## Introduction

The Computer Forensics Tool Testing (CFTT) program is a joint project of the Department of Homeland Security (DHS), the National Institute of Justice (NIJ), and the National Institute of Standards and Technology (NIST) Special Programs Office and Information Technology Laboratory (ITL). CFTT is supported by other organizations, including the Federal Bureau of Investigation, the U.S. Department of Defense Cyber Crime Center, U.S. Internal Revenue Service Criminal Investigation Division Electronic Crimes Program, and the U.S. Department of Homeland Security's Bureau of Immigration and Customs Enforcement, U.S. Customs and Border Protection and U.S. Secret Service. The objective of the CFTT program is to provide measurable assurance to practitioners, researchers, and other applicable users that the tools used in computer forensics investigations provide accurate results. Accomplishing this requires the development of specifications and test methods for computer forensics tools and subsequent testing of specific tools against those specifications.

Test results provide the information necessary for developers to improve tools, users to make informed choices, and the legal community and others to understand the tools' capabilities. The CFTT approach to testing computer forensics tools is based on well-recognized methodologies for conformance and quality testing. Interested parties in the computer forensics community can review and comment on the specifications and test methods posted on the [CFTT Web site](#).

Federated Testing is an expansion of the CFTT program to provide forensic investigators and labs with test materials for tool testing and to support shared test reports. The goal of Federated Testing is to help forensic investigators to test the tools that they use in their labs and to enable sharing of tool test results. CFTT's Federated Testing Forensic Tool Testing Environment and included test suites can be downloaded from [NIST: CFTT Federated Testing Project](#) and used to test forensic tools. The results can be optionally shared with CFTT, reviewed by CFTT staff, and then shared with the community.

This document reports the results from testing the disk imaging function of the Tableau TD3 Forensic Imager Version 2.0.0 using the CFTT Federated Testing Test Suite for Disk Imaging, Version 2.

Test results from other tools can be found on [DHS's computer forensics web page](#).

## How to Read This Report

This report is organized into the following sections:

1. **Tested Tool Description.** The tool name, version, vendor information, support environment (e.g., operating system version, device firmware version, etc.) version are listed.
2. **Testing Organization.** Contact information and approvals.
3. **Results Summary.** This section identifies any significant anomalies observed in the test runs. This section provides a narrative of key findings identifying where the tool meets expectations and provides a summary of any ways the tool did not meet expectations. The section also provides any observations of interest about the tool or about testing the tool including any observed limitations or organization imposed restrictions on tool use.
4. **Test Environment.** Description of hardware and software used in tool testing in sufficient detail to satisfy the testing organization's policy and requirements.
5. **Test Result Details by Case.** Automatically generated test results that identify anomalies.
6. **Appendix: Additional Details.** Additional administrative details for each test case such as, who ran the test, when the test was run, computer used, etc.

## **Federated Testing Test Results for Disk Imaging Tool: Tableau TD3 Forensic Imager Version 2.0.0**

Tests were Configured for the Following Write Block Scenarios:

Large (> 138GB) SATA drive with write blocker built-in to imaging device connected by SATA interface

Large (> 138GB) SATA drive with write blocker built-in to imaging device connected by SATA interface

USB drive with write blocker built-in to imaging device connected by USB interface

### **Tool Description**

Tool Name: Tableau TD3 Forensic Imager

Firmware Version: 2.0.0

Vendor Contact:

Vendor name: Guidance Software  
Address: 1055 E. Colorado Blvd.  
Pasadena, CA 91106-2375  
Phone: 866-229-9199  
Web: <https://www.guidancesoftware.com/>

### **Testing Organization**

Organization conducting test: Missouri State Public Defender Digital Forensics Lab

Contact: Kate Davenport

Authored by: Kate Davenport

This test report was generated using CFTT's Federated Testing Forensic Tool Testing Environment, see [Federated Testing Home Page](#).

### **Results Summary**

Tool met expectations for different imaging scenarios successfully.

## Test Environment & Selected Cases

Hardware:

Tableau TD3 Forensic Imager

FT-LOGS- PNY 32 GB USB

A1 Source Drive- WD Black 500 GB S/N: WX41AB4CL9LF Model: WD5000BPKX-00HPJT0

A2 Source Drive- WD Black 500 GB S/N: WX41AB4CLHZ4 Model: WD5000BPKX-00HPJT0

A3 Source USB Drive- PNY 32 GB

D2 Destination Drive- Seagate Barracuda 80 GB S/N: 5LRC74XD Model: ST3808110AS

Firmware Version: 2.0.0

Federated Testing Version 2

### Selected Test Cases

This table presents a brief description of each test case that was performed.

**Test Case Status**

Case	Description	Status
FT-DI-01-SATA48	Acquire drive of a given type using a given write blocker connected to a computer with a given interface to an image file and compute selected hashes for the acquired data. Test the ability to read a given drive type accurately and correctly hash the data while creating an image file.	completed
FT-DI-01-SATA48	Acquire drive of a given type using a given write blocker connected to a computer with a given interface to an image file and compute selected hashes for the acquired data. Test the ability to read a given drive type accurately and correctly hash the data while creating an image file.	completed
FT-DI-01-USB	Acquire drive of a given type using a given write blocker connected to a computer with a given interface to an image file and compute selected hashes for the acquired data. Test the ability to read a given drive type accurately and correctly hash the data while creating an image file.	completed

FT-DI-10	Acquire a drive to an image file without enough space for the image file. Test the ability of the tool to notify the user that the image file is incomplete.	completed
FT-DI-14	Compute the hash value of a drive (without creating an image file). Test the ability to read all data accurately and correctly hash the data.	completed

## Test Result Details by Case

This section presents test results grouped by function.

