Introduction

The Computer Forensics Tool Testing (CFTT) program is a joint project of the Department of Homeland Security's (DHS) Science and Technology Directorate, the National Institute of Justice, and the National Institute of Standards and Technology's (NIST) Special Programs Office and Information Technology Laboratory. CFTT is supported by other organizations, including the Federal Bureau of Investigation, the U.S. Department of Defense Cyber Crime Center, U.S. Internal Revenue Service's Criminal Investigation Division Electronic Crimes Program, and U.S. Immigration and Customs Enforcement, U.S. Customs and Border Protection, and U.S. Secret Service. The objective of the CFTT program is to provide measurable assurance to practitioners, researchers, and other applicable users that the tools used in computer forensics investigations provide accurate results. Accomplishing this requires the development of specifications and test methods for computer forensics tools and subsequent testing of specific tools against those specifications.

Test results provide the information necessary for developers to improve tools, users to make informed choices, and the legal community and others to understand the tools' capabilities. The CFTT approach to testing computer forensics tools is based on well-recognized methodologies for conformance and quality testing. Interested parties in the computer forensics community can review and comment on the specifications and test methods posted on the CFTT website (<https://www.cftt.nist.gov/>).

This document reports the results from testing Oxygen Forensic Detective v15.5.0.110 – Cloud Extractor v9.5.0.19 for extracting supported cloud-based application data.

Test results from other tools can be found on the DHS S&T-sponsored digital forensics webpage, <https://www.dhs.gov/science-and-technology/nist-cftt-reports>

How to Read This Report

This report is divided into three sections. Section 1 identifies and provides a summary of any significant anomalies observed in the test runs. This section is sufficient for most readers to assess the suitability of the tool for the intended use. Section 2 identifies the testing environment and cloud based applications used for testing. Section 3 provides an overview of the test case results reported by the tool.

Test Results for Mobile Device Acquisition Tool

Tool Tested: Oxygen

Software Version: Forensic Detective v15.5.0.110 – Cloud Extractor v9.5.0.19

Supplier: Oxygen

Address: 909 N. Washington St, Suite 300, Alexandria, VA 22314

Phone: +1(703) 888-2327

WWW: <http://www.oxygenforensics.com/>

1 Results Summary

Oxygen Forensic Detective v15.5.0.110 – Cloud Extractor v9.5.0.19 was tested for its ability to extract and report data from supported cloud-based applications.

Except for the following anomalies, the tool acquired and reported all supported cloud-based application data.

Note that tools tested are reporting what is contained within cloud-based applications. Cloud-based applications often modify data (e.g., compressing the file, changing the file name) which results in inconsistent file names, file sizes, and/or hashes compared to the original file uploaded by a user.

Productivity Data (Google Contacts, iCloud Contacts):

- Individual “Contacts” profile pictures are not reported for “Google Contacts.” The profile picture associated with a “Contact” is a graphic with the first two letters of the individuals name.
- The “Job Title” for individual Contacts is not reported for “iCloud Contacts.”

Storage Services (One Drive):

- Authentication to “One Drive” was not successful. No data was extracted.

Email Services (Outlook):

- Authentication to “Outlook mail” was not successful. No data was extracted.

Social Media and Messaging Data (Facebook):

- DMs do not report heic, txt, doc, and pdf files.
- Facebook heart emoticons applied to a post are not reported.
- Note, as per above graphic and video files uploaded to Facebook will be returned as jpg and mp4 files.

Social Media and Messaging Data (Twitter):

- Authentication to Twitter was not successful. No data was extracted.

Social Media and Messaging Data (WhatsApp):

- Bio information from the owner and followers is not reported.
- Note, as per above graphic and video files uploaded to WhatsApp will be returned as jpg and mp4 files.

Social Media and Messaging Data (Instagram):

- Bio information from the owner and followers is not reported.
- The number of “likes” and “shares” for posts are not reported.
- Note, as per above graphic and video files uploaded to Instagram will be returned as jpg and mp4 files.

