Introduction

The Computer Forensics Tool Testing (CFTT) program is a joint project of the Department of Homeland Security (DHS) Science and Technology Directorate (S&T), the National Institute of Justice, and the National Institute of Standards and Technology (NIST) Special Programs Office and Information Technology Laboratory. CFTT is supported by other organizations, including the Federal Bureau of Investigation, the U.S. Department of Defense’s Cyber Crime Center, U.S. Internal Revenue Service’s Criminal Investigation Division Electronic Crimes Program, as well as the DHS Bureau of Immigration and Customs Enforcement, U.S. Customs and Border Protection and U.S. Secret Service. The objective of the CFTT program is to provide measurable assurance to practitioners, researchers, and other applicable users that the tools used in computer forensics investigations provide accurate results. Accomplishing this requires the development of specifications and test methods for computer forensics tools and subsequent testing of specific tools against those specifications.

Test results provide the information necessary for developers to improve tools, users to make informed choices, and the legal community and others to understand the tools’ capabilities. The CFTT approach to testing computer forensics tools is based on well-recognized methodologies for conformance and quality testing. Interested parties in the computer forensics community can review and comment on the specifications and test methods posted on the CFTT Website (https://www.cftt.nist.gov/).

This document reports the results from testing the disk imaging function of DFT Version 1.0 using the CFTT Federated Testing Test Suite for Disk Imaging, Version 5.

Federated Testing is an expansion of the CFTT program to provide forensic investigators and labs with test materials for tool testing and to support shared test reports. The goal of Federated Testing is to help forensic investigators to test the tools that they use in their labs and to enable sharing of tool test results. CFTT’s Federated Testing Forensic Tool Testing Environment and included test suites can be downloaded from http://www.cftt.nist.gov/federated-testing.html and used to test forensic tools. The results can be optionally shared with CFTT, reviewed by CFTT staff, and then shared with the community.

Test results from other tools can be found on DHS’s computer forensics webpage, https://www.dhs.gov/science-and-technology/nist-cftt-reports.
How to Read This Report

This report is organized into the following sections:

1. Tested Tool Description. The tool name, version, vendor information, and support environment version (e.g., operating system version) are listed.
2. Testing Organization. The name and contact information of the organization that performed the tests are listed.
3. Results Summary. This section identifies any significant anomalies observed in the test runs. This section provides a narrative of key findings identifying where the tool meets expectations and provides a summary of any ways the tool did not meet expectations. The section also provides any observations of interest about the tool or about testing the tool including any observed limitations or organization-imposed restrictions on tool use.
4. Test Environment. Description of hardware and software used in tool testing in sufficient detail to satisfy the testing organization's policy and requirements.
5. Test Result Details by Case. Automatically generated test results that identify anomalies.
6. Appendix: Additional Details. Additional administrative details for each test case such as, who ran the test, when the test was run, computer used, etc.
Federated Testing Test Results for Disk Imaging Tool: DFT Version 1.0

Tests were Configured for the Following Write Block Scenarios:

Small (< 138GB) SATA drive with Tableau Forensic SATA/IDE Bridge T35U connected to PC by SATA interface

Large (> 138GB) SATA drive with Tableau Forensic SATA/IDE Bridge T35U connected to PC by SATA interface

SD drive with Samsung SD adapter for microSD connected to PC by USB interface

USB drive with Tableau Forensic USB Bridge T8-R2 connected to PC by USB interface

Tool Description

Tool Name: DFT
Tool Version: 1.0

Vendor Contact:
Vendor name: National Security Research Institute
Address: 1559, Yuseong-daero, Yuseong-gu, Daejeon, Republic of Korea, 34044
Phone: +82-42-870-2280, +82-42-870-2322
Email: hhu@nsr.re.kr, sylee@nsr.re.kr
Operating System: Microsoft Windows 10

Testing Organization

Organization conducting test: Digital Forensic & Cryptanalysis (DF&C) Lab., Kookmin University
Contact: Prof. Jongsung Kim
Report date: July 28, 2021
Authored by: Prof. Jongsung Kim

This test report was generated using CFTT's Federated Testing Forensic Tool Testing Environment, see Federated Testing Home Page.
Results Summary

The tool met expectations for the different imaging scenarios tested.