### FT-DI-01

#### Test Case Description

Acquire drive of a given type using a given write blocker connected to a computer with a given interface to an image file and compute selected hashes for the acquired data. Test the ability to read a given drive type accurately and correctly hash the data while creating an image file.

This test can be repeated to test acquisition of multiple drive types. This test tests the ability of the tool to acquire a specific type of drive (the drive type tested is included in the test case name) to an image file using a specific write blocker (applies only to tools that are used with hardware write blockers) and a certain interface connection between the test computer and the write blocker. The write blocker used and the interface connection between the test computer and the write blocker are listed for each test case in the table below. Two tests are required to test ATA or SATA drives, one to test drives smaller than 138GB (ATA28 & SATA28: 28-bit addressing) and one to test larger drives (ATA48 & SATA48: 48-bit addressing).

#### Test Evaluation Criteria

The hash values computed by the tool should match the reference hash values computed for the source drive.

## Test Case Results

The following table presents results for individual test cases.

**Test Results for FT-DI-01 cases**

Case	Src	Blocker (interface)	Reference Hash vs Tool Hash	
			MD5	SHA1
FT-DI-01-SATA48	a1	write blocker built-in to imaging device (SATA)	match	match
FT-DI-01-SATA48	a2	write blocker built-in to imaging device (SATA)	match	match
FT-DI-01-USB	a3	write blocker built-in to imaging device (USB)	match	match

### Case Summary

Results are as expected.

## FT-DI-10

### Test Case Description

Acquire a drive to an image file without enough space for the image file. Test the ability of the tool to notify the user that the image file is incomplete.

### Test Evaluation Criteria

The tool should issue a message indicating not enough space for the image file.

## Test Case Results

The following table presents results for individual test cases.

**Test Results for FT-DI-10 cases**

Case	Message
FT-DI-10	Source image is not guaranteed to fit in destination file system.

### Case Summary

Results are as expected.

## FT-DI-14

### Test Case Description

Compute the hash value of a drive (without creating an image file). Test the ability to read all data accurately and correctly hash the data.

### Test Evaluation Criteria

The hash values computed by the tool should match the reference hash values computed for the source drive.

### Test Case Results

The following table presents results for individual test cases.

**Test Results for FT-DI-14 cases**

Case	Src	Reference Hash vs Tool Hash	
		MD5	SHA1
FT-DI-14	a2	match	match

### Case Summary

Results are as expected.

## Appendix: Additional Details

### Test Drives and Partitions

The following table presents the state of each source object, drive or partition, including reference hashes and known content.

Both drives and partitions are described in the table. Partitions are indicated in the *Drive* column by the notation **[drive] + [partition number]**. Where **[drive]** is the drive label and **[partition number]** is the partition number. For example, the first partition on drive A3 would be A3+1. The type column records either the drive type, e.g. SATA, USB, etc., or the partition type, e.g., NTFS, FAT32, etc., depending on whether a drive or a partition is being described.

**Test Drives**

Drive	Type	Content	Sectors	MD5	SHA1	SHA256	SHA512
a1	sata	known	976773168 (465GiB)*	A62A5 ...	EC829 ...	33100 ...	3EFD8 ...
a2	sata	known	976773168 (465GiB)*	8FF3A ...	D8F8B ...	0C592 ...	93B31 ...
a3	usb	known	61997056 (29GiB)	1EA0A ...	F95DD ...	45F43 ...	17105 ...

\* Large 48-bit address drive

### Test Case Admin Details

For each test run, the test computer, the tester, the source drive, the image file drive, the destination drive, and the date the test was run are listed.

**Test Case Admin Details**

Case	User	Host	Blocker (PC interface)	Src	Image	Dst	Date
ft-di-01-sata48	KED	Td3	write blocker built-in to imaging device (SATA)	a1	no	none	Fri Jul 21 08:32:37 2017
ft-di-01-sata48	KED	Td3	write blocker built-in to imaging device (SATA)	a2	no	none	Mon Jul 31 08:28:49 2017
ft-di-01-usb	KED	Td3	write blocker built-in to imaging device (USB)	a3	no	none	Thu Jul 20 10:42:46 2017
ft-di-10	KED	Td3	N/A	a2	d2	none	Mon Jul 31 05:30:04 2017
ft-di-14	KED	Td3	N/A	a2	none	none	Mon Jul 24 11:22:19 2017

## Test Setup & Analysis Tool Versions

Version numbers of tools used are listed.

### Setup & Analysis Tool Versions

cfft-di Version 1.20 created 07/05/16 at 14:56:34
cfft-di Version 1.19 created 06/02/16 at 11:27:15
diskwipe.c Linux Version 1.5 Created 03/20/13 at 14:23:34

Tool: @(#) ft-di-prt\_test\_report.py Version 1.20 created 07/05/16 at 14:57:20

OS: Linux Version 3.2.0-51-generic

Federated Testing Version 2, released 6/30/2017
