continuous functionality necessary for effective mitigation to occur.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
National Protection & Programs Directorate
Justification of Proposed Changes in Federal Protective Service
Appropriation Language**

The revenues and collections of security fees credited to this account shall be available until expended for necessary expenses related to the protection of federally-owned and leased buildings and for the operations of the Federal Protective Service.

Note.—A full-year 2011 appropriation for this account was not enacted at the time the budget was prepared; therefore, this account is operating under a continuing resolution (P.L. 111–242, as amended). The amounts included for 2011 reflect the annualized level provided by the continuing resolution.

PPA Mission Statement

The Basic Security services include law enforcement services on federally controlled property, preliminary investigations of incidents, and capture and arrest suspects. This security also includes the 24-hour security alarm monitoring, nationwide dispatch services, facility security assessments, assistance to Facility Security Committees. FPS estimates revenue and expenditures for Basic Security to total \$247 million in FY 2012.

Summary Justification and Explanation of Changes

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Salaries and Benefits	\$152,697	\$152,697	\$180,175	\$27,478

Salaries and Benefits includes costs for the additional 146 FTEs.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Travel	\$8,294	\$1,365	\$1,365	\$0

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Transportation of Things	\$13,401	\$1,011	\$1,640	\$629

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
GSA rent	\$22,351	\$26,895	\$27,917	\$1,022

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Other Rent	\$6,749	\$722	\$722	\$0

Other rent includes all payments to a non-Federal source for rental space, land, and structures.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Communication, Utilities, and miscellaneous charges	\$8,192	\$1,090	\$2,090	\$1,000

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Printing	\$240	\$250	\$250	\$0

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Advisory and Assistance Services	\$31,548	\$12,534	\$9,038	(\$3,496)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Other Services	\$25,285	\$15,603	\$12,610	(\$2,993)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Purchase from Government Accounts	\$1,257	\$460	\$465	\$5

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Operation & maintenance of facilities	\$54	\$558	\$558	\$0

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Medical Care	\$89	\$12	\$12	\$0

Medical care includes payments to contracts for medical services, but excludes contracts with individuals who are reportable under OPM regulations as federal employees or payments to compensate casual workers and patient help.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Operation & Maintenance of equipment	\$17,489	\$1,539	\$8,168	\$6,629

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Subsistence & Support of Persons	\$3	\$0	\$0	\$0

Subsistence & Support of Persons includes costs for contractual services with the public or another Federal government account for the board, lodging, and care of persons, including prisoners.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Supplies & materials	\$4,358	\$931	\$931	\$0

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Equipment	\$11,023	\$4,289	\$1,493	(\$2,796)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Land & Structures	\$32	\$0	\$0	\$0

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural (or resource) improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease.

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change
Indemnity	\$44	\$44	\$44	\$0

Insurance claims and indemnities includes all benefit payments from the social insurance and Federal retirement trust funds and payments for losses and claims including those under the Equal Access to Justice Act.

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change
Unvouchered	\$1,704	\$0	\$0	\$0

Unvouchered includes expenditures made lawfully for confidential purposes, including authorized payments made by law enforcement personnel to informants, which are not subject to detailed vouchering or reporting.

PPA Mission Statement

Building Specific Security is based on security countermeasure requirements specific to a particular building based on a FPS vulnerability assessment. The two components are the contract Protective Security Officers (PSOs) and Security Systems programs. The PSO Services include access control, control center operations, patrol and response, screening, and visitor processing. The Security Systems program includes the purchase, installation, and maintenance of security equipment, such as cameras, alarms, magnetometers, and x-ray machines. FPS acquires security equipment assets based on their need, as identified through security assessments, and manages standard replacement schedules. FPS estimates revenue and expenditures for Building Security to total \$501 million in FY 2012.

Summary Justification and Explanation of Changes

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change

Travel \$88 \$88 \$88 \$0

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations.

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change

Transportation of Things \$469 \$469 \$469 \$0

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things.

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change

Communication, Utilities, and miscellaneous charges \$372 \$372 \$372 \$0

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services.

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change

Advisory and Assistance Services \$395 \$395 \$395 \$0

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government.

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change

Other Services \$414,992 \$409,860 \$490,899 \$81,039

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25.

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change

Operation & maintenance of facilities \$90 \$90 \$90 \$0

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account.

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change

Operation & Maintenance of equipment \$1,071 \$1,071 \$1,071 \$0

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account.

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change
Supplies & materials	\$177	\$177	\$177	\$0

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency.

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change
Equipment	\$7,461	\$7,461	\$7,461	\$0

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract.

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change
Indemnity	\$17	\$17	\$17	\$0

Insurance claims and indemnities includes all benefit payments from the social insurance and Federal retirement trust funds and payments for losses and claims including those under the Equal Access to Justice Act.

PPA Mission Statement

Reimbursable Agency Specific Security, or Security Work Authorizations (SWAs) - FPS enters into SWAs with customer agencies to procure security measures beyond those included within Basic Security and Building Specific Security. FPS does not request authority for these collections because the additional security services and contract guards are determined by the operational security needs of the customer agencies (e.g., an additional contract guard and closed circuit television (CCTV) cameras within a U.S. Citizenship and Immigration Services waiting room in a multi-tenant Federal building). FPS estimates revenue and expenditures for SWAs to total \$513 million in FY2012.

Summary Justification and Explanation of Changes

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
	\$1,618	\$1,618	\$1,618	\$0

Reimbursable Agency Specific Security, or Security Work Authorizations (SWAs) includes Salaries and Benefits costs for non-recurring services.

BUDGET REQUEST AND SUPPORTING INFORMATION

Office of Health Affairs (OHA) Office of Health Affairs Appropriation

I. Appropriation Overview

A. Mission Statement for Office of Health Affairs:

The Office of Health Affairs (OHA) provides health and medical expertise in support of the DHS mission to prepare for, respond to, and recover from all threats. OHA's responsibilities include: serving as the principal advisor to the Secretary and FEMA Administrator on medical and public health issues; leading and coordinating biological and chemical defense activities; providing medical and scientific expertise to support DHS preparedness and response efforts; and leading the Department's workforce health and medical oversight activities. OHA also serves as the primary DHS point of contact for State and local governments on medical and public health issues.

OHA has four strategic goals that coincide with the strategic goals of the Department:

- 1) Provide expert health and medical advice to DHS leadership
- 2) Build national resilience against health incidents
- 3) Enhance national and DHS medical first responder capabilities
- 4) Protect the DHS workforce against health threats

B. Budget Activities:

The Office of Health Affairs budget is divided into five Program, Project and Activity (PPAs) areas:

BioWatch Program:

The BioWatch Program promotes the DHS mission of detection of biological attacks by managing an early warning system designed to rapidly detect aerosolized biological threat agents that could be used in an intentional release causing harm to the population. This program deploys collection devices and analytical capability in more than thirty high-risk metropolitan areas throughout the nation. The BioWatch Program provides public health experts with a warning of a biological agent release before exposed individuals develop symptoms of illness. This "detect-to-treat" approach provides public health officials with an opportunity to respond aggressively to eliminate or substantially mitigate the potentially catastrophic impact on the population of a biological agent release.

Chemical Defense Program (CDP):

The Chemical Defense Program (CDP) provides health and medical expertise related to chemical preparedness, detection, response, and resilience to provide a comprehensive approach to protection from a chemical attack. Technologies and operations already employed at the Federal, State and local level will be leveraged to create a comprehensive chemical defense framework. The chemical defense framework will define the complimentary relationships of many on-going, but currently separate efforts to create synergistic capabilities and efficiencies. This framework will integrate DHS's current capabilities as well as strengthen relationships both horizontally and vertically amongst all Federal, State, local and tribal chemical defense stakeholders.

National Biosurveillance Integration Center (NBIC):

NBIC collaborates with Federal, State, and local partners to collect, analyze, and share human, animal, plant, food, and environmental biosurveillance information from a myriad of monitoring systems. NBIC provides a Biosurveillance Common Operating Picture (BCOP) to senior decision-makers and partner agencies that provide a consistent, integrated picture of biosurveillance situational awareness for DHS and its partners.

Planning and Coordination (P&C)

Planning and Coordination is comprised of initiatives that primarily support Mission 5 of the Quadrennial Homeland Security Review (QHSR): Ensuring Resilience to Disasters. The four initiatives included within this PPA are: Planning and Exercise Support; Food, Agriculture, Veterinary Defense (FAVD); State and Local Coordination; and, Workforce Health & Medical Support. These initiatives support this mission through a variety of activities directed both externally to Federal, State, and local stakeholders and internally within the Department.

Initiatives within the P&C PPA build resilience by providing appropriate information, resources and guidance to help State and local communities bolster efforts to prepare for and respond to catastrophic health threats. In addition, through these initiatives, OHA provides health and medical expertise for planning at all levels and supports exercises designed to improve preparedness and response to catastrophic health incidents.

Initiatives within Planning & Coordination not only support Federal, State, and local partners, but also focus on building resilience within the Department. These initiatives work to protect the DHS workforce against health threats through implementing activities designed to promote employee resilience. Initiatives include the development of medical guidance for DHS personnel, the provision of standards and guidelines to DHS medical care providers, and the oversight of DHS quality improvement and medical training.

Salaries and Expenses (S&E)

The Salaries and Expenses PPA funds the salaries and benefits for all FTE within OHA and the activities of the Office of the Assistant Secretary (OAS). OAS supports OHA's mission by providing executive direction and leadership to all divisions and branches and ensures OHA's critical mission can be accomplished efficiently and effectively through policy coordination, communications, external relations, strategic planning, and correspondence management. OAS also provides for the management of all relevant business operations including financial management, program analysis, facilities maintenance and planning, continuity of operations planning, human capital management, and information technology support.

In addition, S&E funds OHA's share of the DHS Working Capital Fund, office supplies, training for the entire Organization, travel for senior management, and other shared services.

C. Budget Request Summary:

OHA requests \$160.949 million, 126 full-time positions (FTP) and 118 full-time equivalents (FTE). This is an increase of \$21,698 from the annualized FY 2011 Continuing Resolution amount; whereas, in comparison to the FY 2011 President's Budget Request, a decrease of \$51,785. Funding requested provides for Gen 3 funding, the *DHSTogether* Program and additional FTE for the Acquisition Workforce Initiative.

III. Current Services Program Description by PPA

Department of Homeland Security
Office of Health Affairs
Program Performance Justification
(Dollars in thousands)

PPA: BIOWATCH

	<u>Perm Pos</u>	<u>FTE</u>	<u>Amount</u>
2010 Actual	-	-	\$110,983
2011 C.R.	-	-	\$89,513
2012 Adjustments-to-Base	-	-	\$651
2012 Current Services	-	-	\$90,164
2012 Program Change	-	-	\$25,000
2012 Request	-	-	\$115,164

OHA requests \$115.164 million in FY 2012 for the BioWatch Program. Within this amount, \$90.16 million is for the Gen 1/2 system which is currently operating and \$25.0 million is for the Generation-3 (Gen-3) program. The funding requested for the Gen-3 program in FY 2012 will procure the first 30 automated units of the 90-unit Low Rate Initial Production (LRIP) required to support the Operational Test & Evaluation (OT&E) of the production model Gen-3 sensor, conduct regression testing as appropriate, plan for four operational tests in 4 cities; conduct the first of four operational tests, and begin the development of local concept of automated operations for all BioWatch cities. The request for the Gen 1/2 system will continue current operations in all metropolitan areas in which it is presently deployed and operating.

Adjustments-to-Base: If provided full funding under an annualized Continuing Resolution, OHA plans to reallocate funding from other programs to provide for the necessary funding for the BioWatch Program. The FY11 accomplishments and FY12 request are contingent upon OHA's ability to reallocate its funding within its annualized Continuing Resolution level. As such, the net BioWatch Adjustments-to-Base for FY 2012 include increases of \$9.844 million from other programs (reflected throughout the Congressional Justification as "BioWatch Adjustment") and \$1.253 million in non-pay inflation. Decreases to the base include \$1.586 million in the Administrative Savings Initiative; \$2.081 million due to the realignment of BioWatch Exercises to P&C; \$6.216 million of non-recur costs; and, \$563,000 in efficiency reviews.

CURRENT SERVICES PROGRAM DESCRIPTION:

The BioWatch Program is the only federally-managed, locally-operated, nationwide biosurveillance system designed to detect the intentional release of select aerosolized biological agents. The program has operated in more than 30 high-threat metropolitan areas across the country since early 2003. BioWatch protects millions of people by focusing on early detection of a biological attack which is critical to the successful treatment of affected populations. The BioWatch Program also provides public health decision makers earlier information and therefore more time in responding, mitigating, and recovering from a bioterrorist event. BioWatch is the only program that exercises and evaluates our national collective abilities to provide a detect-to-warn notification system alerting the U.S. civilian population to an aerosolized biological attack. While OHA oversees, coordinates and provides technical support to the BioWatch Program at the Federal level, State and local public health authorities manage the program day-to-day. These State and local stakeholders use the information generated by the detection system as an important tool in deciding whether a biological event of public health significance has occurred.

This request includes funding for current BioWatch operations, as well as funding to begin operational testing and evaluation (OT&E) of the Gen-3 system. The request builds on past funding for the Gen-3 by continuing crucial testing and evaluation activities needed to deploy faster sensors. The Gen-3 system will advance current detection technology by providing an automated detection capability. Current detection capabilities, termed Gen-1/2, consist of outdoor aerosol collectors whose filters are manually retrieved for transport to and subsequent analysis in a Laboratory Response Network (LRN) facility. This system, while extremely beneficial, is labor intensive and the results may not be available until 12-36 hours after the release of a biological agent has occurred. In addition, this detection delay is unacceptable for indoor collector use because response actions following notification of an attack 36 hours earlier is very problematic. The transition to an automated detection system (i.e., Gen-3) will improve the time to detect to 4-6 hours, increase population coverage, and provide greater overall cost effectiveness.

The BioWatch Program's Gen-3 detection capability will be a fully autonomous and networked biodetection system whose function mirrors that of the Gen-1/2 system, namely, to monitor the air for agents of biological concern. However, unlike the Gen-1/2 system, Gen-3 is a "laboratory-in-a-box." Sample collection, preparation, analysis, reporting, archiving, self-assessment, failure analysis, waste handling and fault isolation all occur inside the sensor. As a result, the Gen-3 system does not use the labor-intensive collection and transport of samples for laboratory analysis required with the Gen-1/2 system.

With the availability of Gen-3 technology, DHS intends to deploy Gen-3 sensors nationwide. Based on risk, the BioWatch Program's coverage could be expanded to increase the percentage of the population covered within existing BioWatch jurisdictions and expand to approximately 50 jurisdictions and about 60 critical facilities nationwide by the end of FY 2017.

In addition to BioWatch Program activities, the budget request transfers the Integrated Consortium of Laboratory Networks (ICLN) from the DHS Science and Technology Directorate (S&T) to OHA. The ICLN was developed by S&T to support the national response. The ICLN improves the national sample analysis capability and capacity by providing a coordinated sample analysis capability contained in laboratories for which the primary mission may not involve support following a biological incident.

Key Accomplishments

Significant FY 2010 accomplishments include:

- Maintained Gen-1/2 capability in more than 30 BioWatch jurisdictions nationwide and supported National Security Special Events (NSSEs)
- Signed a memorandum of understanding with the Department of Defense (DOD) Installation Protection Program that will facilitate greater cooperation and coordination between DHS-OHA BioWatch and DOD environmental surveillance programs and coordinated response.
- Initiated a process improvement project to strengthen quality assurance and quality control (QA/QC) activities across the BioWatch Program.
- Initiated the evaluation of assays and characterization of the detection systems proposed by the vendors selected by OHA to enter the Gen-3 Phase I acquisition activity.
- Planned for and started site preparation work in support of the Field Test which will take place in one BioWatch city to begin during the second quarter of FY 2011.
- Awarded Gen-3 Phase I Task Order #2 to one vendor for 12 biodetection units for the reliability, availability, maintainability (RAM) Field Test and associated support and planned and completed site preparation work in support of the Gen-3 Field Test scheduled to begin in one BioWatch jurisdiction during the second quarter of FY 2011.

- Held the 7th Annual National BioWatch Workshop with a record attendance of nearly 600 participants from the private sector and Federal, State and local agencies from across the nation.
- In response to recommendations from the National Academy of Sciences (NAS) Report: *BioWatch and Public Health Surveillance: Evaluating Systems for the Early Detection of Biological Threat*, the BioWatch Program published the updated and multiagency approved document “*BioWatch Outdoor Program Guidance Document for BioWatch Jurisdictions*” which will facilitate State and local planning for and response to a BioWatch Actionable Result (BAR).

Significant FY 2011 planned accomplishments include:

- Maintain the BioWatch Program’s Gen-1/2 capability in more than 30 BioWatch jurisdictions nationwide and continue to support NSSEs.
- Develop the BioWatch Program’s Concept of Operations (CONOPS) for outdoor and indoor BioWatch Actionable Response (BAR) responses that include Incident Actions Plans.
- Maintain a robust quality assurance and quality control (QA/QC) program for Gen-1/2 activities.
- Complete reports relating to the evaluation of assays and characterization of the detection systems proposed by the vendors selected by OHA to enter the Gen-3 Phase I acquisition activity.
- Complete the Gen-3 Field Test and all associated reports written by the Independent Test Activity.
- Transition to use the Department of Defense (DOD) reagents in cooperation with the CDC, DOD and BioWatch jurisdictions.
- Integrate the BioWatch Program’s surveillance and exercise activities with the DOD Installation Protection Program (Guardian program).
- Deliver initial Gen-3 operational assessment by the Operational Test Agency.
- Integrate Veterinary surveillance activities and expertise into BioWatch Advisory Committees to improve situational awareness.
- In response to recommendations from the National Academy of Sciences (NAS) Report: *BioWatch and Public Health Surveillance: Evaluating Systems for the Early Detection of Biological Threat*, the BioWatch Program will implement the first expansion phase of its jurisdictional support network so that each current BioWatch jurisdiction has assistance planning for and response to a BioWatch Actionable Result.

Significant FY 2012 planned accomplishments include:

- Maintain the BioWatch Program’s Gen-1/2 capability in more than 30 jurisdictions nationwide and continue to support NSSEs.
- Maintain a robust quality assurance and quality control (QA/QC) program for Gen-1/2 activities.
- Begin deployment preparations for the four-city Operational Test & Evaluation (OT&E).
- Conduct the first of four OT&E tests in Chicago.
- Procure the first 30 units of the 90-unit Low Rate Initial Production (LRIP) and provide the deployment and logistical support to conduct the Gen-3 Operational Test and Evaluation (OT&E) in the first BioWatch city.
- Complete the BioWatch Program’s indoor and outdoor jurisdictional guidance for autonomous detection before the start of the Gen-3 OT&E; begin the development of local Concept of Operations (CONOPS) for non-OT&E BioWatch cities (a long-lead activity).
- Begin the second expansion phase of the BioWatch jurisdictional coordinator support network so that new BioWatch jurisdictions have technical support and assistance planning for and response to a BioWatch Actionable Result.

- Initiate development of the Gen-3 Quality Assurance Program Plan and evaluate options for implementation of a robust QA/QC program for Gen-3 activities.
- Complete integration of DOD's installation officials into BioWatch Advisory Committees.

PPA: CHEMICAL DEFENSE PROGRAM

	Perm Pos	FTE	Amount
2010 Actual	-	-	\$3,935
2011 C.R.	-	-	\$2,600
2012 Adjustments-to-Base	-	-	(\$161)
2012 Current Services	-	-	\$2,439
2012 Program Change	-	-	-
2012 Request	-	-	\$2,439

The Chemical Defense Program (CDP) requests \$2.439 million in FY 2012 to provide health and medical expertise related to chemical preparedness, response, and resilience in support of a chemical defense framework to ensure an end-to-end approach to chemical defense.

Adjustments-to-Base: The \$161,000 reduction in Adjustments-to-Base is the net of a \$39,000 increase for non-pay inflation and \$200,000 decrease for the BioWatch Program within the annualized Continuing Resolution level.

CURRENT SERVICES PROGRAM DESCRIPTION:

CDP aims to provide Federal, State, and local governments with the knowledge and tools to build and sustain a viable framework for preparedness and response to high consequence chemical events. As such, the Program has transitioned from a singular focus on the Rapidly Deployable Chemical Defense System (RDCDS) system to one of planning, preparedness, response, and strategic interagency communication in order to comprehensively address the gaps in the chemical defense problem set. In order to reflect the broader mission moving forward and align with the OHA Strategic Framework, OHA proposes to change the name of the PPA from RDCDS to the Chemical Defense Program. Three of the RDCDS detection units are undergoing independent testing to validate efficacy.

The program’s efforts are directed towards integrating risk assessments and detection capabilities into community preparedness, developing response protocols and defining best practices. In addition, the program is focused on assessing the capabilities of commercially available detection equipment so that it can guide communities toward acquiring the most effective technologies to their greatest threats at their most vulnerable sites.

The CDP documents lessons learned and best practices captured during scheduled demonstration projects, which will serve as future guidance for other communities to design chemical detection and defense frameworks tailored to their individual requirements and resource availability. The lessons learned, coordinated with the initiatives of DHS Components and other Federal agencies will be incorporated into the design of the chemical defense framework. Specifically, the future guidance documents from these endeavors will facilitate linking detection technologies to threat, risk and vulnerability assessments, preparedness efforts and rapid response actions that will save lives. As part of the framework design, the Chemical Defense Program is in the process of developing methods to identify requirements and planning response activities in the event of a chemical attack.

Finally, the CDP is working in cooperation with the Transportation Security Administration to develop and implement a chemical detector test and evaluation process that would allow independent testing to chemical detector specifications and support the Transit Security Grant Program.

Key Accomplishments

Significant FY 2010 accomplishments include:

- Established and lead a Chemical Threat Awareness working group (WG) within DHS, composed of Science & Technology (S&T), the Office of Policy, Intelligence and Analysis (I&A) and OHA representatives. The group is coordinating threat information and proposed solutions within DHS to inform policy and planning activities regarding high consequence chemical events.
- In partnership with the Chemical Security Analysis Center, developed a formal arrangement with the American College of Medical Toxicology to ensure their members can have direct input to the 2012 Chemical Terrorism Risk Assessment (CTRA) which will improve its utility.
- With the Department of Health and Human Services (HHS) Biomedical Advanced Research and Development Authority (BARDA), co-led a chemical event mass human decontamination working group, which began to establish new specifications and protocols for large-population decontamination.

Significant FY 2011 planned accomplishments include:

- Continue development and refinement of the chemical defense framework.
- Develop a strategy in partnership with the Baltimore emergency response community and transit authorities for a high consequence chemical event in a transit station by conducting a demonstration project that will:
 - o Link DHS risk assessments to local detection and response needs;
 - o Providing technical assistance for acquisition of chemical detection capabilities for Maryland Transit Administration (MTA) station; and,
 - o Begin testing commercial ground-based chemical detectors.
- Organize and host an interagency Subject Matter Expert symposium on mass human decontamination for chemically exposed victims. Publish a comprehensive literature review with a research gap analysis for mass human decontamination.
- Finalize an interim specification document for sentry system chemical detectors in collaboration with TSA, S&T and standards working groups.
- Complete a feasibility study regarding the benefits of chemical detections in high risk venues.

Significant FY 2012 planned accomplishments include:

- Conduct a comprehensive chemical defense demonstration project in an indoor location that will coordinate detection and response capabilities to develop a national model.
- Continue testing of chemical detection equipment to inform State and local purchasing decisions with DHS grant dollars.
- Begin testing the efficacy of commercial decontamination equipment to also inform grant purchasing decisions.
- Provide further technical resources for State and local first responders to improve preparedness against chemical events.

Department of Homeland Security
Office of Health Affairs
Program Performance Justification
(Dollars in thousands)

PPA: NATIONAL BIOSURVEILLANCE INTEGRATION CENTER

	Perm Pos	FTE	Amount
2010 Actual	-	-	\$13,517
2011 C.R.	-	-	\$13,000
2012 Adjustments-to-Base	-	-	(\$5,986)
2012 Current Services	-	-	\$7,014
2012 Program Change	-	-	-
2012 Request	-	-	\$7,014

The National Biosurveillance Integration Center (NBIC) requests \$7.014 million in FY 2012, which will fund technical support services, information technology operations and improvements, biosurveillance private sector data acquisitions and support coordination efforts with Federal, State, local and tribal governments.

Adjustments-to-Base: The \$5.986 million reduction from the annualized Continuing Resolution level is the net effect of the following items: Decreases of \$5.0 million from the North Carolina Bio-Preparedness Collaborative; \$893,000 in efficiency reviews; and, \$273,000 for the BioWatch adjustment and an increase of \$182,000 for non-pay inflation.

CURRENT SERVICES PROGRAM DESCRIPTION:

National Biosurveillance Integration System (NBIS), the consortium of Federal partners, was established to rapidly identify and monitor biological events of national concern. NBIS collaborates among Federal and State partners to collect, analyze, and share human, animal, plant, food, and environmental biosurveillance information. A primary goal of NBIS is to mitigate the consequences of major biological or disease events.

The mission of NBIS is to promote and coordinate effective and timely information gathering, analysis, and sharing regarding biological events of national concern in order to enhance recognition, reduce response time, and promote effective response.

As the managing partner of NBIS, the NBIC organizes data and information from multiple sources. The NBIS then determines those bio-events that have reached reporting thresholds and publishes reports using the Biosurveillance Common Operating Picture (BCOP) which is being piloted in four States.

In the GAO Report 10-171: *Biosurveillance: Developing a Collaboration Strategy Is Essential to Fostering Interagency Data and Resource Sharing*, GAO recommended NBIC develop a new mission statement and purpose, address challenges of sharing, define roles and responsibilities, develop partner buy-in, and develop relevant performance metrics. In addition, the FY2011 House Appropriations Subcommittee Draft Report stated:

The Committee expects that OHA will either communicate a well formulated strategic plan-complete with milestones-for obtaining a fully functional integration center on or before the FY 2012 budget is submitted to Congress, or that the Department will no longer request funding for this activity.

In response to these reports, OHA is currently reviewing the challenges and opportunities with interested stakeholders in order to enhance and improve the NBIC while successfully meeting the statutory requirements and Congressional intent. NBIC is focused on leveraging proven expertise in data integration and biosurveillance analytics while retaining DHS management. OHA will work with its stakeholders to integrate the four critical dimensions of integrated biosurveillance: collaboration, data integration, analysis, and reporting to produce high-quality and timely results. Rather than a top-down approach, OHA plans to build upon existing and proven constructs to weave together and integrate our nation's biosurveillance system.

Key Accomplishments

Significant FY 2010 accomplishments include:

- Provided 24/7 situational awareness to the interagency and DHS leadership on biological events that could be of national significance.
- In partnership with HHS, the Environmental Protection Agency (EPA), Occupational Safety and Health Administration, and the U.S. Geological Survey, provided daily and weekly reports to the White House Domestic Policy Council, National Operations Center and National Incident Command analyzing the human, animal, and environmental health impacts associated with the Deepwater Horizon Gulf Oil Spill event.
- Initiated a Cooperative Agreement between NBIC and the State of North Carolina under the NCB-Prepared concept to develop a State-level integrated biosurveillance capability.

Significant FY 2011 planned accomplishments include:

- Sign a Memorandum of Agreement with Department of Defense Multi-Agency Collaboration Environment (MACE) to improve data integration and expand the information technology capacity of the NBIS.
- Conduct stakeholder outreach by convening an Institute of Medicine Standing Committee comprised of stakeholders from the biosurveillance community to seek guidance on improving and enhancing current NBIS capabilities.
- Strengthen analytical exchange and depth by establishing regular communication and collaboration with interagency analytic elements such as the Biodefense Knowledge Center (BKC), and the Biodefense Fusion Center.
- Work in conjunction with the DHS Office of Infrastructure Protection to further integrate potential or actual impacts on infrastructure caused by biological events into the NBIS analytic process.
- Expand outreach with private industry partners and integrate a State-customized BCOP with at least four States.

Significant FY 2012 planned accomplishments include:

- Expand State and local outreach to include providing tribal and territorial entities BCOP access.
- Provide access to core NBIC analytical capabilities and reports to more than 50 fusion centers
- Provide enhanced functional capabilities in the following areas:
 - o Decrease the average completion time to distribute an NBIS generated biological event alert to at least 100 members of the NBIS stakeholder community.
 - o Utilize the features of the evolving Homeland Security Information Network (HSIN) to provide access to summary information to additional NBIS members in a secure manner.
 - o Develop a NBIS member identity management architecture that allows for interoperability while meeting security requirements on an attribute basis, ensure privacy and civil liberties, and work across security domains.

Department of Homeland Security
Office of Health Affairs
Program Performance Justification

PPA: PLANNING AND COORDINATION

	Perm Pos	FTE	Amount
2010 Actual	-	-	\$3,721
2011 C.R.	-	-	\$3,726
2012 Adjustments-to-Base	-	-	\$936
2012 Current Services	-	-	\$4,662
2012 Program Change	-	-	\$1,500
2012 Request	-	-	\$6,162

OHA requests \$6.162 million in FY 2012 for the Planning and Coordination PPA. The funding requested in FY 2012 will continue the efforts in the Workforce Health and Medical Support arena and enable OHA to proceed with important work in the Food, Agriculture and Veterinary defense area. The Planning and Exercise branch will now support all exercises within OHA, which are proposed to be transferred from BioWatch. The additional \$1.500 million in program changes will support the *DHSTogether* Initiative which will ensure that Department employees have the tools and resources to manage the stresses inherent in these occupations.

Adjustments-to-Base: The \$936,000 increase from the annualized Continuing Resolution level is the net increase \$2.904 million (\$52,000 to non-pay inflation, \$2.081 million to realign of BioWatch exercises to P&C, and \$771,000 to realign Component Services to P&C) and total decreases \$1.968 million (\$200,000 for administrative savings, \$1.470 million for the BioWatch Adjustment, and \$298,000 for efficiency savings).

CURRENT SERVICES PROGRAM DESCRIPTION:

Planning and Coordination is comprised of initiatives that primarily support QHSR Mission 5: Ensuring Resilience to Disasters. Major initiatives include: Planning and Exercise Support; Food, Agriculture, Veterinary Defense (FAVD); State and Local Coordination; and Workforce Health & Medical Support (WH&MS).

Within this PPA is the Workforce Health & Medical Support (WH&MS) initiative, which leads the Department's workforce health and medical oversight activities.

This initiative ensures medical first responder coordination by providing support to DHS personnel who perform operational medical services. DHS has thousands of medical personnel deployed throughout the country, who provide care for wide-ranging and often remotely deployed personnel, from border agents in the Southwest desert, to DHS aviation personnel engaged in counternarcotics and counter-smuggling operations through the hemisphere. These medical first responders are also directly engaged in the humanitarian rescue of migrants who have fallen victim to varying dangerous conditions in an attempt to enter the United States. OHA supports these personnel through: developing health guidance and policy; providing health protection in dangerous work environments; and, facilitating health screening programs to help ensure that responders are able to support the Department's missions, while minimizing health threats and work-related disability.

The WH&MS initiative also focuses on DHS occupational health by developing strategy, policy, requirements and metrics for the medical aspects of a Department-wide occupational health and safety program. This is done in partnership with the Office of Safety and Environmental Programs within the Office of the Under Secretary for Management. OHA provides health and medical consultation resources to DHS Components on a 24/7

basis. OHA consultation services will ensure regulatory compliance and consistency with industry best practices in support of various component missions with regard to medical, health and safety considerations. The initiative also assists the Department's Office of the Chief Human Capital Officer in developing physical evaluation programs (pre-placement, fitness-for-duty, return-to-work, etc.) and performing post-incident analyses.

Lastly, the initiative ensures medical quality assurance by supporting the "One DHS" concept through: developing cross-DHS emergency medical services (EMS) protocols; credentialing and quality assurance standards; providing quality assurance and medical advice; promoting wellness through a newsletter and an internet-based health information site; and, advising FEMA on safety and environmental health housing issues. Furthermore, the program is creating a credentialing and medical oversight framework.

Key Accomplishments

Significant FY 2010 accomplishments include:

- Developed and began implementation of EMS protocols for DHS operational Components which would allow medical first responders to take the critical actions necessary to save lives in austere or tactical environments.
- Developed workforce health protection and wellness-related materials for use throughout the Department, including policy-based health protection guidelines for situations such as disaster related deployment and international travel.

Significant FY 2011 planned accomplishments include:

- Finalize the process allowing the four currently trained Components to use the electronic patient care reporting system.
- Develop a program throughout DHS to ensure adequate credentialing of medical personnel in within the Component agencies.
- Develop a Quality Assurance Program that will set standards and metrics for measuring quality of care, provide insight into training and certification needs, and reduce the liability risk of the Department.

Significant FY 2012 planned accomplishments include:

- Begin the implementation and oversight of detention facility medical care standards.
- Provide essential occupational medical expertise in partnership with shared stakeholders regarding return to work, fit for duty status for new hires/incumbents and medical surveillance.
- Integrate credentialing and LMS systems to provide real-time credentialing status and data to operational components.

The Food, Agriculture, and Veterinary Defense (FAVD) initiative leads the coordination of the Department's programs to ensure the security of our nation's food, agriculture, human and animal health. FAVD experts support the Department's efforts to enhance preparedness through capabilities development and facilitate the integration of the emergency management services community into Federal, State, local, territorial, and tribal food and agriculture sector disaster preparedness activities.

Significant accomplishments in FY 2010 for FAVD initiative include:

- Developed and deployed the Grants Guidance Tool for Food & Agriculture Sector for all-hazards disaster preparedness and response for State, local, and territorial stakeholders that guides State and

local officials to target their grant requests in developing specific capability against food and agricultural attacks.

- Began deployment of the Food and Agriculture Sector Benchmarking Toolkit, which includes the completion and implementation of the Food and Agriculture Readiness Measurement (FARM) Tool for the food sector. This provides a consistent measurement nationally of agricultural security and food defense for each State.
- Created a Veterinary Workspace on the BioWatch portal to provide better situational awareness against zoonotic diseases.

Significant FY 2011 planned accomplishments include:

- Perform gap analysis specific to FAVD arenas across internal, external and Federal, State, local, and private organizations.
- Coordinate implementation of State response plans for food, and agriculture emergency response using the templates developed by National Association of State Department of Agriculture in cooperation with DHS, HHS, and USDA.
- Continue integrating emergency response planning on the Federal level with States and locals through the Food and Agriculture Regional Exercise (coordinated through the GCC/SCC) and continue implementing the lessons learned from the FY 2010 exercises and the associated After Action Reports.

Significant FY 2012 planned accomplishments include:

- Complete the development of the “Dashboard” and Collaboration Tool on the Office of Management and Budget (OMB) MAX Website. This allows better coordination of food defense and agricultural security Federal capabilities between agencies.
- Develop further capabilities for the Food and Agriculture Benchmarking Toolkit based on initial deployment feedback that will further enhance preparedness at the State and local level.
- Continue coordinating implementation of State response plans for food and agriculture emergency response.

Also within the Planning & Coordination PPA is the Planning and Exercise Support initiative that provides health and medical expertise and advice to Federal planning and policy development both within the Federal interagency and DHS. Additionally, through this initiative the Office develops, influences, and participates in exercises that advance national preparedness and response capability for threats having catastrophic health consequences.

The Planning and Exercise Support initiative significant accomplishments in FY 2010 include:

- Developed the strategy which identifies the baselines capabilities including information, resources, personnel, and expertise necessary for integrating public health information into State and major urban area fusion centers.
- Provided DHS input to evolving National Biodefense preparedness and response policy issues, including bio-notification protocols, alternative means to dispense medical countermeasures following an Anthrax attack and response to the Presidential Executive Order on the provision of MCM following a wide-area aerosol anthrax attack.
- Provided health planning expertise and support to the National Level Exercise (NLE) 2010, an Improvised Nuclear Device scenario.
- Developed and with FEMA co-led the Anthrax Response Exercise Series (ARES), a series of 10 exercises in 10 cities that brought together over 1,000 Federal, State, and local jurisdictional personnel

with expertise to review and train on the immediate response actions following a wide-area aerosol anthrax release.

Significant FY 2011 planned accomplishments include:

- Support the interagency process for development of policies and guidance related to medical readiness for WMD and natural disasters. Collaborate with FEMA on all medical response-related applicable activities.
- Provide health and medical policy development and planning expertise to support all Chemical, Biological, Radiological, Nuclear preparedness and response activities, including a comprehensive approach to Federal and national biodefense preparedness.
- Support regional, State and local jurisdictional preparedness planning and response operations by continuing ARES exercises and developing other CBRN exercises having a medical focus across detect, response and recover spectrum.

Significant FY 2012 planned accomplishments include:

- Provide continued health and medical subject expertise to the Federal strategic, operational and crisis planning process representing homeland security interests in a whole of government approach to preparedness and response planning.
- Support the interagency process for development of policies and guidance related to medical preparedness and response to WMD and natural disasters.
- Provide health and medical expertise to FEMA to develop regional plans, grants strategies, and exercises to improve preparedness of States, locals, and tribes in the medical response.
- Support regional, State and local jurisdictional preparedness planning and response operations by developing and executing CBRN exercises having a medical focus across detect, response and recover spectrum. This includes assuming responsibility for the current BioWatch exercises in order to develop a more consistent approach.

The State and Local Coordination initiative develops State and local guidance for health and medical experts to better access Federal grant and training programs which will improve public health preparedness capability. Additionally, this initiative facilitates the inclusion of State & local public health professionals within the national network of State and Local Fusion Centers which improves the sharing of public health threat information.

Significant accomplishments in the State and Local Coordination initiative in FY 2010 include:

- Conducted user acceptance testing of the web-based CoPASS tool on First Responder.gov website. This tool links Grants, Training and Education opportunities, and public health capability development to promote more informed decision-making by the first responder community.
- Provided recommendations for the Homeland Security Grant Program to ensure health and medical capabilities are incorporated into the grant programs.
- Developed a Health Security Intelligence Enterprise (HSIE) Strategy document, which provides a high-level overview of the initiative, describes the overarching goals, identifies health security stakeholders, and describes plans to identify and develop resources to support health integration efforts within fusion centers
- Developed the Health Security Appendix to the Baseline Capabilities for State and Major Urban Area Fusion Centers, to guide fusion centers in integrating the information, resources, personnel, and expertise of the public health and healthcare community into their analysis and information sharing processes.

Significant FY 2011 planned accomplishments include:

- Continue further deployment of CoMPASS.
- Enhance functionalities and additional case studies to the Grants 101 tutorial for the public health community as well as develop a Standards 101, and Training and Education 101 tutorials.
- Promote partnerships between State Public Health Departments and State and Local Fusion Centers and provide technical assistance to support fusion center health integration efforts.

Significant FY 2012 planned accomplishments include:

- Upgrade and maintain CoMPASS based on user feedback.
- Continue to conduct grants and training analyses for enhanced grants and training funding priority recommendations related to the Public Health and Medical communities.
- Continue to develop mechanisms and resources to improve information sharing between fusion centers and the health community.

Department of Homeland Security
Office of Health Affairs
Program Performance Justification
(Dollars in thousands)

PPA: SALARIES AND EXPENSES

	Perm Pos	FTE	Amount
2010 Actual	84	75	\$27,735
2011 C.R.	104	95	\$30,411
2012 Adjustments-to-Base	14	17	(\$1,469)
2012 Current Services	118	112	\$28,943
2012 Program Change	8	6	\$1,227
2012 Request	126	118	\$30,170

Salaries and Expenses (S&E) requests \$30.170 million in FY 2012, which will fund 126 FTP/118 FTE for the Office of the Health Affairs. This includes annualization of prior year FTE and continuing OHA’s progress in converting contractors to FTE as part of the Balanced Workforce Strategy (BWS).

Adjustments-to-Base: The \$1.469 million reduction from the annualized Continuing Resolution level is the net effect of increases amounting to \$2.850 million and decreases of \$4.319 million. The increases are non-pay inflation of \$425,000, DHS balanced workforce of \$1.386 million, GSA rent of \$39,000 and \$1 million in funds for training, professional development and certifications for personnel. The decreases include administrative savings of \$500,000, non-recurring adjustment of \$2.9 million, realignment of Component Services to P&C of \$771,000, and efficiency savings of \$148,000.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Salaries and Expenses (S&E) PPA funds the salaries and benefits for all FTE within OHA and the activities of the Office of the Assistant Secretary (OAS). The Assistant Secretary and Chief Medical Officer leads a team of doctors, veterinarians, nurses, scientists, public health professionals, and other public servants whose expertise and skills contribute to achieving the Office’s mission. OAS provides executive direction and leadership to all divisions and branches and ensures OHA’s critical mission can be accomplished efficiently and effectively. OAS includes both the Immediate Office of the Assistant Secretary and Chief Medical Officer and the Office of the Chief of Staff.

The Immediate Office of the Assistant Secretary and Chief Medical Officer consists of the Assistant Secretary and Chief Medical Officer, the Deputy Assistant Secretary and Deputy Chief Medical Officer, General Counsel, Medical Advisors, a Futures Advisor, and a Global Health Security Advisor. These individuals advise the Assistant Secretary and Chief Medical Officer on specific, highly complex, strategic medical and public health issues.

The Office of the Chief of Staff consists of the Chief of Staff, Deputy Chief of Staff and the Office’s policy, communications, correspondence, and executive support functions, and the management operations division (finance, human capital, and administrative services).

OHA recently implemented a new training and development program intended to provide employees with training and development opportunities that promote mission effectiveness, support the Office’s Strategic Framework, maximize employee and organizational performance, and acquire, build, and promote a skilled and diverse workforce OHA needs dedicated funding to maintain professional certifications and providing

continuing education for its staff that includes doctors, veterinarians, nurses, scientists, and public health professionals. To support these efforts, an additional funding for training, professional development, and certification for OHA staff which includes doctors, veterinarians, nurses, scientists, and public health professionals is included in OHA's FY 2012 request.

In addition, S&E funds OHA's share of the DHS Working Capital Fund, office supplies, training for the entire Organization, professional development certification and continuing medical education, travel for senior management, and other shared services.

Key Accomplishments

Significant FY 2010 accomplishments include:

- Increased OHA support of State, local, territorial and tribal stakeholders through direct interaction and enhanced coordination with national health, medical, and biodefense organizations.
- Developed, in partnership with the Office of the General Counsel, draft legislation to enhance OHA authorities relating to EMS credentialing, and evaluation of chemical and biological detection technology.
- Created a weekly internal newsletter, OHA Happenings, to inform staff of important events and accomplishments.

Significant FY 2011 planned accomplishments include:

- Enhance the range of services provided to OHA personnel to strengthen the workforce and install additional internal controls to improve program management.
- Establish a Balanced Workforce Strategy (BWS) Working Group and develop an implementation strategy that allows for better planning and execution.
- Develop an OHA Stakeholder Outreach Strategy to guide OHA interactions with, and support of, non-governmental organizations, professional organizations, the private sector and other State, local, tribal, and territorial stakeholders.

Significant FY 2012 planned accomplishments include:

- Continue to meet the hiring deadlines with increased number of new Federal employees.
- Implement Phase III of the BWS through new implementation strategy.
- Build State and local capacity, specifically with BioWatch jurisdictions and public information officers on plans related to crisis response communication to a bio-attack.
- Complete comprehensive office-wide workforce staffing plan.
- Develop curriculum to ensure managers and supervisors have appropriate training.

IV. Program Justification of Changes

**Department of Homeland Security
Office of Health Affairs
Justification of Program Changes
(Dollars in Thousands)**

Program Increase 1: BioWatch Gen-3 Testing

Strategic Goals & Objectives: Preventing Terrorism and Enhancing Security

- o Goal 1.2: Prevent the Unauthorized Acquisition or Use of Chemical, Biological, Radiological, and Nuclear Materials and Capabilities

Ensuring Resilience to Disasters

- o Goal 5.2: Enhance Preparedness

PPA: BioWatch

Program Increase: Positions 0 FTE 0 Dollars \$25,000

Funding Profile

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$90,164
Planned Increase							0	0	25,000
Total Program Increase							0	0	25,000
Total Request	0	0	\$110,983	0	0	\$89,513	0	0	\$115,164

Description of Item

The \$25 million of funding requested in FY 2012 will: procure the first 30 units of the 90-unit Low Rate Initial Production (LRIP) required to support the Operational Test & Evaluation (OT&E) of the Gen-3 system; conduct regression testing as appropriate; plan for four OT&E in separate cities; begin execution of OT&E in one jurisdiction; and, begin the development of local Concept of Operations for all BioWatch jurisdictions.

The \$25M funding is allocated among the following activities:

- \$7M funds the procurement of 30 biodetection units;
- \$6M funds the planning and development activities associated with the Phase II solicitation, namely, Gen-3 Concept of Operations for BioWatch jurisdictions and the indoor and outdoor guidance;
- \$11.8M funds the System Test and Evaluation activities associated with the Operational Test in the first of the four OT&E jurisdictions and the required regression and environmental testing; and,
- \$0.2M funds site preparation and deployment for BioWatch jurisdictions beyond OT&E.

These activities are the continuation of multi-year effort to test, evaluate and ready Gen-3 sensors for use across the nation. If testing goes as planned, OHA estimates Gen-3 sensors could be deployed in FY 2014, providing cities with a much enhanced environmental monitoring capability.

In addition, the BioWatch Program will continue current operations of the Gen-1/2 Program.

Justification

Current detection capabilities, termed Gen-1/2 to reflect the best available and current technology used, consist of outdoor aerosol collectors whose filters are manually retrieved for transport to and subsequent analysis in a Laboratory Response Network (LRN) facility. This system, while extremely beneficial, is labor intensive and the data results may be time-delayed relative to the time of the attack. The new Gen-3 system will significantly reduce the time to detection following a biological aerosol attack. This in turn will provide critical additional time to dispense medical countermeasures to entire cities before people become symptomatic following exposure to a pathogen. If people become symptomatic before receiving medical countermeasures, the death rate may be very high, as is the case for inhalational anthrax. Therefore, the more time available to organize an effective response, the more lives likely to be saved.

Impact on Performance (Relationship of Increase to Strategic Goals)

The BioWatch Program supports the Secretary's goal of ensuring resilience to disasters and/or terrorist attacks by providing the capability to detect bioaerosol terrorist operations. The program also is aligned with the OHA responsibility to lead the Department's biodefense activities. An effective and timely detection capability is critical to achieving this goal.

With the FY 2012 request, the BioWatch Program's Gen-3 system will begin efforts to decrease detection time from 12-36 hours to 4-6 hours, thus allowing localities to rapidly conduct response and mitigation efforts. The FY 2012 request also will allow the BioWatch Program to optimize placement of existing Gen-1/2 collectors, thereby increasing the percentage of the population covered within existing BioWatch jurisdictions, and to begin the deployment of an autonomous detection capability to over 100 critical facilities nationwide while providing greater cost effectiveness.

Current Services Level							0	0	\$0
Program Increase							0	0	1,500
Total Request	0	0	\$0	0	0	\$0	0	0	\$1,500

Description of Item

The \$1.500 million in additional funding will support the *DHSTogether* Employee and Organizational Resilience Initiative to ensure that Department employees have the tools and resources to manage the stresses inherent in these occupations.

Justification

In late 2009, Secretary Napolitano tasked the Office of Health Affairs (OHA) with the creation of an employee resilience and wellness program with guidance from a new leadership level component taskforce. OHA approached this task with a focus on building a strong development team, analyzing existing data to define the program, and reaching out across the Federal government to learn about best practices of the top Federal workplaces.

In January 2010, the new initiative, called “*DHSTogether: Building a more resilient workforce,*” was introduced to employees through a “Safety Stand Down” event and the *DHSTogether* Component Leadership Task Force held their inaugural meeting (*DHSTogether* Task Force).

During the initial training effort, approximately 190,000 employees heard from the Secretary and other Component leaders, watched a video training presentation about resilience, and most notably, participated in facilitated dialogue with supervisors and coworkers about methods to improve the workplace. Feedback from the Safety Stand Down training and dialogues were collected and continue to be incorporated as part of the program’s development.

Moving forward, OHA will utilize an overarching resilience framework that will unify existing activities and provide a platform for leadership and to build a culture of support. Further development of the *DHSTogether*

program to meet the strategic and recommended level of effectiveness will require dedicated funding and resources.

Next Steps:

DHSTogether requires a thorough long-term strategic plan to ensure success and significant and meaningful results. In order to develop this long-term strategic plan, OHA will conduct a comprehensive study as a follow on to the baseline information gathered during the first phase of this initiative. The study will assess current programs within the Department and across the Federal agency with an emphasis on best practices. It will also determine gaps within existing programs and identify resources necessary to meet the initiatives' objectives. Most importantly, the study will focus on the development of a One DHS approach to creating resilience that takes into account the diversity of the workforce and the distinct missions and operations conducted within the Department.

While this study and the development of a five-year Strategic Plan will provide a more comprehensive view of the program, the ongoing work conducted during the past seven months through the DHSTogether Task Force has outlined various immediate actions, including the following items that fall into the four strategic pillars of the initiative: leadership priority, strategic communications, Department-wide training and consistency of policies, procedures and programs.

- DHSTogether will fund a strategic communications plan to inform DHS leadership and employees on resilience issues and initiatives, including interactive education and training materials. Initial communications messages will focus on the resources and tools available to assist employees in handling the stresses and other challenges that come with protecting the nation.
- Funding for this initiative will support training, which will include the development, production and delivery of employee and supervisor training topics to support DHS readiness and employee resiliency, including suicide prevention and risk reduction, resilient leadership, and decision-making under stress. Training will incorporate resilience and suicide prevention concepts into existing mandatory supervisor and Leadership Training Curricula, and will address critical incident stress management (CISM) needs throughout the Department.
- DHSTogether will also fund a contractor-managed individual health risk assessment and management tool. This health risk assessment will allow DHS to better understand the education, support and training needs of our workforce, and how to target needs to the appropriate subgroups. This initiative also incorporates a uniform data collection policy for tracking and measuring resiliency data.
- DHSTogether will fund a comprehensive study to identify and measure the impact of existing departmental policies, procedures and programs that support employee and organizational resilience. The study will catalogue best practices and baseline capabilities through leadership interviews and a well-being index, and recommend actions to improve overall employee resiliency.

Impact on Performance (Relationship of Increase to Strategic Goals)

The program will have a direct impact on the resiliency and wellness of the DHS workforce and provide the resources and information necessary to effectively manage the stress associated with work. The annual planning, production and distribution of resilience training and information on a Department-wide scale will maximize participation and increase the programs ability to effectively improve the resilience of the workforce.

The program intends to develop multiple metrics to gauge performance and effectiveness in improving employee and organizational resiliency. The program also intends to use the Federal Human Capital Survey as an initial indicator of performance as rated by the DHS workforce. Job satisfaction and an overall rating of DHS as an employer will be used for measuring the percentage of employees at or above the satisfied level.

Total Program Increase							4	4	696
Total Request	84	75	\$27,735	104	95	\$30,411	123	118	\$30,170

Description of Item

The Office of Health Affairs is requesting a total program increase of \$696,000 in the Salaries and Expenses PPA for FY 2012 to fund four new FTE’s to support the *DHSTogether* program.

Justification

OHA requests funding with the Planning & Coordination PPA to support a new initiative, called “*DHSTogether: Building a more resilient workforce,*” to ensure Department employees have the tools and resources to manage the stresses inherent in these occupations. Additional funding within the Salaries & Expenses PPA will support the four FTE necessary to lead and execute this important departmental program. One FTE will work to support the initiative’s strategic communications strategy and will ensure a comprehensive communications plan is developed to better inform the DHS workforce on the importance of seeking mental health services while reducing the stigma associated with seeking help. Additionally, two FTE are necessary for development training strategies and requirements including the development, production, and delivery of employee and supervisor training specific to the prevention of employee suicide and risk identification. Lastly, one FTE will work with the *DHSTogether* Task Force to identify and develop consistent policies, procedures and programs that support employee and organizational resilience across the Department. This employee will lead the process to export these policies, procedures, and programs to all DHS components including pilot programs that have been identified by the Task Force.

Impact on Performance (Relationship of Increase to Strategic Goals)

The objective of the *DHSTogether* initiative is to develop a more resilient and productive workforce within DHS through improved and consistent health and wellness resources throughout the Department. The initiative to enhance the DHS workforce supports one of the Department’s principle areas of emphasis in the Quadrennial Homeland Security Review (QHSR): Maturing and Strengthening the Homeland Security Enterprise. Funding for four dedicated FTE will ensure achievement of this objective and proper implementation and execution of this initiative.

Program Increase 4: Acquisition Workforce

Strategic Goal(s) & Objective(s): Not Applicable

PPA: Salaries and Expenses

Program Increase: Positions 4 FTE 2 Dollars \$531

Funding Profile

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	-
Total Program Increase							4	2	531
Total Request							4	2	531

Description of Item

Successful acquisition outcomes are the direct result of having the appropriate personnel with the requisite skills managing various aspects of the acquisition process. Between FY 2000 and FY 2008, acquisition spending by civilian agencies increased by 56% (in inflation-adjusted dollars). The Department of Homeland Security is working to ensure its major acquisitions are effectively managed to ensure that the Department maximizes the value of every homeland security dollar and that major programs are implemented in the most responsible and efficient manner possible. This includes having disciplined oversight processes and robust acquisition program management teams in place. DHS has assessed the current resident skills against a set of core acquisition management skills: a program manager, a systems engineer, a life cycle logistician, a business/financial manager and a contracting officer's technical representative, and determined that many of our major acquisition programs are deficient in several of these areas.

The President's March 4, 2009 memorandum on Government Contracting required agencies to improve acquisition practices and performance by maximizing competition and value, minimizing risk, and reviewing the ability of the acquisition workforce to develop, manage, and oversee acquisitions appropriately. Subsequent guidance from the Office of Management and Budget, including memorandum M-09-25 *Improving Government Acquisition* issued July 29, 2009, and OFPP's Memorandum of October 27, 2009 *Acquisition Workforce Development Strategic Plan for Civilian Agencies- FY2010-2014*, provided guidance to agencies to strengthen the acquisition workforce and increase the civilian agency workforce by 5% to more effectively manage acquisition performance. These funds will help ensure the future programmatic growth requirements for training, recruitment, and retention activities while helping us to attract and hire qualified members of the acquisition workforce as defined by the Office of Federal Procurement Policy Act.

In support of the administration's emphasis on strengthening the Federal acquisition workforce, OHA requests \$531K to increase its acquisition workforce capacity and capabilities. The increase will mitigate the risks

associated with gaps in either capacity or capability of the acquisition workforce and improve its effectiveness. The resources requested for OHA will be used to:

- Increase the capability of the acquisition workforce by investing in training to close identified gaps in such areas as project management, negotiations, requirements development, contract management, and other key topics;
- Increase the effectiveness of the acquisition workforce by investing in improvements to systems that support the contracting function;
- Conduct an assessment of options for creating systems to maintain comprehensive acquisition workforce data and selecting the appropriate system; and
- Increase the effectiveness of the Department's centralized acquisition workforce training program comprised of certification and targeted/continuous learning developmental training opportunities.

Impact on Performance (Relationship of Increase to Strategic Goals)

The FY 2012 funding request will help ensure:

- The future programmatic growth capacity for training, recruitment, and retention activities while attracting and hiring qualified members of the acquisition workforce as defined by the Office of Federal Procurement Policy Act. These funds allow DHS the ability to train, recruit, and retain at acceptable standards.
- The sustainability and availability of information technology systems and equipment in support of acquisition workforce effectiveness or for management solutions to improve acquisition management.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Office of Health Affairs
Justification of Proposed Changes in Appropriation Name
Appropriation Language**

For necessary expenses of the Office of Health Affairs, [\$212,734,217] *\$160,949,000*; of which [\$27,553,000] *\$30,170,000* is for salaries and expenses; [and] *of which [\$185,181,217] \$90,164,000 is for BioWatch operation; and of which \$ 40,615,000 shall remain available until September 30, 2013 for biosurveillance, BioWatch Generation 3, [medical readiness planning,] chemical defense [detection], medical and health planning and coordination, workforce health protection : Provided, That not to exceed \$3,000 shall be for official reception and representation expenses: Provided further, That of the funds made available under this heading \$531,000 shall be for strengthening the capacity and capabilities of the acquisition workforce (as defined by the Office of Federal Procurement Policy Act as amended (41 U.S.C. 401 et seq.,) including the recruitment, hiring, training, and retention of such workforce and information technology in support of acquisition workforce effectiveness or for management solutions to improve acquisition management.*

Explanation of Changes:

The language updates and expands the list of funding uses to include chemical defense (instead of solely chemical detection), medical and health planning and coordination and workforce health protection. This more accurately aligns with the statutory and delegated responsibilities of the Office of Health Affairs.

Furthermore, this language changes the BioWatch Gen 1/2 operations program from two-year funding to annual funding.

PPA Mission Statement

The BioWatch Program promotes the DHS mission of detection of biological attacks by managing an early warning system designed to rapidly detect aerosolized biological threat agents that could be used in an intentional release causing harm to the population. This program deploys collection devices and analytical capability in more than thirty high-risk metropolitan areas throughout the nation. The BioWatch Program provides public health experts with a warning of a biological agent release before exposed individuals develop symptoms of illness. This “detect-to-treat” approach provides public health officials with an opportunity to respond aggressively to eliminate or substantially mitigate the potentially catastrophic impact on the population of a biological agent release.

Summary Justification and Explanation of Changes

	FY 2010	FY 2011	FY 2012	2011 to 2012
	Actual	C.R.	Request	Change
Travel	\$153	\$137	\$265	\$128

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2012 request funding level reflects a change in travel associated for the current deployment of autonomous detectors in all BioWatch jurisdictions.

	FY 2010	FY 2011	FY 2012	2011 to 2012
	Actual	C.R.	Request	Change
Advisory and Assistance Services	\$52,598	\$12,488	\$43,221	\$30,733

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2012 request funding level reflects a commitment by OHA to engage industry experts in advisory and assistance services associated with Systems engineering; Program planning; Consequence Management; Preparedness; Event Reconstruction; IT support; Lab operations; Quality Assurance Program; Field operations; Jurisdictional coordinators; Collector optimization; and Gen-3 Testing, Procurement and Planning.

	FY 2010	FY 2011	FY 2012	2011 to 2012
	Actual	C.R.	Request	Change
Purchase from Government Accounts	\$32,440	\$26,151	\$19,969	(\$6,182)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2012 request funding level reflects changes to some Interagency agreements for: Lab / Vendor QA Program Management; Labor Supplies; Assay Lab Capability Operations & Maintenance; Event Reconstruction; National Special Security Events; Preparedness Guidance and Evaluations; Consequence Management; Deployment siting, modeling and evaluation of risks and benefits; Independent test assessment support; Characterization testing; Assay testing; and Modeling Micrositing & Site Prep for testing and the deployment of new technology.

	FY 2010	FY 2011	FY 2012	2011 to 2012
	Actual	C.R.	Request	Change
Supplies & Materials	\$0	\$0	\$16,503	\$16,503

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2012 request funding level reflects the purchases for supplies and materials associated with reagents and other supplies related to the Gen-1/2 program extension and the efforts to support autonomous detection.

	FY 2010	FY 2011	FY 2012	2011 to 2012
	Actual	C.R.	Request	Change
Equipment	\$0	\$23,000	\$7,083	(\$15,917)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2012 request funding level reflects changes associated with the revised Gen-3 project schedule and associated procurement, production, long lead, deployment, spares, and engineering changes involved with autonomous detectors.

	FY 2010	FY 2011	FY 2012	2011 to 2012
	Actual	C.R.	Request	Change
Grants/Subsidies/Contributions	\$24,984	\$27,000	\$27,386	\$386

Grants/Subsidies/Contributions includes cash payments to States, other federal agencies, associations, individuals, commissions, proceedings, or projects. The FY 2012 request funding level reflects changes associated with funding to jurisdictions through cooperative agreements for deployment and jurisdictional preparation for OT&E of autonomous detectors.

PPA Mission Statement

The National Biosurveillance Integration Center (NBIC) provides early detection, characterization, and situational awareness of biological events of potential national significance. NBIC operates by acquiring, integrating, analyzing, and disseminating biosurveillance information from human, animal, plant and environmental data. NBIC collaborates with federal and state partners to collect, analyze, and share human, animal, plant, food, and environmental biosurveillance information from a myriad of monitoring systems. NBIC provides a Biosurveillance Common Operating Picture (BCOP) to senior decision-makers and partner agencies. The BCOP provides a consistent, integrated picture of biosurveillance situational awareness throughout the country.

Summary Justification and Explanation of Changes

PPA Mission Statement

OHA Chemical Defense Program provides health and medical expertise related to chemical preparedness, response, and resilience in support of a Chemical Defense Architecture to ensure an end-to-end approach to Chemical Defense. In addition, the Chemical Defense Program is working in cooperation with the Transportation Security Administration in developing and implementing a test and evaluation process that would allow independent testing to chemical detector specifications and support the Transit Security Grant Program. As part of the architecture design, the Chemical Defense Program is in the process of developing methods to identify requirements and planning responses activities in the event of a chemical attack.

PPA Mission Statement

The Office of Health Affairs (OHA) serves as the Department of Homeland Security's principal authority for all medical and public health matters. OHA provides medical, public health, and scientific expertise in support of the DHS mission to prepare for, respond to, and recover from all threats. The Salaries and Expenses (S&E) PPA funds all FTEs within OHA. The S&E PPA also provides programmatic funding for the Office of International Affairs and Global Health Security, which oversees the Department's global health security initiatives, including the international aspects of pandemic influenza planning and international lessons learned from public health crises.

In FY2010 and 2011, the S&E PPA also provides programmatic funding for the Office of Component Services, which is responsible for establishing policy, standards, requirements and metrics for the Department's health and safety programs, and provides protective and operational medical oversight, credentialing, and medical quality management across DHS.

Summary Justification and Explanation of Changes

	FY 2010	FY 2011	FY 2012	2011 to 2012
	Actual	C.R.	Request	Change
Salaries and Benefits	12,280	\$15,275	\$17,793	\$2,518

Salaries and Benefits includes costs for 118 FTEs. The FY 2012 request includes funding for salaries and benefits for an additional 23 FTEs.

OC 11.1: The FY 2012 request funding for salaries for the additional 23FTEs.

OC 12.1: The FY 2012 request funding for benefits for the additional 23FTEs..

	FY 2010	FY 2011	FY 2012	2011 to 2012
	Actual	C.R.	Request	Change
Travel	\$228	\$411	\$185	(\$226)

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2012 request funding level takes into account reductions for the Secretary's efficiency review.

	FY 2010	FY 2011	FY 2012	2011 to 2012
	Actual	C.R.	Request	Change
GSA Rent	\$2,448	\$3,000	\$3,689	\$689

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2012 request funds non pay inflation of \$39,000 and changes to Rent due to a different algorithm used for the calculation.

	FY 2010	FY 2011	FY 2012	2011 to 2012

K. DHS Balanced Workforce Strategy

In order to establish a high performing workforce comprised of a strong internal core of Federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement. Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment the Department will realign contractor and/or Federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with Federal employees to better realize the full potential of our total workforce – both contracted and Federal. A strong internal core of Federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for Federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into Tiered ranking. The results of Tier 1 contract review are listed below. The results of the lower-priority contracts will post-date this budget submission and will be included in the FY 2013 budget.

THE OFFICE OF HEALTH AFFAIRS requests \$1.386 million and 8 FTE and 14 FTP for the FY 2012 DHS Balanced Workforce Strategy.

FY 2012 DHS Balanced Workforce Strategy

- During FY 2012, the amount of the contracts that will be terminated or reduced equals approximately \$1.4 million.
- Implementation Timeline – The plan provides sufficient funds to provide some overlap in the year of conversion.

Annualization of FY 2011 DHS Balanced Workforce Strategy

FY 2012 is OHA's second year to implement the Balanced Workforce Strategy.

DHS Balanced Workforce Strategy Follow-On

- Contractor conversions have started in FY 2011 and will continue throughout the fiscal year.

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Emergency Management Agency Management and Administration

I. Appropriation Overview

The 2012 President's Budget provides the level of resources required to support the Agency's ability to fulfill its emergency management mission.

A. Mission Statement for Management, and Administration:

The FEMA Management and Administration (M&A) appropriation provides core mission funding for the development and maintenance of an integrated, nationwide capability to prepare for, mitigate against, respond to, and recover from the consequences of major disasters and emergencies regardless of cause, in partnership with other federal agencies, State, local, and Tribal governments, volunteer organizations, and the private sector. The account supports core operations for all FEMA organizations, providing resources for mission activities and administrative support. M&A resources are directed to both regional and headquarters operations.

B. Budget Activities:

Activities are organized according to the following PPA structure:

- Operating Activities
- National Capital Region Coordination
- Urban Search and Rescue

B.1 Operating Activities

The Operating Activities PPA reflects the essential functions for all of FEMA's major mission organizations and directly supports the Agency's efforts to reduce the loss of life and property and to protect the Nation from all hazards including natural disasters, acts of terrorism, and other man-made disasters. Funding for Operating Activities supports the major functional components of the Agency, including:

The Office of the Administrator, which coordinates all policy and strategic planning, managerial, resource, and administrative actions; oversees programs to increase outreach and public awareness; and builds partnerships with and among State, and local governments, non-governmental organizations, business, and industry to support the emergency management efforts across the Nation. The Office of the Administrator includes the following operating units:

- Office of Chief Counsel
- DHS Center for Faith-Based and Neighborhood Partnerships
- Office of the Executive Secretariat
- Office of Equal Rights
- Office of External Affairs

- International Affairs
- Public Affairs
- Legislative Affairs
- Private Sector Initiatives
- Ready Campaign
- Disability Coordinator
- Law Enforcement Advisor
- National Agency Coordination (NAC)
- Office of Policy and Program Analysis
- Regional Operations

The Office of Response and Recovery (ORR), which provides leadership to build, sustain, and improve the coordination and delivery of support to citizens and State, local, Tribal, and Territorial governments to save lives, reduce suffering, protect property, and recover from all hazards. The ORR includes the following operating units:

- ORR Executive Office
- Response Directorate
- Recovery Directorate
- Logistics Management Directorate
- Office of the Federal Coordination Officer Operations

Preparedness and National Protection (PNP), which works to ensure that the Nation is prepared for disasters of all kinds and reflects FEMA's expanded role in preparedness established by the Post-Katrina Emergency Management Reform Act (PKEMRA) of 2006.

PNP includes the following operating units:

- National Preparedness Directorate (funded through grants programs management and administration funds)
- Grants Programs Directorate (funded through grants programs management and administration funds)
- National Continuity Programs
- National Capital Region Coordination (funded through a separate PPA within the Management and Administration appropriation as noted below)

Federal Insurance and Mitigation Administration, which works to strengthen mitigation nationwide to reduce the Nation's risk to natural disasters or other emergencies, and to facilitate adoption and enforcement of up-to-date design and construction practices through state and local building codes. Mitigation supports activities that result in sound risk management decisions by individuals, private sector, and public-sector entities. Mitigation programs are conducted through three core activities: risk analysis, risk reduction, and insurance against flood risk.

Mission Support Bureau, which provides the corporate infrastructure essential to FEMA's pursuit of an enhanced business approach to achieving results and providing support capabilities

designed and scaled to enhance FEMA's mission success. The Mission Support Bureau includes the following operating units:

- Mission Support Bureau Executive Office
- Office of the Chief Information Officer
- Office of the Chief Financial Officer
- Office of the Chief Procurement Officer
- Office of the Chief Security Officer
- Office of the Chief Component Human Capital Officer
- Office of the Chief Administrative Officer

Operating funding supports these key functions both in headquarters and across FEMA's ten regional offices. *Section III: Current Services Program Description by PPA* provides additional details on the functions of each operational element.

B.2 National Capital Region Coordination (NCRC)

As part of the Preparedness and National Protection Programs, NCRC provides leadership in integrating homeland security activities in the National Capital Region (NCR). NCRC also has a critical role in federal government events (e.g., Presidential Inauguration, State of the Union, etc.), drills, and exercises that occur in the NCR. The work of NCRC and its regional partners often serves as a model for multijurisdictional efforts across the country.

B.3 Urban Search and Rescue

As part of the Office of Response and Recovery, the Urban Search and Rescue National Response System and the Task Forces across the country provide coordinated, national, and all-risk capability for locating, extricating, and stabilizing victims of structural collapse resulting from natural and man-made causes, including those involving terrorism and weapons of mass destruction. The Urban Search and Rescue Task Forces are among the many specialized teams managed by the Response Directorate.

C. Budget Request Summary:

The FY 2012 President's Budget of \$815.099 million reflects FEMA's priority to manage resources more effectively across the Federal Government while ensuring the Nation's resilience from disasters. The Agency has reexamined its current allocation of resources among existing programs to consider the relative return on investment among these activities, and to focus on those programs that have the most significant impact on the Agency's ability to fulfill its emergency management mission. Moreover, FEMA will focus on streamlining current business processes and harnessing the use of innovative technologies. The 2012 President's Budget provides the level of resources required to support the Agency's ability to fulfill its emergency management mission.

FEMA is confident that the FY 2012 Budget Request provides the level of resources required to support the Agency's ability to fulfill its emergency management mission. First, the FY 2012 Budget Request reflects the resources required to support the current level of staffing across the Agency. In recent years, FEMA has added staff to build internal capacity in the following

functional areas:

- Establishing Incident Management Assistance Teams (IMATs)
- Developing National Response Coordination Center and Regional Response Coordination Center 24/7 watch capability
- Increasing operational planning capability
- Strengthening emergency communications through Mobile Emergency Response Support (MERS) and improved public disaster communications
- Enhancing the Agency's disaster recovery and logistics functions
- Building capacity for business support activities including acquisition management, information technology, and financial management

Through these additional resources, FEMA can now respond to disasters and help communities recover more quickly than before. For example, the Agency can now provide IMATs, Urban Search and Rescue (US&R) Teams, and MERS within 12 hours of deployment notification. Moreover, the Agency is now able to fill more than 97.5 percent of orders for life-sustaining commodities (including meals, water, tarps, cots, blankets, etc.) within the required timeframe. In addition, today, the Agency is able to provide more than 94 percent of eligible applicants with temporary housing assistance within 60 days of a disaster. In short, the Agency is making significant progress towards its goal of stabilizing communities impacted by Presidentially declared disasters within 72 hours of the event. The FY 2012 Budget Request reflects the funding to maintain the internal capacity that FEMA has established in recent years.

In addition, the FY 2012 Budget Request provides the resources required to support the Administrator's strategic priorities. The FEMA strategic plan identifies several primary objectives to further FEMA's ability to fulfill its emergency management mandate:

- Foster a community-oriented approach to Emergency Management nationally that strengthens local institutions, assets and social networks to build sustainable and resilient communities;
- Build the Nation's capacity to stabilize a catastrophic event within 72 Hours and restore basic services and community functionality within 60 days thereafter;
- Build unity of effort and common strategic understanding among the Emergency Management team nationally by acting jointly to address our most significant risks; and
- Enhance FEMA's ability to learn and innovate as an organization.

A central element of this strategic direction is the *Whole Community* concept. Using the *Whole Community* concept, FEMA will foster a national approach to emergency management that is built upon a foundation of proactive engagement with neighborhood associations, businesses, schools, faith-based community groups, trade groups, fraternal organizations, and other civic-minded organizations that can mobilize their networks to build community resilience and support local needs in times of catastrophe.

Given the strategic objectives listed above, the FY 2012 Budget Request continues the realignment of resources from within the budget to support expanded emphasis on the Administrator's priority programs. Some of these programs include:

Workforce Enhancement Program (\$3.900 million): FEMA has experienced significant growth and change in recent years, creating challenges with recruitment, engaging our workforce, and supporting our employees as they progress through their careers. In response to the FEMA Administrator directed a priority Workforce Enhancement Initiative (WEI) to improve recruitment, hiring, and developmental initiatives and opportunities of and for employees. One central element of the WEI is the new Employee Readiness program, which will help ensure that the incoming workforce is better prepared to operate in our emergency management mission environment.

Readiness Assessment Program (\$1.700 million): The purpose of the Readiness Assessment Program (RAP) is to enable the FEMA Administrator and leaders of reporting organizations to uniformly determine and accurately report on an overall level of readiness by FEMA to fulfill its disaster response and recovery missions. Funding would support readiness assessments of MERS units as well as National and Regional IMATS, and support internal after-action reporting and lessons learned capability.

The FY 2012 Budget Request reflects a thorough examination of resource allocation across specific programs and activities and reflects FEMA's best efforts to determine where funding for FY 2012 would have the greatest impact. Pending FY 2011 appropriations actions and other outstanding decisions, activity level funding requests could change in execution.

Proposed funding levels for specific PPAs are as followed:

Management and Administration: FEMA requests \$815,099 million, 3,659 positions, and 3,486 FTE.

(1) PPA – Operating Activities: FEMA requests \$780.493 million, 3,630 positions, and 3,459 FTE. Program changes include \$7.2 million for continued data center migration, an increase of \$2.389 million for the acquisition workforce.

(2) PPA – National Capital Region Coordination: FEMA requests \$5.493 million, 21 positions, and 19 FTE.

(3) PPA – Urban Search and Rescue: FEMA requests \$29.113 million, 8 positions, and 8 FTE.

II. Summary of FY 2012 Budget Estimates by Program/Project Activity (PPA)

III. Current Services Program Description by PPA

**Department of Homeland Security
Federal Emergency Management Agency
Management and Administration
Program Performance Justification**

(Dollars in Thousands)

	PPA: Operating Activities		
	Perm. Pos	FTE	Amount
FY 2010 Actuals	4,077	3,791	946,915
FY 2011 C.R.	3,533	3,371	868,255
2012 Adjustments-to-Base	79	79	(64,441)
2012 Current Services	3,612	3,450	803,815
2012 Program Change	18	9	(23,322)
2012 Total Request	3,630	3,459	780,493

FEMA requests \$780.493 million, 3,630 positions, and 3,459 FTE.

CURRENT SERVICES PROGRAM DESCRIPTION

The following activities directly support FEMA’s mission to support our citizens and first responders to ensure that as a nation we work together to build, sustain, and improve our capability to prepare for, protect against, respond to, recover from, and mitigate all hazards.

The Operating Activities PPA also includes the Office of the Administrator and FEMA-wide Administrative Management which: coordinate between HQ and Regional Offices all policy, managerial, resource, and administrative activities; maintain programs to address public information issues; and build partnerships with and among state and local governments, nongovernmental organizations, businesses, and industries.

1) Operations:

A. Office of Response and Recovery:

Office of Response & Recovery Programs FY 2012 Funding Summary
(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
ORR Front Office	25	17	2,519	2,099	4,618
Recovery Programs	624	605	69,527	8,845	78,372
Response Programs	828	817	96,906	55,182	152,088
Logistics Programs	246	222	22,294	5,978	28,272
Federal Coordinating Officers	<u>2</u>	<u>2</u>	<u>191</u>	<u>38</u>	<u>229</u>
Subtotal	1,725	1,663	191,438	72,142	263,580

Mission

The Office of Response and Recovery (ORR) provides leadership to build, sustain, and improve the coordination and delivery of support to citizens and State, local, Tribal and Territorial governments to save lives, reduce suffering, protect property and recover from all hazards. The Recovery Directorate, Response Directorate, Logistics Management Directorate, and the Office of Federal Coordinating Officer Operations report to the ORR. The ORR Office of the Associate Administrator is comprised of the Executive Staff, Executive Communication and Coordination Group, Strategic Integration Group, Readiness and Assessment, and the Disaster Declarations Unit.

ORR Front Office

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
ORR Front Office	25	17	2,519	2,099	4,618

Executive Staff

The Executive Staff is responsible for providing direct support to the ORR Associate Administrator and Deputy Associate Administrator in a number of different areas. This support includes such things as scheduling, long range planning, providing administrative support, preparing reports, conducting research, and integration of subordinate element mission execution.

Executive Communication and Coordination Group (ECCG)

The ECCG enables and supports the execution of ORR and subordinate organization programs through the representation, development, review, communication, and coordination of policies, guidance, strategies, and programmatic activities with internal and external partners and stakeholders. The ECCG External Coordination Section coordinates the responses to and addresses a wide variety of issues and inquiries from sources internal and external to FEMA; carries out administrative, programmatic, analytical, guidance, policy, and outreach activities; and responds to significant and special assignments that have broad national impact. The ECCG Internal Coordination Section communicates and coordinates with ORR stakeholders on broad and emerging policy issues, programs, and guidance that have national scope and impact.

Strategic Integration Group (SIG)

The SIG provides strategic planning and synchronization of activities within the subordinate organizations of the ORR to ensure a coordinated and collaborative resource utilization effort to complement the long-term goals and objectives of the ORR.

The primary functions of the SIG are: to act as a transformation, change, and knowledge management agent; leverage private and public sector best practices where applicable; and coordinate and ensure implementation of those initiatives consistent with the vision and goals of the ORR.

Readiness and Assessment

Readiness and Assessment is responsible for developing and implementing the FEMA Readiness Assessment Program (F-RAP). F-RAP will enable the FEMA Administrator and Agency leaders of reporting organizations to uniformly determine and accurately report an overall level of readiness by FEMA to fulfill its disaster response, recovery, and logistics missions. The program will provide recommendations to leaders about ways to improve the readiness status of their respective response and recovery elements, as well as provide a framework for collecting, analyzing, and applying operational information to improve the Agency's ability to respond to and recover from incidents regardless of their cause. It will provide FEMA leadership with important objective evaluation of FEMA component readiness, efficiency, and effectiveness and provide fact-based information for improved decision-making and resource allocation.

Disaster Declarations Unit

The Declarations Unit is responsible for processing gubernatorial requests for Presidential major disaster or emergency declarations and all other related actions to include appeals, cost-share adjustments, and requests to reopen an incident period or expand the incident type under the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. §§ 5121-5207 (the Stafford Act). The Unit's mission is to ensure that each gubernatorial request is processed as consistently with the Stafford Act and expeditiously as possible.

Linkage to FEMA's Strategic Plan

The Office of the Associate Administrator for Response and Recovery (OAARR) provides strategic level coordination, direction, and oversight to FEMA's major operational components—the Office of Federal Coordinating Officer Operations, Logistics Management Directorate, Response Directorate, and the Recovery Directorate—to insure effective innovation, integration, collaboration, and coordination within the Whole Community for disaster response and recovery.

In addition, the FEMA FY 2011-2014 Strategic Priorities outline four key initiatives that the OAARR has direct lead for, and that relate to ORR major outcomes.

- Foster a community oriented approach to emergency management nationally that strengthens local institutions, assets and social networks to build sustainable and resilient communities
- Build the Nation's capacity to stabilize a catastrophic event within 72 hours and restore basic services and community functionality within 60 days thereafter
- Build unity of effort and common strategic understanding for the emergency management team nationally by jointly identifying and implementing actions to address our most significant risks
- Enhance FEMA's ability to learn and innovate as an organization

Organizational Performance

In FY 2010, FEMA responded to 81 new presidential major disaster declarations; 10 new presidential emergency declarations; and 18 Fire Management Assistance Grants across 41 states, the District of Columbia and two Territories, including the back-to-back severe winter storms and record snowstorms, which impacted most of the United States from January through April; Hurricane Earl, and Tropical Storms Otto and Tomas, which repeatedly pounded the Commonwealth of Puerto Rico and the U.S. Virgin Islands, and record floods in the State of Tennessee while continuing to support ongoing response and recovery efforts in states recovering from major incidents suffered in previous years, including the 2004 Florida hurricanes, Hurricane Katrina in 2005, the Midwest flooding of 2008; Hurricane Ike in 2008; the devastating earthquake and tsunami in American Samoa, and the arrival of Tropical Storm Ida in November 2009.

FY 2010 Significant Accomplishments

- Initiated Disaster Management Support Environment (DMSE) Pilot Project (Phase I) to evaluate, interconnect, and consolidate existing FEMA IT systems; create new system functionality and capabilities to increase the speed, effectiveness, and efficiency of business operations; and provide a clear common operating picture.
- Initiated F-RAP to enable the FEMA Administrator and leaders of reporting organizations to uniformly determine and accurately report an overall level of readiness, analyze results, and provide predictive analytic decision support to guide FEMA in fulfilling its disaster response and recovery missions.

FY 2011 Planned Accomplishments

- **Movement Coordination Center (MCC):** Adapt and revise MCC functions, structure, staffing, and procedures in alignment with the Incident Management and Support Keystone principles, tenets, concepts and doctrine to effectively manage transportation assets with greater clarity and visibility.
- **DMSE:** Implement Phase II by testing SAVER₂ during NLE 2011, a full-scale exercise involving FEMA, states, and other partners; integrate informational layers into SAVER₂ as identified in requirements-gathering sessions with stakeholders; incorporate datasets that are available within FEMA through the enterprise data warehouse and available production systems, and; import existing states' data as a proof of concept in a catastrophic scenario.
- **F-RAP:** Establishing Initial Operating Capability: Conduct two pilot, external, functional-readiness-evaluations; conduct external, mission-readiness-evaluations for National Incident Management Assessment Teams (IMAT) during National Level Exercise NLE 2011.

FY 2012 Planned Accomplishments

- **MCC:** Establish next-generation resource movement analysis, planning, management and information-sharing capabilities in concert with DMSE development efforts, providing more rapid response times and greater resolution and flexibility for decision-making.
- **DMSE:** Implement Phase III by releasing the SAVER₂ production environment to the field in order to provide situational awareness, geospatial tools and geospatial web services that fully comply with all FEMA legal and Program policy, IT architecture and IT Security requirements.
- **F-RAP:** Complete identification of historical trends and key performance indicators, test and implement a predictive analytics system to provide operational response and recovers decision support to leadership.
- **SIG:** Complete ORR Five-Year Strategic Plan, building on FEMA Strategic Plan and charting direction for ORR with regard to organizational change instituted in FY 2010

B. Recovery Directorate

Recovery Programs FY 2012 Funding Summary***

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Subtotal	624	605	69,527	8,845	78,372

***The Declaration Unit is currently under Recovery and will be moved to the ORR Front Office no later than FY12.

The Recovery Directorate mission is to support individuals and communities affected by disasters of all sizes, including catastrophic events and terrorist attacks, in their efforts to recover. The Recovery Directorate provides program oversight for support and assistance averaging more than \$6.6 billion annually. The Recovery Directorate oversees mandated Federal disaster assistance programs, manages resources for readiness and recovery capability development, develops recovery strategies, policies, and doctrine for delivering assistance, plans for catastrophic events and continuity of operations, delivers grant assistance for community and individual recovery, and develops and coordinates partnerships.

Over the last few years, the Federal government has substantially improved the coordination of its immediate response to disasters, including efforts to save and sustain lives and stabilize infrastructure. However, long-term recovery, the most expensive and longest-lasting phase of a disaster, is not adequately coordinated and challenges in our recovery programs debilitate affected communities. The Secretaries of Homeland Security and Housing and Urban Development will continue efforts to improve and strengthen long-term disaster recovery at the Federal, tribal, State, and local levels.

The Recovery Directorate is also FEMA's agent in the implementation of the National Disaster Housing Strategy, the National Disaster Recovery Framework, the National Catastrophic Infrastructure Recovery Plan, Emergency Support Function (ESF) #3 (Public Works and Engineering), ESF #6 (Mass Care, Emergency Assistance, Housing, and Human Services), and ESF #14 (Long-Term Community Recovery).

The following Recovery Directorate programs/functions receive staffing and operating expenses support from the M&A appropriation:

Executive Oversight

The Office of the Assistant Administrator provides strategic leadership and direction to support and strengthen Recovery Directorate programs and activities through program analysis and evaluation; policy coordination and analysis; performance measurement and management; development of doctrinal guidance; information management, analysis, and reporting; and internal and external partner coordination and integration.

Recovery Planning Division

The Recovery Directorate's Planning Division strengthens recovery programs and assistance by developing and coordinating national level plans and exercises, including catastrophic, contingency, Continuity of Operations (COOP), and Devolution Planning; coordinating and leading Emergency Support Function (ESF) #14 - Long-Term Community Recovery; and supporting FEMA Regional Office recovery planning activities.

The Recovery Planning Division is also responsible for leading the development, implementation, and other activities associated with the National Disaster Recovery Framework (NDRF). The NDRF describes the concepts and principles that guide recovery efforts; identifies scalable, flexible, and adaptable coordinating structures to align key roles and responsibilities; and links local, State, Tribal and Federal governments, the private sector, voluntary, faith-based, and community organizations that play vital roles in recovery.

On September 29, 2009, the President requested the Secretaries of Homeland Security (DHS) and Housing and Urban Development (HUD) to co-chair a White House Long-term Disaster Recovery Working Group (LTRWG) composed of the Secretaries and Administrators of more than 20 Departments, agencies, and offices. The objective of this high-level, strategic initiative was to provide operational guidance for disaster recovery organizations as well as make recommendations for future strategic improvements to the Nation's approach to disaster recovery management.

Organizational Performance

FY 2010 Significant Accomplishments

- Conducted National Disaster Recovery Framework outreach meetings with stakeholders, drafted the NDRF document, and integrated the common recovery themes identified from the recovery stakeholder outreach meetings.
- Provided Headquarters staff and deployed resources for five declared disasters in FY 2010 to directly support ESF #14 efforts by facilitating partnerships for implementation of recovery activities.

FY 2011 Planned Accomplishments

- Lead national rollout and implementation of the National Disaster Recovery Framework (NDRF), including development of annexes for the Federal Disaster Recovery Coordinators and seven Recovery Support Functions, to provide focus across the nation on how best to prepare, restore, redevelop and revitalize the health and social, natural and environmental fabric of the community following a disaster.
- Create recovery program contingency plans and toolkits for Improvised Nuclear Device (IND) and Anthrax scenarios to improve FEMA's disaster assistance and recovery readiness.
- Enhance Recovery Directorate preparedness through devolution planning in coordination with FEMA Region IV by developing and publishing the Recovery Directorate Devolution Plan, training staff to implement the plan, participation in drills and exercises, and conducting a minimum of four on-site job-shadowing exchanges between Recovery Directorate, Region IV, and Region VII recovery staff

FY 2012 Planned Accomplishments

- Develop Whole of Community plans to address essential functions and recovery resource requirements to restore basic services and get communities functioning again within 60 days after a catastrophic disaster event and achieve a successful recovery within 5 years.

Public Assistance (PA) Division

The Public Assistance Program provides assistance to tribal governments, states, local governments, and certain nonprofit organizations to alleviate suffering and hardship resulting

from major disasters or emergencies declared by the President. It provides reimbursement for debris removal, emergency protective measures and the repair, replacement, or restoration of disaster-damaged, publicly owned facilities and the facilities of certain private nonprofit organizations. The Public Assistance Program provides not less than 75-percent federal cost-share reimbursement to states for actual costs.

FEMA Public Assistance provides Fire Management Assistance Grants (FMAG) to state and local governments, including tribal nations, to minimize immediate adverse effects from, and to manage and control, wild land fires that threaten to cause major disasters. The FMAG Program provides a 75-percent federal cost-share reimbursement to states for actual costs.

FEMA provides Community Disaster Loans to local governments or other political subdivision of the state that have suffered a substantial loss of tax or other revenues because of a major disaster. Communities can use the loans to maintain existing governmental functions or to expand such functions to meet disaster-related needs.

Organizational Performance

FY 2010 Significant Accomplishments

- Completed development of the Public Assistance Program Quality Assurance/Quality Control Plan and accompanying tool to enable the Public Assistance Division to monitor 10 critical metrics at the Joint Field Office (JFO), Regional, and National levels to ensure productivity and quality.
- Performed an internal review of all Public Assistance policies and guidance documents, which identified nine policies and guidance documents for potential modification to improve delivery of Public Assistance.
- Improved the Public Assistance appeals process, including procurement of support contracts, to increase the rate of adjudicating Public Assistance 1st and 2nd appeals and reduced the backlog from 69 in FY 2009 to 21 in FY 2010.

FY 2011 Planned Accomplishments

- Improve and sustain operation of the Emergency Management Mission Integrated Environment system for the efficient processing of an annual average of over \$3.3 billion in Public Assistance funding.
- Complete Bottom Up Review of the Public Assistance Program to evaluate the efficiency and effectiveness of critical program components and determine how the Public Assistance Program can provide the best value to communities across the nation.
- Revise and implement streamlined Public Assistance Program guidance to reflect lessons learned from recent disaster activity, and ensure grantees and sub-grantees have clear and consistent guidance for efficient and effective program implementation after major disasters and emergencies.

FY 2012 Planned Accomplishments

- Implement recommendations and findings from the Bottom Up Review of the Public Assistance Program to improve the efficiency and effectiveness of critical program components and provide the best value to communities across the nation.
- Develop debris management training for State and local government representatives to improve knowledge and capability in development of debris management plans during local debris operations.

Individual Assistance (IA) Division

Individual Assistance ensures that disaster survivors have timely access to a full range of programs and services to maximize their recovery, through coordination among Federal, state, local, and tribal governments, voluntary agencies, and the private sector. Individual Assistance programs and functions are executed under Sections 403, 408, 410, 415, 416, 425, and 426 of the Stafford Act. Individual Assistance programs and functions include:

- The Individuals and Households Program (IHP) provides assistance to individuals and households affected by a disaster to enable them to address necessary expenses and serious needs, which cannot be met through other forms of disaster assistance or insurance. The following assistance may be provided through the IHP:
- Rental Assistance – Financial assistance for rental of alternate housing unit
- Transitional Sheltering – Direct assistance in the form of hotel lodging
- Home Repair – Financial assistance for repair of primary residence
- Replacement – Financial assistance for replacement of primary residence
- Temporary Housing Unit – Direct assistance in the form of temporary housing units (manufactured housing, etc.).
- Permanent Housing construction – Direct or financial assistance for the construction of a home. This type of help occurs only in insular areas or remote locations specified by FEMA, where no other type of housing assistance is possible.
- Other Needs Assistance – Money is available for necessary expenses and serious needs caused by the disaster. This includes medical, dental, funeral, personal property, transportation, moving and storage, and other expenses that are authorized by law.
- The Disaster Unemployment Assistance Program provides unemployment benefits and re-employment services to individuals who have become unemployed because of major disasters.
- The Crisis Counseling Assistance and Training Program assist individuals and communities in recovering from the effects of natural and human-caused disasters through the provision of community-based outreach and psycho-educational services.
- Mass Care Coordination – Unlike other Individual Assistance programs, Mass Care and Emergency Assistance (MC/EA) does not require individuals to meet eligibility requirements before they can receive life-sustaining assistance. Mass Care is a community-based responsibility that may include agencies, organizations, and groups from the local and state levels. When requested by the state, the role of FEMA during Presidentially declared major disasters and emergencies is to coordinate and provide human and material support when shortfalls are identified.
- Donations Management and Voluntary Agency Coordination – FEMA serves as the principal liaison to the voluntary agency community and the coordination unit for unaffiliated volunteers and unsolicited donations.
- The Disaster Housing Assistance Program is a joint FEMA-Housing and Urban Development (HUD) federal program designed to help eligible disaster survivors find temporary housing solutions that will help them transition to non-disaster, self-sufficient housing. The DHAP leverages HUD's existing relationships with Public Housing Agencies in affected areas to assist eligible survivors utilizing grant funding from FEMA.
- The Alternative Housing Pilot Program seeks to identify and evaluate better ways to house future disaster victims in the Gulf Coast States. Funded by a special appropriation, five competitive grants in four states have been awarded to implement projects that incorporate a variety of construction methods and implementation processes. An evaluation report is

being prepared on behalf of FEMA by HUD and is expected to be ready by the middle of 2012.

- The Disaster Case Management Program is a federally funded program administered by FEMA in partnership with the U.S. Department of Health and Human Services, Administration for Children and Families. Disaster Case Management is a time-limited process that involves a partnership between a case manager and a disaster survivor (also known as a “client”) to develop and carry out a Disaster Recovery Plan. This partnership provides the client with a single point of contact to facilitate access to a broad range of resources.

Organizational Performance

FY 2010 Significant Accomplishments

- Completed enhancements to the National Mass Evacuation Tracking System (NMETS) and delivered training to state and local emergency managers to increase nationwide preparedness and capabilities to support mass evacuation.
- Established Rapid Temporary Repair pilot program in coordination with U.S. Army Corps of Engineers to expedite disaster survivors returning to their homes so that they can plan and complete more permanent repairs and speed the recovery process.
- Awarded contracts for the purchase of alternative housing units that will provide FEMA with the opportunity to secure new and innovative housing options for individuals and families.

FY 2011 Planned Accomplishments

- Assess direct housing operations and mass care resource requirements to identify gaps and prioritize development of new Pre-Scripted Mission Assignments (PSMAs) to support the expedited distribution of materials and supplies in preparation for a catastrophic event.
- Develop direct housing assistance program Pre-Placement Interview Standard Operating Procedure (SOP) to improve and standardize the process for assessing individual applicants’ temporary housing needs and ensuring appropriate referrals (e.g. rental resources, temporary housing units, and other housing solutions) to meet the needs of disaster survivors and effectively support recovery of disaster affected communities.
- Develop the Disaster Case Management Program Manual to be used by Regions and States in the development, implementation, and delivery of ongoing case management services for connecting disaster survivors with local providers that can target recovery services to assist them in developing and achieving short and long-term recovery goals.

FY 2012 Planned Accomplishments

- Complete and implement the mass care and emergency assistance strategy and action plan with partners to build unity of effort, identify, and address resource gaps, and to improve capabilities of communities to recover from disasters.
- Create multi-agency mass care and emergency assistance planning templates and guidance documents for State, tribal, territorial, local, voluntary organization and private sector entities to improve community disaster preparedness.
- Develop the Housing Mission Planning SOP to improve rapid assessment of temporary housing and consistency in decision-making to enhance the provision of direct housing assistance to help communities rapidly recover following a disaster incident.

National Processing Service Centers

Individual Assistance also manages the FEMA National Processing Service Centers (NPSC), which are a key component of FEMA's ability to support survivors' resilience to disaster through recovery programs. The NPSCs are FEMA's full-service disaster assistance processing and solution centers responsible for: registering individuals for assistance by phone and via the Internet; verifying home and personal property losses through onsite inspections; processing applicant registrations to determine and communicate assistance eligibility; and responding to applicant questions by phone (and mail) throughout the disaster assistance process. Funding from the M&A appropriation supports approximately 300 fulltime positions in the NPSCs as well as other activities, such as technology requirements needed to maintain call centers, equipment, and training.

Organizational Performance

FY 2010 Significant Accomplishments

- Modified the Direct Assistance Replacement Assistance Consideration portion of the National Emergency Management Information System (NEMIS) to increase usability of the recertification and setup work order processes and decrease the reliance on developer intervention during disaster operations.
- Signed a new interagency agreement with the Internal Revenue Service to augment the registration intake process with as many as 1,400 agents and increase the capability to manage increased call volume and registrations from disaster survivors during major disasters.
- Created a link between National Shelter System and the Individual Assistance Registration Intake system to improve FEMA's ability to locate evacuated disaster survivors during the applicant intake process and to allow applicants access to information on referrals to open shelters.

FY 2011 Planned Accomplishments

- Improve online and automated registration and help line capabilities through use of new technologies for the Advanced Contact Center Network (ACCN) Platform to include speech recognition, electronic correspondence, and touch-tone telephone interaction.
- Complete implementation of E-Signature, which captures disaster survivors' signatures electronically to allow for faster and more efficient processing of applications for assistance as well as improve data storage.
- Develop additional self-service options and improvements to automated registration and help line NPSC capabilities to expedite the registration process and delivery of recovery assistance for applicants in the Disaster Recovery Center (DRC).

FY 2012 Planned Accomplishments

- Develop improvements to applicant processing controls to minimize duplication of assistance to disaster survivors.
- Work with Federal partners to expand information sharing capabilities of disaster assistance programs through the disasterassistance.gov web site.
- Develop and create an information collection and analysis tool as part of the Individual Assistance Preliminary Damage Assessment (PDA) enhancement and reengineering project for use by States as a basis for Governors to request federal disaster assistance from the President and by FEMA to document the recommendation made to the President in response to the Governor's request.

Business Management Division

The Business Management Division (BMD) was established during FY 2010 to provide Recovery Directorate coordination of technology solutions, contracting, facility and asset management, financial management and contract closeouts, human resources support, training, and cadre management. Activities focus on improving efficiency and building sustainable Recovery business and workforce capabilities to modernize service delivery technology with cost-effective system solutions; overseeing training for Recovery staff for employee development, retention, succession planning, and advancement; and integrating management of all Recovery contracts and program contract closeouts in coordination with FEMA Acquisitions.

Linkage to FEMA's Strategic Plan

Organizational Performance

The Recovery Directorate utilized the Quadrennial Homeland Security Review (QHSR) goals and objectives and the FEMA Administrator's five priorities established in the "Administrator's Intent for Building the FY 2012-2016 Future Year Homeland Security Program (FYHSP)," as the guide in establishing priorities and defining desired outcomes. The Administrator's five priorities were incorporated into the Directorate's efforts to identify and develop planning and resource requirements for FY 2012 while looking forward to FY 2013-2016.

The FEMA's "Strategic Initiatives" as found in the FY 2011-2014 Strategic Plan, assisted in driving the evaluation and further refinement of the Directorate's strategies and in determining the FY 2012 prioritization of resources, funding requirements, and activities that will achieve results. The Directorate executed the performance and implementation planning process to ensure that Recovery's priorities, outcomes, and investment of resources align with the strategic trajectory of the Agency.

Recovery's activities support QHSR Mission 5: Ensuring Resilience to Disasters and are directly linked to QHSR Goal 5.3 (Objective 5.3.3) and QHSR Goal 5.4 (Objective 5.4.1).

- QHSR Goal 5.3: "Ensure Effective Emergency Response: Strengthen response capacity nationwide."
 - **Objective 5.3.3:** "Provide timely and appropriate disaster assistance: Improve governmental, nongovernmental and private-sector delivery of disaster assistance."
- QHSR Goal 5.4: "Rapidly Recover: Improve the Nation's ability to adapt and rapidly recover."
 - **Objective 5.4.1:** "Enhance recovery capabilities: Establish and maintain nationwide capabilities for recovery from major disasters."

Resources will be utilized in FY 2012 to support engagement with Individual Assistance, Public Assistance, Long-term Community Recovery partners, expand partnerships and outreach, and develop joint strategies, solutions, and action plans to increase nation-wide Recovery capability and capacity before, during, and after disasters. These efforts are directly connected to the Strategic Initiative, "Build Unity of Effort and Common Strategic Understanding Among the Emergency Management Team Nationally By Acting Jointly to Address Our Most Significant Risks."

Recovery will use resources to develop doctrine, plans, guidance materials, and training with partners to support implementation of the National Disaster Recovery Framework and further development of the Recovery Support Functions (RSFs). The products developed will focus on how best to prepare, restore, redevelop and revitalize the health and social, natural and environmental fabric of the community following a disaster in alignment with FY 2011-2014 FEMA Strategic Plan Strategic Initiative, *“Foster a Community-Oriented Approach to Emergency Management Nationally that Strengthens Local Institutions, Assets and Social Networks to Build Sustainable and Resilient Communities.”*

A key Strategic Initiative as part of the FEMA FY 2011-2014 Strategic Plan is, *“Build the Nation’s Capacity to Stabilize a Catastrophic Event within 72 Hours and Restore Basic Services and Community Functionality Within 60 Days Thereafter.”* The Recovery Directorate will directly support this initiative and dedicate resources to establishing and maintaining nationwide capabilities for recovery (*QHSR Objective 5.4.1*). Specific activities will be undertaken to establish national capability for mass care and to provide temporary housing assistance (including non-congregate shelters, hotel/motel, rental assistance, repair and replacement assistance, or direct housing) within 60 days of a disaster. The Recovery Directorate will be heavily involved with, and will collaborate with the Response Directorate and National Preparedness Directorate-led projects and initiatives related to Whole Community catastrophic planning.

C. Response Directorate

Response Programs FY 2012 Funding Summary

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Office of the Assistant Administrator	11	11	1,361	86	1,447
Training, Exercise and Doctrine Office	19	18	2,219	10,070	12,289
Operations Division	142	135	16,568	5,940	22,508
Planning Division	57	55	6,866	24,819	31,685
Disaster Emergency Communications	295	295	34,254	12,332	46,586
Regional Support	274	274	32,194	1,665	33,859
Business Management	30	29	3,444	270	3,714
Subtotal	828	817	96,906	55,182	152,088

FEMA’s Response Directorate provides and coordinates the core Federal response capabilities needed to save lives, minimize suffering, and protect property in communities throughout the Nation overwhelmed by the impact of an incident, regardless of cause. The Response Directorate encompasses the following programs:

Office of the Assistant Administrator for Response

Assistant Administrator for Operations Programs FY2012 Funding Summary

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Assistant Administrator for Operations	11	11	1,361	86	1,447
Regional Support	274	274	32,194	1,665	33,859
Subtotal	285	285	33,555	1,751	35,306

The Office of the Assistant Administrator provides strategic and operational guidance and leadership to all stakeholders, including FEMA headquarters, regional offices, and interagency

partners. It ensures that Federal emergency response systems and capabilities are properly poised to support states and communities. Key functions include providing leadership necessary to integrate the Nation's emergency response teams, systems, and capabilities; coordinating all Federal emergency management disaster operational planning and programs; and executing the response mission through its three major program areas – operations, planning, and disaster emergency communications. Located within the Office of the Assistant Administrator for Response are the Executive staff and Regional Support.

To affect budgetary savings, FEMA has reduced the travel budget for the Office of the Assistant Administrator, which will achieve a budgetary savings through efficiency by cutting travel of the Assistant Administrator and Deputy Assistant Administrator, as well as other key staff. This reduction could reduce oversight capabilities and limit Response's ability to provide consistency and standardization across the regions.

Regional Support

Regional support provides baseline funding to better support staff, resources, and facility needs in the ten FEMA Regional Response organizations. Additionally, Centers of Excellence will be established in specific regional offices to identify best practices and enhance response readiness. The operational Centers of Excellence will demonstrate expertise in discrete operational response functions to serve as a centralized body of subject matter experts responsible for leading the development of specialized guidance and best practices for the specific response function identified such as space weather, Regional Interagency Steering Committees (RISC), or National Special Security Events (NSSE).

Organizational Performance

FY 2010 Significant Accomplishments

- Developed regional support plans for the headquarters Response Strategic Plan and the Regional Strategic Plans.
- Provided funding for regions to develop catastrophic plans with state partners.
- Conducted localized training and exercises for response-related groups, including Incident Management Assistance Teams (IMAT) and Regional Response Coordination Centers (RRCC), to enhance readiness.

FY 2011 Planned Accomplishments

- Support regional response initiatives and activities.
- Develop and share Centers of Excellence program requirements and procedures to ensure effective response capabilities.

FY 2012 Planned Accomplishments

- Support regional response initiatives and activities.
- Standardize regional budget processes and stand up of Centers of Excellence programs to enable regional support of state, local, territorial, and tribal planning, training, and exercise initiatives.

Training, Exercise and Doctrine Office

Training, Exercise, and Doctrine Office FY 2012 Funding Summary
(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Training Exercise, and Doctrine Office	2	2	235	-	235
Training Unit	7	7	824	1,728	2,552
Exercise Unit	6	6	690	5,072	5,762
Doctrine Unit	4	3	470	3,270	3,740
Subtotal	19	18	2,219	10,070	12,289

The Training, Exercise and Doctrine (TED) Office develops clear and well-communicated incident management and incident support doctrine; guides the development of standards and training; and validates capabilities and concepts through exercises, which promote the professionalization of FEMA’s emergency managers in accordance with the National Incident Management System (NIMS). FEMA doctrine builds upon NIMS and the National Response Framework (NRF) to describe FEMA’s core tenets, concepts, methods, and processes for serving disaster survivors. The Training Unit develops and delivers credentialing and training courses to FEMA Response staff members based on this doctrine. Finally, the Exercise Unit tests and evaluates core systems and procedures to ensure effectiveness in the delivery of FEMA’s incident management and support. TED validates FEMA staff’s ability to perform incident management and support core competencies as well as concepts and processes put forth in doctrine and informs the revision of doctrinal materials and training courses.

The Training Unit improves Response Directorate Disaster Workforce readiness through training and professional development and supports FEMA’s credentialing goals. The Training Unit ensures that resources are aligned with the Response Directorate’s operational response at the field, regional, and National levels. Additionally, the unit utilizes FEMA’s core capabilities to develop response-specific professional development opportunities for all Response staff and teams. By delivering comprehensive Response training, the Training Unit prepares and trains individuals and teams through set standards in order to deploy and respond to disasters. The Training Unit develops the standards, which will drive exercises.

Organizational Performance

FY 2010 Significant Accomplishments

- Conducted a review and analysis of Response Directorate’s training courses to align with new doctrine. Analysis resulted in the identification of over ten courses to be revised or developed, with a primary focus on planning. Developed and conducted a new doctrine course with a focus on full-time command and general staff positions. Developed and coordinated the training of eight Senior Executive Service (SES) staff to serve as principals at the incident support level.
- Initiated development of the FEMA Qualification System (FQS) to enhance the existing Agency credentialing efforts. Facilitated and assisted five cadres (Operations, Planning, Mitigation, Individual Assistance, and Security) with developing performance based Position Task Books, Qualification Sheets and Progression Flow Charts for 125 job titles within five months.
- Developed a preliminary curriculum, conducted classes for GS-12s, and under, covering courses such as Fundamentals of Writing, Time Management, Project Management, and Critical Thinking to assist in enhancing the future development of these employees. Developed a preliminary curriculum and conducted classes for GS-13s and above

covering supervision, management, and leadership. Seventeen courses on professional development were conducted for headquarters staff.

FY 2011 Planned Accomplishments

- Design and develop a multi-tier professional development curriculum framework to align job functionality with core competency enrichment and career progression in support of the Response headquarters workforce.
- Finalize training requirements to develop a standard curriculum for National and Regional Watch Officers to ensure consistency and functional training; thus providing more experienced staff to enhance the quality of support. The pilot course will ensure alignment with core competencies of the positions while focusing on enhancing analytical and communication skills.
- Design and develop an IMAT training curriculum to align with the core competencies and the FEMA Qualification System to ensure emergency managers are properly trained and prepared in the event of disasters. Training will enhance leadership development and team building to ensure alignment with core competencies for the IMAT positions.

FY 2012 Planned Accomplishments

- Implement and refine the multi-tier professional development curriculum framework through the piloting process to align job functionality with core competency enrichment and career progression resulting in a more effective headquarters workforce.
- Based on FY 2011 pilot analysis, finalize revisions to the National and Regional Watch Officers' curriculum and conduct courses in progressive order to ensure effectiveness of training.
- Utilizing curriculum developed in FY 2011, continue courses implemented under IMAT pilot and begin leadership training to ensure critical incident management competencies.
- Develop a response orientation and mentoring program to enable Response staff to progress in the field of emergency management.

The Exercise Unit contributes to the development and execution of operational exercises by providing response-oriented consultation, advisement, and program expert knowledge as well as coordinating with other agencies to provide critical interaction and participation in national-level response exercises. The type and level of support is dependent upon the needs identified for each exercise, and is closely coordinated with the National Preparedness Directorate's Homeland Security Exercise and Evaluation Program. The Exercise Unit develops the input, which will drive the revision and update of training and doctrine. A key component of the Exercise Unit's responsibility is to develop no-notice exercises, Thunderbolts, to evaluate and maintain readiness of FEMA Response nationwide assets.

Organizational Performance

FY 2010 Significant Accomplishments

- Executed and evaluated 12 discussion-based no-notice exercises that prepared staff for any all-hazards incident.
- Executed and evaluated three operational no-notice exercises that tested and validated response team capabilities.
- Participated in National Level Exercise 2010, Eagle Horizon 2010, Cyber Storm 2010, and Liberty RadEx 2010.

FY 2011 Planned Accomplishments

- Conduct 30 no-notice “Thunderbolt” exercises that simulate a real world disaster environment to evaluate staff and teams for all-hazards incidents.
- Coordinate and plan the participation in Tier I exercises, National Level Exercise 2011, and Eagle Horizon 2011. NLE 11 is a National level exercise with interagency and state partners to evaluate the Nation’s ability to respond to and recover from a catastrophic incident. Eagle Horizon 2011 will test FEMA’s continuity of operations plans. NLE 11 is the first national level exercise focusing on a catastrophic natural disaster. The Response Directorate will be specifically testing several innovative concepts to include augmenting national response capabilities using non-traditional emergency management partners and resources under the Whole Community concept.
- Coordinate and plan the participation in Tier II exercises, Vigilant Shield 2011, and Anthrax Series as well as four Principal Level Exercises (PLE) and four Senior Officials Exercises (SOE). Anthrax Series is an exercise with the DoD and interagency partners focused on CBRNE specific incidents. PLEs and SOEs prepare the Nation’s senior level leadership to process and adjudicate high-level policy issues during all-hazards incidents.

FY 2012 Planned Accomplishments

- Conduct 29 no-notice “Thunderbolt” exercises that simulate a real world disaster environment to evaluate staff and teams for all-hazards incidents.
- Conduct two Emergency Support Function Leadership Group (ESFLG) exercises to better prepare interagency partners to effectively execute emergency support function responsibilities.
- Coordinate and plan the participation in Tier I exercises, National Level Exercise 2012, and Eagle Horizon 2012. NLE 12 is an exercise with interagency and state partners to evaluate the Nation’s ability to respond to and recover from a cyber attack. Eagle Horizon 2012 will test FEMA’s continuity of operations plans.
- Coordinate and plan the participation in Tier II exercise, Vigilant Shield 2012, as well as four Principal Level Exercises (PLE) and four Senior Officials Exercises (SOE). Vigilant Shield 2012 is an exercise with DOD and interagency partners focused on CBRNE specific incidents. PLEs and SOEs prepare the Nation’s most senior level leadership to process and adjudicate high-level policy issues during all-hazards incidents.

The Doctrine Unit conducts comprehensive reviews and revisions of the Response Directorate’s guiding documents, identifies voids, and creates new documents in order to guide FEMA response operations at the incident, regional, and national levels. The unit reviews, revises, updates and/or develops incident management and support doctrinal materials incorporating National Incident Management System (NIMS) components, terminology, principles, and policies in accordance with Homeland Security Presidential Directive 5 and establishes a hierarchy of doctrine documents. In addition, the Doctrine Unit designs and implements a comprehensive and permanent program for continual development and maintenance of FEMA disaster operations doctrinal materials that guide FEMA response operations at the incident, regional, and national levels. The Doctrine Unit develops the materials on which training will be based.

Organizational Performance

FY 2010 Significant Accomplishments

- Conducted review of existing Response Directorate doctrinal materials to identify gaps.
- Developed FEMA Incident Management and Support Keystone, Incident Management Manual, National Incident Support Manual, Regional Planning Guide, Incident Action Planning Manual, and Response Watch Procedures.
- Developed input to FEMA Capstone Publication 1, the DoD's Defense Support to Civil Authorities (DSCA) Handbook, and Department of the Army's Defense Support to Civil Authorities Field Manual.

FY 2011 Planned Accomplishments

- Conduct 20 developmental sessions with emergency management Subject Matter Experts (SMEs) to build performance standards for the Response workforce; IT system requirements; and operational concepts, to include the use of Incident Command System (ICS) and Multi-agency Coordination System (MACS), for the effective and efficient execution of incident management and incident support.
- Update and develop ten key authoritative documents, which will provide NIMS compliant standards for FEMA incident management and incident support, which will guide staffing, training, exercising and equipping FEMA response operations at the incident, regional, and headquarters levels.
- Ensure documents focus on mission critical requirements of planning, communications, and resource management.

FY 2012 Planned Accomplishments

- Conduct 20 developmental sessions with emergency management SMEs to build performance standards. Standards will apply to the Response workforce; IT system requirements; and operational concepts, to include the use of ICS and MACS, for the effective and efficient execution of incident management and incident support.
- Ensure incident manuals are developed and available for regional and national stakeholders to provide clear and consistent references for response to disasters.
- Ensure manuals reflect common and collective knowledge of the emergency management community to maximize overall effectiveness of response activities and objectives.
- Ensure Doctrine is incorporated in training and exercises to provide consistency in the development of training and evaluation for emergency managers.

Operations Division

Operations Division Programs FY 2012 Funding Summary
(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Operations Division Mgmt Office	4	3	471	40	511
Response Coordination Branch	13	12	1,529	30	1,559
National Response Coordination Center (NRCC)	4	4	471	817	1,288
National Watch Center	27	26	3,176	1,095	4,271
FEMA Operations Center	26	25	2,989	1,093	4,082
Field Operations Support Branch	6	6	706	2,584	3,290
Future Operations Section	4	4	471	30	501
Incident Management Assistance Team (IMAT)	48	46	5,745	251	5,996
Urban Search and Rescue (US&R) Task Forces	10	9	1,010	-	1,010
Subtotal	142	135	16,568	5,940	22,508

The Operations Division is responsible for the management and coordination of the core Federal disaster response teams, resources, and programs needed to support regions; interagency partners; state, local, and tribal governments, voluntary agencies, and disaster survivors impacted by a

major disaster or emergency, regardless of cause. The Operations Division achieves its mission through the Response Coordination Branch, Field Operations Support Branch, and Urban Search and Rescue Branch.

Response Coordination Branch (RCB)

The Response Coordination Branch (RCB) is responsible for the management and coordination of FEMA's operation and coordination centers across the Nation, maintaining situational awareness of all-hazards incidents that may impact the United States and its territories. The Branch coordinates the operations of the National Watch Center, the National Response Coordination Center, the Future Operations Section, the FEMA Operations Center, and the FEMA Liaisons to other government agencies.

During steady state and activations, the RCB supports disaster response and resource planning; monitors potential or developing events, and provides situational awareness to FEMA leadership, DHS leadership, and the White House national security staff to inform decision makers. The RCB coordinates the activities of FEMA liaisons strategically detailed to U.S. Northern Command, FBI National Joint Terrorism Task Force (JTTF), DHS National Operations Center (NOC), National Hurricane Center (NHC), and the DHS Office of Operations Coordination and Planning (OPS).

National Response Coordination Center (NRCC)

A component of the Response Coordination Branch, the National Response Coordination Center (NRCC) is a multi-agency center that provides overall Federal support coordination for major disasters and emergencies, including catastrophic incidents and emergency management program implementation. The NRCC is activated to coordinate with the affected region(s) and provide needed resources and policy guidance to support an incident. When activated, the NRCC supports disaster response and resource planning; monitors potential or developing events, and provides situational awareness to the Administrator of FEMA and other senior leadership, the Secretary of the Department of Homeland Security and other DHS leadership, and the White House National Security Staff to inform decision-making. The NRCC supports regional and field component operations, and implements coordination of national-level disaster response activities and resource prioritizations and allocations.

Organizational Performance

FY 2010 Significant Accomplishments

- Supported national response and recovery operations for ten major disasters.
- Completed upgrades of information sharing technology at the NRCC and at the primary COOP site.
- Completed audio-visual upgrades to expand capabilities for the NRCC at FEMA headquarters and at the primary COOP site.

FY 2011 Planned Accomplishments

- Complete construction of the NRCC at FEMA headquarters; and complete construction and retrofit of additional space and Task Areas A and B to accommodate increased participation of Federal interagency partners during disaster response.
- Implement the National Incident Support Manual (NISM) for the NRCC to allow for uniform procedures and processes and provide a single starting point of reference for incident support guidance.

- Identify baseline requirements for equipment and technology and a lifecycle program for the NRCC Task Areas, Movement Coordination Center (MCC), and interagency video teleconference facility to ensure a 24/7 capability to share critical information that supports interagency response operations.

FY 2012 Planned Accomplishments

- Complete implementation of the National Information Management Sharing system and the Imagery Coordination Center to enhance the common operational picture across FEMA Regions. This will enhance situational awareness and provide valuable decision-making information to FEMA leadership through graphic high-altitude imagery.
- Implement first year of life cycle equipment and technology upgrades that allows the NRCC to utilize up-to-date technology.
- Develop a strategic transition plan for the movement of the NRCC to the DHS St Elizabeth's Campus to ensure a seamless continuity of operations.
- Complete NRCC facility upgrades to include enhancements and modernizations of the lighting and HVAC systems.

National Watch Center (NWC)

A component of the Response Coordination Branch, the National Watch Center (NWC) maintains a 24/7 national situational awareness of potential, developing, or ongoing situations which may require a Federal response to an incident/event. The NWC links Regional Response Coordination Centers (RRCCs), state Emergency Operation Centers (EOCs), regional DHS components, National and regional Department and agency leads for Emergency Support Functions (ESFs), state fusion centers, Joint Terrorism Task Forces (JTTFs), DOD Operations Centers, and other key Federal, state, and local operational centers. It supports the collection and distribution of pre-incident information to the DHS National Operations Center (NOC) for development of a national common operating picture. The NWC provides situational awareness and information sharing for all-hazards incidents that may require Federal response to include planning and response operations at the classified level.

Organizational Performance

FY 2010 Significant Accomplishments

- Completed Phase 1 (planning) for the secure NWC at FEMA headquarters.
- Completed Phase 1 (planning) upgrades to the Sensitive Compartmented Information Facility (SCIF) at FEMA headquarters.
- Developed and implemented a video teleconference capability at the National Oceanic and Atmospheric Administration (NOAA), National Weather Service Storm Prediction Center (SPC), and the Hydrological Prediction Center (HPC) to enhance coordination capabilities.

FY 2011 Planned Accomplishments

- Within the base budget, complete construction of the secure NWC at FEMA headquarters to provide a new capability for the NWC to monitor, analyze, and respond to classified threats.
- Within the base budget, complete upgrades to the primary Sensitive Compartmented Information Facility (SCIF) at FEMA headquarters. This capability allows FEMA senior

leadership to receive and send classified information and to meet national security requirements.

- Within the base budget, provide training for all NWC staff that will result in a highly competent staff that can monitor and analyze emerging threats to the nation and implement immediate incident management response.

FY 2012 Planned Accomplishments

- Implementation of Regional Watch Standardization for two Regional Watch Centers based on regional implementation plan. This capability will provide secure links to FEMA headquarters and other key Federal, state, and local operational centers. This will enable the Regional Watch Centers to provide the National Watch Center and Regional Administrators with enhanced situational awareness and information sharing at the classified and unclassified level.
- Within the base budget, begin construction of the alternate secure NWC at the primary COOP site. This capability will allow the NWC to continue to operate and fulfill their mission during an incident.
- Develop and implement a video teleconference capability at the National Weather Service Space Weather Prediction Center and provide the most current information on developing space weather related threats to FEMA regions, Federal, state, local, territorial and tribal entities.
- Exercise NWC devolution to Region IV Regional Watch Center to ensure continuity of FEMA headquarters mission essential functions.

The Regional Watch Centers maintain a 24/7 regional situational awareness to conduct analysis, determine possible impacts and identify potential and occurring incidents within their respective areas of responsibility. The regional watch centers link the RRCC, state EOCs, regional DHS components, regional ESFs, state fusion centers, JTTFs, and other key state and local operational centers. In four FEMA regions, the Mobile Emergency Response Support Operations Centers (MOC) provides watch capability to regional leadership. The remaining six FEMA regions utilize regional operations personnel for a 24/7 watch capability to provide the necessary analysis and alerts/notifications. Support for policy and program guidance and equipment standardization and life cycle maintenance for the Regional Watch Centers is provided by the National Watch Center and the Disaster Emergency Communications Division (DECD).

Organizational Performance

FY 2010 Significant Accomplishments

- Completed Phase 1 (planning) for the secure watch at FEMA Region IV; upgrading capabilities to communicate with FEMA headquarters and other Federal and regional partners.
- Completed Phase 1 (development) of the Regional Watch SOP, standardization of all FEMA watches (reports, notifications and thresholds).

FY 2011 Planned Accomplishments

- Complete Phase 2 (installation) of the secure regional watch at FEMA Region IV. This capability will provide secure links to FEMA headquarters and other key Federal, state, and local operational centers. This will enable the Region IV Watch to provide enhanced situational awareness and information sharing at the classified and unclassified level.

- Completed Phase 1 (planning) for the secure watch at FEMA Region V and VII; upgrading capabilities to communicate with FEMA HQ and other Federal and Regional partners.
- Complete Phase 2 (implementation) Regional Watch SOP, standardization of all FEMA Watches (reports, notifications and thresholds).
- Ensure that all of the Regional Watch staff are trained and qualified to perform their mandated 24/7 situational awareness and immediate response mission. This training is performed in conjunction with Response Directorate's Training, Exercise, and Doctrine Branch guidance.
- Exercise National Watch Center devolution to Regional Watch Center to ensure continuity of FEMA Headquarters mission essential functions.

FY 2012 Planned Accomplishments

- Complete Phase 2 (installation) of the secure Regional watch at FEMA Region V and VII, this capability will provide secure links to FEMA HQ and other key Federal, state, and local operational centers. This enables the Region V and VII Watch to provide enhanced situational awareness and information sharing at the classified and unclassified level.
- Completed Phase 1 (planning) for the secure watch at FEMA Region II; upgrading capabilities to communicate with FEMA HQ and other Federal and Regional partners.
- Ensure that all new Regional Watch staff are trained and qualified to perform their mandated 24/7 situational awareness and immediate response mission. This training is performed in conjunction with Response Directorate's Training, Exercise, and Doctrine Branch guidance.
- Exercise National Watch devolution to ensure continuity of FEMA Headquarters mission essential functions.

The Regional Response Coordination Center (RRCC) is a standing multi-agency center operated by FEMA in each of the ten regional offices. Staffed by regional personnel, the RRCCs are the primary situational awareness and operations coordination centers for support to FEMA incident management at the Unified Coordination Group (UCG) level. As the focal point for regional resource coordination, the RRCCs provide overall emergency management coordination, coordinate Federal regional response and support efforts, conduct operational planning, deploy regional-level entities, collect and disseminate incident information, and maintain connectivity with state Emergency Operations Centers (EOC), state fusion centers, and other Federal and state operations and coordination centers. The RRCCs build and maintain a common operating picture of incidents at the regional level. The RRCCs deploy liaison officers and the Regional IMATs to initiate Federal support to state and local entities; facilitate initial delivery of goods and services to save lives and property and stabilize local infrastructures; and facilitate prioritizing "in-theater" interagency resource allocation and coordination. The RRCCs can support multiple concurrent disaster operations within their respective regions. Support for doctrine standardization and internal OREs for the Regional Response Coordination Centers is provided by the National Response Coordination Center.

Organizational Performance

FY 2010 Significant Accomplishments

- Supported response and recovery operations for disasters for a total of 406 days of activation.
- Completed Phase 1 (planning) for RRCC standardization.
- Established RRCC national standards to ensure consistency in capabilities based on each region's operating requirements.

FY 2011 Planned Accomplishments

- Develop an Operational Readiness Evaluation (ORE) Program to ensure standardization for all RRCCs. This ORE program is intended to both evaluate the current state of readiness of personnel, facilities, equipment, and communications capabilities against a fixed standard of performance; as well as providing readiness indicators to leadership to identify critical needs for future programming purposes.
- Develop and implement a common operating picture (COP) capability that will be utilized for the reporting requirements of the NRCCs, RRCCs, and Joint Field Offices (JFOs). Establishing a COP is critical for a common understanding of situations for decision making in allocation of resources and level of effort to meet the needs of the affected region.

FY 2012 Planned Accomplishments

- Conduct OREs in at least five regions.
- Conduct planned annual lifecycle maintenance of equipment and systems to ensure operational readiness.

FEMA Operations Center (FOC)

A component of the Response Coordination Branch, the FEMA Operations Center (FOC) is the official notification point for FEMA and supports the DHS and Executive Branch departments and agencies with several classified and unclassified programs authorized by National Security Presidential Directive 51, Homeland Security Presidential Directive 20, the Federal Civil Defense Act of 1950, 50 USC, Appendix 2251, and Executive Order 12656. The FOC facilitates distribution of warnings, alerts, notifications, and bulletins about events that may require a Federal response to the Federal, state, and local emergency management community using a wide variety of communications systems such as the National Warning System (NAWAS), the Washington Area Warning System (WAWAS), the National-level Emergency Alert System (EAS); and the Emergency Notification System (ENS).

The FOC supports the NRCC and implements a myriad of notifications to all Federal departments and state EOCs as well as activating emergency management staff. The FOC's multifaceted communications and operations capabilities enable it to receive, generate, and disseminate critical, time-sensitive information to senior decision makers at all government levels. The FOC receives, analyzes, and disseminates all-hazards information within FEMA and DHS and to other departments and agencies, as well as to disaster response team members.

Organizational Performance

FY 2010 Significant Accomplishments

- Completed the first of three planned audio-visual system upgrades in collaboration with FEMA facilities staff and completed the initial planning for the third upgrade in FY 2011.
- Completed the enhanced access security system enabling the FOC to exercise total control over personnel access to the sensitive compartmented information facility (SCIF).

FY 2011 Planned Accomplishments

- Within the base budget, upgrade FOC facilities to provide secure and non-secure video communications capability for DHS and FEMA senior leadership.
- Within the base budget, complete construction and accreditation requirements for the SCIF at the Response Directorate primary COOP location. The SCIF will provide the National Watch Center, NRCC team and senior Response staff with a secure location from which to participate in secure conferences and briefings.

FY 2012 Planned Accomplishments

- Enhance the Emergency Notification System (ENS) with additional features to provide added capabilities to ENS users, including Net Notify, SMS texting and use of the survey module to provide additional alert and notification capabilities to Federal agencies.
- Expand Operations Center Cross Training Program to include FOC Operations training at NORAD, National Operations Center (NOC), and from within the FEMA Operational Network. This will enhance the ability to provide alternate back-up operations for essential functions.
- Finalize audio-visual system upgrades at primary COOP site to ensure interagency communication during COOP activation.
- Install central call telephone operator unit at the COOP site to facilitate communication and provide a switchboard capability during activations.

Field Operations Support Branch

In accordance with PKEMRA, the Field Operations Support Branch provides program management and support of the National and Regional Incident Management Assistance Teams (IMATs). The Branch supports doctrine development and conducts internal Operational Readiness Evaluations (OREs) to ensure IMAT readiness. The Branch also coordinates FEMA's operational requirements for the National Airborne Operation Center (NAOC) and other operations.

Organizational Performance

FY 2010 Significant Accomplishments

- Developed a Memorandum of Agreement with the DoD for the use of the NAOC during disasters.
- Developed Operational Readiness Evaluation Program for National and Regional IMATs.
- Conducted CBRNE training and tabletop exercise for the national teams.
- Identified and developed standardized equipment packages for National and Regional IMATs.

FY 2011 Planned Accomplishments

- Develop a Pre-Scripted Mission Assignment (PSMA) and concept of operations with the DOD for the use of the NAOC during disasters

- Complete implementation of the third National IMAT.
- Conduct 16 on-site Operational Readiness Evaluations of the National and Regional IMATs.
- Enhance National IMAT's CBRNE capability through continued training and exercises.

FY 2012 Planned Accomplishments

- Update the NAOC PSMA and concept of operations document based on exercises and deployments.
- Conduct six onsite OREs of the National and Regional IMATs.
- Continue to enhance National IMAT's CBRNE capability through continued training and exercises.
- Update IMAT standard equipment packages and load plans.
- Implement the IMAT life cycle equipment plan.

Future Operations Section

A component of the Response Coordination Branch, the Future Operations Section (FOS) serves as a support element to the NWC, NRCC, RRCCs, response teams, and FEMA senior leadership by providing analysis of threats, both natural and man-made, that present a potential for Federal support and/or assistance. The support includes pre-identification of threats, identification of planning requirements, coordination with internal and external stakeholders, and the development of executable operations plans, courses of action, and recommendations for consideration. During an event, the FOS assesses the operations tempo and determines future short-term needs, such as staffing, and equipment. It maintains situational awareness of developing events outside of the ongoing operations to facilitate rapid response, prioritization, and shifting of assets, as required.

Organizational Performance

FY 2010 Significant Accomplishments

- Developed draft Standard Operating Procedures and job aids for the section.
- Provided support to the FEMA National Watch Center for multiple events that did not warrant activation of the FEMA NRCC; provided crisis action planning support to the NRCC for the Haiti Earthquake, Hurricane Alex, and the Deepwater Horizon Oil Spill Response.

F Y 2011 Planned Accomplishments

- Refine adaptive planning (crisis action planning) methodology in the pre-NRCC activation environment to support senior level decision-making. The methodology documented in crisis action planning would also inform threat identification and analysis processes, to document events or incidents that have a potential to occur greater than 72 hours in the future, and a methodology to formally assess FEMA's readiness posture based on current operational commitments and potential future needs.

FY 2012 Planned Accomplishments

- Complete the refinement of adaptive planning (crisis action planning) methodology in the pre-NRCC activation environment to support senior level decision-making. Continued refinement of the methodology for crisis action planning allows for enhancements in threat identification and analysis, for events or incidents that have a potential to occur greater than 72 hours in the future, and improved reporting and provision of

recommendations to leadership on FEMA's readiness posture based on current operational commitments and potential future needs.

- Review existing FEMA headquarters and Federal interagency plans to determine potential shortfalls in Federal support and make recommendations for improvements that will enhance overall operational readiness.

National Incident Management Assistance Teams

With support provided by the Field Operations Support Branch, the National Incident Management Assistance Teams (IMATs) provide the initial national rapid response to major incidents, disasters, special events, and exercises. The primary mission of the National IMATs is to rapidly deploy to an incident or threatened area, state, or FEMA region to work with the affected state(s) to identify and satisfy initial requirements for Federal assistance. IMATs coordinate and integrate inter-jurisdictional response in support of the affected state(s) or U.S. territory(s). Additionally, IMATs specialize in management and assistance for chemical, biological, radiological, nuclear, or explosive (CBRNE) incidents. National IMATs provide initial situational awareness for Federal decision-makers, and support the initial establishment of a unified command. IMATs provide multidisciplinary emergency management and may include members from the interagency community.

Organizational Performance

FY 2010 Significant Accomplishments

- Deployed National IMATs in support of disasters and special events including but not limited to the 2010 North Dakota flooding, in support of the Department of Health and Human Services during the H1N1 response, in support of United States Agency for International Development (USAID) during the Haiti earthquake response, and in support of the U.S. Coast Guard during the Deepwater Horizon oil spill response.
- Conducted CBRNE tabletop exercise for the national teams.

FY 2011 Planned Accomplishments

- Complete implementation of the third National IMAT through internal realignment of response positions, which will provide "national strike teams" to ensure operational readiness.
- Enhance National IMAT's Chemical Biological Radiological Nuclear and High Yield Explosive (CBRNE) response capability through continued training and exercises, which ensures readiness and preparedness for a CBRNE response. In addition, the exercises meet the HSPD requirement for FEMA's consequence management role.
- Deploy National IMATs as participants and exercise controllers for NLE 11 and other National and regional "no-notice" Thunderbolt Exercises which builds relationship with other inter-agencies and increases the integration of all response assets across the spectrum of Federal, regional, state, territorial, and tribal entities.

FY 2012 Planned Accomplishments

- Participate in national and regional level "no-notice" Thunderbolt Exercises as participants and exercise controllers, including NLE 2012 to enhance operational readiness capabilities of the national response teams.
- Provide National IMAT support to planning and operations for national security special events to include the Democratic National Convention and the Republican National Convention. The N-IMATs will ensure a coordinated multi-level (local, state, regional, Federal) response during the events.

- Provide National IMAT support to Region III IMAT for planning and operations for the Presidential inauguration in January 2013 to ensure a coordinated response in crisis and consequence management.

With support provided by the Field Operations Support Branch, **the Regional Incident Management Assistance Teams (IMAT)** manage Type 2 or Type 3 non-catastrophic incidents and the Federal interagency response, coordination and integration of inter-jurisdictional support to the affected state or U.S. territory. Regional IMATs focus on specific regional issues or events; conduct ongoing interactions (training, planning, and pre-event coordination, etc.); and report to the Regional Administrator. The Regional IMATs support efforts to meet the emergent needs of states and local jurisdictions, help coordinate the Federal response, and have the capability to provide initial situational awareness for Federal decision-makers. IMATs meet the multidisciplinary needs of emergency management and may include members from the regional interagency community. Support for policy and program guidance and equipment standardization and life cycle maintenance for the Regional Incident Management Assistance Teams is provided by the Field Operations Support Branch.

Organizational Performance

FY 2010 Significant Accomplishments

- Deployed Regional IMATs in support of disasters, all-hazards incidents and special events including but not limited to: the 2010 Vancouver Winter Olympics, North Dakota Flooding, American Samoa earthquake and tsunami; in support of the Department of Health and Human Services during the H1N1 response and in support of the U.S. Coast Guard during the Deepwater Horizon Oil Spill response.
- Participated in Operational Readiness Evaluation Program for the Regional IMATs.
- Identified standardized equipment packages for Regional IMATs.

FY 2011 Planned Accomplishments

- Participate in 13 on-site Operational Readiness Evaluations of the Regional IMATs to ensure operational readiness and standardization of capabilities and assets of the R-IMATs.

FY 2012 Planned Accomplishments

- Activate for regional “no-notice” Thunderbolt Exercises as participants, exercise controllers, and participate in NLE 2012 to test IMAT capabilities to respond to various scenarios including a cyber-attack to the nation’s infrastructure.
- Participate in Operational Readiness Evaluations of the Regional IMATs that will ensure operational readiness and standardization of capabilities and assets of the R-IMATs.
- Support planning and operational requirements for national security special events including the Presidential inauguration, Democratic National Convention, and the Republican National Convention. The R-IMATs will ensure a coordinated multi-level (local, state, regional, Federal) response during the events.

Urban Search and Rescue (US&R) Program

The National Urban Search and Rescue (US&R) Program funds 28 task forces across the country to provide a coordinated, National, all-hazards capability for locating, extricating, and stabilizing survivors of structural collapse resulting from natural and man-made causes, including those involving terrorism and weapons of mass destruction. Among its many activities, the US&R Program is responsible for strategic roles (ESF-9 lead, interaction with sponsoring agencies and

operations groups), management roles (managing cooperative agreements with the Task Forces, providing budget, training and exercises), and field operations roles (cadre management, cache management, alerts and notifications, activations/deployments, and reporting). The majority of US&R program, and all grant activity, is funded in the US&R PPA.

Organizational Performance

FY 2010 Significant Accomplishments

- Activated a US&R Incident Support Team and eight National US&R Task Forces, of which four task forces and Incident Support Team (IST) elements deployed to the Haiti Earthquake in support of the USAID, resulting in the unprecedented live rescue of over 130 entrapped earthquake survivors.
- Activated a US&R IST and three National US&R Task Forces in support of operations for Hurricane Earl.
- Provided integrated doctrine for Federal search and rescue operations; prepared, administered, and ensured compliance with preparedness cooperative agreements for 28 US&R Task Forces; completed 14 on-site Technical Assistance and internal Operational Readiness Evaluations; developed a recommended course of action for leveraging the DoD (DOD) resources to augment search and rescue activities; developed a comprehensive logistics database for mobilization of US&R Task Forces by military and commercial airframes; evaluated and initiated courses of action required to improve US&R CBRNE response capabilities; revised and implemented the US&R Hurricane Response Concept of Operations Plan and the US&R Hazardous Materials Concept of Operations Plan.
- Developed, revised, and/or delivered ten National level US&R functional training courses; conducted six Disaster Search Canine Evaluations and Recertification's; participated in three joint DOD interagency full scale response exercises to enhance operational coordination and best practices; developed "Just-In-Time" US&R Force-Multiplier training curriculum for DoD assets.

FY 2011 Planned Accomplishments

- Provide coordinated, national, all-hazards capability for locating, extricating, and stabilizing survivors of structural collapse resulting from natural and man-made causes, including those involving terrorism and weapons of mass destruction; provide and administer Preparedness Cooperative Agreements to 28 US&R Task Forces.
- Improve mission readiness capability: assist in facilitation of comprehensive US&R Program ("Bottom-Up") Review by Homeland Security Institute and implementation of corresponding recommendations; revise and implement US&R Strategic Plan; provide leadership and facilitation of Whole Community Planning Mass Search and Rescue Core Capabilities initiative; continue research and development of Force Multiplier Concept of Operations to include DoD and international US&R assets; research and implement next phase of Task Force Operational Readiness Evaluations and conduct 6 on-site readiness evaluations; continue evaluation and initiation of courses of action required to improve US&R CBRNE response capabilities; revise and begin implementation of Task Force and Incident Support Team Position Descriptions.
- Develop and implement US&R Strategic Training Plan; develop, revise, and deliver 7 National level US&R Functional Training Courses and coordinate delivery of 6 sponsored or equivalent National level US&R Functional Training Courses; conduct 9 Disaster Search Canine Evaluations and Recertification; plan and execute participation in NLE

2011; research and begin acquisition of a comprehensive Learning Management System database.

FY 2012 Planned Accomplishments

- Provide same level of support to 28 USAR teams, as level of funding as in FY11.
- Provide coordinated, national, all-hazards capability for locating, extricating, and stabilizing survivors of structural collapse resulting from natural and man-made causes, including those involving terrorism and weapons of mass destruction; provide and administer Preparedness Cooperative Agreements to 28 US&R Task Forces.
- Complete revised, performance-based US&R Operational Readiness Evaluations for nine National Task Forces to reinforce their readiness posture.
- Implement 23 Incident Support Team and 19 Task Force Position Task Books for National US&R Response System to ensure that US&R members are technically and tactically competent and meet critical qualification standards for deployment.
- Enhance US&R CBRNE response capabilities through improved equipment procurement, training and exercises to increase capability while responding in a contaminated environment and to ensure the health and safety of the US&R Task Force members. Finalize doctrine for Concept of Operations to support US&R CBRNE response capabilities. Revise curriculum for three US&R CBRNE specialized training courses.
- Improve preparedness for response to domestic catastrophic disasters by development and implementation of force-multiplier Concept of Operations (to include DOD and international US&R assets).

Planning Division

Planning Division Programs FY 2012 Funding Summary

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
National Hurricane Program	1	1	118	2,471	2,589
CBRNE Branch	5	5	547	38	585
Improvised Nuclear Device (IND) Resp. & Rec.	7	7	962	4,861	5,823
Nuclear Incident Response Team (NIRT)	1	1	118	1,775	1,893
Domestic Emergency Support Team (DEST)	1	1	118	314	432
Pre-Positioned Equipment Program (PEP)	1	1	118	6,268	6,386
Nuclear/Radiological Incident Prevention P (NRIPP)	-	-	-	250	250
Planning Division Management Office	6	6	704	309	1,013
National Planning Branch	18	17	2,181	189	2,370
Regional Planning	17	16	2,000	8,344	10,344
Subtotal	57	55	6,866	24,819	31,685

The Planning Division leads the development of deliberate plans across the Federal government for catastrophic incidents. The Division coordinates and is responsible for deliberate, adaptive, interagency analysis and plans for potential/actual incidents while directing regional planning efforts for all-hazard events. Further, the Division is responsible for developing and maintaining special programs focused on Chemical, Biological, Radiological, Nuclear and Explosives (CBRNE) hazards to communities throughout the Nation impacted by an incident, regardless of cause. The Division is responsible for Remote Sensing, National Special Security Events, the Directorate's COOP planning and the National Hurricane Program. The Division is accountable for integrating and aligning all FEMA's planning efforts, coordinating the efforts of the Emergency Support Leadership Group (ESFLG), implementing the Agency's Catastrophic

Preparedness Initiative, supporting the Domestic Resilience Group, and leading the *Whole Community* (WC) concept.

The WC describes a distinct operational approach that reinforces the fact that FEMA is only one part of our Nation's emergency management team and that the Nation must leverage all available resources to prepare for, respond to, recover from and mitigate against all hazards to collectively meet the needs of the entire community.

National Hurricane Program

In FY 2010, the National Hurricane Program (NHP) transferred from the Federal Insurance and Mitigation Directorate. This was an effort to better align the products and services of the NHP with stakeholder requirements. The NHP provides evacuation preparedness technical assistance to state, local, and tribal governments, including the preparation of hurricane evacuation studies and technical assistance in developing evacuation plans, assessing storm surge estimates, evacuation zones, evacuation clearance times, transportation capacity, and shelter capacity. The NHP develops these studies and coordinates an overall program of technical assistance in collaboration with other Federal agencies via its chairmanship of the Interagency Coordinating Committee (ICCOH) on hurricanes and joint meetings between the ICCOH and the Hurricane Preparedness Committee of the National Emergency Management Association (NEMA). The NHP also conducts post-storm assessments and other special hurricane analyses, develops hurricane evacuation studies, and maintains and annually trains over 3,000 state and local end users in the HURREVAC evacuation decision assistance software package.

Organizational Performance

FY 2010 Significant Accomplishments

- Completed post-storm assessments for Hurricanes Ike and Gustav. These assessments are of the planning assumptions (and underlying methodologies) of the Hurricane Evacuation Studies (HES) for the areas affected by the storms – hazard, vulnerability, behavioral, transportation and sheltering. The results of these studies are now available to update the HES products for the study areas prior to the 2011 hurricane season, and will help update or refine HES methodology for future studies.
- Completed hurricane evacuation studies that affect coastal counties in four states. These studies provide technical information that is used to safely evacuate those coastal populations that may be impacted by potential storm surge inundation from Category 1-5 hurricanes.
- Worked with the State Emergency Management Agency stakeholders to convene a National Hurricane Program (NHP) Task Force that developed a plan of short-term (as well as prospective long-term) recommendations for improvement to hurricane emergency management and the NHP.

FY 2011 Planned Accomplishments

- Complete hurricane evacuation studies that affect coastal counties in three additional states based on the need to update hurricane evacuation studies and capture changes in population since the last study, which will improve accuracy and confidence in evacuation clearance time estimates, and improve evacuation/population protection decision making at State and local level.
- Take a lead role in developing a standing post-hurricane Disaster Impact Assessment and Planning Team, supported by interagency MOUs and Pre-scripted Mission Assignments to ensure time-sensitive and perishable data regarding estimates of hazard, risk and

operational response are not lost, consistent with Section 402(3)(f) of the Stafford Act (as amended by PKEMRA).

- Complete the second part of the NHP Task Force process, develop a full program review and multi-year program plan of NHP recommendations, and submit to FEMA Leadership for action. This will help to increase the performance of the Whole Community for hurricanes by identifying those actions which a consensus of the emergency management partnership (represented by National Emergency Management Association (NEMA) and International Association of Emergency Managers (IAEM)) agree will have the greatest return on investment (ROI).

FY 2012 Planned Accomplishments

- Complete hurricane evacuation studies that affect coastal counties in three additional states based on the need to update hurricane evacuation studies and capture changes in population since the last study, which will improve accuracy and confidence in evacuation clearance time estimates, and improve evacuation/population protection decision making at state and local level.
- Initiate and complete development of a proposed “DHS Strategy to Improve the National Response and Recovery from a Hurricane” modeled after a similar plan for Improvised Nuclear Device (IND), to reintroduce the programmatic approach to natural disaster comprehensive emergency management into the on-going DHS/FEMA readiness dialogue.

Chemical, Biological, Radiological, Nuclear, and Explosives (CBRNE) Branch

The CBRNE Branch supports FEMA’s all-hazards response mission through the development and maintenance of capabilities and programs that enable FEMA to respond to the consequences of a CBRNE disaster. This includes the development of CBRNE policies, protocols, and procedures during both crisis and consequence management phases of a CBRNE response. The Branch accomplishes this mission by leveraging subject matter expertise in nuclear, radiological, chemical, and biological, and high explosive hazards from within FEMA, the interagency, and the scientific community in support of FEMA's mission. This includes advising FEMA leadership during a CBRNE incident; developing and implementing initial incident action plans; initiating mission assignments; and activating appropriate emergency response teams for CBRNE incidents. The branch coordinates the Improvised Nuclear Device Response and Recovery (INDRR) Program, the Nuclear Incident Response Team (NIRT), the Domestic Emergency Support Team (DEST), the Pre-positioned Equipment Program (PEP), and the Nuclear/Radiological Incident Prevention Program (NRIPP).

Organizational Performance

FY 2010 Significant Accomplishments

- Developed CBRNE training requirements to credential FEMA IMAT personnel to ensure awareness of the unique hazards of CBRNE incidents and how these hazards effect operations, what actions are necessary to operate safely in a CBRNE environment, and what unique interagency resources can be called upon to save and sustain lives during a CBRNE incident.
- Integrated the Incident Management Atmospheric Assessment Center (IMAAC) into FEMA NRCC/RRCC operations for CBRNE events to ensure atmospheric plume predictions are integrated into FEMA incident coordination plans and incident action plans to better inform during a CBRNE response.

- Conducted training for response to a nuclear detonation during Regional Interagency Steering Committee (RISC) meetings at FEMA Regions I and III. This training informed Federal, state and local emergency managers about the predicted prompt effects of a low yield nuclear detonation in an urban environment, the effects of the fallout hazard, and the Federal CONOPS for responding to such a catastrophic disaster.

FY 2011 Planned Accomplishments

- Conduct an Anthrax Training Seminar for the FEMA National IMATs to identify the unique hazards of an anthrax incident, what specific actions are required of the IMAT teams to facilitate an effective response, and what interagency resources are available to more effectively respond to such hazards.
- Establish a FEMA Biological Program to develop and maintain operational capabilities to ensure FEMA can respond effectively and appropriately during a biological incident or attack.
- Develop a comprehensive plan to support the FEMA regions through the establishment of a Regional CBRNE cadre to coordinate CBRNE-related regional activities; serve as principal advisor to the Regional Administrator during a CBRNE event, and serve as the point of contact between FEMA headquarters and the regions on CBRNE specific issues this will also result in the development of CBRNE policies, plans and procedures.

FY 2012 Planned Accomplishments

- In coordination with the Department of Energy's National Nuclear Security Administration (NNSA), participate in the Amber Waves 2012 exercise to test the operational plans and capabilities of specialized NIRT assets in response to the consequence of a radiological dispersal device detonation and contamination spread over multiple states. FEMA and DOE/NNSA are closely coordinating participation in this exercise as many of the NIRT assets are maintained on a daily basis within DOE/NNSA.
- Establish a FEMA Chemical Program to meet operational requirements assigned to FEMA through National doctrine and plans.
- Conduct a Chemical Incident Training Seminar for the FEMA National IMAT teams to identify the unique hazards of a chemical incident, what specific actions are required of the IMAT teams to facilitate an effective response, and what interagency resources are available to respond to such hazards.
- Implement the Regional CBRNE cadre comprehensive plan, in support of the FEMA regions, to coordinate CBRNE-related regional activities; serve as principal advisor to the Regional Administrator during a CBRNE event; and serve as the point of contact between FEMA headquarters and the Regions on CBRNE specific issues this will also result in the refinement of CBRNE policies, plans and procedures.

Improvised Nuclear Device Response and Recovery (INDRR) Program

An improvised nuclear device (IND) is a device designed to result in a nuclear fission reaction. The detonation of an IND in a major urban area would result in a complex catastrophic disaster that would severely challenge the Nation's ability to effectively respond in a timely manner. While all emergencies begin as local events, it can be anticipated that an IND would overwhelm state and local resources, and a rapid well-coordinated Federal response with locals and states is required for life-saving activities and long-term support.

In December of 2008, the DHS Deputy Secretary signed the intra-departmental Integrated Planning Guidance (IPG) for Fiscal Years (FY) 2011-2015 that identified FEMA as the

Departmental lead for response and recovery efforts associated with the terrorist use of an IND. FEMA developed an IND Strategy and implemented an IND Response and Recovery (R&R) Program. The resulting Improvised Nuclear Device Response and Recovery (INDRR) Program works to align organizational/strategic direction that affects project and program goals and objectives and works collectively with the intra- and interagency, and with state, regional, and local agencies to resolve issues within a structured approach where roles and responsibilities for response and recovery to an IND incident are shared.

Organizational Performance

FY 2010 Significant Accomplishments

- Developed the NRCC IND incident action plan to provide guidance during the initial response phase of an IND incident.
- Developed the revised Planning Guidance for Response to a Nuclear Detonation, which provided state and local responders and planners with the necessary information for shelter and evacuation decision-making.
- Developed and supported numerous interagency training efforts on the effects of an IND in an urban environment including: Federal Coordinating Officer (FCO) Training, IMAT Training and Tabletop Exercise (TTX), internal DHS-facilitated discussions, Region I RISC IND TTX, California and Nevada Emergency Management Agency IND seminars.

FY 2011 Planned Accomplishments

- Develop and implement the Nuclear Radiological Incident Coordination Committee consisting of interagency participants to provide guidance and oversight of all efforts to ensure efficient resolution of the identified IND gaps.
- Complete three of the Tier 1 UASI (Urban Area Security Initiative) IND models that will be utilized by state and local planners to develop city-specific IND response plans and provide technical assistance to those state and local planners to produce those plans.
- Finalize the IND Concept of Operation Plan (CONPLAN) to clearly outline the Federal roles, responsibilities, and capabilities to respond to an IND incident.

FY 2012 Planned Accomplishments

- Continue to implement improvements in the seven IND identified capability gap areas to improve the Nation's ability to respond and recovery from an IND attack. Those capability areas include managing the response, characterizing the incident, mass evacuation and in-place protection, medical triage, provide casualty/evacuee care, stabilize and control the impacted area, and perform site cleanup and recovery and restore essential functions.
- Complete two additional Tier 1 UASI city IND models that will be utilized by state and local planners to develop city-specific IND response plans and provide technical assistance to those state and local planners to produce those plans.
- Continue to manage INDRR Program within the FEMA CBRNE Branch to oversee implementation of proposed solutions to the capability gaps identified within the DHS IND strategy.
- Coordinate annual INDRR Strategy Implementation forum to continue alignment of current and future national programs and policies and ensure efforts are applied to solving the identified INDRR gap areas.

Nuclear Incident Response Team (NIRT)

The Nuclear Incident Response Team is comprised of specialized teams managed day-to-day by the Department of Energy's National Nuclear Security Administration (NNSA) and the Environmental Protection Agency (EPA). They are operationally controlled by DHS/FEMA when activated to provide expert technical advice and support in disaster response operations and other needs involving nuclear weapons incidents, radiological incidents, lost or stolen radioactive material incidents, and acts of nuclear terrorism. The FEMA Administrator is responsible for establishing standards and certifying when those standards have been met; conducting joint and other exercises and training and evaluating performance; and providing funds to the DOE and the EPA, as appropriate, for homeland security planning, exercises and training, and equipment.

Organizational Performance

FY 2010 Significant Accomplishments

- Developed FY 2011 process for prioritizing and selection of projects.
- DOE Projects:
 - Updated Dose Coefficient Data File Package (DCFPAK) to provide the dosimetric information needed by government agencies to implement radiation protection programs in a consistent and adequately protective manner.
 - Developed Consequence Management (CM) Tablet software, which is a field analytical data management tool for state and locals to be able to integrate field monitoring radiation data points to provide the capability to generate integrated geospatial representations of radiation contamination following a nuclear/radiological event.

FY 2011 Planned Accomplishments

- Develop five-year NIRT Strategic Plan to align agency strategic priorities with multi-year program goals.
- Improve the interoperability of DOE and EPA NIRT assets to affect a more rapid and integrated Federal response to nuclear or radiological incidents.
- Improve communications between DOE/EPA NIRT assets and FEMA to ensure the rapid and efficient deployment of specialized resources during a nuclear or radiological incident.

FY 2012 Planned Accomplishments

- Continue to enhance the capability of the DOE and EPA NIRT through the procurement of equipment, planning, training, and exercises that meet statutory obligations to establish and certify standards; evaluate the performance of specialized resources; conduct homeland security planning, exercises and training; and to procure essential equipment to fill identified capability gaps.
- Assist with the technology integration aspects of using Unmanned Aerial Vehicle platforms to improve measurement and data collection in a post-detonation situation to better inform consequence management operations.
- Create and support additional training opportunities that promote further integration of DOE and EPA assets with each other and with state and local stakeholders.
- Exercise NIRT asset integration using Incident Command System (ICS) during the DOE Amber Waves 2012 Consequence Management exercise to test existing SOPs and improve response capabilities.

Domestic Emergency Support Team (DEST)

In accordance with PKEMRA, the FEMA Administrator has the responsibility for directing the DEST. NSPD-46/HSPD-15 further identifies the DEST as a specialized interagency team designed to expeditiously provide expert advice, guidance, and support to the FBI On-Scene Coordinator (OSC) during a weapons of mass destruction (WMD) incident or credible threat. FEMA is statutorily responsible for directing the operations of the DEST; coordinating the interagency team for mission planning purposes; and deploying as part of the team.

Organizational Performance

FY 2010 Significant Accomplishments

- Developed draft internal FEMA CONOPS for DEST deployment to provide an internal construct for the efficient operational command and control of the asset.
- Developed and maintained monthly communications tests with the FBI's Strategic Information and Operations Center (SIOC) and FEMA's Operations Center (FOC). These tests ensure accurate and time-critical alert notifications, and identify areas for improvement.

FY 2011 Planned Accomplishments

- Implement FEMA DEST CONOPS to ensure efficient command, control and communications (C-3) in support of the team.
- Establish deployable secure communications capability to allow the team to transmit and receive classified information in the performance of mission requirements.
- Continue to develop and maintain monthly communications tests with the FBI's Strategic Information and Operations Center (SIOC) and FEMA's Operations Center (FOC) to ensure accurate and time-critical alert notifications and communications.

FY 2012 Planned Accomplishments

- Enhance the operational capabilities of the DEST program to ensure FEMA can fulfill its role to lead consequence management planning as part of the DEST during a CBRNE incident.
- Develop and plan DEST participation in exercises to validate and refine C-3 capabilities.
- Develop and plan DEST readiness exercises with interagency team members to ensure team readiness.
- Coordinate with FBI and interagency team members to further refine and improve operational capabilities.

Pre-Positioned Equipment Program (PEP)

The PEP program is a National asset established after 9-11-2001 to provide immediate support for first responders in the event of a WMD incident, whether chemical, biological, radiological, nuclear, or explosive. The PEP also provides support for overwhelming industrial incidents and natural disasters. It promptly brings equipment to emergency responders and replenishes assets consumed in the response. Through the NRCC, state officials can request the deployment of specialized equipment in the event of an all-hazards catastrophic disaster. PEP is a flexible, risk and vulnerability-based emergency management solution that supports Federal, state, local, and tribal jurisdictions so that continual decontamination, detection, search and rescue, medical, and interoperable communications activities.

The PEP consists of standardized sets or caches of emergency equipment, which is supplied to replenish and reconstitute up to 150 first responders (firefighters, law enforcement, and

emergency medical services). The equipment sets consist of personal protective equipment (PPE), including self-contained breathing apparatus (SCBAs) and air purifying respirators, and chemical protective clothing (CPC). The pods also contain: detection devices (radiological, biological, and chemical); medical equipment; technical search and rescue equipment (search cams, life detectors, and thermal imaging cameras); decontamination equipment and portable and mobile radios. The equipment pods are transportable by two tractor-trailer or aircraft (military or commercial).

Organizational Performance

FY 2010 Significant Accomplishments

- Established PEP Site 10 (PST-10) in Las Vegas, Nevada, to improve operational response and provide enhanced coverage in the Southwestern U.S.
- Collaborated with FEMA US&R and DOD National Guard Bureau to develop and deliver airlift load plans to enhance operational capability and response.
- Deployed PEP site teams as part of state and local emergency management community outreach efforts to educate the public about the program and ensure these capabilities are included in state and local disaster planning efforts.

FY 2011 Planned Accomplishments

- Perform Operational Readiness Evaluations (ORE) at ten PEP sites to ensure all operational training, equipment maintenance and program requirements are being met.
- Conduct community outreach deployments at the state and local level at each of ten sites. These deployments provide visibility for the program and serve to educate the public about the program and ensure these capabilities are included in state and local disaster planning efforts.

FY 2012 Planned Accomplishments

- Continue to perform readiness exercises at all PEP sites to ensure all operational training, equipment maintenance, and program requirements are being met.
- Conduct community outreach deployments at the state and local levels at five sites. These deployments provide visibility for the program and serve to educate the public about the program and ensure these capabilities are included in state and local disaster planning efforts.
- Conduct readiness exercises in coordination with DOD assets and local National Guard Bureau units to train and familiarize teams with airlift load requirements to expedite deployments.
- Participate in National-level Fire and Emergency Management events in order to brief the state and local communities on FEMA's response capabilities and how these programs affect those communities.

National Planning Branch

The National Planning Branch is responsible for deliberate, adaptive and interagency planning at the Federal level in preparation to respond to and stabilize a catastrophic event within 72 hours. The Branch has two sections, the Interagency Plans Section, and the Future Plans Section.

FEMA has a five-year strategic plan to prioritize regional planning efforts. In accordance with that, the priorities for regional planning are as follows: (1) all-hazards CONPLANs; (2) initiatives

aligned with Tier 1 UASI Cities and critical catastrophic hazards; (3) existing plans requiring maintenance or a plan update; and (4) initiatives aligned with Tier 2 UASI cities.

The Interagency Plans Section is responsible for leading the deliberate, comprehensive planning efforts for incident response at the Federal level. This section effectively coordinates the consolidation of interagency partner's roles, authorities, and actions into comprehensive plans to address Federal support to regional, state, tribal, and local response efforts. To successfully accomplish these time intensive tasks, the Section requires a cadre of professionals who are not only educated and regularly exercised in deliberate planning and critical thinking, but who are adept in the functions and operations of our interagency partners.

The Future Plans Section is responsible for deliberate planning for FEMA headquarters as an organization and for leading and coordinating adaptive planning at the Federal level during incident response. Adaptive planning is the means by which existing plans are quickly adapted as required to better suit the specific incident. Adaptive planning is rapid, effective planning in a dynamic situation, is a force multiplier that will enhance response, and is conducted in short/no-notice time frames.

Organizational Performance

FY 2010 Significant Accomplishments

- Developed FEMA Anthrax Response Plan addressing how the agency will respond, recover, and protect its workforce during a bioterrorist attack.
- Reenergized the Emergency Support Function Leadership Group (ESFLG) through facilitating monthly meetings and engaging as the interagency planning senior-level coordination body.
- Developed Federal Interagency Response Plan – Earthquake.

FY 2011 Planned Accomplishments

- Develop a Federal Interagency All-Hazards Response Plan with scenario-specific annexes, to include Earthquake and Hurricane. This will effectively provide a single document, with detailed incident specific annexes, that will comprehensively address Federal support to regional, state, tribal, and local entities.
- Facilitate and coordinate Federal Interagency Planning for response efforts based upon the Whole Community concept. Derived from lessons learned, this is critical because catastrophic events will require non-traditional response that goes beyond current Federal planning methodologies.
- Develop and refine the Federal Rapid Medical Countermeasures (MCM) Dispensing Plan. This plan will provide the necessary tasks and procedures required for Federal response support to Anthrax and other key BIO Hazards.

FY 2012 Planned Accomplishments

- Review and validate the Federal Interagency All-Hazards Response Base Plan to ensure comprehensive Federal support is provided to regional, state, tribal, and local entities.
- Develop all-hazard base plan annexes to include cyber attack, improvised nuclear device, and bio attack for inclusion in the comprehensive Federal Interagency All-Hazards Response Plan.
- Continue to facilitate and coordinate Federal interagency planning for response efforts based upon the Whole Community concept. This will ensure that our focus remains on the individuals rather than the incident that greater inclusion paths have been designed into

participatory planning activities, and that emphasis is placed on the empowerment of communities, survivors and all of society to be an effective part of response operations.

- Comprehensively analyze and review the Whole-of-Community approach to emergency management planning, based on lessons learned. This is required to validate planning methodologies and efforts that have been focused on individuals and communities being the most critical response assets present during the initial hours and days following an event.

Regional Planning Branch

The Regional Planning Branch develops coordinated and integrated regional plans, which link to national all-hazards plans. Regional Planning serves as the point of contact for the regions in the Response Directorate for planning. The Regional Planning staff can deploy to the regions to further develop pre-event relationships, protocols, response processes, and a mutual understanding of other agencies roles, issues, and needs. The Regional Planning team leads the development of DHS and FEMA hazard-specific contingency plans and Federal-level catastrophic disaster response plans, in partnership with states and local communities. The goal is to increase the plan-to-action ability to respond with little or no advance notice/warning to major disasters and incidents through rapid response with massive support. To increase asset caches, the plans reflect the need for a significantly higher level of response assets. Additionally, the initiatives and plans significantly enhance Federal disaster response planning activities by focusing solely on specific types of catastrophic disasters.

Organizational Performance

FY 2010 Significant Accomplishments

- Developed Federal plans, both regionally and nationally-focused, that synchronized with Urban Area/regional plans developed from the Urban Area Security Initiative's Regional Catastrophic Preparedness Grant Program:
- Completed Regions IV, V, VI, and VII joint state-regional Catastrophic New Madrid Seismic Zone Earthquake Operational Plans (OPLAN).
- Completed Region IX Hawaii Catastrophic Plan OPLAN.

FY 2011 Planned Accomplishments

- Complete plans for National Special Security Events (NSSEs) and other special events (State of the Union, Asia Pacific Economic Cooperation Summit) which will enhance the ability of the Federal government to rapidly provide support to State and local governments and first responders that are on-scene at these events.
- Complete catastrophic plans for an earthquake in Southern California and an earthquake in Utah along the Wasatch Fault consistent with the Whole Community initiative, which will enhance the Federal government's ability to provide support to the affected jurisdiction in the event of such a catastrophic event.
- Initiate catastrophic plan development for a hurricane in Florida, and continue development in Texas and Louisiana; for a Bluestone dam failure in West Virginia; for a Cascadian Subduction Zone Catastrophic Earthquake/Tsunami in Regions IX and X, and initiate Regional All-Hazards Plan development in all ten FEMA Regions.

FY 2012 Planned Accomplishments

- Initiate, complete, and implement plans for five NSSEs including the State of the Union, Asia-Pacific Economic Cooperation Summit, and major party national conventions; initiate Inauguration planning; and provide support for more than 30 other special events.

Continue Regional All-Hazards Plan development in all ten FEMA Regions, consistent with the Whole Community initiative and PKEMRA. These all-hazard plans will enhance the ability of the Federal government to rapidly respond to the jurisdictions affected by such a catastrophic event and provide support to State and local governments.

- Complete ten catastrophic annexes including earthquakes and tsunamis in Puerto Rico and the US Virgin Islands; an Improvised Nuclear Device (IND) in Chicago; a hurricane in Florida, Texas and Louisiana; and a Bluestone dam failure in West Virginia. All of these efforts are consistent with the Whole Community initiative and will enhance the ability of the Federal government to rapidly respond to the State and local governments affected by such a catastrophic event.
- Continue Cascadian Subduction Zone Catastrophic Earthquake/Tsunami planning in Regions IX and X.

Disaster Emergency Communications Division

Disaster Emergency Communications Programs FY 2012 Funding Summary

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Communications Integration Branch (CIB)	5	5	588	100	688
Disaster Emergency Communications Mgmt Office	6	6	706	40	746
Mobile Emergency Response System	276	276	32,019	12,192	44,211
Tactical Emergency Communications Branch	8	8	941	-	941
Subtotal	295	295	34,254	12,332	46,586

The Disaster Emergency Communications (DEC) Division provides and leads integrated Federal communications support to emergency responders at all levels of government. It has a leading national role in the management, oversight, and development of emergency communications capabilities and doctrine. The Division develops and implements the capability to provide tactical voice, data, and video communications services before, during, and immediately after an incident to support emergency managers at all levels of governments. DEC accomplishes its mission through two highly successful core program activities: Regional Emergency Communications Coordination Work Groups (RECCWGs) and Mobile Emergency Response Support (MERS).

Communications Integration Branch/Regional Emergency Communications Coordination Working Group (RECCWG)

The Communications Integration Branch (CIB) develops comprehensive and integrated Federal, regional, tribal, and state communications plans to ensure that FEMA is prepared to respond and is well integrated with emergency responders during response and recovery efforts nationwide. These planning efforts include the development of State Communication Annexes, development of regional plans, updating national-level contingency plans (CONPLAN), and fulfilling additional requirements of these plans through the development of Pre-Scripted Mission Assignments (PSMA). The CIB works to build communications policies that provide the scope and methods for using FEMA capabilities alongside partners and customers. In addition, the CIB works with the Tactical Emergency Communications Branch (TECB) to determine how the actions of external partners might affect communications capabilities and coordinates plans with external emergency communications providers to build a comprehensive communications support structure.

The DEC manages the RECCWG National Program office. As defined in Title XVIII of the Department of Homeland Security Appropriations Act of 2007, RECCWGs assess emergency communications capabilities within their respective FEMA regions, facilitate disaster

preparedness through the promotion of multi-jurisdictional and multi-agency emergency communications networks; and ensure activities are coordinated with all emergency communications stakeholders within the FEMA regions. The RECCWG budget aligns funding with DEC requirements and responsibilities, which is a step towards improving operational readiness, unity of command, and continuity of operations to ensure the effective use of all response communications assets to achieve mission success.

