#	Comment	Action	Explanation
M1	Page 9, Section 2.2. First paragraph The CSS should have the same definition whether it is being emulated by the Valid8 tool or is a manufacturer's product under test. When it is a product under test, it is never a group home (has no RF resources). But when it is emulated by Valid8 (in this test plan), it is a group home and a group serving. The definition should be consistent; the CSS should never be a group home in either case.	Accepted	Test cases that have a console and the group home will be removed for group based services.
