Introduction

The Computer Forensics Tool Testing (CFTT) program is a joint project of the National Institute of Justice (NIJ), the research and development organization of the U.S. Department of Justice; the National Institute of Standards and Technology’s (NIST) Office of Law Enforcement Standards (OLES) and Information Technology Laboratory (ITL); and is supported by other organizations, including the Federal Bureau of Investigation, the Department of Defense Cyber Crime Center, and the Department of Homeland Security’s Bureau of Immigration and Customs Enforcement and U.S. Secret Service. The objective of the CFTT project is to provide measurable assurance to practitioners, researchers, and other applicable users that the tools used in computer forensics investigations provide accurate results. Accomplishing this requires the development of specifications and test methods for computer forensics tools and subsequent testing of specific tools against those specifications.

Test results provide the information necessary for developers to improve tools, users to make informed choices, and the legal community and others to understand the tools’ capabilities. The approach for testing computer forensic tools is based on well-recognized methodologies for conformance and quality testing. The specifications and test methods are posted on the CFTT Web site at http://www.cftt.nist.gov for both comment and review by the computer forensics community.

This document reports the results from testing the Royal Canadian Mounted Police Hard-Disk Write Lock V0.8 (RCMP HDL) against Software Write Block Tool Specification & Test Plan, Version 3.0, available at the CFTT Web site. This specification identifies the top-level tool requirements as—

- The tool shall not allow a protected drive to be changed.
- The tool shall not prevent obtaining any information from or about any drive.
- The tool shall not prevent any operations to a drive that is not protected.
Test Results for Software Write Block Tools: RCMP HDL V0.8

Tool Tested: RCMP HDL V0.8 021126 © RCMP 1993–2002

Operating System: MS DOS (Windows 98 DOS) Version 4.10.2222

Supplier: Royal Canadian Mounted Police
Technological Crime Branch
Technical Operations Directorate

Address: 1426 St. Joseph Blvd.
Ottawa, Ontario K1A 0R2

1. Results Summary by Requirements

The tool shall not allow a protected drive to be changed.
For all test cases run, the tool always blocked commands that would have changed any protected drives.

The tool shall not prevent obtaining any information from or about any drive.
For all test cases run, the tool always allowed commands to obtain information from any protected drives.

The tool shall not prevent any operations to a drive that is not protected.
For all test cases run, the tool always allowed any command to access any unprotected drives.

2. Anomalies

The tool functioned as documented and no anomalies were observed. Two commands in the control category were blocked that could have been allowed: the recalibrate (0x11) and the extended seek (0x47) commands.

Test Cases: SWB-11, SWB-12, SWB-23, and SWB-24.

3. Test Case Selection

The test cases were selected from Software Write Block Tool Specification & Test Plan, Version 3.0.

All of the 40 test cases defined in the specification were applied to HDL V0.8.
4. Test Results by Assertion

This section presents the test results grouped by assertion. The assertions are taken from the Software Write Block Tool Specification & Test Plan, Version 3.0.

4.1 Mandatory Assertions

SWB-AM-01. If a drive is protected and a command from the write category is issued for the protected drive, then the tool shall block the command.

Each command in the write category was sent to all protected drives, and HDL blocked every command sent.

SWB-AM-02. If a drive is protected and a command from the configuration category is issued for the protected drive then the tool shall block the command.

Each command in the configuration category was sent to all protected drives, and HDL blocked every command sent.

SWB-AM-03. If a drive is protected and a command from the miscellaneous category is issued for the protected drive, then the tool shall block the command.

Each command in the miscellaneous category was sent to all protected drives, and HDL blocked every command sent.

SWB-AM-04. If a drive is protected and a command from the read category is issued for the protected drive, then the tool shall not block the command.

Each command in the read category was sent to all protected drives, but HDL never blocked any command sent.

SWM-AM-05. If a drive is protected and a command from the control category is issued for the protected drive, then the tool shall not block the command.