Organizational Performance

FY 2010 Significant Accomplishments

- Established the ten Regional Emergency Communications Coordination Working Groups (RECCWGs), which consist of Federal, state, and local representatives, as well as representatives of other non-government agencies, supported the conduct of RECCWG face to face meetings in each of the ten Regions and produced the mandated annual regional reports that address interoperable emergency communication concerns. RECCWG face-to-face meetings provide opportunity for direct state, tribal, local and Federal coordination on interoperability issues and programs. The legislatively required report provides valuable strategic and tactical insights from a state, tribal, and local perspective as to the level of interoperability and operability of communications systems supporting emergency response and the public safety community. This perspective informs Federal agencies and provides direct state, tribal, and local input to programs designed to increase interoperability and operability.
- Developed five state and one territorial emergency communication plans that allow FEMA to be better prepared to preposition and deploy communication resources during catastrophic incidents. State and territorial communications plans provide insight into potential state requirements during incident response and increase the efficiency and speed of the Federal response.
- Supported the regions in meeting RECCWG reporting requirements by developing an annual reporting template to serve as a reporting tool for the RECCWGs. RECCWGs must report annually to the FEMA Regional Administrator on the status of building robust and sustainable interoperable emergency communications networks. This template provides the RECCWG membership a tool for completing the legislatively mandated report.

FY 2011 Planned Accomplishments

- Provide the regions with state planning support. State communication annexes serve as interagency CONPLANS for tactical emergency communications activities within a state. Six additional plans will be completed. The state communications plans provide insight into potential state requirements during incident response and increase the efficiency and speed of Federal response.
- Develop regional and scenario-specific plans. Regional Communication Plans serve as operations plans for FEMA tactical emergency communications activities. Templates will be developed to support two regional emergency communications plans. Regional Communications Plans will provide guidance for increased efficiencies during incidents affecting multiple states.
- Promote communications interoperability with state and local response organizations through RECCWGs in each FEMA Region to provide a venue for all emergency response organizations at all levels of government to improve integration of emergency communications response and recovery. RECCWG meetings will be conducted in the ten FEMA Regions with additional monthly conference calls in many of the Regions.

FY 2012 Planned Accomplishments

- Improve FEMA's capability to employ disaster emergency communications services to fill gaps in state and major urban area emergency communications plans.
- Support the conduct of RECCWG meetings to provide a forum where state, tribal, local, and Federal agencies can directly affect interoperability planning to include direct input to the FEMA Grants Office, Office of Emergency Communications (OEC), Federal Communications Commission (FCC) and other agencies involved in strategic and tactical interoperability planning and policy.
- Develop regional and scenario-specific templates and assist the Regional Administrators (RA) in developing regional specific plans as outlined by each RA. Regional Communication Plans serve as operations plans for FEMA tactical emergency communications activities and provide increased efficiency and speed of Federal communications support during incidents that affect multiple states in a region.
- Document the operational emergency communications needs of state, tribal, and local responders through development of 6 comprehensive state plans in accordance with the Regional Administrator and RECCWG recommendations. Provide support for the updating of state plans completed prior to 2008 to ensure the continued viability of the plans.
- Develop up to six additional State Communications Plans. Annex development in collaboration with state and local emergency personnel; produce strengthened relationships between FEMA and state and local emergency communications stakeholders and provide an increase in efficiency and speed of Federal communications support during incidents.

Tactical Emergency Communications Branch (TECB)/Mobile Emergency Response Support (MERS) Program

The Tactical Emergency Communications Branch (TECB) aggressively responds to disasters and other emergency situations with mobile communications, operations, and logistics capabilities to support the needs of emergency responders. TECB is engaging across the Federal government, with state, tribal, and local agencies, and with other partners to help establish consistent doctrine, plans, tactics, techniques, and procedures to ensure effective communications interoperability, standards, and capabilities during federally coordinated response operations.

MERS is a flexible response asset that provides self-sufficient, mobile communications, logistics, operations capabilities required for the on-scene management of all-hazard disaster response activities. The six MERS detachments are centrally managed and are dispersed across the United States to rapidly respond to incidents any time, in any environment. MERS detachments are called upon to support National Special Security Events as well as other planned special events and activities. Collectively, they provide a cost-effective solution to National Response Framework (NRF) requirements. MERS' ability to build disaster support facilities allows interagency staff at Joint Field Offices to focus on immediate response and recovery activities. MERS home station operations centers and operations specialists support FEMA's network of operations centers providing situational awareness and reporting down to the incident site level.

MERS detachments significantly enhance FEMA's response execution across the full spectrum of incidents, both natural and man-made. The DEC Division seeks to improve the MERS operational response capability by synchronizing readiness, technology, risk, and funding

activities across all mission sets. Sustained funding for MERS is key to enhanced FEMA readiness for high risk, zero tolerance for failure missions.

Establishing a sound budget for the DEC Division supports current FEMA and Response Directorate Strategic Planning Guidance to build a robust communications program that includes funding operations and maintenance for all-crisis mission support. Stable sustainment funding for Mobile Emergency Response Support (MERS) is key to delivery of rapid, reliable, and mission ready Federal response capability. This capability grows in importance as FEMA enhances its support to incidents involving Improvised Nuclear Devices (INDs), cyber attacks, and CBRNE full-spectrum response planning and operations.

Organizational Performance

FY 2010 Significant Accomplishments

- Developed light and heavy communications packages to support voice, video, and data communication requirements for response teams, including IMAT, DEST, and US&R
- Created a comprehensive lifecycle management program for the recapitalization of major communications and logistics equipment, and vehicle replacement.
- Developed a National response network strategy for enabling interoperable communications capabilities in accordance with National Communications System Directive (NCS D 3-10) communication requirements.
- Participated in national level exercises to ensure that DEC Division's technical assets are aligned with FEMA's response and recovery mission requirements.

FY 2011 Planned Accomplishments

- Define the Tactical End State Architecture (TESA) outlining the current structure and roles of the people and process within the DEC Division including the baseline capabilities, organization structure, and network architecture which will result in a standardized framework and methodology for establishing disaster emergency communications response capabilities across FEMA and other agencies.
- Develop functional guidance for Regional DEC operations. The Emergency Support Function (ESF) #2¹ Coordination Standard Operating Procedure (SOP) contains instructions on how to perform the tasks associated with ESF #2. The SOPs include policies for activations, deployment, and deactivations of technical resources and roles and responsibilities for the operation, management, recovery, and continuity of equipment and infrastructure during an event.

FY 2012 Planned Accomplishments

- Identify communications requirements to ensure interoperability among Federal, state, local, and tribal governments and private sector and non-governmental organizations through close coordination and consultation with the RECCWG.
- Enable efficient and effective Federal disaster operations by providing tactical communications support for voice, video, and data communications to state, local, and tribal first responders in coordination with other Federal partners in accordance with the Federal Coordination Officials (FCO) requirements.

¹ESF 2, Communications, which supports the restoration of the communications infrastructure, facilitates the recovery of systems and applications from cyber attacks, and coordinates Federal communications support to response efforts during incidents requiring a coordinated Federal response).

- Develop the next level TESA incorporating a planned technology upgrade path base on the DEC technology roadmap. This will provide the DEC Division an orderly and logical incorporation of new technologies into the current TESA and enhance life-cycle management and budget planning.
- Develop Annex K (Communications) to National and regional plans. A comprehensive communications plan, Annex K will increase interoperability and readiness for Federal, stated, local and tribal entities by identifying gaps and documenting interoperable solutions for mitigation purposes.

Business Management Division

Business Management Programs FY 2012 Funding Summary

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Assets and Contracts Management	10	10	1,161	163	1,324
Business Mgmt Division Mgmt Office	8	8	871	107	978
Human Resources Management	7	7	823	-	823
Financial Management Branch	<u>5</u>	<u>4</u>	<u>589</u>	<u>-</u>	<u>589</u>
Subtotal	30	29	3,444	270	3,714

The Business Management Division (BMD) was established in FY 2010 to coordinate the major support requirements of the Directorate. The Division is charged with making solid decisions about the Response Directorate's mission needs and providing world-class support for the day-to-day business. BMD accomplishes this mission through the coordinated efforts of the Assets and Contracts Management (ACM) Branch, the Human Resources Management Branch (HRMB), and the Financial Management Branch (FMB).

- The ACM provides support services to the Directorate in the areas of assets and contract management for headquarters and regional response staff and teams. ACM also supports IMATS, US&R, and MERs, including contracting expertise encompassing a wide range of systems, services and items through all acquisition phases; provides acquisition solutions from contract support, source selection support, and policy support.
- The HRMB provides customer service solutions to Response Directorate senior management on all human resource issues. It serves as the conduit between the Directorate and the Human Capital Division (HCD) on all personnel-related issues for all Directorate programs, and administers the Directorate's personnel, employee relations, employee assistance, payroll and benefits, and related human capital programs.
- The FMB manages the Response Directorate's annual budget in support of operational programs, including budget formulation, execution, and fund allocation. It provides technical support in all financial areas, and serves as the conduit between the Directorate and the Chief Financial Officer (CFO) on all budget and accounting-related issues for all Directorate programs.

Organizational Performance

FY 2010 Significant Accomplishments

- Provided consolidated and uniform procedures regarding office supplies, equipment, contract support, and office space services to the Directorate in order to maximize cost savings and efficiencies.

- Provided personnel management solutions including developing position descriptions, staffing plans, and hiring initiatives for the Directorate in support of the reorganization of the Directorate.
- Revised and standardized financial management processes and procedures in accordance with the Office of Chief Financial Officer's directives and policies in support of the reorganization of the Directorate.

FY 2011 Planned Accomplishments

- Revise and update property, supply and equipment purchase and distribution policies/procedures to maximize possible cost savings in order to increase cost savings efforts through standardized purchasing of supplies and equipment.
- Work to reduce Directorate vacancy rates using updated position description and identifying Directorate hiring priorities and develop a tracking system to accurately track position fill rates in order to maximize human resources available to the Directorate.
- Formulate and justify annual Congressional justifications, budgets, and supporting documents that effectively outline the requirements of the Directorate and help to ensure that approved budgets provide for the funding necessary to effectively support mission requirements across all lines of business.

FY 2012 Planned Accomplishments

- Refine Directorate equipment, furniture, and facility needs in a responsive, value-added manner, refresh equipment inventories as prescribed in refresh plans to ensure that staff has the necessary equipment to perform their mission, and provide enhanced procurement oversight and guidance to achieve greater cost savings and organizational efficiencies in procuring goods and services for the Directorate.
- Integrate the mission assignment database and an automated action tracking function with the common operating system that is currently being developed. This will enhance information processing and utilize web technology to field an automated action-tracking tool for use by mission assignment managers to improve FEMA's capability to track mission assignments.
- Effectively manage all Directorate positions and provide accurate accounting of staff levels and vacancies to senior leaders in order to maximize the benefit of authorized positions.

D. Logistics Management Directorate (LMD)

Logistics Programs FY 2012 Funding Summary

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Logistics Management M&A	15	13	1,980	2,531	4,511
Logistics Operations	39	35	4,200	76	4,276
Plans and Exercises	16	14	1,680	229	1,909
Distribution Management	105	96	6,837	312	7,149
Property Management	22	19	2,280	1,188	3,468
Business Management	16	12	1,440	966	2,406
Regional Support	33	33	3,877	676	4,553
Subtotal	246	222	22,294	5,978	28,272

The Logistics Management Directorate (LMD) is FEMA's major program office responsible for policy, guidance, standards, execution and governance of logistics support, services and operations. LMD's mission is to provide an efficient, transparent and flexible logistics capability for the procurement and delivery of goods and services necessary for an effective and timely response to and recovery from disasters. LMD is organized around four core competencies: *Logistics Plans & Exercises* to develop and provide cohesive and synchronized logistics plans and exercises to achieve both short and long term readiness requirements; *Logistics Operations* to manage and execute the coordination and communication, tracking and reporting for all hazards operations and serve as the central reporting element for the National Response Coordination Center on all logistics actions and operational activities; *Distribution Management* to manage the Agency's warehouse facilities and transportation systems used to receive, store, maintain, issue, distribute and track supplies, services, materiel and equipment; and *Property Management* to provide industry standards (using American Society for Testing and Materials voluntary consensus standards) Quality Assurance, Customer Assistance and Technical reviews of property accountability, inventory services to Strategic Storage Sites, Distribution Centers and Temporary Housing Staging Areas, and oversight of disposal and donations of agency disaster funded supplies and equipment.

Logistics Management Executive Oversight

Effectively plans, manages, and sustains the national logistics response and recovery operations in support of domestic emergencies and special events – to act as the National Logistics Coordinator (NLC) or Single Logistics Integrator for National incident support. The Office of Assistant Administrator establishes national logistics planning, support services procedures, and fosters transparency through collaboration, coordination, and technology enhancements to expand region and state level logistics capabilities. In coordination with FEMA's Grant Programs Directorate, this office reviews applications requesting assistance through the Homeland Security Grant Program. The Administrator's office also continues to strengthen FEMA Logistics relationships with the private sector through a robust "Vendor Day" program and engagement with the Infrastructure Protection Commercial Facilities Sector Specific Agency and private sector partners in logistics preparedness planning, exercises and ongoing operations.

This office also provides oversight to the Logistics Systems Office, which is responsible for the development and sustainment of all Logistics Systems, including the Logistics Supply Chain Management System (program development/sustainment is funded through DRS appropriation) Logistics Visibility (Log Vis) module resident with the Situational Awareness Viewer for Emergency Response (SAVER).

In July 2010, Department of Homeland Security Office of the Inspector General reported that FEMA had made significant progress in enhancing its logistics capability and is better prepared now than at any previous time for dealing with catastrophic disasters. By April of 2011, the logistics transformation primary goals will be substantially achieved, and the two-person Transformation and Initiatives Office will be dissolved. One permanent full time position will be transitioned to the Office of the Administrator to oversee finalization of transformation efforts, and transition shift emphasis to customer outreach through an externally focused Logistics Planning, Readiness and Assistance Program. The other position will move to the executive office to provide senior-level management of the Logistics Systems Office.

Additionally, the Logistics Capability and Assessment Tool that was launched in 2008 has been instrumental in providing training to all 10 FEMA regions, conducted briefings for 41 states and

territories, and facilitated 19 focus sessions with states and territories, ultimately enhancing their disaster logistics capabilities. Through 2011 and into 2012, the Logistics Management Directorate will complete additional assessments and expand services to local government entities. The focus in 2012 will be to complete the assessments and develop a “train the trainer” DVD and associated documentation, which will be delivered to the regions. Through the remainder of 2012 and going forward, Logistics Management will continue to oversee this program and provide in-house resources to assist regions in their training efforts.

Organizational Performance

FY 2010 Significant Accomplishments

- In collaboration with the Emergency Management Institute (EMI) and the United States Army Logistics University (ALU), developed and conducted a 4 ½ day Interagency Logistics Course pilot course consisting of 24 students representing FEMA, DOD, DOS, and the states of Florida and Virginia. The course familiarized students with logistics planning considerations and the interagency role in disaster relief and humanitarian assistance missions.
- Continued implementation of Lean Six Sigma projects beginning with transportation billing, the new Atlanta Distribution Center and expanding across the entire supply chain. The goal is to decrease late billing charges, increase scheduling reliability, and decrease order error rates percent.

FY 2011 Planned Accomplishments

- In conjunction with the US Army, jointly conduct four Interagency Logistics Courses (ILC) to train approximately 128 interagency students (to include States and private sector), thereby increasing the understanding of interagency logistics across whole of nation communities.

FY 2012 Planned Accomplishments

- In collaboration with the US Army, jointly conduct four Interagency Logistics Courses (ILC) to train approximately 128 interagency students, thereby increasing the understanding of interagency logistics across whole of nation communities.
- Develop a Logistics Planning, Readiness and Assistance Program that integrates current capabilities into a single program focused on improvement and sustainment of FEMA Region and State response readiness.

Logistics Operations Division

Manages and executes national logistics collaboration and coordination, tracking and reporting for all-hazards operations utilizing the National Logistics Coordinator concept. The division operates the Logistics Management Center (LMC), which serves as the central reporting element for the National Response Coordination Center (NRCC) on all logistics operational activities and actions. Logistics Operations also manages the storage, maintenance, and deployment of over 4,000 ready-for-dispatch Temporary Housing Units (THUs) and 60 Mobile Disaster Recovery Centers (MDRCs) to ensure we are adequately prepared for disaster response. This division also manages the Responder Support Camp contract and program, ensuring that FEMA can provide adequate shelter, food, and water for 2,000 first responders within 102 hours.

Organizational Performance

FY 2010 Significant Accomplishments

- Implemented three written concepts of operations (Responder Support Camps, Temporary Housing Unit Support Guide and Incident Support Bases) necessary to enable response and recovery operations.
- Transitioned key Total Asset Visibility Resource Accountability Coordination Center (TRACC) functions from contractor to government workforce thus reducing contractor footprint, which improved government oversight and accountability of the program and ensures continuity of the program as government employees assume these key responsibilities.
- Closed seven Temporary Housing sites that stored Katrina legacy units.

FY 2011 Planned Accomplishments

- Publish a refined Logistics Operations Manual that defines an overarching concept for National Logistics Coordinator construct and disaster logistics support for FEMA Regions.
- Develop the logistics portion of the FEMA Readiness Reporting Program and finalize New Madrid Seismic Zone service and support planning; validate plan through NLE 2011.
- Close the final three Temporary Housing sites that store Katrina legacy units saving the government X million.
- Establish and maintain FEMA Unified Readiness Reporting System quarterly readiness rates for Logistics operations equipment, systems and teams.

FY 2012 Planned Accomplishments

- Publish an updated Temporary Housing Unit (THU) SOP and Support Guide fully implementing THU Production Center construct for the reception, storage, maintenance and deployment of THUs.
- Maintain FEMA Unified Readiness Reporting System quarterly readiness rates for Logistics operations equipment, systems and teams.

Plans and Exercises Division

Develops and determines strategic baseline planning criteria to provide cohesive and synchronized logistics plans and exercises to achieve both short and long-term readiness requirements. The Division ensures deliberate planning efforts and coordinated CONOPS, OPLANS and Interagency Plans, resulting in repeatable processes that optimize national logistics response and recovery operations in support of domestic emergencies and special events. Plans and Exercises Division is responsible for operations analysis, lessons learned and adaptive planning during incident support. The Division provides training and hands-on assistance with several logistics planning tools, including the Logistics Capability Assessment Tool (LCAT) and the Logistics Planning, Readiness and Assistance Program.

Organizational Performance

FY 2010 Significant Accomplishments

- In coordination with GSA, co-hosted the 2011 Emergency Support Function (ESF) #7 Annual Summit. The Summit brings together all elements of the EFS #7 community FEMA Headquarters, Regions, GSA and partner agencies (Department of Transportation (DOT), USFS, United States Army Corp of Engineers (USACE), Mass Care, Department of Health and Human Services (HHS), United States Department of Agriculture (USDA),

Department of Energy (DOE), Department of the Interior (DOI) and DoD (DOD), Defense Logistics Agency (DLA)/US Northern Command (USNORTHCOM)/National Guard Bureau (NGB)). Emphasis on planning for NLE 2011 and Catastrophic Response.

- Trained all 10 FEMA regions, conducted briefings for 41 states and territories, and facilitated 19 focus sessions with states and territories on the Logistics Capability Assessment Tool (LCAT). The LCAT helps states self-evaluate current disaster logistics readiness, identify areas targeted for improvement, develop a roadmap to mitigate weaknesses and enhance strengths. Management of the LCAT Program will move to the Logistics Plans and Exercises Division in FY 2011.
- FEMA-LMD and USNORTHCOM initiated planning to co-host a Defense Support of Civil Authorities (DSCA) Conference to brief Senior Leaders on logistics synchronization efforts to strengthen the Catastrophic Incident Supplement by identifying specified and implied tasks for a New Madrid event, especially as it involves DSCA.

FY 2011 Planned Accomplishments

- Assist with Whole Community Concept planning to incorporate National Voluntary Organization Active in Disasters (NVOADS) and private sector capability Conducted Defense Support to Civil Authorities Conference with USNORTHCOM, and hosted by the American Red Cross, to brief ESF-7 Senior Leaders on logistics synchronization efforts to strengthen the logistics portion of the Catastrophic Incident Supplement by identifying specified and implied tasks to a New Madrid event.
- Develop, finalize and deliver a Logistics Capability Assessment (LCAT) self-training tool to facilitate State logistics readiness; create a “Train-the-Trainer” DVD and related documentation to facilitate a hand-off of LCAT to the regions
- Facilitate LCAT planning and readiness sessions for 2 New Madrid and 9 Hurricane prone States.

FY 2012 Planned Accomplishments

- Develop and publish a Logistics Annex for the New Madrid Seismic Zone.
- Finalize the Whole Community Concept Support plan, which will result in a unified effort of interagency logistics support to disasters, enabling the whole community to stabilize the incident area within 72 hours.
- Integrate FEMA Interagency Logistics and Resource Support Plans with Defense in Support of Civil Authorities (DSCA) capabilities. The anticipated outcome is more effective coordination with internal and external logistics partners leading to synchronization across the national supply chain
- Continue support of regional LCAT efforts, largely through in-house resources, Webinars and teleconferences

Distribution Management Division

The Program manages a comprehensive supply chain, warehouse and transportation operation using a strategic alliance of FEMA partner agencies to distribute supplies, equipment, and services rapidly, effectively and efficiently to support emergencies. It oversees eight distribution centers located throughout the country and overseas, as well as transportation services to ensure preparedness to rapidly ship initial response resource commodities during a disaster. The strategic initiative is to build a nation’s capacity to stabilize a catastrophic event within 72 hours and restore basic services and community functionality within 60 days thereafter.

Organizational Performance

FY 2010 Significant Accomplishments

- Successful disaster support to American Samoa, Mid-West Floods, and Hurricane Alex by providing timely lifesaving and life sustaining commodities and services. Collaborated with USAID in support of Haiti Relief efforts.
- Completed Air Cargo Certification for all Transporters, enabling rapid military transport.
- Conducted monthly inventory reconciliations between FEMA property system of record and financial records with 98 percent accuracy.
- Opened a new industry standard warehouse in Atlanta in accordance with the approved business case.
- Completed over 95 percent of orders in support of disasters, Earl, Haiti, American Samoa, Alex and Midwest floods within the agreed upon delivery date.

FY 2011 Planned Accomplishments

- Complete upgrade of the Distribution Centers (DC) integration with Logistics Supply Chain Management System, personnel structure, processes and technology to seven of the eight Distribution Centers.
- Continue DC Pilot Project to enable a fully capable network of disaster response resources, personnel, products, and services to improve supply chain velocity, efficiency, accountability and accuracy in all disaster response activities.
- Develop a comprehensive web based exchange where agency partners can provide daily electronic data feed to display real time inventory and response capability. Partner shipments comprise over 70 percent of Logistics Resources in a major disaster. Real time visibility over partner shipments will provide ability to manage these shipments, track them to ISBs, project arrival times, and manage diversions to meet the most pressing, time sensitive needs of disaster survivors.
- Maintain a 95 percent on time completion rate of orders in support of disasters.
- Open a new industry standard warehouse in Puerto Rico in accordance with the approved business case to support Caribbean area incidents.

FY 2012 Planned Accomplishments

- Develop a comprehensive web based exchange where agency partners can provide daily electronic data feed to display real time inventory and response capability.. Partner shipments comprise over 70 percent of Logistics Resources in a major disaster. Real time visibility over partner shipments will provide ability to manage these shipments, track them to ISBs, project arrival times, and manage diversions to meet the most pressing, time sensitive needs of disaster survivors.
- Continue to transition the DC network to standardized operational units sharing the common operating model of defined operating requirements and metrics; this system will feed real-time information to local and national levels.

Property Management Division

The Property Management Division provides industry standard quality assurance, customer assistance and technical reviews of property accountability, inventory services to strategic storage sites, Distribution Centers and Temporary Housing Staging areas and oversight of disposal and donations of agency disaster funded supplies and equipment. In addition, the division also provides Inventory Management Specialists to staff the JFO site closure teams. These competencies either sustain or enable efficient inventory and financial management of strategic

stocks that are under the control of the Logistics Management Directorate and have improved the accuracy inventory rate from 62 to 98 percent. Property Management provides assurance that FEMA has the essential life-sustaining resources to meet disaster survivor needs while enabling FEMA to correct critical material weaknesses.

Organizational Performance

FY 2010 Significant Accomplishments

- Conducted 100 percent inventories of all Distribution Centers and Temporary Housing staging areas and provided inventory and property accountability oversight for over 600 separate disaster sites that were in response or recovery mode during this fiscal year, resulting in a 98 percent accuracy rate
- Achieved a 95 percent annual reconciliation accuracy of Disaster Response Supply inventory.

FY 2011 Planned Accomplishments

- Achieve a 20 percent reduction of disaster related inventory adjustments.
- Achieve a minimum 95 percent annual reconciliation accuracy of Disaster Response Supply inventory.
- Assume responsibility for policy compliance, auditing, and operational oversight of non-fixed facilities to include Temporary Housing Unit (THU) locations, Distribution Centers, and disaster-related facilities such as Joint Field Offices (JFO), Auxiliary JFO's, and prepositioned sites.
- Develop formal compliance procedures for JFO Site Closure.

FY 2012 Planned Accomplishments

- Refine oversight processes and procedures over non-disaster sites to reduce inventory losses by 30 percent over FY 2011.
- Continue to improve the reconciliation between property and financial records to achieve 98 percent reconciliation rates.
- Improve the headquarters APO cadre on-hand rate to a sustainable level to support a Tier III event.
- Conduct formal compliance reviews of all JFO sites prior to closure using the JFO Site Closure team.

Business Management Division

Provide comprehensive Logistics-related fiscal, personnel, facilities, IT and administrative services through coordination with other FEMA directorates and offices to achieve optimum mission requirements and capabilities. Functions of Business Management include integrating human resources management and strategies into the overall strategic objectives for LMD, advising directorate leadership on human capital requirements and professional training development for operational mission and programs and providing comprehensive financial management services, to include budget formulation, oversight, and financial document tracking for five divisions and 10 regions. The division also manages the HQ Disaster Assistance Employee (DAE) Logistics cadre, which consists of over 300 DAEs, and serves as the national cadre manager for 10 regions. In this capacity, the division ensures consistent policies are in place for management and training of DAEs, including oversight and implementation of FEMA's qualification system.

Organizational Performance

FY 2010 Significant Accomplishments

- Converted over 80 non-disaster specific CORE positions to permanent, full-time positions

FY 2011 Planned Accomplishments

- Implement the FEMA Qualification System.

FY 2012 Planned Accomplishments

- Transition management of the regional logistics budget to the regions, promoting greater efficiency in purchasing and setting spending authority where it should be – with the Regional Administrator.

Regional Logistic Operations Support

Funding provides regional Logistics permanent full time staff the capability to travel throughout the Regions to conduct disaster preparedness planning with state and local partners and to provide those partners with an increased level of support. Regional Logistics staff provides strategic direction to state and local partners through resources such as the Logistics Capability Assessment Tool (LCAT), standard operating procedures (SOPs) and other training, such as the point of distribution (POD) training. The M&A funding also provides the necessary IT equipment and supplies to support Regional Logistics staff. This capability increases the states’ ability to provide faster and more efficient response to disasters, lessening the immediate requirements for LMD’s response when disaster strikes and making the delivery of logistics services increasingly more efficient and cost-effective. A strong logistical presence in the Regions supports LMD’s focus on institutionalizing command and coordination of strategic logistics planning, operations and management while pushing operational control and execution down to the most effective level of execution.

E. Office of Federal Coordinating Officer Operations (FCO)

Office of the Federal Coordinating Office Programs FY 2012 Funding Summary

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
FCO Programs	2	2	191	38	229

The Federal Coordinating Officer (FCO) program consists of 45 officers who provide critical leadership at FEMA field offices during presidentially – declared disasters and in support of State level planning and preparedness efforts. While support to this program is found here, activities of the FCOs are primarily funded in the Disaster Relief Fund, Disaster Readiness and Support (DRS) plan, including salaries and benefits and program costs such as travel to maintain credentialing and qualifications and to serve as leaders at interagency training exercises, and communication equipment to effectively administer disaster relief from the field. During deployment to disasters, salaries and benefits for the FCOs are funded by the specific disaster declarations.

The mission of the Office of FCO Operations is to lead, train, equip, and manage FEMA’s Federal Coordinating Officers to ensure their availability for rapid deployment in response to any disaster; to deliver training to develop and sustain FCO professional competencies; and to coordinate FCO assignments to meet the on-scene needs of FEMA and its emergency management partners.

The Stafford Act directs a Federal Coordinating Officer (FCO) to do the following; (1) make an initial appraisal of the types of relief most urgently needed; (2) establish field offices as the FCO deems necessary; (3) coordinate the administration of relief from other organizations, and; 4) take other such action as directed by the President.

Upon declaration of a major disaster or emergency, the FEMA Administrator appoints an FCO who is charged with initiating all actions necessary to assure that Federal assistance is provided in accordance with the declaration, applicable laws, regulations, and the FEMA-State agreement. This may include designation as Disaster Recovery Manager, exercising all authority to direct DRF funding in response to a disaster.

FY 2010 Significant Accomplishments

- Brought the cadre up to the strength authorized and ensure the necessary training to have the appropriate numbers of credentialed FCOs match the severity level of disasters to which FEMA responds.
- Achieved and maintained 100 percent State satisfaction with FCO performance in delivery of disaster assistance programs.

FY 2011 Planned Accomplishments

- Enhance training for specialized Response FCOs and qualified Chemical, Biological, Radiological, Nuclear, and high yield Explosive (CBRNE) FCOs. Training allows the FCO cadre to be credentialed to respond to all hazard disaster events, which would include any events related Chemical, Biological, Radiological, Nuclear, and high yield Explosive (CBRNE) and catastrophic earthquakes.
- Enhance training and equipment in preparation for a catastrophic earthquake response and participate in National Level Exercise 2011 (NLE-11). Training allows FCOs to have complete functional capabilities within these two hazard type events that will ensure FEMA responds accurately and timely to these type events.

FY 2012 Planned Accomplishments

- Enhance FEMA overall readiness by leading certification exercises for key response and recovery teams. Develop metrics for managing the readiness of individual FCO cadre members and the overall cadre readiness.

2. Federal Insurance and Mitigation:

Mitigation Programs FY 2012 Funding Summary

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Dam Safety	3	3	436	7,681	8,117
Earthquake	8	7	1,006	6,457	7,463
Building Science Program	-	-	-	476	476
Environmental & Historic Preservation	9	9	1,307	1,100	2,407
Regional Support	112	112	13,160	-	13,160
Disaster Management Support	10	10	672	432	1,104
Mitigation - Executive Oversight	43	38	5,021	91	5,112
Subtotal	185	179	21,602	16,237	37,839

The Federal Insurance and Mitigation Administration (FIMA) create safer communities by reducing loss of life and property and preventing potential disaster losses. This is accomplished through three core competencies and one support activity: (1) Analyzing Risk through identification and assessment; (2) Reducing Risk through land use, building codes, and the Hazard Mitigation Grant Program; (3) Environmental Planning and Historic Preservation; and, (4) Regional and Disaster Support activity.

These core competencies and support activity work jointly to reduce the likelihood of future losses, to enable individuals to recover more rapidly from floods and other disasters, and to minimize the financial impact of disasters on the U.S. Treasury, states, local and tribal communities..

National Dam Safety Program (NDSP)

As a critical element of the Nation's infrastructure, dams bring water, power, flood control, recreation, economic possibilities, and many other advantages to people. Safe operations and maintenance are critical to sustaining these advantages and avoiding potential disaster. Since 1998, the recorded number of deficient dams (those with structural or hydraulic deficiencies, leaving them susceptible to failure) has risen by 85 percent—from 1,818 to 4,095. While federally owned dams are in good condition, and there have been modest gains in repair, the number of dams identified as unsafe is increasing at a faster rate than those being repaired. The number of high-hazard potential dams (dams whose failure would cause loss of human life) is increasing dramatically. Since 1998, the number of high-hazard-potential dams has increased from 9,281 to 13,000 in 2009.

FEMA's role in addressing this problem is to aid states and communities in recognizing their risk and developing plans to mitigate that risk as the lead federal agency for the National Dam Safety Program (NDSP). FEMA coordinates efforts through collaborative partnerships between States, Federal agencies, private sector, and other stakeholders to secure the safety of these dams through research, training, and public awareness. The NDSP provides financial assistance to States' dam safety programs to support dam safety activities including:

- inspecting and monitoring dams;
- training dam safety staff and inspectors;
- data analysis and research to support the improvement of State Dam Safety Programs;

- preparation of Emergency Action Plans; and
- Public awareness campaigns aimed at both the public and emergency management on the risks associated with dam failure.

Organizational Performance

FY 2010 Significant Accomplishments

- Worked with States to produce and strengthen Emergency Action Plans and dam inspections with funding provided through the FY 2009 Grant Assistance Program. The continued increased program funding level enabled State programs to make significant progress in emergency plan development, increased the number of dam inspections, and supported the initiation of State specific public awareness and outreach activities in FY 2010.
- Collaborated with the National Oceanic and Atmospheric Administration (NOAA) on Dam Incident Emergency Interoperability. This effort seeks to develop a prototypical operating environment to integrate services and data sharing across Federal agencies. It seeks to improve the National Weather Service's ability to provide real-time dam-related flooding information to State dam safety officials and State and local emergency managers.
- Initiated a study with the National Academy of Science to identify issues common to both dams and levees, and examine the policy, economic, and human behavioral drivers that promote or inhibit the expansion of dam and levee hazard mitigation and safety programs to promote community resilience.

FY 2011 Planned Accomplishments

- Provide approximately \$7.5 million in State Assistance Grants as an investment in the 50 States and Puerto Rico's dam safety programs, supporting the development of emergency plans, dam inspections, condition assessments, and public awareness and outreach activities. This will both support dam safety and emergency management officials and expand the use of technologies to increase the public's awareness of and preparedness for the risk of dam failure or operating malfunction.
- Increase the number of high-hazard potential dams that have emergency plans from 6,974 to 7,324 dams, improving local communities' ability to respond to dam failure and reduce the risks to life and property.

FY 2012 Planned Accomplishments

- Implement performance-based eligibility criteria for awarding Dam Safety State Assistance Grants, ensuring that grants are only awarded to State Dam Safety Programs that can efficiently and effectively utilize the funds to meet National Dam Safety Program goals.
- Expand the use of web-based technology, invest in training activities for State dam safety and emergency management officials to increase the public's awareness of and preparedness for the risk of dam failure by building unity of effort across the various directorates in FEMA and leverage the resources and capabilities of the Agency and our external stakeholders.
- Increase the number of high hazard potential dams that have emergency plans by an additional 350 dams, improving local communities' ability to respond to dam failure and reduce the risks to life and property

National Earthquake Hazards Reduction Program (NEHRP)

Congress established the National Earthquake Hazards Reduction Program (NEHRP) in 1977, and authorized the member agencies to conduct research on the causes and effects of earthquakes, produce technical guidance to develop earthquake resistant design and construction standards, and develop techniques to educate the public about earthquake hazards and mitigation.

In 2010, a series of major international earthquakes killed hundreds of thousands, irrevocably altering cities and landscapes and setting national development back by decades. On January 12, 2010, a magnitude 7.0 earthquake killed over 200,000 in Haiti. On February 27, 2010, a massive, magnitude 8.8 earthquake occurred off the coast of Chile which, along with the resulting tsunami, caused an estimated 500 lives lost. On April 4, 2010, a 7.2 magnitude earthquake struck Southern California near the border with Mexico causing significant damage and fatalities. It is notable that unlike Haiti, Chile has a modern building code similar to U.S. building codes, which significantly reduced the amount of damage and injury that might have occurred otherwise. Ongoing efforts to support the creation and maintenance of disaster-resistant building codes and standards is a major focus of the National Earthquake Hazards Reduction Program and is an important factor in reducing the losses from major U.S. earthquakes over the past 30 years.

Areas such as the New Madrid seismic zone in the Central United States remain more vulnerable to extensive damage cause by earthquakes than other parts of the country, particularly the Western United States. This is because western states adopted seismic building codes much earlier than those in the Central United States did. Currently, Arkansas (adopted 2006); Indiana (adopted 2006), Mississippi (adopted 2003) and Tennessee (adopted 2006) have adopted statewide seismic building codes. Illinois and Missouri have not adopted statewide seismic codes, however many jurisdictions in those states have adopted. State and local jurisdictions need to do more to improve the earthquake resistance of buildings and infrastructure in this part of the Nation. In FY 2011, States and communities in the New Madrid Seismic Zone will commemorate the 200-year anniversary of the 1811-1812 earthquakes that were the largest to strike the continental United States. Because States in this region have only recently adopted building codes for earthquake resistant construction, much of the region is still vulnerable. This is because many of the older structures are of unreinforced masonry construction and were not designed for earthquakes. These buildings are more like those that collapsed in Haiti than those, which survived in Chile. Following the Chilean earthquake, FEMA NEHRP staff participated in field surveys of the damage to learn how to improve U.S. design and construction requirements based on lessons learned. This event provided an excellent opportunity to evaluate the performance of building codes and construction practices that could be applied here, and several lessons will need to be taken into account in U.S. building codes.

Each year, approximately 3,000 to 4,000 earthquakes rock the Nation and FEMA, along with partners from the U.S. Geological Survey, the National Institutes of Standards and Technology and the National Science Foundation, works to help communities identify earthquake risk and develop plans for reducing those risks. Specifically, FEMA manages initiatives that reduce the risk to life and property from earthquakes, including:

- translating research into technical guidance publications and best practices on seismic safety, building design and construction, building codes and standards, and reducing economic losses;

- assisting state and local governments in building capabilities for determining potential damage and reducing the effects of earthquakes before they occur;
- Working with national codes and standards organizations to develop and improve seismic building standards.

Organizational Performance

FY 2010 Significant Accomplishments

- Developed and updated the following earthquake publications: FEMA P-593 Seismic Rehabilitation Training for One and Two Family Dwellings, FEMA P-749 Earthquake Resistant Design Concepts, and FEMA P-750 NEHRP Recommended Seismic Provisions for New Buildings.
- Successfully defended approximately 20 proposed changes to the International Building and International Residential Codes during the hearings for the 2012 editions of those codes. Communities that adopted these codes will build stronger, more earthquake resistant buildings.

FY 2011 Planned Accomplishments

- Provide training, outreach and technical support to State and local emergency managers, design professionals, and local officials for the National Level Exercise 11 – a multi-agency earthquake exercise to test response and recovery capabilities at every level of government in the New Madrid region. Increase earthquake-resistant building design and construction standards by completing the development/update of the following guidance: electronic pre-disaster assessment tool (ROVER – Rapid Observation of Vulnerability and Estimation of Risk), FEMA P-795 Quantification of Building Seismic Performance Factors-Component Equivalency Methodology, FEMA E-74 Reducing the Risk of Non-Structural Earthquake Damage, FEMA P-752 Design Examples for the NEHRP Provisions, and FEMA P-753 Training Materials for the NEHRP Provisions, and Seismic Retrofit of Soft-Story and Wood-Framed Buildings.
- Evaluate current International Building and International Residential Codes in order to develop proposed changes to the 2015 edition.

FY 2012 Planned Accomplishments

- Complete the development/update of the following publications: FEMA Seismic Performance Assessment Methodology, FEMA Identification and Mitigation of Non-Ductile Concrete Buildings, and FEMA Simplified Seismic Design Guide.
- Submit proposed changes to the International Building and International Residential Codes for the 2015 edition.
- Develop and execute high-profile earthquake awareness and education programs with national partners including national retailers and entertainment groups.

Building Science Program

The Building Science branch develops mitigation guidance that focuses on creating disaster-resilient communities. The program's mitigation activities include:

- Acting as a Technical Services Bureau for FIMA and FEMA for the development and maintenance of over 100 technical manuals regarding evaluation and design standards for multiple hazards which are unused by local officials and homeowners

- Assessing structural resiliency in post-disaster environments through immediate deployment of Mitigation Assessment Teams following disasters
- Developing timely publications, guidance materials, tools, technical bulletins, and recovery advisories that incorporate the most up-to-date building codes, flood-proofing requirements, and wind-resistant requirements for new construction or repairing existing buildings
- Supporting the development and adoption of disaster-resistant model building codes and standards;
- Furthering development of the Risk Management Series for all-hazards mitigation
- Providing technical support for the National Flood Insurance Program and Hazard Mitigation Assistance Programs
- Providing technical support to public and private sector stakeholders.

Organizational Performance

FY 2010 Significant Accomplishments

- Successfully proposed and supported the International Code Council adoption of new flood and wind-related improvements to the nation's model building codes and standards which will provide state and local building code officials, architects, designers and contractors the most up-to-date information available about building safety.
- Published FEMA P-784 Substantial Damage Estimator (SDE) and FEMA P-758 Substantial Improvement/Substantial Damage Desk Reference as new tools and guidance for local officials responsible for conducting substantial damage and substantial improvement estimations in accordance with the requirements of the National Flood Insurance Program.
- Delivered to all ten FEMA Regions workshops on the disaster-resistant flood provisions of the most current national consensus model building codes and standards which, upon adoption and enforcement, will provide greater protection for communities from future flood losses .
- Completed several guidance documents, training courses, and fact sheets and trained over 500 people on coastal construction techniques to promote disaster resilient construction along America's coastlines and hurricane prone regions.

FY 2011 Planned Accomplishments

- Complete one Mitigation Assessment Team report following a significant wind, flood, earthquake or other hazard event to collect data and educate developers, architects, engineers and local officials about building resiliency during a natural disaster event
- Update non-flood related (hurricane, tornado, wildfire, manmade) building science guidance documents.
- Complete new flood-related guidance documents and train over 500 people.

FY 2012 Planned Accomplishments

- Increase the number of jurisdictions that adopt disaster resistant codes by 4 percent. (In October 2010 – 6,995 of 15,991 or 44 percent jurisdictions had adopted compliant codes for one or more hazard, i.e., wind, flood, or earthquake).
- Complete one Mitigation Assessment Team report following a significant wind, flood, earthquake, and or other hazard event to collect data and educate developers, architects, engineers, and local officials about building resiliency during a natural disaster event.

- Update non-flood related (hurricane, tornado, wildfire, manmade) building science guidance documents.
- Submit new proposed changes for flood and wind-related improvements to the Nation's model building codes and standards.

Environmental Planning and Historic Preservation

FEMA's Office of Environmental Planning and Historic Preservation (OEHP), located within FIMA, manages FEMA's compliance with all environmental planning and historic preservation laws, executive orders and regulations, across all FEMA programs. Specifically, the Office is the functional authority on FEMA's environmental and historical preservation (EHP) compliance, and manages all environmental and historic preservation policy, legal sufficiency, systems, human capital (including the EHP Disaster Workforce), outreach, and performance management aspects of these requirements. The Office's mission is to help communities reduce the impact that disasters and emergency management decisions and operations have on the Nation's natural and cultural resources. The program acts in accordance with the following directives/mandates:

- National Environmental Policy Act (42 U.S.C. 4321 et seq.) (Implemented in 44 CFR Parts 10).
- National Historic Preservation Act (16 U.S.C. 470 et seq.) (implemented in 36 CFR Part 800)
- Endangered Species Act (16 U.S.C. 1531 et seq.)
- Executive Order 11988, Floodplain Management, dated May 24, 1977. (implemented in 44 CFR Part 9)
- Executive Order 11990, Protection of Wetlands, dated May 24, 1977. (implemented in 44 CFR Part 9)
- Department of Homeland Security Management Directive 023-01 (Environmental Planning)

The EHP Strategic Plan, FY 2009-2013, has three major goals: build sustainable capabilities; strengthen operational effectiveness; and strengthen EHP partnerships. When successful, EHP results in informed FEMA decisions; evaluation of program and policy alternatives; and transparency to the public.

Organizational Performance

F Y 2010 Significant Accomplishments

- Implemented Grants Programs Directorate (GPD) EHP Compliance Coordinator position, to provide effective and dedicated support to GPD programs, as a pilot for implementation in other programs.
- Conducted Phase 1 of EHP Human Capital plan, which included a staffing analysis based on EHP competencies needed across FEMA, key EHP resource gaps across agency programs, and a plan for revising and piloting key training for field staff, including the Coordinating OEHP Compliance Course, and Advanced Principles and Methods of Historic Preservation.
- Streamlined EHP compliance for Grant Programs Directorate programs through the completion of a Programmatic Environmental Assessment and Finding of No Significant Impact for these programs.

FY 2011 Planned Accomplishments

- Expand program capabilities and services to FEMA and communities by hiring a new Deputy Regional Environmental Officer in each of FEMA's ten regions.
- Expand EHP System and Management capabilities by hiring two new Headquarters program staff.
- Develop Phase 2 of Human Capital Plan to ensure future cross-FEMA EHP capabilities, to include the development of an EHP organizational staffing model.

FY 2012 Planned Accomplishments

- In accordance with FEMA's Qualification System, continue to implement disaster-related qualifying plans and Position Task Books to ensure that the Mitigation Disaster Workforce is prepared to do their job during disaster operations.
- Begin and monitor implementation of Phase 2 of Human Capital Plan to ensure future cross-FEMA EHP capabilities, to include the development of an EHP organizational staffing model. Develop Phase 3 of Human Capital Plan to ensure readiness capabilities of all FEMA staff with EHP competencies, including coordinating the implementation of EHP organizational model.
- In addition to the performance objectives outlined above, the following performance measures represent additional measures of efficiency, effectiveness, or timeliness for key functions within FIMA

Regional and Disaster Support Branch

The Regional and Disaster Support (R&DS) Branch works to define and manage FIMA's role in FEMA's response and recovery operations as well as to ensure regional integration into National programmatic issues. This responsibility requires the R&DS design consensus-based solutions to prepare the disaster workforce to consistently deliver program and technical assistance to affected local governments and disaster applicants, along with facilitating Regional input regarding crosscutting initiatives. The main goals of Regional & Disaster Support are:

- Translate Headquarters programs and initiatives into tools and resources to equip the Hazard Mitigation Disaster Workforce with standards, training, and job aides to consistently deliver hazard mitigation assistance in the disaster setting, and to further the efforts of FIMA programs.
- Build and facilitate a National network of Regional Managers to effectively integrate FIMA's performance.
- Coordinate FIMA disaster operations, National disaster policy analysis, and crosscutting program and administrative issues in support of the Regions and the Disaster Field organization.

Organizational Performance

FY 2010 Significant Accomplishments

- Planned, coordinated, developed, tested, implemented, and maintained over 50 standardized guiding documents, and job aids to support field staff in effectively delivering mitigation and flood insurance information and assistance to communities affected by disasters.
- Developed and implemented the Disaster Workforce Training Plan and maintained, coordinated, and conducted training classes in the Regions and disaster Joint Field

Offices. Work included finalizing and marketing two new courses, and developed draft plan of instruction for one new course for disaster workforce.

- Coordinated disaster workforce issues to include collecting and maintaining data, analyzing existing staffing capacity and readiness, and supported recruitment and retention efforts.

FY 2011 Planned Accomplishments

- Field test the ICS/NIMS position task books for the disaster workforce, including required updates, additions.
- Develop implementation plan and training to migrate mitigation workforce to new position task books consistent with response doctrine.
- Develop strategy to integrate the concept of risk analysis into response and recovery operations, enabling risk analysis to be performed in Joint Field Offices.

FY 2012 Planned Accomplishments

- Continue to implement disaster-related qualifying plans and Position Task Books in order to better train and qualify Mitigation personnel for field operations.
- Update and implement the Field Operations Guide and other disaster related program procedures and products.
- Develop internal staff capacity in risk analysis and leadership in the Joint Field Office.
- Deploy the Mitigation Advisor Support Tool (MAST), which supports data gathering for FEMA/Mitigation within the Disaster Recovery Center, and make any required changes and updates.
- Pilot test Substantial Damage training and procedures in Joint Field Offices.

FIMA Management and Administration

FIMA Mission Support activities include management and oversight of Agency programs, business operations' support, stakeholder engagement and outreach support, business process management and improvement activities, and information systems' support activities.

Organizational Performance

FY 2010 Significant Accomplishments

- Initiated the development of an agency-wide five-year FEMA Insurance and Mitigation Strategic Plan. The development process began with the development of a Strategic Direction for the Federal Insurance and Mitigation mission: Value People and Relationships, Enhance Credibility, and Advance Mitigation in support of Sustainability, to which FIMA programs are already aligned. A Strategic Planning Steering Committee and executive oversight committee are in place to guide the development process.
- Supported stakeholder outreach for a diverse portfolio of more than ten Flood Insurance and Mitigation Administration activities including communicating mission progress to internal and external stakeholders, providing support for issue management, and developing comprehensive and integrated outreach plans to enable programs to better communicate their available tools, resources and capabilities to a wide host of stakeholders.

FY 2011 Planned Accomplishments

- Complete and execute FEMA Insurance and Mitigation Strategic Plan that will include the development of 5-year goals, objectives, and strategies along with measures to document outcomes. The implementation phase, which is planned for Mid April through June require FIMA business lines to align program plans with the goals, objectives, and strategies. An Implementation Plan and Structure will be developed to aid in the alignment of FIMA component activities with the Plan in FY 2011.
- Lead FEMA in implementing and expanding use of web-based management system to streamline acquisition process to enhance efficiency, but also improve financial accountability and traceability.
- Identify and develop themes and associated messages which cut across programmatic lines and which can be utilized by every level of government and the private sector to communicate the value of making investments to reduce disaster losses. These messages will encourage communities and the public to understand basic hazard mitigation concepts and to consider their own investments in mitigation activities.

FY 2012 Planned Accomplishments

- Expand use of web-based management system to streamline other critical business processes and functions to enhance efficiency, but also improve accountability and traceability.
- Develop and implement comprehensive plan for FEMA and its partners to increase public recognition of the value of investments in reducing risks. Identify and develop themes and associated messages which cut across programmatic lines and which can be utilized by every level of government and the private sector to communicate the value of making investments to reduce disaster losses. These messages will encourage communities and the public to understand basic hazard mitigation concepts and to consider their own investments in mitigation activities.

3. Protection and National Preparedness Directorate:

Notational Continuity Programs FY 2012 Funding Summary

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Continuity of Government	19	17	2,396	16,216	18,612
Continuity of Operations	24	23	3,026	3,639	6,665
Contingency Programs	20	18	2,522	9,321	11,843
Integrated Public Alert Warning System	11	11	1,387	11,960	13,347
Mount Weather Capital Improvement	-	-	-	12,000	12,000
Management & Administration	11	10	1,389	2,627	4,016
Subtotal	85	79	10,720	55,763	66,483

The Protection and National Preparedness Directorate (PNP) is responsible for the coordination of protection and preparedness related activities throughout the Agency, including grants, planning, training, exercises, individual and community preparedness, assessments, lessons learned, continuity, and national capital region coordination. PNP conducts assigned mission sets through four directorates (National Preparedness, Grant Programs, National Continuity, National Capital Region Coordination) consisting of twenty divisions and four offices. National Continuity Programs are funded within the Operating Activities PPA as described below. National Capital Region Coordination is funded in its own PPA as described later. National Preparedness and Grant Programs are funded in the grant appropriations.

National Continuity Programs

FEMA's National Continuity Programs (NCP) serves the public by preserving our Nation's constitutional form of government. NCP provides planning, direction, and assessments of Federal Executive Branch Department and Agency (D/A) programs; it also provides continuity guidance to state, local, and tribal governments and private sector partners. NCP maintains operational capabilities necessary to monitor readiness and assist Federal D/A's in performing essential functions for a comprehensive, integrated continuity program that ensures survival of our form of government across a wide range of potential threats or emergencies. NCP provides planning and execution of the FEMA COOP Plan to maintain operational capabilities necessary for performing Mission Essential Functions (MEFs) in the event of a disaster.

NCP also administers several activities to ensure and improve emergency communications with the public, including development, implementation, and administration of the Integrated Public Alert and Warning System (IPAWS), which includes the Emergency Alert System (EAS) and Commercial Mobile Alerting System (CMAS). Additionally, NCP operates and maintains contingency communications and applications designed to assist the Federal D/As in providing the status of their ability to perform their Primary Mission Essential Functions (PMEFs) in support of the National Essential Functions (NEFs). These resources are used to conduct assessments and track/test capabilities at all times under all conditions.

Lastly, NCP, through the Mount Weather Emergency Operations Center, provides the infrastructure to support COOP, Incident Management, and all hazards activities for multiple Executive Branch departments and agencies, including the DHS/FEMA HQ COOP site. In addition, it provides operational space for and maintains the capability to coordinate, track, and synchronize the relocation of key leadership and staff from the FEMA Emergency Relocation Group (ERG) members to perform their essential functions.

Continuity Planning and Operations

FEMA is the lead agent coordinating Federal Executive Branch continuity programs to ensure National Essential Functions continue during a catastrophic emergency. This role includes responsibility for formulating and providing guidance, plans, and training for agency use in developing viable, executable continuity plans; facilitating interagency coordination; and monitoring and assessing the status and operational capabilities of individual and collective department and agency continuity capabilities across the Executive Branch so they are prepared to execute their essential functions during a crisis and in support of Continuity Operations.

FEMA additionally provides guidance to State, territorial, tribal, and local governmental jurisdictions on continuity programs to ensure their Essential Functions can continue to be performed during a catastrophic emergency.

Organizational Performance

FY 2010 Significant Accomplishments

- Conducted continuity training outreach to Federal, state, territorial, tribal, and local government jurisdictions by delivering more than 125 Continuity resident and independent study courses to more than 45,386 professionals across the country. Awarded 190 Professional Continuity Practitioner Level I and 21 Master Professional Continuity Practitioner Level II certificates, which puts us much closer to our overall goals of awarding 1,000 Level I and 100 Level II certificates to trained continuity practitioners by the end of FY 2014.
- Developed, coordinated, and conducted a FEMA Devolution event and Eagle Horizon 2010. This effort included as many as 68 Departments and Agencies (D/As) and over 10,000 participants, which is a continuing increase over previous years and a significant increase from the 45 D/As and 3,500 participants we had during our initial event in 2004.
- Conducted FEMA's Continuity of Operations Strategic Planning Conference for States, Territories, and the District of Columbia. This second annual conference was held in Galveston, Texas on March 16-18, 2010. There were over 230 participants from across the nation.

FY 2011 Planned Accomplishments

- Develop and institutionalize the Continuity Readiness Cell (CRC) to support FEMA's operational capability to continue essential functions and monitor Federal capabilities. The CRC will collect, analyze and report on the ability of the nation to perform the eight National Essential Functions (NEFs). The analysis of the NEFs will provide continuity Common Operating Picture (COP) to include gaps, impacts, and resources required, and proposed remediation.
- Develop, coordinate, and conduct Eagle Horizon 2011. Conduct 10 FEMA Regional Continuity Assessments based on continuity objectives included in the exercise.
- Conduct continuity-training outreach to Federal, State, territorial, tribal, and local government jurisdictions and the private sector by delivering more than 60 continuity-based resident courses and offering continuity-based independent study courses to more than 24,400 continuity professionals across the country.
- Develop virtual or independent study courses for our Building Design for Homeland Security, and Planners Workshop courses.

FY 2012 Planned Accomplishments

- Develop, coordinate, and conduct a Devolution exercise, as well as the Eagle Horizon 2012. Conduct Federal Department and Agency External Assessments of participants in Eagle Horizon 2012 based upon continuity objectives for the event. NCP aims to have more than 11,000 participants, including a robust amount participating via telework, and over 70 D/A's participate in Eagle Horizon 2012.
- Conduct continuity training outreach to Federal, State, territorial, tribal, and local government jurisdictions by delivering more than 65 continuity-based resident courses and offering continuity-based independent study courses to more than 25,132 professionals across the country. Implement the CRC at an operational capacity to serve as the primary continuity response capability for FEMA, providing operational capability to continue essential functions and monitor Federal capabilities.
- Enhance the capability to move key leaders and designated staffs to COOP locations in a timely manner by implementing a robust credentialing and tracking system, establishing the required legal agreements to formalize the program, enroll program participants, and test the capability end-to-end.

Contingency Programs

NCP operates and maintains contingency communications and applications designed to assist the Federal Executive Branch departments and agencies in performing their Priority Mission Essential Functions (PMEFs) in support of the National Essential Functions (NEFs). These resources, to include the Readiness Reporting System (RRS) and the Department and Agency Continuity Network (DACN), are used to conduct assessments and track/test capabilities at all times under all conditions, including natural disasters, man-made incidents, terrorism, and war. These resources will also ensure senior leadership within the Federal Executive Branch can communicate appropriate situational awareness of all Federal departments and agencies and their ability to perform essential functions.

Organizational Performance

FY 2010 Significant Accomplishments

- Installed an additional 26 percent of High Frequency (HF) radio systems within FEMA regions and State EOCs. The additional HF radio systems provide the Administrator and the Regional Administrators with an enhanced command and control communications system.
- Deployed the RRS to provide state of the art reporting and assessment of the FEB's departments and agencies ability to perform their essential functions.
- Standardized system configurations, applications, and operational processes supporting NCP's Continuity Communications Architecture (CCA). For NCP's primary and alternate Command and Control (C2) nodes, developed necessary Memorandums of Understanding (MOUs), processes, and procedures for the following CCA components:
 - FEMA High Frequency Continuity System (FHFCS);
 - FEMA Secure Local Area Network (FSL);
 - Acceptable Communications Security (COMSEC) devices (e.g., KG-175, KY-99); and,
 - Integrated network switch.

FY 2011 Planned Accomplishments

- Install an additional 26 percent of High Frequency (HF) radios systems, which will allow program updates to finish in 2012.
- Conduct proof-of-concept testing and evaluate new technologies and protocols.
- Develop a multi-layered communications network to separately handle classified and unclassified communications.

FY 2012 Planned Accomplishments

- Complete development and deployment of the RRS to the Joint Worldwide Intelligence Communications System (JWICS) network, and move to an operations and maintenance cycle.
- Construct an autonomous integrated network of communications capabilities to facilitate government leadership's ability, to communicate decisions in the event of a disaster.
- Continue to enhance the NCP CCA by leveraging advanced technologies and improving coordination with external departments and agencies. Critical areas to enhance include:
 - Improve secure communications (Red switch) diversification and interoperability;
 - Enhance satellite access through multiple transponder options; and,
 - Address system life cycle management for existing communications resources (e.g., aging antennas, radios, and ancillary equipment).

Integrated Public Alert & Warning (IPAWS)

IPAWS was established by Executive Order 13407 and provides the necessary platform to provide advanced warning to the American public of impending natural and man-made disasters. IPAWS integrates new and existing public alert and warning systems and technologies to provide Federal, state, territorial, tribal, and local alert and warning authorities a broad range of messaging options and communications pathways to reach the American public, increasing the capacity and reliability for providing life saving information to citizens in danger. Beginning with a modernization of the Emergency Alert System (EAS), IPAWS is building gateways to the nation's commercial mobile carriers enabling delivery of alerts to cellular devices in hazard areas, and integrating with NOAA warning services to provide consistent warning capabilities nationwide. IPAWS will facilitate the delivery of alert and warning information over more media to more people before, during, and after a disaster.

IPAWS strategic goals are as follows:

- Create and maintain an integrated interoperable environment for alert and warning
- Make alert and warning more effective
- Strengthen the resilience of IPAWS infrastructure

Organizational Performance

FY 2010 Accomplishments

- Published the IPAWS Common Alerting Protocol v1.2 Technical Specifications, a digital messaging format enabling integration of public alert and warning systems for distribution of a common message across a wide variety of communications means.
- Completed and adopted the Commercial Mobile Alerting System (CMAS) Interface Specifications that define the connection protocols between IPAWS and participating commercial mobile carriers for delivery of alerts to cellular phones.
- Conducted a live test of the national Emergency Alert System in Alaska, using radio, television, and related media outlets across the state. This test allowed NCP to check

testing procedures and is the first phase of a plan to conduct the first-ever nationwide test of the EAS system in late 2011.

FY 2011 Planned Accomplishments

- Deploy the initial IPAWS CMAS Gateway capabilities to support federal alert testing for message delivery to cellular phones by working with cellular industry partners.
- Conduct a nationwide test of the Emergency Alert System.
- Complete construction of five new Primary Entry Point expansion stations. The IPAWS Primary Entry Point Expansion Project is adding new radio stations to the network of FEMA connected radio stations in order to provide direct broadcast coverage to over 90 percent of the US population. The FEMA Primary Entry Point stations provide a robust all-hazards alerting capability for initial delivery of the Presidential emergency message.

FY 2012 Planned Accomplishments

- Finalize integration of CMAS capability (cellular broadcast alerting) into IPAWS.
- Complete construction of five new Primary Entry Point expansion stations.
- Conduct the first nationwide test of the national Emergency Alert System. Nationwide testing of the EAS initially, followed by full IPAWS capability testing, is planned to occur bi-annually to ensure the readiness of the systems to provide a Presidential emergency alert to the American People.
- Incorporate testing of the IPAWS capabilities into the National Exercise Program.

Mount Weather Emergency Operations Center (MWEOC)

The MWEOC facility, located in Mount Weather, VA, provides the infrastructure to support COOP, Incident Management, and all hazards activities for multiple Executive Branch departments and agencies, including the DHS/FEMA HQ COOP site. In addition, it provides operational space for and maintains the capability to coordinate, track, and synchronize the relocation of key leadership and staff from the FEMA Emergency Relocation Group (ERG) members to perform their essential functions. ERG members serve as FEMA HQ emergency personnel responsible for performing the Agency's mission essential functions.

Organizational Performance

FY 2010 Significant Accomplishments

- Upgraded facilities

FY 2011 Planned Accomplishments

- Complete Multi-Purpose Building, Area A Water Distribution, Environmental Compliance Phase II, Logistics Center, Public Safety Building, Heath Unit & New Road Design

FY 2012 Planned Accomplishments

- Complete life-cycle IT Modifications to update current system
- Implement electromagnetic pulse protection from solar weather events
- Complete Fire Sprinklers Phase IV & V upgrades in legacy buildings
- Complete Environmental Compliance Phase II Construction to address erosion and run-off issues

4. Office of the Administrator

Office of the Administrator Programs FY 2012 Funding Summary

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Management and Administration	15	13	2,198	566	2,764
Office of the Executive Secretariat	5	5	658	411	1,069
Law Enforcement Advisor	3	3	100	110	210
Faith-Based and Community Initiatives	5	5	805	772	1,577
Administrator's Programs	28	26	3,761	1,859	5,620

The Administrator has the ultimate responsibility for providing leadership and direction that enables FEMA to accomplish Agency mission, to support our citizens and first responders to ensure that as a nation we work together to build, sustain, and improve our capability to prepare for, protect against, respond to, recover from, and mitigate all hazards.

Executive Office

The Office provides support to the Administrator and Deputy Administrator in fulfilling mission. The Administrator collaborates with State, local governments and other emergency providers to build a national system of emergency management. The Administrator integrates the Agency's emergency preparedness, protection, response, recovery, and mitigation responsibilities to confront the challenges of a natural disaster, act of terrorism or other manmade disaster. The Administrator coordinates the implementation of risk-based, all-hazards strategy.

The Administrator is the principal advisor to the President, Homeland Security Council, and the Secretary of The Department of Homeland Security (DHS) for all matters relating to emergency management in the United States. Advice is provided on request to any of these entities. After informing the Secretary, the Administrator makes recommendations to Congress relating to emergency management. The President may designate the Administrator to serve as a member of the Cabinet in the event of natural disasters, acts of terrorism, or other man-made disasters. Nothing in the above is to be construed as affecting the authority of the Secretary under the Homeland Security Act.

The Administrator shall assist the President in carrying out functions of the Stafford Act, and carry out the mission to protect the Nation from all hazards by leading and supporting a risk-based, comprehensive emergency management system. The Administrator is also responsible for supervising FEMA's grant programs and administering the National Response Framework. The Administrator assists the President in carrying out the functions of the national preparedness goal and the national preparedness system.

Executive Secretariat

The Office of the Executive Secretariat (OES) serves as the primary point of contact for FEMA's Office of the Administrator for coordinating departmental tasking, briefing material, and official correspondence. The OES is the central coordination point within FEMA responsible for ensuring proper and expeditious action on all tasks and correspondence addressed to and from FEMA.

Office of Senior Law Enforcement Advisor

The Law Enforcement Advisor enhances communication and coordination between FEMA and State, local and tribal law enforcement. The Law Enforcement Advisor is an integral part of FEMA's senior leadership team – participating in planning meetings and consequence management during a crisis.

DHS Center for Faith- Based and Community Initiatives

The DHS Center for Faith-Based and Community Initiatives (CFBCI) builds, sustains, and improves effective partnerships between government sectors and faith-based and community organizations. Located within FEMA, CFBCI attends to faith-based and community organization engagements and partnerships across DHS.

National Advisory Council

As statutorily required by the Post-Katrina Emergency Management Reform Act (P.L. 109-295), the National Advisory Council advises the Administrator on emergency management, members shall be appointed by the Administrator, and they shall represent a geographic and substantive cross section including the private sector and nongovernmental organizations. The National Advisory Council incorporates state, local, tribal, and private sector input in the development and revision of a number of FEMA programs and documents, including the National Incident Management System (NIMS), the National Response Framework (NRF) and other related plans and strategies. The NAC has provided over 100 individual formal recommendations to the Administrator. Provisions of the Federal Advisory Committee Act apply to the committee's operations.

Organizational Performance

FY 2010 Significant Accomplishments

- Commenced Deputy Administrator's internal budget review process. This process resulted in a realignment of \$75 million within the FY 2011 Management and Administration appropriation spend plans to fund centrally managed requirements, salaries and benefits, and Administrator's priority initiatives.
- Designed Whole Community Framework for Catastrophic Planning and implemented a new framework to respond to catastrophic disasters that will be tested in upcoming exercises.
- Strengthened workforce development including implementing work force enhancement initiatives such as the Mission Readiness course that established a comprehensive employee orientation program.
- Created of capstone doctrine for FEMA (FEMA Publication 1).
- Conducted meetings Washington, DC and Denver, CO and a public teleconference to specifically discuss the National Disaster Recovery Framework. The council also reorganized its subcommittee structure to mirror FEMA's structure, to realize greater efficiencies, and to provide greater awareness and allow for fuller participation on subcommittees.

FY 2011 Planned Accomplishments

- In FY 2011, the NAC will be providing input on revisions to the National Response Framework, as a part of the implementation of the Presidential Decision Directive; catastrophic planning; the NIMS revision; post disaster housing; and flood plain management and mitigation issues.

FY 2012 Planned Accomplishments

- The NAC will meet approximately quarterly, providing input and recommendations in accordance with the Administrator’s priorities.

Office of External Affairs

Office of External Affairs Programs FY 2012 Funding Summary

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Intergovernmental Affairs	8	8	1,111	394	1,505
International Affairs	11	11	1,425	370	1,795
Public Affairs	23	23	3,119	1,294	4,413
Legislative Affairs	16	16	2,122	152	2,274
Private Sector Initiatives	6	6	835	143	978
Ready Campaign	-	-	431	1,854	2,285
Regional Support	36	36	4,230	-	4,230
Management and Other Activities	<u>24</u>	<u>24</u>	<u>2,391</u>	<u>516</u>	<u>2,907</u>
Subtotal	124	124	15,665	4,723	20,388

The Office of External Affairs provides leadership, message coordination, internal communication, analyses, outreach/relationship building, external affairs training, and decision-making support on FEMA policies, plans, programs, key initiatives, and actions that affect stakeholders and the American public. The OEA provides operational services to FEMA’s mission for Intergovernmental Affairs, International Affairs, Legislative Affairs, Private Sector Initiatives, and Public Affairs.

Intergovernmental Affairs

This division serves as FEMA’s primary national-level liaison for tribal, state, and local officials and the associations that represent their interests. Intergovernmental Affairs staff supports senior FEMA leadership by coordinating meetings with intergovernmental partners and facilitates partner participation in the FEMA policy development process.

International Affairs

This division supports information exchanges (technical assistance and other subject matter expertise) with foreign emergency management agencies and multilateral organizations; implements the agency’s international agreements; manages FEMA’s involvement in the civil side of the North Atlantic Treaty Organization (NATO); supports the resolution of international issues during domestic disasters; facilitates participation in international training and exercises; and supports the U.S. Department of Homeland Security (DHS) in international policy work related to emergency management.

Legislative Affairs

This division serves as FEMA’s primary liaison to congressional committees, members of Congress and their staff. Division staff responds to congressional committee oversight and other inquiries from individual members and their congressional staff; notifies Congress about agency initiatives, policies, and programs; coordinates the development of congressional testimony and briefings for FEMA senior officials; and develops and implements strategies to advance the FEMA’s legislative initiatives and other interests relating to Congress.

Private Sector Initiatives

This division serves as FEMA's primary liaison to the corporations, trade associations, academia, and other non-governmental organizations that make up the nation's private sector. During all phases of disaster management, the division works to enhance a culture of preparedness by building a private sector network and assisting the development of functional relationships between FEMA and representatives of major private sector organizations. The Private Sector division advises senior leadership on emergency management issues that are top of mind with the private sector and supports the identification of private sector best practices that FEMA programs can use to improve Agency processes and to deliver better service to customers.

Public Affairs

This division coordinates FEMA's public message and serves as the primary point of contact with the media and the American public to communicate FEMA's actions, activities, responsibilities, policies, and initiatives. Public Affairs coordinates with all FEMA offices to disseminate information; tracks and manages all contacts with the media; maintains FEMA's public communications, such as press releases and the FEMA Web page; develops and implements the agency's social media strategies; and educates FEMA employees through internal communications and meetings.

Ready Campaign

This program develops and executes a national public service advertising campaign designed to educate and empower Americans to prepare for and respond to emergencies including natural disasters and potential terrorist attacks. Launched in 2003, the goal of the campaign is to get the public involved and ultimately to increase the level of basic preparedness across the nation. The campaign works closely with the Citizens Corp program, which is the local-level effort to increase the preparedness of the American public and businesses.

Disaster Operations and Cadre Management

This division provides leadership, training, coordination, and support to FEMA's External Affairs function during incidents requiring a Federal response to fully execute all functional responsibilities necessary to lead public disaster communications in a unified manner. The division also supports External Affairs cadre management to include recruiting and training, as well as provides staffing support and communications coordination during disaster operations.

Organizational Performance

FY 2010 Significant Accomplishments

- Continued proactive outreach with government officials, community leaders and private sector stakeholders to include hosting conferences with African American and Hispanic leaders and listening sessions with tribal leaders, leveraging resources to strengthen regional capability to more directly engage and support Tribal nations and private sector engagement initiatives, engaging the private sector into FEMA's no-notice "Thunderbolt" exercises, creating an interactive tabletop exercise for private sector distribution and use, and holding the first ever FEMA Technology Sector Day, bringing industry and FEMA staff together to share essential response and recovery data with the public in user-friendly formats.
- Exchanged best practices and solutions to emergency management challenges through participation in multilateral organizations such as the Asia Pacific Economic Cooperation, the North Atlantic Treaty Organization, the European Union and with emergency management offices in Australia, New Zealand, Israel, the Russian Federation, Canada,

Mexico, Chile, and 16 other nations.

- Engaged nearly 5,000 National Preparedness Month (NPM) Coalition Members to educate individuals, families, and communities on the importance of emergency preparedness through the Ready Campaign, representing the largest Coalition in the campaign’s history.
- Launched new public service advertising (PSAs) targeting both the General Market and the Hispanic market. The new television, radio, outdoor and Web PSAs promote the idea that preparing today will help reduce the consequences of a disaster tomorrow, encourage Americans to prepare and direct audiences to visit www.listo.gov where they can find tools and resources to prepare. These PSAs are available in English and Spanish.

FY 2011 Planned Accomplishments

- Support the engagement of all FEMA stakeholders in the *Whole Community* approach by leveraging governmental and non-governmental stakeholders to become active participants in External Affairs operational procedures and public messaging.
- Expand efforts to ensure underserved populations and stakeholders are fully integrated into outreach efforts and engaged in operational planning and public messaging, to include the disability advocacy community, tribal governments, international community, private sector, children’s advocates, and faith-based organizations.
- Increase overall awareness of citizen’s role in preparedness by promoting the engagement of all citizens and stakeholder organizations to be better prepared and to encourage communities to be more resilient through the Ready Campaign.

FY 2012 Planned Accomplishments

- Continue proactive outreach to state, local and tribal officials, Congressional members and staff; private sector and other non-governmental representatives; and the media to establish stronger communications and partnerships with agency stakeholders
- Provide clear and consistent information through a variety of channels before, during and after a disaster to reduce the impact of disaster and help individuals recover.
- Continue bilateral emergency management exchanges and engage with multi-lateral emergency management organizations to provide subject matter expertise and receive “Lessons Learned” and “Best Practices” from international partners.
- Increase citizen preparedness by expanding partnerships with public and private sector organizations to increase the reach and effectiveness of preparedness information.
- Deliver enhanced training for all External Affairs disciplines (community relations, intergovernmental affairs, legislative affairs, private sector, and public affairs) to ensure personnel have the training and skills needed to meet disaster response and recovery missions as defined by the agency’s credentialing program

Office of Policy and Program Analysis (OPPA)

Office of Policy and Program Analysis Programs FY2012 Funding Summary

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
OPPA Programs	29	26	3,876	5,264	9,140

The Office of Policy and Program Analysis (OPPA) fosters strategic coherence across FEMA by leading and coordinating the development and implementation of Agency policy, strategy,

program analysis and evaluation, and FEMA's use of the Defense Production Act (DPA) authorities.

Policy Division

The mission of the Policy Division leads and coordinates development of policies that support effective and efficient delivery of Agency programs across the full spectrum of preparedness and emergency management, and to represent agency interests in departmental, national, and international policymaking. This office also supports Agency leadership in the identification, development, and implementation of the Agency's policy priorities and represents the Agency on DHS-policy matters. In addition to these efforts, the Policy Division develops, oversees, and coordinates the Agency's policy process, including chairing the FEMA Policy Working Group and coordinates, tracks, and analyzes Agency responses to GAO and OIG reports and recommendations.

Defense Production Act Division

The mission of the Defense Production Act (DPA) Program Division is to provide guidance and support to DHS and other Federal agencies to develop plans and programs to expedite and expand the supply of critical resources from the private sector for homeland security, emergency preparedness, response, and recovery activities and critical infrastructure protection and restoration. The DPA Program is responsible for implementing FEMA's DPA functions enabling OPDA to provide guidance and support for use of DPA authorities by FEMA and other DHS components; advises the National Security Council on issues of national security resource preparedness and on the use of DPA authorities; and provides for the central coordination of DPA plans and programs by Federal departments and agencies.

Program Analysis & Evaluation Division

The mission of the Program Analysis & Evaluation (PA&E) Division is to give the agency an independent analysis and evaluation capability that enhances decision-making, program performance transparency, and accountability. PA&E conducts program analyses, which include analyses and evaluations of alternative plans, programs, components, personnel levels, and budget submissions; and the formulation of the Future Years Homeland Security Program. PA&E also helps develop strategic requirements and capabilities to include: establishing a common strategic requirements development system for all of FEMA; assessing current operations capabilities; and validating and prioritizing organizational capabilities to determine risks and gaps for FEMA Senior Leadership.

Strategic Planning & Analysis Division

The mission of the Strategic Planning & Analysis (SP&A) Division is to help the agency make innovative and informed decisions on FEMA's short - term strategic direction and identify future drivers or requirements affecting emergency management operations in 15 to 20 years. This is accomplished by leading the development and implementation of FEMA's strategic planning process, to include development of FEMA's 3-5 year Strategic Plan and long-term driver and trend analysis in support of the Strategic Foresight Initiative, which will proactively monitor changing drivers and trends in emergency management 15 – 20 years out. SP&A also establishes and maintains an enterprise wide risk framework to aid the Agency's planning, programming, and decision making efforts and ensure linkage to the DHS integrated risk management efforts. These efforts along with providing guidance to help the agency make innovative and informed decisions about FEMA's long term direction and facilitating integrated strategic thinking,

planning, and decision-making enables FEMA to be in a better position to conduct its overall mission and determine future requirements.

Organizational Performance

FY 2010 Significant Accomplishments

- Organized and led a DHS Task Force comprised of 18 components to evaluate the risks of climate change effects to DHS missions and operations as a pilot project for the White House Council on Environmental Quality. The final adaptation report has been approved by Secretary Napolitano. This includes guidance proposing six recommendations for implementation in FY 2011.
- Established an interagency working group (IWG) to coordinate development of a “consistent and unified” Federal priorities and allocations system, in accordance with new Defense Production Act statutory requirements. The IWG developed common provisions to be included in the priorities and allocations rules to be issued by the six Federal departments that are delegated DPA priorities and allocations under Executive Order 12919.
- Launched FEMA’s Strategic Foresight Initiative (SFI). This initiative established a community of practice with more than 600 participants from federal, state, local, private sector, and non-government organizations that identified and began analysis of 10 strategic drivers that will affect the strategic needs of the emergency management community over the next 10 – 15 years.

FY 2011 Planned Accomplishments

- Conduct pilot of program policy assessment model that will perform a policy review of climate change adaptation, environmental and historic preservation compliance, public assistance program policies, and community engagement and resilience with a goal to refresh and improve FEMA’s policies.
- Conduct an engagement campaign to listen to and discuss with local residents ideas for strengthening public participation in emergency management and homeland security.
- Develop and implement a performance management process called FEMASat that will look at the missions and goals of FEMA organizations, the metrics used by these organizations to evaluate their performance, and the resources provided to accomplish the mission(s) of these organizations.

FY 2012 Planned Accomplishments

- Implement a second year of policy assessments to improve FEMA’s mission delivery, including identification of major policy areas to be assessed, developing and undertaking the necessary work programs, and identifying policy changes that will allow more effective delivery of FEMA assistance to its partners.
- Support the activities of the Defense Production Act Committee (DPAC) by coordinating the interagency development of the required annual DPAC report to Congress, recommending actions to amend and implement DPA authorities, as needed and appropriate, to support the national defense including homeland security plans and programs.
- FEMASat will evolve over time but plan to establish regular, frequent, and integrated meetings with relevant staff components to discuss outcomes, resources, and strategies.
- Conduct five workshops, prepare reports for each, and develop one annual SFI report to be distributed and presented to the emergency management community. Workshops and

reports will help to identify and summarize analysis of strategic needs for emergency management.

Office of Equal Rights (OER)

Office of Equal Rights Programs FY 2012 Funding Summary

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Equal Rights Programs	23	23	2,365	1,093	3,458

The Office of Equal Rights (OER) serves the Agency and the Nation by promoting affirmative employment, a discrimination-free workplace, and equal access to FEMA programs and benefits. The OER proactively pursues a workforce that reflects the Nation's labor force for its employees, and a workplace climate that fully embraces the core values of Accountability, Compassion, Diversity, Integrity, Partnership, Respect, and Trust. OER performs its mission by providing expert guidance and proactive support to all its customers, including State and local government officials, and the American people. The overarching goals of the office are to bring the fullest human value to the work of the Agency and to fulfill the office responsibilities under the federal law. The office is organized into three sections: Civil Rights – manages the Federally Assisted and Federal Conducted Programs; Informal EEO Programs – manages EEO counseling, dispute resolution, and training; and, Formal EEO Programs – manages formal EEO complaint processing and investigations. OER encompasses the following activities and elements:

- Federally Assisted and Federally Conducted Programs and Investigations
Entitles any person eligible to receive disaster aid or other services from FEMA receives those benefits without discrimination. The Civil Rights Program provides Technical Assistance and Complaints Resolution services. Technical assistance is provided through policy guidance to the agency in meeting Civil Rights mandates. In disaster operations, the staff works closely with community organizations to resolve tensions and eliminate potential complaints. The office also provides assistance to FEMA and the national emergency management community in the effort to make publications, programs, and facilities accessible to people with disabilities. Complaints resolution is attempted for anyone who believes they have been discriminated against in the receipt of services or benefits from FEMA.
- Equal Employment Opportunity (EEO) Program
The EEO Program enforces all Federal discrimination laws that cover all FEMA personnel, including DAEs and applicants for employment. Through the EEO program, OER provides a variety of services: including equal rights training for managers, supervisors, and employees; developing and maintaining an informal and formal EEO discrimination complaint process; investigating formal complaints of discrimination, increasing resolution of complaints through Alternative Dispute Resolution (ADR); and proactively recruiting employees and Special Emphasis programs.

Organizational Performance

FY 2010 Significant Accomplishments

- Developed a one-to-two day scalable training class for supervisors in a field setting that focuses on supervisory accountability and integrity, managing a temporary workforce, resolving conduct and performance issues, and managing personnel during

demobilization.

- Conducted training throughout the regional organizations to ensure new management personnel understood responsibilities under the Equal Employment Opportunity Laws, specifically the Genetic Information Act and the Americans with Disabilities Act Amendments Act of 2008.
- Conducted two week-long interactive forums at Emergency Management Institute for Tribal Colleges and Universities and Historical Black Colleges and Universities for the purpose of capacity building as well as establishing partnership with the Agency. The participants were Tribal Colleges, Universities, Historically Black Colleges, Universities Presidents, and Senior Academic Officials.

FY 2011 Planned Accomplishments

- Enhance audit plans and conduct compliance reviews focusing on a specific disaster from a previous year to assess and strengthen policy and procedures that focuses on an element of agency programs.
- Implement/launch newly developed on-line Title VI (external civil rights), diversity awareness, and harassment training for supervisors and employees.
- Through the Emergency Management Institute, continue to develop relationships with minority serving institutions on campus emergency preparedness and emergency management as a curriculum.

FY 2012 Planned Accomplishments

- Launch an independent study course for managers/supervisors that include disability awareness training with a focus on reasonable accommodations.
- Develop a comprehensive Title VI web page, newsletter.
- Through the Emergency Management Institute, conduct two conferences with minority serving institutions on campus emergency preparedness and emergency management as a curriculum.
- Conduct a forum at Emergency Management Institute for Hispanic Serving Institutions for the purpose of relationship building and Emergency preparedness.

Disability Integration and Coordination

Disability Integration and Coordination Program FY2012 Funding Summary

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Disability Coordinator	2	2	353	150	503
Regional Support	10	10	1,175	-	1,175
Subtotal	12	12	1,528	150	1,678

The Office of Disability Integration and Coordination provides guidance and leadership to the Agency, Federal partners, and States on integrating the access and functional needs of children and adults with disabilities. This includes all efforts associated with preparing for, protecting against, responding to, recovering from and mitigating all hazards. Access and functional needs include physical, communications and programmatic access and assistance to maintain independence and preserve health and safety.

Guidance and leadership is provided via two way communication utilizing email to a distribution list of over 1000 constituency leaders in all 50 States and territories as well as meetings with

partners and stakeholders to discuss strategies to improve integration of planning response and recovery for children and adults with disabilities in community-wide initiatives. Assistance is provided through the leadership of the ODIC, the FEMA Disability Working Group and via the Regional Disability Integration Specialists.

Organizational Performance

FY 2010 Significant Accomplishments

- Established the Office of Disability Integration and Coordination with a mission to prepare individuals and families and strengthen communities before, during, and after a disaster by providing guidance, tools, methods and strategies to integrate and coordinate emergency management efforts to meet the access and functional needs of all citizens, including children and adults with disabilities.
- Established the FEMA Disability Working Group with a membership of over 35 federal representatives to provide leadership and advice across the Agency to integrate the access and functional needs of people with disabilities across all of FEMA's work
- In September 2010, ODIC brought together 700 stakeholders in person and via webcast for a 3 day conference "Getting Real" on Whole Community inclusive practices in emergency management. The work of this conference has continued with regional and national initiatives underway to take action to address the Whole Community inclusive emergency management priorities identified during this conference.

FY 2011 Planned Accomplishments

- FEMA is currently bringing on Regional Disability Integration Specialists in every Region to support Whole Community initiatives inclusive of the access and functional needs of people with disabilities. 8 of the 10 specialists are onboard as of 1/19/11
- Getting Real 2011 will continue the engagement of stakeholders in Whole Community initiatives inclusive of the access and functional needs of children and adults with disabilities.
- Lead an agency -wide effort to review FEMA's training materials for accuracy, accessibility and alignment with Whole Community principles that integrate the access and functional needs of children and adults with disabilities across all emergency management training.

FY 2012 Planned Accomplishments

- Utilize Disability Working Group to lead 10 percent Increase in opportunities for inclusive, Whole Community training imbedded in all related training topics.
- Increase outreach to FEMA's disability and emergency management stakeholders in all states and the Territories by 10 percent. FEMA's database of 1,000 stakeholders allows us to reach and communicate with key partners in our Whole Community teambuilding efforts. This increased outreach will allow us to improve ongoing communication with interested parties and share guidance, training and promising practices in inclusive emergency management.
- Increase disability inclusive initiatives in grant guidance.
- Regional workshops on promising practices in disability inclusive emergency management in all ten Regions
- Identify criteria, acquire and disseminate disability inclusive promising practices in emergency management via FEMA.Gov

Regional Operations

Regional Operations FY2012 Funding Summary (\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Headquarters Liason Office	6	6	769	374	1,143
Region 1	8	8	940	798	1,738
Region 2	6	6	705	640	1,345
Region 3	5	5	587	456	1,043
Region 4	7	7	822	868	1,690
Region 5	4	4	470	450	920
Region 6	4	4	470	895	1,365
Region 7	4	4	470	455	925
Region 8	4	4	470	602	1,072
Region 9	4	4	470	1,276	1,746
Region 10	4	4	470	793	1,263
Subtotal	56	56	6,644	7,607	14,251

* Region IX program \$1.276 million of funds of includes Pacific Area Office support program funds of \$0.877M. Total PAO funding level in FY 2012 is \$2.2 million, which includes S&B spread of \$1.323M across different directorate regional support activities (primarily Response).

**M&A Regional FTP = 960 positions, of which 904 positions are identified as “Regional Support” within each directorate, with the balance, the remaining Regional Administrator staff, detailed above.

The table above outlines the program funding allocations for the 10 FEMA Regional Offices and Office of Regional Operations in support of the missions and functions outlined in this budget narrative, as well as the salaries and benefits allocations.

The Regional Operations mission cuts across all FEMA missions and disciplines. Regional Operations includes the leadership, management and mission support functions and staff of the 10 FEMA Regions, and a small headquarters coordination and liaison office. The Regions execute the operational direction received from headquarters to ensure that FEMA can build, sustain and improve capability to prepare for, protect against, respond to, recover from, and mitigate against all hazards.

The Office of Regional Operations at Headquarters is located within the Office of the Administrator and serves as the Agency’s Office through which all policy, managerial, resource and administrative actions that affect or impact the Regions receive effective coordination between headquarters and the Regional Offices. The Office of Regional Operations also works to ensure that FEMA policies, programs, administrative and management guidance are implemented in the Regions in a manner consistent with the Agency’s overall goals.

The principal functions of the office are: (a) serving as liaison between the Regional Administrators and Headquarters leadership to ensure successful collaboration as one team; (b) advising the headquarters leadership on matters affecting or impacting the Regions; and (c) providing guidance to Regional Administrators on policy, programs, operations, and administrative matters.

Regional Administrators

It is the mission of the Regional Administrator (RA) to manage the office in supporting the development and execution of a Regional, all-hazards, risk-based emergency management system

of preparedness, protection, response, recovery, and mitigation through close working relationships with Federal agencies, States, tribal nations, localities, business and industry, and State and local volunteer organizations. RA functions are broad and reflect the full range of responsibilities set forth in section 507 of the Homeland Security Act (6 USC § 317), authorities specifically delegated from the Administrator, section 2.22 of Title 44 of the CFR, and other responsibilities.

The Regional Administrator for each of the 10 FEMA Regions include the Regional Administrator, Deputy Administrator, emergency analyst policy staff, regional counsel, external affairs officers, administrative support, and other support staff. The precise number of persons and types of positions varies by Region based on regional priorities and office requirements.

Mission Support Divisions

The Regional Mission Support Divisions for each of the 10 FEMA Regions include a division director, Administrative Services Branch, Information Technology Branch and other personnel responsible for facilities management, security, personal property management, acquisitions, and budget coordination.

Regional resources outlined in this section also support grants management functions for the financial aspects of grants administered out of the Regional Offices functions that reside as either a Grants Management Branch within the Mission Support Division, or as a separate Grants Management Division.

Organizational Performance

FY 2010 Significant Accomplishments

- Regional Offices have an increased role in Agency operational and strategic planning initiatives through improved processes and coordination forums for matters related to the organization, policy and doctrine, staffing, personnel, facilities, priorities, and other activities affecting the Regional Offices.
- 84 positions from FEMA HQ to the Regional Offices were reallocated to the Regional Offices with the goal to enable the Regions to implement expanded authorities pursuant to the Administrator's Intent.
- Developed processes to deliberately identify and share lessons learned and best practices, as well as policies and doctrine impacting the Regions.

FY 2011 Planned Accomplishments

- Regional Accountability – Regional Offices develop and execute Operating Plans outlining the planned expenditure of resources to execute Agency priorities with outcomes monitored through Agency FEMAStat reporting sessions;
- Regional Budgets – Regions develop spend plans to begin to execute FY 2012 budgets and assess resource requirements to help develop the FY2013 budget pursuant to the guidance and priorities set forth by program offices at headquarters;
- Building the Regional Workforce and Team Effectiveness – Regions engage in intra- and inter-divisional information sharing and planning forums to understand how to best leverage employee strengths, improve management, and improve teamwork to achieve the FEMA mission

FY 2012 Planned Accomplishments

- Regions fully perform budget development and execution responsibilities for program,

and salaries and benefits resources to achieve outcomes set forth in Regional Operating Plans to successfully execute Agency mission priorities.

- Identify and formalize the range of regional authorities and Agency policies to ensure a consistent and continuous implementation of FEMA’s mission across all 10 Regional Offices; and
- Imbed and reflect Whole Community principles and goals within the range of Regional program initiatives and outreach efforts.
- Increase engagement with the private sector and communities with access and functional needs in planning, information sharing, and advisory forums.
- Expand the Office of Regional Operation’s ability to serve as a coordination point for information sharing and alignment of HQ and the Regional offices to improve the quality and diversity of policies and initiatives managed in concert with the Regional Administrators.

Office of the Chief Counsel (OCC)

Office of Chief Counsel Programs FY 2012 Funding Summary

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Counsel Programs	61	61	10,522	923	11,445
Regional Support	10	10	1,175	-	1,175
Subtotal	71	71	11,697	923	12,620

The OCC supports FEMA’s efforts to reduced loss of life and property and protect the Nation from all hazards by providing the Agency with high quality legal advice, counsel, risk analysis, and dispute resolution services through a knowledgeable, accessible, responsive, and solution-oriented network of innovative and ethical legal professionals. The OCC is comprised of eight divisions: Federal Insurance and Mitigation; Response and Recovery; Mission Support; Protection and National Preparedness; Legislation, Regulations and Policy; Professional Development; Chief of Staff for Legal Policy; Professional Development; and Alternative Dispute Resolution.

Response and Recovery Legal Division

The Division consists of three branches: Response; Recovery; and Litigation. The Division is responsible for providing legal advice to the Response and Recovery Directorate to support FEMA’s efforts to reduce loss of life and property and protect the Nation from all hazards by providing Response, Recovery, Office of Federal Coordinating Officers, and Logistics, with high quality legal advice, counsel, risk analysis, and dispute resolution services through a knowledgeable, accessible, responsive, and solution-oriented network of innovative and ethical legal professionals. The Response Branch also manages CORE and DAE field counsel cadres that deploy to disasters across the country; and the Recovery Branch manages legal teams at the Louisiana and Mississippi recovery offices.

Mission Support Legal Division

The Division consists of three branches: Acquisition, Technology, and Property; General Law; and Mission Support Litigation. The Division provides legal services related to acquisition and contracting, ethics, equal employment opportunity, fiscal policy and procedures, human capital,

information and privacy, property, records management, technology use, and tort claims, primarily to activities of the Mission Support Bureau and the Office of Equal Rights.

Federal Insurance and Mitigation Legal Division

The Division furthers the Federal Insurance and Mitigation Administration's (FIMA) mission of reducing the loss of life and property by lessening the impact of disasters through the provision of comprehensive, timely and professional legal counsel, and zealous and ethical representation in litigation for the National Flood Insurance Program (NFIP), Flood Map Modernization, Mitigation grant programs, Flood Mitigation Assistance Program, National Dam Safety Program, National Earthquake Hazards Reduction Program, National Hurricane Program, for the Office of Environmental Planning and Historic Preservation, and for other programs and activities administered by FIMA.

Protection and National Preparedness Legal Division

The Division provides solution-oriented, articulate, legally sufficient and timely counsel to further the mission of the Protection and National Preparedness Directorate (PNP) in coordinating preparedness and protection-related activities throughout the Agency. Legal counsel includes, but is not limited to, issues involving grants; planning; training; exercises; individual and community preparedness; assessments; lessons learned; and continuity and national capital region coordination. This Division also provides legal advice to the United States Fire Administration (USFA) in furtherance of its mission to reduce loss of life and property in emergencies and disasters.

Legislation, Regulations and Policy Legal Division

This Division provides dedicated, responsive, and prudent legal advice and counsel on matters relating to legislation, regulations, and policy. Clients supported include the Office of External Affairs, the Office of Disability Integration and Coordination, the FEMA Law Enforcement Advisor, the Center for Faith Based and Community Initiatives, the Policy Working Group, the Government Accountability Office and Office of Inspector General Liaison Office, and the National Advisory Council Designated Federal Official.

Chief of Staff for Legal Policy Legal Division

The Chief of Staff for Legal Policy (CSLP) provides oversight, visibility, and legal policy integration across OCC functional divisions to ensure consistency and consideration of cross-program or Agency-wide implications of complex or compound legal issues, such as those that affect more than one division or program subject area, involve threshold questions of applicable FEMA legal authorities, or potentially implicate more than one functional division or program. The CSLP also supervises OCC's Regional Counsel who assists the Regional Administrators in properly carrying out their missions and functions by providing timely and comprehensive legal advice, training, and information.

Professional Development Legal Division

This Division is responsible for managing a professional development program for the OCC staff that includes workforce readiness through training, credentialing, and developing professional capabilities and resources aligned with OCC's operational goals at the Field, Regional, and National levels to ensure effective and consistent response to all hazards. The Division's essential mission is two-fold: 1) to grow leaders with a set of core competencies that ensure mission readiness; and 2) to lead OCC's efforts to build a culture of high performance in law related knowledge, accessibility, and solution orientation. In developing and implementing this program,

the Division considers OCC's delivery of legal services; identifies training mechanisms and curricula by which those services may be improved; engages in strategic and tactical planning; and collects and exchanges information to develop policy and deliver legal services.

Alternative Dispute Resolution

The ADR Office provides ADR services for FEMA under the Administrative Dispute Resolution Act of 1996. The ADR Office offers a wide range of dispute resolution processes and tools to engage Agency personnel in preventing and managing conflicts. The ADR Office customizes various ADR techniques and tools to deepen the conflict management, strategic decision-making, and collaborative problem solving skills of FEMA personnel.

Organizational Performance

FY 2010 Significant Accomplishments

- Implemented a major organizational realignment dissolving the former OCC organizational structure and creating a new organizational structure that aligns with and mirrors the overall organization of FEMA.
- Commenced implementation of a redesign of the OCC electronic shared workspace (ESW) to host a new Task Management System (TMS), which is a matter management reporting system for tracking all executive and major matters in OCC.
- Established Regional Counsel in FEMA Regions IV, VI and IX in furtherance of goal to have regional counsel in every region.
- Commenced the Advice in Crisis Initiative team's development of an OCC training module based on a critical examination of the interaction between lawyers and decision makers in the context of disasters and crises. The AIC Initiative team began this endeavor by examining specialized literature, case studies, and conducting interviews/focus groups with FEMA veterans, government, and non-governmental stakeholders.

FY 2011 Planned Accomplishments

- Establish Regional Counsel in every region and Assistant Regional Counsel in regions IV, VI and IX.
- Empower Regions and Joint Field Offices to address our most significant legal risks and enhance the Agency's ability to act jointly with all stakeholders in a consistent, effective, and legally sufficient manner nationwide.
- Complete implementation of the redesign of the OCC electronic shared workspace (ESW) to host a new Task Management System (TMS), which is a matter management reporting system for tracking all executive and major matters in OCC.

FY 2012 Planned Accomplishments

- Make every lawyer an emergency management lawyer through training that will establish a baseline level of expertise for each OCC attorney. Utilizing the Disaster Operations Legal Reference published in FY 2011 and other training activities, each OCC attorney will receive training in requisite legal areas and in their assigned areas of subject matter expertise. Each OCC Attorney also will be prepared through training to provide effective legal guidance during disaster operations at headquarters and in the field.
- Complete implementation of a DHS Office of General Counsel (OGC) Knowledge Management system for containing and sharing documents and reference sources within DHS OGC and among the DHS OCCs, including FEMA OCC. OCC is involved in a knowledge management working group (WG) spear-headed by the DHS OGC. The WG is composed of designated knowledge management personnel from OGC-HQ and OGC

component offices. The WG is advisory and will provide recommendations to OGC on matters relating to information and knowledge management technology. Such matters will include OGC purchase, development, use, and sharing of software and hardware technology to assure uniformity, efficiency, and the highest possible accuracy in those activities.

5. Mission Support:

Mission Support Bureau FY 2012 Funding Summary

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Office of Associate Administrator	259	234	30,361	5,128	35,489
Office of the Chief Administrative Officer	114	110	13,272	66,670	79,942
Office of the Chief Security Officer	92	89	9,426	18,389	27,815
Chief Information Officer	280	268	36,457	59,816	96,273
Chief Human Capital Officer	154	145	17,042	3,278	20,320
Chief Procurement Officer	202	177	23,543	1,772	25,315
Subtotal	1,101	1,023	130,101	155,053	285,154

The Mission Support Bureau (MSB) supports all facets of the Agency mission by providing strategic leadership to and assuring the timely, efficient, and effective delivery of administrative, human capital, financial, Information Technology (IT), procurement, and security services and business function capabilities. This community of capabilities supports the entire FEMA enterprise of mission activities that range from performing Urban Search and Rescue; to taking in and managing requests for Individual and Public Assistance grants; to approving and paying those grants; to managing flood insurance policies for the Nation's citizens.

MSB consists of seven Offices:

- The MSB Executive Office (MSB EO)
- The Office of the Chief Administrative Officer (OCAO)
- The Office of the Chief Component Human Capital Officer (OCCHCO)
- The Office of the Chief Financial Officer (OCFO)
- The Office of the Chief Information Officer (OCIO)
- The Office of the Chief Procurement Officer (OCPO)
- The Office of the Chief Security Officer (OCSO)

MSB'S linkage to FEMA's strategic plan:

Each of the aforementioned Bureau offices delivers vital capabilities that constitute the essential backbone to accomplish FEMA's mission. When viewed as an integrated whole, the products, resources, and services the Bureau's offices deliver are the very foundation—the brick and mortar—upon which every staff and program office in FEMA can build success, and therefore ultimately achieve the outcomes desired from the four initiatives outlined in the Agency's strategic plan:

Strategic Initiative

- Foster a Community-Oriented Approach to Emergency Management Nationally that Strengthens Local Institutions, Assets and Social Networks to Build Sustainable and Resilient Communities.
- Build the Nation's Capacity to Stabilize a Catastrophic Event within 72 Hours, Restore Basic Services, and Community Functionality within 60 Days Thereafter.
- Build Unity of Effort and Common Strategic Understanding Among the Emergency Management Team Nationally By Acting Jointly to Address Our Most Significant Risks.
- Enhance FEMA's Ability to Learn and Innovate as an Organization.

Achieving these desired outcomes requires that MSB Offices deliver administrative, human capital, financial, IT, procurement, and security services. Without these services, no FEMA staff or program office can move forward to success. In this context, each MSB Office Chief brings the capabilities and expertise from their respective areas into a mutually supporting leadership climate that aggressively seeks to:

- Improve service and support across the enterprise continuously.
- Achieve high levels of customer satisfaction evidenced by operational and functional resilience.
- Ensure financial and managerial accountability, and achieve measurable financial efficiencies in service delivery or program management.
- Promote creative problem solving and implement innovative solutions to mission challenges.
- Identify and implement program and service efficiencies.
- Promote workforce diversity.
- Seek external partnership opportunities.
- Engage and motivate employees to achieve high levels of productivity.

The capabilities of each MSB Office are detailed in their respective Overview, , and organizational Performance sections. The concluding section of this Congressional Justification, the MSB ACTIVITY MEASURES SET, identifies the criteria that MSB leadership will use to measure progress throughout the budget year.

The MSB Executive Office (MSB EO)

Office of Associate Administrator (MSB) FY2012 Funding Summary
(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Executive Offices	19	17	2,162	5,128	7,290
Regional Support	240	217	28,199	-	28,199
Subtotal	259	234	30,361	5,128	35,489

The MSB EO provides primary strategic oversight to - and is focused on integrating activities within and seeking efficiencies among – the six MSB Component Offices. Additional, specific Executive Office responsibilities include the functions of the Component Acquisition Executive; managing the Administrator’s Priority Workforce Enhancement Initiative; coordinating administrative, human capital, financial, and acquisition needs in FEMA’s ten Regional Offices; establishing and maintaining a highly responsive enterprise customer assurance capability; coordinating cross-Bureau continuity of operations planning; and managing and overseeing basic administrative functions and activities.

Organizational Performance
FY 2010 Significant Accomplishments

- Supported national response and recovery operations for 10 major disasters.
- Formally established and staffed the Executive Office for the new Mission Support Bureau.
- Established multiple working groups comprised of personnel representing a true cross-FEMA Management and Administration - 89

section of FEMA employees to identify improvements to the workforce lifecycle, focusing on performance reviews, awards, leadership development, training, recruitment, hiring, and retention.

FY 2011 Planned Accomplishments

- Create a one-stop customer service center to promptly address internal and external personnel and office support needs, and assure quality and competent customer support across the Agency, but initially focusing on the National Capital Region.
- Identify and implement enterprise opportunities and efficiencies within the Mission Support family of functions.
- Continue Mission Readiness course delivery for all new employees, while expanding employee readiness to include a new “Duty Readiness” element.

FY 2012 Planned Accomplishments

- Expanding the one-stop customer service center to include Regions and, if possible, field activities and organizations.
- Continue to identify and implement enterprise opportunities and efficiencies within the Mission Support family of functions.
- Continue Mission Readiness and Duty Readiness course delivery for all new employees, while expanding employee readiness to include a new “Deployment Readiness” element.
- Institute the new Performance Management system for all employees FEMA-wide.
- Continue to ensure major agency acquisition activity receives all necessary due diligence prior to progression through the Acquisition Review Board process.

The Office of the Chief Administrative Officer (OCAO)

Office of the Chief Administrative Officer Programs FY2012 Funding Summary
 FY2012 Funding Summary
 (\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
	5	4	466	-	466
Facilities and Support Services	60	57	6,633	16,250	22,883
FEMA Enterprise Operations	-	-	-	44,242	44,242
Records Management	28	28	3,418	427	3,845
OSHE	21	21	2,754	5,751	8,505
Subtotal	114	110	13,272	66,670	79,942

The OCAO provides critical support to FEMA’s mission through a full range of administrative and management services, including real and accountable property management; occupational safety, health and environmental programs; records management; printing and graphics support services; fleet support and management; support to Freedom of Information Act requests; and privacy protection to FEMA’s programs, partners, and stakeholders. In addition, the OCAO is responsible for supporting Mission Support Bureau strategic and operational planning activities by providing assistance to all Offices within the Bureau for the development and implementation of operational and tactical program-level plans that support FEMA and Mission Support Bureau strategic direction. The portfolio of the OCAO includes:

Facilities and Support Services Division: The Facilities and Support Services Division is responsible for facility management-related policies, products, services, and solutions, to include the acquisition, leasing, repair, maintenance, and disposal of FEMA fixed and temporary facilities, and accountable property. It manages space optimization planning, furniture acquisition, energy management, move support services, and the transit subsidy program. In addition, the Division provides or coordinates critical mission support services, such as mail delivery, fleet management, and printing for both steady state and disaster support operations.

Occupational Safety, Health, and Environment Division: The Occupational Safety, Health, and Environment Division provides leadership, oversight, guidance, and support to ensure the protection of all FEMA employees, operations and programs nationwide, and supports both steady-state and disaster response operations, including the Nuclear Incident Response Team and the Domestic Emergency Support Team. Divisional responsibilities are accomplished through a robust array of specific programs (such as Occupant Evacuation Planning), trained and experienced personnel (such as the National Safety Cadre), training programs (such as Collateral Duty Safety Officer Training), and evaluation, assessment, and compliance verification activities (such as Management Evaluation Technical Assistance Reviews, Life Safety and Fire Engineering Plan Reviews, and Environmental Regulatory Compliance Reviews).

Records Management Division: The Records Management Division (including the Privacy Office) are responsible for and administer a number of Agency programs addressing key statutory responsibilities, including Records Management, the Privacy Act, the Freedom of Information Act, the Information Quality Act, the Paperwork Reduction Act, and the Federal Advisory Committee Act. These programs include responsibility for Correspondence Management; Forms Management; Directives Management that support the development of critical Response and Recovery policies, Research Service, and the National Archives and Records Administration Reimbursable Program. The Division also administers the enterprise systems for the collection, preservation, management, safeguarding of records, correspondence, and historical research material. These programs support the Agency by training staff in records management and privacy awareness, and seeking and implementing measures to reduce the burden of Federal paperwork on the public.

Organizational Performance

FY 2010 Significant Accomplishments

- Defined the requirements and costs for development of facility acquisition projects listed in the Five Year Plan for relocating/consolidating Regions 2, 4, 6, 8, and 9.
- Completed 170 Fuel Tank Program site visits, including 70 assessments, 60 closures, and 40 repairs.
- Closed all FY 2009 privacy incident sand processed 794 Freedom of Information Act requests to closure.

FY 2011 Planned Accomplishments

- Refine the requirements and costs for development of facility acquisition projects listed in the Five Year Plan for relocating/consolidating Regions 4, 6, and 8.
- Bring 32 percent of remaining regulated tanks into compliance.
- Reduce the pending Freedom of Information Act backlog by the number of new requests received, plus an additional 25 percent of that same number.

FY 2012 Planned Accomplishments

- Prepare for the acquisition of Regional offices in Regions 4, 6, 8, a storage facility for the Thomasville Mobile Emergency Response Support Detachment, and the Faith Wing building for the Center for Domestic Preparedness.
- Increase the Regions' national preparedness status by decentralizing the Government Printing Office Express and Simplified Purchase Agreement services to the Regions in order to allow the Regions to more efficiently print materials.
- Conduct a feasibility study to examine the necessity for pre and post deployment medical examinations for all deployable FEMA employees.
- Reduce the pending Freedom of Information Act backlog by the number of new requests received plus an additional 25 percent of that same number.

The Office of the Chief Component Human Capital Officer (OCCHCO)

Chief Human Capital Officer Programs FY 2012 Funding Summary

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Human Capital Programs	154	145	17,042	3,278	20,320

The Office of the Chief Component Human Capital Officer (OCCHCO) plays a critical role in managing FEMA most important asset, its people, and maintains a continuing responsibility for a broad range of activities, principally but not exclusively, focused on building, developing, and retaining a high-performing and diverse workforce composed of permanent, temporary, and intermittent employees. This request supports accomplishment of an unusually challenging human capital mission through numerous programs and initiatives designed to acquire and retain top notch talent, develop employees, support managers, build and sustain partnerships, incentivize employees, ensure strong labor relations, encourage performance awards and recognition, build and sustain a strong Surge Contingency Force, support a work life program that includes robust benefits and retirement counseling, maintain an employee assistance program, seek additional telework opportunities, as well as support various other activities.

OCCHCO programs and functions are organized across the following divisions: the Workforce Operations Division, Workforce Programs Division, and Disaster Workforce Division. These divisions are supported by the Business Management Unit, the Executive Services Unit, the Technology Innovations Unit, and the Human Capital Plans and Policy Unit. All divisions and supporting offices work together in a unified and integrated effort to retain, develop, and motivate FEMA's multifaceted employee workforce to reach their fullest potential.

Workforce Operations Division

The Workforce Operations Division is responsible for building a talented and proficient staff that will efficiently and effectively carry out the mission and vision of the Agency. The Division conducts personnel activities to recruit, hire, and staff Headquarters, Regional, and Field Offices, as well as processes all personnel and payroll actions and is responsible for pay administration.

Workforce Programs Division

The Workforce Programs Division provides leadership and direction in the formulation and implementation of policies and programs to promote efficient and effective human capital

management and represents the Agency on personnel matters with both internal and external stakeholders. The Division ensures Federal, Departmental, and FEMA human capital goals, policies, and practices are communicated to all employees. Additionally, it manages FEMA's human capital efforts in leadership and professional development, organizational development, performance management, employee/labor relations, and employee services.

Disaster Workforce Division

The Disaster Workforce Division coordinates policy affecting the disaster workforce, and oversees the FEMA-wide deployment tracking process of all FEMA employees deployed for disaster response and recovery operations. The Division also coordinates and implements the Surge Capacity Force CONOPS Plan as mandated by section 624 of the PKEMRA in coordination with FEMA's Office of Response and Recovery and DHS.

Business Management Unit

The Business Management Unit facilitates development and execution of the OCCHCO budget and serves as the Office liaison with the Offices of the Chief Financial Officer and Chief Procurement Officer to ensure effective contract management and acquisition plan oversight. The Unit manages Office supply and equipment purchases, oversees the preparation of financial audits, coordinates travel and purchase card issuance and use, represents OCCHCO on FEMA's Investment Working Group and Performance Improvement Council, and support other functions which contribute to the successful business operations of the human capital enterprise.

Executive Services Unit

The Executive Service Unit manages FEMA's human resources program for executive and politically appointed staff, including Presidential Appointees; members of the Senior Executive Service; Schedule C employees; and executive experts and consultants. The Unit provides advisory services to the Agency, as well as analysis and policy-development in coordination with the Plans and Policy Unit.

Technology Innovations Unit

The Technology Innovations Unit is responsible for processing FEMA personnel actions and providing customer service liaisons to all supported program offices. It manages all FEMA automated human capital systems, and is the primary interface with the National Finance Center. The Unit provides organizational development consulting services to program offices, and is responsible for aggressively seeking ways to further develop and improve human capital data systems.

Plans and Policy Unit

The Plans and Policy unit provides strategic human capital plan development and alignment and facilitates FEMA-wide workforce planning, ensuring that workforce programs and initiatives fully complement and integrate with FEMA's overarching strategic human capital plan. The unit researches, monitors, evaluates legislation, regulations, and guidance to ensure the widest dissemination of policy changes, and provides policy clarification and interpretation support to program offices.

Organizational Performance

FY 2010 Significant Accomplishments

- Completed the first phase of the strategic workforce planning initiative, with an

engagement with the Homeland Security Studies and Analysis Institute (HSSAI); establishing current capabilities of the FEMA baseline workforce.

- Completed agency hiring milestones, the conversion process for the disaster CORE employee workforce into permanent fulltime (PFT) employee positions.
- Developed the concept of operations (CONOPS), training, and implementing guidance for the FEMA Surge Capacity Force (SCF).

FY 2011 Planned Accomplishments

- Complete subsequent phases of the strategic workforce planning initiative, which will focus on recording required mission capabilities, identification of workforce requirements to achieve these capabilities; development and execution of workforce strategies to realize the work force requirements and capabilities articulated.
- Continue the “BEST Workforce” initiative to improve employee engagement, which directly affects individual and organizational performance in achieving FEMA’s mission.
- Expand Surge Capacity Force training to include other DHS Components.

FY 2012 Planned Accomplishments

- Complete final phases of the strategic workforce planning initiative and begin implementing strategies for the hiring and retention within the FEMA workforce of individuals with the right skills to support FEMA’s current and projected mission requirements.
- Continue implementing and maturing the guidance for the FEMA Surge Capacity Force (SCF). Provide training development and oversight.
- Introduce the FEMA Future Deployment System; the next-generation FEMA automated deployment and reporting system improving deployment capability and accountability.

The Office of the Chief Financial Officer (OCFO)

Chief Financial Officer Programs FY 2012 Funding Summary
(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Financial Programs	191	177	22,711	5,082	27,793
Centrally Managed/Working Capital	-	-	-	32,490	32,490
Subtotal	191	177	22,711	37,572	60,283

The OCFO supports the FEMA mission by providing funds control, financial information, financial operations, and financial policy support to FEMA’s management and oversight organizations. OCFO functions:

- Serve as the principal advisor to the Administrator and other Agency Leadership on matters relating to FEMA’s financial resources.
- Provide for and assure the financial integrity, formulation, execution, and analysis of FEMA’s annual and multi-year budget.
- Develop and maintain an integrated agency-wide financial accounting system, including systems for cash management, credit management, and debt collection, with appropriate financial reporting and internal controls.

- Provide for consolidated finance and accounting services.
- Plan and perform FEMA-wide reviews to determine compliance with the requirements of the Federal Managers' Financial Integrity Act
- Provide required reports, which include a description and analysis of the status of financial management in the Agency's, annual financial statements, audit reports, and internal accounting and administrative controls systems.
- Manage the Agency payroll services and, as appropriate, cross-servicing to other Federal Agencies.
- Serve as liaison to the Office of Management and Budget (OMB) and to the Congressional Appropriations Committees for all matters related to the Agency's budget.
- Provide oversight and guidance to Field Offices on financial management activities.

The OCFO is comprised of three line-operating divisions: the Financial Management Division, the Budget Planning and Analysis Division, and the Financial Systems and Management Reporting Division. The operating divisions are supported by four staff functions: Risk Management and Compliance, Financial Policy, Field-Based Financial Operations, and Business Operations.

Financial Management Division: The Division performs all accounting services for 93 FEMA Appropriations Accounts. It reconciles accounts and ensures accuracy of trial balances for the preparation of financial statements and accompanying footnotes. It also manages debt collection activities. Division personnel perform the invoice approval and payment processes for all mission assignments, reimbursable activities, and other intergovernmental payments. They ensure timely and accurate recording of grant obligations and process final closeouts in the financial system, as well as coordinating with internal and external entities to ensure compliance with DHS/FEMA policies, and legislation and directives related to financial controls.

Budget Planning and Analysis Division: The Division performs an ongoing role in the planning, formulation, justification, analysis, and execution of FEMA's operating, mitigation, and disaster budgets. The Budget Division has the primary responsibility for making recommendations to the Administrator and presenting FEMA's portion of the President's Budget to the Department, the Office of Management and Budget (OMB), and Congress. After budgets are approved by the Congress and signed into law by the President, the Budget Division monitors the Agency's execution activities for conformance with executive and legislative intent. The Division provides program management and oversight of current year and prior year funding.

Financial Systems and Management Reporting Division: The Division provides technical support to implement and maintain the OCFO financial management systems/interfaces. The staff also furnishes accurate, relevant, and timely financial information to clients across the Agency, the Department, and Congress.

Risk Management and Compliance Unit: This Unit is responsible for developing and implementing the Agency's internal controls program. Working in conjunction with the DHS financial management staff, the FEMA Risk Management and Compliance unit manages the annual audit of financial statements, coordinates testing and corrective actions to improve improper payments, and coordinates the review of internal controls as required by OMB Circular A-123.

Financial Policy Unit: This Unit develops Agency-wide policies, procedures and standards for all financial management functions and promulgates these and related government-wide financial

management requirements throughout the Agency. This unit is also responsible managing and addressing specific questions related to FEMA travel policy.

Field-Based Financial Operations Unit: This Unit is responsible for managing and directing FEMA's field-based financial management activities including budget formulation and execution, finance and accounting operations, and risk management. This unit provides management and oversight to the field-based financial staff, including Recovery Office financial directors, Joint Field Office financial leads, and OCFO comptrollers. This team is responsible for formulating and executing operating budgets for open disasters, working closely with program management to determine multi-year financial requirements for public assistance, individual assistance, and hazard mitigation projects for open disasters.

Business Operations Unit: This Unit supports the day-to-day operations of the OCFO through coordination and execution of strategic planning, knowledge management, human capital management, Continuity of Operations (COOP) activities, leadership and staff development, procurement, facilities, and management of the OCFO operational budget.

Organizational Performance

FY 2010 Significant Accomplishments

- Lead the Agency-wide effort to examine the FEMA FY 2011 budget by coordinating the Deputy Administrator's internal budget review process, which resulted in a realignment of funding within the Management and Administration account to fund mandatory infrastructure requirements and the Administrator's strategic initiatives, including workforce enhancement, catastrophic planning, and the Disaster Management and Support Environment.
- Strengthened internal controls within the OCFO by improving internal controls over the journal voucher process and implementing funds control processes and procedures for Apportionment and Reapportionment Schedule (SF-132) and Report on Budget Execution and Budgetary Resources (SF-133).
- Worked in partnership with the Office of the Chief Procurement Officer to de-obligate more than \$1.5 billion in unliquidated contract obligations, which provided additional funding to support critical disaster recovery activities during FY 2010.

FY 2011 Planned Accomplishments

- Interface the Agency's current financial system (IFMIS) with the Fed Traveler system, which will streamline the current business process, strengthen internal controls, accelerate voucher approval time, and reduce the existing burden on Agency travelers.
- Complete the implementation of Regional Budgeting to allow the Regional Administrators the control to apply resources to best execute their mission.
- Strengthen internal controls within the grants management process by establishing an Agency-wide process for tracking compliance with OMB Circular A-133, and developing an Agency project plan for compliance with the Open Government Directive.

FY 2012 Planned Accomplishments

- Collaborate with the Grants Program Directorate to develop an enterprise-wide grants management program resulting in increased internal controls and consistency in grants management.

- Complete data clean up and requirements development for the implementation of TASC as part of the larger effort to increase the accuracy of financial reporting within FEMA.
- Support FEMA in achieving compliance with the Agency-wide effort to achieve compliance with the Open Government Directive.
- Transition from paper-based to electronic processing within key financial operations, including travel processing, accounts payable, and accounts receivable resulting in increased efficiency and accuracy in processing transactions.
- Strengthen internal controls around the purchasing, recording and tracking of capital assets by ensuring the assets are properly valued and recorded on the Agency Financial Statements.

The Office of the Chief Information Officer (OCIO)

Chief Information Officer Programs FY2012 Funding Summary

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Information Technology Programs	280	268	36,457	35,997	72,454
FEMA Enterprise Operations	-	-	-	23,820	23,820
Subtotal	280	268	36,457	59,816	96,273

The OCIO supports FEMA’s mission by maintaining, enhancing the Agency’s Information Technology (IT) infrastructure, developing, and enhancing key systems to support operating programs. The requested funding supports FEMA’s mission by building, sustaining and improving the capabilities that provide operations and maintenance support for 90 applications; afford IT governance and administrative support for programs and offices; and deliver IT services (including Information Security, internet, telecommunications, and desk-side technical help), support and oversight across the enterprise which includes more than 20 fixed locations, over 9,000 employees, and during an event can include up to 25,000 employees, who support our citizens and first responders. Funding supports FEMA plans to build on its FY 2010 and 2011 successes of consolidating two data centers (SAVVIS and Plano, TX) into the DHS Enterprise Data Center in Southern VA. Funding also supports FEMA plans to improve management effectiveness by seeking cost-effective, reliable, secure, and innovative solutions through which to continue to deliver the Agency’s services to Nation’s citizens and first responders. Our IT initiatives are closely aligned with those who carry out the Agency’s mission and with the broader framework provided by the President’s Management Agenda, and relevant legislation and guidance.

To continue to ensure the sustained viability and resiliency of IT capabilities and reduce costs, FEMA will continue to work towards the migration of applications from the FEMA Mount Weather Facility and two other commercial data centers that are currently hosting FEMA mission support applications. FEMA will continue to take advantage of IT services offered at the DHS-enterprise level, such as email and internet collaboration services, that will improve capabilities and reduce costs. These efforts along with the accomplishments from FY 2010 will continue to reduce the costs associated with maintaining and operating multiple disparate data centers and improve the support of the FEMA mission by providing enterprise class services.

Operating Activities includes the essential functions for the OCIO's divisions and branches to support FEMA's mission to support our citizens and first responders to ensure that as a nation we work together to build, sustain, and improve our capabilities to prepare for, protect against, respond to, recover from, and mitigate all hazards.

The OCIO is comprised of two operating divisions: The Operations Division and the Administration Division. The Operations Division provides IT services and capabilities to FEMA, other Federal Agencies, and State and local governments in support of FEMA's mission by building, sustaining, and improving FEMA's information systems, networks, and IT service centers. It provides leadership and guidance in conducting and maintaining FEMA's IT enterprise infrastructure and for the management, design, development, acquisition, integration and implementation of critical infrastructure products and systems and assist in maintaining the CIO goals and standards.

OCIO Operations Division: The Operations Division manages Operations Support, Software Development and Integration, Architecture, Engineering, and Enterprise Services, Regional Support, and Information Technology Security.

Operations Support Branch: Provides day-to-day operation, maintenance, control and security of the FEMA enterprise from Headquarter sites thru the regions and including the extension of the enterprise into disaster field offices and sites. The enterprise includes both classified and unclassified voice, video and data systems as well as the customized and off-the-shelf software applications required to perform FEMA's mission throughout the entire spectrum of preparation; planning; response; recovery and mitigation of all hazards.

- The Network Operations Center (NOC) – Funding requested by the NOC is used to provide A 24 x 7 operation center that serves as the central control and management point for all telecommunications and computing services that support Headquarters and Regional FEMA offices in the delivery of disaster assistance services to citizens and first responders. Supported by various monitoring tools, the NOC manage all systems, networks, managed services provided by telecommunications carriers, DHS data centers, and enterprise applications, to ensure IT services are available to the entire FEMA Enterprise in support of the FEMA Mission.
- Security Operations Center (SOC) – Funding requested will be used to ensure IT resources are secured and available to the entire FEMA IT Enterprise by monitoring the enterprise 24/7 using state of the art Intrusion Detection System (IDS) appliances. The SOC also provides IT computer forensics/Digital Media Analysis for the entire Agency; responds to, coordinates, and jointly works reported security incidents with the DHS SOC; and manages enterprise patch management, antivirus software and vulnerability scans to ensure FEMA's data and infrastructure is protected from cyber risks.
- Video Operations Center (VOC) – Funding will be used to provide fully integrated and managed enterprise video conference capabilities to support First Responder command and control, Headquarters, Regional Offices, Joint Field Offices (JFO), State Offices, and other fixed sites in support of the FEMA Mission with state of the art multipoint video integration. During major events the VOC is the center of command and control activity, linking deployed FEMA assets with Headquarters and the multitude of Federal, State, Local, and Tribal partners who affect response and recovery operations. The VOC also provides video services to various other federal departments and agencies to include the White House.

- Service Delivery Section – Funding is used to provide a secure command, control, and communications infrastructure, which supports mobile users and fixed sites such as the Recovery Division’s National Processing Service Centers, and the Logistics Division’s Distribution Centers (including the new state-of-the-art facility in Atlanta) with readily available applications and services used by FEMA employees and partners before, during, and after an event. This funding also supports operations and maintenance of critical disaster support systems, such as Public Assistance Emergency Management Mission Integrated Environment (PA EMMIE), which tracks the grant lifecycle for Public Assistance grants.
- Site Support Section – Funding is used to deliver desk-side technical services to FEMA and its partners at all Headquarters facilities in the National Capital Region; Operations Centers such as the Mount Weather Emergency Operations Center, and Regional and National Watch Centers, such as the National Response Coordination Center; National Processing Service Centers; the Disaster Operations Center, and Logistics Distribution Centers, that support disaster survivors.

Systems Development and Integration Branch: Funding provides the establishment of leadership and support for the direction, design, development, testing and fielding of applications, systems, and infrastructure. Additionally, funding pays for the management of successful delivery of IT projects, such as the Recovery Division’s FY 11 and 12 efforts to improve the National Mass Evacuation Tracking System (NMENTS) and Direct Assistance Replacement Assistance Consideration (DARAC) within scope, budget, and on schedule, using leading edge technologies, Project Management Institute best practices coupled with world-class vendors obtained through innovative contract vehicles. The funding ensures that system development efforts follow the DHS System Engineering Life Cycle (SELC) and FEMA guidance to ensure the sustainability of projects.

Architecture, Engineering and Enterprise Services Branch: Funding pays for the design and documentation of architectural blueprints and Information Communication Technology (ICT) infrastructure business plans, which inform strategic decisions when reviewing potential solutions to improve IT capabilities, such as the Response Division’s effort to identify and implement a baseline equipment and a lifecycle equipment management program for National Response Coordination Center; the analyses of business requirements for planning future business direction, and evaluating current organizational position-benchmarking/maturity assessment; supports design and implementation of technical plans, such as the implementation of the Logistics Division’s advanced wireless network at the Atlanta Distribution Center and the Recovery Division’s plan to modernize its Advanced Contact Center Network in FY 12, while undertaking configuration management planning and ICT infrastructure research studies and evaluation; and for resources to establish service portfolios which will aid in gap analyses and the determination of action plans, to address business process improvement and automation issues such as the Mitigation Division and National Preparedness Directorate’s development of web-based system to manage and streamline acquisition processes to enhance efficiency, and improve financial accountability and traceability.

Regional Support Branch: Funding pays for resources to serve as Liaison between the Office of the Chief Information Officer and the FEMA Regions providing oversight, first responder functionality, and comprehensive support to Regional IT and various FEMA satellite facilities in order to improve coordination, standardization, uniformity, and operational compliance; resources to serve as the IT authority on Regional/Mobile Emergency Response System (MERS) IT

resources and capabilities, providing support and oversight of Regional/MERS programs (classified and unclassified), and national IT initiatives utilizing standard practices and procedures; and to develop and maintain inventories of regional IT assets and capabilities to reduce costs and improve national response capability.

Information Technology Security Branch: Funding pays for the oversight of the FEMA Information Security Program by managing and controlling all aspects of security vulnerabilities in FEMA's 90 systems, including conducting incident investigation, diagnosis, resolution, recovery and closure, as well as establishing and maintaining security education and training programs; oversee inspections, assessments, and assistance to FEMA organizations, including the conduct and verification of security certification and accreditation (C&A) activities; the expertise to serve as the Chief Information Officer's (CIO's) agency expert on computer security issues, including support of management initiatives, budget/resource preparation and justification, IT capital planning, enterprise architecture planning, annual and quarterly FISMA reporting, Agency annual performance plan inputs, and new technologies assessments; and for the resources that direct FEMA IT security program, which involves establishing and enforcing thorough and in-depth technical standards and procedures for security policy and ensuring adherence to laws, and policy.

OCIO Administration: Provides leadership and oversight to establish and direct the underlying business processes and functions necessary to affect efficient operations throughout the OCIO and supported missions across FEMA. Ensures the OCIO has the resources required to accomplish its mission. Funding requested by the Administration Division is used to manage Independent Verification and Validation, Customer Advocates, Governance and Investment Integration, and Business Operations.

Independent Verification and Validation Branch: Funding supports the development and implementation of the Agency's Quality Assurance Program for FEMA IT systems, such as the U.S. Fire Administration's National Fire Information Reporting System (NFIRS); development of plans and programs for achieving and maintaining product quality throughout the systems life cycle; resources to ensure system owners, such as the Mitigation and Recovery Divisions and the Chief Financial Officer manage the configuration of their systems; to provide quality assurance insight, oversight, and visibility into the design, development, testing and fielding of applications, systems, and infrastructure; provide resource that monitor deliverable artifacts during development cycle to prevent the production of defects and verify adherence to quality plans and requirements, and thus improve effectiveness and reduce overall systems costs.

Customer Advocate Branch: Funding pays for the resources that assist Directorate, Division, and Program Offices in defining requirements for IT systems, such as the effort to document and validate the Disaster Work Force Division's business process and functional needs, ensuring that system development efforts are in accordance with DHS and FEMA SELC guidance; act as an IT budget formulation and planning liaison to communicate IT processes and integration standards; assist in determining system recovery design criteria including reliability and maintainability; establish measures that reflect stakeholder perspectives; and schedule and conduct IT service delivery performance reviews that are the cornerstone of successful provider-customer relationships.

Governance and Investment Integration Branch: Funding provides for the resource that conducts IT investment analysis and translates strategic plans and mission objectives into policy and guidance to advance agency-wide IT programs; the resource that oversees the development of

effective plans of actions and milestones to implement industry best practices and auditor recommendations for improving IT operations, such as for improvements to the Chief Financial Officer's Integrated Financial Management Information System (IFMIS) and the Recovery Directorate's Individual Assistance services; and the support that serves as IT Liaison for Program Performance reporting for agency IT capital assets (OMB Exhibits 300 and 53), Capital Planning and Investment Control (CPIC) and Acquisition Program Baselines for 9 major investments, including the National Continuity Programs Division's Integrated Public Alerts and Warnings System (IPAWS), the Logistics Division's Logistics Supply Chain Management System (LSCMS), and the Mitigation Division's RiskMap System.

Business Operations Branch: Funding pays for the resources that provide leadership, and serve as the OCIO focal point for FEMA-wide IT financial management, including OCIO budget development and execution that supports 90 existing systems, over 20 major system development efforts, and over 9000 full time employees with IT services to support agency strategic priorities; the resource that develops and directs the effective implementation of IT related acquisition strategies and methods, ensuring contract deliverables comply with established contractual terms and conditions and to implement methods for monitoring, tracking, and reporting the status of OCIO contracts; the resources that provide leadership and oversight in managing the human resource activities and organizational functions in support of the mission of the OCIO.

Organizational Performance

FY 2010 Significant Accomplishments:

- Provided IT services and the communications (computing, telecommunications, and satellite) backbone for Response, Logistics, and Recovery Division's efforts on 10 major disasters.
- Provided IT services for Regional Response and Recovery operations for disasters for a total of 406 days of activation.
- Supported the deployment of National IMATs in support of disasters and special events, including the Vancouver Winter Olympics, the 2010 North Dakota flooding, the Department of Health and Human Services during the H1N1 response, the American Samoa earthquake and tsunami response, the United States Agency for International Development (USAID) during the Haiti earthquake response, and the U.S. Coast Guard during the Deepwater Horizon oil spill.

FY 2011 Planned Accomplishments:

- Provide telecommunications, internet, e-mail, and desk-side technical support services to over 9000 full time employees, and maintain a surge capability to support up to 25,000 in case of a major event.
- Improve mission operations, customer support and system security by deploying new business systems completed in FY 2010 to address identified weaknesses and deficiencies.
- Operate and maintain FEMA's critical business systems (IFMIS, ProTrac, Resource Manager online) and mission systems (National Emergency Management Information System (NEMIS), LSCMS, PA EMMIE, Mitigation eGrants, etc.).

FY 2012 Planned Accomplishments:

- Engage plans for upgrading FEMA's enterprise telephone switching system to improve enterprise voice availability and reliability. Implement Voice Over Internet Protocol

technology where feasible.

- Implement plans for standardizing FEMA Regional Response Coordination Centers, using the FEMA Enterprise Video Contract to standardize design, implementation, and maintenance to reduce cost.
- Work with programs to ensure alignment with DHS Infrastructure Transformation Program (ITP) initiatives, which will enhance FEMA’s ability to integrate into the One DHS environment.
- Work on the next generation of Disaster applications leveraging emerging technologies while continuing to support legacy systems resulting in enhanced support disaster response.
- Complete transition FEMA Intelligent Road/Rail Information System, Agile Systems Development, and NEMIS (including 26 associated applications) to the DHS data center resulting in improved system administration, security, and system availability.

The Office of the Chief Procurement Officer (OCPO)

Chief Procurement Officer Programs FY 2012 Funding Summary

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Procurement Programs	202	177	23,543	1,772	25,315

The OCPO provides a full range of acquisition services and business solutions to FEMA programs, partners, and stakeholders, such as the Recovery and Logistics Directorates, in support of both steady state and disaster activities and operations. The OCPO ensures quality contracting in a timely manner, and delivers acquisition services using the most efficient and effective means possible by:

- Providing pre- and post-award contracting and acquisition support to our customers – ensuring stewardship of public funds by following the federal acquisition regulations and the tenets of best practices in acquisition.
- Conducting acquisition oversight and monitoring of internal controls pertinent to the acquisition process to detect and prevent fraud, waste, and abuse of acquisition resources.
- Updating, maintaining and providing access to electronic procurement systems, including the contract writing system, to ensure uniform as well as statutory and regulatory compliant contract documents;
- Improving the delivery of sound acquisition and business solutions and increasing the number of strategic sourcing opportunities.
- Providing program management oversight and inventorying of FEMA acquisition programs, ensuring that FEMA acquisition life-cycle oversight complies with FEMA/DHS policies.
- Conducting acquisition investment reviews.

Acquisition Operations Division: The Acquisition Operations Division awards, modifies, and provides life cycle oversight of acquisitions for both steady state and disaster/contingency requirements. The Division coordinates and collaborates closely with FEMA program customers to develop and execute quality and timely acquisition solutions that fully support mission requirements.

Acquisition Program and Planning Division: The Acquisition Program and Planning Division educates and equips customers and stakeholders with the innovative tools, resources and business

solutions they need to make sound acquisition and business management decisions. The Division works with FEMA organizations and acquisition professionals to develop requirements and effective acquisition strategies, to include exploring opportunities for strategic sourcing; conducting acquisition portfolio reviews; providing acquisition guidance, governance and oversight of FEMA programs and the Acquisition Program Managers and Contracting Officer's Technical Representatives tiered training programs; and conducting extensive market research with industry through vendor outreach in a continuing effort to minimize contract risk and maximize the execution of FEMA's mission throughout the acquisition life cycle.

Acquisition Policy and Legislation Division: The Acquisition Policy and Legislation Division directly supports the acquisition operations functions of awarding and modifying contracts by informing contracting officers and contract specialists of existing acquisition policies and procedures that affect the way they do business; conducting special acquisition programs that directly support FEMA's mission; identifying and providing acquisition training opportunities that ensure currency of acquisition knowledge, skills, and abilities; maintaining and providing access to electronic acquisition tools to create, maintain, and report contractual documents; and conducting acquisition oversight activities that monitor acquisition staff performance and that identify and correct internal control deficiencies.

Organizational Performance

FY 2010 Significant Accomplishments

- Awarded to new Public Assistance appeals contracts to assist FEMA Headquarters and Regional office staff with the adjudication of 1st and 2nd appeals
- Conducted two Commodity Councils, which identified \$10 million in cost avoidance for the Agency. Achieved an additional estimated \$6 million in cost avoidance through promoting the use of DHS Strategically Sourced Contracts.
- Expanded the Acquisition Disaster Assistance Employee cadre to 40, achieving partial implementation of DHS Office of the Inspector General recommendations.
- Conducted six contracting officer technical representative (COTR) tiered training courses, resulting in 78 COTRs receiving Tier II (41) and Tier III (37) certifications.

FY 2011 Planned Accomplishments

- Establish commodity councils (integrated project teams) to explore the benefits of streamlining processes in order to acquire commodities and services for the Agency at the most cost-effective pricing. Establish an Industry Liaison Local Business Transition Team to facilitate the transition of disaster requirements/contracts to local businesses within the disaster area and coordinates business outreach activities with Joint Field Office staff and the private sector. This will support the implementation of Section 307 of the Robert T. Stafford Act.
- Recruit and hire the Disaster Acquisition Response Team for Regional deployment, which will focus on achieving efficiencies in administering and closing out disaster contracts.
- Establish processes that will improve the quality of large contract award decisions and reduce the number of upheld protests.

FY 2012 Planned Accomplishments

- Complete the automation of the Procurement Request process. The new system will allow FEMA components to locate, track, and manage their procurement requests on demand.

- Continue to refine established processes to improve the quality of large contract award decisions and reduce the number of upheld protests.
- Continue to streamline and improve support to the FEMA and DHS Acquisition Review Board process.
- Support the Response Directorate’s Nuclear Incident Response Team to continue to enhance its capabilities through the procurement of equipment.

The Office of the Chief Security Officer (OCSO)

Office of the Chief Security Officer Programs FY2012 Funding Summary

(\$ in 000s)

<u>Activity</u>	<u>Pos.</u>	<u>FTE</u>	<u>S&B</u>	<u>Program</u>	<u>Total</u>
Security Programs	92	89	9,426	1,568	10,994
FEMA Enterprise Operations	-	-	-	16,821	16,821
Subtotal	92	89	9,426	18,389	27,815

The OCSO supports the FEMA mission by providing critical security services to protect and safeguard all FEMA personnel; property; buildings and facilities, such as the National Response Coordination Center, Joint Field Offices, and sensitive compartmented information facilities; classified material and systems. The CSO also supports mission critical programmatic functions, such as the prevention of disaster assistance program fraud. OCSO is comprised of four operating divisions that are supported by nine branches: the Field Operations Division consists of the Disaster Security Operations Branch and Regional Security Operations Branch; the Support Operations Division consists of the Personnel Security Branch and Physical Security Branch; the Program Protection Division consists of the Special Security Programs Branch, Security Solutions Branch and the Administrative Security Programs Branch; and the Fraud and Internal Investigations Division consists of the Law Enforcement Coordination and Investigation Branch and the Fraud Prevention and Investigation Branch.

Field Operations Division (FOD)

Disaster Security Operations Branch (DSOB): DSOB is responsible for ensuring that critical security services are provided at all FEMA disaster sites and special event assignments. DSOB is the first-line security element for the Response and Recovery Directorate and for ensuring that security is provided for Urban Search and Rescue, Incident Management Assistance Team, Tactical Incident Branch, Mobile Emergency Response Service (staff and communications equipment), Logistics staging sites and other temporary FEMA locations requiring security protection or augmentation to all Security activations, and monitors National Response Coordination Center Emergency Support Function 13, mission assigned actions. DSOB is also responsible for the recruitment, hiring, credentialing and management of the Security Cadre, which is comprised of 105 members who deploy and manage security operations at the Joint Field Offices, Disaster Relief Centers, Mobile Disaster Relief Centers, and Responder Support Base Camps.

Regional Security Operations Branch (RSOB): RSOB serves as the Office of the Chief Security Officer (OCSO) liaison to the Regional Administrators (RAs) and is responsible for supporting regional security operations through the Regional Security Officers (RSOs). The RSOB provides administrative, technical and policy guidance for all security programs at regional facilities. The RSOB also provides direct support to all RAs and RSOs for operational and

technical security matters. In addition, the RSOB provides or facilitates security training to regional security POCs, regarding new technical and operational security processes.

Support Operations Division

Personnel Security Branch (PSB): PSB is responsible for initiating personnel security and suitability background investigations on all permanent full-time employees, Disaster Assistance Employees, local hires, CORE, and contract employees, and for the periodic reinvestigations of applicants and employees. PSB is also responsible for ensuring compliance with Federal regulations regarding personnel security and suitability policies, programs, and standards that govern background investigations and adjudications as well as granting, denying and revoking security clearances and access to classified information.

Physical Security Branch (PSB): PSB is responsible for the protection and safeguarding of FEMA personnel, property, buildings, and facilities. PSB is also responsible for developing and implementing physical and technical security policies and procedures in accordance with Federal, state, and other applicable regulations. In addition, PSB is responsible for all FEMA facility access control and the issuance and compliance of Personal Identity and Verifications access cards (HSPD-12); conducting NCIC/NLETS inquiries on employees, contractors and visitors; initiating foreign visitor verification and approval; conducting vulnerability risk and security assessments; providing direct oversight to Homeland Security Advisory System (HSAS) for all FEMA real property assets; protecting over 153 FEMA facilities and other related assets; procuring, deploying, standardizing and monitoring electronic security systems.

Program Protection Division

Special Security Program Branch (SSPB): SSPB is responsible for National Security policy oversight and programs for protecting sensitive classified information received from the Intelligence Community and executing the Sensitive Compartmented Information (SCI) program within FEMA. Additionally, SSPB oversees FEMA's participation in, and support of, Special Access Programs (SAP) facilities and information systems.

Security Solutions Branch (SSB): SSB is a new branch within the OCSO which consists of the Technical Surveillance Countermeasures and TEMPEST Programs and is responsible for providing National Security protection of sensitive compartmented information facilities or other designated classified or collateral areas from technical surveillance penetration by hostile and foreign governments to obtain unauthorized access to classified or sensitive information.

Administrative Security Programs Branch (ASPB): ASPB is a new branch within the OCSO and is responsible for the protection of classified National Security Information (NSI) and sensitive but unclassified information, the processing of foreign travel visits by FEMA employees, and FEMA's counterintelligence program to prevent hostile or foreign intelligence agents from successfully gathering and collecting intelligence from FEMA. ASPB is also responsible for ensuring compliance with Presidential Executive Orders, Federal law and regulations and various DHS Management Directives. ASPB also manages the Industrial Security Program, Operations Security Program, NATO Program, and the Security Training Program. In addition, ASPB is responsible for FEMA's new Controlled Unclassified Information rollout of sensitive information and for identifying, reporting, and conducting official inquiries

into security incidents involving the mishandling or compromise of NSI and sensitive but unclassified information, to include personal identifiable information.

Fraud and Internal Investigations Division

Law Enforcement Coordination and Investigation Branch (LECIB): LECIB is responsible for investigating administrative and criminal employee misconduct, theft of Government property, conducting threat assessments against FEMA employees, investigating and collecting data on reports of suspicious activities in carrying out counterterrorism-related activities under the DHS Suspicious Activity Reporting Program, and providing and coordinating personal protective details and escort functions, security training, and serving as FEMA's liaison to Federal, state, local and tribal law enforcement agencies and to the FBI Joint Terrorism Task Force.

Fraud Prevention & Investigation Branch (FPIB): FPIB identifies, impedes, mitigates, and prevents fraudulent losses of FEMA funds and assets through agency fraud awareness training, comprehensive research, investigation and recoupment of funds. FPIB ensures the agency's compliance in addressing fraud, waste and abuse as well as recommending internal controls to prevent disaster fraud as noted in the *Stafford Act*, as amended, and the *Post Katrina Emergency Management Reform Act*. FPIB also performs data-mining analysis of disasters to identify potential fraudulent activity, handles all preliminary complaints of fraud against FEMA, conducts initial inquiries of those complaints, and works in partnership with the DHS Office of Inspector General supporting the prosecution of offenders. In addition, FPIB submits recoupment's of fraudulent and/or improper payments to recover FEMA disaster assistance funds in coordination with FEMA's Office of Chief Counsel and National Coordination Team.

Organizational Performance

FY 2010 Significant Accomplishments

- Established FEMA's first electronic fingerprinting process system reducing processing time from 2 to 3 weeks to just 1 to 3 days.
- Completed HSPD-12 Regional Deployment Plan for the issuance of the Personal Identity Verification (PIV) cards. As such, FEMA is in compliance with HSPD-12. In addition, OCSO issued over 7,000 PIV cards for other DHS component agencies.
- Deployed electronic security systems to reduce reliance on security guard services at FEMA's National Capital Region locations, Regional Offices, and Gulf Coast facilities resulting in an estimated annual cost-savings of \$4.1 million.

FY 2011 Planned Accomplishments

- Continue to improve FEMA's electronic fingerprinting process system reducing processing time from 1 to 3 days to 12 to 48 hours.
- Continue to deploy electronic security systems to reduce reliance on security guard services at FEMA's National Capital Region locations, Regional Offices, and Gulf Coast facilities to realize cost-savings.
- Deploy the Identity Credentialing Access Management (ICAM) system for FEMA Headquarters and Region IV visitor access.

FY 2012 Planned Accomplishments

- Continue to improve FEMA's electronic fingerprinting process system reducing processing time from 12 to 48 hours to less than 8 hours.
- Continue to deploy electronic security systems to reduce reliance on security guard forces

at FEMA's National Capital Region locations, Regional Offices, and Gulf Coast facilities to realize cost-savings.

- Continue to identify efficiencies for cost reductions in guard services by reducing the number of guard posts nationwide and modifying guard positions to security assistants.
- Automate ICAM for all FEMA employees' on boarding and off boarding.
- Continue to upgrade FEMA's Technical Surveillance Countermeasures equipment in order to provide support to FEMA nationwide.

FY2011 C.R.	21	19	6,995
2012 Adjustments-to-Base	0	0	(1,502)
2012 Current Services	21	19	5,493
2012 Program Change	-	-	-
2012 Total Request	21	19	5,493

FEMA requests \$5.493 million, 21 positions, and 19 FTE.

CURRENT SERVICES DESCRIPTION

Established by Congress in the Homeland Security Act of 2002 (section 882) the Office of National Capital Region Coordination (NCRC) coordinates between and among federal, state, local, regional, private sector and nonprofit partners in the National Capital Region (NCR) to enhance preparedness in the National Capital Region.

NCRC will continue to facilitate federal interagency coordination; engage, collaborate with and advocate for state and local NCR partners to improve integration between these partners and federal preparedness efforts; and, maintain opportunities for NCR stakeholders to increase awareness of all hazards preparedness.

As part of these activities, NCRC will maintain its role in the NCR’s unique regional governance processes, which encourage partners to cooperate, think and plan on a regional basis in addition to their jurisdictional or agency imperatives.

On the Federal level, the NCRC Director chairs the Joint Federal Committee (JFC), which represents the Legislative, Judicial, and Executive Branches, and NCRC will continue to staff this entity. Given that the NCR does not have a Federal Executive Board, the JFC is one means to develop, coordinate, and implement inter-agency activities and plans for the NCR.

The NCRC Director is also a principal member of the Senior Policy Group (SPG), along with the Homeland Security Advisors and Directors of Emergency Management from Virginia, Maryland, and the District of Columbia. The SPG, representing their respective Chief Executives, is the senior policy and decision-making body for homeland security in the NCR. NCRC also participates and coordinates regularly with Regional Emergency Support Functions, the Metropolitan Washington Council of Governments and its related committees, the region’s chief information officers, and others to improve preparedness in the NCR.

In prior years, NCRC has performed a “heavy lift” in improving planning for NSSEs and other major events. With an improved planning baseline having taken root, NCRC will participate in

such activities at a reduced level. Additionally, under this reduction, the completion of regional efforts geared toward identifying and reducing regional risks will be phased over two years rather than one.

Organizational Performance

FY 2010 Significant Accomplishments

- Organized federal emergency managers and partnered with the Office of Personnel Management (OPM) to improve the preparedness of Federal agencies and employees and lay the groundwork for OPM-led exercises prior to the 2013 Presidential Inauguration.
- Developed a managed risk knowledgebase with extensive stakeholder input to support risk-informed regional decision-making, in direct response to stakeholder needs identified in prior regional risk activities.
- Strengthened NCR situational awareness and information sharing by coordinating the utilization of legacy information management systems across levels of government; supporting regional planning; and, improving ties between FEMA and NCR partners (via FEMA watch center).

FY 2011 Planned Accomplishments

- Strengthen NCR-specific situational awareness and information exchange with additional selected federal, state and local entities.

FY 2012 Planned Accomplishments

- Complete the next iteration of federal emergency planning, building on prior efforts, with a focus on refining planning in high density federal “neighborhoods.”
- Provide coordination support to OPM evacuation and sheltering exercise.
- Participate in Presidential Inaugural planning via the Consequence Management Subcommittee (co-chaired by NCRC and FEMA Region III), with other parties actually writing plans and funding exercises.
- Maintain NCR-specific situational awareness and information exchange with selected federal, state and local agencies and refine protocols leading up to the Inauguration.

FEMA requests \$29.113 million, 8 positions, and 8 FTE.

CURRENT SERVICES DESCRIPTION

In accordance with Robert T. Stafford Disaster Relief & Emergency Assistance Act (Stafford Act), as amended, 42 U.S.C. §5121, et seq., PKEMRA, and 44 CFR 208 – National Urban Search and Rescue Response System, the National Urban Search and Rescue (US&R) Response System funds 28 task forces across the country to provide a coordinated, national, all-hazards capability for locating, extricating, and stabilizing survivors of structural collapse resulting from natural and man-made causes, including those involving terrorism and weapons of mass destruction. Among its many activities, the US&R Program is responsible for strategic roles (ESF-9 lead, interaction with sponsoring agencies and operations groups), management roles (managing cooperative agreements with the Task Forces, providing budget, training and exercises), and field operations roles (cadre management, cache management, alerts and notifications, and reporting).

Organizational Performance

FY 2010 Significant Accomplishments

- Activated a US&R Incident Support Team and eight National US&R Task Forces of which four task forces and IST elements deployed to the Haiti Earthquake in support of the U.S. Agency for International Development (USAID) resulting in the unprecedented live rescue of over 130 entrapped earthquake survivors by U.S. US&R teams. US&R-Developed Search & Rescue organizational constructs involving ESF-9 partner agencies for planning and execution.
- Administered and monitored US&R Preparedness Grants by reviewing bi-annual task force progress reports and tracking grantee progress to ensure compliance with cooperative agreements.
- In coordination with the Department of State, executed a joint tabletop exercise with EMERCOM of Russia to improve collaboration and understanding of international urban search and rescue capabilities and protocols.

FY 2011 Planned Accomplishments

- Improve Preparedness Cooperative Agreement administration by streamlining grant preparation and administration processes using automation where appropriate.
- Improve US&R Preparedness Grant monitoring and oversight by enhancing HQ and regional level coordination for reviewing progress reports from task forces bi-annually and tracking progress of grantees to ensure compliance with cooperative agreements.

FY 2012 Planned Accomplishments

- Provide and administer Preparedness Cooperative Agreements to 28 US&R Task Forces.
- Monitor US&R Preparedness Grants by reviewing progress reports from Task Forces bi-annually and tracking progress of grantees to ensure compliance with cooperative agreements.
- Enhance US&R/CBRNE response capabilities through improved equipment procurement, training, and exercises.
- Improve preparedness for international urban search and rescue resource cooperation for domestic catastrophic disasters through collaborative exchange and exercises.

	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level	-	-	-	-	-	-			
Program Increase	-	-	-	-	-	-	18	9	2,390
Total Request							18	9	2,390

Description of Item

Successful acquisition outcomes are the direct result of having the appropriate personnel with the requisite skills managing various aspects of the acquisition process. Between FY 2000 and FY 2008, acquisition spending by civilian agencies increased by 56 percent (in inflation-adjusted dollars). The Department of Homeland Security is working to ensure its major acquisitions are effectively managed to ensure that the Department maximizes the value of every homeland security dollar and that major programs are implemented in the most responsible and efficient manner possible. This includes having disciplined oversight processes and robust acquisition program management teams in place. DHS has assessed the current resident skills against a set of core acquisition management skills: a program manager, a systems engineer, a life cycle logistician, a business/financial manager and a contracting officer’s technical representative, and determined that many of our major acquisition programs are deficient in several of these areas.

The President’s March 4, 2009 memorandum on Government Contracting required agencies to improve acquisition practices and performance by maximizing competition and value, minimizing risk, and reviewing the ability of the acquisition workforce to develop, manage, and oversee acquisitions appropriately. Subsequent guidance from the Office of Management and Budget, including memorandum M-09-25 *Improving Government Acquisition* issued July 29, 2009, and OFPP’s Memorandum of October 27, 2009 *Acquisition Workforce Development Strategic Plan for Civilian Agencies- FY 2010-2014*, provided guidance to agencies to strengthen the acquisition workforce and increase the civilian agency workforce by 5 percent to more effectively manage acquisition performance. These funds will help ensure the future programmatic growth requirements for training, recruitment, and retention activities while helping us to attract and hire qualified members of the acquisition workforce as defined by the Office of Federal Procurement Policy Act.

In support of the administration’s emphasis on strengthening the Federal acquisition workforce, FEMA requests \$2.389M to increase its acquisition workforce capacity and capabilities. The increase will mitigate the risks associated with gaps in either capacity or capability of the acquisition workforce and improve its effectiveness. The resources requested for FEMA will be used to:

- Increase the capability of the acquisition workforce by investing in training to close identified gaps in such areas as project management, negotiations, requirements development, contract management, and other key topics;
- Increase the effectiveness of the acquisition workforce by investing in improvements to systems that support the contracting function;
- Conduct an assessment of options for creating systems to maintain comprehensive acquisition workforce data and selecting the appropriate system; and
- Increase the effectiveness of the Department’s centralized acquisition workforce training program comprised of certification and targeted/continuous learning developmental training opportunities.

Impact on Performance (Relationship of Increase to Strategic Goals)

The FY 2012 funding request will help ensure:

- The future programmatic growth capacity for training, recruitment, and retention activities while attracting and hiring qualified members of the acquisition workforce as defined by the Office of Federal Procurement Policy Act. These funds allow DHS the ability to train, recruit, and retain at acceptable standards.
- The sustainability and availability of information technology systems and equipment in support of acquisition workforce effectiveness or for management solutions to improve acquisition management.

Program Increase #2: Data Center Migration
 PPA: Operating Activities
 Program Increase: Positions 0 FTE 0 Dollars \$7,200

Funding Profile

	FY 2010 Actuals			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level	0	0	0	0	0	0	0	0	
Program Increase	-	-	-	-	-	-	-	-	7,200
Total Request									7,200

Description

FY 2012 data center development funding, to be managed through the DHS Working Capital Fund (WCF), will be used for the continuation of system and application migration to the two DHS Enterprise Data Centers for central DHS management in FY 2012. This includes:

- Discovery, migration planning, and scheduling activities specifically related to systems/applications that will transition to the DHS Data Centers in FY 2010
- Purchase of new equipment for placement in the DHS Data Centers as part of migration/transition efforts
- Installation of equipment racks at the DHS Data Centers
- Migration-related build-out of DHS Data Center infrastructure
- Transition of disaster recovery/backup/COOP capability to DHS Data Centers
- Installation of infrastructure support as part of system migrations at the DHS Data Centers

Justification

The Data Center consolidation efforts will standardize IT resource acquisitions across DHS Components, and streamline maintenance and support contracts, allowing for less complex vendor support and expediting response times in the event of an emergency. Benefits derived from consolidation are enhanced DHS IT security posture, improved information sharing with stakeholders, and increased operational efficiencies over time.

Program Decrease #1: Business Systems Investment Reduction
 PPA: Operating Activities
 Program Decrease: Positions 0 FTE 0 Dollars \$(5,000)

Funding Profile

	FY 2010 Actuals			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level	0	0	20,851	0	0	20,750	0	0	18,156
Program Decrease	-	-	-	-	-	2,594	-	-	(\$5,000)
Total Request			20,851			18,156			13,156

Description

The Business Systems Investment money is to be used to provide new capabilities for FEMA users in business systems (as opposed to mission systems). FY 2012 examples include:

- Maintain the existing portion of previously developed of business process work flows of purchase requisitions from two program offices through approvals to the contracting officer for execution.
- Maintain the previously developed content tracking system for Office of General Counsel and Office of Chief Procurement Officer.
- Maintain previously implemented e-travel and budget systems.
- Maintain a previously implemented e-correspondence system.
- Maintain a previously procured enterprise shared workspace system.
- Maintain a previously implemented e-mail system.
- Complete building and maintain a mobile solutions infrastructure.
- Program management office staff to perform preparatory activities for the new DHS Transformation and Systems Consolidation (TASC) project.
- Complete TASC data cleansing effort.

Justification

Business systems investments Since 2009, FEMA has made significant investments in its business systems, and since many of these new systems are now entering an operations and maintenance phase, the Agency requires less funding for these business systems requirements.

Program Decrease #2: Facility Enhancement Program Reduction
 PPA: Operating Activities
 Program Increase: Positions 0 FTE 0 Dollars \$(23,300)

Funding Profile

	FY 2010 Actuals			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level	0	0	13,300	0	0	9,400	0	0	32,700
Program Decrease	0	0	0	0	0	0	0	0	(23,300)
Total Request	0	0	13,300	0	0	9,400	0	0	9,400

Description

The Federal Emergency Management Agency (FEMA) mission is to support our citizens and first responders to ensure that as a nation we work together to build, sustain and improve our capability to prepare for, protect against, respond to, recover from and mitigate all hazards. FEMA accomplishes this mission by leading and supporting the Nation in a risk-based comprehensive management system of preparedness, protection, response, recovery, and mitigation.

One of FEMA’s critical functions is to build and maintain an operational capacity for emergency response and to increase the overall preparedness of the country. FEMA has current documented repair needs of over \$84 million at its owned facilities. Many of the repairs are required to replace and update major building systems (e.g., HVAC, plumbing) that, if they were to fail, would compromise the mission support capability of the facility and hinder Agency mission attainment. The multi-year funding program will significantly improve the condition of FEMA facilities to support mission attainment and maintain safe and healthy working conditions for employees. As these funds are invested, the annual amount required to repair and maintain facilities will decrease. This initiative directly supports FEMA’s mission to provide enhanced preparedness capability to handle its all hazards responsibility related to natural and man-made disasters.

Justification

The 2012 President’s Budget reflects FEMA’s priority to manage resources more effectively across the Federal Government while ensuring the Nation’s resilience from disasters. The Agency has reexamined its current allocation of resources among existing programs to consider the relative return on investment among these activities, and to focus on those programs that have the most significant impact on the Agency’s ability to fulfill its emergency management mission. Moreover, FEMA will do more with less by streamlining current business processes and harnessing the use of innovative technologies. The 2012 President’s Budget provides the level of resources required to support the Agency’s ability to fulfill its emergency management mission.

Program Decrease #3: National Level 2012 Exercise
 PPA: Operating Activities
 Program Decrease: Positions 0 FTE 0 Dollars \$(2,000)

Funding Profile

	FY 2010 Actuals			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level	0	0	0	0	0	5,000	0	0	5,000
Program Decrease	-	-	-	-	-	-	-	-	(\$2,000)
Total Request									\$3,000

Description

NLE is the first national level exercise focusing on a catastrophic natural disaster. The Response Directorate will be specifically testing several innovative concepts to include augmenting national response capabilities using non-traditional emergency management partners and resources under the Whole Community concept. Coordinate and plan the participation in Tier II exercises, Vigilant Shield 2011, and Anthrax Series as well as four Principal Level Exercises (PLE) and four Senior Officials Exercises (SOE). Anthrax Series is an exercise with the DoD and interagency partners focused on CBRNE specific incidents. PLEs and SOEs prepare the Nation’s senior level leadership to process and adjudicate high-level policy issues during all-hazards incidents.

Justification

The President’s Budget requests \$2.000 million in FY 2012. The 2012 NLE will exercise cyber attack response and will not require the movement of personnel – Urban Search and Rescue Teams, IMATs etc - characteristic of NLE 2011. Thus the FY 2012 NLE funding requirement has been reduced.

Program Decrease #4: Disaster Management Support Environment
 PPA: Operating Activities
 Program Decrease: Positions 0 FTE 0 Dollars (\$3,000)

Funding Profile

	FY 2010 Actuals			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level	0	0	0	0	0	3,000	0	0	
Program Decrease	-	-	-	-	-	-	-	-	(\$3,000)
Total Request									(\$3,000)

Description

The Disaster Management Support Environment (DMSE) Pilot Project evaluated, interconnect, and consolidate existing FEMA IT systems. Identified, analyzed and reviewed disaster management and support functions to determine how to best consolidate various software systems to create a more streamlined workflow that better aligns with FEMA business practices. Identified requirements for middleware in order to accomplish long-term (Phase III) project objective of creating a comprehensive resource management ordering, tracking and reporting suite of tools to provide improved visibility and control of event management and support services.

Justification

The 2012 President’s Budget reflects FEMA’s priority to manage resources more effectively across the Federal Government while ensuring the Nation’s resilience from disasters. Primary FEMA investment in DMSE will be completed in FY 2011 and this level of effort does not need to be repeated in FY 2012.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Emergency Management Agency
Appropriation Language**

For necessary expenses for management and administration of the Federal Emergency Management Agency, \$,815,099,000, including activities authorized by the National Flood Insurance Act of 1968 (42 U.S.C. 4001 et seq.), the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5121 et seq.), the Cerro Grande Fire Assistance Act of 2000 (division C, title I, 114 Stat. 583), the Earthquake Hazards Reduction Act of 1977 (42 U.S.C. 7701 et seq.), the Defense Production Act of 1950 (50 U.S.C. App. 2061 et seq.), sections 107 and 303 of the National Security Act of 1947 (50 U.S.C. 404, 405), Reorganization Plan No. 3 of 1978 (5 U.S.C. App.), the Homeland Security Act of 2002 (6 U.S.C. 101 et seq.), and the Post-Katrina Emergency Management Reform Act of 2006 (Public Law 109-295; 120 Stat. 1394): Provided, That not to exceed \$3,000 shall be for official reception and representation expenses: Provided further, That of the total amount made available under this heading, not to exceed \$12,000,000 shall remain available until September 30, 2013, for capital improvements at the Mount Weather Emergency Operations Center: Provided further, That of the total amount made available under this heading, \$29,113,461 shall be for the Urban Search and Rescue Response System, of which not to exceed \$1,600,000 may be made available for administrative costs; and \$5,319,432 shall be for the Office of National Capital Region Coordination: Provided further, That of the funds made available under this heading, \$2,389,509 shall be for strengthening the capacity and capabilities of the acquisition workforce (as defined by the Office of Federal Procurement Policy Act, as amended (41 U.S.C. 401 et seq.)), including the recruitment, hiring, training, and retention of such workforce and information technology in support of acquisition workforce effectiveness or for management solutions to improve acquisition management.

Note.--A full-year 2011 appropriation for this account was not enacted at the time the budget was prepared; therefore, this account is operating under a continuing resolution (P.L. 111-242, as amended). The amounts included for 2011 reflect the annualized level provided by the continuing resolution.

Explanation of Changes:

No significant changes are proposed.

PPA Mission Statement

Operating Activities includes the essential functions for all of FEMA’s major mission organizations and directly supports FEMA’s primary mission to reduce the loss of life and property and to protect the Nation from all hazards including natural disasters, acts of terrorism, and other man-made disasters. Operating Activities leads and supports the Nation through a risk-based, comprehensive emergency management system of preparedness, protection, response, recovery, and mitigation.

Summary Justification and Explanation of Changes

	2010 Actual	2011 C.R	2012 Request	2011 to 2012 Change
Salaries and Benefits	\$409,508	\$397,970	\$417,704	\$19,734

Salaries and Benefits includes costs for 3,337 FTEs.

	2010 Actual	2011 C.R	2012 Request	2011 to 2012 Change
Travel	\$19,514	\$19,896	\$14,143	(\$5,753)

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations.

	2010 Actual	2011 C.R	2012 Request	2011 to 2012 Change

PPA Mission Statement

National Capital Region Coordination (NCRC) program advances homeland security, including all hazards preparedness, in the National Capital Region (NCR). The program serves as a model for other regions of the country. NCRC focuses on developing and refining a common regional approach to homeland security that results in the integrated strategies and interoperability among Federal, State, local, regional and private/non-profit stakeholders. NCRC's primary responsibilities include coordinating and participating in programs and initiatives aimed at enhancing the homeland security posture of the region. NCRC also plays valuable roles in events, drills, and exercises that occur annually in the NCR. NCRC also serves as a principal in the NCR's regional governance structure and coordinates with the NCR's Regional Emergency Support Function (RESFs) to improve preparedness in the NCR.

PPA Mission Statement

The National Urban Search and Rescue System is comprised of 28 task forces that provide a coordinated, national, all-risk capability to assist State and local governments in responding to structural collapse incidents when the President declares a major disaster or emergency under the Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act). These task forces are highly trained and possess the necessary expertise to extricate and medically treat victims in heavy rescue situations. Funding is used to operate and train the existing task forces, maintain the equipment caches, and replace/repair equipment that has been used in training and actual disasters.

K: DHS Balanced Workforce Strategy

In order to establish a high performing workforce comprised of a strong internal core of federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment the Department will realign contractor and/or federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with federal employees to better realize the full potential of our total workforce – both contracted and federal. A strong internal core of federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into Tiered ranking. The results of Tier 1 contract review are listed below.

FEMA Federal Emergency Management Agency requests \$8.1 million and 79 FTE for the FY 2012 DHS Balanced Workforce Strategy.

Directorate	FY2010 Actual		FY2011 Pres. Budget		FY2011 Annualization		FY2011 Fellow-on		FY2012 Increase		Fy2011-FY2012 DHS Balanced Workforce Strategy

FY 2012 DHS Balanced Workforce Strategy

Provide additional details on the FY 2012 DHS Balanced Workforce including:

- Federal Emergency Management Agency (FEMA) Management and Administration functions provide the corporate infrastructure (IT, Finance, HR, Procurement, Facilities) facilities are currently working to reduce the amount of contract employees in place
- FEMA has 14 contracts that are currently projected to reduce contractors through replacement of FTE conversion in FY 2012. The projection will replace contractors with 79 FTE and reduce contract funds from \$14.3 million to \$8.1 million, a cost savings of \$6.1 million.

