Introduction

The Computer Forensics Tool Testing (CFTT) program is a joint project of the National Institute of Justice (NIJ), the Department of Homeland Security, and the National Institute of Standards and Technology's Law Enforcement Standards Office and Information Technology Laboratory. CFTT is supported by other organizations, including the Federal Bureau of Investigation, the U.S. Department of Defense Cyber Crime Center, the U.S. Internal Revenue Service Criminal Investigation Division Electronic Crimes Program, the Bureau of Immigration and Customs Enforcement, U.S. Customs and Border Protection and the U.S. Secret Service. The objective of the CFTT program is to provide measurable assurance to practitioners, researchers and other applicable users that the tools used in computer forensics investigations provide accurate results. Accomplishing this requires the development of specifications and test methods for computer forensics tools and subsequent testing of specific tools against those specifications.

Test results provide the information necessary for developers to improve tools, users to make informed choices, and the legal community and others to understand the tools' capabilities. This approach to testing computer forensic tools is based on well-recognized methodologies for conformance and quality testing. The specifications and test methods are posted on the CFTT Web site (<http://www.cfft.nist.gov/>) for review and comment by the computer forensics community.

This document reports the results from testing the wipe function of Tableau TDW1 Drive Tool / Drive Wiper - Firmware version 04/07/10 18:21:33 against the *Forensic Media Preparation Tool Test Assertions and Test Plan Version 1.0*, available at the CFTT Web site (<http://www.cfft.nist.gov/fmp-atp-pc-01.pdf>).

Test results for other devices and software packages using the CFTT tool methodology can be found on NIJ's CFTT Web page, <http://www.nij.gov/nij/topics/forensics/evidence/digital/standards/cfft.htm>.

How to Read This Report

This report is divided into four sections. The first section is a summary of the results from the test runs. This section is sufficient for most readers to assess the suitability of the tool for its intended use. The remaining sections of the report describe how the tests were conducted and provide documentation of test case details that support the report summary. Section 2 gives the selection of each test case from the set of possible cases defined in the test plan for forensic media preparation tools. The test cases are selected, in general, based on features offered by the tool. Section 3 lists the hardware and software used to run the test cases, with links to additional information about the items used. Section 4 contains a description of each test case, listing all test assertions that apply along with

their expected results and the actual results. Please refer to the vendor's Web page (<https://www.tableau.com/index.php?pageid=products&model=TDW1>) for guidance on using the tool.

Test Results for Forensic Media Preparation Tool

Tool Tested: Tableau TDW1 Drive Tool / Drive Wiper

1 Results Summary

The Tableau TDW1 Drive Tool / Drive Wiper is a multipurpose tool designed to erase SATA hard drives. It provides single- or multi-pass drive wiping options accessible from a menu-driven interface located on the front panel of the device.

In all the test cases, the Tableau TDW1 Drive Tool / Drive Wiper - version 04/07/10 18:21:33 overwrote all visible sectors successfully.

The tool does not automatically remove hidden sectors from source drives but is designed to alert the user when hidden sectors exist. The user may either leave the hidden sectors as is or manually remove them using the “Disk Utilities” *Remove DCO & HPA* menu option. In cases FMP-03-DCO-2, FMP-03-DCO-HPA-2 and FMP-03-HPA-2, the *Remove DCO & HPA* option was not exercised and hidden sectors were not overwritten. In cases FMP-03-DCO, FMP-03-DCO-HPA and FMP-03-HPA, the *Remove DCO & HPA* option was exercised and all sectors were successfully overwritten.

Table 1 provides a brief overview of the test case results.

Table 1. Overview of Test Results

Test Case	Total Sectors	First Sector Overwritten	Last Sector Overwritten	Unchanged Sectors	
				First	Last
FMP-01-SATA28	78140160	0	78140159		
FMP-01-SATA48	312581808	0	312581807		
FMP-03-DCO	234441648	0	234441647		
FMP-03-DCO-2	390721968	0	380721966	380721967	390721967
FMP-03-DCO-HPA	488397168	0	488397167		
FMP-03-DCO-HPA-2	234441648	0	209441646	209441647	234441647
FMP-03-HPA	156301488	0	156301487		
FMP-03-HPA-2	390721968	0	375721966	375721967	390721967

Test Case Selection

Tableau TDW1 Drive Tool / Drive Wiper was only tested for its ability to overwrite sectors of a disk drive. The overwrite command can be run in either 'single' or 'multiple pass' mode. See the 'Log Highlights' box of Test Details section 4.2 for more details as to the construction of each individual test setup.