Each command in the control category was sent to all protected drives. HDL always blocked two of the commands sent: the recalibrate (0x11) and the extended seek (0x47) commands. HDL never blocked the other commands in the control category.

Test Cases: SWB-11 and SWB-12.

SWB-AM-06. If a drive is protected and a command from the information category is issued for the protected drive, then the tool shall not block the command.

Each command in the information category was sent to all protected drives, but HDL never blocked any command sent.
SWB-AM-07. If the tool is executed, then the tool shall issue a message indicating that the tool is active.

HDL always issued the message “Write Lock successfully installed” to indicate that the tool was active.

SWB-AM-08. If the tool is executed, then the tool shall issue a message indicating all drives accessible by the covered interfaces.

HDL always issued the message “N Hard-Disk(s) reported by Int_13h” to indicate that N drives were accessible by the interface.

SWB-AM-09. If the tool is executed, then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.

For each covered drive, HDL always issued either the messages “Hard-Disk N Locked!” or “Hard-Disk N Not Locked!” to indicate the protection status of each drive.

SWB-AM-10. If the tool is configured to return success on blocked commands and the tool blocks a command, then the return code shall indicate successful command execution.

If HDL was configured to return success on blocked commands, all blocked commands returned success.

SWB-AM-11. If the tool is configured to return fail on blocked commands and the tool blocks a command, then the return code shall indicate unsuccessful command execution.

If HDL was configured to return fail on blocked commands, all blocked commands returned fail.

4.2 Optional Assertions

SWB-AO-01. If a subset of all covered drives is specified for protection, then commands from the write category shall be blocked for drives in the selected subset.

When a subset of covered drives was selected and each command in the write category was sent to all protected drives, HDL blocked every command sent.

SWB-AO-02. If a subset of all covered drives is specified for protection, then commands from the configuration category shall be blocked for drives in the selected subset.

When a subset of covered drives was selected and each command in the configuration category was sent to all protected drives, HDL blocked every command sent.
SWB-AO-03. If a subset of all covered drives is specified for protection, then commands from the miscellaneous category shall be blocked for drives in the selected subset.

When a subset of covered drives was selected and each command in the miscellaneous category was sent to all protected drives, HDL blocked every command sent.

SWB-AO-04. If a subset of all covered drives is specified for protection, then commands from the read category shall not be blocked for drives in the selected subset.

When a subset of covered drives was selected and each command in the read category was sent to all protected drives, HDL never blocked any command sent.

SWB-AO-05. If a subset of all covered drives is specified for protection, then commands from the control category shall not be blocked for drives in the selected subset.

When a subset of covered drives was selected and each command in the control category was sent to all protected drives, HDL always blocked two of the commands sent: the recalibrate (0x11) and the extended seek (0x47) commands. HDL never blocked the other commands in the control category.

SWB-AO-06. If a subset of all covered drives is specified for protection, then commands from the information category shall not be blocked for drives in the selected subset.

When a subset of covered drives was selected and each command in the information category was sent to all protected drives, HDL never blocked any command sent.

SWB-AO-07. If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.

When a subset of covered drives was selected and each command in every category was sent to all unprotected drives, HDL never blocked any command sent.

SWB-AO-08. If the tool is active during the operating system boot and shutdown processes, then no changes are made to any protected drives.

The system was booted with the test harness and HDL and started from the AUTOEXEC.BAT file. Each command in the write category was sent to every protected drive to show that the tool was active. Finally the system was shut down. A SHA1 hash value was then computed and compared to a SHA1 hash value computed before the test for each drive used in the test to ensure that after the harness was no longer active, nothing was written to the drives. The SHA1 hash

1 The Secure Hash Algorithm (SHA1), developed by NIST, along with NSA, for use with the Digital Signature Standard (DSS) is specified within the Secure Hash Standard (SHS) [National Institute of Standards and Technology (NIST). FIPS Publication 180: Secure Hash Standard (SHS). May 1993.]. SHA-1 [National Institute of Standards and Technology (NIST)].
values computed after the test were the same as the values computed before the test, indicating that no changes to the drives occurred during the test.