FEMA is currently working under a continuing resolution. Once final approved budget is received additional information will be available.

- The Logistics Management Directorate has a human capital support contract in the amount of \$837 thousand (annually) that will have four positions converted to federal employees. The computation for cost saving is as follows: The amount of funding needed to hire Federal employees is \$340 thousand per annum, the amount needed to retain two contractors to provide skill sets not resident to federal worker is \$317 thousand, for a combine total of \$657 thousand. Thereby, realizing a cost saving of \$180 thousand per annum.
- The Response Directorate has five contracts in the amount of \$5.947 million that will have positions converted to federal employees, which will eliminate or reduce contract cost. The amount of funding needed to hire Federal employees under the Response Directorate for FY 2012 is \$5.050 million. All five contracts will be terminated in the amount of \$5.94.7 million
- The Office of the Chief Procurement Officer (OCPO) has three (3) contracts in the amount of \$1.503 million that will have positions converted to Federal employees, which will eliminate or reduce contract cost. The OCPO has determined that the amount of funding needed to hire Federal employees is \$452 thousand. The projected contract cost after conversion is \$512 thousand for a total contract savings of \$539 thousand.
- The Office of The Chief Security Officer (OCSO) has 5 contracts in the amount of \$6 million that will have positions converted to federal employees, which will eliminate or reduce contract cost. Amount of funding needed to hire Federal employees is \$1.949 million.
 - Implementation Timeline – *Do you expect any overlap of contractor and Federal employees (for training etc) Contracts are not expected to overlap. When will the contract end?* The requirement to exercise follow on options will be evaluated each year, however, three of the contracts will be eliminated immediately following the conversion and the others will only be reduced and will continue through period of performance.

- *Identify any contractor functions that will be eliminated or absorbed by current federal employees and do not require additional new federal positions. Staff assistants within each of the directorate's five divisions will absorb some of the minor administrative work currently being completed by the contractor.*

FY 2011 DHS Balanced Workforce Strategy

FEMA is currently working under a continuing. Once final approved budget is received additional information will be available.

DHS Balanced Workforce Strategy Follow-On

Provide additional justification for FY 2010 and FY 2011 DHS Balanced Workforce Follow-On.

- Any adjustments necessary to reflect any contractor conversion that occurred prior to FY 2012 that were not reflected in the corresponding year's budget request.

BUDGET REQUEST AND SUPPORTING INFORMATION

FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA) STATE AND LOCAL PROGRAMS

I. Appropriation Overview

A. Mission Statement for State and Local Programs:

Through the appropriation for State and Local Programs (SLP), FEMA fulfills its role as the principal component of the Department of Homeland Security (DHS) responsible for preparing State and local governments to prevent, protect against, respond to, and recover from incidents of terrorism and other catastrophic events. The appropriation provides for grants, training, exercises, and other support to assist Federal agencies, States, territories, and tribal and local jurisdictions to prepare for terrorism and major disasters. SLP funds are administered by two different organizations within FEMA, the Grants Programs Directorate (GPD), and the National Preparedness Directorate (NPD).

B. Budget Activities:

In support of the National Preparedness Guidelines and the National Strategy for Homeland Security of 2007, FEMA's FY 2012 budget for State and Local Programs is divided into four major categories: the State and Regional Preparedness Program; the Metropolitan Statistical Area (MSA) Preparedness Program; the Training, Measurement, and Exercise Program; and Management and Administration (M&A) of the State and Local Program, which is a percentage of the other three program categories.

Protection and National Preparedness (PNP)

PNP is FEMA's lead component responsible for the coordination of protection and preparedness related activities throughout the Agency, including grants, planning, training, exercises, individual and community preparedness, assessments, lessons learned, continuity, and national capital region coordination. PNP conducts assigned mission sets through four directorates (National Preparedness, Grant Programs, National Continuity, National Capital Region Coordination) consisting of 20 divisions and 4 offices.

Grant Programs Directorate

GPD is responsible for the award, administration, and programmatic oversight of the State and Regional Preparedness Program and the Metropolitan Area Statistical (MSA) Preparedness Program.

State and Regional Preparedness Program

The State and Regional Preparedness Program includes grant programs that provide resources to support preparedness projects that build State and local capabilities as outlined in the National Preparedness Guidelines, the Target Capabilities List, and the National Strategy for Homeland Security of 2007:

- *State Homeland Security Grant Program (SHSGP)* - This program awards grants to all 50 States, the District of Columbia, Puerto Rico, and four U.S. territories on the basis of risk and need.

- *The Citizen Corps Grant Program (CCP)* - CCP is the Department's grassroots initiative to actively involve all citizens in hometown preparedness through personal readiness, training, and volunteer service.
- *Emergency Management Performance Grants (EMPG)* - This program provides grants that address emergency response and recovery activities. The EMPG program provides resources to assist State and local governments to sustain and enhance all-hazards emergency management capabilities.
- *Firefighter Assistance Grants Program* - This program is comprised of Assistance to Firefighter Grants (AFG), Staffing for Adequate Fire and Emergency Response (SAFER) Grants, and Fire Prevention and Safety Grants (FP&S). The combination provides support to fire departments and non-affiliated emergency medical services (EMS) to improve the readiness and capability of local first-responders during all-hazards emergencies including firefighting and EMS operations. Firefighter Assistance Grants are an integral part of the Department of Homeland Security's grant programs that assist Federal agencies, States, territories, tribal, and local jurisdictions protect against, prevent, plan for, and respond to acts of terrorism and other catastrophic events.

Metropolitan Statistical Area (MSA) Preparedness Program

The MSA Preparedness Program includes:

- *Urban Area Security Initiative (UASI)* - This program provides funding to support regional collaboration on enhanced security and terrorism readiness in the Nation's highest-risk urban areas.
- *Transit Security Grant Program* - The TSGP provides grant funding to support mass transit agencies within the Nation's key high-threat urban areas in their efforts to enhance security measures for critical transit infrastructure, including bus, rail, and ferry systems. This program also provides funding to Amtrak for continued security enhancements for intercity rail operations between key, high-risk urban areas throughout the United States. A risk-based approach is used to allocate TSGP funding to eligible mass transit and intra-city bus systems on a regional basis to address priorities identified in the National Preparedness Guidelines, the NIPP, and the National Strategy for Transportation Security (NSTS), with particular focus on high-risk and high consequence transit systems.
- *Port Security Grant Program* - The PSGP provides grant funding to port areas for the protection of critical port infrastructure from terrorism. PSGP funds are primarily intended to assist ports in enhancing port-wide risk management capabilities, enhanced domain awareness, capabilities to prevent, detect, respond to, and recover from attacks involving Improvised Explosive Devices (IEDs) and other non-conventional weapons, as well as training and exercises. PSGP funds are allocated to the Nation's highest risk port areas to address priorities identified in National Preparedness Guidelines (NPG), the National Infrastructure Protection Plan (NIPP), and the National Strategy for Maritime Security.
- *Buffer Zone Protection Program* - The BZPP provides funds to build security and risk-management capabilities at the State and local levels that will help protect critical infrastructure from acts of terrorism. Specifically, the program helps to implement Buffer Zone Plans (BZPs) by providing funds to support planning and equipment acquisition. BZPs help identify preventive and protective measures that make it more difficult for terrorists to conduct surveillance or launch attacks within the immediate

vicinity of high-risk critical infrastructure assets. BZPs are developed in cooperation between DHS and State and local officials, and help increase the preparedness capabilities of the jurisdictions responsible for the security of surrounding communities.

National Preparedness Directorate

NPD is responsible for administering the Training, Measurements, and Exercise Programs, which covers exercises, training, technical assistance, and evaluations.

Training, Measurement, and Exercise Programs

Training, Measurement, and Exercise Programs provide resources to support homeland security preparedness activities for State and local capabilities as outlined in the National Preparedness Guidelines and Homeland Security Act of 2002. For FY 2012, there are six programs included in Training, Measurement, and Exercise Programs:

- *National Exercise Program (NEP)* - NEP provides an organized approach to setting priorities for exercises, reflecting those priorities in a multi-year schedule of preparedness-related security exercises that serve the strategic and policy goals of the U.S. Government, and addressing findings from those exercises in a disciplined, interagency process.
- *Continuing Training Grants Program* - This program provides first responders with a comprehensive Weapons of Mass Destruction (WMD) training program that improves their capacity to prevent, protect against, respond to, and recover from acts of terrorism.
- *National Domestic Preparedness Consortium* – Including the Center for Domestic Preparedness, this program identifies training needs for all response disciplines responsible for terrorism and other catastrophic event prevention, deterrence, and incident response. The Consortium specifically focuses on enhancing first responders' capability to prepare for, respond to, protect against, and recover from incidents involving chemical, biological, radiological, nuclear, or explosive (CBRNE) agents.
- *Technical Assistance (TA) and Evaluations and Assessment Program* - The TA program is a capabilities-based program structured to build and sustain State and local capacity in priority preparedness activities. The TA services developed and delivered to State and local homeland security personnel address the full spectrum of the goals, priorities, and capabilities outlined in the National Preparedness Guidelines. The Evaluations and Assessment portion provides for the successful performance of preparedness policy, planning, and assessments to synchronize and integrate the preparedness activities conducted across the Federal government and among the State and local stakeholders.

C. Budget Request Summary:

In Fiscal Year (FY) 2012, FEMA requests 680 FTE and \$3,844,663,000 for State and Local Programs as described below:

PPA 1 – State and Regional Preparedness Program (\$2,083,000,000): In FY 2012, FEMA requests \$1.050 billion for the State Homeland Security Grant Program (SHSGP), of which \$50 million is for Operation Stonegarden, \$13 million for the Citizen Corps Grants Program (CCP), and \$350 million for the Emergency Management Performance Grant Program. This PPA also includes \$670 million for Firefighter Assistance Grants, of which \$250 million is allocated for

Assistance to Firefighters Grants, and \$420 million is dedicated to Staffing for Adequate Fire and Emergency Response (SAFER) grants, and Fire Prevention and Safety (FP&S) and Station Construction Grants.

PPA 2 – MSA Preparedness Program (\$1,570,000,000): In FY 2012, FEMA requests \$920 million for grants under the Urban Area Security Initiative (UASI), \$300 million for the Port Security Grants Program (PSGP), \$300 million for the Transit Security Grants Program (TSGP), and \$50 million for the Buffer Zone Protection Program (BZPP).

PPA 3 – Training, Measurement, and Exercise Programs (\$191,663,000): In FY 2012, FEMA requests \$191.6 million for Training, Measurement, and Exercise Programs, which includes \$40 million for the National Exercise Program (NEP), \$20.7 million for Continuing Training Grants Program (CTGP), \$107 million National Domestic Preparedness Consortium (NDPC) which includes \$62.5M supporting the Center for Domestic Preparedness (CDP), \$10 million for Technical Assistance Program, and \$14 million for Evaluations and National Assessment Program.

PPA 4 – Management and Administration: In FY 2012, FEMA requests not to exceed 4.8% of the total State and Local Programs appropriation for management and administration activities. This funding will support the full range of grant administration, related preparedness activities, program administration activities, and FEMA’s support organizations for infrastructure and administrative activities, including contributions to the Departmental working capital fund. FEMA requests this amount be transferred post-enactment to the Management and Administration appropriation.

FEMA requests \$2,083,000,000 for this activity.

CURRENT SERVICES PROGRAM DESCRIPTION

The State and Regional Preparedness Program suite includes grant programs that are some of the most visible and highly funded Homeland Security grant programs.

State Homeland Security Program (SHSP) – \$1.05 billion

The SHSP is a primary funding source for building homeland security capabilities that align with the NPG at the state and local levels. States and localities use SHSP funds to build a wide range of homeland security capabilities. Most capabilities specific to terrorism also are applicable to large-scale natural disasters and public health emergencies. Grant allocations are based on an analysis of risk and effectiveness, but each state is assured a minimum allocation.

Projects funded under SHSP support building and sustaining capabilities at the state and local levels through planning, equipment, training, and exercise activities and help states implement the strategic goals and objectives included in state homeland security strategies. The SHSP supports activities within the QHSR mission areas, as well as the National Priorities identified in the NPG. SHSP funding remains primarily focused on enhancing capabilities to prevent, protect against, respond to, or recover from chemical, biological, radiological, nuclear, and explosive (CBRNE) incidents. However, the allowable scope of SHSP activities includes catastrophic events, provided that these activities also build capabilities that relate to preventing, protecting against, responding to, or recovering from acts of terrorism.

Operation Stonegarden (OPSG) - \$50 million

The intent of OPSG is to enhance cooperation and coordination among local, State, and Federal law enforcement agencies in a joint mission to secure the United States borders along routes of ingress from international borders to include travel corridors in states bordering Mexico and Canada, as well as states and territories with international water borders. Prospective recipients for OPSG include local units of government at the county level and federally recognized tribal governments in the states bordering Canada (including Alaska), southern states bordering Mexico, and States and territories with international water borders.

Citizens Corps Program (CCP) - \$13 million

CCP funding supports Citizen Corps Councils with efforts to strengthen collaboration between government and civic leaders. These Councils serve as a collaborative planning body to develop goals and strategies for community resilience tailored to specific community vulnerabilities and populations. Elements of local strategies include: outreach and education on personal preparedness; integration of nongovernmental assets and personnel in preparedness and response protocols; improved plans for emergency notifications, evacuation, and sheltering; and increased citizen participation in community safety. Citizen Corps Councils engage citizens in personal preparedness exercises, ongoing volunteer programs, and surge capacity response in order to better prepare citizens to be fully aware, trained, and practiced on how to prevent, protect/mitigate, prepare for, and respond to all threats and hazards. This program provides funding by formula basis to all 50 States and 6 territories.

The CCP was established post-9/11 to empower American citizens to take responsibility for their own safety and security against all types of threats and disasters. The CCP works to ensure everyone in the country has a baseline understanding of hazards, has the information they need to prepare for and act in the event of an emergency, has access to preparedness and response training and exercise programs, and has opportunities to volunteer their time towards community preparedness. Currently, there are over 2,300 Citizen Corps Councils in jurisdictions that cover 78percent of the U.S. population and is operating in all 50 States and six U.S. territories.

Recent and Planned Accomplishments

FY 2010 Accomplishments

- Fielded an online registration tool to collect data on Citizen Corps Councils and Community Emergency Response Team (CERT) programs to collect data better aligning program priorities and leveraging activities in priority areas (i.e. engagement in whole community planning and public education; training through CERT programs).
- Established Environmental and Historic Preservation (EHP) processes and systems to support the majority of FEMA's grant programs, and conducted numerous workshops assisting grant recipients.
- Conducted 40 SHSP monitoring visits to track grantee performance.

FY 2011 Planned Accomplishments

- Bring online the Non-Disaster Grant System (ND Grants) and migrate legacy data from the Office of Justice Programs Grant Management System over to ND Grants

- Implement sub-grantee reporting visibility on USAspending.gov in accordance with OMB guidance to ensure that the taxpayers can see where grant dollars are being spent.
- Set objectives and evaluative criteria for FEMA's Whole Community Planning and Preparedness Initiative as well as efforts to counter violent extremism.
- Develop performance measures that track FEMA's efficiency in administering grant programs.
- Develop State Accomplishment Summaries for 56 States and Territories that categorizes expenditures by target capability, reviews accomplishments by the States in the utilization of FEMA resources, and discusses the specific hazards facing the jurisdictions.
- FEMA will develop and implement 3-7 grants effectiveness measures by the end of FY 2011.

FY 2012 Planned Accomplishments

- Begin the migration of grantee reporting through the Grants Reporting Tool to ND Grants along with the implementation of program monitoring and EHP compliance requirement modules so that grantees can utilize one online resource to apply for, report on, and manage their grants.
- Increase partnership and participation with the regional offices, stakeholders and our federal partners to provide better customer service, increase responsiveness, and transparency of the grant program.
- Deliver report evaluating existing grant performance measures and developing a set of quantifiable performance measures and metrics assessing the effectiveness of grant programs.
- Close out the FY 2007 Public Safety Interoperable Communication (PSIC) grant which has provided nearly \$1 billion in funding for interoperable communications equipment that enabled state and local jurisdictions to meet the goals in their State Communications Interoperability Plan (SCIP).
- Evaluate the effectiveness of the SHSP grants program implementing the plan and measures developed by Grants Program Directorate (GPD) and National Preparedness Assessment Division (NPAD).

Emergency Management Performance Grants Program (EMPG) - \$350 million

EMPG is a formula grant provided to assist state and local governments to sustain and enhance the effectiveness of their emergency management program. Funds are provided to all 56 states and territories as well as to the Federated States of Micronesia and the Republic of the Marshall Islands. FEMA provides states the flexibility to allocate funds according to risk and to address the most urgent state and local needs in disaster mitigation, preparedness, response, and recovery. Working within the standard Federal Government grant administration process, EMPG provides the support that state and local governments need to achieve measurable results in key functional areas of emergency management: 1) Laws and Authorities; 2) Hazard Identification and Risk Assessment; 3) Hazard Management; 4) Resource Management; 5) Planning; 6) Direction, Control, and Coordination; 7) Communications and Warning; 8) Operations and Procedures; 9) Logistics and Facilities; 10) Training; 11) Exercises; 12) Public Education and Information; and 13) Finance and Administration.

In FY 2012, the Administration proposes to realign the EMPG into the State and Local Program appropriation.

Recent and Planned Accomplishments

FY 2010 Accomplishments

- Distributed \$123 million to “Develop and Enhance Plans and Protocols” to improve the ability of State and local communities to prevent, respond, and recover from natural and man-made disasters.
- Developed all-hazard plans at state and county levels.
- Tested, trained, and exercised state and county emergency plans; including evacuation plans for special needs population.

FY 2011 Planned Accomplishments

FY 2012 Planned Accomplishments

- Award and monitor grants enabling state and local jurisdictions to ensure that their emergency management agency’s (EMA) are adequately staffed.

Assistance to Firefighter Grants (AFG) - \$670 million

The AFG program awards grants directly to fire departments and nonaffiliated emergency management services (EMS) organizations throughout the United States to support one-year projects that improve the effectiveness and safety of the Nation’s first responders in homeland security, firefighting, and EMS operations. Under its authorizing legislation, AFG must also expend a minimum of five percent of appropriated funds for fire prevention activities.

FEMA’s GPD administers the program, in cooperation with the U.S. Fire Administration. The entire AFG process is fully automated in an electronic grants system. Applicants apply online; grants are awarded electronically; grantees manage their grants (payment requests, amendments, etc.) online; and grants are monitored and closed out electronically. For FY 2012, eligible applicants will again be invited to submit an application for assistance in the following program areas most critical to enhancing the capabilities of the fire and EMS services:

- Operations and Safety programs, which include training, equipment, and personal protective equipment
- Firefighting Vehicle Acquisition program, which includes pumpers, brush trucks, tankers/tenders, rescue vehicles, ambulances, turntable ladder trucks with quintuple capabilities (quints), aerials, foam units, and fireboats
- Wellness/fitness activities
- Increase the number of trained, "front-line" firefighters
- Modifications to facilities
- Fire Protection and Safety (FP&S) activities, which include awareness and education, arson prevention, code enforcement, burn prevention and firefighter safety research and development

Funding priorities for each of the funding activities are announced by DHS, based on the Department’s National Preparedness Goals (NPG) as well as recommendations from the Nation’s fire service, as represented by nine major fire service organizations. The applications that most closely relate to these

announced priorities are reviewed by peer panels. The peer review panels typically take three weeks to complete and commence within two weeks of the end of the grant application period. The grant awards are based primarily on the results of the peer review panels.

In FY 2012, the Administration proposes to realign the AFG Program into the State and Local Program appropriation.

Recent and Planned Accomplishments

FY 2010 Accomplishments

- Awarded 188 SAFER grants for \$207,258,816 to provide funding directly to fire departments and volunteer firefighter interest organizations in order to help them increase the number of trained, "front line" firefighters available in their communities.
- Awarded 5,206 AFG grants for \$506,421,557 to provide firefighters and other first responders critically needed equipment, protective gear, emergency vehicles, training, and other resources needed to protect the public and emergency personnel from fire and related hazards.
- Awarded 241 FP&S grants for \$37,380,494 to support projects that enhance the safety of the public and firefighters from fire and related hazards.
- Collected performance measure data initiated the evaluation thereof.

FY 2011 Planned Accomplishments

- Fund an estimated 625 pieces of response apparatus, 10,000 pieces of Self Contained Breathing apparatus, 40,000 sets of turn out gear, 50,000 pieces of rescue equipment and provide basic training to over 15,000 firefighters, and the installation of over 20,000 smoke alarms.
- Develop strategies to improve communication to AFG program stakeholders (i.e., expanding on feedback given to unsuccessful applicants; delivering additional guidance and training to applicants and awardees).
- Develop and implement improvements to the processing of grant awards in an effort to reduce timeline between appropriation and award.
- Develop and implement improvements to management of grant awards including strategies to improve the rate for which awardees expend grant funds.
- Develop and implement enhanced monitoring plans that emphasize a risk based approach.

FY 2012 Planned Accomplishments

- Enable hiring of more than 2,200 firefighter positions that curb the trend of layoffs and improve departmental capability to respond per National Fire Protection Association recommendations.
- Evaluate strategies implemented in FY 2011 to improve communication to AFG program stakeholders; evaluate improvements to the processing of grant awards in effort to reduce timeline between appropriation and award.

PPA 2: METROPOLITAN STATISTICAL AREA (MSA) PREPAREDNESS PROGRAM

	<u>Perm. Pos</u>	<u>FTE</u>	<u>Amount</u>
2010 Actual			1,467,040
2011 C.R.			1,549,000
2012 Adjustments-to-Base			0
2012 Current Services	0	0	1,549,000
2012 Program Change			21,000
2012 Total Request	0	0	1,570,000

FEMA requests \$1,570,000,000 for this activity.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Metropolitan Statistical Area (MSA) Preparedness Programs include:

Urban Area Security Initiative (UASI) - \$920 million

The UASI Program addresses the unique multi-disciplinary planning, operations, equipment, training, and exercise needs of high-threat, high-density urban areas, and assists them in building and sustaining capabilities to prevent, protect against, respond to, and recover from threats or acts of terrorism. This program provides funding to high-risk urban areas based on risk and effectiveness.

In FY 2012, program participants may use UASI funding to achieve or enhance all of the 37 capabilities outlined in the National Preparedness Guidelines (NPG) and the Target Capabilities List, as long as they enhance the capability to prevent, protect against, respond to, or recover from acts of terrorism. Proposed investments under the UASI program should focus on the National priorities and the most urgent state and local priorities.

Port Security Grant Program (PSGP) – \$300 million

The PSGP provides grant funding to port areas for the protection of critical port infrastructure from terrorism. PSGP funds are primarily intended to assist ports in enhancing port-wide risk management capabilities; improving domain awareness; increasing capabilities to prevent, detect, respond to, and recover from attacks involving improvised explosive devices and other nonconventional weapons; and conducting training and exercises.

PSGP funds are allocated to the Nation's highest risk port areas to address priorities identified in the NPG, the National Infrastructure Protection Plan (NIPP), and the National Strategy for Maritime Security. The pool of eligible port applicants has been expanded to reflect the changes required by the Security and Accountability for Every Port Act, which states that all entities covered by an Area Maritime Security Plan may submit an application for consideration. PSGP funds support the development of an integrated risk-based decision-making process for each port area patterned after the risk management framework articulated in the NIPP. At the recommendation of the U.S. Coast Guard, in several cases, multiple port areas have been grouped together to reflect geographic proximity, shared risk, and a common waterway.

Rail/Transit Security Grant Program (TSGP) – \$300 million

The TSGP provides grant funding to support mass transit agencies within the Nation's key high-threat urban areas in their efforts to enhance security measures for critical transit infrastructure including bus, rail, and ferry systems. This program also includes \$20 million to provide funding to Amtrak for continued security enhancements for intercity rail operations between key, high-risk urban areas throughout the United States. A risk-based approach is used to allocate TSGP funding to eligible mass transit and intra-city bus systems on a regional basis to address priorities identified in the NPG, the NIPP, and the National Strategy for Transportation Security, with particular focus on high-risk and high-consequence transit systems.

Buffer Zone Protection Program (BZPP) – \$50 million

The BZPP provides funds to build security and risk-management capabilities at the State and local levels that will help protect critical infrastructure from acts of terror. Specifically, the program helps to implement Buffer Zone Plans (BZPs) by providing funds to support planning and equipment acquisition. BZPs help identify preventive and protective measures that make it more difficult for terrorists to conduct surveillance or launch attacks within the immediate vicinity of high-risk critical infrastructure assets. BZPs are developed in cooperation between DHS and State and local officials, and help increase the preparedness capabilities of the jurisdictions responsible for the security of surrounding communities.

Recent and Planned Accomplishments

FY 2010 Accomplishments

- Developed program monitoring for the SHSGP, EMPG, TSGP, Intercity Bus Security Grant Program, Freight Rail Security Grant Program, PSGP, and Intercity Passenger Rail grant programs.
- Established Environmental and Historic Preservation (EHP) processes and systems to support the majority of FEMA's grant programs and conducted numerous workshops assisting grant recipients.
- Conducted 37 TSGP, 15 PSGP, and 21 UASI monitoring visits to track grantee performance

FY 2011 Planned Accomplishments

- Begin accepting all FY 2011 preparedness grant applications through ND Grants and migrate legacy data from the Office of Justice Programs Grant Management System over to ND Grants.
- Implement sub-grantee reporting visibility on USAspending.gov in accordance with OMB guidance.
- Develop performance measures that track FEMA's efficiency in administering grant programs.

FY 2012 Planned Accomplishments

- Begin the migration of grantee reporting through the Grants Reporting Tool to ND Grants along with the implementation of program monitoring and EHP compliance requirement modules.

- Continue the implementation and monitoring of Transportation Worker Identification Credential, OPack, and Asset Hardening projects under the Port and Transit Security Grant Programs.
- Evaluate the effectiveness of the UASI grants program implementing the plan and measures developed by GPD and NPAD.

PPA 3: TRAINING, MEASUREMENT, AND EXERCISE PROGRAM

	Perm. Pos	FTE	Amount
2010 Actual			249,628
2011 C.R.			262,500
2012 Adjustments-to-Base			
2012 Current Services	0	0	262,500
2012 Program Change			-70,837
2012 Total Request	0	0	191,663

FEMA requests \$191,663,000 for this activity.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Training, Measurement, and Exercise Program consist of grants, exercises, technical assistance, and training programs that include: the National Exercise Program, Continuing Training Grant Program, National Domestic Preparedness Consortium, and the Technical Assistance and Evaluation and Assessment Program.

National Exercise Program (NEP) – \$40.0 million

The current NEP establishes a national, interagency-wide program to coordinate homeland security preparedness-related exercise activities. The NEP provides an organized approach to set priorities for exercises, reflects those priorities in a multi-year schedule of exercises that serves the strategic and policy goals of the U.S. Government, and addresses findings from those exercises in a disciplined process.

The NEP is based on the following:

National Level Exercises (NLE): Cabinet officers and other key officials are required to participate in approximately five exercise events annually. One of these is an operations-based exercise (i.e., full-scale or functional), designated as the NLE. NLEs test existing policies, plans, and capabilities in concert with intergovernmental, private sector, and international partners, where appropriate. NLE 2011 addresses a domestic non-terrorism major earthquake scenario; and NLE 2012 will address an international/defense crisis cyber attack scenario.

In addition, approximately four discussion-based exercises (i.e., tabletops or seminars), known as Senior Officials Exercises (SOE) or Principal Level Exercises (PLE), are conducted each year to address emerging issues. The Regional Exercise Support Program (RESP) and Terrorism Exercise Support Program (TPEP) also support the NEP by providing support to State and local partners and support emerging requirements.

Additionally, the following programs and functions support the NEP:

1. *Five-Year Exercise Schedule*: A multi-year schedule of exercises and exercise topics is presented to the Deputies each year, in advance of the budget call. The schedule is driven by U.S. Government-wide strategic priorities.
2. *Corrective Action Program (CAP)*: To ensure meaningful exercise outcomes, a CAP process identifies, analyzes, prioritizes, assigns, and tracks progress of issues identified in exercises.
3. *Alignment with Other Exercises*: The NEP does not replace other exercise programs, although some individual Department and agency exercises may be incorporated into NEP exercises where they align closely with the NEP goals and objectives.
4. *Lessons Learned Information Sharing (LLIS)*: LLIS.gov is a web-based tool which serves as the national network of lessons learned, best practices, and preparedness information for homeland security professionals. The National Exercise Division works in conjunction with the National Preparedness Assessment Division on this program.
5. *National Exercise Simulation Center (NESC)*: The congressionally mandated NESC is implementing new technologies to support increasing demand for exercise support, promote realism, promote consistent design and evaluation, and reduce burden on real-world resources.

Linkage to FEMA's Strategic Plan:

- Build the Nation's Capacity to Stabilize a Catastrophic Event within 72 Hours and Restore Basic Services and Community Functionality Within 60 Days Thereafter
 - National-level exercises such as NLE 2011 will serve as a cornerstone for the Administrator's initiative to build the Nation's capacity to stabilize a catastrophic event within 72 hours and restore basic services and community functionality. NLE 11 will also demonstrate the Administrator's resolve to include the whole of community (i.e., private sector, citizens, non-governmental organizations, etc.) in our preparedness efforts. Additionally, NLE 11 will serve as a benchmark milestone for completion and/or validation of many of the Administrator's priorities.
- Enhance FEMA's Ability to Learn and Innovate as an Organization
 - FEMA NED's goal to implement a reformed National Exercise Program directly correlates with the ability of our organization to learn and innovate.
- Build Unity of Effort and Common Strategic Understanding Among the Emergency Management Team Nationally By Acting Jointly to Address Our Most Significant Risks
 - Efforts through preparedness exercises and the continuing expansion of the National Exercise Simulation Center's capabilities buttress the FEMA Administrator's priority to building a unity of effort amongst the entire emergency management community. FEMA NED's goals expand further than the emergency management community, to include all mission areas, and all across the homeland security enterprise.

Recent and Planned Accomplishments

FY 2010 Accomplishments

- Conducted NEP Tier I exercises including: NLE 2010, PLE 1-10, SOE 2-10, SOE 3-10, PLE 3-10, and planning NLE 2011.
- Refined and improved data collection, corrective action, and evaluation processes to better assess national preparedness, and ensure corrective actions are implemented following the conduct of exercises and/or real-world events.

FY 2011 Planned Accomplishments

- Reform and revise exercise methodology doctrine and the NEP with a focus on smaller-scale, more efficient, limited-notice exercises that are based on validating plans and lessons learned.
- Conduct NLE 2011 focused on validating catastrophic plans and a whole of community (i.e., federal departments/agencies, 8 states, private sector, citizens, non-governmental organizations) response to a major New Madrid Seismic Zone earthquake.
- Plan NLE 2012 focused on cyber terrorism and conduct at least four SOEs (at the Principal and/or Assistant Secretary Level); and continue to enhance and empower the FEMA regions through the Regional Exercise Support Program, which is now under the authority of the Regional Administrators and Federal Preparedness Coordinators.

FY 2012 Planned Accomplishments

- Fully implement the NEP reform process by incorporating smaller-scale, more efficient, limited-notice exercises; and building a series of progressive exercises building up to the conduct of large-scale NLE 2012 focused on response to a cyber incident.
- Fully reform the Regional Exercise Support Program, Terrorism Prevention Exercise Program, and the SOE/PLE programs to align with the revised NEP; and sponsor over 140 national-level, federal, regional, state, and local exercises.
- Advance the National Exercise Simulation Center's capability to utilize modeling and simulation tools and software, which will allow for increased support to exercises and real-world events throughout the country; and greater efficiencies by reducing the amount of participant travel.

Continuing Training Grant Program - \$20.663 million

Funds for the CTG and previous Competitive Training Grants Programs (CTGP) are administered through the Homeland Security National Training Program and are managed by NTED. CTG programs traditionally meet the continuing training needs of responder communities and consist of current training partners that have previously received grant funding to provide training and education to the state, local jurisdictional, and tribal first responders and local officials. In addition to providing training across various responder disciplines, CTG also includes programs that deliver homeland security curricula in the form of executive education programs and accredited master's degree education, such as the Center for Homeland Defense and Security at the Naval Postgraduate School (NPS) in Monterey, CA.

Linkage to FEMA's Strategic Plan:

- Enhance FEMA's Ability to Learn and Innovate as an Organization

The Continuing Training Grants support the Naval Postgraduate School's Executive Leadership and Homeland Security Master's Degree Programs which provide training and educational support to DHS and FEMA employees.

Recent and Planned Accomplishments

FY 2010 Accomplishments

- Delivered more than 600 training course completions resulting in more than 20,000 responders in resident, nonresident, Train-the-Trainer, and blended learning programs through instructor-led and web-based courses. Developed and delivered an additional 12 live response satellite broadcasts that addressed relevant FEMA issues and programs, with an additional two broadcasts scheduled. Conducted course audits in ten percent of NTED-approved classes.
- Conducted two cohorts (65 total students from 27 states) under the NPS Homeland Security Executive Leaders Program; and four cohorts (100 total students from 32 states) under NPS' Master's Degree Program.
- Conducted a series of roundtable discussions with senior leaders and training professionals across the Nation to develop the NTP, define and prioritize requirements, align training, and draft a national training strategy.

FY 2011 Planned Accomplishments

- Conduct 20 additional Executive Education Seminars to educate new leadership and elected officials on home and security and emergency management issues following a number of state/locals elections scheduled in FY 2011. Finalize the searchable online course catalog for FEMA training and partner with DHS to include FEMA training in an online compendium of homeland security training available across the Nation.
- Finalize national training strategy and begin implementation. Coordinate and publish a series of documents which provides policy, guidance, and smart practices related to training design, development, delivery, and evaluation. Convene meetings with stakeholders to provide ongoing management and maintenance.

FY 2012 Planned Accomplishments

- Work with NDPC training partners to continue to surpass the current accumulative FY average of more than 2,600 course completions, resulting in more than 120,000 distinct responder and local government students trained.
- Implement national training strategy with the focus on emergency management core competencies at all levels of execution, whether operational or strategic management. Incorporate all policy, guidance, and smart practices related to training design, development, delivery, and evaluation.

National Domestic Preparedness Consortium (NDPC) - \$107 million

Overview: The NDPC consists of the following members:

- Center for Domestic Preparedness (CDP), Anniston, AL (\$62.5 million)
- Energetic Materials Research and Testing Center (EMRTC), Institute of Mining and Technology, Socorro, NM (\$11.125 million)
- National Center for Bio-medical Research and Training (NCBRT)
 - Louisiana State University, Baton Rouge, LA (\$11.125 million)
- National Emergency Response and Rescue Training Center (NERRTC),
 - Texas Engineering Extension Service (TEEX), Texas A&M University, College Station, TX (\$11.125 million)
- Counter Terrorism Operations Support (CTOS), Nevada National Security Site (NNSS), National Nuclear Security Administration, US Department of Energy, Las Vegas, NV (\$11.125 million)

The NDPC provides first responders with a comprehensive weapons of mass destruction (WMD) training program that improves their capacity to prevent, protect against, respond to, and recover from acts of terrorism. In administering this program, the FEMA's National Training and Education Division (NTED) oversees, coordinates, and strives to institutionalize the development and delivery of comprehensive training that targets members of the responder community, providing WMD knowledge to enhance their skills and abilities. Ensuring the quality and consistency of training of first responders is a key element in FEMA's preparedness mission.

Each of the NDPC components focuses on development and delivery of products and services according to its institutional expertise. The NDPC specifically focuses on enhancing first responders' capability to prepare for, respond to, protect against, and recover from incidents involving chemical, biological, radiological, nuclear, or explosive (CBRNE) agents. Under this arrangement, the NDPC demonstrated results in the Nation's unified effort to bring all levels of government, business, and the emergency response community to enhanced levels of preparedness.

Linkage to FEMA's Strategic Plan:

- Build the Nation's Capacity to Stabilize a Catastrophic Event within 72 Hours and Restore Basic Services and Community Functionality Within 60 Days Thereafter

The NDPC FY 2011 outcomes directly align with this strategic plan initiative. NDPC's primary focus is delivering training and preparing our nation's state, local, and tribal responders for catastrophic incidents, with a particular focus on chemical, biological, radiological, nuclear and explosive related threats.

Recent and Planned Accomplishments

FY 2010 Accomplishments

- Reorganized the Training and Education Integration Division as the NTED to better support the overarching National Training Program (NTP) under the direction of the Assistant Administrator for

National Training and Education. Created and staffed an NTP Branch within NTED and drafted a concept of operations for the NTP.

- Recorded more than 2,100 training course completions resulting in training delivery to more than 100,000 responders in resident, nonresident, Train-the-Trainer, and blended learning programs through instructor-led and web-based courses.
- Implemented advances in technology in multiple states utilizing visual collaboration and synchronized computer-based training to reach those in urban, suburban, and rural areas, thus institutionalizing and standardizing the training provided by the NDPC.
- Integrated national standards in evaluating training using Kirkpatrick's Four-level Model of Training Evaluation. Since implementation, the program has completed Level 1 and 2 evaluations on all of its courses. One NDPC member developed a standardized Level 3 template for other NDPC members to integrate into their programs. This level of evaluation has enhanced the ability to assess the effectiveness of the training provided, and aids in determining whether or not trainees are better prepared as a result of the training they received.

FY 2011 Planned Accomplishments

- Finalize NTP strategy and begin implementation. Coordinate and publish a series of documents which provides policy, guidance, and smart practices related to training design, development, delivery, and evaluation. Convene meetings with stakeholders to provide ongoing management and maintenance.
- Expand a project within the state of Oklahoma to develop two other discipline certification programs at the basic, intermediate, and advanced levels that will augment the state's credentialing system. Again, this project utilizes all the NDPC members and the NTED training partners with courses certified by NTED. These templates then will be reviewed by that discipline's national recognized body for adoption.
- Implement improved course catalogs, databases, Learning Management System solutions, and related knowledge management technologies to lay the groundwork for a national system that furthers National Preparedness.
- Develop requirements for National Domestic Preparedness Consortium (NDPC) that requires the members to calculate and track a cost per student user day, aligning the practice with other training-related organizations (i.e. USFA, FLETC, etc.).

FY 2012 Planned Accomplishments

- Increase course deliveries and completions by five percent, where appropriate, leveraging technology where practicable. Formulate and meet a shared goal with CTG Program training partners to surpass the current accumulative FY average of more than 2,600 course completions resulting in more than 120,000 distinct responder and local government students trained.
- Increase the number of institutionalized awareness courses. Platforms considered for institutionalization are academies, community colleges, state training centers, and private institutions when appropriate.
- Focus on higher education partnerships and outreach to grow the NTP and create understanding and synergy between participants in the various higher education conferences and communities.

- Carry out the NTP and routinely incorporate a robust dialogue that furthers the goals of the NTP into all NTED conferences and training and education events. Collect, maintain, and track cost per student user day data for the NDPC.

Center for Domestic Preparedness (CDP) - \$62.5 million

Funds for the CDP are allocated to provide specialized all-hazards preparedness training for state, local, and tribal emergency responders on capability-building skills tied to national priorities, especially those related to WMD, and to sustain and modernize the facilities at CDP. The facilities operated by CDP offer a unique capability that enables responders to train using toxic nerve agents and live biological agents while ensuring an optimized and safe learning environment for students. Within the funding provided for FY 2012, \$5.5 million is to be used to operate the Noble Training Facility (NTF). The NTF is the only hospital facility in the United States dedicated solely to training hospital and healthcare professionals in disaster preparedness and response operations. The NTF addresses training gaps identified by the healthcare response community and trains healthcare professionals to meet all-hazard threats in a realistic hospital environment. In addition to developing and delivering emergency responder training at various levels for a broad range of emergency response disciplines, the CDP also participates in efforts to standardize and decentralize this training for state, local, and tribal responders, while maintaining training quality and gathering meaningful evaluation data for continuous program improvement and effective program management. The CDP maintains a campus of 124 acres and approximately 900,000 square feet of training and support facilities. CDP provides one-of-a-kind training facilities and environments for emergency responders to conduct specialized, advanced hands-on training in realistic and challenging training venues that are not typically available at the state, local, or tribal levels.

Linkage to FEMA's Strategic Plan

- Build the Nation's Capacity to Stabilize a Catastrophic Event within 72 hours and Restore Basic Services and Community Functionality within 60 Days thereafter.
 - The Center for Domestic Preparedness FY 2011 outcomes directly align with this strategic plan initiative. CDP's primary focus is delivering training and preparing our nation's state, local and tribal responders for catastrophic incidents.

Recent and Planned Accomplishments

FY 2010 Accomplishments

- Further enhanced existing training venues (NTF and Chemical Ordnance Biological and Radiological Training Facility (COBRATF)), by adding advanced CBRNE technology to training programs, enhancing scenarios by incorporating simulations as appropriate, and upgrading realistic training venue environments that further challenge the responder students' planning, decision-making skills, and the implementation of operational tactics.
- Identified and further expanded training partnerships internal and external to DHS and FEMA that support the mission of CDP and other agencies focused on state, local, and tribal emergency response capabilities to incidents of terrorism or natural disaster involving CBRNE or mass casualties.

- Focused mobile training efforts to meet critical training requirements while maintaining capabilities through providing police academies, fire academies, community colleges, universities, and major metropolitan departments with opportunities to participate in the CDP's mentor program with the goal being to institutionalize CDP training and development of a local training delivery capability through partnerships designed to meet annual refresher and sustainment training requirements.
- The CDP utilized a combination of our resident, mobile, and Train-the-Trainer programs to deliver 4,293 courses resulting in 89,579 course completions throughout the Nation and territories.

FY 2011 Planned Accomplishments

- Enhance the Advanced Responder Training Facility (ART) facility and pilot in support of existing CDP and partners' defined requirements related to training, exercises, and real-world response preparedness.
- Review CDP curriculum in order to align to NTP and expand integrated training exercise opportunities across training courses, disciplines, and capabilities to add realism based on complex scenarios, incorporating multiple threats, multiple targets, mass casualty incident response, and other facets associated with events involving CBRNE, including the implementation of advanced bio-detection training and practical exercises into all five COBRATF courses.
- Implement a quarterly integrated training exercise as a capstone end-of-course event for resident training that incorporates multiple target capabilities, incident command, and daytime and nighttime operational activities based on National Planning Scenarios that cover a minimum of two operational periods.

FY 2012 Planned Accomplishments

- Fully implement the ART to meet national training and exercise requirements through CDP curriculum and collaborative partnerships in support of NTP.
- Implement a monthly integrated training exercise as a capstone end-of-course event for resident training that incorporates multiple target capabilities, incident command, and daytime/nighttime operational activities based on NTP, incorporating scenarios that include COBRATF, NTF, and ART.
- Further focus CDP's resident and nonresident training capabilities by building strategic partnerships with State Administrative Agency training points of contact for the purpose of providing comprehensive training approaches that meet identified training needs that focus on resident training while providing preparation for National Special Security Events and other risk-based requirements.
- Increase recognition and value of NTF through accreditation, certification, and endorsement of leading healthcare regulatory, accreditation, and credentialing organizations while further enhancing medical professional's ability to respond to mass casualty events.
- Improve all-hazards resident training through the integration of advanced technology into training programs, additional enhancement of scenarios and training venues through the incorporation of immersive training environments and increase in challenging learning conditions to improve the responder/students' planning, decision-making, and operational tactical skills.

Technical Assistance (TA) Program - \$10 million

The Technical Assistance (TA) Program is a capabilities-based program structured to build and sustain state and local capacity in priority preparedness activities. Under this vision, the TA services developed and delivered to state and local homeland security personnel address the full spectrum of the goals, priorities, and capabilities outlined in the NPG. As capability gaps are identified, the TA program develops services that can address those needs and build priority capabilities in the most critical areas. Throughout all of the TA programs, planning guidance and support is a common thread. The TA program is designed to be an agile program that addresses present-day areas of the greatest state and local need.

The program is committed to transferring and institutionalizing knowledge at the state and local levels and provides a dynamic menu of services responsive to national priorities. It is performance-based and effectively leverages limited resources. TA support is provided through lessons learned and best practices, planning guidance and templates, and direct support through workshops, subject-matter expert access, and planner support.

TA support requirements are characterized into three areas:

- Planning Services,
- Prevention/Protection, and
- Grants Management.

The TA program's processes will also serve as a conduit for direct support from other Directorates within FEMA, and potentially other components within the Department.

Planning Services TA – The enhancement of planning and planning capabilities at all levels of government is critical to national preparedness. Planning services are provided in support of all threats and hazards. The Planning Services TA programs draw on the subject-matter expertise resident within FEMA and the Department overall, as well as from throughout the emergency response community. The primary focus for this support is on planning for catastrophic events, as well as enhancing overall preparedness by integrating planning across the entire mission space to provide for improved strategic, deliberate, and crisis action planning at the state and local levels. Additionally, these services will support the development of preparedness guidance and planning standards or measures. Finally, these services will be leveraged to provide support to specialized, limited scope, and duration pilot projects in support of national planning.

Prevention/Protection TA - The establishment of a network of fusion centers to facilitate effective nationwide information sharing is a top priority that requires close collaboration among Federal, state, and local partners. To facilitate the development of a national fusion center capability, DHS, FEMA Protection and National Preparedness, and the U.S. Department of Justice's (DOJ) Bureau of Justice Assistance have partnered to develop the Fusion Process Technical Assistance Program as a component of the Homeland Security Preparedness Technical Assistance Program. This program has been developed in support of the DHS Office of Intelligence and Analysis and in coordination with the Office of the Director of National Intelligence; the Office of the Program Manager, Information Sharing Environment; the Federal Bureau of Investigation; and experts from the state and local community—including the Global Justice Information Sharing Initiative, the Criminal Intelligence Coordinating Council, and the Global Intelligence Working Group. The joint DHS/DOJ Fusion Process Technical

Assistance Program provides several direct support and subject matter expert services focusing on fusion centers, including onsite support services, personnel exchanges, fellowships, and documentation of best practices and lessons learned. This includes assistance to state and local jurisdictions on developing, implementing, and operating fusion centers.

Additionally, these funds support efforts to identify best practices in integrating protection activities, in partnership with the DHS Office of Infrastructure Protection. Activities under this category also provide prevention and protection support to planning, exercise, and operational efforts across FEMA, the Federal Government, and the state/local community. Finally, the program supports the coordination of prevention/protection activities.

Grants Management TA - The Grants Management TA program facilitates grants management through focused TA for all of FEMA's grantees on pressing issues and concerns faced in the management of FEMA grants. The main objectives of Grants Management TA are to: (1) help participants in developing/revising effective policies, procedures, and practices in critical areas of grants management; (2) facilitate problem-solving in addressing specific grants management issues; (3) apply proven business practices that will create greater efficiency in the use of human capital to meet grants management priorities (i.e., monitoring, strategic planning, organization, program implementation, drawdown, staff training, auditing, and performance measurement); (4) improve participants' ability to conduct successful Federal and state programmatic and financial monitoring; (5) prepare participants for performance and financial audits; (6) improve participants' decision-making skills by focusing on more performance-oriented solutions which are consistent with state strategies and priorities; and (7) improve collaboration among policy, program, and financial staff as an effective means to integrate grants management operations.

Linkage to FEMA's Strategic Plan

- Build Unity of Effort and Common Strategic Understanding Among the Emergency Management Team Nationally By Acting Jointly to Address Our Most Significant Risks
 - The Technical Assistance program is closely aligned with this strategic initiative. For example, the TA program supports the development of Comprehensive Preparedness Guides (CPG), which incorporates the Administrator's intent to include the whole of community (e.g., functional needs populations, citizens, private sector, etc.) in planning efforts. This priority was reflected in the most recent revision to CPG 101 and will be incorporated in future planning guidance.
- Build the Nation's Capacity to Stabilize a Catastrophic Event within 72 Hours and Restore Basic Services and Community Functionality Within 60 Days Thereafter
 - The TA program will be developing catastrophic planning guidance package for State / local governments to institutionalize planning for catastrophic incidents and provides technical assistance to State and local jurisdictions in developing and updating emergency operations plans for response to catastrophic disasters.

Recent and Planned Accomplishments

FY 2010 Accomplishments

- Expanded programs and activities to increase planning and technical assistance across all mission areas, to include coordinating prevention and protection information with response, recovery, and mitigation planning.
- Conducted the Nationwide Plan Review and developed five additional Comprehensive Preparedness Guides (CPGs) as prioritized to address preparedness requirements.
- Supported national fusion center initiatives, including the 2010 National Fusion Center Conference, and supported implementation of the Baseline Capabilities Assessment.

FY 2011 Planned Accomplishments

- Expand available guidance and technical assistance across all three programs to provide increasingly specialized support in areas dictated by the state and local governments and provide program and project management technical assistance to enhance effectiveness of support programs.
- Implement program to address findings of the 2010 Nationwide Plan Review, including the development of a national planning system, finalization of five new CPGs, and expanded direct support programs to expedite the revision of state and local strategic plans, emergency operations, and the development of regional base plans.
- Support national fusion center initiatives, including support for the 2011 National Fusion Center Conference, regional TA workshops, and implementation of the Baseline Capabilities Assessment.

FY 2012 Planned Accomplishments

- Develop catastrophic planning guidance package for State / local governments to institutionalize planning for catastrophic incidents.
- Support national fusion center initiatives, including support for the 2012 National Fusion Center Conference, regional TA workshops, and implementation of the Baseline Capabilities Assessment.
- Conduct strategic review of all TA programs' efficiencies.

In addition to the Technical Assistance performance objectives outlined above, the following performance measures represent additional measures of efficiency, effectiveness, or timeliness for key functions within the Technical Assistance Program:

Evaluations and Assessments Program - \$14 million

The NPD Evaluations and Assessments Program under the National Preparedness Assessment Division (NPAD) supports the FEMA mission by working to measure overall national preparedness, as well as the effectiveness of preparedness programs, including grants programs, NPAD also provides critical feedback to policy officials and program managers regarding compliance, capability, resource needs, and performance in the context of national preparedness strategy and guidance.

- ***National Preparedness Report (NPR)***. The 2009 NPR, revised by NPAD in FY 2010 and pending clearance, was a first-of-its-kind analytical capstone designed to fulfill five congressionally mandated preparedness reporting requirements while providing an objective, data-based evaluation

of preparedness. The NPR includes the Federal Preparedness Report, Catastrophic Resource Report, Emergency Medical Services Report, and Emergency Support Function Report, and a summation of the State Preparedness Reports submitted annually by the states to FEMA. The consolidation of the five subordinate reports into one capstone document is intended to allow integration and much improved analysis of the disparate information contained in those reports and to decrease the reporting burden on Federal, state, and local respondents. Development of the next National Preparedness Report is underway. The 2010 Report, to be completed in 2011, will be based on the Whole Community Planning process and engage with all preparedness stakeholders to produce a much enhanced product.

- ***State Preparedness Report (SPR)***. Each state or territory receiving Federal assistance must submit an annual report on its level of preparedness to FEMA. FEMA collects the reports from all 56 states and territories and reviews and analyzes them in order to produce substantive analysis on nationwide trends, identify areas for increased attention, and inform broader assessments of national preparedness. FEMA has created a web-based, quantitative SPR survey that incorporated states' input, enhancing the ability to effectively analyze this data as well as significantly reducing user burden. A follow-on Quality Assurance Survey validates the consistency of the SPR Survey tool in order to minimize subjectivity. FEMA provides extensive technical assistance to the states in completing the SPR and solicits feedback to improve the survey, tool, and process. It also initiated a series of SPR reports in order to provide information back to the states. In 2011 NPAD will produce and deliver a series of State Homeland Security Accomplishments Reports. These Summary Reports will present preparedness stakeholders with a high-level overview of State accomplishments in all-hazards preparedness supported through the use of Federal preparedness grants and programs.
- ***Remedial Action Management Program/ Corrective Action Program (RAMP/CAP)***. NPAD is conducting phased implementation to establish an integrated RAMP that supports data collection, after-action reporting, improvement planning, action tracking, and lessons learned for exercises and real-world events. RAMP is one of eight components of the national preparedness system and provides critical feedback on performance in the form of reports on corrective actions and lessons learned. NPD is leveraging existing processes and software systems where possible, such as the Homeland Security Exercise and Evaluation Program (HSEEP) and Corrective Action Program (CAP), and Lessons Learned Information Sharing (LLIS) currently managed under the NEP.
- ***Performance Measures and Metrics***. NPAD continually tracks data on PNP program metrics and milestones as required by the 1993 Government Performance and Results Act (GPRA). Performance measures and milestones are reported quarterly, allowing PNP to demonstrate the effectiveness and efficiency of PNP programs and provide data to inform assessment projects. PNP will be reporting new measures for FY 2011 to demonstrate its performance in meeting the Quadrennial Homeland Security Review (QHSR) objectives for enhancing and sustaining nationwide disaster preparedness capabilities and for ensuring individual, family, and community planning readiness for disasters.

Linkage to FEMA's Strategic Plan

- Build the Nation's Capacity to Stabilize a Catastrophic Event within 72 Hours and Restore Basic Services and Community Functionality Within 60 Days Thereafter

- NPD-NPAD will report annually on the preparedness of the Nation. It will use its individual activities, State Preparedness Reports, NIMSCAST, and FEMA grant programs, as well as other data collected as part of the Comprehensive Assessment System, to evaluate preparedness. NPD-NPAD's reporting products, including the National Preparedness Report, will inform its partners, Congress, and the public.
- NPD-NPAD will use the State Strategies provided by State Homeland Security Grant Program recipients to assess the effectiveness of the grants.
- NPD-NPAD's reporting products, including the National Preparedness Report, will inform its partners, Congress, and the public.
- Enhance FEMA's Ability to Learn and Innovate as an Organization
 - NPD-NPAD will partner with NPD-NED to develop the RAMP/CAP manual and directive and provide input to the HSEEP revision, to ensure that the guidance is consistent to the greatest extent possible for evaluation of operational performance in tracking Agency-wide actions to address lessons learned. NPD-NPAD will partner with the Response Directorate and others such as EMAP to develop measures for evaluation of operational performance by FEMA and our partners in real-world events. NPD-NPAD will work with the Office of the Administrator to help ensure that all FEMA components follow the RAMP/CAP manual and directive, which will establish a standard process and software to manage corrective actions and lessons learned.

Recent and Planned Accomplishments

FY 2010 Accomplishments

- Implemented the first-ever quantitative, web-based SPR through direct input, feedback, and participation from our state and territorial partners, reducing the user burden of more than 7,000 pages of narrative text previously submitted annually by states. FEMA provided the first-ever value-added reports back to the states based on their SPRs and data analysis from the CAS.
- The CAS became fully functional and operational and produced the first National Preparedness Report (NPR) currently in clearance.
- Produced after-action reports and lessons learned for the American Samoa Earthquake, Tsunami, and Flooding, and for the 2010 FEMA Support to the Haiti Earthquake Response. Conducted outreach to expand the LLIS.gov community from 46,000 to 58,000 users, to include emergency management and homeland security professionals at all levels of government and in nongovernmental organizations and the private sector.

FY 2011 Planned Accomplishments

- Align NPD-NPAD assessments methodology to assessment related recommendations of the Preparedness Task Force to include a refined PrepCast tool; continue plans to expand the FEMA data warehouse to include NPD preparedness data to enhance the ability to query comprehensive preparedness data for analytic use by NPD as well as our state and local partners; improve CAS; and develop the next NPR.
- In collaboration with Federal partners, FEMA will produce an overarching multi-year implementation plan to review and improve the capability to manage FEMA-internal and Federal interagency corrective actions and lessons learned from exercises and real-world events, in

accordance with White House-level policy discussions. Develop a data collection capability, including documentation and training, to collect observations for FEMA during real-world events to generate better data for corrective actions and lessons learned.

- Align NPD-NPAD assessments programs to evolving National Preparedness policy initiatives to include the Whole Community approach to catastrophic planning and the refined National Preparedness System.
- In partnership with the Grants Program Directorate, NPD-NPAD will develop and implement 3-7 grants effectiveness measures by the end of FY 2011.
- NPD-NPAD is working with the NIC to develop more effective grant effectiveness measurements based on the National Preparedness System and the Whole Community Maximum of Maximum planning efforts. Accordingly, a process will be developed by the end of FY 2011 for measuring investments against the risks identified by each grant recipient.

FY 2012 Planned Accomplishments

- Implement data integration concepts, plans, and policies and expand the use of the FEMA data warehouse to other FEMA Directorate IT systems, resulting in improvements to the next NPR. Develop concept to widen IT integration with Federal interagency partners' data sources in future years.
- Test and refine the data collection capability for FEMA based on experience in major disasters and emergencies. Develop after-action reports and lessons learned for two to three high profile real-world events to advance catastrophic disaster preparedness.
- Develop and publish guidance on how to use lessons learned available on LLIS.gov to improve national preparedness. Target outreach to expand participation by under-represented groups in the LLIS.gov user community. Develop partnerships to strengthen the content on priority topics, such as community preparedness to support objectives of the QHSR.
- Apply refined assessments methodology based on changes to the National Preparedness System and recommendations of the Preparedness Task Force to improve analysis and reporting products.
- Report on the effectiveness of the SHSP and UASI grants programs based on metrics and measurements developed in partnership with GPD Analysis will be based on the construct of the National Preparedness System in which jurisdictions identify risks, capability gaps, and needs and invest grant dollars to close those gaps and address those risks.

PPA 4: MANAGEMENT AND ADMINISTRATION (M&A)

	Perm. Pos	FTE	Amount
2010 Actual*	664	552	120,608
2011 C.R.*	664	634	120,608
2012 Adjustments-to-Base	66	46	63,936
2012 Current Services	730	680	184,544
2012 Program Change			0
2012 Total Request	730	680	184,544

FEMA requests 4.8 percent transfer of total funding from State and Local Program for salaries & benefits, program management and administration activities executed within the Protection and National Preparedness Directorate. These funds will be transferred to FEMA’s Management & Administration appropriation after enactment. This funding supports 730 positions/680 FTE which includes the 50 new positions identified under the DHS Balanced Workforce Strategy for the Center of Domestic Preparedness (CDP). This in-sourcing initiative will result in an estimated \$750,000 in annual savings.

CURRENT SERVICES PROGRAM DESCRIPTION:

M&A includes traditional operational and program management support resources for FEMA’s GPD and NPD. This account covers the salaries and benefits for headquarters and regional staff, travel, rent, printing and supplies, related preparedness activities, administration activities, and contributions to the DHS Working Capital Fund.

National Preparedness Programs – 457 Positions/422 FTE

Budget Activity / Function	Auth Positions
National Exercise Program	27
Continuing Training Grants	10
CDP/NOBLE *	103
National Domestic Preparedness Consortium	0

Evaluation and Assessment	23
National Integration Center	67
EMI	85
Individual and Community Preparedness	17
National Training and Education Division	28
NPD Management and Administration	79
TOTAL, National Preparedness Directorate	457

** Includes insourcing for CDP*

National Integration Center (NIC) - NPD serves as the Executive Agent for the National Incident Management System (NIMS) and the National Response Framework (NRF). The NIC coordinates and brokers agency and interagency, intergovernmental, and private sector planning initiatives in support of operational response and recovery objectives for the NIMS and the NRF. NIC plays a critical role in

coordinating the various components of the NRF to ensure that the NRF remains linked to and based upon the NIMS. NIC also has the mission of coordinating the National Credentialing and Resource Typing Program, which includes developing and maintaining the policies, standards, and procedures to ensure emergency response personnel are qualified, identified, and equipped for their role in saving lives and protecting property. In addition, NIC evaluates and updates existing policies and guidance related to the development and implementation of a National Preparedness System (NPS) and the National Preparedness Goal (NPG).

Linkage to FEMA's Strategic Plan

- QHSR Objective 5.2.2: Strengthen capabilities: Enhance and sustain nationwide disaster preparedness capabilities
- FEMA Strategic Initiative #4: Enhance FEMA's Ability to Learn and Innovate as an Organization
- Administrator's Priority #1: Strengthen the nation's resilience to disasters
- IPG: Develop, enhance and maintain the National Incident Management System
- QHSR: Preparedness standards for life safety, law enforcement, mass evacuation, and shelter in place, public health, mass care, and public works capabilities, including capacity levels for catastrophic incidents, have been developed and are used by all jurisdictions.

Recent and Planned Accomplishments

FY 2010 Accomplishments

- Continued NRF and NIMS outreach efforts to support and facilitate the enhancement of existing and new incident management programmatic and operational standards for consistency with NIMS principles and doctrine.
- Per Title IX of the Implementing Recommendations of the 9/11 Commission Act of 2007, Voluntary Private Sector Preparedness Accreditation and Certification Program, adopted three voluntary Private Sector Preparedness Standards to better prepare private sector partners. Implemented the program through each FEMA Region by training all 10 Federal Preparedness Officers and their representatives. Worked with the DHS Private Sector Office, DHS Office of Infrastructure Protection, and other FEMA offices to develop the Title IX-mandated small business concerns.
- Provided NIMS support through the NIMS Support Center; enhanced mutual aid through investing in enhancing the Emergency Management Assistance Compact increasing incident management interoperability, and pilot-testing the Resource Ordering and Status System in a statewide deployment, as well as by completing key NIMS documents and guidelines on the Incident Command System, Training, and Credentialing.

FY 2011 Planned Accomplishments

- Review, validate, and update the NIMS Typed Resources and NIMS Job Titles with qualifications for mutual aid deployment and the NIMS Job Aids, e.g., Emergency Response Field Operating Guide (ERFOG), Incident Command System Forms, Position Qualification Guide, and the Command and General Staff Position Task Books.

- Complete biennial review and revision of the NIMS document, outreach to stakeholders with NRF and NPS, revise the NRF core document, and further implement the Title IX Private Sector Preparedness through FEMA regions. Identify, assess, and/or validate equipment and technologies that will support incident management and disaster preparedness.
- Modify national preparedness goal (NPG) and doctrine to reflect any revision or successor to Homeland Security Presidential Directive-8 and the recommendations of the congressionally-mandated Federal, state, local, and tribal Preparedness Task Force.

FY 2012 Planned Accomplishments

- Finalize and implement revised preparedness policy and doctrine per the Preparedness Task Force recommendations and presidential policy directive on national preparedness.
- Finalize capability level guidelines and establish a maintenance and management process for continuously evaluating, updating, revising, or modifying the guidelines based upon lessons learned, changes in policy or doctrine, and the understanding of risks and capabilities in coordination with appropriate Federal, state, and local subject matter experts and practitioners.
- Review, revise, and distribute the NIMS doctrine and associated guides and the NRF and based on lessons learned and stakeholder input and continue NRF and NIMS outreach efforts to support and facilitate the enhancement of existing and new incident management programmatic and operational standards for consistency with NIMS principles and doctrine.

National Training and Education Division (NTED) – The National Training and Education Division (NTED) provides the management and administration of the National Domestic Preparedness Consortium (NDPC) and the Continuing Training Grants (CTG) Program. NTED training partners provide the first responders and Government official training that improves their ability to prepare for, protect against, respond to, recover from, and mitigate, all-hazards incidents and acts of terrorism through the Homeland Security National Training Program (HSNTP). NTED funds 60 plus training partners to include the Naval Postgraduate School Center for Homeland Security and Defense (CHSD).

Linkage to FEMA’s Strategic Plan

- Enhance FEMA’s Ability to Learn and Innovate as an Organization
 - Both the National Domestic Preparedness Consortium (NDPC) and the Continuing Training Grants (CTG) Program (with NTED manages) are geared toward advancing learning opportunities for FEMA employees (i.e., through the Naval Postgraduate School funded out of the Continuing Training Grants), as well as State and local first responders and homeland security/emergency management officials.
- Build the Nation’s capacity to stabilize a catastrophic event within 72 Hours and restore basic services and Community functionality within 60 days thereafter.
 - The focus of NDPC training is on preparing first responders to respond to catastrophic incidents.

Recent and Planned Accomplishments

FY 2010 Accomplishments

- Training Delivery – NTED, through the Training Partners, effectively trained more than 150,000 first responders in Fiscal Year 2010 in resident, non-resident, train-the-trainer and blended learning programs, and reached out to more than 184,000 responders with preparedness information through satellite broadcasts. NTED completed reviews/certifications of 48 courses, 9 instructor audits, and 10 desk audits in FY 2010.
- Learning Management Systems Consolidation and Enhancement - Continued improvement to the Registration and Evaluation System (RES), to include Geographic Information System (GIS) capability, and added the functionality of providing State specific reports by zip codes. Assisted with the phase I activities in building of the consolidated online FEMA/NPD training courses database.
- Completed the incorporation of training outcomes and reporting data collections for The Center of Domestic Preparedness (CDP), into the Responder Evaluation System (RES) database functions.

FY 2011 Planned Accomplishments

- Training Delivery - Train an additional 160,000 responders in resident, non-resident, Train-the-Trainer and blended learning programs. Develop and deliver additional live response satellite broadcasts that address relevant FEMA issues and programs. Analyze products from 2010 NDPC Strategy and update as necessary. Conduct course audits in ten percent of NTED approved classes.
- Assist with the creation and administration of the Emergency Management (EM) Academy, with the initiation and implementation of the data system to track performance measures against the established goals.
- National Assessment Analysis - Assist in the developmental of the Strategic Plan to collect, synthesize, and analyze, the threats and risks of the by States and geographical location, to further develop the national training needs assessments. Incorporate plans and procedures into the learning management integration operational plans.
- Conducted the baseline data collection for the reporting of contact hours to measure the number of student contact hours for National Preparedness Directorate (NPD) direct delivery courses offered each fiscal year.

FY 2012 Planned Accomplishments

- Implement quarterly reporting of student contact hours to measure the number of student contact hours to meet the National Preparedness Directorate (NPD) direct delivery courses offered each fiscal year reporting requirements.
- Finalize requirements for the implementation of an integrated NTE information and learning management system to ensure consistency of management tools and policies (e.g., Responder Evaluation System, course development and review process, etc.) across the NTE collaborative environment.
- Develop and implement a national training business practice to provide baseline requirements for NTE course development and other learning and development opportunities.

Emergency Management Institute (EMI) - The planning and systems aspects of Protection and National Preparedness/NPD are complemented by EMI which provides training to Federal, state, local, tribal, volunteer, public, and private sector officials to strengthen emergency management core competencies, including incident management, operational planning, disaster logistics, emergency communications, disaster assistance, continuity programs, public disaster communications, integrated preparedness, and hazard mitigation, as well as minority-serving institution initiatives and Tribal Incident Management Team and liaison initiatives. EMI directly supports the implementation of the NIMS, the NRF, the NDRF, and the NPG by conveying necessary knowledge and skills to practitioners. EMI uses a diverse training delivery system that includes residential onsite training; offsite delivery in partnership with emergency management training systems, colleges, and universities; and technology-based mediums to conduct individual training courses for emergency management personnel across the Nation.

Linkage to FEMA's Strategic Plan

- QHSR Objective 5.2.2: Strengthen capabilities: Enhance and sustain nationwide disaster preparedness capabilities, to include life safety, law enforcement, mass evacuation and shelter-in-place, public health, mass care, and public works.
- FEMA Strategic Initiative #4: Enhance FEMA's Ability to Learn and Innovate as an Organization
- Administrator's Priority #1: Strengthen the nation's resilience to disasters
- Administrator's Priority #2: Build unity of effort among the entire emergency management team – Federal, state, local, tribal government, private sector; NGOs, communities, and individuals
- NPD Draft Strategic Plan Priority "Training and Education": Design and implement a comprehensive program to train and educate State, local, and Tribal officials as well as FEMA's disaster workforce and other Federal partners, to meet the current and emerging needs of the Nation's emergency management and homeland security professions.

Recent and Planned Accomplishments

FY 2010 Accomplishments

- Developed 18 new courses targeted at state, local, and tribal audiences for resident, field, and independent study delivery, as well as funded limited technology upgrades in resident classrooms using the additional \$1.9 million of funding allocated in FY 2010. These new courses represent the first large new development for state-delivered courses in nearly a decade.
- Deployed multi-hazard emergency planning for higher education at nine universities to date, reaching a total of 91 colleges and universities and 291 participants. Five additional universities are scheduled for delivery through September. Additionally, a four-hour training module from the course will be presented to nearly 100 participants at the Historically Black Colleges and Universities (HBCU) Law Enforcement Executives Association Conference in July 2010. This includes modeling on the HBCU initiative to disseminate emergency management related information to minority serving institutions of higher education. EMI built a tribal college/university program to develop increased tribal nation capacity for training and delivery of FEMA activities.
- In conjunction with FEMA mission support personnel, initiated a one-week training course for new FEMA employees to be conducted at EMI. This training is part of an effort to provide a consistent and comprehensive approach for the "on-boarding" of new employees. Additionally, developed a

three-day Emergency Management Practices course for delivery to all Protection and National Preparedness staff to provide baseline knowledge of emergency management.

FY 2011 Planned Accomplishments

- Develop and deliver a competency-based Emergency Management Academy to provide career paths for entry level to executive emergency managers to continue the professionalization of emergency management. The foundational competency model will be piloted, the capstone event will be deployed, and development of the specialized training programs will begin.
- Extend the higher education outreach to Hispanic Serving Institutions by offering the Emergency Management Preparedness, Planning, Training, and Education for Colleges and Universities course designed to provide college and university executives an introduction to emergency management, a basic overview of EMI's Higher Education Program, career information on emergency management, and other information regarding FEMA activities.
- Expand EMI's Response and Recovery training curriculum for state, tribal, and local emergency management personnel and align EMI's curriculum with nationally recognized emergency management competencies based on key stakeholder collaboration, conduct gap analysis, and develop new courses or revise existing courses.

FY 2012 Planned Accomplishments

- Deploy the specialized training programs of the Emergency Management Academy and develop and pilot the executive/managerial training programs.
- Develop and deploy a revised Master Trainer Program (MTP) based on an analysis of the existing program underway. The MTP is a series of courses designed to develop a cadre of training professionals to achieve national capability in emergency management through training at all levels of government and related organizations.
- Implement an integrated internal/external EMI Learning Management System (LMS) under a single Meridian Global application utilizing multiple data domains. This effort will integrate the FEMA Employee Knowledge Center and the EMI eLearning LMS and provide the advanced functionality available to FEMA employees to local, state, tribal, and other federal professionals. The use of segregated domains within a single LMS will provide the security required of federal training records and personal information while achieving efficiencies in resource requirements such as hosting costs, software licenses, and operation and maintenance requirements.
- Develop a new Emergency Management for Tribal Elected Officials course and revise three foundational courses of the Tribal curriculum increase content sensitive to needs and issues of Native American tribes.
- Develop five new State-delivered field courses and revise several older courses to meet the needs of State and local emergency managers nationwide for major topics like planning, leadership, and damage assessment.

Individual and Community Preparedness Division (ICPD)- ICPD's mission focuses particularly on the outreach and training required to support the critical role of the public as prepared effective partners as well as the metrics to gauge progress in this goal. The outreach and training for youth and underserved populations will directly support whole of community participation in planning and training for

preparedness and resilience. ICPD activities are designed for implementation through partnerships with nongovernmental organizations and community leaders representing diverse populations.

Linkage to FEMA's Strategic Plan

- Foster a Community-Oriented Approach to Emergency Management Nationally that Strengthens Local Institutions, Assets and Social Networks to Build Sustainable and Resilient Communities.
 - ICPD works to increase the preparedness of individuals, organizations, and communities through the support and coordination of local, grassroots preparedness programs that provide the greatest impact on communities across the nation. ICPD administers the Citizen Corps and Community Emergency Response Team Programs (CERT) nationally. The Division also works with internal DHS/FEMA and external partners to promote the common goal of achieving more resilient communities.

Recent and Planned Accomplishments

FY 2010 Accomplishments

- In coordination with the U.S. Department of Education, and the American Red Cross hosted the National Summit on Youth Preparedness to develop a framework for a national strategy to enhance youth awareness and preparedness capabilities at all levels of abilities and backgrounds.
- ICPD Achievement Awards Program – *The 2010 National Citizen Corps Achievement Awards—Celebrating Resilient Communities*. The National Citizen Corps Achievement Awards recognized innovative practices and achievements of Citizen Corps Councils across the nation that are making our communities safer, stronger, and better prepared to manage any emergency situation. Fourteen awards were given out to individuals and members of Citizen Corps Councils to recognize their achievements.
- Develop and release new training materials for the CERT Program to address tribal, teen, traffic and crowd control and other preparedness initiatives.

FY 2011 Planned Accomplishments

- Launch new data collection tool for Citizen Corps Councils and CERT programs to provide baseline information as to what activities have occurred with HS Grant funding that aligns with the Administrator's intent.
- Develop long term strategic plan for youth preparedness with the American Red Cross and Department of Education, including guidance, evaluation tools, resource guide, templates, and program materials, social media plan, summary of current research and plan for additional research.
- Release new CERT Supplemental Training modules
- Conduct biennial household survey through the ICPD Support Services contract.

FY 2012 Planned Accomplishments

- Develop a library of community preparedness tools and templates on ICPD website to make programs, technical assistance, and contacts more accessible to the Whole of Community (e.g., translating ICPD publications and website into Spanish for accessibility in the Latino community).
- Analyze and produce guidance on findings for the 2011 National Household Survey, including a new mitigation measure to capture whether citizens are taking appropriate preparedness and mitigation actions.
- Provide resources enhance the 2010 Youth Summit, identify and develop youth education resources; and, develop new locally delivered accessible preparedness training delivered through partners and programs to underserved communities.

Office of Preparedness Integration and Coordination (OPIC) – OPIC’s mission is to support the Administrator’s Intent and overarching principle of regional empowerment by integrating and coordinating protection and preparedness programs, initiatives, and activities across all PNP components – the National Preparedness Directorate (NPD), Grant Programs Directorate (GPD), National Continuity Programs (NCP), and Office of National Capital Region Coordination (NCRC) – and across all 10 FEMA Regions. The office is responsible for facilitating dialogue between leadership and program staff at Headquarters and the Federal Preparedness Coordinators and program staff in the FEMA Regions on the types of programs described above. OPIC coordinates with the Office of Regional Operations to synchronize engagement with the Regions on preparedness efforts.

Linkage to FEMA’s Strategic Plan

- Build Unity of Effort and Common Strategic Understanding Among the Emergency Management Team Nationally By Acting Jointly to Address Our Most Significant Risks

Recent and Planned Accomplishments

FY 2010 Accomplishments

- Established and fielded two analytical courses for the Preparedness Analyst and Planning Office (PAPO) Preparedness Analyst and Planning Specialist (PAPS) to train them how to connect strategic planning efforts with performance results.
- Conducted four quarterly reviews with the Federal Preparedness Coordinators (FPC) and Deputy FPCs to foster an information sharing and learning environment.
-
- Led the Department’s efforts to establish a partnership between the National Governors Association (NGA) and National Emergency Management Agency (NEMA) to collaboratively address complex challenges of homeland security and all hazards disaster prevention, protection, mitigation, preparedness, response and recovery. The partnership provides a “ready-made” group of experienced subject matter experts providing input and technical assistance for the Departments national strategies, policies, plans and programs in homeland security and all hazards management.

FY 2011 Planned Accomplishments

- Continue collaborative partnership with NGA and NEMA to improve national strategies, policies, plans and programs towards homeland security and all hazards management.
 - OPIC and NGA will host a Policy School for New State Homeland Security Advisors to assist new State Homeland Security leaders in enhancing their fundamentals in National Preparedness Coordination.
 - OPIC and NEMA will conduct an outreach and training program for new State Emergency Management Directors.
- OPIC will allocate \$29,000 to each of the 10 FEMA Regions for special projects with an emphasis on the importance of preparedness through the support and coordination of locally developed preparedness education programs for children and youth.
- Continue quarterly reviews with FPCs and Deputy FPCs to foster an information sharing and learning environment. Continued oversight and review will allow FPCs to better understand the preparedness cycle and in turn better carry out their designated mission.

FY 2012 Planned Accomplishments

- Continue collaborative partnership with NGA and NEMA by conducting at least two forums supporting outreach or training initiatives to improve implementation of the Department's national strategies, policies, plans and programs towards homeland security and all hazards management.
- OPIC will allocate \$29,000 to FEMA Regions for special projects related to protection and national preparedness. All FY12 special projects proposed must align to at least one of the FY 2011 Annual Program Plan (APP) priorities. In accordance with the Administrator's priorities, special projects approved will support youth and family preparedness.
- Conduct quarterly reviews with the FPCs and Deputy FPCs to foster an information sharing and learning environment. Continued oversight and review will allow FPCs to better understand the preparedness cycle and in turn better carry out their designated mission.

Grant Preparedness Programs – 273 Positions/259 FTE

Budget Activity / Function	Auth Positions
Grants Accountability and Oversight	102
Business Support and Data Analysis	14
Program Development and Administration	157
TOTAL, Grants Program Directorate	273

FEMA's GPD has three primary functions: 1) Grants Accountability and Oversight; 2) Business Support and Data Analysis; and 3) Program Development and Administration. GPD leadership has conducted an internal reorganization to align its major components along these primary functions.

Grants Accountability and Oversight – This function manages the business processes necessary for all pre-award activities including the announcing of funding opportunities, accepting and reviewing

applications, determining award eligibility, providing quality control over grants award documents and processing award packages. This function manages all post-award activities, such as monitoring grantees, processing modifications, generating amendments, reviewing grantee financial status reports, and coordinating grant closeout. The function also assists in the coordination and monitoring of key grant-related audit activities, i.e., DHS Office of Inspector General, Government Accountability Office, Single Audit Act, and the independent Financial Auditor.

Business Support and Data Analysis – This function provides a single mechanism to analyze, synthesize, and present grant-related financial data. Responding to increasingly intense security of FEMA’s stewardship of grant and assistance resources, this function will provide information that ensures accountability and oversight of awarded funding.

Program Development and Administration – This function serves as the executive agent for development of grant guidance for the homeland security grant programs; provides programmatic oversight and technical assistance for grant administration, monitoring, and reporting; and is a principal liaison for interagency programmatic collaboration and coordination. This function will also support the FEMA regions. In addition, this function will develop programmatic monitoring protocols and strong performance measures that track how efficient FEMA is in administering the grant programs.

FEMA’s GPD M&A funding and requirements support the full range of the grant programs’ administration activities and FEMA’s support organizations for infrastructure/ administrative activities, including contributions to the Departmental working capital fund.

Linkage to FEMA’s Strategic Plan

GPD serves as the primary grants management organization within FEMA, and it works with the regions in its execution of grant oversight. The FEMA Regions implement the policies and initiatives developed at the headquarters level, providing the operational arm of a very tactical FEMA organization.

FEMA GPD’s first priority is to develop and refine efforts and activities that support the Administrator’s *Regional Empowerment initiative*. FEMA is therefore framing its goals and objectives, through both regional and headquarters activities which are meant to complement each other, to provide assurances that the appropriate management controls are in place for FEMA grants. FEMA is reorganizing its grant management function.

- Create a *One (FEMA) GPD* alignment of duties and responsibilities to the mission and cascade goals that resolve existing fragmented objectives and organizational linkages, which are current impediments to the Administrator’s goals, while creating outcomes oriented FEMA grants management.
- Establish communications avenues that enhance oversight management at headquarters and provide grantees a consistent message at the regional level.
- Identify and promote an understanding of grants management requirements at the regional level, when applicable, and across the FEMA portfolio of grants.

- Establish functional accountability and performance measures while enabling leadership to manage their resources and providing viable career paths for GPD staff.
- Implement oversight management of FEMA grant activity geared to mitigation of grant risks
- Establish accountability and performance measures in the following areas: Improper payments and disallowed costs, grant closeout, flow of funds, program performance, reporting, and pre-award management.

Recent and Planned Accomplishments

FY 2010 Accomplishments

- Reorganized grant administration and assistance functions to better align business processes and functions, including financial reviews and technical assistance to grantees.
- Institutionalized internal controls for grants management both operationally and strategically by: developing an internal controls framework; assessing and revising policies and procedures; working to provide adequate reporting systems; and implementing processes and analytical reviews that enable sound managerial decision-making as well as effective grant administration and oversight.
- Provided outstanding customer service to all grantees as well as internal and external partners via the customer service center. The customer service center responded to 1,605 calls and 15,860 emails in FY 2010.
- Conducted workforce analyses studies to thoroughly understand workload, possible improvements, and resource implications, to get ahead of workload and workforce fluctuations through strategic planning and forecasting in order to enhance customer service and stakeholder partnerships.
- Conducted three national grants management workshops, training FEMA grant recipients and Federal representatives to help ensure proper stewardship of Federal funds and compliance with regulations and requirements.

FY 2011 Planned Accomplishments

- Begin accepting all FY 2011 preparedness grant applications through ND Grants and migrate legacy data from the Office of Justice Programs Grant Management System over to ND Grants.
- Streamline grant processes to improve effectiveness and efficiency in the award, financial management, and monitoring of grants, including financial reviews, funding drawdowns, and financial monitoring.
- Implement sub-grantee reporting visibility on USAspending.gov in accordance with OMB guidance.

FY 2012 Planned Accomplishments

- Begin the migration of grantee reporting through the Grants Reporting Tool to ND Grants along with the implementation of program monitoring and environmental and historical preservation compliance requirement modules.

- Begin Regional Implementation of Grants initiative for which selected portions of the grants lifecycle are implemented in the regions to provide better customer service to grantees.

IV. Program Justification Changes

**Department of Homeland Security
Federal Emergency Management Agency
State and Local Programs
Justification of Program Changes**
(Dollars in Thousands)

Program Decrease #1: State and Local Programs

Strategic Goal(s) & Objective(s): 5.2 (5.2.1, 5.2.2)

PPA: State and Regional Preparedness Program

Program Decrease: (\$269,013)

Funding Profile

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level									\$2,352,013
Program Decrease									(\$269,013)
Total Request			\$2,370,887			\$2,353,700			\$2,083,000

Description of Item

FEMA requests \$2,083,000 for State Homeland and Security Grant Programs in FY 2012.

Justification

The Agency’s request maintains funding levels for State Homeland Security Grant Programs (SHSGP) and Operation Stonegarden (OPSG) while prioritizing the remaining \$13 million in FY 2012 resources towards the Citizen Corps Program (CCP). SHSGP grant recipients continue building capabilities to protect and prepare state and local governments’ responses to acts of terrorism, large-scale disasters (natural and man-made), and public health emergencies. OPSG continues to enhance and coordinate joint mission border protection priorities and activities across federal, state, and local law enforcement agencies and tribal governments. CCP strengthens the Department’s activities with more than 2,300 Citizen Corps Councils in jurisdictions covering 78 percent of the U.S. population and operating in all 50 States and 6 U.S. territories. CCP activities collaborate local community resilience goals and strategies including: outreach and education on personal preparedness; integration of nongovernmental assets and personnel in preparedness and response protocols; improved plans for emergency notifications, evacuation, and sheltering; and increased citizen participation in community safety.

Assistance to Firefighter Grants

FEMA's FY 2012 request of \$670 million for the Assistance to Firefighter Grants program ensures that the Nation's communities will continue to be protected and prepared for all hazards by funding approximately 2,200 firefighter positions and 5,000 grants for firefighting first responders to purchase life-saving equipment.

The Assistance to Firefighters Grant (AFG) program positively impacts local first responders' capabilities by providing basic services within their communities. FEMA will distribute \$250 million to approximately 5,000 grant recipients in order to support fire departments and nonaffiliated EMS organizations with one-year projects that improve the effectiveness and safety of the Nation's first responders in homeland security, firefighting, and EMS operations. Firefighter safety is directly impacted by the Department's ability to provide critical resources. AFG grant awards also supplement fire departments' insufficient equipment resources to enable them to conduct operations with fireground staff and other responders.

Staffing for Adequate Fire and Emergency Response (SAFER) Grants program awards grants directly to fire departments throughout the United States in order to rehire laid-off firefighters, increase fire department staffing consistent with nationally recognized consensus standards, support veteran first responders, and provide our state and local partners with the tools they need to keep our country safe. Fire department staffing, in particular, has been adversely impacted during the current economic downturn, and over the past 10 years. The increase to this program in FY 2012 supports the Department's request to distribute \$420 million to fund more than 2,200 firefighter positions within impacted local communities.

Emergency Management Performance Grants

The proposed FY 2012 EMPG program provides \$350 million to continue assisting State and local jurisdictions in improving their overall emergency management systems. EMPG grant recipients establish, expand, and maintain effective partnerships with neighboring jurisdictions to develop emergency management plans, train and exercise, and procure necessary resources to assist in the event of any emergency, natural or man-made. EMPG grants continue to be distributed on a formula basis across all 50 states, the District of Columbia, Puerto Rico, U.S. Virgin Islands, American Samoa, Guam, Northern Mariana Islands, plus the Federated States of Micronesia and the Republic of the Marshall Islands.

Program Decrease #2: State and Local Programs

Strategic Goal(s) & Objective(s): 1.1 (1.1.3), 1.3 (1.3.2), and 5.2 (5.2.1, 5.2.2)
 PPA: Training, Measurement, and Exercise Program

Program Decrease: (\$62,419)

Funding Profile

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level									254,082
Program Decrease									(\$62,419)
Total Request			\$249,628			\$262,500			\$191,663

Description of Item

FEMA requests a decrease of \$62,419,000 in the Training, Measurement, and Exercise Program for FY 2012.

Justification

FEMA will absorb the total reduction across multiple activities by applying efficiencies and eliminating redundant activities identified through working with state and local governments. A \$7.337 million reduction to Continuing and Emerging Training Grants will be achieved by focusing the provided funding on the most critical needs that aren't already being met by National Domestic Preparedness Consortium (NDPC) training or the training offered by States. An additional \$53.809 million reduction will occur in NDPC because States are assuming increased responsibility for awareness level, refresher, and sustainment training that will allow our institutional partners to focus resources on more advanced, specialized training consistent with their respective expertise. A \$1.273 million reduction in Evaluation and Assessments funding will be realized due to streamlining and consolidating data collection efforts through the Agency.

Program Increase #1: State and Local Programs

Strategic Goal(s) & Objective(s): 1.3 (1.3.3) and 2.2 (2.2.3)

PPA: Metropolitan Statistical Area (MSA) Preparedness Programs

Program Increase: \$21,000

Funding Profile

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level									\$1,549,000
Program Increase									\$21,000
Total Request			\$1,467,040			\$1,549,000			\$1,570,000

Description of Item

FEMA requests \$1,570,000,000 for the Metropolitan Statistical Area (MSA) Preparedness Program in FY 2012.

Justification

The Agency will continue to focus MSA Preparedness Program grant resources on activities supporting the Department’s highest prioritized mission, “Preventing Terrorism and Enhancing Security.” The FY 2012 request provides additional resources to Urban Area Security Initiative (UASI) requests annually submitted by emergency management activities in high-threat, high-density urban areas. UASI grant requests continue to fund prevention, protection, response, recovery initiatives and capabilities directed at threats or acts of terrorism.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Emergency Management Agency
Justification of Proposed Changes in State and Local Programs
Appropriation Language**

State and Local Programs

(including transfer of funds)

For grants, contracts, cooperative agreements, and other activities, \$3,844,663,000 shall be allocated as follows:

(1) \$2,083,000,000 shall be for State and Regional Preparedness Programs, of which-

(A) \$1,050,000,000 shall be for the State Homeland Security Grant Program under section 2004 of the Homeland Security Act of 2002 (6 U.S.C. 605): Provided, That of the amount provided by this paragraph, \$50,000,000 shall be for Operation Stonegarden to address the Nation's Southwest Border security issues: Provided further, That notwithstanding subsection (c)(4) of such section 2004, for fiscal year 2011, the Commonwealth of Puerto Rico shall make available to local and tribal governments amounts provided to the Commonwealth of Puerto Rico under this paragraph in accordance with subsection (c)(1) of such section 2004.

(B) \$13,000,000 shall be for the Citizen Corps Program.

(C) \$350,000,000 shall be for Emergency Management Performance Grants, as authorized by the National Flood Insurance Act of 1968 (42 U.S.C. 4001 et seq.), the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5121 et seq.), the Earthquake Hazards Reduction Act of 1977 (42 U.S.C. 7701 et seq.), and Reorganization Plan No. 3 of 1978 (5 U.S.C. App.).

(D) \$670,000,000, to remain available until September 30, 2013, shall be for necessary expenses for the Firefighter Assistance Grants program authorized by the Federal Fire Prevention and Control Act of 1974 (15 U.S.C. 2201 et seq.), of which \$250,000,000 shall be available to carry out section 33 of that Act (15 U.S.C. 2229) and of which \$420,000,000 shall be available to carry out section 34 of that Act (15 U.S.C. 2229a).

(2) \$1,570,000,000 shall be for the Metropolitan Statistical Area Preparedness Program, of which-

(A) \$920,000,000 shall be for the Urban Area Security Initiative under section 2003 of the Homeland Security Act of 2002 (6 U.S.C. 604).

(B) \$300,000,000 shall be for Public Transportation Security Assistance and Railroad Security Assistance, under sections 1406 and 1513 of the Implementing Recommendations of the 9/11 Commission Act of 2007 (Public Law 110-53; 6 U.S.C. 1135 and 1163), of which not less than \$20,000,000 shall be for Amtrak security: Provided, That such public transportation security assistance shall be provided directly to public transportation agencies.

(C) \$300,000,000 shall be for Port Security Grants in accordance with 46 U.S.C. 70107.

(D) \$50,000,000 shall be for Buffer Zone Protection Program Grants.

(3) \$191,663,000 shall be for the Training, Measurement, and Exercise Program, of which-

(A) \$107,000,000 shall be for the National Domestic Preparedness Consortium in accordance with section 1204 of the Implementing Recommendations of the 9/11 Commission Act of 2007 (6 U.S.C. 1102), of which \$62,500,000 shall be for the Center for Domestic Preparedness; \$11,125,000 shall be for the National Energetic Materials Research and Testing Center, New Mexico Institute of Mining and Technology; \$11,125,000 shall be for the National Center for Biomedical Research and Training, Louisiana State University; \$11,125,000 shall be for the National Emergency Response and Rescue Training Center, Texas A&M University; \$11,125,000 shall be for the National Exercise, Test, and Training Center, Nevada Test Site;

(B) \$20,663,000 shall be for the Continuing Training Grants Program.

(C) \$24,000,000 shall be for Technical Assistance and Evaluations and Assessments.

(D) \$40,000,000 shall be for the National Exercise Program:

Provided, That not to exceed [4.7]4.8 percent of the amounts provided under this heading shall be transferred to the Federal Emergency Management Agency "Management and Administration" account for program administration: Provided further, That for grants under paragraphs (1)(A), (1)(B), and (2)(A), the applications for grants shall be made available to eligible applicants not later than 25 days after the date of enactment of this Act, eligible applicants shall submit applications not later than 90 days after the grant announcement, and the Administrator of the Federal Emergency Management Agency shall act within 90 days after receipt of an application: Provided further, That for grants under paragraphs (2)(B) through (2)(D), the applications for grants shall be made available to eligible applicants not later than 30 days after the date of enactment of this Act, eligible applicants shall submit applications within 45 days after the grant announcement, and the Administrator of the Federal Emergency Management Agency shall act not later than 60 days after receipt of an application: Provided further, That for grants under paragraphs (1)(A) and (2)(A), the installation of communications towers is not considered construction of a building or other physical facility: Provided further, That grantees shall provide reports on their use of funds, as determined necessary by the Secretary: Provided further, That (a) the Center for Domestic Preparedness may provide training to emergency response providers from the Federal Government, including without reimbursement to employees of the Federal Emergency Management Agency for professional development pursuant to 5 U.S.C. 4103, foreign governments, or private entities, if the Center for Domestic Preparedness is reimbursed for the cost of such training, and any reimbursement under this subsection shall be credited to the account from which the expenditure being reimbursed was made and shall be available, without fiscal year limitation, for the purposes for which amounts in the account may be expended, and (b) the head of the Center for Domestic Preparedness shall ensure that any training provided under (a) does not interfere with the primary mission of the Center to train State and local emergency response providers.

Note.--A full-year 2011 appropriation for this account was not enacted at the time the budget was prepared; therefore, this account is operating under a continuing resolution (P.L. 111-242, as amended). The amounts included for 2011 reflect the annualized level provided by the continuing resolution.

Section 3006 of the Digital Television Transition and Public Safety Act of 2005 (Title III of the Deficit Reduction Act of 2005, Pub. L. No. 109-171) creates a new matching grant program to assist public safety agencies in the acquisition of, deployment of and training for the use of interoperable communications systems that utilize or enable interoperability with communication systems that utilize the 764-776 MHz and 794-806 MHz bands. It directs the National Telecommunications and Information Administration (NTIA) in consultation with DHS to take the administrative actions necessary to establish and implement the grant program. A memorandum of agreement (MOU) was established and signed in 2007 between the NTIA, Department of Commerce, and DHS, in which FEMA provides grants management and administrative services to NTIA in support of the PSIC program through fiscal year 2012.

*FY 2010 and FY 2011 include management and administration costs. FY 2012 request reported under State and Regional Preparedness Program.

PPA Mission Statement

The Emergency Management Performance Grants (EMPG) program provides resources to assist state and local governments to sustain and enhance all-hazards emergency management capabilities. States have the opportunity to use EMPG funds to further strengthen their ability to support emergency management activities while simultaneously addressing issues of national concern, as identified in the national priorities of the National Preparedness Guidelines. EMPG has a 50 percent Federal and 50 percent state cost share cash or in-kind match requirement.

Summary Justification and Explanation of Changes

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Grants/Subsidies/Contributions	\$329,750	\$329,750	\$0	(\$329,750)

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, associations, individuals, and contributions to commissions, proceedings, or projects. The FY 2012 request provides an overall increase of \$10 million increase for this program. This amount is reported under State and Regional Preparedness Program.

This exhibit is for information purposes only. Funding for management and administration costs are transferred to and reported under FEMA's Management and Administration appropriation.

PPA Mission Statement

The Management and Administration PPA includes funding for the Protection and National Preparedness Directorate to support the full range of grant administration, related preparedness and program administration activities. Funding also includes FEMA's support organization for infrastructure/administrative activities, IT, rent, and contributions to the Departmental working capital fund. The Management and Administration PPA includes programs that were previously funded in Operations, Management, and Administration (OMA) appropriation: Incident Management Systems Integration (IMSI), Emergency Management Institute (EMI), Program Development, and Administration and Grants Accountability and Oversight.

Summary Justification and Explanation of Changes

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Salaries and Benefits	\$42,778	\$70,266	\$82,811	\$12,545

Salaries and Benefits includes costs for 640 FTEs. The FY 2012 request includes an increase of \$12,545,000 for the inclusion of AFG and EMPG in PPA6 and insourcing of CDP contractors to FTE.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Travel	\$3,540	\$3,039	\$3,840	\$801

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2012 request reflects an increase of \$801,000 for the inclusion of AFG and EMPG in this PPA.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Transportation of Things	\$17	\$17	\$17	\$0

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
GSA rent	\$3,060	\$4,493	\$5,242	\$748

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2012 request increases an increase of \$748,000 inflationary increases and for the inclusion of AFG and EMPG rent costs.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Communication, Utilities, and miscellaneous charges	\$2,089	\$3,354	\$7,171	\$3,817

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2012 request includes an increase of \$2,328,000 for the inclusion of AFG and EMPG costs for IT related services.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Printing	\$67	\$67	\$67	\$0

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Other Services	\$55,677	\$25,992	\$71,963	\$45,971

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2012 request includes increases of \$45,971,000 for the inclusion of AFG and EMPG contracted services.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Supplies & materials	\$694	\$694	\$707	\$13

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2012 request includes an increase of \$13,000 for the inclusion of AFG and EMPG consumables.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Equipment	\$811	\$811	\$851	\$40

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2012 request includes an increase of \$40,000 for the inclusion of AFG and EMPG equipment upgrade and replacement costs.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Land & Structures	\$70	\$70	\$70	\$0

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural (or resource) improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Grants/Subsidies/Contributions	\$11,354	\$11,354	\$11,354	\$0

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, associations, individuals, and contributions to commissions, proceedings, or projects.

K. DHS Balanced Workforce Strategy

In order to establish a high performing workforce comprised of a strong internal core of federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment the Department will realign contractor and/or federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with federal employees to better realize the full potential of our total workforce – both contracted and federal. A strong internal core of federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into Tiered ranking. The results of Tier 1 contract review are listed below. The results of the lower-priority contracts will post-date this budget submission and will be included in the FY 2013 budget.

FEMA requests \$3.6 million 50 positions and 46 FTE for the FY 2012 DHS Balanced Workforce Strategy to support the in-sourcing initiative for the Center for Domestic Preparedness.

FY 2012 DHS Balanced Workforce Strategy

The Center for Domestic Preparedness (CDP) currently has contracts in place with several companies for support services in the Budget and Administration, Operations and Support, and Training and Development Directorates of the organization. This initiative will convert contract dollars to 50 FEMA Full Time Employees (FTE). CDP requests zero additional funding for the conversion of the contract dollars to FTE positions. The conversion of the 50 contractor positions to FTEs will result in over \$4.8 million in contract cost avoidance over a 5 year period. The cost of those contract positions is \$4,852,155. These avoided costs will be used to fund the FTEs. The funding needed for the 50 FTE positions is \$3,792,086. The estimated actual saving over the five years are over \$1 million those

savings will be utilized to offset other cost increases in items such as student travel, annual escalation clauses in contracts, and higher utilities.

The CDP proposes to convert portions of existing contracts that are currently performing Information Technology (IT) Support Services, Physical Security Support Services, Asset and Budget Management Support Services, Instructional Designers, Learning Management Systems Specialists, Training Specialists, Resident and Non-Resident Training Coordinators, Web-Based, Training Management Support Services, Training Evaluations Specialists, Training Needs and Research Analysts, Technical Writers, Editors, Multi-Media Specialists, Quality Control Manager, Chemical Laboratory Technician, Occupational Health Nurse, Student Record and Archive Manager, Travel Office Manager, Webmaster/Web-Based Training Specialist, Learning Management System Specialist, Training Research Analysts, and Administrative Support Positions throughout the three directorates. Only those areas being converted will be terminated from the contracts. We will work closely with the Office of Acquisition Management to phase the contracts to minimize any potential overlaps to ensure continuity of operations. Most of the positions can be classified as either inherently governmental or nearly inherently governmental. The remaining conversions will result in increased efficiencies, continuity of operations for the Center, and increased government oversight of contractor operations.

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Emergency Management Agency Radiological Emergency Preparedness Program

I. Appropriation Overview

A - Mission Statement for the Radiological Emergency Preparedness Program:

The Radiological Emergency Preparedness Program (REPP) assists state, local, and tribal governments in the development of offsite radiological emergency preparedness plans within the emergency planning zones of Nuclear Regulatory Commission (NRC) licensees of commercial nuclear power facilities. The REPP fund is financed from user fees assessed and collected from NRC licensees to cover budgeted costs for radiological emergency planning, preparedness, and response activities in the following year.

B - Budget Activities:

FEMA requests budget authority in FY 2012 to:

- Conduct activities in conjunction with state, local and industry officials to ensure all elements required to gain and maintain ‘reasonable assurance’ of required levels for public safety determinations related to operating nuclear power generating stations.
- Conduct and evaluate REPP exercises and drills.
- Conduct joint FEMA/NRC rulemaking and policy development activities as they relate to offsite planning and preparedness.
- Conduct necessary offsite planning and preparedness reviews pertaining to proposed new reactor licensing and construction efforts.
- Conduct radiological courses for Federal, state, tribal and local emergency planning, preparedness and response personnel.
- Develop and maintain guidelines and procedures for alert and notification systems installed around nuclear power facilities. Ensure these efforts are coordinated with emerging National policies pertaining to public alert and warning systems.
- Continuously review and update REPP guidelines and regulatory supplements to ensure they are standardized and in conformance with the National Preparedness System. Specifically, publish final Radiological Emergency Preparedness Program Manual and NUREG 0654/FEMA-REP-1/Rev.1 Supplement 4 incorporating program guidance and policy enhancements.
- Maintain an integrated network system to aid Federal, state, local and tribal emergency response providers in preparedness, planning, training and exercising.

C - Budget Request Summary:

REPP estimates the Fiscal Year (FY) 2012 offsetting collection authority to be \$33.5 million. This represents anticipated fee authority of (\$896,000).

2012 Total Request	170	170	-896

FEMA requests to utilize \$37.35 million in 2011 offsetting collections for FY 2012 operating expenses in support of the REPP. This funding will support 170 positions and provide \$17.9 million for salaries and benefits and \$15.6 million for program funding.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Radiological Emergency Preparedness Program (REPP) oversees nationally coordinated, locally implemented radiological emergency preparedness (REP) and response activities. The program assists state, tribal, and local governments in the development and conduct of offsite REP activities within the emergency planning zones of Nuclear Regulatory Commission (NRC)-licensed commercial nuclear power facilities. The REP programs historical success lies in its ability to integrate and enhance Federal, state, tribal, and local governments' preparedness planning and response capabilities for all types of radiological emergencies.

Funds for REPP activities are generated through user fees charged to each participating reactor licensee. Funds that are available for obligation in a given year rely on the level of collections received in the prior fiscal year.

Ongoing terrorism-based drills are increasing the program's nuclear and radiological responsibilities. REPP also actively supports other FEMA, DHS, and Federal partners' improvised nuclear device and radiological dispersal device planning and exercises, as these programs have common elements with REPP's primary mission.

In the regional offices, REPP established a 1:1 ratio of site specialists for each plant in order to address the increase in site-specific issues that have surfaced since the 9/11 terrorist attacks. REPP has also noticed that as these plants begin to seek operating

license extensions, the number of issues involving opposition from local citizens and intervener/public interest groups increases dramatically.

New Reactor Licensing Process:

The New Reactor Licensing Program is a joint effort between the FEMA and the NRC to provide reasonable assurance that appropriate protective measures can be taken both onsite and offsite in the event of a radiological emergency at a commercial nuclear power facility. FEMA and the NRC share a common objective of protecting public health and safety through evaluating emergency plans for proposed new reactor applicants.

Federal Radiological Preparedness Coordinating Committee (FRPCC):

The FRPCC, funded by REP Program user fee collections, coordinates the activities of Federal agencies with responsibilities in the radiological emergency planning and preparedness process. The FRPCC serves as a radiological information clearing house between member agencies.

The FRPCC meets on a quarterly basis and oversees several active subcommittees. The FRPCC subcommittees support vital REPP missions, including Federal Preparedness, Offsite Instrumentation, Environment/Food/Health, Training and Exercises, Protective Action Guides, and Public Information, among others. These subcommittees are chaired by the Federal agency with principal responsibility for the given mission area. The FRPCC is also responsible for updating the Nuclear/Radiological Incident Annex (NRIA) of the National Response Framework (NRF), which will be accomplished in accordance with FEMA's centralized effort to update the NRF.

FY 2010 accomplishments include:

- Supported the NRC with offsite emergency plan reviews for 12 new reactor applications in various states. Completed reviews and certified the offsite plans for six new units, providing a reasonable assurance finding of public safety to the NRC.
- Provided support and oversight to conduct, evaluate, and report findings that will be submitted to the NRC on 34 joint, biennial, graded REPP exercises and any associated remedial drills.
- Adjudicated and resolved public comments and continued work associated with finalizing the REP Program Manual and NUREG 0654/FEMA-REP-1/Rev.1 Supplement 4. These documents provide crucial guidance to nuclear power licensees and all levels of government (to include thousands of user's), affecting millions of citizens living within nuclear power plant emergency planning zones.

FY 2011 planned accomplishments:

- Provide support and oversight to conduct, evaluate, and report findings that will be submitted to the NRC on 30 joint, biennial, graded REPP exercises and any associated remedial drills.
- Publish, market, and implement final REP Program Manual and NUREG 0654/FEMA-REP-1/Rev.1 Supplement 4, incorporating program guidance and policy enhancements. This revised guidance and policy will bring REPP into compliance with contemporary emergency preparedness and planning doctrines such as National Incident Management System (NIMS), Homeland Security Exercise and Evaluation Program (HSEEP), Integrated Planning System, NRF, etc.

- Provide enhanced public alert and notification system guidance to REPP state, local and tribal governments through the issuance of a revision to FEMA-REP-10, “Guide for the Evaluation of Alert and Notification Systems for Nuclear Power Plants.” This guidance will incorporate contemporary technologies and will promote more effective alerting measures.
- The Federal Response Subcommittee of the FRPCC will embark on an initiative to revise and update the NRF NRIA. This will be an interagency effort led by DHS/FEMA and completion is anticipated to take place in FY2013.
- Support the NRC in the review of offsite emergency plans for four new reactor units, most of which may be on green fields (i.e. localities/States without a nuclear power plant).
- Develop guidance for Small Modular Reactor programs.

FY 2012 planned accomplishments:

- Provide support and oversight to conduct, evaluate, and report findings that will be submitted to the NRC on 33 joint graded, biennial REPP exercises and any associated remedial drills.
- Provide REPP training for Federal, state, local and tribal response organizations to include hundreds of local responders, managers, etc. This cadre assists with both REPP specific and general community preparedness.
- Continue efforts to update NUREG 0654/FEMA-REP-1/Rev.1. This keystone document has essentially been unchanged for more than 25 years and will require considerable involvement from Federal, state, local, and tribal governments, along with commercial and public stakeholders. Changes will include further incorporation of NIMS, NRF, and HSEEP, along with improved guidance on hostile action-based scenarios (i.e., terrorist attacks). These documents provide crucial guidance to nuclear power licensees and all levels of government (to include thousands of users), affecting millions of citizens living within nuclear power plant EPZs.

Linkage to FEMA’s Strategic Plan

The preliminary outcomes identified align with Priority 2, 4 and 5 of the Administrator’s Intent for Building the FY 2012-2016 Future Year Homeland Security Program (FYHSP), listed below:

- Priority 2: Build Unity of Effort Among the Entire Emergency Management Team – Federal, State, Local, Tribal Government, Private Sector, NGOs, Communities, and Individuals;
- Priority 4: Work with our Partners to Address our Most Significant Risks; and
- Priority 5: Build, Sustain and Improve FEMA’s Mission Support Capabilities

REPP goals, objectives and priorities are:

- Finalize REPP Alert and Notification System guidelines and procedures; Update REPP guidelines and regulatory supplements; improve, simplify and streamline REPP exercise evaluation tool processes
- Increase public outreach; work with state, local, tribal government to address radiological risks; increase and meet the training needs for emergency responders

- Streamline and standardize processes and improve regional support
- Build a professional workforce to effectively support recovery of disaster affected communities
- Build communication activities in conjunction with Federal, state, local, and tribal governments; and industry officials to ensure public safety determination maintained reasonable assurances related to operating nuclear power generating station.

IV. Justification of Program Changes

Not Applicable.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Emergency Management Agency
Justification of Proposed Changes in Radiological Emergency Preparedness
Appropriation Language**

The aggregate charges assessed during fiscal year [2011]2012, as authorized in title III of the Departments of Veterans Affairs and Housing and Urban Development, and Independent Agencies Appropriations Act, 1999 (42 U.S.C. 5196e), shall not be less than 100 percent of the amounts anticipated by the Department of Homeland Security necessary for its radiological emergency preparedness program for the next fiscal year: Provided, That the methodology for assessment and collection of fees shall be fair and equitable and shall reflect costs of providing such services, including administrative costs of collecting such fees: Provided further, That fees received under this heading shall be deposited in this account as offsetting collections and will become available for authorized purposes on October 1, [2011]2012, and remain available until expended. Note.--A full-year 2011 appropriation for this account was not enacted at the time the budget was prepared; therefore, this account is operating under a continuing resolution (P.L. 111-242, as amended). The amounts included for 2011 reflect the annualized level provided by the continuing resolution.

Explanation of Change:

No substantive changes are proposed.

The Chemical Stockpile Emergency Preparedness Program (CSEPP) is conducted under the chemical demilitarization program, a major defense acquisition program executed by the U.S. Department of the Army. CSEPP was established by a Memorandum of Understanding between the Federal Emergency Management Agency (FEMA) and the U.S. Army in August 1988. A new MOU between parties, signed on October 8, 1977, gives FEMA exclusive responsibility for all off-post activities. This program was designed to enhance preparedness in the 10 States and 39 counties that surround the U.S. Army's stockpile of unitary chemical warfare agents. The primary goal of the CSEPP program, as mandated by P.L. 99-145, is to provide "maximum protection" of the public by promoting the development of emergency plans; establishing systems of alert and notification, communications and automated data processing (ADP); establishing emergency operating centers (EOC); and conducting training exercises, and public information and education activities.

PPA Mission Statement

The Radiological Emergency Preparedness Program (REPP) assists State, local, and tribal governments in the development of off-site radiological emergency preparedness plans within the emergency planning zones of Nuclear Regulatory Commission (NRC) licensees of commercial nuclear power facilities. The REPP fund is financed from user fees assessed and collected from NRC licensees to cover budgeted costs for radiological emergency planning, preparedness, and response activities in the following year.

Summary Justification and Explanation of Changes

	2010 EOY Proj. Actual	2011 C.R.	2012 Request	2011 to 2012 Change
GSA rent	1,893	1,813	1,940	\$127

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The increase reflects an increase in billed costs.

	2010 EOY Proj. Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Other Services	6,022	12,580	7,415	(\$5,165)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2012 request includes a decrease of \$5,165 from FY 2011 for savings from non-recurring costs.

	2010 EOY Proj. Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Purchase from Government Accounts	3,963	5,084	3,963	(\$1,121)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2012 request includes a decrease of \$1,121 from FY 2011 for savings from non-recurring costs.

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Emergency Management Agency National Predisaster Mitigation Fund

I. Appropriation Overview

A – Mission Statement for National Predisaster Mitigation Program:

Section 203 (42 U.S.C. § 5133) of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (P.L. 93-288) established a Federal program that provides “technical and financial assistance to State and local governments to assist in the implementation of pre-disaster hazard mitigation measures [e.g. property acquisition and elevation, minor localized flood mitigation measures, safe rooms, wildfire, seismic retrofit projects] that are cost-effective and designed to reduce injuries, loss of life, and damage and destruction of property...” The National Predisaster Mitigation (PDM) Fund was created under FEMA as the vehicle for disseminating these grants to state and local governments. Operating independently of the Disaster Relief Fund, which provides post-disaster mitigation funding, the PDM program offers an annual funding source for qualified mitigation activities that are not dependent upon a declaration of disaster activity by the President.

The PDM program will support the Administration’s effort to expand and improve the coordination of Federal efforts to incentivize state and local governments to plan for and implement pre-disaster mitigation strategies. Consistent with disaster recovery best practices, the budget supports efforts that increase community resiliency to disasters and other vulnerabilities. Through a partnership with the Department of Housing and Urban Development (HUD) Sustainable Communities Initiative, the goal is to support strategic local approaches to sustainable development goals and activities that reduce risks while protecting life, property, and the environment. FEMA will continue to integrate resiliency goals into the PDM program’s grant process.

B – Budget Activities:

PDM supports the DHS goal to strengthen capacity at all levels of society to withstand threats and hazards. PDM does this by providing technical assistance to applicants, which assists in the development of their projects in meeting eligibility criteria and Federal funding to state, territorial, local, and tribal governments to support the development and enhancement of hazard mitigation projects that involve physical measures to avoid and/or reduce damage from natural disasters.¹

PDM funding will provide grants to state, territorial, local, and tribal governments to reduce the risks associated with disasters. PDM resources will support the development and enhancement of hazard mitigation plans, as well as the implementation of pre-disaster mitigation projects. By

¹ Physical measures for the PDM program include property acquisition and elevation, minor localized flood control, safe room construction, wildfire mitigation, seismic retrofit projects, dry flood-proofing, retrofits of existing buildings and infrastructure, and soil stabilization.

operating independently of the DRF, the PDM program provides a stable, year-to-year funding source for qualified projects that is not dependent upon presidentially declared disaster activity.

In FY 2012, through its PDM program FEMA will:

- Coordinate with HUD to incorporate pre-disaster mitigation and sustainability principles into both the PDM program and the Sustainable Communities Initiative, administered by HUD; and
- Identify, develop, and initiate implementation of training, capacity building, best practices, tools, and guidance for these coordinated programs.

C – Budget Request Summary:

PDM is part of the FEMA Mitigation Division's group of Hazard Mitigation Assistance (HMA) Grant Programs. HMA is an effort that has unified the common elements of the PDM; the Flood Program Grants such as the Repetitive Flood Claims Program, the Severe Repetitive Loss Program and the Flood Mitigation Assistance Program; and the post-disaster Hazard Mitigation Grant Program.

FEMA requests \$84.9 million in FY 2012 for the PDM grant program. Funding will be used to provide the \$575,000 per state allocation as required; fund projects and plans through the competitive process, support the national grant competition; to support salaries and operating expenses; and, to fund program support and the technical assistance contracts used for the preparation, review, and processing of PDM grants.

2012 Total Request-Guidance	15	15	84,937

FEMA requests \$84.9 million in FY 2012 for this activity. Funding will be used to provide the \$575,000 per state allocation as required by the Predisaster Hazard Mitigation Act of 2010 (P.L. 111-351); support the national grant competition; support salaries and operating expenses; and, fund program management and the technical assistance contracts used for the preparation, review, and processing of PDM grants.

CURRENT SERVICES PROGRAM DESCRIPTION:

The PDM program assists state, territorial, local, and tribal governments in implementing cost-effective hazard mitigation activities that complement a comprehensive mitigation program. This program provides a funding resource for state, territorial, local, and tribal governments seeking to initiate or complete plans and projects that ensure a reduction in post-disaster natural hazard damages and immediate risk reduction to the population, to property, and for structures at risk from natural hazards including critical facilities (e.g., water treatment plants, emergency operations centers, sewage treatment plants, and water pumping stations). Often, funding is the primary obstacle that states and local governments must overcome in order to be more proactive in the prevention or reduction of the damage caused by natural hazards. The PDM Federal cost share is up to 75 percent for all eligible costs, except for small and impoverished communities in which the Federal share can be up to 90 percent of the eligible costs.

The PDM program supports efforts to raise risk awareness and reduce disaster losses before disasters strike. Grants are awarded to states, territories, tribal governments, and local communities for the purposes of hazard mitigation planning and hazard mitigation projects.

Grants awarded for mitigation planning are limited in funding levels based on whether the application supports a new plan or updates an existing plan. Grants awarded to support mitigation projects must fall within one of the eligible activity categories.²

Grants for mitigation projects vary and include activities such as retrofitting structures to resist flood, wind, and earthquake damage; elevating structures above base flood levels; property acquisition and demolition or relocation for the creation of open space; and, minor flood reduction and drainage measures.

Communities that participate in the PDM program are able to identify, plan for, and mitigate repetitive loss situations that negatively impact their residents or present a threat to life and property. Grant proposals are subject to a National Evaluation Process (NEP) to score and rank applications. The NEP is comprised of peer reviewers that consist of representatives from FEMA, states, and tribal and local governments. Approved projects go through an extensive review process. In addition all applications are reviewed by technical experts to verify cost effectiveness and engineering feasibility. Additionally, FEMA must review projects for compliance with applicable federal environmental planning and historic preservation requirements, including National Environmental Policy Act, National Historic Preservation Act, Endangered Species Act, and Executive Orders 11988 and 11990, and 12898, and such reviews may at times exceed 18-months from the time that the cost-effectiveness and engineering reviews are completed. The final approved projects may eliminate the risk of flooding, reinforce critical infrastructure to protect against damage during a seismic event, or mitigate repetitive damage to homes in a flood-prone area. PDM projects specifically related to flood mitigation may provide an additional cost savings by reducing future claims on the National Flood Insurance Program for insured structures.

In FY 2007, FEMA began allocating grant funds in accordance with Section 203(f) of the Stafford Act (42 U.S.C. § 5133(f)), but continued to use the national competition as the mechanism for the awards program. In addition to the funds appropriated each year, the PDM program reinvests de-obligated grant award funds returned by the grant recipient to support the next cycle of grant awards. Due to the thorough grant eligibility requirements, a project that is initially awarded may no longer be pursued by a recipient because the recipient no longer has the non-Federal match, the project is no longer a recipient priority, or the project encountered complications in the design and cannot be achieved.

FY 2010 accomplishments include:

- Integrated opportunities to enhance community resiliency through a partnership with the U.S. Housing and Urban Development (HUD) Sustainable Communities program. The HUD Sustainable Communities program is a regional planning initiative and is delivered through collaborative effort between HUD, U.S. Department of Transportation (DOT) and Environmental Protection Act (EPA). FEMA and HUD have committed to considering each other's program priorities (i.e. FEMA - PDM and HUD-Sustainable Communities Regional

² Eligible activities for the PDM program include property acquisition and elevation, minor localized flood control, safe-room construction, wildfire mitigation, seismic retrofit projects, dry flood-proofing, retrofits of existing buildings and infrastructure, soil stabilization, and hazard mitigation planning.

Planning Initiative) when administering and delivering their individual programs in FY 2011 and beyond.

- FEMA developed PDM Evaluation Factors to be used in FY 2011 and will acknowledge sub-applications that identify sustainability principles that address hazard mitigation, but this will not affect scoring. However, National Panel evaluators will note these linkages between sustainability and hazard mitigation, (and therefore links between PDM and the HUD Sustainability Initiative).
- As part of the unified Hazard Mitigation Assistance (HMA) Grant Program effort, provided opportunities for transparency and partnership with states, territories, and tribal and local governments through the HMA Summit, the External Stakeholders Workgroup, focus groups, and training courses.
- Used an enhanced benefit cost analysis ratio tool that streamlines and modifies the benefit cost analysis program to make it easier for state and local communities to meet the benefit cost analysis requirements of the mitigation grant programs and to meet the requirements of the Office of Management and Budget Circular A-94.
- Reduced the costs associated with the annual National Review from \$1 million to \$201,000. The \$800,000 savings was applied to additional grant awards, conduct additional outreach & develop partnerships, and improve portfolio management.
- In FY 2010 applicants submitted more than 115 eligible planning applications for consideration. These applications had a combined total Federal share of \$6.4 million. Planning applications are applications to develop or update the community, tribal or state hazard mitigation plan. Having a FEMA-approved and adopted hazard mitigation plan is a requirement for all HMA grant programs
- Reduced the outreach costs of the HMA Summit by more than \$900 per attendee. In 2008, the cost per attendee was \$1,942. By FY 2010, this cost was reduced to \$1,028 per attendee which increased the capability to reach more stakeholders for the Summit. The HMA Summit is an annual conference that brings together Federal, state, local, and tribal partners to share information and best practices on current trends and implementation of the HMA programs. The outcome of the unified HMA was improving program delivery, outreach and partnerships, and portfolio management, and streamlining processes.
- The cost to produce the annual HMA FY 2010 guidance was reduced by 84 percent or \$344,000. The 84 percent reduction enabled the program to continue program delivery, outreach & partnerships, and portfolio management and to streamline processes. The savings were applied to other activities that improve effective program delivery as well as used to provide more funding for grant awards.
- Reduced the costs to administer the PDM portion of the National Review by 43 percent through a savings of \$151,000 from FY 2009 to FY 2010.
- Selected 45 project applications totaling \$42.5 million for the Federal share for further review, which are pending award. As a result, program funding is carried to the next fiscal year or until a final award is made. Project details are as follows:
 - Four safe-room projects totaling a Federal share of \$2.8 million were selected for further review and are pending award. Once awarded, these 4 safe-rooms will protect more than 4,500 people.
 - Three wildfire projects totaling a Federal share of \$669,000 were selected for further review and are pending award. Once awarded, these funds will be used to protect 236 acres of land and at least 388 people.

- One seismic retrofit project with a Federal share of \$1.7 million was selected for further review and is pending award. Once awarded, this project will protect four buildings totaling more than 61,000 square feet.
- There were 37 flood-related mitigation projects totaling \$37.4 million Federal share that passed National Review. These flood-related mitigation projects are pending award and will protect individuals and communities from future flood hazards.

In 2005 Multi-Hazard Mitigation Council independent report concluded that for every dollar spent on mitigation projects, the Nation is afforded about \$4 in future benefits. Programs considered in that report included the Flood Mitigation Assistance (FMA) program funded by the National Flood Insurance Fund, the HMGP funded by the DRF, and Project Impact which is no longer appropriated, but was the precursor to PDM. In 2010, FEMA culminated a multi-year process to evaluate the damages or losses avoided as a result of HMA grant funding for flood-related risks. To date, FEMA has conducted nine loss-avoidance studies of flood-related HMGP projects. These loss-avoidance studies show the economic benefits of implementing flood mitigation activities (see table below). The loss-avoidance studies were conducted for the HMGP, which is a post-disaster HMA grant program; however similar flood mitigation projects could be submitted and considered eligible under all HMA grant programs (HMGP, PDM, FMA, Repetitive Flood Claim (RFC), and Severe Repetitive Loss (SRL)). Although this project type is an eligible activity under multiple HMA programs and linking specific projects with specific programs is difficult in studies such as these FEMA expects the losses avoided from such projects across all HMA grant programs to be similar, if not identical, and is the precursor to PDM. To further validate the benefits of FEMA mitigation projects, FEMA has conducted nine loss-avoidance studies of flood-related mitigation projects.³

A loss avoidance study verifies the effectiveness of mitigation projects and documents the economic performance of completed mitigation projects. The Federal Return on Investment (ROI) reflects all the losses avoided for disaster events occurring after the mitigation project is completed. The losses avoided to date can be found in the following chart. It is anticipated that the ROI will continue to increase as time progresses.

Project Size	Project Investment	Losses Avoided	Return on Investment	Flood Activity Type
975 Structures	\$44.1 million	\$93.6 million	212%	Acquisition
379 Structures	\$23.7 million	\$24.2 million	102%	Acquisition & Elevation
9 Projects	\$2.5 million	\$52.8 million	2112%	Localized Flood Reduction
6 Projects	\$48 million	\$46.9 million	98%	Localized Flood Reduction
28 Structures	\$4.6 million	\$3.1 million	67%	Acquisition & Elevation
205 Structures	\$14.1 million	\$13.5 million	96%	Elevation
6 Projects	\$19.5 million	\$7.3 million	37%	Localized Flood Reduction
2 Projects	\$1.24 million	\$1.2 million	97%	Localized Flood Reduction
692 Structures	\$10.9 million	14.5 million	132%	Acquisition

³ The loss-avoidance studies were conducted for the HMGP, which is a post-disaster HMA grant program; however HMA flood mitigation projects could be submitted and considered eligible under HMGP, PDM, FMA, RFC, and SRL. Therefore, this project type is an eligible activity under multiple HMA programs and linking specific projects with specific programs is difficult in studies such as these.

FY 2011 planned accomplishments include:

- Use an enhanced portfolio approach to assist states, territories, and tribal and local governments in the management of pre-qualified mitigation proposals that are: consistent with state and local mitigation plans and priorities, determined technically feasible to reduce losses to the identified hazard(s), cost-effective and facilitate more expeditious awarding of grants.
- Clarify technical requirements for project-specific activities that will streamline and simplify technical requirements, making it easier for state and local communities to develop eligible applications and document program requirements.
- Implement a new financial system that trims costs by eliminating transaction fees, that expedites the award process, and that improves tracking of grant awards, thereby increasing obligation rates for the mitigation grant programs.
- Continue to evaluate the program requirements and processes to determine where refinements can be made that will improve the overall effectiveness and delivery of the program, in order to enable stakeholders, as well as FEMA, to more efficiently and effectively deliver the PDM program.
- Integrate opportunities to enhance community resiliency through a partnership with the HUD Sustainable Communities program. The HUD Sustainable Communities program is a regional planning initiative and is delivered through collaborative effort between HUD, DOT and EPA. FEMA and HUD have committed to considering each other's program priorities (i.e. FEMA - PDM and HUD-Sustainable Communities Regional Planning Initiative) when administering and delivering their individual programs in FY 2011 and beyond. In the FY 2011 PDM Evaluation Factors, FEMA is acknowledging sub-applications that identify sustainability principles that address hazard mitigation, but this will not affect scoring. However, National Panel evaluators will note these linkages between sustainability and hazard mitigation, (and therefore links between PDM and the HUD Sustainability Initiative).
- In recent years, the national grant competition has resulted in a list of eligible but unfunded PDM projects. To date, FEMA has identified 244 projects totaling approximately \$121 million that were previously determined to be eligible and could be funded if adequate funds were available. If funding levels would permit (i.e. funding in excess of current fiscal year eligible applications) FEMA would consider this list of unfunded projects for priority funding in future fiscal years so that the funds can be quickly obligated and mitigation accomplished. These projects would reduce the Nation's vulnerability to future hazard events by reducing the loss of life and property and reducing the Nation's costs of responding to, and recovering from, natural hazard events.

Eligible but Unfunded PDM Totals by Applicant	
State/Applicant	Proposed Fed Share (\$)
Alabama	3,369,517
Alaska	1,621,227
Arizona	677,601
Arkansas	2,368,624

Wiyot Tribe	35,854

*As of January 2011

FY 2012 planned accomplishments include:

- Increasing PDM efficiencies through the continued refinement and application of an enhanced portfolio approach to assist states, territories, and tribal and local governments in the management of pre-qualified mitigation proposals that are: consistent with state and local mitigation plans and priorities; determined technically feasible to reduce losses to the identified hazard(s); cost-effective and facilitate more expeditious awarding of grants.
- Clarify programmatic requirements, and align them with system requirements, for project-specific activities that will streamline and simplify the preparation and submission of applications, making it easier for state and local communities to develop eligible applications. This enhancement will enable applicants to create better applications as well as enable FEMA to make awards in a more efficient manner.
- Implement cost-effectiveness enhancements to simplify the process for achieving the discount rate for state, tribal, and local communities.
- Continue providing opportunities to enhance community resiliency through a partnership with the HUD Sustainable Communities Initiative. The HUD Sustainable Communities program is a regional planning initiative and is delivered through collaborative effort between HUD, DOT, and EPA. FEMA and HUD have committed to considering each other's program priorities (i.e. FEMA - PDM and HUD-Sustainable Communities Regional Planning Initiative) when administering and delivering their individual programs in FY 2011 and beyond. In developing ranking criteria for the FY 2012 PDM program, FEMA intends to use the data collected from FY 2011 sub-applications to refine evaluation factors related to sustainability in order to assign point values. Sub-applications in FY 12 that demonstrate the linkage between the two programs may thus receive a higher point score and therefore may be more competitively-ranked.

IV. Program Justification Changes

**Department of Homeland Security

Program Decrease									-15,063
Total Request	15	15	\$57,612	15	15	\$100,000	15	15	\$84,937

Description of Item

This represents an overall reduction of 15 percent from the FY 2011 C.R.

Justification

The National Predisaster Mitigation grant program is authorized by Section 203 (42 U.S.C. § 5133) of the Robert T. Stafford Disaster Relief and Emergency Assistance Act to provide “technical and financial assistance to state and local governments to assist in the implementation of pre-disaster hazard mitigation measures that are cost-effective and designed to reduce injuries, loss of life, and damage and destruction of property...” PDM is the vehicle for disseminating these grants to state and local governments. Operating independently of the Disaster Relief Fund, which provides post-disaster mitigation funding, the PDM program offers an annual funding source for qualified mitigation activities that are not dependent upon a declaration of disaster activity by the President.

The PDM fund supports efforts to raise risk awareness and reduce disaster losses before disasters strike. Grants are awarded to states, territories, tribal governments, and communities for the purposes of hazard mitigation planning and hazard mitigation projects. Communities that

participate in the PDM program are able to identify, plan for, and mitigate repetitive loss situations that negatively impact their residents or present a threat to life and property. Approved projects go through an extensive review process to verify cost effectiveness, engineering feasibility, and environmental and historic preservation site reviews. The final approved projects may eliminate the risk of flooding, reinforce critical infrastructure to protect against damage during a seismic event, or mitigate repetitive damage to homes in a flood prone area. PDM projects specifically related to flood mitigation may provide an additional cost savings by reducing future claims on the National Flood Insurance Program for insured structures.

In FY 2012, FEMA will use \$74.7 million to award planning and project grants based on a competitive process to States and in accordance with the funding allocation specified in Section 203(f) of the Stafford Act (42 U.S.C. § 5133(f)). \$7.47 million of the \$74.7 million grant total will be allocated to States in the form of management cost grants. These management cost grants include any indirect costs, administrative expenses, and other expenses not otherwise accounted for that are reasonably incurred by a Grantee or sub-grantee in administering a grant or sub-grant award. Management cost grants represent an additional 10 percent of the total grant dollars awarded to a state.

FEMA will use \$7.2 million of the funds requested in FY 2012 to provide program support and technical assistance to applicants (States) and sub-applicants (local governments, tribes). Of this amount, \$1.7 million is required to support the development and submittal of Congressional earmarked projects from FY 2008 – FY 2010. The remaining \$3 million requested for FY 2012 will provide for program support, technical assistance, and the salaries and expenses of the PDM workforce.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Emergency Management Agency
Justification of Proposed Changes in National Predisaster Mitigation Fund
Appropriation Language**

For the Predisaster Mitigation Grant Program under section 203 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. § 5133), including administrative costs, \$84,937,000 to remain available until expended: Provided, That the total administrative costs associated with such grants shall not exceed 3 percent of the total amount made available under this heading.

Note.—A full-year 2011 appropriation for this account was not enacted at the time the budget was prepared; therefore, this account is operating under a continuing resolution (P.L. 111–242, as amended). The amounts included for 2011 reflect the annualized level provided by the continuing resolution.

Explanation of Change:

FEMA proposes to remove the total administrative cost percentage from appropriation language. The 3 percent for administrative costs would provide an insufficient level of funding for the program to continue to operate effectively. PDM requires \$3 million annually to cover operating costs which includes \$1.9 million in salaries and benefits for 15 permanent staff and \$1.1 million for operating expenses such as travel, rent, supplies, and IT. At the reduced funding level, retaining this percentage rate would require the program to reduce other operating costs critical to the grant review and award process.

PPA Mission Statement

Funding requested through this account is dedicated to grants for pre-disaster mitigation. The National Pre-Disaster Mitigation (PDM) Fund was created under FEMA as the vehicle for disseminating these grants to state and local governments. Operating independently of the Disaster Relief Fund (DRF), which provides post-disaster mitigation funding, the PDM program offers an annual funding source for qualified mitigation activities that are not dependent upon a declaration of disaster activity by the President.

Summary Justification and Explanation of Changes

	FY 2010 Actual	FY 2011 CR	FY 2012 Request	2011 to 2012 Change
Salaries and Benefits	\$1,806	\$1,947	\$1,947	\$0

Salaries and Benefits support 15 full time permanent positions in FY 2012. Funding will provide for the annualization of the 2011 pay increase and the cost of living adjustment effective January 2012.

	FY 2010 Actual	FY 2011 CR	FY 2012 Request	2011 to 2012 Change
Travel	\$541	\$711	\$718	\$7

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2012 request level reflects increase cost in travel fares and service fees.

	FY 2010 Actual	FY 2011 CR	FY 2012 Request	2011 to 2012 Change
GSA rent	\$129	\$166	\$224	\$58

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2012 request reflects the inflationary increases in lease costs.

	FY 2010 Actual	FY 2011 CR	FY 2012 Request	2011 to 2012 Change
Communication, Utilities, and miscellaneous	\$24	\$34	\$68	\$34

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2012 request provides for IT and telecommunications services for program headquarter and region based staff.

	FY 2010 Actual	FY 2011 CR	FY 2012 Request	2011 to 2012 Change
Printing	\$3	\$3	\$3	\$0

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities.

	FY 2010 Actual	FY 2011 CR	FY 2012 Request	2011 to 2012 Change
Advisory and Assistance Services	\$618	\$769	\$769	\$0

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2012 request reflects the anticipated need for reduction in contractual services due to the overall decrease in grant funding.

	FY 2010 Actual	FY 2011 CR	FY 2012 Request	2011 to 2012 Change
Other Services	\$7,118	\$8,215	\$8,215	\$0

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2012 request provides funding for program and technical support services for the grant award process.

	FY 2010 Actual	FY 2011 CR	FY 2012 Request	2011 to 2012 Change
Purchase from Government Accounts	\$33	\$62	\$56	(\$6)

	FY 2010 Actual	FY 2011 CR	FY 2012 Request	2011 to 2012 Change
Supplies & materials	\$7	\$7	\$7	\$0

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency.

	FY 2010 Actual	FY 2011 CR	FY 2012 Request	2011 to 2012 Change
Equipment	\$55	\$84	\$56	(\$28)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2012 request provides for equipment replacement and upgrades.

	FY 2010 Actual	FY 2011 CR	FY 2012 Request	2011 to 2012 Change
Grants/Subsidies/Contributions	\$47,277	\$114,662	\$238,840	\$124,177

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects.

BUDGET REQUEST AND SUPPORTING INFORMATION
--

Federal Emergency Management Agency
Emergency Food and Shelter

I. Appropriation Overview

A. Mission Statement for Emergency Food and Shelter:

The Emergency Food and Shelter Program (EFS) provides grants to nonprofit and faith-based organizations at the local level through the National Board to supplement their programs for emergency food and shelter.

B. Budget Activities:

EFS funds are used to supplement food, shelter, rent, mortgage, and utility assistance programs for people with non-disaster related emergencies.

The EFS program is administered via a national board of volunteer agencies chaired by FEMA. The National Board qualifies jurisdictions for annual EFS funding awards based on criteria involving current population, unemployment, and poverty levels. Grants are awarded to nonprofit community and government organizations that are chosen by local boards in the qualifying jurisdictions.

C. Budget Request Summary:

The FEMA FY 2012 request for the EFS program is 0 positions, 0 FTE, and \$100,000,000.

II. Summary of FY 2012 Budget Estimates by Program/Project Activity (PPA)

FEMA requests \$100 million for this activity.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Emergency Food and Shelter (EFS) Program provides grants to nonprofit and governmental organizations at the local level to supplement their programs for emergency food and shelter. More than 14,000 nonprofit and local government agencies in more than 2,500 cities and counties across the United States have received awards.

Funding for this program is distributed by the National Board which consists of designees from six charitable organizations – American Red Cross, Catholic Charities USA, National Council of Churches of Christ in the U.S.A., The Jewish Federations of North America, The Salvation Army, and United Way Worldwide. The National Board is chaired by FEMA.

Local jurisdictions (city or county) are eligible for EFS program support when they have the highest need for emergency food and shelter services as determined by unemployment and poverty rates. In FY 2010, the National Board selected jurisdictions to receive funding according to one of the following thresholds: (1) those with 13,000 or more residents unemployed and an unemployment rate of at least 7.8 percent; (2) those with 300 to 12,999 residents unemployed and an unemployment rate of at least 9.8 percent; or (3) those with 300 or more residents unemployed and a poverty rate of at least 11 percent.

Funding may also be provided to jurisdictions that do not meet the initial eligibility requirements through the State Set-Aside Committee process. The National Board allocates a portion of

appropriated funds to State Set-Aside Committees based upon the unemployment in those jurisdictions that did not qualify for direct funding from the National Board. The State Set-Aside Committee process allows states to address pockets of homelessness and poverty or address the immediate needs of a locality that might be going through a high economic impact event.

Recent and Planned Accomplishments

In FY 2010, approximately 93 million meals and 6.3 million nights of lodging were provided. In FY 2010, the funds were also used to provide approximately 149,412 rent/mortgage payments and 311,133 utility bill payments. All 50 states, the District of Columbia, Puerto Rico, American Samoa, Guam, the Northern Mariana Islands, and the Virgin Islands received funds in FY 2010.

In FY 2011, the services to be rendered are estimated at 93 million meals and 6.3 million nights of lodging. The FY 2011 funds are estimated to also support 149,412 rent/mortgage payments and 311,133 utility bill payments.

In FY 2012, the services to be rendered are estimated at 46.5 million meals and 3.1 million nights of lodging. The FY 2012 funds are estimated to also support 74,700 rent/mortgage payments and 155,400 utility bill payments.

Total Request	0	0	\$200,000	0		\$200,000	0	0	100,000

Description of Item

FEMA requests a reduction of \$100,000,000 in the EFS program for FY 2012.

Justification

The FY 2012 request for EFS reflects a refocus of agency-wide resources on FEMA's primary mission of preparing for and coordinating disaster response and recovery efforts. This request will continue to significantly supplement nonprofit and governmental organization emergency food and shelter programs by contributing an estimated at 46.5 million meals, 3.1 million nights of lodging, support 74,700 rent/mortgage payments and 155,400 utility bill payments.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Emergency Management Agency
Justification of Proposed Changes in Emergency Food and Shelter
Appropriation Language**

To carry out an emergency food and shelter program pursuant to Title III of the McKinney-Vento Homeless Assistance Act (42 U.S.C. 11331 et seq.), \$100,000,000, to remain available until expended: Provided, That total administrative costs shall not exceed 3.5 percent of the total amount available under this heading.

Note.—A full-year 2011 appropriation for this account was not enacted at the time the budget was prepared; therefore, this account is operating under a continuing resolution (P.L. 111–242, as amended). The amounts included for 2011 reflect the annualized level provided by the continuing resolution.

Explanation of Changes:

No substantive changes are proposed.

BUDGET REQUEST AND SUPPORTING INFORMATION

FEMA DISASTER RELIEF FUND

I. Appropriation Overview

A – Mission Statement for the Disaster Relief Fund

Pursuant to the Robert T. Stafford Disaster Relief and Emergency Assistance Act, the Disaster Relief Fund (DRF) provides a no-year base against which FEMA can direct, coordinate, manage, and fund eligible response and recovery efforts associated with domestic major disasters and emergencies that overwhelm state resources. Through the DRF, FEMA can fund authorized federal disaster support activities as well as eligible state, territorial, tribal, and local actions, such as providing emergency protection and debris removal. The DRF also funds:

- The repair and rebuilding of qualifying disaster-damaged infrastructure
- Hazard mitigation initiatives
- Financial assistance to eligible disaster survivors
- Fire Management Assistance Grants for qualifying large urban wildfires

B – Budget Activities:

Major disasters and emergencies may be the result of natural or man-made hazards and are declared by the President, typically in response to gubernatorial requests for assistance. States request Federal assistance to supplement their available resources and certify that a given disaster is beyond their capacity or capability to respond. The DRF also supports fire management assistance activities for the mitigation, management, and control of fires on public and private lands.

FEMA coordinates three major disaster assistance programs:

- Federal Assistance to Individuals and Households
- Public Assistance
- Hazard Mitigation assistance

Non-declaration-specific readiness and support activities are also funded under the DRF. These activities provide indirect support across FEMA (and to our Federal partners) and are managed separately as Disaster Readiness and Support (DRS) activities.

Effective November 4, 2008, FEMA was authorized to transfer DRF funding to the U.S. Agency for International Development (USAID) to implement disaster-specific Relief and Reconstruction Plans in the Federal States of Micronesia and the Republic of the Marshall Islands through the Compacts of Free Association.

C – Budget Request Summary

FEMA requests 45 temporary full-time positions, 5,365 FTEs, and \$1,800,000,000 for the Disaster Relief Fund in Fiscal Year (FY) 2012. This represents an increase of \$321,600,000 and no change to positions or FTE compared to the annualized FY 2011 Continuing Resolution. As of October 1, 2010, essentially all non-disaster-specific Cadre of On-call Response Employee (CORE) positions performing mission critical functions similar to those performed by employees in the Management and Administration (M&A) appropriation were converted to full-time-permanent positions in M&A.

Coupled with prior year recoveries and carry forward funds, the DRF is projected to support the five-year average obligation level for non-catastrophic disaster activity (excluding extraordinary events, such as the series of 2004 hurricanes in Florida, Hurricanes Katrina and Rita in 2005, the California Wildfires of 2007, and Hurricanes Gustav and Ike in 2008). This request supports that level of activity through a combination of \$1,800,000,000 of new budget authority and the estimated projected recoveries of prior year obligations in FY 2012.

2012 Program Change	0	0	328,402
2012 Total Request	45	5,365	1,800,000

Note: The DRF, per the Stafford Act, has no permanent positions. The 45 positions above are temporary full time positions associated with the Federal Coordinating Officers (FCOs).

FEMA requests \$1,800,000,000 for this activity. This request will enable the DRF to support the five-year average obligation level for non-catastrophic disaster activity.

CURRENT SERVICES PROGRAM DESCRIPTION:

The *Robert T. Stafford Disaster Relief and Emergency Assistance Act* (Stafford Act), 42 U.S.C. 5121-5207 (Public Law 93-288, as amended), authorizes the President to provide Federal assistance to supplement state and local governments' disaster response, recovery, readiness, and mitigation efforts. Under Section 504 of the Homeland Security Act, as amended, FEMA's Administrator has been delegated the responsibility for administering the Stafford Act's Federal assistance programs. The DRF provides funding for the following Stafford Act declarations or activities: (1) major disaster; (2) emergency; (3) fire management assistance; (4) pre-declaration surge; and (5) Disaster Readiness and Support.

FEMA funds Stafford Act programs and disaster support activities in two categories: Direct Disaster Programs and Disaster Readiness and Support (DRS) activities. Direct Disaster Programs are those which support FEMA's responsibility to respond to, recover from, and mitigate the specific impacts of presidentially declared major disasters and emergencies. DRS activities are generalized, non-disaster-specific initiatives (e.g., training) that provide disaster readiness and preparedness support across FEMA.

Direct Disaster Programs

Individual Assistance (IA), Public Assistance (PA), and Hazard Mitigation Grant Program (HMGP) are FEMA's primary Direct Disaster programs. These programs are managed and administered by the Recovery and Mitigation Directorates within FEMA.

These programs constitute the majority of the resources provided by the Federal Government (through FEMA) to directly address the short, medium, and long-term impacts of a disaster on individuals and communities. Disaster assistance under the authorities of the Stafford Act can be provided to states (and further provided to local or tribal governments), the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.

Individual Assistance (IA)

The DRF provides funding for the following Individual Assistance Programs:

Individual and Households Programs (IHP) – funded at 100 percent by the Federal government

- Temporary housing (rent and lodging expense): Funding to rent alternate housing or a temporary housing unit when rental properties are not available.
- Repair: Funding is provided for homeowners to repair damage (to their primary residence) from the disaster that is not covered by insurance. A flood insurance purchase and maintenance requirement may be placed on the home if the home is in a Special Flood Hazard Area. Repair assistance is intended to repair the home to a safe, sanitary and functional living condition.
- Replacement: Funds are made available to homeowners to assist with the replacement of destroyed primary residence that is not covered by insurance. The goal is to help the homeowner with the cost of replacing their destroyed home.
- Permanent Housing Construction: Funds are made available for the construction of a home, or FEMA will provide direct assistance with the construction. This type of assistance only occurs in insular areas or remote locations specified by FEMA, where no other type of housing assistance is possible, or where other temporary housing options are unavailable or infeasible. Construction shall follow current minimal local building codes and standards (where they exist), or minimal acceptable construction industry standards in the area. Construction will aim toward average quality, size, and capacity, taking into consideration any unique needs (such as disability requirements) of the occupant.

Other Needs Assistance (ONA)

Other Needs Assistance is available for necessary expenses and serious needs of survivors of the declared disaster. Assistance provided by the ONA program is cost-shared between FEMA (75 percent) and the State (25 percent).

Assistance is provided to individuals contingent on their ability or inability to secure a loan from the U.S. Small Business Administration (SBA). If SBA determines that an applicant cannot afford a loan, SBA will automatically refer the applicant to the ONA program for assistance.

ONA can be provided for disaster-related serious needs in five categories:

- **Repair or Replacement of Personal Property:**
 - Clothing
 - Household Items (i.e., home furnishings, appliances)
 - Specialized Tools or Job-related Protective Clothing and Equipment
 - Educational materials (i.e. books)
 - Cleaning Supplies (i.e., wet/dry vacuum, air purifier, dehumidifier)
- **Transportation:** Repair or replacement of a vehicle that is deemed unusable due to disaster-related damage.
- **Medical and Dental Expenses:** Medical treatment or the purchase of medical equipment required due to physical injuries resulting from a disaster.
- **Funeral and Burial Expenses:** Funeral services, burial, or cremation and other funeral expenses related to a death caused by the disaster.
- **Other Items:** The State and FEMA can agree to pay for specific disaster-related costs that are not listed above. Some examples are generators, moving and storage expenses, and the cost of a National Flood Insurance Program Group Flood Insurance Certificate.

Crisis Counseling Assistance and Training Program (CCATP)

The Crisis Counseling Program supports short-term interventions with individuals and groups experiencing psychological effects resulting from large-scale disasters. These interventions involve the counseling goals of assisting disaster survivors in understanding their current situation and reactions, mitigating additional stress, assisting survivors in reviewing their options, promoting the use or developments of coping strategies, providing emotional support, and encouraging linkages with other individuals and agencies that may help survivors recover to their pre-disaster level of functioning. Supplemental funding for crisis counseling is available to State Mental Health Authorities through two grant mechanisms: (1) the Immediate Services Program; and (2)

the Regular Services Program, which provide funds for up to nine months following a major disaster declaration.

Disaster Unemployment Assistance (DUA)

The Disaster Unemployment Assistance program provides individuals who have become unemployed because of a disaster and unable to secure regular unemployment benefits with unemployment benefits and re-employment services.

Legal Services

Legal services may be provided to low-income individuals unable to secure such services adequate to meet their needs as a consequence of a major disaster.

Public Assistance (PA)

The Public Assistance program offers assistance to state, local, and tribal governments after a declared major disaster or emergency for eligible disaster-related damage. In addition, certain private non-profit organizations that operate facilities and provide services to the public typically provided by a government agency may receive public assistance. PA is a cost-shared (75 percent Federal, 25 percent non-Federal) grant program. However, states may request, and the President may grant a higher Federal cost share in situations in which the disaster has had a significant economic impact on the state.

Public Assistance provides funding to grantees for the repair and restoration of damaged public and eligible private non-profit facilities, for emergency measures taken to protect lives and property, and in support of disaster-related debris removal. When Public Assistance is authorized, such assistance may be provided under one or more of the following seven categories:

- Category A – Debris Removal
- Category B – Emergency Protective Measures
- Category C – Repair of Roads and Bridges
- Category D – Water Control Facilities
- Category E – Public Buildings
- Category F – Public Utilities
- Category G – Other Facilities

Hazard Mitigation Grant Program (HMGP)

The Hazard Mitigation Grant Program provides state, local, and tribal governments with cost-shared grants (75 percent Federal, 25 percent non-Federal) to reduce the risk of potential damage, hardship, loss, and suffering in an area affected by a major disaster. Ultimately, the

HMGP reduces future need for Federal disaster assistance by reducing the impact of and increasing the resistance to natural hazards.

HMGP funding is made available to states based on 15 percent of the total Federal funds spent in the Public and Individual Assistance programs (minus administrative expenses) for each major disaster costing up to \$2 billion; 10 percent for disasters between \$2 billion and \$10 billion; and 7.5 percent for major disasters between \$10 billion and not more than \$35.33 billion.

HMGP projects vary and may include retrofitting structures to resist flooding, winds and earthquakes; elevating structures above base flood levels; property acquisition and demolition or relocation for open space; and minor flood reduction and drainage measures.

HMGP grants are required to be cost effective. In 2005, the Multi-hazard Mitigation Council (MMC), a part of National Institute of Building Sciences, published a report that analyzed the overall impact of FEMA's Hazard Mitigation Programs. The findings show that money spent on reducing the potential damage of natural hazards is a sound investment and is cost effective. *On average, a dollar spent on hazard mitigation activities will save the Nation approximately \$4 in future payouts for damage caused by natural hazards.*

Other Direct Disaster Programs

- **Fire Management Assistance**

FEMA provides assistance for the mitigation, management, and control of any fire on public or private forest or grassland that threatens such destruction as would constitute a major disaster. Items eligible for funding under the Fire Management Assistance Grant Program (FMAGP) include equipment, labor costs, emergency work, and temporary repair work directly related to firefighting activities associated with the declared fire.

- **Compacts of Free Association**

The DRF provides funding for disaster relief and reconstruction activities in the Federated States of Micronesia and the Republic of the Marshall Islands pursuant to the Compacts of Free Association. This funding is provided through a direct transfer of DRF funds to the United States Agency for International Development.

Disaster Closeout Initiative

In FY 2010, FEMA undertook an aggressive effort to improve the efficiency of the Agency's disaster closeout process. This effort included issuing and enforcing standard closeout policies, establishing consistent closeout practices across all regions, establishing and tracking closeout metrics, and streamlining and simplifying the closeout process. This effort resulted in the closure of 157 disasters, well in excess of previous yearly closeout averages.

Direct Disaster Recent and Planned Accomplishments

FY 2010 Accomplishments

- The DRF supported 65 major disaster declarations and 9 emergency declarations involving 37 states. In addition, 14 fire management assistance grants were awarded for eligible fires in 8 states.
- FEMA handled more than 245,000 disaster assistance applications and provided more than \$471 million in assistance to individuals.
- Processed 122,339 submitted applications with \$3.8 billion obligated for assistance under the Public Assistance program and 1,243 applications with over \$108 million obligated under the Fire Management Assistance Grant Programs.
- FEMA recovered over \$2.5B from prior year obligations to replenish the DRF. The Office of Chief Financial Officer formed a partnership with the Office of Chief Procurement Officer to identify and de-obligate excess funds related to existing contracts. This effort resulted in the de-obligation of over \$1.5Billion. This effort is continuing in FY 2011.
- The Office of the Chief Financial Officer established a Field Based Operations (FBO) unit to focus on improving the financial management of DRF resources. FBO is responsible for managing and directing FEMA's field-based financial management activities including budget formulation and execution, finance and accounting operations, and risk management. It provides management and oversight to the field-based financial staff, including Recovery Office financial directors, Joint Field Office financial leads, and OCFO comptrollers. Additionally, FBO is responsible for formulating and executing operating budgets for open disasters, working closely with program management to determine multi-year financial requirements for public assistance, individual assistance, and hazard mitigation projects for open disasters.

FY 2011 Planned Accomplishments:

- Logistics Operations – Close nine (9) Temporary Housing Unit sites (Carnes, MS; Purvis, MS; Columbia, MS; DeRidder, LA; Lumberton, MS; Hickory Grove, MS; Lottie, LA; Melville, LA and Hope, AR) as the balance of excess temporary housing units auctioned in FY 2010 are removed from these sites. The site at Hope, AR will remain as a readiness location for as long as necessary and is projected to close by the end of FY 2011.
- Elimination of Non-Disaster Specific NDS 2-year COREs and transfer of positions and requisite funding to the M&A appropriation.
- Support JFO site closures at part of the Logistics Site Closure Team

- Implement electronic correspondence with applicants to reduce the amount of paper-production costs and offer a more secure means of communication with applicants.
- FEMA will continue to expand its efforts to improve the management of DRF resources. FY 2011 planned activities include:
 - Continuing and expanding the disaster closeout initiative.
 - Expanding FY 10 resource recapture efforts to include the identification and de-obligation of excess grant funds.
 - Improving the efficiency of Disaster field office operations while reducing operating costs.
 - Increasing the accuracy of DRF spending projections through:
 - Expanding the use of monthly spend plans.
 - Tracking the causes of variances from estimates.
 - Increasing the accountability and responsibility for accurate estimates.

FY 2012 Planned Accomplishments:

- Improve efficiencies and effectiveness of disaster supply chain management by leveraging LSCMS solutions to fully implement industry supply chain management best practices; and continue to integrate FEMA logistics with additional Federal, state, local, tribal government, Non-Governmental Organization, and private industry partners.
- FEMA will implement Speech Recognition Technology that will convert spoken words to machine-readable input for automatic interface with FEMA’s Interactive Voice Response Systems and NEMIS, enabling applicants to perform updates and status inquiries independent of using a Helpline agent.
- Implement the FEMA Employee Deployment Safety and Health Preparedness Program , reducing last minute costs involved with ordering and shipping needed personal protective equipment and pre-training FEMA employees to address hazards they may face prior to deployment
- Continuation of DRF funds management initiatives to improve the efficiency and effectiveness of DRF resource use.

Disaster Readiness and Support (DRS)

FEMA reassessed its ability to respond to large-scale, complex, presidentially-declared major disasters and, rather than waiting for disasters to occur and reacting with costly and inefficient response actions, saw the need for a more proactive and robust advance-readiness posture. The successor to the legacy Disaster Support activities (DSA), Disaster Readiness and Support activities (DRS) funding was established to bolster FEMA’s general steady-state effectiveness and readiness.

FEMA manages disaster readiness support costs throughout the year. These expenses are essential for: (1) timely disaster response; (2) responsive customer service; and (3) cost-effective program oversight and delivery.

The DRS funds key activities and initiatives, such as:

- Strategic pre-positioning and management of disaster commodities
- Improved inventory of specialized assets
- Standby support to enable FEMA to increase response and recovery capacity as quickly as needed.

DRS activities support FEMA's all-hazards mission. They include initiatives and resources formerly funded from the DRF's legacy DSA, as well as post-Katrina readiness contracts. Many of these costs are predictable on an annual basis and allow FEMA to support a cross-section of disasters utilizing an infrastructure of processing and distribution centers and information technology systems. In addition, the DRS includes certain costs to help FEMA pre-position for disasters, including the establishment of large commodity and transportation service contracts that can be activated in the event of a major disaster.

These efforts (including better communications, a more effective intake process, more efficient delivery systems for disaster commodities, and improved oversight of disaster aid through our technical assistance contractors) will continue to improve the quality of FEMA support to disaster survivors.

FEMA has increased transparency and budgetary discipline of the DRS through the implementation of detailed spending plans and through monthly program reviews. The monthly program review process emphasizes a more efficient program administration and budgetary accountability. As a result, FEMA is better equipped to maintain its critical disaster support activities and infrastructure; and ensure the timely delivery of disaster assistance.

FEMA anticipates that the 2012 DRS spend plan will fund activities similar to those funded in FY 2011.

Office of Response and Recovery (OR&R)

Response Directorate

The Response Directorate coordinates and provides the core Federal disaster response capability needed to save lives, reduce suffering, and protect property in communities throughout the nation that have been overwhelmed by the impact of a major disaster or emergency, regardless of cause. Three core program activities funded by the DRS account are Hurricane Response Planning, the Disaster Emergency Communications Division, and the new agency initiative called FEMA Qualification System (FQS).

Disaster Emergency Communications Division (DECD)

The DECD provides and leads integrated Federal communications support to emergency responders at all levels of government. It has a leading national role in the oversight, and development of Regional Emergency Communications Coordination Working Groups (RECCWG). DECD accomplishes its mission by tactical voice, data, and video communications services before, during, and immediately after an incident to support emergency managers at all levels of governments.

The National Program oversight of the Regional Emergency Communications Coordination Working Group (RECCWG), as defined in the Title XVIII of the Department of Homeland Security Appropriations Act of 2007, assesses emergency communications capabilities within its respective FEMA regions; facilitates disaster preparedness through the promotion of multi-jurisdictional and multi-agency emergency communications networks; and ensures activities are coordinated with all emergency communications stakeholders within the FEMA region.

Disaster Emergency Communications (DEC) and Mobile Emergency Response Support (MERS) Frederick provide power projection platforms for emergency response communications support to the National Capital Region (NCR) with direct support for National Security Special Events (NSSE). As a national asset, MERS Frederick provides tactical communications capabilities for CONUS and OCONUS.

FY 2010 Accomplishments

- Established all ten mandated Regional Emergency Communications Coordination Working Groups (RECCWG) that consist of Federal, state, and local representatives, and other non-government agencies to address interoperable emergency communication concerns.
- Developed 27 state, 15 Emergency Support Function (ESF), and 4 four regional emergency communications plans that allow FEMA to be better prepared to preposition and deploy communications resources during catastrophic incidents.
- Provided emergency communications support to the Haiti earthquake relief effort by Mobile Emergency Response Support (MERS) Frederick where tactical teams deployed and backhauled command and control communications from Haiti to the Frederick facility by utilizing a bridging capability which provided critical communications links for Federal responders.
- Participated in multiple emergency communications exercises to include Defense Interoperability Communications Exercise (DICE), Vigilant Accord, and Eagle Horizon.

FY 2011 Planned Accomplishments

- Promote interoperable communications by providing AES encrypted communications utilizing the Key Management Facility (KMF) located at the Frederick MERS Facility, thus enhancing FEMA's overall readiness and provide secure voice IAW DHS 4300A for Land Mobile Radios (LMR).
- Provide direct communications support to the 2011 State of the Union Address which will support seven Federal Agencies, State and local entities with interoperable communications. Special emphasis was given to the US Capital Police Hazmat Response Team in support of the US Congress.
- Promote communications interoperability with state and local response organizations through Regional Emergency Communications Coordinating Work Groups (RECCWGs).

FY 2012 Planned Accomplishments

- Work with the National Communications System to enhance long-term communications restoration plans for state and local entities through RECCWGs to provide a forum where state, tribal, local, and Federal agencies can directly impact interoperability planning.
- Implement the National Response Network/RoIP Strategy for enabling interoperable emergency communications through the use of Internet Protocol (IP) based networks which is supported by KMF and Comparator functions through the Frederick MERS facility.
- Participate in multiple emergency communications exercises to include the Defense Interoperability Communications Exercise (DICE), Vigilant Accord, and Eagle Horizon to ensure that technical assets are aligned with FEMA's response and recovery mission requirements.
- Enhance state and local government communications capabilities through supporting the development of communications plans, delivering six additional state plans in FY 2012.

FEMA Qualifications System (FQS)

The FEMA Qualification System (FQS) is a performance based approach to workforce qualification and certification of incident management and incident support positions activated to support disasters. This approach seeks to improve FEMA's response and recovery services by identifying required competencies and tasks for disaster personnel and fostering knowledge and skill development within those competencies to successfully perform the tasks. The FQS is guided by operational requirements and current doctrine and drives FEMA's training curriculum for disaster workers at all organizational levels.

The FQS was built upon and expands the former Disaster Response Workforce Division's credentialing initiative. The individual cadres utilized their existing DRWD position task books as a foundation for their work on the FQS products, moving from a training focus to an ICS compliant, performance based focus on more robust, measurable competencies and tasks that support increased functional ability across each cadre.

FY 2011 Planned Accomplishments

- Finalize the Position Task Books, Position Qualification Sheets, and Progression Flow Charts for 28 focus groups. This will represent over 300 incident management disaster titles. Initiate focus groups for incident support positions in the National Response Coordination Center (NRCC) and the Regional Response Coordination Centers (RRCC) to develop Position Task Books, Position Qualification Sheets, and Progression Flow Charts. This will represent over 100 incident support disaster titles.
- Develop and revise existing courses, as needed, for the incident management positions that support the Planning Section (11) and the Operations Section (98). Develop training curriculum for the incident support positions that support the NRCC.
- Establish a formal project for assessing, analyzing, and piloting the Incident Qualifications and Certification System (IQCS) for FQS compatibility.

FY 2012 Planned Accomplishments

- Deliver revised and newly developed Planning and Operation Sections' training curriculum, NRCC training curriculum, and RRCC training curriculum.
- Finalize testing of the IQCS and begin implementation.
- Develop an audit process in conjunction with agency Cadre Managers that provides for a review and analysis of the FQS and the initiation of a 3-year review cycle.
- Initiate contract for the development and/or revision of the Logistics Section, Finance/Administration Section, and Command Staff training curriculum to align with FQS requirements.

National Evacuation Contracts

The National Evacuation Contracts provides FEMA with the ability to plan, execute, and exercise multi-modal evacuation capability in the event of catastrophic disasters. Program activities address evacuation capabilities by motor coach, rail, air, and ambulance.

Currently, the Logistics Management Directorate Office of Transformation and Initiatives, oversees the motor coach, rail, and ambulance evacuation contracts (*see Logistics Management Directorate portion of CJ*). In addition to the air evacuation contract, which already resides in the Response Directorate, in FY 2011, motor coach, rail, and ambulance contract these responsibilities will transition to the Response Directorate within Response, this will be a Directorate-wide program relying on a cooperative effort among the Operations Division, the Planning Division, and the Training, Exercise, and Doctrine (TED) Office.

FY 2011 Planned Accomplishments

- Review and evaluate ambulance, rail, air, and motor coach contracts to ensure consistency with current FEMA and Response Directorate doctrine and modify and revise contracts as needed. Develop evacuation plans, capabilities, and Standard Operating Procedures (SOPs) in adherence to the accepted planning process and approved FEMA practices in order to ensure that mass evacuation operations can be completed as planned and establish management oversight of the evacuation contracts through Response's Movement Coordination Center (MCC).
- Complete regular exercising of mass evacuation capabilities as per performance contract to ensure vendors are capable of delivering committed services in agreed upon time parameters.
- Participate in one tabletop/full scale mass evacuation exercise
- Provide one market survey every 30 days during hurricane season as well as readiness posture to provide event based market surveys; which are required under the readiness task order to respond to disasters in order to maintain same national readiness posture of medical assets as identified in FY 2010 (see *Logistics Management Directorate Office of Transformation and Initiatives 2010 Accomplishments*).

FY 2012 Planned Accomplishments

- Refine evacuation plans, capabilities, and Standard Operating Procedures (SOPs) in adherence to the accepted planning process and approved FEMA practices in order to ensure that mass evacuation operations can be completed as planned
- Coordinate the evacuation contracts (motor coach, air, ambulance, and rail) through Response's Movement Coordination Center (MCC).
- Maintain readiness posture of more than 100 field cadre staff to support evacuations from asset monitors and field staff to Liaison Officers, SMEs and Central Dispatch Officers.
- Provide one market survey every 30 days during hurricane season as well as readiness posture to provide event based market surveys which are required under the readiness task order to respond to disasters.
- In conjunction with Acquisitions, revise and rebid National Evacuation Contracts.

Logistics Management Directorate (LMD)

The mission of the Logistics Management Directorate is to effectively plan, manage and sustain national logistics response and recovery operations, in support of domestic emergencies and special events – to serve as the National Logistics Coordinator (NLC).

Major Programs

The temporary housing unit (THU) program will continue closing sites as the excess inventory disposal process progresses to allow focus on core business of THU readiness.

The Property Management Division provides industry standard quality assurance, customer assistance and technical reviews of property accountability, inventory services to strategic storage sites, Distribution Centers and Temporary Housing Staging areas, and oversight of disposal and donations of agency disaster funded supplies and equipment.

The Distribution Centers (DCs) will develop a plan for implementing and integrating the appropriate mix of internal and external support capabilities. The new Atlanta DC will be fully operational and serve as a prototype for all future Distribution Centers. DC Caribbean will be relocated and brought in line with the prototype model. Plans will be put in place to relocate and/or upgrade DC Hawaii in 2012.

Phase 2 of the LMD's Logistics Supply Chain Management System (LSCMS) will be implemented and rolled out across FEMA with Initial Operational Capability in calendar year 2010 and Full Operational Capability in calendar 2011.

LMD will also award a restructured support camp contract for shelter of Federal Emergency Response personnel in times of disaster. This will reduce arrival time of first responders from 102 to 72 hours and provide scalability and flexibility not resident in the current contract.

Logistics Operations, Logistics Support Services (Temporary Housing Unit & Responder Support Camp Programs)

The temporary housing unit (THU) Storage Sites Program supports the Recovery Directorate's Direct Housing Program. The program is part of a well thought out, life-cycle and performance-based business model and supports THU sites with contracts for various support services. The DRS supports the base costs, including land leases for FEMA's 14 THU readiness and storage sites, as well as satellite locations.

The THU program executes two distinct functions: readiness, and storage/disposal of excess units. Readiness sites are used to store and maintain temporary housing units (travel trailers, mobile homes and park models) in ready-for-dispatch condition that can be deployed and utilized to house citizen survivors in need after a disaster. Storage sites currently contain temporary housing units previously used in support of Hurricanes Katrina and Rita housing missions that are excess to FEMA's needs. In FY 2010, FEMA closed three of the THU storage sites that were housing excess THUs. The THU program will continue closing sites as the excess inventory disposal process progresses to allow focus on the core business of THU readiness. The

excess inventory disposal process is projected to be complete by the end of calendar year 2011. Ultimately, two enduring readiness sites will remain, located in Cumberland, MD and Selma, AL. These two sites will maintain the baseline capacity of 4,000 units of mixed type. Units will be maintained and stored in ready-for-dispatch condition so that Logistics is ready to provide temporary housing for disaster survivors when called upon.

In addition to THUs for disaster survivors, the Logistics Support Services Branch is also the program manager for the national Responder Support Camp (RSC) contract. This contract is designed to provide shelter, food, and other basic needs during disaster situations for FEMA federal, state and local first responders. RSCs are primarily used in locations that have been heavily impacted by a disaster and where local services are either unavailable or their use by first responders would compete with support needed by disaster survivors. Currently, camp sizes can range from 301-2,000 first responders.