The test cases were selected from cases defined by *Forensic Media Preparation Tool Test Assertions and Test Plan Version 1.0* based on features supported by this tool.

Table 2 shows which wipe mode was selected and the initial fill written to disk (hex value). The fill value written by **diskwipe** to initialize the drive is reported in the column labeled **Initial Fill**.

Table 2. Modes and Values

Test Case	Mode	Initial Fill (hex value)
FMP-01-SATA28	Multiple pass	0x24 ('\$')
FMP-01-SATA48	Single pass	0x43 ('C')
FMP-03-DCO	Single pass	0x1C
FMP-03-DCO-2	Single pass	0x33 ('3')
FMP-03-DCO-HPA	Multiple pass	0x2C (',')
FMP-03-DCO-HPA-2	Multiple pass	0x1D
FMP-03-HPA	Single pass	0x32 ('2')
FMP-03-HPA-2	Single pass	0x1C

The following source interfaces were used in testing: SATA28 and SATA48.

Test Materials

1.1 Support Software

Several programs were used in the setup and analysis of the test drives. These include **hdat2** (download from <http://www.hdat2.com/download.html>), **dsumm** (download from <http://www.cfft.nist.gov/>), **ransom** (download from <http://www.cfft.nist.gov/>) and **diskwipe** from **FS-TST Release 2.0** (download from <http://www.cfft.nist.gov/diskimaging/fs-tst20.zip>).

The **hdat2** program is used to create, remove and document hidden areas on a drive.

The **dsumm** program analyzes the content of a hard drive. It produces a summary of disk contents in terms of counts for each byte value present on the drive. For example, if a drive can contain 10GB (19531250 sectors of 512 bytes per sector) and the drive is wiped with zero bytes, then **dsumm** reports 10,000,000,000 zero bytes. The program also prints the first sector found with printable ASCII content.

The **ransum** program examines a hard drive to identify sectors that do not contain the content written to the drive by the **diskwipe** program. The **ransum** output is a list of sector ranges classified as either *overwritten* or *unchanged*.

The **diskwipe** program initializes a hard drive with known content.

1.2 Test Drive Creation

The following steps are used to set up a test drive:

1. The drive is initially filled with known content by the **diskwipe** program from FS-TST. The **diskwipe** program writes the sector address to each sector in both C/H/S and LBA format. The remainder of the sector bytes is set to a constant fill value unique for each drive. Each sector has known unique content after the setup. The fill value is noted in the **diskwipe** tool log file.
2. The **dsumm** program analyzes the drive contents. This documents the content of the drive.
3. If the drive is intended for hidden area tests (FMP-03), either an HPA, a DCO or a DCO with an HPA is created.
4. The drive size after creation of a hidden area is recorded.

1.3 Test Drive Analysis

The following steps are used to analyze a test drive after it has been wiped by the tool under test:

1. The size of the drive is recorded. This determines if the tool changes the size of a hidden area.
2. Any hidden areas still remaining on the drive are removed.
3. The **dsumm** program is run to determine the final content of the drive.
4. The **ransum** program is run to classify sectors as either *overwritten* or *unchanged*.

1.4 Test Drives

Table 3 lists the hard drives used in testing. The column labeled **Test Case** identifies the test case. The column labeled **Model** is the model of the drive as returned by the ATA IDENTIFY DEVICE command. The column labeled **Serial #** is the serial number as returned by the ATA IDENTIFY DEVICE command.

Table 3. Model and Serial Numbers by Test Case

Test Case	Model	Serial #
FMP-01-SATA28	FUJITSU MHW2040BH	K10XT7B278AP
FMP-01-SATA48	ST3160815AS	9RX7Y1DP
FMP-03-DCO	WDC WD1200JD-00GBB0	WD-WMAES2049679
FMP-03-DCO-2	SAMSUNG SP2004C	S07GJ1ULC07896
FMP-03-DCO-HPA	WDC WD2500AAKS-00VSA0	WD-WMART1591607
FMP-03-DCO-HPA-2	Hitachi HTS542512K9SA00	080914BB6200WBKPD2G
FMP-03-HPA	Hitachi HDS721680PLA380	PVF804Z31NKPSN
FMP-03-HPA-2	Hitachi HTS722020K9SA00	080703DP04A0DTGL80TC

Table 4 lists the drive configurations for hidden sector test cases. The column labeled **Test Case** identifies the test case. The column labeled **Size** is the number of visible sectors on the drive for the test case. The size of the drive, including both visible and hidden sectors, is reported in the column labeled **Total**. The column labeled **Hidden** is the size in sectors of the hidden area.