Social Media and Messaging Data (TikTok):

- Authentication to TikTok was not successful. Attempts to login with the TikTok username and password, google and Facebook were all attempted. No data was extracted.

NOTE: Some social media applications will compress files as they are uploaded, resulting in inconsistent file size, file names, and hash values compared to the original uploaded data files, resulting in different file sizes and hashes. This is reported “as expected” behavior and highlighted with an asterisk.

For more test result details see section 3.

2 Testing Environment

The tests were run in the NIST CFTT lab. This section describes the selected test execution environment, and the cloud-based data applications used for testing.

2.1 Execution Environment

Oxygen Forensic Detective v15.5.0.110 – Cloud Extractor v9.5.0.19 was installed on Windows 10 Pro version 10.0.19042.1586.

2.2 Cloud-based Application Data

Oxygen Forensic Detective v15.5.0.110 – Cloud Extractor v9.5.0.19 was measured by analyzing acquired data from supported cloud-based application data. Table 1 defines the data objects and elements used for testing tools capable of extracting and reporting cloud-based application data.

Service	Artifact Group - Artifacts
Storage Service: Google Drive iCloud One Drive	Account Profile: <i>Profile picture, Username, Password, Token</i> Files: <i>Filename, File Content, File Size, Creation Date, Last Viewed Date, Hash</i>
Email Service: Gmail Outlook	Account Profile: <i>Name, Username, Password, Token</i> Contacts: <i>Full Name, Email Address, Last Time Contacted Date, Number of Times Contacted, Last Viewed Date, File Content, File Type, File Size, Last Viewed Data</i> Email Data: <i>Direction (incoming, outgoing), Status (read, unread), Creation Date, Sender, Receiver email addresses, Subject, Email Body, Attachment Filename, Attachment File Content, File Size, Folder: Drafts, Inbox, Sent, Email Header, Hash</i>
Productivity Services: Google Calendar Google Contacts iCloud Contacts	Google Calendar Account Profile: <i>Username, Password, Token</i> Calendar Data: <i>Calendar Name, Event Description, Location of Event Start Date, End Date, Event Recurrence Date Range</i> Google Contacts Account Profile: <i>Email, Password, Token</i> Contact Data: <i>Profile Pic, Name, Company, Job Title, Email, Phone Number, Street Address, City, St, Zip, Birthday, Website, Notes</i>

Service	Artifact Group - Artifacts
Productivity Services, continued Google Calendar Google Contacts iCloud Contacts	<u>iCloud Contacts</u> Account Profile: <i>Email, Password, Token</i> Contact Data: <i>Profile Pic, Name, Company, Job Title, Email, Phone, Street Address, City, State/Country, Zip, Birthday, Website, Notes</i>

Table 1: Cloud-based Application Data

3 Test Results

This section provides the test cases results reported by the tool. Section 3.1 identifies the cloud-based service and data artifacts within each service used for testing Oxygen Forensic Detective v15.5.0.110 – Cloud Extractor v9.5.0.19.

The Test Cases column in sections 3.1 are comprised of two sub-columns that define a particular test category and individual sub-categories of cloud services that are verified when testing. The results are as follows:

As Expected: the CDX tool returned expected test results.

Partial: the CDX tool returned some of data.

Not As Expected: the CDX tool failed to return expected test results.

Not Applicable (NA): the CDX tool does not provide support.

3.1 Cloud Data Extraction

Cloud-based application data were acquired and analyzed with Oxygen Forensic Detective v15.5.0.110 – Cloud Extractor v9.5.0.19. All test cases pertaining to the acquisition of supported cloud-based application data were successful with the exception of the anomalies reported in Section 1 [Results Summary](#).

See Tables 2 below for more details.

NOTE: Some social media applications will compress files as they are uploaded, resulting in inconsistent file size, file names, and hash values compared to the original uploaded data files, resulting in different file sizes and hashes. This is reported as expected behavior and highlighted with an asterisk.