FY 2010 Accomplishments

- Logistics Operations - Closed three (3) THU sites (Ft. Pickett, VA; Ft. Pierce, FL and Baton Rouge, LA) and auctioned off approximately 120,000 excess temporary housing units, including travel trailers, mobile homes and park models. Sales returned approximately \$159M to US Treasury.

FY 2011 Planned Accomplishments

- Logistics Operations – Close nine (9) THU sites (Carnes, MS; Purvis, MS; Columbia, MS; DeRidder, LA; Lumberton, MS; Hickory Grove, MS; Lottie, LA; Melville, LA and Hope, AR) as the balance of excess temporary housing units auctioned in FY 2010 are removed from these sites. The site at Hope, AR will remain as a readiness location for as long as necessary and is projected to close by the end of FY 2011.

FY 2012 Planned Accomplishments

- Logistics Operations – Maintain, per all applicable mandates, the two enduring readiness sites located in Cumberland, MD and Selma, AL.

Distribution Centers (DCs)

Essential DC improvements are continuing as part of the Distribution Center Strategic Plan and implementation under LMD's mandate to establish a professional logistics capability. LMD is working through a well thought out and performance-based business model which fully utilizes the capabilities and assets of our business partners and commercial industry. The result is an organic capability that is determined based on a National Inventory Plan, as well as a "virtual capability" from all partners.

During a disaster operation, the DCs support FEMA disaster responders with critical equipment and supplies, including emergency meals, bottled water, generators, cots, blankets, tarps, blue roof sheeting and other disaster commodities. These life-saving and life-sustaining resources provided to citizens in times of disaster can be distributed through state and county distribution points in time of need. A portion of these supplies have been pre-positioned in the hurricane-

prone states in Regions I, II, IV and VI. To further increase disaster responsiveness, LMD Distribution Management is retrofitting existing diesel refrigeration trailers with diesel/electric refrigeration units. These units will allow extended pre-disaster loading of commodities and rapid deployment within hours of notification. The DC's are also building a comprehensive local Disaster Assistance Employee (DAE) development training plan. This plan will ensure the availability of a professional trained local workforce to augment DC operations during disasters. Through mutual agreement, the DCs also store pre-positioned medical caches in support of Health and Human Services (HHS) National Disaster Medical Systems (NDMS). FEMA and HHS work collaboratively to issue the caches when requested.

The Disaster Readiness and Support Funds supports base costs, including rent from the centralized facilities account and security for DCs in Atlanta, GA; Berryville, VA; Frederick, MD; Guam, and Puerto Rico and rent for DCs Hawaii, Fort Worth, TX, and San Jose, CA (Moffett Field). Additionally, FEMA stocks commodities in the dual purpose Temporary Housing and Distribution Center located in Cumberland, MD.

The OCONUS (Outside Continental United States) DCs have an expanded mission. FEMA Distribution Center Hawaii provides FEMA owned Humanitarian Daily Rations (HDRs) to the Department of State and United States Pacific Command in support of foreign disaster assistance, provided the action will not adversely affect FEMA's ability to meet domestic disaster relief responsibilities. FEMA DC Guam stores Department of Defense owned HDRs at no cost to the Department of Defense in exchange for the authority to withdraw Department of Defense-owned HDRs for FEMA purposes. The type of event that will be covered under this effort is any Foreign Disaster Response in the PACOM's Area of Operation (Pacific) and is triggered when the effected country requests assistance from the United States through the Ambassador.

FY 2010 Accomplishments

- Revised and modified maintenance support operations to realize a cost avoidance of \$1 million
- Implemented maintenance management reporting that directs the focus mission essential equipment visible to all managers

FY 2011 Planned Accomplishments

- Redistribute commodities from Cumberland, MD to Selma, AL and DC Atlanta, realignment would increase responsiveness placing commodities closer to more disaster prone areas
- Implement vendor supplied embedded barcode that will facilitate rapid receipt and tracking of cargo
- Develop comprehensive sourcing/training plan for local hire DAE's, increasing responsiveness while reducing travel/training cost

FY 2012 Planned Accomplishments

- Purchase low boy trailers to transport 54 Pack generators that will allow for pre-loading and rapid deployment of generators during emergencies

- Convert existing diesel refrigerated trailers to diesel electrical units allowing for the pre-loading and staging of perishable commodity during disaster season
- Create lifecycle replacement process to track the usage of major assets including generators
- Replace aging generators and trailer fleet, as appropriate
- Conduct distribution storage assessment to evaluate capacity needed to meet planned requirements

Property Management

The Property Management Division provides industry standard quality assurance, customer assistance and technical reviews of property accountability, inventory services to strategic storage sites, Distribution Centers and Temporary Housing Staging areas, and oversight of disposal and donations of agency disaster funded supplies and equipment. These competencies either sustain or enable world class inventory and financial management of strategic stocks that are under the control of the Logistics Management Directorate and have improved the accuracy inventory rate from 62 to 98 percent. Property Management provides assurance that FEMA has the essential life sustaining resources to meet disaster survivor needs while enabling FEMA to correct critical material weaknesses.

FY 2010 Accomplishments

- Conducted monthly inventory reconciliations between FEMA property system of record and financial records with 98 percent accuracy
- Validated the closure and disposal of all accountable property at closed THU sites

FY 2011 Planned Accomplishments

- Support Joint Field Office site closures as part of the Logistics Site Closure Team
- Continue to provide oversight of property accountability for all open sites until the sites are closed and all property is accounted for and disposed of properly

FY 2012 Planned Accomplishments

- Purchase low boy trailers to transport 54 Pack generators that will allow for pre-loading and rapid deployment of generators during emergencies
- Convert existing diesel refrigerated trailers to diesel electrical units allowing for the pre-loading and staging of perishable commodity during disaster season
- Create lifecycle replacement process to track the usage of major assets including generators
- Replace aging generators and trailer fleet, as appropriate
- Conduct distribution storage assessment to evaluate capacity needed to meet planned requirements

Logistics Supply Chain Management System (LSCMS)

LSCMS supports FEMA's mission of responding to all hazards expediently and efficiently by managing the nation's end-to-end supply chain of critical disaster assets and commodities. LSCMS addresses performance gaps and Recommendation 38 from the President's report on Hurricane Katrina which identified the need to provide full disaster logistics supply chain visibility to FEMA and its partners.

LSCMS addresses these gaps by providing automated systems and processes for managing the disaster supply chain process including – initial request for assets and commodities, orders to FEMA and partners, transportation of disaster goods, inventory management at FEMA locations, shipment, and receipt by the states. LSCMS provides situational awareness and in-transit visibility through reporting and Geographic Information Systems (GIS) mapping capabilities showing in-transit location of disaster shipments for FEMA, DHS, and other decision makers. Currently, the LSCMS system is able to track the movement of more than 200 assets and commodities with primary focus on the "Big 8" commodities: water, ice, emergency meals (such as Meals-Ready-to-Eat (MREs)), plastic sheeting, tarps, cots, blankets and generators.

FY 2010 Accomplishments

- Implemented Phase 2 Initial Operational Capability including warehouse management at three FEMA Distribution Centers, and hand held capture of receipt and shipment information at field sites.

FY 2011 Planned Accomplishments

- Implement Phase 2 Final Operational Capability, including integrating requests/orders for electronics with other disaster goods and upgrading the current supply chain management system

FY 2012 Planned Accomplishments

- Complete Phase 2 Final Operational Capability, including integrating requests/orders for electronics with other disaster goods and upgrading the current supply chain management system.
- Improve efficiencies and effectiveness of disaster supply chain management by leveraging LSCMS solutions to fully implement industry supply chain management best practices; and continue to integrate FEMA logistics with additional Federal, state, local, tribal government, Non-Governmental Organization, and private industry partners.

National Evacuation Contracts

The Office of Transformation and Initiatives oversees several national evacuation asset services contracts in addition to the LTMI. In FY 2011, some of these responsibilities will transition to FEMA's Response directorate.

- Rail: LMD will no longer fund or oversee the deliberate planning portion of the rail contract (the rail planner), as this is no longer a disaster-readiness function
- Motor Coach: This program will be split in FY 2011. Readiness and Operational Support functions will reside in Logistics Management Directorate while Deliberate Planning functions will shift over to Response Directorate. Ambulance: Provide readiness to zones 1 through 4 (Nationwide coverage) to enable FEMA to evacuate medical special needs (MSN) individuals in the event of an activation. Any deliberate planning related to MSN populations is an ESF-8 led function.

FY 2010 Accomplishments

- Maintained a National readiness posture of medical assets as follows:
 - 300 Ground ambulances x 4 zones = 1,200 Ground Ambulances
 - 3500 Para-transit seats x 4 zones = 14,000 Para-transit Seats
 - 25 Air Ambulances x 4 zones = 100 Air Ambulances

FY 2011 Planned Accomplishments

- Provide one (1) market survey every 30 days during hurricane season as well as readiness posture to provide event based market surveys; which are required under the readiness task order to respond to disasters
- Participate in one (1) tabletop/full scale mass evacuation exercise
- Maintain same national readiness posture of medical assets as identified in 2010

FY 2012 Planned Accomplishments

- Maintain readiness posture of 100+ field cadre staff to support evacuations from asset monitors and field staff to Liaison Officers, SMEs and Central Dispatch Officers
- Provide one (1) market survey every 30 days during hurricane season as well as readiness posture to provide event based market surveys which are required under the readiness task order to respond to disasters
- Participate in one (1) tabletop/full scale mass evacuation exercise
- Maintain same national readiness posture of medical assets as identified in 2010

Recovery Directorate

The Recovery Directorate works to ensure that individuals and communities affected by disasters of all sizes, including catastrophic and terrorist events, are able to return to normal with minimal suffering and disruption of services. Program activities focus on improving efficiency and expediting delivery of disaster assistance to eligible individuals, to state, local, and tribal governments, and to eligible private nonprofit organizations. This is accomplished through a commitment to streamline procedures to improve program policy, to minimize error, and to modernize service delivery technology.

Annual costs for the following contracts, staff, and activities will be funded through the DRS (actual deployment costs in response to a disaster declaration will continue to be funded from the specific disasters):

- Contract Support
 - Individual Assistance Technical Assistance (IA-TAC)
 - Public Assistance Technical Assistance (PA-TAC)
 - Housing Inspection Services (HIS)
 - Mail Operations
 - Enterprise Application Development Integration and Sustainment (EADIS)

- Corporate Lodging Consultants (CLC)
 - Surge Staffing for Registration Intake
- National Processing Service Centers (NPSCs)

The DRS supports base costs, including rent and security, for FEMA’s three NPSCs located in Maryland, Texas, and Virginia. The NPSC facilities provide FEMA call center and benefits processing capabilities to register and process disaster survivors’ applications.

DRS funding for the NPSCs also supports the following:

 - Developers to make continuous updates to Individual Assistance program changes in the NEMIS system to ensure that processing complements the most up to date policies.
 - What is expected to be a one- time cost for equipment that supports an Interagency Agreement with the Internal Revenue Service (IRS) to provide surge staffing for Registration Intake, as needed. Specifically, meeting FEMA technical requirements for IRS facilities that perform this function. When the Interagency Agreement (IAA) is utilized pursuant to a disaster declaration, funding will be charged to the declaration’s costs under the DRF.
- Other Interagency Agreements
 - Crisis Counseling Assistance and Training Program (CCATP). The Center for Mental Health Services (CMHS) under the U.S. Department of Health and Human Services provides critical technical support in the management of FEMA’s Crisis Counseling Assistance and Training Program (CCP). FEMA annually funds three PFT positions, contract support, travel, equipment supplies and administrative costs through an IAA. When the program is actually “turned on” pursuant to a disaster declaration, funding will be charged to the declaration’s costs under the DRF.
 - Disaster Unemployment Assistance (DUA). The Employment and Training Administration, within the Department of Labor (DOL), administers the Disaster Unemployment Assistance (DUA) Program on FEMA’s behalf. As such, FEMA annually funds DOL through an IAA to perform this function. When the program is actually “turned on” pursuant to a disaster declaration, funding will be charged to the declaration’s costs under the DRF.
- Maintain a Web-based Public Assistance Program
 - DRS funding is used to maintain a web-based capability for the Public Assistance Program (PA) that allows FEMA staff, PA applicants, and states to perform all PA grant management activities online in addition to supporting the use of state-of-the art technology such as wireless handheld devices. This includes maintaining the use of handheld devices for Public Assistance staff and contractors to perform inspections on damaged facilities. The information then is automatically uploaded into the web-based system, eliminating a paper-based process, improve efficiency, and attain cost savings.

FY 2010 Accomplishments

- Conducted Functional Needs Support Services training for representatives from all ten FEMA regional offices to enhance regional capability to provide technical assistance to States in providing timely assistance for individuals with functional needs to sustain their independence in congregate care facilities.
- Awarded two new contracts to support inbound and outbound mail operations at FEMA's National Processing Service Centers for processing all mail from disaster survivors to FEMA, and the outbound printing and mailing regarding Individual Assistance from FEMA, which increased mail processing efficiency to within 72 hours of receipt while reducing previous backlogs and processing times that exceeded two weeks.
- Upgraded the Disaster Recovery Center (DRC) Locator, to provide online information for disaster survivors looking for the location and hours of operation of FEMA sites established following a disaster to receive face-to-face interaction with FEMA representatives and apply in-person for various forms of government assistance.
- IA TAC contractors, as part of readiness capability development, provided deliverables in the form of detailed response plans, creation of a nationwide database of local building codes, a library of mission capability summaries as part of pre-scripted mission assignments, and participated in over 10 different Regional and national exercises, workshops, and training events.

FY 2011 Planned Accomplishments

- Develop Individual Assistance Policy Handbook to ensure consistent application of Individual Assistance policies in the implementation of Individual Assistance recovery programs.
- Develop new Preliminary Damage Assessment data management and sharing software as part of the Individual Assistance Preliminary Damage Assessment (PDA) enhancement and reengineering project to facilitate information sharing, enhance data accuracy and inform declaration decision making.
- Improve EMMIE system efficiencies and the effectiveness of operations by correcting 52 performance issues and scalability constraints to process all new Public Assistance disaster grants in support of communities recovering from major disasters. .
- Develop a mobile-optimized version of the Disaster Recovery Center (DRC) Locator tool to allow disaster survivors to locate the closest DRC to their current location via any handheld device with an internet browser to make disaster recovery support services more accessible to those in need.
- Increase IA TAC readiness by 30 percent to support planning and rapid response for mass care and temporary housing assistance operational requirements for multiple disaster missions throughout the United States.

FY 2012 Planned Accomplishments

- Develop the direct housing operational planning Standard Operating Procedure to help communities rapidly recover following a disaster event and meet the needs of disaster survivors.
- Finalize the National Mass Care Strategy with partners to streamline coordination and expedite the delivery of mass care and emergency assistance to disaster survivors.

- Conduct a comprehensive review of the Recovery Information Management System (RIMS) suite of tools to identify cost-efficient alternatives and migrate all remaining Recovery Information Systems applications from the contractor-owned, contractor-operated data center to the DHS Data Center 2 (DC2) resulting in a more scalable, robust, cost-efficient and compliant production environment for these critical tools.
- Identify and adopt specific, measurable capabilities with private voluntary organizations, non-governmental organizations, and private industry (contractors) to conduct effective feeding and temporary housing operations during large-scale disasters and emergencies.

Office of Federal Coordinating Officer Operations

Federal Coordinating Officer Operations

The Federal Coordinating Officer (FCO) program consists of 45 officers who provide critical leadership at FEMA field offices during presidentially – declared disasters and in support of state level planning and preparedness efforts. Primary DRS program costs are travel requirements to maintain credentialing and qualifications, travel costs to field to serve as leaders at interagency training exercises, and communication equipment to effectively administer disaster relief from the field. During deployment to disasters, salaries and benefits for the FCOs are funded by the specific disaster declarations.

FY 2010 Accomplishments

- Achieved and maintained 100 percent state satisfaction with FCO performance in delivery of disaster assistance programs.

FY 2011 Planned Accomplishments

- Develop and conduct bi-monthly certification of interagency response teams in coordination with Department of Defense Certification Exercise program (CERTEx).

FY 2012 Planned Accomplishments

- Enhance FEMA overall readiness by leading certification exercises for key response and recovery teams. Develop metrics for managing the readiness of individual FCO cadre members and the overall cadre readiness.

PROTECTION AND NATIONAL PREPAREDNESS

National Preparedness Directorate (EMI)

In accordance with the intent of the Disaster Readiness Support Account, The Emergency Management Institute (EMI) within the National Preparedness Directorate is responsible for training FEMA's Disaster Workforce (including PFTs, COREs and DAEs) to perform the tasks specifically related to master assignments as defined in their credentialing plans at the trainee and qualified levels. The foundations for the disaster workforce credentialing plans are individual position task books. These position task books reflect the work to be accomplished for each FEMA disaster position. These tasks are performed at the Joint Field Office, National Response Coordination Center, Regional Response Coordination Center, and in the field (staging areas, command centers, emergency operations centers, etc.) while deployed to support specific

disasters. The position task books include an evaluation component to assess performance. EMI works in partnership with FEMA's Disaster Reserve Workforce Division (DRWD) to ensure that training, credentialing plans, and position task books are in sync to guarantee the readiness of FEMA's disaster workforce.

FY 2010 Accomplishments

- Converted four Disaster Field Training Operations courses formerly delivered at the JFO to on-line mandatory courses for completion prior to deployment and added 30 new independent study and resident courses to the curriculum for FEMA's disaster workforce
- Assisted DRWD in the development of credentialing plans, migration to their implementation, and the delivery of mandatory credentialing training.
- Completed review to align curriculum with position specific requirements which defined future development and revision needs.

FY 2011 Planned Accomplishments

- Add 20 new courses to the curriculum for FEMA's disaster workforce in addition to developing and revising and piloting the Disaster Response Operations and Planning training to support new national doctrine.
- Increase participation in integrated exercises to assess the capability of FEMA's disaster workforce.
- Coordinate with the Response and Recovery Directorate and DRWD on revising FEMA credentialing system entitled "FEMA Qualification System Guide for Incident Management and Incident Support Positions." To ensure the readiness of FEMA's disaster workforce.

FY 2012 Planned Accomplishments

- Development and revision of 20 courses to support the new qualifying process for the disaster workforce.
- Review and update disaster workforce training requirements.
- Coordinate all Disaster Workforce training delivered in the Regions including annual training plans, credentialing/qualifying, funding, new procedures, and technologies to expand reach to disaster workforce audience, and data collection.

MISSION SUPPORT BUREAU

Office of the Chief Administrative Officer (OCAO)

The Mission Support Bureau (MSB) supports all facets of the Agency mission by providing strategic leadership to and assuring the timely, efficient, and effective delivery of administrative, human capital, financial, Information Technology (IT), procurement, and security services and business function capabilities. While the majority of these functions are funded by management and administration, several responsibilities of MSB are directly related to disaster planning and support.

In addition to the MSB front office, MSB consists of five Offices:

- The Office of the Chief Administrative Officer (OCAO)
- The Office of the Chief Component Human Capital Officer (OCCHCO)
- The Office of the Chief Information Officer (OCIO)
- The Office of the Chief Procurement Officer (OCPO)
- The Office of the Chief Security Officer (OCSO)

MSB EO OVERVIEW

The MSB EO provides primary strategic oversight to - and is focused on integrating activities within and seeking efficiencies among – the five MSB Component Offices. The MSB EO operates using Management and Administration funds only, but the five Offices it oversees directly support Disaster Related Activities. The information herein explains and supports these preparedness and disaster activities. Other functions which are not in direct support of a disaster are funded through Management and Administration funds.

Office of the Chief Administrative Officer (OCAO) – FY2012 Budget Narrative

The Chief Administrative Office directly supports FEMA’s mission by providing a full range of services including facilities, occupational safety, health and environmental programs, records management, and privacy protection to FEMA’s programs, partners, and stakeholders. The portfolio of the OCAO includes: Facilities and Support Services Division (FSSD), Occupational Safety, Health, and Environment Division (OSHE), Records Management Division and Privacy Office (RMP). The primary activities funded from the DRS are: the acquisition and maintenance of disaster facilities, postage for disasters, express mail & shipping for disasters, printing for disasters, maintenance of mail equipment at disaster fixed facilities; responses to disaster-related FOIAs; inspection of disaster sites for safety and health hazards, maintain readiness requirement for National Safety Health Cadre, environmental and health support services to disaster operations, and industrial hygiene equipment maintenance.

Organizational Performance

FY 2010 Accomplishments

- Prepared mail kits for 65 disasters for immediate deployment.
- Conducted mail management training to 65 disaster personnel.
- Achieved an Agency-approved Credentialing program for the National Disaster Safety Officer Cadre.
- Conducted twelve (12) environmental assessments at Temporary Housing Unit (THU) sites as part of the site close-out process.

- Eliminated 7 percent of all FEMA disaster-related FOIA backlog.

FY 2011 Accomplishments

- Provide deployable mail kits to ensure FEMA personnel are able to perform their mission to contact disaster survivors.
- Provide fleet cards to disaster personnel.
- Perform environmental assessments at remaining THU sites.
- Integrate environmental principals and concepts into Disaster Safety Officer training to ensure full compliance with environmental requirements.
- Achieve elimination of at least 8 percent of the disaster FOIA backlog.

FY 2012 Accomplishments

- Purchase postage for disaster mail operations throughout the Agency to expedite delivery of federal disaster relief checks to disaster victims through the U.S. Postal Service (USPS).
- Implement the FEMA Employee Deployment Safety and Health Preparedness Program that reduces last minute costs involved with ordering and shipping needed personal protective equipment.
- Implement the FEMA Safety and Health Building Inspection program that identifies safety hazards up front prior to construction, renovation, etc at disaster sites.
- Achieve elimination of at least 9 percent of the disaster FOIA backlog.

Office of the Chief Information Officer (CIO)

The Office of the CIO provides technical oversight and administrative support to FEMA’s mission by maintaining and enhancing the technological infrastructure. The DRS specifically funds several operation and maintenance services key to disaster readiness. The major Information Technology (IT) activities funded by the DRS include:

- Disaster Assistance Improvement Program (DAIP)
- Network Services
- Document Management and Records Tracking System (DMARTS)
- Disaster Communications
- Disaster Assistance Technical Services (DATS)

- Center (NPSC) and Distribution Center (DC) Support National Processing Service
- Capability (DFSC) Disaster Financial Support

Disaster Assistance Improvement Program (DAIP)

Post - Hurricane Katrina, more than 800,000 individuals required immediate disaster assistance (shelter, food, clothing, etc.). Federal agencies across the board received millions of requests for assistance – FEMA alone received 2.7 million applications. The influx of applicants ultimately overwhelmed the system, and the President signed Executive Order 13411 requiring FEMA to overhaul its assistance process and unify applications across the federal interagency. DRS funds provide support to the DAIP which has created initial operating capacity for a single access point for more than 40 federally funded forms of assistance (FOAs) and streamlines applicants' information into a unified system.

Network Support Services

Network support services include implementing IT solutions, and managing, directing, and supporting the daily operations and maintenance of the FEMA network as FEMA performs its disaster mission. A full range of network services are required throughout the life of a disaster or emergency, including cyber security and network infrastructure management and monitoring, and computer hardware and software support for FEMA and other Federal partners supporting an event throughout its lifecycle. Specific examples of the services provided are Security Operations Center services, Tier-2 restoration support for FEMA's nationwide voice and data network in the event of failure, and the 24/7 help desk support.

Document Management and Records Tracking System (DMARTS)

DMARTS is an enterprise solution for conforming disaster document and records management to DHS Document Management standards. DMARTS is an enterprise level application that provides data capture, document management, correspondence tracking, and records management functionality. This system supports FEMA users in locating, accessing, storing, retrieving, managing, and archiving documents, along with creating consistent streamlined supportable processes for the user community.

Disaster Communications Services

The Office of the CIO supports telecommunications services for disaster missions. These telecommunications services include, satellite airtime for the Mobile Emergency Response System (MERS) and Mobile Disaster Recovery Centers and the communications needs for the FEMA National Processing Service Centers (NPSCs) (local and long distance telephone services, circuits, 800-services, 800-translator service, switch maintenance, router maintenance, and satellite services which support the infrastructure needed to provide voice and data connectivity to the NPSC call center agents).

Disaster Assistance Technical Services (DATS)

DATS is the framework that provides a full IT project Systems Engineering Lifecycle range of services and support for the disaster workforce, disaster survivors and the public. One of the

major services provided is the Disaster Assistance Support Center (DASC) which is the primary reception center for new information system requests for FEMA's Recovery Directorate.

Office of the CIO Support to the NPSCs and Disaster Response

The Office of the CIO provides contractor support and equipment so the NPSCs can provide efficient call center services and timely expedition of disaster survivors' applications. The CIO also provides: (1) IT contractors to be deployed to the Joint Field Offices (JFOs) as part of the IT Disaster Response Team; (2) hardware and software maintenance for JFO network infrastructure ; (3) maintenance and repair of vehicles deployed to the JFOs; (4) maintenance of management software tools; (5) network management and troubleshooting; (6) software maintenance and development of the Gold image to reimage disaster laptops and (7) Uninterrupted Power Supply (UPS) Maintenance.

Disaster Financial Support Capability (DFSC)

FEMA's National Emergency Management Information System (NEMIS) provides a comprehensive capability to support the financial elements of the disaster management process in the form of the Emergency Support (ES) Module. The ES Module provides the front end processing of disaster financial management documents and processes financial transactions and services through FEMA's Integrated Financial Management Information System (IFMIS). The ES Module pre-processes financial transactions from other modules and exports them into IFMIS. The ES Module payment system allows users to process disaster-housing payments and perform recoupment and other administrative tasks associated with disaster payments.

FY 2010 Accomplishments

- Transitioned all 10 FEMA regional offices (fixed sites) to One Net resulting in improved Multiprotocol Label Switching (MPLS) service, diversity of availability (in case of an interruption of service by one carrier), a reduced hardware footprint, and centralized oversight of telecommunications services to manage costs and ensure Service Level Agreements are met by telecommunications providers .
- Improved assistance for disaster victims by implementing the FEMA Self-Help Portal in response to Executive Order 13411.
- Established an enterprise wireless solution which will initially support the Logistics Management Division Total Asset Visibility (TAV)/Logistics Supply Chain Management System (LSCMS) project goal of reducing the cost for providing commodities to disaster survivors.
- Enhanced the Housing Inspectors ability to communicate housing inspections and expedite the process by implementing an updated version of the Automated Construction Estimation software communications. (This is under goal 2.2 in the FEMA strategic plan)

FY 2011 Planned Accomplishments

- Implement remaining components of the enterprise wireless solution at the Logistics Management Division

Distribution Centers and initiate implementation at selected Regional office facilities and implementing an Enterprise Wireless Contract with the goal of standardizing wireless systems design, implementation, and maintenance.

- Implement Remedy Version 7, a service request and incident management software tool, across the enterprise to establish one reporting system for all FEMA locations under a single managed system.
- Centralize storage for all FEMA entities on an enterprise-wide Storage Area Network (SAN) solution. This solution will eliminate the need for individualized file and data storage servers provide for greater economies of scale, and down-size FEMA's infrastructure footprint. This solution will include building out the network infrastructure at multiple locations to support replication and high-availability storage.

FY 2012 Planned Accomplishments

- Implement plans for upgrading enterprise PBX systems to improve enterprise voice availability and reliability and implementing Voice Over Internet Protocol (VoIP) where feasible.
- Implement plans for standardizing FEMA Regional Response Coordination Centers by primarily utilizing the FEMA Enterprise Video Contract to standardize design, implementation, and maintenance to reduce cost.
- Work with programs to ensure alignment with DHS Infrastructure Transformation Program (ITP) initiatives which will enhance FEMA's ability to integrate into the One DHS environment.
- Transition FEMA Integrated Response and Recovery Information System (IRRIS), Agile Systems Development (ASD), and NEMIS (including 26 associated applications) to the DHS datacenter resulting in centralized management and improved system administration, security, and system availability.

Office of the Chief Security Officer (CSO)

The Office of the Chief Security Officer is responsible for following: Physical Security, Personnel Security, Disaster Security Operations, Technical Security Countermeasures Program, Administration Security Services, Information Security, Operations Security, Special Security Programs and Security Training. These security services support all FEMA personnel, external customers, fixed facilities, and disaster operations nationwide.

DRS funding for this activity includes background investigation and fingerprint processing for all disaster employees and contractor staff assigned to a JFO or disaster facility. Funding also supports contractual services for Federal Protective Service (FPS) at FEMA fixed disaster facilities. Guard services provided at FEMA disaster locations are funded from the disaster declaration.

Office of the CSO Recent and Planned Accomplishments

FY 2010 Accomplishments

- Initiated an establishment of a 25 member strike team of professional officers, (DAE) employees to deploy initially to any and all declared disaster situations requiring security support.
- Hired and trained five regional security officers to ensure that regional assets, resources, personnel, information, and equipment are properly protected and secured commensurate with specific requirements associated with a particular region.
- Implemented a secure file transfer process allowing for faster transmission and submission of electronic FBI fingerprints for applicant determinations for disaster hiring

FY 2011 Planned Accomplishments

- Hire and train regional security officers for three FEMA regions. The position ensures that regional assets, resources, personnel, information, are equipment are properly protected and secured commensurate with specific requirements associated with a particular region. Regional security officers will also ensure sufficient support to disaster operations within regional areas.
- Upgrade the existing electronic fingerprint kits with newer and smaller versions allowing for better quality submissions and decreased processing time for disaster applicants. (local hires and local contract hires)
- Identification and implementation of security guard reductions at FEMA disaster and disaster support locations as a means of realizing cost savings

FY 2012 Planned Accomplishments

- Deploy HSPD-12 PIV Card issuance workstations and conducted enrollment and issuance activities at ongoing recovery and disaster locations
- Deploy minimal physical security system per direction to convert to localized support
- Identify and implement security guard reductions at FEMA disaster and disaster support locations as a means of realizing cost savings

OCCHCO Overview

The Office of the Chief Component Human Capital Officer (OCCHCO) plays a critical role in managing the Agency's most important asset, people. In the case of the DRF-DRS this responsibility involves the Human Capital Management responsible for a broad range of human capital related activities focused on the over 9,500 Stafford Act Employees (SAEs) workforce operating in the field and at every Joint Field Operations location. DRS funding allows the

Agency to support the over 9,300 temporary employees of the Disaster Assistance Employees (DAE) workforce, to ensure the readiness and deployment of disaster responders to include FEMA's 4,400 full-time workforce and the DHS/FEMA Surge Capacity Force (SCF) of 15,400 identified emergency support permanent employees throughout DHS as a whole.

Costs include, but are not limited to: printing; advertizing of local hire positions; time & attendance; overtime utilities; equipment maintenance & replacement; general office supplies; and the Workers Compensation contract. Approximately 80% of all claims come from employees being injured at disaster sites. The Compensation Act (FECA) provides for the payment of workers' compensation benefits to employees injured while performing their duties. Monthly statistics show that most of our Office of Workers' Compensation Program (OWCP) claims are from SAEs. Even though the Department of Labor administers the OWCP Program, FEMA is responsible for all of the costs associated with the Program. DRS funds the Unemployment Compensation Contract and all DRF claims. The compensation program provides benefits for eligible unemployed former disaster employees. The program is administered by States as agents of the Federal government. Additionally, SAEs are allowed access to the Employee Assistance Program (EAP) website. EAP is an agreement with Health and Human Services that covers expert resources on employee assistance, work/life issues for employees working under disaster support stress environments.

Disaster Workforce Support

The OCCHCO's Disaster Workforce Division (DWD) coordinates the lead element of a centralized management framework for: overall policy affecting the Disaster Workforce (DW) and oversees the Agency-wide deployment tracking process of all FEMA (and Surge Capacity Workforce) employees deployed for disaster response and recovery operations. It also coordinates and implements the SCF Concept of Operations (CONOPS) Plan as mandated by section 624 of the PKEMRA in coordination with the Disaster Operations Directorate and DHS.

The DRS provides funding for a DWD program management office to emphasize Disaster Reserve readiness and tailor best-practices from successful workforce models. This DRS funded program supports not only the development of reserve workforce policy and guidance's, allocates Agency resources to maintain systems, to include the introduction of the next generation FEMA Deployment System (FDS) in FY 2011/FY 212, and also adapts the DWD and Agency deployment strategies to the evolving needs of FEMA and Disaster Reservists.

Elements include coordinating force planning, training, assisting in the guidance of Agency DW credentialing and deployment of the DW, full-time FEMA employees, and the Surge Capacity Force (an initiative which represents some 15,400 DHS employees). It coordinates, prescribes, and enforces nationwide standards of Reserve readiness and implements, manages, and improves standardized processes for tracking Reserve recruitment, availability, deployment, and demobilization. Additionally, this DRS program and goals builds on developing and retaining a high performing, diverse disaster ready workforce.

The OCCHCO-DWD has the lead in SAE workforce matters and coordinates with other OCCHCO elements, such as the OCCHCO Plans and Policy Unit (PPU) on policy affecting the DW and oversees, in coordination with the OCCHCO Technology Innovations Unit (TIU), the Agency-wide deployment tracking process of all FEMA employees deployed for disaster

response and recovery operations. It coordinates with the OCCHCO Workforce Operations Division (WOD) on personnel activities which recruit, hire, and staff Headquarters, and Regional and Field Offices. WOD processes all personnel and payroll actions and is responsible for pay administration.

DWD also has a leading role in developing, coordinating and implementing the DHS/FEMA SCF CONOPS Plan as mandated by section 624 of the PKEMRA in coordination with the Disaster Operations Directorate and DHS.

OCCHCO- FY 2010 Accomplishments

- Completed the first phase of the strategic workforce planning initiative, with an engagement with the Homeland Security Studies and Analysis Institute (HSSAI); defined the baseline workforce of the current FEMA workforce. This baseline assessment is intended to quantify the current workforce in terms of numbers, locations, work performed, and some assessment of capabilities of the current workforce.
- Completed Agency hiring milestones, the conversion process for the disaster CORE employee workforce into permanent fulltime (PFT) employee positions and the rationalization of funding for the remaining limited numbers of disaster nonspecific CORE employees.
- Developed the CONOPS, training, and implementing guidance for the FEMA SCF.
- Migrated new credentialing framework to the remaining 23 Cadres of the Disaster Workforce to include, seven additional Cadre Specific Planning sessions; 20 Cadre Migration Reviews; 16 initial Cadre Review Boards; nine first level annual cadre reviews; and six second level Cadre Review Boards.
- Transitioned the Agency-wide Credentialing Program to the Office of Response and Recovery for the purpose of enhancing and broadening the program as the FEMA Qualification System.
- Completed and managed in coordination with Agency funding the FEMA DRF-DRS Workers Compensation and Unemployment Compensation payment program.

OCCHCO - FY 2011 Planned Accomplishments

- Complete subsequent phases of the strategic workforce planning initiative, which will focus on recording required mission capabilities, identification of manpower requirements to achieve these capabilities; development and execution of workforce strategies to realize the manpower requirements and capabilities articulated.
- Continue the “BEST Workforce” initiative to improve employee engagement, which directly affects individual and organizational performance in achieving FEMA’s mission (Goal of increasing Employee Engagement by ten-percent from FY 2010 to FY 2011).
- Expand SCF training to include other DHS Components.

FY 2012 Planned Accomplishments

- Continue the migration of full-time FEMA employees to the new credentialing framework.

Office of the Chief Procurement Officer

The Office of the Chief Procurement Officer (OCPO) is responsible for obligating over \$2,000,000,000 from the Disaster Relief Fund (DRF) annually to support a full range of acquisition services and business solutions, such as finalizing and closing out contracts, maintaining the contract writing system, and enhancing the contract file management system's capability.

OCPO Recent and Planned Accomplishments

FY 2010 Accomplishments

- Initiated a project to automate the requisitioning (40-1) process, to reduce costs, the potential for errors, and to improve management, oversight and tracking of acquisitions
- Deployed DAE acquisition personnel to accelerate the contract closeout efforts for the DRF, thereby de-obligating \$1.2 Billion and addressing the Corrective Action Plan recommendation in OIG Report 09-32, Internal Controls in the FEMA Disaster Acquisition Process
- Established 26 full-time CORE positions focused on disaster contract file administration and close-out as the Disaster Acquisition Response Team

FY 2011 Planned Accomplishments

- Deploy DAE acquisition personnel to accelerate the DRF contract closeout efforts, as required, to address the Corrective Action Plan recommendation in OIG Report 09-32, Internal Controls in the FEMA Disaster Acquisition Process
- Implement a new Disaster Acquisition Response Team (DART) to focus on contract file administration and contract closeout
- Expand the Acquisition cadre of disaster reservists with experienced contracting specialists

FY 2012 Planned Accomplishments

- Deploy DAE acquisition personnel to accelerate the contract closeout efforts for the DRF, as needed
- Monitor the effectiveness of DART and implement any necessary adjustments
- Expand the Acquisition cadre of disaster reservists with experienced contracting specialists.

Office of Chief Financial Officer (OCFO)

The OCFO leads the effort to maximize the impact of financial resources and ensure accountability to support the mission of FEMA.

The OCFO oversees planning and response activities of the financial management members of FEMA's emergency teams and management of the national Disaster Comptroller cadre.

FEMA maintained a class of employees referred to as Non-Disaster Specific Cadre of Response Employees (NDS COREs) to perform essential duties that cannot reasonably be attributed on a disaster specific basis. These NDS COREs were hired as Temporary Full-Time (TFT) employees with appointments not-to-exceed 2-years. Based on the distribution of work among

all of the programs/offices 233 positions were converted to Permanent Full-Time (PFT) positions and for the most part funded in the M&A appropriation.

FEMA will utilize the DRS to fund maintenance of financial systems required for disaster related financial operations, mitigate audit weaknesses, conduct field based financial operations, and maintain critical administrative and management (corporate) accounts. Administrative and management costs include the following: rent/leases for specified FEMA spaces occupied by disaster employees; disaster-related postage and shipping charges; disaster financial operations support; unemployment insurance and workmen's compensation for DAE's; and CORE transit subsidy. This account will have oversight within the OCFO.

OCFO Recent and Planned Accomplishments

FY 2010 Accomplishments

- Established a Field Based Operations (FBO) unit to focus on improving the financial management of DRF resources.
- A joint OCFO/Office of the Chief Procurement Officer (OCPO) team identified and de-obligated for reuse over \$1.5B in excess funds related to existing contracts.
- Implemented a "Self Inspection Process" designed to establish common financial management standards and processes across all disaster field offices, ensure compliance with financial management laws, standards, and regulations, and promote efficient use of DRF resources.

FY 2011 Planned Accomplishments

- Expand FY 2010 resource recapture efforts to include the identification and de-obligation of excess grant funds.
- Improve the efficiency of Disaster field office operations while reducing operating costs.

FY 2012 Planned Accomplishments

- Identify deficiencies in the financial management process and implement standards and processes to ensure that the improvements identified and achieved are ingrained in the disaster resource management process.
- Reduce or eliminate disaster related audit issues identified in the Agency audit.
- Expand the use of monthly spend plans across all disasters to increase visibility and accuracy in DRF spending.
- Track and report the causes of variances from DRF spending plan projections to improve spending estimation accuracy.
- Increase the accountability and responsibility for accurate projections to maximize the impact of DRF resources.

Other DRS Activities

External Affairs

The DRS funds Media Monitoring and Contact Management activity. This covers the disaster related portion of the annual media monitoring and analysis service, the media contact management and distribution service, and the stakeholder contact management and distribution service. It also provides funding for communications go kits required for social media, web and visual imagery operations for use in readiness, response and recovery operations as well as development and deployment of an upgraded community relations reporting system to support effective information flow to disaster survivors and improve situational awareness.

Mitigation

The DRS supports: 1) reprinting of publications depleted by disaster activities; 2) replenishment of publications that were used by routine disasters.

Equal Rights

Non-disaster specific investigations and EEO activities are funded through the DRS.

IV. Program Justification Changes

This request provides \$1.8 billion for the Disaster Relief Fund

Justification

Coupled with estimated annual recoveries, this request will enable the DRF to support the five-year average obligation level for non-catastrophic disaster activity (excluding extraordinary events, such as the series of 2004 hurricanes in Florida, Hurricanes Katrina and Rita in 2005, the California Wildfires of 2007, and Hurricanes Gustav and Ike in 2008).

Impact on Performance (Relationship of Increase to Strategic Goals)

Without these funds, the FEMA would not be able to support the 5-year average obligation level for non-catastrophic disaster activity.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Emergency Management Agency
Justification of Proposed Changes in Disaster Relief Fund
Appropriation Language**

For necessary expenses in carrying out the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5121 et seq.), \$1,800,000,000, to remain available until expended: Provided, That funds provided under this heading shall not be available for transfer pursuant to section 503 of this Act or pursuant to any other transfer authority available to the Secretary of Homeland Security provided in this or any other Act: Provided further, That for any request for reimbursement from a Federal agency to the Department of Homeland Security to cover expenditures under the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5121 et seq.), or any mission assignment orders issued by the Department for such purposes, the Secretary of Homeland Security shall take appropriate steps to ensure that each agency is periodically reminded of Department policies on- (1) the detailed information required in supporting documentation for reimbursements; and (2) the necessity for timeliness of agency billings. Note.--A full-year 2011 appropriation for this account was not enacted at the time the budget was prepared; therefore, this account is operating under a continuing resolution (P.L. 111-242, as amended). The amounts included for 2011 reflect the annualized level provided by the continuing resolution.

B. FY 2011 to FY 2012 Budget Change

**Department of Homeland Security
Federal Emergency Management Agency

Summary Justification and Explanation of Changes

	2010	2011	2012	2011 to 2012
	Actuals	C.R.	Request	Change
Salaries and Benefits	\$507,679	\$507,000	\$507,000	\$0

Salaries and Benefits includes costs for 3,383 FTEs.

	2010 Actuals	2011 C.R.	2012 Request	2011 to 2012 Change
Travel	\$167,174	\$52,000	\$52,000	\$0

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations.

	2010 Actuals	2011 C.R.	2012 Request	2011 to 2012 Change
Transportation of Things	\$38,263	\$16,000	\$16,000	\$0

Transportation of Things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things.

	2010 Actuals	2011 C.R.	2012 Request	2011 to 2012 Change
GSA rent	\$22,264	\$18,000	\$18,000	\$0

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent-related services.

	2010 Actuals	2011 C.R.	2012 Request	2011 to 2012 Change
Other Rent	\$65,115	\$1,000	\$1,000	\$0

Other rent includes all payments to a non-Federal source for rental space, land, and structures.

	2010 Actuals	2011 C.R.	2012 Request	2011 to 2012 Change
Communication, Utilities, and miscellaneous charges	\$30,207	\$30,000	\$30,000	\$0

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility service.

	2010 Actuals	2011 C.R.	2012 Request	2011 to 2012 Change
Printing	\$1,275	\$8,000	\$8,000	\$0

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities.

	2010 Actuals	2011 C.R.	2012 Request	2011 to 2012 Change
Advisory and Assistance Services	\$13,302	\$15,000	\$15,000	\$0

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government.

	2010 Actuals	2011 C.R.	2012 Request	2011 to 2012 Change
Other Services	\$464,552	\$695,000	\$695,000	\$0

Other services include report contracted services with non-Federal sources that are not otherwise classified under Object Class 25.

	2010 Actuals	2011 C.R.	2012 Request	2011 to 2012 Change
Purchase from Government Accounts	\$188,897	\$324,000	\$324,000	\$0

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified.

	2010 Actuals	2011 C.R.	2012 Request	2011 to 2012 Change
Operation & maintenance of facilities	\$24,464	\$35,000	\$35,000	\$0

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account.

	2010 Actuals	2011 C.R.	2012 Request	2011 to 2012 Change
Operation & Maintenance of equipment	\$2,240	\$0	\$0	\$0

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account.

	2010 Actuals	2011 C.R.	2012 Request	2011 to 2012 Change
Supplies & materials	\$15,621	\$67,000	\$67,000	\$0

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency.

	2010 Actuals	2011 C.R.	2012 Request	2011 to 2012 Change
Equipment	\$25,801	\$35,000	\$35,000	\$0

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract.

	2010 Actuals	2011 C.R.	2012 Request	2011 to 2012 Change
Land & Structures	\$9,772	\$6,000	\$6,000	\$0

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to building, nonstructural (or resource) improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease.

	2010	2011	2012	2011 to 2012
	Actuals	C.R.	Request	Change
Grants/Subsidies/Contributions	\$6,552,426	\$3,654,903	\$891,000	(\$2,763,903)

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects.

	2010	2011	2012	2011 to 2012
	Actuals	C.R.	Request	Change
Interest & dividends	\$100	\$0	\$0	\$0

Interest and Dividends includes obligations for (1) payments to creditors for the use of moneys loaned, deposited, overpaid, or otherwise made available; (2) the distribution of earnings to owners of trust or other funds; (3) interest payments under lease-purchase contracts for construction of buildings.

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Emergency Management Agency Flood Hazard Mapping and Risk Analysis

I. Appropriation Overview

A – Mission Statement for Flood Hazard Mapping and Risk Analysis:

The Flood Hazard Mapping and Risk Analysis Program addresses flood hazard data update needs and preserves the successful Flood Map Modernization investment. The requested Fiscal Year (FY) 2012 funding will allow FEMA to continue implementing a multi-year mapping effort intended to meet the FEMA statutory requirement to review the flood hazards maps on a five-year cycle and address flood hazard data update needs over a longer time horizon, as funding is available. With FY 2012 funding, FEMA will continue Risk Mapping, Assessment, and Planning (Risk MAP) following the strategy outlined in the Risk MAP Multi-Year Plan. The plan articulates a strategy for how FEMA delivers information necessary for flood risk reduction and sustainable community development. This integrated flood risk management approach weaves county-level flood hazard data developed in support of the National Flood Insurance Program (NFIP) into watershed-based risk assessments that serve as the foundation for local Hazard Mitigation Plans and targeted risk communication activities. FEMA will focus the FY 2012 investment on addressing flood hazard data update needs for coastal and riverine flood hazard areas, and on expanding and improving utility and accessibility of the flood hazard and flood risk data.

Flooding is the most frequent and costly natural hazard in the United States. Over 90 percent of all natural disasters in the Nation involve flooding. Changes in the climate and sea level rise in the coming decades will only increase the significance of the flood threat in this Nation. FEMA's Risk MAP program and the National Flood Insurance Program that it supports are essential to managing and reducing this risk. Risk MAP and the National Flood Insurance Program reduce the costs of flooding by supporting management and mitigation of flood risks. A study by the Multi-hazard Mitigation Council showed that each dollar spent on mitigation saves society an average of four dollars.

B – Budget Activities:

FEMA manages several risk analysis programs to assess the impact of natural hazards that lead to effective strategies for reducing risk. These programs support the Department of Homeland Security (DHS) objective to “strengthen nationwide preparedness and mitigation against natural disasters.” Risk MAP is integrating and aligning the individual risk analysis programs into a more effective unified strategy. The vision for Risk MAP is to deliver quality data that increases public awareness and leads to action that reduces risk to life and property.

Risk MAP Vision
Through collaboration with State, Local, and Tribal entities, Risk MAP will deliver quality data that increases public awareness and leads to action that reduces risk to life and property

Risk MAP supports the DHS goal to strengthen capacity at all levels of society to withstand threats and hazards. Risk MAP does this by improving community capacity to withstand disasters by mitigating known and anticipated hazards.

FEMA’s Risk MAP Multi-Year Plan outlines the goals, objectives, and strategies for Risk MAP. The major objectives of Risk MAP are:

- o 80 percent of the Nation’s flood hazards data is current – the flood hazard data are new, have been updated, or deemed still valid
- o Local officials are aware of risks from natural hazards
- o Communities take action to reduce risk

FEMA is charged with maintaining reliable flood hazard information to support the National Flood Insurance Program, where the U.S. Government has an exposure of \$1.2 trillion. These efforts simultaneously provide communities and citizens with the information they need to reduce the risk of loss of life and property from flooding. To support the administration of this insurance program reliable flood hazard data is needed. The reliability of flood hazard analyses and maps erodes over time. Changes in the built environment, additional storm and precipitation data, and improvements in the engineering science all affect the currency of the risk analysis products. These changes move in both directions: over the past seven years, as many structures have been taken out of designated Special Flood Hazard Areas (SFHA) as have been newly shown in. When a structure is taken out of the SFHA, the mandatory purchase requirement is removed and the price of continuing the insurance drops dramatically. Funding for Risk MAP supports FEMA’s efforts to address existing gaps in the flood hazard data inventory and address changes that continue to occur over time.

Risk MAP also works to maintain and increase local official’s awareness of their flood risk. Awareness tends to decrease over time because many years can pass between major flood events memories fade, local staff changes and there is a natural tendency for people to minimize risks that they live with every day. The primary mechanism through which Risk MAP will increase local officials' awareness is through the interactions that occur during a flood map update.

FEMA Risk MAP activities are funded from two primary sources of funds – the Flood Hazard Mapping and Risk Analysis Program appropriation and fees received from NFIP policy holders through the National Flood Insurance Fund (Table 1). Both sources of funding are critical to the development and implementation of new flood maps in communities across the Nation. NFIF funding is the core funding for the program and supports all aspects of the program. The work accomplished through NFIF funding includes some production, but primarily enables the program to: meet statutory and regulatory requirements for processing map change requests from communities and citizens; respond to stakeholder correspondence; distribute flood hazard data products; establish and maintain cost and schedule controls; track and monitor performance; and, support the development of state and local capabilities to participate in the management and delivery of Risk MAP through the Cooperating Technical Partners program and other core program functions. Funding from the NFIF supports some of the staffing, travel and other administrative expenses for the Flood Hazard Mapping and Risk Analysis program.

C – Budget Request Summary:

FEMA requests \$102.7 million in FY 2012 for the Flood Hazard Mapping and Risk Analysis Program. These appropriations are used to analyze and produce flood hazard and flood risk data and map products, to communicate flood hazard risk, and related technical services. With FY 2012 funding, FEMA will focus on reviewing and updating flood hazard data and maps to accurately reflect flood hazards for the areas with the highest flood risk and greatest update need. Flood hazard data and mapping efforts will support the goals identified in FEMA’s Risk MAP Multi-Year Plan and will specifically address gaps in flood hazard data to form a solid foundation for flood risk assessments, floodplain management, and actuarial soundness of the NFIP. These funds also provide staffing, travel, operating expenses, contractual services, and grants supporting the development of flood hazard and flood risk information.

Funding Source	NFIF	RiskMAP	TOTAL
NFIF Salaries & Benefits	\$9,273		\$9,273
NFIF Program Funds	\$108,433		\$108,433
RiskMAP Salaries & Benefits		\$9,023	\$9,023
RiskMAP Program Funds		\$93,689	\$93,689
TOTAL	\$117,706	\$102,712	\$220,418
FTE	71	80	155

2012 Program Change			-117,075
2012 Total Request	84	80	102,712

FEMA requests \$102.7 million in FY 2012 for this activity. Funding in FY 2012 will provide \$8.8 million for the annualization of the 2011 salaries and benefits; full funding of the 28 positions created from the 2011 in-sourcing initiative; and, \$93.9 million for increased contract costs due to inflation, and the continuation of activities as described in the Risk MAP Multi-Year Plan.

Funding in FY 2012 for Risk MAP will be used to produce improved flood hazard mapping for NFIP.

- Increase the percent of flood hazard data that meet new, valid or updated engineering standards to 55 percent by updating 20,000 to 25,000 miles of riverine flood hazard and 3,100 miles of open coastline, affecting five to seven million people.
- Maintain local officials' flood risk awareness at 70 percent.
- Initiate additional Risk MAP projects, to increase the population in watersheds where Risk MAP has begun to 44 percent of the U.S. population.

CURRENT SERVICES DESCRIPTION:

The Risk MAP Multi-Year Plan builds on the strong foundation of the Flood Map Modernization program. This plan will significantly improve the integrated flood risk management approach by weaving county-level flood hazard data into watershed-based risk assessments that serve as the basis for local hazard mitigation plans and targeted risk communication activities. Risk assessments systematically analyze the people and property in a community or watershed potentially impacted by flood hazards to quantify physical, social, and economic losses. Targeted risk communication activities include

prioritizing flood map updates for highest risk areas and highlighting areas where mitigation activities are most needed based on the results of the watershed risk assessments.

The overall goals in the FEMA Risk MAP Multi-Year Plan are:

- 1) Risk MAP Goal 1: Address gaps in flood hazard data to form a solid foundation for flood risk assessments, floodplain management, and actuarial soundness of the NFIP.
- 2) Risk MAP Goal 2: Ensure that a measurable increase of the public's awareness and understanding of risk management results in a measurable reduction of current and future vulnerability to flooding.
- 3) Risk MAP Goal 3: Lead and support states and local and tribal communities to effectively engage in risk-based mitigation planning resulting in sustainable actions that reduce or eliminate risks to life and property from natural hazards.
- 4) Risk MAP Goal 4: Provide an enhanced digital platform that improves management of limited Risk MAP resources, controls information produced by Risk MAP, and enhances communication and sharing of risk data and related products to all levels of government and the public.
- 5) Risk MAP Goal 5: Align Risk Analysis programs and develop synergies to enhance decision-making capabilities through effective risk communication and management.

FY 2010 accomplishments include:

- Initiated additional 600 Risk MAP projects affecting 3,800 communities and addressing highest priority engineering data needs, including coastal and levee areas.
- Created a baseline of local understanding of flood risk and produced a national annualized flood loss study.
- Ensured 80 percent of the Nation's population (excluding territories) is covered by local hazard mitigation plans that are approved or approvable pending adoption.
- Transitioned flood hazard data distribution from a paper map-focused system based on high volume offset printing, to a nearly all-digital distribution with limited paper copies printed as needed for affected local governments.
- Developed requirements for new integrated Risk MAP products that augment the Digital Flood Insurance Rate Map delivered in Flood Map Modernization with additional flood risk information to enable broader risk communication.

FY 2011 planned accomplishments include:

- Increase the percent of flood hazard data that meet new, valid or updated engineering standards to 53 percent.
- Increase local officials' flood risk awareness from 68 percent to 70 percent.

- Initiate additional Risk MAP projects, to increase the population in watersheds where Risk MAP has begun to 40 percent of the U.S. population.

FY 2012 planned accomplishments include:

Funding in FY 2012 for Risk MAP will be used to produce improved flood hazard mapping for NFIP. FEMA expects that a more fully informed public coupled with more focused actions will reduce flood risks. The following accomplishments are planned for FY 2012, aligned with the Risk MAP vision:

- Increase the percent of flood hazard data that meet new, valid or updated engineering standards to 55 percent.
- Maintain local officials' flood risk awareness at 70 percent.
- Initiate additional Risk MAP projects, to increase the population in watersheds where Risk MAP has begun to 44 percent of the U.S. population.

The two primary focus areas are (1) coastal flood studies and (2) significant riverine flood hazard data update needs. Ultimately, these investments will produce accurate flood hazard data, integrated watershed flood risk assessments, and stronger hazard mitigation plans.

FEMA's Risk MAP approach will support local risk assessment and planning activities while addressing the flood hazard data update needs, thus enabling our citizens to increase their awareness of flood risk and ensure good planning to mitigate against these risks.

A. Coastal Flood Studies: In FY 2012, FEMA will continue the effort started in 2009 to update the Nation's coastal flood hazard studies. Funds are allocated to initiate updated coastal flood hazard studies in those areas determined to be in most need. This investment will reduce the flood hazard data update needs by 34 percent, representing approximately 3,100 miles of open coast. Future coastal hazard analyses and mapping needs will be selected based on risk, community, and state cost share, and cost efficiencies using a consistent hazard study approach.

B. Significant Riverine Flood Hazard Update Needs: In FY 2012, FEMA will dedicate funding to update riverine hazard engineering analyses. This also includes other non-coastal flood hazards like ponding and shallow flooding and updates related to the accreditation status of levees. This investment will reduce the riverine flood hazard data update needs by 5 percent to 6 percent, covering approximately 20,000 - 25,000 miles of inland flooding sources.

Part of FEMA's Risk MAP strategy is to invest more in monitoring the validity of published flood hazard information. The principal factors that drive the need for updated flood hazard analyses are:

- Physical changes: such as manmade influences which may include new bridges culverts, levees, and development in the floodplain
- Climate changes: such as recent flood disasters or additional stream gauge data
- Engineering methodology changes: such as improved computer models and better understanding of the physics of water flow

Keeping pace with these changes is important and failing to do so could lead to unwise land use decisions and construction standards, thereby putting homeowners at increased risk while providing a false sense of security. Conversely, overstated hazards can result in potentially unnecessary construction costs and incorrect insurance rating decisions. Sound, reliable flood hazard information is a necessary component of ensuring the fiscal soundness of NFIP.

As FEMA began work on Risk MAP, the next five-year assessment of NFIP maps also was initiated. FEMA will continue its work with stakeholders to ensure that flood hazard information on Flood Insurance Rate Maps reflects existing conditions and is aligned with flood risk. This work will involve documenting the engineering gaps that require a map update based on the three principal factors mentioned above. A watershed validation evaluation strategy will be used to track the assessment process, document engineering gaps and their resolution, and aid in prioritization for using flood risk as a key factor for areas identified for flood map updates.

In FY 2012, FEMA will continue its watershed validation evaluation strategy for reviewing flood hazard engineering data and map update needs. The results of these evaluations and other flood hazard data update needs identified throughout the mapping lifecycle will be managed systematically and will allow FEMA to effectively quantify the inventory maintenance required. This watershed validation evaluation will provide the necessary data required to identify the flood hazard engineering data and map needs and associate them with the level of risk for that geographic area. Through Risk MAP, FEMA will update the flood hazard data by watershed where necessary so that FEMA's flood hazard data is in agreement with other Federal agencies' scientific data within the watershed.

FEMA also is investing significantly in elevation data to support quality flood hazard data. In FY 2010, FEMA delivered to Congress a National Digital Elevation Acquisition and Utilization Plan outlining the Risk MAP approach. Based on recommendations from the National Academy of Sciences and experience gained through Flood Map Modernization, FEMA developed updated elevation standards for new flood hazard data. A portion of FEMA's effort also will be focused on the identification of current flood hazards in and around the Nation's levee systems which are located in more than one-quarter of the counties for which FEMA is providing new digital flood hazard mapping. Where the Provisionally Accredited Levee status for levee systems is expiring or when the necessary data and documentation for levee systems are provided for accreditation, FEMA will update the flood hazard data to reflect these changes. FEMA will reduce the flood hazard data needs related to the resolution of provisionally accredited levees by 90 percent in FY 2012.

During the implementation of Risk MAP, sustainable partnerships will continue to be vital. FEMA will maintain its partnerships and seek out new collaborations to support the Risk MAP program. Resources in the form of “cash match” or new data as identified in FEMA’s Bluebook are highly valued and are most beneficial for the program. When targeted at known flood hazard data update needs and included in the partnership agreement, FEMA will give its highest investment priority to capable partners who provide a 25 percent cash match. FEMA typically receives these partner contributions through existing successful partnerships within the Cooperating Technical Partners (CTP) Program. While contributions from multiple sources are valuable, FEMA will consider establishing a partnership under the CTP Program in flood map update prioritization and will support those partnerships that are mutually beneficial.

Program Decrease									-117,075
Total Request	56	50	223,763	84	56	220,000	84	80	102,712

Description of Item

The FY 2012 request will provide for an increase in the percentage of flood hazard data that meet new, valid or updated engineering standards, maintain local officials' flood risk awareness, and provide for additional Risk MAP projects.

Justification

Funding in 2012 will provide for the annualization of the 2011 salaries and benefits, full funding of the 28 positions created from the 2011 in-sourcing initiative, and support the continuation of activities as described in the Risk MAP Multi Year Plan.

Funding in FY 2012 for Risk MAP will be used to produce improved flood hazard mapping for NFIP.

- Increase the percent of flood hazard data that meet new, valid or updated engineering standards to 55 percent by updating 20,000 to 25,000 miles of riverine flood hazard and 3,100 miles of open coastline, affecting five to seven million people.
- Maintain local officials' flood risk awareness at 70 percent.
- Initiate additional Risk MAP projects, to increase the population in watersheds where Risk MAP has begun to 44 percent of the U.S. population.

The impact of this decrease is to delay reaching the target of 80 percent of the stream miles in FEMA's inventory designated as New, Valid, or Updated (NVUE) by about 6

years – from 2014 to at least 2020. Such reductions are prudent in the current budget environment. While FEMA, States, and communities will be accepting more risk when the flood hazards in fewer watersheds are studied, careful selection of new study projects can buy down this risk until additional funds become available in future years.

Because the Risk MAP production lifecycle is three to five years per project, projects initiated in 2011, 2010, 2009, and prior fiscal years will still be in progress throughout fiscal year 2012. As a result, the total amount of work in progress, managed by FEMA staff will only be reduced slightly in fiscal year 2012 based on the reduced work initiated. In addition, FEMA staff is critical to the effectiveness of the Risk MAP outreach mission as the primary, most credible, interface with local governments. As more Risk MAP projects reach the delivery phase in fiscal year 2012 and beyond, the responsibility for government staff to support outreach to communities and local officials will increase.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Emergency Management Agency
Justification of Proposed Changes in
Flood Hazard Mapping and Risk Analysis
Appropriation Language**

For necessary expenses, including administrative costs, under section 1360 of the National Flood Insurance Act of 1968 (42 U.S.C. § 4101), \$102,712,000, and such additional sums as may be provided by State and local governments or other political subdivisions for cost-shared mapping activities under section 1360(f)(2) of such Act (42 U.S.C. § 4101(f)(2)), to remain available until expended[: Provided, That total administrative costs shall not exceed 3 percent of the total amount appropriated under this heading]. (Department of Homeland Security Appropriations Act, 2011.)

Note.—A full-year 2011 appropriation for this account was not enacted at the time the budget was prepared; therefore, this account is operating under a continuing resolution (P.L. 111–242, as amended). The amounts included for 2011 reflect the annualized level provided by the continuing resolution.

Justification:

FEMA proposes to modify the limitation on the total administrative cost percentage to account for the additional staff requested for the in-sourcing initiative to ensure adequate administrative resources to effectively manage the program

PPA Mission Statement

The Flood Hazard Mapping and Risk Analysis Program addresses flood hazard data update needs and preserves the successful Flood Map Modernization investment. The requested Fiscal Year (FY) 2012 funding will allow FEMA to continue implementing a multi-year mapping effort intended to meet the FEMA statutory requirement to review the flood hazards maps on a five-year cycle and address flood hazard data update needs. With FY 2012 funding, FEMA will continue Risk Mapping, Assessment, and Planning (Risk MAP) following the strategy outlined in the Risk MAP Multi-Year Plan. The plan articulates a strategy for how FEMA delivers information necessary for flood risk reduction and sustainable community development. This integrated flood risk management approach weaves county-level flood hazard data developed in support of the National Flood Insurance Program (NFIP) into watershed-based risk assessments that serve as the foundation for local Hazard Mitigation Plans and targeted risk communication activities. FEMA will focus the FY 2012 investment on addressing flood hazard data update needs for coastal and riverine flood hazard areas, and on expanding and improving utility and accessibility of the flood hazard and flood risk data.

Summary Justification and Explanation of Changes

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Salaries and Benefits	\$5,515	\$7,070	\$8,656	\$1,586

Salaries and Benefits support 84 full time permanent positions in FY 2012. There will be an increase in FY 2012 due to the annualization of insourcing.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Travel	\$1,116	\$1,102	\$900	(\$202)

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2012 request reflects a decrease from efficiencies and savings from regional based program activities.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
GSA rent	\$558	\$930	\$993	\$63

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2012 request provides for the inflationary increase in lease costs.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Communication, Utilities, and miscellaneous	\$15	\$192	\$194	\$2

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2012 request does provide for inflationary increases in communication services for non recurring cost.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Advisory and Assistance Services	\$40,765	\$30,002	\$16,584	(\$13,418)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2012 Request reflects a decrease in requirements for contracted services.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Other Services	\$108,238	\$185,411	\$75,311	(\$110,100)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2012 request does reflect a decrease in requirements for contracted services as a result of program efficiencies, a reduction in program funding level and carryover funding available in FY 2011.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Equipment	\$35	\$99	\$32	(\$67)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2012 request provides for the replacement and upgrade of equipment for existing staff.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Grants/Subsidies/Contributions	\$65,820	\$65	\$0	(\$65)

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The FY 2012 request reflects a decrease in program funding level for grant awards.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Supplies & Materials	42	57	42	(15)

Supplies and materials includes all cost for the purchases of supplies and materials. The FY 2012 request provides consumable items used by staffing.

K. DHS Balanced Workforce Strategy

In order to establish a high performing workforce comprised of a strong internal core of federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment the Department will realign contractor and/or federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with federal employees to better realize the full potential of our total workforce – both contracted and federal. A strong internal core of federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into Tiered ranking. The results of Tier 1 contract review are listed below. The results of the lower-priority contracts will post-date this budget submission and will be included in the FY 2013 budget.

Federal Emergency Management Agency requests \$1.8 million and 24 FTE for the FY 2012 DHS Balanced Workforce Strategy.

Position Type	FY 2010 Actual		FY 2011 C.R.		FY 2011 Annualization		FY 2011 Follow On		FY 2012 Increase		FY2010 – FY2012 DHS Balanced Workforce Strategy

Total	0	0	28	4	0	24	0	0	0	0	28	28

Annualization of FY 2011 DHS Balanced Workforce Strategy

The FY 2011 President’s Budget provided funding and appropriation language to support the creation of 28 full time permanent positions through efficiencies achieved from in-sourcing contracted duties.

This effort was identified as part of Secretary Napolitano’s Department-wide Efficiency Review, and was determined to be an effective balance of contractors to federal employees throughout the Department, and converting contractor positions to federal employees when feasible and appropriate. In FY 2011, FEMA will convert contractor positions related to its Flood Map Modernization (Risk Map) to full-time and permanent positions. The FY 2012 President’s Budget provides \$1.8 million for the annualization of the 2011 salaries and benefits.

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Emergency Management Agency National Flood Insurance Fund

I. Appropriation Overview

A – Mission Statement for the National Flood Insurance Fund:

The National Flood Insurance Fund (NFIF), which was established by the National Flood Insurance Act of 1968 (42 U.S.C. § 4001 et seq.), is a premium revenue and fee-generated fund that supports the National Flood Insurance Program (NFIP). The Act, as amended, authorizes the Federal government to provide flood insurance on a national basis to owners of properties located in vulnerable areas. The National Flood Insurance Reform Act of 1994 (P.L.103-325) made flood insurance mandatory for all federally backed mortgages of properties located in the special flood hazard areas (SFHA). Currently, the NFIP insures more than 5.6 million residential and commercial policyholders totaling approximately \$1.2 trillion in insurance coverage. By supporting flood hazard reduction grant programs and floodplain management efforts, the National Flood Insurance Program estimates that more than \$1.2 billion in flood-related losses are avoided annually.

The NFIP is not just an insurance program. It also works to reduce the cost of flood damage through identifying, analyzing, and reducing flood risk. By encouraging and supporting mitigation efforts, FEMA leads our Nation in reducing the impact of disasters. FEMA applies insurance concepts and methods to reduce the nation's vulnerability to natural hazards and manages the National Flood Insurance Program (NFIP) to provide consumer-oriented flood insurance to accelerate recovery from floods, to mitigate future losses and to reduce personal and national costs of flood disasters. FEMA administers the NFIP so that insurance and floodplain management policies and operations are mutually reinforcing. Further, FEMA works to increase the NFIP policy base so that more people are indemnified by insurance for future flood losses, facilitating their recovery, rebuilding communities and reducing costs to taxpayers.

The National Flood Insurance Program consists of three major functions that focus on reducing flood risk and the impact of flood disasters:

- **Identifying and Analyzing Flood Risk.** The first component of the business strategy requires reliable information about flood risk. FEMA flood mapping activities help identify and analyze flood risk for communities nationwide by updating and maintaining community flood hazard information, including map maintenance and distribution activities that complement the Risk MAP activities. The Flood Mapping component of the strategy produces flood hazard maps, also known as Flood Insurance Rate Maps (FIRMs) that identify areas at risk of flooding. However, flood risk changes over time and many maps no longer reflect current risks, due to land development and changes in the environment. FEMA continues to produce more reliable, up-to-date flood data by using the latest mapping technology

and delivering it in a Geographic Information System (GIS)-based format. Flood hazard information is now available to a wide range of users including: the public, floodplain managers, developers, and the insurance industry. With the new maps, communities can more efficiently manage flood risks, land use, water resources, disaster mitigation, and disaster recovery operations. Property owners can more reliably assess their flood risks and make decisions about flood insurance based on those risks.

- **Reducing Flood Risk.** The second component of the business strategy is to reduce the risk associated with flood events through floodplain management as well as flood-related grants and assistance such as Flood Mitigation Assistance, Repetitive Flood Claims, and Severe Repetitive Loss.

FEMA promotes sound local Floodplain Management to reduce the risk to new or planned buildings and infrastructure, and funding in the form of Flood Related Grants for reducing existing community risk. The NFIP plays a critical role in encouraging communities to adopt and enforce floodplain management regulations and to implement broader floodplain management programs aimed at reducing risk to new or planned buildings and infrastructure. By law, FEMA can only provide flood insurance to those States or communities that adopt and vigorously enforce floodplain management regulations that meet or exceed minimum NFIP requirements. Communities incorporate NFIP requirements into their zoning codes, subdivision ordinances, and/or building codes or they adopt special purpose floodplain management ordinances.

The NFIP requirements include:

- Elevation of new and substantially improved residential structures above the base flood level
- Elevation or dry floodproofing (made watertight) of new or substantially improved non-residential structures
- Regulation of development in floodways, the central portion of a riverine floodplain needed to carry deeper and faster moving water, to ensure that there are no increases in upstream flood elevations
- Additional requirements to protect buildings in coastal areas from the impacts of waves, high velocity, and storm surge

These requirements are the most cost-effective way to reduce the flood risk to new buildings and infrastructure. Structures built to NFIP standards experience 80 percent less damage than structures not built to these standards and have resulted in \$1.2 billion per year in reduced flood losses.

FEMA provides funding to reduce the risk of flood damage to existing buildings and infrastructure by providing Flood Related Grants to states, communities and Tribal Nations. The NFIF funds three programs specifically designed to reduce the fund's loss exposure. The Flood Mitigation Assistance program (FMA) provides funds on an

annual basis so that measures can be taken to reduce or eliminate risk of flood damage to buildings insured under the NFIP. The Repetitive Flood Claims program (RFC) provides funding to reduce or eliminate the long-term risk of flood damage to structures insured under the NFIP that have had one or more flood claim payments. The Severe Repetitive Loss program (SRL) provides funds on an annual basis to reduce the risk of flood damage to residential structures insured under the NFIP that are qualified as severe repetitive loss structures.

- Insuring Flood Risk.** The third component of the business strategy is to insure against flood loss. NFIP provides a vehicle through which homeowners can take an active role in protecting their property against flood losses. Floods are the most common and costly natural disaster in the United States. Fortunately, property owners who live in communities participating in the NFIP can purchase affordable protection to insure against flood losses. Since 1969, the NFIP has paid over \$36 billion dollars in flood insurance claims that have helped hundreds of thousands of families and businesses recover from flood events. Most people who live or own businesses in NFIP participating communities are eligible to purchase federally-backed flood insurance. Even after a property has been damaged by flood previously, owners and renters are still eligible to purchase flood insurance, provided that the community is participating in the NFIP.

Residents who live in Special Flood Hazard Areas are required by law to purchase flood insurance if they have a mortgage from a federally regulated lender. They also must carry the insurance for the life of the mortgage. Residents with property outside high-risk areas can also purchase flood insurance and may be eligible for significant premium rate reductions. Flood Insurance Operations manages the insurance program by supporting various management activities, including underwriting, operations, and claims payments.

The following chart illustrates the steps that can be taken to reduce flood risk:

B – Budget Activities:

Funding for the National Flood Insurance Program is derived from two primary sources:

- Flood insurance premiums (mandatory) which is used to pay out claims and to provide funding to support the operating and administrative costs associated with maintaining the program. FEMA estimates mandatory premium collections of \$3.103 billion in FY 2012.
- Policy fee income (discretionary) which also is paid by flood insurance policy holders which supports floodplain management, flood mapping, insurance operations, flood-related grants, and NFIP management. For FY 2012, FEMA projects fee collections of \$171.0 million, which reflect an increase of \$2.0 million from the FY 2011.

The NFIP appropriation supports the following key program elements:

NFIP Management and Flood Insurance Operations

NFIP Management – NFIP management reflects the overall management of the Flood Insurance Program. FEMA applies insurance concepts and methods to reduce the nation's vulnerability to natural hazards and manages the National Flood Insurance Program (NFIP) to provide consumer-oriented flood insurance to accelerate recovery from floods, to mitigate future losses and to reduce personal and national costs of flood disasters. FEMA administers the NFIP so that insurance and floodplain management policies and operations are mutually reinforcing. Further, FEMA works to increase the NFIP policy base so that more people are indemnified by insurance for future flood losses, facilitating their recovery, rebuilding communities and reducing costs to taxpayers.

Flood Insurance Operations - Flood Insurance Operations provides for all aspects of managing the insurance program including: the development and oversight of insurance coverage policy and regulations; analysis and evaluation of insurance risks and claims data used to determine premium rates; and, oversight of insurance companies that write flood insurance policies and adjust claims.

Floodplain Management and Flood Mapping

Flood Mapping - Flood Mapping produces flood hazard maps, also known as Flood Insurance Rate Maps (FIRMs) that identify areas at risk of flooding. Land development and changes in the environment change flood risk over time and causes many maps to become outdated. This program enables FEMA to produce reliable, up-to-date flood data by using the latest mapping technology and delivering it in a Geographic Information System (GIS)-based format. With the new maps, communities can more efficiently manage flood risks, land use, water resources, disaster mitigation, and disaster recovery operations. Property owners can more reliably assess their flood risks and make decisions about flood insurance based on those risks.

Floodplain Management - The National Flood Insurance Program plays a critical role in encouraging communities to adopt and enforce floodplain management regulations. Communities are informed and educated about the benefits of implementing broader floodplain management programs aimed at reducing risk to new or planned buildings and infrastructure. By law, FEMA can only provide flood insurance to those States or communities that adopt and vigorously enforce floodplain management regulations that meet or exceed minimum NFIP requirements. The NFIP works with communities to incorporate these requirements into their zoning codes, subdivision ordinances, and/or building codes. In some cases, communities receive assistance with efforts to adopt special purpose floodplain management ordinances.

National Flood Insurance Fund (Mandatory)

The National Flood Insurance Act of 1968 (42 U.S.C. § 4001 et seq.), as amended, authorizes the Federal Government to provide flood insurance on a national basis. Flood insurance may be sold or continued only in communities that participate in the NFIP and enact and enforce appropriate floodplain management measures. Federally regulated funding institutions cannot provide loans to non-participating communities with an identified flood hazard.

Flood Related Grants

The National Flood Insurance Fund supports flood hazard reduction efforts facilitated through its flood related grants and assistance program: Flood Mitigation Assistance, Repetitive Flood Claims, and Severe Repetitive Loss. These programs reduce the risk of flood damage to existing buildings and infrastructure by providing grants to states, communities, and tribal nations. The Flood Mitigation Assistance (FMA) grants provide funds for activities that decrease or eliminate risk of flood damage to structures insured under the NFIP. The Severe Repetitive Loss (SRL) and the Repetitive Flood Claims (RFC) fund activities that decrease the long-term risk of flood damage to residential structures insured under the NFIP that have experienced repetitive losses from previous flood damage.

C – Budget Request Summary:

FEMA requests budget authority from mandatory premium collections of \$3.103 billion and \$171 million from Federal Policy Fee income in FY 2012. The increase is additional revenue collections from estimated policies in force increases and flood policy rate increases. The rate increase is based on the Annual Actuarial Rate Review conducted to ensure that premium rates are adequate to meet projected claims requirements. These funds will be used to pay claims of the NFIP in addition to operating expenses. These funds will also support the Repetitive Flood Claims and the Flood Mitigation Assistance programs.

¹ The \$171 million reflects the amount of anticipated fee collections for FY 2012, \$22 million above the \$149 million stated in the Budget Appendix.

² The \$50 million for Repetitive Flood Claims and Flood Mitigation Assistance is \$10 million less than the \$60 million stated in the Budget Appendix.

³ The FY 2012 FTE request number of 327 is 38 more than the FTE number of 289 listed in the Budget Appendix.

III. Current Services Program Description by PPA

**Department of Homeland Security
Federal Emergency Management Agency
National Flood Insurance Fund
Program Performance Justification**
(Dollars in Thousands)

PPA: Flood Mitigation and Flood Insurance Operations

	<u>Perm. Pos</u>	<u>FTE</u>	<u>Amount</u>
2010 Actual	133	103	14,751
2011 C.R.	133	103	22,145
2012 Adjustments-to-Base		23	-145
2012 Current Services	133	126	22,000
2012 Program Change	-	-	-
2012 Total Request	133	126	22,000

For FY 2012, FEMA requests \$22.0 million from Federal policy fee revenue to support salaries and operating costs for the flood mitigation and flood insurance operations activities.

CURRENT SERVICES DESCRIPTION:

Flood Mitigation and Flood Insurance Operations activities include management and oversight of NFIP insurance activities, business operations support, stakeholder engagement and outreach support, business process management and improvement activities, and information systems support activities associated with the Federal Insurance and Mitigation Administration's executive oversight.

FY 2010 accomplishments include:

- Supported stakeholder outreach for flood insurance and mitigation activities including communicating mission progress to internal and external stakeholders, provided support for issue management, and developed comprehensive and integrated outreach plans to enable programs to better communicate available tools, resources, and capabilities to a wide host of stakeholders.
- Completed development of NFIP Records Management System for deployment to all ten regional offices.

FY 2011 planned accomplishments include:

- Identify and develop crosscutting themes to increase public recognition of the value of investments in reducing flood risks.

FY 2012 planned accomplishments include:

- Develop and implement comprehensive plan for FEMA and its partners to increase public recognition of the value of investments.

PPA: Floodplain Management and Flood Mapping

2012 Current Services	177	172	149,000
2012 Program Change	-	-	-
2012 Total Request	177	172	149,000

For FY 2012, FEMA requests \$149.0 million from Federal policy fee revenue to support salaries and operating costs for ongoing floodplain management and flood mapping efforts.

CURRENT SERVICES DESCRIPTION:

Floodplain Management:

The Floodplain Management Branch oversees programs that are designed to reduce risk through land use and building code regulations. Floodplain management activities are authorized under the National Flood Insurance Act, as amended. Through these programs, FEMA encourages communities and their citizens to take informed and effective mitigation actions before a flood in order to reduce the long-term risk to people and property. Structures built to NFIP standards experience 80 percent less damage than structures not built to these standards. One of the mechanisms utilized is the Community Assistance Program-State Support Services Element (CAP-SSSE). The purpose of this program is to provide, through a state grant mechanism, a means to ensure that communities participating in the NFIP are achieving the flood loss reduction goals of the NFIP. CAP-SSSE is intended to accomplish this by funding states to provide a significant portion of the technical assistance to NFIP communities and to evaluate community performance in implementing NFIP floodplain management activities with the additional goal of building state and community floodplain management expertise and capability.

CAP-SSSE capitalizes on partnering with the staff of state agencies to provide technical assistance. The grant is a product-oriented program directly related to the flood loss reduction objectives of the NFIP.

The NFIP supports the salaries and expenses of program management and implementation staff at FEMA's national and ten regional offices that administer floodplain management programs.

The responsibilities of these offices include reducing flood risk through floodplain management and flood hazard reduction efforts, providing technical assistance to communities participating in the NFIP, and administration of the CAP-SSSE grant program. The various and miscellaneous salaries and expenses funding allows program staff: to deliver technical assistance to NFIP participating communities; to strengthen local flood loss reduction programs through onsite visits; and, to provide funding for the necessary supplies and equipment, including computer equipment and other needed resources, to meet the mission of the program.

FY 2010 accomplishments include:

- Reduced potential annual flood losses by nearly \$1.6 billion through NFIP insurance and floodplain management activities.
- Assisted all entities of Federal, state, and local governments to effectively maintain sound floodplain management practices and to educate the general public on mitigation actions that may be taken in a pre-disaster environment by developing a variety of outreach materials.
- Provided technical assistance to the 21,000-plus communities participating in the NFIP and monitored the compliance with program requirements; provided grant funds to states and territories to help furnish this technical assistance and monitoring; and developed policy, guidance, and regulations to improve implementation of floodplain management at the state and community levels to enhance compliance by communities with NFIP requirements.

FY 2011 planned accomplishments:

- Reduce potential annual flood losses by \$1.7 billion through NFIP insurance and floodplain management activities.
- Increase Community Rating System (CRS) participation by 25 additional NFIP communities.
- Develop proposed rule strengthening floodplain management in more than 21,000 participating communities. This will be accomplished by publishing clarifications to the current regulations that will make it more clear on how to meet minimum NFIP standards

FY 2012 planned accomplishments:

- Reduce potential annual flood losses by \$1.8 billion through NFIP insurance and floodplain management activities.
- Continue to increase CRS participation and class improvements.
- Implement new floodplain management regulations to further FEMA's flood hazard reduction goals.

Flood Mapping and Risk Analysis:

The Flood Hazard Mapping and Risk Analysis Program addresses flood hazard data update needs and preserves the successful Flood Map Modernization investment. The requested FY 2012 funding will allow FEMA to continue implementing a multi-year mapping effort that meets the FEMA statutory requirement to review the flood hazards maps on a five-year cycle and address flood hazard data update needs. With FY 2012 funding, FEMA will continue Risk MAP as outlined in the Risk MAP Multi-Year Plan. The plan articulates a strategy for how FEMA delivers information necessary for flood risk reduction and sustainable community development.

This integrated flood risk management approach weaves county-level flood hazard data developed in support of the NFIP into watershed-based risk assessments that serve as the foundation for local Hazard Mitigation Plans and targeted risk communication activities. FEMA will focus the FY 2012 investment on addressing flood hazard data update needs for coastal and riverine flood hazard areas, and expanding and improving utility and accessibility of the flood hazard and flood risk data.

FEMA's Risk MAP activities are funded from two primary sources of funds – the Flood Hazard Mapping and Risk Analysis Fund and the NFIF. Both sources of funding are critical to the development and implementation of new flood maps in communities across the Nation. The NFIF funding is the core funding for the program and supports all aspects of the program. The Flood Hazard Mapping and Risk Analysis Program funding is devoted to production and technical services.

Risk MAP measures to track progress towards this outcome are:

- Communities take action to reduce risk.
- Local officials are aware of risks from natural hazards.
- 80 percent of the Nation's flood hazards data are current – the flood hazard data are new, have been updated, or deemed still valid.

The detailed production accomplishments for Risk MAP are described in the justification for the Flood Hazard Mapping and Risk Analysis Program appropriation.

PPA: National Flood Insurance Fund Offsetting Collections - Mandatory

	<u>Perm. Pos</u>	<u>FTE</u>	<u>Amount</u>
2010 Actual	0	0	2,268,320
2011 C.R.	0	0	3,015,546
2012 Adjustments-to-Base			37,202
2012 Current Services	0	0	3,052,748
2012 Program Change	-	-	-
2012 Total Request	0	0	3,052,748

FEMA requests \$3.053 billion in FY 2012 for this activity. Funding will provide for the payment of flood claims and operating costs of the program including: Write-Your-Own (WYO) expenses and commissions and interest expenses.

CURRENT SERVICES PROGRAM DESCRIPTION:

NFIP Management is the overall management and oversight of the NFIP operations including the selling and servicing of policies provided by the NFIP Write-Your-Own partners. FEMA and its partners apply insurance concepts and methods to provide consumer-oriented flood insurance to accelerate recovery from floods. FEMA administers the NFIP so that insurance and floodplain management policies and operations are mutually reinforcing. Furthermore, FEMA works to increase the NFIP policy base so that more people are indemnified by insurance for future flood losses, facilitating their recovery, rebuilding communities, and reducing costs to taxpayers. Activities in this category include selling and servicing flood insurance policies, claims, and establishing appropriate premium rates.

FY 2010 accomplishments include:

- Increased flood insurance policies in force by nearly 1 percent (0.9 percent).
- Reduced the percentage of policyholders that receive highly-discounted (i.e., subsidized) premiums to 22 percent, thus further strengthening the financial soundness of the Program.
- Saved an estimated \$1.6 billion in annual flood disaster losses.
- Paid \$500 million from NFIP net income to The Treasury for the debt incurred from 2005 Hurricanes Katrina, Rita, and Wilma, reducing outstanding Treasury borrowing to \$18.5 billion.

FY 2011 planned accomplishments:

- Enhance partnerships with agencies that regulate lending institutions to improve lender compliance with NFIP statutes and increase borrowers' understanding of flood insurance requirements. Continue NFIP training offerings for lenders.
- Implement a comprehensive national marketing program to increase the number of NFIP policies by five percent using means such as television advertising, direct mailing, public relations activities, websites, and marketing and training support for insurance companies and agents who sell flood insurance.

- Enhance operating efficiency by improving the NFIP income-to-combined loss and expense-ratio by one percent through a concentrated, detailed actuarial rate review of the NFIP.

FY 2012 planned accomplishments:

- Continue the comprehensive national marketing program to increase the number of NFIP policies by five percent through the active assistance of new and existing program partners and with a focus on retaining existing customers while acquiring new policyholders. This will include customer relationship management strategies and expanded public relations activities.
- Reduce subsidies to pre-FIRM properties, which will strengthen the NFIF, improve equity in policy ratings, and ensure that people living in high-risk areas bear their share of the insurance burden. This is projected to increase FY 2012 premium revenue by \$80 to \$100 million.

NFIP Operation Expenses - FEMA provides for management and oversight of the insurance component of the NFIP. This includes the development and oversight of insurance coverage policy and regulations; analysis and evaluation of insurance risks and claims data used to determine premium rates; and, oversight of insurance companies that write flood insurance policies and adjust claims. It also includes crosscutting activities such as the CRS program and NFIP operations in a post-disaster environment. Under the CRS, flood insurance premium rates are adjusted to reflect the reduced flood risk resulting from community activities that meet CRS goals, including reduction of flood losses, accurate insurance rating, and promotion of flood insurance awareness. Participating communities are rated by Class from 1 to 10, with Class 1 communities receiving the greatest premium rate reductions. Nonparticipating communities are rated as Class 10. Credits can be applied toward a community's CRS classification for various activities under the following floodplain management headings: Public Information, Mapping Regulations, Flood Damage Reduction, and Flood Preparedness. To support post-disaster operations, resources are provided 1) to equip the mitigation disaster workforce with standards, training, and job aides to consistently inform disaster applicants about the NFIP in a post-disaster environment; and, 2) to effectively integrate NFIP into disaster operations, national disaster policy analysis, and crosscutting program and administrative issues.

Flood Insurance Operations activities include:

- Actuarial management to analyze insurance risks, claims data, and financial models in order to evaluate and communicate all aspects of the financial solvency of the program and to set the appropriate premium rates.
- Operations management for more than 5.6 million NFIP flood policies with more than \$1.2 trillion of insurance in force, to include issuance, renewal, claims, and resolution of claims appeals.
- Underwriting management to set policy and develop regulations regarding insurance coverage eligibility and the classification of risks.
- Claims management to set policy and develop regulations regarding the adjustment and payment of claims.
- Management of the private insurance companies that write flood insurance policies and adjust claims for the NFIP, including conducting periodic operational reviews.

- Education, training, and technical assistance for private insurance company agents and adjusters.
- Management of the vendors that supply services to the NFIP, such as the Bureau and Statistical Agent and the Direct Servicing Agent.
- Management of flood insurance marketing and public communications, including advertising, community outreach programs, and publicity.
- Partnering with stakeholders in the private sector and other government agencies, including lenders who require the purchase of flood insurance for certain loans.

FY 2010 accomplishments include:

- Initiated a comprehensive review of the NFIP and created the NFIP Reform Working Group, Produced a Phase I Report that captured stakeholder concerns and recommendations and a Phase II Report outlining the guiding principles for the reform effort and the evaluation criteria to steer the policy analysis. Initiated Phase III, which will create the portfolio of public policy options and evaluate them using the criteria developed in Phase II.
- Improved oversight of the 90 Write-Your-Own insurance companies that sell and service 5.6 million NFIP policies to strengthen management and oversight of the NFIP including exceeding compliance standard of the Improper Payment Act.
- Conducted the annual review of experience, and revised flood insurance rates to ensure that the premiums collected are adequate to cover losses and operations for the historical average loss year.

FY 2011 planned accomplishments:

- Continue the work of the NFIP Reform Working Group for “Rethinking the NFIP” initiative and analyze selected policy options to provide workable public policy alternatives.
- Transition the selling and servicing the flood insurance policy portfolio of a former WYO insurance company to the FEMA NFIP Direct Servicing Agent Program.

FY 2012 planned accomplishments:

- Continue to develop and update a variety of tools, websites and outreach materials that assist the Write-Your-Own Companies and the Direct Servicing Agent in informing and educating insurance agents and the general public on the importance of Flood Insurance as a means to aid in recovery after a disaster.
- Update, clarify and revise the flood insurance policy forms to comply with statutory changes that have occurred during the past several years.

Flood-related Grants - A component of the business strategy is to reduce the risk associated with flood events through floodplain management as well as through flood-related grants and assistance such as Flood Mitigation Assistance (FMA), Repetitive Flood Claims (RFC), and Severe Repetitive Loss (SRL). FEMA promotes sound local floodplain management to reduce the risk to new or planned buildings and infrastructure, and funding in the form of flood-related grants for reducing existing community risk. The NFIP plays a critical role in encouraging communities to adopt and enforce floodplain management regulations and to implement broader floodplain management programs aimed at reducing risk to new or planned buildings and infrastructure. By law, FEMA can provide flood insurance only to those states or communities

that adopt and vigorously enforce floodplain management regulations that meet or exceed minimum NFIP requirements. Communities incorporate NFIP requirements into their zoning codes, subdivision ordinances, and/or building codes or they adopt special purpose floodplain management ordinances.

The NFIP requirements include:

- Elevation of new and substantially improved residential structures above the base flood level.
- Elevation or dry floodproofing (made watertight) of new or substantially improved non-residential structures.
- Regulation of development in floodways, the central portion of a riverine floodplain needed to carry deeper and faster moving water, to ensure that there are no increases in upstream flood elevations.
- Additional requirements to protect buildings in coastal areas from the impacts of waves, high velocity, and storm surge.

These requirements are the most cost-effective way to reduce the flood risk to new buildings and infrastructure. Structures built to NFIP standards experience 80 percent less damage than structures not built to these standards and have resulted in \$1.2 billion per year in reduced flood losses.

FEMA provides funding to reduce the risk of flood damage to existing buildings and infrastructure by providing flood related grants to states, communities, and tribal nations. The NFIF funds three programs specifically designed to reduce the fund's loss exposure. The FMA program provides funds on an annual basis so that measures can be taken to reduce or eliminate risk of flood damage to buildings insured under the NFIP. The RFC program provides funding to reduce or eliminate the long-term risk of flood damage to structures insured under the NFIP that have had one or more flood claim payments. The SRL program provides funds on an annual basis to reduce the risk of flood damage to residential structures insured under the NFIP that are qualified as severe repetitive loss structures.

The 2005 Multi-Hazard Mitigation Council independent report, which included the Hazard Mitigation Assistance (HMA) programs of FMA and the Hazard Mitigation Grant Program (HMGP), concluded that for every dollar spent on mitigation projects, the Nation is afforded about \$4 in future benefits. In FY 2010, FEMA culminated a multiyear process to evaluate the damages or losses avoided as a result of HMA grant funding for flood-related risks. To date, FEMA has conducted nine loss avoidance studies of flood-related HMGP projects. The HMGP has a more extensive program history than the NFIF grant programs. These loss avoidance studies show the economic benefits of implementing flood mitigation projects (see table below). The flood mitigation activities funded under the HMGP projects are indistinguishable from the flood-related projects funded under the FMA, RFC, and SRL programs. These reflect the losses avoided that are expected to be seen under the NFIF mitigation grant programs.

A loss avoidance study verifies the effectiveness of mitigation projects and documents the economic performance of completed mitigation projects. The Federal Return on Investment (ROI) reflects all the losses avoided for disaster events occurring after the mitigation project is

completed. The losses avoided to date can be found in the following chart. It is anticipated that the ROI will continue to increase as time progresses.

Project Size	Project Investment	Losses Avoided	Return on Investment	Activity Type
975 Structures	\$44.1 million	\$93.6 million	212%	Acquisition
379 Structures	\$23.7 million	\$24.2 million	102%	Acquisition & Elevation
9 Projects	\$2.5 million	\$52.8 million	2,112%	Localized Flood Reduction
6 Projects	\$48 million	\$46.9 million	98%	Localized Flood Reduction
28 Structures	\$4.6 million	\$3.1 million	67%	Acquisition & Elevation
205 Structures	\$14.1 million	\$13.5 million	96%	Elevation
6 Projects	\$19.5 million	\$7.3 million	37%	Localized Flood Reduction
2 Projects	\$1.24 million	\$1.2 million	97%	Localized Flood Reduction
692 Structures	\$10.9 million	14.5 million	133%	Acquisition

*Please note that the projects above are HMGP projects but are identical to flood projects funded under the FMA, SRL, and RFC programs. Therefore, these are indicative of anticipated losses avoided by projects funded under the NFIF mitigation grant programs.

PPA: Severe Repetitive Loss Program (Flood-related Grants)

	<u>Perm. Pos</u>	<u>FTE</u>	<u>Amount</u>
2010 Actual	18	12	54,008
2011 C.R.*	18	18	67,655
2012 Adjustments-to-Base			-67,655
2012 Current Services	18	18	0
2012 Program Change	-	-	-
2012 Total Request*	18	18	0

*Program is funded by unobligated balances in FY 2011 and FY 2012.

The FY 2012 request does not provide new funding for the Severe Repetitive Loss (SRL) Program. The program will utilize the remainder of its prior year unobligated balances (estimated \$68 million), which provides sufficient funding for the salaries and expenses and new repetitive loss property grants.

CURRENT SERVICES DESCRIPTION:

The SRL Program is a mandatory program which provides funding to reduce or eliminate the long-term risk of flood damage to severe repetitive loss residential structures insured under the NFIP. Section 1361A of the National Flood Insurance Act (42 U.S.C. § 4102a) defines an SRL property as a residential property that is covered under an NFIP flood insurance policy and: (a) That has at least four NFIP claim payments (including building and contents) over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or (b) For which at least two separate claims payments (building payments only) have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building.

For both (a) and (b) above, at least two of the referenced claims must have occurred within any ten-year period, and must be greater than ten days apart. There are approximately 8,800 properties meeting the legislative definition of severe repetitive loss. The long-term goal of the SRL Mitigation Program is to reduce or eliminate claims under the NFIP through project activities that will result in the greatest savings to the NFIP in the shortest period of time. FEMA may contribute up to 75 percent Federal funding for the amount approved under the grant award to implement approved activities. Any state or federally recognized Indian tribal government that has taken actions to reduce the number of repetitive loss properties, including severe repetitive loss properties, and that has a FEMA-approved State Mitigation Plan that specifies how it has reduced and how it intends to reduce the number of such repetitive loss properties, is eligible to receive an increased Federal cost share of up to 90 percent Federal funding for SRL grants. Unlike the other flood mitigation grant programs, SRL focuses on the most severe repetitive loss residential structures.

FY 2010 accomplishments include:

- Provided opportunities for transparency and partnership with States, territories, and tribal and local governments through the HMA Summit, the External Stakeholders Workgroup, focus groups and training courses.
- Provided up to \$45 million in grant funds for mitigation activities affecting approximately 300 properties. These measures are expected to provide a savings to the National Flood Insurance Program of approximately \$90 million in reduced claims payments.
- Refine and apply an enhanced cost-effectiveness approach based on past insurance losses to make it easier for State and local communities to demonstrate the cost effectiveness requirements of the mitigation grant programs.

FY 2011 planned accomplishments include:

- Evaluate the enhanced cost-effectiveness approach based on past insurance losses to determine its value to the SRL program and other flood grant programs.
- Continue to refine and apply an enhanced cost-effectiveness approach based on past insurance losses to make it easier for state and local communities to demonstrate the cost-effectiveness requirements of the mitigation grant programs.
- Refine and apply the pilot to enhance state and local communities' capability to meet the cost-share responsibility.

FY 2012 planned accomplishments include:

- Implement cost-effectiveness enhancements to simplify the process for achieving the discount rate for state, tribal, and local communities.
- Continue to further align the programmatic requirements and implementation of all five of the HMA mitigation programs.
- Clarify programmatic requirements, and align them with system requirements, for project-specific activities that will streamline and simplify the preparation and submission of applications, making it easier for state and local communities to develop eligible applications.

PPA: Repetitive Flood Claims Program (Flood-related Grants)

	Perm. Pos	FTE	Amount
2010 Actual	0	0	3,647
2011 C.R.	0	0	10,000
2012 Adjustments-to-Base			-
2012 Current Services	0	0	10,000
2012 Program Change			-
2012 Total Request	0	0	10,000

The FY 2012 request provides \$10.0 million for the Repetitive Flood Claims (RFC) program.

CURRENT SERVICES PROGRAM DESCRIPTION:

The RFC grant program was established by the Flood Insurance Reform Act of 2004 (P.L. 108-264) as a mandatory program that provides funding to reduce or eliminate the long-term risk of flood damage to structures insured under the NFIP that have had one or more flood claim payments. The long-term goal of the RFC program is to reduce or eliminate claims under the NFIP through mitigation activities that are in the best interest of the NFIF. RFC grants are awarded on a national basis without reference to state allocations, quotas, or other formula-based allocations of funds. Funding is restricted to a maximum of \$1 million for minor localized flood reduction projects. RFC grants are not limited to residential flood mitigation projects.

FY 2010 accomplishments include:

- Provided opportunities for transparency and partnership with States, territories, and tribal and local governments through the HMA Summit, the External Stakeholders Workgroup, focus groups and training courses.
- Provided up to \$10 million in grant funds for mitigation activities affecting approximately 40 properties. These measures are expected to provide a savings to the National Flood Insurance Program of approximately \$20 million in reduced claims payments.
- Reviewed 40 RFC applications totaling \$21.3 million Federal share during the National Review.

FY 2011 planned accomplishments:

- Identify and implement program improvements to increase the effectiveness of the RFC program.
- Provide up to \$10 million in grant funds for mitigation activities affecting approximately 40 properties.

FY 2012 planned accomplishments:

- Implement pilot to enhance state and local communities' ability to meet their cost-share responsibility.
- Apply cost-effectiveness enhancements to simplify the process for achieving the discount rate for state, tribal, and local communities.
- Continue to further align the programmatic requirements and implementation of all five of the HMA mitigation grant programs.
- Clarify programmatic requirements, and align them with system requirements, for project-specific activities that will streamline and simplify the preparation and submission of applications making it easier for state and local communities to develop eligible applications.

PPA: Flood Mitigation Assistance Program (Flood-related Grants)

	<u>Perm. Pos</u>	<u>FTE</u>	<u>Amount</u>
2010 Actual	11	8	21,010
2011 C.R.	11	11	40,000
2012 Adjustments-to-Base			-
2012 Current Services	11	11	40,000
2012 Program Change			-
2012 Total Request	11	11	40,000

The FY 2012 request provides \$40.0 million for the Flood Mitigation Assistance program.

CURRENT SERVICES DESCRIPTION:

The FMA grant program is a mandatory program which provides funding to states, federally recognized Indian tribal governments, and communities so that cost-effective measures can be taken to reduce or eliminate the long-term risk of flood damage to buildings, manufactured homes, and other structures insured under the NFIP.

The total amount of FMA grant funds provided during any five-year period will not exceed \$10 million to any state agency or \$3.3 million to any community. The total amount of FMA grant funds provided to any state, including all communities located in the state, will not exceed \$20 million during any five-year period. However, the Administrator may waive these limits for any five-year period when a major disaster or emergency is declared pursuant to the Robert T. Stafford Disaster Relief and Emergency Assistance Act as a result of flood conditions.

FMA is an allocation based program, in which FEMA determines and distributes annual program allocations to all 56 States and Territories. FMA allocations are based on a number of factors which include number and dollar amount of NFIP insured policies as well as the number and dollar amount of repetitive loss properties per State or Territory. During the FY 2010 FMA application period, FEMA assisted States and Territories in developing applications for consideration and submittal. This resulted in more applications being submitted for consideration than the amount of funding available.

FY 2010 accomplishments include:

- Provided opportunities for transparency and partnership with States, territories, and tribal and local governments through the HMA Summit, the External Stakeholders Workgroup, focus groups and training courses.
- Reduced potential annual losses to the NFIP by \$80 million through the FMA grants.
- Reviewed 35 FMA applications totaling \$19 million Federal share. The cost to administer this review was reduced by 47.5% from FY 2009 for a savings of \$19,000.

FY 2011 accomplishments include:

- Identify and implement program improvements to increase the effectiveness of the FMA program.
- Continue to provide opportunities for transparency and partnership with states, territories, and tribal and local governments through the HMA Summit, the External Stakeholders Workgroup, focus groups, and training courses.
- Provide up to \$40 million in grant funds for mitigation activities.
- Continue to realize cost savings in the National Review process and the HMA guidance development.

FY 2012 accomplishments include:

- Implement pilot to enhance state and local communities' ability to meet their cost-share responsibility.
- Implement cost-effectiveness enhancements to simplify the process for achieving the discount rate for state, tribal, and local communities.
- Continue to further align the programmatic requirements and implementation of all five of the HMA mitigation programs.
- Clarify programmatic requirements, and align them with system requirements, for project-specific activities that will streamline and simplify the preparation and submission of applications, making it easier for state and local communities to develop eligible applications.

The effectiveness of FMA was identified in the 2005 Multi-Hazard Mitigation Council independent report on mitigation grants. This report concluded that for every dollar spent on mitigation projects, the nation is afforded about \$4 in future benefits. Since this report, FEMA launched a multi-year process to evaluate losses avoided as a result of HMA grant funding for flood related risks. There have been nine loss avoidance studies to date to verify and document the effectiveness and economic performance of completed mitigation projects. These studies also assess the rate of return on the federal investment in the completed projects and all the losses avoided for disaster events occurring since the project's completion. The nine studies reflect an aggregated rate of return of 152 percent and it is anticipated that the rate of return will continue to increase as time progresses. These findings further demonstrate the economic benefits of implementing mitigation activities.

IV. Program Justification Changes

Federal Emergency Management Agency National Flood Insurance Fund

Not applicable.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Emergency Management Agency
Justification of Proposed Changes in National Flood Insurance Fund
Appropriation Language**

For activities under the National Flood Insurance Act of 1968 (42 U.S.C. § 4001 et seq.) and the Flood Disaster Protection Act of 1973 (42 U.S.C. § 4001 et seq.), \$171,000,000, which shall remain available until September 30, 2013, and shall be derived from offsetting collections assessed and collected under section 1308(d) of the National Flood Insurance Act of 1968 (42 U.S.C. § 4015(d)), which is available for salaries and expenses associated with flood mitigation and flood insurance operations; and, floodplain management and flood mapping: Provided, That not to exceed \$22,000,000 shall be available for salaries and expenses associated with flood mitigation and flood insurance operations; and not less than \$149,000,000 shall be available for flood plain management and flood mapping, which shall remain available until September 30, 2013: Provided further, That any additional fees collected pursuant to section 1308(d) of the National Flood Insurance Act of 1968 (42 U.S.C. § 4015(d)) shall be credited as an offsetting collection to this account, to be available for flood plain management and flood mapping: Provided further, That in fiscal year 2012, no funds shall be available from the National Flood Insurance Fund under section 1310 of that Act (42 U.S.C. § 4017) in excess of: (1) \$132,000,000 for operating expenses; (2) \$1,007,571,000 for commissions and taxes of agents; (3) such sums as are necessary for interest on Treasury borrowings; and (4) \$50,000,000, which shall remain available until expended for flood mitigation actions, of which of which \$10,000,000 is for repetitive insurance claims properties under section 1323 of the National Flood Insurance Act of 1968 (42 U.S.C. § 4030), and of which \$40,000,000 is for flood mitigation assistance under section 1366 of the National Flood Insurance Act of 1968 (42 U.S.C. § 4104c) notwithstanding subparagraphs (B) and (C) of subsection (b)(3) and subsection (f) of section 1366 of the National Flood Insurance Act of 1968 (42 U.S.C. § 4104c) and notwithstanding subsection (a)(7) of section 1310 of the National Flood Insurance Act of 1968 (42 U.S.C. § 4017): Provided further, That amounts collected under section 102 of the Flood Disaster Protection Act of 1973 and section 1366(i) of the National Flood Insurance Act of 1968 shall be deposited in the National Flood Insurance Fund to supplement other amounts specified as available for section 1366 of the National Flood Insurance Act of 1968, notwithstanding 42 U.S.C. § § 4012a(f)(8), 4104c(i), and 4104d(b)(2)-(3): Provided further, That total administrative costs shall not exceed 4 percent of the total appropriation.(Department of Homeland Security Appropriations Act, 2011)

Note.—A full-year 2011 appropriation for this account was not enacted at the time the budget was prepared; therefore, this account is operating under a continuing resolution (P.L. 111–242, as amended). The amounts included for 2011 reflect the annualized level provided by the continuing resolution.

Explanation of Change:

The FY 2012 National Flood Insurance Fund budget request provides an increase for commissions and taxes of agents based on estimated flood policies in force and flood policy rate increases. Commissions, Write-Your-Own (WYO) program costs, and taxes are based on the premium revenue generated by the projected number of policies in force. FY 2012 policy growth and rate increases in flood policies are predicted to continue which determines the increase in WYO program costs. The property and casualty insurance companies including agents that sell and service federally underwritten flood insurance policies under their own names retain a percentage of the premium for the cost of writing and servicing National Flood Insurance Program (NFIP) policies. This percentage is based on the average industry expense ratios for selected categories of expenses as published in *Best's Aggregates and Averages*.

FEMA budget request provides an increase for operating expenses due to a WYO insurance company transitioning a large volume of flood policies to the NFIP Direct Servicing Agent Program. When the NFIP Direct Servicing Agent Program assumes these flood policies, the NFIP will capture the costs associated with selling and servicing these policies in Operating Expenses.

Note: The \$171 million reflects the amount of anticipated fee collections for FY 2012, \$22 million above the \$149 million stated in the Budget Appendix. The \$50 million for flood mitigation actions is \$10 million less than the \$60 million stated in the Budget Appendix.

PPA Mission Statement

Resources under this activity support the salaries and expenses of FTE managing the National Flood Insurance Program (NFIP) and flood mitigation programs. In FY 2012, FEMA will continue to support the NFIP and to provide operational and administrative support for the Community Rating System and will enhance oversight of the program.

Summary Justification and Explanation of Changes

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
GSA rent	\$1,321	\$1,473	\$1,572	\$100

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2012 request reflects the inflationary increases in lease costs.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Communication, Utilities, and miscellaneous	\$169	\$370	\$343	(\$27)

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2012 request provides for telecommunication and wireless services.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Other Services	\$688	\$1,970	\$1,716	(\$254)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2012 decrease from the FY 2011 request is due to efficiencies from contracted personnel, IT and financial services that support the NFIP.

Unobligated balance, end of year	4,492			---
Recoveries of prior year obligations	---			---
Total requirements	\$135,890	\$146,855	\$149,000	\$2,145

PPA Mission Statement

Through Floodplain Management programs, FEMA encourages communities and their citizens to take informed and effective mitigation actions before a flood in order to reduce the long-term risk to people and property. Through the delivery of mitigation programs, FEMA leads a national effort to: identify and improve the understanding of communities' hazards and their risks; develop and improve techniques and planning processes which mitigate those risks; provide an environment at the State and local levels that is conducive to applying those techniques and processes; provide financial and technical assistance to facilitate application of those techniques and processes; and support development of incentives and disincentives which make application of those techniques and processes a social, political and/or economic priority.

Summary Justification and Explanation of Changes

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Salaries and Benefits	\$22,486	\$24,163	\$25,215	\$1,052

Salaries and Benefits supports 177 full time permanent positions in FY 2012. The increase above the FY 2011 request will provide for the annualization of pay for positions filled in 2011.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
GSA rent	\$1,766	\$1,960	\$2,297	\$337

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2012 request reflects the inflationary increases in lease costs.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Communication, Utilities, and miscellaneous	\$246	\$492	\$528	\$36

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2012 request provides for telecommunication and wireless services.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Other Services	\$83,120	\$100,322	\$106,415	\$6,093

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2012 request reflects the costs of flood map production, technical services and program support. In addition, the reduction in funding from the FY 2011 funding level is due to one-time unobligated balances from FY 2010 that were available to support program activities.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Purchase from Government Accounts	\$645	\$732	\$904	\$173

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2012 request provides for increases in DHS WCF.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Grants/Subsidies/Contributions	\$18,458	\$22,950	\$12,810	(\$10,140)

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The decrease in FY 2012 from the FY 2011 funding level is due to one-time unobligated balances from FY 2010. It also reflects reduction in flood mapping services being provided through grant awards from this funding source.

PPA Mission Statement

The National Flood Insurance Act of 1968, as amended, authorizes the Federal Government to provide flood insurance on a national basis. Flood insurance may be sold or continued in force only in communities that enact and enforce appropriate floodplain management measures. Communities must participate in the program within 1 year of the time they are identified as flood-prone in order to be eligible for flood insurance and some forms of Federal financial assistance for acquisition or construction purposes. In addition, Federally regulated funding institutions cannot provide loans to nonparticipating communities with an identified flood hazard.

More than 20,000 communities in all States and Territories participate in the NFIP. Structures built to NFIP criteria experience 80 percent less damage through reduced frequency and severity of losses. The flood mitigation program requirements are estimated to save in excess of \$1 billion per year in flood losses avoided. The NFIP limits the impact of disaster by encouraging property owners and others to manage their risk through flood insurance and other hazard insurance mechanisms.

Summary Justification and Explanation of Changes

	FY 2010 Actual	FY 2011 Enacted	FY 2012 Request	2011 to 2012 Change
Indemnity	\$1,078,979	\$1,866,835	\$1,966,690	\$99,855

Insurance claims and indemnities includes all benefit payments from the social insurance and Federal retirement trust funds and payments for losses and claims including those under the Equal Access to Justice Act.

	FY 2010	FY 2011	FY 2012	2011 to 2012
	Actual	C.R.	Request	Change
Interest and Dividends	114,782	60,990	264,635	203,645

Payments to creditors for the use of moneys loaned, deposited, overpaid, or otherwise made available. The FY 2012 request provide the estimated interest NFIP will pay to Treasury on borrowings.

	Recoveries of prior year obligations				---
Total requirements		\$65,366	\$0	\$0	\$0

PPA Mission Statement

The Flood Insurance Reform Act of 2004 introduced several new requirements and program initiatives. This included the establishment of the Severe Repetitive Loss Pilot Program, initially authorized at \$40 million annually. The Program provides technical and financial assistance to State and local governments to mitigate severe repetitive loss properties under the National Flood Insurance Program (NFIP). The Program focuses on a subset of the repetitive loss properties – severe repetitive loss properties - that have the largest impact on claims paid from the NFIP. Mitigating potential damages to these properties will result in savings to the NFIP. This program is funded from mandatory, premium collections. **The amounts for FY 2011 and FY 2012 does not provide new funding for this program. All activities are funded by carryover.**

Summary Justification and Explanation of Changes

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Salaries and Benefits	\$834	\$2,091	\$2,091	\$0

Salaries and Benefits supports 18 positions and provides for the annualization of the 2011 pay increase and the proposed cost of living allowance effective January 2012.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Travel	380	517	517	\$0

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2012 request level reflects increase cost in travel fares and service fees.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
GSA rent	\$157	\$200	\$200	\$0

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2012 request reflects the inflationary increases in lease costs.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Other Services	\$12,974	\$14,080	\$14,080	\$0

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2012 Request provides funding for program and technical support services for the grant award process.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Purchase from Government Accounts	\$0	\$75	\$75	\$0

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2012 request provides for non pay inflation.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Grants/Subsidies/Contributions	\$39,599	\$50,399	\$50,399	\$0

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The reduction in FY 2012 is due to the non recurring carryover funds available in FY 2011.

Recoveries of prior year obligations				---
Total requirements	\$10,000	\$10,000	\$10,000	\$0

PPA Mission Statement

The Flood Insurance Reform Act of 2004 introduced several new requirements and program initiatives. This included the establishment of a grant program which provides a mechanism to mitigate properties that have experienced repetitive losses where the State or community does not meet eligibility requirements under the Flood Mitigation Assistance program. Although not necessarily focused on Severe Repetitive Loss Properties, the Act does direct FEMA to give priority to "Worst-Case Properties" that would result in the greatest savings to the NFIF. This program will be funded from mandatory, premium collections.

Summary Justification and Explanation of Changes

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Travel	\$22	\$61	\$61	\$0

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2012 request provides increased staff travel for grant process and award activities.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Advisory and Assistance Services	\$0	\$5	\$5	\$0

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2012 request provides for non pay inflation and expansion of existing services.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Other Services	\$843	\$923	\$930	\$7

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2012 Request provides funding for program and technical support services for the grant award process.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Purchase from Government Accounts	\$0	\$10	\$11	\$1

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2012 request provides for services through DHS WCF and other inter agency agreements for services.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Supplies & materials	\$0	\$1	\$1	\$0

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2012 request provides funding for consumable items needed by staff to perform job functions.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Equipment	\$0	\$16	\$16	\$0

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2012 request provides for the purchase of additional equipment, equipment replacement and upgrades.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Grants/Subsidies/Contributions	\$2,782	\$17,557	\$8,941	(\$8,616)

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The FY 2012 request reflects a realignment of funding levels between the flood grant programs to ensure that states and communities have the ability to reduce the drain on the NFIF.

PPA Mission Statement

The Flood Mitigation Activities (FMA) support activities to eliminate at-risk structures that are repetitively flooded. Through fee-generated discretionary funds transferred from the National Flood Insurance Fund (NFIF), FMA supports activities to eliminate at-risk structures that are repetitively flooded, and provides flood mitigation assistance planning support to States and communities. In FY 2008, these activities were funded from the National Flood Mitigation Fund appropriation.

Summary Justification and Explanation of Changes

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Salaries and Benefits	\$633	\$1,477	\$1,500	\$23

Salaries and Benefits supports 11 full time permanent positions in FY 2012.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Travel	\$106	\$229	\$208	(\$21)

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2011 Request provides for non pay inflation.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
GSA rent	\$139	\$107	\$114	\$7

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2012 request provides for non pay inflation.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Advisory and Assistance Services	\$0	\$0	\$27	\$27

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Other Services	\$3,057	\$5,410	\$5,464	\$54

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2012 request provides for non-pay inflation.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Purchase from Government Accounts	\$0	\$40	\$43	\$3

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2012 request provides for non-pay inflation.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Supplies & materials	\$8	\$8	\$7	(\$1)

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Equipment	\$15	\$15	\$11	(\$5)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 to 2012 Change
Grants/Subsidies/Contributions	\$17,051	\$73,145	\$32,599	(\$40,545)

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The FY 2012 request reflects a decrease in carryover funding available in FY 2011 for grants and a reduction in the amount of new fee funding for grants in FY 2012 due to estimated unobligated carryover balances from FY 2011.

BUDGET REQUEST AND SUPPORTING INFORMATION

FEMA Disaster Assistance Direct Loan Program

I. Appropriation Overview

A. Mission Statement for Disaster Assistance Direct Loan Program:

The Disaster Assistance Direct Loan Program account provides loan authority and subsidy budget authority for disaster assistance direct loans.

B. Budget Activities:

The Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act) authorizes two types of direct loans: (1) section 319 (State Share) loans to states for the non-Federal portion of cost-shared Stafford Act programs, and (2) section 417 (Community Disaster) loans to local governments that incurred substantial losses of tax and other revenues as a result of a major disaster and require financial assistance in order to perform governmental functions. In accordance with the Federal Credit Reform Act of 1990, this account supports subsidy budget authority and authorizes loan levels for the direct loan programs; however, in FY 2012, no funds are requested for section 417 (Community Disaster) loan subsidy.

C. Budget Request Summary:

Loan subsidy of \$295,000 and a direct loan limitation of \$25 million for section 319 (State Share) loans are requested for FY 2012. No funds are requested for section 417 (Community Disaster) loan subsidy in FY 2012.

FEMA requests \$25 million in loan authority and \$295,000 in subsidy budget authority for section 319 loans for FY 2012.

CURRENT SERVICES PROGRAM DESCRIPTION:

Under the Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act), FEMA may make two types of direct loans:

State Share Loans: Under section 319 of the Stafford Act, FEMA may lend or advance to a state or an eligible applicant the portion of assistance for which the applicant is responsible under cost-sharing provisions of the Stafford Act. To be deemed eligible for a loan, the governor of the affected state must demonstrate, where damage is overwhelming and severe, that the state is unable to assume immediately its financial responsibility to meet the cost-share because (1) the state is responding to concurrent, multiple disasters/emergencies or has incurred extraordinary costs as a result of a particular disaster or emergency; and (2) the damages caused by such disaster or disasters are so overwhelming and severe it is not possible for the state to assume immediately its financial responsibility. \$217 million in State Share loans have been approved, with the last loan issued in 1996. There are no outstanding State Share loans.

Community Disaster Loans (CDL): Under section 417 of the Stafford Act, loans may be authorized to local governments that have suffered a substantial loss of tax and other revenues as a result of a major disaster, and have demonstrated a need for financial assistance in order to perform their municipal operating functions. The loans, not to exceed 25 percent of the annual operating budget of that local government for the fiscal year in which the major disaster occurred are made at the current Department of Treasury rate for a term of five years and may not exceed \$5 million. All or part of such loans may be canceled to the extent that revenues of the local government during the full three post-disaster fiscal years are insufficient to meet its operating budget as the result of the disaster. A local government is not eligible for further CDLs during any period in which the jurisdiction is in arrears with respect to required repayment of an existing loan. \$300 million in traditional CDLs have been approved, with the last loan issued in 2009. No CDLs were obligated in FY 2010; the last loan was issued in 2009.

Special Community Disaster Loans (SCDL): The Community Disaster Loan Act of 2005 (P.L. 109-88) authorized FEMA to transfer \$750 million from the Disaster Relief Fund to provide up to \$1 billion in loan authority to assist communities impacted by Hurricanes Katrina and Rita. For these SCDLs, three elements were added to the traditional program under Section 417: (1) it removed the \$5 million limit on individual loans, (2) the loans were restricted “to assist local governments in providing essential services,” and 3) the loan cancellation provision of section 417(c)(1) of the Stafford Act was inapplicable.

The Emergency Supplemental Appropriations Act for Defense, the Global War on Terror, and Hurricane Recovery, 2006 (P.L. 109-234) appropriated an additional \$279,800,000 to support \$371,733,000 in SCDLs. However, certain eligibility criteria were different from those in the 2005 Act: (1) the maximum loan amount was increased to 50 percent of the applicant’s operating budget the fiscal year of the disaster, (2) the loan analysis could only consider “tax revenue” loss and not “other revenues” as allowed for in the 2005 Act, and (3) applicants were required to demonstrate actual loss in tax

revenues of 25 percent or greater. The loan cancellation provision continued to be inapplicable.

The U.S. Troop Readiness, Veterans' Care, Katrina Recovery, and Iraq Accountability Appropriations Act, 2007 (P.L. 110-28) removed the loan cancellation prohibitions contained in the 2005 and 2006 Acts. This statutory change now gives FEMA discretionary authority, limited by the language in section 417(c)(1) of the Stafford Act, to cancel SCDLs issued pursuant to either the 2005 or 2006 Acts.

From October 2005 to September 2006, FEMA approved 152 SCDLs totaling \$1,270,501,241 to 109 eligible applicants in Mississippi and Louisiana.

In accordance with the Federal Credit Reform Act of 1990, three accounts are used to record cash flow data for direct loans:

- Disaster Assistance Direct Loan Program Account. This is the budget account into which an appropriation is made to cover the subsidy costs of a direct loan, and from which such costs are disbursed into the financing account.
- Disaster Assistance Loan Liquidating Account. This budget account records all cash flows to and from FEMA for pre-1992 direct loans made under the State Share and CDL programs. There is no longer any activity in this account.
- Disaster Assistance Direct Loan Financing Account. The loan financing account is a non-budgetary account that records all cash flows to and from FEMA resulting from CDL and State Share direct loans obligated in 1992 and beyond. This account holds balances, receives the subsidy cost payment from the program account, and includes all other cash flows resulting from post-1991 direct loans. The funds in this account are a means of financing and are not included in the budget totals. Loans are obligated from this account, using the subsidy budget authority from the Disaster Assistance Direct Loan Program Account and borrowing authority from the Department of the Treasury.

IV. Program Justification Changes

Not Applicable

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Emergency Management Agency
Justification of Proposed Changes in Disaster Assistance Direct Loan Program
Appropriation Language**

For activities under section 319 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5162), [\$295,000] \$295,000 is for the cost of direct loans: Provided, That gross obligations for the principal amount of direct loans shall not exceed \$25,000,000: Provided further, That the cost of modifying such loans shall be as defined in section 502 of the Congressional Budget Act of 1974 (2 U.S.C. 661a).

Note.— A full-year 2011 appropriation for this account was not enacted at the time the budget was prepared; therefore, this account is operating under a continuing resolution (P.L. 111–242, as amended). The amounts included for 2011 reflect the annualized level provided by the continuing resolution.

Explanation of Changes:

No substantive changes are proposed.

--

Federal Emergency Management Agency
U.S. Fire Administration

I. Appropriation Overview

A – Mission Statement for U.S. Fire Administration

The mission of the United States Fire Administration (USFA) is to provide National leadership to foster a solid foundation for our fire and emergency services stakeholders in prevention, preparedness, and response.

B – Budget Activities:

USFA coordinates with other Federal, state, and local emergency service agencies, the private sector, colleges and universities, and other DHS educational consortium participants. In fulfilling its' mission, USFA utilizes the assets of the National Fire Academy , the National Emergency Training Center, Management, Operations and Support Services , and the National Fire Programs Division.

C – Budget Request Summary:

FEMA requests \$42.538 million, 115 positions and 115 FTE for FY 2012.

2012 Total Request	115	115	42,538

FEMA requests \$42.538 million, 115 positions and 115 FTE for FY 2012.

CURRENT SERVICES PROGRAM DESCRIPTION:

United States Fire Administration (USFA) prepares the Nation's first responders through on-going and when necessary, expedited training, regarding how to evaluate and minimize community risk, improve protection to critical infrastructure, and be better prepared to react to all hazard and terrorism emergencies. USFA coordinates with other Federal, State, and local emergency service agencies, the private sector, colleges and universities, and other DHS educational consortium participants. In fulfilling its mission, USFA utilizes the assets of the National Fire Academy (NFA), National Emergency Training Center (NETC) Facilities and Support Services, and the National Fire Program (NFP) Division.

National Fire Academy

The National Fire Academy promotes the professional development of the fire and the emergency response community and its allied professionals. NFA supports State and local training organizations to fulfill their obligation to the career and volunteer fire and emergency services. NFA also develops, delivers, and manages educational and training programs having a National focus which are outside State and local training missions or exceed State and local capabilities because of cost or audience. The programs are designed to support the DHS and FEMA goals to help State and local response agencies prevent, mitigate, prepare for, and respond to local, regional, and national emergencies.

NETC Management, Operations, and Support Services Division

The Management, Operations, and Support Division manages, operates and maintains the National Emergency Training Center in the most efficient and effective manner. Management, Operations, and Support Services (MOSS) provides administrative, operational, and emergency services in support of the program activities and special groups at NETC.

National Fire Programs Division

The National Fire Programs Division manages USFA public education and information efforts. NFP operates the National Fire Data Center for the collection, analysis publication, dissemination, and marketing of information related to the Nation's fire problem and USFA programs. NFP also manages USFA research efforts in fire detection, prevention, suppression; and first responder health, safety and effectiveness; and special programs that enhance USFA and partner roles in all-hazard preparedness and response.

Linkage to FEMA's Strategic Plan

USFA's mission is tied to QHSR Goal 5.2 – Enhance Preparedness: Engage all levels and segments of society in improving preparedness.

- Objective 5.2.1: Improve individual, family, and community preparedness: ensure individual, family and community planning, readiness, and capacity-building for disasters.
- Objective 5.2.2: Strengthen capabilities: Enhance and sustain nationwide disaster preparedness capabilities, to include life safety, law enforcement, mass evacuation and shelter-in-place, public health, mass care, and public works.

USFA programs specifically target the general public as well as the fire and emergency services. They focus on supplementing, not duplicating, existing programs of training, technology and research, data collection and analysis, and public education.

Organizational Performance

National Fire Academy

FY 2010 Accomplishments

- Delivered 3,793 training programs to 113,336 fire and emergency response personnel, and allied professionals.
- Completed the migration of existing web-based content for NFA Online, USFA's web-based learning management system for distance learning training and began pilot-testing a new distance learning evaluation database application.
- Conducted a Congressionally mandated National fire-based emergency medical services curriculum advisory assessment.

FY 2011 Planned Accomplishments

- Increase the number of students receiving NFA training programs through USFA's technology-based distance learning program from 35,000 to 50,000 students annually. The program includes internet course delivery, blended learning courses, web-based graphic simulations, and other on-line formats such as web casts.
- Improve effectiveness and portability, and reduce capital investment by \$100,000 in the command and control graphic simulation tools by migrating to commercial off-the-shelf operating systems. This will result in an estimated increase in enrollments of 5,000 students annually.

FY 2012 Planned Accomplishments

- Provide leadership and assistance to state fire training agencies in adopting a National professional development model through compartment of National Fire Protection Association standards and Center for Public Safety Excellence competencies.

NETC, Management, Operations, and Support Services

FY 2010 Accomplishments

- Joint funding with the FEMA Facilities Office enabled completion of several deferred maintenance projects to include: installation of three new elevators in accordance with ADA compliance codes, and retrofit of an existing service elevator; repair and installation of new windows and storm windows campus-wide; and replaced a cooling tower and aging gas-fired water heaters to improve reliability and energy efficiency.
- Installed 50 geothermal wells to supply heating and cooling to 26,000 square feet of facilities on the NETC campus. In addition, MOSS installed a new natural gas line to install gas boilers to facilitate the process of moving forward on the goal of removing all NETC buildings from being supplied by a neighboring steam plant.
- Enhanced the video-on-demand internal and external distribution capabilities; developed and implemented new technology to support training, exercises, simulations and new emerging threats. Expanded video support and video conference partnerships with other agencies and FEMA organizational elements.
- Awarded a contract to develop a staff succession plan to mitigate the effects of a potential mass retirement of the 44 percent of USFA staff currently projected to be eligible to retire over the next five years.
- Number of applications processed and students trained for the NFA and the Emergency Management Institute (EMI).

	NFA			EMI		
	Offerings	Applications Received	Students Attended	Offerings	Applications Received*	Students Attended*
On-Campus	320	11,435	7,327	270	11,634	7,499
Off-Campus	253	47,110	46,875	723	2,463,607	1,980,750
State Sponsored	3,220	59,210	59,134			
Total	3,793	117,755	113,336	993	2,475,241	1,988,249

*Includes 2,446,844 applicants and 1,964,066 attendees for the independent self-study program.

FY 2011 Planned Accomplishments

- With funding assistance from the FEMA Facilities Office, chillers will be replaced and boilers installed to move forward with the goal of removing all buildings off a neighboring steam plant. Upgrade heating, cooling and ventilation control systems campus-wide to improve energy utilization.
- Complete the installation of geothermal wells to provide heating and cooling to the remainder of the NETC campus, thereby eliminating NETC's energy dependency on a neighboring steam plant.
- Support all video and internet components of Emergency Alert System-15 (EAS-15) as it relates to FEMA National and regional programs by: implementing new high-definition video technology systems, distribution, and storage retrieval units; expanding high tech distribution including multi-cast, Worldwide Interoperability for Microwave Access, and global positioning system interface; and supporting disaster based daily briefings video mobile systems and devices.

FY 2012 Planned Accomplishments

- Continue installation of heating, ventilation, and air conditioning equipment in the student dormitories to utilize the geothermal wells installed in 2011, thereby eliminating the dependency on a neighboring steam plant.

National Fire Programs Division

FY 2010 Accomplishments

- Launched National smoke alarm public education campaign, "Install.Inspect.Protect." to encourage installation and maintenance of home smoke alarms in an effort to reduce residential fire deaths and injuries. Published 15th Edition of, "Fire in the United States," a statistical overview of the national fire

problem covering a five-year period with primary focus on 2007, the latest year for which data is available.

- Implemented web-based Data Entry Browser Interface; which is a reporting option that eliminates the need to download and install software on the user's computer; thereby making National Fire Incident Reporting System (NFIRS) reporting more accessible, particularly with smaller fire departments.

FY 2011 Planned Accomplishments

- Develop, manage, and maintain activities designed to enhance fire and emergency services response to incidents and disasters. This includes USFA staffing of Emergency Support Function-4, management of the Emergency Management & Response – Information Sharing and Analysis Center, and coordination of the All Hazard Incident Management Team program.
- NFIRS modernization and enhancement efforts will focus on improved flexibility and efficiency in access to data warehousing and mining. The improved NFIRS will be available to internal FEMA customers for initial testing during FY 2011.
- Develop and disseminate resource materials to improve information base, and enhance responder performance and public safety. This will include results from research that was done on the durability of self-contained breathing apparatus face piece, and analytical studies of issues such as high-risk populations and firefighter injuries.

FY 2012 Planned Accomplishments

- Analyze elements of the National fire problem and provide information to fire prevention/protection community that motivates corrective action and provides baseline for evaluating initiatives.
- Develop strategies to support and enhance FEMA disaster response and recovery mission with informed and mission-ready first responders.
- Develop data warehouse and mining capabilities to increase flexibility and efficiency in retrieving and exporting NFIRS data for all system users.
- Develop and disseminate resource materials to improve and enhance responder performance and public safety.

IV. Program Justification Changes

**Department of Homeland Security
Federal Emergency Management Agency
United States Fire Administration and Training
Justification of Program Changes**
(Dollars in Thousands)

Program Decrease 1: USFA Program Reductions

Strategic Goal(s) & Objective(s): 5.2 Enhance Preparedness: Engage all levels and segments of society in improving preparedness

Objective 5.2.2: Strengthen capabilities: Enhance and sustain nationwide disaster preparedness capabilities to include life safety, law enforcement, mass evacuation and shelter-in-place, public health, mass care, and public works.

PPA: United States Fire Administration (USFA)

Program Decrease: Positions 0 FTE 0 Dollars -\$1,720

Current Services Level									4,550
Program Decrease							0	0	-1720
Total Request			4,457			4,770	0	0	2,830

Description of Item

The FY 2012 President's Budget Request reflects a \$1.72 million reduction to the United States Fire Administration appropriation in support of DHS' Administrative Savings Initiative.

Justification

The funding decrease of \$1.72 million is achieved through the following actions:

Description	Amount	Impact
Reduce 27 USFA/National Fire Academy (NFA) resident fire and EMS core class deliveries to 13,500 students and one fire service core curriculum development effort	\$230K	13,500 fewer students will be trained
Eliminate USFA citizen fire and life prevention research efforts.	\$180K	These research efforts have the potential to improve the health and safety of the general public. Partnerships with other agencies will be eliminated.
Reduce Response Efforts	\$355K	The response effort supports initiatives to enhance the capacity of fire and emergency services personnel to respond to emergencies of all kinds.
Eliminate the TV studio/broadcast capabilities that delivers critical information and training to all first responders on the campus site and across the nation	\$850K	This effects our capability to transmit critical information and just in time training during national and regional disasters, relying upon private sources to be accessed (if available) in order to reach first wave responders.
Eliminate wireless capabilities provided to 25,000 resident students and special group participants in the NETC dormitories.	\$105K	This service provides 24 hour repair and upkeep to the systems students use in preparing and developing course curriculum for on campus classes.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Emergency Management Agency
Justification of Proposed Changes in U.S. Fire Administration
Appropriation Language**

For necessary expenses of the United States Fire Administration and for other purposes, as authorized by the Federal Fire Prevention and Control Act of 1974 (15 U.S.C. 2201 et seq.) and the Homeland Security Act of 2002 (6 U.S.C. 101 et seq.), \$42,538,000.

Note.—A full-year 2011 appropriation for this account was not enacted at the time the budget was prepared; therefore, this account is operating under a continuing resolution (P.L. 111–242, as amended). The amounts included for 2011 reflect the annualized level provided by the continuing resolution.

Explanation of Changes:

No substantive changes are proposed.

PPA Mission Statement

The mission of the United States Fire Administration (USFA) is to reduce life and economic losses due to fire and related emergencies through leadership, coordination, and support. USFA prepares the Nation's fire responders through ongoing and, when necessary, expedited training, regarding how to evaluate and minimize community risk, improve protection to critical infrastructure, and be better prepared to react to all-hazard and terrorism emergencies of all kinds.

Summary Justification and Explanation of Changes

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Salaries and Benefits	\$12,856	\$13,440	\$13,440	\$0

Salaries and Benefits includes costs for 115 FTEs.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Travel	\$313	\$313	\$248	(\$65)

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Transportation of Things	\$61	\$61	\$61	\$0

Transportation of Things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Other Rent	\$6	\$6	\$6	\$0

Other rent includes all payments to a non-Federal source for rental space, land, and structures.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Communication, Utilities, and miscellaneous charges	\$2,700	\$2,700	\$2,700	\$0

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility service.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Printing	\$510	\$510	\$510	\$0

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Advisory and Assistance Services	\$2,975	\$2,975	\$2,975	\$0

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, state and local governments, tribes, etc.) as well as from other units within the Federal Government.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Other Services	\$8,001	\$7,692	\$6,122	(\$1,720)

Other services include report contract Enacted services with non-Federal sources that are not otherwise classified under Object Class 25.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Purchase from Government Accounts	\$1,990	\$1,990	\$1,990	\$0

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Operation & maintenance of facilities	\$6,367	\$6,367	\$6,367	\$0

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Operation & Maintenance of Equipment	\$2,164	\$2,163	\$2,163	\$0

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Supplies & Materials	\$537	\$537	\$537	\$0

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Equipment	\$1,852	\$1,852	\$1,852	\$0

Equipment includes all costs for the purchases of persona property of a durable nature or the initial installation of equipment when performed under contract.

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change
Grants/Subsidies/Contributions	\$4,482	\$4,482	\$3,112	(\$1,265)

Grants/Subsidies/Contributions includes cash payments to states, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects.

BUDGET REQUEST AND SUPPORTING INFORMATION

Salaries and Expenses:

I. Appropriation Overview

A – Mission Statement for Salaries and Expenses:

The U.S. Citizenship and Immigration Services (USCIS) will secure America's promise as a nation of immigrants by granting immigration and citizenship benefits, providing accurate and useful information to our customers, promoting an awareness and understanding of citizenship, and ensuring the integrity of the immigration system.

USCIS has established six goals: (1) strengthen the security and integrity of the immigration system, (2) provide effective customer-oriented immigration benefits and information, (3) support immigrants' integration and participation in American civic culture, (4) promote flexible and sound immigration policies and programs, (5) strengthen the infrastructure supporting the USCIS mission, and (6) operate as a high-performance organization that promotes a highly talented workforce and a dynamic work culture.

USCIS is the component of the Department of Homeland Security (DHS) that facilitates legal immigration for people seeking to enter, reside, or work in the United States. USCIS possesses the authority to grant or deny immigration benefits – approving close to six million immigration benefits each year. These immigration benefits range from work authorization documents to asylum and refugee applications, to petitions for immediate relatives to immigrate to the United States.

The Salaries and Expenses account encompasses all of the discretionary funding of USCIS. The most significant program that has been fully funded through this account is E-Verify. E-Verify is an automated system that allows U.S. employers to electronically verify names, dates of birth (DOB), and social security numbers (SSN), along with immigration information for non-citizens, against Federal databases to ensure the employment eligibility of both citizen and non-citizen new hires.

Starting in FY 2010, funding was enacted to cover a portion of the cost of refugee and asylum operations, an allocated share of the International Operations Division, and the cost of processing Adjustment of Status (I-485) applications for refugees, which are exempt from fees by law. The purpose of the appropriation was to eliminate certain fee surcharges on applications for activities unrelated to the cost of providing services on those applications. These activities were previously funded within the Immigration Examinations Fee Account (IEFA).

B – Budget Activities:

The salaries and expenses appropriation funds activities related to maintaining operational support of E-Verify, including expanded activities approved in FY 2010. Funding is also requested to enhance Immigrant Integration activities started in FY 2009 to help facilitate immigrant integration through programs that support immigrants on the path to naturalization and promote the rights, responsibilities, and importance of United States citizenship. In addition, USCIS is requesting appropriated resources to continue the FY 2011 budget request financing approach of asylum and refugee surcharges, as well as the cost of the Systematic Alien Verification for Entitlements (SAVE) program and the Office of Citizenship. The budget request includes additional funding for these areas consistent with current policy.

C – Budget Request Summary:

USCIS requests 1,329 positions, 1,314 FTE and \$369,477,000 for the FY 2012 Salaries and Expenses account.

2012 Request	368	360	102,424

USCIS requests \$102,424,000, 368 positions, and 360 FTE for this activity.

CURRENT SERVICES PROGRAM DESCRIPTION:

E-Verify was established by the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IIRIRA) and is based on the Employment Eligibility Form (Form I-9). E-Verify is an Internet-based system that enables an employer to determine an employee's eligibility to work in the United States by verifying information reported on an employee's Form I-9 against Department of Homeland Security (DHS), Social Security Administration (SSA), and Department of State databases. As of December 2010, more than 236,000 employers are enrolled in E-Verify, representing more than 821,000 worksites nationwide. As of December 2010, approximately 2.9 million new hires have been run through E-Verify in FY 2011 and the program continues to grow by approximately 1,300 new employers per week.

Significant accomplishments in FY 2010 include:

- E-Verify acquired access to U.S. passport photos to expand the photo matching feature in an effort to further detect document fraud. The addition of passport photos builds on the success of the photo tool for immigration documents, which was launched in FY 2007. The new U.S. passport feature was deployed in September 2010.

- E-Verify launched a series of employee-focused initiatives. These included a multilingual employee hotline dedicated to addressing inquiries, issues, and complaints. The hotline received 44,000 calls. E-Verify also partnered with DHS's Office of Civil Rights and Civil Liberties to create a series of online, bilingual videos designed to help employers understand their responsibilities under E-Verify and to inform employees of their rights. In addition, USCIS signed a Memorandum of Agreement with the Department of Justice's Office of Special Counsel (OSC) for Immigration-Related Unfair Employment Practices to formalize a referral process for discrimination cases.
- E-Verify enhanced Monitoring and Compliance (M&C) efforts by deploying the first phase of a Data Analytic System (DAS). DAS automates reporting and interfaces with the Compliance Tracking and Management System (CTMS) to populate behavior detection reports that identify potential misuse, fraud, discrimination and other types of noncompliant behavior. DAS will accelerate M&C activities in the future and will build upon the more than 11,000 compliance actions completed in FY 2010. Another key enhancement that supported employer compliance in FY 2010 was the redesign of the E-Verify interface that helps to ensure that employers use proper case closure codes and complete the Tentative Nonconfirmation (TNC) process. The program is also in the process of establishing a Nebraska Verification Operations Center (NVOC) in Lincoln, NE to accommodate M&C staff. The NVOC will be functional in FY 2011.
- More than 15 Small Business Administration Offices and Small Business Development Centers throughout the country partnered with E-Verify to either post the E-Verify logo on their website, include a favorable article about E-Verify in their newsletter, host a joint event, and/or forward email alerts to over 239,000 members on a regular basis.

FY 2011 planned accomplishments include:

- Launch a self-check function to give employees the capability to verify their own employment eligibility outside of the hiring process. Employees can then proactively resolve any issues by empowering them to have access to their own work authorization information.
- In partnership with the American Association of Motor Vehicle Administrators (AAMVA), USCIS will collaborate on the development of a program which confirms whether driver's license data submitted by an employee matches the information on record with participating states. State-issued documents are most frequently used in employment verification. Therefore, the verification of state-issued driver's license data in the E-Verify program is critical to reducing document fraud.
- The Verification Information System (VIS) (supporting both E-Verify and SAVE) will be migrated into the DHS Data Center.
- A new contract will be awarded supporting VIS operations and maintenance.
- Begin status verification operational capabilities at the NVOC.

FY 2012 planned accomplishments include:

- Access an updated version of SEVIS II—the U.S. Immigration and Customs Enforcement (ICE) database that houses student and exchange visitor data—in an effort to reduce the number of Tentative Non-confirmations (TNCs) by automatically verifying that nonimmigrant students and exchange visitors are authorized to work.
- Launch the second phase of the Data Analytics System (DAS). DAS will offer comprehensive analytical capabilities that can support pattern analysis, algorithms, and the use of external data sources, to facilitate monitoring and compliance.
- Begin developing requirements for a future-state VIS, which will include a modernized technical architecture, improved business process flow, and upgraded content management solutions.

2012 Current Services	2	2	-
2012 Program Change	-	-	-
2012 Request	2	2	-

CURRENT SERVICES PROGRAM DESCRIPTION:

The REAL ID Act requires that a state must verify the information on source documents before it can issue a REAL ID-compliant driver’s license or identification card to applicants.

DHS is facilitating the development and deployment of information sharing and verification capabilities that will enable states to verify data against other state and federal databases as required by the REAL ID Act. USCIS is providing project acquisition, project management, independent verification and validation, and system development services to enhance state capabilities to verify immigration status, U.S. passports, and DHS-issued source documents. The scope of effort for this program is limited to enhancements to existing state communications networks and federal databases and does not involve the development of any new databases.

Program resources are focusing on the following program areas:

- **Project Acquisition and Management Support** - USCIS is providing project acquisition and project management support to the Office of State-Issued Identification Support (OSIIS) located in the Screening Coordination Office in the DHS Office of Policy.
- **SAVE-Verification of Lawful Status (VLS) Modernization Projects** - Funding will support improvements in the capabilities of the Systematic Alien Verification for Entitlement (SAVE) system, a system that verifies lawful immigration status.

- **Verification of Lawful Status (VLS) Operations and Maintenance** - USCIS is funding operations and maintenance for the VLS application, a network application interface that facilitates state verification of lawful status with SAVE.
- **Independent Verification and Validation (IV&V) and Independent Government Cost Estimate Services (IGCE)** - USCIS is providing IV&V and IGCE services in support of OSIS REAL ID verification activities.
- **Browser-based Tutorial for DMV SAVE Users** - USCIS is developing a browser-based tutorial to assist DMV personnel in the use of the SAVE system.
- **Passport Verification Project** - USCIS is leading an effort to enable state verification of U.S. passports through the USCIS Enterprise Service Bus.

Significant accomplishments in FY 2010 include:

- Staffing and operation of REAL ID Project Management Office (PMO) in the USCIS Verification Division (2 FTEs and 2 contractors).
- Procurement of a contract with MITRE to perform IV&V and Independent Government Cost Estimates (IGCE) for REAL ID-related initiatives.
- Procurement of a contract with the American Association of Motor Vehicle Administrators (AAMA) to: develop applications to support DMV verification of lawful status (VLS), U.S. passports, and immigration photos; and to support VLS operations and maintenance.
- Procurement of a contract with Savvee to provide contractor personnel support to the PMO and to develop a browser-based tutorial for DMV users of SAVE.

FY 2011 & FY 2012 planned accomplishments include:

- Management and completion of all work performed under the MITRE contract, to include: IV&V and IGCE analysis for the state-to-state project led by the State of Mississippi under a cooperative agreement with FEMA; data analysis, requirements definition, and Independent Government Cost Estimate (IGCE) for enhancements to the SAVE Program.
- Management and completion of all work performed under the AAMVA contract, to include: build-out and alignment of the VLS application with SAVE functionality; development of a capability for state DMVs to verify U.S. passports and immigration photos; development of web services and web-based menu access options for selected AAMVA applications; and operation, maintenance, and support for the AAMVA VLS system.
- Management and completion of all work performed under the Savvee contract, to include: project management support; customer relationship management; data

quality management; and development of a browser-based tutorial for DMV users of SAVE including test functionality.

USCIS requests \$203,400,000, 734 positions, and 734 FTE for this activity.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Refugee, Asylum, and International Operations (RAIO) Directorate extends protection, citizenship, and other immigration benefits to eligible individuals as well as detecting fraud and protecting national security. RAIO is comprised of three operational divisions. The Refugee Affairs Division is a headquarters-based operation whose officers travel internationally to conduct refugee processing in accordance with U.S. law and international obligations; conduct protection screenings for migrants interdicted at sea; and, adjudicate requests for parole under the Cuban Medical Professional Parole program. The Asylum Division has eight domestic offices which conduct adjudications of affirmative asylum applications and conduct credible fear screenings for all persons placed in expedited removal who request asylum or express a fear of persecution or torture on return to their country of origin. The International Operations Division has three overseas district offices (Mexico City, Bangkok, Rome) and 29 field offices. With a broad footprint extending from U.S. embassies and consulates to additional refugee processing locations, RAIO is the face of USCIS abroad.

RAIO officers conduct asylum interviews in the United States and refugee processing activities in dozens of overseas locations: they authorize parole for individuals in emergent and humanitarian circumstances, and conduct a full range of other immigration benefit adjudications. RAIO officers reunite separated refugee and asylee family members, unite prospective adoptive parents with children who are in need of a home, and travel to overseas military bases to naturalize men and women as U.S. citizens who serve in the U.S. military.

RAIO administers the Cuban and Haitian Entrant Program (CHEP), providing multi-million dollar grants to non-governmental organizations that provide orientation and resettlement services to Cuban and Haitian migrants paroled into the U.S. RAIO liaises with United States and foreign governments, international organizations, and private entities worldwide.

Significant accomplishments in FY 2010 include:

- Interviewed approximately 95,000 refugee applicants from more than 67 countries to support the admission of more than 73,000 refugees, in keeping with the President's annual refugee determination.
- Developed directorate-wide quality standards and launched quality review programs for product lines from each operational division.
- Implemented strategies and made significant progress toward systematic information sharing with Canada, including sending fingerprints to Canada via the Five Country Conference High Value Data Sharing Protocol (HVSDP).

FY 2011 planned accomplishments include:

- Revise the asylee and refugee following-to-join process to enhance efficiency and integrity, including information technology changes and implementation of procedures for the interview of domestic I-730 beneficiaries.
- Institutionalize partnerships with intelligence and law enforcement agencies to enhance the integrity of RAIO programs including: 1) implementation of enhanced security screening initiatives; 2) expansion of biometric initiatives including the use of DNA testing; 3) coordination on revocation or termination of RAIO benefits if fraud or other ineligibilities are subsequently identified; and 4) ongoing assessment of security check processes to formulate recommendations for improvement.
- Finalize the development of a comprehensive training course for all RAIO staff to enhance training efficiency as well as the quality and consistency of refugee, asylum, and international adjudications.

FY 2012 planned accomplishments include:

- Refine RAIO basic training, develop new standard training initiatives for supervisors and managers, and assess the use of new training methods and technologies to improve the efficacy of the RAIO training strategy.
- Evaluate current performance measures and processes for adjudicators, supervisors, and managers to enhance performance feedback mechanisms.

- Continue to refine RAIO quality assurance framework and adjust procedures and methodologies as needed.
- Identify opportunities to further enhance the integrity of RAIO adjudications through strategic partnerships with law enforcement and intelligence agencies and the use of biometric technology.
- Revise asylum officer productivity standards in accordance with empirical data from a case processing time study.
- Implement revised asylum officer performance evaluation forms.
- Revise and update credible and reasonable fear procedures for the Asylum Division.
- Implement new technologies and processes to enhance the integrity of asylum case processing.
- Identify and develop training courses to meet program and staff needs; provide pre-service training to new officers and on-going in-service training to all officers.
- Continue to evaluate guidance that has been issued, taking into account transformation efforts and developments, and revise or update as appropriate.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Office of Citizenship promotes the rights and responsibilities of citizenship and provides integration tools and resources for immigrants, organizations, and other stakeholders. Our continued success as a nation of immigrants depends on the ability of lawful newcomers to permanently settle in communities and enjoy the rights and freedoms that define our nation. Naturalization is a critical milestone for immigrants in achieving full participation, gaining a sense of belonging, and receiving equality under the law. American society must remain open and welcoming to immigrants and provide essential tools and support for them to gain a sense of belonging and ownership in the future of our country. This program supports these goals. With this funding, the Office of Citizenship will:

- Provide educational products and resources that welcome immigrants, promote English language learning and education on the rights and responsibilities of citizenship, and prepare immigrants for naturalization;
- Support and build community capacity to prepare immigrants for citizenship and integration through grants, technical assistance, and training opportunities;
- Improve access to information on citizenship education opportunities and resources; and
- Implement a citizenship-focused public awareness and education effort.

Significant accomplishments in FY 2010 include:

- Under the expanded Citizenship and Integration Grant Program, USCIS awarded approximately \$8.1 million across two funding opportunities. The first opportunity provided more than \$4.7 million in funding through grants of up to \$100,000 to strengthen local citizenship service providers (48 awards). The second opportunity provided more than \$3.3 million in funding through grants of up to \$500,000 to increase the capacity of members or affiliates of national, regional, or statewide organizations to provide citizenship services (8 awards).
- Launched the first phase of the Citizenship Resource Center, a free website for citizenship learners, teachers, and organizations with centralized citizenship information, study materials, interactive learning activities, and teacher lesson plans and activities based on the English and civics portions of the naturalization test. The Citizenship Resource Center includes a helpful link to an online search resource for visitors to search by zip code for citizenship classes.
- Conducted 15 teacher training workshops for more than 1,000 citizenship educators and volunteers.

FY 2011 planned accomplishments include:

- Award approximately \$8.5 million through the Citizenship and Integration Grant Program.
- Expand the Citizenship Resource Center to include a new online course to help volunteer instructors learn basic strategies for teaching English and citizenship, additional multimedia content such as videos and podcasts, and interactive civics-based learning activities developed in partnership with the Smithsonian Institution's National Museum of American History.
- Launch a national initiative to raise awareness about the rights, responsibilities, and importance of U.S. citizenship and the free educational tools and resources available to eligible lawful permanent residents.

FY 2012 planned accomplishments include:

- Award approximately \$8.5 million through the Citizenship and Integration Grant Program.
- Expand Citizenship Resource Center content to include additional interactive learning activities and other new media technologies such as handheld and mobile applications for citizenship preparation.
- Continue national initiative to raise awareness about the rights, responsibilities, and importance of U.S. citizenship and the free educational tools and resources available

to eligible lawful permanent residents, review messaging, and evaluate overall marketing strategy.

- Implement research and evaluation activities to better understand citizenship motivations, integration factors, and the effectiveness of the Office of Citizenship initiatives.
- Through the Immigrant Integration Program Enhancement request, build a regional citizenship outreach presence, and award new citizenship and integration grants focused on literacy development and citizenship education program development.

2012 Request	-	-	12,500

USCIS requests \$12,500,000 for this activity.

CURRENT SERVICES PROGRAM DESCRIPTION:

In FY 2010, USCIS received an \$11 million appropriation and also received an additional \$11 million that was transferred to USCIS through a DHS reprogramming to fund this program. The funding, which is being managed through the DHS Working Capital Fund, is being used to fund the migration of USCIS mainframe and other applications from the Department of Justice Data Centers to the DHS Enterprise Data Centers. This includes:

- Discovery, migration planning, and scheduling activities specifically related to systems/applications that will transition to the DHS Data Centers.
- Purchase of new equipment for placement in the DHS Data Centers as part of migration/transition efforts.
- Installation of equipment racks at the DHS Data Centers.
- Migration-related build-out of DHS Data Center infrastructure.
- Transition of disaster recovery/backup/COOP (Continuity of Operations) capability to DHS Data Centers.
- Installation of infrastructure support as part of system migrations at the DHS Data Centers.

In FY 2011, USCIS will use \$11 million to:

- Continue and complete the establishment of staging and production environments for the migration of five applications to DHS data center 1 (DC1). The migration for these applications started in FY 2010.

- Build out and implement disaster recovery capabilities at DC2 for the Verification Information System program.
- Establish new environments for three programs at DC1.
- Purchase new equipment for placement in DC1 as part of the migration/transition efforts.
- Build out and complete the environments and migration for four additional applications to DC1.
- Build out staging and production environments and initiate the migration process for five additional applications. These applications are complex and need a longer lead time to complete. The applications should be fully migrated in FY 2012.

In FY 2012, USCIS will use \$12.5 million to:

- Purchase new equipment for placement at a DHS data center to establish a baseline for the development and test environments for all USCIS applications. Development and test environments are targeted to be fully migrated to a DHS data center in FY 2013. The equipment has to be purchased during FY 2012 to be able to migrate the development/test environments at the start of FY 2013.
- Complete the migration of the five complex applications that will be initiated during FY 2011.
- Build out and complete the environments and the migration of eight additional applications.

2012 Program Change	-	-	-
2012 Request	186	186	29,937

USCIS requests \$29,937,000, 186 positions, and 186 FTE for this activity.

CURRENT SERVICES PROGRAM DESCRIPTION:

SAVE helps State, local, and Federal agencies determine a non-citizen’s eligibility for public benefits by checking their immigration status against U.S. Department of Homeland Security immigration databases. As of December 2010, the SAVE Program has a total of 678 registered agencies. This includes 235 State agencies, 40 Departments of Motor Vehicles (DMV), 373 local agencies, and 30 Federal agencies. SAVE’s customer base grew by 113 percent in FY 2010. During FY 2010, more than 11.7 million queries were run through SAVE. Through December 6, 2010, 1.8 million SAVE queries were run through the system in FY 2011. Large agency customers include the Social Security Administration, the U.S. Department of Housing and Urban Development, the U.S. Department of Education, and the California Department of Motor Vehicles. Every State and the District of Columbia are represented in SAVE’s customer base.

Significant accomplishments in FY 2010 include:

- Coordinated with the Department of Health and Human Services on implementation of the Pre-Existing Condition Insurance Pool mandated by health care reform.
- Instituted a Monitoring & Compliance function to ensure the integrity of the SAVE Program.

- Enhanced the current system by adding a new document type for Visa Waiver travelers in response to Customs and Border Protection's I-94W Automation Initiative.
- Hosted the first SAVE Program User Forum to provide current customers with in-depth information on the program and solicit feedback on improvement initiatives. Forum attendees represented some of SAVE's largest customers, including the Social Security Administration (SSA), the Department of Health and Human Services (HHS), the Department of Education (DOE), and the Virginia, Maryland and District of Columbia Departments of Motor Vehicles. The event included an open forum discussion where participants were able to ask questions, discuss concerns, and provide input on improving the program.
- Implemented a streamlined registration process for Georgia localities and developed a Webinar to guide agencies through the process. Worked closely with officials from the Georgia Municipal Association and the Association of County Commissioners of Georgia and registered 253 Georgia agencies.

FY 2011 planned accomplishments include:

- Conduct a SAVE program evaluation.
- Develop system requirements for profile-based system (PBS)/SAVE modernization.
- Conduct a Six Sigma root cause analysis of SAVE referrals to minimize additional verification.
- Process 97% of SAVE second step electronic referrals within three federal workdays.

FY 2012 planned accomplishments include:

- Implement a profile-based system (PBS) with profiles tailored to system user needs.
- Implement an agency outreach and education program to provide assistance to system users on the verification process and proper use of the system.
- Connect to additional data sources and include extra data elements to reduce the number of cases requiring additional verification.
- Implement photo tool capabilities to include retrieval of images, enabling customers to view the electronic photograph of USCIS immigration documents.

2012 Program Change	11	6	1,467
2012 Request	11	6	1,467

USCIS requests \$1,467,000, 11 positions and 6 FTE for this activity.

CURRENT SERVICES PROGRAM DESCRIPTION:

Successful acquisition outcomes are the direct result of having the appropriate personnel with the requisite skills managing various aspects of the acquisition process. Between FY 2000 and FY 2008, acquisition spending by civilian agencies increased by 56% (in inflation-adjusted dollars). The Department of Homeland Security is working to ensure its major acquisitions are effectively managed to ensure that the Department maximizes the value of every homeland security dollar and that major programs are implemented in the most responsible and efficient manner possible. This includes having disciplined oversight processes and robust acquisition program management teams in place. DHS has assessed the current resident skills against a set of core acquisition management skills: a program manager, a systems engineer, a life cycle logistician, a business/financial manager, and a contracting officer's technical representative, and determined that many of our major acquisition programs are deficient in several of these areas.

The President's March 4, 2009 memorandum on Government Contracting required agencies to improve acquisition practices and performance by maximizing competition and value, minimizing risk, and reviewing the ability of the acquisition workforce to develop, manage, and oversee acquisitions appropriately. Subsequent guidance from the Office of Management and Budget, including memorandum M-09-25 *Improving Government Acquisition* issued July 29, 2009, and the Office of Federal Procurement Policy's (OFPP) Memorandum of October 27, 2009 *Acquisition Workforce Development*

Strategic Plan for Civilian Agencies – FY 2010–FY 2014, provided guidance to agencies to strengthen the acquisition workforce and increase the civilian agency workforce by 5% to more effectively manage acquisition performance. These funds will help ensure the future programmatic growth requirements for training, recruitment, and retention activities while helping us to attract and hire qualified members of the acquisition workforce as defined by the Office of Federal Procurement Policy Act.

FY 2012 planned accomplishments include:

The requested resources will be used to hire the following positions:

- Four Logisticians
- One Cost Analyst
- One Program Manager
- One Systems Engineer
- One Business and Finance Manager
- One IT Architect
- One Test and Evaluation Manager
- One Contracting Officer's Technical Representative (COTR)
- The positions will be assigned to the Office of Transformation Coordination (OTC). This office was created to fundamentally transform USCIS business practices. USCIS is conducting comprehensive organizational change management and stakeholder outreach efforts to keep stakeholders abreast of changes and provide feedback to OTC staff.
- Increase the capability of the acquisition workforce by investing in training to close identified gaps in such areas as project management, negotiations, requirements development, contract management, and other key topics;
- Increase the effectiveness of the acquisition workforce by investing in improvements to systems that support the contracting function;
- Conduct an assessment of options for creating systems to maintain comprehensive acquisition workforce data and selecting the appropriate system; and
- Increase the effectiveness of the Department's centralized acquisition workforce training program comprised of certification and targeted/continuous learning developmental training opportunities.

2012 Current Services	-	-	-
2012 Program Change	-	-	-
2012 Request	-	-	-

USCIS requests no funds for this activity in FY 2012.

CURRENT SERVICES PROGRAM DESCRIPTION:

In FY 2010, USCIS received supplemental funding for necessary expenses and other disaster response activities related to Haiti following the earthquake of January 12, 2010, for reception and resettlement services provided under the Cuban/Haitian Entrant Program; fee waivers for eligible Haitians granted Temporary Protected Status (TPS); and the humanitarian parole program to bring medical evacuees and certain categories of Haitians into the United States.

On January 15th, the Administration designated TPS for Haitian nationals who were in the United States as of January 12, 2010. This designation allowed eligible Haitian nationals in the United States to continue living and working in the country for the next 18 months. Haitian nationals submitted applications to USCIS for TPS status and related benefits, and USCIS processed and adjudicated the applications. USCIS incurred costs associated with processing and adjudicating applications, collecting biometrics and running background checks, and issuing documents.

On January 18, 2010, the Secretary of the Department of Homeland Security announced a special humanitarian parole policy for certain Haitian orphans that were adopted or in the process of being adopted by US citizens. Requests for humanitarian parole under this program were accepted through April 14, 2010. This special program and the steps taken to allow them to obtain Lawful Permanent Resident (LPR) status and citizenship are collectively referred to as the Haitian Orphan Parole Program (HOPP).

On December 9, 2010, President Obama signed the Help HAITI Act of 2010 into law. This Act authorized the Secretary of Homeland Security to adjust HOPP parolees who were physically present in the United States to LPR status. Applications for adjustment under this Act may be filed at any time on or before December 9, 2013.

Significant accomplishments in FY 2010 include:

- In response to the Haiti earthquake, USCIS administered the Secretary's Special Humanitarian Parole Program for Haitian Orphans that resulted in over 1,100 orphans being authorized parole into the United States. USCIS also approved the requests for humanitarian parole, based upon urgent medical needs, for approximately 120 persons. In addition, USCIS processed more than 48,000 applications for Temporary Protected Status (TPS) for Haitians living in the United States.

IV. Program Justification of Changes

**Department of Homeland Security
U.S. Citizenship and Immigration Services
Salaries and Expenses
Justification of Program Changes
(Dollars in Thousands)**

Program Increase 1: Immigrant Integration & Citizenship

Strategic Goal(s) & Objective(s): 1.4: Improve Security through Enhanced Immigration Services

PPA: Immigrant Integration & Citizenship

Program Increase: Positions 4 FTE 2 Dollars \$1,760

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							24	24	17,989
Program Increase							4	2	1,760
Total Request							28	26	19,749

Description of Item

USCIS requests 4 positions, 2 FTE, and \$1,760,000 for this program enhancement.

Justification

Immigrant Integration – expand citizenship and integration program activities through new grant opportunities to include:

Literacy Development for Immigrants Grant Program (Pilot Program) - A lack of basic literacy skills is a significant barrier to naturalization for immigrants of all ages. While there are numerous options for literate immigrants who wish to learn English as a second language, there are very few resources available for pre-literate individuals. As a result, this grant program will focus on building the literacy skills of lawful permanent residents. Under the pilot program, five non-profit organizations or public schools can apply for funding of up to \$200,000 to create a new educational program that specifically targets pre-literate immigrant populations on the path to citizenship. These grants will further the development of research-based curricula that could be used as models for organizations across the nation.

Citizenship Education Program Development Workshop Cooperative Agreement - Provide a cooperative agreement to a non-profit public or private educational organization to plan and implement five regional citizenship education program development workshops at which adult education practitioners and teachers collaborate to

devise content, formats, training strategies, and dissemination methods related to citizenship education. The grantee will be responsible for planning and implementing all aspects of the workshops; recruiting (and funding participation) appropriate adult education experts and practitioners to participate in the workshops; devising an agenda and working structure for the workshop; and submitting an evaluation and implementation plan based on the workshop discussion to USCIS. Applicants would be encouraged to collaborate with one or more partner institutions as appropriate.

Staffing – fund four new Regional Citizenship Outreach Officers, to support effective implementation of USCIS citizenship training and public awareness efforts.

Impact on Performance (Relationship of Increase to Strategic Goals)

Increased immigrant outreach, education, and training investments are intended to multiply efforts of stakeholder partners to ensure immigrants have the information, resources, and tools necessary to fulfill our promise as a nation of immigrants.

Program Increase 2: Data Center Development

Strategic Goal(s) & Objective(s): 1.4: Improve Security through Enhanced Immigration Services

PPA: Data Center Development

Program Increase: Positions 0 FTE 0 Dollars \$12,500

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	-
Program Increase							-	-	12,500
Total Request							-	-	12,500

Description of Item

USCIS requests \$12,500,000 for this program enhancement.

Justification

FY 2012 data center development funding will be used for the continuation of system and application migration to the two DHS Enterprise Data Centers for central DHS management.

The Data Center consolidation efforts will standardize IT resource acquisitions across DHS Components, and streamline maintenance and support contracts, allowing for less complex vendor support and expediting response times in the event of an emergency. Benefits derived from consolidation are enhanced DHS IT security posture, improved information sharing with stakeholders, and increased operational efficiencies over time.

Program Increase 3: Acquisition Workforce

Strategic Goal(s) & Objective(s): 1.4: Improve Security through Enhanced Immigration Services

PPA: Pay and Benefits: Acquisition Workforce

Program Increase: Positions 11 FTE 6 Dollars \$1,467

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	-
Program Increase							11	6	1,467
Total Request							11	6	1,467

Description of Item

USCIS requests 11 positions, 6 FTE, and \$1,467,000 for this program enhancement.

Justification

Successful acquisition outcomes are the direct result of having the appropriate personnel with the requisite skills managing various aspects of the acquisition process. Between FY 2000 and FY 2008, acquisition spending by civilian agencies increased by 56% (in inflation-adjusted dollars). The Department of Homeland Security is working to ensure its major acquisitions are effectively managed to ensure that the Department maximizes the value of every homeland security dollar and that major programs are implemented in the most responsible and efficient manner possible. This includes having disciplined oversight processes and robust acquisition program management teams in place. DHS has assessed the current resident skills against a set of core acquisition management skills: a program manager, a systems engineer, a life cycle logistician, a business/financial manager, and a contracting officer’s technical representative, and determined that many of our major acquisition programs are deficient in several of these areas.

