

## DHS High Value Asset (HVA) Major Information Systems - Listing of Non-PII systems (2022)

Component	System Name	System Description
CBP	CBP Amazon Web Services Cloud East	In meeting the Office of Management and Budget (OMB)'s 2010 Cloud First policy, and the anticipated closure of the National Data Center (NDC) in September of 2019, the U.S. Department of Homeland Security/U.S. Customs and Border Protection (DHS/CBP) has established the Office of Information and Technology (OIT) datacenter migration plan. This plan outlines not only the datacenter migration effort, but also the modernization of the legacy applications and systems to re-architect for the Cloud. In line with the OBM's 2010 Cloud First policy, DHS/CBP has chosen Amazon Web Services (AWS) as its cloud service provider. Specifically, the AWS U.S. East/West Region (N. Virginia), Infrastructure as a Service (IaaS) cloud provides a broad set of infrastructure services, such as computing power, storage options, networking and databases, delivered as a utility on-demand, available in seconds, with pay-as-you-go pricing. The stated goal of the OIT Data Center Migration Plan is to reduce the reliance and cost associated with traditional on-premise infrastructure and increase application deployment time. This can be accomplished by leveraging the AWS IaaS cloud native services, and utilizing virtualization and automated provisioning technologies to develop a DEV/SAT/PROD/ADMIN platform and environment that will enable the rapid deployment and provisioning of DHS/CBP applications and systems.
ICE	ICE Cloud General Support System	The ICE Cloud is a cloud-based General Support System (GSS) that provides FedRAMP approved Cloud services to ICE program areas. It encompasses the infrastructure as well as the management layers of the cloud environments, providing the resources that allow the Agency to deploy and maintain mission-oriented applications. It also allows the ICE OCIO Operation Division, ICE Network Operations Center (NOC) and Security Operations Center (SOC) to effectively manage and monitor the cloud environment. This includes services designed to help developers simplify provisioning and managing infrastructure, deploying application code, automating software release processes, and monitoring application and infrastructure performance. All systems residing on the ICE Cloud must provide separate privacy documentation to ensure proper coverage. ICE Cloud is leveraging the following Cloud Service Provider's FedRAMP Authorizations: Amazon Web Services (AWS) GovCloud Microsoft Azure Government Cloud Microsoft Azure Commercial Cloud ICE currently uses the Microsoft Azure Commercial Cloud environment for information that may be shared to members of the public, which is not a function supported by the AWS GovCloud or Microsoft Azure Government Cloud. The Microsoft Azure Commercial Cloud may be used in the future for internal-facing systems as well.
MGMT	Cirrus	The described information system is an Azure Government Cloud Based information system. The general support system provides a production Tier 1/ Tier 2operational environment providing core Cloud, IT Service Management, Networking, Security, and Operational support to DHS information systems.

MGMT	DHS IA Compliance System	The DHS Information Security Compliance and Oversight Program is responsible for ensuring DHS information security is consistent and complies with the goals and objectives set forth by federal and agency legislation, regulations, policies, directives, and standards. To support the accomplishment of these responsibilities, the Department has implemented web-based, enterprise applications in support of the DHS Compliance and Oversight Program. These applications are hosted at a Government owned contractor operated facility and at a Government owned Enclave.
MGMT	DHS One Network	Homeland Security Enterprise Network was designed to provide a highly redundant/resilient, high speed, multi-agency Wide Area Network (WAN) backbone in which all Department telecommunications to interconnect DHS component and other government agency applications and services.
MGMT	E-Mail as a Service - HP	The Mail Mobility and Archive Services boundary is comprised of two applications, DHS HQ A2Z and DMES, which are Platform as a Service (PaaS) within the DHS Cirrus Infrastructure as a Service (IaaS), hosted in the DHS Microsoft Azure Government Cloud. DHS Mobility Enterprise Service (DMES) provides the ability to mitigate security threats against mobile devices by enabling enterprise-controlled security policy enforcement, compliance monitoring, and active operational responses. DMES is the primary enterprise component for mitigating mobile device security threats by centrally enforcing and monitoring compliance with security policies. DMES secures, monitors, manages, and supports mobile devices deployed across the DHS enterprise and components that subscribe to the service are setup with their own tenant within the DHS. This provides DHS HQ components with full flexibility and customization of their deployment and the ability to secure their mobile devices and provide their users with access to enterprise resources and applications. DMES is integrated with the PIV Identity Management System (IDMS) and Credential Management System (CMS) to provision Derived PIV Credentials (DPC) to managed mobile devices. DHS HQ Archive2Azure (DHS HQ A2Z) is a managed compliance storage solution based on Microsoft Azure Cloud. It is delivered as part of the Archive2Anywhere platform. The DHS HQ A2Z is a sub-system within the Mail, Mobility and Archiving Services (MMAS) FISMA boundary. The DHS HQ A2Z facilitates: elimination of legacy email archives, retention of inactive employee work files and PSTs, retention of file system content and system generated data, data sets generated from eDiscovery, and data sets generated from eDiscovery response to facilitate DHS data retention searches. DHS Archive2Azure delivers long-term, secure retention, and management of low touch unstructured data, including journal email for regulatory compliance.
MGMT	LAN A - Network Services	LAN A - Network Services (LAN A - NS) is the sensitive but unclassified servers and network hardware that facilitate business productivity by allowing data to be processed and transmitted.

