Introduction

The Computer Forensics Tool Testing (CFTT) program is a joint project of the Department of Homeland Security's (DHS) Science and Technology Directorate (S&T), the National Institute of Justice, and the National Institute of Standards and Technology's (NIST) Special Programs Office and Information Technology Laboratory. CFTT is supported by other organizations, including the Federal Bureau of Investigation, the U.S. Department of Defense's Cyber Crime Center, U.S. Internal Revenue Service's Criminal Investigation Division Electronic Crimes Program, U.S. Immigration and Customs Enforcement, U.S. Customs and Border Protection and U.S. Secret Service. The objective of the CFTT program is to provide measurable assurance to practitioners, researchers, and other applicable users that the tools used in computer forensics investigations provide accurate results. Accomplishing this requires the development of specifications and test methods for computer forensics tools and subsequent testing of specific tools against those specifications.

Test results provide the information necessary for developers to improve tools, users to make informed choices, and the legal community and others to understand the tools' capabilities. The CFTT approach to testing computer forensics tools is based on well-recognized methodologies for conformance and quality testing. Interested parties in the computer forensics community can review and comment on the specifications and test methods posted on the CFTT website (<https://www.cftt.nist.gov/>).

This document reports the results from testing the forensic media preparation function of Mac Test and Erasure Version 10.40 using the CFTT Federated Testing Test Suite for Forensic Media Preparation, Version 5.

Federated Testing is an expansion of the CFTT program to provide forensic investigators and labs with test materials for tool testing and to support shared test reports. The goal of Federated Testing is to help forensic investigators to test the tools they use in their labs and to enable sharing of tool test results. CFTT's Federated Testing Forensic Tool Testing Environment and related test suites can be downloaded from <http://www.cftt.nist.gov/federated-testing.html> and used to test forensic tools. The results can be optionally shared with CFTT, reviewed by CFTT staff, and then shared with the community.

Test results from other tools can be found on DHS's computer forensics webpage at <https://www.dhs.gov/science-and-technology/nist-cftt-reports>.

How to Read This Report

This report is organized into the following sections:

1. **Tool Description:** The tool name, version, and developer information are listed.
2. **Testing Organization:** Contact information and approvals.
3. **Results Summary:** This section identifies any significant anomalies observed in the test runs. This section provides a narrative of key findings identifying where the tool meets expectations and provides a summary of any ways the tool did not meet expectations. The section also provides any observations of interest about the tool or about testing the tool including any observed limitations or organization-imposed restrictions on tool use.
4. **Test Environment and Selected Test Configurations:** Description of hardware and software used in tool testing, the test drives used, and a list of the applicable test configurations from the Federated Testing Forensic Media Preparation Test Suite.
5. **Test Results by Test Configuration:** Automatically generated test results that identify anomalies.
6. **Appendix: Additional Details:** Additional administrative details for each test configuration such as who ran the test, when the test was run, computer used, etc.

Federated Testing Test Results for Forensic Media Preparation Tool: Mac Test and Erasure Version 10.40

1. Tool Description

Tool Name: Mac Test and Erasure
Tool Version: 10.40
Operating System: macOS
Vendor Name: Greystone Data Technology (GDT, Inc.)
Web: <https://greystonedatatech.com>

2. Testing Organization

Organization Conducting Test: Greystone Data Technology
Contact: Chien Pham
Report Date: Sep 27, 2022
Authored by: Chien Pham

This test report was generated using CFTT's Federated Testing Forensic Tool Testing Environment; see [Federated Testing Home Page](#).

3. Results Summary

The results of Mac Test and Erasure Version 10.40 to wipe a Hard Disk Drive using 3-pass NIST 800-88-compliant Standard were "As Expected."

4. Test Environment & Selected Test Configurations

This section describes the test hardware and software, test configurations, and test drives used in testing.