The President’s March 4, 2009 memorandum on Government Contracting required agencies to improve acquisition practices and performance by maximizing competition and value, minimizing risk, and reviewing the ability of the acquisition workforce to develop, manage, and oversee acquisitions appropriately. Subsequent guidance from the Office of Management and Budget, including memorandum M-09-25 *Improving Government Acquisition* issued July 29, 2009, and the Office of Federal Procurement Policy’s (OFPP) Memorandum of October 27, 2009 *Acquisition Workforce Development Strategic Plan for Civilian Agencies – FY 2010–FY 2014*, provided guidance to agencies to strengthen the acquisition workforce and increase the civilian agency workforce by 5% to more effectively manage acquisition performance. These funds will help ensure the future programmatic growth requirements for training, recruitment, and retention activities while helping us to attract and hire qualified members of the acquisition workforce as defined by the Office of Federal Procurement Policy Act.

In support of the administration's emphasis on strengthening the Federal acquisition workforce, USCIS requests \$1,467,300 to increase its acquisition workforce capacity and capabilities. The increase will mitigate the risks associated with gaps in either capacity or capability of the acquisition workforce and improve its effectiveness. The resources requested for USCIS will be used to hire the following positions:

- Four Logisticians
- One Cost Analyst
- One Program Manager
- One Systems Engineer
- One Business and Finance Manager
- One IT Architect
- One Test and Evaluation Manager
- One Contracting Officer's Technical Representative (COTR)
- The positions will be assigned to the Office of Transformation Coordination (OTC). This office was created to fundamentally transform USCIS business practices. USCIS is conducting comprehensive organizational change management and stakeholder outreach efforts to keep stakeholders abreast of changes and provide feedback to OTC staff.
- Increase the capability of the acquisition workforce by investing in training to close identified gaps in such areas as project management, negotiations, requirements development, contract management, and other key topics;
- Increase the effectiveness of the acquisition workforce by investing in improvements to systems that support the contracting function;
- Conduct an assessment of options for creating systems to maintain comprehensive acquisition workforce data and selecting the appropriate system; and
- Increase the effectiveness of the Department's centralized acquisition workforce training program comprised of certification and targeted/continuous learning developmental training opportunities.

Impact on Performance (Relationship of Increase to Strategic Goals)

The FY 2012 funding request will help ensure:

- The future programmatic growth capacity for training, recruitment, and retention activities while attracting and hiring qualified members of the acquisition workforce as defined by the Office of Federal Procurement Policy Act. These funds allow DHS the ability to train, recruit, and retain at acceptable standards.
- The sustainability and availability of information technology systems and equipment in support of acquisition workforce effectiveness or for management solutions to improve acquisition management.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

For necessary expenses for citizenship and immigration services, \$369,477,000, of which \$203,400,000 is for processing applications for asylum or refugee status; and of which \$132,361,000 is for immigration verification programs, including the E-Verify Program, as authorized by section 402 of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (8 U.S.C. 1324a note), to assist United States employers with maintaining a legal workforce: Provided, That notwithstanding any other provision of law, funds available to United States Citizenship and Immigration Services may be used to acquire, operate, equip, and dispose of up to five vehicles, for replacement only, for areas where the Administrator of General Services does not provide vehicles for lease: Provided further, That the Director of United States Citizenship and Immigration Services may authorize employees who are assigned to those areas to use such vehicles to travel between the employees' residences and places of employment: Provided, That of the funds made available under this heading, \$1,467,000 shall be for strengthening the capacity and capabilities of the acquisition workforce (as defined by the Office of Federal Procurement Policy Act, as amended (41 U.S.C. 401 et seq.)), including the recruitment, hiring, training, and retention of such workforce and information technology in support of acquisition workforce effectiveness or for management solutions to improve acquisition management: Provided further, That none of the funds made available in this Act for grants for immigrant integration may be used to provide services to aliens who have not been lawfully admitted for permanent residence.

PPA Mission Statement

The E-Verify Program, a key component of the Department's Secure Border Initiative, involves electronic verification checks of the Social Security Administration and DHS databases, using an automated system to verify employment authorization.

The potential for system abuse grows with an increase in registered employers. By increasing and expanding aggressive monitoring and compliance initiatives fraudulent, discriminatory or misinformed use of E-Verify will be minimized, specifically, fraudulent use of Social Security numbers or Alien numbers. Aggressive monitoring and compliance will also deter prescreening of job applicants and adverse action against employees who receive tentative non-confirmation notices.

The requested amount will allow E-Verify to continue to support and operate a comprehensive electronic employment verification program, and initiate a phased-in expansion and improvement of existing employment verification systems, to ensure compliance with U.S. immigration and employment laws.

	FY 2010	FY 2011	FY 2012	2011 to 2012
	Actual	C.R.	Request	Change
Salaries and Benefits	\$24,428	\$39,223	\$40,148	\$925

Salaries and Benefits includes costs for 360 FTEs. This funding supports the anticipated resource needs for FY 2012. It includes funding for 8 new FTEs.

	FY 2010	FY 2011	FY 2012	2011 to 2012
	Actual	C.R.	Request	Change

PPA Mission Statement

The REAL ID Act requires that a state must verify the information on source documents before it can issue a REAL ID-compliant driver's license or identification card to applicants.

The funding provided through USCIS is aimed specifically at the development and deployment of enhanced network communications and data verification capabilities that will enable States to meet the verification requirements of the REAL ID Act and Final Rule.

The integrity of the immigration system is facilitated if State efforts through REAL ID discourage the use of false immigration information to unlawfully obtain benefits.

Summary Justification and Explanation of Changes

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Salaries and Benefits	\$247	\$391	\$391	\$0

Salaries and Benefits provides for 2 FTE for FY 2012.

PPA Mission Statement

This program will fund activities associated with improving the integration of immigrants into the United States including: grants to community-based organizations for citizenship preparation; expanding English language learning aids; supporting a training framework for local literacy organizations to prepare volunteers to teach English and citizenship to immigrants; and, promoting citizenship through targeted integration messages. Key to the success of this new program is establishing partnerships with state and local governments, U.S. businesses, non-profits, faith-based organizations, and academia as all have important roles to play in improving integration. USCIS will also work with other federal agencies to coordinate efforts aimed at integration.

Summary Justification and Explanation of Changes

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change

BUDGET REQUEST AND SUPPORTING INFORMATION

Immigration Examinations Fee Account:

I. Appropriation Overview

A – Mission Statement for Immigration Examinations Fee Account:

The Immigration Examinations Fee Account (IEFA) is the primary funding source for USCIS, comprising approximately 86 percent of the total USCIS budget. Fees collected from the filing of immigration benefit applications are deposited into the IEFA and used to fund the cost of processing immigration benefit applications and associated support benefits and the cost of similar benefits provided to other immigrants where fees are waived.

B – Budget Activities:

Adjudication Services

Through a network of approximately 235 domestic and foreign offices, USCIS is responsible for the timely and quality processing of:

Family-based petitions - facilitating the process for close relatives of U.S. citizens and permanent residents to immigrate, gain permanent residency, work, etc.

Employment-based petitions - facilitating the process for current and prospective employees to immigrate or work in the U.S. temporarily

Asylum and Refugee petitions - adjudicating asylum applications and processing refugees

Naturalization petitions - processing applications of those who wish to become U.S. citizens

Secure identity cards and travel documents booklets are personalized and provided to recipients of certain immigration benefits as evidence of immigration status and for use in proving eligibility to work and live in the United States and/or to re-enter the United States after travel abroad. Premium processing revenues collected into this account fund the Transformation Program which is a multi-year effort to modernize USCIS business processes and supporting systems.

Information and Customer Services

Through multiple channels of available assistance, including the USCIS website, toll-free call centers (National Customer Service Call Centers), and face-to-face appointments, these services make it easier for customers to get the information they need, when they need it. On an annual basis, USCIS:

Serves more than 14 million customers via the National Customer Service Call Centers

Serves customers through information counters at local and international offices

Administration

The Administration activity supports a variety of headquarters offices including Administration, Chief Financial Officer, Chief Counsel, Communications, Legislative Affairs, Policy and Strategy, Chief Human Capital Officer, and Security and Integrity.

Systematic Alien Verification for Entitlements (SAVE)

SAVE assists Federal, State, and local benefit-granting agencies with determining eligibility for benefits by verifying immigration status. For FY 2012, the SAVE program is included in the Salaries and Expenses budget request.

C – Budget Request Summary:

USCIS requests 10,133 positions, 10,133 FTE, and \$2,486,310,000 for FY 2012.

2012 Program Change	-	-	-
2012 Request	8,930	8,930	2,052,243

USCIS requests 8,930 positions, 8,930 FTE and \$2,052,243,000 to process millions of immigration benefit applications while maintaining backlog goals and ensuring the security and integrity of the immigration system.

CURRENT SERVICES PROGRAM DESCRIPTION:

Adjudication Services is comprised of five USCIS directorates and many program offices:

Field Operations

The Field Operations Directorate oversees and manages the day-to-day operations of the National Benefits Center, four regional offices, twenty-six district offices, and eighty-seven field offices (including satellite and field support offices) located throughout the United States and its Territories. This includes the adjudication of all applications and petitions for immigration benefits (other than asylum applications) that require in-person interviews in the United States and its Territories, as well as timely action on ancillary applications and other assigned benefit requests. The Field Operations Directorate provides immigration information, customer service and assistance to applicants, petitioners, and beneficiaries while ensuring the integrity of the immigration system.

Significant accomplishments in FY 2010 include:

- Naturalization at Basic Training Initiative: Improved the process for Naturalization of eligible foreign military recruits at Basic Training with the U.S. Army and expanded this initiative to the Navy at the Great Lakes Training Center.
- Naturalization Certificate Automation and Redesign: Began implementation of the Naturalization Certificate Automation and Redesign Initiative providing USCIS with the capability to automate the production of Naturalization Certificates and enhance inventory control throughout the lifecycle of the Naturalization Certificate.
- Established the National Security Operations Branch: Improved management of operational matters related to fraud detection and national security including increasing presence of USCIS officers with Joint Terrorism Task Forces.

FY 2011 planned accomplishments include:

- Naturalization Quality Procedures V (NQP5): Develop improved Naturalization Quality Procedures (NQP5) to reflect updates in processes, guidance, and recent legislation to enhance efficiency and consistency in the processing of naturalization applications.
- Centralization of Six Naturalization Forms: Centralize the intake of six naturalization forms at the Office of Intake Operations and Enhancement (formerly Lockbox Operations) and the National Benefits Center to better control the fee deposit process and improve process times and consistency.
- Adjudication of Applications per Adam Walsh: Develop and deliver in depth guidance and training to Field Officers on Adam Walsh cases to promote a more consistent and timely adjudication and enhance the protection of prospective immigrant children.

FY 2012 planned accomplishments include:

- Transformation Program Initiatives: Expand Transformation training as well as change management initiatives to field offices in order to prepare for the delivery of the new case management system.
- Use of audio visual technology during interviews: Assist with implementing a program to videotape immigration interviews to ensure operational consistency.
- Update and improve Staff Analysis Model (SAM): Using improved data and an automated performance modeling tool, implement improvements to the SAM.

Service Center Operations

Service Center Operations (SCOPS) is one of the key operational components of USCIS. Tasked with the adjudication of the largest volume of applications across the broadest and most diverse cross-section of immigration benefits, SCOPS is a strong and vital partner in the development of immigration policies and programs to ensure improved customer service while delivering the right benefit, to the right person, without delay. SCOPS continuously evaluates and modifies workflow processes in order to more effectively and efficiently administer immigration laws within the established cycle

times, and is dedicated to ensuring the security of the United States through a vigilant workforce of officers who incorporate numerous security checks on a broad range of immigration benefit applications. Working closely with adjudications staff, law enforcement agencies and other government agencies, the specialized teams within each service center conduct extensive research and vetting of individuals and organizations that may pose a threat to the national security of the United States.

Significant accomplishments in FY 2010 include:

- Continued to be in the forefront of a variety of major initiatives including the development and rollout of Haitian Temporary Protected Status (TPS) including all associated operational documents, rollout materials, support of outreach initiatives, and systems reconfiguration.
- Developed the Verification Initiative for Business Enterprises (VIBE) initiative, awarded the contract, and created the production environment.
- Conducted two cross center reviews on specific applications improving standardization and integrity of adjudications across geographic locations.

FY 2011 planned accomplishments include:

- Develop and implement an updated receipt process for the new fee associated with the immigrant visa package.
- Successfully commence processing the CNMI applications for nonimmigrant workers.
- Award new Service Center Operations Support Services contract.
- Award Scientist Credential Review contract, which is a new initiative to aid in the adjudicative process.

FY 2012 planned accomplishments include:

- Transition to a fully transformed application receipt process.
- Create the infrastructure, hiring plan, and implementation foundation for future comprehensive immigration reform.
- Increase adjudication production efficiency through increased development of IT.

International Operations

The International Operations Division (IO) is a component of the Refugee, Asylum and International Operations Directorate (RAIO) charged with the responsibilities of advancing the USCIS mission in the overseas arena, adjudicating applications and petitions for a wide variety of immigration benefits, providing customer service and support to applicant and beneficiaries as well as to other foreign and domestic governmental agencies, adjudicating requests for humanitarian and significant public benefit parole filed by individuals outside the U.S., and administering the Cuban and Haitian Entrant Program (CHEP) to provide resettlement and orientation assistance to Cuban and Haitian migrants paroled into the U.S. IO also conducts naturalization

interviews and oath ceremonies for active members of the United States Armed Forces and their family members overseas. Operating in a dynamic, global environment with constantly changing political, cultural, environmental and socio-economic factors, IO has 29 offices overseas and operates in 4 domestic locations.

Significant accomplishments in FY 2010 include:

- Significantly reduced backlogs to enable families to more quickly reunite more in the U.S. by decreasing the number of pending Requests for Waiver of Inadmissibility Grounds (Forms I-601) by 50% and decreasing the number of pending asylee /refugee following-to-join cases by 68%.
- Successfully implemented a backlog reduction plan for Forms I-601 filed in Ciudad Juarez, Mexico, processing the immediately approvable cases within 2 weeks of filing and meeting a 6-month processing time target for those that were not immediately approvable.
- Deployed electronic fingerprint capture capability for international offices.
- In response to the earthquake in Haiti, immediately set up procedures to implement the unprecedented decision to parole into the United States certain Haitian adoptees, authorized parole for over 1,100 orphans to join adoptive families in the U.S., and established protocols to parole into the U.S. individuals with critical medical needs.
- Successfully deployed to all overseas offices an integrated, web-based case-management system (CAMINO) that enables the agency to track the status of any case filed in an USCIS overseas office and that generates statistical reports that enhance the ability to monitor workloads, align resources, and process cases timely.

FY 2011 planned accomplishments include:

- Evaluate efficacy of the quality assurance program and adjust as necessary.
- Complete workload and staffing analysis and implement any adjustments to office presence, size or jurisdiction identified as resources permit and, where necessary, as authorized by the Department of State.
- Assume responsibility from the Department of State for receipting Forms I-601 and assess benefits of transferring for domestic adjudication certain overseas adjudications that do not require an interview.
- Enhance the security of boarding letters for lawful permanent residents overseas who do not have evidence of status.

FY 2012 planned accomplishments include:

- Expand quality assurance program to additional product lines.
- Evaluate verification/investigative training for officers and locally employed staff and improve as appropriate.
- Implement any adjustments to office presence, size, or jurisdiction identified through workload analysis performed in FY 2011 as resources permit and where necessary, and as authorized by the Department of State.

Fraud Detection and National Security

The Fraud Detection and National Security Directorate (FDNS) detects and combats immigration benefit fraud, identifies threats to national security and public safety posed by those seeking immigration benefits, and serves as an effective conduit of information between USCIS and the law enforcement and intelligence community.

Significant accomplishments in FY 2010 include:

- Closed over 6,900 national security cases after vetting and resolving national security concerns and/or providing relevant information to Immigration Services Officers for use in the adjudication of the case.
- Worked with law enforcement partners to develop enhanced applicant screening processes.
- Participated in 42 task forces and working groups, serving as the primary conduit for information sharing and collaboration between USCIS, DHS, and other intelligence and law enforcement agencies.

FY 2011 planned accomplishments include:

- Support Joint Terrorism Taskforce (JTTF) commitments, ICE Document Benefit Fraud Task Force (DBFTF), and other law enforcement liaison activities, national security vetting, overseas verification, and anti-fraud activities.
- Support liaison activities with other government agencies, Law Enforcement Support Operation, enhanced intelligence capabilities, and recurrent vetting activities.
- Support intelligence and information sharing capabilities by producing intelligence reports, responding to analytic support requests, and responding to the expected increase in enforcement-related requests for information.

FY 2012 planned accomplishments include:

- Enhance and maintain full support for JTTF commitments, DBFTF, and other law enforcement liaison activities, national security vetting, overseas verification, and anti-fraud activities.
- Enhance HQFDNS liaison activities with other government agencies, Law Enforcement Support Operation, enhanced intelligence capabilities, and recurrent vetting activities.
- Enhance and support information sharing capabilities, improve and increase production of intelligence reports, respond to analytic support requests, and respond to expected continuing increase in enforcement-related requests for information.

Enterprise Services

The Enterprise Services Directorate (ESD) is comprised of four divisions that are responsible for many key services for USCIS. Examples of such services include: capturing biometrics for background checks needed to adjudicate immigration benefits,

administering the USCIS Freedom of Information Act (FOIA) program, managing over 50 million A-Files and related files, providing 24/7 access to information from A-Files located at the National Records Center, and issuing all records and A-File policy for USCIS. In addition, the Enterprise Services Directorate operates the E-Verify program, which enables employers to verify employee eligibility to work in the United States, and the Systematic Alien Verification for Entitlements (SAVE) program, which enables state, local, and Federal agencies to determine a non-citizen's eligibility for public benefits by checking their immigration status. E-Verify and SAVE are included in the Salaries and Expenses Appropriation request.

Significant accomplishments in FY 2010 include:

- Processed approximately 2.5 million biometrics captures within 60 days of an applicant's initial filing, with a FBI rejection rate of less than 2%.
- An average customer satisfaction rating of 99.75% at the Application Support Centers.
- Closed over 93,000 FOIA requests and exceeded all targeted goals for records operations. This includes responding to 98.8% of priority requests within one workday, 99.6% of routine requests within three workdays, responding to 9,408 telephonic requests in an average of 4 hours and 18 minutes, and improving data integrity by reviewing 317,115 files and correcting electronic information for 55,800 files reviewed.
- Worked closely with the National Archives and Records Administration to identify and turn over custodianship of more than 300,000 A-files for individuals with birth dates more than 100 years ago.
- Launched comprehensive Records Academy courses for USCIS personnel and appropriate federal agencies that have access to USCIS systems and records. Completed 10 Basic Records training courses and 4 Advanced Records training courses that trained over 800 students from USCIS, ICE, and CBP. The Records Academy was awarded the 2010 Pioneer Award for Ingenuity and Innovation.
- Conducted a comprehensive review of the Records Operation Handbook (ROH) chapters that included reviewing and updating 12 chapters of the ROH, establishing a review methodology to ensure required subject matter expertise, and establishing a rigorous timeline to ensure all chapters are reviewed and updated as required.

FY 2011 planned accomplishments include:

- Implement the CanadaVisa Program, increasing biometrics captures as determined by DHS.
- Compete and award an enhanced contract in support of Application Support Centers.
- Serve as co-lead with DHS/FDINS on international initiatives such as UKVisa and CANVisa.
- Establish policies, procedures, and processes to support Transformation efforts with specific emphasis on transitional procedures impacting the Application Support Centers. Develop agency policies and procedures on records retention and records schedules.

- Respond to an estimated 126,000 or more inquiries from ICE, CBP, USCIS, and other government agencies for information contained within A-Files located at the NRC or in EDMS.
- Process an estimated 96,000 FOIA requests.
- Establish Records Electronic Systems Training – Quality Assurance (REST-QA) as a formal program to collaborate with the Office of Security and Integrity inspection and review efforts. REST-QA will be staffed by a team of records subject matter experts.
- Improve A-file handling and dissemination of information by streamlining procedures to give greater support and accountability between USCIS, ICE, and CBP.
- Enhance and improve Open Disclosure on behalf of the agency.
- Fully deploy FIPS Net to support appropriate and timely FOIA processing.
- Reduce FOIA backlog to below 9,500 cases.
- Achieve Genealogy Program performance goals (overall active cycle time for genealogy requests will be less than 90 days).

FY 2012 planned accomplishments include:

- Receive and process over 105,000 FOIA requests.
- Review, perform system updates, and re-retire 1.3 million A-Files retired at the Lee's Summit, Missouri and San Bruno, California Federal Records Centers.
- Complete the final 4 phases of the National File Tracking System (NFTS) Master Reconciliation.
- Expand the Scan on Demand Application to additional sites in conjunction with the Office of Transformation Coordination (OTC) integrated operating environment.

Office of Transformation Coordination (OTC)

USCIS is transforming from a paper-based filing system to a customer-focused electronic filing system. In November 2008, USCIS awarded a 5-year contract to a Solutions Architect to incrementally design, build, implement, and maintain the transformed business capabilities. As a result, USCIS expects to decommission over 10 major USCIS legacy systems, including Claims 3 and Claims 4. To fundamentally transform its business practices, USCIS is conducting comprehensive organizational change management and stakeholder outreach efforts to keep stakeholders abreast of changes and provide feedback to OTC staff.

Significant accomplishments in FY 2010 include:

- Completed business process reengineering for the end-to-end immigration benefit business process from the intake of the benefit application through the production of the benefit document.
- Completed business requirements, business rules and workflow processes for select nonimmigrant benefit types.
- Solicited feedback from USCIS customers, immigration advocates, employees and other federal agencies to inform and shape the transformation approach.

FY 2011 planned accomplishments include:

- Develop and test the five core foundational capabilities for Release A:
 1. “Immigration Accounts” provides a single, comprehensive view of each customer, with easier access to customer information, and online access.
 2. “Electronic Case Management” provides tools to support employees in making decisions and reviewing their work. These tools help us to deliver benefits in a more efficient way with some types of checks already completed by the system.
 3. “Enterprise Information Management” supports decision-making by giving employees the information they need at their fingertips.
 4. “Knowledge Sharing” provides easy, secure access to relevant information will change the way the Agency shares information with our partners.
 5. “Risk and Fraud Support” will improve with automated background checks and give officers more risk information to assist with their decisions.
- Continue two-way communication and outreach efforts with stakeholders.
- Complete System of Records Notice, Privacy Impact Assessments, and Federal Regulations needed to launch transformed systems.

FY 2012 planned accomplishments include:

- Complete testing, training and deploy the Release A core foundational capabilities in three waves.
 1. Wave 1 will support electronic filing of the nonimmigrant I-539 primary benefit type, Application for Extend/Change Non-Immigrant Status, and supporting ancillary benefit types, (i.e. I-20 Certificate of Eligibility for Non-Immigrant Student Status, I-134 Affidavit of Support, I-601 Application for Waiver of Grounds of Inadmissibility, etc...)
 2. Wave 2 will expand processing of the I-539 to additional USCIS Service Centers
 3. Wave 3 will enable customers to electronically file additional nonimmigrant benefit types, (I-765 Application for Employment Authorization Document, I-821 Application for Temporary Protected Status, I-102 Application for Replacement/Initial Non-Immigrant Arrival/Departure Document, I-290B Notice of Appeal or Motion).
- Customers will be able to establish online Immigration Accounts that provide a single, electronic location where an applicant’s information is stored. Each account-holder will have the ability to update information or conduct activities that link back to the individual’s account. An account will provide a comprehensive view of an applicant’s history of interactions with USCIS and contain up-to-date information about case status.
- USCIS Officers will access relevant case information to support and facilitate decision-making in one electronic location. This core capability of USCIS Transformation will enable officers to focus on decision-making rather than

information gathering and provide better case-specific resources. This will include access to case facts and evidence, and tools to process cases.

Office of Information Technology

The Office of Information Technology, a component within the Management Directorate, supports USCIS operations with technology services and solutions.

Significant accomplishments in FY 2010 include:

- **BASICS** – OIT has begun the deployment of the new USCIS active directory and exchange e-mail environment. Once this activity is deployed, USCIS will no longer have to rely on ICE for these services. This is a critical, required component for the deployment of the Transformation Release A solution. As of January 2011, 40% of employees have been migrated to the new Active Directory and Exchange environment. All employees will be migrated by June 2011.
- **DHS Data Center Migrations** – The BASICS Active Directory/Exchange disaster recovery systems have been installed in the DHS Data Center 2. Verification Information System application hardware has been installed and the application is in the process of being migrated. The migration of systems from the DOJ data centers is planned for completion in FY 2011. Currently, DHS has obtained one mainframe, and the hardware for systems migrating out of Rockville has been obtained.
- **CITRIX** – The Work-at-Home CITRIX infrastructure has been upgraded to the newest version of CITRIX and is being centrally managed.

FY 2011 planned accomplishments include:

- Increase real-time Enterprise Application and System monitoring at DHS Data Centers to provide better information for advance troubleshooting, capacity planning, and pre-deployment planning.
- Begin the migration of USCIS applications from the Technology Engineering Consolidation Center (TECC) to the DHS Data Centers.
- Increase the capacity of the infrastructure to meet telework demand. The increase involves adding additional systems and storage to CITRIX infrastructure to support capacity for up to 80 percent of employees being capable of teleworking.
- Complete the transition of USCIS data circuits, web conference host accounts, and phone services to Networx.
- Implement the infrastructure required at USCIS Transformation sites and the DHS Data Center to host Release A of the Transformation project.

FY 2012 planned accomplishments include:

- Establish a central data management capability that will enable USCIS to replicate data between data centers, from field sites to centralized backup sites, and reduce the cost of protecting critical data.
- Implementation of HSPD-12 application authentication for USCIS employees. This will aid in the creation of a single sign-on capability for multiple USCIS applications, including the Transformation solution.
- Continue the migration of USCIS applications from the Technology Engineering Consolidation Center (TECC) to the DHS data centers. The number of systems migrated will be contingent on funding availability from DHS.
- Complete development of legacy systems interfaces in support of the Integrated Operating Environment Release B in the Transformation solution.
- Initiate planning and coordination for development of legacy systems interfaces for IOE Release C in the Transformation solution.

2011 C.R.	271	271	87,114
2012 Adjustments-to-Base	-47	-47	-1,341
2012 Current Services	224	224	85,773
2012 Program Change	-	-	-
2012 Request	224	224	85,773

USCIS requests 224 positions, 224 FTE, and \$85,773,000 to provide timely, consistent, and accurate information to our customers.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Customer Service Directorate (CSD) provides nationwide assistance to customers who contact the USCIS by telephone with questions about immigration services and benefits, and issues related to case processing. To meet the demand for telephone customer service, CSD designed and implemented a triage process whereby callers were able to access and obtain general information and case status through a network Interactive Voice Response (IVR) system. Callers whose inquiry requires additional information can be transferred to receive live assistance.

Significant accomplishments in FY 2010 include:

- The National Customer Service Call Centers (NCSC) IVR received over 14 million calls.
- Implemented the new IVR selection menu to allow faster access to live assistance.
- Improved the Customer Relationship Interface System (CRIS) to allow applicants the ability to submit their service request online, reducing the response time from 30 to 15 days.

FY 2011 planned accomplishments include:

- Re-compete the Tier 1 contract that handles live assistance phone inquiries.

- Enhance NCSC systems using Siebel/CTI to send information from Tier 1 to Tier 2 when a call is transferred. This will allow the Tier 2 Immigration Service Officer (ISO) to have the call information immediately instead of asking the caller to describe an issue again.
- Increase system adoptability to utilize new transformation systems, which will allow the NCSC access to provide specific responses to customer inquiries.
- Increase Call Center Immigration Service Officers access to USCIS systems to increase the ability to answer questions at the time of the call and minimize referrals to field offices.

FY 2012 planned accomplishments include:

- Expand communication channels with customers to include e-mail customer service.
- Include web chat customer service at the Tier 2 level in addition to e-mail and telephone inquiries.
- ISO's at the Tier 2 level will spend 25% of their time processing adjudications.

USCIS requests 979 positions, 979 FTE, and \$348,295,000 to strengthen key management processes, systems, and administrative support activities; and to facilitate mission success and enhance the timeliness, accountability, efficiency and effectiveness of service delivery.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Administration Program is comprised of offices that are included in the Management Directorate as well as other program offices. The Management Directorate manages resources to provide timely, effective, and efficient products and services in its business line; promoting accountability, transparency, and integrity through the evaluation of and application of management practices and controls within USCIS. Specifically, the following Management Directorate program offices are funded in the Administration Program: Office of Administration; Office of the Chief Financial Officer; Office of Equal Opportunity and Inclusion; Office of Human Capital and Training; and the Office of Security and Integrity.

Outside of the offices of the Director, Deputy Director, and the Chief of Staff, core offices include the following:

Office of Administration plans, develops, implements, and evaluates agency-wide policies, procedures, and programs for Acquisition, Asset, and Facilities Management, for the operation of centrally-managed, agency-wide support activities, and for the direct delivery of administrative support to Headquarters.

Office of Chief Counsel (OCC) consists of dedicated legal divisions advising and representing USCIS Operations both at Headquarters and in the field. Divisions include Adjudications Law, Refugee and Asylum Law, Commercial and Administrative Law, Ethics, Field Operations, Training, and Liaison. Each division is responsible for reviewing, interpreting, and providing legal advice and guidance to USCIS operational components and OCC field staff.

Office of the Chief Financial Officer (OCFO) coordinates the development and execution of the budget and biennial fee reviews; manages investment and performance measurement processes; conducts financial management consistent with law, regulation, standards, and best practices; and, undertakes economic analysis supporting regulations development.

Office of Communications oversees and coordinates communication to both internal and external stakeholders to empower employees with the tools needed to perform their jobs, educate the public regarding USCIS benefits and services, and facilitate consistent messaging and imaging for USCIS.

Office of Legislative Affairs maintains communication with Congress through responding to constituent concerns, promoting USCIS priorities, proactive outreach on issues of interest, and ongoing educational activities for Members of Congress and staff.

Office of Equal Opportunity and Inclusion (OEOI) ensures individuals are not denied opportunities in employment or program-services delivery because of their race, color, religion, sex, national origin, age, disability, sexual orientation, status as a parent, genetic information or reprisal.

Office of Policy and Strategy directs, prioritizes, and sets the agenda for agency-wide policy, strategy, and long-term planning activities, as well as for the conduct of research and analysis on immigration services issues.

Office of Security and Integrity (OSI) leads a multi-disciplined security and integrity program to protect and safeguard USCIS personnel, facilities, information and assets. OSI manages the personnel and industrial security, administrative/special security, communications security, and physical security programs and oversees the security awareness training program. OSI also manages a comprehensive internal management review program of USCIS functions and protects the integrity of USCIS programs by investigating allegations of employee misconduct related to waste, fraud, abuse or mismanagement.

This activity is reflected in the Salaries and Expenses Account in the FY 2012 President's Budget submission.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Systematic Alien Verification for Entitlements (SAVE) program helps State, local, and Federal agencies determine a non-citizen's eligibility for public benefits by checking their immigration status against U.S. Department of Homeland Security immigration databases. As of December 2010, the SAVE Program has a total of 678 registered agencies. This includes 235 State agencies, 40 Departments of Motor Vehicles (DMV), 373 local agencies, and 30 Federal agencies. The SAVE customer base grew by 113 percent in FY 2010. During FY 2010, more than 11.7 million queries were run through SAVE. Through December 6, 2010, 1.8 million SAVE queries were run through the system in FY 2011. Large agency customers include the Social Security Administration, the U.S. Department of Housing and Urban Development, the U.S. Department of Education, and the California Department of Motor Vehicles. Every State and the District of Columbia are represented in the SAVE customer base.

Significant accomplishments in FY 2010 include:

- Coordinated with the Department of Health and Human Services on implementation of the Pre-Existing Condition Insurance Pool mandated by health care reform.

- Instituted a Monitoring & Compliance function to ensure the integrity of the SAVE Program.
- Enhanced the current system by adding a new document type for Visa Waiver travelers in response to Customs and Border Protection's I-94W Automation Initiative.
- Hosted the first SAVE Program User Forum to provide current customers with in-depth information on the program and solicit feedback on improvement initiatives. Forum attendees represented some of SAVE's largest customers, including the Social Security Administration (SSA), the Department of Health and Human Services (HHS), the Department of Education (DOE), and the Virginia, Maryland and District of Columbia Departments of Motor Vehicles. The event included an open forum discussion where participants were able to ask questions, discuss concerns, and provide input on improving the program.
- Implemented a streamlined registration process for Georgia localities and developed a Webinar to guide agencies through the process. Worked closely with officials from the Georgia Municipal Association and the Association of County Commissioners of Georgia and registered 253 Georgia agencies.

FY 2011 planned accomplishments include:

- Conduct a SAVE program evaluation.
- Develop system requirements for profile-based system (PBS)/SAVE modernization.
- Conduct a Six Sigma root cause analysis of SAVE referrals to minimize additional verification.
- Process 97% of SAVE second step electronic referrals within three federal workdays.

PPA Mission Statement

The funds from the Immigration Examinations Fee Account (IEFA), Information and Customer Services Program, are used to provide timely, consistent, and accurate information to its customers that will reduce the frequency of repeated, redundant applicant contact with USCIS employees, thus improving agency efficiency. Through multiple channels of available assistance, including the USCIS website, toll-free call center (National Customer Service Call Center), and face-to-face appointments; USCIS will make it easier for our customers to get the information they need, when they need it.

Summary Justification and Explanation of Changes

	Actual	C.R.	Request	2011 - 2012 Change
Operation & maintenance of facilities	\$0	\$52	\$48	(\$4)

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. The FY 2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY 2012-2013 Fee Review.

	FY 2010	FY 2011	2012	
	Actual	C.R.	Request	2011 - 2012 Change
Research and Development	\$0	\$11	\$11	(\$1)

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The FY 2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY 2012-2013 Fee Review.

	FY 2010	FY 2011	2012	
	Actual	C.R.	Request	2011 - 2012 Change
Operation & Maintenance of equipment	\$582	\$5,662	\$5,256	(\$406)

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY 2012-2013 Fee Review.

	FY 2010	FY 2011	2012	
	Actual	C.R.	Request	2011 - 2012 Change
Subsistence & Support of Persons	\$0	\$7,171	\$6,657	(\$514)

Subsistence & Support of Persons includes costs for contractual services with the public or another Federal government account for the board, lodging, and care of persons, including prisoners. The FY 2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY 2012-2013 Fee Review.

	FY 2010	FY 2011	2012	
	Actual	C.R.	Request	2011 - 2012 Change
Supplies & materials	\$1,885	\$3,464	\$3,216	(\$248)

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY 2012-2013 Fee Review.

	FY 2010	FY 2011	2012	
	Actual	C.R.	Request	2011 - 2012 Change
Equipment	\$5,716	\$11,298	\$10,488	(\$809)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY 2012-2013 Fee Review.

	FY 2010	FY 2011	2012	
	Actual	C.R.	Request	2011 - 2012 Change
Land & Structures	\$3,419	\$749	\$695	(\$54)

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural (or resource) improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease. The FY 2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY 2012-2013 Fee Review.

	FY 2010	FY 2011	2012	
	Actual	C.R.	Request	2011 - 2012 Change
Indemnity	\$1,936	\$392	\$364	(\$28)

Insurance claims and indemnities includes all benefit payments from the social insurance and Federal retirement trust funds and payments for losses and claims including those under the Equal Access to Justice Act. The FY 2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY 2012-2013 Fee Review.

PPA Mission Statement

This program has funded the operations of the SAVE Program. SAVE is an intergovernmental information-sharing program that verifies an individual's immigration status to ensure that only those eligible receive Federal, state, or local public benefits. The FY2012 request is included in the Salaries and Expenses Account.

Summary Justification and Explanation of Changes

	FY 2010 Actual	FY 2011 C.R.	2012 Request	2011 - 2012 Change
Salaries and Benefits	\$13,189	\$11,975	\$0	(\$11,975)

Salaries and Benefits includes costs for 0 FTE. The FY2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY2012-2013 Fee Review.

	FY 2010 Actual	FY 2011 C.R.	2012 Request	2011 - 2012 Change
Travel	\$21	\$301	\$0	(\$301)

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY 2012-2013 Fee Review.

	FY 2010 Actual	FY 2011 C.R.	2012 Request	2011 - 2012 Change
Transportation of Things	\$3	\$143	\$0	(\$143)

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. The FY 2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY 2012-2013 Fee Review.

	FY 2010 Actual	FY 2011 C.R.	2012 Request	2011 - 2012 Change
GSA rent	\$0	\$2,366	\$0	(\$2,366)

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY 2012-2013 Fee Review.

	FY 2010 Actual	FY 2011 C.R.	2012 Request	2011 - 2012 Change
Other Rent	\$0	\$63	\$0	(\$63)

Other rent includes all payments to a non-Federal source for rental space, land, and structures. The FY 2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY 2012-2013 Fee Review.

	FY 2010 Actual	FY 2011 C.R.	2012 Request	2011 - 2012 Change
Communication, Utilities, and miscellaneous charges	\$0	\$627	\$0	(\$627)

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY 2012-2013 Fee Review.

	FY 2010 Actual	FY 2011 C.R.	2012 Request	2011 - 2012 Change
Printing	\$200	\$98	\$0	(\$98)

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY 2012-2013 Fee Review.

	FY 2010 Actual	FY 2011 C.R.	2012 Request	2011 - 2012 Change
Advisory and Assistance Services	\$602	\$12,730	\$0	(\$12,730)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY 2012-2013 Fee Review.

	FY 2010 Actual	FY 2011 C.R.	2012 Request	2011 - 2012 Change
Other Services	\$51	\$189	\$0	(\$189)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY 2012-2013 Fee Review.

	FY 2010 Actual	FY 2011 C.R.	2012 Request	2011 - 2012 Change
Purchase from Government Accounts	\$2	\$2,898	\$0	(\$2,898)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY 2012-2013 Fee Review.

	FY 2010 Actual	FY 2011 C.R.	2012 Request	2011 - 2012 Change
Operation & maintenance of facilities	\$0	\$5	\$0	(\$5)

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. The FY 2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY 2012-2013 Fee Review.

	FY 2010 Actual	FY 2011 C.R.	2012 Request	2011 - 2012 Change
Research and Development	\$0	\$1	\$0	(\$1)

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The FY 2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY 2012-2013 Fee Review.

	FY 2010 Actual	FY 2011 C.R.	2012 Request	2011 - 2012 Change
Operation & Maintenance of equipment	\$0	\$513	\$0	(\$513)

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2012 request reflects anticipated resource needs based on fee reform and preliminary requirements identified in the FY 2012-2013 Fee Review.

	FY 2010 Actual	FY 2011 C.R.	2012 Request	2011 - 2012 Change
Subsistence & Support of Persons	\$0	\$650	\$0	(\$650)

BUDGET REQUEST AND SUPPORTING INFORMATION
--

H-1B Nonimmigrant Petitioner Account

I. Appropriation Overview

A – Mission Statement for H-1B Nonimmigrant Petitioner Account:

The H-1B Visa Reform Act of 2004 requires employers who participate in the H-1B program to pay an additional \$1,500 (\$750 for those petitioners who employ less than 25 full-time equivalent employees), in addition to the base-processing fee of \$320 to file a Petition for a Nonimmigrant Worker (Form I-129). USCIS receives five percent of these funds, as well as the entire base-processing fee. However, this account only includes funding associated with the fee stipulated in the H-1B Visa Reform Act of 2004 and does not include funding associated with the base processing fee. These funds comprise less than one percent of the total USCIS budget.

The FY 2010 Emergency Supplemental Appropriation for Border Security Act (Public Law 111-230) increased certain H-1B and L-1 application fees. This law requires an additional filing fee of \$2,000 for H-1B petitions, and \$2,250 for certain L-1 petitions where the petitioner employs 50 or more individuals in the U.S. and more than 50% of its employees are in H-1B or L-1 nonimmigrant status. Revenue from fees above base levels (i.e., the \$500 or \$150 fees) is deposited into the General Fund of the Treasury, not the H-1B Nonimmigrant Petitioner or Fraud Prevention and Detection Accounts.

B – Budget Activities:

Funding from the H-1B Nonimmigrant Petitioner Account primarily supports the Service Center Operations Directorate. Fee revenues primarily fund contract activities (mail, filing, biometric and data entry) and facility rent expenses related to the processing of immigration benefit applications at USCIS Service Centers.

The Service Center Operations Directorate manages four regionally based Service Centers which receive, process, and adjudicate applications, petitions and their related fees for immigration benefits not requiring face-to-face contact with the applicant, petitioner, or beneficiary.

C – Budget Request Summary:

USCIS requests \$13,000,000 in FY 2012 to maintain current service levels. These funds will continue to support contract activities and facility rent expenses for the processing of immigration benefit applications.

II. Summary of FY 2012 Budget Estimates by Program/Project Activity (PPA)

III. Current Services Program Description by PPA

Department of Homeland Security
Citizenship & Immigration Services
H-1B Nonimmigrant Petitioner Account:
Adjudication Services
Program Performance Justification
 (Dollars in Thousands)

PPA: Adjudication Services

	Perm. Pos	FTE	Amount
2010 Actual	-	-	8,950
2011 C.R.	-	-	13,000
2012 Adjustments-to-Base	-	-	-
2012 Current Services	-	-	13,000
2012 Program Change	-	-	-
2012 Request	-	-	13,000

USCIS requests \$13 million for contract activities and facility rent expenses that support the processing of immigration benefit applications. The fee associated with the requested amount is set by Congressional statute providing USCIS with five percent of the fees collected for the H-1B visas (Nonimmigrant Petitioner), in addition to the base-processing fee to file a Petition for a Nonimmigrant Worker (Form I-129).

CURRENT SERVICES PROGRAM DESCRIPTION:

The USCIS Service Center Operations Directorate receives, processes, and adjudicates applications, petitions and their related fees for immigration benefits not requiring face-to-face contact with the applicant, petitioner, or beneficiary, which includes:

- *Family-based petitions* - facilitating the process for close relatives to immigrate, gain permanent residency, work, etc.
- *Employment-based petitions* - facilitating the process for current and prospective employees to immigrate or stay in the U.S. temporarily.

USCIS annually processes millions of immigration benefit applications at its Service Centers. The \$13 million for contract activities and facility rent expenses is a portion of the total operations contract support and Service Center rent. The balance is covered by fees from the Immigration Examinations Fee Account.

Significant accomplishments in FY 2010 include:

- Ensured that the mail, filing, and data entry functions being performed by contractors located within the Service Centers continued uninterrupted.

FY 2011 & 2012 planned accomplishments include:

- Ensure that the mail, filing, and data entry functions being performed by contractors located within the Service Centers continues uninterrupted.
- Continue funding for Service Center facility rent expenses.

PPA Mission Statement

The funds from the H-1B Nonimmigrant Petitioner Account, comprising less than one percent of the total USCIS budget request, are specifically targeted to contracting activities and facility rent expenses related to processing immigration benefit applications. These funds are the result of the H-1B Visa Reform Act of 2004, which requires employers who participate in the H-1B program to pay an additional \$1,500 (\$750 for those petitioners who employ less than 25 full-time equivalent employees), in addition to the base processing fee of \$320 to file a Petition for a Nonimmigrant Worker (Form I-129). USCIS receives five percent of these funds, as well as the entire base processing fee. However, this account only includes funding associated with the fee stipulated in the H-1B Visa Reform Act of 2004 it does not include funding associated with the base processing fee.

Summary Justification and Explanation of Changes

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	FY 2011 - FY 2012 Change
GSA rent	\$0	\$2,000	\$2,000	\$0

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. This amount is a portion of the Service Center rent; the difference is covered by fees collected into the Immigration Examinations Fee Account. This funding supports the anticipated resource needs for FY 2012.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	FY 2011 - FY 2012 Change
Advisory and Assistance Services	\$8,950	\$11,000	\$11,000	\$0

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. This funding supports the anticipated resource needs for FY 2012.

BUDGET REQUEST AND SUPPORTING INFORMATION
--

Fraud Prevention and Detection Account:

I. Appropriation Overview

A – Mission Statement for Fraud Prevention and Detection Account:

Funding in the Fraud Prevention and Detection Account is used for activities related to preventing and detecting fraud for all immigration benefit types. The Immigration and Nationality Act, as amended, requires petitioners to pay \$500 toward this purpose for a beneficiary's initial grant of H-1B or L nonimmigrant classification, as well as if they are changing a beneficiary's employer within these classifications; and pay \$150 for H-2B benefits in addition to the base-processing fee for a Petition for a Nonimmigrant Worker (Form I-129). USCIS receives a one-third share of revenue derived from these fees.

The FY 2010 Emergency Supplemental Appropriation for Border Security Act (Public Law 111-230) increased certain H-1B and L-1 application fees. This law requires an additional filing fee of \$2,000 for H-1B petitions, and \$2,250 for certain L-1 petitions where the petitioner employs 50 or more individuals in the U.S. and more than 50% of its employees are in H-1B or L-1 nonimmigrant status. Revenue from fees above base levels (i.e., the \$500 or \$150 fees) is deposited into the General Fund of the Treasury, not the Fraud Prevention and Detection Account.

B – Budget Activities:

The Fraud Detection and National Security Directorate (FDNS) at USCIS develops, coordinates and leads national anti-fraud operations for USCIS and oversees and enhances policies and procedures pertaining to the performance of law enforcement (background) checks on applicants and petitioners. In addition, FDNS identifies threats to national security and public safety as well as serving as a conduit for intelligence related information between USCIS and the law enforcement and intelligence community.

C – Budget Request Summary:

USCIS requests 186 positions, 186 FTE, and \$38,078,000 to fund USCIS requirements for FY 2012.

2012 Current Services	186	186	38,078
2012 Program Change	-	-	-
2012 Request	186	186	38,078

USCIS requests 186 positions, 186 FTE, and \$38,078,000 for this activity for FY 2012.

CURRENT SERVICES PROGRAM DESCRIPTION:

As part of a joint anti-fraud strategy and in partnership with ICE, FDNS identifies vulnerabilities in the nation’s immigration system and works to eliminate the potential for exploitation of those vulnerabilities and prosecute the violators.

Operationally, FDNS officers located in field offices, service centers, and the National Benefits Center perform most anti-fraud activities. These officers perform site inspections, deconfliction and vetting activities, and coordinate with law enforcement agencies. Field FDNS officers participate in Document Benefit Fraud Task Forces (DBFTFs), Joint Terrorism Task Forces (JTTFs), and other federal and local law enforcement initiatives. In FY 2010, FDNS officers received over 31,000 fraud leads, which resulted in over 10,000 administrative investigations. While these figures represent a significant commitment to anti-fraud work, the USCIS priority is the resolution of national security cases.

In FY 2010, FDNS continued its Administrative Site Visit and Verification Program (ASVVP). The ASVVP serves as a vehicle to conduct pre and post adjudication site inspections on religious worker and H-1B temporary worker petitions. The ASVVP detects fraud in individual petitions and applications, and produces data that is useful in determining fraud risks and patterns.

In FY 2010, FDNS placed two officers in overseas offices in order to enhance overseas verification efforts. Guided by future fraud risk assessments, FDNS will work in cooperation with the Refugee, Asylum, and International Operations Directorate to build its overseas capacity to cover more high-volume posts.

A total of 438 Immigration Officers, Intelligence Research Specialists, and support personnel in field offices and service centers perform FDNS operations.

FY 2010 Accomplishments:

- Conducted over 15,000 ASVVP site visits and continued to promote the program with community, employer, and advocacy organizations.
- Completed over 10,000 administrative fraud investigations.
- Increased overseas verification capabilities by placing FDNS officers in Monterrey, Mexico; Frankfurt, Germany; and New Delhi, India.
- Continued the development of a comprehensive and collaborative approach for detecting, prosecuting, and deterring immigration-related fraud.
- Supported agency transformation efforts through the detail of officers and staff.

FY 2011 Planned Activities:

- Continue to provide support for JTTF commitments, law enforcement liaison activities, national security vetting, overseas verification, and anti-fraud activities.
- Continue development of a comprehensive and collaborative approach for detecting, prosecuting, and deterring immigration-related fraud.

FY 2012 Planned Activities:

- Continue to support JTTF commitments, law enforcement liaison activities, national security vetting, overseas verification, and anti-fraud activities.
- Enhance and support information sharing capabilities, improve and increase production of intelligence reports, respond to analytic support requests, and respond to expected continuing increase in enforcement-related requests for information.
- Expand the capabilities of the Integrated Operating Environment to meet evolving and expanding FDNS requirements for state of the art business solutions.
- Restructure the FDNS Data Quality Assurance Program and its tools to allow for near or real time identification of FDNS case management data.
- Continue development of a comprehensive and collaborative approach to detecting, prosecuting, and deterring immigration-related fraud.

PPA Mission Statement

The funds from the Fraud Prevention and Detection Account, comprising approximately two percent of the total USCIS budget request, primarily support the USCIS goal to ensure the security and integrity of the immigration system. These funds are specifically for activities related to preventing and detecting fraud for all immigration benefit types.

Summary Justification and Explanation of Changes

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Salaries and Benefits	\$77,277	\$22,213	\$22,213	\$0

Salaries and Benefits includes costs for 186 FTEs. This funding supports the anticipated resource needs for FY 2012.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Travel	\$782	\$758	\$758	\$0

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. This funding supports the anticipated resource needs for FY 2012.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Transportation of Things	\$112	\$119	\$119	\$0

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. This funding supports the anticipated resource needs for FY 2012.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
GSA rent	\$1,936	\$2,486	\$2,486	\$0

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Communication, Utilities, and miscellaneous charges	\$287	\$15	\$15	\$0

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. This funding supports the anticipated resource needs for FY 2012.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Printing	\$3	\$0	\$0	\$0

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Advisory and Assistance Services	\$13,838	\$7,372	\$6,292	(\$1,080)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. This funding supports the anticipated resource needs for FY 2012.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Other Services	\$635	\$5,535	\$5,535	\$0

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. This funding supports the anticipated resource needs for FY 2012.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Purchase from Government Accounts	\$230	\$65	\$65	\$0

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. This funding supports the anticipated resource needs for FY 2012.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Subsistence & Support of Persons	\$13	\$1	\$1	\$0

Subsistence & Support of Persons includes costs for contractual services with the public or another Federal government account for the board, lodging, and care of persons, including prisoners. This funding supports the anticipated resource needs for FY 2012.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Supplies & materials	\$271	\$174	\$174	\$0

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. This funding supports the anticipated resource needs for FY 2012.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Equipment	\$726	\$420	\$420	\$0

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. This funding supports the anticipated resource needs for FY 2012.

Salaries and Expenses

I. Appropriation Overview

A. Mission Statement

We train those who protect our homeland.

B. Budget Activities

The Federal Law Enforcement Training Center (FLETC) is the leading service provider for federal law enforcement training. FLETC serves as an interagency law enforcement training organization for over 85 Federal Partner Organizations (POs) with personnel located throughout the United States and its territories. FLETC's personnel conduct instructional programs for basic law enforcement recruits and some advanced training based on agency requests. FLETC also provides the necessary facilities, equipment, and support services for conducting advanced, specialized and refresher training for federal law enforcement personnel.

FLETC provides services to state, local, international and other federal law enforcement agencies with related law enforcement missions on a space-available basis. FLETC also provides training conducted at other locations when the programs being conducted do not require the use of certain specialized facilities and when a geographical concentration of personnel is identified.

Consolidation of law enforcement training permits the Federal Government to emphasize training program excellence and shared experiences in cooperative training in a cost effective manner. Professional instruction and practical application provide students with the skills and knowledge necessary to meet the demanding challenges of a federal law enforcement career. New federal hires and journey-level personnel learn not only the responsibilities of a law enforcement officer and agent, but through interaction with students from many other agencies, also become acquainted with the missions and duties of their colleagues. This interaction provides the foundation for a more cooperative federal law enforcement effort.

FLETC's POs have considerable input regarding training issues as well as operational and functional aspects of the Center. Representatives from these agencies take part in regular curriculum review and development conferences, and participate in the development of FLETC policies and directives. This relationship is characteristic of a "true partnership," which is responsive to the training mission.

C. Budget Request Summary

The Federal Law Enforcement Training Center requests 1,130 positions, 1,103 FTE and \$238,957,000. This amount reflects the annualization of the Southwest Border supplemental and a program change of \$3,318,000 that supports Transportation Security Administration (TSA) Basic Training.

2012 Program Change	-	-	3,318
2012 Total Request	893	872	207,937

FLETC requests \$207.937 million for this activity. The requested amount includes \$0.762 million for annualization of the Southwest Border supplemental and a \$29.716 million transfer to the Management and Administration PPA. The program change of \$3.318 million supports Transportation Security Administration (TSA) Basic Training.

CURRENT SERVICES PROGRAM DESCRIPTION:

Law Enforcement Training: FLETC's services to its three major client groups underscore its homeland security support mission in promoting intergovernmental cooperation in law enforcement preparedness.

Federal – FLETC provides law enforcement training to over 85 federal agencies having enforcement responsibilities. FLETC prepares new and experienced law enforcement professionals to fulfill their responsibilities in a safe manner and at the highest level of proficiency. The average basic student spends 12 weeks training at FLETC, and receives a combination of classroom instruction and hands-on practical exercise training in all phases of law enforcement from firearms and high-speed vehicle operations to legal case instructions and defendant interview techniques. Students must apply their classroom knowledge during exercises that simulate typical situations encountered on the job. To add realism these exercises often involve contract role players who act as victims, witnesses or

suspects. Each of the basic programs provides core knowledge essential for new federal officers or agents to carry out their duties in a safe and efficient manner.

In addition to basic training, FLETC offers advanced and specialized training for career-long law enforcement preparation in subjects that are common to two or more of its Partner Organizations. Examples include Antiterrorism Port Security Boat Operations, Cyber Counterterrorism Investigator Training, Covert Electronics Surveillance, Critical Infrastructure Protection, Financial Forensics Techniques, Intelligence Analysts Training and Land Transportation Antiterrorism Training.

State and local – The National Center for State and Local Law Enforcement Training trains personnel from state and local law enforcement agencies in advanced topics designed to develop specialized law enforcement skills. The participants benefit from federal expertise, specialized training, and receive instruction specific to their needs. Additionally, the program offerings are in subjects not generally available from state and local police academies or colleges and universities.

International – In the interest of combating global crime and protecting U.S. interests abroad, FLETC offers a range of training programs to foreign law enforcement agencies. Training focuses on the U.S. Government's Law and Democracy Program and the International Law Enforcement Academy programs in Europe, Asia, Africa, and other regions in the world. In cooperation with the Department of State, FLETC manages an International Law Enforcement Academy in Gaborone, Botswana, and serves as Deputy Director at the International Law Enforcement Academy in Bangkok, Thailand. Additionally, FLETC provides training and technical assistance at locations worldwide in collaboration with and support of the respective U.S. embassies abroad. In support of this program, FLETC recently assigned a Regional Training Advisor to the U.S. Embassy in Kiev, Ukraine on a reimbursable basis.

PPA: Management and Administration

	Perm. Pos	FTE	Amount
2010 Actual	-	-	-
2011 Continuing Resolution	-	-	-
2012 Adjustments-to-Base	230	224	29,716
2012 Current Services	230	224	29,716
2012 Total Request	230	224	29,716

FLETC requests \$29.716 million for this activity. This new PPA is created from a transfer from the Law Enforcement Training PPA to break out management and administration functions. There are no program changes.

CURRENT SERVICES PROGRAM DESCRIPTION:

Management and Administration: Management and Administration provides critical management, oversight, analysis, policy, and administrative support to ensure the FLETC mission of training those who protect our homeland is done efficiently and effectively. Included are activities which are administrative and non-operational in nature. Excluded are operational activities which relate to the delivery of Law Enforcement Training. Also excluded are activities which are traditionally considered administrative in nature but the preponderance of the support is directly related to the delivery of Law Enforcement Training.

The Management and Administration program includes the FLETC Director, Director's Office, and immediate staff including the Office of Chief Counsel, Washington Office, Public Affairs Office, Equal Employment Opportunity Division, and Inspection and Compliance Division. Also included is the Chief Financial Officer Directorate, providing budget, finance, accounting, financial systems, financial statements, relocation, travel, and strategic planning functions.

The Management and Administration program also includes Asset Management functions, such as Procurement, Real and Personal Property Management, Environmental Compliance and Safety. It includes the Operation Support functions such as Human Capital and Critical

Incident Stress Management to promote fairness, consistency, and efficiency in the utilization of staffing, scheduling, human capital and human resources.

Excluded from this program are direct training functions such as the Training Directorate, Office of Training Operations, Field Training Directorate, Office of State and Local Training, Training Innovation and Management, Office of Training Management, and Office of Training Support. Also excluded from this program are the Chief Information Officer and Facilities Management because the preponderance of facilities and Information Technology equipment at FLETC are in the training environment. These activities are not administrative in nature and more directly tie to the Law Enforcement Training Program.

**Department of Homeland Security
Federal Law Enforcement Training Center
Salaries and Expenses:
Accreditation
Program Performance Justification
(Dollars in Thousands)**

PPA: Accreditation

	Perm. Pos	FTE	Amount
2010 Actual	7	6	1,258
2011 Continuing Resolution	7	7	1,309
2012 Adjustments-to-Base	-	-	(5)
2012 Current Services	7	7	1,304
2012 Total Request	7	7	1,304

FLETC requests \$1.304 million for this activity. There are no program changes.

CURRENT SERVICES PROGRAM DESCRIPTION:

Accreditation: The Federal Law Enforcement Accreditation (FLETA) process sets the standards for Federal law enforcement training. The accreditation of a Federal Law Enforcement academy or program provides assurance to the citizens they serve that they have voluntarily submitted to a process of self-regulation; and, that they have successfully achieved compliance with a set of standards that have been collectively established by their peers within their professional community that demonstrate their adherence to quality, effectiveness and integrity. To accomplish this goal, trainers in the same discipline, working through a professional accrediting body, assist each other in evaluating and improving their professionalism. The focus of the effort is to accredit Federal academies; entry-level and advanced or specialized training programs; instructor training; and, other programs that affect multiple Federal, state and local law enforcement officers.

IV. Program Justification Changes

Total Request	-	-	-	-	-	-	-	-	3,318

Description of Item

To fund basic training of additional Federal Air Marshals and Visible Intermodal Prevention and Response (VIPR) team members.

Justification

DHS requests this program increase to meet increased basic training requirements for TSA.

Impact on Performance (Relationship of Increase to Strategic Goals)

Enhancing the number of Federal Air Marshals and VIPR teams deployed will safeguard lawful travel by increasing capability to detect, deter, and prevent terrorist attacks.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Law Enforcement Training Center
Justification of Proposed Changes in Salaries and Expenses
Appropriation Language**

For necessary expenses of the Federal Law Enforcement Training Center, including materials and support costs of Federal law enforcement basic training; the purchase of not to exceed 117 vehicles for police-type use and hire of passenger motor vehicles; expenses for student athletic and related activities; the conduct of and participation in firearms matches and presentation of awards; public awareness and enhancement of community support of law enforcement training; room and board for student interns; a flat monthly reimbursement to employees authorized to use personal mobile phones for official duties; and services as authorized by section 3109 of title 5, United States Code; \$237,653,000, of which up to \$48,978,000 shall remain available until September 30, 2013, for materials and support costs of Federal law enforcement basic training; and of which not to exceed \$12,000 shall be for official reception and representation expenses: Provided, That the Center is authorized to obligate funds in anticipation of reimbursements from agencies receiving training sponsored by the Center, except that total obligations at the end of the fiscal year shall not exceed total budgetary resources available at the end of the fiscal year: Provided further, That section 1202(a) of Public Law 107-206 (42 U.S.C. 3771 note), as amended by Public Law 111-83 (123 Stat. 2166), is further amended by striking “December 31, 2012” and inserting “December 31, 2014” Provided further, That the Director of the Federal Law Enforcement Training Center shall schedule basic or advanced law enforcement training, or both, at all four training facilities under the control of the Federal Law Enforcement Training Center to ensure that such training facilities are operated at the highest capacity throughout the fiscal year.

For the additional amount, for necessary expenses funding Federal Law Enforcement Training Accreditation activities, \$1,304,000, of which \$300,000 shall remain available until expended to be distributed to Federal law enforcement agencies for expenses incurred participating in training accreditation: Provided further, That the Federal Law Enforcement Training Accreditation Board, including representatives from the Federal law enforcement community and non-Federal accreditation experts involved in law enforcement training, shall lead the Federal law enforcement training accreditation process to continue the implementation of measuring and assessing the quality and effectiveness of Federal law enforcement training programs, facilities, and instructors.

Explanation of Changes:

Request modification of FLETC S&E Appropriation Language to create greater distinction of the FLETA portion of this account.

Extension of Public Law 107-206 as amended by Public Law 111-83 (relating to FLETC's authority to hire federal annuitants) until December 31, 2014 is requested at this time.

Law Enforcement Training Mission Statement

We train those who protect our homeland.

Summary Justification and Explanation of Changes

	FY 2010 Actual	FY 2011 Continuing Resolution	FY 2012 Request	2011 - 2012 Change
Salaries and Benefits	\$122,984	\$124,550	\$97,306	(\$27,244)

Salaries and Benefits includes costs for 872 FTEs.

	FY 2010 Actual	FY 2011 Continuing Resolution	FY 2012 Request	2011 - 2012 Change
Travel	\$7,550	\$8,427	\$6,108	(\$2,319)

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations.

	FY 2010 Actual	FY 2011 Continuing Resolution	FY 2012 Request	2011 - 2012 Change
Transportation of Things	\$644	\$1,288	\$744	(\$544)

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things.

	FY 2010 Actual	FY 2011 Continuing Resolution	FY 2012 Request	2011 - 2012 Change
Other Rent	\$35	\$35	\$35	\$0

Other rent includes all payments to a non-Federal source for rental space, land, and structures.

	FY 2010 Actual	FY 2011 Continuing Resolution	FY 2012 Request	2011 - 2012 Change
Communication, Utilities, and miscellaneous	\$9,144	\$9,884	\$9,240	(\$644)

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services.

	FY 2010 Actual	FY 2011 Continuing Resolution	FY 2012 Request	2011 - 2012 Change
Printing	\$759	\$1,810	\$1,640	(\$170)

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities.

	FY 2010 Actual	FY 2011 Continuing Resolution	FY 2012 Request	2011 - 2012 Change
Advisory and Assistance Services	\$3,644	\$503	\$145	(\$358)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, state and local governments, tribes, etc.) as well as from other units within the Federal Government.

	FY 2010 Actual	FY 2011 Continuing Resolution	FY 2012 Request	2011 - 2012 Change
Other Services	\$19,978	\$21,816	\$19,193	(\$2,623)

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25.

	FY 2010 Actual	FY 2011 Continuing Resolution	FY 2012 Request	2011 - 2012 Change
Operation & maintenance of facilities	\$35,835	\$32,708	\$29,619	(\$3,089)

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account.

	FY 2010 Actual	FY 2011 Continuing Resolution	FY 2012 Request	2011 - 2012 Change
Medical Care	\$3,220	\$5,017	\$4,493	(\$524)

Medical care includes payments to contracts for medical services, but excludes contracts with individuals who are reportable under OPM regulations as federal employees or payments to compensate casual workers and patient help.

	FY 2010 Actual	FY 2011 Continuing Resolution	FY 2012 Request	2011 - 2012 Change
Operation & Maintenance of equipment	\$11,886	\$7,458	\$6,888	(\$570)

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account.

	FY 2010 Actual	FY 2011 Continuing Resolution	FY 2012 Request	2011 - 2012 Change
Subsistence & Support of Persons	\$809	\$1,093	\$962	(\$131)

Subsistence & Support of Persons includes costs for contractual services with the public or another Federal government account for the board, lodging, and care of persons, including prisoners.

	FY 2010 Actual	FY 2011 Continuing Resolution	FY 2012 Request	2011 - 2012 Change
Supplies & materials	\$12,379	\$21,548	\$18,589	(\$2,959)

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency.

	FY 2010 Actual	FY 2011 Continuing Resolution	FY 2012 Request	2011 - 2012 Change
Equipment	\$15,926	\$17,954	\$17,904	(\$50)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract.

	FY 2010 Actual	FY 2011 Continuing Resolution	FY 2012 Request	2011 - 2012 Change
Land & Structures	\$26	\$56	\$43	(\$13)

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural (or resource) improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease.

	FY 2010 Actual	FY 2011 Continuing Resolution	FY 2012 Request	2011 - 2012 Change
Indemnity	\$160	\$53	\$24	(\$29)

Insurance claims and indemnities includes all benefit payments from the social insurance and Federal retirement trust funds and payments for losses and claims including those under the Equal Access to Justice Act.

	FY 2010 Actual	FY 2011 Continuing Resolution	FY 2012 Request	2011 - 2012 Change
Interest & Dividends	\$44	\$34	\$4	(\$30)

Interest & dividends includes payments to creditors for the use of moneys loaned, deposited, overpaid, or otherwise made available.

BUDGET REQUEST AND SUPPORTING INFORMATION
--

Acquisition, Construction, Improvements & Related Expenses

I. Appropriation Overview

A. Mission Statement

We train those who protect our homeland.

B. Budget Activities

The Federal Law Enforcement Training Center (FLETC) is the leading service provider for federal law enforcement training. FLETC serves as an interagency law enforcement training organization for over 85 Federal Partner Organizations (POs) with personnel located throughout the United States and its territories. FLETC's personnel conduct instructional programs for basic law enforcement recruits and some advanced training based on agency requests. FLETC also provides the necessary facilities, equipment, and support services for conducting advanced, specialized and refresher training for federal law enforcement personnel.

FLETC provides services to state, local, international and other federal law enforcement agencies with related law enforcement missions on a space-available basis. FLETC also provides training conducted at other locations when the programs being conducted do not require the use of certain specialized facilities and when a geographical concentration of personnel is identified.

Consolidation of law enforcement training permits the Federal Government to emphasize training program excellence and shared experiences in cooperative training in a cost effective manner. Professional instruction and practical application provide students with the skills and knowledge necessary to meet the demanding challenges of a federal law enforcement career. New federal hires and journey-level personnel learn not only the responsibilities of a law enforcement officer and agent, but through interaction with students from many other agencies, also become acquainted with the missions and duties of their colleagues. This interaction provides the foundation for a more cooperative federal law enforcement effort.

FLETC's POs have considerable input regarding training issues as well as operational and functional aspects of the Center. Representatives from these agencies take part in regular curriculum review and development conferences, and participate in the development of FLETC policies and directives. This relationship is characteristic of a "true partnership," which is responsive to the training mission.

C. Budget Request Summary

The Federal Law Enforcement Training Center requests \$37,456,000. The request includes a reduction of \$1,000,000 for non-recr of the Practical Applications/Counter-Terrorism Operations Training Facility (PA/CTOTF). There are no program changes.

III. Current Services Program Description by PPA

**Department of Homeland Security
Federal Law Enforcement Training Center
Acquisition, Construction, Improvements & Related Expenses:
Program Performance Justification
(Dollars in Thousands)**

PPA: Acquisition, Construction, Improvements & Related Expenses:

	<u>Perm. Pos</u>	<u>FTE</u>	<u>Amount</u>
2010 Actual	-	-	106,593
2011 Continuing Resolution	-	-	43,456
2012 Adjustments-to-Base	-	-	(6,000)
2012 Current Services	-	-	37,456
2012 Total Request	-	-	37,456

FLETC requests \$37.456 million for this activity. The request includes a reduction of \$1.000 million for non-recur PA/CTOTF funding. There are no program changes.

CURRENT SERVICES PROGRAM DESCRIPTION:

Acquisition, Construction, Improvement & Related Expenses: This account provides for the acquisition and related costs for the expansion and maintenance of FLETC, to include funding for the Facilities Master Plan, Minor Construction and Maintenance, Environmental Compliance, and Communications Systems. The Master Plan provides the long range blueprint for expansion of facilities to meet the training requirements of over 85 Partner Organizations. Minor Construction and Maintenance provides alterations and maintenance funding for approximately 300 buildings at four locations. These locations include Glynco, Georgia which has a projected utilization rate of 70% in FY 2011; Artesia, New Mexico which has a projected utilization rate of 73% in FY 2011; Charleston, South Carolina which has a projected utilization rate of 83% in FY 2011; and Cheltenham, Maryland which has a projected utilization rate of 21% in FY2011¹. Environmental Compliance funding is to ensure compliance with the Environmental Protection Agency and state environmental laws and regulations. Communications Systems funding is to maintain and repair or replace the fiber optics telecommunications cable system.

¹ The utilization rate for Cheltenham is being re-evaluated and examined to more accurately capture capacity and identify opportunities to increase utilization.

IV. Program Justification Changes

Not Applicable.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

For acquisition of necessary additional real property and facilities, construction, and ongoing maintenance, facility improvements, and related expenses of the Federal Law Enforcement Training Center, \$37,456,000, to remain available until expended: Provided, That the Center is authorized to accept reimbursement to this appropriation from government agencies requesting the construction of special use facilities.

B. FY 2011 to 2012 Budget Change

Summary Justification and Explanation of Changes

	FY 2010 Actual	FY 2011 Continuing Resolution	FY 2012 Request	2011 to 2012 Change
Travel	\$23	\$23	\$23	\$0

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations.

	FY 2010 Actual	FY 2011 Continuing Resolution	FY 2012 Request	2011 to 2012 Change
GSA rent	\$252	\$256	\$256	\$0

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services.

	FY 2010 Actual	FY 2011 Continuing Resolution	FY 2012 Request	2011 to 2012 Change
Advisory and Assistance Services	\$10	\$10	\$10	\$0

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government.

	FY 2010	FY 2011	FY 2012	2011 to 2012
	Actual	Continuing Resolution	Request	Change
Other Services	\$3	\$3	\$3	\$0

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25.

	FY 2010	FY 2011	FY 2012	2011 to 2012
	Actual	Continuing Resolution	Request	Change
Purchase from Government Accounts	\$156	\$156	\$156	\$0

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified.

	FY 2010	FY 2011	FY 2012	2011 to 2012
	Actual	Continuing Resolution	Request	Change
Operation & maintenance of facilities	\$2,110	\$2,110	\$2,110	\$0

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account.

	FY 2010	FY 2011	FY 2012	2011 to 2012
	Actual	Continuing Resolution	Request	Change
Supplies & materials	\$88	\$88	\$88	\$0

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency.

	FY 2010	FY 2011	FY 2012	2011 to 2012
	Actual	Continuing Resolution	Request	Change
Equipment	\$546	\$546	\$546	\$0

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract.

	FY 2010	FY 2011	FY 2012	2011 to 2012
	Actual	Continuing Resolution	Request	Change
Land & Structures	\$103,405	\$80,741	\$34,264	(\$46,477)

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural (or resource) improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease.

Fiscal Year	Due Date	Reference/Citation	Requirement	Status
FY 2008	Dec. 2009	S. Rept. 110-84, to accompany the Department of Homeland Security Appropriations Bill, 2008, (S. 1644)	C-MANPADS -- The Committee was disappointed to learn that additional funding provided in fiscal year 2007 for a comprehensive passenger aircraft suitability assessment resulted in a decision by the administration to push back its report and recommendation on deployment of these systems until fiscal year 2010. While the additional resources allowed a greater number of aircraft to be assessed, the major concerns about these systems such as effectiveness and reliability should soon be well characterized. The Committee directs the Department to report on the first portion of Phase III testing by the end of fiscal year 2008 and provide a recommendation on whether these systems are suitable for deployment or not.	Delivered to Congress
FY 2009 and FY 2010	Report due with FY 2011 Budget Submission	Conference Report (111-298), to accompany the Department of Homeland Security Appropriations Act, FY 2010 and H.R. 111-157 .	Unexpended Obligations (V&V) -- Based on the Directorate's ongoing validation and verification reviews, S&T shall also submit with its fiscal year 2011 budget request and each subsequent fiscal year a report on the amounts deobligated from projects in the prior fiscal year (fiscal year 2009) and what projects those funds were subsequently obligated to. [H.R. 111-157: Furthermore, the Committee is pleased with the efforts that S&T has made to recover and realign funds that have lain dormant due to expired programs, or lack of expenditure. S&T is directed to continue briefing the Committee on the results of its quarterly validation and verification reviews, report the amount available to de-obligate, and identify how S&T plans to use these funds.]	Delivered to Congress
FY 2010	3/5/2010	S. Rept. 111-31, to accompany the Department of Homeland Security Appropriations Bill, 2010	TSL Five-Year Master Facility Plan -- Further, \$5,000,000 is included, as requested, for infrastructure upgrades at the Transportation Security Laboratory [TSL]. To ensure that the Committee has the full long-term plan for modernizing the laboratory, S&T shall provide a 5-year master facility plan for improvements at the TSL to the Committee by March 5, 2010.	Delivered to Congress
FY 2010	60 days following enactment (Dec. 20)	Conference Report (111-298), to accompany the Department of Homeland Security Appropriations Act, 2010	First Responder IPT Expenditure Plan -- The conference agreement provides \$46,134,000 for Transition as proposed by the House instead of \$45,134,000 as proposed by the Senate. Within the funds provided, \$10,000,000 is provided for first responder technologies as requested; \$2,000,000 is for the Naval Postgraduate School to design, develop and field test first responder technologies outside of the integrated product team process as requested; and \$1,000,000 is to continue a manufacturing pilot program to identify and transition advanced technologies and manufacturing processes in the homeland security industrial base. S&T shall provide an expenditure plan for the first responder technology program within 60 days after the date of enactment of this Act.	Delivered to Congress

FY 2010	Within 30 days of enactment (Nov. 27)	Conference Report (111-298), to accompany the Department of Homeland Security Appropriations Act, FY 2010	Implementing NAPA Recommendations -- As discussed in the Senate report, S&T shall report within 30 days after the date of enactment of this Act on its plans and timelines for full implementation of the National Academy of Public Administration study recommendations related to strategic planning. [S. Rept. 111-31, At the direction of the Committee, the National Academy of Public Administration [NAPA] undertook an independent review of research and development spending on homeland	Delivered to Congress
FY 2010	Report due with FY 2011 Budget Submission	Conference Report (111-298), to accompany the Department of Homeland Security Appropriations Act, FY 2010	R&D Results -- As part of the fiscal year 2011 budget request and in each subsequent fiscal year, S&T shall report on the results of its research and development efforts in the prior year (fiscal year 2009), including all technologies, technology improvements, or capabilities delivered to front line users, and the role the Integrated Product Teams played in the development.	Delivered to Congress
FY 2010	Report due semi-annually	Conference Report (111-298), to accompany the Department of Homeland Security Appropriations Act, 2010	DHS Use of FFRDCs - Report semiannually on the current projects tasked to Federally Funded Research and Development Centers, as outlined in the Senate report, which states "Report semiannually on the current projects tasked to federally funded research and development centers, the funding obligated by component, including the purposes for the funds, and any projects completed in the prior 6-month period."	In DHS clearance.
FY 2010	Obligation of funds prohibited until assessment complete	Conference Report (111-298), to accompany the Department of Homeland Security Appropriations Act, 2010	NBAF Risk Assessment -- Due to concerns raised by GAO about DHS's original assessment of the risk related to foot-and-mouth disease research on the U.S. mainland, a general provision is included prohibiting the obligation of these funds for NBAF construction until the Secretary undertakes a bio-safety and bio-security mitigation risk assessment using plume and epidemiologic impact modeling to determine the requirements for the safe operation of NBAF in Manhattan, Kansas. Once DHS completes the risk assessment, the National Academy of Sciences (NAS) shall provide an independent evaluation of the DHS study within four months to ensure that risk has been adequately identified and mitigated in planning for NBAF. Up to \$2,000,000 of the amount provided may be used for the NAS evaluation.	Delivered to Congress
FY 2010	None specified	Conference Report (111-298), to accompany the Department of Homeland Security Appropriations Act, 2010	NBAF (foot and mouth disease R&D permits and emergency response plan) -- In addition, the conferees continue bill language, proposed by the Senate, that requires the Secretary of Homeland Security, in coordination with the Secretary of Agriculture, to report to the Committees on the procedures used to issue a permit for foot-and-mouth disease live virus research and an emergency response plan in the event of an accidental release of a hazardous pathogen originating from NBAF.	Delivered to Congress

BUDGET REQUEST AND SUPPORTING INFORMATION
--

Management and Administration:

I. Appropriation Overview

A – Mission Statement for Management and Administration:

Fund the effective and efficient management and leadership of the S&T Directorate activities to deliver advanced technology solutions to DHS components and first responders.

B – Budget Activities:

The Management and Administration (M&A) appropriation provides for salaries and benefits related to 375 FTE at the S&T Directorate headquarters. The 375 FTE provide executive direction to the S&T Directorate for program management, program execution oversight, program analysis, policy analysis, planning, financial management, guidance formulation, and operations and maintenance support for all S&T Directorate programs.

The M&A appropriation funds business operations and the S&T Directorate's share of the DHS Working Capital Fund. The Business Operations functions include paying for rent, office supplies, utilities, and other operational functions associated with the S&T Directorate's Washington, DC headquarters. This account pays for the training and travel associated with senior management of the S&T Directorate and contractor staff who support the execution of headquarters functions including financial management, facility planning, maintenance, and other administrative functions. M&A also funds the administration of the S&T Directorate's regulatory and treaty compliance activities, headquarters shared services agreements, and the financial and programmatic databases. The M&A appropriation does not fund contractor support or travel associated with the direct execution of Research, Development, Test, and Evaluation (RDT&E) programs across the S&T Directorate.

C – Budget Request Summary:

The S&T Directorate requests 375 FTE and \$149.365 million for M&A in FY 2012. The total adjustments-to-base of \$1.960 million include a \$4.0 million transfer of funding from DNDO for 12 FTE, and an administrative savings of \$4.291 million in advisory and assistance services. This also includes a program increase of \$3.800 million for data center consolidation, a program increase of \$0.405 million for acquisition support personnel and a staffing increase of 44 FTE to the authorized FTE level from converting M&A funded contractors to Federal employees.

2012 Program Change	3	2	4,205
2012 Total Request	376	375	149,365

The S&T Directorate requests \$149.365 million for this activity.

CURRENT SERVICES PROGRAM DESCRIPTION:

The M&A appropriation funds salaries and benefits related to 375 FTE at the S&T Directorate headquarters. The 375 FTE provide executive direction to the S&T Directorate for policy analysis, planning, financial management, and guidance formulation. These FTE also conduct program management, execution, oversight, analysis, as well as operations and maintenance support for all S&T Directorate programs. The request includes a staffing increase of 56 FTE; this is an increase of 44 FTE to the authorized FTE level from converting M&A funded contractors to Federal employees. The increase in FTE will not require additional funds and will be offset within the appropriation by replacing M&A-funded contract staff with M&A-funded Federal employees. In addition, S&T is proposing administrative savings in contract support in the amount of \$4.291 million. Also included is a transfer of \$4.000 million and 12 FTE from DNDO.

The M&A appropriation funds all of the corporate-level functions in the S&T Directorate that allow the technical divisions to manage the Research, Development, Test, and Evaluation (RDT&E) programs. Those functions include the Finance and Budget Division, including the Chief Financial Officer; the Administration and Support Division, which manages the facilities, personnel and the information technology infrastructure; the

Operations Analysis Division, which provides science-based risk analyses; and the Corporate Communications Division, which coordinates internal and external information dissemination. The DHS Working Capital Fund (WCF) provides those shared services that the components rely on to execute their missions, such as contracting officers and the DHS-wide information technology infrastructure.

Director Support

The Directorate has four PPAs, and sixteen thrust areas, each of which has an important role in implementing RDT&E activities. These PPAs are: Acquisition and Operations Support; Research, Development and Innovation; Laboratory Facilities; and University Programs.

Acquisition and Operations Support

Provides expert assistance to entities across the Homeland Security Enterprise (HSE) to ensure that the transition, acquisition and deployment of technologies, information, and procedures improve the efficiency and effectiveness of the operational capabilities across the HSE mission. This includes providing technological assessment of major acquisition programs in DHS to help ensure that technologies, CONOPS, and procedures meet operational requirements; technology analysis and technology review of analysis of alternatives at the beginning and throughout an acquisition program's life; oversight of the test and evaluation of DHS major acquisition programs; standards to support the Homeland Security mission, and administration of the SAFETY Act program.

The five main areas of Acquisition and Operations Support are: Operations Research and Analysis; Safety Act; Standards; Technology Transition Support; and Testing and Evaluation.

Laboratory Facilities

Manages the Laboratory Facilities programs. The Office of National Laboratories (ONL) provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations and institutions, which can provide the knowledge and technology required to secure our homeland.

The *Homeland Security Act of 2002* assigns ONL “the coordination and utilization of the Department of Energy (DOE) national laboratories and other sites under Section 309 in a manner to create a networked laboratory system for the purpose of supporting the missions of the Homeland Security Department.” In addition to oversight of the S&T Directorate's laboratory operations, ONL coordinates homeland security-related activities and laboratory-directed research conducted within the DOE's national laboratories.

ONL's internal customers are the S&T Directorate's executing divisions and the Test and Evaluation and Standards division. The primary external Federal customers are: United States Department of Agriculture (USDA); Transportation Security Administration (TSA); and the Federal Bureau of Investigation (FBI). ONL executes two programs: Construction and Lab Operations.

Research, Development, and Innovation (RD&I)

Provides state-of-the-art technology and solutions to meet the needs of the operational components of the Department and the first responder community. Includes customer-focused and output-oriented RDT&E programs that balance risk, cost, impact, and time to delivery. These RDT&E programs support the needs of the operational components of the Department and the first responder community and address crosscutting areas such as standards and interoperability. The five thrust areas of research and development include: APEX Research and Development; Border Security; Chemical Biological, Radiological, Nuclear, and Explosive Defense; Counter Terrorist; Cyber Security; and Disaster Resilience.

University Programs

Supports critical homeland security-related research and education at U.S. colleges and universities to address high-priority DHS-related issues and to enhance homeland security capabilities over the long term. The program brings together scientists, mathematicians, and engineers from many academic disciplines and institutions. These researchers are investigating research questions important to DHS and developing new technologies and approaches to solve complex and challenging homeland security problems. The program focuses on building homeland security expertise in the academic community, creating strategic partnerships among universities and public agencies, and developing a new scientific workforce of homeland security experts. The primary customers for University Programs are the DHS S&T Directorate's divisions, the DHS component agencies, and Federal, State, and local government agencies.

Finance and Budget Division

The Finance and Budget Division provides the S&T Directorate with high-quality, efficient, and cost-effective financial management services through four branches. The Program Analysis and Evaluation (PA&E) Branch develops long-term plans for resource allocation, execution plans, Congressional Justifications, and management of financial resources within the S&T Directorate. The Performance and Outreach Branch develops and implements internal and external performance metrics for S&T Directorate programs, as well as risk assessment methodologies to help inform programming decisions. The Acquisition Branch develops the S&T Directorate's acquisition strategy, and manages the travel and purchase card programs. The Financial Operations Branch is dedicated to sound fiscal stewardship of the S&T Directorate's appropriations and reimbursable funding; timely and accurate budget execution, financial management and financial reporting; and monitoring programs and activities to provide assurance about the adequacy of internal controls within the S&T Directorate.

Administration and Support Division

The Administration and Support Division provides critical infrastructure support to the S&T Directorate and is composed of eight components: Facilities, Human Capital Office (HCO), Office of the Chief Information Officer (OCIO), Executive Secretariat, Office of the Chief Administrative Officer (CAO), Office of Administration and Audits, Central Security Office (CSO), and Readiness and Operational Coordination (ROC). In compliance with Presidential Directives, Federal Regulations and Department guidance, the Administration and Support Division provides support and continuous process improvement through problem identification and solution, sound policy and procedure development, and high-quality service.

Operations Analysis Division

The Operations Analysis Division provides the S&T Directorate with a wide range of scientific and technical tools to inform planning and management activities. The division provides information to decision-makers and program managers resulting from research, studies, operational analyses, risk analyses, analytic and computational models, simulations, war-games, and experimentation events that it oversees. The division uses these technical and analytical support activities to establish baseline operational capabilities and goals, integrate policy and program planning, and inform management decisions and the development of strategic objectives. The Operations Analysis Division oversees the activities of the Homeland Security Studies and Analysis Institute (HSSAI), Homeland Security Systems Engineering and Development Institute (HSSEDI) and other S&T Directorate-sponsored Federally Funded Research and Development Centers (FFRDCs), and the Homeland Security Science and Technology Advisory Committee (HSSTAC).

Corporate Communications Division

The Corporate Communications Division communicates the objectives and status of homeland security technology programs, disseminates information regarding opportunities for private-sector entities (corporate and academic), and ensures that the media understands and accurately represents DHS technologies and programs. The Corporate Communications Division holds conferences and manages the S&T Directorate's presence at other information-sharing events to improve contact among technology developers, vendors, and acquisition personnel. They also promote the participation of colleges, universities, private research institutes, and companies (and consortia thereof) in the research process by disseminating information regarding research conducted or sponsored by the Department, and provide public-communication support to the S&T Directorate-sponsored Federally Funded Research and Development Centers.

Working Capital Fund

Funds provided within the M&A appropriation are also used to acquire services through the DHS WCF, which includes: IT services, human resources, procurement operations,

and financial systems. The WCF also provides consolidated subscriptions, government-wide mandated services, and DHS crosscutting activities.

IV. Program Justification Changes

Department of Homeland Security Science & Technology Management and Administration:

Justification of Program Changes (Dollars in Thousands)

Program Increase 1: Data Center Consolidation
 PPA: Salaries and Benefits
 Program Increase: Positions 0.0, FTE 0.0, Dollars \$3,800

Funding Profile

Current Services Level	-	-	-	-	-	-	-	-	-
Program Increase	-	-	-	-	-	-	0	0	3,800
Total Request									3,800

Description

FY 2012 data center development funding, to be managed through the DHS Working Capital Fund (WCF), will be used for the continuation of system and application migration to the two DHS Enterprise Data Centers for central DHS management in FY 2012. This includes:

- Discovery, migration planning, and scheduling activities specifically related to systems/applications that will transition to the DHS Data Centers in FY 2012
- Purchase of new equipment for placement in the DHS Data Centers as part of migration/transition efforts
- Installation of equipment racks at the DHS Data Centers
- Migration-related build-out of DHS Data Center infrastructure
- Transition of disaster recovery/backup/COOP (Continuity of Operations) capability to DHS Data Centers
- Installation of infrastructure support as part of system migrations at the DHS Data Centers

Justification

The Data Center consolidation efforts will standardize IT resource acquisitions across DHS Components, and streamline maintenance and support contracts, allowing for less complex vendor support and expediting response times in the event of an emergency. Benefits derived from consolidation are enhanced DHS IT security posture, improved information sharing with stakeholders, and increased operational efficiencies over time.

**Department of Homeland Security
Science and Technology
Management and Administration**

Justification of Program Changes
(Dollars in Thousands)

Program Increase # 2: Acquisition Workforce
 PPA: Salaries and Expenses
 Program Increase: Positions - 3 FTE - 2 Dollars \$405

Funding Profile

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level	-	-	-	-	-	-			
Program Increase	-	-	-	-	-	-	3	2	405
Total Request							3	2	405

Description of Item

Successful acquisition outcomes are the direct result of having the appropriate personnel with the requisite skills managing various aspects of the acquisition process. Between FY 2000 and FY 2008, acquisition spending by civilian agencies increased by 56% (in inflation-adjusted dollars). The Department of Homeland Security is working to ensure its major acquisitions are effectively managed to ensure that the Department maximizes the value of every homeland security dollar and that major programs are implemented in the most responsible and efficient manner possible. This includes having disciplined oversight processes and robust acquisition program management teams in place. DHS has assessed the current resident skills against a set of core acquisition management skills: a program manager, a systems engineer, a life cycle logistician, a business/financial manager and a contracting officer's technical representative, and determined that many of our major acquisition programs are deficient in several of these areas.

The President's March 4, 2009, memorandum on Government Contracting required agencies to improve acquisition practices and performance by maximizing competition and value, minimizing risk, and reviewing the ability of the acquisition workforce to develop, manage, and oversee acquisitions appropriately. Subsequent guidance from the Office of Management and Budget, including memorandum M-09-25 *Improving Government Acquisition* issued July 29, 2009, and OFPP's Memorandum of October 27, 2009 *Acquisition Workforce Development Strategic Plan for Civilian Agencies- FY2010-2014*, provided guidance to agencies to strengthen the acquisition workforce and increase the civilian agency workforce by 5% to more effectively manage acquisition performance. These funds will help ensure the future programmatic growth requirements

for training, recruitment, and retention activities while helping us to attract and hire qualified members of the acquisition workforce as defined by the Office of Federal Procurement Policy Act.

Justification

In support of the administration's emphasis on strengthening the Federal acquisition workforce, the Science and Technology Directorate requests \$405,000 to increase its acquisition workforce capacity and capabilities. The increase will mitigate the risks associated with gaps in either capacity or capability of the acquisition workforce and improve its effectiveness. The resources requested for the Science and Technology Directorate will be used to:

- Hire a Systems Engineer GS-15, Logistician GS-15, and Business/Finance Manager GS-14 to work on the National Bio & Agro-Defense Facility (NBAF),
- Increase the capability of the acquisition workforce by investing in training to close identified gaps in such areas as project management, negotiations, requirements development, contract management, and other key topics;
- Increase the effectiveness of the acquisition workforce by investing in improvements to systems that support the contracting function;
- Conduct an assessment of options for creating systems to maintain comprehensive acquisition workforce data and selecting the appropriate system; and
- Increase the effectiveness of the Department's centralized acquisition workforce training program comprised of certification and targeted/continuous learning developmental training opportunities.

Impact on Performance (Relationship of Increase to Strategic Goals)

The FY 2012 funding request will help ensure:

- The future programmatic growth capacity for training, recruitment, and retention activities while attracting and hiring qualified members of the acquisition workforce as defined by the Office of Federal Procurement Policy Act. These funds allow DHS the ability to train, recruit, and retain at acceptable standards.
- The sustainability and availability of information technology systems and equipment in support of acquisition workforce effectiveness or for management solutions to improve acquisition management.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

For salaries and expenses of the Office of the Under Secretary for Science and Technology, and for management and administration of programs and activities as authorized by title III of the Homeland Security Act of 2002 (6 U.S.C. 181 et seq.), [151,959,000] **\$149,365,000**: *Provided*, That not to exceed \$10,000 shall be for official reception and representation expenses: *Provided further*, That of the funds made available under this heading, \$405,000 shall be for strengthening the capacity and capabilities of the acquisition workforce (as defined by the Office of Federal Procurement Policy Act, as amended (41 U.S.C. 401 et seq.), including the recruitment, hiring, training, and retention of such workforce and information technology in support of acquisition workforce effectiveness or for management solutions to improve acquisition management. (Department of Homeland Security Appropriations Act, 20[11] **12**)

Acquisition & Operations Support	---	---	44,663	---	---	127,500	---	---	162,000	---	---	34,500
Laboratory Facilities	---	---	2,273	---	---	4,820	---	---	5,200	---	---	380
University Programs	---	---	998	---	---	1,000	---	---	1,000	---	---	---
Total Obligations	---	---	75,000	---	---	150,320	---	---	185,200	---	---	34,880

Explanation of Increase/Decrease.

FY2011 and FY2012 increases are due to new Systems Engineering and Development Institute FFRDC oversight and management.

E. Summary of Requirements by Object Class

**Department of Homeland Security
Science and Technology Directorate
Management and Administration**
Summary of Requirements by Object Class
(Dollars in Thousands)

Object Classes	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	2011 - 2012 Change
11.1 Total FTE & personnel compensation	\$35,197	\$39,397	\$46,289	\$6,892
11.3 Other than full-time permanent	2,693	2,693	2,693	---
11.5 Other Personnel Compensation	1,488	1,488	1,488	---
11.8 Special Service Pay	---	---	---	---
12.1 Benefits	9,587	10,763	14,883	4,120
Total, Personnel Comp. & Benefits	\$48,965	\$54,341	\$65,353	\$11,012
Other Object Classes:				
21.0 Travel	791	791	791	---
22.0 Transportation of things	---	---	---	---
23.2 Other rent	18	18	18	---
23.3 Communications, utilities, & other misc. charges	28	28	28	---
24.0 Printing and reproduction	---	---	---	---
25.1 Advisory and assistance services	43,186	38,503	29,907	(8,596)
25.2 Other services	1,438	1,438	1,438	---
25.3 Purchases of goods & svcs. from Gov't accounts	41,850	41,850	47,535	5,685
25.4 Operation & maintenance of facilities	290	290	157	(133)

PPA Mission Statement

The Management and Administration (M&A) appropriation provides for salaries and expenses related to 375 full time equivalent (FTE) personnel in Washington, D.C. This appropriation also provides for the operation of the S&T Directorate's Washington, D.C., headquarters including business operations, contributions to the DHS Working Capital Fund, and other administrative costs associated with the management of the S&T Directorate and its resources.

Summary Justification and Explanation of Changes

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Salaries and Benefits	48,965	54,341	65,353	11,012

Salaries and Benefits includes costs for 375 FTEs. The FY 2012 includes salaries and benefits of 12 FTE transferred from DNDO to S&T, funds to cover 2 FTE for acquisition support program increase and funds transferred from the Advisory and Assistance Services to cover the federal salaries of contractor conversions.

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change
Travel	791	791	791	---

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations.

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change
Other Rent	18	18	18	---

Other rent includes all payments to a non-Federal source for rental space, land, and structures.

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change
Communication, Utilities, and miscellaneous charges	28	28	28	---

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services.

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change
Advisory and Assistance Services	43,186	38,503	29,907	(8,596)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The decrease includes \$4,291,000 due to the Administrative Savings Initiative as well as funding transferred to Salaries and purchases from Government Accounts to cover costs of converting contractor staff to federal employees.

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change
Other Services	1,438	1,438	1,438	---

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Purchase from Government Accounts	41,850	41,850	47,535	5,685

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2012 request includes \$3,800,000 for the data center consolidation. Funds in the amount of \$1,885,000 included to cover additional Shared Services, and WCF expenses.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Operation & maintenance of facilities	290	290	\$157	(\$133)

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Operation & Maintenance of equipment	\$241	\$241	\$241	\$0

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Supplies & materials	590	590	590	\$0

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Equipment	3,459	3,459	2,987	(472)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Land & Structures	1,651	1,651	\$320	(\$1,331)

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural (or resource) improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease.

I. Changes in Full Time Equivalent

J. FY 2012 Schedule of Working Capital Fund by Program/ Project Activity

**Department of Homeland Security
Science and Technology Directorate
Management and Administration**

FY 2012 Schedule of Working Capital Fund by Program/Project Activity
(Dollars in Thousands)

Program/Project Activity	FY 2010 Actual	FY 2011 C.R.	FY 2012 Anticipated	Increase / Decrease for FY 2012
	AMOUNT	AMOUNT	AMOUNT	AMOUNT
Other Salaries and Expenses	\$40,158,022	\$41,471,324	\$44,801,340	\$3,330,016
Total Working Capital Fund	\$40,158,022	\$41,471,324	\$44,801,340	\$3,330,016

FY 2012 Anticipated WCF estimate includes \$3.8M for Data Center Consolidation.

K. DHS Balanced Workforce Strategy

In order to establish a high performing workforce comprised of a strong internal core of federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment the Department will realign contractor and/or federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with federal employees to better realize the full potential of our total workforce – both contracted and federal. A strong internal core of federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into Tiered ranking. The results of Tier 1 contract review are listed below. The results of the lower-priority contracts will post-date this budget submission and will be included in the FY 2013 budget.

The Science and Technology Directorate requests \$0.0 million and 44 FTE for the FY 2012 DHS Balanced Workforce Strategy.

Position Type	FY 2010 Actual		FY 2011 Pres. Budget		FY 2011 Annualized		FY 2011 Follow On		FY 2012 Increase		FY2010 – FY2012 DHS Balanced Workforce Strategy	
	Pos.	FTE	Pos.	FTE	Pos.	FTE	Pos	FTE	Pos.	FTE	Pos	FTE
IT Specialist									7	7	7	7
Program Analyst	17	17	35	35					34	34	34	34
Engineer									3	3	3	3
Total	17	17	35	35					44	44	44	44

FY 2012 DHS Balanced Workforce Strategy

- The increase in FTE will not require additional funds and will be offset within the appropriation by replacing M&A-funded contract staff with M&A-funded Federal employees.

**SCIENCE AND TECHNOLOGY DIRECTORATE
RESEARCH, DEVELOPMENT, ACQUISITIONS, AND OPERATIONS**

I. Appropriation Overview

A. Mission Statement for Research, Development, Acquisitions, and Operations:

The S&T Directorate's mission is to improve homeland security by working with partners to provide state-of-the-art solutions and/or technology that helps them achieve their missions. S&T partners and customers include the operating components of the Department, other government agencies, state, local, tribal, and territorial emergency responders and officials.

The S&T Directorate ensures that DHS and the homeland security community have the science, technical information and capabilities they need to effectively and efficiently prevent, protect against, respond to, and recover from all-hazards and homeland security threats. The S&T Directorate develops state-of-the-art solutions to protect the Nation's people and critical infrastructure from chemical, biological, explosive, and cyber attacks.

The S&T Directorate accomplishes its mission through partner-focused and output-oriented research, development, testing and evaluation (RDT&E) programs that balance risk, cost, impact, and time to delivery. These RDT&E programs support the needs of the operational components of the Department and the first responder community and address crosscutting areas such as standards and interoperability.

B. Budget Activities:

The Directorate has four RDT&E Program, Project, and Activities (PPA), and 16 thrust areas, each of which has an important role in implementing research and development activities. These four PPAs are: Acquisition and Operations Support; Research, Development and Innovation; Laboratory Facilities; and University Programs.

Acquisition and Operations Support

Provides expert assistance to entities across the Homeland Security Enterprise (HSE) to ensure that the transition, acquisition, and deployment of technologies, information, and procedures improve the efficiency and effectiveness of the operational capabilities across the HSE mission. The five thrust areas of Acquisition and Operations Support are: Operations Research and Analysis; Safety Act; Standards; Technology Transition Support; and Testing and Evaluation.

Laboratory Facilities

Manages the Laboratory Facilities programs. The Office of National Laboratories (ONL) provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations and institutions, which can provide the knowledge and technology required to secure our homeland. ONL executes two programs: Construction and Lab Operations.

Research, Development, and Innovation (RD&I)

Provides state-of-the-art technology and/or solutions to meet the needs of the operational components of the Department and the first responder community. Includes customer-focused

and output-oriented RDT&E programs that balance risk, cost, impact, and time to delivery. The six thrust areas of RD&I include: APEX Research and Development; Border Security; Chemical, Biological, Radiological, Nuclear, and Explosive Defense (CBRNE); Counter Terrorist; Cyber Security; and Disaster Resilience.

University Programs

Supports critical homeland security-related research and education at U.S. colleges and universities to address high-priority DHS-related issues and to enhance homeland security capabilities over the long term. The three thrust areas of University Programs include: Centers of Excellence, Education, and Minority Serving Institutions.

C. Budget Request Summary:

The S&T Directorate requests 130 positions, 130 FTE, and \$1,027,067,000 for Research, Development, Acquisitions, and Operations in FY 2012, an increase of \$163,796,000 from the FY 2011 President's Budget level. This provides for construction of the NBAF facility in Lab Facilities and an increase in Cyber Security. Due to the funding of higher priority items within the Department, total funding reduces support for advisory and assistance services, Chemical, Biological, Radiological, Nuclear, and Explosive (CBRNE), and eliminates funding for the National Transportation Security Center of Excellence (NTSCOE) within University Programs

2012 Total President's Budget	-	-	54,154
Total Change 2011 to 2012	-	-	(32,131)

The Science and Technology (S&T) Directorate requests \$54.154 million for Acquisition and Operations Support in FY 2012. The \$32.131 million decrease in FY 2012 reflects realignment of programs and projects within the Science & Technology Directorate. Within this decrease, there is a reduction of \$3.200 million due to the Administrative Savings Initiative (ASI).

CURRENT SERVICES PROGRAM DESCRIPTION

Acquisition and Operations Support (AOS) PPA - Provides expert assistance to entities across the Homeland Security Enterprise (HSE) to ensure that the transition, acquisition and deployment of technologies, information, and procedures improve the efficiency and effectiveness of the operational capabilities across the HSE mission. This includes providing technological assessment of major acquisition programs in the Department of Homeland Security (DHS) to help ensure that technologies, concept of operations (CONOPS), and procedures meet operational requirements, technology analysis and technology review of analysis of alternatives at the beginning and throughout an acquisition program's life; oversight of the test and evaluation of DHS major acquisition programs; standards to support the Homeland Security mission, and administration of the SAFETY Act program.

The five thrust areas of Acquisition and Operations Support are: Operations Research and Analysis; Safety Act; Standards; Technology Transition Support; and Testing and Evaluation.

Operations Research and Analysis Thrust – FY 2012 estimate: \$11.680 million. Provides science based analytic capability and capacity to DHS to better understand threats, the implications of major decisions, evaluate alternatives, improve DHS mission operations and the use of technology across the HSE and improve the Department's risk management capabilities.

Complex Event Modeling, Simulation, and Analysis Project (CEMSA) (formerly Critical Infrastructure Protection Analytical Capability (CIPAC)) – Examines the interdependencies, cascading effects, and the dynamics of multi-event and multi-vector attacks. This effort will provide significant improvements in timelines, quality, and usability of information to provide decision makers real-time information to make informed decisions during an event. CEMSA will enable risk analysts to dynamically compose simulation models and tools to analyze the impact of multiple, interacting, disruptions to the transportation sector, including all modes of surface transportation and the supply chain. The analyst's results enable policymakers to assess the effects these disruptions have on our Nation's most vulnerable transportation infrastructure. CEMSA streamlines the risk analysis process and conforms to open industry standards. The project leverages the capabilities developed for Critical Infrastructure Protection Decision Support System (CIPDSS) and sector-specific MSA. In FY 2010, the project conducted a proof-of-concept and feasibility test of the critical infrastructure protection analytical capability. In FY 2011, the project will continue this effort, working towards demonstrating the capability to analyze interdependencies and cascading effects. In FY 2012, the project plans to develop a prototype to analyze interdependencies among critical infrastructure assets and predict the cascading effects of a man-made or natural disaster across multiple sectors and multiple disruptions.

Countermeasures Development Project – Addresses the dynamic nature of emerging and disruptive threats previously identified through threat assessments of new technology. The project identifies capabilities to counter emergent threats for which countermeasure capabilities do not yet exist. In FY 2010, the project identified and continued to address countermeasure development needs. In FY 2011, the project will identify emerging and disruptive technological threats that do not have countermeasures. In FY 2012, the project plans to continue these efforts and collaborate with interagency intelligence counterparts in identifying and developing countermeasures for the threats.

Future Capabilities Research and Development Project – Supports research collaboration with external agencies and international partners. In FY 2010, the project continued work on the Detect and Identify Threatening Plant Pathogens activity, a proof-of-concept project to determine whether threatening plants pathogens can be detected and identified through spatial imagery; another project involves a proof-of-concept effort to validate the use of human odor as a

biometric screening technique. The technology involves DNA-coated carbon nanotube field-effect transistors as sensing elements. In FY 2011, the project will complete both the proof-of-concept biometric screening tool and the determination on whether satellite imagery can detect of threatening plant pathogens algorithms that may be introduced into the United States. In FY 2012, the project plans to continue to identify research and development projects that leverage science and technology proof-of-concept projects being pursued by the intelligence Community.

Homeland Security Studies and Analysis Institute (HSSAI) – The S&T Directorate awarded a Federally Funded Research and Development Center (FFRDC) contract for HSSAI in March 2009. The purpose of HSSAI is to provide special technical expertise to Department components for various capacities which include: analyzing and conducting trade-off studies of mission-level goals and strategies, analyzing operations and operational requirements, assessing DHS organizations and their governance, and evaluating performance metrics constrained by cost and schedule. HSSAI generally considers all missions within an over-arching context of threat, consequence, and vulnerability risk reduction under the constraints of cost and schedule. The research agenda covers the spectrum of homeland security policy, operations and technology, including terrorism threat trends and adversarial perspectives, information sharing and communications interoperability, border and transportation security, immigration enforcement and administration, infrastructure protection, and all-hazards preparedness and emergency response. In FY 2010, HSSAI continued to provide recommendations for policy and operational changes, as well as technology insertion concepts throughout the Federal, State, local, tribal, public, and private sector organizations that make up the homeland security enterprise. In FY 2011, HSSAI will continue to provide recommendations for policy and operational changes, as well as technology insertion concepts throughout the Federal, State, local, tribal, public, and private sector organizations that make up the homeland security enterprise by;

- Conducting studies on the global supply chain strategies, capability and capacity modeling, national essential functions, and law enforcement metrics and strategies;
- Developing an analysis of alternatives (AOA) framework for conducting DHS programs and projects;
- Developing resiliency frameworks and conducted symposia to engage the nation's thought leadership;
- Beginning development of an operational analysis framework for assessing mobile screening capabilities;
- Refining an immigration reform analysis to look at impacts of illegal immigrant registration;
- Developing requirements prioritization frameworks for various DHS components;

- Continuing studies on radicalization and the understanding of insider threats;
- Creating various frameworks for conducting focused program effectiveness studies for DHS PAE; and
- Developing and conducting a symposium on Piracy.

In FY 2012, HSSAI plans to conduct operations analyses to develop measurable and meaningful operational performance metrics as guided by DHS senior leadership. The studies and analyses include, but are not limited to:

- Developing top-level and bottoms-up operational frameworks for resilience (resistance, absorption, and restoration) that can be incorporated into our critical infrastructure and society;
- Developing system and system-of-system concepts through capability gap analysis and AOA frameworks to address the most strategic and critical needs of the homeland security enterprise;
- Developing top-level program requirements, system performance, and effectiveness metrics based on mission goals;
- Developing high-level program Concept of Operation (CONOPs) frameworks and operational architectures based on mission goals, operational capabilities, and requirements;
- Designing and providing support for homeland security-related exercises, games, and simulations, including the examination of past incidents, tabletop and operational exercises, and nominal operations to determine lessons learned and the implications for homeland security planning;
- Developing top-level mission risk and risk reduction (threat, vulnerability, consequence) resource allocation models, component tradeoff simulations, and tools and metrics to evaluate mission tradeoffs and mission integration strategies;
- Conducting operational analysis, particularly at field activities, for extended (months to one-to-two years) periods, to provide objective assessments, systems evaluations, and other technical and analytic support; and
- Using economic (lifecycle) and policy analyses to assess the distributed costs and benefits of alternative approaches to enhancing security including leveraging of homeland security, particularly research and development (R&D), assets across the Nation and with international partners.

Identification and Assessments Project – Anticipates and defines potential threats emerging from new scientific and technological advances, and evaluates terrorists’ innovative or novel use of existing technologies. In FY 2010, the project completed two assessments. The first assessment evaluated the vulnerabilities of current and potential technologies that would be utilized in developing a smart power grid. The second assessment examined whether the entertainment industry (i.e., Movie, Gaming, and Theme Parks) have entertainment technologies that can be implemented as part of the biometric screening process to better provoke tell-tale reactions and identification of commercial aviation travelers with hostile intent. In FY 2011, the project will identify assessment and analysis topics on emerging and disruptive technological threats through collaboration with the Intelligence Community. This will include support for a series of workshops and working groups coordinated with the Interagency. These workshops will address border and maritime security issues and intelligence analysis and assessment, and resiliency. In FY 2012, the project plans to continue to provide interagency intelligence-based net assessments of emerging and disruptive technologies and their potential danger to the homeland.

Intelligence, Surveillance, and Reconnaissance (ISR) Project – Supports research activities to improve the collection and dissemination of information using satellites, radars, sensors, and unmanned platforms in support of DHS components and Northern Command. In FY 2010, the project initiated a program to model the effects of wind turbine farms on national long range radar systems. The project also continued the analysis of integrated surveillance systems and evaluation of alternative future sensor systems. While the initial effort highlighted some top-level architecture design issues, the follow-on effort focuses on increasing the fidelity of the findings and informs the customer of the feasibility of the various system alternatives. In FY 2011, the project will continue the model development effort and surveillance systems analysis while addressing current issues that face the ISR. In FY 2012, the project plans to complete the model development effort and transition it to the relevant DHS and interagency offices.

Risk Sciences and Decision Support Project – Conducts research and development aimed at advancing risk and decision support sciences (risk analysis, risk communications, performance metrics, etc.). In FY 2010, the project continued to improve risk practices in DHS with particular emphasis on improving both internal and external DHS risk communications practices. In FY 2011, the project will pursue two projects: one aimed at improving the Department’s ability to evaluate, from an all-hazards perspective, effectiveness of proposed programs, while the other will research foundational issues in managing risk in a complex-adaptive system context. In FY 2012, the project plans to field a prototype decision-support tool employing a multi-criteria evaluation of proposed programs and to further develop risk analytic techniques useful for complex-adaptive systems for which many existing analytic approaches have proven less than satisfactory.

Safety Act Thrust – FY 2012 estimate: \$8.902 million. Evaluates and qualifies technologies for liability protection in accordance with the Support Anti-Terrorism by Fostering Effective Technologies (SAFETY) Act of 2002 and the supporting regulations of the Final Rule (6 CFR

Part 25) implemented on July 10, 2006. The purpose of the SAFETY Act is to ensure that the threat of liability does not deter potential manufacturers or sellers of effective anti-terrorism technologies from developing, deploying, and commercializing these technologies. There are three key areas of focus for the Office of Safety Act Implementation (OSAI): operations, outreach, and coordination.

- *Operations* – OSAI processes applications under the criteria stipulated by the provisions of the SAFETY Act expeditiously. As part of this process, OSAI evaluates the efficacy of candidate technologies based on criteria set forth in the Final Rule, considers the applicant's current insurance situation, and advises DHS whether to issue SAFETY Act protections to the company. In FY 2010, OSAI evaluated and streamlined business processes to ensure that applications are processed within an average of the congressionally mandated 120 days. In FY 2011 and FY 2012, OSAI will continue to evaluate and streamline business processes to ensure that applications are processed within the congressionally mandated 120 days, even though the complexity and scope of individual applications are expected to increase significantly.
- *Outreach* – OSAI promotes homeland security technologies by raising public awareness of the benefits of liability protections available under the SAFETY Act, thereby expanding the creation, proliferation, and use of anti-terrorism technologies. In FY 2010, the program continued its outreach efforts towards priority homeland security technologies and under-represented technology areas to further industry participation. OSAI continued to hold periodic SAFETY Act workshops inside and outside of the Washington, DC Metropolitan Area to reach more potential stakeholders and applicants. In FY 2011, OSAI will reach out to those applicants that are eligible for renewal of their SAFETY Act awards to promote new deployments of these effective anti-terrorism technologies. In FY 2012, OSAI plans to focus on reaching out to small business applicants who are developing unique and innovative homeland security technologies.
- *Coordination* – OSAI coordinates the SAFETY Act application review process across DHS and with other Federal agencies to support these partners in their missions and to minimize the burden on applicants for SAFETY Act protection. This crucial advanced coordination regularly occurs whenever the SAFETY Act can play an important role in pending Federal procurements. In FY 2010, OSAI worked with universities and national laboratories that research, develop, and pilot new innovative homeland security technologies to educate and inform them about the SAFETY Act. In FY 2011, OSAI will work with commercial facilities owners and operators to identify promising technologies for consideration under the SAFETY Act. In FY 2012, OSAI plans to work with cyber technology developers to increase program interest.

Standards Thrust – FY 2012 estimate: \$16.538 million. Identifies standards needs and funds initial standards development to ensure technologies applied across the Homeland Security

Enterprise (HSE) meet minimum operational needs and do so in a safe, effective, and actionable manner.

Biological Countermeasures Standards Project - Develops standards related to biological threat detection in order to provide a comprehensive suite of performance standards for detection equipment, guidance on how to respond to biological incidents, and the development of surrogate materials for testing. In FY 2010, the project finalized sampling standards for white powder incidents and supported the development of biological agent surrogates for user training and testing of equipment. In FY 2011, the project will develop training protocols for white powder sampling, continue work on decontamination guidance. In FY 2012, the project will finalize sampling training programs and work to incorporate surrogate materials in to testing and training.

Biometrics Equipment Standards Project – Develops standards for biometric technologies including facial images, iris images, and fingerprints. These biometric standards are the foundation of identity management, resulting in strong partnerships with US VISIT and biometrics users across the federal government. In FY 2010, the program implemented biometric data standards to improve the interagency interoperability of collected biometric information throughout federal government. The program also developed rules that require biometrics equipment to be tested in an accredited biometrics laboratory prior to DHS procurement. In FY 2011, the ongoing usability biometrics standards program will continue development of protocols for the testing of multimodal biometrics. In FY 2012, the program plans to develop test protocols for next-generation iris, face and fingerprint systems to measure optimum throughput with requisite image quality.

Cargo Security Technology Standards Project – In partnership with the S&T Borders and Maritime Division, the Office of Standards supports development of standards in cargo security and global supply chain security. Ongoing efforts in cargo and global supply chain security will focus on technologies such as E-Seals and Container ID Tags. In FY 2010, the project will hold a cargo security standards workshop and report standards needs for container security strategies, technologies, and practices. In FY 2011, the project will initiate standards development for intrusion detection, non-intrusive inspection and seal security. In FY 2012, the project plans to initiate development of performance standards and test methods for identified new cargo screening and global supply chain security technologies, including new Radio Frequency Identification Device (RFID) systems, Mechanical Seals and Common Wireless Network Architectures.

Chemical Countermeasures Standards Project - Develops standards related to chemical threat detection in order to provide a comprehensive suite of performance standards for detection equipment, guidance on how to respond to chemical incidents, and the development of surrogate materials for testing. In FY 2010, the project, in partnership with the Office of Health Affairs (OHA), continued work on standard performance specifications and test methods for chemical

detection equipment. In FY 2011, the project plans to develop expanded chemical detection standards to include draft standards for chemical standoff detection technologies. In FY 2012, the project plans to expand the chemical detection standards to include toxic industrial chemicals and new threat agents.

Credentialing Standards Project – Develops standards for government personnel credentials including those used by first responders. In FY 2010, the project released a draft document “Framework for Emergency Response Official Authentication and Authorization Infrastructure” – this framework is the first step in providing secure access and sharing of information regarding first responder resources. In FY 2011, the project will incorporate existing federal protocols and resources such as Open ID, Information Cards, and Public Key Information (PKI) to finalize the framework draft document. In FY 2012, the project plans to conduct pilot testing of compliance to the framework for access control standards for credentialing.

Explosives Countermeasures Standards Project - Develops standards related to explosives detection including standards for trace explosive material detectors from cargo, baggage and passengers. In FY 2010, the program completed the development of trace explosives standard test materials for RDX and C4 explosives. In FY 2011, the project will determine suitability of candidate material for standard test materials for homemade explosives (HME) such as hydroxymethylene triperoxide diamine (HMTD) and urea nitrate (UN). In FY 2012, the project plans to complete certification of trace explosives standard test materials for HMTD and UN.

Geospatial Information Systems (GIS) Interoperability Standards Project – The project develops standards for First Responder locator technologies, including standards from the National Fire Protection Association (NFPA). In FY 2010, the project participated in a workshop on Precision Personnel Locators, hosted a session on performance standards, and identified techniques for measuring locator system performance. In FY 2011, the project will identify preliminary test methods to ‘ground truth’ detector performance for both the ability to locate the responder and to communicate with systems outside the building. In FY 2012, the project plans to finalize revision to NFPA indoor localization, performance, and test method standards for Geospatial Information Systems (GIS) systems supporting emergency response.

Human Systems Engineering Project – Develops and defines requirements for systems, technologies, methods, and measures to influence and evaluate how the design of new and existing technologies and systems affects human-performance. In FY 2010, the project demonstrated the process for identifying human-performance requirements and risks in the design and development of technologies and systems for five DHS programs/projects. In FY 2011, the project will apply and continue to improve human-systems integration processes on an additional five DHS programs/projects. The project will also develop an outline for a DHS human systems integration standard and begin initial development of an ambulance design standard. In FY 2012, the project plans to improve the human-systems integration (HSI) processes on an additional five DHS programs/projects, develop a database on the benefits of

having applied these processes to DHS/S&T technology, and complete the DHS online HSI Community of Practice Portal software application, which will provide the capability for DHS-wide collaboration among HSI professionals.

Human Systems Research Project – Develops ways to maximize human performance across DHS end-user tasks and activities. In FY 2010, the project determined the feasibility of measuring cognitive state assessment, reviewed five systems for use in training environments, and validated a handheld fatigue detection technology. The project also reported on the effects of imperfect automation on screener performance and training methods involving the use of perceptual discrimination and priming and completed a fatigue detection study to validate 3-min Psychomotor Vigilance Test (PVT). In FY 2011, the project will develop a human performance model that addresses end-user tasks associated with performance drivers across all DHS domain areas and will conduct additional studies on the use of perceptual strategies in training protocols. In addition, the project will develop cognitive state assessment algorithms, a Motion X-Ray prototype, and a human performance research roadmap for TSA. In FY 2012, the project plans to identify performing screener cues, techniques, and strategies to develop a training program and screener selection criteria.

Incident Management Training and Process Standards Project – Develops standards to provide optimized equipment and procedures to emergency management at all levels of the response – from First Responder interoperable equipment to implementation of the National Response Framework and the National Incident Management System. In FY 2010, the program initiated a study of human-machine interface standards to improve the ease-of-use of equipment for emergency operation centers, First Responders, and other homeland security end users, (i.e., baggage screeners.) In FY 2011, the program will support development of a suite of Incident Management standards, which includes training on initial response to possible weapons of mass destruction attacks. In FY 2012, the program plans to evaluate new position location and emergency responder electronic safety equipment technologies and publish a standardized methodology for characterizing building types and signal quality to support position location technology and standards development.

Mobile Platforms Project – Develops standards for sensor and detector deployment mobile platforms. These standards support the operator of the device, the performance of the detector and the security of the data in a variety of operations environments (i.e., search and rescue, HAZMAT operations). Through partnerships with ASTM International (formerly known as American Society for Testing and Materials), Institute of Electrical and Electronic Engineers (IEEE) and NFPA, the projects identify standards development needs in Urban Search and Rescue (USAR) robots and hazardous material (HAZMAT) equipment communities. The project includes robots, Unmanned Aerial Systems, and other mobile detection applications. In FY 2010, the project calibrated and characterized a test facility that can conduct standard test methods for USAR robots and produced user guides that assist in decision-making about appropriate robots for specific situations. In FY 2011, the project will conduct workshops with

responders and manufacturers of USAR robots and incident response robots to prioritize test methods. In FY 2012, the project plans to update calibration and characterization of test facilities to incorporate latest standard tests and characterization approaches for USAR and incident response robots.

Personal Protective Equipment for Responders Project - Develops standards for First Responder personal protective equipment to enable State and local agencies to purchase equipment that has been rigorously tested against appropriate standards and certified for use. These standards include NFPA, National Institute for Occupational Safety and Health (NIOSH) National Institute of Justice, etc. In FY 2010, the program reviewed existing respiratory protection guidelines, and in collaboration with other Federal partners, proposed modifications to existing standards. In FY 2011, the project will finalize revisions of the protective clothing standard and initiate the development of performance testing guidelines. In FY 2012, the project plans to propose personal protective equipment standards to meet new and emerging threats, reflecting newly developed technologies and lessons learned from existing standards.

Radio Frequency Identification (RFID) Project - The Office of Standards seeks to identify and/or develop standards which promote the development of modal-specific technologies and systems to ensure security of cargo while in transit; this includes standards for Radio Frequency Identification Device (RFID) technologies that are used to tag and track containers. In FY 2010, the project deployed a pilot RFID counterfeit detection system and began participation in international standards efforts to promote global supply chain security (ISO TC 104, freight containers). In FY 2011, the project will develop performance requirements for RFID counterfeit detection systems. In FY 2012, the project plans to develop standardized test methods for identifying counterfeit RFIDs in the field.

Sensor Network & Alert Systems Project – Develops standards for sensor and detector deployment on stationary. These standards support the operator of the device, the performance of the detector and the security of the data in a variety of operations environments (i.e., border deployment, building or urban monitoring). Through partnerships with ASTM International, Institute of Electrical and Electronic Engineers (IEEE) and NFPA, the projects identify standards development needs in sensor networks and alert systems; Includes stationary sensor systems and the networks to support them. In FY 2010, the project developed collaborative demonstrations with SBInet and United States Coast Guard using interoperable sensor technology and finalized network standards. In FY 2011, the project will develop guidance for users to procure interoperable sensor networks and systems, including serial interface standards for CBRN sensors. In FY 2012, the project plans to finalize interoperability standards to include CBRN detection systems and messaging.

Standards Infrastructure Project – Works to promote and maintain relationships with standards-development organizations to ensure commitment to partnerships, ongoing infrastructure (databases, working groups), and specific projects (biothreat identification protocols). Agencies

we currently partner with include: American National Standards Institute (ANSI), ASTM, IEEE, NFPA, Federal Emergency Management Agency's (FEMA) Incident Management System Integration Division, Transportation Security Laboratory (TSL), AOAC International, Homeland Security Studies and Analysis Institute (HSSAI), and the Interagency Board for Equipment Standardization and Interoperability (IAB). Standards development requires consensus and significant resources both across and outside DHS. For some private-sector standards development organizations, S&T Test & Evaluation/Standards Division (TSD) must pay to maintain its membership and ensure voting rights in decision-making processes.

X-ray Screening Equipment Standards Project - Develops standards related to explosives detection and blast mitigation including standards for bulk explosive material detectors, protective equipment, body-scanning systems, and cargo screening systems. In FY 2010, the project finalized/adopted standard test methods for X-ray inspection systems and body scanners, including efforts to support standards for Advanced Imaging Technologies. In FY 2011, the project will revise and update the X-ray body-screening system standard using the latest results from instrument testing and evaluations, including results from testing Advanced Imaging Technologies. In FY 2012, the project plans to develop prioritized requirements for new scanning technology, technical standards, and training standards for explosive detection technologies, and finalize and adopt first-round improvised explosive device countermeasures standards.

Technology Transition Support Thrust – FY 2012 estimate: \$10.393 million. Facilitates the transition and transfer of S&T Directorate solutions to customers. Activities involve integrating technology development efforts across S&T to develop the most cost effective and timely solutions and processes to meet customer requirements, including First Responders.

Acquisitions Support and Operations Analysis - Assists DHS components in developing and institutionalizing up front systems analyses and developing robust operational requirements and analyses of alternatives for acquisition programs. It allows the S&T Directorate, in partnership with components, to develop a framework and methodology for understanding the range of technology insertion points throughout the continuum of DHS missions and analyzes the relative return on investment of technology applications to detecting, classifying, preempting, or mitigating threats at these different junctures as well as develop analyses of alternatives to ensure investments are made appropriately. This effort will allow in-depth analyses of multiple programs both on-going and proposed to develop systematic approaches, robust operational requirements and analyses of alternatives to ensure adequate programmatic planning and adherence to DHS Management Directive (MD-102) as well as appropriately planning to align with necessary operational test and evaluation milestones. This upfront effort will result in realistic and achievable programmatic goals that incorporate the best technical solutions and necessary testing to minimize risk and maximize performance.

International and Interagency Programs – Leverages the capabilities of external organizations, within the U.S. and abroad, to address high-priority homeland security needs. The International and Interagency Programs facilitate the S&T Directorate’s cooperative Research, Development, Test, and Evaluation (RDT&E) activities across Federal, State, local, territorial, and tribal governments, the international community, and the private sector. These activities include:

- Guiding the S&T Directorate's coordination of Federal government and private-sector efforts to identify and develop countermeasures against current and emerging threats;
- Leading a world-wide staff of science and technology liaison officers who help execute S&T Directorate programs of national and international scope and impact; and
- Facilitating both national and international technology awareness to avoid technological surprise and ensure the Department's technological superiority.

International Programs - The International Cooperative Programs Office (ICPO), with coordination of the S&T technical divisions, modified the grant program to provide larger individual awards and fewer total awards in FY 2010. Larger awards (Maximum of \$750,000 each and lasting up to three years) have greater potential to leverage international capabilities in support of the divisions’ missions to provide near- and longer-term capabilities to their DHS customers. During the year, cost extensions to four additional grants were awarded. These efforts were to augment current grants and capitalize on unexpected findings with relevance to DHS programs in: improving biometrics capture at points of entry; detecting homemade explosives; enhancing multi-robot monitoring through complex video and data analytics, and improving hurricane intensity classification. ICPO funded three international research projects in FY 2010 based on a technical review by a panel of subject-matter experts (SMEs) from inside the Federal government (meeting the goal of funding two-to-four grant awards). In addition, one of S&T Directorate’s technical divisions (Chemical and Biological) made a grant award through this competition for a livestock epidemiological modeling project that directly supports their agricultural defense program. Other planned international program activities in FY 2010 included numerous international workshops, conferences, and activities that will build capacity for international cooperation in the technical areas of S&T Directorate Divisions. ICPO facilitated participation in an International Conference on Science and Technology in Sweden in FY 2010. The program also supported the Department’s rapid engagement in international aviation security cooperation following the failed bombing attempt in December 2009, facilitating coordinated S&T and TSA meetings, as well as laboratory visits with each of its ten bilateral partners (Canada, United Kingdom, Australia, Singapore, Sweden, Mexico, Israel, France, Germany, and New Zealand). This incident also led to development of new cooperative activities and bilateral programs with its partners in aviation security research and technology development. The program also established S&T Directorate agreements with two new international partners, New Zealand and the European Union. In FY 2011, ICPO will maintain the scientist and engineer exchange program. The DHS, S&T Directorate will also conduct an

International Conference on Science and Technology in Europe. In support of the grant solicitation program, the program will fund international research projects in the same manner outlined for FY 2010. The grant solicitation will fund two-to-four international research projects (Maximum of \$750,000 each and lasting up to three years) based on a technical review by a panel of SMEs inside the Federal government. In FY 2012, the program plans to fund international research projects in the same manner outlined for FY 2010 and FY 2011 and is working with S&T Directorate's technical divisions to improve the efficiency of its solicitation and review process (by incorporating a pre-application/white paper review stage).

Interagency Programs (IAD)- In FY 2010, the Interagency program conducted the first South Central Regional Homeland Security S&T Summit. The summit increased Regional S&T resilience; enhanced and strengthened partnerships, collaboration and information sharing with and among international, Federal, state, local, tribal, and national laboratory partners. It also leveraged the Homeland Defense/Homeland Security (HD/HS) Capabilities Forum to support interagency outreach and coordination between DHS, the National Guard, and U.S. Northern Command to enable awareness, information sharing, and synchronization of, and interest in, finding solutions to HD/HS capability gaps. Coordination efforts resulted in S&T partnering with US Northern Command on Rapid Reaction Tunnel Detection Joint Capability Technology Demonstration. Inter Agency Programs served as the Executive Secretary to the Aviation Security Enhancement Partnership (ASEP), that was established following the December 25, 2009 attempted airline bombing. IAD established relationships with market-leading private enterprises such as Intel Corporation, Cisco Systems, and IBM Watson Center Research through the Center of Innovation (CoI). IAD served as the S&T lead in a significant disaster event obtaining capability gaps identified by customers and potential opportunities for future S&T collaboration. IAD conducted extensive Interagency Coordination with officials at the Federal, State, local, tribal, and territorial level which met the priorities of the Department. IAD Sought opportunities to leverage research and technology development efforts in support of Homeland Security needs; and to cultivate S&T collaboration, partnering, and information sharing opportunities. In FY 2010, IAD also created collaborative network of federal agencies through the National Science and Technology Council (NSTC); planned the first meeting in this Administration; sought and achieved internal consensus about DHS S&T priorities in this area, and facilitated DHS S&T participation.

In FY 2011, IAD will continue to expand S&T partnerships with DOD (Joint Staff, National Guard, commands, etc.), DOE, and other government agencies, to leverage RDT&E efforts/capabilities avoiding duplication of effort/investments. It will conduct at least one new or follow-up Regional Interagency Symposia to further strengthen collaborative efforts and to collect state, local, tribal and/or territorial (SLTT) input on technology gaps. IAD will also conduct at least one visit to a significant disaster event to assess technology needs, serving as the primary linkage for the Directorate. In FY 2012, IAD plans to continue to: expand S&T

partnerships with the DOD and DOE, and other government agencies, to leverage RDT&E efforts/capabilities to avoid duplication of effort/investments. It will expand outreach to the Homeland Security Enterprise (HSE) by strengthening partnerships & info sharing. It will conduct at least one new or follow-up Regional Interagency Symposia to further strengthen collaborative efforts and to collect SLTT input on technology gaps. IAD will also conduct at least one visit to a significant disaster event to assess technology needs, serving as the primary linkage for the Directorate

Program Transition - Aligns and coordinates the S&T Directorate's transition effort with Department components' requirements using Capstone Integrated Product Teams (IPTs). Product transition focuses on delivering near-term technology to meet customer-identified science and technology requirements, as well as informing the Basic Research and Innovation Offices of priority customer technology needs. Currently, the Capstone IPTs consist of thirteen functional homeland security areas: Border Security; Cargo Security; Chemical/Biological Defense; Cyber Security; Counter-Improvised Explosive Devices (IED); Transportation Security; Incident Management; Infrastructure Protection; Information Sharing/Management; Interoperability; Maritime Security; People Screening, and the newest Capstone IPT, the First Responder IPT. In FY 2010, the program refined support and analysis of customer gaps through the IPT process and monitor efforts for cost, schedule, and capability to ensure the technology effectively transitions into acquisition. In FY 2011, the program will refine the IPT process further ensuring efficiency, effectiveness, increased leadership insight, customer involvement, and integration with component and Department planning activities to ensure technology gaps are incorporated in the IPT process at the earliest appropriate stage once identified. In FY 2012, the program plans to continue to monitor program cost, schedule, and technical performance to ensure technology development and delivery to DHS components, first responder community, and state, local, and tribal entities.

Testing and Evaluation (T&E) Thrust – FY 2012 estimate: \$6.641 million. Establishes policies and procedures for and coordinate and monitor the T&E activities across the DHS acquisition framework, to ensure acquisition programs follow accepted T&E practices, conduct appropriate evaluations and reduce the risk associated with new deployments.

First Responder Technologies (SAVER) – Maintains an operational T&E program for First Responder Technologies to enable State and local agencies to purchase equipment that has been rigorously tested against appropriate standards and certified for use. In FY 2010, FY 2011, and FY 2012, the Division collaborated, and will continue to collaborate with FEMA to identify high priority product categories based on the needs of First Responders. In FY 2010, the System Assessment and Validation for Emergency Responders (SAVER) Program has conducted objective assessments and validations on commercial equipment and systems from the prioritized product categories and published those results via Market Surveys, Focus Groups and Assessment Reports along with other relevant equipment information, to the emergency response

community in an operationally useful form to support equipment procurement decisions. These efforts will continue in FY 2011 and FY 2012.

Modeling and Simulation (M&S) Project – Develops policy for Modeling and Simulation in support of T&E. In FY 2010, the project developed policy for the use of Modeling and Simulation (M&S) in support of T&E and incorporated it in the updated T&E Directive, T&E training course, and the development of the T&E Guidebook. In FY 2011, the project will validate and revise the M&S policy in the T&E Directive, Guidebook, and training courses to reflect the current acquisition framework. In FY 2012, the project plans to continue to maintain and revise the M&S policy in the T&E Directive, Guidebook, and training courses to reflect the current acquisition framework.

Oversight T&E Activities for Special DHS Projects - Works directly with over 70 DHS acquisition programs to assist in the development and execution of a robust T&E program that will lead to the evaluation of the program's effectiveness and suitability. In FY 2010, the program continued its oversight function and expanded to include new Level I and non-delegated programs. In FY 2011, the program will provide T&E oversight of all existing and emerging Level I and non-delegated acquisition programs. In FY 2012, the program plans to continue to provide T&E oversight of all existing and emerging Level I and non-delegated acquisition programs.

T&E Infrastructure Development Project – Assesses, integrates, and coordinates the Federal and non-Federal (colleges, universities, local governments, private research institutes, and companies) test assets to provide an inventoried list of DHS T&E infrastructure. The inventoried list provides the T&E community and managers with details of available T&E facilities, resources, and capabilities and allows DHS T&E to identify infrastructure needs and eliminate excess. In FY 2010, the program developed the initial DHS T&E capability data and included a limited infrastructure review beyond DHS to other Federal and university capabilities. The goal was to establish an initial inventory of capability that will help programs to choose existing infrastructure that meet their testing requirements and receive feedback on the usability of the information. In FY 2011, the program will identify and inventory DHS T&E facilities, resources, and capabilities and identify T&E needs, gaps, and excess. In FY 2012, the program plans to maintain the inventory of DHS T&E facilities, resources, and capabilities while continuing to identify the evolving DHS T&E needs, gaps, and excess.

T&E Policy Analysis and Development Project – Develops T&E policies and procedures that define T&E activities required of all DHS components throughout the system acquisition process to verify attainment of technical performance specifications and evaluate operational effectiveness/suitability. In FY 2010, the program updated the T&E Directive, developed a T&E training course to support T&E certification for DHS personnel, initiated a study of the alternatives for an Operational Test Agent (OTA) for DHS, and initiated work on a T&E Guidebook for Program Managers across DHS. In FY 2011, the program will maintain and

revise the T&E Directive, Guidebook, and training courses to reflect the current acquisition framework. In addition, the program will continue the study of the alternatives for an Operational Test Agent (OTA) for DHS. In FY 2012, the program plans to continue to maintain and revise the T&E Directive, Guidebook, and training courses to reflect the current acquisition framework.

PPA: Laboratory Facilities

	Perm. Pos	FTE	Amount
2010 Actual	124	124	176,111
2011 C.R.	130	130	150,188
2012 Adjustments-to-Base	-	-	(23,688)
2012 Current Services	130	130	126,500
2012 Program Change	-	-	150,000
2012 Total President's Budget	130	130	276,500
Total Change 2011 to 2012	-	-	126,312

The Science and Technology (S&T) Directorate requests \$276.500 million for this activity in FY 2012. The \$126.312 million increase supports beginning construction of the National Bio and Agro-defense Facility (NBAF) the eventual replacement for the aging Plum Island Research Facility. Current services supports continued operation of other DHS S&T facilities, as well as planned infrastructure upgrades.

CURRENT SERVICES PROGRAM DESCRIPTION

The Office of National Laboratories (ONL) manages the Laboratory Facilities programs. ONL provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations and institutions, which can provide the knowledge and technology required to secure our homeland.

The *Homeland Security Act of 2002* assigns ONL “the coordination and utilization of the Department of Energy (DOE) national laboratories and other sites under Section 309 in a manner to create a networked laboratory system for the purpose of supporting the missions of the Homeland Security Department”. In addition to oversight of the S&T Directorate’s laboratory operations, ONL coordinates homeland security-related activities and laboratory-directed research conducted within the DOE’s national laboratories.

ONL’s internal customers are the S&T Directorate’s executing divisions and the Test and Evaluation and Standards division. The primary external Federal customers are the United States Department of Agriculture (USDA), Transportation Security Administration (TSA), and the Federal Bureau of Investigation (FBI). ONL executes two programs: Construction and Lab Operations.

Construction - Oversees the planning, budgeting, and management of laboratory infrastructure construction and upgrade projects. Construction projects provide and maintain research and development (R&D) capabilities to support the missions of the S&T Directorate, the Department, and other government agencies that have interrelated homeland security missions. The investments include the construction of future laboratories, where a current capability does not exist, and upgrades to extend the life and capabilities of present laboratory facilities.

Infrastructure Upgrades Project – Ensures that S&T Directorate laboratories do not reach a point where dilapidated infrastructure or the lack of sufficient infrastructure prohibits conducting needed research and development. Capital upgrades are not routine operations and maintenance or expected upkeep but include new construction, renovation, remodeling, rebuilding, and outfitting space to allow scientists to pursue new capabilities based on customer requirements; and major overhauls of systems (electrical, water/sewage system) to ensure operability, safety, and security. This effort prevents an unmanageable and unaffordable situation where multiple key facilities require upgrades simultaneously.

Infrastructure upgrades will continue into FY 2012 for the Transportation Security Lab (TSL) as part of the Five-Year Master Plan reported to Congress referred to as the TSL Infrastructure Investment Program (IIP). The project will provide TSL the critical infrastructure needed to ensure its role as a leader in aviation security and to meet its mission of researching, developing, engineering, testing, and evaluating solutions to detect and mitigate the explosives threat and weapons used against our nation's transportation systems. In FY 2010, ONL constructed explosive storage bunkers so that TSL can continue to support increasing system development testing requirements. In addition to explosive storage space, capital investment plans at TSL include the following: constructing a new independent testing and evaluation (IT&E) laboratory; renovating and expanding the developmental, test, and evaluation (DT&E) laboratory space; and providing additional office and non-explosive storage space. These upgrades support TSL's current needs and the laboratory's efforts to expand expertise in mass transportation. Currently, the laboratory operates second and third shifts and must rotate equipment among various laboratory cells to conduct testing. Any disruptions in these activities adversely affect testing schedules and technology development for DHS customers. In FY 2011, ONL will design all of the remaining TSL IIP components and begin construction of limited program components. In FY 2012, ONL plans to begin construction activities of critical components, including the Independent Testing & Evaluation Laboratory.

National Bio and Agro-Defense Facility (NBAF) Construction Project – Provides an integrated animal, foreign animal, and zoonotic disease research, development, and testing facility to support the complementary missions of DHS and USDA. NBAF will replace Plum Island Animal Disease Center (PIADC) and provide additional capabilities in state-of-the-art research, development, testing, and evaluation infrastructure to conduct research on high-consequence zoonotic (i.e., transmitted from animals to humans) diseases that could be a threat to public health. Expanded capabilities from the existing PIADC mission will allow NBAF to address a broader and more complete spectrum of threats. Research and development at NBAF will additionally address multiple threats/vulnerabilities related to bio- and agro-attacks and improve our understanding of potential agro-terrorism such as employing foreign animal and zoonotic disease pathogens against U.S. targets.

NBAF Space Justification – NBAF will satisfy the requirements identified in Homeland Security Presidential Directive (HSPD)-9 by providing an integrated facility for studying foreign animal and zoonotic diseases. The existing animal holding, laboratory, training, and support spaces at PIADC present challenges for scientists and building operators since they are inefficiently designed and not designed to modern biocontainment standards. Major limitations exist in the ability to conduct large-animal research trials necessary for assessing and countering emerging threats and developing necessary vaccines. NBAF will be designed to maximize laboratory space and research efficiencies while providing state-of-the-art technologies that meet modern biocontainment standards.

The NBAF project was originally envisioned to be completely financed by sales proceeds from the disposal of Plum Island. The FY 2010 Appropriations language (H.R. 2892, Section 535) directed that should the DHS Secretary determine that Plum Island will not be the future site of NBAF; the Secretary will have the General Services Administration (GSA) Administrator sell Plum Island’s real and related personal property along with transportation assets supporting PIADC operations through public sale. Proceeds from the sale will be available in an offsetting account of the DHS S&T Directorate’s Research, Development, Acquisition, and Operations (RDA&O) to offset NBAF construction costs and related costs necessary to remediate Plum Island, as well as reimbursement for expenses incurred by GSA. GSA is currently working with DHS to put Plum Island on the market.

However, sales estimates have been found to be considerably overestimated and as such, direct appropriations will be required to build the NBAF. Moving ahead, DHS seeks to replace the existing mission at Plum Island and plans to include the augmented mission capabilities of BSL-4 and vaccine production. Once operations are transitioned off of Plum Island to NBAF, Plum Island will be sold and sales proceeds will be used to offset NBAF costs. Once complete, NBAF will have approximately 540,000 gross square feet, which includes the necessary support space to safely operate and maintain NBAF at the various biosafety levels.

Foot and Mouth Disease (FMD) research requires BSL-3Ag laboratory space while zoonotic disease research requires BSL-4 laboratory space. The overall space is broken out as follows:

Space	GSF
Office/Support	160,000
BSL-2	14,500
BSL-3	302,000
BSL-4	38,500
Vaccine Prod.	25,000
NBAF	540,000

In FY 2010, the project continued detailed design and completed a site-specific risk assessment, which the FY 2010 appropriations bill required. In addition, the project received cost-share funds from the State of Kansas that supported site preparation including earthwork, roadways, parking, fencing, and utility distribution. For FY 2011, the S&T Directorate is requesting cost-

share funds from the State of Kansas to build the central utility plant (CUP). In FY 2012, the project plans to request incremental funding authority to begin construction of the PIADC replacement laboratory.

Pacific Northwest National Laboratory (PNNL), Area 300 Project – 2010 funding fulfilled the S&T Directorate’s total commitment to the Capability Replacement Laboratory of \$55.934 million, per the MOA between the S&T Directorate and the Department of Energy (DOE). The DOE Office of Science manages this project. ONL provides project management oversight and coordination for the construction of this DOE-led project. PNNL currently provides DHS with R&D capabilities in several areas, such as radiological detection and analysis, dosimetry for standards, and information analytics. This research supports the S&T Directorate, National Protection and Programs Directorate (NPPD), Domestic Nuclear Detection Office (DNDO) and Custom and Border Protection (CBP). In FY 2007, ONL supported the joint program’s facility design. Construction began in FY 2008 and is expected to be complete in FY 2011.

Lab Operations - Manages the operations and maintenance of the DHS laboratories and infrastructure.

Chemical Security Analysis Center (CSAC) Facility Operations – Develop and informs risk assessments related to national chemical defense. CSAC is located at the DOD Edgewood Chemical Biological Center (ECBC) in Aberdeen, MD. CSAC directly supports the S&T Directorate’s chemical countermeasures activities in the Chemical and Biological Division and operates in cooperation with the FBI and DOD. The DOD Sample Receipt Facility (SRF) at ECBC houses CSAC, providing the capability to integrate knowledge across the full chemical threat spectrum. In FY 2010, FY 2011, and FY 2012, operations costs for this facility include rent, security, utilities, and information technology infrastructure.

National Urban Security Technology Laboratory (NUSTL) Operations Provides testing and evaluation expertise to the S&T Directorate and other DHS components such as DNDO. NUSTL also is the DHS liaison for the deployment of experimental technologies in the New York City metropolitan area. NUSTL is a government-owned, government-operated laboratory located in the Borough of Manhattan in New York City. In FY 2009, ONL conducted the remaining environmental cleanup to return excess space to GSA and move NUSTL to smaller facilities. The move will reduce rent and operational costs. The laboratory plans to transition into the new offices by the end of FY 2011. GSA requirements for final cleanup include, the final disposal of contaminated materials and removal of fume hoods, large exhaust ducting, furnaces, and other equipment that are legacy from DOE activities. The FY 2010, FY 2011, and FY 2012 operations costs include rent, security, and utilities.

National Biodefense Analysis and Countermeasures Center (NBACC) Operations – Provides the capability to characterize current and future biological threats, assess their impacts, and inform the development of countermeasures and vaccines. NBACC also conducts bioforensic analysis of evidence from biocrimes and terrorism to support law enforcement’s efforts to attribute crimes to the perpetrators. The unique missions of threat characterization and bioforensics enhance the Nation’s overall biodefense capabilities. NBACC will closely collaborate with the FBI and other law enforcement agencies. NBACC is located at Fort Detrick, MD and is part of the National

Interagency Biodefense Campus that includes HHS, DOD, and USDA. Construction began in FY 2006, and office and administrative spaces will be ready for occupancy in FY 2010. The S&T Directorate began operating NBACC as a Federally Funded Research and Development Center (FFRDC) in FY 2007. The FFRDC plans, manages, and executes the NBACC research programs and operates the facility. In FY 2010, FY 2011, and FY 2012, operations costs include NBACC management through the FFRDC, security, equipment/furnishings, utilities and site services, fees, and insurance.

Plum Island Animal Disease Center (PIADC) Operations – Researches contagious animal diseases (e.g., foot-and-mouth) identified in other countries. PIADC's mission is to develop strategies and vaccines to protect the Nation's animal industries and exports from foreign animal diseases accidentally or deliberately introduced into the United States. DHS and USDA jointly perform the R&D work at PIADC. Both organizations have a research presence, including laboratory employees, but DHS is responsible for the operations and maintenance of the facility. The combined work of both agencies supports the S&T Directorate's agro-terrorism countermeasures programs. Research at the facility occurs in BSL-2, BSL-3, and BSL-3Ag laboratory spaces. PIADC is located on Plum Island, off the eastern end of Long Island, New York. The Center is a self-sustaining operation, with its own power plant, fuel storage, fire protection, waste disposal, and security systems. The S&T Directorate also provides the only ferry transport to and from the island and is responsible for operating and maintaining the ferries, docks, and harbor. The S&T Directorate provides the day-to-day operational support, including the operations work force. Major operations costs include security, utilities, and fuel in FY 2010, FY 2011, and FY 2012.

Salaries and Benefits – Funds salaries and benefits for non-Headquarters, Federal employees located at the S&T Directorate's field laboratories. These employees operate and execute programs at the DHS S&T Laboratories in support of S&T divisions and DHS components.

Transportation Security Laboratory (TSL) Operations – Develops civil transportation security technologies, such as explosives and weapons detection systems. TSL is a science and engineering laboratory that develops promising technologies to the point of operational test and evaluation. TSL supports the S&T Directorate's Explosives Division and TSA. TSL is located at the Federal Aviation Agency (FAA) William J. Hughes Technical Center in Atlantic City, N.J. The real property and facilities belong to FAA. The FY 2010, FY 2011, and FY 2012, major operations costs include rent, buildings maintenance, utilities, security, and information technology.

PPA: Research, Development, and Innovation

	Perm. Pos	FTE	Amount
2010 Actual	-	-	627,810
2011 C.R.	-	-	577,448
2012 Adjustments-to-Base	-	-	64,402
2012 Current Services	-	-	641,850
2012 Program Change	-	-	18,000
2012 Total President's Budget	-	-	659,850
Total Change 2011 to 2012	-	-	82,402

The Science and Technology (S&T) Directorate requests \$659.850 million for Research, Development, and Innovation in FY 2012. The \$82.402 million increase in FY 2012 reflects a realignment of programs and projects within the Science & Technology Directorate. Within this total, there is an increase of \$18.000 million for Cyber security to support the Comprehensive National Cyber security Initiative (CNCI). Also included is an administrative savings initiative of \$1.100 million.

CURRENT SERVICES PROGRAM DESCRIPTION

Provides state-of-the-art technology and/or solutions to meet the needs of the operational components of the Department and the first responder community. Includes customer-focused and output-oriented RDT&E programs that balance risk, cost, impact, and time to delivery. The six thrust areas of RD&I include: APEX Research and Development; Border Security; Chemical, Biological, Radiological, Nuclear, and Explosive Defense; Counter Terrorist; Cyber Security; and Disaster Resilience.

APEX Research & Development Thrust – FY 2012 estimate: \$17.900 million. Consists of crosscutting, multi-disciplinary efforts requested by DHS components. Apex projects are high priority, high-value, and short turn-around in nature.

Science & Technology Operational Research and Enhancement Program (STORE) – Partners with the United States Secret Service (USSS) to better integrate technology solutions with human networks protecting government leaders and designated personnel traveling across the country. STORE has two primary goals: (1) Implement new and existing technologies that

are lightweight, efficient, modular, and portable to more effectively maintain control of cleared areas while extending protective capabilities beyond the physical boundaries. STORE will optimally integrate these technologies, including communication and various detection systems, to work together to support human processes. (2) Help USSS establish a sustainable plan to rigorously analyze and measure their effectiveness, consider emerging threats, and make technology refresh decisions to guide future acquisitions. In FY 2010, the project embedded S&T Directorate staff with USSS operational personnel to understand protective operations and to establish a baseline for the requirements analysis in FY 2011. In FY 2011, the project will conduct a full capability analysis, model threat scenarios, determine system effectiveness measures and metrics, and conduct trade space analysis to deliver an initial capability improvement plan. In FY 2012, the project plans to prototype protective mission systems and/or technology, based on the findings in FY 2011. The project also plans to review the analyses and acquisition processes supporting long-term, protective mission technology enhancements.

Border Security Research & Development Thrust - DHS is responsible for securing the borders, territorial waters, ports, terminals, waterways, and air, land, and sea transportation systems of the United States. The Science & Technology (S&T) Directorate invests in the research and development of border security technology to: prevent the illicit movement and illegal entry or exit of people, weapons, dangerous goods, and contraband; manage the risk posed by people and goods in transit; and, disrupt and dismantle transnational criminal organizations.

Cargo Security Program – FY 2012 estimate: \$15.918 million. Develops technologies to ensure the integrity of cargo shipments (including sea, air, and land conveyance) and enhances the end-to-end security of the supply chain – from the manufacturer of goods to final delivery. This work will reduce the risk of terrorists manipulating cargo as it conveys across various transit modes in the international supply chain.

Advanced Screening and Targeting/Project Screen – Enhances DHS risk assessment capability by providing next-generation risk assessment and targeting tools for inbound containers in support of CBP and DHS policy. In FY 2010, the project performed an evaluation of pattern analysis tools. In FY 2011, the project will conduct testing of Project SCREEN spiral improvements. In FY 2012, the project plans to complete a Beta test of Project SCREEN.

CanScan Project – Develops a next-generation, non-intrusive inspection system to detect terrorist materials, contraband items (e.g., drugs, currency, illegal firearms), or humans at border crossings and ports of entry. The new system will provide increased penetration, resolution, and throughput compared to current capabilities for scanning containerized cargo. The system will incorporate technologies that will provide elemental material identification and/or material composition. In FY 2010, the project developed and finalized requirements, performed concept studies, and analysis of alternatives. In FY 2011, the project ends to fund higher priority projects.

Composite Container Project – Develops an International Standards Organization (ISO) composite shipping container with embedded security sensors. The sensors detect intrusions from the point-of-consolidation to the point-of-deconsolidation in the maritime supply chain. This technology yields several potential benefits for the shipping industry beyond cargo security. Composite containers are stronger than current steel shipping containers and are 10-15 percent lighter. Weight savings benefit shippers by allowing them to load more goods per container. Composite containers are also easier to repair, which decreases life-cycle costs. In FY 2010, the project initiated testing and evaluation of the hybrid composite container. In FY 2011, the project will validate breach security grid embedded in composite container panels. In FY 2012, the project plans to deliver hybrid composite container final performance specifications.

Conveyance Security Device Project – Develops multiple, open standard, intrusion detection, tracking, and tracing systems to monitor the integrity of cargo conveyance units. These systems will be applicable to various configurations of intermodal conveyances, including trucks and trailers. In FY 2012, the project plans to initiate requirements analysis.

Man-Portable Chemical, Explosives, and Drug Detector Project – Develops a handheld device that non-intrusively detects explosives and narcotics. The Explosives Division manages this project. In FY 2010, the project investigated the feasibility of a combined explosive and narcotics detection device. In FY 2011, the project will demonstrate the narcotics library in a mass spectrometry unit for a man-portable detection device. In FY 2012, the project plans to conduct testing and evaluation on a mass-spectrometry unit containing an explosives and narcotics library.

Project Southwest Border Transportation (SWBT) – Develops a high-speed, semi automated screener for detection of drugs, currency, firearms and others crossing the border into or out of the United States, including screening for pedestrians, cyclists, motorized cycles, privately owned vehicles (POVs), and light trucks. In FY 2012, the project plans to initiate requirements analysis.

Supply Chain Secure Corridors Pilot Project - Demonstrates an Electronic Chain-of-Custody (ECoC) device through a pilot program that S&T-developed and evaluated that will enable improved visibility of cargo conveyances transiting U.S. land ports-of-entry. The pilot will test and assess the ECoC device by implementing it on four supply chain routes entering the country via land. The pilot will allow CBP to determine the ECoC's efficacy, understand the different concept of operations of different supply routes, as well as provide an immediate interim operational capability. As of the date of this submission, the project is only pending a fully executed memorandum of agreement with the Customs and Border Protection to become operational. In FY 2011, the project will finalize concept of operations between stakeholders for the supply chains being used, and build and test technologies and infrastructure. In FY 2012, the project plans to test and validate the technologies, and conduct cargo runs.

Land Border Security Program – FY 2012 estimate: \$16.000 million. Develops and transitions technical capabilities that strengthen U.S. land border security by safeguarding lawful trade and travel; and disrupting and dismantling transnational criminal and terrorist organizations.

Air-Based Technologies Project – Develops advanced airborne sensor technologies to improve land and maritime border surveillance capabilities, including the assessment of persistent wide area surveillance systems. In FY 2012, the project plans to transition new sensor technologies to component customers based on performance data proven in real operational environments.

Border and Maritime Systems Basic Research Project – Researches technical borders and maritime capabilities that enhance homeland security without impeding the flow of commerce or travel and address current gaps in border and maritime systems, including studying and analyzing emerging threats. In FY 2011, the project will identify a border and maritime system in one or more of the following environments – northern border, southern border, inland waterways, and/or island/remote areas.

Complex Systems Analysis Basic Research Project – Generates the fundamental knowledge and conceptual development to prototype new concepts, supporting methods, and tools necessary to advance understanding and inform capability development to effectively address complex system problems. The project studies the role of advanced modeling and simulation in assessing effectiveness in streamlining and enhancing DHS-SBI (Secure Border Initiative) decision making in a complex environment. In FY 2011, the project will develop an understanding of how work is structured (evolved and by design) in complex situations. In FY 2012, the project plans to conduct demonstration of complex systems diagnostic framework deployment and facilitation within the context of a complex systems environment.

Ground-Based Technologies Project – Researches, develops, tests and evaluates sensors and surveillance systems to assess their performance in detecting and classifying targets at ranges between 2-24nm. Focus is radars, imagers, Unattended Ground Sensors (UGS), and tripwires. Evaluation of field test data results in recommendations as to which systems are cost effective and provide superior operational performance. In FY 2010, the project evaluated land-border tripwires. In FY 2011, the project will conduct system test and evaluation of buried tripwire. In FY 2012, the project plans to continue testing and transition advanced sensor technologies.

Multimodal Tunnel Detection Project – Builds on the original tunnel detection project to develop an integrated, orthogonal approach to detect and characterize cross border tunnels. No single technology can effectively detect tunnels. Multi-modal Tunnel Detect will combine various sensor modalities (i.e. magnetic, seismic, acoustic, resistive, radio frequency, and other complementary sensor modalities) to develop new border security system technologies for reliable detection of clandestine tunnels for a variety of border environments. This project will 1) improve the identification and characterization of geophysical conditions found in areas of greatest interest along the border; 2) uncover technological dependencies with respect to

location; and 3) develop prototypes to detect clandestine tunnels. In FY 2010, the project modeled the geological and geophysical characteristics of border areas of greatest interest, surveyed potential tunnel detection solutions; participated in a joint project with the Department of Defense (DOD) to evaluate the initial three approaches (i.e., passive seismic/acoustic, active seismic and electromagnetic). The project also modified the Ground Penetrating Radar (GPR) Prototype for use as a sensor in multi-modal technology and evaluate in-ground commercial fiber optic infrastructure as a potential acoustic sensor. The project also researched various methods to indirectly indicate the presence of a tunnel via tracking of illicit transport methods.

Northern Border Test Bed Project – Evaluates sensors and surveillance technologies in an operational environment test bed on the Northern border, enabling agent training and tactics development, as well as testing of developmental hardware in operational environments. In FY 2010, the project completed the communications infrastructure preliminary design and submitted the system security accreditation package for review. In FY 2011, the project will complete NET-B installation and integrate sensor test bed technologies and will demonstrate initial Automated Scene Understanding (ASU) land capability based on cameras and radars. In FY 2012, the project plans to conduct system test and transition Northern Border Test Bed technology.

Renewable Energy Basic Research Project – Develops S&T Borders & Maritime Division (BMD)-related renewable energy (RE) research agenda designed to develop strategies for meeting short- and long-term BMD power requirements using RE sources and/or power management. Alternative power sources and options are critical to on-going DHS operations at the border. In FY 2010, the project assessed energy scavenging, power sources, and energy management for remote areas or areas with minimal infrastructure. In FY 2011, the project will identify RE capabilities options for inland waterway and/or the northern/southern border. In FY 2012, the project plans to demonstrate renewable energy capability for remote sensors.

Research and Development Governance Project – Develops a coherent guidance, integration, and accountability framework, which encourages desirable research outcomes for enhanced mission capabilities. Research and development (R&D) governance will provide decision/policy makers with information and support to achieve higher levels of mission performance. In FY 2011, the project will develop science-based tools and technologies to enhance DHS S&T BMD R&D governance capabilities. In FY 2012, the project plans to develop, prototype and test science-based tools and technologies to enhance DHS S&T BMD R&D governance capabilities.

Sense and Avoid Systems for Unmanned Aerial Systems (UAS) Project – Conducts airspace and UAS encounter modeling & simulation (M&S) required to build a knowledge base, including model verification and validation (V&V) based on real-world flight T&E, to demonstrate the FAA-mandated safety case to enable routine (‘file-and-fly’) UAS access to the National Airspace System (NAS). The project also establishes a UAS sense-&-avoid (S&A) test bed for evaluating UAS and sense-and-avoid systems in realistic, user-relevant CONOP applications. In FY 2010,

the project delivered modeling and simulation results for UAV-related U.S. Coast Guard (USCG) applications. In FY 2011, the project will develop a detailed flight test and integration plan, begin validating Collision Avoidance System Safety Assessment Tool (CASSATT) using flight test data of opportunity for sense, and avoid systems and will identify renewable energy-sensor capability options for the inland waterways and Northern and Southern border environments.

Small Dark Aircrafts Project – Develops and transitions capabilities to detect, identify, and track high-risk targets, including small aircraft. Small aircraft are characterized as ultra-lights and small general aviation, fixed-wing and helicopters. In FY 2010, the project conducted requirements analysis. In FY 2011, the project will develop and evaluate capabilities that could support detection, discrimination, and tracking of low observable small dark aircraft. In FY 2012, the project plans to demonstrate emerging technologies that could support detection, discrimination, and tracking of low observable small dark aircraft.

Tunnel Activity Monitoring Project - Integrates sensors and covert communication technologies to detect human activity in existing public infrastructure tunnels such as sewer systems. Development of “through-the-wall” sensors and communications systems that use low power but are robust enough to effectively work in a difficult, underground environment with concrete, wire mesh, re-bar, and other features is a significant challenge. The project will also assess technologies to extract and interpret sensor information from the tunnels. In FY 2010, the project conducted preliminary communication tests and laboratory evaluation of sensors. The project also assessed and selected a test bed. In FY 2011, the project will conduct a functional demonstration of the technology and begin system design and component refinement. In FY 2012, the project plans to optimize the technology for limited deployment in a southern border city.

Tunnel Detection Project – Pursues technologies and knowledge for detection, identification, apprehension, interdiction, and enforcement capabilities to address subterranean threats along the U.S. border. This project provides a better understanding of the effectiveness and limitations of various technologies against different types of cross-border tunnels in urban border regions. The project includes near-term development and longer-term basic research. In FY 2010, the project investigated the geophysical characteristics of urban border regions. In FY 2011, the project will research and characterize geophysical characteristics within different key border regions for tunnel detection. In FY 2012, the project plans to initiate requirements analysis.

Maritime Border Security Program – FY 2012 estimate: \$11.047 million. Develops and transitions technical capabilities that enhance U.S. maritime border security by safeguarding lawful trade and travel; and disrupting and dismantling transnational criminal and terrorist organizations.

Advanced Fusion Technologies Project – Develops the capability to fuse tactical information from multiple data sources (both law enforcement and commercial databases) and eliminate scene clutter. The project enhances the ability of law enforcement officers and commanders to quickly detect and localize maritime threats through better situational awareness for effective decision-making in complex and dynamic environments. The project will address USCG and CBP capability gaps identified in the requirements analysis process. In FY 2010, the project conducted installation and checkout of initial test bed technologies including the Sensor Management System (SMS) and Visualization Tools (Viz Tools) for Situational Awareness and Emergency Response. These initial systems provided situational awareness to the Coast Guard watchstanders through new sensor connections, communications, and display of data. In FY 2011, the project will develop a technology roadmap and begin demonstration of initial advanced fusion technology subsystems. In FY 2012, the project plans to identify new technology, conduct demonstrations, and transition knowledge products and potential solutions to USCG and CBP.

Port and Coastal Surveillance Improvement Project – Develops, tests, and demonstrates technologies to detect, track, and identify large and small vessels in port and coastal regions under a variety of operational and environmental conditions. In FY 2010, the project tested the initial prototype Improved Imaging Technology (IIT) unit. In FY 2011, the project will transition initial Port and Coastal Radar Improvement capability to USCG. In FY 2012, the project plans to transition the Port and Coastal Radar Improvement prototype, test reports, and lessons learned to Interagency Operations Center (IOC).

Port Security Test Bed Project – Provides an operational maritime environment test bed to develop, test and evaluate new sensors, surveillance and command center technologies. This testbed, established at USCG Sector Command Center Los Angeles/Long Beach, California, will enable S&T to evaluate technologies and validate requirements for advanced sensors, data fusion tools, data sharing and data control. In FY 2010, the project transitioned an initial Advanced Automated Scene Understanding maritime capability to USCG. In FY 2011, the project will develop an assessment report of technologies tested at the Port Security Test Bed to demonstrate maturing technologies in an operationally relevant environment for USCG, CBP, and other Federal, State and local First Responders in and around a port area. In FY 2012, the project plans to develop a prioritized list of technologies, sensor/data connections, and associated concepts of operations that should significantly benefit USCG and their federal, state, and local partners in any port, not just the Los Angeles/Long Beach.

Small Boat Harbor Surveillance (SBHS) Project - Develops, tests, and demonstrates technologies to track small boats in harbors and port environments. This project demonstrates improved situational awareness. In FY 2010, the project designed initial prototype Small Vessel Tracking (SVT) unit. In FY 2011, the project will build and test a prototype Small Boat Harbor Surveillance System. In FY 2012, the project plans to transition the SBHS system.

Small Dark Vessels Project – Develops and transitions capabilities to detect, identify, track, and interdict high-risk targets, including small dark vessels. Small maritime vessels are the class of Self-Propelled Semi-Submersibles (SPSS), Self-Propelled Fully-Submersibles (SPFS), Go-Fast boats, and other fishing vessels that conduct illicit activity. The project includes near-term development and longer-term basic research. In FY 2010, the project evaluated effectiveness of current U.S. capabilities and transitioned knowledge products to more effectively use national assets to predict where and when to look for SPSS. In FY 2011, the project will develop an improved Self-Propelled Semi-Submersible (SPSS) detection capability. In FY 2012, the project plans to demonstrate advanced sensors, communications and information sharing capabilities to detect small dark vessel threats.

Wide Area Surveillance (WAS) Project - Demonstrates persistent Wide Area Surveillance (WAS) capability to explore Concept of Operations (CONOPS) and data integration issues associated with the detection, tracking, and classification of vessel traffic offshore. In FY 2010, the project tested, evaluated, and demonstrated prototype Shipboard AIS and RADAR Contact Reporting (SARCR) systems. In FY 2011, the project will test, evaluate, and demonstrate a prototype Tethered Aerostat Radar Processor (TARP) system. In FY 2012, the project plans to demonstrate and advanced WAS capability and deliver final report to USCG.

Chemical Biological, Radiological, Nuclear, and Explosive Defense Research & Development Thrust - S&T invests in research & development to support Threat Awareness, Prevention, and Protective strategies, coordinated surveillance and detection, response and recovery initiatives, and protective countermeasures to address chemical, biological, radiological, nuclear, and explosive (CBRNE) threats. Efforts include: prevention of terrorism; prevention of the unauthorized use of CBRNE materials within the U.S.; reduction of vulnerability of critical infrastructure from terrorist attacks and other hazards; prevention of the illicit movement and illegal entry or exit of people, weapons, dangerous goods, and contraband; and, coordination with local and regional partners to identify hazards, assess vulnerabilities, and develop strategies to manage the risks associated with man-made hazards.

Bioagent Detection Program – FY 2012 estimate: \$53.653 million. Conducts research, develops, and/or identifies tools to enable rapid detection and provide advanced warning of attacks or releases of biological threat agents against the population and agriculture of the United States. Defines the intended use and application, develops the requirements, and executes the technology developmental efforts to support early detection and warning of potential bioagent threats to humans and animals.