Table 4. Drive Configurations for Hidden Sector Tests

Test Case	Size	Total	Hidden (DCO+HPA)
FMP-03-DCO	224441647	234441648	10000001
FMP-03-DCO-2	380721967	390721968	10000001
FMP-03-DCO-HPA	463397167	488397168	25000001 (10000001+15000000)
FMP-03-DCO-HPA-2	209441647	234441648	25000001 (10000001+15000000)
FMP-03-HPA	141301487	156301488	15000001
FMP-03-HPA-2	375721967	390721968	15000001

Test Results

The main item of interest for interpreting the test results is determining the conformance of the tool under test with the test assertions. Conformance with each assertion tested by a given test case is evaluated by examining the **Log Highlights** box of the test report details.

1.5 Test Results Report Key

A summary of the actual test results is presented in this report. The following table presents a description of each section of the test report summary.

Heading	Description
First Line:	Test case ID, name and version of tool tested.
Case Summary:	Test case summary from <i>Forensic Media Preparation Tool Test Assertions and Test Plan Version 1.0</i> .
Assertions:	The test assertions applicable to the test case, selected from <i>Forensic Media Preparation Tool Test Assertions and Test Plan Version 1.0</i> .
Tester Name:	Name or initials of person executing test procedure.
Analysis Host:	Host used to set up test drive and analyze final drive state.
Test Host:	Host computer executing the test.
Test Date:	Time and date that test was started.

Test Case FMP-01-SATA28 Tableau TDW1 F/W version: 04/07/10 18:21:33

1.6.8 FMP-03-HPA-2

Test Case FMP-03-HPA-2 Tableau TDW1 F/W version: 04/07/10 18:21:33	
Case Summary:	FMP-03. Overwrite hidden sectors using WRITE commands.
Assertions:	FMP-CA-01 All visible sectors shall be overwritten with the specified benign data. FMP-AO-01 If there is a hidden area present and the tool supports overwriting sectors contained in a hidden area, then all sectors contained in the hidden area shall be overwritten with the specified benign data. FMP-AO-02 A hidden area may optionally be removed from the storage device.

About the National Institute of Justice

A component of the Office of Justice Programs, NIJ is the research, development and evaluation agency of the U.S. Department of Justice. NIJ's mission is to advance scientific research, development and evaluation to enhance the administration of justice and public safety. NIJ's principal authorities are derived from the Omnibus Crime Control and Safe Streets Act of 1968, as amended (see 42 U.S.C. §§ 3721–3723).

The NIJ Director is appointed by the President and confirmed by the Senate. The Director establishes the Institute's objectives, guided by the priorities of the Office of Justice Programs, the U.S. Department of Justice, and the needs of the field. The Institute actively solicits the views of criminal justice and other professionals and researchers to inform its search for the knowledge and tools to guide policy and practice.

Strategic Goals

NIJ has seven strategic goals grouped into three categories:

Creating relevant knowledge and tools

1. Partner with state and local practitioners and policymakers to identify social science research and technology needs.
2. Create scientific, relevant, and reliable knowledge—with a particular emphasis on terrorism, violent crime, drugs and crime, cost-effectiveness, and community-based efforts—to enhance the administration of justice and public safety.
3. Develop affordable and effective tools and technologies to enhance the administration of justice and public safety.

Dissemination

4. Disseminate relevant knowledge and information to practitioners and policymakers in an understandable, timely and concise manner.
5. Act as an honest broker to identify the information, tools and technologies that respond to the needs of stakeholders.

Agency management

6. Practice fairness and openness in the research and development process.
7. Ensure professionalism, excellence, accountability, cost-effectiveness and integrity in the management and conduct of NIJ activities and programs.

Program Areas

In addressing these strategic challenges, the Institute is involved in the following program areas: crime control and prevention, including policing; drugs and crime; justice systems and offender behavior, including corrections; violence and victimization; communications and information technologies; critical incident response; investigative and forensic sciences, including DNA; less-than-lethal technologies; officer protection; education and training technologies; testing and standards; technology assistance to law enforcement and corrections agencies; field testing of promising programs; and international crime control.

In addition to sponsoring research and development and technology assistance, NIJ evaluates programs, policies, and technologies. NIJ communicates its research and evaluation findings through conferences and print and electronic media.