4.1 Test Hardware and Software

Hardware: Mac mini 2014, Intel Core i5, CPU 2.80GHz with SATA Interface

Operating System: macOS

Software: Mac Test and Erasure Version 10.40

4.2 Defined Test Configurations

The following table describes each defined configuration of test drive and wipe method.

The columns are as follows:

- **Config:** The test configuration ID.
- **Drive Type:** The drive size category and interface type.
- **Host Interface:** The type of connection used to connect the test drive to the test computer.
- **Connection:** Either *direct* or *bridge*. Indicates if the test drive was connected to the test computer directly or via a bridge. If connected via a bridge, the bridge description is included.
- **Hidden Sectors:** Indicates the presence and type of hidden sectors.
- **Wipe Method:** The selected method for wiping a drive.

Config	Drive Type	Host Interface	Connection	Hidden Sectors	Wipe Method
001	SATA w/ NCQ support (modern drive)	SATA	Direct	None	Secure Erase

Note on SATA w/ NCQ support vs SATA w/o NCQ support: forensic media preparation tools treat drives differently based on whether they support NCQ (Native Command Queuing). SATA HDDs manufactured before 2005 and some older SSDs do not support NCQ. Newer HDDs manufactured in 2005 or later support NCQ.

4.3 Test Drive Information and Layouts

The following table describes the test drive and its layout for each test configuration.

- **Config:** The test configuration ID.
- **Drive Type:** The drive size category and interface type.
- **Manufacturer/Model:** The drive manufacturer and model.

- **Drive Size:** The drive size in sectors and Mega-/Giga-bytes.
- **Hidden Sectors:** The size in sectors of any hidden area and the type of hidden area.

Config	Drive Type	Manufacturer/Model	Drive Size	Hidden Sectors
001	SATA w/ NCQ support (modern drive)	MJA2250BH/FUJITSU	488,397,168 (232GiB)	0

5. Test Results by Test Configuration

This section has two subsections: a summary of the test results and detailed results for each test configuration.

5.1 Results Summary

The following table reports the overall result for each tested configuration. An entry of “*Anomaly*” in the “Results” column means that some sectors were not wiped. An entry of “*As Expected*” in the “Results” column means that all sectors were completely overwritten or erased.

Config	Drive Type	Host Interface	Connection	Hidden Sectors	Wipe Method	Results
001	SATA w/ NCQ support (modern drive)	SATA	Direct	None	Secure Erase	As Expected

5.2 Test Result Details by Configuration

This section presents the detailed analysis of each test configuration. Each analysis is presented as a table of sector runs for sectors as identified as either “*unchanged*,” “*overwritten*,” or “*shifted*.” A successful test result is for all sectors to be overwritten.

The columns of the tables of sector runs are as follows:

- **Result Type:** Category of result, either “*overwritten*” or “*unchanged*.” Sectors that have been relocated (still with original content) are classified as “*shifted*” and are considered as a variation on “*unchanged*.”
- **N Sectors:** The number of sectors in the category.
- **N Runs:** The number of sector runs in the category.
- **Start Logical Block Addressing (LBA)** For each sector run, this is the LBA of the first sector of the run.
- **End LBA:** For each sector run, this is the LBA of the last sector of the run.
- **Run Length:** For each sector run, the number of sectors in the run.

5.2.1 Test Result Details for Configuration 001

Expected Results: Configuration 001, all sectors overwritten

Result Type	N Sectors	N Runs	Start LBA	End LBA	Run Length
overwritten (hex fill)	488,397,168	1	0	488,397,167	488,397,168

6. Appendix: Additional Details

6.1 Test Configuration Administrative Details

For each test configuration run, the tester, the test computer, and the date the test was run are listed in the following table:

Config	Tester	Host	Date
001	Chien Pham	Desktop	Tue Sep 27 01:08:29 2022

OS: Linux Version 4.13.0-37-generic
Federated Testing Version 5, released 3/12/2020