Ag Screening Tools Project – Focuses on the development of standardized technologies to detect high priority foreign animal diseases. In FY 2010, the project initiated a capabilities study to identify and prioritize stakeholder needs for screening protocols and detection and inspection tools, as well as developed a strategy to address their needs. In FY 2011, specific gaps in high threat foreign animal disease diagnostics will be identified and research projects identified to fill

those gaps to buy down risk of livestock infections caused by these bioagents. In FY 2012, in coordination with interagency stakeholders, the project plans to develop enhanced protocols and tools to address current capability gaps in foreign animal disease diagnostics. Additionally, the project will initiate transition of Foreign Animal Disease (FAD) assays to end users to support surveillance and diagnostics.

Bioassay - Near Term Project – Develops rapid detection assays to recognize biological threat agents and toxins in support of the National Bio-Monitoring Architecture (NBMA), Public Health Surveillance through the Public Health Actionable Assay initiative, and the Integrated Consortium of Laboratory Networks (ICLN) for event detection, characterization, and mitigation. In addition, bio-informatics resources, strain repository, antibody development, antibody repository, and standards are being developed to support, evaluate and independently validate Public Health Actionable Assays (PHAA) to support the Centers for Disease Control (CDC) Laboratory Response Network (LRN) through the Federal Standards for Assay Performance and Equivalency (FSAPE). The Federal Standards support interoperability and unified operational concepts for U.S. Government-deployed systems and Public Safety Actionable Assays (PSAA) used by first responders and private-sector end-users. In FY 2010, the project delivered the second Signature Erosion Analysis Report to CDC for the assays currently used in the LRN to provide higher confidence in results. The project transitioned additional nucleic-acid detection assays and signatures to Office of Health Affairs (OHA) to support the BioWatch program and to CDC to support the LRN. The project transitioned a Rapid Anthrax Antimicrobial Susceptibility Assay to the CDC LRN that will allow the LRN to rapidly assess the antimicrobial susceptibility of biothreat agents against clinically relevant antibiotics (anthrax is first to be developed) in the event of a release to support decision making for distribution and dispensation of post-exposure prophylaxis. In FY 2011, the project will evaluate and validate candidate PHAA assays for deployment and use by the CDC and LRN to support Biosurveillance and Detection. The project will develop and transition assays for biothreat agents as guided and prioritized by the 2010 Bioterrorism Risk Assessment (BTRA). The project will also transition Rapid Ricin toxin and Botulinum neuro-toxin, serotype-specific assays to the CDC LRN. In FY 2011 and FY 2012, this project will continue to develop and improve immunologically-based antigen and toxin detection assays of the top biothreat agents. This project will develop and transition new nucleic-acid assays for those that have “eroded” (based on updated bioinformatics information and tools). Standards development for additional agents in support of PSAA initiatives will also be initiated to address first response community needs.

BioAssays – Next Generation Basic Research Project – Evaluates and develops new approaches for detecting the broad range of future threats including enhanced, advanced and emerging threats. This project addresses the need for a highly robust, multiplexed assay chemistry that will allow the Nation to screen and monitor for multiple pathogens from a single sample at a reduced cost. This project will encompass nucleic-acid-based detection, immunological and

non-immunological based antigen detection, and exploration of other novel approaches to support the rapid detection of biological agents of interest. This project will develop, evaluate, and transition nucleic-acid detection assays and signatures for enhanced biothreats, for virulence markers as well as highly robust sample preparation and processing chemistry to support detection. In FY 2010, this project continued to evaluate candidate assays and associated refined chemistries to support future needs for bio-detection and monitoring and evaluated novel approaches to detect enhanced (antibiotic resistant) and advanced (genetically modified or engineered) threats. In FY 2011, this project will evaluate novel approaches to emerging threats and optimize the strategy for incorporation of promising candidate assay chemistries for Next Gen Biodetection and BioAssays – Near Term projects. In FY 2012, this project plans to develop robust detection reagents, sample preparation methodologies, assay chemistry and potential technology devices to further refine detection system capabilities.

Detect-to-Protect Triggers and Confirmers - Develop low-cost, bio-aerosol triggers and confirmers to detect biological agents within minutes (acting as reliable ‘bio smoke alarms’) for protection of high-threat facilities and their occupants. The goal is to develop commercialized detection systems that could enable transportation, entertainment, and other high-value facilities to monitor for airborne hazards and take low-regret precautions (e.g., turning off ventilation systems). In addition, these systems can also be employed by U.S. Government programs to support biosurveillance and detection related activities. In FY 2011, this project will complete twelve month pilot testing of Trigger and Confirmer technologies that will serve as a demonstration of a rapid aerosol detection system in a subway environment and undergo full test and evaluation of the assays and assay chemistry through the PSAA program for private sector use and through the FSAPE process for U.S. Government use. Pilot systems will be designed to detect a credible threat release of a biological agent. In FY 2012, the project plans to transition the technology through commercialization.

Multi-Application Multiplex Technology Platform Project – Develops a multiplex technology platform that will allow an end user to screen for multiple pathogens from a single sample, and provide a user-friendly concept for multi-agency use and application where assay cartridges may be changed, based upon facility- or agency-specific needs. The project will ensure that different assay cartridges are validated for use by specific agencies. During surveillance operation mode, each agency will use their specific assays/cartridges for their intended application and use. In the event of a biological attack, this facilitates assay cartridge delivery to support agencies that have the same platform to provide surge-capacity support for event mitigation. As the detection science and technology matures, the Multi-Application Multiplex Technology Platform will test for traditional agents, enhanced agents, emerging agents, and advanced agents, performing up to 100 tests or detecting 100 targets simultaneously within a single sample. In FY 2010, the project conducted a technology feasibility assessment. In FY 2011, the project will deliver a prototype for capability demonstration. In FY 2012, the project plans to conduct a capability

demonstration in select end user laboratories. Customers include CDC, USDA, EPA, DoJ, FDA, CBP and others.

Next-Gen Biological Detection Project – Conducts enabling research and develops technology that, in a time frame shorter than BioWatch, accurately detect the presence of a traditional biothreat agent, provides characterization of that pathogen for its virulence, determines if the agent has been enhanced to defeat medical countermeasures, provides a rough quantification of the amount of that agent, and preserves the viability of samples for further analysis. The system should additionally provide advance warning or indication of potential advanced threat agents that have been genetically engineered to defeat detection. In addition, the goal is to explore cheaper or reusable reagents that will significantly reduce the operational cost while still providing highly reliable and timely results. The project will also seek to improve system reliability and maintainability to reduce the total life-cycle costs. In basic research, the project evaluates existing technology as well as explores and develops new technology for potential application and development of the Next-Generation Biodetection technology in support of the National BioMonitoring Architecture. This project will have the potential to address enhanced, emerging, and advanced biological threats and will explore innovative detection technologies (existing, developmental, and emerging). Basic research efforts will explore enabling technologies for compatibility and incorporation in an automated, fully integrated, end-to-end (collection, identification, and reporting) system for standalone detection, analysis, and reporting of aerosolized agents. This project will both draw on and inform the BioAssay – Next Generation project described above. In FY 2010, the project continued its basic research, focusing on the exploration of more promising concepts encompassing sample capture, sample processing, and agent detection and characterization. In FY 2011, the project will complete component exploration in research and initiate transition phase with development of requirements in concert with users. In FY 2012, following a “go/no go” decision and lessons learned from BioWatch Gen-3 deployment and employment, the development of a breadboard system will be initiated.

Rapid Biodetection Project (Includes Portable Biodetector) - This project contains two initiatives: (1) Development of an interim and long-term solution for the rapid detection of Biological Threat agents in the field to support the First Responder, Coast Guard, CBP, USSS, FEMA and others; and (2) Development of a BioDefense Architecture in support of the BioDefense Strategy for the 21st century (HSPD10). This initiative will support multiple Federal agencies, and state and local first responder needs; to rapidly identify biothreat agents in the field where sample processing and detection are all integrated into a simple-to-use platform or concept for field application. Due to the time constraints and urgency of need for such a technology, a “short-term or interim solution” and a “longer-term or ideal solution” for a technology will be explored. The “short term” approach is to evaluate and modify existing commercially available devices to support an interim solution that reliably detects three (3) or more priority biothreat agents in suspicious “white powder”. The “longer-term” approach is to develop an optimal

solution which is user friendly, highly robust and reliable system that is capable of detecting all the high priority biothreat agents that collectively meets FEMA, Coast Guard, CBP and First Responder, USSS and others need. In FY 2011 and FY 2012 both the “short-term” and “longer-term” approaches will be aggressively pursued by testing COTS, refining user requirements, and initiating development of the optimal solution. The BioDefense Architecture to support the BioDefense Strategy for the 21st century will be developed to provide a framework for planning, understanding the threat space and gaps, exploration of different or new and more robust approaches and their tradeoffs, execution and implementation strategy, as well as Bio-Defense related investments. This strategy will incorporate threat and risk assessment knowledge and further define implementation strategies that meet HSPD-10 pillar elements. Customers include DHS components and directorates, the state and local community, private sector, and federal, state, and inter-agency partners. The Strategy will encompass customer capability needs to support the overall Biodefense Strategy in a coordinated approach over a five year timeframe. In FY 2011, the strategy will focus on baselining customer needs against current capabilities and identify key priority areas and gaps for future investments. In FY 2012, a five year strategy will be delivered.

Safe Container (SAFECON)/Time Recorded Ubiquitous Sensor Technology (TRUST) Project – Develops high reliability, high-throughput detection technologies to scan containers entering the country for weapons of mass destruction, explosives, contraband, and human cargo. The project attempts to immediately detect and isolate suspected threat containers while minimizing impact on commerce. SAFECON is a crane-mounted sensor system that detects dangerous cargo in shipping containers during on- and off-loading. SAFECON also looks for sample collection and preparation mechanisms to make screening more effective. TRUST is an alternative approach to container screening that takes advantage of the long transit time most shipping containers undergo from their port of origin to the United States. TRUST will sample for chemical, biological, radiological, nuclear, and high yield explosive (CBRNE) threats and human cargo inside the container, without opening the container. SAFECON and TRUST’s parallel development will allow each to take advantage of findings from the other.

- SAFECON – In FY 2010, the project completed a test bed at the Transportation Security Lab (TSL). The test bed provides a realistic environment to test vendors’ proposed technologies and S&T Directorate-developed technologies against CBRNE threats. In FY 2011, the project will conduct a final demonstration of the Remote Vapor Inspection System (RVIS) at the test bed. The project will also develop sample preparation and collection capabilities in the laboratory and begin identifying how to automatically analyze and present data in a meaningful way to Custom and Border Protection (CBP) end users. In FY 2012, the project plans to prototype sample preparation and collection systems and begin integrating them with various detection systems.

- **TRUST** – In FY 2010, the project developed the TRUST prototype scheduled for completion in FY 2011. This “in-situ” device will operate in transit, throughout the container’s voyage, sampling, and detecting threats, contraband, and anomalies. If the system detects a threat, it will send a radio message from inside the container to a shipboard relay and then to CBP. In FY 2011, the project will test the prototype at sea and evaluate sensing, sample collection, and communication subsystem performance. Positive results will lead to further developing and miniaturizing those subsystems in FY 2012.

Very Low Cost Bio Agent Detect Project – Decreases cost and improves performance of near real-time pathogen detection and characterization by eliminating the “consumables” (e.g., buffer, reagents, etc.). The project will conduct field pilots of embedded sensor technology within the homeland security community to validate cost and efficiency models. Currently, all biological detection methods require fluids, and much of the expense comes from the direct costs and care of reagents required in the process. This project will develop “dry methods” that do not require externally supplied water or that can take moisture from the air. Further advantages could result from decreasing the size and power consumption of such detectors to support ubiquitous detection with low operation and maintenance costs. In FY 2010, the project began feasibility studies in the laboratory. In FY 2011, the project will test various methods in the laboratory and down-select approaches for prototype development. In FY 2012, the project plans to develop a prototype design of sensors embedded into a consumer platform.

Viable Bioparticle Capture Project – Develops an automated sampler that is compatible with laboratory analysis, sealed for safe handling of potential infectious agents, and capable of preserving sample viability for multiple days. The final system will augment BioWatch information by 1) allowing characterization of the viability of a threat used in an attack; 2) support rapid antimicrobial susceptibility testing; 3) support orthogonal testing (using other assay chemistry for additional verification or characterization) as needed; and 4) enabling more definitive post-event characterization of bioterrorist events; 5) The system will also provide critical information about persistence, decay and re-aerosolization of agent in the days after an attack. In FY 2010, the project demonstrated the feasibility of selected concepts and components through laboratory tests. In FY 2011, the project will include the testing of collectors for their ability to maintain viability of pathogens collected as aerosols. In FY 2012, the project will support a pilot demonstration and deliver and transition the prototype to Office of Health Affairs (OHA).

Bioagent Threat Assessment Program – FY 2012 estimate: \$44.325 million. Addresses biological and agricultural knowledge gaps and develops defensive strategies to counter potential threats. Supports a full spectrum of knowledge products (e.g. reports/studies) to better inform policy makers on the attributes, risks, and consequences associated with the intentional release of a biological or agricultural (livestock) agent.

Agrodefense Basic Research Project – Performs fundamental basic research and addresses critical knowledge gaps for foreign animal and zoonotic diseases, in collaboration with Federal and academic partners. In FY 2010, the project completed integrated planning of S&T Directorate programs for foreign animal and zoonotic disease research. In FY 2010-11, the project will continue to execute ongoing R&D activities to address critical priorities, to include biotherapeutic discovery in collaboration with Federal and academic partners.

Biodefense Knowledge Center (BKC) – A center of expertise and information that provides several levels of analysis of biological threats to DHS components and multiple Federal agencies. Products include categorized and tailored assessments, in-depth analyses of biodefense issues and biotechnologies; and a knowledge management system to enable rapid and secure customer access to biodefense knowledge and information. Products include material threat assessments (in-depth studies of estimates of exposures to high-consequence agents) periodic awareness bulletins (which inform customers about technologies used for peaceful or, with a little alteration, nefarious ends), and focused reference resources (such as agent fact books). The BKC also is developing a multi-level secure, on-line knowledge management system to house products from BKC, the S&T Directorate's Chem-Bio Division, and international partners, as well as to provide knowledge discovery tools for analysis of multiple classified and unclassified biodefense community sources. The BKC is guided by an interagency advisory board that is consists of ten Federal agencies and four DHS components that are also customers of BKC services. BKC provides thorough, authoritative and scientifically accurate analyses that contain information that is difficult or impossible for customers to gain access to using in-house capabilities or other routes such as for-profit centers. In FY 2011, the BKC will continue to publish analyses and assessments such as a second generation material threat assessments, developed in coordination with HHS to better meet the intended use and application. The BKC will develop software pilots of its knowledge management system for DHS customers to rapidly characterize and understand biological threats. Customers include Customs and Border Protection (CBP), which requested BKC help in developing and refining rule-sets used at the National Targeting Center for bioterrorism monitoring. Through collaboration with HHS, BKC is developing a pilot capability to geolocate threats to global health. BKC also is working with Federal Bureau of Investigation (FBI) to develop large scale scanning and reporting of advanced life sciences traffic in threat streams. Also in FY 2011, BKC managers will add two additional international partners to the Global Knowledge Center, the international version of its knowledge management system. In FY 2012, BKC plans to finalize the second generation of material threat assessments for HHS's use in guiding medical countermeasures development decisions. It will continue to refine its knowledge management system, including expanding the Global Knowledge Center to another international partner and adding data sources, features, and the capacity for the system to enable analysts to vet and validate positive "hits" received from any input stream to the system.

Biodefense Net Assessments Project – Conducts assessments of this Nation’s overall biodefense strategy every four years to provide “...recommendations for re-balancing and refining investments among the pillars of our overall biodefense policy” as required in HSPD-10 and Project BioShield legislation. In FY 2010, the project refined and assigned high-priority questions and issues in future biodefense to a group of experts for detailed analysis. In FY 2011, the project will engage biodefense experts to review preliminary results and continue analyses. This feedback will refine the results to ensure convergence on the issues assigned. In FY 2012, the project plans to complete the quadrennial net assessments and deliver to the National Security Staff, DHS S1, DHS S2, OHA, NPPD, Policy, and interagency partners.

Biological Threat Characterization Center (BTCC) Project – Historically, BTCC conducted two major activities: 1) the biennial, systematic end-to-end risk assessments on traditional, enhanced and advanced biological agents, known as Bioterrorism Risk Assessments (BTRA); and 2) laboratory studies to close major scientific gaps to further refine our understanding of the risk and threat posed by these agents and interagency partner needs. The BTRA has now been programmatically moved under the *Bioterrorism Risk Assessment Project*.

The BTCC conducts laboratory studies that help to address key biothreat-related knowledge gaps identified in the Material Threat Assessments (MTA) performed by the Biodefense Knowledge Center (BKC) as well as studies identified by the Interagency community with concurrence and approval from DHS S&T. In FY 2010, the BTCC continued to address knowledge gaps on traditional agents to reduce the uncertainties in the BTRA, and evaluated feasibility of an adversary capability to develop advanced biological threat agents. In FY 2011, the BTCC will continue to support laboratory-based research to supply crucial data for the BTRA and MTAs, and conduct critical studies indentified by the interagency partners. This will include addressing knowledge gaps related to acquisition, production, dissemination, stability and pathogenicity of top priority traditional biothreat agents. In FY 2012, the BTCC plans to continue this effort and expand the research it is supporting to potentially include additional threat parameters (e.g., additional agent analysis of acquisition, stability, etc) as well as expand the portfolio to include enhanced and/or advanced agents.

Bioterrorism Risk Assessment (BTRA) Project – the BTRA, required under HSPD-10, is a comprehensive, probabilistic risk assessment that estimates terrorism risk as the probability of an attack occurring and the consequences of an attack should it occur. It incorporates the judgments of the intelligence and law enforcement communities with input from the scientific, medical, and public health communities to integrate risk as a function of threat, vulnerability, and consequences. As a strategic level assessment, the BTRA is designed and has been used to 1) aide in identifying and prioritizing credible, high impact threats, 2) aide in identifying and prioritizing vulnerabilities and knowledge gaps, and 3) provide a systematic, science-based, common framework for analysis. The BTRA provides the basis for risk-informed investments for National strategic biodefense planning, while identifying key knowledge gaps and defining critical vulnerabilities. This guides investments in biodefense and permits the U.S. to develop

effective biodefense capabilities in the face of limited resources. In FY 2010, the project delivered the third full BTRA assessment which was updated to include a comprehensive analysis of bioterrorism risk for 43 potential bioterrorism agents (38 human, 5 livestock pathogens), 4 terrorist organization types (international, state sponsored, domestic, lone wolf) with 6 different levels of capabilities (3 technical capability levels and 2 financial resource levels) against 20 different target types (subway, stadium, transportation, outdoor events, etc.). The 2010 BTRA also delivered a knowledge gap analysis on high risk bioagents, studies benchmarking the BTRA model against Material Threat Assessments and other planning scenarios, and several stakeholder driven tailored assessments. Tailored assessments are stakeholder-driven, focused studies designed to evaluate the impact of possible mitigation approaches to bioterrorism. In FY 2011, the project will continue to focus on performing tailored assessments to support near-term stakeholder decision making and preparedness planning. Tailored assessments leverage the BTRA modeling platform as a systematic, science-based, common framework for analysis which can support multiple stakeholder directed evaluations of risk management strategies. The project also continues to update data, models, and perform gap analyses to support threat characterization and strategic planning. In FY 2012, the BTRA will deliver a 2012 BTRA product comprised of multiple tailored assessments, sensitivity studies, and a gap analysis. Modeling improvements and updates, including new models designed to better capture the intelligent, adaptive adversary will be implemented in FY 2012.

Food Defense Basic Research Project – Performs fundamental basic research through the Food Protection and Defense National Center of Excellence that addresses agent/matrix interactions and the resulting implications for contaminant viability, detection, decontamination, and disposal. In FY 2010, the project explored new concepts and approaches to prevent, respond to, or recover from the intentional contamination or disruption of the Nation’s complex food system. In FY 2011, the project will develop promising new concepts and approaches to prevent, respond to, or recover from the intentional contamination or disruption of the Nation’s complex food system along with continuing ongoing R&D activities to support critical priorities.

Foreign Animal Disease (FAD) Modeling Near-Term & Long-Term Project – Supports the development and use of modeling and analysis tools to explore control strategies for FAD outbreaks at multiple scales, and recruits and supports the next-generation of expertise in infectious disease modeling to enhance the national capability in this highly interdisciplinary field. In FY 2010-2012, the project is addressing priority knowledge and capability gaps, including those influencing model complexities (data availability, parameterization, scalability, validation) and scope (FAD, zoonoses, wildlife). During FY 2012-2013, requirements, architectures, and prototypes for next-generation capabilities will be developed.

Integrated Threat Risk Assessment - The S&T Directorate is required to prepare an Integrated Chemical, Biological, Radiological, and Nuclear Terrorism Risk Assessment (ITRA) updated biennially under HSPD-18. The ITRA represents a consolidation and integration of the S&T

Directorate's standalone risk assessments (Chemical Terrorism Risk Assessment (CTRA), BTRA, and Radiological/Nuclear Terrorism Risk Assessment) and calculates relative Chemical, Biological, Radiological, and Nuclear (CBRN) risk to guide the prioritization of medical countermeasure development, and allocation of other scarce resources. In FY 2011, the project will deliver the second ITRA reports and tools, expanded to include enhanced and advanced agents and a prototype desktop tool. In FY 2011, the project will also expand the second ITRA report and tool to include additional decision support, improved modeling for radiological and nuclear, and improved food modeling across all threats. In FY 2012, the project plans to make tailored assessments available as independent formal reports.

Joint Agro Defense Office (JADO) – Provides coordination and staff support for the development and management of an integrated interagency R&D strategy for foreign animal disease defense, including the transition plan to the National Bio- and Agro-Defense Facility (NBAF). The National Science and Technology Council (NSTC) Foreign Animal Disease Threat (FADT) subcommittee facilitates the overall interagency coordination to better leverage and integrate interagency R&D efforts, including programs on veterinary countermeasures, basic research, FAD modeling, and depopulation, disposal and decontamination (3D). In FY 2010, in coordination with the FADT subcommittee, the office supported the preparation of an integrated R&D roadmap for FY 2012-2016 and enhanced interagency coordination of veterinary countermeasure, basic research, FAD modeling, and 3D projects. In FY 2010, the office also initiated a two-year assessment of strategic research and development opportunities for the National Bio- and Agro Defense Facility (NBAF). In FY 2011, the project will conduct workshops engaging Federal, state, academic, industry and international partners to review interagency research priorities and develop operational requirements for development products. In FY 2012, the strategic research assessment of NBAF is scheduled for completion and the office plans to coordinate a symposium to engage the non-federal research community in the implementation of recommendations from the assessment.

Responsive Studies Project - Provides rapid analysis and integration of scientific data and threat information, potentially including classified data, to inform decision-makers such as the Secretary of DHS, Chem-Bio senior leaders, members of the OHA, HHS, seeking to understand biodefense and preparedness issues. The outcome of this project will be a series of studies, each requested by a senior-level customer, that provide critical, high-value information otherwise unavailable or unattainable. Equally important, the project must be available when the customer requests studies to be conducted on short notice. Due to the high frequency of information requests from customers, it is expected that in FY 2012 the project will launch on studies identified in FY 2011 but for which funding was unavailable.

System Studies Project – Performs studies that use reference scenarios to assess the capability of the Nation's current biodefense posture, identify critical gaps, perform cost-benefit tradeoffs of different options for addressing those gaps, and inform guidance and CONOPS. Internal DHS customers use the results of system studies to help coordinate DHS-led biodefense for the

Nation. In FY 2010, the project performed a preliminary architecture analysis of food systems for defending against biological threats. This analysis will lay the foundation for prioritizing future studies in this sector. In FY 2011, the project will use the results from the preliminary analysis to identify high-level requirements for prioritized countermeasures identified in the architecture analysis. In FY 2012, the project plans to complete chemical and biological transit protection requirements and concept of operations for underground transit systems.

Chemical Detection Program – FY 2012 estimate: \$16.598 million. Researches, develops, and/or identifies tools to enable interception, detection, and warning of attacks or large releases of chemical threat agents against the population of the United States. Defines use concepts, requirements, and procedures for improved techniques for early detection and warning of potential chemical threats and enables modeling of the expanse of such chemical disasters.

Advanced Chemical Vapor Detection System Project – Develops technology that can be used both as an autonomous, networked continuously running facility monitor and a hand-portable, networked chemical detection system that will quickly (<1 min) “detect-to-warn” of the presence of a broad range of Toxic Industrial Chemicals (TIC’s) and Chemical Warfare Agents (CWAs). Starting in FY 2010, the project initiated research efforts aimed at exploring novel approaches to chemical detection and to collate customer requirements. In FY 2011, the project will further define requirements and initiate concept exploration. In FY 2012, the project plans to solicit for and begin development of new technologies against the defined requirements.

Autonomous Rapid Facility Chemical Agent Monitor (ARFCAM) Project - Develop a low-cost, fully autonomous, networkable chemical monitor that will “detect-to-warn” the presence of up to 17 CWAs and high-priority TICs simultaneously within a single device. This project will improve protection of facility occupants through its ability to detect a wide range of agents with increased reliability. In FY 2011, the project will complete test and evaluation and transition to customer(s) for follow-on operational testing and evaluation (OT&E) to occur at the end of FY 2011.

Cell-All Ubiquitous Chem Detect Project – Examines proof-of-concept technologies for integrating miniaturized chemical agent detectors into personal devices, such as cellular telephones. Together, individual miniaturized sensing devices can create a widely distributed network for detection, classification, and notification of a chemical release, potentially detecting chemical components of some biological agents. Individual device owners on the network will control the detection and transmission of the data, sensor timing, and global positioning system location information. The goals of this project include significant improvement to chemical detectors’ integration, size, cost, power, maintenance, durability, and response characteristics. In FY 2010, the project demonstrated three different device prototypes and established their efficacy in detecting several Toxic Industrial Chemicals (TIC’s). The project down-selected approaches to develop second-generation prototypes – one leverages the National Aeronautics and Space Administration’s (NASA) nanotechnology applications that support environmental

sensing in manned space flights; the other attempts to integrate commercial, next-generation sensors into a standard platform for detection. Also in FY 2010, the project began collaborating with the National Institute of Standards and Technology (NIST) to improve production of nano-scale sensor platform. The project also initiated focus group meetings with consumers, device manufacturers, Emergency Operations Center (EOC) personnel, and carriers to drive the concept-of-operations (CONOPS) and adoption of this technology. In FY 2011, the project will complete focus group meetings, refine the CONOPS, and test second-generation device prototypes in the field on the Verizon network. In FY 2012, the project plans to conduct a pilot with a select group of First Responders to evaluate operational performance in the real world.

Hybrid Sensors for Chemical Detection Project – Develops more effective (e.g., detect at concentrations below 1 part/trillion), smaller, and less expensive chemical detectors. This project will exploit approaches including biologically-inspired designs and emerging nanotechnology applications to develop systems capable of detecting and identifying chemical agents in air and water with dramatically increased effectiveness and decreased cost. Such chemical detectors have a broad range of homeland security applications for individuals, Emergency Responders, and DHS operational components. In FY 2012, this project plans to conduct feasibility studies on emerging chemical detection approaches and materials.

Lightweight Autonomous Chemical Agent System (LACIS) Project – Develops a networkable handheld detector for responders, which will detect up to 17 TICs and CWAs in a single sensor package. LACIS aims to detect TICs and CWAs below the Immediately Dangerous to Life and Health (IDLH) level, emphasizing a very low false-negative response. This system allows for more reliable detection across a broader range of chemical agents for improved protection of responders to a chemical incident. Additionally, it will enable enhanced detection capabilities at borders, portals and other nodes of people and cargo flow. In FY 2011, the project will complete test and evaluation and transition to customer(s) for follow-on operational testing and evaluation (OT&E) to occur at the end of FY 2011.

Responder Remote Chemical Detection Project - Provides a portable capability for responders to detect and identify chemical hazards in a potentially contaminated space without physically entering the space, allowing them to take the most appropriate measures to protect themselves from harm and to assess the most appropriate equipment to carry into rescue and recovery operations involving toxic chemicals. This effort addresses one of the highest ranked needs expressed by the Interagency Board (IAB), the primary advocacy group for responders. The effort will also incorporate the requirement to assess for the presence of other hazardous materials such as potentially explosive gases. The outcome of the project is envisioned to be a versatile, “dual-use” vapor hazard monitor that can reduce the number of individual pieces of equipment that responders must have available to exercise their emergency response duties. In FY 2012, the project will begin with a survey of requirements for field application, an assessment of potential technology solutions, and a study of the feasibility of modifying commercial off-the-shelf (COTS) or military-fielded equipment for this purpose.

Secondary Screening for Chem Bio Materials (formerly known as Non-Intrusive Container Monitor) Project – Develops screening architecture and investigates technology that will determine the contents of suspicious packages passing through security portals or containers in cargo rapidly and efficiently. This project focuses on enhancing security at portals within and at the perimeter of key elements of our national infrastructure. This technology will promote the interception and confiscation of illicit materials by a variety of customs, law enforcement, and responder personnel. In FY 2010, the project explored new technology concepts. In FY 2011, the project will report on mid-phase laboratory testing of feasible technologies against potential hazards or their surrogates. In FY 2012, the project plans to continue laboratory testing and development of technology solutions.

Chemical Threat Assessment Program – FY 2012 estimate: \$9.955 million. Researches and identifies current and potential chemical threats to understand the risk posed to the United States by their illicit use. This program encompasses risk-based, chemical threat agent characterization programs, domestic defense strategic planning, and analytical technologies, strategies, and procedures.

Chemical Defense Strategy Project – Considers applicable and prevailing policy and regulatory directives, operational gaps across the domestic chemical defense domain, and investments made across the Federal government over the recent past to address operational gaps. A comprehensive strategic perspective is required to re-establish and document appropriate priorities and scope for the DHS chemical defense program. The strategy will consider the relative risk of high-consequence scenarios involving toxic chemical materials and Federal agency plans to address scenarios within their operational or regulatory environments. Of major significance will be priorities of DHS components. The risk-based prioritization of gaps and the DHS strategy to address these gaps will be documented through an effort to be initiated in FY 2011 and completed in early FY 2012.

Chemical Infrastructure Risk Assessment (CIRA) Project – Develops tools to help assess risk presented by attacks on the chemical industry by identifying and quantifying various infrastructure gaps, vulnerabilities, potential key hazardous chemicals, and associated processes. It also maintains an operational reach-back capability supporting the development of Office of Infrastructure Protection (OIP) chemical security regulations (Chemical Facility Antiterrorism Standards (CFATS)). In FY 2010, the project developed updated lethal toxicity estimates for 15 common toxic industrial chemicals, a scenario-driven approach for assessing the hazard of a release from the chemical supply chain, as well as an assessment of dispersion models for chemical facility releases. In FY 2011, the project will deliver the first Chemical Infrastructure Risk Assessment. In FY 2012, the project plans to fully integrate the CIRA methodology into the Chemical Terrorism Risk Assessment (CTRA), and to conduct selected sensitivity studies and tailored assessments related to chemical facilities.

Chemical Security Analysis Center (CSAC) Project – Develops and sustains expert reach-back capabilities to provide rapid support in domestic emergencies. The CSAC serves as the Nation’s first centralized repository of chemical threat information (hazard and characterization data) for analysis of the Nation’s vulnerabilities to chemical agent attacks. To ensure a cohesive effort to evaluate threats and countermeasures, CSAC conducts key analytical assessments, such as material threat assessments (MTAs), hazard assessments, and the CTRA. Primary DHS customers for CSAC products are NPPD, OHA, TSA, and I&A. CSAC provides completed MTAs to HHS to fulfill BioShield requirements. In FY 2010, CSAC delivered the chemical agent reactions database (CARD) to DHS I&A. CSAC also completed and delivered the biennially updated CTRA, which expands the number of chemicals considered in the assessment and incorporates an economic impact model. In FY 2011, the project will provide a comprehensive hazard assessment on the threat of selected chemicals to food and food processing systems, update the 2006 Non-Traditional Agent (NTA) sourcebook, as well as provide S&T Directorate-based 24/7 reach-back capability to DHS and other government agencies. In FY 2012, the project plans to deliver the 2012 CTRA, a hazard assessment on additional food systems, and begin development of a new knowledge management framework.

Increase Safety of Hazardous Chemicals Project – Develops an understanding and identifies solutions to improve the safety and security of hazardous chemicals during manufacture, storage, transportation, and use. In FY 2010, this project began by developing a consensus definition for inherently safer technology among industry, academia, and government. In FY 2011, the project will initiate an effort to develop concise metrics for assessing the value of safer design technologies throughout the chemical supply chain. In addition, an effort to identify capability gaps and outline a strategy for addressing gaps will be initiated. In FY 2012, the project plans to complete both efforts initiated in FY 2011, and to utilize those results to begin examining specific processes that would be amenable to additional safer design strategies, where safety and security would be enhanced.

Integrated Chemical, Biological, & Radiological (Chem-Bio-Rad) Strategy - Applies the processes used to develop the FY 2011 chemical and biological defense strategies and incorporates radiological defense needs to produce an integrated strategy across CBR domestic defense. The integrated strategy will be informed by prevailing guidance in the form of directives and regulations as well as by improvements made in defensive posture since 2004. Prioritization of gaps will be risk-based with a focus toward identifying potential efficiencies that can be realized by considering common aspects of chemical, biological, and radiological defense. The development of this strategy will consider perspectives of all DHS and other Federal agencies with equities in the CBR defense space. The integrated CBR strategy will be developed through an effort initiating in FY 2012 with completion targeted for early FY 2013.

Large-Scale Toxic Chemical Transport Release Modeling Project – Develops an improved understanding of the consequences of large-volume, hazardous-chemical releases in transport (e.g., rail cars or tanker trucks). In FY 2010, the project initiated development of improved

source terms for incorporation into models, and collaborated with TSA in collecting relevant data from large-scale field tests. In FY 2011, the project will complete the development of improved source term descriptions and conduct limited testing with laboratory-based experiments to verify model enhancements. This project ends in FY 2011.

Explosives Detection Program – FY 2012 estimate: \$98.082 million. Researches, develops, and/or identifies tools to detect and locate explosives intended to be used as terrorist weapons and strengthen aviation security by bolstering the international aviation security system, processes and technologies, and by encouraging partnerships with industry. Defines concepts, requirements, and procedures for improved techniques for early detection and warning of potential explosive threats. Includes explosive threats to the Nation's transportation systems and large public gatherings.

Air Cargo Project – Identifies and develops the next generation of screening systems to mitigate the threat of explosives placed in air cargo containers. Activities include developing technologies for screening of break-bulk, palletized, and containerized air cargo configurations with reduced operational costs and low false-alarm rates. This technology will protect commercial airliners, as well as the Nation's supply chain and economy. The technology will reduce reliance on human screeners to detect artfully concealed threats; provide automated equipment to screen air cargo to increase throughput; reduce government oversight costs; reduce industry costs of complying with air-cargo screening regulations; and provide additional layers of security to enhance and verify air-cargo, supply-chain integrity. In FY 2010, the project delivered a prototype mass-spectrometer, bench-top, explosives trace detector for laboratory assessment. In FY 2011, the project will deliver a candidate screener selection test, a cargo on-screen alarm resolution protocol, a trace source alarm analysis report, a background trace signature report, and the mass-spectrometer laboratory assessment report to Transportation Security Administration (TSA). In FY 2012, the project plans to develop an operational handheld trace direct analysis tool for break bulk and palletized air cargo screening, perform a laboratory assessment of handheld trace direct analysis tool for break bulk and palletized air cargo screening, develop prototype palletized cargo screening systems through preliminary design review phase, and deliver and test mass spectrometer explosives trace detectors with non-contact sampling capability for air cargo screening.

Algorithm and Analysis of Raw Images Project – Develops a non-proprietary database of explosive-detection images, which will be provided to all detection-program participants. Collects and consolidates images from commercial vendor systems and coordinates the purchase of additional images and data from Explosives Detection Systems (EDS), Advanced Technology (AT) X-ray imaging systems, and emerging detection systems. The evaluation of these images will help determine the causes of false alarms over many types of scanning systems. In FY 2010, the project investigated segmentation methods for X-ray image analysis in detecting explosives. In FY 2011, the project will investigate iterative reconstruction methods for X-ray

image analysis in detecting explosives. In FY 2012, the project plans to provide an updated image database for third party algorithm development.

Automated Carry-On Detection Project – Develops advanced capabilities to detect explosives and concealed weapons. This project also will introduce new standalone or adjunct imaging technologies, such as computer tomography (CT), to continue the improvement of detection performance and the detection of novel explosives. In FY 2010, the project transitioned to TSA a CT checkpoint detection system to identify potential threats based on physical characteristics. In FY 2011, the project will test and deliver a prototype shoe-screening system, capable of detecting explosives hidden in shoes worn by passengers. In FY 2012, the project plans to transition Block I of an Integrated Checkpoint Framework to TSA, incorporating standard data formats, interoperability, and remote multiplexed screening and develop automatic detection algorithms for Advanced Imaging Technology (AIT), to relieve human screeners and streamline operations at aviation checkpoints.

Automatic Threat Recognition Project - Develops and evaluates automated target recognition (ATR) algorithms for AIT in a test bed with the goal of automatic and reliable detection of threats on passengers, reducing the need for human interpretation. This is critical to improve detection, lower false alarm rates and reduce privacy concerns. This research will guide further enhancements necessary to reach full-scale development and deployment. In FY 2011, the project will evaluate advanced threat recognition algorithms. In FY 2012, the project plans to perform laboratory assessments of advanced image processing algorithms for checkpoint imaging systems and development of advanced algorithms for image processing.

Canine Explosives Detection Project – Studies the canine olfactory system and the genetic markers that can predict high-performance explosive-detection canines and canine physiological limitations and strengths. The project will enhance canine training tools and implementation. In FY 2010 the project completed the olfaction enhancement study as well as delivered the Cargo Phase IV Preliminary Assessment report to the customer. The project also developed and transitioned low-cost, non-hazardous canine training aids for the highest priority homemade explosives (HME) threats identified by TSA. In FY 2011, the project will deliver another set of low-cost, non-hazardous canine training aids for additional, TSA high-priority HME threats. The project plans to continue testing the use of commercially available ozone generators as possible means to mask threat odor signatures from detection by canines. In FY 2012 the project plans to develop a database of current behavior metrics for TSA puppies and dogs to be delivered to TSA.

Checked Baggage Project – Drives commercial development of next-generation explosives detection systems (EDS) that will substantially improve the performance of checked baggage screening. Test and evaluation of these systems will focus on probability of detection, false alarm rates, and throughput. The project also measures affordability of these systems by evaluating initial purchasing cost, operating costs, maintainability, and other elements of the full

life-cycle costs. In FY 2010, the project transitioned next-generation EDS performance requirements that leverage enhanced detection technology. In FY 2011, the project will deliver a carbon nanotube X-ray source to enable higher performance in X-ray based screening systems. In FY 2012, the project plans to complete the design of an advanced X-ray imaging system with a carbon nanotube X-ray source and deliver a revised imaging standard for X-ray systems (DICOS).

Detection Technology and Material Science Project –The project will develop and test advanced materials for detection or explosives threats and within aircraft to reduce the effects of an explosive detonation, including the attenuation of the explosive shock wave and containment of blast fragmentation (shrapnel). In FY 2010, the project investigated the use of biomaterials for novel detection capabilities. In FY 2011, the project will investigate applications of nanotechnologies in advanced detection systems. In FY 2012, the project plans to conduct evaluations of advanced X-ray sources and detector component technologies.

Explosives Trace Detection Project – Develops advanced capabilities to detect explosives (including HMEs) through improved trace sampling and detection technologies. In FY 2010, the project conducted third party testing of a bench-top non-contact trace detection system. In FY 2011, the project will deliver prototype swab-based mass spectrometry trace-detection systems for check-point applications. With lessons learned from these initial systems, the technology will be enhanced for improved detection and operational characteristics such as throughput and maintenance. In FY 2012, the project plans to transition production ready mass spectrometer trace detection systems for TSA checkpoint applications.

MagViz (SENSIT NMRI) Rapid Liquid Component Detector Project – Uses ultra-low field Magnetic Resonance Imaging (MRI) technology to screen baggage for liquid explosives. The goal of MagViz is to improve security and enable the TSA to eliminate the 3-1-1 rule. MagViz intends to detect liquids in baggage without contact at the same rate as current X-ray machines with minimal impact on passenger throughput. In FY 2010, the project continued building the magnetic characterization database of liquids; evaluated the capability of MagViz to detect dangerous semi-solids (e.g., heavy gels, creams); and demonstrated MagViz's capability to seamlessly screen segregated liquids (without the 3-1-1 bag constraint) at a depth of 22 cm in a laboratory. The project also developed and tested its first Bottled Liquid Scanner (BLS) at the Albuquerque Airport in September 2010. In FY 2011, the project will begin developing two, more refined BLS systems. One will use the ultra-low field (ULF) capability developed to-date; the other will use a medium-field (MF) that may offer greater capability in identifying complex, mixed substances characteristic of liquid HMEs. The project will also conduct an assessment to ensure that safety and health concerns do not prohibit future commercialization and adoption of the MagViz technology. In FY 2012, the project plans to demonstrate both ULF and MF BLS prototypes in the laboratory leading to an operational demonstration and qualified product testing at the Transportation Security Laboratory (TSL) in FY 2013.

Mass Transit Project – Assesses and develops technology for the detection of explosive threats for maritime and surface mass transit, including buses, commuter rail transit (i.e. subways or metros), light rail (i.e. trolleys and streetcars), long-distance rail (i.e. Amtrak), and heavy rail. The project develops and demonstrates technology to enable a resilient transit system that leverages public awareness, technology, and layered-security programs, while maintaining efficient flow of passengers. In FY 2011, the project will conduct a demonstration of emerging technologies for screening people and “leave behinds” in the mass transit environment. In FY 2012, the project plans to develop video analysis and video tracking algorithms for transit station situational awareness of potential explosives threats. The project also plans to deliver specific assessments of maritime transit systems to set technology development requirements and establish a laboratory for testing vehicle explosive threat detection sensors for a maritime transit venue.

Next Generation Passenger Check Point Project – Develops the next-generation detection system to screen passengers for explosives at mass transit portals. This project investigates new emerging liquid- and gel-based explosive threats and includes them in a comprehensive detection system. In FY 2010, the project delivered a Standoff Personnel Imager at TRL 7. In FY 2011, the project will complete qualification for the next-generation checkpoint detection system to detect novel explosives. In FY 2012, the project plans to Transition Block I of Integrated Checkpoint Framework to TSA, incorporating standard data formats, interoperability, and remote screening.

Person-Borne Improvised Explosive Devices (PBIED) Detection Project – Investigates technologies capable of detecting all types of explosive threats, including homemade, commercial, and military explosives. In FY 2010, the project demonstrated a detection of trace levels of explosives with Laser Induced Acoustics by Energy Research Company. In FY 2011, the project will develop a basic prototype of standalone technologies using spectroscopic sensors to detect both explosives and explosive device components for the standoff detection of PBIEDs. In FY 2012, the project plans to develop and assess prototype(s) for standoff detection applications, develop a prototype for standoff detection of concealed explosive devices on people, and develop a prototype for standoff detection methods of explosives residue on people or leave behind packages.

Predictive Screening Project – Develops technologies to automatically identify, alert authorities to, and track suspicious behaviors that precede suicide-bombing attacks. The S&T Directorate will test technologies at ports-of-entry, transit portals, and special events. Operational benefits derived from predictive screening include increased probability of identifying suicide bombing behaviors before an attack occurs; significant expansion of active surveillance within a target environment; and increased deterrence of travelers carrying illegal weapons and false documents. In FY 2010, the project conducted operational testing of semi-automated tracking of designated suspicious behavior. In FY 2011, the project will deliver a final validation report on observable

behavioral indicators of suicide bombing attacks. In FY 2012, the project plans to continue these efforts.

Safe Container (SAFECON)/Time Recorded Ubiquitous Sensor Technology (TRUST) Project – Develops high reliability, high-throughput detection technologies to scan containers entering the country for weapons of mass destruction, explosives, contraband, and human cargo. The project attempts to immediately detect and isolate suspected threat containers while minimizing impact on commerce. SAFECON is a crane-mounted sensor system that detects dangerous cargo in shipping containers during on- and off-loading. SAFECON also looks for sample collection and preparation mechanisms to make screening more effective. TRUST is an alternative approach to container screening that takes advantage of the long transit time most shipping containers undergo from their port of origin to the United States. TRUST will sample for chemical, biological, radiological, nuclear, and high yield explosive (CBRNE) threats and human cargo inside the container, without opening the container. SAFECON and TRUST's parallel development will allow each to take advantage of findings from the other.

- SAFECON – In FY 2010, the project completed a test bed at TSL. The test bed provides a realistic environment to test vendors' proposed technologies and S&T Directorate-developed technologies against CBRNE threats. In FY 2011, the project will conduct a final demonstration of the Remote Vapor Inspection System (RVIS) at the test bed. The project will also develop sample preparation and collection capabilities in the laboratory and begin identifying how to automatically analyze and present data in a meaningful way to Custom and Border Protection (CBP) end users. In FY 2012, the project plans to prototype sample preparation and collection systems and begin integrating them with various detection systems.
- TRUST – In FY 2010, the project developed the TRUST prototype scheduled for completion in FY 2011. This "in-situ" device will operate in transit, throughout the container's voyage, sampling and detecting threats, contraband, and anomalies. If the system detects a threat, it will send a radio message from inside the container to a shipboard relay and then to CBP. In FY 2011, the project will test the prototype at sea and evaluate sensing, sample collection, and communication subsystem performance. Positive results will lead to further developing and miniaturizing those subsystems in FY 2012.

Underwater Surveillance Project – Conducts basic research to support the Underwater Surveillance - Dams and Tunnels project. The project will study bubble jetting resulting from underwater explosions and its impact on vertical structures (such as dam spillway gates and navigation locks), and then determine appropriate standoff distances for submerged targets, thus defining which areas require surveillance. The lack of fundamental knowledge of underwater blast effects currently limits researchers' ability to define parameters for effective underwater surveillance. This research will have the added benefit of informing effective design of blast

mitigation measures for underwater targets. In FY 2010, the project conducted small and medium-scale physical testing to describe bubble jetting and inform numerical codes. In FY 2011, the project will perform small scale testing of bubble jetting mitigation strategies, conduct computational studies of dam structural response, and compare data from the project against predictions from existing underwater blast modeling tools. The project will be completed in FY 2011.

Underwater Surveillance – Dams and Tunnels Project – Provides advanced, automated, affordable underwater monitoring and surveillance technologies to detect underwater threats against dams and tunnels. Since these structures are particularly vulnerable to a water-borne attack, detecting suspicious activity is critical to asset protection. These technologies must be capable of operating in harsh environments for extended periods, and be both seamlessly and transparently integrated into existing infrastructure security operations. In FY 2010, the project adjusted identified technologies to specific requirements for underwater infrastructure. In FY 2011, the project will provide a final report with recommendations for underwater surveillance standoff. This project ends in FY 2011 due to funding of higher priorities.

Vehicle-Borne Improvised Explosive Devices (VBIED) Detection Project – Develops technologies to detect or image improvised explosive devices (IEDs) within a vehicle. The project also develops technologies to sample and detect explosive residues and components non-intrusively, and fuse multiple technologies to provide automation for VBIED detection. This has the potential to speed screening and enable security screeners to concentrate on high-risk vehicles. In FY 2010, the project developed a prototype for screening moving vehicles, as well as a prototype of standalone spectroscopic technologies to detect both explosives and explosive-device components for the standoff detection of VBIEDs. In FY 2011, the project will develop a prototype of standalone technologies using spectroscopic technologies to detect both “explosives” and “explosive device components” for the standoff detection of VBIEDs. In FY 2012, the project plans to develop prototypes for standoff spectroscopic detection, demonstrate a prototype for standoff detection of explosives residue on a vehicle, and demonstrate a mobile prototype for external screening of a vehicle for a concealed explosive device.

Explosives Threat Assessment Program – FY 2012 estimate: \$22.102 million. Research and identify current and potential explosive threats, including those to transportation environments, in order to understand the risk posed to the United States, strengthen aviation security by bolstering the international aviation security system, improve security processes and technologies, and encourage partnerships with industry. Encompasses risk-based, counter IED programs, threat characterization, attribution, strategic planning, prediction of magnitude of explosive disasters, and analytical technologies, strategies, procedures.

Actionable Indicators and Countermeasures Project – Aids the intelligence and law enforcement communities by developing and validating a framework that integrates multiple indicators to assess whether individuals, groups, and communities are moving toward engaging in extremist

violence in the U.S. It will also systematically assess international and domestic efforts developed to prevent violent extremism to provide policymakers with scientifically sound information on which they can base response and prevention strategies. In FY 2010, the project identified characteristics that distinguish the rhetoric of violent and non-violent Jihadi groups. In FY 2011, the project will assess communication and outreach strategies aimed at countering violent extremism in the U.S. In FY 2012, the project plans to deliver a report on quantitative analyses conducted to identify indicators of actors intending to use violence.

Aircraft Vulnerability Tests Project – Assesses the vulnerability of narrow- and wide-body aircraft passenger cabins and cargo holds to explosives. These vulnerability assessments will analyze blast/damage effects of explosives and determine the minimum threat mass of improvised explosive required to cause catastrophic damage to various aircraft types. The assessments will also identify the detection limits for bulk screening systems. In FY 2010, the project tested full-scale effects of aircraft vulnerability on narrow-body overhead bins, wide-body and narrow-body window-belts, and wide-body and narrow-body lavatories. In FY 2011, the project will complete validation of aircraft vulnerability codes for relatively simple phenomena, including testing flat panels and curved reinforced panels. In FY 2012, the project plans to complete validation of aircraft vulnerability codes for confined blast (luggage-encased charge) against simulated aircraft sidewall (fuselage skin, insulation blankets, and interior panels).

Blast/Projectile – Unified Blast Analysis Tool Project – Develops improved blast-modeling capabilities to predict effects of explosive attacks on tunnels, bridges, and levees. The project is designing fast running software tools that will allow infrastructure owners and operators to accurately and efficiently assess system vulnerabilities. Two U.S. mass transit systems are serving as test beds for evaluating a prototype version of the tunnel blast analysis tool. The software tools, which will run on a PC, will allow for rapid identification of vulnerabilities without requiring expensive and time-consuming high performance computer models. In FY 2010, the project demonstrated a first-generation, fast-running blast analysis tool for tunnels. In FY 2011, the project will deliver a prototype blast analysis tool for bridges and a second generation blast analysis tool for tunnels. In FY 2012, the project plans to provide fast-running blast analysis software tools for tunnels, bridges, and levees.

Homemade Explosives Characterization Project – Determines the impact, friction, and electrostatic-discharge sensitivities of HME threats. The project provides a better understanding of the potential damage and impact of HME being utilized in a terrorist attack and aids in determining the requirements for technologies to counter this threat. This data also facilitates the safe handling and storage of HME materials during R&D activities. In FY 2010, the project systematically qualified and quantified the physical and chemical properties of high-consequence HME threats selected by TSA, specifically hydrogen peroxide and solid oxidizers. In FY 2011, the project will examine HME material selection and its impact on safety-testing processes at several laboratory locations to generate best-practice testing approaches and further improve our

predictive explosive modeling tools such as kinetic-Cheetah, Hydrodynamic code, and Finite Element Analysis. In FY 2012, the project plans to deliver a definitive HME data compendium, for TSA and the explosives community, which includes safety data and x-ray data on HME threats.

Risk Prediction Project – Develops analytical technologies and tools to rapidly and automatically identify potential IED targets and staging areas within the U.S. This project will leverage existing geo-behavioral pattern discovery algorithms from overseas attacks. These algorithms coupled with an understanding of domestic infrastructure, terrorist tactics, and demographic data, will identify U.S. vulnerabilities. In FY 2010, the project delivered a final test and evaluation report benchmarking the performance characteristics of existing technologies, and delivered an interim framework for integrated geospatial, social, and anomaly detection technologies. In FY 2011, the project will work with DHS operational customers to establish a developmental test bed to evaluate baseline risk/vulnerability assessments for critical U.S. cities and infrastructure. In FY 2012, the project plans to transition baseline software to support DHS’s operational mission to screen for IED and IED-enabling smuggling at cross-border transit portals.

VBIED Full Mission Characterization Project – This project assesses the operational parameters associated with disrupting VBIEDs in a variety of threat configurations (i.e. car/panel truck/large truck threats). In FY 2010, the project determined the effectiveness of disruption tools to facilitate the creation of requirements for the development of future disruption tool systems. Disruption techniques needing characterization include manual, overpressure (OP), expulsion, and surgical. In FY 2011, the project will evaluate a simultaneous overpressure charge to truck cab and trailer, as well as the effects of an expulsion charge on a truck trailer. In FY 2012, the project plans to characterize efficacy of VBIED render safe using a simultaneous OP charge to truck cab/Expulsion charge to truck trailer.

Radiological and Nuclear Detection Program – FY 2012 estimate: \$98.742 million. Research, develop, and/or identify technologies and tools needed to detect, identify, characterize, locate, interdict, secure, and prevent use of nuclear or radiological devices or device materials. This includes developing the capability to detect and react to pre-detonation cues or signatures to provide early-warning indicators of an imminent or credible threat of a terrorist attack using a nuclear or radiological device.

Basic Research (BR) Program (formerly Academic Research Initiative Program (ARI)) - This program has two primary objectives: 1) Engage the academic community to advance fundamental knowledge for nuclear detection and related sciences with emphasis on fundamental research to solve long-term, high-risk research challenges and 2) develop human capital for the nuclear science and engineering profession. Further, it works to sustain a long-term commitment to frontier academic research in the field and coordinate BR efforts with other research being supported across the federal government. In January 2007, the DNDO basic research program was formally established through a Memorandum of Understanding with the National Science

Foundation (NSF). NSF administers the proposal solicitation, evaluation, and grant award process as well as the first year of grant funding. The DHS Grants Office administers the subsequent years in conjunction with the S&T Directorate. Since inception, 49 grants have been awarded to over 40 academic institutions across the country. In addition to its focus on basic and fundamental radiation detection science, the BR funds academic disciplines traditionally not associated with radiological/nuclear detection, such as social sciences, to submit ideas and proposals.

- *New Radiation Detector Materials Project (formerly Fundamental Research in New Radiation Detector Materials Project)* – Focuses on long-term research aimed at developing greatly improved radiation detector materials that are highly sensitive, selective, low cost, and rugged. Research to significantly improve the yield and performance of sensor materials beyond those presently available is needed with particular emphasis on the growth, processing, and characterization of new detection materials. This includes development and improvement of scintillator materials (e.g., faster response, higher light output, better linearity, and improvements in growth and fabrication) as well as semiconductor materials (e.g., reducing impurities, optimizing charge transport, allowing room temperature operation, and innovatively improving contacts and charge collection) with the goals of excellent efficiency and energy resolution at room temperature. In FY 2010, several approaches exploring novel nanostructured materials were investigated to include core-shell semiconductor/scintillator structures and metal enhanced fluorescence. The project also continued to develop a new scintillating garnet material that utilized yttrium, gallium, gadolinium, and aluminum and examined cadmium magnesium telluride (CdMgTe) production as a room temperature semiconductor detector, with a focus on mitigating Te inclusions issues in growth. In FY 2011, the characterization of new candidate semiconductor materials including PbOAl, BiI, SnGeS, PbGeS will occur. Work will also continue on refining vertical melt-growth techniques for the production cadmium zinc telluride (CdZnTe). A benchmark model providing a fundamental understanding of scintillator non-proportionality will be developed. In FY 2012, the characterization of energy transfer mechanisms from LaF₃ scintillators to CdTe semiconductor core-shell quantum dot technology is anticipated, as is early findings on the development of an environmentally friendly aqueous scintillator. The project plans to also develop a novel “semiconducting scintillator” based on GaAs and InP.
- *Novel Nuclear Detection System Concepts and Architectures Project (formerly Fundamental Research in Novel Nuclear Detection System Concepts and Architectures Project)* – Explores radically new approaches to threat detection, eventually leading to sensor or detection systems that are highly sensitive to nuclear and radiological signatures and selective in the ability to distinguish and locate these materials from naturally occurring background. Research into new detection system concepts, architectures, or networks that can support detection of nuclear and radiological threats being transported via general aviation (non-

commercial aircraft), small maritime craft (under 300 tons), and/or across the expansive land borders between official Points of Entry are of particular interest. In FY 2010, ARI efforts completed characterization and fabrication of a photonics-based nuclear radiation sensor and the development of algorithms to optimize electron tracking in Si-drift based detector systems. In FY 2011, research will include investigating novel modeling approaches of borders and maritime pathways that enable detection system design and employment options. Research will extend multilayer screening algorithms from port security applications to aviation-based applications. In FY 2012, the project plans to initiate a demonstration of concept of a liquid xenon detector as a high energy and the development of predictive background models to enhance passive detection capabilities.

- *Alternative Neutron Detection (He3 Alternative) Technologies Project (formerly Fundamental Research in Alternative Neutron Detection (He3 Alternative) Technologies Project)* – Develops greatly improved neutron detectors, detector systems, and/or materials that provide substantial improvements over existing Helium-3 technologies. Research to significantly improve the yield and performance of neutron sensitive materials, other than Helium-3, beyond those presently available is needed with particular emphasis on the growth, processing, and material characterization. This includes development and improvement of neutron sensitive scintillator materials as well as semiconductor materials with the goals of excellent efficiency and neutron energy discrimination. Additionally, neutron detection systems that improve the directionality, localization, and/or imaging capabilities are also needed. In FY 2010, the first growth and structural characterization of boron arsenide crystals for high efficiency neutron detection was completed, as was the complete characterization and testing of a novel solid-state, self powered neutron detector using deeply etched boron filling PiN diodes. In FY 2011, the project will evaluate an innovative direction-sensitive neutron detector based on multilayer drift chamber technology and continue on fast neutron spectroscopy using layered plastic scintillators and thermal neutron detection material. In FY 2012, the project plans to research the sensitivity of superheated emulsion for energy thresholded fast neutron detection, as well as develop a thermal neutron detector using thin lithium metal films and multi-wire proportional counters. The project plans to also initiate material growth experiments on hexagonal boron nitride for neutron detection.
- *Active Detection Technologies, Signatures, and Sources Project (formerly Fundamental Research in Active Detection Technologies, Signatures, and Sources Project)* – Improves the automated material discrimination and/or anomaly detection capability of non-intrusive inspection (NII) systems used for air, land, and sea cargo; vehicle scanning; and human portable scanning applications. Existing NII systems use radiography, computed tomography, spectral analysis and neutron-based assays. Fundamental research in these areas address full-systems or system components including: 1) novel low-power, low weight,

high-yield neutron and gamma ray production sources; 2) high-efficiency, fast-recovery, low cost spectral detectors; 3) high-efficiency, threshold neutron detectors; 4) automated image analysis algorithms for single and dual energy radiography systems; and 5) investigations into novel signatures associated with active detection methods such as nuclear resonance fluorescence (NRF). In FY 2010, the effort successfully completed a number of studies of NRF signatures associated with precise, near monochromatic reactions at the Triangle Universities Nuclear Laboratory. In FY 2011, this project will establish a university-based user facility with a new accelerator, enabling novel nuclear-reaction studies. The project also will evaluate a new methodology for direct high-energy photon generation using Doppler-compensated inelastic electron scattering. Finally, the project will develop and evaluate new signal processing tools for active interrogation systems using nuclear resonance fluorescence. In FY 2012, the project plans to focus on developing direct high-energy photon generation and extending the pulse lengths attainable using microwave thermionic guns to support longer and more intense photon beam generation for active interrogation. Also, the project plans to provide new data on time correlation and directionality of neutrons produced by polarized photo fission reactions.

- *Expert Systems, Networks, Algorithms, and Data Processing for Nuclear Detection Project (formerly Fundamental Research in Expert Systems, Networks, Algorithms, and Data Processing for Nuclear Detection Project)* – Investigates innovative data processing and analysis techniques that will lead to significant performance improvements, including 1) accuracy of spectral analysis of gamma-ray sensor systems, 2) sensitivity and precision of detection systems, 3) sensor fusion (both radiation and other sensors), and 4) detector implementation and networking. The research includes significant simulation and modeling to provide a fundamental basis to support these new approaches. In FY 2010, a new deterministic modeling capability was developed using massive parallel computing that provides a new adjunct for simulations of cargo container screening. In FY 2011, the project will demonstrate advanced algorithms with a new machine-learning capability for detecting nuclear material in search applications. Additionally, the project will develop new Compton imaging algorithms to improve radiation detector sensitivity and benchmark models and algorithms for use in novel electron-tracking detector systems. In FY 2012, the project plans to improve detection and discrimination in 3-D environments through the use of complementary information obtained from spectroscopic gamma-ray imaging instruments, visual sensors, and background measurements. Also, the project plans to develop an innovative modeling capability of adversary behavior that will enable optimal deployment of radiation sensors to interdict terrorist borne threats.
- *Nuclear Forensics Technologies Project (formerly Fundamental Research in Nuclear Forensics Technologies Project)* – Advances analytical techniques used to determine the origin and transit route of pre-detonation nuclear materials. Research emphasis includes 1)

identifying ways to improve techniques and methodologies (i.e., speed, accuracy, and precision in both existing and novel methods) for the physical, chemical, radiological, or morphological analysis of nuclear or radioactive materials, including determining specific processing the material underwent, geographic origins, transport pathways, and intended use; 2) improving the separation or analysis of non-nuclear material associated with nuclear materials; and/or 3) improving the use of signatures to identify source materials in the nuclear fuel cycle. In FY 2010, the project developed a portable tungsten coil atomic emission detector for nuclear forensics. In FY 2011, researchers will complete a study of complexation using absorption spectroscopy and x-ray absorption spectroscopy (XAS). Additionally, the project will translate macro-scale electrochemistry to microelectrodes and characterize trivalent actinide electrochemical behavior. In FY 2012, the project plans on assessing initial performance of engineered mesoporous sensor materials for actinide detection and identification using, and establishing feasibility of cavity resonance kinetic inductance detectors (CaRKIDs) to achieve forensics-quality gamma spectral resolutions.

Exploratory Research (ER) Program – The ER program area explores innovative, high-risk, early-stage technologies, concepts and ideas that can make transformational contributions to support the Global Nuclear Detection Architecture (GNDA) and reduce the risk of nuclear terrorism. Specifically, the ER program researches technology and techniques that: 1) address capability gaps and weaknesses in the GNDA, with emphasis on radiological and nuclear detection; 2) provide substantial performance improvement or cost reduction of rad/nuc detection capabilities; and 3) improve nuclear forensics capabilities. Efforts under the ER program are intended to transform the basic building blocks of nuclear detection technology and supporting fields, with the research generally culminating in a proof of concept or proof of feasibility demonstration in a laboratory setting. Successful ER technologies and concepts may then transition to support subsequent near-term research projects or spur commercial development. ER also provides performance modeling, improved algorithm development, and other support capabilities for the broader DNDO mission. In FY 2010, the S&T Directorate performed an extensive program review for all projects within the Exploratory Research (ER) program.

- *Materials Research and Other Supporting Technologies Project* – Advances radiation detection through focused research in sensor materials, front-end electronics, signal processing, modeling, and supporting technologies. Advances in one or more of these areas can provide new and improved capabilities to search and screen for nuclear and radiological materials of concern, improved identification of these materials, and reduced or simplified operational burden for end-users. Main categories of sensor materials include scintillators, semiconductors, 3-D topologies, and materials which provide novel non-traditional mechanisms of gamma or neutron detection. The main component of Other Supporting Technologies is Photomultiplier Tube (PMT) replacements. Elements of this project are noted below:

- *Advanced scintillator development* explores gamma-sensitive scintillator materials that most deployed radiation detection systems use (including large portal monitors and mobile and hand-held detectors). This effort researches materials to 1) improve energy resolution and hence improve capabilities to discriminate threat from benign radiation sources; 2) increase available volume and other parameters to improve detector element sensitivity; and 3) decrease costs through improved fabrication techniques and lower-cost raw materials. In FY 2010, this effort advanced the development of several promising new materials, including one which won an R&D 100 award. This particular material has performance which is competitive with the best commercially available materials yet promises to be easier to fabricate at a lower cost. This material is being provided to the developers of the next generation of pagers. In FY 2011, the effort will scale-up low-rate production efforts for large-size, high-performance scintillators and complete high-throughput screening of thousands of candidate materials for new scintillators. In FY 2012, the effort plans to push towards scintillators which exhibit energy resolution at the theoretical limit determined by physics – approximately 2%. Also, the scintillator effort is working on developing ceramics which promise to provide low cost high energy resolution options. In FY 2012, the project will transition large area high energy resolution ceramics into prototype detectors.
- *Advanced semiconductor development* investigates room temperature operating semiconductor materials to sense and characterize radiological threat materials. Current state-of-the-art high-performance semiconductors require cryogenic cooling, which significantly limits deployment of detector systems using these materials. This effort researches: 1) novel semiconductor materials or 2) economical production methods (less than \$1000/cm³) for high-performance semiconductor materials. In FY 2010, this effort investigated several new promising semiconductor materials which might rival the performance of the best commercially available semiconductor detector material yet at a lower cost. In FY 2011, this project will continue to investigate new high-performance semiconductors that rival the performance of the best commercially available materials; develop low-rate production infrastructure for at least one high-performance semiconductor; and complete an information-based search for new candidate materials for semiconductors. In FY 2012, the effort plans to transition into detector prototypes one or more semiconductor materials, which offer exceptional stopping power and efficiency due to their high density and atomic number, and are easy to grow due to their underlying crystal structure leading to a significantly reduced cost.
- *Photomultiplier tube (PMT) replacements/photon conversion* effort includes Solid State Photomultipliers (SSPMs) and other semiconductor-based technologies that convert scintillation photons into electrical signals, and hold the promise to provide photodetectors which are far superior to traditional PMTs, due to their compact size, low voltage and power requirements, mechanical robustness, insensitivity to radio frequencies and magnetic fields and other environmental effects, non-vacuum requirements, and low

cost. In FY 2011, the project will develop low noise versions of the solid state alternative technologies to PMTs using novel large band-gap materials as opposed to the traditional materials. In FY 2012, the effort plans to transition these low noise photodetector versions into large area photodetector prototypes.

- *Passive Detection Systems Project (formerly divided into two projects: Passive Detection Systems Project and the Gamma-Ray Imaging Project)* – Develops next-generation neutron and gamma ray detection systems for a broad range of passive detection applications. Current state-of-art in deployed detection systems uses large polyvinyl toluene (PVT) panels in radiation portal monitors. Handheld radionuclide identification systems currently use sodium iodide (NaI) or cesium iodide (CsI) scintillators, or high-purity germanium or cadmium zinc telluride (CZT) semiconductor materials. Research in this program encompasses new materials integrated with advanced electronics, novel detector configurations, and specialized algorithms to greatly improve passive sensing with emphasis on simultaneously improving detection sensitivity and specificity, while minimizing operational burdens associated with employment of these systems. Performance benefits to be derived from this research include longer range stand-off detection of threat materials, improved differentiation of threat materials from environmental background and benign sources of radioactivity, and decreased false alarms and greater confidence in alarm resolution. In FY 2010, the project included the feasibility demonstration of a coplanar CZT based imaging systems and the design of a silicon (Si) based electron tracking detection system. In FY 2011, project will study the feasibility of a hybrid Compton imaging system to fuse visual and gamma images. In addition to novel designs, these systems will investigate the fusion of other sensor information (e.g. electro-optical, infrared, radar and/or lidar) to further improve detection signal to noise ratios and receiver operating characteristic curve performance. In FY 2012, the project plans to continue research and development of novel coded aperture/Compton scatter imager designs supporting various search and monitoring applications. Specific efforts include testing and evaluation of a hybrid Compton imaging - coded aperture system using CZT semiconductor materials; proof of concept of fusing Compton imaging with video imaging for compact directional threat tracking; proof of concept of gamma imaging applied to maritime small vessel surveillance; development of advanced imager reconstruction algorithms for 3-D imaging; and feasibility demonstration of technology that can support dual neutron/gamma imaging.
- *Helium-3 Replacement Technologies and Fast Neutron Detection Project* – Explores near-term and longer-term alternatives to helium-3 detectors currently used in various radiation portal monitor (RPM) applications, as well as hand-held and personal radiation detection instruments. Helium-3 has been a vital isotope in instrumentation for neutron detection because of its high absorption cross-section for thermal neutron beams and excellent gamma rejection properties. However, there is now a generally-recognized, world-wide critical

shortage of Helium-3 due to 1) increased demand by industries such as oil, medicine, basic science, and defense and security; and 2) decreased supply since the source of Helium-3 has been from the nuclear weapons program, which has reduced production over the years. Because the need for better and more efficient neutron detectors continues, an intensified and more focused research and development effort has gone into alternative technologies for Helium-3 neutron detectors. Particular focus was initially on portal applications since this requires the most Helium-3, but increasing attention is being given to applications which are the next largest users of Helium-3 -- backpacks and handhelds. This project investigates a range of materials, technologies, and sensor systems, many of which are based on either boron-11 or lithium-6 as neutron capture agents. In FY 2010, the project tested five technologies for performance in neutron detection efficiency and gamma-ray discrimination. Results of this testing will be valuable for assessing technology maturity and guiding future research and development. In FY 2011, the project will digest the results from the FY 2010 testing, and continue to pursue a number of detection technologies. The project will investigate detectors and systems designed to measure just thermal neutrons, just fast neutrons with spectra capabilities, as well as those designed to measure both fast and thermal neutrons. The project will investigate technologies based on scintillators, as well as semiconductors which can yield high energy resolution. Dual use materials will also be investigated, which can measure both neutrons and gammas with high energy resolution. Materials which can provide very efficient and compact design will also be investigated; these can efficiently detect neutrons with only a fraction of an inch thickness. New growth techniques to provide large scintillator crystals for efficient fast neutron detection will be explored. In FY 2011, the project will subject developing technologies to another round of testing, with particular emphasis on backpacks and handhelds. In FY 2011, the project will transition several technical alternatives to helium-3, with particular applications to portals, to full testing and/or product acquisition. In FY 2012, the project plans to transition several technical alternatives to Helium-3, with particular applications to backpacks and handhelds, to full testing and/or product acquisition.

- *Detection of Shielded SNM: New Signatures and Systems for New Applications and Enabling Component Technologies (formerly divided into three projects: Active Detection Project, Novel Active Detection Source Project, and the Active Detection Detectors, Systems, and Concepts Project)* – Expand and improve detection technologies for highly shielded special nuclear material (SNMs) for existing and new application scenarios. SNM produces a relatively weak passive signature that can be easily shielded, making stand-off, passive, detection difficult, if not impossible. Active Interrogation (AI) detection uses particle interrogation techniques to produce and/or enhance a unique signature from SNM, greatly improving detection performance. AI detection methods employ photons, neutrons, or other particles to penetrate shielding containers, vehicles, and other regions of interest. Other techniques of interest use natural fields such as cosmic rays and gravity to penetrate large

volumes and detect the presence of objects with high mass density such as metals with high atomic numbers found in shielding and in SNM. In FY 2010, new system prototypes under development enable entirely new concepts of operations by pairing specific particle sources with appropriate detectors, supporting electronics, signal processing and signal analysis algorithms. These systems include mobile AI systems for aircraft inspection and human-portable devices for scanning regions of interest inside ships/boats and buildings. Active detection scanners require highly compact, efficient, and flexible particle sources. Neutron and gamma-ray detectors need to operate in high-field environments, requiring high count-rates, fast recovery times and good-to-high energy resolution. Advanced enabling detector technologies also require ultra-fast electronics and algorithms to process the signals. This project will continue to develop enabling sources and detectors for AI systems that can transition to NTR projects or directly to system development. In FY 2011, the project will research and identify all potential signatures and user-community requirements for detecting threat materials for general aviation aircraft and human portable applications. In FY 2012, the project plans to conduct a series of proof of concept demonstrations that include; 1) a mobile and re-locatable AI system for aircraft; 2) a high-rate neutron detector for AI systems; 3) a human portable AI system; 4) a compact, lower dose x-ray source for radiographic applications; and 5) a unique high-energy, monochromatic photon source for exploring new, low-dose NRF detection applications, along with new photo-fission signatures. The project will commence development of technologies that can detect shielded SNM in human-occupied vehicles.

Algorithms, Modeling, and Software Development Project – Researches signal processing and signal analyses that improve detection and characterization of signals from threat objectives, and compensation, correction, or reduction of background noise to improve detector performance. Normally occurring background radiation affects detector sensitivity and limits current radiation detection technologies' performance. Further, temporal and spatially varying environmental background and nuisance sources (e.g., benign materials containing naturally occurring radioactive materials and patients experiencing nuclear medicine procedures) often lead to unacceptable false alarm rates. This project uses advanced statistical approaches to data analysis to include machine language and use of correlated data to improve the sensitivity/specificity of nuclear detection and models detector performance. Research in this area also includes advanced abilities to model detector performance and support capability-based design of advanced detection concepts. In FY 2011, the project will make substantial improvements in the Monte Carlo modeling and simulation code to improve usability and accuracy for various passive and active detection scenarios, and support development of a robust CAD-based front end to support rapid prototyping in given applications. Also, work will conclude on the CANES (contextually-aware nuclear expert system) project, an effort that uses machine learning to facilitate alarm resolution at portal monitors by examining all-source information about a particular cargo. In FY 2012, the project plans to continue improving Monte Carlo modeling and simulation code to

directly support homeland security applications. Also, the project will support Bayesian approaches in both detection and spectral identification algorithms. Specific work will include Bayesian analysis of spectra with branch and bound techniques to allow more accurate analysis of spectra, to include complex mixtures or masked sources. Work will also continue on demonstrating the use of multiple algorithm approaches to enable detection of threats from deployed sensors in search applications.

- *Forensics Data Collection and Analyses Project* – Develops analytical techniques for determining the origin and transit route of nuclear materials. Nuclear forensics analyzes pre-detonation materials and supports analysis of post-detonation materials. These analyses inform and support attribution and response decision-making. Laboratory analysis determines physical, chemical, radiological, or morphological properties of sample material or debris. Analytical results help determine specific processing the material underwent, geographic origins, transport pathways, and intended use of the materials. In FY 2011, the project will research and develop Stimulated Electron Emission (SEE) to perform nuclear forensics on containers and other common surfaces exposed to radiation more rapidly and accurately. In FY 2012, the project plans to develop new analytical methods while continuing research in material pathway and morphological analyses.

Near Term Research (NTR) Program (formerly included in the Nuclear Detection Exploratory Research (ER) Program) – The NTR program area performs accelerated development, characterization, and demonstration of leading-edge technologies that address critical gaps in nuclear detection capabilities. Characterization results form the basis for a subsequent cost benefit analysis (CBA) that objectively determines whether the technology should transition to system development and eventual production and deployment. Contracts awarded under the NTR programs are typically executed in four distinct phases: preliminary design review (PDR), critical design review (CDR), characterization readiness review (CRR), and characterization assessment. In FY 2010, the S&T Directorate performed an extensive program review of NTR projects, defined but not initiated in FY 2010 when the Radiological and Nuclear (rad/nuc) Division was in DNDO, to determine program progress and potential for further funding. These projects are discussed below.

- *Advanced Radiation Monitoring Device (ARMD) Project (formerly divided into two projects: the SrI Near Term Project and the CLYC Detector Near Term Project)* – Leverages breakthrough scintillator material development and solid-state replacements for photomultiplier tubes (PMT). The project will build upon advances in new detection materials discovered under previous Exploratory Research projects utilizing advanced scintillator materials and neutron detection techniques. Two materials of particular interest are strontium iodide (SrI₂) and cesium lithium yttrium chloride (CLYC). SrI₂ has demonstrated exceptional performance as a gamma ray detector with excellent energy resolution and low cost, outstanding growth characteristics. CLYC has demonstrated excellent performance for

detecting both gamma rays and neutrons. The PMT replacements leveraged for this project are much more compact, lower power, lower cost, and more rugged than traditional PMTs, enabling high-performance devices in a compact form factor. This project will combine these breakthroughs in new detection materials with both gamma and combined gamma/neutron detection capabilities to develop lower cost, greater efficiency small gamma detection systems, as well as replacements for traditional neutron detection systems that relied on Helium-3. This project initiated in FY 2010. In FY 2011, the project will complete the preliminary design phase for three spectroscopic personal radiation detector systems with improved capabilities over existing technologies. In FY 2012, the project plans to complete the critical design review and characterization readiness review to ensure the developed devices are prepared for data collection activities planned during characterization assessment.

- *Long Range Stand-Off Detection Project* – Develops an aerial stand-off radiation measurement system for the detection of nuclear and radiological material from an airborne platform. These systems will be able to detect and locate point-like sources in a complex and dynamic background. This platform could be used in urban, maritime, and coastal environments, with a concept of operations more in line with law enforcement practices rather than past radiological mapping operations. The proposed systems will be deployable on rotary winged aircraft. The system will provide real time data on the presence, location, and isotope identification enabled by the fusing of radiation detection with other sensing modalities (e.g. multispectral imaging, GPS, altimetry, etc). Utilizing new materials, innovative packaging, and algorithm improvements, these systems will offer greater detection sensitivity, lower false alarms, and simultaneously provide a greater range of operation. This project will initiate in FY 2011. In FY 2012, the project plans to complete its preliminary design review.
- *Intelligent Radiation Sensing System (IRSS) Project* – Creates data fusion software to maximize performance of co-deployed detection hardware connected by a wireless network. IRSS will leverage advances in small, efficient directional detectors, advanced distributed detection algorithms developed under various ER programs, and phenomenology studies characterizing the requirements for in-transit detection. USCG boarding parties and security teams at special events could use the networked system, which may include many disparate types of detectors. This system could improve sensitivity, expand surveillance area, locate threats faster, and detect and identify radiation sources better compared to single detectors or multiple autonomous (non-networked) detectors. In FY 2010, the IRSS project began fabrication of its Performance Test Units (PTU). In FY 2011, this project plans to complete characterization of the IRSS PTUs. Characterization results will be released in early FY 2012. These results form the basis for a subsequent CBA to determine whether the technology should transition to system development and eventual production and deployment.

- *Shielded Nuclear Alarm Resolution (SNAR) Project* – Develops and characterizes advanced technologies to resolve alarms and definitively verify the presence of special nuclear material (SNM) in shielded and/or cluttered environments. The project has two principal applications: 1) Dramatic performance enhancement to commercially or near commercially available x-ray NII screening systems by integrating solutions directly into hardware and software to substantially reduce the number of manual inspections while increasing probability of SNM detection; and 2) Targeted and choke point screening in multiple venues, including vehicle border crossings, checkpoints, rail, air cargo, and general aviation, with rapidly re-locatable inspection systems. In FY 2010, the SNAR project completed its critical design review and began fabrication of its PTU's. In FY 2011, this project plans to complete fabrication and characterization of the PTUs. The findings of the SNAR PTU characterization will be released in FY 2012. Characterization results form the basis for a subsequent CBA to determine whether the technology should transition to system development and eventual production and deployment.

Counter Terrorist Research & Development Thrust - S&T invests in the research and development of efforts to counter terrorism. Efforts include: prevention of terrorist attacks; and, prevention of the illicit movement and illegal entry or exit of people, weapons, dangerous goods, and contraband.

Hostile Behavior Predict and Detect Program – FY 2012 estimate: \$14.554 million. Leverage social and behavioral science research, data, and theory to understand the determinants and timing of group conversions to terrorism and the intent to engage in violence. Knowledge from this program informs analytical, operational, and policy concerns related to terrorists and terrorist activities. Also, develop and build the capability to non-invasively detect suspicious behavior that indicates the intent to cause harm.

Community Perceptions of Counter-IED Technology Project – Conducts focus groups and survey analysis to improve the understanding of public perception regarding IED countermeasures, in order to ensure the delivery of more acceptable and effective C-IED methods and technologies. Focused panel workshops will help analyze community perceptions of C-IED strategies and technologies. Researchers will use qualitative workshop results to develop a broad-based, quantitative survey to capture community implications from a larger, more diverse population. The results will inform program managers and technology developers, enabling them to construct more acceptable and effective Counter-IED solutions. In FY 2010, the project provided two reports on Community Perceptions of Technologies (CPT). In FY 2011, the project will conduct one CPT Panel and provide analyses resulting in future guidance documents. In FY 2012, funding for this project transfers to Community Perceptions the project plans to provide one CPT panel report and one report comparing prior CPT panels, identifying crosscutting themes for development of a survey instrument.

Community Perceptions of Technology (CPT) Panel Project – Brings together representatives of industry, public interest groups, community organizations, and citizens with subject-matter experts to understand and integrate community perspectives and concerns in the development, deployment, and public acceptance of technology. In FY 2010, the project coordinated two panels. In FY 2011, the project will conduct up to two panels, and deliver expert assessments of public perceptions of national security measures in relation to civil liberties and privacy issues. In FY 2012, the project plans to conduct up to two additional panels and deliver a web-based capability to enable the development of a fully functional Community of Practice of researchers, practitioners, and science communication experts interested in public opinion research and national security.

Cross-Cultural Validation of SPOT (Screening Passengers by Observation Techniques) Behaviors Project – Provides empirical validation of existing behavioral indicators employed by DHS' operational components to screen passengers at air, land, and maritime ports, including those indicators contained within TSA's SPOT. This effort complements the automated prototype work and supports development of an enhanced capability to detect behavioral indicators of hostile intent at a distance. The project will integrate these validated behavioral indicators into the screening concept of operations through each component's existing training programs. In FY 2010, the project inserted multi-cultural indicators into the Intent Training and Simulation project and demonstrated a mobile, collaborative collection and reporting tool. In FY 2011, the project will develop the final report and transition, if valid, the optimized indicators and weights to DHS operational screening commands. FY 2011 will be the final year of funding for this project.

Future Attribute Screening Technologies Mobile Module (FAST M2) - Develops a prototype screening facility containing a suite of real-time, non-invasive sensor technologies to detect behavior indicative of malintent (the intent or desire to cause harm) rapidly, reliably, and remotely. The system will measure both physiological and behavioral signals to make probabilistic assessments of malintent based on sensor outputs and advanced fusion algorithms. Federal, State, and local authorities may use the fully developed FAST system in primary and secondary screening environments to increase the accuracy and validity of people screening at special events, airports, and other secure areas. FAST will measure indicators using culturally neutral and non-invasive sensors. FAST will use an established independent peer review to ensure objectivity and thoroughness in addressing all aspects of the program. In FY 2010, the project identified, integrated, and demonstrated continued advances in physiological and behavioral screening and new sensor technology. The project also optimized performance (e.g., decreased face-to-face time required between a guard and a passenger), upgraded software so it is adaptable to different customers' environments, and demonstrated the effectiveness of the mobile module in laboratory and operational environments. In FY 2011, the project will refine the system and conduct a limited user evaluation at a Major League Baseball venue that has offered to host FAST testing. Results from this project will transition to the Passive Methods for

Precision Behavioral Screening project, which will leverage the FAST results to build systems that do not require operator-induced stress (e.g., agents asking questions), an even higher technical hurdle.

Hostile Intent Detection-Automated Prototype Project – Develops real-time, non-invasive, and culturally independent, hostile-intent detection prototype video extraction algorithms to identify unknown or potential terrorists through an interactive process with 75 percent accuracy. In FY 2010, the project demonstrated integrated multi-cultural, real-time intent detection. In FY 2011, the project will further develop, test, and evaluate multi-cultural intent detection indicators and automated extraction algorithms against off-line operational video for adoption by TSA, the target customer, as well as other operational components. FY 2011 will be the final year of funding for this project.

Insider Threat Detection Project – Delivers improved tools to identify behavior patterns and characteristics before hiring, during employment, and after separation that are associated with insider threats. In FY 2010, the project assembled enabling data including research, training, and testing sets; developed metrics to measure tools and provide linkages to standard threat measurements; and identified potential behavioral indicators. In FY 2011, the project will begin operational testing of an empirical framework. In FY 2012, the project plans to identify and empirically evaluate experimentally derived behavioral indicators of insider threat. Ultimately, this project will pilot and transition the insider-threat detection tools to critical industrial bases, DHS, and other government agencies.

Internet Radicalization Project - Develops innovative methods to understand the relationship between online behavior, internet content, and radicalization in order to develop knowledge tools for operational and policy personnel to counter radicalization. Recent studies have demonstrated how online interactions can impact offline behaviors. This project will leverage studies on online behavior and other methods to identify patterns that lead to radicalization and potential countermeasures. In FY 2012, this project plans to demonstrate innovative methods to study radicalization.

Passive Methods for Precision Behavioral Screening Project – Builds on the FAST program to transform the screening process from active to passive detection so that the screening process does not require direct interaction between the operator and the subject. This project will develop technologies that will enable increased standoff, automation, and throughput using non-intrusive, undetectable technologies that screen for behavioral and psychological cues of a person's intent to commit a harmful act at safe standoff ranges. Passive detection will enable the interpretation of physiological and behavioral cues or signatures that the body naturally produces and does not require operator-induced stress (e.g. agents asking questions). In FY 2011, the project will conduct a feasibility study on technologies for passive detection and develop a sensor validation plan. In FY 2012, the project will conduct sensor experiments on passive cues

that will guide subsequent prototype development. Also in FY 2012, the project plans to demonstrate the sensors in a controlled environment.

Violent Intent Modeling and Simulation (VIMS) Project – Develops tools to assist analysts in determining whether radical groups are likely to engage in political violence. This project builds models and data retrieval systems that will allow analysts to understand how behavioral, social, and organizational factors may contribute to and predict the emergence of violence. In FY 2010, the project updated VIMS 2.0 to increase usability, better integrate social-science theory and data, and evaluate-additional capacities that improve analysis. In FY 2011, the project will begin evaluating the information extraction and content analysis tool for integration into the analytical framework of VIMS. In FY 2012, the project plans to complete a summary of alternative methods for validating complex analytic tools for socio-behavioral modeling to include initial hypotheses/approaches for the VIMS project.

Wide Area Surveillance – Investigates novel sensors and systems for use in densely populated infrastructure settings and urban landscapes (e.g., airports, train stations, city streets and squares) to provide continuous surveillance of the Nation’s highest priority infrastructure. The effort will adapt and further develop military-grade optical sensors with far greater image resolution than currently available commercially. This project will integrate sensors into a system that must accommodate large data quantities, camera-to-camera handoff, and advanced image recognition. It will provide high-resolution, real-time, and forensic surveillance of threats posed by individuals, objects, or vehicles. In FY 2010, the project demonstrated the first-generation prototype at Logan International Airport in Boston, MA. The project also developed a more advanced, second-generation system that uses a novel optical imager that leverages military aerial surveillance technology. The new imager more than doubled the previous resolution and may ultimately decrease system costs due to its use of many inexpensive imagers. In FY 2011, the project will complete the second-generation system, conduct laboratory testing, and begin operational evaluation in support of a DHS component. The project will also develop components of a persistent infrared capability. In FY 2012, the project plans to demonstrate the second generation system at Logan International Airport. The project also plans to prototype an infrared, persistent surveillance system.

Identity Management Program – FY 2012 estimate: \$12.153 million. Research and develop biometrics-based technologies, procedures, conops, and information to identify known terrorists and criminals and prevent their movement into and out of the U.S. through effective, interoperable multi-biometrics in diverse areas, including border crossings, ports-of-entry, and visa application sites.

Biometrics Detector Project - Develops rapid, non-contact, three-dimensional fingerprint scanner technologies that will allow DHS to collect high-quality fingerprints at screening checkpoints with minimum impact on throughput. Currently, the fingerprinting process is slow, and converting contact fingerprints into digitally stored records is time consuming and can require

several attempts. Biometric Detector will develop less intrusive technology that produces much higher success rates at capturing fingerprints the first time, with greater detail, consequently increasing speed and accuracy in records matching and identification. In FY 2010, the project demonstrated two multi-finger scanners; evaluated fingerprint spoofing; and began assessing the ability of human examiners and computer algorithms to match the new three-dimensional fingerprint data to two-dimensional fingerprint data in existing databases. In FY 2011, the project will complete this assessment and undertake engineering efforts to refine the design of the multi-finger prototypes. These efforts include improving the human/machine interface and refining the optical system to accommodate a wider range of hand sizes. The project will also develop test methods and protocols to prepare for qualified product testing with the Federal Bureau of Investigation (FBI). In FY 2012, the project plans to demonstrate multi-finger scanner prototypes based on DHS operational scenarios (e.g., airport or land border checkpoint). The project also plans to test non-contact, multi-finger scanners for inclusion on the FBI's Qualified Product List (QPL), the standard used by DHS Components and recognized by Federal/State/local and international communities.

Mobile Biometrics System Project – Develops technologies for mobile biometrics screening at remote sites along U.S. borders, at sea, and other areas not near a processing station. HFD worked with CBP, TSA, USCIS, USVISIT, USCG, USSS and ICE field operators to define and prioritize mobile biometrics technology requirements. In FY 2010, the project began the development of a four finger slap module that will be capable of obtaining 10 prints in the field and be able to be incorporated into a future multi-modal mobile biometrics device. In FY 2011, the project will demonstrate the module and pilot current multi-modal mobile biometric devices. In FY 2012, the project plans to integrate the four finger slap module into a multi-modal mobile biometric device and demonstrate its use in an operational environment.

Multi-modal Biometrics Project – Develops technologies to enable a department-wide capability to non-intrusively collect two or more biometrics (e.g., fingerprint, face image, and iris recognition) in less than 10 seconds at a 95% acquisition rate without impeding the movement of individuals. This project provides robust, standards-based, interoperable multi-modal biometric technologies to identify dangerous individuals accurately and rapidly. This project will develop technology that will support multiple DHS operations, potentially including entrance and exit solutions that US-VISIT will need to provide to the Office of Field Operations (OFO) within CBP. In FY 2010, in conjunction with the National Institute of Standards and Technology (NIST) and other Federal partners, the project collected a large database of face and iris images for quality performance assessments, performed field evaluations of biometric technologies, and sponsored the development of voluntary consensus standards to improve performance and interoperability. The project also analyzed the performance of biometric technologies against DHS operational components' performance requirements. In FY 2011, the project will conduct an iris-quality evaluation and calibration study, and develop test protocols to allow accredited third-party laboratories to evaluate biometric vendor products based on DHS performance

requirements. In FY 2011, the project will deliver a rapid and low-cost DNA-based biometric prototype for verification of family relationship in asylum, refugee, and overseas adoptions. In FY 2012, the project plans to encourage cross-discipline approaches to multi-biometrics, initiate an industry challenge to evaluate biometric quality algorithms, and expand the relationships that can be verified through the use of Rapid-DNA technology.

Remote Biometrics Capture Project – Develops accurate, near real time capability relying on remote capture of multi-modal biometrics to identify known terrorists and criminals at U.S. check points. HFD will work with CBP, TSA, USCIS, US VISIT, USCG, USSS, and ICE field operators to define and prioritize Remote Biometric technology requirements. In FY 2012, the project plans to conduct a functional requirements analysis with input from operational components and release a broad agency announcement (BAA) or other funding mechanism to begin development of the next generation remote multimodal biometric system.

Ten Print Capture Project – Develops next generation, ergonomically correct, high-speed finger print collection for enrollment. HFD will work with CBP, TSA, USCIS, US VISIT, USCG, USSS, and ICE field operators to define and prioritize ten print technology requirements. In FY 2012, the project plans to conduct a functional requirements analysis with input from operational components and release a BAA or other funding mechanism to begin development of the next generation ten print device.

Under Secretary Initiative- Biometrics project - Develops technologies for mobile biometrics screening at remote sites along U.S. borders, at sea, and other areas not near a processing station. HFD worked with CBP, TSA, USCIS, US VISIT, USCG, USSS, and ICE field operators and state, local, and tribal agencies to define and prioritize mobile biometrics technology requirements. In FY 2010, the project began the development of a “four finger slap module” that will be capable of obtaining 10 prints (4-4-2) in the field and incorporated into a future multi-modal mobile biometrics device. In FY 2011, the project will demonstrate the module and pilot current multi-modal mobile biometric devices with Federal, state, local, and tribal agencies. In FY 2012, the project plans to integrate the “four finger slap module” into a multi-modal mobile biometric device and demonstrate its use in an operational environment. Additional plans include establishing a baseline for program evaluation of the impact of deploying this mobile biometric system in an operational environment.

Under Secretary Initiative- Rapid DNA project – Develops rapid and low-cost DNA-based biometric verification of family relationships in asylum, refugee, and overseas adoptions. Processing of legal immigration applications will be made more efficient and fraud will be deterred. In FY 2011, the project will deliver a prototype capable of verification of parent – child relationships and establish a baseline for a program evaluation of the impact of deploying this technology. In FY 2012 and beyond, the project will expand the types of relationships that can be verified using Rapid-DNA technology and conduct field pilots.

Cyber Security Thrust/Program – FY 2012 estimate: \$64.102 million. Conducts and supports research, development, testing, evaluation, and transition for advanced cyber security and information assurance technologies to secure the Nation’s current and future cyber and critical infrastructures in response to the President’s *National Strategy to Secure Cyberspace* and *Comprehensive National Cybersecurity Initiative*. These solutions include user identity and data privacy technologies, end system security, research infrastructure, law enforcement forensic capabilities, secure protocols, software assurance, and cybersecurity education.

CNCI Leap Ahead Technologies Project - Invests in leap-ahead research and development, targeting revolutionary techniques and capabilities that can be deployed over the next decade with the potential to redefine the state of cyber security in response to the Comprehensive National Cyber security Initiative (CNCI). In FY 2011, the project will initiate research activities in areas which include studying trustworthy computing in scalable environments and realistic settings, modeling of internet attacks, digital provenance and nature-inspired health which are directly applicable to the Nation’s critical infrastructures, and will establish long-term (five plus years) goals and outcomes. In FY 2012, the project plans to develop and prototype component-level techniques, including novel hardware and software combinations that will serve as eventual building blocks to scalable trustworthy complex systems.

Cyber Economic Incentives – Invests in research on the role of economics in identifying and realigning cyber economic incentives through the creation of a science-based understanding of markets, decision making, and motivators. In FY 2011, projects will study models of cybersecurity investment and markets and will define meaningful cybersecurity metrics and actuarial tables. In FY 2012, the project plans to develop new theories and models of cyber economics and scientific understanding of the social dimensions of cyber economics, develop scientific frameworks to incentivize vendors to improve the economic viability of assured software development methods, provide methods to support an environment where users have “ownership” of their personal data and are aware of its provenance, distribution, use, and destruction, and study disincentives to online criminal behavior.

Cyber Infrastructure & Emerging Threats (DECIDE) Project – The Distributed Environment for Critical Infrastructure Decision-Making Exercises (DECIDE) effort is a distributed scenario-based exercise (war-gaming) designed to enable large businesses in critical infrastructures to develop coordinated responses to cyber attacks based on their business models. In FY 2010, the DECIDE facilitated distributed infrastructure protection exercises by providing a multi-user simulation framework aimed at business continuity managers within the Finance Sector. Also in FY 2010, DECIDE demonstrated more complex user interfaces and decision trees, and scenarios involving equities and options trading. In FY 2011, DECIDE will deliver two updated software releases demonstrating clearing and settlement activities and engage financial sector participants through focus groups to ensure the exercise capability meets operational requirements. In FY 2012, DECIDE plans to engage financial sector participants to test and evaluate the exercise capabilities, complete two additional software releases that simulate the equities and fixed

income markets, and deliver the final DECIDE version 1.0 software which is capable of facilitating large scale exercises.

Cyber Security Assessment and Evaluation Project – Conducts technical assessment, risk analysis, and modeling requirements that focus on implementation and deployment of cyber security technologies. In FY 2010, the project led technology transition forums with other Federal agencies and large system integrator companies and developed reports in support of cyber security technology transitions. In FY 2011, the project will conduct red-teaming efforts on developed technologies and provide red-team assessments and feedback. In FY 2012, the project plans to conduct red-teaming assessments across high priority project areas including experimental research testbeds, the Distributed Environment for Critical Infrastructure Decision-Making Exercises (DECIDE) Tool. The project will produce additional vulnerabilities assessments and reports, as well as conduct IT Security Entrepreneur Forums (ITSEF).

Cyber Security Forensics Project – Develops new cyber forensic analysis tools and investigative techniques for law enforcement officers and forensic examiners to address the full range of cyber related crimes. Starting in FY 2011, the project plans to test and evaluate deployable solutions and new capabilities in partnership with law enforcement customers. Additionally, in FY 2011, the project will deliver smart phone acquisition test plans, new software, and file sources, including malware software, for the National Software Reference Library. In FY 2012, the project plans to deliver a universal forensic triage device that will aid analysts in the quick investigation and extraction of evidence from computers and other devices captured or involved in an active forensic investigation. The project will deliver a GPS device forensics tool for law enforcement providing analysis of mobile GPS devices seized in criminal and terrorist cases for use in both lab and field settings. The project also plans to deliver a final report on the findings and trends of insider threat related specifically to the banking and finance sector and provide training and exercise opportunities for members of the banking and finance sector and law enforcement to mitigate cyber insider threat.

Enterprise Level Security Metrics and Usability Project – Develops a science of security measurement and usability, including developing the supporting tools and techniques to make the measurements practical and useful as decision aids. Specifically, this project addresses evaluating security at the system level, providing tools that facilitate decision-making and accountability through collection, analysis, and, reporting of relevant performance data. In FY 2010, the project developed security measurements and the supporting tools and techniques. In FY 2011, the project will mature models and simulation capabilities to more accurately simulate how attack actions affect system performance and define an initial set of enterprise risk metrics based on those capabilities. In FY 2012, the project will produce one or more of the following : tools to determine security of system composition, tools to measure change in enterprise security posture based on changing threats, tools to assess impact of not deploying security solutions, and tools to determine balance of security and performance within an enterprise.

Experimental Research Testbed Project – Provides a cyber security testbed to evaluate defense mechanisms against attacks on the infrastructure and supports mitigation of attacks. The project supports the S&T Directorate by working with the NSF to create the Defense Technology Experimental Research (DETER) cyber security testbed. Existing testing facilities cannot handle experiments on a large enough scale to represent today’s operational networks or the portion of the Internet that might be involved in a security attack. Industry has only been able to test and validate new security technologies in small-to-medium scale private research laboratories that do not adequately simulate a real networking environment. Using the DETER testbed, researchers can safely analyze cyber attacks and develop attack mitigation and confinement strategies. In FY 2010, the project tested new technologies, including worm defense, routing security, distributed denial of service defense, malware detection, and domain name system security. In FY 2011, the project will increase overall testbed capacity and scaling capabilities and initiate work for the inclusion of both simulated and real remote networked industrial control systems through federation. In FY 2012, the project plans to continue to increase capabilities through new experimental abstractions, languages, experiment recipes and widely federated access control resources. As part of these capabilities, the project will provide updated open source releases of software developed under Testbed Project to the Homeland Open Security Technology (HOST) program repository.

Experiments and Competitions Project – Experiments address cyber security requirements from DHS customers in support of operational missions in critical infrastructure protection. Requirements gathering will continue in FY 2011 and FY 2012 to assess customer’s needs for cyber pilots and experiments. A current effort is the DHS Secure Wireless Access Pilot (DSWAP) which demonstrates a way to securely connect to DHS networks using the public wireless infrastructure, which is available at many locations and commonly known as “hot spots.” In FY 2011, the DSWAP technology is being piloted at the Federal Law Enforcement Training Center (FLETC) in Georgia. Cyber Security Competitions help fulfill the challenge in Priority III of the National Strategy to Secure Cyberspace to “foster adequate training and education programs to support the Nation’s cybersecurity needs” and is mentioned by name in the President’s Cyberspace Policy Review as a key educational program. The National Collegiate Cyber Defense Competition (NCCDC) is an event in which teams of undergraduate and graduate students from universities across the country compete in a business-oriented, defensive information assurance competition. In FY 2012, the project plans to fund national and regional collegiate cyber security competitions in which teams of students from over 75 institutions compete in an artificially constructed operational environment by assuming administrative and protective duties for an existing “commercial” network. The US Cyber Challenge (USCC) and The National Initiative for Cybersecurity Education (NICE) both target young Americans with the skills to fill the ranks of cyber security practitioners and researchers. These programs will provide opportunities to develop their skills, give them access to advanced education and exercises. In FY 2011 USCC’s initial-term goal is to find 4,000 talented youth

and create a pipeline through which young Americans will be discovered and progress toward careers as technical cyber security experts.

Homeland Open Security Technology – Lead Federal, State and local government agencies towards adoption of open security technologies. The identification of open source technology being used at all levels will foster communities around common approaches and prioritize common security gaps. This effort will: improve the security of popular open source software currently being used in government, foster the development of communities focused on open source security tools, provide a collaborative environment for exchanging and discovering security related research products and work to ease the certification hurdles related to the adoption of open source software in government. The approach taken will build collaborative relationships between government, the open source community, industry and academic entities; and help establish new, innovative open source projects which become self-sustaining through community, industry and government adoption. In FY 2012 this effort will sponsor the certification of commonly used security modules and aid the development of open source security technology in community identified gap areas.

Identity Management & Data Privacy Project – Evaluates, develops proof-of-concept solutions, and conducts pilot experiments of identity and access control architectures and technologies, as well as data privacy protection technologies, for the homeland security community. In FY 2010, in partnership with NORTHCOM, NSA and DISA in the Defense Support for Civil Authorities (DSCA) Information Sharing proof-of-concept, the project successfully demonstrated a cross-organizational information sharing capability between DHS and DOD that utilized strong credentials, identity federation and attribute based access control. During FY 2011, the project will deliver a data anonymization methodology and best practices document for DHS component privacy offices. In FY 2011, the project will finalize work in federated attribute based access control incorporating location based environmental attributes to ensure secure information sharing across customized workspaces. In FY 2012, the project will extend the Federal ICAM backend attribute exchange architecture capability to non-Federal entities. The project will continue to address operational privacy capability gaps from the Privacy Working Group (PWG). The project will deliver a data anonymization case study report to external Federal, State, local and private sector organizations.

Internet Measurement Techniques Project – Identifies and models critical internet infrastructure, incorporating an understanding of geographic and topological mapping of internet hosts and routers and develops modeling and analysis capabilities that predict the effects of cyber attacks on commercial and Federal Government infrastructures. These internet maps will enhance internet monitoring and modeling capabilities to identify threats and predict the cascading impacts of various damage scenarios. The attack modeling will improve Border Gateway Protocol (BGP) route monitoring capabilities; extract peering relationships from internet topology datasets; and produce more reliable geo-location tools for visualizing and navigating geographic as well as topological connectivity and increase accuracy of currently available tools

for matching IP addresses to router interfaces. In FY 2010, the project completed Geographic router-level maps and collected network traffic data revealing internet attacks from widely distributed internet locations that will help to create technologies to combat internet attacks. In FY 2011, the project will complete and provide transitionable open source mapping and analysis tools and will apply research activities to operational settings in ongoing studies of cyber attacks. In FY 2012, the project plans to provide edge mapping tools that give us a better understanding of the infrastructure of the Internet and plans to continue to apply modeling capabilities and results to customers' operational infrastructures and representative environments to improve the understanding and situational awareness of potential impact of cyber attacks.

Modeling of Internet Attacks Project – Develops modeling and analysis capabilities that predict the effects of cyber attacks on commercial and Federal Government infrastructures. This project will improve Border Gateway Protocol (BGP) route monitoring capabilities; extract peering relationships from internet topology datasets; and produce more reliable geo-location tools for visualizing and navigating geographic as well as topological connectivity and increase accuracy of currently available tools for matching IP addresses to router interfaces. In FY 2010, the project collected network traffic data revealing internet attacks from widely distributed internet locations that will help to create technologies to combat internet attacks. In FY 2011, the project will apply research activities to operational settings in ongoing studies of cyber attacks. In FY 2012, the project plans to continue to apply modeling capabilities and results to customers' operational infrastructures and representative environments to improve the understanding and situational awareness of potential impact of cyber attacks.

Process Control Systems (PCS) Security Project – Improves security for PCS, a statistics and engineering discipline that deals with architectures, mechanisms, and algorithms for controlling the output of a specific process. PCS control water supply, electrical power, gas and oil pipelines, and other distributed processes. The PCS Security Project is jointly sponsored with the Department of Energy. In FY 2010, the project delivered Secure Wireless devices that will help secure wireless transmission for process control systems. In FY 2011, the project will create and deliver sector roadmaps and requirements documents, and evaluate current threats based on input from customers and key stakeholders. In FY 2012, the project plans to work with the Department of Energy to complete development of an initial set of risk and security assessment solutions for cyber infrastructure for the power grid.

Moving Target Defense – Moving Target Defense (MTD) projects enable the creation, analysis, evaluation, and deployment of mechanisms and strategies that are diverse and that continually shift and change over time to increase complexity and cost for attackers, limit the exposure of vulnerabilities and opportunities for attack, and increase system resiliency. The characteristics of an MT system are dynamically altered in ways that are manageable by the defender yet make the attack space appear unpredictable to the attacker. In response to the Comprehensive National Cyber security Initiative (CNCSI), in FY 2011, the project will initiate research activities directly applicable to the Nation's critical infrastructures, and will establish long-term (five plus years)

goals and outcomes. In FY 2012, the project plans to develop and prototype component-level techniques, including abstractions and methods that will enable scientific reasoning regarding MTD mechanisms and their effectiveness; characterize the vulnerability space and understand the effect of system randomization on the ability to exploit those vulnerabilities; increase understanding of the effect of randomization of individual components on the behavior of complex systems, with respect to both their resiliency and their ability to evade threats; develop a control mechanism that can abstract the complexity of MTD systems and enable sound, resilient system management; and enable the adaptation of MTD mechanisms as the understanding of system behavior matures and our threat evolves.

Secure Protocols Project – Develops secure protocols for the cyber-components that make up the Internet, specifically the Internet’s Domain Name System (DNS) and routing infrastructure. This project combines Domain Name Security System Security (DNSSEC) and Secure Protocol for the Routing Infrastructure (SPRI). In FY 2010, the project concluded Public Key Infrastructure (PKI) deployment activities with global registries to enable effective and efficient connections between URLs; developed and deployed standards for secure routing; and gathered operational DNSSEC query data to analyze DNS security further. In FY 2011, the project will report on draft secure routing protocols, deploy DNSSEC into government and the private sector, and continue core standards activities to develop new secure routing protocols. In FY 2012, the project plans to design documentation and open-source tools to support the deployment and testing of the Border Gateway Protocol Security (BGPSEC) and the Resource Public Key Infrastructure (RPKI) protocols, and deliver a technical report of a roadmap for security for the routing infrastructure in the Internet as part of the Routing Security Roadmap. This project plans to deliver one new tool or technology for DNSSEC.

Software Assurance MarketPlace (SWAMP) Project – Develops an environment that can be used by open source software product developers to test the security functionality of their software using source code analysis techniques to discover and eliminate vulnerabilities from large open source codebases. A service and facility will be made available to open source developers, allowing them to gain maximum value through access to, and use of, many software analysis tools, including those funded by DHS S&T, open source analysis tools, and commercial tools, without having to acquire licenses or learn how to use each one individually. In FY 2011, the project will award a contract to begin the initial build-out of the Software Assurance MarketPlace. In FY 2012, the project plans to establish an Initial Operating Capability.

Software Quality Assurance Project – Develops tools, techniques and environments for analyzing software to detect security vulnerabilities associated with our Nation’s critical infrastructure (energy, transportation, telecommunications, banking and finance, and others) and networks. Specifically, this project addresses the presence of internal flaws and vulnerabilities in software and deals with the root of the problem by improving software security. Test environments for these tools will also be built, one such facility is the SoftWare Assurance Market Place (SWAMP) which will develop an environment that can be used by open source and

commercial software product developers to test the security functionality of their software using source code analysis techniques to discover and eliminate vulnerabilities from large open source codebases. In FY 2010, the project provided tools and techniques to analyze software to detect security vulnerabilities. In FY 2011, the project will establish and apply advanced software testing tools to selected software code bases used by the Government and other critical infrastructures and award contracts for the SWAMP. The project will also complete development of an open source Intrusion Detection System (IDS), with further development supported in the future through a non-profit foundation. In FY 2012, the project plans to continue to produce tools for identifying, analyzing, and rectifying latent vulnerabilities in software; transition technology to commercial products; and initialize the SWAMP infrastructure.

Tailored Trustworthy Spaces – Projects provide flexible, adaptive, distributed trust environments that can support functional and policy requirements arising from a wide spectrum of activities in the face of an evolving range of threats. In support of the CNCI goal of transforming the cyber-infrastructure to be resistant to attack so that critical national interests are protected from catastrophic damage and our society can confidently adopt new technological advances, in FY 2011 this project will initiate research activities with the Finance Services Sector Coordinating Council (FSSCC) in Identity Management in a federated environment. In FY 2012 this project will initiate a project with the FSSCC for a High Assurance Domain (HAD) incorporating DNSSEC and trusted registries within a Finance Sector Top Level Domain (TLD).

Transition to Practice – This newly initiated project builds on the S&T Directorate’s process of funding projects through the full R&D lifecycle - research, development, testing, evaluation and transition. This project supports DHS S&T partnering with those Federal agencies that fund basic research and identifying projects that can be transitioned and commercialized. In alignment with the needs identified in the Comprehensive National Cybersecurity Initiative (CNCI), in FY 2012, this project plans to work with the identified agencies across the U.S. Government’s research and development community to identify mature technologies that are the best candidates for transition. Once identified, work will be undertaken to initiate experimental deployment activities with entities such as DHS’ National Cyber Security Division (NCSA), the National Science Foundation (NSF) Office of Cyber Infrastructure (OCI), and the Defense Research and Engineering Network (DREN), and the DHS National Cyber Security Division.

Disaster Resilience Research & Development Thrust - Efforts include reduction of vulnerability of critical infrastructure, key leadership, and events to terrorist attacks and other hazards; with State, local, tribal and territorial governments, secure their information systems; working with local and regional partners to identify hazards, assess vulnerabilities, and develop strategies to manage risks associated with all hazards; increasing the state of preparedness of State, local, regional, tribal, and territorial partners, as well as nongovernmental organizations, the private sector, and the general public; advancing and improving disaster emergency and interoperable communications capabilities; and, improving the capabilities of DHS to lead in emergency management.

Bioagent Attack Resiliency Program – FY 2012 estimate: \$50.038 million. Provides advanced planning, develops Concept of Operations (CONOPS), develops, and provides capabilities to support forensics, laboratory response, personnel protection, and decontamination, and utilize exercises and training for responding to and recovering from a biological disaster. This program includes actions to limit the spread of disease among animal species to protect the United States economy.

Bioforensics Research and Development (R&D) Project – Near-Term & Long-Term – Develops improved methods for extracting genetic materials and proteins from different sample matrices for biological, chemical, and physical characterization. It provides scientific foundation for material attribution, develops protocols for characterization and identification of Biological Threat Agents (BTAs), and develops a robust sample management, molecular signatures, and physical/chemical analysis research program to address FBI/NBFAC requirements. Bioforensics R&D – Near-Term provides NBFAC with tools to analyze the CDC Category A and B biological threat agents of concern and methods for analyzing enhanced and engineered threats.

Bioforensics – Long-Term advances forensic science, establishes an inter-disciplinary approach to the bioforensics problem, and engages academia in basic scientific research that supports bioforensics technological gaps. In FY 2010, the project initiated studies to develop improved methods for culturing trace amounts of fastidious select agent bacteria during forensics analysis. This will be used to develop orthogonal methods of BTA characterization and to determine the feasibility of using whole genome sequencing methods for forensic analysis of known and unknown biothreat agents. In FY 2011, the project will initiate phase two of the viral genetic stability study, which launched in 2009, focusing on closing knowledge gaps in viral agent biology for improving match criteria between viral samples. In FY 2012 and beyond, the project plans to identify strategies for analyzing emerging, enhanced and advanced threat agents and will develop bioinformatic methods to support analysis of these agents.

Chem-Bio Event Characterization Project - Provides a capability for the response community to rapidly determine the extent of chemical or biological contamination in an urban area following the determination that an event occurred either by environmental detection and/or people presenting illness. This project addresses one of the high priority needs expressed by the Emergency Management, Environmental, and Public Health community. The effort will incorporate the requirement for rapid environmental assessment methods integrating the environmental data with health surveillance data to properly inform risk-based decisions regarding needed actions to mitigate the event. The outcome of the project is envisioned to be a system of tools and methods for emergency responders for public health, environmental cleanup, and emergency management at the Federal, State and local levels to exercise their emergency response duties. In FY 2012, the project will begin with a survey of requirements for field application, an assessment of potential technology solutions including the feasibility of modifying COTS or military-fielded equipment for this purpose, and the development of methods for rapid environmental assessments.

Decontamination, Disposal and Depopulation Project (3D) – This new project, initiating in FY 2012 will develop, in coordination with USDA and EPA, new and/or enhanced animal health emergency response tools, technologies and associated CONOPS to increase capacity and to ensure that decontamination, disposal, and depopulation activities are handled as rapidly and as humanely as possible. In the event of a widespread foreign animal disease outbreak in a major livestock production area, hundreds of thousands of cattle or hogs, or millions of poultry could be affected. A comprehensive response strategy is required to effectively mitigate animal health emergencies (i.e. high-consequence foreign animal diseases) and maintain continuity of business to the maximum extent practicable. The 3D project will develop the tools, technologies and information necessary to support the most efficient, effective and humane policies possible in an emergency response setting. In FY 2012, the project plans to deliver a report containing guidelines and best practices for the development of a logistical infrastructure for handling animal mortalities during an animal disease outbreak emergency response.

FAD Vaccine and Diagnostics – Near- & Long- Term Projects – Develops new and next generation vaccines and biotherapeutics for high-priority zoonotic and foreign animal disease (FAD) pathogens, for transition to USDA’s National Veterinary Stockpile. The National Veterinary Stockpile ensures that first responders in the animal agriculture community have the resources needed to safely and effectively respond to foreign animal and zoonotic disease outbreaks. This project also provides support to enable the science mission at Plum Island Animal Disease Center. Next generation vaccines will allow differentiation of naturally infected from vaccinated animals (DIVA). DIVA vaccines cause an animal to develop protective antibodies that can be differentiated from antibodies that are associated with the presence of disease or infection, allowing vaccination of animals against a disease without the fear that, once vaccinated, healthy animals will test positive for disease due to the presence of pathogen-specific antibodies in their bloodstream. Additionally, this project will research and develop vaccines for FADs for which no vaccines currently exist. In FY 2010, the project completed the majority of regulatory testing requirements for the first next-generation DIVA vaccine for foot-and-mouth disease (FMD), which is expected to receive conditional license approval in FY 2011. In FY 2011, the project will complete pivotal early development regulatory requirements for additional FMD serotypes/subtype vaccine candidates; coordinate licensing and implementation of USDA approved DIVA diagnostic assay that support the next generation FMD DIVA vaccines; safety and efficacy testing of foreign manufactured FMD vaccines (e.g., Argentina’s 4-way FMD vaccine); conduct research on improving potency and duration of immunity of FMD molecular vaccines; and leverage the knowledge gained to improve other FAD biological countermeasures. In FY 2012, the project plans to complete pivotal late development regulatory requirements for additional FMD serotypes/subtypes vaccine candidates; transition one or more cattle FMD biotherapeutic candidates and at least one African swine fever vaccine candidate from discovery to early development; coordinate with animal health industry partners on development programs for licensure of vaccine candidates for Rift Valley Fever, Classical Swine

Fever, and Henipavirus; and continue to identify and evaluate countermeasure technology platforms for applicability to high-priority FAD pathogens.

National BioForensics Operations (NBFAC) Project – Provides the Nation with a unique capability to conduct forensic analysis of evidence from biocrime and bioterror investigations. This helps prevent and deter biocrimes and terrorism by providing unimpeachable data for attribution. As designated in HSPD-10, the National Bioforensics Analysis Center (NBFAC) is the Nation’s lead facility for technical analysis of samples from biocrime and bioterror investigations. As an operational facility, NBFAC provides secure, state-of-the-art, biothreat agent signature-free, biocontainment space for the analysis of evidentiary samples; validated protocols for the identification and characterization of the biological, chemical and physical ‘fingerprints’ that those samples may contain; rigorous chain-of-custody and quality-control procedures to ensure the integrity of the sample and its analysis; and maintains 24/7 continuous hub-and-spoke laboratories to provide casework support and additional specialized capabilities. In FY 2010, the project conducted casework and expanded its International Standards Organization (ISO) 17025 accreditation to include complementary assays for 30 top human and animal biological threat agents (BTAs) and additional core competencies. In FY 2011, the project will continue casework and transition ISO accredited casework capabilities to the new National Biodefense Analysis and Countermeasures Center (NBACC) building, ISO-accredit complementary assays for obligate intracellular bacteria, anaerobic bacteria and several major viral groups, and ISO-validate components of a methods based approach for identifying and characterizing unknown BTAs. In FY 2012, the project plans to continue casework and maintain ISO 17025 accreditation for complementary assays for over 30 human and animal BTAs, as well as achieve ISO 17025 accreditation for components of a methods based approach for the identification and characterization of unknown organisms and genetically modified organisms.

Operational Tools for Response and Restoration Project – Develops a suite of state-of-the-science indoor-outdoor predictive tools to characterize the extent and degree of contamination, incorporating the best-available deposition, degradation, and surface viability data. This project will provide validated interagency sampling plans and improved statistical sampling design to support characterization and decontamination planning. In FY 2010, this project initiated the development and validation of sampling design/plan tools and validation of a sampling plan design for anthrax. Also in FY 2010, the project created responder guidance for sampling suspicious materials and initiated a Bio-Response Operational Testing and Evaluation (BOTE) with EPA, CDC, FBI, DoD/DTRA, and DOE National Labs. The objective is to operationally test and evaluate biological incident (anthrax release) response from health/law enforcement response through environmental remediation. In FY 2011, the project will continue to develop sampling design/plan tools that incorporate reaerosolization parameters as well as operationally test the available sampling plans and tools through BOTE. In FY 2012, the project plans to extend products to include additional biological agents as well as begin development on improved environmental sampling tools and methods for biological agents.

Systems Approaches for Restoration Project – Develops a coordinated systems approach to the restoration of wide urban areas, to include high-traffic areas (transit/transportation facilities) and critical infrastructures, following the aerosol release of a biological agent. Prior activities focused on guidelines and protocols for protecting and restoring airports and other critical transportation hubs (e.g., subways). The S&T Directorate is now focusing on restoring wide urban areas, like city neighborhoods, following a biological release. In FY 2010, the Interagency Biological Restoration Demonstration (IBRD) was completed. This work was performed in collaboration with DOD’s Defense Threat Reduction Agency (DTRA) and in partnership with the EPA, HHS, Seattle, and county authorities and agencies. IBRD has provided a set of concepts, protocols, and tools that other communities can adopt and modify to develop their restoration plans. In FY 2011, the project will test the concepts, protocols and tools in an “All Hazards Framework” with a broader focus on Chemical, Biological and Radiological attacks. The aim is to transition products and tools to FEMA, OHA, EPA, DOD, and HHS. FEMA will take the catastrophic plans and use UASI grants and training funding to provide the remaining UASIs the template and resources to build their own local/regional frameworks.

Underground Transport Restoration Project - Provides the capability for transit systems to rapidly recover from a Chemical or Biological event addressing a high priority need expressed by TSA and Transit systems. The effort will address the requirements for rapid characterization, clean-up, and clearance of the chemical or biological contamination in the physical structures (tunnels, stations) and rolling stock (railcars, buses). The outcome of the project is envisioned to be a system of tools and methods for transit systems in partnership with public health, environmental cleanup, and emergency management at the Federal, State and local levels to exercise their emergency response and recovery duties. In FY 2012, the project will begin with a survey of requirements, an assessment of potential technology solutions including the feasibility of modifying COTS, and the development of methods for rapid recovery and functionality of transit systems.

Chemical Attack Resiliency Program – FY 2012 estimate: \$19.229 million. Provides advanced planning, develops Concept of Operations (CONOPS), develops and provides capabilities in forensics, laboratory response, personnel protection, and decontamination, and utilizes exercises and training for responding to and recovering from a chemical disaster.

Chemical Decontamination R&D Project – Develops and tests technologies that decontaminate NTAs, CWAs, and persistent Toxic Industrial Chemicals (TICs). The project will assess the validity of current techniques for decontamination of NTAs, describe performance gaps, and begin to fill gaps through a measured R&D program. In FY 2010, the project selected the most promising new approaches for use in proof-of-concept demonstrations against NTAs and traditional persistent chemical threat agents. In FY 2011, the project will investigate new approaches for use in proof-of-concept demonstrations against NTAs and traditional agents. In FY 2012, the project plans to solicit for and begin the development of new decontamination technologies.

Chemical Forensic Project (Chem FP) – Develops and maintains a robust and enduring national capability for the collection, preservation, and processing of chemical threat agents (CTAs) and associated evidence to provide comprehensive and timely forensic analysis and attribution. This effort enables the FBI to conduct investigations of chemical terrorist and criminal acts by associating evidence with people, places, and other events, as well as potential attribution to their original source. CTAs include chemical warfare agents (CWAs) and toxic industrial chemicals/materials (TICs/TIMs). The S&T Directorate coordinates similar non-traditional agents (NTAs) efforts with other agency partners. New chemical forensic initiatives are coordinated with other DHS components, FBI, DTRA, Technical Support Working Group (TSWG), EPA, FDA, USDA, Intelligence Community (IC), and other federal agencies, as well as international partners, to ensure effective leveraging of studies that pertain to the Chem FP mission. In FY 2010, the project evaluated and developed collection, preservation, and analytical methods for additional CTAs, prioritized by risk and intelligence, as well as environmental effects on sampling and signatures. In FY 2011, the project will develop standards for evaluation of chemical sampling and preservation methods and develop additional analytical methods for emerging CTAs prioritized by risk and intelligence. The Chem FP will design moot courts to identify and evaluate law enforcement and judicial admissibility issues as well as challenge the scientific underpinnings of Chem FP methods. In FY 2012, the project plans to identify best practices for the collection and preservation of different types of chemical evidence at the scenes of chemical incidents and develop a “Guidelines for Chemical Sampling” publication based on completed and on-going studies.

Integrated Consortium of Laboratory Networks (ICLN) Project – Consists of a national homeland security infrastructure with a coordinated and operational system of laboratory networks that provide timely, high-quality, interpretable results for early detection and effective consequence management of acts of terrorism and other events requiring an integrated laboratory response. This project will provide optimized national laboratory preparedness by improving coordination of laboratory response to incidents and by promoting common standards of performance across laboratory response assets of multiple Federal agencies. In FY 2010 the project initiated a risk-based laboratory response gap prioritization study and tested its integrated laboratory response architecture. In FY 2011, the project will complete the risk-based laboratory response gap prioritization study. In FY 2012, the project plans to transition operational aspects of the ICLN to OHA.

Integrated Detection/Decontamination Demonstration Project – Demonstrates newly evolving tools for detecting the release, mapping contamination, and monitoring the decontamination process through facility clearance of evolving chemical threats. This project plans to reduce the overall time for recovery of critical infrastructure by focusing response on affected areas. In FY 2010, this project completed a system study and market survey of technologies and procedures, and began planning a laboratory demonstration of available technologies. In FY 2011, this project plans to perform laboratory-scale demonstrations and evaluate performance of surveyed

technologies. A table-top exercise of a remediation scenario will be conducted. In FY 2012, the project will develop a concept of operations for the remediation process and begin planning a large-scale demonstration.

Non-Traditional Threat Agents (NTA) Laboratory Capability Project (formerly NTA Mobile Laboratory Capability) – Develops a high-throughput chemical laboratory system for analysis and identification of NTAs. The project will enable high-throughput analysis for rapidly mapping contamination and supporting the recovery of contaminated areas. This project will help government officials make rapid determinations and expedite the return of areas contaminated with evolving chemical threats to normal use. In FY 2010, the project initiated the validation of analytical assay performance across multiple matrices, optimization of sample preparation methods to maximize agent recovery/detection, and completion of a system design. In FY 2010, the project also initiated lab design based upon the front-end analysis to evaluate appropriate protocols and technologies for inclusion in the laboratory, and gather necessary standard operating procedures from end-users. In FY 2011, the project will initiate lab construction using customer-designated platforms. In FY 2012, the project will complete construction of the laboratory platform, perform a throughput demonstration using the newly developed protocols, and initiate the laboratory acceptance process with the stakeholders.

Explosives Attack Resiliency Program – FY 2012 estimate: \$13.091 million. Provides advanced planning, develops CONOPS, develops advanced materials and funds exercises and training for responding to and recovering from a disaster employing explosives.

Active Blast Protection Project – Researches materials used to protect infrastructure and buildings in case of an IED attack. The project will focus on efforts to develop a high-performance building envelope model (HPBEM), which will include modeling and calculation requirements, metrics, benchmarks, verification, and establishing analytical validation methods. The model will include high-performance requirements for security, blast protection, resiliency, energy conservation, sustainability, durability, cost effectiveness, and other elements to provide for high-performance building envelopes. In FY 2010, the project reported on current building envelope technologies and researched new curtain wall systems (CW). In FY 2011, the project will develop a HPBEM with input from key sectors of the building industry. In FY 2012, the project plans to develop a HPBEM for structural systems, which will include security, blast protection, and disaster mitigation.

Blast Analysis of Complex Structures Project – The project focuses on reducing substantial damage to buildings resulting from IED attacks in large urban centers. In the initial phase, the streetscapes of the New York City Financial District were modeled to include rigid representations of all the buildings and the geometry of all the streets and alleys. The project develops computational tools to quickly calculate structural responses to a range of explosives. The project provides methods for blast engineers to calculate blast loads in dense urban environments and perform calculations to estimate the relationship between an overcast sky and

blast loads. In FY 2010, the project's second phase modeled the Midtown Manhattan section of New York City. In FY 2011, the project will deliver a database of structural blast loads on urban buildings. In FY 2012, the project plans to deliver a generic unclassified version of the fast-running airblast tool that can be applied to any urban environment.

Blast/Projectile – (Advanced Materials Design Project) – Develops design guidance based on best practices for the engineering and design community. The project's current focus is on a high performance and integrated design approach for inherent resilience of surface transportation infrastructure through four major efforts:

- The Advanced Materials Database - S&T is developing a repository for information on advanced high-performance materials that exhibit significantly enhanced attributes, characteristics, and properties to significantly increase the resilience of the built environment and the transportation sector, such as bridges, highways, subway stations, railroad stations, and tunnels.
- The Building Infrastructure Protection Series (BIPS) - BIPS consist of publications that provide the latest techniques for performing a rapid visual screening risk assessment for mass transit, tunnels, and bridges for natural and man-made hazards.
- Ultra High Performance Concretes (UHPC) - S&T is researching UHPCs for the construction of new bridges, tunnels, and highways to counter the effects of natural and man-made disasters in critical infrastructure (i.e., bridges, subway stations, railroad stations, and tunnels).
- The Security, Energy, and Environmental Solutions (SEE) – This effort is designed to promote blast protection, energy efficiency, and sustainability in terms of existing and new infrastructure, including tunnels and bridge safety, security, durability, productivity, and functionality in all national infrastructure, including the state-of-the-art technology for transportation infrastructure and tunnels.

In FY 2010, the project reported on the advanced materials in critical infrastructure protection. Additionally, the project accelerated efforts to identify novel materials for a wide variety of blast protection applications through the Advanced Materials Database and the Security Information and Technologies Exchange Database, which comply with Interagency Security Committee, Unified Facilities Criteria, and Veteran Affairs standards. The project completed the Integrated Rapid Visual Screening tool for Tunnels, Mass Transit Stations, and Federal and Commercial Buildings. The project developed 90% drafts of the Primer to Design Safe School Projects in Case of Terrorist Attacks and School Shootings, A How-to Guide to Mitigate Potential Terrorist Attacks against Buildings, and A Reference Manual for the Mitigation of Buildings Against Terrorist Attacks. In FY 2011, the project will conduct numerical modeling of material properties and begin development of materials to meet requirements for blast resistance. The project will also begin the development of the Integrated Rapid Visual Screening tool for Bridges. In FY 2012, the project plans to design materials with enhanced blast-resistant properties.

Blast/Projectile – Protective Measures and Design Tools Project – Provides protective measures along with design guidance for protecting the Nation’s most critical infrastructure assets. Protective measures may include mechanisms to reduce blast effects, rapid mitigation and restoration technologies, and other defensive measures. This project is working closely with several mass transit agencies, including the Port Authority of New York and New Jersey, Bay Area Rapid Transit, and the Massachusetts Bay Transportation Authority to protect critical components of subway systems from terrorist threats. Working in close coordination with the Transportation Security Administration (TSA) and transit systems, the project is developing new technologies to address key vulnerabilities in tunnels, stations, and associated ventilation structures. Within the next three years, the project will develop and test technologies to protect transit infrastructure in New York and San Francisco, California. Additionally, the project is assessing vulnerabilities and identifying mitigation schemes to protect bridges from vehicle-borne improvised explosive devices (VBIEDs) and other explosive attacks. Specifically, materials are being investigated to protect towers and cables of long-span bridges from catastrophic failure. As part of the development process, the project will numerically analyze protective designs against blast and projectile threats and conduct physical demonstrations to assess their effectiveness. This work will mature and expand existing protective measures by making them less expensive, easier to apply, and more effective, and will develop entirely new materials and design concepts for additional classes of infrastructure. In FY 2010, the project developed and conducted scaled demonstrations of protective measures for concrete bridge towers. Also in FY 2010, the project worked closely with two U.S. mass transit agencies to design protective schemes. In FY 2011, the project will conduct physical testing of tunnel retrofits and report on analysis of additional protective measures to protect against explosive blast for critical transit infrastructure. In FY 2012, the project plans to conduct analyses of transit ventilation structures, and provide design guidance for protection of bridges and mass transit structures.

Blast-Resistant Materials – Develops proof-of-concept material technologies to mitigate the explosive/blast force and fragments from an IED. This project includes basic research on advanced blast-resistant materials with properties that provide added protection to high-value structures that are likely targets of IED attacks. This includes new materials and deflecting structures that reduce damage to critical infrastructure and/or personnel. In FY 2010, the project developed and characterized materials with blast-resistance properties, including woven composites, micro-trusses, and foams. In FY 2011, the project will evaluate materials to protect against high-velocity kinetic-energy penetrators. In FY 2012, the project plans to continue to develop materials and test performance against blast effects. Materials to be evaluated in FY 2012 include polyurea coatings and novel types of blast resistant glass.

Bridge Vulnerability Project – Develops an understanding of the vulnerabilities of different types of bridges. This project will evaluate vintage bridge components to improve understanding of explosives effects and to refine blast modeling tools. The approach is unique from previous

research in that it examines actual bridge sections exposed to wear or aging instead of fabricated specimens. As a result, it will provide more accurate vulnerability information for aging bridges and allow for refinement of existing numerical models that predict failure of bridge components. The project is using the Golden Gate Bridge, Crown Point Bridge (NY State - Lake Champlain), Manhattan Bridge (NYC East River), and the Waldo Hancock Bridge (Maine) for homeland security research on potential effects of an IED attack against a bridge. These efforts are in partnership with the Maine Department of Transportation (DOT), NY DOT, NYC DOT, Golden Gate Bridge Authority, and the Federal Highway Administration. In FY 2010, the project recovered vintage bridge components and developed a plan for explosive testing to assess critical bridge vulnerabilities. In FY 2011, the project will gather additional vintage bridge components and perform initial blast experiments. In FY 2012, the project plans to conduct and report on additional blast experiments with these bridge components.

Community Resilience Project – Conducts research into methodologies for effective hazard and risk communications to enhance the ability of local officials to convey understandable and credible warnings of IED activity to the public. This project will help local government and civic officials understand how to properly frame risk warnings and post-event instructions to maximize the public’s understanding of the information while maintaining public trust and confidence. In FY 2010, the project issued a preliminary report detailing the current understanding of risk perception and hazard and risk communication. The report provided preliminary guidelines to government and civic officials for effective IED communication strategies. The report also evaluated preliminary guidelines against historical events, experiential reasoning, and expert knowledge among authorities in terrorism, risk perception, media communications, and public administration. In FY 2011, the project will develop a feasibility study, concept of operations, and technical specifications for a simulation-based system that will enable officials to develop, evaluate and train hazard/risk communications strategies at the local level. In FY 2012, the project plans to initiate development of agent-based models of emergent behaviors among populations during IED/terrorist events.

Enhanced Blast Explosives in Urban Canyons Project – Characterizes the effect of IED events in urban canyons, (i.e., city landscapes populated with tall buildings) and develops a high-quality database of blast overpressure measurements to refine numerical models to accurately predict the complicated reflection, diffraction, and diffusion of blast waves in these scenarios. Accurately characterizing the explosive air blast in an urban environment is critical for predicting casualties and building damage, developing structural retrofits and blast mitigation methods, and planning response operations. The S&T Directorate is collaborating with the Technology Support Working Group on this project. In FY 2010, the project conducted a series of half- to full-scale explosives tests in a wide range of simulated urban environments. In FY 2011, the project will perform the second phase of urban blast experiments. In FY 2012, the project plans to continue these efforts.

Operationally Deployable Explosives Mitigation - Develops new approaches and technologies to or/from an explosive and (sand ball bearing ,tacks ,nails ,.g.e) mitigate the shrapnel damage The novel concept is to mitigate the effects of explosives by forcing the .suicide bombers .shrapnel into the ground to minimize damage to surrounding people and infrastructure

Render Safe/Diagnostics Project – Increases standoff capabilities, reduces collateral damage and provides more precise IED disruption and disablement capabilities and techniques for bomb squads. In FY 2010, the project transitioned a decision-support tool for tactical decision making when disabling a threat. In FY 2011, the project will deliver four prototype Electro-Adhesion units for IED defeat. In FY 2012, the project plans to demonstrate an advanced Robotic Arm system with improved articulation to provide for IED defeat.

Stabilization of Damaged Structures Project – Develops technologies that will research priorities to fill gaps on building stabilization and investigates materials that might stabilize a building after an IED attack. In FY 2010, the project created a research clearinghouse of available technologies to help stabilize buildings. The project focused on four key areas: monitoring, sensing and modeling; creating a Building Information Modeling (BIM) First Responders Standard; risk assessment and decision-making; and building stabilization technologies and testing. The project will hold four workshops in those areas and produce reports from the workshops. The results from the Blast Analysis of Complex Structures Project will be incorporated into the BIM module. In FY 2011, the project will create a BIM First Responders Standard, develop risk assessment and decision-making tool and conduct test simulations for building stabilization technologies. In FY 2012, the project plans to conduct final test simulations for building stabilization technologies and materials.

First Responder Capability Program – FY 2012 estimate: \$25.691 million. Develop technologies, information, procedures, and CONOPS to aid first responders, emergency managers, and incident commanders as they respond to hazardous situations. Assist the emergency response communities to establish requirements. Tests technologies and assesses them for usability to help make the technologies available across all First Responder communities.

Advanced Incident Management Enterprise System (AIMES) Project – Develops the next-generation incident-management enterprise system. It builds upon the UICDS architecture and Training, Exercise & Lessons Learned framework by providing an integrated, interoperable, and unified common operating picture with total visibility into incident information; resources; environment; logistics supply chain; response and recovery plans; methods; tactics; and policies. AIMES will integrate all elements of the incident management enterprise in order to provide a secure, scalable, interoperable, and unified situational awareness to the responder community. In FY 2010, the project designed, developed, and tested an AIMES prototype enterprise framework. In FY 2011, the project will integrate logistics functions and modeling tools into AIMES. In FY

2012, the project plans to roll into the Homeland Security Incident Management Enterprise which contains UICDS.

First Responder Technologies - Develops and designs technologies to address capability gaps identified by Federal, State, local, and tribal First Responders in the First Responder Capstone Integrated Product Team (IPT). Using prioritized capability gaps from the IPT, the S&T Directorate's technical divisions propose technology solutions. The First Responder IPT then prioritize the proposed technology solutions to determine funding needs. This program also tests technologies, assesses them for usability, and commercializes them so the technologies are available across all First Responder communities. In FY 2010, Federal, State, local, and tribal First Responders identified science and technology requirements and prioritized technology solutions proposed by the S&T Directorate divisions. The S&T Directorate, in continued partnership with the Naval Post Graduate School, developed and implemented a process for field-testing First Responder prototype technologies. In FY 2011, the program will continue to field-test First Responder prototype technologies. It will also continue to coordinate the activities of and provide leadership to the S&T Directorate First Responder IPT. In FY 2012, the program plans to continue to coordinate the activities of and provide leadership to the S&T First Responder IPT to provide a fair and equitable process for collecting and addressing technology gaps from the First Responder community Nation-wide.

Geospatial Location Accountability and Navigation System for Emergency Responders (GLANSER) Project – Develops an advanced first responder locating system that includes integrated sensor components and software for visualizing locations and tracking incident commanders. The technology uses building diagrams, floor maps, and office/apartment location, and securely connects to emergency operations centers (EOCs). This system will enable incident commanders and decisions makers to visually track responders to enhance overall situational awareness while providing incident commanders the ability to accurately locate and track personnel to rapidly and effectively re/deploy and save at-risk responders during an incident. The project plans to develop a system that will improve accuracy and signal penetration inside enclosed areas (i.e. collapsed buildings, subterranean facilities, or underground); conduct testing in major urban areas; and demonstrate key 3D-locator prototype sub-components to track first responders within an accuracy of less than three meters. In FY 2010, the project developed the system prototype and conducted an initial feasibility demonstration of the prototype in Minneapolis, MN Fairfax, VA, and an exhaustive multi-building test at the National Institute of Standards and Technologies in Gaithersburg, MD. In FY 2011, the project will demonstrate a 3D-locator sensor with an accuracy of three to five meters and develop a detailed visualization component. In FY 2012, the project plans to refine the accuracy of location detection of GLANSER to at least one meter or less while integrating the system components. The project also plans to complete an initial prototype demonstration of GLANSER in a relevant operational environment.

Physiological Health Assessment Sensor for Emergency Responders (PHASER) Project – Develops an integrated sensor package that will monitor a responder’s vital signs such as cardiac rhythm, heart rate, blood pressure, body temperature, and oxygen saturation, which could indicate Pre-Ventricular Contractions (PVCs) or cardiac arrhythmias. First responders need a highly reliable metric and notification system for on-scene identification of firefighters who are about to experience a heart attack or other life-threatening condition. This project plans to fuse these measurements to establish the physical health of the responder and warn both the wearer and command staff of life-threatening physiological conditions during an incident. In FY 2010, the project developed the initial CONOPS and operational requirements, developed innovative monitoring metrics as part of the PHASER architecture, integrated a series of sensors and conducted trials with Redondo Beach Fire Department to validate the initial PHASER prototype. In FY 2011, the project will adjust its focus and aggressively conduct further basic research to develop a better understanding of the science that would underlie a successful physiological monitor and conduct additional tests with additional responders. In FY 2012, the project plans to obtain informed consent on testing clinical trial conditions and baseline the architecture and sensors for PHASER.

Southeast Regional Research Initiative – The Southeast Regional Research Initiative (SERRI) program, assists State, local, and tribal leaders within the Southeast Region in developing tools and methods required to anticipate and forestall terrorist events and to enhance disaster response. SERRI project areas for FY 2010 addressed identified DHS/FEMA requirements and capability gaps.

Technology Clearinghouse Project – Provides a certified and accredited web-based central resource system of technical information to serve as a one-stop-shop for the dissemination of homeland security science and technology information to Federal, State, local, and tribal agencies; the system and associated efforts encourage and support innovative solutions to enhance homeland security. Along with other outreach efforts (e.g., publication of First Responder Technologies (R-Tech) bulletins, participation at key First Responder conferences and events), the website also fulfills Section 313 of the *Homeland Security Act of 2002*. The Tech Clearinghouse provides: 1) government organizations with information to support procurement and grant guidance decisions; and 2) technology developers with requirements and operational information that can assist them in developing tools that are more useful. Tech Clearinghouse continually identifies and integrates new sources of relevant information for First Responders into its website development. In FY 2010, the project integrated content from other existing government agency databases that have relevant S&T information for First Responders. In addition, during the second quarter of FY 2010, First Responder Communities of Practice was launched. First Responder Communities of Practice is an online network of vetted, active, and retired First Responders, emergency response professionals and Federal, State, local, or Tribal Homeland Security officials sponsored by S&T Directorate’s First Responder Technologies (R-Tech) program. Registered members of this professional network share information, ideas, and

best practices, enabling them to more efficiently and effectively prepare for all hazards. In FY 2011, the program will identify and integrate new sources of information into Tech Clearinghouse. Tech Clearinghouse efforts in FY 2011 include technical assistance to First Responders to solve matters related to technical deficiencies, policy, guidance, and/or governance issues. Also in FY 2011, The First Responder Communities of Practice will continue to grow its membership, in order to provide a collaboration site for many of the Nation's First Responders. In FY 2012, the program plans to identify and integrate new sources of information into FirstResponder.gov and grow the Communities of Practice membership.

TechSolutions Project – Rapidly addresses the technology gaps identified by Federal, State, local, and tribal First Responders. The TechSolutions project fields prototypical solutions in 12 to 15 months; establishes a cost that is commensurate with the proposal (normally \$1.0 million dollars or less per project), and develops a solution that meets 80 percent or more of the identified requirement. First Responders are able to submit gaps to the program through the website, www.TechSolutions.dhs.gov. TechSolutions validates capability gaps and First Responder priorities by working with a panel of First Responder subject matter experts to include the Inter-Agency Board (which comprises over 1,000 leaders from fire, police, and Emergency Medical Services (EMS) throughout the United States). In FY 2010 and 2011, the program continued and will continue to collect capability gaps received through the TechSolutions website, virtual workshop meetings and the First Responder Capstone IPT as a means for determining prototype and demonstration opportunities. In FY 2010, the TechSolutions project delivered and demonstrated prototype technology Brain Music, Thales Radio, Less Lethal Light Emitting Diode Device, Regional Operational Pilot Program, and Interoperable Personal Protective Equipment. Six new first responder capability gaps have been identified for TechSolutions FY 2011 project portfolio. Development efforts are scheduled to beginning in the second quarter of FY 2011. In FY 2012, TechSolutions will continue to identify first responder capability gaps and develop/test four to six new prototype technologies.

Information Sharing, Analysis, and Interoperability Program – FY 2012 estimate: \$23.682 million. Create an integrated information sharing architecture and link that architecture to interagency efforts to prevent terrorism while protecting privacy, civil rights and civil liberties; Research, analyze and develop technologies to strengthen interoperable communications and improve effective information sharing at all levels of government.

Cloud Computing Project - Conducts research through interagency collaboration and partnership with industry to establish the highest impact pursuits for de-centralizing the collection and distribution of data for incident management or infrastructure protection. In FY 2012, the project plans to establish formal partnering agreements with industry to co-sponsor prioritized requirements definition and initiate research for distributed data for use by multiple entities in a secure environment.

Collaboration Project – Creates valuable scientific and technical collaboration with partners both inside and outside the DHS research community. This enables the S&T Directorate to leverage both its funding and technical expertise and take advantage of research activities underway in government and industry laboratories and in universities in the US, as well as abroad. In FY 2010, the project expanded joint programs to include machine learning (DHS National Science Foundation (NSF) Foundations of Data and Visual Analytics (FODAVA)); visual analytics based cyber security techniques (European Union), cognitive science for visual analytics (Canadian VAC), and large-scale database visualization (Germany). In FY 2011, the project will complete integration of FODAVA mathematical design with NVAC and complete the first joint research program with the German Ministry of Interior. In FY 2012, the project plans to establish a joint visual analytics university consortium for UK, Germany, U.S., and Canada.

Common Operating Picture (COP) Data Fusion Technologies Project – Develops sensor integration technologies to fuse massive volumes of surveillance information from government agency and private sector sensor systems. In FY 2010, this project developed the Real-time evacuation Planning Model (RtePM), a data fusion and analysis tool to support evacuation planning, and produced emerging requirement analysis and information sharing papers and processes. In FY 2011, the project will enhance RtePM to include more planning functionality, as well as a dynamic mode for operational use, and develop a symbology service to facilitate information sharing across organizations and jurisdictions. In FY 2012, the project plans to transition RtePM to an operational support organization, as well as analyze requirements and develop a capability for Incident Response Coordination via 3G Networks.

Compliance Assessment Program (CAP) – A partnership between S&T and the National Institute of Standards and Technology, this project currently provides local, state, and Federal emergency responders with an independent and transparent process to formally assess communications equipment against a select group of requirements within the suite of Project 25 (P25) standards. P25 standards make it possible for radios to interoperate regardless of manufacturer, enabling emergency responders to communicate. In FY 2010, nine major land mobile radio manufacturers completed testing of emergency communications equipment through P25 CAP. In FY 2011, the project expanded interoperability and performance testing to include conformance testing, as well as assessing VoIP systems that implement bridging standards. In FY 2012, the project plans to fully incorporate conformance tests into the program and begin the transition of the P25 CAP to a fully compliant ISO 17025 laboratory program with lab assessments performed by recognized lab accreditation bodies and supported by fees paid by participating labs.

Converged Interoperable Communications Project – Develops a system of systems approach to enable effective coordination across organizational and jurisdictional boundaries and seamlessly share relevant information when needed, as authorized. Ultimately, this will allow emergency responders to coordinate preparations for response and recovery efforts for day-to-day incidents and large-scale

emergencies, such as a major hurricane. Emergency responders will be able to coordinate to pre-position assets better to assist in response efforts, plan for mass evacuations, monitor the availability of resources, and measure the initial impact. In FY 2011, the project will continue to conduct research and development of new and emerging technologies supporting emergency response agencies' integration of narrowband and broadband networks. In FY 2012, the project plans to develop improved, networking technology that would allow emergency responders to share information and wireless broadband networks, as well as evaluate existing technologies. These networks may be shared between local jurisdictions to create a regional network or shared with commercial entities through a public-private partnership.

Discrete-Element Computing, Privacy, and Forensics Project – Develops specialized technologies and techniques for accessing, managing, and processing multiple data types, modes, and structures. To be most effective and useful, these techniques must operate in real-time on dynamic, streaming data and include networked sensor or surveillance data. In FY 2010, the project designed and created the discrete-element computing hardware architecture, demonstrated a discrete element framework for synthetic simulation environments, and piloted discrete-based techniques for incorporating information privacy and security. In FY 2011, the project will test common data-intensive computing architecture and identify privacy-ensuring data elements. In FY 2012, the project plans to test data-intensive architecture for discrete computing simulations and develop parameterized discrete computer algorithms for real-time computer forensics.

Emergency Data Exchange Language (EDXL) Project – Facilitates the RDT&E of practitioner-driven, information-sharing standards and encourages their implementation into software, systems, and devices. In FY 2010, the project expanded its standards development work to address the list of gaps identified through the gap-analysis effort, as well as develop and pilot additional data-messaging standards. In FY 2011, the project will expand standards development to ensure seamless information exchanges among the emergency management services at the local, tribal, State, and Federal levels including Federal Emergency Management Agency (FEMA)'s Integrated Public Alert and Warning System (IPAWS), the Commercial Mobile Alert Service (CMAS), and health-related fields. In FY 2012, the project plans to reevaluate gap analysis of key information exchanges to identify new standards that practitioners will prioritize and ensure that new, improved emergency response communications technologies align with the National Incident Management System (NIMS) and National Incident Exchange Model (NIEM) to provide message exchange standards that helps to promote information sharing.

Integrated Data Processing and Analysis Project - Develops scalable technologies for the integrated analysis of free text, database records, audio, video, imagery, transactional data, geographical data, and sensor information. This project provides technological tools for intelligence analysts to "connect the dots" of information that is legally collected by DHS to protect the homeland. In FY 2010, the project transitioned text analysis/geospatial capability to the production environment and demonstrated a proof-of-concept prototype to ICE and local and

State partners. In FY 2010, the project also transitioned the Detainee Prioritization and Questioning system to ICE and deployed information-sharing enhancements among regional law enforcement agencies. In FY 2011, the project will conduct regional information sharing and collaboration pilots with law enforcement agencies in the Mid-Atlantic and Pacific Northwest regions. In FY 2012, this project plans to deliver information sharing capabilities for law enforcement to include: Multi jurisdictional alerts and deconflictions; enhanced data access from field agents through mobile devices; and scar, marks and tattoos capture and access. It will also deliver the capability for law enforcement to share tribal vehicle and driver information, warrants and license plate information. The project also plans to pilot device agnostic applications for mobile devices and develop detailed plans for portal technology implementations.

Internet Protocol (IP) Communications Test and Evaluation Project – Researches IP-enabled communication technologies and evaluates promising solutions. This project will enable the emergency response community to confidently deploy and use IP technologies and integrate video, cellular, and satellite communications. In FY 2010, the project published the first video quality requirement manual and transitioned a set of VoIP standards and best practices, which were prioritized by public safety and confirmed by industry, for an operational environment. In FY 2011, the project will complete the first draft of the next VoIP implementation profile focused on the technology area prioritized by practitioners, identify video standard requirements for emergency response activities, and publish results and lessons learned from pilots of new technologies. In FY 2012, the project plans to begin testing the VoIP implementation profile and publish initial voluntary consensus standards for live-streaming video that the emergency response community uses.

Law Enforcement Data Fusion Project – Geospatial predictive analytics tools aid law enforcement agencies in combating terrorism, gangs, and conventional criminal activity before an event occurs. Using statistical algorithms, geospatial predictive analytics analyze the location of historically documented incidents and the features of the environment that influence or constrain events in order to forecast the locations of future events. In FY 2010, this project piloted the integration of this GIS software into two Fusion Centers, New Jersey and Virginia and the Federal Air Marshall Service (FAMS). GIS experts are embedded in the Fusion Centers working side by side with Fusion Center and FAMS investigators and analysts. In FY 2011, the project will be integrated into the Federal Air Marshall Service (FAMS) Investigations Division and undergo further development for use in Fusion Centers. The project will be enhanced by the development of a risk assessment framework that will be piloted in conjunction with NPPDs Office of Risk Management and Analysis. In FY 2012, the project plans to transition the risk assessment framework to NPPD.

Multi-Band Radio (MBR) Project – Supports the testing and evaluation of MBR technologies manufactured by multiple vendors through demonstrations and pilots nationwide. These efforts will focus on testing the radio's operation across multiple systems— analog, conventional, digital, and current Project 25 adjusted —and multiple public safety agencies, including: local,

tribal, State and Federal (e.g., DoD, DOJ, DHS). In FY 2012, the project plans to deliver a comprehensive best- practices guide that emergency response agencies can use to quickly implement Multi-Band Radios and achieve communication interoperability in their local and regional areas.

Public Safety Standards and Applications Project (Formerly known as Threat Dissemination Standards) – Disseminates intelligence products to State, local, and private sector security partners. In FY 2010, the project designed specifications for sensor fusion standards and exchange protocols, continued the pilot test with the Los Angeles Police Department (LAPD) ARCHANGEL program, and transitioned CIIMS to a commercially available capability. In FY 2011, the project will develop and test the Intelligent Public Safety Gateway (IPSG) information management system to support threat based analysis of law enforcement incidents and vulnerabilities. In FY 2012, the project plans to enhance and extend the IPSG to include additional capabilities that address the broader public safety community.

Suspicious Activity Reporting (SAR) Project – Develops an open-source toolkit, which is a set of analytical capabilities delivered via a flexible and adaptive framework that empowers analysts, investigators and watch standers to find and understand complex relationships within their law enforcement or terrorism related data. In FY 2010, the project performed technology assessments, system interface specifications, and software development for SAR. The Analytic Toolkit (ATK) has been integrated into the Federal Air Marshalls (FAMS) Investigative Unit. In FY 2011, the project will transition to FAMS for operational use.

Tagging, Tracking, and Locating Project – Develops technologies to provide tagging, tracking, and locating devices for the law enforcement community. In FY 2010, the project expanded the capabilities of current direction-finding equipment adapted to the changing cellular landscape. In FY 2011, the project will develop a single Graphic User Interface (GUI) and software package to allow simultaneous signal across various cell phone protocols. In FY 2012, the project plans to build upon previous research in fourth-generation mobile communications protocol(s), assess direction-finding roadmap, and deliver hardware and software upgrades.

Virtual USA (vUSA) – A collaborative effort among DHS S&T, other DHS entities, and State and local emergency responders to reduce technology and governance barriers to sharing information among the homeland security and emergency responder community. vUSA integrates existing frameworks and investments of the emergency response community, at all jurisdictional levels, to improve situational awareness by providing real-time access to operational information – such as weather conditions; traffic; the location and operational status of critical infrastructure; fuel supplies; availability of emergency shelters and medical facilities; and other critical information. In FY 2011, the current vUSA Prototype will be migrated to the DHS OCIO Enterprise Architecture resulting in an operational capability. This will enable vUSA to leverage existing security, identity management and access control policies and best practices within DHS. Also in FY 2011, a new vUSA regional pilot will be identified to

leverage past success with vUSA regional pilots and incorporate new and emerging technologies. In FY 2012, the FY 2011 pilot will be completed and feedback from pilot participants will be incorporated into the vUSA operational capability. Also, in FY 2012 a subsequent vUSA pilot will be identified to leverage new DHS service offerings such as service oriented architecture (SOA) and data services that would benefit vUSA participant's at all jurisdictional levels.

Visual Analytics, Precision Information Environments (VAPIE) Project – Enables diverse, diffuse, and dynamic data to be shared, analyzed, and understood in real time through visualization-based techniques and technologies. The techniques enable users from the local, tribal, State, and Federal first responder, law enforcement, public safety, and public health communities to collaborate with database information, as well as on-scene data. In FY 2010, the program designed and demonstrated a combined Port Authority of New York and New Jersey (PANYNJ) Computer Statistics (CompStat) and San Diego-based Automated Regional Justice Information System (ARJIS) Scalable Reasoning System (SRS) capability in both locations; completed integration of the NVAC, the CCI Center of Excellence, and the DHS-NSF FODAVA research activity; and demonstrated a limited, metropolitan-scale precision information environment for San Diego and Seattle. In addition, the program supported the 2010 Olympics by implementing a Common Operation Picture and a Visual Analytics Center and will establish a basic Science-Industry-Funding Transfer framework (SIFT) for moving research products to local, State, and Federal applications. In FY 2011, the project will develop incident-scale simulation capability, and demonstrate the Mid-Atlantic Data Sharing Program. In FY 2012, the project plans to establish a second National Science Foundation (NSF)-DHS joint program on foundations of data and visual analytics.

Wireless Broadband Technology Project (formerly Wireless Broadband Productization) – Tests and evaluates commercially available and emergent wireless broadband products to address capability gaps and determine areas that require new or focused research. The project will ensure that technologies developed in the laboratory work in a real-world environment to support the emergency response community. In FY 2010, through the National Public Safety Telecommunications Council (NPSTC) Broadband Working Group established consensus around the Long Term Evolution (LTE) standard for Public Safety Broadband Network development. In FY 2011, the project will help support an update to the 2007 700MHz broadband Statement of Requirements for public safety. In FY 2012, the project plans to document research findings and publish recommendations regarding transition to wireless broadband solutions across multiple spectrum options.

Wireless Tracker – Develops technologies to provide tagging, tracking, and locating devices for the law enforcement community. In FY 2012, the project plans to build upon previous research in fourth-generation mobile communications protocol(s), assess direction-finding roadmap, and deliver hardware and software upgrades.

Natural Disaster Detection Program – FY 2012 estimate: \$1.104 million. Research, develop, and/or identify tools to detect and evaluate the magnitude of natural disasters to provide early warning. Defines concepts, requirements, and procedures for improved techniques for early detection and warning of natural disasters threats and the prediction of magnitude of these disasters.

Seismic Activity Detection Data Collection, Analysis, Alert, and Warning Project – Develops the data sources to support design and development of models that provide earlier prediction of seismic activity than is currently available from ground-based seismic monitoring systems. The project also integrates the modeling predictive capabilities with emergency management alert and warning systems, planning capabilities, and training and exercise programs. In FY 2011, the project will collect and evaluate requests for information for a Geospatial Analysis Program to explore the use of overhead sensor data as an input to an early warning system for seismic activity. Also in FY 2011, the project will lay the groundwork to develop seismic warning models that integrate overhead sensor data into emergency management planning tools to provide better predictions of earthquake consequences. In FY 2012, the project plans to test and evaluate existing data sources and process techniques to identify earthquake zones of high stress. The project also plans to develop geospatial analysis models that exploit overhead sensor data to provide early warning of seismic activity and integrate those data into emergency management planning tools to provide better predictions of earthquake consequences on the affected region.

Wild Fire Detection and Prediction Project – Develops the tools to improve remote sensing systems, advanced image processing techniques, and fire modeling systems to detect, locate, and then predict the magnitude of wild fires to help prevent wildland-urban interface (WUI) fire disasters. In FY 2011, the project will define an operating concept and requirements with Federal and State response agencies for improved data acquisition and analysis techniques for the early detection of wild fires in remote locations and the prediction of potential magnitude and direction of wild fires, if left alone. In FY 2012, the project plans to prototype improved techniques for early detection of wild fires in remote locations and prediction of magnitude and direction of wild fires.

Natural Disaster Resiliency Program – FY 2012 estimate: \$19.156 million. Develop and provide advanced planning, CONOPS, disaster management tools, and training aids for responding to and recovering from a large-scale natural disaster including private sector assistance to “design-in” greater resilience for critical infrastructure; and provide DHS with more robust tools for disaster response and field coordination, disaster logistics, individual and public assistance programs, as well as national continuity programs.

Enhancing Public Response and Community Resilience Project – Makes empirically based recommendations about prioritizing and addressing public needs. Using data generated during hurricanes Katrina and Rita, the project will capture and communicate lessons learned to enhance Federal, state, and local responses to future catastrophic events. In FY 2010, the project

completed a geospatial analysis of needs for shelter, food, disaster relief, and other services during the evacuations from Hurricanes Katrina and Rita in Texas. This analysis will help First Responders and response planners to anticipate assistance needs during hurricanes and other catastrophic events and more accurately plan for resource requirements and evacuation strategies. In FY 2011, the project will deliver a validated template for national 2-1-1 call systems to standardize the receipt and recording of information to improve preparedness, response planning, and delivery of emergency services and information before, during, and after catastrophic events. In FY 2012, the project plans to develop a computer-based data management system to enable automatic compilation of 2-1-1 Call Center data and deliver a report identifying resilience goals, baseline conditions, performance metrics, and methodologies to guide implementation of resilience initiatives at the community level. The project also plans to deliver a feasibility study and develop a strategy for a social network analysis system that could be employed in disaster preparedness and planning. Finally, the project plans to deliver a report identifying potential causal and relational links of Post Traumatic Stress Disorder (PTSD) between multiple variables among First Responders.

Federal Emergency Management Agency (FEMA) Project – The FEMA “Disaster Management & Support Environment” project in FY 2011, will (1) improve access to accurate, timely and relevant emergency management information; (2) provide modernization of FEMA disaster field operations; (3) provide enhanced support to national, regional, and local exercise programs to improve community resilience.

Incident Logistics and Resource Tracking System Project – Provides a comprehensive and transparent disaster logistics enterprise across all disaster response, including public and private partners. Past incidents, such as Hurricane Katrina, highlighted the need for an integrated logistics capability to provide relief supplies to victims in a timely manner. This capability will provide decision makers overall situational awareness for timely procurement and disbursement of public and private material inventories, locations of resources, and supplies to respond to an emergency. The tracking system will allow FEMA to manage critical resources more effectively and will enhance real-time coordination and situational awareness. This capability will be scalable and interoperable with Federal, state, and local systems (legacy and future) to enable efficient use of the supply chain. In FY 2010, the project developed the logistics system and began integration into FEMA’s Total Asset Visibility (TAV) capability. In FY 2011, the project will complete user testing of the first prototype system. In FY 2012, the project plans to roll into the Homeland Security Incident Management Enterprise which contains UICDS.

Levee Strengthening and Damage Mitigation Project – Develops techniques to rapidly seal a breached levee. In September 2008 and November 2009, the project successfully demonstrated the Portable Lightweight Ubiquitous Gasket (PLUG) at the United States Department of Agriculture (USDA) facility in Stillwater, Oklahoma. The PLUG, at quarter scale, greatly impeded the water with a flow rate of nearly 120 cubic feet per second. This demonstration also included a 1) Long Shallow Breach PLUG specifically designed for levees similar to the ones

that failed in New Orleans during Hurricane Katrina and 2) Rapid Spillway/Earthen Dam Protection technology that protects earthen sections by minimizing erosion during high water flows. The project's subsequent activities were built on these successes. In December of 2010, the project successfully completed a full-scale "proof-of-concept" demonstration at the newly built DHS Hydraulics Test Facility in Vicksburg, Mississippi. This site allows water flow rates of up to 2000 cubic feet per second and breaches of up to 40 feet wide and 8.5 feet deep. The site could also support future testing of subsequent PLUG sizes and designs; continued research and development to address levee vulnerabilities; and operator training to deploy the technologies, particularly in severe conditions. There are no funds for further evaluation of transition options.

The National Critical Infrastructure Protection R&D Plan – The S&T Directorate prepares an annual update to the *National Critical Infrastructure Protection Research and Development Plan* (NCIP R&D Plan), as required by HSPD-7. This plan supports the implementation of the *National Infrastructure Protection Plan* (NIPP), and by corollary, the supporting Sector Specific Plans (SSPs), the Sector Annual Reports, and the National Annual Report (NAR) in collaboration with IP. The NIPP, the SSPs, the NAR, and the NCIP R&D Plan integrate near-term (i.e. NIPP), mid-term (i.e., SSPs), and long-term (i.e. NCIP R&D) research objectives to form a coordinated approach to technology development to meet sector infrastructure protection goals and work toward a national vision of a secure and resilient homeland. In FY 2010, the project updated the plan based on advances in technology and changed its focus to include all hazards, resilient continuity of operations, and sustainability. In FY 2011 and FY 2012, the project plans to update the National CIP R&D Plan to define, articulate, and integrate the baseline research and technology developments within Federal agencies focused on High Performance and Integrated Design for infrastructure needs of the Nation. All of these activities will be closely coordinated through the National Science and Technology Council Infrastructure Subcommittee (NSTC-ISC). The NSTC-ISC will coordinate with the NPPD, the SSAs (as designated by HSPD-7), private industry through the NIPP Coordinating Council System, and all other agencies involved in funding R&D relevant to CIP, including international technical collaboration through the agreements established by the DHS S&T Directorate.

Preparedness and Response Advance Requirements Development and Studies Project – Engages emergency response communities at the Federal, State, and local levels to assess the state-of-the-art and establish requirements for the development of advanced technologies within the Incident Management Enterprise Program. This project teams customers with experts to develop those requirements. In addition, experts work with customers to identify any existing innovative capabilities that will meet the customers' needs. These investments at the early stages of technology acquisition improve chances of project success and increase project efficiency. In FY 2012, the project plans to define concept and requirements for the development of advanced technologies, such as improved micro- and nano-scale robotic sensor devices for first responder / Urban Search & Rescue to use in locating buried surviving victims.

Quantitative Psychosocial Impacts Index Project – Produces a quantitative index of the direct and indirect public health, social, and political impacts of catastrophic events. A valid quantitative index will improve DHS risk assessments and will help DHS prioritize its preparedness, response, and recovery activities. In FY 2010, this project began research on the social and behavioral science theory and data relevant to constructing a valid index. In FY 2011, this project will deliver a report on candidate public health, social, and political variables for inclusion in the index. In FY 2012, the project plans to document and begin implementing a strategy for collecting the cross-sectional and longitudinal data needed to develop the index.

Rapid Mitigation and Recovery Project – Basic Research – Develops rapid mitigation and recovery technologies intended to limit damage and consequences for CIKR and to enable the resumption of normal operations quickly after facing a threat. The basic research portion of this project concentrates on longer-term needs and investigates failure mechanisms, damage limitations, and solutions for rapid restoration of service for critical infrastructure. The project's current focus is dams built with both concrete and embankment sections. Better analysis of interactions at soil/water/concrete junctions is critical for understanding potential failure modes and determining whether current embankment construction methods provide adequate resiliency for high-consequence dams. In FY 2010, the project conducted numerical simulations, scoped experimental approaches for investigating soil behavior, and finalized an experimental plan for evaluating concrete dam/earth embankment systems. In FY 2011, the project will conduct physical experiments to characterize the response of embankment dams to a crack or gap induced at the embankment-concrete interface and will develop a numerical model of embankment dam interfaces, enabling the development of suitable mitigation strategies. In FY 2012, the project plans to finalize mitigation strategies, considering the potential type of events (blast effects, earthquake) that may induce cracks or gaps.