**DHS High Cost Non-High Value Asset (Non-HVA) Major Information Systems -  
Listing of Non-PII systems (2022)**

Component	System Name	System Description
ICE	P25 Land Mobile Radio Network	<p>Project 25 (P25) Land Mobile Radios and related Infrastructure will provide mission-critical tactical communications capabilities. The communication technologies will support ICE LEOs in routine operations, continuity of communications, special operations, and emergency response and recovery. TACCOM will provide P25 interoperable communications with all ICE, and all federal, state, local and tribal law enforcement agencies across wide geographic areas. The systems will be scalable and expandable to support tactical communications in emergency situations.</p>
ICE	Robotics Process Automation	<p>Robotics Process Automation (RPA) is a software-based approach to process automation through scripted interactions with existing applications and processes. RPA is most often implemented through third-party software offerings, which allow the development and execution of automations. RPA solutions can work within an existing IT landscape and can be used to automate a wide range of computational transaction-based processes. The automations that are created through RPA are programmed to mimic and replicate the actions of a human worker interacting with the user interface (e.g., clicks and interactions that would be visible on a desktop screen). Automations can be programmed to complete tasks that are repetitive, have multiple steps and interact with multiple applications, all within a controlled and centralized system and framework.</p>

CBP	CBP Enterprise Monitoring Tools	<p>CBP Enterprise Monitoring Tools (CEMT) is a Major Application that provides monitoring and alerting for situational awareness of CBP's enterprise and system configuration environment. CEMT is a complex system that consists of a combination of Commercial off the Shelf (COTS) applications/software, custom code, and database servers that form various functional areas. Each functional area has its own unique function which shares data throughout CBP with Office of Information and Technology (OIT) managers, CBP Situation Room Personnel, Technical Operations Center (TOC), and the Enterprise Management and Monitoring (EMM) Section.</p>
-----	---------------------------------	---

CBP	CBP Network Operations Center	<p>The CBP Network Operations Center (NOC) is tasked with providing and maintaining technical support on a 24X7 basis for CBP Network. The CBP NOC environment includes CBP field site LAN Switches, WAN optimization appliances, firewalls, DNS DHCP services, engineering services to perform network support, monitoring, and maintenance on NDC-1 Data Center and all CBP field site environments. The CBP LAN switch environment encompasses all manageable switches within NDC NOC enclave and CBP field sites. The purpose of the CBP NOC is to maintain the performance, management and administration capabilities of CBP network, all CBP field site locations to include the underlying switched layer 2 and layer 3 supporting environment. To support this effort of network management, the CBP NOC deploys and maintains all network devices, and collects and report information related to the overall health of the network. Other functions of the NOC include collecting system logs, monitoring network status via polling, archiving historical network, providing Domain Name Service (DNS) resolution for CBP and CBP field sites. To ensure the viability of the NOC, prevention controls have been implemented. Prevention controls include preventing attacks through the use of deploying firewall rules and Switch/Router Access Control Lists (ACLs). Additionally, back-up and recovery procedures help ensure any potential intrusions have minimal impact on these systems.</p>
-----	-------------------------------	--

TSA	Computer Network Defense System	<p>The Computer Network Defense System (CNDS) provides real-time monitoring of system, network, and cyber security events in the TSA Security Operations Center (SOC). Security events are collected via Splunk, a security information and event management system that captures and correlates real-time data in searchable repositories from which it can generate reports and alerts. CNDS primarily stores machine generated security events coming from the IT enterprise network technology stack. This usually consists of Intrusion Detection Systems (IDS), web proxies, firewalls, simple mail transport protocol (SMTP), Anti-Virus (AV) and operating system security and audit event logs. All of this log information is ingested by the CNDS Security Information and Event Management (SIEM) system where it is subjected through a series of detection and correlation rules in order to find the potential threats, suspicious behavior and malicious code that requires further investigation by a TSA SOC analyst.</p>
