

CRYPTOGRAPHIC AGILITY

Homeland
Security

A design feature that enables updates to future cryptographic algorithms and standards without the need to modify or replace the surrounding infrastructure.

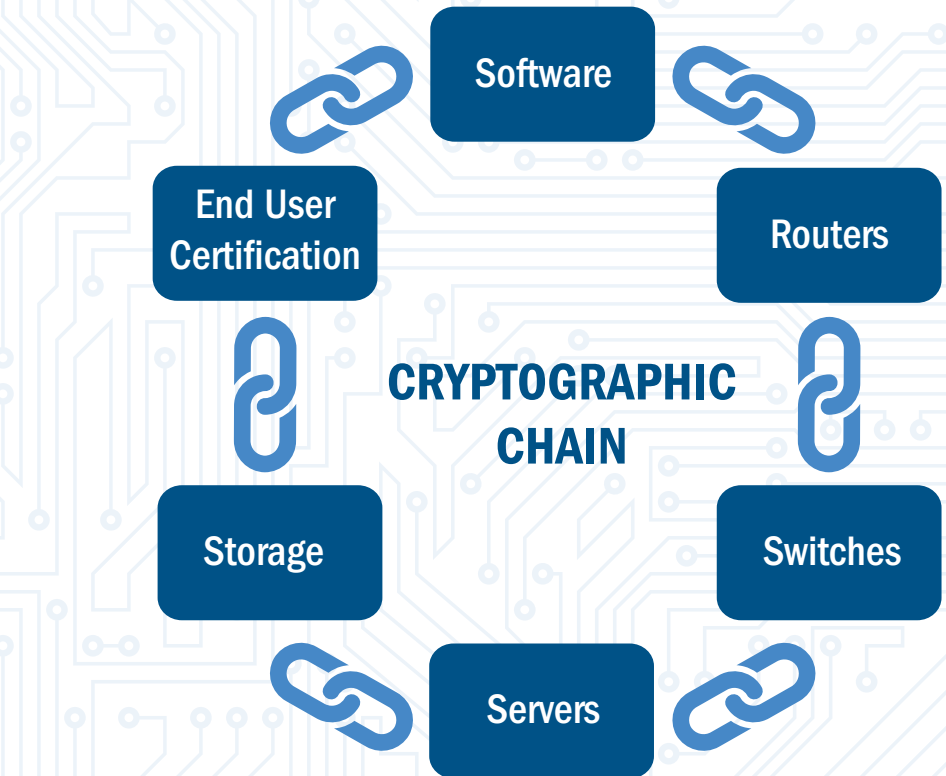

WHY IT MATTERS

Many information systems cannot adopt new cryptographic algorithms without costly and time consuming changes to hardware and infrastructure.

GET AGILE

- + Maintain an inventory of the devices accessing your network
- + Automate cryptographic inventories and updates
- + Don't forget your digital certificates

Ensure cryptographic agility is reflected throughout your infrastructure that uses cryptographic algorithms.