Rapid Mitigation and Recovery Project – Transition – Develops rapid mitigation and recovery technologies intended to minimize damage and consequences for CIKR and to enable the recommencement of normal operations quickly after facing a threat. The transition portion focuses on IP's high-priority need for technologies to reduce the effect of natural and manmade disruptions quickly preventing cascading effects specifically related to the release of Toxic Inhalation Hazard (TIH) materials from rail tank cars and stationary storage tanks. Specifically, the project will identify, develop, and assess threat-mitigation technologies and/or procedures that will reduce or eliminate the release of TIH products from intentionally assaulted rail tank cars and stationary storage tanks. The project will investigate the damage caused by 0.50 caliber armor-piercing rounds and small IEDs. In FY 2010, the project addressed stationary storage tanks, additional TIH chemicals, and additional threat scenarios. This project was completed in FY 2010.

Recovery Transformer Project – Collaborates with IP and DOE to specify, design, build, and demonstrate a new type of electrical power transformer for use during recovery from emergency grid blackouts. The recovery transformer will be easy to transport and install, and have low

maintenance requirements and a long service life. This capability will reduce the long procurement, transportation challenges, and installation delays in transformer replacement and will increase the resiliency of the power grid. The project aims to drastically reduce the downtime of major outages due to transformer failures (man-made or otherwise). This reduction in downtime of a long-term outage will enable the several of the critical infrastructure sectors to recover to fully functioning operations more rapidly and reduce the overall impact of a long term power outage. In FY 2010, the project completed the final design for the prototype recovery transformer and began manufacturing. In FY 2011, the project will demonstrate and test the prototype recovery transformer in a laboratory environment. The project will also evaluate promising advanced technologies for a dramatic decrease in transformer size and weight. In FY 2012, the project plans to deploy, install, and energize the prototype transformer in a host utility's grid. Additionally, the project plans to consider subcomponent testing of advanced technologies for a smaller, lighter, more transportable and more efficient recovery transformer.

Resilient Electric Grid – Demonstrates High-Temperature Superconducting (HTS) technologies for reliable distribution and protection of electrical power. REG will protect critical, electric-power dependent infrastructure (like the Manhattan Financial District) from the cascading effects of a power surge on electrical grids. The existing electric grid is highly susceptible to brown outs and black outs, and current methods for preventing power outages and restoring power often require extraordinary effort and are costly and slow. Existing technologies and planned mitigations also require a lot of space, which is problematic in dense urban areas. This project will demonstrate key components of a future “micro grid” that will instantaneously reduce damaging power surges (fault currents) and allow for multiple alternative pathways of power delivery, providing resilience against natural disasters and deliberate attacks. Specifically, this project develops the first of its kind inherently fault current limiting, high temperature superconducting (IFCL-HTS) cable used to interconnect power substations, as well as other stand alone fault current limiting devices. In FY 2010, the project tested the 25 meter cable to study heat (alternating current) losses and insulation properties to better protect the cable against lightning strikes and meet industry qualification requirements. The project improved the cable design based on the test results. Also in FY 2010, the project tested key components of a stand-alone fault current limiter (FCL), which is an alternative to the relatively high-risk, IFCL-HTS cable. In FY 2011, the project will test the new, improved cable design. In FY 2010, The S&T Directorate assessed the proposed alternate in-grid demonstration site as a feasible alternative. Therefore, in FY 2011, the project will also begin site design work and preparations for the in-grid demonstration site of the IFCL-HTS cable within the Consolidated Edison electric grid. In FY 2012, the project plans to complete site preparation and begin installing the cable for operational test and evaluation. The cable requires positive results from one year of operational testing before the utility industry considers it a viable technology.

Resilient Tunnel Project – Develops technologies to address critical vulnerabilities in U.S. transportation tunnels. The project is designing an inflatable tunnel plug to protect mass transit

tunnels from fires, smoke, and flooding. Past assessments revealed that terrorists using improvised explosive devices (IEDs) could exploit certain weaknesses to cause catastrophic tunnel failure. The project expands upon the analyses to identify alternative technical solutions to mitigate these vulnerabilities. Two major transit agencies, including Washington Metropolitan Area Transit Authority, drive technical and operational requirements for the plug and subsystem designs. In FY 2010, the project conducted a full-scale demonstration of a more advanced, second-generation medium pressure tunnel plug. The project evaluated the plug design, optimized plug geometry, and generated a design to withstand higher pressure. In FY 2011, the project will redesign the medium pressure plug with web reinforcements to successfully withstand high stresses that the FY 2010 plug could not. This plug will be built per customers' requests to provide a potential solution for a location where they cannot easily install floodgates. In FY 2012, the project plans to demonstrate the large-scale, medium-pressure plug, and begin developing a high-pressure plug, the original requirement identified in the vulnerability studies.

Standard Unified Modeling Mapping Integrated Toolkit (SUMMIT) Project – Provides FEMA analysts, decision makers, policy makers, emergency managers, and infrastructure operators an integrated modeling and simulation capability. This capability effectively, economically, and rapidly verifies and validates response tactics, plans and procedures, and conducts “what-if” incident analyses prior to an incident (preparedness, analysis, training), during/after an incident (operational, lessons learned) in Real-Time for training and exercise and Non-real-time for analysis. The project will develop accurate and reliable estimates of hazards from a wide range of natural and terrorist events; analyze and use route mapping to effectively manage transportation assets during mass evacuations or the post-event flow of emergency supplies; and conduct analyses to provide better understanding of possible impacts from natural disasters and terrorist events. This project will leverage results of the TELL project and will follow three tracks: model development, integration framework, and support for conducting planning exercises. The project will use a spiral-development process to insert technology as it matures and to refine requirements and concepts before committing to significant development efforts. In FY 2010, the project developed framework specifications for new models and developed an initial system capability for establishing ground truth while deploying the SUMMIT SDK at FEMA NESC for use in future exercises (NLE 11/12). In FY 2011, the project will integrate and test modeling technologies for the simulation based-incident planning and response system and is on track as a critical technology enabler for NLE11. In FY 2012, the project plans to conduct pilot demonstrations for three to five scenarios as part of a simulation-based incident planning and response system while integrating the toolkit with the overall Incident Management Enterprise System.

Natural Disaster Threat Assessment Program – FY 2012 estimate: \$2.468 million. Research and identify techniques to predict the occurrence, magnitude, and impact of natural disasters. Develop modeling, simulation, and analysis capabilities to improve decision makers' ability to

evaluate threats to critical infrastructure and changes to risks, including infrastructure interdependencies.

Overhead Imagery Data Project – Develops advanced geographic information science (GIScience) techniques to support the application of remote sensing, image processing, geographic information systems, digital cartography, and spatial modeling for disaster management and hazards research. In 2011, the project will collect and evaluate requests for information to integrate overhead imagery data from a variety of collection platforms and sensors into incident management geospatial systems to improve and accelerate sensor tasking and data delivery as well as disaster impact analysis on facilities, dwellings, and critical infrastructure. In FY 2012, the project plans to prototype integration of overhead imagery data from a variety of collection platforms and sensors into FEMA incident management geospatial systems to improve and accelerate disaster impact analysis on facilities, dwellings, and critical infrastructure.

Radiological and Nuclear Resiliency Program – FY 2012 estimate: \$10.256 million. Provide advanced planning, technology development, CONOPS development, and exercises/training for responding to and recovering from radiological or nuclear attacks or radiological incidents. Reduce the impact of an event on critical infrastructure by providing effective, affordable fast-running analysis tools, and protection solutions. Research and identify technologies that effectively and safely aid personnel in performing recovery and restoration efforts. Conduct demonstrations that bring together Federal, State, and local partners to develop, test, and share the CONOPS for key scenarios.

Response and Recovery Program – The Response and Recovery program provides advanced planning, develops CONOPS, and funds exercises and training for responding to and recovering from rad/nuc attacks. In FY 2011, the S&T Directorate will initiate work in this new area and continue to grow the program in FY 2012. Rad/nuc attacks have the potential to devastate large areas by prompt blast effects and contaminate hundreds of square miles with radioactive fallout. This program will provide operationally effective response operations by improving methods and capabilities required by first responders. It will also provide for more rapid and cost-effective post-attack cleanup and restoration by developing a systems approach for citywide areas. Restoration demonstrations, which bring together Federal, State, and local partners to develop, test, and then share the CONOPS for key scenarios, are at the heart of this approach. The S&T Directorate will partner with FEMA, EPA, NPPD, the Department of Defense (DOD), the Department of Energy (DOE), the Occupational Safety and Health Administration (OSHA), and the State and local public health and response communities to build on existing expertise to further formulate this area.

(Dollars in Thousands)**

PPA: University Programs

	Perm. Pos	FTE	Amount
2010 Actual	-	-	65,640
2011 C.R.	-	-	49,350
2012 Adjustments-to-Base	-	-	(9,749)
2012 Current Services	-	-	39,601
2012 Program Change	-	-	(3,038)
2012 Total President's Budget	-	-	36,563
Total Change 2011 to 2012	-	-	(12,787)

The Science and Technology (S&T) Directorate requests \$36.563 million for University Programs. The \$12.787 million decrease in FY 2012 results in the reduction of funding to all areas within the Office of University Programs and the elimination of funding for the National Transportation Security Center of Excellence (NTSCOE) due to a reprioritization of resources towards higher priority initiatives.

CURRENT SERVICES PROGRAM DESCRIPTION

The Office of University Programs supports critical homeland security-related research and education at U.S. colleges and universities to address high-priority DHS-related issues and to enhance homeland security capabilities over the long term. The program brings together scientists, mathematicians, and engineers from many academic disciplines and institutions. These researchers are investigating research questions important to DHS; developing new technologies and approaches to solve complex and challenging homeland security problems. The program focuses on building homeland security expertise in the academic community, creating strategic partnerships among universities and public agencies, and developing a new scientific workforce of homeland security experts. The primary customers for University Programs are the DHS S&T Directorate's divisions, the DHS component agencies, and federal, state, and local government agencies.

Investments in university basic research, as well as, support for students in relevant fields are critical to preserving the U.S.'s strategic/ economic security and supporting various Quadrennial Homeland Security Report (QHSR) Mission Areas:

- Preventing Terrorism and Enhancing Security
- Securing and Managing Our Borders
- Safeguarding and Securing Cyberspace
- Ensuring Resilience to Disasters
- Strengthening and Maturing DHS

The University Programs Division carries out its activities through three thrust areas: 1) the DHS University Centers of Excellence (COEs), 2) the DHS S&T Directorate's Educational Programs, and 3) the Minority Serving Institutions.

Centers of Excellence Thrust Area – The 12 current COEs engage approximately 200 colleges and universities to conduct multidisciplinary research in priority DHS mission areas. The COEs align to the S&T Directorate's divisions and their customers. COEs improve understanding of the causes, elements, and consequences of a range of threats from terrorists and natural disasters. They also support countermeasure, mitigation, prevention, and resilience approaches based on both technologies and human behavior.

The COEs work with and through the S&T Directorate's divisions and complement other DHS research and development programs including those of federal laboratories and federally funded research and development centers (FFRDCs). They take advantage of other relevant Federal agency-sponsored research and provide outcomes useful to federal, state, and local government, private sector, and international partners. The selection process for the COEs is highly competitive, rigorously peer-reviewed, and merit-based.

The COEs are primarily funded through research grants and cooperative agreements. They are building expertise and reach-back capabilities in multi-disciplinary topical areas important to homeland security. Presently, these areas are:

- Advanced Data Analysis and Visualization
- Biological Threats and Countermeasures
- Border Security
- Chemical Threats and Countermeasures
- Communications and Interoperability
- Community, Individual, Infrastructure and Economic Resilience
- Emergency Preparedness and Response
- Explosives Detection, Mitigation, and Response
- Food and Agriculture Security
- Human Factors Aspects of Technology

- Immigration Studies
- Infrastructure Protection
- Maritime and Port Security
- Natural Disasters and Related Geophysical Studies
- Risk and Decision Sciences
- Social, Behavioral, and Economic Sciences
- Transportation Security

In FY 2010, the program awarded cooperative agreements for National Center for Food Protection and Defense (NCFPD) and the National Center for Zoonotic and Animal Disease Defense (ZADD) to run through FY 2016. Also in FY 2010, after a re-compete, the program established a new Center of Excellence for Risk & Economic Analysis of Terrorism Events (CREATE) operations research, risk assessment, and economic analysis which will run through FY 2016. In FY 2011, this COE plans to extend or replace the existing Center of Excellence for Risk, Economic and Operations Research at the University of Southern California.

The current Centers of Excellence include:

- Center for Advancing Microbial Risk Assessment (CAMRA), led by Michigan State University, established jointly with the U.S. Environmental Protection Agency (EPA) (www.camra.msu.edu);
- National Center for Border Security and Immigration (NCBSI), co-led by the University of Arizona at Tucson and the University of Texas at El Paso (<http://www.borders.arizona.edu/>);
- Center of Excellence for Command, Control, and Interoperability (CCI), co-led by Rutgers and Purdue Universities, (<http://ccicada.rutgers.edu/>, <http://www.purdue.edu/discoverypark/vaccine/>);
- The Center for Awareness and Location of Explosives-Related Threats (ALERT), formerly Center of Excellence for Explosives Detection, Mitigation, and Response, co-led by Northeastern University and the University of Rhode Island (<http://www.northeastern.edu/alert/>, <http://energetics.chm.uri.edu/?q=node/6>);
- National Center for Food Protection and Defense (NCFPD), led by the University of Minnesota (www.ncfpd.umn.edu);
- The Center of Excellence for Maritime, Island and Remote and Extreme Environment Security (MIREES), co-led by the University of Hawaii and Stevens Institute of Technology (<http://www.cimes.hawaii.edu/>, <http://www.stevens.edu/csr/about/centers.html>);
- National Center for Zoonotic and Animal Disease Defense, formerly National Center for Foreign Animal and Zoonotic Disease Defense (FAZD), collocated at Texas A&M University and Kansas State University (<http://fazd.tamu.edu/> <http://sites.google.com/site/ceezad/home/>);
- The National Consortium for the Study of Terrorism and Responses to Terrorism (START), led by the University of Maryland (www.start.umd.edu);

- National Center for Risk and Economic Analysis of Terrorism Events (CREATE) led by the University of Southern California (<http://create.usc.edu/>)
- Coastal Hazards Center of Excellence (formerly the Center of Excellence for Natural Disasters, Coastal Infrastructure, and Emergency Management (NDCIEM)), co-led by the University of North Carolina at Chapel Hill and Jackson State University (<http://hazardscenter.unc.edu/diem/>, <http://www.jsu.edu/cset/or/centers/centndciem.htm>);
- National Center of Excellence for the Study of Preparedness and Catastrophic Event Response (PACER), led by Johns Hopkins University (www.pacercenter.org); and
- National Transportation Security Center of Excellence, co-led by the University of Connecticut, Texas Southern University, and Tougaloo College, with Long Island University, University of Arkansas, Rutgers University, and San Jose State University as partners (<http://www.cti.uconn.edu/>, <http://transportation.tsu.edu/NTSCE/home.htm>, <http://www.tougaloo.edu/hsi/index.htm>, <http://www2.southampton.liu.edu/homeland/index.html>).

The following section contains specific activities conducted in the Office of University Programs.

Center for Advancing Microbial Risk Assessment (CAMRA) – Aligns with the S&T Directorate’s Chemical and Biological Division. The S&T Directorate established CAMRA jointly with the U.S. Environmental Protection Agency to fill critical gaps in microbial risk assessments – answering the question, “How clean is safe?” Following the anthrax contamination events, the Federal government recognized the need to develop safe standards for cleanup of biological agents of concern (BACs). CAMRA researchers are developing a scientific basis for standards for BACs in different media – air, water, and on surfaces. In FY 2010, CAMRA conducted infectious disease modeling for various agents to assess microbial risks and developed control strategies and models of the fate and transport of pathogens in the air, drinking water, and on solid surfaces. In FY 2011, CAMRA will develop tools and models for pathogen transmission, complete time-dependent dose-response (with animal models), and integrate quantitative microbial risk assessment (QMRA) from science to decisions for key pathogens. In FY 2012, CAMRA plans to focus on completing final tasks and missions with the integration of the projects into a comprehensive QMRA framework along with allowing the scientific community access to appropriate tools and models.

The National Center for Border Security and Immigration (NCBSI) – Aligns with the S&T Directorate’s Borders and Maritime Security Division. The COE provides fundamental research in support of DHS’ goals of strengthening border security, immigration enforcement, and immigration services. DHS customers and end-users include Customs and Border Protection (CBP), Immigration and Customs Enforcement (ICE), U.S. Citizenship and Immigration Services (CIS), U.S. Coast Guard (USCG), as well as state and local agencies. The COE will conduct scientific and engineering investigations that offer the prospect of high-payoff

breakthroughs in detecting people and goods moving across our borders (legally or illegally), as part of a fully integrated, system-of-systems approach. The S&T Directorate expects this COE to provide insight and facilitate breakthroughs that could improve areas including screening and situational awareness along U.S. northern and southern borders. In FY 2010, the COE conducted research in detection (human, vehicles, and decision support), networks (interoperability, reliability, and C2), fusion (tools and approaches), immigration related challenges (methods, metrics, and estimates), risk assessment (migration and alignment), and governance (law enforcement and international cooperation). In FY 2011, the COE will continue its research efforts as well as educational activities. The COE will also continue to serve as a systems integrator between border security technologies, border management, and immigration policies to deliver innovative, practical solutions. In FY 2012, the COE plans to conduct research and provide educational activities related to border security and immigration.

Center of Excellence for Command, Control, and Interoperability (CCI) – The CCI COE supports Command, Control, and Interoperability activities for the S&T Directorate through research and development in knowledge management, threat assessment, surveillance, cyber security, as well as communications interoperability and compatibility. This COE focuses on developing new methods, algorithms, and technologies that enable Federal, State, and local homeland security agencies to efficiently manage and analyze vast amounts of data. In FY 2010, the COE:

- Developed extensive homeland security related science, technology, engineering and mathematics (HS-STEM) curricula and research programs to train students in advanced CCI-related research and analytical methods;
- Directly supported S&T Directorate efforts for the Port Authority of New York and New Jersey, ICE, CBP, and law enforcement and first responder agencies in Washington, Indiana, Pennsylvania, and California;
- Developed a strategy for integration of CCI -related research and analysis with empirical data from other COEs and DHS Components.

In FY 2011, the COE will expand its network of universities and partner with the international community, identifying complementary and collaborative roles for each and expanding its portfolio of multidisciplinary research projects. In addition, the COE will continue developing Homeland Security related Science, Technology Engineering and Mathematical (HS-STEM) curricula focusing on interdisciplinary research programs and aligning its ongoing research programs with current CCI and other Division initiatives. In FY 2012, the COE plans to focus on expanding deployment of its technologies, joint developments with international partners, and extending outreach and education in professional, K-12 and minority serving institutions (MSI) arenas. Multi-year, university-based collaborations with Canada, Germany, and the United Kingdom will be underway. A series of technology experiments throughout 2012 will prove the utility of COE research. Finally, a Sports Evacuation Planning capability will be developed and implemented throughout the National Football League (NFL).

The Center for Awareness and Location of Explosives-Related Threats (ALERT) (formerly Center of Excellence for Explosives Detection, Mitigation, and Response) – In collaboration with the S&T Directorate’s Explosives Division, provides basic explosive-related research to advance the technical tools and information that the S&T Directorate’s customers will need in the future. DHS customers and end-users include the Office of Infrastructure Protection (OIP), Policy Directorate, Transportation and Security Administration (TSA), Immigration and Customs Enforcement (ICE), Office for Bombing Prevention (OBP), and State Homeland Security Agencies.

This COE conducts research to enhance the Nation’s ability to prepare for, prevent, mitigate, respond to, and recover from terrorist attacks involving explosives. The COE also develops relevant educational curricula for undergraduates, graduate students, and career professionals, as well as programs to enlighten secondary school teachers about the scientific foundations for homeland security. It also brings teachers and students into laboratories to participate in actual research and enhances their interest in and commitment to homeland security-related professions.

This COE conducts basic and transformation research in explosive-related areas such as:

- Properties (e.g., chemical, physical, and material) and formulation of explosive materials (including precursors and homemade compounds), as well as materials and/or technologies to mitigate explosives effects (e.g., blast-resistant materials);
- Detection of explosives and explosive devices, including methods to screen people, containers, and other potential conveyances of explosive materials;
- Unconventional approaches (e.g., alternative signatures) to identify indications of threats from explosives or bombers, to include algorithm development for improved detection and/or imaging capabilities and relevant human factors issues;
- New explosive detection tools by focusing on the fundamental sciences to enable more sensitive, selective, and adaptable sensors;
- Material science to improve understanding of the blast response of critical structures.
- The research outcome is to anticipate and predict failure and to assess the potential for mitigation of failure;
- Other effective and efficient countermeasures, particularly ones for use in densely populated urban settings and transportation venues.

In FY 2010, the COE developed a multi-factor approach to detection that improves technology and the ability to prevent casualties and damage to property. Also in FY 2010, the COE obtained first-generation, scientific properties from available technical tools to characterize and test homemade explosives (HME) and precursor compounds. In FY 2011, the COE will identify the fundamental science and enabling technology of research barriers that provide protection from explosives-related threats. The COE will identify the next-generation detection and mitigation systems. In FY 2012, the COE plans to expand research, analysis, and testing of advanced algorithm concepts for various security screening systems and transportation modalities.

The National Center for Food Protection & Disease (NCFPD) – Aligns with the S&T Directorate’s Chemical and Biological Division. Its mission is to defend the safety of the post-harvest food system by establishing best practices, developing new tools, and attracting new researchers to manage and respond to food contamination events. NCFPD works in system-wide food security, including:

- Supply-chain management;
- Food processing protection;
- Detection and diagnostics;
- Public health;
- Disposal and decontamination; and
- Economic impact assessment and risk communication.

This work helps the Department mitigate and counter threats to U.S. agriculture and food. In FY 2010, NCFPD developed a comprehensive information system for biological threats and countermeasures; extended the food event-modeling framework; worked on detection in various food matrices; and broadened research on import vulnerabilities. In FY 2011, NCFPD will develop the required expertise, infrastructure, and training needed to provide DHS and food sector agencies/owners with comprehensive, internal capabilities in food defense. In FY 2012, NCFPD plans to focus on two general types of efforts: 1) food-related topics (such as specific agent-food interactions) and 2) basic or early-stage research, which, if successful, can move to Divisional support/other stakeholders for further support or development.

National Center for Zoonotic & Animal Disease Defense (ZADD) (formerly *The National Center for Foreign Animal and Zoonotic Disease Defense (FAZD)*) – Aligns with the S&T Directorate’s Chemical and Biological Division. This COE’s mission is to protect the nation’s agriculture and public health sectors against high-consequence foreign, emerging, and/or zoonotic animal disease threats in the United States by conducting research, developing technology, training a specialized workforce, and communicating this research to a wide audience of human and animal health care professionals and customers/stakeholders. ZADD is developing a scientific basis for detecting and preventing emerging and zoonotic diseases, which assists in the Department’s responsibility to develop countermeasures and effective control strategies. In FY 2010, the COE 1) developed prototype host pathogen genetic markers for use in Rift Valley Fever (RVF) vaccine candidates; and 2) continued development of scenario and consequence models for high consequence animal disease threats. In FY 2011, ZADD will 1) study genetic resistance, vector competency, and disease transmissibility of high consequence animal pathogens; 2) develop coordinated epidemiologic, economic, and environmental models for emerging, animal, and zoonotic diseases; and 3) develop countermeasures to prevent against, detect, control, and eradicate foot and mouth disease (FMD), avian influenza (AI), and RVF. In FY 2012, ZADD plans to extend the Center’s ability to provide innovative, cutting-edge solutions; capacity; and expertise for high consequence disease threats facing the agricultural community.

Center of Excellence for Maritime, Island & Remote, and Extreme Environmental Security (MIREES) – Aligns with the S&T Directorate’s Borders and Maritime Security Division. This COE conducts fundamental research to improve interdiction capabilities, enhance capacity to respond to catastrophic events, particularly for U.S. islands and extreme environments, and develop a more secure and efficient marine transportation system. DHS customers and end-users include the National Protection and Programs Directorate (NPPD), the Chief Medical Officer (CMO), Office of Infrastructure Protection (OIP), Federal Emergency Management Agency (FEMA), United States Coast Guard (USCG), and state homeland security agencies. The COE conducts integrated policy, legal, scientific, and engineering studies in detecting and monitoring people and goods moving through the U.S. maritime domain. This COE has developed meaningful courses of study for students, both graduate and undergraduate, and career professionals involved with these issues. In FY 2010, the COE conducted research related to maritime domain awareness through a systems approach to integrate sensors below, on the surface, and above the water. In FY 2011, the COE will continue research guided by a spiral development approach to solving the complex issues facing the global marine transportation system (MTS) and our coastal communities. In FY 2012, the COE plans to conduct research and provide educational activities related to maritime domain awareness.

The National Consortium for the Study of Terrorism and Responses to Terrorism (START) – Aligns with the S&T Directorate’s Human Factors/Behavioral Sciences Division. START provides strategies for intervention against terrorists and terrorist groups, while strengthening the resilience of U.S. citizens to terrorist attacks. The START consortium uses advanced behavioral and social science theories, methods, and data to better understand the origins, dynamics, and impacts of terrorism. Applying this knowledge will provide guidance on how to disrupt terrorist networks, reduce the incidence of terrorism, and enhance the resilience of American society in the face of terrorist threats and natural disasters. Program activities include providing the world’s largest open-source database of terrorist incidents, a Global Terrorism Database (GTD), which enhances our understanding of the occurrences and impacts of terrorism. START will link the GTD to a number of databases that will include data on terrorism using weapons of mass destruction, volatility around the world, and illegal acts committed by extremists in the United States.

In FY 2010, START conducted research in the following areas:

- Radicalization and terrorist group formation, extending its research to more countries and groups;
- Terrorist group persistence and dynamics, focusing on improving understanding of how terrorist groups operate, the effectiveness of counterterrorism strategies, and conducting an empirical analysis of Improvised Explosive Device (IED) attacks;
- Societal responses to terrorist threats and attacks;
- Muslim community integration: journey into America
- The role for state governments in community resilience

- Potential populations at risk from U.S. chemical facilities releases;
- Cross-cutting data collection and analysis, including expansion of the GTD, development of a quantitative index of the public health impacts of terrorism, building community resilience through public involvement, analysis of organizational factors in the successful application of “community engagement,” and identification of principles for bioterrorism preparedness.

In FY 2011, this Center of Excellence will be re-competed (resulting in replacement or extension of START) with input from S&T Directorate divisions and corresponding DHS operational units to address emerging topics, research gaps, and foster new strategic partnerships. Efforts for the Center in FY 2012 plan to be the result of the 2011 re-competition effort and the negotiated scope of work concerning Studies of Terrorism and the Responses to Terrorism.

Coastal Hazards Center of Excellence (formerly Center of Excellence for Natural Disasters, Coastal Infrastructure, and Emergency Management (NDCIEM)) – This COE focuses on advancing the understanding of coastal hazard resilience and transferring knowledge into action, resulting in reduced loss of life and injury and lessened damages to the built and natural environment. It does so by conducting basic and transformational research in coastal hazards modeling, engineering to enhance the resilience of the built and natural environment, disaster response and social resilience, and planning for resilience. Additionally, the COE develops and implements curricula that promote solutions to the challenges of natural disasters in the Nation’s coastal zone. The COE will use these curricula to educate and train the next generation of scholars and practitioners to address natural hazards. In FY 2010, the COE launched new graduate and undergraduate curricula in multiple programs including Engineering, Public Safety Management, Applied Science, and Environmental Health. In FY 2011, the COE will develop a web-based decision support tool that infrastructure managers and emergency management officials can use to minimize disruptions across multiple Critical Civil Infrastructure (CCI) components due to natural disasters. In FY 2012, the COE plans to create a comprehensive portal for the dissemination of hazards-related research and education materials covering K-12, undergraduate and graduate curricula, and related resources.

National Center for Risk & Economic Analysis of Terrorism Events (CREATE) (formerly Center of Excellence for Risk, Economic and Operations Research) – Cuts across all six S&T Directorate divisions’ missions, and coordinates activities with the S&T Directorate’s Operations Analysis Office, the Risk Sciences Branch, and the Homeland Security Systems Engineering and Development Institute (SEDI™). CREATE evaluates the risks, costs and consequences of terrorism, and identifies economically efficient investments in countermeasures to improve security and resilience. Research in these areas can contribute significantly to the Department’s ability to identify and select cost-effective options for enhancing national security, minimize human and economic casualties in the face of a range of hazards, and improve DHS’ ability to predict terrorist threats. In FY 2010, the COE was re-competed and six research theme areas were developed in collaboration with each of the S&T Directorate divisions and the

corresponding DHS operational units. The six theme areas were: Management of Risks from Intelligent, Adaptive Adversaries; Economic and Decision Models of Terrorist Enterprises; Uncertainty in Terrorism Risk Management; Risk Perception and Communication; Consequences and Costs of Terrorism; and Evaluating the Effectiveness of Terrorism Risk Management Approaches. In FY 2011, CREATE will extend game theory, risk analysis, terrorist preference modeling and decision analysis to account for the strategic nature of terrorist decision-making with regard to countermeasures; advance the state of knowledge on the motivations, organization, recruitment, and operations of terrorists organizations. CREATE will also develop methods to assess threats and to allocate resources to countermeasures in a high-stakes, highly uncertain environments; examine the dynamics of public response, societal consequences, and risk and crisis communication in reducing the consequences of fear and other indirect impacts of terrorism, both preceding and after events. Furthermore, CREATE will assess consequences of terrorism, especially their direct and indirect economic impacts, and explore the benefits of resilience, and use behavioral economics to examine the impact of how individuals respond to threats and hazards, including the role for insurance as a mitigation tool. CREATE will also investigate and apply new analytical approaches to assess the benefits of homeland security programs across all hazards, threats and target domains and inform policy decisions. In FY 2012, CREATE plans to add partners with extensive capabilities in financial risk and economics as well as counter-terrorism operators. The synergies with CREATE's existing capabilities, as well as those of the START COE will create a powerful alliance to predict and counter terrorist attacks.

National Center for the Study of Preparedness and Catastrophic Event Response (PACER) – Aligns with the S&T Directorate's Infrastructure and Geophysical Division and Chemical and Biological Division. PACER focuses on optimizing the Nation's preparedness and response in the event of a high-consequence natural or man-made disaster. In upcoming years, PACER will focus more on medical and public health issues related to emergency preparedness and response with an emphasis on surge capacity. Relevant issues include critical decision-making, resilience of medical response networks, surge capacity, detection and biosurveillance, and public health preparedness. DHS customers and end-users include Office of Health Affairs (OHA), Federal Emergency Management Agency (FEMA), Office of Infrastructure Protection (OIP) and hospitals, health departments, and emergency responders. In FY 2010, PACER developed a model Memoranda of Understanding for shared resources and services between health care facilities applicable to all acute care hospitals throughout the U.S. In FY 2011, the COE will develop a tool that can be used to estimate surge capacity in acute care medical facilities throughout the U.S. for catastrophic and other mass casualty events. In FY 2012, the COE plans to develop Version II of the Electronic Mass Casualty Assessment and Planning Scenarios (EMCAPS) software. This software will provide heightened robust planning capabilities to emergency response organizations by predicting local surges in casualties based on DHS planning scenarios.

National Transportation Security Center of Excellence (NTSCOE) – The NTSCOE’s research, education, and training programs, respond to a cross-cutting set of customers across all six S&T Directorate divisions and DHS component organizations. This COE is highly integrated with the requirements of Transportation Security Administration (TSA), Office of Infrastructure Protection (OIP), certain U.S. Coast Guard activities at ports, and these agencies’ partners at the state/local level. The NTSCOE has initiated collaboration with additional DHS components, such as the Transportation Security Laboratory (TSL), and maintains close links across the COE network. It addresses the technology and research needs associated with securing the Nation’s surface transportation infrastructure and protecting the people who use it.

In FY 2010, the NTSCOE extended and further implemented the results of its research, education, and training projects to support the evolving needs of DHS and its partners and developed an initial NTSCOE Strategic Plan to ensure the NTSCOE’s long-term alignment to address surface transportation security challenges from an all-hazards approach. Additionally in FY 2010, the NTSCOE, working in close partnership with TSA, successfully developed a pilot security awareness program for mass transit bus operators, and is expanding related work in public awareness. In FY 2011, the NTSCOE will expand on and begin transitioning the projects noted above, as well as additional collaborative NTSCOE efforts to support customers in the S&T Directorate, other DHS components, and elsewhere within the Federal government, using the NTSCOE Strategic Plan as a guide for future efforts. The NTSCOE’s work will address the full range of hazards to the Nation’s surface transportation infrastructure, including terrorist attack, natural disaster, pandemic disease, and vulnerabilities unique to the transportation of hazardous petrochemicals. Funding for this center ends in FY 2011.

Education Thrust Area – This thrust area invests in institutions as well as high-performing science and engineering students or professionals in the United States to develop the next generation of homeland security science and technology leaders. This thrust funds students, scholars, and faculty drawn from postsecondary, graduate, and professional levels of science and engineering disciplines. Activities in this thrust area include individual student scholarships and internships; Homeland Security related Science, Technology Engineering and Mathematical (HS-STEM) Career Development Grants to academic institutions; post graduate professional fellowships and a partnership with the National Defense University to provide advanced science and technology education to current DHS employees.

Scholarship, Fellowships, and Institutional Development - University Programs provides financial support and mentoring to students pursuing HS-STEM degrees: the DHS Scholars Program and the Career Development Grants program. The DHS Scholars program competitively awards scholarships to individual science, mathematics, and engineering undergraduate and graduate students. The DHS S&T Directorate’s Career Development Grants program provides competitive awards to support undergraduate and graduate students attending institutions, including the COEs, which have made a commitment to develop HS-STEM curricula and fields of study. These two competitive programs provide educational support,

internships, and employment avenues to high quality individuals to enhance the scientific leadership in areas important to DHS. DHS requires supported students serve one 10-week summer internship and one year in an approved HS-STEM venue. Student and scholar researchers perform work at more than 28 DHS-affiliated venues including the S&T Directorate, national laboratories, and DHS components such as USCG and the Office of Intelligence and Analysis (I&A). In FY 2010, 6 institutional grants, 20 fellowships, and 50 internships were awarded. Approximately 200 students attended the annual S&T Directorate Career Pathways Student Meeting and received information on DHS operations and careers. In FY 2011, programs will be modified as necessary to align with the new S&T Directorate strategic plan and goals. In FY 2012, efforts will continue in this area.

Minority Serving Institutions (MSIs) - Programs in this area include the Scientific Leadership Award (SLA) grant program and the Summer Research Team (SRT) program. Both are intended to improve the capabilities of MSIs to conduct research, education, and training in areas critical to homeland security and to develop a new generation of scientists capable of advancing homeland security goals. The SLA program provides three to five years of institutional support for students and early career faculty. The SRT program provides support for a ten week collaborative research experience between recipient MSIs and one of the COEs. In FY 2010, 15 SLA awards were initiated and 11 SRT programs were supported. Student participants attended the annual Career Pathways Student Meeting and received information on DHS operations and careers. In FY 2011, focused outreach efforts to MSI communities will continue. Programs will be modified as necessary to align with the new S&T Directorate strategic plan and goals. In FY 2012, efforts will continue in this area.

IV. Justification of Program Changes

**Department of Homeland Security
Science & Technology
Research, Development, Acquisitions, and Operations
Justification of Program Changes
(Dollars in Thousands)**

Program Increase #1: Cyber Security
PPA: Research and Technology
Program Increase: Positions 0.0, FTE 0.0, Dollars 18,000.0

Funding Profile

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level	-	-	-	-	-	-	-	-	0
Program Increase	-	-	-	-	-	-	-	-	18,000
Total Request	-	-		-	-		-	-	18,000

Description of Item

The FY 2012 program change reflects a program change increase of \$18.000 million for Cyber Economic Incentives, Moving Target Defense, Tailored Trustworthy Spaces, and Transition to Practice projects for Cyber Security. Funding was provided from the 2008 White House Comprehensive National Cybersecurity Initiative (CNCI).

Justification

An increase of FY 2012 funding would enable the Division to initiate the following projects:

- Cyber Economic Incentives;
- Moving Target Defense;
- Tailored Trustworthy Spaces; and

- Transition to Practice;

Cyber Economic Incentives – Invests in research on the role of economics in identifying and realigning cyber economic incentives through the creation of a science-based understanding of markets, decision making, and motivators.

Moving Target Defense – Moving Target Defense (MTD) projects enable the creation, analysis, evaluation, and deployment of mechanisms and strategies that are diverse and that continually shift and change over time to increase complexity and cost for attackers, limit the exposure of vulnerabilities and opportunities for attack, and increase system resiliency. The characteristics of an MT system are dynamically altered in ways that are manageable by the defender yet make the attack space appear unpredictable to the attacker.

Tailored Trustworthy Spaces – Projects provide flexible, adaptive, distributed trust environments that can support functional and policy requirements arising from a wide spectrum of activities in the face of an evolving range of threats.

Transition to Practice – This newly initiated program builds on the S&T Directorate’s process of funding projects through the Directorate’s projects go through the full R&D lifecycle - research, development, testing, evaluation and transition. This project supports DHS S&T partnering with those Federal agencies that fund basic research and identifying projects that can be transitioned and commercialized. In alignment with the needs identified in the Comprehensive National Cybersecurity Initiative (CNCI) this project will work with the identified agencies across the U.S. Government’s research and development community to identify mature technologies that are the best candidates for transition.

Impact on Performance (Relationship of Increase to Strategic Goals):

The increase in FY 2012 funding will enable the Cyber Division to initiate projects to strengthen Cybersecurity initiatives including Cyber Economic Incentives, Moving Target Defense, Tailored Trustworthy Spaces, and Transition in support of *QHSR MISSION 4: SAFEGUARDING AND SECURING CYBERSPACE*.

**Department of Homeland Security
Science & Technology
Research, Development, Acquisitions, and Operations
Laboratory Facilities
Justification of Program Changes
(Dollars in Thousands)**

Program Increase #2: Laboratory Facilities
PPA: Laboratory Facilities
Program Increase: Positions 0.0, FTE 0.0, Dollars \$150,000.0

Funding Profile

	FY 2010 Actual			FY 2011 CR			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level	-	-	-	-	-	-	130	130	126,500
Program Increase	-	-	-	-	-	-	-	-	150,000
Total Request	124	124	176,111	130	130	150,188	130	130	276,500

Description of Item

The FY 2012 program change reflects an increase of \$150.000 million for laboratory construction of the National Bio and Agro-Defense Facility (NBAF)

Justification

National Bio and Agro-Defense Facility (NBAF) Construction Project will provide an integrated animal, foreign animal, and zoonotic disease research, development, and testing facility to support the complementary missions of DHS and USDA. NBAF will replace Plum Island Animal Disease Center (PIADC) and provide additional capabilities in state-of-the-art research, development, testing, and evaluation infrastructure to conduct research on high-consequence zoonotic (i.e., transmitted from animals to humans) diseases that could be a threat to public health. Expanded capabilities from the existing PIADC mission will allow NBAF to address a

broader and more complete spectrum of threats. Research and development at NBAF will additionally address multiple threats/vulnerabilities related to bio- and agro-attacks and improve our understanding of potential agro-terrorism such as employing foreign animal and zoonotic disease pathogens against U.S. targets.

NBAF Space Justification – NBAF will satisfy the requirements identified in Homeland Security Presidential Directive (HSPD)-9 by providing an integrated facility for studying foreign animal and zoonotic diseases. The existing animal holding, laboratory, training, and support spaces at PIADC present challenges for scientists and building operators since they are inefficiently designed and not designed to modern biocontainment standards. Major limitations exist in the ability to conduct large-animal research trials necessary for assessing and countering emerging threats and developing necessary vaccines. NBAF will be designed to maximize laboratory space and research efficiencies while providing state-of-the-art technologies that meet modern biocontainment standards. At this point on the NBAF project cycle, which is consistent with other capital projects, the final laboratory design is still being completed. S&T will be working to finalize NBAF's design throughout FY 2011. Early construction at the Manhattan, Kansas site will be focused on replacing DHS's existing BSL-3 laboratory space for large animals.

Beginning in FY 2012, according to a phased building schedule, the initial useful segments to be built would include the following:

- Entry Control Points (North and West)
- Badging Facility
- Office areas to Support BSL-2 and BSL-3E Labs
- BSL-2 and one third of the programmed BSL-3E Laboratories
- Partial basement and pipe inspection level under BSL-3E, including small effluent decontamination system.

As S&T finalizes the building design, it will also explore the most cost-effective construction scenarios for the NBAF. This may also provide the most expeditious transition of the mission from Plum Island to Manhattan, KS and accelerate the disposal of Plum Island.

**Department of Homeland Security
Science & Technology
Research, Development, Acquisitions, and Operations
Transition
Justification of Program Changes
(Dollars in Thousands)**

Program Increase #3: Transition
 PPA: Transition
 Program Increase: Positions 0.0, FTE 0.0, Dollars \$2,000.0

Funding Profile

	FY 2010 Projected Actuals			FY 2011 President's Budget			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level	-	-	-	-	-	-	-	-	-
Program Increase	-	-	-	-	-	-	-	-	2,000
Total Request	-	-	-	-	-	-	-	-	2,000

Description of Item

The FY 2012 request includes an increase of \$2.000 million to the Office of Transition, Acquisitions Support and Operations Analysis program. The proposed increase will support research and development efforts to support QHSR Missions 1, 2, 4, & 5. The increase will assist DHS components to develop and institutionalize up front systems analyses and develop robust operational requirements and analyses of alternatives for acquisition programs. The increase allows the S&T Directorate, in partnership with components, to develop a framework and methodology for understanding the range of technology insertion points throughout the continuum of DHS missions. It will also analyze the relative return on investment of technology applications to detecting, classifying, preempting, or mitigating threats at these different junctures, as well as develop analyses of alternatives to ensure investments are made appropriately.

Justification

The Acquisitions Support and Operations Analysis program will provide science based analytic capability and capacity to DHS to better understand threats, the implications of major decisions, evaluate alternatives, improve DHS mission operations and the use of technology across the homeland security enterprise (HSE) and improve the Department's risk management capabilities. This effort will allow in-depth analyses of multiple programs both on-going and proposed to develop systematic approaches, robust operational requirements and analyses of alternatives to ensure adequate programmatic planning and adherence to Management Directive 102 (MD-102) as well as appropriately planning to align with necessary operational test and evaluation milestones. This upfront effort will result in realistic and achievable programmatic goals that incorporate the best technical solutions and necessary testing to minimize risk and maximize performance.

Impact on Performance (Relationship of Increase to Strategic Goals)

The requested FY 2012 funding will enable the Division to establish additional direct relationships between its researchers and customers across DHS and expand future funding mechanisms in support of *QHSR MISSION 7, GOAL 7.1: FOSTER INNOVATIVE APPROACHES AND SOLUTIONS THROUGH LEADING EDGE SCIENCE AND TECHNOLOGY*: Ensure scientifically informed analysis and decisions are coupled to innovative and effective technological solutions. *Objective 7.1.2: Develop innovative approaches and effective solutions*: Encourage and enable innovative approaches to critical homeland security challenges, fostering collaborative efforts involving government, academia, and the private sector.

Program Decrease	-	-	-	-	-	-	0	0	-3,038
Total Request	0	0	65,640	0	0	49,350	0	0	36,563

Description of Item

The FY 2012 funding decrease will eliminate one or more Centers of Excellence (COEs), Minority Serving Institutions (MSIs), and approximately \$1.893 million from Education’s Scholarship and Fellowship program within University Programs.

Justification

University Programs aims to build scientific leadership and core competencies in multi-disciplinary areas by investing in three thrust areas: a coordinated, university-based system of Centers of Excellence (COEs); Educational Programs; and Minority Serving Institutions. Integration of these three thrust areas ensures that DHS gets the maximum return on its investment in university research and education.

University Programs supports basic research and the education of promising students in homeland security-related Science, Technology, Engineering, and Mathematics (HS-STEM) fields. The Homeland Security Act of 2002 directs the S&T Directorate to “establish a coordinated, university-based system to enhance the Nation's homeland security.” Implicit in

this directive is the need for DHS to support both university-based research and a well-considered approach to training and placing future Homeland Security scientists, engineers, and practitioners for/in HS-STEM fields. Universities provide adaptable homeland security research capacity to address critical homeland security research needs in both the near- and long-term.

University Programs' mission is to maximize the Department's return on investment in university-based research and education to achieve the goals set by Congress as efficiently as possible. Because the program supports research, education, and technology development in HS-STEM fields, it is building the Nation's intellectual capital in these areas. University Programs is one of the only Federal entities assuming this role with respect to domestic security-related studies. The Congress enacted legislation (America COMPETES Act) to increase investment in long-term basic research and increase support for students in relevant fields as critical to preserving the U.S.'s strategic and economic security.

Impact on Performance (Relationship of Increase to Strategic Goals):

The reduction in FY 2012 funding will hinder University Programs' ability to establish additional direct relationships between its researchers and customers across DHS and expand future funding mechanisms for its wide range of programs in support of *QHSR MISSION 1: PREVENTING AND ENHANCING SECURITY, QHSR MISSION 2: SECURING AND MANAGING OUR BORDERS, QHSR MISSION 4: SAFEGUARDING AND SECURING CYBERSPACE, QHSR MISSION 5: ENSURING RESILIENCE TO DISASTERS, and MATURING AND STRENGTHENING THE HOMELAND SECURITY ENTERPRISE.*

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Science and Technology
Justification of Proposed Changes in RDA&O
Appropriation Language**

For necessary expenses for science and technology research, including advanced research projects; development; test and evaluation; acquisition; and operations; as authorized by title III of the Homeland Security Act of 2002 (6 U.S.C. 181 et seq.); and the purchase or lease of not to exceed five vehicles, [\$866,305,000]\$1,027,067,000, of which [\$740,305,000]\$750,067,000, to remain available until September 30, 2014[2013]; and of which [\$126,000,000]\$276,500,000, to remain available until September 30, [2015]2016, is solely for operation and construction of Laboratory Facilities.

Explanation of Changes:

No substantive changes proposed; the change to the language pertaining to Laboratory Facilities only clarifies the existing authority.

¹ FY 2011 C.R. funding level equals the FY 2010 Enacted.

² Technical adjustment for the difference between the FY 2010 enacted level and FY 2011 President's Budget Level.

³ A total of \$4.300M for the Administrative Savings Initiative is a reduction to the following types of activities: advisory and assistance services; travel of people and things; printing and reproduction; and supplies.

Total all IT and Non-IT Investments	\$0	\$150,000	\$150,000		

NATIONAL BIO AND AGRO DEFENSE FACILITY

1. Project Description, Justification, and Scope

The NBAF will be an integrated foreign animal and zoonotic disease research, development, and testing facility to support the complementary missions of DHS and the United States Department of Agriculture (USDA). Currently, some of this research occurs at Plum Island Animal Disease Center (PIADC), where researchers have contributed significantly to protecting against Foreign Animal Diseases (FAD) for the past 50 years. The Homeland Security Act of 2002 (Public Law 107-296) transferred the operation of the PIADC from USDA to DHS. DHS and USDA discussed a coordinated agricultural research strategy, as called for in the Homeland Security Act of 2002 and Homeland Security Presidential Directive 9 (HSPD-9), "Defense of United States Agriculture and Food (January 30, 2004)." These discussions revealed a capability gap that must be filled by an integrated research, development, test, and evaluation infrastructure for combating agricultural and public health threats posed by Foreign Animal Diseases, emerging, and zoonotic diseases in livestock. The DHS Science and Technology (S&T) Directorate is responsible for addressing this gap.

Accordingly, DHS proposed building NBAF to bridge the capability gap and to comply with HSPD- 9. Co-locating DHS with USDA's Animal and Plant Health Inspection Service – Veterinary Services (APHIS-VS) and Agricultural Research Service (ARS) at NBAF would increase capabilities in research, diagnostics, and responses to outbreaks in agricultural animals (i.e., cattle, swine, and sheep). NBAF will provide a domestic, modern, integrated high-containment facility that includes Biosafety Level (BSL)-2, BSL-3E, BSL-3Ag, and BSL-4 laboratories for an estimated 350 scientists and support staff to safely and effectively prevent the accidental or intentional introduction of animal diseases of high consequence into the United States.

PIADC, the current facility built in the 1950s, is nearing the end of its lifecycle, and does not contain the necessary BSL facilities to meet research requirements. NBAF would fulfill the need for a secure U.S. facility to support collaborative efforts among researchers from Federal and state agencies, academia, and international partners to perform necessary research to protect the agricultural economy and public health. Additionally, the NBAF mission supports the recommendations of the *Report of the Commission on the Prevention of Weapons of Mass Destruction (WMD) Proliferation and Terrorism (December 2008)*, which advises the US to undertake a series of mutually reinforcing domestic measures to prevent agro and bioterrorism. NBAF Space Justification – NBAF will satisfy the requirements identified in Homeland Security Presidential Directive (HSPD)-9 by providing an integrated facility for studying foreign animal and zoonotic diseases. The existing animal holding, laboratory, training, and support spaces at PIADC present challenges for scientists and building operators since they are inefficiently designed and not designed to modern biocontainment standards. Major limitations exist in the ability to conduct large-animal research trials necessary for assessing and countering emerging threats and developing necessary vaccines. NBAF will be designed to maximize laboratory space and research efficiencies while providing state-of-the-art technologies that meet modern biocontainment standards.

The proposed NBAF consists of a laboratory facility and four outbuildings. The laboratory facility will have BSL-2, BSL-3E, BSL-3Ag, BSL-4, small-scale vaccine and reagent development capabilities, and support space. The outbuildings include a CUP, entry guardhouse,

central receiving facility, and maintenance building. The area needed for the NBAF is approximately 540,000 gross square feet. The overall space is broken out as follows:

Space	GSF
Office/Support	160,000
BSL-2	14,500
BSL-3	302,000
BSL-4	38,500
Vaccine Prod.	25,000
NBAF	540,000

2. Significant Changes

Description of Item

The FY 2012 program change reflects a program change increase of \$150.000 million for initial funding for construction of the National Bio and Agro-Defense Facility (NBAF) main laboratory building and associated support infrastructure.

Justification

The \$150M will provide the initial funding for construction of the NBAF that will provide an integrated animal, foreign animal, and zoonotic disease research, development, and testing facility to support the complementary missions of DHS and USDA. NBAF will replace Plum Island Animal Disease Center (PIADC) and provide additional capabilities in state-of-the-art research, development, testing, and evaluation infrastructure to conduct research on high-consequence zoonotic (i.e., transmitted from animals to humans) diseases that could be a threat to public health. Expanded capabilities from the existing PIADC mission will allow NBAF to address a broader and more complete spectrum of threats. Research and development at NBAF will additionally address multiple threats/vulnerabilities related to bio- and agro-attacks and improve our understanding of potential agro-terrorism such as employing foreign animal and zoonotic disease pathogens against U.S. targets.

FY2010 Accomplishments

In FY 2010, the project continued detailed design, completed a site-specific risk assessment, and accepted the gift of money from Kansas to preparation the site for construction. Per the FY 2010 Department of Homeland Security Appropriations Act (P.L. 111-83), the following documents were submitted to Congress:

- 1) Site-Specific Biosafety and Biosecurity Mitigation Risk Assessment (SSRA);
- 2) A review of the SSRA by a National Academy of Sciences (NAS) Committee;
- 3) A report which describes the procedure that will be used to issue the permit to conduct foot-and-mouth disease virus (FMDv) under section 7524 of the Food, Conservation, and Energy Act of 2008; and
- 4) A report which describes the plans to establish an emergency response plan (ERP) with city, regional, and State officials in the event of an accidental release of foot-and-mouth disease or another hazardous pathogen.

FY2011 Accomplishments

In December 2011, S&T completed 100% design for the central utility plant (CUP) and the 35% design documents for the laboratory facility. Based on the results of the SSRA, S&T is evaluating design enhancements to further improve the security and biocontainment infrastructure. Kansas gifted 48 acres of land in Manhattan, KS, to build the NBAF. Upon approval by the Department of Justice, DHS will take ownership of the property in FY11. In addition, the project received cost-share funds from the State of Kansas that supported site preparation requirements prior to construction. The S&T Directorate is requesting cost-share funds from the State of Kansas to build the CUP. Pending acceptance of the gift money, the CUP construction contract will be awarded in spring 2011. Additionally, DHS is awarding a contract to expand and update the SSRA based on the 50% design and advancements in modeling techniques.

The General Services Administration (GSA) is currently working with DHS to evaluate the timing of the sale of Plum Island to maximize the sale value. The FY 2010 Appropriations language (H.R. 2892, Section 540) directs that the Secretary will have the General Services Administration (GSA) Administrator sell Plum Island's real and related personal property along with transportation assets supporting PIADC operations through public sale if the DHS Secretary were to determine that Plum Island would not be the future site of NBAF. Gross proceeds from the sale will be available in an offsetting account of the DHS S&T Directorate's Research, Development, Acquisition, and Operations (RDA&O) to offset site acquisition, NBAF construction, and related costs including due diligence requirements necessary to remediate Plum Island. The timing of the sale correlates to when DHS will transition from Plum Island into the newly constructed and commissioned NBAF.

3. Project Schedule and Current Cost Estimate

PPA Mission Statement

Provides expert assistance to entities across the Homeland Security Enterprise (HSE) to ensure that the transition, acquisition and deployment of technologies, information, and procedures improve the efficiency and effectiveness of the operational capabilities across the HSE mission. This includes providing technological assessment of major acquisition programs in DHS to help ensure that technologies, CONOPS, and procedures meet operational requirements, technology analysis and technology review of analysis of alternatives at the beginning and throughout an acquisition program's life; oversight of the test and evaluation of DHS major acquisition programs; standards to support the Homeland Security mission, and administration of the SAFETY Act program.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Travel	\$429	\$455	\$455	\$0

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations.

PPA Mission Statement

Includes customer-focused and output-oriented research, development, testing and evaluation (RDT&E) programs that balance risk, cost, impact, and time to delivery. These RDT&E programs support the needs of the operational components of the Department and the first responder community and address crosscutting areas such as standards and interoperability. Innovation focuses on high-risk/high-reward, homeland security R&D that could lead to technology breakthroughs that significantly enhance DHS operations. The five main areas of research and development include: Border Security; Chemical Biological, Radiological, Nuclear, and Explosive Defense; Counter Terrorist; Cyber Security; and Disaster Resilience.

Summary Justification and Explanation of Changes

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Travel	\$2,874	\$3,046	\$3,046	\$0

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations.

	<u>2010 Actual</u>	<u>2011 C.R.</u>	<u>2012 Request</u>	<u>2011 to 2012 Change</u>
Transportation of Things	\$20	\$0	\$0	\$0

	<u>2010 Actual</u>	<u>2011 C.R.</u>	<u>2012 Request</u>	<u>2011 to 2012 Change</u>
Other Rent	\$232	\$0	\$0	\$0

Other rent includes all payments to a non-Federal source for rental space, land, and structures.

	<u>2010 Actual</u>	<u>2011 C.R.</u>	<u>2012 Request</u>	<u>2011 to 2012 Change</u>
Communication, Utilities, and miscellaneous charges	\$25	\$0	\$0	\$0

	<u>2010 Actual</u>	<u>2011 C.R.</u>	<u>2012 Request</u>	<u>2011 to 2012 Change</u>
Advisory and Assistance Services	\$130,271	\$27,467	\$27,467	\$0

Advisory and assistance provide funds for Intergovernmental Personnel Act (IPA) and consultants in management and professional support services and engineering and technical services.

	<u>2010 Actual</u>	<u>2011 C.R.</u>	<u>2012 Request</u>	<u>2011 to 2012 Change</u>
Other Services	\$470	\$1,144	\$1,144	\$0

	<u>2010 Actual</u>	<u>2011 C.R.</u>	<u>2012 Request</u>	<u>2011 to 2012 Change</u>
Purchase from Government Accounts	\$13,953	\$1,134	\$1,134	\$0

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified.

	<u>2010 Actual</u>	<u>2011 C.R.</u>	<u>2012 Request</u>	<u>2011 to 2012 Change</u>
Operation & maintenance of facilities	\$5,140	\$63	\$63	\$0

Operation and maintenance of facilities includes obligations for operation, maintenance, repair, and storage of equipment, when done by contract.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Research and Development	\$458,171	\$542,102	\$624,504	\$82,402

Research and Development includes costs for contracts for basic and applied research and development. Includes an administrative savings of \$1,100,000 which reduces the CBRNE Defense R&D, an realignment of \$65,502,000 to correct FY 2011 C.R. and a program increase of \$18,000,000 to Cyber Attack R&D.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Operation & Maintenance of equipment	\$325	\$29	\$29	\$0

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Supplies & materials	\$798	\$435	\$435	\$0

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b)

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Equipment	\$751	\$62	\$62	\$0

Obligations for the purchase of personal property of a durable nature – that is, property that nominally may be expected to have a period of service of a year or more after being put into use without material impairment of its physical condition. Includes obligations for service in connection with the initial installation of equipment when performed under contract.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Land & Structures	\$609	\$0	\$0	\$0

Land and Structures provides costs for construction and capital improvement activities.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Grants/Subsidies/Contributions	\$14,171	\$1,966	\$1,966	\$0

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects.

Total, Laboratory Facilities		\$176,111	\$150,188	\$276,500	\$126,312

PPA Mission Statement

The mission of the Laboratory Facilities is to ensure that required infrastructure laboratory facilities support ongoing S&T Directorate mission research and development activities. Laboratory Facilities conducts its works in two main areas: construction and DHS-laboratory operations, which includes Salaries and Benefits.

Summary Justification and Explanation of Changes

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Salaries and Benefits	\$13,089	\$15,619	\$15,619	\$0

Salaries and Benefits includes costs for FTEs located at DHS S&T-operated laboratories.

Benefits	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
	3,633	3,850	3,850	---

See 11.1 Salaries and Benefits

Travel	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
	\$756	\$1,021	\$635	(\$386)

Travel includes all costs of S&T's personnel while in an authorized travel status, either directly or by reimbursing the traveler. The FY 2012 request includes a decrease of \$386,000 to cover a realignment to correct the FY 2011 C.R.

Transportation of Things	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
	\$35	\$0	\$0	\$0

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things.

GSA rent	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
	\$2,066	\$1,250	\$1,250	\$0

GSA Rent provides funding for rental space provided by General Services Administration (GSA) to the National Urban Security and Technology Laboratory (NUSTL), formerly Environmental Measurements Laboratory (EML) facilities.

Other Rent	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
	\$96	\$0	\$0	\$0

Other rent includes all payments to a non-Federal source for rental space, land, and structures.

Communication, Utilities, and misc. charges	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
	\$16,830	\$12,804	\$12,804	\$0

Communications, Utilities, and Misc Charges provides funds for communications, utilities, and related charges at laboratories managed by ONL.

Advisory and Assistance Services	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
	\$43,334	\$10,446	\$10,446	\$0

Advisory and assistance provides funds for Intergovernmental Personnel Act and consultants in management and professional support services and engineering and technical services. Such personnel support both operations and construction activities.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Other Services	\$579	\$345	\$345	\$0

Other Services provide funds for mission essential training and tuition. There is no change in projected costs from FY 2011.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Purchase from Government Accounts	\$34,207	\$4,611	\$4,611	\$0

Purchase from Government Accounts provides costs for administrative support, contracting administration support, and rent for interim non-GSA facilities.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Operation & maintenance of facilities	\$40,826	\$65,445	\$65,445	\$0

Operation and maintenance of facilities provides normal daily operations of PIADC, NUSTL, TSL, and NBACC. The costs include maintenance and repair of building and land.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Research and Development	\$1,796	\$0	\$0	\$0

Research and Development includes costs for contracts for basic and applied research and development.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Operation & Maintenance of equipment	\$686	\$616	\$616	\$0

Operation and maintenance of equipment provides normal daily operations and maintenance of PIADC, NUSTL, TSL, and NBACC equipment.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Supplies & materials	\$4,776	\$7,163	\$5,163	(\$2,000)

Supplies and materials provides daily office supplies, fuel for PIADC, and gasoline. Includes a decrease of \$2,000,000 to cover a realignment to correct the FY 2011 C.R.

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change
Equipment	\$2,420	\$1,800	\$1,800	\$0

Equipment provides costs for personal property, and information technology hardware/software, and includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract.

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change
Land & Structures	\$9,851	\$25,218	\$153,916	\$128,698

Land and Structures provides costs for construction and capital improvement activities. The FY 2012 request reflects an increase of \$128,698,000 for NBAF Construction.

	2010	2011	2012	2011 to 2012
	Actual	C.R.	Request	Change
Grants/Subsidies/Contributions	\$75	\$0	\$0	\$0

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects.

BUDGET REQUEST AND SUPPORTING INFORMATION

Management and Administration

I. Appropriation Overview

A. Mission Statement for Management and Administration

The Domestic Nuclear Detection Office (DNDO) is the lead agency “responsible for coordinating Federal efforts to detect and protect against the unauthorized importation, possession, storage, transportation, development, or use of a nuclear explosive device, fissile material, or radiological material in the United States, and to protect against attack using such devices or materials against the people, territory, or interests of the United States...” Essential to this authority, DNDO “shall serve as the primary entity of the United States Government to further develop, acquire, and support the deployment of an enhanced domestic system to detect, prevent, deter and report on attempts to move, control or use, the radiological and nuclear (rad/nuc) material” as prescribed in Security and Accountability For Every Port Act of 2006 (SAFE Port Act). Additionally, DNDO is authorized to “enhance and coordinate the nuclear detection efforts of Federal, State, local, and tribal governments and the private sector to ensure a managed, coordinated response.” In recognition of the catastrophic risk posed by the use of a nuclear weapon within the United States, and pursuant to the SAFE Port Act, the Department of Homeland Security (DHS) has integrated all nuclear detection/prevention/deterrence program technology development, test, evaluation, operational support activities, and nuclear forensics into DNDO. DNDO is dedicated to the development and enhancement of the Global Nuclear Detection Architecture (GNDA); acquisition and deployment support for the domestic detection systems; coordination of effective sharing of nuclear detection-related information; establishment of procedures and training for end users of nuclear detection equipment; and national-level integration, development, and advancement of an enduring national nuclear forensics capability.

The Management and Administration (M&A) appropriation provides for the management and administrative support to accomplish the DNDO mission. M&A includes all costs related to Federal personnel, including detailees from other organizations. In addition, M&A provides the material support for DNDO personnel, including supplies and materials, and administrative needs, such as information technology (IT) equipment and support. Finally, DNDO contributes M&A funds to the DHS Working Capital Fund (WCF) for facilities, other infrastructure and security costs, Human Resource services, IT services, and personnel support services including training and management travel costs.

B. Budget Activities

Management and Administration: The DNDO Fiscal Year (FY) 2012 request provides for 142 full-time positions (FTP) and 142 full-time equivalents (FTE) of which approximately 17 are detailees. As a jointly-staffed office with resources from across the Federal government, DNDO provides reimbursement to parent organizations for detailed staff. The total change from FY 2011 includes the transfer of 12 FTE from DNDO to the

Science and Technology Directorate (S&T), the addition of 8 new FTE in FY 2012, and an additional 16 Balanced Workforce Strategy (BWS) conversions.

As DNDO continues to expand focus beyond containerized cargo at points of entry, diverse solutions will be continually developed, as it continues to improve oversight and effective program management. An evolution in emphasis, which began in FY 2010, is resulting in increased architectural studies and analysis in support of strategic meaning for and implementation of the GNDA. DNDO is focusing efforts to develop surge capabilities to detect threats with limited or imperfect intelligence. These surge capabilities will necessarily rely on the multiple State and local law enforcement agencies that are available to perform rad/nuc detection operations using mobile and human-portable sensors.

As DNDO has matured as an organization, the Business and Finance Office has improved its ability to provide internal controls guidance, fiscal accountability, and transparency. DNDO's internal controls process is designed to provide assurance regarding the accountability, reliability, and transparency of financial reporting by complying with laws and regulations pertaining to financial reporting and establishing controls that safeguard assets from waste, loss, unauthorized use, or misappropriation. In accordance with Office of Management and Budget (OMB) Circ. A-123, DNDO leadership is conducting the tests necessary to meet the essential responsibility of ensuring that *"federal programs operate and federal resources are used efficiently to achieve desired objectives."* Periodic assessments have also been conducted in regards to the payment management process, and deficiencies have been rectified by the application of efficiency controls.

DHS Balanced Workforce Strategy: DHS launched the Balanced Workforce Strategy to conduct a multi-sector workforce assessment to eliminate or convert contractor positions. Positions were assessed against five screening criteria to determine if the functions remained necessary or were better suited to be met with Federal employees. DNDO's implementation of this efficiency review and workforce assessment resulted in the elimination of five contractor positions and further determined that 128 positions would be more suitable for Federal employment. To mitigate programmatic, workforce turnover and other risks, the positions will be converted over a five year period. Historically, DNDO has averaged a retention rate of over 90% of its career professionals. This stability in the workforce will allow DNDO to maintain staffing strength while successfully recruiting and retaining staff to fill the new positions outlined in this request.

C. Budget Request Summary

The Domestic Nuclear Detection Office requests \$41.12 million and 142 FTE within M&A in FY 2012.

II. Summary of FY 2012 Budget Estimates by Program/Project Activity (PPA)

2012 Program Change	8	8	1,960
2012 Total Request	142	142	41,120

DNDO requests 142 FTE and \$41.12 million for FY 2012.

CURRENT SERVICES PROGRAM DESCRIPTION

The M&A appropriation funds the administration of the Domestic Nuclear Detection Office (DNDO). The M&A request provides for the execution of salaries, benefits, and expenses related to 142 FTE, a net increase of 12 FTE from the calculated FY 2011 Continuing Resolution level. Additionally, funds are provided to the DHS WCF which provides such services as rent, the Office of Procurement Operations, and IT infrastructure support.

M&A provides for the management and administrative support of DNDO's mission and includes all costs related to Federal personnel, including salaries and benefits for DNDO staff, including detailees from other Federal agencies and DHS Components, such as the Department of Energy, Federal Bureau of Investigations, the Department of Defense, United States Coast Guard (USCG), and others. The M&A appropriation provides funding that assists in the achievement of DNDO's mission through the following leadership and administrative elements:

- Office of the Director: Policy Office and Office of the Chief Financial Officer.
- Office of the Chief of Staff: Information Technology; Executive Secretariat; Security; Human Resources; and Administration and Facility Resources.

M&A provides for the management and administrative support of the Directorates operating within the organizational structure of DNDO. The functions of each Directorate include:

- **Mission Management Directorate (MMD).** In cooperation with DNDO's intra- and interagency partners, MMD identifies, coordinates, and prioritizes programs across DNDO that meet the needs and enhance the capability of stakeholders, thereby, reducing the risk of rad/nuc terrorism.
- **Architecture Directorate (AD).** In cooperation with DNDO's intra- and interagency partners, AD develops time-phased strategies and plans for improving the Nation's ability to detect and prevent rad/nuc attacks.
- **Systems Engineering and Evaluation Directorate (SEED).** Ensures that DNDO proposes sound technical solutions and thoroughly understands systems performance and potential vulnerabilities prior to deploying those solutions.
- **Product Acquisition and Deployment Directorate (PADD).** Carries out the engineering development, production, developmental logistics, procurement and deployment of current and next-generation nuclear detection systems in support of an end-user community that includes other DHS components, including Customs and Border Protection (CBP), U.S. Coast Guard (USCG), and Transportation Security Administration (TSA).
- **Operations Support Directorate (OSD).** Develops the information sharing and analytical capacity necessary to create a fully integrated operating environment. OSD also conducts training, exercises, outreach, and technical assistance in support of preventive rad/nuc detection programs.
- **National Technical Nuclear Forensics Center (NTNFC).** Is tasked with two core missions: to provide national-level integration, centralized planning and stewardship for the technical nuclear forensics community; and to lead the U.S. Government in establishing a robust and enduring pre-detonation rad/nuc materials forensics capability.

M&A Administrative Savings Initiative - \$0.08 million

DNDO will achieve efficiencies amounting to \$0.08 million through reduced travel spending, and through reductions in the use of non-critical supplies and materials. Travel will be reduced through increased use of videoconferencing and other technologies, and by increased prioritization to ensure that only mission-critical travel is funded.

DHS Balanced Workforce

In FY 2010, DHS launched the Balanced Workforce Strategy (BWS) in order to conduct a multi-sector workforce assessment aimed at eliminating or converting contractor positions. Positions were assessed against five screening criteria to determine if the functions remained necessary or were better suited to be met with Federal employees. DNDO's implementation of this efficiency review and workforce assessment resulted in the elimination of five contractor positions and further determined that 128 positions would be more suitable for Federal employment. To mitigate programmatic, workforce turnover, and other risks: the positions will be converted over a five year period.

DHS chartered the BWS to examine the resources that support its missions to determine if these would be better served if the functions currently being performed by a contractor workforce were to be converted into Federal positions. DNDO conducted a position-by-position analysis in accordance with this initiative in which each position was judged against five criteria:

- Inherently or Nearly Inherent Governmental Functions. While no inherently governmental functions were being performed by a contractor, it was determined that some positions were performing nearly inherently governmental duties. The conversion of these positions would allow the expansion of the duties to provide more direct government management, decision-making, accountability and flexibility by the staff.
- Personal Services. A review of tasks completed by contractors was performed, and it was determined that no personal services were being performed.
- Mission Critical Functions. Functions that were critical to the operation of DNDO, such as highly technical scientific work, operations center support, etc., that were currently being performed by contractors were closely examined to determine if these functions would be better served by Federal employees who could provide an expected level of consistency and knowledge. It was determined that these positions met the mission critical criteria and were considered for conversion.
- Duration of Requirement. As with other areas, Federal employees in the following positions would provide increased flexibility as compared to the non-personal services contractors: some Executive and Administrative Assistants, facilities management, and IT support staff. These positions were considered for conversion. Contract staff positions where the task or assignment had specific completion dates with no follow-on assignment; and support positions that had experienced or were anticipated to experience significant fluctuations in their levels of support were not included in the conversion plan.
- Significant Cost Savings. Contractor positions of an ongoing nature with a consistent level of support were also identified for conversion in cases in which

there was a significant long-term cost benefit to having those positions filled by Federal employees.

Program Realignment

The objective of DNDO's workforce balancing plan is to complete the hiring for each group within the year. Approximately 13% of the total planned conversions are planned for Year One (FY 2012). To mitigate the on-board/hiring process risk, a full year of funding will be available to support the resource requirement for either a contractor or a Federal employee. The planned funding realignment strategy takes into account the known factors impacting the actual date an employee reports to the organization, thereby releasing the need for contractor support.

Availability of Savings: DNDO's plan impacts the savings expected to be realized as a result of the conversion in two different ways.

1. Actual program savings will be achieved in the year following the group of positions being converted.
2. The amount transferred in successive years will be reduced by the surplus expected in the year of conversion.

The approach will be to realign the funding from the Research, Development and Operations (RD&O) or Systems Acquisition appropriations to the Management & Administration account for the group of positions being converted. It should be noted that this strategy does not decrease the amount that DNDO will spend on its core missions but will simply change the type of funding requested (i.e. contractor support vs. Federal) and realign the appropriation in which the funds are requested. The basic principle used in computing the yearly cost and savings is as follows:

Year 1:

- a. Program Contractor Cost = full Contractor Cost transfer to M&A
- b. Contractor Savings after conversion in M&A subsidizes Year 2 group as an offset to Program Contractor Cost for Conversion
- c. Program Savings = \$0

Year 2:

- a. Program Contractor Cost – Year 1 savings = full Contractor Cost, Year 2
- b. Contractor Savings after year 2 conversion subsidizes Year 3 group.
- c. Program savings = *Surplus* from year 1 conversions.

Year 3 - 5:

- a. Identical to Year 2 plus the availability of the unused subsidy from prior year.

DNDO's workforce balancing plan will result in the conversion of 128 positions over a five-year period. This approach provides mitigation to existing risks in the hiring process and others that are unique to the conversion.

- Lead times for hiring. As we are converting the position and not the contracted resource currently fulfilling the requirement, there is an unknown lead time to fill each position. Announcements, screening of applicants, possible security clearance investigation delays, and other factors make it difficult to predict when a position will be filled.
- Volume of change to a program. DNDO will adapt to opportunities to hire quality candidates while still providing program offices the ability to absorb the change to their workforce.
- Need to accomplish the work. While the hiring process is executed, the work must go on. The transfer of the funds to the M&A account will permit DNDO to fund the work either through the contract vehicle(s) or salaries.
- Impact of other conversions. As other government agencies are also in the process of converting positions, there is a risk of higher than normal workforce turnover to both the Federal employees and contractors. Should this happen, the planned rate of conversion would allow DNDO to fill the unexpected vacancies and remain on plan.
- DNDO hiring track record. Although DNDO has experienced a slower than anticipated rate of hiring since its inception, the rate on hiring the past few years had allowed DNDO to maintain a consistent workforce levels.
- BWS Schedule. The plan provides sufficient funds to support each position in the year of conversion by providing funding for the FTP at the contracted rate. This will ensure there are funds to support the work either as a contractor or a Federal employee. The success of the plan is dependent on completing the hiring for all positions in the year of conversion. The full-year's savings from each group being converted is leveraged to support the next set of contracted positions to be converted.

DNDO's approach includes an oversight team consisting of Human Resources, budget, Contracting Officer/specialists, and programmatic representatives. This team will resolve conversion plan related issues, monitor the hiring progress and funding utilization, enact necessary modifications to support contracts, and regularly report on progress to DNDO senior leaders, engaging them as necessary to ensure timely plan execution. DNDO is committed to channeling the savings realized through this process into additional development and implementation of the GNDA.

General functions of positions, anticipated grade, and number of contractors planned for the realignment of funds to M&A for DNDO's implementation of the 16 BWS positions include:

Year 1:

- a. Systems Engineering, (1 contractor): GS-12/13
- b. Test Engineering, (1 contractor): GS-13/14
- c. Resource Management, (3 contractors):
 - GS-11/12/13, Architecture
 - GS-12/13, National Technical Nuclear Forensics
 - GS-11/12/13, Operations Support

- d. Mission Management, (2 contractors):
 - GS-12/13/14, Maritime Mission
 - GS-12/13/14, Interior Mission
- e. Operations Support Specialist, (1 contractor): GS-12/13
- f. Product Acquisition & Deployment, (2 contractors):
 - GS-11/12, Budget & Finance Lead
 - GS-13/14, On-Dock/Mobile Systems
- g. Red Team Specialist, (1 contractor): GS-14/15
- h. Class Guide Consult, (1 contractor): GS-14/15
- i. Records Management, (1 contractor): GS-13/14
- j. Program Liaison, (1 contractor): GS-9/11/12
- k. Executive Assistance, (1 contractor): GS-9
- l. Reception, (1 contractor): GS-4

IV. Program Justification Changes

**Department of Homeland Security
Domestic Nuclear Detection Office
Management and Administration
Justification of Program Changes**
(Dollars in Thousands)

Program Increase 1: Program management for oversight and technical execution
PPA: Management and Administration:
Program Increase: Positions 8.0, FTE 8.0, Dollars \$1,960.0

Funding Profile

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							134	134	39,160
Program Increase 1							8	8	1,960
Total Request	-	-		-	-		142	142	41,120

Description

DNDO requests \$1.96 million in FY 2012 for increased staff to provide oversight and technical execution.

Justification

FY 2012 funding provides support for 142 FTP and 142 FTE. The program increase provides for 8 FTP and 8 FTE. The additional staff will help perform vital mission support roles that will allow DNDO to better perform its mission to protect the Nation from illicit radiological/nuclear (rad/nuc) material.

New Full-Time Positions include:

- (4) Management/Program Oversight. As DNDO continues to look beyond containerized cargo and focuses its efforts on developing surge capabilities to detect threats with limited or imperfect intelligence, diverse solutions will be continually developed requiring a managed growth of personnel to maintain proper oversight and effective program management.
- (2) Support of GNDA. A shift of emphasis, which began in FY 2010, will result in increased architectural studies and analysis in support of the Global Nuclear Detection Architecture (GNDA). As a result of this shift, additional FTE are required to work toward continued assessment of the rad/nuc risk and the associated gaps in the GNDA.
- (1) Business Operations. As DNDO has matured its technical programs, the Business and Finance Office has been improving its ability to provide internal

controls guidance, fiscal accountability, and transparency. To ensure a framework of sound financial management additional resources are requested to provide improvements in financial management operations.

Separate from this request are staffing changes reflected within the adjustments-to-base to DNDO's M&A Appropriation, which include the transfer of 12 FTE from DNDO's Transformational Research and Development to S&T in FY 2012, and implementation of DHS's Balanced Workforce Strategy that including 16 contractor conversions.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

For salaries and expenses of the Domestic Nuclear Detection Office and for management and administration of programs and activities [\$38,500,000] \$41,120,000. Provided, that not to exceed \$3,000 shall be for official reception and representation expenses.

(Department of Homeland Security Appropriations Act, [2011]2012)

PPA Mission Statement

Per the National Security Presidential Directive (NSPD) 43 / Homeland Security Presidential Directive (HSPD) 14, the mission of Domestic Nuclear Detection Office (DNDO) is to "substantially reduce the risk of nuclear terrorism against the United States by continuously improving capabilities to deter, detect, respond to, and attribute attacks, in coordination with domestic and international partners."

The M&A appropriation provides for the management and administrative support of that goal. M&A includes all costs related to Federal personnel, including detailees from other organizations. The M&A appropriation accounts for the funding that assists in the achievement of DNDO's mission through the maintenance of an operations level that provides facilities, supplies and materials, IT equipment and administrative support. DNDO's contributions to the DHS Working Capital Fund are included within the M&A request.

Summary Justification and Explanation of Changes

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	FY 2011 to FY 2012 Change
Salaries and benefits	\$17,201	\$18,748	\$25,578	\$6,830

Salaries and Benefits includes costs for 142 FTE. The FY 2012 request is \$25,578,000 for personnel compensation and benefits. The increase in salaries and benefits is planned to accommodate a request for an additional 8 FTE, 16 contractor conversions associated with the DHS Balanced Workforce Strategy, and hiring to authorized FTE level.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	FY 2011 to FY 2012 Change
Travel	\$56	\$58	\$40	(\$18)

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2012 request is \$40,000; the decrease in travel represents a portion of DNDO's M&A efficiency offset that is in response to the Administrative Savings Initiative.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	FY 2011 to FY 2012 Change
Transportation of things	---	---	11	11

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. The FY 2012 request is \$11,000. The funding will be used to finance the transportation of furniture and other household goods associated with the rotation of overseas employees and the permanent change of station or relocation of domestically based DHS federal employees.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	FY 2011 to FY 2012 Change
GSA rent	\$4,318	\$4,328	\$4,784	\$456

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2012 request is \$4,784,000. Factored into the GSA cost is the rental of space through GSA to accommodate DNDO office requirements at secondary location in Washington D.C.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	FY 2011 to FY 2012 Change
Communication, utilities, and miscellaneous charges	\$25	\$27	\$27	\$0

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2012 request is \$27,000.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	FY 2011 to FY 2012 Change
Printing	22	23	23	\$0

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2012 request is \$23,000.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	FY 2011 to FY 2012 Change
Other services	\$489	\$442	\$676	\$234

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2012 request is \$676,000 Increase reflects services associated with additional FTEs (8 FTEs requested and 16 contractor conversions).

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	FY 2011 to FY 2012 Change
Purchase from Government accounts	\$15,339	\$14,143	\$9,548	(\$4,595)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2012 request is \$9,548,000. A decrease in purchases from government accounts is driven by a decrease in Working Capital Fund allocations, as well as savings that are anticipated to result from the implementation of the Balanced Workforce Strategy.

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	FY 2011 to FY 2012 Change
Operation & maintenance of facilities	\$0	\$0	\$105	\$105

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. The FY 2012 request of \$105,000 is an increase of \$105,000.

	FY 2010	FY 2011	FY 2012	FY 2011 to FY 2012
	Actual	C.R.	Request	Change
Operation & maintenance of equipment	\$554	\$427	\$65	(\$362)

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2012 request of \$65,000 is a decrease of \$362,000, reflective in part of the transfer of Transformational Research and Development to DHS' Directorate for Science and Technology (S&T).

	FY 2010	FY 2011	FY 2012	FY 2011 to FY 2012
	Actual	C.R.	Request	Change
Supplies & materials	\$242	\$200	\$138	(\$62)

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2012 request is \$138,000. The decrease in supplies and materials represents a portion of DNDO's M&A efficiency offset that is responsive to OMB's Savings Initiative.

	FY 2010	FY 2011	FY 2012	FY 2011 to FY 2012
	Actual	C.R.	Request	Change
Equipment	\$169	\$104	\$125	\$21

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2012 request is \$125,000.

J. FY 2012 Schedule of Working Capital Fund by Program/Project Activity

**Department of Homeland Security
Domestic Nuclear Detection Office
Management and Administration**

FY 2012 Schedule of Working Capital Fund by PPA

(Dollars in Thousands)

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	Increase / Decrease for FY 2012
Program/Project Activity	AMOUNT	AMOUNT	AMOUNT	AMOUNT
Total WCF-M&A	\$12,947	\$11,403	\$10,487	(\$916)

Note:

In FY 2012, DNDO's total Working Capital Fund assessment decreased. The total cost share associated with Office of Procurement Operations (OPO) is distributed between M&A, RD&O and Systems Acquisition.

K. DHS Balanced Workforce Strategy

In order to establish a high performing workforce comprised of a strong internal core of federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment the Department will realign contractor and/or federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with federal employees to better realize the full potential of our total workforce – both contracted and federal. A strong internal core of federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for federal employees. As the Department has a large magnitude of contracts, all contracts reviews have been prioritized based upon risk into Tiered ranking.

DNDO requests \$3.5M and 16 FTE for the FY 2012 DHS Balanced Workforce Strategy.

Position Type	FY 2010		FY 2011		FY 2011		FY 2011		FY 2012		FY2010 – FY2012

Reception									1	1	1	1
Total	0	0	0	0	0	0	0	0	16	16	16	16

FY 2012 DHS Balanced Workforce Strategy

- The amount of funding to convert 16 contract positions to Federal positions during Year One amounts to \$3.5 million.
- During Year One, the amount of the Contract that will be terminated or reduced equals approximately \$1.338 million. Contractor Savings after conversion in M&A will subsidize the Year 2 group as an offset to Program Contractor Cost for Conversion.

- **Implementation Timeline.** The plan provides sufficient funds to support each position in the year of conversion by providing funding for the FTP at the contracted rate. This will ensure there are funds to support the work either as a contractor or a Federal employee. The success of the plan is dependent on completing the hiring for all positions in the year of conversion.
- DNDO's implementation of an efficiency review and workforce assessment resulted in the elimination of five contractor positions and further determined that 128 positions would be more suitable for Federal employment.

Annualization of FY 2011 DHS Balanced Workforce Strategy

No funding is required for the annualization of FY 2011 DHS Balanced Workforce during Year One of DNDO's conversion plan.

DHS Balanced Workforce Strategy Follow-On

No contractor conversions occurred prior to FY 2012. No adjustments are necessary in FY 2012.

BUDGET REQUEST AND SUPPORTING INFORMATION

Research, Development, and Operations

I. Appropriation Overview

A. Mission Statement for Research, Development, and Operations

The mission of the Department of Homeland Security's (DHS) Domestic Nuclear Detection Office (DNDO) is to substantially reduce the risk of nuclear terrorism against the United States by continuously improving capabilities to deter, detect, respond to, and attribute attacks, in coordination with domestic and international partners. DNDO's strategic focus includes prevention of acts of nuclear terrorism through all available means. This strategy incorporates the benefit of deterrence which serves as a capability multiplier when measuring the effectiveness against failure-averse adversaries and their enablers. DNDO is focusing efforts to develop surge capabilities to detect threats with limited or imperfect intelligence. These surge capabilities will necessarily rely on the multiple State and local law enforcement agencies that are available to perform radiological and nuclear (rad/nuc) detection operations using mobile and human-portable sensors. DNDO is promoting several opportunities to emphasize the rad/nuc detection capabilities and operations at the State and local level. Along with the Securing the Cities (STC) Program, DNDO will increase the number of engagements with stakeholders to conduct covert testing. The Rad/Nuc Challenge will be initiated to provide a competition amongst the Preventive Rad/Nuc Detection (PRND) community, with industry demonstrations and information exchange forums. The budget also provides for the upgrade of three Mobile Detection Deployment Units (MDDU) to a larger equipment set.

DNDO was established by National Security Presidential Directive (NSPD)-43 and Homeland Security Presidential Directive (HSPD)-14 to provide a focal point addressing the broad spectrum of rad/nuc protective measures. Title V of the Safety and Accountability for Every Port Act of 2006 (SAFE Port Act of 2006 P.L. 109-347) directs DNDO to "serve as the primary entity of the United States Government (USG) to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop, or use an unauthorized nuclear explosive device, fissile material, or radiological material in the United States, and improve that system over time." DNDO is responsible for the acquisition of current and next generation of nuclear detection systems. DNDO is also responsible for integrating, advancing, and stewarding national nuclear forensics capabilities amongst the Departments of Defense, Energy, Justice, State, Homeland Security and the Intelligence Community.

DNDO has organized the majority of its development, test, evaluation, and acquisition programs into four mission areas. At the foundation of this mission space construct is the Global Nuclear Detection Architecture (GNDA) delineation of geographic layers (exterior, border, interior, and crosscutting) and transportation pathways (air, land, and sea). DNDO works closely with Federal, State, and local entities with the primary

operational responsibility for each pathway or within each layer to forge a more effective linkage between user requirements and technology and operational capability development efforts. The four mission areas to which DNDO has aligned activities, and the scope of activity addressed by each mission area, are described below:

The *land borders mission area* encompasses all official road and rail ports of entry (POEs), as well as land border checkpoints and illicit traffic between the official POEs. Road POE rad/nuc scanning focuses on cargo, pedestrians, and privately-operated vehicles (POVs). Current international rail efforts will address the scanning of cargo.

The *aviation mission area* addresses all threat pathways involving civil air transport – both commercial operations and general aviation. Rad/nuc threats may be transported via air as a prelude to an attack elsewhere, or the actual attack involving a rad/nuc threat device may be executed and delivered directly by air. Rad/nuc detection capabilities address the scanning of air cargo, aviation passengers and their baggage, as well as the aircraft and crew.

The *maritime mission area* addresses the scanning of people, cargo, vessels, and other conveyances at seaports of entry and on seas, oceans, or other navigable waterways within U.S. Federal, State, local and tribal law enforcement jurisdiction. All vessels, including container ships, commercial fishing boats, tug boats, barges, commercial tour boats, cruise ships, tankers, bulk cargo ships, and privately owned/operated pleasure craft and sailboats, within the defined maritime domain may be exploited by terrorists to transport illicit rad/nuc material.

The *interior mission area* comprises all detection opportunities within U.S. borders. The risk to metropolitan urban areas and critical infrastructure is reduced through facilitated build out of relevant Preventive Radiological/Nuclear Detection (PRND) programs, which are coordinated with State and local partners

Further, in its *cross mission and infrastructure support* role, DNDO directly interfaces with Federal, State, and local stakeholders to gather rad/nuc technology and operational capability requirements and provide these requirements by no later than FY 2012 to the Radiological and Nuclear Division within the Science and Technology Directorate (S&T) and to the systems development and operations support activities within DNDO. Once these systems are deployed, DNDO provides ongoing, centralized alarm adjudication and information sharing services.

DNDO is committed to ongoing interaction with Federal, State, and local groups across the full range of systems development efforts, which include all necessary systems engineering and test and evaluation needs. In addition, DNDO develops training and exercises specific to user groups, their operations, and relevant technologies. As a complement to the activities of these mission areas, DNDO will continue a full range of mission support efforts such as systems engineering, test and evaluation infrastructure, red teaming and net assessments, architecture studies, and operations support activities, including technical reachback.

Finally, the National Technical Nuclear Forensics Center (NTNFC) provides the technical capability to determine the origin and nature of nuclear or radiological attacks, interdicted source materials and devices to support national priorities for deterrence, attribution and prosecution. The Nuclear Forensics and Attribution Act (NFAA), signed into law on February 16, 2010, codified this mission within DNDO and included specific requirements to lead the development and implementation of the National Strategic Five-Year Plan for improving U.S. nuclear forensic and attribution capabilities, and to establish a National Nuclear Forensics Expertise Development Program to address the workforce pipeline needs in nuclear forensics.

The Research, Development, and Operations (RD&O) request identifies resources required for GNDA Development and the implementation of solutions to address vulnerabilities in the GNDA and all required mission and operations support activities.

B. Budget Activities

Systems Engineering and Architecture

All programs and mission areas require the implementation of a strong and disciplined systems engineering approach. Systems engineering is integral to program support, and includes areas such as risk management, configuration control, requirements development, and technical evaluation and analysis. Systems engineering is also a key component of test and evaluation efforts, providing the bases for the development of test strategies and plans, generation of test requirements, selection of appropriate test venues and equipment, support of test implementation, and reporting of test results. Additionally the development of detection technology standards to set the goals of the technology performance is included in this program.

At the core of all DNDO activities is the systems architecture function: determining gaps and vulnerabilities and then formulating recommendations and plans to mitigate the same. By intensively studying the multi-layered structure of the rad/nuc detection architecture, a well-defined and carefully coordinated network of interrelationships is being understood and developed.

The Joint Annual Interagency Review of the GNDA provides a means to evaluate and document the GNDA. DNDO Systems Architecture efforts are focused on developing an enhanced GNDA, including both domestic and international components. The global architecture comprises several key elements: a multi-layered structure of rad/nuc detection systems, deployed both domestically and overseas; a well-defined and carefully coordinated network of interrelationships among them; and a set of systems engineering-based principles and guidelines governing the architecture's design and evolution over time.

The GNDA Strategic Plan under development in FY11 will provide for the first time the high-level mission and goals of the GNDA. Since the GNDA is truly global and has

components that are both international and domestic, the strategic plan outlines different sets of objectives and performance goals for the U.S. government for its work to develop of the GNDA within, at, outside, and across its borders. The strategic plan will serve as a framework for subsequent planning for and analysis of the GNDA.

Near-term priorities for Systems Engineering and Architecture are:

- Develop Technical Capability Standards for handheld, transportable, and mobile rad/nuc detection equipment.
- Participate in the development of national and international standards for rad/nuc detection equipment.
- Complete an overarching strategic plan for the development of the GNDA and continually update the architecture gap and risk analyses.
- Complete the 2011 Joint Annual Interagency Review. Expand architecture studies to a broader range of potential pathways and identify solution options for enduring vulnerabilities in the GNDA.

Systems Development

DNDO Systems Development programs serve as the rad/nuc detection improvement component within DNDO, taking concepts for new detection systems from exploratory (or long-range) research to a level of maturity sufficient for production and deployment. Typically, DNDO will take a proven technology and explore various mission requirements that could be applicable to current vulnerabilities identified in the GNDA, including identifying potential end uses. Systems Development activities include engineering development and all developmental logistics elements associated with current as well as next-generation nuclear detection systems. The long range research will be done through the transformational research activities that are planned to be transferred to S&T by no later than FY 2012. This research will directly feed the development activities detailed here. Current programs include radiation portal monitors, human portable systems, advanced imaging techniques and neutron detector replacement, among others.

In order to implement the requirements of the DHS Acquisition Directives and improve overall program oversight; DNDO has implemented the Solution Development Process. The process includes foundational guidelines for long term plans, stage requirements and stage gates for program decision phases. This process provides a structured mechanism for leadership to initiate programs and objectives; to conduct periodic reviews and evaluate programs against approved objectives and milestones.

Within the FY 2012 request, DNDO is promoting several opportunities to further develop rad/nuc detection capabilities and operations at the State and local level. The Rad/Nuc Challenge will be initiated to provide a competition within the Preventive Rad/Nuc Detection (PRND) community, and will include industry demonstrations and information exchange forms. Unlike drug or weapon interdiction personnel, operational rad/nuc personnel do not often receive encouragement for superior performance as threats are not

regularly encountered. The Rad/Nuc Challenge provides a mechanism to award superior performance and encourage excellence. It also fosters more effective community-wide competition and advancement by establishing a greater awareness of the current state-of-the-art of technology and Concepts of Operations (CONOPS) throughout the field.

Near-term priorities for Systems Development are:

- Establish an Information Exchange Forum. Schedule activities including workshops, briefings, panel meetings, and the presentation of papers sponsored by members of the PRND community who wish to share their ideas and insights.
- Initiate a System/Capability Exposition. Include exhibit booths, system and CONOPS demonstrations, hands-on experiences, and showcases. This feature of the Rad/Nuc Challenge will expose industry and academia to the Government's needs, helping to shape independent research and development programs and alert attendees to upcoming opportunities.
- Deploy proven technology to improve the current-generation of human-portable and mobile rad/nuc detection systems to further the capabilities at our Nation's borders and airports.
- Utilize proven technology to improve the detection capability of radiography systems to automatically identify materials that could be used to shield special nuclear materials.
- Advance the technical maturity of emerging technologies to passively detect rad/nuc threats from a stand-off distance.
- Advance efforts to develop a rad/nuc scanning capability to address cargo entering the country from Canada and Mexico via rail.
- Develop and implement, at seaport terminals that have on-dock rail transfer capabilities, technologies to more efficiently scan cargo that is transferred directly from ship to rail and exits the terminal by train.
- Develop and evaluate boat-mounted rad/nuc detection technologies to address the "detection at sea" mission.
- Development of non-Helium-3 (^3He) based neutron detectors.
- Study and characterize the unique challenges of deploying rad/nuc equipment and operations at domestic Airports of Entry (APOEs) and international preclearance sites.
- Improve rad/nuc systems' algorithm performance for detection and identification of radiation.

Transformational Research and Development

DNDO's Transformational and Applied Research (TAR) program is planned to transfer to S&T by no later than FY 2012. Additional information on rad/nuc research will be included in the Congressional Justification for S&T.

Assessments

The DNDO capability development process is anchored by a critical assessment of technologies as they are deployed and implemented, as well as a continual assessment of

the GNDA, through a variety of means. Development and acquisition programs are supported by test and evaluation (T&E) campaigns to characterize technologies and systems, red teaming assessments to deepen understanding of adversary capabilities, and net assessments to identify the effectiveness of the planned and deployed GNDA.

In addition to the above activities, DNDO executes pilots – activities planned as operational tests or trials that serve as a tentative model for future development or deployment decisions. While DNDO’s aforementioned test campaigns are intended to evaluate the technical performance of detection technologies in controlled environments, pilot programs allow DNDO to conduct limited deployments of new concepts of operation (CONOPS) or emerging rad/nuc detection technologies in existing operational environments, or alternately, existing CONOPS or technologies in new operational environments. These pilots provide an assessment of the processes, equipment, and/or systems to support PRND mission objectives and customer/stakeholder requirements. Pilots are a tool for DNDO to identify and leverage lessons learned that will reduce the risk of full scale deployments, enhance the impact of limited and competing resources, and expedite deployment of the GNDA, thereby increasing the Nation’s ability to respond to the rad/nuc threat. In addition, DNDO has established Graduated Rad/Nuc Detector Evaluation and Reporting (GRaDERSM), a program to ensure independent and consistent testing of radiation detectors is performed by accredited laboratories.

Near-term priorities for Assessments are:

- Conduct Net Assessments and Red Team evaluations that enable DNDO programs to enhance the integration of international, Federal, State, tribal, local, first responders, and other mission partners.
- Having completed the Rad/Nuc Countermeasures Test and Evaluation Complex (RNCTEC) facility in FY 2009, startup the facility, and conduct RNCTEC operational and management activities.
- Retain radiation experts to assist in test planning and analysis and to ensure independent and technically defensible T&E campaigns.
- Conduct T&E activities each year to support each DNDO mission area, and sustain testing infrastructure at the testing sites as required.
- Pilot emerging technical and operational solutions to address vulnerabilities in the GNDA.

Operations Support

DNDO operations support provides technical resources and sustainment strategies to Federal, State, and local stakeholders and partners who are developing or enhancing their PRND capabilities. This support includes situational awareness of the PRND mission, PRND program development assistance, CONOPS and standard operating procedures (SOPs) development, and training and exercise validation.

To fulfill its mandate, operational support activities at DNDO track to the follow basic functions:

- PRND Capability Development and Enhancement;
- Training and exercising; and
- Integrated and centralized alarm adjudication, data collection, and information sharing services.

DNDO works directly with law enforcement and other Federal partners to determine indicators of nuclear terrorism to recommend appropriate response, including interdiction. Additionally, DNDO develops and maintains information sharing capabilities and analytical tools necessary to support an integrated operating system to be used by Federal, State, local, and tribal law enforcement agencies, as well as the larger intelligence and counterterrorism communities. DNDO rounds out its support to State and local entities through a training and exercise program tailored to the needs of the community.

More specifically, a central operations support capability is provided through the DNDO Joint Analysis Center (JAC), a 24/7 information and analysis activity that provides for situational awareness of the deployed nuclear detection architecture, rapid information reporting, and facilitation of technical support for alarm adjudication and resolution. The JAC relies on the national laboratory-based Secondary Reachback Program (SRB) to provide expert advice and analysis in support of detection operations, and on the Nuclear Assessment Program (NAP), a national laboratory-based capability, designed to support DNDO in its mission to develop the Global Nuclear Detection Architecture and provide technical analysis related to nuclear incidents as well as foreign and domestic detection capabilities. NAP ensures that a sufficient pool of subject matter experts exists to analyze the technical and operational aspects of rad/nuc events.

Near term priorities for Operations Support are:

- Systematically build integrated radiation detection capabilities in the Interior layer of the GNDA.
- Routinely provide rad/nuc informational products to the DHS Fusion Centers.
- Gather, analyze, and disseminate rad/nuc intelligence and information to ensure the Department and all its partners can conduct collaborative rad/nuc operations based on a common frame of reference.
- Ensure that detection events lead to an appropriate response by local or Federal law enforcement, fire and other public safety operations.
- Conduct engagements with State and local communities to increase awareness, partnerships, and capabilities.
- Expand existing foundational programs, such as training, exercises, and onsite program assistance to include a broader range of customers, evolving risks and vulnerabilities, technologies, and proven operational concepts.
- Operate, maintain, and enhance the JAC Collaborative Information System, as the government's capability to receive, analyze, store, and report on rad/nuc-related information.

National Technical Nuclear Forensics

The NTNFC was established within DNDO in 2007 by NSPD-17/HSPD-4 (Annex IV). This presidential directive assigned roles and responsibilities to six Federal departments and agencies for developing and maintaining a comprehensive national technical nuclear forensics (NTNF) capability. DNDO was given two core missions: to provide national-level integration, centralized planning and stewardship as the “systems integrator” for the nuclear forensics (NF) enterprise; and to serve as the capability developer for pre-detonation rad/nuc materials forensics. The Nuclear Forensics and Attribution Act (NFAA) (P.L. 111-140), signed into law on February 16, 2010, codified this two-tiered mission and mandated the NTNFC to lead the development and implementation of the National Nuclear Forensics Expertise Development Program (NNFEDP) and the National Strategic Five-Year Plan for Improving the Nuclear Forensics and Attribution Capabilities of the United States. DNDO is striving to appropriately resource and advance NTNF capabilities, as emphasized by the President and Congress, and as urged by the National Academy of Sciences in their July 2010 report “Nuclear Forensics: A Capability At Risk.”

In order to address the system integration and pre-detonation materials development missions, the NTNFC is organized into three key work areas: 1) Operational Readiness, 2) Technology Advancement, and 3) Expertise Development.

The NF operational readiness work area comprises activities that ensure the USG has effective, jointly-developed plans that are regularly exercised and assessed, to assure preparedness for a nuclear attack or interdiction, immediately and without warning. In FY 2011 - FY 2012, the NTNFC will lead the NF community in the implementation of the National Strategic Five-Year Plan and activities outlined therein, through the use of its well-established interagency forums. In addition, NTNFC will lead the development and revision of foundational documentation, the organization of interagency exercises, and the conduct of annual capability assessments.

Due to the complexity of pre-detonation materials characteristics, NTNFC addresses Technology Advancement systematically, across the nuclear fuel cycle and the pre-detonation phases of materials collection, analysis, and evaluation. NTNFC works with partner agencies and the international community to design and build programs that define the use of standardized methods for analyses, articulation of confidence in results, and practice of demonstrated competencies in linkages, measurements and evaluations. This strategy increases knowledge of the characteristics of domestic and foreign materials, signatures, and manufacturing processes – utilizing current and emerging techniques and tools tied to rigorous standards for forensics investigations.

Finally, the Expertise Development work area aims to ensure that a sufficient population of highly qualified scientists is cultivated and sustained to provide the critical technical expertise that underpins the entire NTNF enterprise. The NTNFC plans to continue the expansion of the NNFEDP gradually in FY 2011 - FY 2012, in step with NTNF mission requirements and near-term assessments of human capital supply and demand. The

NTNFC will introduce three to four new Ph.D. scientists into the NF workforce annually as it advances toward the goal of adding at least 35 new scientists by 2018. These goals are based on the recommendations of the expert Nuclear Forensics Science Panel and the AAAS/APS to stem the loss of qualified personnel and maintain baseline staffing levels.

C – Budget Request Summary

The Domestic Nuclear Detection Office requests \$206.258 million for FY 2012 Research, Development, and Operations.

II. Summary of FY 2012 Budget Estimates by Program/Project Activity (PPA)

CURRENT SERVICES PROGRAM DESCRIPTION

The Domestic Nuclear Detection Office (DNDO) systems engineering and architecture program develops, implements, and supports a disciplined systems engineering approach throughout DNDO, and enhances the Global Nuclear Detection Architecture (GNDA), including both domestic and international components.

Systems Engineering Program

Description

The Systems Engineering Program includes the following projects:

- *Radiological/Nuclear (Rad/Nuc) Detection Standards* fulfills the U.S. Government (USG) responsibility for providing necessary support for the development and maintenance of standards for rad/nuc detection.
- *Program Integration and Quality Assurance* provides the support that is required to execute the Systems Engineering Support in an efficient manner while maintaining high quality and consistency across the multiple subtasks supporting various DNDO Programs.
- *Trade Studies and Modeling* provides modeling support to DNDO programs in coordination with the national laboratories and other supporting organizations to develop and validate models that are used for deployment and systems

performance modeling to predict technical performance or to enhance understanding of potential technical performance.

Background and Strategy

The Systems Engineering Program is aligned to:

- DHS Quadrennial Homeland Security Review (QHSR) Mission 1-Preventing Terrorism and Enhancing Security
 - Goal 1.2 – Prevent Unauthorized Acquisition or Use of Chemical, Biological, Rad/Nuc (CBRN) Materials and Capabilities
 - Objective 1.2.3 Control Movement of CBRN
 - Objective 1.2.4 Protect Against Hostile Use of CBRN
- DNDO Strategic Plan
 - Goal 7 – Strengthen the foundation and infrastructure of the GNDA through continuously improving operational support and situational awareness
 - Objective 7.4 – Develop Technical Capability Standards for radiation detection and non-intrusive imaging to detect rad/nuc threats
- DNDO Systems Engineering and Evaluation Directorate Strategic Plan
 - Goal 1 – Institutionalize a Systems Engineering mindset across DNDO Programs and Mission Areas in support of the systems development lifecycle
 - Objective 1.1 – Assist DNDO program managers and mission area managers in compliance with systems engineering requirements found in Department of Homeland Security (DHS) Acquisition Directive 102-01
 - Goal 2 – Provide leadership in the development of national and international standards relating to rad/nuc detection
 - Objective 2.1 – Develop Government unique technical capability standards for non-intrusive imaging and rad/nuc detection systems
 - Objective 2.2 – Develop and Maintain national consensus standards for rad/nuc detection systems
 - Objective 2.3 –Support and participate in the development and maintenance of international consensus standards for rad/nuc detection systems. Under the Rad/Nuc Detection Standards project, the Technical Capability Standard Development project element was mandated by the Safe Port Act of 2006

The Systems Engineering Program provides standards for rad/nuc detection system performance that are consistent with the goals of the GNDA. Systems Engineering efforts ensure the satisfactory performance of all supported DNDO programs throughout the Systems Engineering Life Cycle and is essential for conducting the DNDO Solution Development Process.

Accomplishments in Systems Engineering and Architecture – Systems Engineering

Significant accomplishments in FY 2010 include:

- Completed a formal Study Plan and an Analysis Plan and initiated an Analysis of Alternatives (AOA) for the Human Portable Tripwire (HPT) radiation detection mission.

FY 2011 planned accomplishments include:

- Complete an AOA for the HPT radiation detection mission.
- Complete an Alternatives Analysis for the Small Boat Stand-Off Detection System.
- Complete an Alternatives Analysis for the On-Dock Rail Program
- Complete an Operational Assessment of Radiation Detection Straddle Carrier at the Port of Tacoma, Washington.
- Complete Operational Testing of the Joint Analysis Center Collaborative Information System.
- Complete a comprehensive report describing the methodology of the development and validation of injection study tools.

FY 2012 planned accomplishments include:

- Complete an AOA for the International Rail radiation detection mission.
- Complete an Alternatives Analysis for the Long Range Radiation Detection (LRRD) Program.
- Complete an Alternatives Analysis for the Cargo Imaging for Shielded Nuclear Threats (CISNT) Program, formerly known as the Advanced Cargo Imaging (ACI) Program.

Standards Program

There are two types of standards: consensus-based standards which are developed by the technical community including commercial vendors, and Technical Capability Standards which are government-unique standards. Pursuant to the Safety and Accountability for Every Port Act of 2006 (SAFE Port Act of 2006), DNDO is responsible for developing Technical Capability Standards for non-intrusive imaging and radiation detection systems. The objective of the DNDO Standards Program is to ensure all radiation detection standards are informed by the threat scenarios, as they are understood. As such, the Standards Program supports all DNDO programs for acquisition, research and development.

Initial Technical Capability Standards will be government-unique and will use classified information on rad/nuc threats as a basis. The intent is to develop a technical capability standard for each category of detection systems. As appropriate, the program will then support the modification of existing consensus standards to include the government-

unique standard information. The Technical Capability Standards will also provide a basis for DNDO to work with the Department of Energy's (DOE) National Nuclear Security Administration (NNSA) to develop unclassified test objects that are consistent with the threat-informed requirements. In collaboration with the National Institute of Standards and Technology (NIST), DNDO has formed an interagency working group and commenced work on developing Technical Capability Standards.

DNDO is also responsible for supporting the development of national and international rad/nuc detection consensus standards. The DNDO consensus standards program will:

- Review present standards for currency and revision as needed and identify those areas requiring development of new standards.
- Provide the support needed to maintain the current Internet access to rad/nuc American National Standards Institute (ANSI) standards under DNDO responsibility.
- Support U.S. participation at related international standards development meetings to ensure U.S. concerns are represented in the international community, and that U.S. standards reflect existing international efforts.

Systems engineering and evaluation support is provided to specific DNDO programs in areas such as standard systems engineering documentation, adaptation of concepts of operations (CONOPS), systems capabilities matrices, and test campaigns. These systems engineering activities are described in the Systems Development section of this request - as a part of the programs that receive this support.

Accomplishments in Systems Engineering and Architecture - Standards

Significant accomplishments in FY 2010 include:

- Achieved formal DHS adoption of six ANSI rad/nuc detection standards which can now be used as established consensus standards for the Graduated Rad/Nuc Detector Evaluation and Reporting (GRaDER) testing program.
- Achieved inter-agency concurrence on Technical Capability Standard for handheld instruments used for the detection and identification of radionuclides.

FY 2011 planned accomplishments include:

- Finalize ANSI 42 Airborne radiation detection technology standard.
- Publish an inter-agency approved Technical Capability Standard for handheld instruments used for the detection and identification of radionuclides.
- Draft a Technical Capability Standard for transportable and mobile radiation detection systems.

FY 2012 planned accomplishments include:

- Complete first revision and update of ANSI N42.42 Data Format Standard for Radiation Detectors Used for Homeland Security.

- Achieve inter-agency concurrence on a Technical Capability Standard for transportable and mobile radiation detection systems.
- Develop a draft, threat-based Technical Capability Standard for rad/nuc detection by non-intrusive imaging systems.

Information Sharing

Description

The DNDO Information Sharing Program establishes and maintains the necessary enterprise and data architectures that enable programs in DNDO, DHS, as well as our Federal, State, local and commercial partners to effectively share rad/nuc information for the purpose of preventing terrorism and enhancing National security. The DNDO Information Sharing program provides subject matter expert support for Governance, Enterprise Architecture, and Data Architecture (to include Data Management Planning and Support) to aid the evolution of standardized systems for robust rad/nuc information exchange. The DNDO Information Sharing program conducts activities to aid DNDO programs and projects in collection, documentation, and validation of GNDA-related information. Integrated information sharing and exchange policies, operational concepts, tactics, techniques, and procedures are produced. This enables improved and timelier rad/nuc detection, incident, and information correlation to “connect the dots.”

Background and Strategy

Governance and information sharing activities support performance of DNDO rad/nuc information sharing and integration responsibilities derived from DNDO missions outlined in Section 1802 of the SAFE Port Act of 2006 [6 USC 592] and in DHS policy (DHS Acquisition Directive 102-01, DHS Directive 103-01, Enterprise Data Management Policy). DNDO oversees, reports, and supports DNDO enterprise and data architecture in performance of DHS MD 0007.1, “Information Technology Integration and Management.” Identified GNDA architectural gaps are analyzed; GNDA information sharing gaps and needs, organizational and technical connections are documented; data standards and conventions are developed and established; concepts and candidate information sharing solutions are identified; pilot information sharing solutions are prototyped and supported; methodologies and technologies are developed for validating information integration required for the various layers of the domestic portion of the global architecture; and the measurement of effectiveness with which information sharing and integration contribute to an integrated [GNDA] architecture are aided.

The SAFE Port Act of 2006 sections 8 & 9 established DNDO to “support and enhance the effective sharing and use of appropriate information” and “further enhance and maintain continuous awareness by analyzing information from all Office mission-related detection systems.”

Information Sharing is aligned to:

- DHS Quadrennial Homeland Security Review (QHSR) Mission 1- Preventing Terrorism and Enhancing Security

- Goal 1.2 – Prevent the Unauthorized Acquisition or Use of Chemical, Biological, Radiological/Nuclear (CBRN) Materials and Capabilities
 - Objective 1.2.3 Control Movement of CBRN
 - Objective 1.2.4 Protect Against Hostile Use of CBRN

Accomplishments in Systems Engineering and Architecture – Information Sharing

Significant accomplishments in FY 2010 include:

- Completed development and began validation of the architectural products developed to support core information exchanges among domestic GNDA participants.
- Identified commercially available message routing solution that meets DNDO's requirements to allow sharing of rad/nuc information in real time to enhance situational awareness of Federal, State, and local partners.
- The White House Interagency Policy Committee on "Information Sharing and Architecture" recognized DNDO as one of its success stories and recommended DNDO's approach as a potential solution for sharing information between Federal, State, and local partners.

FY 2011 planned accomplishments include:

- Create Memoranda of Agreement and Understanding, Information Sharing Access and Agreements, and Interconnection Security Agreements supporting validated information exchanges (documented in the architecture) with data-sharing partners.
- Continue experimental prototyping efforts by connecting live sensors in the Defense Threat Reduction Agency (DTRA) test environment; display situational awareness information to operators in the prototype experiment.
- Establish an Enterprise Architecture for DNDO.
- Establish the National Information Exchange Model (NIEM) CBRN domain.

FY 2012 planned accomplishments include:

- Update and maintain an Enterprise Architecture for DNDO to meet the component enterprise architecture maturity framework.
- Update and maintain the National Information Exchange Model (NIEM) CBRN domain, in conjunction with the domain co-steward.
- Establish and maintain Information Exchange Package Documentation (IEPDs) for all DNDO programs (e.g., Joint Analysis Center Collaborative Information System (JACCIS), which uses the joint DNDO, Customs and Border Protection (CBP) IEPD N.25 standard for rad/nuc information exchange).
- Support DNDO programs in establishing and maintaining required enterprise architecture data management and systems engineering artifacts.
- Facilitate and review all artifacts for Enterprise Architecture Decision Point review for all DNDO Programs.

- Facilitate and review all artifacts for Data Management required by DHS for all DNDO Programs.
- Perform all aspects of Enterprise Architecture Program Governance and Strategic Planning to ensure information sharing is deliberate and effective. This includes administration and oversight of the Capital Planning and Investment Control process for DNDO.
- Establish and maintain standards and conventions for Information Technology and information exchange for DNDO.

Mission Critical Messaging (MCM)

Description

The DNDO will establish a program beginning in FY 2012 to provide a capability to implement automated sharing of rad/nuc situational awareness information with our Federal, State, and local partners. This mechanism will enable information sharing in real-time using the NIEM and geospatial message routing. Mission Critical Messaging (MCM) responds to information integration-related capability gaps identified in the 2009 Joint Interagency Annual Review of the GNDA—particularly the integration of unclassified information from systems to be used for situational awareness across the GNDA. MCM facilitates the development and implementation of a messaging infrastructure for communicating rad/nuc situational awareness by Federal, State, local, tribal, and territorial partners. MCM will leverage the information sharing architecture and standards developed by DNDO to allow our partners to establish messaging infrastructures to communicate real-time situational awareness more easily with multiple partners. Through MCM, DNDO will prototype and establish a standard for message exchange using commercially available message routing hardware and software which can be acquired and deployed by our Federal, State, and local partners.

Background and Strategy

MCM responds to information integration-related capability gaps identified in the 2009 Joint Interagency Annual Review of the GNDA — in particular, the integration of unclassified information from systems to be used for situational awareness across the GNDA. Beginning in 2009, the DNDO began experimenting with solutions to fill this gap. Under the efforts of the Southeast Transportation Corridor Pilot (SETCP), DNDO explored the use of rad/nuc information exchange standards to enhance our ability to share cargo screening information and to support Radiological alarm adjudication. With lessons learned in the SETCP, DNDO began prototyping solutions that would scale to provide effective GNDA information sharing. DNDO's partner, Defense Threat Reduction Agency (DTRA), identified commercial message routing solutions that met DNDO's requirements, and DNDO has successfully connected those technologies to a state counter-terrorism center display system. Based on the success of experimental prototyping efforts and the recommendation of the White House Interagency Policy Committee on "Information Sharing and Architecture," the MCM program is planned for initiation in FY 2012.

MCM is aligned to:

- DHS QHSR Mission 1- Preventing Terrorism and Enhancing Security
 - Goal 1.2 – Prevent the Unauthorized Acquisition or Use of Chemical, Biological, Radiological/Nuclear (CBRN) Materials and Capabilities
 - Objective 1.2.3 Control Movement of CBRN
 - Objective 1.2.4 Protect Against Hostile Use of CBRN

Accomplishments in Systems Engineering and Architecture – Mission Critical Messaging

Significant accomplishments in FY 2010 include:

- (Program does not start until 2012.)

FY 2011 planned accomplishments include:

- (Program does not start until 2012.)

FY 2012 planned accomplishments include:

- Stand-up the MCM Program; Plan, analyze and develop the program approach. Establish a test interface between the DNDO Joint Analysis Center (JAC) and at least one Federal, State, local or tribal entity.

Systems Architecture

Global Nuclear Detection Architecture (GNDA) Development Program

The GNDA Development effort is aligned to:

- DHS QHSR Mission 1, Preventing Terrorism and Enhancing Security
 - Goal 1.2 Prevent the Unauthorized Acquisition or Use of CBRN Materials and Capabilities
 - Objective 1.2.3 Control Movement of CBRN
 - Objective 1.2.4 Protection Against Hostile Use of CBRN
- DNDO's Strategic plan
 - Goal 1: Lead USG efforts to further develop an enhanced GNDA through a layered defense-in-depth approach to the detection and interdiction of illicit nuclear and radioactive materials

DNDO is focusing efforts to develop surge capabilities to detect threats with limited or imperfect intelligence. These surge capabilities will necessarily rely on the multiple State and local law enforcement agencies that are available to perform rad/nuc detection operations using mobile and human-portable sensors.

Description

Beginning with its baseline architecture analysis in 2005, DNDO adopted a geographical/transport model of the global architecture, based on the flow of weapons or materials from point of origin, or source, through a series of detection “layers,” to targets, typically in the United States. The overall aim of the architecture development and analysis is substantial risk reduction through a balanced, robust, adaptive/responsive, cost-effective, and layered strategy. The balance is achieved through a multi-layered structure of rad/nuc detection systems (both domestically and internationally), and a well-defined and carefully coordinated network of interrelationships among them.

GNDA development incorporates cross-cutting elements that impact multiple mission areas; i.e. International GNDA Studies and International Engagement, and GNDA-Wide Planning, Modeling and Analysis, as well as specific pathway analyses and implementation efforts.

DNDO will lead the U.S. interagency in the development of the first GNDA Strategic Plan, which will provide further guidance for the development of the GNDA. The strategic plan will articulate the mission and goals of the overall GNDA as well as the objectives and performance goals for the U.S. government in support of the GNDA. The performance goals will serve as a framework for portions of future reports on the Joint Annual Interagency Review, starting with the 2011 report. Additionally, the strategic plan will inform additional developmental activities, such as implementation planning for portions of the GNDA.

The GNDA Development program is composed of two distinct projects.

Project 1: International GNDA Studies

Studies and analyses are performed to characterize the gaps, identify options, evaluate the advantages and disadvantages of alternative solutions, and formulate time-phased plans to reduce risks. As a crosscutting function, ongoing development of the GNDA will involve analyses of all potential pathways, suggest technologies or programs to address any identified vulnerabilities, and strive for stronger linkages at every point in the architecture. This includes performance of international geographical architectural analyses and investigation of key relationships with international partners to enhance national level detection capacity in their respective countries.

Prioritization methodologies and engagement will be conducted under both bilateral discussions and arrangements as well as under the framework of existing international agreements (e.g. UN 1540, Global Initiative to Combat Nuclear Terrorism) as well as existing institutions (e.g. International Atomic Energy Agency, World Customs Organization, Interpol, International Civil Aviation Organization, International Maritime Organization, etc) as a means to bolster the GNDA.

Project 2: GNDA-Wide Planning, Modeling, and Analysis

Strategic planning and evolving risk evaluations will contribute to an annual report that will provide both the status of current detection architecture capabilities as well as provide strategic direction for further enhancements to detection capabilities across the architecture. These strategic planning, modeling and risk analyses are intended to reduce both the technical and programmatic risk of new efforts and enhance their integration and interoperability with the overall GNDA.

The development of specific architecture studies, concepts of operations (CONOPS) analyses, detector modeling and analysis, and “systems of systems studies” support will help identify and characterize trade-offs presented from alternative detection architecture solutions, risks, and prioritize costs that will impact myriad implementation approaches across the land borders, aviation, maritime and interior mission areas.

In order to fulfill the need for a sustainable GNDA, ongoing analysis is required. These analyses include: 1) means to influence adversary decision processes and thereby improve the effectiveness of detection systems through deterrence, dissuasion, delay, or deflection, 2) methods for evaluating the effectiveness of the GNDA such as those for evaluating risk reduction or vulnerability reduction, and 3) methods to enhance the robustness of the GNDA such as portfolio analysis or sustainability analysis.

Accomplishments in Systems Engineering and Architecture – GNDA Development Studies

Significant accomplishments in FY 2010 include:

- Completed draft of International Atomic Energy Agency (IAEA) Nuclear Security Series recommendations document on detection and response, in conjunction with USG interagency and international IAEA membership
- Completed the Model Guidelines Document for Nuclear Detection Architectures, an internationally developed document, led by DNDO, which is intended to serve as a high-level reference for nations and organizations interested in improving their capabilities for preventing nuclear terrorism and the illicit trafficking of nuclear and other radioactive materials and devices.
- Completed the Analysis of Motivating Factors and International Engagement Strategies Study which identified and analyzed motivating factors that might influence a country to participate in developing a Global Nuclear Detection Architecture under a U.S.-led international collaboration.
- Completed the study titled “Prospects for Enhancing the Southeast Asian Component of the Global Nuclear Detection Architecture,” which identified current willingness and capability to participate in the development of national and regional nuclear detection architectures which would enhance the effectiveness of the GNDA.
- Conducted an international workshop under the framework of the Global Initiative to Combat Nuclear Terrorism to identify and analyze methodologies to

effectively implement capabilities enhancing the Global Nuclear Detection Architecture.

- Conducted a workshop for South East Asian countries in Singapore to identify effective regional nuclear detection architecture development strategies to enhance the regions capability to implement an effective detection architecture considering current regional priorities.
- Formalized relationships with the Governments of France and Singapore by completing Project Arrangements for cooperation in Radiological and Nuclear Detection, to include research and development, information sharing and testing and evaluation of detection technologies.
- Completed draft for over-arching interagency strategic plan for the GNDA.
- Delivered to Congress the Joint Annual Interagency Review of the Global Nuclear Detection Architecture.

FY 2011 planned accomplishments include:

- Conduct two planned “Global Initiative to Combat Nuclear Terrorism Implementation Workshops” to follow on to Model Guidelines Document for Nuclear Detection Architectures document development and implementation.
- Conduct one planned regional GNDA workshop in Middle East.
- Conduct three regional architectural analyses.
- Continue bilateral and multilateral engagements with key foreign partners on nuclear detection architectures, to include the International Atomic Energy Agency, and Global Initiative to Combat Nuclear Terrorism and other partners.
- In coordination with DHS Directorate for Science and Technology (S&T), complete the second edition of the Homeland Security Presidential Directive (HSPD)-18 Risk Analysis for Medical Countermeasures.
- Complete an interagency-approved GNDA Strategic Plan and supporting analysis.
- Develop a Systems Architecture strategic plan to be completed by end of FY 2011.
- Complete the 2011 Joint Annual Interagency Review of the GNDA, including GNDA Program/Budget Crosscut.
- Continue work on detection modeling, data fusion and analysis to enhance detection capabilities in support of various fixed and mobile operational detection programs. This is an ongoing annual activity.
- Continue foundational studies on the application of PRND capabilities, including whether or where to employ 100% or randomized screening concepts at strategic locations. Two studies related to the domestic layer are expected to be completed by the end of FY 2011.
- Refine risk methodology and investigate risk buy-down for the various inputs to the GNDA.
- Continue Detector Operational Modeling to support detector deployment in various environments. This is an ongoing activity.

FY 2012 planned accomplishments include:

- Conduct two “Global Initiative to Combat Nuclear Terrorism Implementation Workshops” to follow on to Model Guidelines Document (MGD) development and implementation.
- Conduct one regional GNDA workshop.
- Conduct three regional architectural analyses.
- Continue bilateral and multilateral engagements with key foreign partners on nuclear detection architectures, to include the International Atomic Energy Agency, and Global Initiative to Combat Nuclear Terrorism and other partners.
- Update Systems Architecture strategic plan as required.
- Complete the 2012 Joint Annual Interagency Review of the GNDA, including GNDA Program/Budget Crosscut.
- Continue work on detection modeling, data fusion and analysis to enhance detection capabilities in support of various fixed and mobile operational detection programs. This is an ongoing annual activity.
- Conduct three foundational studies on the application of PRND capabilities, including whether or where to employ 100% or randomized screening concepts at strategic locations. Three studies related to the domestic layer are expected to be completed by the end of FY 2012.
- Refine risk methodology and investigate risk buy-down for the various inputs to the GNDA.

Guided by the GNDA, DNDO provides support to the assessment and mitigation of threats in the land borders, aviation, maritime and interior mission areas, such as the development of specific architecture studies, CONOPS analyses, detector modeling studies, and enterprise architecture support that are specific to each mission area. These studies will typically be focused on specific programs and will directly support DNDO pilot and research and development (R&D) initiatives. These preliminary studies are intended to reduce the technical and programmatic risk of new efforts and enhance their integration and interoperability with the overall GNDA.

Land Border Mission Area Studies

Description

DNDO develops time-phased strategies and plans for improving the probability of preventing and deterring rad/nuc attacks. Plans are developed jointly with DNDO’s intra-agency and interagency partners and in close coordination with relevant DNDO offices. The time-phased aspect of the plans is important because it allows for the integration of current and near-term technologies and approaches, as well as longer-term options that may draw upon technologies that are currently in the R&D phase and not available for implementation for several years.

Background and Strategy

In general, studies will be commissioned to identify and characterize trade-offs, risks, and costs before deciding on specific implementation paths. To be most effective, DNDO approaches and mitigates threats by working with our front-line end-user components to assess and implement solutions to mitigate these threats.

Work during FY 2012 through FY 2016 will continue to support analyses of detection strategies between the Ports of Entry (POEs) and remaining vulnerabilities at POEs, as well as modeling and risk assessments focused on characterizing the threat and identifying opportunities for detection and interdiction at the border. A specific area of study during the FY 2012 - FY 2016 timeframe will be an evaluation of the Land Border POE architecture and technology base. A study will assess the effectiveness of the existing rad/nuc prevention and deterrence capabilities currently at the Land Border POEs in light of new prevention and deterrence technologies on the horizon, updated operational approaches to stop the smuggling of illicit rad/nuc materials, and the introduction of prevention/deterrence processes. Then, if warranted, technological, operational, and policy changes will be recommended to make rad/nuc prevention and deterrence efforts more effective and in-line with current approaches to the rad/nuc smuggling challenge. Additionally, approaches to increase the likelihood of encountering terrorists will be evaluated, where there are vast land areas to patrol and few chokepoints or opportunities to engage adversaries. This increase in the likelihood of encounter should lead to improved deterrence.

Accomplishments in Systems Engineering and Architecture - Land Border GNDA Requirements Development Studies

Significant accomplishments in FY 2010 include:

- Completed an international rail Threat and Gap Study that documented the threat objects that could be smuggled across the borders along with legitimate cargo, identified current technological capabilities to detect illicit rad/nuc materials being shipped by rail, and recommended near, mid, and far-term steps to reduce the risk of smuggling illicit rad/nuc materials into the U.S. via rail.
- Completed an international rail Modeling Study that reviewed past work that was done on detection of rad/nuc threats in the rail venue, examined a number of potential technology-based solutions with the modeling framework, and then estimated system capability to identify the relative merits of alternative solutions.
- Compiled a comprehensive guidance document for technical requirements for agent-based radiation detectors in the Office of Border Patrol's (OBP) Field Patrol Operations. This document is based on lab and field work, and the report is in the final approval process.

FY 2011 Planned Accomplishments include:

- Complete a study documenting options for increasing the probability of encounter on the border.

FY 2012 Planned Accomplishments include:

- Complete the Land Border Optimum POE strategy study.
- Document gaps and priorities based on Land Border Optimum POE Strategy study and Probability of Encounter study.

Land Border Pathways

Description

Through FY 2010, the Phased Deployment Implementation Plan (PDIP) initially sought to equip Border Patrol Agents with commercial-off-the-shelf (COTS) detectors to provide the basic capability to detect and identify the presence of rad/nuc material. The first initiative of this partnership was the evaluation of COTS detectors in both laboratory and operational environments, integration of these COTS detectors with existing CONOPS and the purchase and deployment of those detectors found technically and operationally acceptable. The outcome of this phase was the fielding of Personal Radiation Detectors (PRDs) and Radio-Isotope Identification Devices (RIIDs) to Border Patrol Agents at checkpoints along the northern and southern borders of the United States. PDIP matured at the end of FY 2010, and any resultant works will be included in the more holistic approach, called Land Border Pathways. While the PDIP program ended in FY 2010, the remainder of COTS purchases will be carried over into FY 2011. The PDIP was formally closed at the end of FY 2010, with the activities under the PDIP being transferred within DNDO to directorates more in alignment with the Solution Development Process (SDP) recently adopted by DNDO. That is, the research, studies, evaluations, and detector procurements will still be conducted, but now by the appropriate directorates as identified by the SDP under the broader land border scope of activities. The procurement of the remaining detectors identified in the PDIP will be carried over into FY 2011. DNDO will continue to support the OBP with improvements to its rad/nuc detection capabilities, both in developing the next generation of detectors as well as procurement of detectors for OBP, as funds are available.

DNDO continues to partner with representatives from Customs and Border Protection (CBP) Office of Field Operations (OFO), OBP, Office of Intelligence and Operations Coordination (OIOC) and Laboratories and Scientific Services (LSS) to further define requirements and identify and evaluate technology solutions for enhancing radiation prevention and deterrence capabilities in the land border operational environment, i.e. at and between POEs.

Background and Strategy

The Land Border Pathways is an iterative program that leverages existing and emerging technologies and findings from laboratory and field evaluations against capability gaps and mission requirements generated from studies and direct input from user representatives.

Future initiatives of the Land Border Pathways will be the investigation and assessment of the applicability and use of advanced identification devices being developed under the HPT Program. If deemed operationally viable and acceptable, the resultant technology from the HPT Program will be purchased and deployed as either an initial capability or upgrade to the currently deployed PRDs. If the HPT technologies are not deemed appropriate, DNDO and CBP will initiate actions in accordance with DHS Acquisition Management Directive (AMD) 102-01 to define and develop new capabilities that address CBP's specific needs.

Concurrent with the assessment of HPT technologies, DNDO and CBP will develop assessment strategies for investigating requirements and solution strategies for capability gaps identified in the Land Border GNDA Requirements Studies Program. Potential areas for investigation include Vehicle Based Sensors and Unattended Detection Systems.

Accomplishments in Systems Engineering and Architecture – Land Border Pathways

Significant accomplishments in FY 2010 include:

- Conducted extended evaluations (three months in duration) at three OBP checkpoints to assess the efficacy of pedestrian portals and their impact on OBP operations.
- Documented lessons learned from PRDs and RIIDs deployed under PDIP in FY 2009.

FY 2011 Planned Accomplishments include:

- Develop an analysis plan for evaluating enhanced checkpoint detection systems applied to OBP operations.
- Develop an analysis plan for evaluating vehicle-based detection systems applied to OBP operations.
- Develop an analysis plan for evaluating unattended detection systems applied to OBP operations.
- Develop a draft report describing radiation detector types, operational procedures, and policy provisions that might be suitable for improving the land border elements of the GNDA.

FY 2012 Planned Accomplishments include:

- Develop supporting documentation (e.g., Mission Needs Statement) for at least one concept, including giving consideration to those concepts for which analysis plans were developed in FY 2011.

- Develop a final report describing radiation detector types, operational procedures, and policy provisions that might be suitable for improving the land border elements of the GNDA.

Aviation Mission Area Studies

Description

This effort determines the bounding requirements for critical Aviation mission area projects to optimize mobility/agility/adversary cost, to develop holistic airport solutions, and to address International General Aviation (IGA) and Domestic General Aviation (GA) scanning.

Aviation environments present unique and complex challenges for PRND operations. While efforts have been made to characterize individual components of aviation pathways (i.e. passengers/baggage) for PRND purposes, greater understanding and consideration of broad aviation environments is required in order to maximize system effectiveness and efficiency. DNDO has initiated the Multi-Pathway Scanning Integration Program to support this more holistic approach. The holistic approach aligns with the latest DNDO planning principles and strategies, considers the perspective of end user (airport/location and stakeholder, versus pathway), leverages current rad/nuc systems, and accounts for the deterrence provided by non-rad/nuc security measures already in place. The holistic approach examines the intersection of International Commercial Aviation (ICA) Pax/Bag, ICA Air Cargo, and International General Aviation (IGA) pathways including the commonality of systems and processes that can be leveraged and shared. In addition to potentially increasing effectiveness against rad/nuc threats, the cumulative benefits gained from enhanced efficiencies across national and global operations has the potential to significantly reduce long-term burdens of system acquisition, maintenance, and operation.

The following principles will be applied in defining the requirements for potential solution options for the aviation mission area priorities:

- It is not necessary that each priority be 100% completed before addressing the next, lower-level priority; there are insufficient resources to deploy and sustain 100% radiological/nuclear (rad/nuc) scanning in all vectors of aviation operations.
- Not all solutions have to be rad/nuc detection-based; the full Doctrine, Organization, Training, Materiel, Leadership, Personnel, Facilities/Regulations, Grants, and Standards trade space should be considered.
- Both foreign partners and the private sector must be part of materiel and non-materiel solutions.
- Aviation environments should be addressed simultaneously and more holistically across multi-vector operations; application of random, agile and mobile solutions will create uncertainty in the adversary across those domains and result in improved prevention/deterrence effect.

- Standardized versus tailored solutions for specific operations (Passenger/Baggage (Pax/Bag), Air Cargo, etc.) will improve efficient use of resources, and increase overall coverage of aviation pathways.

Background and Strategy

The aviation architecture must address all gaps, maximizing uncertainty and risk perception by the adversary. The projects included in the GNDA Requirements Development Program begin to define and examine the gaps and needs associated with the potential solution space for addressing these priorities. Pre-arrival, international general aviation is a specific priority within the GNDA. In an effort to maintain a level of uncertainty in the adversary regarding the entire general aviation pathway, it is important to continue to develop scanning solutions along the “compliant” portion of the IGA pathway while simultaneously addressing non-compliant IGA issues with interagency partners. Efforts to characterize domestic airport of entry (APOE) environments and define system requirements for APOEs will be done concurrently.

Accomplishments in Systems Engineering and Architecture - Aviation Mission Area Studies:

Significant accomplishments in FY 2010 include:

- Initiated a study to characterize aviation environments at international locations, including IGA Fixed Base Operator (FBO) sites.
- Initiated study to consider application of mobility/agility/adversary cost concepts within aviation environments.
- Completed a gap analysis of Rotary-Wing Traffic along the Gulf Coast
- Completed Passenger/Baggage pilot operational demonstrations at Charlotte and SeaTac airports.
- Began characterization of rad/nuc detection technology and operations at domestic APOE servicing International Air Cargo (IAC), and/or IGA in an effort to more efficiently and holistically examine opportunities to enhance scanning technology and operations across the pathways; supports Holistic Airport Deployment Gaps/MNS development.

FY 2011 Planned Accomplishments include:

- Initiate threat-based aviation surge capability analysis, identifying existing capabilities and opportunities for surge capability enhancements.
- Complete study characterizing aviation environments at international locations.
- Complete study to consider application of mobility/agility/adversary cost concepts within aviation pathways.
- Initiate analysis of domestic general aviation pathways (specific to Interior)

- Complete site surveys for domestic APOEs with CBP other relevant stakeholders, and initiate activities consistent with AMD 102-01 to document capability gaps in domestic APOE operational environments.

FY 2012 Planned Accomplishments include:

- Begin regional, cross-border aircraft vulnerability mitigation analysis of northern border and Caribbean aviation traffic.
- Assess feasibility of air-to-air rad/nuc detection considering current and evolving stand-off detection capabilities.
- Assess feasibility of developing software that will assist operations centers in detecting flight anomalies that pose direct-to-target threats.
- Begin development of IGA security gap solutions (for inbound IGA) and MNS.
- Complete DHS-AMD-102-1 activities to document capability gaps for domestic APOEs, and document solution options. This process may result in the need to develop, test, and pilot modified systems, and/or identify where existing systems can address specific operational needs.

Maritime Mission Area Studies

Description

Conduct a series of studies of the baseline maritime pathways architecture to assess PRND capabilities, rad/nuc threats (materials, weapons and conveyances), waterway/seaport vulnerabilities, options to mitigate these vulnerabilities, and recommendations for achieving the maximum risk reduction within the constraints of the available budget.

Background and Strategy

At the core of all DNDO activities is the systems architecture function: determining gaps and vulnerabilities and formulating recommendations and plans to mitigate the same. By intensively studying the multi-layered structure of the rad/nuc detection architecture, a well-defined and carefully coordinated network of interrelationships is understood and developed.

Accomplishments in the Systems Engineering and Architecture - Maritime GNDA Requirements Development Studies

Significant accomplishments in FY 2010 include:

- Completed the Offshore Secondary Inspection Study designed to research maritime strategies and CONOPS for conducting offshore inspection and verification of potentially dangerous rad/nuc cargo.

- Completed Maritime Modeling Analysis entitled Evaluation of Detection Concepts for Non-containerized Nuclear Threats to U.S. Ports that assessed detection applications and developed the Maritime Simulation Model.
- Completed development of Architecture Analysis and Review Knowledgebase (ARK), an organizational scheme to facilitate the review of maritime reports, studies, and strategic plans associated with the maritime pathway of the GNDA.
- Completed an Inland Waterways Architecture Study, a PRND architecture study and gap analysis of the Inland Waterways, including the Intra-coastal Waterway, Western Rivers (Mississippi River & tributaries), Columbia River System, and Hudson River.
- Completed an Underwater Detection Feasibility Study in which simulations showed that passive (or eventually active) underwater monitoring may offer a detection option in some scenarios using advanced platforms requiring accurate sensor-to-hull standoff distance.
- Completed Maritime Model Guidelines, including proposed (draft) guidance suitable for international forums, to enable partner nations to direct limited resources to establish a PRND program in the maritime domain; led a series of collaborative joint ventures with Canada under Cooperative Activity Arrangement (RND CAA) to advance maritime security rad/nuc detection technology R&D, pilot projects, equipment testing, risk analysis and CONOPS that help to advance a North American Nuclear Detection Architecture.

FY 2011 planned accomplishments include:

- Complete Maritime Security Risk Analysis Model (MSRAM) rad/nuc enhancement, to improve the Coast Guard MSRAM's capability to evaluate, analyze and manage domestic security risk of rad/nuc direct attacks and exploitation/ transfer scenarios against maritime critical infrastructure and key resources. Additionally, DNDO will coordinate modeling of rad/nuc attack consequences and detector countermeasures to evaluate vulnerability improvements, and develop decision support tools that inform operational commanders on PRND CONOPS.
- Complete initial Maritime Domain Awareness (MDA) Study to integrate the DNDO GNDA into appropriate elements of the MDA Enterprise Architecture, including command & control, communications & reachback, intelligence & information collection/management, and sensors to enhance situational awareness, maritime domain "encounter", and rad/nuc detection.
- Complete Great Lakes Saint Lawrence Seaway System (GLSLSS) Architecture Study to assess PRND options and recommendations that reduce vulnerabilities in this vital border region. The GLSLSS Study incorporates significant outreach/engagement with Federal, State, and local echelons (e.g., law enforcement, public safety, Defense/National Guard) as well as commercial industry, private constituents, and international partners to leverage possible regional resources.

- Complete Urban Marina Security Architectural Analysis recommending strategies to secure an archetype marina located in a high-density urban center. The study utilizes the architecture gap analysis methodology to study the urban marina security environment and evaluate options that capture the benefit of deterrence, which serves as a capability multiplier in combination with PRND and interdiction efforts.

FY 2012 planned accomplishments include:

- Continue MDA Studies that design and integrate DNDO's GNDA into the appropriate elements of the MDA Enterprise Architecture. Complete the MDA study that describes the PRND information systems that intersect the MDA command and control information network architecture and technology development, and make recommendations on the integration of maritime PRND data and information into the MDA enterprise-wide network and data management/standards. Continue Analyses of Alternative Technologies that will enhance the ability to encounter illicit smuggling of rad/nuc weapons and materials by sorting anomalies and providing targeted identification of suspect vessels.
- Continue Comprehensive Global Maritime Domain Detection Architecture Analysis, a detailed and collective documentation of the Maritime GNDA System, including federal strategies and capabilities under development to close gaps in the architecture.
- Continue overarching Maritime Modeling and Operations Analysis framework that integrates a wide range of maritime pathway countermeasures in all layers of the GNDA and information sharing among the layers. The Maritime Analysis framework includes an advanced Maritime Simulation Model (MSM) to provide an effective and validated maritime domain decision support system useful to conduct tradeoff studies and integrate estimates of probabilities and consequences.
- Initiate GNDA Requirements Development Analysis for the Maritime Critical Pathway for Cruise Ships (cruise ships and terminal operations). Conduct an analysis to characterize the potential threats and vulnerabilities, clarify gaps in the architecture and assess options (capabilities and CONOPS). Develop a risk mitigation strategy and methodology to optimally integrate detection/prevention/deterrence of radiological and special nuclear material solutions.
- Initiate GNDA Requirements Development Analysis for Human Portable Radiation Detection Systems Maritime Adjudication/ Advancement. Identify potential solutions to expedite on-scene adjudication of detected rad/nuc sources and enhance the operational efficiency of this mission.

Maritime Program Assistance

Description

This program includes the “Maritime Capability Development” project, and is intended to utilize the lessons learned from the West Coast Maritime Pilot (WCMP) to facilitate development of PRND capabilities in maritime regions throughout the U.S. Through this program, maritime stakeholders will receive guidance and assistance from DNDO on operational protocols, training, and exercises that support small vessel radiation detection capabilities.

Background and Strategy

The three-year WCMP program, begun in September 2007 and concluded in December 2010, contributed to the development of a radiation detection architecture that reduces the risk of rad/nuc threats and that could be illicitly transported on recreational or small commercial vessels. The pilot validated the effectiveness of the use of radiation detection equipment by local authorities and maritime partners as part of their routine operations in the maritime environment.

DNDO will work with maritime partners and local authorities in maritime regions to assess the geographic configurations of the ports to maximize detection and interdiction opportunities. Maritime stakeholders will also receive guidance from DNDO on operational protocols, training, and exercises that support small vessel radiation detection capabilities.

Accomplishments in Systems Engineering and Architecture – Maritime Program Assistance

Significant accomplishments in FY 2010 include:

- (Program does not start until 2012.)

FY 2011 planned accomplishments include:

- Develop outreach program for use in major port regions based on lessons learned from WCMP.

FY 2012 planned accomplishments include:

- Implement Maritime PRND program in two major port regions.

Interior Mission Area Studies

Description

Continuous improvement in the Interior Mission Area will rely on the continued evaluation of PRND threat risks in various pathways of the GNDA. In order to address this risk, an average of three Architecture Studies will be accomplished per year, with the

intent to evaluate these studies and propose potential solutions to address identified capability gaps. The intent of Interior Architecture Development is to identify gaps in the GNDA and to inform pilot efforts to develop recommended CONOPS, systems, and implementation approaches to address the identified gaps.

Background and Strategy

Additional architecture studies will be prioritized and conducted annually as gaps to the GNDA are identified.

Accomplishments in Systems Engineering and Architecture - Interior GNDA Requirements Development Studies

Significant accomplishments in FY 2010 include:

- Completed Green Border States Architecture Study and gap analysis to identify capability development options in U.S. states with international land borders.
- Completed a feasibility study of the tracking and tagging of industrial radioactive sources to address the potential loss or theft of radioactive sources of concern.
- Completed a classified study on the food industry and the potential malicious use of radioactive materials.
- Completed the Special Events PRND module for state and local jurisdictions to better plan, organize, and deploy PRND assets in support of special events.
- Completed the vulnerability assessment on the JL Shepherd Mark-45 blood irradiators for future security upgrades by the Department of Energy.
- Developed the Source Security PRND module for state and local jurisdictions to better plan and organize to assist in securing radioactive sources of concern in their localities.

FY 2011 planned accomplishments include:

- Complete a follow-on analysis of architecture options to address the potential vulnerabilities of the food industry as identified in the FY 2010 study.
- Complete the *Hiding in Plain Sight* Study to identify indicators for State and local law enforcement to address the threat of covert staging and transport of illicit rad/nuc materials.
- Complete a non-detection equipment tactics, techniques, and procedures (TTP) study and flipbook to assist State and local stakeholders in identifying indicators of rad/nuc threats (other than through the use of equipment based detection).
- Complete a comparative analysis of the costs, benefits, and operational affects of multiple types of PRND deployments including detection equipped law enforcement (DELE) and special teams' deployments to better inform future capability development.
- Evaluate the feasibility of increasing encounter by deploying "trigger" assets on non-law enforcement "users" such as postal carriers.
- Evaluate the use of surge assets in response to an intelligence driven event in the domestic United States with interagency partners.

FY 2012 planned accomplishments include:

- Conduct three architecture studies to evaluate Interior Mission Area PRND threats and pathways.

SUMMARY: The table below assists in illustrating the crosswalk between specific projects and activities and the DNDO mission areas. It is clear that programs and activities have applicability to more than one mission area are represented in a cross-cutting manner.

The Domestic Nuclear Detection Office (DNDO) requests \$69.689 million for this activity in FY 2012.

CURRENT SERVICES PROGRAM DESCRIPTION

The Department of Homeland Security (DHS) is responsible for ensuring that the Nation maintains a preeminent research and development (R&D) program to address user requirements in radiation detection science and technology. Long range radiological/nuclear (rad/nuc) basic research activities are conducted through the Transformational and Applied Research (TAR) activities that are planned to transfer from DNDO to the Directorate for Science and Technology (S&T) in FY 2012. Consequently, DNDO has implemented a standard solutions development process to build on these activities and to address technical requirements arising from gaps in operational capabilities and to meet mission requirements.

In FY 2012, DNDO Systems Development efforts will include three on-going programs aimed at maturing technologies with potential applications across multiple mission areas: Human Portable Tripwire (HPT) program, the Cargo Imaging for Shielded Nuclear Threats (CISNT) program, and the Long-range Radiation Detection (LRRD) program. Each of these initiatives is, at least in part, the result of transitioning Advanced Technology Demonstrations (ATDs) from the TAR program. In addition, DNDO will continue efforts to develop systems to address the challenges of efficiently scanning cargo containers that are transported via rail from seaports and begin a new effort to develop boat-mounted radiation detection systems.

Overall, funding levels for Systems Development programs requested in FY 2012 have marginally increased from the previous FY 2011 request. DNDO will continue to

develop a wider range of potential solutions to enduring and possibly changing vulnerabilities in the Global Nuclear Detection Architecture (GNDA). This emphasis is expected to result in increased funding for systems studies, as well as testing and piloting existing technologies in new operational environments.

State & Local Initiatives – Rad/Nuc Challenge

Description

The Security and Accountability for Every Port Act of 2006 (SAFE Port Act) Public Law 109-347 mandates that DNDO implement the domestic portion of the GNDA which relies upon State and local law enforcement officials to conduct rad/nuc detection operations. Moreover, the SAFE Port Act charges DNDO with enhancing and coordinating the nuclear detection efforts of Federal and State and local officials in order to ensure a managed, coordinated response to rad/nuc threats. Within the FY 2012 request, DNDO is promoting an opportunity to emphasize the rad/nuc detection capabilities and operations at the State local and tribal levels through the Rad/Nuc Challenge.

Rad/Nuc Challenge

The Rad/Nuc Challenge will be initiated to include a competition among the PRND community, with industry demonstrations and information exchange forums. Unlike drug or weapon interdiction personnel, operational rad/nuc personnel do not often receive encouragement for superior performance as threats are not regularly encountered. This program provides a mechanism to award superior performance and encourage excellence.

As part of DNDO's efforts to encourage private industry to initiate product development the events coordinated with the challenge will be designed to broaden the sharing of information within the rad/nuc detection community with local law enforcement and first responders.

- **Competition Rodeo.** Creates productive, spirited competition among individuals and teams at all levels of the PRND and response community. Its focus is to stimulate the development of enhanced skills and awareness at the State and local level, but it incorporates participation by Federal groups as well. It includes individual and team competitions; and helps set operational performance criteria and informs metrics of success across the community.
- **Information Exchange Forum.** Scheduled activities including workshops, briefings, panel meetings, and the presentation of papers sponsored by members of the PRND community who wish to share their ideas and insights.
- **System/Capability Expo.** Includes exhibit booths, system and CONOPS demonstrations, hands-on experiences, and showcases. This part of the event is open to all attendees as an ongoing feature available to be visited both during and between scheduled activities.

Outcomes associated with the Rad/Nuc Challenge include:

- Supports sharing of successes and lessons learned.
- Exposes industry and academia to the Government's needs, helping to shape independent research and development programs and alert attendees to upcoming opportunities.
- Encourages a dialog between the equipment development community with State, local and tribal law enforcement and first responders.
- Fosters more effective community-wide competition and advancement by establishing a greater awareness of the current state-of-the-art of technology and CONOPS throughout the field.
- Provides an environment for networking within the PRND community.

Human Portable Tripwire Program

Description

The HPT Program, currently in the Analyze/Select phase, has an established Mission Needs Statement (MNS) signed by DNDO and its DHS end-user partners from Customs and Border Protection (CBP) and United States Coast Guard (USCG). The MNS identifies capability gaps within the existing detection architecture that necessitate the analysis of alternative approaches that can fill the gaps, including materiel and non-materiel solutions. Until the Analyze/Select phase is completed, a firm acquisition strategy cannot be completed. If the Analyze/Select phase results in a selected alternative that can be met with a commercial-off-the-shelf (COTS) solution, no development effort will be required. However, if the Analyze/Select phase results in a selected alternative that can only meet requirements with additional development, DNDO may award contracts for the same. Subsequently, the Obtain phase is dependent upon the type of solution identified ranging from strictly a non-materiel solution, to a COTS materiel solution, to full development of a new device which provides some combination of enhanced capabilities: gamma detection, neutron detection, spectroscopic identification, source localization, integrated communications, or automated reachback. This project is aligned with the Architecture Implementation Bottom-up Review (BUR) Activity.

Presently, the HPT program has engaged the following stakeholders and users to collect requirements and establish the metrics described in the next section:

- CBP Office of Field Operations (CBP/OFO), Office of Border Patrol (CBP/OBP), and Office of Air and Marine (CBP/OAM)
- U.S. Coast Guard
- Transportation Security Administration (TSA) Visible Intermodal Prevention and Response (VIPR)
- Jacksonville, FL Sheriff's Office
- South Carolina State Transport Police

The number and type of HPT devices to be acquired are due to the dependency on the results of the studies and analyses leading up to acquisition, as well as the stakeholder's

prioritization of the HPT capability relative to other needed Human Portable Radiation Detection Systems (HPRDS) capabilities.

Background and Strategy

The HPRDS MNS identified four common roles in which human portable detection capabilities are employed: tripwire, wide area search, small area search, and secondary screening. The tripwire role is intended to increase the opportunity and likelihood of detecting rad/nuc material through constant, non-deliberate rad/nuc scans. HPT detection systems used to perform passive monitoring should be considered standard operational equipment capable of being worn by operators at all times. These systems should also be easy to use and cost effective so they can be easily deployed to a large number of operators to increase the opportunity for detection. HPT systems, when worn continuously, can also function as personal protective equipment (which provides warning to personnel when exposed to potentially harmful levels of radiation).

The current-generation of HPT systems is predominantly composed of Personal Radiation Detectors (PRDs). These devices have limited capabilities. The following were identified in the HPRDS MNS as capability gaps in the currently employed human portable devices used to perform the Tripwire role:

- Systems cannot detect threat material in certain operational environments due to the size of the conveyances, the size of current detectors, and the operational scenarios in which tripwire capabilities are employed.
- Systems cannot adequately detect or identify certain radiological threat sources that are located near legitimate radiological materials or Naturally Occurring Radiological Material (NORM).
- Systems using commercially available identification algorithms are frequently not able to identify rad/nuc sources that are present, which impacts the field operator's ability to locally adjudicate rad/nuc alarms.
- HPT systems are not capable of sharing information between other systems, nor are they currently networked to support real time rad/nuc threat source localization or reporting.

Additionally, new technological developments have introduced the possibility that systems may be able to provide directional information to pinpoint the source of radiation and/or be networked together to support more efficient localization and adjudication of detected rad/nuc materials. Current Federal agencies operating PRDs have support-training and procedures and organizations for this mission. State and local jurisdictions are supported by grants for the procurement of radiation detection systems and development of PRND programs. This program will examine the Doctrine, Organization, Training, Material, Leadership & Education, Personnel, & Facilities/ Requirements Generation System (DOTMLPF/RGS) trade space with respect to the present HPT capability and will subsequently execute the Analyze/Select and Obtain phases of the program pending the output of the AoA and concurrence of the user community/stakeholders.

Accomplishments in Systems Development HPT Program

Significant accomplishments in FY 2010 include:

- Began development of operational requirements for a HPT system through user engagement and operational analysis.
- Began Analysis of Alternatives (AOA) for HPT potential materiel and non-materiel solutions.

FY 2011 planned accomplishments include:

- Complete development of operational requirements for a HPT system through user engagement and operational analysis.
- Complete Analysis of Alternatives (AOA) for HPT potential materiel and non-materiel solutions.
- Conduct assessment of Commercial Off the Shelf (COTS) systems

FY 2012 planned accomplishments include:

- Initiate the development of a HPT system designed to meet user requirements.
- Conduct data collection efforts against special nuclear material (SNM) to improve algorithm performance of HPT systems.
- Conduct an Early Operational Assessment of the HPT system in a simulated operational environment.

Cargo Imaging for Shielded Nuclear Threats

Description

The Cargo Imaging for Shielded Nuclear Threats (CISNT) program will evaluate and, develop as appropriate, Non-Intrusive Inspection (NII) radiography capability that can identify and discriminate SNM and shielded material contained in full-size trucks, cargo containers, and rail cars. In doing so, CISNT will leverage the findings from past and current TAR programs. This program was initiated as the Advanced Cargo Imaging (ACI) program and included in the President's Budget request for FY2011. The name change reflects the objectives of the program.

Background and Strategy

Currently-deployed NII radiography systems are primarily designed to provide the capability to address detection of "traditional" contraband such as drugs, currency, guns, and explosives that may be illicitly smuggled in cargo containers. These types of contraband have a relatively low atomic number (low Z), and are generally detectable with standard radiography systems. Conversely, nuclear material or shielding material, which has a high atomic number (high Z), will be seen in the radiograph as an opaque or dark object because the high Z material will attenuate the x-rays more effectively. Current systems are used in this way and provide some degree of rad/nuc detection capability. The Cargo Advanced Automated Radiography System (CAARS) and

Shielded Nuclear Alarm Resolution (SNAR) ATDs initiatives provided valuable information that shaped the vision of what could be attained and well as evaluating commercial NII capabilities.

As noted, CISNT will leverage the results from the technology developed under the CAARS and SNAR ATDs. The CAARS ATD completed its Technology Demonstration and Characterization (TD&C) in FY 2010 and the results from the CAARS program are being evaluated for use in the CISNT program. The SNAR ATD is scheduled to complete its TD&C in FY 2012. Under the CAARS program, NII prototype systems were developed and evaluated for their ability to scan full-size trucks and cargo containers and automatically detect high Z ($Z \geq 72$) materials including rad/nuc threats in addition to providing conventional radiographic imaging capability for detection of illicit drugs, high explosives, and other contraband. Under the SNAR ATD program the ability to not only detect, but to also discriminate among rad/nuc materials is under evaluation. CISNT will also leverage lessons learned from the DHS S&T CanScan Broad Agency Announcement issued in FY 2010 which is targeted at innovative NII and Automated Threat Recognition Technologies for enhanced screening, examination, and detection of contraband, hidden compartments, materials for weapons of mass destruction/mass effect, and human stowaways. The final CAARS testing report(s) are expected to be completed in FY2011 and inform the CISNT Program.

Under CISNT, COTS NII capabilities will also be evaluated. During FY 2011 a Request for Information (RFI) was released. TD&Cs are scheduled during FY 2011 and FY 2012 and will provide baseline test data to support NII system technology development and potential acquisition decisions. Human operator recognition of threat objects and contraband through radiographic image analysis also is a present capability that could be enhanced in existing NII systems if additional threat detection algorithm software were developed to aid the detection process for both SNM and shielding materials along with traditional contraband (e.g., drugs, high explosives, weapons, currency, etc.) detection.

Accomplishments in Systems Development Cargo Imaging for Shielded Nuclear Threat

Significant accomplishments in FY 2010 include:

- The CISNT program is a FY 2011 start.

FY 2011 planned accomplishments include:

- Refine the operational concept and translate operational requirements to system specifications.
- Complete a preliminary Mission Needs Statement.
- Complete market research into existing commercial capability.
- Enhance and standardize DNDO's data collection system to support standardized testing of LS NII systems.

FY 2012 planned accomplishments include:

- Refine operational requirements and perform an AOA pursuant to the CBA recommendation, An AOA for CISNT will be drafted in FY 2012 that leverages lessons learned from the CAARS ATD, SNAR ATD, and the TD&C of systems.
- Begin TD&C of a selected set of systems; collect data to characterize the operational environment and determine limits of technical approach.
- Complete draft AOA for CISNT.
- Continue the testing of systems as new systems are developed for use at Ports of Entry (POEs) and border crossings.
- Develop an Operational Requirements Document (ORD) in FY 2012 that leverages lessons learned from the CAARS ATD, SNAR ATD, and the Technology Demonstration and Characterization (TD&C).

Long-Range Radiation Detection (LRRD)

Description

The overarching goal of the LRRD program is to determine if a passive long-range rad/nuc detection system should be developed and fielded. To achieve this goal, the LRRD program must first determine if there is a need and identify that need with a gap in the GNDA. Next, the program must collect user requirements and perform an AOA, the result of which becomes a decision to field nothing or to field one or more systems.

Background and Strategy

LRRD builds upon the capabilities demonstrated by the SORDS ATD and the Roadside Tracker project. To transition the technology to a systems development phase it will be necessary to collect and validate user needs to address two of the most problematic constraints for passive detection and classification of radioactive materials in the Interior (as well as in other mission areas): the need to detect rad/nuc materials at a large distance from the source, and to quickly localize the source of the radiation.

The LRRD program leverages the information obtained as part of the SORDS ATD program completed by TAR in FY 2010. The technology demonstrations produced an increase in passive standoff detection capability, therefore DNDO will develop an MNS, a Preliminary Concept of Operations (P-CONOPS), a Capabilities Development Plan (CDP), and an Acquisition Plan as required by DHS AMD102-01 to begin the acquisition process.

Accomplishments in Systems Development LRRD Program

Significant accomplishments in FY 2010 include:

- Evaluated whether and how to transfer technologies developed through the SORDS program into an Acquisition program. Deliverables capturing this evaluation will be signed and approved in FY 2011.
- Conducted stakeholder engagements to capture and validate user needs.

- Began preparations for an LRRD Limited Use Experiment (LUE) to evaluate the performance of the SORDS and Roadside Tracker systems under operational conditions.
- Initiated development of a MNS, CDP, and P-CONOPS.

FY 2011 planned accomplishments include:

- Complete MNS.
- Complete CDP.
- Complete P-CONOPS.
- Develop Acquisition Plan (AP).
- Conduct AOA.
- Conduct LRRD Limited Use Experiment.
- Develop Life Cycle Cost Estimate (LCCE).
- Draft LRRD LUE final report.

FY 2012 planned accomplishments include:

- Develop ORD.
- Develop CONOPS.
- Develop Integrated Logistics Support Plan (ILSP).
- Develop the Acquisition Program Baseline.
- Develop the LRRD Test and Evaluation Master Plan (TEMP).
- Finalize LRRD LUE final report.

International Rail Program

Description

International rail traffic represents one of the most difficult challenges for radiation detection systems. Over 120 trains with 4,800 loaded rail cars enter the United States from Canada and Mexico each day through 31 rail POEs. Over 2.5 million rail cars pass every year with goods destined for every State in the country. Approximately three times the number of trains cross from Canada compared to Mexico. Additionally, three of the top five northern rail POEs and four of the top five southern rail POEs are situated in or near major urban population centers.

Passive radiation detection systems, such as radiation portal monitors, must overcome technical challenges in this environment, as compared to the road vehicle environment: increased offset distances between the detector and rail cargo; excessive attenuation of rad/nuc signals due to heavy steel construction of the rail cars and cargo carried therein; and the presence of NORM cargo. Furthermore, there are unique operational challenges in this environment due to the length of the trains, the distance required to stop moving trains, and the difficulties in separating alarming cars for further examination. This requires detection systems to have exceedingly low false and nuisance alarms.

Within the *International Rail* program exists the *International Rail Cargo Scanning* project which is focused on identifying solutions to address these challenges.

Background and Strategy

International Rail is referenced in Public Law (P.L.) 110-28 and P.L. 110-53. P.L. 110-28 provided funds to accelerate development and deployment of detection systems at international rail border crossings. Through FY 2009, a portion of those funds has been used to characterize the rail operating environment, identify user needs, conduct stream of commerce data collection efforts at a lower volume POE site, and conduct evaluations of architecture alternatives. The remaining balance is targeted at additional stream of commerce characterization, AMD 102-01 documentation development, and detector testing in FY 2010 and FY 2011. P.L. 110-53 in the area of International Railroad Security notes that “The Secretary shall develop a system to detect both undeclared passengers and contraband, with a primary focus on the detection of nuclear and radiological materials entering the United States by railroad.” Multiple options are identified for the Secretary to achieve this goal.

Market research, modeling and simulation, and studies performed prior to and during FY 2010 have provided input to a Capability Development Plan (CDP) targeted for completion in FY 2011. This CDP will shape the Analysis of Alternatives that is targeted for completion in FY 2012. DNDO will continue leveraging lessons learned in current and future fiscal years from non-U.S. deployments of radiation detectors for scanning rail cargo through discussions with the Department of Energy’s (DOE) Second Line of Defense program which has deployed numerous systems outside of the United States.

Accomplishments in Systems Development International Rail

Significant accomplishments in FY 2010 include:

- Completed International Rail Threat and Gap study that evaluated multiple rad/nuc detection architectures for rail traffic coming into the United States from Mexico and Canada. This information will be used in a formal AOA that weighs multiple technical, cost, and operational factors to be completed in FY 2011 and FY 2012.
- Completed modeling and simulation of multiple rad/nuc detection architectures identified in the above Threat and Gap study. This information will be used in a formal AOA that weighs multiple technical, cost and operational factors to identify the most promising architecture to be completed in FY 2012.
- Shared lessons learned and testing results associated with rail cargo rad/nuc detection systems between DNDO International Rail and DOE Second Line of Defense program. Held discussions with Second Line of Defense regarding potential joint project concepts. Held discussions with the DOE Second Line of Defense regarding leveraging synergies with the expected deployment of a rad/nuc detection system at a major high volume POE on the Southern Border.
- Collected information on existing and future system capabilities that can support the detection and identification of radiation and nuclear material carried in rail

cargo via an industry RFI. Using the RFI data, identified opportunities for further investigation and integration into the International Rail CDP documentation.

- Identified a candidate domestic rail POE site for performing a rail cargo scanning technology trial targeting FY 2011.

FY 2011 planned accomplishments include:

- Initiate a technology trial at a testbed or operational rail site in the United States to identify technical and operational issues associated with technology alternatives for scanning rail cargo for rad/nuc materials.
- Continue implementation of any cooperative Rail Cargo Scanning project(s) identified working in concert with Second Line of Defense.
- Complete an AOA draft for the Rail Cargo Scanning project based on lessons learned from activities such as modeling and simulation efforts.
- Update an initial AP drafted in FY 2010.
- Identify concepts generated from reviewing the FY 2010 International Rail RFI that may warrant Transformational Research efforts.

FY 2012 planned accomplishments include:

- Complete an AOA for the Rail Cargo Scanning project for International Rail.
- Continue implementation of any cooperative project(s) identified working in concert with Second Line of Defense.
- Document in concert with CBP, lessons learned from operational experiences with rad/nuc detection system(s) utilizing passive and active detection at rail crossings.
- Document the performance of candidate international rail systems.

On-Dock Rail Program

Description

The On Dock Rail Program is analyzing alternatives solutions for scanning intermodal cargo containers (IMCC) arriving in the United States via ship and being directly transferred to rail cars at the ports. At the inception of this program, 98% of ship cargo is transferred to trucks at the Port of Entry (POE), which are subsequently screened via radiation portal monitors (RPMs) at the exit gates. The remaining 2% of cargo is transferred directly from ship to rail and currently is being scanned by mobile Radiation Portal Monitors (mRPM).

Accomplishments in Systems Development On-Dock Rail

Significant accomplishments in FY 2010 include:

- Construction of two Straddle Portal Prototypes (SPP) began this fiscal year using modified IMCC for the support structure. One of the units uses GFE supplied sodium iodide detectors and the other has GFE polyvinyl toluene detectors.

- Data were collected by a Request for Information (RFI) for current technology in the industry that could support the On Dock Rail program. The information collected will be fed into the Analysis of Alternatives/ Alternatives Analysis (AoA/AA) for this program.
- A Memorandum of Agreement was signed among the Department of Energy and the Department of Homeland Security, Domestic Nuclear Detection Office and Customs and Border Protection for the relocation of a Radiation Detection Straddle Carrier (RDSC) from Freeport Bahamas to Tacoma Washington. The RDSC will be evaluated for its suitability as part of the overall preventive r/n terrorism mission at the port environment.