Test Environment & Selected Cases

Hardware: Custom PC with USB 3, USB 2, SATA ports
PC1: AMD Ryzen 7 3700X CPU @ 3.6GHz
PC2: Intel(R) Core(TM) i7-8700 CPU @ 3.20GHz
PC3: Intel(R) Core(TM) i5-4460 CPU @ 3.20GHz
PC4: AMD Ryzen 7 3700X CPU @ 3.6GHz
PC5: Intel(R) Core(TM) i7-8700K CPU @ 3.70GHz
PC6: Intel(R) Core(TM) i5-6500 CPU @ 3.20GHz

Operating System:
PC1: Microsoft Windows 10 Pro 21H1 (19043.1083)
PC2: Microsoft Windows 10 Enterprise (10.0.19042 build 19042)
PC3: Microsoft Windows 10 Home (19042.1083)
PC4: Microsoft Windows 10 Pro version 1809 (17763.1577)
PC5: Microsoft Windows 10 Pro (10.0.18363 build 18363)
PC6: Microsoft Windows 10 Enterprise (10.0.19041 build 19041)

## Test Result Details by Case

This section presents test results grouped by function.
FT-DI-01

Test Case Description

Acquire drive of a given type using a given write blocker connected to a computer with a given interface to an image file and compute selected hashes for the acquired data. Test the ability to read a given drive type accurately and correctly hash the data while creating an image file.

This test can be repeated to test acquisition of multiple drive types. This test tests the ability of the tool to acquire a specific type of drive (the drive type tested is included in the test case name) to an image file using a specific write blocker (applies only to tools that are used with hardware write blockers) and a certain interface connection between the test computer and the write blocker. The write blocker used and the interface connection between the test computer and the write blocker are listed for each test case in the table below. Two tests are required to test ATA or SATA drives, one to test drives smaller than 138GB (ATA28 & SATA28: 28-bit addressing) and one to test larger drives (ATA48 & SATA48: 48-bit addressing).

Test Evaluation Criteria

The hash values computed by the tool should match the reference hash values computed for the source drive.

Test Case Results

The following table presents results for individual test cases

<table>
<thead>
<tr>
<th>Case</th>
<th>Src</th>

</tr>
</tbody>
</table>

Case Summary

Results are as expected.
**FT-DI-03**

**Test Case Description**

Acquire removable media of a given type using a given media reader connected to a computer with a given interface to an image file and compute selected hashes for the acquired data. Test the ability to read a given removable media type accurately and correctly hash the data while creating an image file.

This test can be repeated to test acquisition of multiple removable media types. This test tests the ability of the tool to acquire a specific type of removable media (the removable media type tested is included in the test case name) to an image file using a specific media reader which may also be a write blocker and a certain interface connection between the test computer and the media reader. The media reader used and the interface connection between the test computer and the media reader are listed for each test case in the table below.

**Test Evaluation Criteria**

The hash values computed by the tool should match the reference hash values computed for the source drive.

**Test Case Results**

</tbody>
</table>

**Case Summary**

Results are as expected.

**FT-DI-05**

**Test Case Description**

Acquire partition of a given type to an image file and compute selected hashes for the acquired data. Test the ability to read a given partition type accurately and correctly hash the data while creating an image file.
Test Evaluation Criteria

The hash values computed by the tool should match the reference hash values computed for the source drive.

Test Case Results

The following table presents results for individual test cases

</tr>
</tbody>
</table>

Case Summary

Results are as expected.

FT-DI-10

Test Case Description

Acquire a drive to an image file without enough space for the image file. Test the ability of the tool to notify the user that the image file is incomplete.

Test Evaluation Criteria

The tool should issue a message indicating not enough space for the image file.

Test Case Results

The following table presents results for individual test cases

### Test Results for FT-DI-10 cases

</tr>
</tbody>
</table>

Case Summary
FT-DI-13

Test Case Description

Compute the hash value of the acquired data within an image file. Test the ability of the tool to recomputed the hash of an existing image file.

Test Evaluation Criteria

The hash values computed by the tool should match the reference hash values computed for the source drive.

Test Case Results

The following table presents results for individual test cases

Case Summary

Results are as expected.

Appendix: Additional Details

Test Drives and Partitions

The following table presents the state of each source object, drive or partition, including reference hashes and known content.

Both drives and partitions are described in the table. Partitions are indicated in the Drive column by the notation [drive]+[partition number]. Where [drive] is the drive label and [partition number] is the partition number. For example, the first partition on drive A3 would be A3+1. The type column records either the drive type, e.g. SATA, USB, etc., or the partition type, e.g., NTFS, FAT32, etc., depending on whether a drive or a partition is being described.
