

SUPPORTING TECHNOLOGY INNOVATION

The Department of Homeland Security (DHS) [Technology Clearinghouse](#) is a central resource for sharing authoritative science and technology information to foster discovery, development, and application of innovative technology solutions. The DHS Technology Clearinghouse is administered by the DHS Science and Technology Directorate to allow the entire homeland security community to search, discover, and access the latest outcomes of cutting-edge research, development, testing, and evaluation activities.

IMPROVING DECISION MAKING

Curated homeland security technology information is available to improve decision making by:

- Informing decisions in the full technology lifecycle
- Guiding research and development
- Driving procurement decisions
- Supporting policy decisions
- Saving money, time, and lives with better access to information about innovative technology solutions

ENDURING VALUE

The Technology Clearinghouse allows for public and access-restricted content to be shared from a single platform. DHS users can access the site with their credentials to discover all information in the Clearinghouse. Other members of the homeland security community can access the valuable public information. Each user's search results are tailored to their own access permissions.

SHARING FINDINGS

Members of the DHS community can easily share final results of their science and technology activities, thanks to the updated content submission form. This extends the impact and longevity of their work by reaching more audiences. Site users can contact the Clearinghouse team for help with sharing their resources and reports.

EXPANDED INFORMATION

- More than 1,000 individual items can be found in the Clearinghouse to aid decision making, policy development, procurement, and more. Additional content is being added to the Clearinghouse website weekly.
- In FY24, restricted access will expand to the broader federal government, enhancing the enduring value of this growing collection of homeland security information.