FY 2011 planned accomplishments include:

- Data collection will be performed on the SPP at Savannah River National Laboratory to support the Alternatives Analysis for this technology.
- Data will be collected with the Mobile Nuclear Radiation Detection System (MNRDS) at Savannah River National Laboratory for analysis of using this technology in secondary scanning.
- Evaluate DOE SLD straddle-mounted detectors during an Operational Assessment at the Rail Test Center (RTC). Select the sea port and start preparations for the stream of commerce data collection for the Straddle Portal Prototype.
- Begin Alternatives Analysis.

FY 2012 planned accomplishments include:

- Perform the stream of commerce data collection for the Straddle Portal Prototype.
- Complete Alternatives Analysis
- Perform the System Engineering Review for the On Dock Rail Program
- Complete the “Analysis and Select” phase (Stage 2a) for the On Dock Rail Program. This will end with the Stage Gate 2a review.
- Complete the “Develop Programmatic Approach” phase (Stage 2b) for the On Dock Rail Program. This will end with the Stage Gate 2b review.

Small Vessel Standoff Detection Program (SVSD)

Description

The Small Vessel Standoff Detection (SVSD) program seeks to develop and field a capability to provide standoff Boat-to-Boat, Aerial, and Fixed-Site rad/nuc detection systems in U.S. port areas and maritime regions as appropriate to meet the implementation objectives. This program will address the need of Federal, State, and local maritime officers to conduct PRND screening missions against the small vessel threat without the need to board each encountered vessel. Using information from the Dolphin operational testing of current COTS and government-off-the-shelf (GOTS) standoff detection equipment in a maritime environment, the SVSD Program will inform

the future development of CONOPS, tactics, techniques and procedures; and the development of a materiel capability to reduce the risk of a rad/nuc threat being transported or deployed by means of a small vessel. Further optimization of the current state of the art and development of future Standoff PRND systems will continue to improve maritime PRND capabilities and reduce the “small maritime” threat.

Background and Strategy

The SVSD program’s high level mission need is for standoff detection of small vessels to minimize the need to board the vessel to conduct the PRND mission. Current and future force levels for USCG, CBP, and other Federal, State, and local partners are only capable of boarding a small fraction of the daily U.S. small vessel traffic. The program will initially develop a capability for scanning small vessels from maritime Law Enforcement vessels on the water. These systems will be deployed onboard USCG and CBP/OAM patrol vessels for employment during routine day-to-day maritime operations as well as periods of heightened maritime security force posture. Follow-on projects to reduce the risk will address aerial and land-based deployment of sensors to complement the Boat-to-Boat system.

Accomplishments in Systems Development SVSD Program

Significant accomplishments in FY 2010 include:

- Completed AMD 102-01 activities; received Milestone 1 approval for Boat-to-Boat systems.

FY 2011 planned accomplishments include:

- Complete AMD 102-01 activities to receive Milestone 2A approval for Boat-to-Boat systems.

FY 2012 planned accomplishments include:

- Complete AMD 102-01 activities to receive Milestone 2B approval for Boat-to-Boat systems. LRIP systems delivered to USCG and CBP OAM for Operational Evaluation.
- Complete AMD 102-01 activities to receive Milestone 1 approval for Aerial-mounted systems.

Non-³He Neutron Detection Alternatives for Backpacks

Description

The highest performing backpack systems deployed by DHS and other Government agencies use Helium-3 (³He) based neutron detectors. ³He gas is now in very short supply. (Because of the small volume and weight requirements of a backpack, a new technology is needed that is of low bulk and light weight construction.) The purpose of

this project is for DNDO to help accelerate the commercial development of a near term replacement to satisfy near term requirements.

Background and Strategy

DNDO has been obtaining a few hundred liters per year of ^3He to complete the mission as related to backpack systems but the future availability of ^3He gas is uncertain. New neutron detection technologies have been developed that may replace the need for ^3He in backpack systems. DNDO will release a request for information for vendors to submit their backpack systems for testing. For this effort, DNDO is not planning on supporting development of a backpack system, but intends to obtain and test nearly commercial products to validate solutions to the ^3He shortage.

For several years, the Transformational and Applied Research Directorate (TARD) within DNDO has been supporting development of a number of promising new technologies for neutron detection which do not rely on ^3He . Some of these technologies have reached sufficient maturity that they can be tested as candidate replacement systems. TARD has been working with the Product Acquisition and Deployments Directorate (PADD) and the Systems Engineering and Evaluation Directorate (SEED) within DNDO to coordinate and execute performance tests in order to identify the more promising technologies so that their development can be accelerated so that they can become the next generation of ^3He replacement technologies. This would allow transition of these technologies from TARD to PADD.

Accomplishments in Systems Development for Non- ^3He Neutron Detection Alternatives for Backpacks Program

Significant accomplishments in FY2010 include:

- Begin performance tests of at least five types of new detectors to identify promising technologies developed by the government and TARD to serve as ^3He replacements for backpacks, as well as portals and handhelds.

FY 2011 planned accomplishments include:

- Finish first round of performance tests to identify promising technologies developed by the government and TARD for backpacks, as well as portals and handhelds. Provide feedback to participants.
-

FY 2012 planned accomplishments include:

- Conduct market research and release a request for information to test backpacks under development for commercial application using non- ^3He based neutron detectors.

Multi-Pathway Scanning Integration

Holistic Airport Deployments

Description

Aviation environments present unique and complex challenges for PRND operations. While efforts have been made to characterize individual components of aviation pathways (i.e. passengers/baggage) for PRND purposes, greater understanding and consideration of broad aviation environments is required in order to maximize system effectiveness and efficiency. DNDO has initiated the Multi-Pathway Scanning Integration Program to support this more holistic approach. This program consists of two key projects: the Holistic Airport Development and the Multi-Pathway Systems Evaluation. The holistic approach aligns with the latest DNDO planning principles and strategies, considers the perspective of end user (airport/location and stakeholder, versus pathway), leverages current rad/nuc systems, and accounts for the deterrence provided by non-rad/nuc security measures already in place. The holistic approach examines the intersection of International Commercial Aviation (ICA) Pax/Bag, ICA Air Cargo, and International General Aviation (IGA) pathways including the commonality of systems and processes that can be leveraged and shared. In addition to potentially increasing effectiveness against rad/nuc threats, the cumulative benefits gained from enhanced efficiencies across national and global operations has the potential to significantly reduce long-term burdens of system acquisition, maintenance, and operation. This effort includes analysis of operational needs and selection of potential solution options, for holistic airport deployments at domestic APOE locations; future efforts may initiate support for systems development and/or acquisition as appropriate. In addition, this effort may include future characterization of Pre-Clearance Airport scanning capability, including materiel/non-materiel alternatives analysis to identify potential appropriate enhancements.

Results from previous efforts to characterize APOEs are being analyzed and leveraged as part of the current activities. Initial findings from previous work indicated that a limited number of RPMs deployed in specific chokepoints within APOE environments could scan a significant percent of air cargo. While this type of fixed solution will not be feasible to accomplish scanning across all incoming international air cargo environments, it provides an opportunity to increase the amount of air cargo scanned while alternative mobile and agile systems are developed for other types of air-cargo and IGA operations.

The Analyze/Select Phase for the Holistic Airport Deployment Project will be conducted in several cycles, each addressing various “tiers” or classes of airport sites categorized by various differentiating characteristics of the airport environment such as size, traffic/volume, complexity, number of chokepoints, etc. Upon completion of all approved site surveys, the survey team will produce a Summary Site Characterization Final Report and a Technology Characterization Final Report.

Significant accomplishments in FY 2010 include:

- Completed Passenger/Baggage pilot/operational demonstrations at Charlotte and SeaTac airports.
- Began characterization of rad/nuc detection technology and operations at domestic APOE servicing International Air Cargo (IAC), and/or IGA in an effort to more efficiently and holistically examine opportunities to enhance scanning technology and operations across the pathways; supports Holistic Airport Deployment Gaps/MNS development.

FY 2011 planned accomplishments include:

- Complete site surveys for domestic APOEs with CBP other relevant stakeholders.
- Develop MNS, Capability Development Plan (CDP), and Preliminary CONOPS (P-CONOPS), consistent with AMD 102-01 to document capability gaps and needs in domestic APOE operational environments.

FY 2012 planned accomplishments include:

- Complete analysis for deployment of RPMs to a limited number of APOEs for targeted air cargo scanning.
- Initiate Analysis of Alternatives (AoA) process for APOEs, addressing the full scope of APOE operations.
- Initiate modeling/simulation activities to support AoA process.
- Initiate characterization testing of detection systems to support AoA process and modeling/simulation activities.

To complement the efforts addressing domestic Airports of Entry (APOE) environments, DNDO is also working with partners to determine how existing non-PRND systems might be utilized within the PRND Architecture. The multi-pathway systems evaluation effort examines technology and systems applicable to multiple pathways.

Computed Tomography/Advanced Technology Scanning and Evaluation

In close collaboration with DHS-S&T, DNDO is evaluating the feasibility of using Computed Tomography (CT) and Advanced Technology (AT) X-ray systems, currently deployed throughout aviation pathways to detect explosives, to detect rad/nuc materials in baggage and small cargo. The program will begin with a baseline system evaluation to determine basic feasibility to support the rad/nuc mission and the potential path forward for human-in-the-loop testing. The initial tests will focus on determining if the existing, certified CT systems will alarm on rad/nuc materials/test objects of interest.

Significant accomplishments in FY 2010 include:

- Began examination of the feasibility of existing CT/AT X-ray infrastructure utilized by TSA for explosives detection to support rad/nuc scanning or imaging to aid in the detection or identification of potentially illicit sources and threats.

FY 2011 planned accomplishments include:

- Complete baseline CT/AT testing with DHS-S&T, and complete feasibility assessment.
- Based on feasibility assessments, jointly develop MNS, CDP, and P-CONOPS with TSA and other relevant partners.
- Pending feasibility results of baseline CT/AT tests, partner with S&T and TSA to develop path forward.

FY 2012 planned accomplishments include:

- Pending feasibility results of baseline CT/AT tests, and continue partnering with S&T and TSA on path forward.

PVT Improvements

Description

During FY 2009, DNDO began an effort to explore and optimize the current polyvinyl toluene (PVT) Energy Windowing algorithms. Throughout FY 2010, DNDO has been executing a plan to solicit ideas for improvements to the PVT Solutions. Through the use of RFIs, DNDO received 20 improvement ideas from the national labs, industry and internally from DNDO. An integrated assessment team with representatives from DNDO, CBP, S&T and Oak Ridge National Lab evaluated the proposals. The team recommended eight of these proposals as viable improvements that would provide improvements to the PVT System. Development of these improvements begins in FY 2011 with implementation anticipated to start in FY 2012.

Algorithm Improvement

Description

The algorithm improvement program's (AIP) mission is to improve radioisotope detection and identification algorithm performance. The AIP will define the specifications for the algorithm replay tool to interface with an algorithm test bed (ATB), scoring criteria to gauge performance.

Background and Strategy

The performance of the currently deployed gamma detection and identification algorithms affects every Government program that procures radiation detection equipment to detect, identify, and intercept illicit rad/nuc material. The improvement of these algorithms needs to be addressed to maximize future improvements to the rad/nuc

mission space and to minimize duplicative efforts across the U.S. Government. More accurate radioisotope detection and identification algorithm performance in the field will improve the ability of deployed assets (i.e., handheld, backpack, and portal monitor radiation detection systems) to reduce the threat posed by radiological dispersal devices (RDDs) and improvised nuclear weapons.

Accomplishments in Systems Development – Algorithm Improvement

Significant accomplishments in FY 2010 include:

- Explored improvements to Energy Windowing algorithms currently used in PVT based systems.
- Continued development and improvement of DHSisotopeID full spectrum analysis tool for faster execution and more portable code.

FY 2011 planned accomplishments include:

- Determine if improvements to Energy Windowing algorithms are deployable.
- Validate DHSisotopeID against a standard set of spectra files
- Initiate development of selected improvements to the PVT Solution.

FY 2012 planned accomplishments include:

- Define benchmarks that will be used to measure algorithm performance.
-
- With High-Purity Germanium (HPGe) and Sodium Iodide (NaI) detectors, collect the source spectrum for open and closed benchmark data sets for use with new algorithms and benchmarks, and validate.
- Coordinate across the Government the proposed benchmarks, existing data sets, review scored algorithms, and discuss techniques to improve performance.
- Define algorithm replay tool interface requirements, reference electronic package, isotopes of interest, and algorithm scoring criteria.

SUMMARY: System Development projects and activities, in conjunction with S&T’s transformational development R&D activities, maintain the Nation’s preeminent research and development program. The following table illustrates the crosswalk between specific programs and the DNDO mission areas. It is clear that programs and activities have applicability to more than one mission area and are represented in a cross-cutting manner.

The Domestic Nuclear Detection Office (DNDO) requests no funding for this activity due to the program’s planned transfer to DHS’s Science and Technology Directorate (S&T) by no later than FY 2012. Additional program information can be found in the Congressional Justification for S&T.

DNDO established a transformational research and development (R&D) program which seeks to identify, explore, develop, and demonstrate scientific and technological approaches that meet one or more of the following criteria: address gaps in the Global Nuclear Detection Architecture (GNDA), dramatically improve the performance of nuclear detection components and systems, or significantly reduce the operational burden and/or cost of radiological/nuclear (rad/nuc) detection. Dramatic technological improvements may include improvements in system or component effectiveness and performance characteristics; reduction in cost of acquisition or maintenance; improvement in availability or reduction of operational burden by users in the field. R&D investments are made based on competitive awards, with investigators in all sectors – government laboratories, academia, and private industry – encouraged to participate. This program takes advantage of the qualities and respective advantages of all three sectors to accelerate discovery and develop products, with teaming among them highly encouraged. Transformational R&D is carried out within three major programs: Advanced Technology Demonstrations (ATD), Exploratory Research (ER) and the Academic Research Initiative (ARI).

Significant accomplishments in FY 2010 include:

- Developed a new scintillator material (SrI₂) which is now being provided to the Advanced Radiation Monitoring Device (ARMD) program to develop the next generation hand-held detectors – this material won an R&D100 award as one of best 100 inventions in the world in 2010.
- Supported the development and testing of five candidate detectors to replace ³He. One of these detector materials, CLYC, is transferring to engineering development.
- Evaluated performance and began transition efforts for several advanced stand-off radiation detection and tracking technologies to support surge and search efforts – some of these technologies came from the Stand-off Radiation Detection System (SORDS) program.
- Completed the development of a mobile detection system to monitor vehicles and vessels for rad/nuc threats within normal traffic. Developed the first compact accelerator that can produce three discrete end-point energies at the required pulse rate – this accelerator is needed to enable mobile shielded SNM detection capability.
- Through the Academic Research Initiative (ARI) supported 118 students in nuclear science, engineering and other disciplines through 36 grants at 30 universities across the country.

FY 2011 Planned Accomplishments include:

Nuclear Detection Basic Research (BR) Project (formerly Academic Research Initiative Program (ARI) – This program has two primary focus areas: 1) Engages the academic community in rad/nuc research goals and builds a community dedicated to solving long-term, high-risk research issues; and 2) develops the next-generation of researchers with expertise in nuclear and radiological detection technologies. In January 2007, the DNDO basic research program formally was designated the Academic Research Initiative (ARI) through a Memorandum of Understanding with the National Science Foundation (NSF) to support execution of the ARI program. NSF administers the proposal solicitation, evaluation, and grant award process as well as the first year of grant funding. In addition to its focus on basic and fundamental radiation detection science, the ARI funds academic disciplines traditionally not associated with radiological/nuclear detection, such as social sciences, to submit ideas and proposals.

- *Basic Research in New Radiation Detector Materials Project (formerly Fundamental Research in New Radiation Detector Materials Project) - Characterize new candidate semiconductor materials including PbOAl, BiI, SnGeS, PbGeS. Refine vertical melt-growth techniques for the production cadmium zinc telluride (CdZnTe). Develop a benchmark model providing a fundamental understanding of scintillator non-proportionality.*
- *Basic Research in Novel Nuclear Detection System Concepts and Architectures Project (formerly Fundamental Research in Novel Nuclear Detection System*

- Concepts and Architectures Project*) - Investigate novel modeling approaches of borders and maritime pathways that enable detection system design and employment options. Continue to research the extension of multilayer screening algorithms from port security applications to aviation-based applications.
- *Basic Research in Alternative Neutron Detection (³He Alternative) Technologies Project (formerly Fundamental Research in Alternative Neutron Detection (³He Alternative) Technologies Project)* - Evaluate an innovative direction-sensitive neutron detector based on multilayer drift chamber technology and continue on fast neutron spectroscopy using layered plastic scintillators and thermal neutron detection material.
 - *Basic Research in Active Detection Technologies, Signatures, and Sources Project (formerly Fundamental Research in Active Detection Technologies, Signatures, and Sources Project)* – Establish a university-based user facility with a new accelerator, enabling novel nuclear-reaction studies. Evaluate a new methodology for direct photon generation using Doppler-compensated inelastic electron scattering. Develop and evaluate new signal processing tools for active interrogation systems using nuclear resonance fluorescence.
 - *Basic Research in Expert Systems, Networks, Algorithms, and Data Processing for Nuclear Detection Project (formerly Fundamental Research in Expert Systems, Networks, Algorithms, and Data Processing for Nuclear Detection Project)* – Demonstrate a new machine-learning capability for detecting nuclear material in search applications. Develop new Compton imaging algorithms to improve radiation detector sensitivity and benchmark models and algorithms for use in novel electron-tracking detector systems.
 - *Basic Research in Nuclear Forensics Technologies Project (formerly Fundamental Research in Nuclear Forensics Technologies Project)* – Complete a study of complexation using absorption spectroscopy and x-ray absorption spectroscopy (XAS). Translate macro-scale electrochemistry to microelectrodes and characterize trivalent actinide electrochemical behavior.

Nuclear Detection Exploratory Research (ER) Program – The ER program area explores innovative, high-risk, early-stage ideas that can make transformational contributions to reduce the risk of nuclear terrorism. Specifically, ER develops technology and techniques that: 1) address capability gaps in radiological and nuclear detection; 2) provide substantial performance improvement or cost reduction of rad/nuc detection capabilities; and 3) improve nuclear forensics. Successful technology may transition to support a subsequent ATD or spur commercial development. ER also provides performance modeling, improved algorithm development, and other support capabilities.

- *Advanced Scintillator Development* – The effort will scale-up low-rate production efforts for large-size, high-performance scintillators and complete high-throughput screening of thousands of candidate materials for new scintillators.

- *Advanced Semiconductor Development* – This project will transition several new high-performance semiconductors into detector system prototypes; develop low-rate production infrastructure for at least one high-performance semiconductor; and complete an information-based search for new candidate materials for semiconductors.
- *Photomultiplier Tube (PMT) Replacements/Photon Conversion* – The project will develop low noise versions of the solid state alternative technologies to PMTs using novel large band-gap materials as opposed to the traditional materials.
- *Helium-3 Replacement Technologies and Fast Neutron Detection Project* - The project will pursue a number of technologies, many of which are based on either boron-11 or lithium-6 as neutron capture agents. The project will investigate detectors and systems designed to measure just thermal neutrons, just fast neutrons with spectra capabilities, as well as those designed to measure both fast and slow neutrons. The project will investigate technologies based on scintillators, as well as semiconductors which can yield high energy resolution. Dual use materials will also be investigated, which can measure both neutrons and gammas with high energy resolution. Materials which can provide very efficient and compact design will also be investigated; these can efficiently detect neutrons with only a fraction of an inch thickness. New growth techniques to provide large scintillator crystals for efficient fast neutron detection will be explored.
- *Active Detection Project (formerly divided into three projects: Active Detection Project, Novel Active Detection Source Project, and the Active Detection Detectors, Systems, and Concepts Project)* - The project will research and identify all potential signatures and user-community requirements for detecting threat materials for general aviation aircraft and human portable applications.
- *Algorithms, Modeling, and Software Development Project* - The project will make substantial improvements in the Monte Carlo modeling and simulation code to improve usability and accuracy for various passive and active detection scenarios, and support development of a robust CAD-based front end to support rapid prototyping in given applications. Also, work will conclude on the CANES (contextually-aware nuclear expert system) project, an effort that uses machine learning to facilitate alarm resolution at portal monitors by examining all-source information about a particular cargo.
- *Forensics Data Collection and Analyses Project* - The project will research and develop Stimulated Electron Emission (SEE) to perform nuclear forensics on containers and other common surfaces exposed to radiation more rapidly and accurately.

Nuclear Detection Near Term Research (NTR) Program (formerly included in the Nuclear Detection Exploratory Research (ER) Program) – The NTR program area performs accelerated development, characterization, and demonstration of leading-edge technologies that address critical gaps in nuclear detection capabilities. Characterization results form the basis for a subsequent cost benefit analysis (CBA) that objectively determines whether the technology should transition to system development and eventual production and deployment. Contracts awarded under the NTR programs are typically

executed in four distinct phases: preliminary design review (PDR), critical design review (CDR), characterization readiness review (CRR), and characterization assessment.

- *Advanced Radiation Monitoring Device (ARMD) Near Term Project (formerly divided into two projects: the Sri Near Term Project and the CLYC Detector Near Term Project)* - Leverages break-through scintillator material development and solid-state replacements for photomultiplier tubes (PMT). The project will build upon advances in new detection materials discovered under previous Exploratory Research projects utilizing advanced scintillator materials and neutron detection techniques.
- *Long Range Stand-Off Detection Near Term Project* - This project will initiate in FY 2011. Develops an aerial stand-off radiation measurement system for the detection of nuclear and radiological material from an airborne platform. These systems will be able to detect and locate point-like sources in a complex and dynamic background. This platform could be used in urban, maritime, and costal environments, with a concept of operations more in line with law enforcement practices rather than past radiological mapping operations. The proposed systems will be deployable on rotary winged aircraft. The system will provide real time data on the presence, location, and isotope identification enabled by the fusing of radiation detection with other sensing modalities (e.g. multispectral imaging, GPS, altimetry, etc). Utilizing new materials, innovative packaging, and algorithm improvements, these systems will offer greater detection sensitivity, lower false alarms, and simultaneously provide a greater range of operation.
- *Intelligent Radiation Sensing System (IRSS) ATD Project* - Creates data fusion software to maximize performance of co-deployed detection hardware connected by a wireless network. IRSS will leverage advances in small, efficient directional detectors, advanced distributed detection algorithms developed under various ER programs, and phenomenology studies characterizing the requirements for in-transit detection. USCG boarding parties and security teams at special events could use the networked system, which may include many disparate types of detectors. This system could improve sensitivity, expand surveillance area, locate threats faster, and detect and identify radiation sources better compared to single detectors or multiple autonomous (non-networked) detectors. This project will be completed in FY 2011 with the characterization of the IRSS performance test units.
- *Shielded Nuclear Alarm Resolution (SNAR) Project* - Develops and characterizes advanced technologies to resolve alarms and definitively verify the presence of special nuclear material (SNM) in shielded and/or cluttered environments. The project has two principal applications: 1) Dramatic performance enhancement to commercially or near commercially available x-ray NII screening systems by integrating solutions directly into hardware and software to substantially reduce the number of manual inspections while increasing probability of SNM detection; and 2) Targeted and choke point screening in multiple venues, including vehicle border crossings, checkpoints, rail, air cargo, and general aviation, with rapidly re-locatable inspection systems. This project will be completed in FY 2011 with the characterization of the SNAR performance test units.

The Domestic Nuclear Detection Office (DNDO) requests \$43.104 million for this activity.

CURRENT SERVICES PROGRAM DESCRIPTION

The DNDO development and acquisition process is anchored by the assessment of DNDO-mission related programs as they are developed, deployed, and implemented. DNDO continually assesses the global nuclear detection and reporting architecture through a variety of means, including test and evaluation (T&E) campaigns to characterize and collect performance data on commercially available and emerging technologies and systems, execution of pilots with operational agencies to evaluate concepts of operations (CONOPS), red teaming assessments to deepen the understanding of adversary capabilities, and net assessments to identify the effectiveness of the planned and deployed global nuclear detection and reporting architecture.

Test and Evaluation (T&E) Program

Description

DNDO technology development and acquisition programs are supported by T&E campaigns to characterize and assess the effectiveness of technologies under development as well as commercial-off-the-shelf (COTS) and/or government-off-the-shelf (GOTS) technologies or systems. The DNDO development and acquisition process is anchored by rigorous assessments of mission related technologies as they are developed, deployed, and implemented. The testing of detection systems against special nuclear materials (SNM) in significant quantities and in realistic configurations is a key to assessment of radiological/nuclear (rad/nuc) systems. This type of testing requires highly specialized and secure testing facilities, such as the Radiological & Nuclear

Countermeasures Test and Evaluation Complex (RNCTEC), and resourced with appropriate test instrumentation, equipment, radioactive sources, measurement devices/sensors, and test data collection/archiving systems. The T&E program is comprised of the following projects: T&E Operations, T&E Facility Infrastructure, Directed Testing focused on COTs equipment used by Federal, State, and local responder community, Algorithm Test Bed, Graduated Rad/Nuc Detector Evaluation and Reporting (GRaDER) program, and Test Data Management.

Background and Strategy

The T&E Program is aligned to:

- DHS QHSR Mission 1. Preventing Terrorism and Enhancing Security;
 - Goal 1.2 Prevent the Unauthorized Acquisition or Use of Chemical, Biological, Radiological/Nuclear (CBRN) Materials and Capabilities
 - Objective 1.2.3 Control Movement of CBRN
 - Objective 1.2.4 Protection Against Hostile Use of CBRN
- DNDO BUR Activity: Architecture Implementation
- DNDO's Strategic Plan Goal 7: Strengthen the foundation and infrastructure of the GNDA through continuously improving operational support and situational awareness.
 - Objective 7.6: Test and evaluate COTS and newly developed rad/nuc detection technologies that will be used at the border and within the domestic interior.
- DNDO's Systems Engineering and Evaluation Directorate's Strategic Plan
 - Goal 3: Develop timely and credible test and evaluation campaigns in support of internal and external (international, Federal, State, local and other entities) customers' rad/nuc detection requirements
 - Goal 4: Establish and develop an integrated T&E infrastructure of facilities, equipment, sources, processes, and personnel to meet T&E needs.
 - Goal 5: Develop an experimentation capability to analyze the most pressing Global Nuclear Detection Architecture (GNDA) gaps and recommend operational solutions.
 - Goal 6: Provide meaningful assessments of operational utility through a robust evaluation of campaigns/events in support of Pilot programs.

Evaluating the performance and operational utility of technologies developed or purchased to detect and identify nuclear weapons and SNM is crucial to thwarting nuclear proliferation and terrorism, the primary goal of DNDO. The T&E Program maintains the core capability to test and evaluate rad/nuc detection technologies in support of DNDO's primary goal, including maintaining essential T&E assets, resources, and facilities and relationships with nuclear scientists who assist in the design and execution of test campaigns. Beyond testing facilities, test data collection systems and nuclear experts, a critical component of T&E is the nuclear material used in the testing of detectors, referred to as sources. Based on threat information, this program identifies the amount (ranges of quantities are listed under the official Department of Energy (DOE)

Category I through IV) and configuration of test objects or sources used for testing, and then uses the DOE national labs to design and fabricate different sources in varying sizes. A T&E source program has been developed to build up the test sources inventory of four different Highly Enriched Uranium (HEU) and four to five plutonium (Pu) source sizes for testing.

Accomplishments in Assessments T&E – Facility Infrastructure and Operations

Significant accomplishments in FY 2010 include:

- Conducted twelve individual test campaigns.
- Based on Ports of Entry (POE) operational alarm reporting on monocalcium phosphate (agricultural fertilizer), a Rapid Response Test was conducted at Pacific Northwest National Laboratory (PNNL) to assess the detection sensitivity of portals for both Advanced Spectroscopic Portals (ASP) and polyvinyl toluene (PVT) detectors and the GR-135 Radio-Isotope Identification Device (RIID) handheld units against this material to distinguish between this common commodity vs. threat alarms.
- Fabricated and delivered four copies of 1st size of Category 4 HEU sources.
- Completed characterization, Nuclear Regulatory Commission (NRC) registration and Department of Transportation certification of 1st size Category 4 HEU sources and Category 4 Weapons Grade (WG) Plutonium (Pu) Sealed Source.
- Maintained infrastructure at RNC TEC and initiated physical security upgrades to facility to prepare for use of Category II SNM sources with reduced costs for force protection.

FY 2011 planned accomplishments include:

- Conduct fifteen planned individual test campaigns.
- Conduct two rapid response tests to resolve alarm issues that occur at POE radiation scanning for rad/nuc material. These tests support faster adjudication of alarms.
- Fabricate and deliver four additional Category 4 HEU spheres in 2nd size. Two different core designs will be used to represent different characteristics.
- Initiate fabrication of one or more Category 4 HEU spheres in 3rd size.
- Commence planning and preparations for the fabrication of Category 4 Reactor Grade (RG) Pu Sealed Sources in one size.
- Fabricate up to four each of Category 4 Weapon Grade (WG) Pu sealed sources in up to 2 sizes.
- Complete fabrication of 3rd and 4th size of Category 4 HEU spheres.

- Continue physical security upgrades to RNC TEC to reduce costs for force protection in preparation for testing activities using Category I & II SNM sources.

FY 2012 planned accomplishments include:

- Maintain the expertise and resources to conduct up to fifteen individual test campaigns.
- Continue physical security upgrades, including procurement and deployment of sensors, vehicle barriers, and perimeter fencing to RNC TEC to reduce costs for force protection in preparation for testing activities using Category I & II SNM sources.
- Complete fabrication of size #3 and #4 of Category 4 HEU spheres. Assemble HEU spheres into sets of two to four sizes.
- Complete fabrication of two Category 4 RG Pu sealed sources.
- Fabricate up to four each Category 4 WG Pu sealed sources in three sizes.

Directed Test Campaign

DNDO routinely conducts test campaigns to characterize currently available equipment in operationally relevant environments and CONOPS. Such tests provide for the independent assessment of equipment outside of the Developmental Test and Evaluation (DT&E) and Operational Test and Evaluation (OT&E) conducted by the developers of this equipment. State and local entities have repeatedly stated their need for these test results to inform them in the development of effective Preventive Radiological/Nuclear Detection (PRND) programs at the State, local, and tribal level using appropriate CONOPS.

State and local law enforcement and other public safety personnel are procuring PRND technologies that are commercially available. Two primary issues associated with the use of PRND technologies by law enforcement and public safety personnel are: 1) their effectiveness in detecting various radioactive sources, and 2) their performance in certain operationally relevant environments. DNDO has evaluated off-the-shelf or government available PRND equipment in order to provide performance evaluation information on specific models and their potential operational utility. The following classes of detectors have been evaluated in the past under the Directed Test funding: personal radiation detectors, handheld, backpack and mobile detection systems, and radiation detection systems suitable for maritime environments and aerial platforms (initiated and planned in FY 2010). The class of detection system for evaluation with the highest priority in FY 2012 will be selected in FY 2011.

Accomplishments in Assessments Directed Test Campaign

Significant FY 2010 accomplishments include:

- Completed the Dolphin test campaign to evaluate the performance of COTS and GOTS rad/nuc detection systems mounted on small vessels and tested in San Diego harbor under operational conditions with United States Coast Guard (USCG).
- Initiate collaboration with Defense Threat Reduction Agency (DTRA) and DOE to complete test planning for joint test campaign of detection systems that could be used on airborne platforms (Gryphon test).
- Established and planned an international collaboration program with European Union (EU) for conducting Illicit Trafficking Radiation Assessment Program (ITRAP+10) tests, leveraging ITRAP tests performed in 1997.
- In collaboration with EU, established testing protocols for ITRAP+10 for nine rad/nuc categories of equipment.

FY 2011 planned accomplishments include:

- Conduct Gryphon test execution of airborne detection systems in collaboration with DTRA and DOE.
- Conduct cooperative testing of ITRAP+10 technologies at European and US testing facilities in collaboration with the EU and DOE.

FY 2012 planned accomplishments include:

- Complete report for Gryphon test campaign to inform federal, state, and local operational entities of the performance of aerial detection systems.
- Complete testing and produce joint EU/US ITRAP+10 report.
- Initiate the next Directed Test dependent on highest priority determined in FY 2011.

Algorithm Test Bed (ATB)

Most radiation detectors utilize algorithms of various complexities to notify users of the presence of radiological material. For some instruments, these algorithms can also identify and classify the type of radiological material that is detected. The interpretation of the collected data determines the response of the detector whether it be to alarm or identify radiological material. The “intelligence” of algorithms varies between radiation detectors; therefore it is important to understand the capabilities and limitations of algorithms utilized in a variety of different radiation detectors.

To this end, DNDO needs the capability to evaluate the baseline performance of detector algorithms, and compare new and existing detector algorithms against standardized sets of both modeled and measured threats in a virtual environment. These modeled results

can be used to significantly augment the physical tests performed by DNDO to help improve current algorithms and map out the limits of performance for existing algorithms. DNDO's primary resource for performing these types of computational studies is the Algorithm Test bed (ATB) at Johns Hopkins University Applied Research Laboratory (JHU/APL).

The ATB provides an avenue for performing algorithmic studies, which can supplement physical testing that is significantly more expensive, and often limited in what measurement configurations can be evaluated due to time, resource, and budgetary constraints. More specifically, some of the analytical studies that can be investigated at the ATB include threat injection studies, receiver operator characteristic (ROC) curve studies, degraded mode studies, and concept of operations studies.

Currently, DNDO has developed and continues to develop the capability to evaluate a variety of different types of radiation detectors using the ATB including portal monitors (ASP and PVT-based systems), hand-held radioisotope identification devices, mobile platform radiation detection systems, and radiography systems for the Cargo Advanced Automated Radiography System (CAARS) program. The ATB provides a mechanism to evaluate the effectiveness of improvements to algorithms against a gold standard set of measured threats.

Accomplishments in Assessments – Algorithm Test Bed

Significant FY 2010 accomplishments include:

- Completed modeling tools (such as tools to inject threat spectrum into actual screened cargo spectrum collected at the ports) to perform simulations of a wide scope of SNM threat objects in lieu of testing in the field. These simulations, performed on the ATB, enhance testing capability.
- Developed and validated injection study tools for two ASP systems and one PVT system using the current test source profiles and a comprehensive report describing the methodology has been completed.
- Performed regression testing of software updates to ensure that enhancements to the software did not unintentionally create deficiencies elsewhere in the code.
- Support DHSIsotopeID (rad/nuc ID software) development and continued testing.
- Completed fifteen analytical studies such as: 1) ASP regression study performed with modified threshold settings which led to Customs and Border Protection (CBP) approval to proceed to Field Validation testing, and 2) DHSIsotopeID regression studies provided an independent assessment of strengths and weaknesses of the algorithms used in ASP, Human Portable Radiation Detection Systems (HPRDS) and GR-135 RIID technologies.

FY 2011 planned accomplishments include:

- Continue to support algorithm development and optimization techniques and injection studies for a wider range of detection systems adding HPRDS, mobile systems and Advanced Cargo Imaging (ACI) systems to the ATB suite.
- Continue to perform regression testing of software updates of DNDO-developed systems as needed, including DHSIsotopeID testing and assessment of development.
- Standing-up the Generic Algorithm Test Bed which allows for spectroscopic algorithm assessment against a set of standardized metrics developed by a peer group. This allows distribution of standardized, diverse data sets to a large field of algorithm developers.

FY 2012 planned accomplishments include:

- Continue to perform ATB studies that allow programs to make informed program-wide decisions for increased performance and deployment of detection systems.
- Accept spectroscopic algorithms from developers and assess using the Generic Algorithm Test Bed to increase and diversify data sets for development and assessment.

Graduated Rad/Nuc Detector Evaluation and Reporting Program

The Graduated Rad/Nuc Detection Evaluation and Reporting (GRaDER) program was established to provide objective and reliable performance testing information to PRND Federal, State and local stakeholder for PRND equipment tested against consensus standards to assist them in making PRND equipment procurements.

The rad/nuc detector industry continues to develop new technologies and enhancements to existing technology. Federal, State, and local technology users need accurate and objective performance testing of this equipment to inform their procurement decisions. The pace of innovation and new products in the marketplace makes it prohibitive for the Federal government to continually test to ensure rad/nuc detection equipment procured meets DHS adopted voluntary consensus standards.

DNDO is mandated by Congress (Safety and Accountability for Every Port Act of 2006) to implement a test and evaluation program to provide effectiveness information and metrics for evaluating PRND technology. The GRaDER program was established to meet this mandate. This testing framework can be accessed any time a vendor has a new technology and is ready to perform testing of the technology against standards, rather than waiting for a government-sponsored test.

In the current Phase 1, the GRaDER program has established independent testing against American National Standards Institute (ANSI) N42 voluntary consensus standards established by industry and officially adopted by DHS. The law also requires DHS to

publish technical capability standards (or government unique standards) and standard operating procedures for the use of non-intrusive imaging and radiation detection equipment. The GRaDER program will integrate these technical capability standards into Phase II of the program. The GRaDER program, working with NIST, uses the National Voluntary Laboratory Accreditation Program (NVLAP) to designate competent laboratories and assure independent and consistent testing of COTS radiation detection devices. Results of the GRaDER program will be made available to DHS components, other Federal agencies, and State, local and tribal law enforcement and first responder agencies. The ultimate objective is to enable informed procurement decisions and ensure that grant funding provides the best detection capabilities.

While the Directed Testing program has similar goals and users of the test data as the GRaDER program, Directed Testing is conducted by DNDO and is based on threat informed and mission related DHS performance requirements. Such requirements are based on the current nuclear threat. The test objectives therefore change for specific scenarios and over time. In GRaDER, all tests in Phase I are performed against the consensus standards by NVLAP accredited laboratories and therefore provide a common basis of comparison of instruments for each category of equipment.

Accomplishments in Assessments GRaDER Program

Significant FY 2010 accomplishments include:

- Initiated first Phase I testing of the GRaDER program testing of COTS Rad/Nuc detection systems by DNDO-accepted laboratories.
- Integrated three NVLAP-accredited or DNDO-accepted laboratories/laboratory teams to perform testing.
- Refined and republished compliance levels for each class of equipment included in the GRaDER Program.
- Continued outreach to the vendor community to inform them of the availability, benefits and protocols of the program.
- Continued coordination with Federal Emergency Management Agency (FEMA) for implementation of grant guidance supported by GRaDER Program compliance reporting.
- Continued coordination with DHS' Directorate for Science and Technology (S&T) Standards Executive, on the development of DHS conformity assessment and accreditation policy and guidance to meet homeland security needs.
- Continued to introduce and promote the GRaDER Program capabilities and objectives to Federal, State and local law enforcement, first responders and first receivers.

FY 2011 planned accomplishments include:

- Begin reporting results of testing against selected ANSI N42 standards to support the Authorized Equipment List from the FEMA Grant Office.
- Continue Phase I testing of the GRaDER program for manufacturer-financed testing of COTS rad/nuc detection systems by NVLAP-accredited laboratories.
- Begin planning, budgeting and scheduling for the GRaDER Program Post-Market Surveillance (GPMS) program to verify continued compliance for previously tested COTS instruments.
- Begin integration of Technical Capability Standards (Phase 2) and additional ANSI/IEEE N42 voluntary consensus standards into the GRaDER Program.
- Increase scope of laboratory testing in terms of additional ANSI N42 standards, e.g. N42.48 for Spectroscopic Personal Radiation Detectors.
- Integrate additional NVLAP-accredited or DNDO-accepted laboratories.
- Continue outreach to the vendor and user communities.

FY 2012 planned accomplishments include:

- Initiate Phase II of GRaDER and begin testing against Technical Capability Standards.
- Continue Phase I of the GRaDER program for manufacturer-financed testing of COTS rad/nuc detection systems by NVLAP-accredited laboratories.
- Increase scope of laboratory testing in terms of additional ANSI N42 standards, e.g. N42.46 Imaging Performance of X-Ray and Gamma-Ray Systems for Cargo and Vehicle Security Screening.
- Continue reporting results of testing against selected ANSI N42 standards to support the Authorized Equipment List from the FEMA Grant Office.
- Maintain the GRaDER Evaluated Equipment List (GEEL) on the GRaDER Community of Interest (COI) of the Homeland Security Information Network (HSIN) and the FEMA Responder Knowledge Base (RKB). Update information on previously tested instruments based on the GPMS program.
- Begin implementing the GPMS program to verify continued compliance for previously tested COTS instruments.
- Complete revising and republish the NIST Handbook 150-23, *NVLAP Homeland Security Applications – Radiation Detection Instruments*.
- Integrate additional of Technical Capability Standards into the GRaDER Program.
- Integrate additional NVLAP-accredited or DNDO-accepted laboratories.
- Continue outreach to the vendor and user communities.

Test Data Management

This project focuses on the collection, analysis, reporting and archiving of test data collected during DNDO test campaigns as well as the collection of similar test reports by other agencies. Two data management systems are developed under the Test Data

Management program: Archive and Retrieval Management System (ARMS) and Report Analysis and Archive System (RAAS).

ARMS is a repository that will store and retrieve all T&E data for every DNDO system under test. The fundamental need for this system is derived from the requirement for a centrally-controlled repository of verified data sets, traceable distribution of DNDO data as requests are made to perform additional analysis with the test results, documented ground truth-based detector response characteristics for all systems under every test to allow for data mining and fusion analyses, and retrievable test data for independent audit report recommendations.

In support of this effort, JHU/APL designs and implements the ARMS database in accordance with GNDA and National Information Exchange Model (NIEM) standards and as described by the ARMS logical data model. In addition, JHU/APL provides DNDO technical experts to assess the T&E data before it is allowed to be stored in or distributed by ARMS. This step ensures the data is of a quality sufficient for use by DNDO and is properly stored and documented within the ARMS database.

The House Appropriations Committee in 2008 directed DNDO to collect and maintain a comprehensive inventory on results of radiation portal monitor testing. Inclusive in the information data base was all testing performed by the U.S. National Laboratories in order to provide an understanding of PVT and ASP ability to detect specific rad/nuc materials. Hence RAAS was developed and is an information management system for the retention and dissemination of test reports, test data and evaluations of radiation detection equipment from various agencies such as DHS, Department of Defense DTRA, DOE, national laboratories, and others. These agencies have sponsored and/or conducted studies, evaluations and tests on equipment currently in their inventories and deployed for the detection, localization and identification of SNM and other radioactive materials. This repository of test reports is made available to all appropriate organizations with an interest in rad/nuc detection equipment performance.

Accomplishments in Assessments Test Data Management

Significant FY 2010 accomplishments include:

- Completed storage of 266 radiation and radiography reports with metadata into the RAAS available to all federal agencies.
- Launched ARMS 2.0 (Web-based archival retrieval data management system) containing data from 22 test events and with request tracking capability for the 54 current ARMS users registered.
- Began work on ARMS 3.0 which extends 2.0 to include enhanced data search capability.
- Managed data that will be collected in DNDO test campaigns, and enhanced the integration of the data into ARMS.

FY 2011 planned accomplishments include:

- Review, evaluate and add 150 radiation and radiograph reports to expand the content of RAAS.
- Improve import, export and search capabilities of ARMS 3.0.
- Define and simplify the interface between the data collection system used at the test site and ARMS.

FY 2012 planned accomplishments include:

- Review, evaluate and add 150 radiation and radiograph reports to expand the content of RAAS.
- Continue information sharing of analysis, studies, and tools to expand the content and capabilities of the Archival and Retrieval Management System (ARMS) across DNDO user community and with peer organizations.
- Develop data visualization tools to graphically represent all test event data and content stored within ARMS.

PRND Pilot Programs

Continuous improvement in the Interior Mission Area will rely on the continued evaluation of PRND threat risks in various pathways of the GNDA. In order to address this risk, an average of three Architecture Studies will be accomplished per year, with the intent to evaluate these studies and then conduct pilots of promising new PRND concepts. The intent is to identify gaps in the GNDA and where feasible, to conduct follow-on pilot efforts to develop recommended CONOPS, systems, and implementation approaches to address the identified gaps. The Green Border Pilot will focus on PRND activities conducted in those states with land borders between Canada and Mexico. DNDO is evaluating how to better integrate State and local assets with Federal assets in the buffer zone (within approximately 100 miles) of the border layer between POEs.

From FY 2009 to FY 2010, DNDO conducted domestic PRND studies for the “Green Border” states along the Mexican and Canadian borders, to identify gaps and develop mitigation strategies. Border States are of particular importance between the formal POEs controlled by CBP, where there is little or no Federal presence, and border incursions, if detected, may be responded to by State and local law enforcement organizations. It is critical that DNDO engage with border states to complement Federal operations and fill vulnerable architecture gaps. The Green Borders architecture study was completed in FY 2010 and a three year pilot program will be initiated in FY 2011 to develop new PRND capabilities in the Green Border States. At the completion of the pilot, the pilot results will be evaluated and changes will be made to the National PRND Guidance Documents as appropriate, and lessons learned will be disseminated to appropriate stakeholders to improve their PRND programs.

The West Coast Maritime Pilot (WCMP) and International Commercial Aviation (ICA) Passengers and Baggage (Pax/Bag) Pilot programs were completed in FY2010. Close out activities and final documentation will be produced in FY2011 for these pilot programs. A description of the three year WCMP is provided under the Systems Engineering and Architecture PPA, Maritime Program Assistance section. Additional information and accomplishments for the Pax/Bag pilot is provided under the Systems Development PPA, Multi-Pathway Scanning Integration section.

Accomplishments in Assessments Pilots

Significant accomplishments in FY 2010 include:

- Conducted Full Scale Exercises (FSEs) in Puget Sound and San Diego in order to validate training, equipment, CONOPS, procedures and protocols. The exercises were designed to involve all participants in the WCMP, and evaluate the effectiveness of human portable, boat-mounted, and fixed rad/nuc detection equipment in the maritime environment.
- Identified communications requirements to integrate maritime PRND with intelligence, targeting, reachback and response for future deployment.
- Concluded pilots at Seattle-Tacoma and Charlotte International Airports and provided limited initial operational capability to Seattle-Tacoma and Charlotte International Airports.
- Completed Green Border architecture study.

FY 2011 planned accomplishments include:

- Document lessons learned and identify gaps and assess the operational utility from the pilot to improve future development and deployment of maritime PRND capabilities.
- Based on the maritime pilot results, identify life-cycle costs associated with maintaining a maritime PRND capability.
- Complete final Operational Utility Assessment for the ICA Pax/Bag Screening Pilot.
- Initiate Green Border Pilot by identifying stakeholders, identifying demonstration events and developing pilot planning documents.
- Identify and test technologies to be deployed, and develop CONOPS, training, common operational picture requirements, and reachback procedures for Green Border Pilot.

FY 2012 planned accomplishments include:

- In coordination with stakeholders, conduct a series of exercises including drills, functional exercises, and full scale exercises to train, test and evaluate CONOPS. Training and equipment deployed during the pilot is provided to the stakeholders.

Red Team and Net Assessments (RTNA)

Description

DNDO independently assesses the operational effectiveness and performance of its programs and deployed PRND capabilities. Engaging in a continuum of assessment types, the assessment process identifies and evaluates risk from both an insider's and a postulated adversary's perspective to assess effectiveness of defensive programs and capabilities.

The Red Team and Net Assessments program is comprised of two efforts, as described below.

The Red Team (RT) employs two models in assessing the GNDA. Adversarial-based assessments are conducted from an outside perspective without using any "inside" information of current or planned capabilities. Covert tests use inside information to intentionally introduce radioactive sources against known defenses without the knowledge of frontline defenders to assess the performance of fielded technology, training, and protocols. Upon the identification of seams, gaps, and/or vulnerabilities, the RT produces reports recommending possible mitigation steps and documents the lessons learned. RT conducts assessments that:

- Determine sensitive information that exists in open sources that may be used to defeat the Nation's defenses.
- Devise possible courses of adversary action including the effect that PRND capabilities have on the emulated adversary's behavior and risk estimates.
- Use covert and overt operations to assess the performance of deployed PRND capabilities.

Net Assessments (NA) assesses the effectiveness of planned and deployed PRND capabilities. NA examines the various DNDO programs, reviews procedures and policies, integrates lessons learned from all RTNA assessments, and conducts continuous independent assessments to determine value added against the global threat. The NA program, in cooperation with Federal, State, and local operational partners, is part of a strategy to improve the overall probability of success in the PRND mission. NA conducts assessments that:

- Assess the effectiveness of CONOPS, protocols, training, technologies, communications, and technical support for PRND programs and capabilities.
- Build models that integrate validated lessons learned from overt and covert operations and assessments, intelligence estimates, expert elicitation, and

workshops into probabilistic measures of the effect that implemented capabilities have on adversary decision making.

Background and Strategy

DNDO's Red Team and Net Assessments (RTNA) Directorate is aligned to the Assessments BUR Activity and has its foundation in Title 6 USC 592, which directs DNDO to evaluate radiation detection systems "under realistic operational and environmental conditions and against realistic adversary tactics and countermeasures." This overarching direction has subsequently been reinforced by the DHS QHSR. Specifically:

- QHSR Objective 1.2.1: Anticipate emerging threats: Identify and understand potentially dangerous actors, technologies, and materials, directs identification of adversary capabilities before their first use. Red Team activities are uniquely qualified to provide insight to decision makers for this difficult task.
- QHSR Objective 1.2.4: Protect against hostile use of CBRN: Identify the presence of and effectively locate, disable, or prevent the hostile use of CBRN captures the development and fielding of PRND capabilities, including all technologies, policies, protocols, training, and other support as required. Net Assessments provides tools to assess the effectiveness of each of these components of a PRND program as well as the GNDA as a whole.
- DNDO Strategic Plan Objective 1.3: Periodically analyze vulnerabilities, capabilities, and overall effectiveness of the GNDA and make recommendations to address any shortcomings.

As a whole, the RTNA Directorate provides a coordinated assessments cycle which employs complementary cooperative and adversarial approaches in assessing the effectiveness of implemented PRND capabilities.

State & Local Initiatives – Red Team Covert Testing Program Deployments

Description

The Security and Accountability for Every Port Act of 2006 (SAFE Port Act) Public Law 109-347 mandates that DNDO implement the domestic portion of the GNDA which relies upon State and local law enforcement officials to conduct rad/nuc detection operations. Moreover, the SAFE Port Act charges DNDO with enhancing and coordinating the nuclear detection efforts of Federal and State and local officials in order to ensure a managed, coordinated response to rad/nuc threats. Within the FY 2012 request, DNDO is promoting an opportunity to emphasize the rad/nuc detection capabilities and operations at the State and local level through an increase in Red Team Net Assessments (RTNA) Covert Testing Program deployments.

Increased RTNA Covert Testing Program Deployments

DNDO's Red Team conducts overt and covert tests to assess the performance of fielded technology, training, and protocols deployed to defeat R/N threats through U.S. preventive R/N detection defenses. DNDO currently conducts 20 deployments per year.

In FY2010, ten requests were turned down due to lack of resources. Additional resources are requested to meet the current demand. Funding will pay for additional technical support personnel, licensed source handlers, and rad/nuc sources in order to meet demand from additional stakeholders. DNDO will be able to increase engagements to 30 per year.

Accomplishments in Red Team and Net Assessments

Significant FY 2010 accomplishments include:

- Conducted open-source, covert testing, and adversarial red teaming activities to include using special nuclear material (SNM) surrogates; provided support to the WCMP, and expanded assessments of land border and aviation pathways.
- Assessed the effectiveness of Federal, State, territorial, tribal, and local agency first responder PRND training.
- Conducted assessments of DNDO PRND programs and those involving other agencies to determine program effectiveness. Continued the PRND data collection effort to baseline State and local detection capabilities.
- Refined the probabilistic model by incorporating RTNA findings and recommendations. Used the adversary modeling approach in support of the DHS Radiation and Nuclear Terrorism Risk Assessment. Completed initial model verification, validation, and accreditation.

FY 2011 planned accomplishments include:

- Conduct open source, covert testing, and adversarial red teaming activities to include using SNM surrogates. Continue to assess domestic capabilities, aligning support with DNDO outreach programs.
- Continue assessing the effectiveness of Federal, State, territorial, tribal, and local agency first responder PRND training.
- Conduct assessments of DNDO PRND programs and those involving other agencies to determine program effectiveness. Continue the PRND data collection effort to baseline State and local detection capabilities.
- Continue to elicit subject matter experts on potential nuclear and radiological adversaries to enhance portrayal in the probabilistic model under development.
- Continue to refine the probabilistic model by fully incorporating RTNA findings and recommendations and conducting analyses that enhance the nation's PRND defenses. Conduct verification, validation, and accreditation of model enhancements.

FY 2012 planned accomplishments include:

- Conduct open source, covert testing, and adversarial red teaming activities to include using SNM surrogates. Continue to assess domestic capabilities, aligning support with DNDO outreach programs.

- Continue assessing the effectiveness of Federal, State, territorial, tribal, and local agency first responder PRND training.
- Conduct assessments of DNDO PRND programs and those involving other agencies to determine program effectiveness. Complete the PRND data collection effort to baseline State and local detection capabilities.
- Continue to elicit subject matter experts on potential rad/nuc adversaries to enhance portrayal in the probabilistic model under development.
- Continue to refine the probabilistic model by fully incorporating RTNA findings and recommendations and conducting analyses that enhance the nation's PRND defenses. Conduct verification, validation, and accreditation of model enhancements.

SUMMARY: The following table illustrates the crosswalk between specific projects and activities and the DNDO mission areas. Programs and activities have applicability to more than one mission area and are represented in a cross cutting manner.

PPA: ASSESSMENTS						
MISSION ALIGNMENT						
	Cross Mission Capability Development	Infrastructure and Support	Land Borders	Aviation	Maritime	Interior

The Domestic Nuclear Detection Office (DNDO) requests \$36.837 million for this program.

CURRENT SERVICES PROGRAM DESCRIPTION

PRND capability development and enhancement is not solely accomplished by technology deployments. All detection and interdiction efforts must be conducted in coordination with trained Federal, State, local and tribal law enforcement agencies, as well as the larger intelligence and counterterrorism communities. Accordingly, while DNDO has initiated the capability enhancement and training and exercise functions, it is also responsible for developing the information sharing and analytical tools necessary to create a fully-integrated and common operating picture. Furthermore, DNDO establishes additional protocols and procedures to ensure that the detection of unauthorized nuclear explosive devices, fissile material or radiological material is promptly reported to the Secretaries of Defense, Homeland Security and Energy, the Attorney General, and other appropriate officials for appropriate action by law enforcement, military, emergency response, or other authorities. DNDO must have the ability to integrate detection data and intelligence assessments in near real-time to develop information that enables an overall system and situational awareness. This requires DNDO to closely interact with the Intelligence Community (IC) as a developer of intelligence requirements and consumer of intelligence products, not as an intelligence collection agency. Conversely, DNDO partners directly with the law enforcement community, which is the primary user of preventive radiation detection equipment in the domestic layer of the Global Nuclear Detection Architecture (GNDA). This integrated approach to detection and information analysis provides a substantial improvement and efficiency in alarm resolution, threat assessments, data trend analysis, and, most importantly, overall probability of success in countering the threat of nuclear terrorism.

Joint Analysis Center and Joint Analysis Center Collaborative Information System

The Joint Analysis Center (JAC), as interagency coordination mechanism and central monitoring point for the GNDA, maintains situational awareness for the GNDA—to include status of radiological and nuclear (rad/nuc) detection operations, visibility into the status of rad/nuc alarms, and awareness of rad/nuc-related incidents and events. To do so, the JAC coordinates adjudication of nuclear detection events (including Technical Reachback); analyzes intelligence reports and sensor information; facilitates technical support to Federal, State, and local authorities; and coordinates the government technical response to rad/nuc detection incidents. Within the JAC program are three operational elements and an Information technology (IT) system. The three operational elements are JAC Operations, maintaining situational awareness and facilitating the adjudication of detection events; Secondary Reachback (SRB), providing technical reachback and data mining support; and the Nuclear Assessment Program that provides technical analysis related to nuclear trafficking incidents, and captures indicators and warnings that support that analysis. The Joint Analysis Center Collaborative Information System (JACCIS) is the IT system that supports the overall JAC mission.

- **JAC Operations:** The JAC Operations staff achieves its mission by developing, maintaining, continuously improving, and communicating to its stakeholders awareness of the GNDA by:
 - Maintaining near real-time knowledge of the operational status of GNDA detection components and systems (e.g., manufacturers, models, installations, etc.);
 - Consolidating, fusing, maintaining and communicating information on the performance characteristics, strengths and limitations of deployed detection systems and their associated concepts of operations (CONOPS);
 - Determining, tracking and communicating information on the types, amounts, characteristics, etc., of the streams of commerce (“traffic streams”) associated with various detection system installations, e.g., portal monitors at various U.S. borders and ports of entry (POEs).

JAC operations staff also conducts and sponsors data mining and associated statistical analyses to provide the data-driven basis for a continuously improving situational awareness of GNDA operational and performance characteristics, and streams of commerce. Operations staff directly supports the technical reachback alarm adjudication system by facilitating alarm adjudication support to cognizant decision making entities and stakeholders.

- **Secondary Reachback Program:** SRB provides 24/7 technical capability to facilitate radiation detection alarm resolution and effectively transition to response operations if required. SRB is used when alarms can’t be resolved at the point of detection. Facilitated and coordinated by DNDO, SRB provides support to Federal, State and local customers. The program sustains this reachback function, while enhancing the expertise of the technical personnel who support

reachback capability through knowledge of equipment capabilities and limitations, awareness of technical signatures of threats, and specific knowledge of end-user CONOPS.

- **Nuclear Assessment Program (NAP):** NAP, a national laboratory-based capability, is designed to support DNDO in its mission to develop the GNDA and provide technical analysis related to nuclear incidents as well as foreign and domestic detection capabilities. NAP ensures that a sufficient pool of subject matter experts exists to analyze the technical and operational aspects of rad/nuc events.

Accomplishments in Operations Support JAC & JACCIS

Significant accomplishments in FY 2010 include:

- Finalized preparations for Initial Operating Capability of JACCIS at the DHS Data Center.
- Maintained and enhanced the NAP capability designed to provide rapid assessments of nuclear threat communications, illicit nuclear trafficking events, and other nuclear terrorism indicators to operational elements in the law enforcement, diplomatic, and intelligence communities.
- NAP products include 66 illicit trafficking or communicated threat assessments; twelve open source reports on illicit trafficking worldwide; and weekly classified inputs to the JAC.
- Provided daily reports of all-source information to enhance the situational awareness for DNDO and other government agencies, including ongoing technical, operational, and behavioral analysis and evaluations of current cable and open source traffic.
- Sustained operations of the SRB capability, supporting the radiation detection community with immediate spectral data analysis and reports for fourteen reachback requests, 27 drills, and 241 connectivity checks from DHS and State and local entities.
- Developed analytical capabilities of two major software tools and conducted analysis for spectral adjudication, detector performance evaluations, data mining activities, and ten operational reports.
- Provided spectral analysis and threat courses to Customs and Border Protection (CBP)/LSS spectroscopists.

FY 2011 planned accomplishments include:

- Reduce the process time for alarm adjudication events from four man-hours to three.
- Increase the number of JAC Memorandums of Understanding (MOUs) with State Fusion Centers by 20%, and develop the automated links from these nodes in the Community of Interest (COI) web portal to JACCIS.

- Engage 50 States for DNDO data sharing agreements regarding radiation licensing.
- Focus the NAP capability to provide technical analysis related to nuclear incidents as well as foreign and domestic detection capabilities. Provide analysis to support GNDA development.
- Continue to design and enhance software and analytical tools to conduct analysis for spectral adjudication, detector performance evaluations, data mining activities, and operational reports. Keep current with existing and emerging data formats to ensure future operability of software and analytical tools.
- Continue to provide reachback tools and training to State and local radiation health professionals, assist with State and local development of basic reachback capabilities, and help integrate State experts into the national alarm adjudication protocol, as required.
- Coordinate with DOE to ensure the appropriate numbers of spectroscopists are available at the National reachback level. Use the program's training efforts to mitigate spectroscopist attrition.

FY 2012 planned accomplishments include:

- Increase the number of JAC MOUs with State Fusion Centers by 20% and develop the automated links from these nodes in the COI portal to JACCIS. By 2012, JACCIS will be in the 'operate and maintain' phase.
- Focus the NAP capability to provide technical analysis related to nuclear incidents as well as foreign and domestic detection capabilities. Provide analysis to support GNDA development. Develop and implement a system that graphically depicts the deployed GNDA.
- Maintain and enhance the SRB program to support the radiation detection community with rapid spectral data analysis and reports, as requested, up to projected 50 incidents.
- Prepare up to twelve technical reports that inform Preventive Radiological/Nuclear Detection (PRND) community on detector performance, detection phenomena trends, triggers that may indicate threat material is present and operational aspects of detector performance.
- Conduct spectroscopy and reachback workshops and seminars for 100 State & local radiation health and rad/nuc detection operations personnel, as requested.

PRND Training and Exercises Program

Description

The following are a list of activities that comprise the training and exercise program:

- Developing comprehensive Federal/National planning guidance,
- Developing PRND training policies and standards, identifying and resolving PRND training curriculum and delivery gaps, development and delivery of PRND Next Generation Training, assistance and integration of PRND training within

- Federal, State, and local agencies, maximizing development and use of decentralized support mechanisms, and Training program assessment.
- Developing a comprehensive set of PRND exercise templates and tools to be published on the Community of Interest site for use by all DNDO stakeholders and partners.

The development, continued improvements, and direct delivery of exercise support consists of a common suite of products and methodologies that support exercise design, development, conduct, and reporting. This support includes tools to track the improvement actions of identified deficiencies and to ensure all exercise products are created in accordance with the Homeland Security Exercise and Evaluation Program (HSEEP).

Background and Strategy

DNDO, in partnership with Federal, State, and local stakeholders, has developed the PRND Program Management Handbook and accompanying modules as capstone products for domestic capability enhancement. The Handbook provides comprehensive guidance to State and local agencies in developing, enhancing, and maintaining PRND programs around the framework of planning, organization, equipment, training, and exercises.

As national awareness increases and more resources are dedicated by Federal, State, and local governments to the PRND mission, operational programs will expand and create further demand on support services. To meet these needs, DNDO will develop additional training, exercise, and other support resources that remain relevant to the full range of operations, technologies, and threats. Specialized capabilities at the State and local levels, as well as Federal capabilities such as the Transportation Security Administration's (TSA) Visible Intermodal Prevention and Response (VIPR) program and DNDO's Mobile Detection Deployment Program (MDDP), will require much greater coordination to foster and develop comprehensive, integrated, and regional approaches to PRND programs.

DNDO will also continue close working relationships with the Federal Emergency Management Agency (FEMA) to assist them in developing National planning guidance, including PRND-specific planning scenarios, Target Capability Lists (TCLs), and PRND guidance for Homeland Security grants. Beyond existing partnerships, DNDO will enhance our relationships with other Federal partners inside and outside DHS. As a result, DNDO will leverage DHS resources, contacts, and expertise and develop more expansive and fully networked PRND communities as we integrate them with State and local agencies at regional and national levels.

The Training and Exercises Program develops and implements rad/nuc training and exercise execution for Federal, State, and local law enforcement and public safety professionals to increase PRND operational capabilities. The program's main objectives are to increase operational capabilities at the Federal, State, and local levels; develop and exercise protocols and standards for effective use of radiation detection equipment and

associated alarm resolution and reporting processes; develop training curricula in support of emerging detection technologies; and foster organic capabilities by assisting Federal, State, and local agencies in institutionalizing training courses in their academies.

The Training and Exercises Program is responsible for the development, oversight and administration of the design, delivery, evaluation and continual improvement of the PRND training curriculum and associated exercise support services. This training is directed by DNDO personnel and provided by contracted instructors in the vicinity of the requesting State or local agency utilizing their own equipment. Additionally, the Training and Exercises Program will finalize development of a comprehensive Train-the-Trainer curriculum, including distribution of self-study courseware compact discs to a wide spectrum of State and local law enforcement and public safety agencies. This training will significantly increase the number, awareness and capabilities of PRND participants involved with the DNDO mission.

Furthermore, the Training and Exercises Program supports exercise services for rad/nuc detection and prevention in States, regions and domains within the Interior layer of the GNDA, as well as providing exercise support and consultation within international rad/nuc prevention missions. The Securing the Cities (STC) program in New York is a customer of the Training and Exercise program.

From FY 2012 through FY 2016, the funding will be used to further develop PRND training curricula and exercise execution for the maturing and expanding domains, including: (1) Conduct training gap analyses for ongoing curriculum development; (2) Develop alternative training methods and products that sustain and enhance PRND capabilities for target audiences; (3) Conduct exercises, drills and workshops to test and evaluate capabilities and pre-and post-training course deliveries, and (4) develop regional training hubs.

Accomplishments in Operations Support Training and Exercises Program

Significant accomplishments in FY 2010 include:

- With FEMA/National Training and Education, delivered the Personal Radiation Detectors (PRDs), Primary Screener (Backpack, Maritime and Commercial Vehicle Inspection (CVI)), Secondary Screener (Radio-Isotope Identification Devices (RIID)), Advanced PRND Operations Course (APOC) and Train-the-Trainer training courses to State and local partners.
- Created, initiated and chartered an interagency PRND Training Advisory Forum (TAF) to provide advice on training course development needs.
- Assisted the State of Florida in establishing a Regional Training Center.
- Developed a standardized PRND Train-the-Trainer template for national implementation.
- Developed a standardized PRND State Reachback Spectroscopy course.
- Assisted six States in establishing PRND exercise programs.

- Participated in the DHS National Exercise Program's 2010 National Level Exercise (NLE 10).
- Transitioned PRND training program to TSA VIPR Teams.
- Provided International Programs Exercise Support to the Global Initiative Exercise Planning Group.

FY 2011 planned accomplishments include:

- Continue product development on overarching PRND Handbook (including revisions to existing editions), CONOPS, TCLs, Standard Operating Procedure (SOP) templates and ensure they are reviewed at least annually.
- Facilitate and track the training of 4,000 participants in PRND operations.
- Develop PRND alternative training products which expand the options for delivery.
- Integrate comprehensive PRND capabilities-based training in Arizona and New Mexico homeland security systems.
- Assist States in establishing Regional Training Centers upon request.
- Planning to support requests (internal and external to DNDO) for exercise conduct or exercise program establishment from jurisdictions in up to 12 States.
- Provide exercise support in preparation for the 2012 Democratic and Republican National Conventions.
- Provide International Programs Exercise Support to the Global Initiative Exercise Planning Group.

FY 2012 planned accomplishments include:

- Facilitate and track the training of 4,500 participants in PRND operations.
- Update and promulgate PRND alternative training products which expand options for delivery.
- Integrate comprehensive PRND capabilities-based training in California and New York State academies or applicable organizational training networks.
- Provide Domestic State and Local Exercise Support as requested by State/local jurisdictions (anticipate providing support in up to 12 States).
- Provide International Programs Exercise Support to –the Global Initiative Exercise Planning Group.

Interior Capability Development

Description

Central to the success of an integrated effort to defend our Nation from the rad/nuc threat is a strong partnership with State and local (S&L) entities responsible for the PRND mission within their own communities. To facilitate this partnership, DNDO is pursuing targeted engagements with S&L communities to educate and inform them on rad/nuc threats, support available from DNDO and partner agencies, and activities they can undertake to detect and deter an adversary seeking to use illicit rad/nuc material. The goal is to catalyze and increase PRND capability nationwide thereby increasing probability of encounter/detection, as well as deterring the adversary.

By the end of FY 2016, targets to reduce the risk of rad/nuc attack include developing or enhancing PRND capabilities in all 50 States and six territories through: 1) outreach and engagements, 2) facilitated program management assistance, 3) technical and equipment deployment assistance, and 4) operational support and technical reachback.

Background and Strategy

Initial engagements focus on threat and mission familiarization and are accomplished by visits to the States and Urban Area Security Initiative (UASI) regions. Subsequent engagements provide training and guidance on PRND operations to State, county and municipal agencies, spurring the development of regional PRND programs, and preparing for their expansion over time. These efforts lead to improved DNDO situational awareness, expanded PRND capabilities for the interior layer, and integrated program development activities.

The graded approach has three phases:

- **Outreach Phase.** Provides the S&L partners with general information to raise their awareness or enhance familiarity with PRND practices and protocols. Aside from the development of engagement materials and processes up front, these engagements require the fewest resources to deliver. Delivery methods include telephone and email contact and providing materials and resources posted on websites/portals or distributed at meetings. Example Materials include: fact sheets and brochures, DNDO Today, conferences notifications, Grant Guidance Appendix, DNDO website/portal, NAP Monthly Open Source Reports, news articles and media reports.
- **Engagement Phase.** Provides the S&L partners with solution packages and performance models, best practices and experiences that guide implementation of various initiatives. Additional resources are required to develop and deliver engagement materials. Delivery methods can include providing models, samples, and templates via emails or direct postal mailing, as well as contact by virtual conferencing, phone calls, and brief visits. Engagement material examples include: Threat Awareness Briefing, alarm resolution protocols, PRND Program Management Handbook/modules, Pilot Program Lessons Learned, working group

meetings, topic-focused conference calls and webinars, generic CONOPS and instructions for technical assistance.

- **Program Delivery Assistance and Support Phase.** Delivers rigorous, customized solutions to the S&L partners through direct on-site support. In addition to the resources required to develop the engagement materials up front, providing direct on-site support is the most resource-intensive method of delivery. Workshops, guidance and facilitation efforts maximize direct interaction between DNDO and the recipients, and help ensure standardized and integrated programs are developed across the country. Two specific delivery methods include:

Facilitated Program Assistance (PA): The PRND PA is intended to encourage multi-jurisdictional and multi-disciplinary policy makers, program managers, and operational administrators to work together to design and implement PRND programs, using the existing PRND Program Management Handbook. The PA is delivered through four facilitated sessions over a period of six months, to a State/Urban Area PRND Working Group that is established through the PA process. The output of the PRND PA is for stakeholders to develop a PRND implementation strategy, which incorporates multiple threat pathways and is the basis for capability development.

- **Technical Assistance and Operational Support:** As necessary, DNDO develops new training, exercises, and other support resources that are relevant to the full range of operations, and requirements in a given environment or region. Specialized capabilities at the S&L levels require greater hands-on assistance to foster and develop comprehensive, and integrated, regional approaches to PRND programs. DNDO will utilize the PRND Program Management Handbook and associated modules as the framework to deliver intensive, facilitated support to S&L agencies, both in broad PRND program development and also in focused technical assistance deliveries addressing specific operational capabilities (e.g. special event screening, CVI, etc).

Additional efforts to promote the PRND mission include: developing and distributing analytical and trend reports to State Fusion Centers and Emergency Operations Centers; maintaining the PNRD COI web portal; including a dedicated appendix on PRND in the DHS Homeland Security Grant Program Guidance; and outreach to national associations and S&L stakeholders through conferences and meetings. DNDO is also coordinating with Federal partners (including, but not limited to, FBI, DOE, Department of Defense (DoD), CBP, TSA, FEMA and other DHS headquarters components) to identify and work with potential State, local, and tribal stakeholders.

The DNDO is providing increasing support to the 18,000 Federal, State, and local law enforcement agencies and 35,000 firefighter and emergency responder agencies as they

develop their individual PRND programs to secure the interior layer of the GNDA, deter adversaries, and enhance national security.

Accomplishments in Operations Support Interior Capability Development

Significant accomplishments in FY 2010 include:

- Conducted 21 situational awareness outreach meetings with UASI law enforcement and public safety agencies and Homeland Security Advisers (HSAs) annually.
- Delivered a Statewide PRND Facilitated Handbook Program Assistance package to the National Capital Region and Texas.
- Developed technical assistance support programs for specific operational capabilities for the maritime communities in San Diego and Seattle.
- Assisted the Phoenix and Tucson UASI regions by providing CONOPS, training and exercise support and a limited equipment capability to initiate a PRND program in their respective regions.

FY 2011 planned accomplishments include:

- Conduct at least twelve situational awareness outreach meetings with UASI law enforcement and public safety agencies and HSAs.
- Deliver a Statewide PRND Facilitated Handbook Program Assistance package to at least four additional States and/or Urban Areas.
- Deliver at least twelve technical assistance packages.
- Working with State, local and tribal entities providing CONOPS, training and exercise support and a limited equipment capability to initiate a PRND program in up to four areas in the interior of the country.

FY 2012 planned accomplishments include:

- Conduct at least fourteen situational awareness outreach meetings with UASI law enforcement and public safety agencies and HSAs.
- Deliver a Statewide PRND Facilitated Handbook Program Assistance package to at least five additional States and/or Urban Areas.
- Deliver at least twelve Technical Assistance packages.

State & Local Initiatives – Securing the Cities

The Security and Accountability for Every Port Act of 2006 (SAFE Port Act) Public Law 109-347 mandates that DNDO implement the domestic portion of the GNDA which relies upon State and local law enforcement officials to conduct rad/nuc detection operations. Moreover, the SAFE Port Act charges DNDO with enhancing and coordinating the nuclear detection efforts of Federal and State and local officials in order

to ensure a managed, coordinated response to rad/nuc threats. Within the FY 2012 request DNDO is promoting several opportunities to emphasize the rad/nuc detection capabilities and operations at the State and local level, including an enhanced Securing the City (STC) Program. The keystone of the enhanced State and local efforts is the STC program. STC will build upon the lessons learned in the pilot with the New York City Region, and build capabilities and plan for sustainment of rad/nuc detection capabilities in other UASI Tier I regions. Within this funding line are additional resources for the NYC Region for the development of enhanced functionality for detection, communication, and coordination.

Background and Strategy

Securing the Cities (STC) is a program that aims to reduce the risk of a rad/nuc attack in high-risk metropolitan areas by integrating regional capabilities to detect and interdict radiological threats. This program was intended to be a three-year pilot with funding ending in FY 2009 so the Department did not request funding in either FY 2010 or FY 2011. To date, the New York City (NYC) region has been the only region to participate in this initiative. Through the STC program, DNDO provides technical assistance to S&L jurisdictions in and around the New York City metropolitan area and helps the region develop PRND capabilities. DNDO will continue to engage with the STC program participants to extract lessons learned and share them with other UASI cities. An assessment of the pilot is on-going to determine the program's viability for possible expansion to other UASI regions.

The activities in the RD&O Appropriation and the Operations Support PPA address the *operational training*, CONOPS development and on-site support from DNDO. The activities in the Systems Acquisition, Radiation Portal Monitor Program (RPMP) and Human Portable Radiation Detection Systems (HPRDS) PPAs address the mobile vehicle and human portable solution acquisition; as well as the training for that equipment.

Accomplishments in Operations Support Urban Area Capabilities Development

Significant accomplishments in FY 2010 include:

- Continued the Securing the Cities Initiative working with New York City regional law enforcement and emergency response personnel.
 - Delivered over 4200 PRDs, 63 RIIDs and other specialized PRND equipment to the region during FY 2010.
 - Trained over 1850 personnel in FY 2010 with vendor provided PRND training. Total trained since program inception is over 3500 personnel.
 - Developed five PRND training courses for S&L training self-delivery. S&Ls have trained over 900 personnel using these courses and other train-the-trainer assets.
 - STC NYC partners conducted over 100 reachback and connectivity drills with the DNDO JAC.

- Assisted region in the development of three jurisdictional table top exercises to ensure HSEEP compliance and to serve as building blocks for a required regional full-scale exercise.
- Assisted in the planning for the regional full-scale exercise scheduled for FY 2011.
- Helped refine the regional concept of operations allowing for clear procedures for coordinated operations among regional partners.
- Initiated assessment of the STC program and its capabilities.

FY 2011 planned accomplishments include:

- Continue a dedicated regional presence in NYC to facilitate continued growth and the capture of lessons learned.
- Conduct up to three jurisdictional functional exercises and one HSEEP-compliant regional full-scale exercise
- Complete the assessment of STC, and transition the NYC program to a self-sufficient operational program.
- Evaluate the effectiveness of the STC construct and make recommendations to the model's viability for use in other Tier I UASI cities.

FY 2012 planned accomplishments include:

- Additional funding for the STC program is included as part of the Systems Acquisition Appropriation, Securing the Cities PPA.

Mobile Detection Deployment Program (MDDP)

Description

The Mobile Detection Deployment Program (MDDP) provides a contiguous United States (CONUS) PRND equipment package for Federal, State and local authorities to augment their incident response teams, including the DOE Radiological Assistance Program (RAP) teams and the National Guard's Civil Support Teams (CSTs). The system design and the support personnel are postured to support time-planned activities such as NSSE, rather than time sensitive rad/nuc detection operations.

Modeled after a RAP response system, one unit consists of a vehicle (a SUV/truck/van) towing a trailer equipped with backpack, handheld, and belt-mounted radiation detection instruments, and command and control capabilities. Unit number one is stored and maintained by the Remote Sensory Lab (RSL), Andrews AFB in Maryland, the second unit is located on the west coast. Upon receipt of direction from DNDO, DOE representatives will deploy to support operations. The system is intended to support NSSEs and other DHS Designated Special Events, in support of DHS missions.

Background and Strategy

Plans for the deployment of detection systems as part of MDDP are determined by representatives of DNDO and DOE RAP/NA-42, based on requirements at the local deployment site. The initial specialized MDDP unit (delivered and fielded in FY 2008)

was modeled after a RAP deployment system: a vehicle towing a trailer equipped with radiation detection instruments and command and control capabilities. The unit provides a PRND package that can be utilized by a myriad of S&L public safety and Federal agencies and provide a force multiplier capability to RAP.

In FY 2009, DNDO procured an additional large and three smaller scale MDDP systems. Pending approval of acquisition funding in FY 2012, the three smaller systems will be upgraded to larger systems. The deployment strategy will focus on adding systems to expand coverage across the country, increasing the number of events that can be supported, and reducing response time and logistics to support deployment. Five MDDP systems are currently deployed at locations around the U.S. and are designated Mobile Detection Deployment Units (MDDUs). Program funds provide for maintenance and operations for approximately twelve to sixteen deployments annually.

By FY 2012, the three smaller MDDP systems will be upgraded to large systems. MDDP will consist of five large response systems to assure broader coverage of NSSEs. Each large response system will consist of a truck towing a tag-a-long trailer that is configured to safely transport radiation detection and radionuclide identification instruments, sufficient to field a 40-member team, certain command and control-related equipment and support equipment to sites across the United States. Location of systems will be rolled out according to concentration and priority of identified NSSEs, and other special events.

Accomplishments in Operations Support MDDP

Significant accomplishments in FY 2010 include:

- Completed, accepted and deployed five MDDP trailers and equipment.
- Supported 12 Federally-designated special events and/or related exercises where DNDO provides mobile detection capability and support.

FY 2011 planned accomplishments include:

- Conduct 16 Federally-designated special events and/or related exercises where DNDO provides mobile detection capability and support.

FY 2012 planned accomplishments include:

- Conduct 16 Federally-designated special events and/or related exercises where DNDO provides mobile detection capability and support.

State and Local Users' Groups

Description

There are numerous, ongoing support activities that are important mechanisms for communicating and getting feedback from PRND stakeholders. These activities are reflected in the planned program elements for this program. Projects included are:

1. PRND COI Website Portal,
2. Participation in State and Local Stakeholder Working Group (SLSWG) Meetings, and
3. Interior Focus Group (IFG).

Background and Strategy

PRND COI: DNDO has created and maintains a PRND COI web portal on the Homeland Security Information Network to provide consistent, useful PRND information to federal, state, local and tribal PRND operators. The intent of the site is to enhance communication between DNDO and the broader PRND community while providing a forum where vetted users can securely collaborate to share best practices and lessons learned. The PRND Community of Interest (COI) provides access to many DNDO capability development documents and is intended to be the one stop shop for federal, state, local and tribal operators seeking to build or enhance PRND capability.

State and Local Stakeholder Working Group (SLSWG): One means by which DNDO is addressing the needs of state and local partners is through the active involvement of S&L PRND practitioners in the DNDO decision process. DNDO has identified key S&L representatives from over 25 states who have been engaged in PRND planning and operations. Since 2005, this DNDO SLSWG has met twelve times and has collaborated in developing the entire range of support resources offered by DNDO, such as training curriculum, exercise designs, and equipment test designs. They have shared their best practices, and have served as a sounding board for DNDO decision makers.

IFG:

DNDO has created an Interior Focus Group (IFG) to ensure new and existing PRND programs and products address identified gaps in the GNDA and meet the needs of Interior stakeholders. The IFG meets at least twice a year and is comprised of ten to fifteen S&L representatives and an equal number of representatives from Federal agencies involved in the PRND mission.

Accomplishments in Operations Support State and Local Users' Groups

Significant accomplishments in FY 2010 include:

- Hosted two SLSWG meetings.
- Established and activated the PRND COI Web Portal.
- Conducted two Interior Focus Group meetings, and documented user requirements.

FY 2011 planned accomplishments include:

- Host two SLSWG meetings.
- Develop a data gathering methodology to send clear lessons learned and best practice information back to the user community. Review, update and add COI content while expanding user base.
- Conduct two IFG meetings.

FY 2012 planned accomplishments include:

- Host two SLSWG meetings.
- Review, update and add COI content while expanding user base.
- Conduct at least two IFG meetings.

SUMMARY: The following table illustrates the crosswalk between specific projects and activities and the DNDO mission areas.

The Domestic Nuclear Detection Office (DNDO) requests \$24.77 million for this activity. There is an increase of \$5.07 million above the calculated FY 2011 Continuing Resolution level.

CURRENT SERVICES PROGRAM DESCRIPTION

A National Technical Nuclear Forensics (NTNF) capability serves as an integral component and layer of the United States Government (USG) effort to prevent nuclear terrorism. In the aftermath of a nuclear detonation, or following the seizure of a nuclear device or radiological/nuclear material, there will be unprecedented and extreme pressure to rapidly attribute the source, to identify the responsible party, and to ensure there is no follow-on attempt. Nuclear forensics (NF) is one of the three pillars (along with intelligence and law enforcement investigation) fundamental to attributing nuclear material or a device to its source. NF contributes to deterrence and prevention by promoting the concept of “nuclear accountability” for the planned or actual use of radiological and nuclear (rad/nuc) materials in acts that threaten the nation’s security.

On April 30, 2010, President Obama wrote to Congress that nuclear forensics and attribution are “a vital national security priority” and integral to “helping implement the U.S. nuclear security strategy.” A robust, communicated NTNF capability will deter nations from sponsoring or providing nuclear weapons and materials to terrorist groups; compel nations to improve security at their nuclear sites; assist in averting follow-on attacks; and strengthen attribution in the event of an interdiction of material or an attack.

The National Technical Nuclear Forensics Center (NTNFC) maintains a consistent effort to assure “Operational Readiness” of the USG NTNF enterprise, one of the three primary work areas for NTNFC. Coordination of NF activities is critical to the success of the

NTNF mission – ad hoc actions in the aftermath of an event will fail to meet intense demands for rapid and effective response. NTNFC is meeting its integration responsibility by leading joint planning, increasingly rigorous exercises, and assessments of NF activities to assure the preparedness across the USG at all times, and without warning.

NTNFC's "Technology Advancement" program supports its other mandated mission: to serve as the national capability developer for NF of rad/nuc materials interdicted before a detonation. The program is focused on advancing the speed, accuracy and confidence of NF analyses, including the development of reference materials necessary for the validation of methods used for characterizing materials; developing new signatures to help identify the origin and pathway of materials; and creating and improving data evaluation and simulation tools to enable the linking of measurement results to both comparison samples and characteristics predicted through modeling and simulation.

NTNFC also leads the National Nuclear Forensics Expertise Development Program (NNFEDP), an interagency effort to recreate and sustain an enduring NF expertise pipeline - one of our most critical challenges. NTNFC is increasing the emphasis it has placed on the development and retention of the expertise pipeline, across the human capital spectrum from the most junior (e.g., student interns, fellows, and new faculty) to the most senior (e.g., forensic scientists' knowledge capture, formal mentoring, and a stable and sufficient research and development R&D program). NTNFC's activities in this mission area are well-aligned with Congress's goals for the NNFEDP, as specified in the Nuclear Forensics and Attribution Act (NFAA).

Operational Readiness

Description

A fundamental responsibility of the NTNFC is to advance the NF-readiness of the USG. Operational Readiness is derived from robust, jointly developed plans and Concepts of Operations (CONOPS); continuous assessment of capabilities and limitations; frequent sharing of information and personnel; and a rigorous joint exercise program, including a comprehensive lessons-learned and corrective actions component. Through this approach, the USG will be operationally-ready to carry out the NF mission without warning in order to support attribution of an attack or interdiction of smuggled material or device. The USG readiness posture makes a significant contribution to deterrence.

Background and Strategy

The NTNF strategy, which emerged with the establishment of NTNFC in DNDO in FY 2007, is built on a foundation of vigorous interagency collaboration among the five departments with NF missions and the Intelligence Community (IC). NTNFC provides centralized planning, evaluation, and stewardship of USG NF capabilities through interagency coordination, international collaboration, exercises, assessment, and corrective actions. NTNFC also coordinates the joint development of foundational plans that establish interagency strategic goals, objectives, and operational procedures. Bi-monthly NTNF Steering Committee and annual Executive Council meetings, led by

NTNFC, facilitate interagency planning, issue resolution, and document development, coordination, and review. The NTNFC streamlines interagency NF investment priorities through the development of annual interagency budget crosscuts to ensure program and resource alignment. Improved integration yields better communication and enhanced efficiencies by eliminating duplication and examining unfunded gaps.

As the “systems integrator,” NTNFC synchronizes partner-agency exercise programs and training processes. Assessments sponsored by NTNFC identify gaps and areas that need to be improved. NTNFC continues to lead the National Science & Technology Council’s Nuclear Defense R&D (NDRD) Attribution Working Group to develop interagency long-term R&D priorities, including an annual interagency budget assessment of R&D investment against NDRD Roadmap priorities.

Accomplishments in Operational Readiness

Significant accomplishments in FY 2010 include:

- Led the interagency to complete the “National Strategic Five-Year Plan to Improve the Nuclear Forensics and Attribution Capability of the United States” as mandated by the National Defense Authorization Act of 2010 Section 1036 and the NFAA.
- Completed the USG NTNF Implementation Plan.
- Updated the NTNF Playbook to reflect maturing NF operational processes.
- Led the NTNF Strategic Communications Working Group to develop the interagency NTNF Strategic Communications Plan.
- Created a NTNF Community Intellipedia web page to facilitate interagency information sharing, communication, and document coordination.
- In partnership with the State Department, completed the interagency U.S. Strategy for International Engagement of Nuclear Forensics.
- Led the NTNF community through the planning, execution, after-action evaluation, and corrective action plan development of NF operations as part of the National Level Exercise 2010 (which addressed National Planning Scenario 1 for an Improvised Nuclear Device).
- Sponsored and participated in one full-scale, sample collection, operational exercise.
- Led and supported an international NF collaboration exercise under the Nuclear Forensics International Technical Working Group (ITWG) to include lessons learned.
- Created a SharePoint site on the Homeland Security Information Network (HSIN) to facilitate collaborative efforts between USG and international partners.
- Completed, as one of three sponsors, the National Academy of Sciences Study, “Nuclear Forensics: A Capability At Risk,” which provided findings and recommendations to sustain and improve the Nation’s NF capabilities.

FY 2011 planned accomplishments include:

- Lead the joint interagency annual review for the National Strategic Five-Year Plan, as mandated by Congress.
- Review and update the interagency NTNF Implementation Plan and NTNF Playbook.
- Lead the NTNF Strategic Communications Working Group to review and update the interagency NTNF Strategic Communications Plan.
- Enhance the NTNF Community Intellipedia web page to facilitate interagency information sharing, communication, and document coordination.
- Develop a collaborative website to facilitate real time implementation of a strategic messaging plan, including interagency coordination of media queries and proactive public announcements.
- Participate in reviewing and updating the U.S. Strategy for International Engagement on Nuclear Forensics.
- Conduct two proficiency tests, document the results, and capture corrective actions to validate competencies in NF materials analyses.
- Develop improvements to NF program through the corrective action process and begin planning for full-scale operational validation exercise.
- Plan and execute training exercises leading up to two large scale exercises in FY 2012.
- Support completion of the third “Round Robin” exercise under the ITWG to include a corrective action program. Lead the planning of the fourth “Round Robin,” a subsequent validation exercise.
- Continue maintaining the SharePoint site on HSIN to facilitate collaborative efforts between USG and international partners.
- Perform the first Biennial NTNF Capability Assessment and submit findings to the National Preparedness Report.

FY 2012 planned accomplishments include:

- Lead the joint interagency annual review and update the National Strategic Five-Year Plan, as mandated by Congress.
- Review and update the interagency NTNF Implementation Plan and the NTNF Playbook.
- Lead the NTNF Strategic Communications Working Group to review and update the NTNF Strategic Communications Plan.
- Continue to maintain the NTNF Community Intellipedia web page to facilitate interagency information sharing, communication, and document coordination.
- Continue to maintain a collaborative website to facilitate real time implementation of a strategic messaging plan, including interagency coordination of media queries and proactive public announcements.
- Participate in annual review/prioritization process associated with State Department-led U.S. Strategy for International Engagement of Nuclear Forensics.

- Execute two large scale exercises to include an international NF exercise and an end-to-end, pre-detonation exercise.
- Lead and support the fourth “Round Robin” exercise under the ITWG to include the execution of the validation exercise and formulation of new Lessons Learned.
- Continue to maintain the SharePoint site on the HSIN to facilitate collaborative efforts between USG and international partners.
- Update the Biennial NTNF Capability Assessment in the National Preparedness Report.
- Per the Strategic Capability Partnership Initiative (Department of Homeland Security (DHS), Department of Defense (DoD), Department of Energy (DOE), Office of Domestic National Intelligence (ODNI), lead the NF working group focused on leveraging the science, technology, and engineering capabilities at DOE National Laboratories to address national security challenges.

Technology Advancement

Description

NTNFC supports activities that advance the USG capability to rapidly, accurately, and credibly identify the origin and history of rad/nuc materials intercepted before a detonation. Linking a questioned sample to comparison samples and to a predictive result requires a systematic approach that addresses the variety of NF analyses across the nuclear fuel cycle.

Background and Strategy

At present, there is an extensive list of analytical methods used to characterize radiological and special nuclear material (SNM) that must be validated for use in investigations. In the near term, NTNFC is placing emphasis on moving existing methodologies through a validation process that will provide a robust capability to characterize SNM as well as radiological materials that may be a threat in a radiological dispersal device (RDD). Development of new signatures, analytical methods, and reference materials will increase in focus once these prioritized methodologies have advanced through the validation process. To improve large-scale data management and assessment capabilities, NTNFC is continuing the development of forensic data evaluation methods (formerly called Knowledge Management & Assessment System (KMAS)). These methods will integrate relevant modeling, simulation, and data evaluation techniques to enable the linking of measurement results to both comparison samples and predictive results, including linkages of materials to manufacturing processes, to production facilities, and to geographic regions.

Technology Advancement activities in pre-detonation materials forensics are performed primarily by national laboratories with Federal program managers’ oversight and direction. The end users include the Federal Bureau of Investigation (FBI), the DoD, the DOE, and the IC. In all areas of pre-detonation materials forensics, NTNFC incorporates opportunities to advance interagency and international cooperation, as well as expertise development.

Accomplishments in Technology Advancement

Significant accomplishments in FY 2010 include:

- Continued forensics material characterization on selected U.S. highly enriched uranium samples to identify potential discriminating forensics signatures in the U.S. inventory.
- Continued broader international cooperation under the Global Initiative to Combat Nuclear Terrorism (GICNT) and the Nuclear Smuggling ITWG constructs.
- Developed sealed-source database tools to track foreign and domestic sealed sources coordinated with interdicted material tracking information, in conjunction with DOE Office of Intelligence and FBI.
- For RDD threat material, completed validated methodology process for cesium age-dating and included the development of a supporting reference material.
- Completed the evaluation, for validation purposes, of uranium isotopic and chemical composition methods on uranium oxides.
- Continued to engage international partners in sharing standard reference materials, best practices and protocols, and participated in an international materials forensics exercise.
- Demonstrated the first bench-scale production capability for uranium; this capability will enable development of process-based predictive signatures.
- Conducted the first demonstration of data evaluation (formerly captured in “KMAS”) methods for pattern recognition and trend analyses when sifting through substantial banks of nuclear materials data.
- Demonstrated the next-generation of tools for pattern analysis and methods to articulate whether or not measurements from questioned samples can be included or excluded from specific families of signatures.
- Completed the report, “Simulating Signatures in Nuclear Materials: Feasibility for Developing Signatures Capabilities for the Uranium Fuel Cycle,” which provides a roadmap to develop a set of predictive models and techniques to improve understanding of how material production processes throughout the nuclear fuel cycle (from mining raw material to processing, enrichment, and finishing) can affect discriminatory forensics materials signatures (which are created, persist, and, erased throughout the fuel cycle).
- Continued knowledge capture and documentation of “hands-on” rad/nuc materials production expertise, which is disappearing, to assist in identifying the most potentially discriminating signatures from materials production processes.
- Continued international collaborations on NF materials signatures analyses and comparative process knowledge with the United Kingdom (UK) and Canadian governments.

FY 2011 planned accomplishments include:

- Continue application of validated and accepted methodologies to analyze samples of US-produced SNM and radiological material for the purposes of collecting signature information.
- Continue international cooperation through bi-lateral arrangements (e.g., Canada and the UK), intergovernmental cooperation (e.g., International Atomic Energy Agency and GICNT), and through scientific and technical collaborations (e.g., ITWG).
- Continue sealed-source manufacturing information collection through arrangements with foreign and domestic isotopic sealed source manufacturers and through historical U.S. production documents and archives.
- Continue development of standard reference materials that will aid in the validation of analytical methodologies to be employed in NF activities; in FY 2011, a plutonium metal standard will be characterized for use in method validation efforts.
- Continue development of validated methodologies to be employed in NF activities; in FY 2011, plutonium isotopic and chemical form analyses will be addressed.
- Continue to expand the application of data evaluation (formerly captured in “KMAS”) methods for use in the forensics exercise program and operational case studies.
- Continue to develop and validate predictive models and techniques to improve understanding of how material production processes throughout the nuclear fuel cycle can affect the discriminatory forensics materials signatures.
- Continue knowledge capture and documentation of “hands-on” rad/nuc materials production expertise, which is disappearing, to assist in identifying the most potentially discriminating signatures from materials production processes.

FY 2012 planned accomplishments include:

- Continue international cooperation through bi-lateral arrangements (e.g., Canada and the UK), intergovernmental cooperation (e.g., International Atomic Energy Agency and GICNT), and through scientific and technical collaborations (e.g., ITWG).
- Continue sealed-source manufacturing information collection through arrangements with foreign and domestic isotopic sealed source manufacturers and through historical U.S. production documents and archives.
- Continue development of standard reference materials that will aid in the validation of analytical methodologies to be employed in NF activities.
- Continue development of validated methodologies to be employed in NF activities.
- Continue to expand the application of data evaluation (formerly captured in “KMAS”) methods for use in the forensics exercise program and operational case studies.

- Continue to develop and validate predictive models and techniques to improve understanding of how material production processes throughout the nuclear fuel cycle can affect the discriminatory forensics materials signatures.
- Continue knowledge capture and documentation of “hands-on” rad/nuc materials production expertise, which is disappearing, to assist in identifying the most potentially discriminating signatures from materials production processes.

National Nuclear Forensics Expertise Development Program (“Academic Pipeline”)

Description

A top priority for NTNFC is to lead USG efforts to restore and sustain an enduring NF expertise pipeline, one of the most significant challenges facing the national capability. As mentioned, the NFAA recognizes the National Nuclear Forensics Expertise Development Program (NNFEDP) necessity to cultivate and maintain a workforce capable of performing the technical NF mission. Led by NTNFC, the NNFEDP provides scholarships, fellowships, internships, post-graduate, and university awards for studies and research in specialties relevant to nuclear forensics. Such efforts include the Nuclear Forensics Graduate Fellowship Program, the Nuclear Forensics Post-Doctorate Award Program, the Nuclear Forensics Education Award Program, and the Nuclear Forensics Junior Faculty Award Program. The NNFEDP initiative addresses the nation’s need for talented, qualified, next-generation NF scientists to support an enduring NF capability.

This program is unique from broader science and engineering Federal education programs in its specific focus on filling identified gaps within the NF field. In order to leverage USG programs and personnel and minimize duplication, NTNFC is actively coordinating with its interagency partners in the NF community, including the DOE National Nuclear Security Administration and the Office of Science, and the DoD Defense Threat Reduction Agency. This will help to ensure robust federal support and unity of effort. In addition, the NNFEDP is utilizing an interdisciplinary approach to the NF problem that encourages collaboration among academic programs, universities, and national laboratories.

Background and Strategy

In FY 2012, the expertise development program will reach its planned steady state of annual support to address the human capital needs of the USG NF enterprise. As the NTNFC stewards, advocates, and developers, the NTNFC focuses on assuring an enduring nuclear expertise pipeline for a credible future forensics capability. NTNFC plans to continually assess the state-of-practice within the national laboratory system and its expertise pipeline to identify and address human capital gaps and needs. Periodic workforce surveys will be conducted and the results could impact the NNFEDP scope. Enduring solutions will take time (years) as the outflow of experts continues to increase. NTNFC recognizes that the NTNFC community must address the problem holistically, from restoring the near-extinct academic programs, to retaining the current mid-to-senior-level experts, to capturing and transferring the knowledge of retiring experts (and partnering them with the next generation). Increased attention and support from Congress, the Administration, and the academic and scientific communities enables

NTNFC to continue with ongoing efforts and consider additional ways to advance the NNFEDP.

Accomplishments in the National Nuclear Forensics Expertise Development Program

Significant accomplishments in FY 2010 include:

- Built upon the success of programs initiated in FY 2008 – FY 2009, and expanded them to achieve the steady-state goal in FY 2012.
- Continued support to a new cadre of graduate/undergraduate interns (ten to fifteen) in the Seaborg Institute Nuclear Science Summer Internship Programs.
- Continued support for undergraduate internship programs through two technical nuclear forensics summer programs: NF summer internships (five interns) at the national laboratories and a regional Nuclear Forensics Summer School (ten undergraduate students).
- Increased graduate fellowships to sixteen in FY 2010 (from ten in FY 2009).
- Expanded post-doctoral fellowships to seven in FY 2010 (from three in FY 2009).
- Expanded Nuclear Forensics Education Awards to five university awards in FY 2010 (from three in FY 2009).
- Initiated the Junior Faculty Award Program to address the academic faculty deficiencies in the pipeline (four awards in FY 2010).
- Conducted a census of the NF workforce to collect information on experience and expertise available within the NF community.
- Initiated funding of the NAS study on “The Future of U.S.-Based Nuclear Chemistry and Related Expertise” to assess long-term supply and demand for nuclear chemistry and radiochemistry expertise in the U.S. and provide recommendations for appropriately growing NF expertise development initiatives into the future.
- Initiated the Graduate Mentoring Assistance Program with dedicated funding to the national laboratories for senior scientist-student mentoring in research areas related to NF.
- Initiated support to the University of California-San Diego Public Policy and Nuclear Threats program with the sponsorship of seven students to attend the “Nuclear Boot Camp” summer session.
- Began developing a NNFEDP interagency Program Plan.
- Expanded the NF expertise development outreach program to include hosting the first annual NF academic community - National Laboratory collaboration meeting and presenting the NNFEDP at conferences of multiple target audiences.

FY 2011 planned accomplishments include:

- Perform an analysis of the FY 2010 census of the NF workforce and produce a report identifying trends and/or gaps, including an assessment of the impact of NTNFC requirements on the NF workforce as requirements and technologies change.
- Complete the NNFEDP interagency Program Plan.

- Continue support to a new cadre of graduate/undergraduate interns (ten to fifteen) in the Seaborg Institute Nuclear Science Summer Internship Programs.
- Fund ten undergraduate students to attend the regional Nuclear Forensics Summer School.
- Initiate an undergraduate scholarship program with two to three scholarships in FY 2011.
- Maintain the Nuclear Forensics Graduate Fellowship Program for sixteen fellows in FY 2011.
- Increase Post-doctoral Fellowships to eleven fellows in FY 2011.
- Maintain NFEAP at five awards in FY 2011.
- Expand Junior Faculty Awards at universities to five awards in FY 2011 (from four in FY 2010).
- Continue supporting the NAS study on “The Future of U.S.-Based Nuclear Chemistry and Related Expertise.”
- Continue the Graduate Mentoring Assistance Program with dedicated funding to the national laboratories for senior scientist-student mentoring in research areas related to NF.
- Increase support to the University of California-San Diego Public Policy and Nuclear Threats program with the sponsorship of eight students to attend the “Nuclear Boot Camp” summer session.
- Expand and formalize the nuclear forensics expertise development outreach program, including outreach specifically to Minority Serving Institutions/Historically Black Colleges and Universities.

FY 2012 planned accomplishments include:

- Continue support to a new cadre of graduate/undergraduate interns (ten to fifteen) at the Seaborg Institute Nuclear Science Summer Internship Programs.
- Fund ten undergraduate students to attend the Nuclear Forensics Summer School.
- Expand undergraduate scholarship program to four-five scholarships in FY 2012 (from two to three in FY 2011).
- Expand the Nuclear Forensics Graduate Fellowship Program to eighteen fellows in FY 2012 (from sixteen in FY 2011).
- Expand Post-doctoral Fellowships to fourteen fellows in FY 2012 (from eleven in FY 2011).
- Expand Junior Faculty Awards at universities to six awards in FY 2012 (from five in FY 2011).
- Maintain NFEAP at five awards in FY 2012.
- Complete the NAS study on “The Future of U.S.-Based Nuclear Chemistry and Related Expertise.”
- Continue the Graduate Mentoring Assistance Program with dedicated funding to the national laboratories for senior scientist-student mentoring in research areas related to NF.

- Maintain support to the University of California-San Diego Public Policy and Nuclear Threats program with the sponsorship of eight students to attend the “Nuclear Boot Camp” summer session.
- Maintain the NF expertise development outreach program, including outreach specifically to Minority Serving Institutions/Historically Black Colleges and Universities.

IV. Program Justification Changes

**Department of Homeland Security
Domestic Nuclear Detection Office
Research, Development, and Operations
Systems Engineering and Architecture
Justification of Program Changes**
(Dollars in Thousands)

Program Increase 1: Systems Engineering and Architecture
PPA: Systems Engineering and Architecture
Program Increase: Positions 0.0, FTE 0.0, Dollars \$7,445

Funding Profile

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	24,413
Program Increase							-	-	7,445
Total Request	-	-	25,046	-	-	25,448	-	-	31,858

Justification:

The Systems Engineering process includes all phases of technology development, including testing and evaluating the technologies at several stages during development. Systems Engineering and Architecture resources have been critical to laying the foundation of the DNDO Mission Pathways and identifying and developing the framework of the Global Nuclear Detection Architecture (GNDA).

The FY 2012 request reflects realignment of funding throughout DNDO to assist the RD&O and Acquisition programs in exploring a wider range of potential solutions to address enduring vulnerabilities. The shifting of funds reflects an adjustment in DNDO priorities that emphasize the continued development of the expanded suite of solutions and the coordination with stakeholders in their deployment throughout the Mission Pathways in deterring nuclear terrorism.

Included in the FY 2012 funding request for Systems Engineering and Architecture is Mission Critical Messaging (MCM), a new initiative aimed at providing connectivity and efficient information-sharing between the components in the GNDA. MCM will provide Joint Analysis Center Collaborative Information System (JACCIS) real-time situational awareness from Federal, State, local, and tribal partners, and allow those partners to share situational awareness by filling a gap in connectivity between the thousands of detection assets deployed and the unclassified information associated with those detection assets.

Funding will provide for capability planning, the development of proof of concepts, initial implementations and Phase Two deployments.

The FY 2012 request also includes an offset from the Systems Engineering and Architecture PPA that will be moved to DNDO's Management and Administration Account for the group of contractor positions being converted as a part of the Balanced Workforce Strategy.

Directive / Mandate:

In the National Security Presidential Directive (NSPD) 43 / Homeland Security Presidential Directive (HSPD) 14, DNDO is mandated to “[s]erve as the primary entity in the United States Government to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop or use an unauthorized nuclear device, fissile material or radiological material in the United States.”

Impact on Performance

This effort to address potential solutions to enduring vulnerabilities in additional areas within the GNDA aligns with the Secretary’s priority of Preventing Terrorism and Enhancing Security.

The programmatic changes in the Architecture program are occurring in the Cross Cutting Functions as System of Systems Analysis and Portfolio Analysis methods and are developed to complement Risk Assessment methods for prioritization of capability needs within the GNDA. The introduction of these methods is expected to result in a more robust architecture and provide the basis for enhancing coordination between the several departments, agencies, and components that implement the GNDA.

MCM will help ensure greater reliability, consistency, and speed of information flow in the IT component of the GNDA, increasing our chances of recognizing an indicator of terrorism, faster. This critical capability is specified in HSPD 14 (2)f “Support and enhance the effective sharing and use of appropriate information generated by the intelligence community, law enforcement agencies, counterterrorism community, other government agencies, and foreign governments.”

**Department of Homeland Security
Domestic Nuclear Detection Office
Research, Development, and Operations
Systems Development
Justification of Program Changes**
(Dollars in Thousands)

Program Decrease 1: Systems Development
PPA: Systems Development
Program Decrease: Positions 0.0, FTE 0.0, Dollars \$-27,394

Funding Profile

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	97,083
Program Decrease							-	-	(27,394)
Total Request	-	-	116,804	-	-	100,000	-	-	69,689

Justification:

Changes in the Systems Development PPA are the result of program realignments, planned efficiencies, current program additional funding needs, and new programs. Program Realignments away from Systems Development PPA include non material solution development activities that are realigned to Systems Engineering and Architecture PPA; use, maintenance, and sustainment activities of the Mobile Detection Deployment Program assets that are realigned to the Operations Support PPA; pathway-specific (i.e. aviation, land border, maritime, and interior) architecture studies that are realigned to the Systems Engineering and Architecture PPA; and Nuclear Assessment Program and Reachback development activities that are realigned to the Operations Support PPA.

Planned Efficiencies include the merging of the post-Advanced Technology Demonstration (post-ATD) Shielded Nuclear Alarm Resolution program with the post-ATD Cargo Advanced Automated Radiography Systems program. Another planned efficiency includes the dividing of the Human Portable Radiation Detection System (HPRDS) program into small area search, wide area search, and tripwire components.

Altered Funding Profiles for Current Programs resulting in efficiencies include the On-Dock Rail program transitioning to the Radiation Portal Monitor Program PPA in the Systems Acquisition appropriation in FY 2013; and merged Aviation programs addressing Cargo and Passenger/Baggage systems solutions, resulting in developing holistic, multi-pathway solutions.

New program investment is planned in response to the nation's critical shortage of Helium-3 gas (^3He), a neutron detection material. DNDO has planned and included funding for ^3He replacement subsystems as a part of its baseline budget request.

Directive / Mandate:

In the National Security Presidential Directive (NSPD) 43 / Homeland Security Presidential Directive (HSPD) 14, DNDO is mandated to “[s]erve as the primary entity in the United States Government to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop or use an unauthorized nuclear device, fissile material or radiological material in the United States.”

Impact on Performance:

The focus on addressing vulnerabilities in mission areas beyond containerized cargo will enable DNDO to find solution to improve rad/nuc detection capabilities.

Total Request	-	-	34,857	-	-	32,416	-	-	43,104

Justification:

Specific Assessment programs that maintain level funding as on-going support programs to all DNDO directorates are: Test and Evaluation (T&E) Algorithm Test Bed, Directed Testing, and Test Data Management, and Red Team and Net Assessments (RTNA). In FY 2012, the funding of the core test and evaluation personnel and the experts who design, maintain and operate the T&E data management system within the system engineering efforts will be included in the Assessments budget. The mission areas are impacted by a wide range of tests and evaluations and the various pilot programs managed under Assessments. Testing will continue to enable the technical community to bridge the gap between “bench-top testing” performed by developers and operational field-testing.

The program change in Assessments reflects DNDO’s efforts to conduct a broader range of test and evaluation campaigns, grow the special nuclear material (SNM) detection campaigns, and continue to implement the Graduated Rad/Nuc Detector Evaluation and Reporting (GRaDER) Program for the testing of rad/nuc detection technologies. The GRaDER and Preventive Radiological/Nuclear Detection (PRND) Directed Test campaigns are expected to result in tangible improvements to commercial-off-the-shelf (COTS) products available in the marketplace.

Directive / Mandate:

In the National Security Presidential Directive (NSPD) 43 / Homeland Security Presidential Directive (HSPD) 14, DNDO is mandated to “[s]erve as the primary entity in the United States Government to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store,

transport, develop or use an unauthorized nuclear device, fissile material or radiological material in the United States.”

Impact on Performance:

This increase will enable the Domestic Nuclear Detection Office to more effectively meet the Secretary’s priority of Preventing Terrorism and Enhancing Security

**Department of Homeland Security
Domestic Nuclear Detection Office
Research, Development, and Operations
Operations Support
Justification of Program Changes**
(Dollars in Thousands)

Program Decrease 2: Operations Support
PPA: Operations Support
Program Decrease: Positions 0.0, FTE 0.0, Dollars -\$1,208

Funding Profile

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	38,045
Program Decrease							-	-	(1,208)
Total Request	-	-	39,020	-	-	38,436	-	-	36,837

Justification:

Overall, noticeable expansion and implementing activities for the domestic nuclear detection architecture will occur in FY 2012. Minor fluctuations in the Operations Support PPA are reflective of inflation and shifts in programmatic funding requirements. In FY 2011, the Joint Analysis Center (JAC), JAC Collaborative Information System (JACCIS), Nuclear Assessment Program and Secondary Reachback (SRB) were funded in the amount of \$22 million. In FY 2012, funding totaling \$25.6 million is planned and will include enhancements to SRB data mining efforts. In FY 2012, the Mobile Detection Deployment Units will be completed, and the operating and maintenance costs are increased to reflect all five units in use, instead of just two.

In FY 2011 Operations Support consolidated the Regional Reachback Program with the Secondary Reachback Program (SRB) to take advantage of programmatic efficiencies resulting in an overall decrease of costs in operating the national reachback capability. The FY 2012 budget request includes a reduction of approximately \$1.3 million in the amount of technical data mining and software development activities that were planned for the SRB performers. DNDO is decelerating State and Local Preventive Rad/Nuc Detection program assistance activities in future years, in order to increase near-term planning, which will strengthen implementation in the out-years.

In FY 2012, funding is also requested for new programs: primarily State and Local Users' Groups, and Interior Capability Development Program Assistance. These proposed funding increases are aimed at enhancing operations support and cross mission support. Program Assistance efforts will evolve from the current level of two states per year, to four or more states or regions in 2012. This project is an expansion of PRND

integration efforts among States and cities, and seeks to link and leverage PRND efforts regionally as the domestic architecture is developed. New training, exercises, and other support resources that are relevant to the full range of operations and requirements in a particular venue will be made available to the State and local (S&L) governments. Increased hands-on assistance will be made available to the S&L governments to translate the comprehensive and integrated, regional approaches to the PRND programs.

Directive / Mandate:

In the National Security Presidential Directive (NSPD) 43 / Homeland Security Presidential Directive (HSPD) 14, DNDO is mandated to “[s]erve as the primary entity in the United States Government to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop or use an unauthorized nuclear device, fissile material or radiological material in the United States.”

Impact on Performance:

This funding decrease will support the Department’s performance goals and aligns with the Secretary’s priority of Preventing Terrorism and Enhancing Security. The focus on addressing vulnerabilities in mission areas beyond containerized cargo will enable DNDO to find solution to improve rad/nuc detection capabilities. Currently, DNDO can meet its Government Performance and Results Act (GPRA) metric of assisting four UASI regions develop a basic PRND program per fiscal year.

**Department of Homeland Security
Domestic Nuclear Detection Office
Research, Development, and Operations
National Technical Nuclear Forensics Center
Justification of Program Changes**
(Dollars in Thousands)

Program Increase 3: Forensics
PPA: National Technical Nuclear Forensics Center
Program Increase: Positions 0.0, FTE 0.0, Dollars \$7,148

Funding Profile

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	17,622
Program Increase							-	-	7,148
Total Request	-	-	19,835	-	-	19,700	-	-	24,770

Justification:

The FY 2012 program increase in the Forensics PPA supports Expertise Development which will reach its planned steady-state of \$5 million annually to support the human capital needs of the United States Government (USG) nuclear forensics enterprise through the National Nuclear Forensics Expertise Development Program (NNFEDP). NNFEDP provides scholarships, fellowships, internships, post-graduate, and university awards for studies and research in specialties relevant to nuclear forensics.

Additionally, an increase in Operational readiness will allow for increased frequencies of materials exercises and USG National Technical Nuclear Forensics (NTNF) assessments; and an increase in Technology Advancement will accelerate the advancement of materials analysis methodologies to operational users for use in actual casework or in development of the Nuclear Materials Information Program database.

These increases sufficiently fund NTNF Planning and Support activities, NTNF External Analyses, NTNF Capabilities Assessments, and Pre-Detonation Materials Forensics Exercises. The program increases will also allow the program to align with agencies that have operational roles in nuclear forensics. Specifically, FBI and other agencies require standardized, validated methodologies to perform forensics analyses with confidence for prosecution and attribution. No validated methods currently exist.

Directive / Mandate:

In the National Security Presidential Directive (NSPD) 43 / Homeland Security Presidential Directive (HSPD) 14, DNDO is mandated to “[s]erve as the primary entity in

the United States Government to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop or use an unauthorized nuclear device, fissile material or radiological material in the United States.”

Impact on Performance:

The funding increase will enable NTNFC to sufficiently meet the requirements of accelerating and advancing current capabilities, as well as developing an enduring nuclear expertise pipeline. The additional funding will tackle current foundational capabilities (e.g., analyzing currently held nuclear materials and populating databases) and develop new techniques and technologies for signatures analysis, and at the same time revitalize, attract and retain an essential cadre of nuclear forensics scientists.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

For necessary expenses for radiological and nuclear research, development, testing, evaluation and operations, [\$324,537,000] \$206,258,000 to remain available until September 30, 2014. (*Department of Homeland Security Appropriations Act, [2011] 2012*)

Explanation of Changes:

No substantive changes proposed

B. FY 2011 to 2012 Budget Change

PPA Mission Statement

Systems Engineering and Architecture: DNDO Systems Engineering and Architecture programs are (1) developing an enhanced global nuclear detection architecture, including both domestic and international components, and (2) maintaining and supporting a disciplined systems engineering approach throughout DNDO. The global architecture is comprised of several key elements: a multi-layered structure of radiological/nuclear detection systems, deployed both domestically and overseas; a well-defined and carefully coordinated network of interrelationships among them; and a set of systems engineering-based principles and guidelines governing the architecture's design and evolution over time. From its initial stand-up, DNDO recognized the importance and need for the application of a systems engineering approach in achieving an integrated and balanced global nuclear detection system solution. Effective implementation and operation of detection systems begins with the design and development of reliable and maintainable systems, built to rigorous, established performance standards and specifications, while assessing total system performance and total ownership costs within the family of radiological/nuclear detection systems.

Summary Justification and Explanation of Changes

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Travel	\$567	\$78	\$161	\$83

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2012 request is \$161,000. Approximately 40% of travel supports Architecture Development activities in the Land Borders and Maritime Missions, and supports Cross Cutting Functions. Activities for this portion of the travel include international engagement, and development of architectural analysis and reports. Architecture Implementation activities constitutes 60% of travel for Aviation Mission purposes, as well as Cross Cutting Functions. Travel associated with Architecture Implementation supports GNDA Development, Information Sharing, Domestic General Aviation Scanning, and Systems Engineering.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Advisory and Assistance Services	\$4,593	\$5,107	\$4,697	(\$410)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2012 request is \$4,697,000.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Purchase from Government Accounts	\$10,087	\$10,292	\$7,435	(\$2,857)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2012 request is \$7,435,000. The change in activity for this object class is reflective of the focus in 2011 to study the vulnerabilities and gaps in the Global Nuclear Detection Architecture. This focus prioritizes and informs DNDOs' capability development efforts across the mission pathways. A portion of the funding is then shifted into the development efforts in other portions of the DNDO portfolio.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Research and Development	\$9,799	\$12,131	\$19,565	\$7,434

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The FY 2012 request is \$19,565,000. DNDO develops time-phased strategies and plans for improving the probability of detecting and interdicting rad/nuc attacks. Studies and analyses are performed to characterize GNDA gaps, identify options, evaluate the advantages and disadvantages of alternative solutions, and formulate time-phased plans for reducing risk. The time-phased aspect of the plans is important because it allows for the integration of current and near-term technologies and approaches, as well as longer-term options that may draw upon technologies that are currently in the R&D phase that may not be available for implementation for several years.

PPA Mission Statement

Systems Development: DNDO Systems Development and Acquisition (SDA) programs serve as the radiological/nuclear detection systems research, development and acquisition component within DNDO. SDA is responsible for the engineering development, production, and all developmental logistics products associated with the current and next generation of nuclear detection systems. Product lines include radiation portal monitors (and associated materials development and facilitation), radiography (which includes non-intrusive inspection, or NII, systems such as the CAARS), human-portable systems, and integration programs to address the needs of our operational customers (Federal, State, local, and tribal authorities).

Summary Justification and Explanation of Changes

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Travel	\$3,899	\$559	\$140	(\$419)

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2012 request is \$140,000. Reductions in travel are planned in response to OMB's FY 2012 Savings Initiative.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Advisory and Assistance Services	\$18,077	\$21,400	\$3,283	(\$18,117)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2012 request is \$3,283,000.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Other Services	\$66	\$0	\$0	0

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2012 request is \$0.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Purchase from Government Accounts	\$44,687	\$42,401	\$6,903	(\$35,498)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2012 request is \$6,903,000. Funding supports Architecture Implementation including Helium-3 (³He) Shortage Mitigation.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Research and Development	\$46,052	\$59,299	\$58,778	(\$521)

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The FY 2012 request is \$58,778,000. FY 2012 funding in RDT&E will support On-Dock Rail Primary Scanning, Maritime Small Vessel Standoff Detection, Materials/Non-Materials Analysis of Alternatives, and Cross Mission System Development.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Equipment	\$3,696	\$579	\$0	(\$579)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2012 request is \$0.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Grants/Subsidies/Contributions	\$328	\$0	\$585	\$585

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The FY 2012 request is \$585,000.

PPA Mission Statement

Assessments: The DNDO research, development, and acquisition process is anchored by an independent assessment of DNDO-mission related programs as they are developed, deployed, and implemented, as well as a continual assessment of the global nuclear detection and reporting architecture, through a variety of means. Assessments programs include test and evaluation (T&E) campaigns to characterize technologies and systems, execution of pilots with operational agencies to evaluate concepts of operation, red teaming assessments to deepen our understanding of adversary capabilities, and net assessments to identify the effectiveness of the planned and deployed global nuclear detection and reporting architecture.

Summary Justification and Explanation of Changes

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Travel	\$389	\$609	\$267	(\$343)

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2012 request is \$267,000. Travel supports Cross Cutting Functions such as Red Team and Net Assessments, and includes Test and Evaluation Program and Test and Evaluation Operations as well.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Advisory and Assistance Services	\$3,801	\$6,120	\$4,859	(\$1,261)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2012 request is \$4,859,000.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Purchase from Government Accounts	\$15,223	\$23,179	\$3,678	(\$19,501)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2012 request is \$3,678,000. Purchase from Government Accounts includes inter-agency agreements with national laboratories, and supports such programs as the Green Border Initiative and the Test and Evaluation Program.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Operation & maintenance of facilities	\$0	\$0	\$9,917	\$9,917

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. The FY 2012 request is \$9,917,000. The testing of detection systems against special nuclear materials (SNM) in significant quantities and in realistic configurations is a key to assessment of rad/nuc systems. This type of testing requires highly specialized and secure testing facilities such as the Nevada Test Site (NTS). This facility is unique in the U.S. Government, enabling the technical community to bridge the gap between "bench-top testing" performed by developers and operational field-testing.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Research and Development	\$40	\$4,020	\$16,646	\$12,626

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The FY 2012 request is \$16,646,000. The DNDO research, development, and acquisition process is anchored by the assessment of DNDO-mission related programs as they are developed, deployed, and implemented. FY12 R&D will support Architecture Implementation and Cross Cutting Functions, including the Test and Evaluation Program.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Operation & maintenance of equipment	\$15,403	\$0	\$562	\$562

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2012 request is \$562,000.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Grants/Subsidies/Contributions	\$0	\$550	\$7,174	\$6,624

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The FY 2012 request is \$7,174,000.

PPA Mission Statement

DNDO Operations Support is responsible for supporting the situational awareness of the nuclear and radiological landscape and the global nuclear detection architecture, while directly facilitating the technical adjudication of rad/nuc incidents. The capability of the JAC is the 24/7 DNDO information hub, and the essence of DNDO's rapid information reporting. Additionally, Operations Support develops training, exercises, information sharing capabilities, and analytical tools necessary to create a fully integrated operating environment to be used by Federal, State, tribal, and local law enforcement agencies, as well as the larger intelligence and counterterrorism communities.

Summary Justification and Explanation of Changes

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Travel	\$390	\$348	\$817	\$469

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2012 request is \$817,000. Travel is associated with the Interior Mission as well as Cross Cutting Functions, and supports programs including the Joint Analysis Center (JAC), Preventive Rad/Nuc Detection (PRND) Training and Exercise, State and Local Information Sharing, Interior Capability Development and Urban Area Capability Development.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Advisory and Assistance Services	\$9,365	\$11,584	\$8,090	(\$3,494)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2012 request is \$8,090,000.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Purchase from Government Accounts	\$10,528	\$21,849	\$22,892	\$1,043

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2012 request is \$22,892,000. Purchases from Government Accounts are associated with the Interior Mission and Cross Cutting Functions and supports programs such as the JAC, Mobile Detection Deployment Program, PRND Training and Exercise, and Interior Capability Development.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Research & Development	\$5	\$2,832	\$5,038	\$2,206

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The FY 2012 request of \$5,038,000 is an increase of \$2,231,000 above the authorized FY 2011 Continuing Resolution amount.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Operation & maintenance of equipment	\$18,528	\$132	\$0	(\$132)

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2012 request is \$0.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Equipment	\$204	\$2,037	\$0	(\$2,037)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2012 request is \$0.

Total Requirements		\$19,818	\$19,700	\$24,770	\$5,070

PPA Mission Statement

DNDO's National Technical Nuclear Forensics (NTNF) capability serves as an integral component and layer of the United States Government (USG) effort to combat nuclear terrorism. This capability provides means for the collection, analysis, and evaluation of rad/nuc materials and associated evidence for the purpose of comprehensive and timely forensic analysis to contribute to attribution conclusions. An effective forensics and attribution capability will inform national response deliberations and can also help to prevent a follow-on attack. At the strategic level, nuclear forensics can contribute to deterrence and prevention by promoting the concept of "nuclear accountability" for nations that may wittingly or unwittingly enable a terrorist to obtain nuclear devices or materials.

A strong, consistent effort to coordinate NTNF activities across the USG is critical to the success of the mission. DNDO's NTNF Center (NTNFC) has the leading role to ensure this coordinated success as national systems integrator for USG nuclear forensics. NTNFC is fulfilling its mandate to steward the national-level planning, integration, advancement, and readiness of an enduring national nuclear forensics capability. DNDO has begun planning and leading the interagency effort to address pipeline issues on multiple fronts, including fellowships, internships, scholarships, outreach, university awards, and enhanced multi-year R&D funding. DNDO's joint forensics and transformational research academic expertise initiatives have generated enormous enthusiasm among non-governmental organizations, universities, and national labs. These new initiatives are providing a significant adrenaline boost to the nuclear pipeline.

Summary Justification and Explanation of Changes

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Travel	\$202	\$68	\$240	\$172

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2012 request is \$240,000.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Advisory and Assistance Services	\$2,529	\$1,688	\$1,614	(\$74)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2012 request is \$1,614,000.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Purchase from Government Accounts	\$17,102	\$18,472	\$18,687	\$215

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2012 request is \$18,687,000.

	2010 Actual	2011 C.R.	2012 Request	2011 - 2012 Change
Research and Development	\$2	\$114	\$4,229	\$4,115

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The FY 2012 request is \$4,229,000. The pre-detonation rad/nuc materials forensics capability development is the NTNFC's primary R&D mission. Forensics is focused on ensuring and advancing the capability to perform rad/nuc materials analysis and evaluation. This involves isotopic and chemical composition and physical structure. This R&D is used to address identified gaps and shortfalls in the capabilities.

BUDGET REQUEST AND SUPPORTING INFORMATION

Systems Acquisition

I. Appropriation Overview

A. Mission Statement for Systems Acquisition

The Domestic Nuclear Detection Office (DNDO) acquires radiological/nuclear (rad/nuc) detection equipment for other Department of Homeland Security (DHS) components, including the United States Coast Guard (USCG), multiple offices within Customs and Border Protection (CBP), and the Transportation Security Administration (TSA). DNDO aims to ensure that all deployed systems are evaluated prior to any acquisition decisions, so that the performance capabilities of these systems are well understood. All deployed technologies are accompanied by the appropriate conops development, training, exercises, and alarm response protocols.

B. Budget Activities

Radiation Portal Monitor Program: The United States border is the first layer within the Global Nuclear Detection Architecture (GNDA) where the United States has full control over detection and interdiction. As such, significant effort and resources have been placed at this layer to provide comprehensive rad/nuc detection capabilities, particularly at ports of entry (POEs). After 9/11, considerable concern was raised about the possibility that terrorists could use the enormous volume of cargo flowing into the United States as a pathway for bringing in nuclear material or a nuclear weapon. The Radiation Portal Monitor Program (RPMP) was established by CBP, and later transferred to DNDO, with the objectives of deploying monitoring equipment at the United States POEs and providing the scientific and technical expertise to design, acquire, and deploy these systems. CBP retained the operations and maintenance functions of the RPMP program. Additionally, in the Safety and Accountability for Every Port Act of 2006 (SAFE Port Act), Congress mandated that all containers coming in through the top 22 ports, by volume, be scanned for radiation. DNDO has acquired and deployed commercial-off-the-shelf (COTS) first-generation polyvinyl toluene (PVT) RPMs in accordance with the GNDA and CBP priorities, as defined in a joint DNDO/CBP deployment strategy.

A key consideration in rad/nuc detection is the ability to effectively detect threats without impeding the flow of legitimate trade and travel across the border in the most effective and efficient manner. CBP currently scans cargo entering at the Nation's POEs using PVT-based RPMs that can detect radiation, but cannot distinguish between threat materials and naturally-occurring radioactive material (NORM), such as kitty litter and ceramic tiles. These are often sent for secondary screening where additional PVTs or Radio-Isotope Identification Devices (RIIDs) are utilized.

Securing the Cities Initiative: The objective of the Securing the Cities (STC) initiative is to reduce the risk of a rad/nuc attack in high-risk metropolitan areas by enhancing and evaluating regional capabilities to detect and interdict radiological threats. The New

York City (NYC) region is the first to participate in this initiative. DHS proposes to fund STC within its FY 2012 request to place greater emphasis on supporting State and local operations for rad/nuc detection. A three-phased STC Program will provide for the implementation of rad/nuc detection capabilities in select Urban Area Security Initiative (UASI) Tier I regions, with defined objectives based on risk, will be the cornerstone for DNDO's drive to implement the domestic layer of the GNDA. Additional resources for the NYC Region for the development of enhanced functionality for detection, communication, and coordination are included.

- Phase I – DNDO provides an initial operating capability for cities that is focused on satisfying the immediate needs of States and locals to develop a radiological/nuclear detection capability; increased understanding and awareness of the nuclear threat; enhanced regional capabilities to detect and interdict radiological threats; and increased cooperation and coordination among regional jurisdictions and agencies. Initial capabilities include development of concepts of operations and alarm adjudication protocols, deployment of equipment, training and exercise support, as well as technical program assistance.
- Phase II – DNDO provides additional resources emphasizing development of enhanced detection, analysis, communication, and coordination functionality that better integrates State and local capabilities, fulfilling the four goals of the GNDA Strategic Plan. Phase II also expands the U.S. Government's role in State and local rad/nuc detection activities by:
 - Partnering with State and local jurisdictions to ensure national coordinated response.
 - Defining end states for U.S. Government support to State and local activities.
- Phase III – DNDO would facilitate sustainment of detection capabilities through alarm adjudication, and subject matter expert support through DNDO base funding. In addition, during Phase III, FEMA Homeland Security Grant Program funds will be leveraged by S&Ls to provide continued training, exercise and equipment sustainment.

STC is a multi-year commitment and depending on the complexity and needs of the region, an engagement, completing Phase I and II could take up to but not exceed 5 years before the region can transition to Phase III. STC engagements with UASI regions will end after Phase II is completed in order to start new STC engagements in new UASI regions thereafter. A key component of STC will be completed evaluations after each Phase for every engagement to ensure rad/nuc detection capabilities are being developed and to demonstrate that expansion of STC to other UASI regions is warranted.

Human Portable Radiation Detection Systems: DNDO has multiple programs that provide a variety of law enforcement and first responders with effective human portable systems for rad/nuc detection: the Handheld program, the Human Portable Wide Area Search (HPWAS) program, and the Human Portable Tripwire (HPT) program. These

solutions are used for detecting, localizing, and identifying rad/nuc materials and are relatively light, easy to use, and of sufficiently low cost to support widespread deployment. Until HPWAS, HPT, and Handheld program systems being developed separately under Research, Development, and Operations (RD&O) funding are available for acquisition, currently available systems will be procured using System Acquisition funding to support user needs. The Advanced Handheld system achieved operational status at the end of FY 2010, and the Basic Handheld system is scheduled to be available for operations in FY 2011. The HPT program is intended for small area searches. Conversely, wide area searches are purposeful searches performed to find rad/nuc material in larger areas, such as a large aircraft or in passenger, baggage, and cargo conveyance pathways. HPWAS detection systems range in size, maximizing detection capability, and may include an isotope identification function.

C – Budget Request Summary

The Domestic Nuclear Detection Office requests \$84.361 million in FY 2012 funding for the Systems Acquisition appropriation.

DNDO requests \$37.361 million in FY 2012 for this activity.

CURRENT SERVICES PROGRAM DESCRIPTION

Radiation Portal Monitor Program

Description

The Domestic Nuclear Detection Office (DNDO) has acquired and deployed commercial-off-the-shelf (COTS) first-generation polyvinyl toluene (PVT) Radiation Portal Monitors (RPMs) and is testing and evaluating next-generation Advanced Spectroscopic Portal (ASP) monitors for use in secondary scanning in accordance with the Global Nuclear Detection Architecture (GNDA) and Customs and Border Protection (CBP) priorities, as defined in a joint DNDO/CBP deployment strategy. A key consideration in radiological/nuclear (rad/nuc) detection is the ability to effectively detect threats without impeding the flow of legitimate trade and travel across the border. CBP currently scans cargo entering at the Nation's ports of entry (POEs) using PVT-based RPMs that can detect radiation, but cannot distinguish between threat materials and naturally-occurring radioactive material (NORM), such as kitty litter and ceramic tiles. These are often sent for secondary screening where additional PVTs or Radio-Isotope Identification Devices (RIIDs) are utilized. To address the limitations in secondary scanning locations, DNDO has been developing next-generation spectrographic technology to automatically detect and distinguish threats from non-threat materials. In addition to PVTs in primary screening, these Advanced Spectroscopic Portal (ASP) monitors, pending successful

certification in FY 2011, will be installed beginning in FY 2012 in support of secondary scanning applications.

Background and Strategy

The United States border is the first layer within the GNDA where the United States has full control over detection and interdiction. As such, considerable effort and resources have been placed at this layer to provide comprehensive rad/nuc detection capabilities, particularly at POEs. After 9/11, considerable concern was raised about the possibility that terrorists could use the enormous volume of cargo flowing into the United States as a pathway for bringing in nuclear material or a nuclear weapon. By far, the largest mode for incoming cargo is maritime shipping containers, with approximately eleven million containers coming into the country every year, so it was with a sense of urgency that this pathway was addressed. The Radiation Portal Monitor Program (RPMP) was established by CBP, and later transferred to DNDO, with the objectives of deploying monitoring equipment at the United States POEs and providing the scientific and technical expertise to design, acquire, and deploy these systems. Additionally, in the Safety and Accountability for Every Port Act of 2006 (SAFE Port Act), Congress mandated that all containers coming in through the top 22 ports, by volume, be scanned for radiation.

Over 1400 RPMs have been installed since 2002. Additionally, during 2012-2016, approximately 700 to 800 PVT deployments and between 300 and 400 ASP systems are required to complete the currently planned build-out. Currently, the program is reevaluating the need for further PVT deployments and is not planning on procuring new PVT systems in FY 2012. In addition, the exact number of systems is highly dependent on ASP certification and any changes in the final desired end-state with potential changes being discussed over a more agile and mobile architecture strategy. DNDO and CBP are reviewing the current deployment plan with the decision to seek ASP certification for secondary screening locations only. The deployment plan includes nearly 500 secondary screening locations, of which, approximately 300 have PVT systems currently installed. Not all of these PVT systems will be replaced with ASP units. Preliminary analysis of the deployment plan indicates that between 300 and 400 of the secondary screening locations will require ASP units and 100 to 200 will require PVT systems. When a PVT system is reused, the program saves funds on the purchase of the unit; however, the engineering and deployment costs for installing the refurbished unit is the same as a deploying a new unit. The quantities discussed here are preliminary and detailed analysis is ongoing.

The program is planning on an alternative neutron detection module (NDM) being fully tested and available in FY 2011. The new module has completed final vendor testing. Government testing and acceptance began in the first quarter of FY 2011. The new design has already demonstrated it can meet the detection specifications and is undergoing final environmental testing. Independent government cost estimates indicate the new NDM will increase the unit cost. When PVT units are replaced with ASP units, the Helium-3 (^3He) used in the neutron detection tubes will be transferred to the ASP units and the PVT systems will be refurbished and modified with the non- ^3He , alternative NDM, if required for redeployment.

DNDO continues to analyze the appropriateness of providing ASP, PVT or mobile systems at Ports of Entry (POE), including seaports, land border crossings and airports; or between POEs. Mobile units have the additional benefit to operate in both overt and covert coverage in areas at and between POEs or Urban Area Security Initiative (UASI) regions, and along major transportation routes in less or sparsely populated areas.

The RPMP is aligned to:

- Department of Homeland Security (DHS) Quadrennial Homeland Security Review (QHSR) Mission 1- Preventing Terrorism and Enhancing Security
 - Goal 1.2 – Prevent the Unauthorized Acquisition or Use of Chemical, Biological, Radiological/Nuclear (CBRN) Materials and Capabilities
 - Objective 1.2.3 Control Movement of CBRN
 - Objective 1.2.4 Protect Against Hostile Use of CBRN
- DNDO's Strategic Plan Goal 3: Strengthen the Nation's ability to detect and report rad/nuc threats at the border in conjunction with Federal, State, and local partners.
 - Objective 3.4 – Develop, acquire and support the deployment of systems and/or approaches that enhance rad/nuc screening capabilities of all traffic through U.S. littoral and riparian borders, in accordance with the GNDA.

Accomplishments in the Radiation Portal Monitor Program

Significant accomplishments in FY 2010 include:

- Completion of the multi-year Northern Border Initiative using prior year funding. To achieve this goal, DNDO deployed PVT systems to over 100 northern land border crossings to ensure 100% screening of cargo and personal conveyances.

FY 2011 planned accomplishments include:

- Assuming successful ASP certification, deploy up to fifteen of the ASP Low-Rate Initial Production (LRIPs) units and approximately 20 PVT units.
- Provide RPMs to support CBP's American Recovery and Reinvestment Act funding for new and expanded POEs. Activity will seek to maintain the achieved 100% screening of containerized cargo and personal conveyances at land border POEs.
- Conduct government testing and acceptance of the alternative NDM for the PVT system.
- Conduct a study to determine the marginal gains of continued deployments of PVT systems given the current level of cargo scanning versus the current program's future funding profile. Study will incorporate threat risks, operational considerations and funding profile. Study will also address the long term viability of PVT systems and the future plans for this rad/nuc detection infrastructure.

FY 2012 planned accomplishments include:

- Pending successful ASP certification, procure and begin deploying approximately 44 ASP systems based on the approved deployment strategy. Initial ASP deployments will focus on the locations where improved performance is most needed, across land border crossings and seaports.
- Deploy remaining inventory of PVT systems at international preclearance airports, low volume seaports, ferries, and new/reconfigured POEs (land, sea, and mail).

The Domestic Nuclear Detection Office (DNDO) requests \$27.0 million in FY 2012 for this activity.

CURRENT SERVICES PROGRAM DESCRIPTION

Securing the Cities Initiative

The objective of the Securing the Cities (STC) initiative is to reduce the risk of a rad/nuc attack in high-risk metropolitan areas by enhancing regional capabilities to detect and interdict radiological threats. This initiative was initiated in the New York City (NYC region.)

The STC Initiative in NYC has been funded since FY 2007. First year activities included planning and evaluation activities to determine the city and region’s most critical needs. The second and third years followed with phased capability development and implementation, executed largely through financial support for equipment, installation and integration, supportability, training, exercises, and program management. The fourth year continued with training and will culminate in a full-scale exercise in the region scheduled for spring 2011. Throughout STC’s implementation, an assessment of the program’s effectiveness in building capabilities has been underway. An interim report published in September 2008 described the business model. An additional interim report is expected to be complete in spring 2011 followed by a final report in fall 2011. These reports will assess Phase I activities in NYC. A continuation of this assessment effort will resume evaluating Phase II in NYC. A phased Securing the Cities program will enable the NYC region to become more integrated into the domestic Global Nuclear Detection Architecture with continued funding to build out the mobile portion of their

architecture with greater federal oversight and concurrence of program decisions. Phase II funding in the NYC region will focus on two major themes: strengthening pathway coverage and laying a foundation linking multiple UASIs to form a more comprehensive security layer. Securing the Cities Phase I in NYC centered on the area within 45 miles of Manhattan. Phase II funding will focus on enhancing mobile detection capabilities along statewide land and maritime pathways. The equipment inventory in the NYC region will also be increased over the Phase I levels. Additionally, Phase II funding will be used to establish linkages emphasizing development of enhanced analysis, communication, and coordination functionality that better integrates state and local capabilities with Federal capabilities.

Acquisition funds were utilized to procure, integrate, deploy, test, evaluate, train, and exercise a multi-layer, multi-pathway, multi-jurisdiction PRND and reporting architecture for the region. Funds were also allocated to ensure that detection capabilities are integrated with Federal, State, and local command, control, and situational awareness capabilities. State and local partners provided in-kind resources by bearing operational costs. Funds were also used for logistics, maintenance, and calibration costs as well as personnel costs to support the training necessary to operate detection equipment and conduct operational exercises. State and local partners are provided with the information they need to appropriately budget for the long-term sustainability of capabilities implemented under this initiative.

DNDO Systems Acquisition funds are dispersed under the STC program through competitively awarded Cooperative Agreements to the State and local agencies participating in the STC program.

No funds were requested for STC in FY 2010 and FY 2011 although Congress directed funding to continue the program in FY 2010. DNDO is requesting \$27 million for FY 2012. During the pilot phase of the program in NYC, Congress provided funding in the Research, Development, and Operations Appropriations because the program objectives were to determine the feasibility of expanding the rad/nuc detection capabilities of a region. With the program maturing from a pilot into a structured implementation program, all funding is requested to be provided in the Systems Acquisition Appropriation to improve the transparency of the programs execution.

Significant accomplishments for FY 2010 include:

- Continued the STC Initiative working with NYC regional law enforcement and emergency response personnel.
 - Delivered nearly 3700 pieces of PRND equipment to the STC region during FY 2010.
 - Trained over 1850 personnel in FY 2010 with vendor provided PRND training. Total trained since program inception is over 11,000 personnel.
 - Developed five PRND training courses for State and local training self-delivery. State and locals have trained over 900 personnel using these courses and other train-the-trainer assets.

- STC NYC partners conducted over 100 reachback and connectivity drills with the DNDO Joint Analysis Center.
- Assisted region in the development of three jurisdictional table top exercises to ensure Homeland Security Exercise and Evaluation Program (HSEEP) compliance and to serve as building blocks for a required regional full-scale exercise.
- Assisted in the planning for the regional full-scale exercise scheduled for FY 2011.
- Helped refine the regional concept of operations allowing for clear procedures for coordinated operations among regional partners.
- Initiated assessment of the STC program and its capabilities.

FY 2011 planned accomplishments include:

- Continue a dedicated regional presence in NYC to facilitate continued growth and the capture of lessons learned.
- Conduct up to three jurisdictional functional exercises and one HSEEP-compliant regional full-scale exercise.
- Complete the assessment of STC Phase I in the NYC region.
- Transition the NYC program into Phase II development where more emphasis is placed upon development of enhanced detection, analysis, communication, and coordination functionality that better integrates State and local capabilities, fulfilling the four goals of the Global Nuclear Detection Architecture Strategic Plan.
- Evaluate the effectiveness of the STC construct before expanding beyond New York City and incorporate changes into the STC business model prior to expansion to other UASI regions.

FY 2012 planned accomplishments include:

- Working with the NYC region, complete the architectural design that defines the rad/nuc capability requirements for the region.
- Enable the NYC region to become more integrated into the domestic Global Nuclear Detection Architecture.
- Continue enhancing mobile detection capabilities in the NYC region along statewide land and maritime pathways.
- Establish linkages emphasizing development of enhanced analysis, communication, and coordination functionality that better integrates state and local capabilities with Federal capabilities.
- Issue funding opportunity announcement and competitively award a cooperative agreement for one additional UASI Tier 1 metropolitan area.
- Complete a CONOPS, training and deployment of the initial equipment set and training for Phase I for the next STC implementation.
- Lay the foundation linking multiple UASIs to form a more comprehensive security layer.

The Domestic Nuclear Detection Office (DNDO) requests \$20.0 million in FY 2012 for this activity.

CURRENT SERVICES PROGRAM DESCRIPTION

Human Portable Systems

Description

DNDO procures multiple types of equipment that provide Department of Homeland Security (DHS) components and in some cases law enforcement and first responders with effective human portable systems for radiological/nuclear (rad/nuc) detection and identification. These solutions are used for detecting, localizing, and identifying rad/nuc materials and are relatively light, easy to use, and of sufficiently low cost to support widespread deployment. The objectives of this program are to expand the range of activities and address different types of conveyances and cargo to be scanned for rad/nuc material.

Human Portable Systems are aligned to:

- DHS Quadrennial Homeland Security Review (QHSR) Mission 1- Preventing Terrorism and Enhancing Security
 - Goal 1.2 – Prevent the Unauthorized Acquisition or Use of Chemical, Biological, Radiological/Nuclear (CBRN) Materials and Capabilities
 - Objective 1.2.3 Control Movement of CBRN
 - Objective 1.2.4 Protect Against Hostile Use of CBRN

Visible Intermodal Prevention and Response Teams

Description

DNDO procures the rad/nuc systems supporting the Transportation Security Administration (TSA) Visible Intermodal Prevention and Response (VIPR) teams, a Federal asset that may be called upon during times of heightened rad/nuc alert. The VIPR rad/nuc program will be accomplished using a combination of several procurement activities. These include: procuring the equipment sets, subsequent retrofit/upgrade of previously deployed equipment, VIPR contractor planning support, and development/modification of VIPR training and exercises. These teams, equipped with Personal Radiation Detectors (PRDs), handheld Radio-Isotope Identification Devices (RIIDs), and radiation detection backpacks (including spares), provide an increased layer of Preventive Radiological/Nuclear Detection (PRND) capabilities for domestic transportation modes. A VIPR team will normally consist of a supervisor and six members who will be equipped with eleven PRD pagers, three RIIDs, and two to four radiation detection backpacks per team including spares. In addition, a training suite will be provided with a VIPR train-the-trainer module. DNDO is working closely with TSA/VIPR to institutionalize PRND course with the VIPR training academy as well as with VIPR exercise officials to institutionalize PRND exercise capabilities. Funding in FY 2012 is focused on recapitalizing inventory in the previously deployed VIPR team stockpiles.

Background and Strategy

The concept of a PRND-equipped VIPR Team Pilot was originated by DNDO and TSA following the 2007 Top Officials Exercise (TOPOFF) 4. The exercise generated a discussion regarding the current capability of Federal assets to detect rad/nuc material before an attack occurs. TSA identified VIPR teams as a potential PRND resource and DNDO took on the effort of supporting TSA in building PRND-Equipped VIPR teams.

The TSA VIPR teams have been established to serve all modes of transportation. VIPR teams can be deployed to work with local security and law enforcement officials to supplement existing public safety resources, provide deterrent presence and detection capabilities, and introduce an element of unpredictability to disrupt potential terrorist planning activities. Strategically, VIPR seeks to protect the Interior layer with increased PRND capabilities poised at domestic transportation modes; provide a deterrent to terrorist activities; and increase the odds of detecting rad/nuc material and weapons in transit to intended targets.

Accomplishments in Systems Acquisition for VIPR teams

Significant accomplishments in FY 2010 include:

- Procured and deployed rad/nuc detection equipment, including 165 PRDs, 45 handheld RIIDs, and fourteen backpack detectors for fifteen national VIPR teams.
- Procured 45 source kits to support training for fifteen national VIPR teams.

FY 2011 planned accomplishments include:

- Complete outfitting the expanded fifteen VIPR teams with sixteen additional backpacks.

FY 2012 planned accomplishments include:

- Procure VIPR rad/nuc equipment sets and retrofit/upgrade previously deployed VIPR equipment sets.
- Develop/modify training and exercises for VIPR teams, equipped with PRDs, handhelds, and radiation detection backpacks.

Mobile Detection Deployment Program

Description

Five Mobile Detection Deployment Program (MDDP) systems are currently deployed at Department of Energy (DOE) Radiological Assistance Program (RAP) team locations around the U.S. and are designated Mobile Detection Deployment Units (MDDUs). These MDDP systems provide a surge capability that can be readily deployed to support PRND operations for special events and intelligence-driven searches. Research, Development, and Operations (RD&O) program funds provide for maintenance and operations for fifteen deployments annually.

Systems Acquisition program funds provide for the acquisition of three sets of additional Human Portable Radiation Detection Systems (HPRDS) radiation detection and radionuclide identification instruments for a 20-member team. This will upgrade the three small MDDP systems to large systems. Each large response system will consist of a truck towing a tag-a-long trailer that is configured to safely transport radiation detection and radionuclide identification instruments, sufficient to field a 40-member team, certain command and control-related equipment and support equipment to sites across the United States.

Background and Strategy

The plan for the deployment of detection systems as part of MDDP was determined by representatives of DNDO and DOE. The initial specialized MDDP unit (delivered and fielded in FY 2008) was modeled after a RAP deployment system: a vehicle (a sports utility vehicle (SUV)/truck/van) towing a trailer loaded with "enhanced" radiation detection instruments and command and control capabilities. The unit was envisioned to provide a PRND package that can be utilized by a myriad of State and local public safety and Federal agencies and provide a force multiplier capability to RAP. The MDDP capability includes a relationship between DNDO and DOE for the program and the deployment of the asset. DNDO operates five MDDUs which are the actual, physical truck and trailer combinations that contain the rad/nuc detection equipment and are deployed in the field. The MDDU's will be physically located within five RAP regions, but will be managed by MDDP.

In FY 2009, DNDO procured an additional large and three smaller scale MDDP systems. The deployment strategy is focused on adding systems to expand coverage across the country, increasing the number of events that can be supported, and reducing response time and logistics to support deployment. Five MDDP systems are planned to be deployed at locations around the U.S. Program funds provide for maintenance and operations for approximately twelve to sixteen deployments annually.

The budget request provides funding to upgrade the three smaller systems with additional equipment to the same amount of equipment are the larger systems. MDDP will consist of five large response systems to assure broader coverage of National Security Special Events (NSSEs). Location of systems will be rolled out according to concentration and priority of identified NSSEs, and other special events.

Accomplishments in Systems Acquisition for the MDDP

Significant accomplishments in FY 2010 include:

- No funding was requested nor provided for this activity in FY 2010. The next phase of activities starts in FY 2012. Please see RD&O sections for operational accomplishments.

FY 2011 planned accomplishments include:

- No funding is requested for this activity in FY 2011. The next phase of activities starts in FY 2012.

FY 2012 planned accomplishments include:

- Procure three sets of MDDP HPRDS equipment to upgrade three small MDDUs to large MDDUs.

Customs and Border Protection

Description

DNDO coordinates with Customs and Border Protection (CBP) for the deployment of human portable systems for CBP officers and agents to scan people, cargo and privately owned vehicles at and between ports of entry. DNDO anticipates transition to next-generation advanced and basic handheld systems (RIIDs) in FY 2012. Current or next-generation systems will be procured based upon availability.

Accomplishments in Systems Acquisition for the CBP-Office of Field Operations (OFO) Office of Border Patrol (OBP) and Laboratories and Scientific Services (LSS)

Significant accomplishments in FY 2010 include:

- Procured and deployed 72 handheld systems.

- Procured 2,285 PRDs.
- Procured approximately 4,400 PRDs to further equip 20 OBP sectors.

FY 2011 planned accomplishments include:

- Initiate procurement of approximately 750 next-generation handheld RIIDs, if available. If next-generation handhelds RIIDs are not available, procure current generation handheld RIIDS.
- Anticipate procurement of eight next-generation High Purity Germanium (HPGe) handheld units to support Laboratories and Scientific Services (LSS) reachback support.

FY 2012 planned accomplishments include:

- Procure approximately 340 next-generation handheld RIIDs, if available. If next-generation handheld RIIDs are not available, continue procuring current generation handheld RIIDS for recapitalization.
- Procure two next-generation HPGe handheld units to support LSS reachback support.

United States Coast Guard Joint Acquisition Strategy

Description

In accordance with the cooperatively developed Joint Acquisition Strategy (JAS), DNDO recapitalizes current United States Coast Guard (USCG) rad/nuc detection systems and procures new systems to satisfy USCG requirements, which include hundreds of PRDs, RIIDs, and backpack systems. DNDO anticipates transitioning to the next generation of basic and advanced handheld systems (RIIDs) in FY 2012-2016. Commercial-off-the-shelf (COTS) procurement of other components of the HPRDS suite (PRDs and backpacks) will continue pending other solution development efforts related to those components (e.g., Human Portable Tripwire (HPT) and Wide Area Search (WAS)).

Accomplishments in Systems Acquisition for the USCG JAS

Significant accomplishments in FY 2010 include:

- Continued recapitalization of existing USCG equipment at an approximate rate of 20%.
- Procured rad/nuc detection systems to satisfy USCG requirements, including 788 PRDs, 118 handheld RIIDs, 118 source kits for handheld RIIDS, eighteen handheld radiation monitors (HRMs), four HPGe handheld RIIDs, 33 backpacks systems, and six linear radiation monitors (LRMs).

FY 2011 planned accomplishments include:

- For handheld RIIDs, procure next-generation equipment. If next-generation equipment is not available, continue recapitalization of existing USCG equipment at an approximate rate of 20%. Recapitalization rate would result in the following requirements: approximately 788 PRDs, 118 handheld RIIDs (current or next generation, if available), and 33 backpack systems, depending on the availability of Helium-3 (^3He) gas or other approved neutron detectors for the backpacks.
- Upgrade eight currently deployed HPGe handhelds to next-generation systems.

FY 2012 planned accomplishments include:

- For handheld RIIDs, continue procuring next-generation handheld RIIDs, if available, in accordance with the agreed-upon rate. If next-generation handheld units are not available, continue recapitalization with current generation units. Recapitalization rates would result in the following requirements: approximately 788 PRDs, 118 handheld RIIDs, and 33 backpack systems.

West Coast Maritime Pilot Program

Description

This pilot program supports the DHS Small Vessel Security Strategy's specific objective to develop a robust layered defense by expanding and enhancing maritime rad/nuc detection capabilities for international, Federal, State, local, tribal, and private stakeholders. Consequently, the focus of this effort is to evaluate the effectiveness of a limited-phased deployment of commercially-available and government-off-the-shelf rad/nuc detection capabilities in the Puget Sound and San Diego regions and gather lessons learned to support a wider deployment of maritime capabilities to other priority U.S. ports.

Accomplishments in Systems Acquisition for the West Coast Maritime Pilot Program

Significant accomplishments in FY 2010 include:

- Procured and deployed rad/nuc detection equipment, including eight PRDs, two handheld RIIDs, handheld RIID spares, 20 backpack systems and ancillary equipment, and seven source kits for handheld RIIDs.
- Procured two boat-mounted PRND systems with isotopic identification systems options to address the risk from small maritime craft delivering or transporting rad/nuc materials or weapons to the United States.

FY 2011 planned accomplishments include:

- This activity will be finalizing its efforts and no further acquisition of equipment is planned. Pilot efforts were completed in December 2010.

- Release the West Coast Maritime Pilot Final Report, including recommendations for future deployments.

³He Shortage Acquisition

Description

DNDO has reserved Systems Acquisition funds for the procurement of ³He gas. DNDO will request that the ³He Sub-Interagency Policy Committee (IPC) approve and allocate 1200 liters ³He per year for five years commencing in FY 2012 through FY 2016 as part of the DHS transition plan to migrate off of ³He. The ³He will be used by DHS to continue its radiation detection programs while an alternative technology is developed and made ready for deployment.

Background and Strategy

Significant reductions in the requested allocations by various governmental agencies have occurred in FY 2009 through FY 2011 since the ³He IPC initiated a conservation policy relating to ³He usage. Alternative technologies are being pursued for replacing ³He tubes in Radiation Detector Portal Monitors and are significantly reducing DHS dependence upon the use of ³He.

Backpack and handheld neutron detectors play a significant role in locating and detecting neutron sources to execute the DNDO mission. ³He tubes have been and continue to be the most efficient material known for neutron detection for portable units. Alternative replacement technologies for backpacks and handhelds neutron detectors are not developed enough for commercialization and deployment. A transition plan to reduce dependency on ³He is being developed and implemented by DNDO for DHS. In order to reach our non-dependency on ³He, alternative technologies are being developed, but require three to five years to fully engineer, test and field systems for final validation and deployment. DNDO will continue to use the minimum quantity of gas possible until ³He tubes are phased out using alternative technologies.

The proposed procurement of ³He gas will ensure critical neutron detection capabilities are deployed until an alternative technology is fully developed and deployed and DNDO's dependence on ³He can be eliminated.

FY 2012 planned accomplishments include:

- Procure 1,200 liters of ³He.
- Maintain a ³He tracking program.

IV. Program Justification of Changes

**Department of Homeland Security
Domestic Nuclear Detection Office
Systems Acquisition
Radiation Portal Monitor Program
Justification of Program Changes**
(Dollars in Thousands)

Program Increase 1: Radiation Portal Monitor Program
PPA: Radiation Portal Monitor Program
Program Increase: Positions 0.0, FTE 0.0, Dollars \$37,361

Funding Profile

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	0
Program Increase							-	-	37,361
Total Request	-	-	51,616	-	-	0	-	-	37,361

Description:

The request for the Radiation Portal Monitor Program (RPMP) is \$37.361 million.

Justification:

This program procures equipment to meet the needs of end-users, in accordance with the Global Nuclear Detection Architecture (GNDA). This funding will support the vital acquisition of a full range of equipment and technology. With the anticipated availability of a non-³He neutron detector and ASP Certification in FY 2011, DNDO plans to begin the deployment of ASPs in secondary scanning locations. Pending successful ASP certification, funds will only be used to procure ASP units. It is estimated that 44 ASP units will be purchased.

The RPMP was established with the objectives of deploying RPMs at United States ports of entry (POEs), and providing the scientific and technical expertise to design, acquire, and deploy these systems. As the Department of Homeland Security (DHS) works to keep the major seaports and northern and southwest land borders safe using radiological/nuclear (rad/nuc) detection capabilities, the Domestic Nuclear Detection Office (DNDO) continues to address the vulnerabilities in other locations and pathways. This focus will evaluate the capabilities and benefits of mobile detection solutions, more capable of meeting mission requirements than the deployment of fixed solutions.

Directive / Mandate:

In the National Security Presidential Directive (NSPD) 43 / Homeland Security Presidential Directive (HSPD) 14, DNDO is mandated to “[s]erve as the primary entity in the United States Government to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop or use an unauthorized nuclear device, fissile material or radiological material in the United States.”

**Department of Homeland Security
Domestic Nuclear Detection Office
Systems Acquisition
Securing the Cities
Justification of Program Changes**
(Dollars in Thousands)

Program Increase 2: Securing the Cities
PPA: Securing the Cities
Program Increase: Positions 0.0, FTE 0.0, Dollars \$7,000

Funding Profile

	FY 2010 Actual			FY 2011 C.R.			FY 2012 Request

Current Services Level							-	-	20,000
Program Increase							-	-	7,000
Total Request	-	-	25,330	-	-	20,000	-	-	27,000

Description:

The request for Securing the Cities (STC) is \$27.0 million.

Justification:

Securing the Cities (STC) was initiated in FY 2007 as a three year pilot program to build basic radiological/nuclear (rad/nuc) detection capabilities in America’s cities. The New York City (NYC) region (including jurisdictions in Connecticut, New Jersey, and New York) was chosen for the initial pilot because risk analyses concluded that NYC is the highest risk urban area in the United States. While the original objective of STC was to build a capability that would be sustained and expanded by the recipient, DHS has determined that STC funding should be included in the FY 2012 President’s Budget and expanded to an additional UASI jurisdiction. Approximately \$20 million is expected to be spent in the NYC region, and \$7 million for an additional Urban Area Security Initiative (UASI) region. Federal funding for radiological and nuclear detection through the STC program will support DNDO’s efforts to implement an integrated domestic nuclear detection architecture.

Directive / Mandate:

In the National Security Presidential Directive (NSPD) 43 / Homeland Security Presidential Directive (HSPD) 14, DNDO is mandated to “[s]erve as the primary entity in the United States Government to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop or use an unauthorized nuclear device, fissile material or radiological material in the United States.”

**Department of Homeland Security

PPA Mission Statement

The Radiation Portal Monitor (RPM) Program was established at CBP in January 2002 with the objective of deploying RPMs at ports of entry (POEs) and providing the scientific and technical expertise to design, acquire, deploy, operate and maintain these systems. In 2005, DNDO assumed the responsibility of designing, acquiring and deploying the systems, and it has established a Ports of Entry program to work with CBP to bring the latest technology to bear on the threat of illicit nuclear materials crossing our borders. A first generation of detector based on Polyvinyl-Toluene technology (PVT) has been developed and is being deployed. A second generation of advanced radiation detection systems, known as Advanced Spectroscopic Portal (ASP) systems, is now being developed for CBP's use in secondary screening at POEs. These efforts are part of the multi-layered strategy to keep U.S. ports safe and secure by interdicting rad/nuc materials in five transport vectors: international mail and express consignment courier facilities (ECCFs), seaport terminals, international airports, land crossings, and rail crossings. ASP is only being developed for use in secondary screening at this time.

Summary Justification and Explanation of Changes

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Equipment	\$43,357	\$23,348	\$37,361	\$14,013

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY2012 request is \$37,361,000 million. This funding will support the vital acquisition of a full range of equipment and technology, and will procure equipment to meet the needs of end-users in accordance with the GNDA. Acquisitions will focus on mobile and portable systems that will scan more than just containerized cargo. Final Secretarial certification for Advanced Spectroscopic Portal (ASP) systems in secondary screening is scheduled for Spring 2011. The budget does not include additional funding for PVT systems.

PPA: Securing the Cities		2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Object Classes:					
25.1	Advisory and Assistance Services	329	0	0	0
25.2	Other Services	0	0	0	0
25.3	Purchase from Govt. Accts.	453	272	378	106
25.7	Operation and maintenance of equipment	4,996	0	0	0
31.0	Equipment	66	0	0	0
41.0	Grants/Subsidies/Contributions	19,486	21,135	26,622	5,487
Total, Other Object Classes		\$25,330	\$21,407	\$27,000	\$5,593
Full Time Equivalents		---	---	---	0
Unobligated balance, start of year		(6,588)	(1,407)	---	1,407
Unobligated balance, end of year		1,407	---	---	0
Recoveries of prior year obligations		---	---	---	0
Total Requirements		\$20,149	\$20,000	\$27,000	\$7,000

PPA Mission Statement

STC was set up to design and implement detection architecture to reduce the risk of illicit radiological materials from being used as a weapon within a major urban area. Federal financial support for this initiative was scheduled to end with FY 2009; however, congressional activity added an additional \$20 million to the NYC initiative in FY 2010. The initial STC engagement was conducted with the New York City (NYC) region, defined as within 45 miles of the NYC city limits. STC stakeholders include NYC (especially the New York Police Department), the counties proximate to NYC, the State of New York, the State of New Jersey, the State of Connecticut, the Port Authority of New York/New Jersey (PANY/NJ) and the Metropolitan Transportation Authority (MTA).

Summary Justification and Explanation of Changes

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Purchase from Govt. Accts.	\$453	\$272	\$378	\$106

Purchases from government accounts include costs for purchases from other Federal government agencies or accounts that are not otherwise classified. Funds will be used for installation, integration, and deployment activities at ports of entry and other domestic locations, as outlined in the current services section. The FY 2012 request is \$378,000.

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Grants/Subsidies/Contributions	\$19,486	\$21,135	\$26,622	\$5,487

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The FY 2012 request is \$26,622,000. STC will build upon the lessons learned in the pilot with the New York City Region to build capabilities and plan for sustainment of rad/nuc detection capabilities in other UASI Tier I regions. Within this funding line are additional resources for the NYC Region for the development of enhanced functionality for detection, communication, and coordination.

Department of Homeland Security
Domestic Nuclear Detection Office
Systems Acquisition
Human Portable Radiation Detection Systems
Funding Schedule
(Dollars in Thousands)

PPA: Human Portable Radiation Detection Systems		2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Object Classes:					
25.1	Advisory and Assistance Services	271	0	0	0
25.3	Purchase from Govt. Accts.	632	0	0	0
31.0	Equipment	8,125	260	20,000	19,740
Total, Other Object Classes		\$9,028	\$260	\$20,000	\$19,740
Full Time Equivalents		---	---	---	0
Unobligated balance, start of year		(9,096)	(260)	---	260
Unobligated balance, end of year		260	---	---	0
Recoveries of prior year obligations		---	---	---	0
Total Requirements		\$192	\$0	\$20,000	\$20,000

PPA Mission Statement

HPRDS is structured to provide a wide variety of law enforcement and first-responder services with the capability to detect and identify terrorist nuclear explosive devices or radiation dispersal devices (RDDs). HPRDS provides key radiation detection, threat source identification, and notification capabilities to aid law enforcement officers in mitigating terrorist nuclear threats in both POE and non-POE locations. HPRDS fills existing shortfalls through either commercial-off-the-shelf (COTS) solutions tailored to existing Concepts of Operations (CONOPS) and operating environments or, in instance where COTS systems are demonstrated to be inadequate, the development of cutting edge technology, which are used as primary detection tools by Customs officers, Border Patrol agents, and USCG personnel. State and local law enforcement agencies and first responders use this equipment for queued search and secondary identification operations.

Summary Justification and Explanation of Changes

	2010 Actual	2011 C.R.	2012 Request	2011 to 2012 Change
Equipment	\$8,125	\$260	\$20,000	\$19,740

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. Equipment purchased will be deployed to ports of entry and other domestic locations, as outlined in the current services section. The FY 2012 request is \$20,000,000. HPRDS has several programs under which it executes the critical responsibility of procuring multiple types of equipment that provide law enforcement and first responders with effective equipment for rad/nuc detection and identification. Handheld detection units and PRDs will be procured for CBP-OBP in FY 2011 based upon the deployment schedule. Current or next-generation systems will be procured based upon availability. These efforts, and associated resources, are vital to the continuity and effectiveness of the mission of deploying rad/nuc detection equipment.

J. FY 2012 Schedule of Working Capital Fund by Program/Project Activity

**Department of Homeland Security
Domestic Nuclear Detection Office
Systems Acquisition**

(Dollars in Thousands)

	FY 2010 Actual	FY 2011 C.R.	FY 2012 Request	Increase / Decrease for FY 2012
Program/Project Activity	AMOUNT	AMOUNT	AMOUNT	AMOUNT
Total WCF-SYSACQ	\$256	\$312	\$265	(\$47)

Note:

In FY 2012, DNDO's total Working Capital Fund assessment decreased. The total cost share associated with Office of Procurement Operations (OPO) is distributed between M&A, RD&O and Systems Acquisition.