**SWB-AO-09.** If the tool is active and the tool is then deactivated, then no commands to any drive shall be blocked.

The tool was activated, each command in the write category was sent to each protected drive and then the tool was deactivated. Then when all commands in every category were sent to each drive, HDL never blocked any commands sent.

**SWB-AO-10.** If the tool blocks a command, then the tool shall issue either an audio or a visual signal.

This optional feature is not supported by HDL.

5. Testing Environment

The tests were run in the NIST CFTT lab. This section describes the hardware (test computers and hard drives) available for testing. Not all components were used in testing. The following host computers were used for execution of test cases: Cadfael, Rumpole, Wimsey, JudgeDee, HecRamsey, McCloud, McMillan, and AndWife. Ten hard drives (8 different models, 3 different brands) were used for the tests (Table 5-1).

5.1 Test Computers

Cadfael, Rumpole, Wimsey, and JudgeDee have the following hardware components in common:

<table>
<thead>
<tr>

<tr>
<td>Two slots for removable SCSI hard disk drive</td>
</tr>
</tbody>
</table>

Rumpole also had a 30GB OnStream SC30 tape drive (not used in the test procedures). JudgeDee had a third slot for a removable IDE hard disk drive.

HecRamsey, McCloud, McMillan, and AndWife have the following hardware components in common (Table 5-2):

</tbody>
</table>

5.2 Hard Disk Drives

The hard disk drives that were used were selected from the drives listed in Table 5-3. These hard drives were mounted in removable storage modules. Any combination of up to three IDE hard drives and two SCSI hard drives can be installed in Paladin, HecRamsey, McCloud, McMillan, AndWife, Cadfael, Rumpole, Wimsey, or JudgeDee as required for a test. The IDE disks used had jumpers set for cable select. The SCSI ID for the SCSI disks was set to either 0 or 1 as required by the test case.

The hard drives used in testing are described in Table 5-3. The column labeled Label is an external identification for the hard drive. The column labeled Model is the model identification string obtained from the drive. The Interface column identifies the type of interface used to connect the drive to the computer. The Usable Sectors column documents the size of the drive in sectors. The column labeled GB gives the size of the drive in gigabytes.

</table>

The drives are set up in a variety of ways with the common partition types (FAT16, FAT32, FAT32X, NTFS, and Linux ext2) represented. The setup of each drive is documented in Table 5-4. The column labeled Drive Label is an external identification for the hard drive. The column labeled Partition Table describes the partition table for the drive. In the partition table description the column labeled N is a sequence number. The unlabeled column identifies a primary partition (P), a primary extended partition (X), a secondary partition within an extended partition (S), or an extended partition within an extended partition (x). The column labeled Start LBA is the starting logical block address (LBA) of the partition. The column labeled Length is
the length of the partition in sectors. The column labeled **Boot** indicates the boot partition. The column labeled **Partition Type** contains the two-digit hexadecimal partition type code and name of the partition type for common partition types.

</tbody>
</table>
After the drives were created, a SHA1 hash value was computed for the entire drive (Table 5-5). After testing was finished, a SHA1 hash value was computed again (Table 5-6). The lack of change in the SHA1 hash values indicates that no changes were made to the drives during testing.

### 5.3 Support Software

Software **Write Block Test Harness (SWBT) Release 1.0** was developed to support the testing of interrupt 13h-based software write block tools. The program DISKWIPE from the FS-TST Release 1.0 package was used in the drive setup procedure. Both FS-TST Release 1.0 and SWBT Release 1.0 can be obtained from CFTT website at [http://www.cftt.nist.gov](http://www.cftt.nist.gov). The support software has components to monitor interrupt 0x13 activity at [TALLY13.COM](http://www.cftt.nist.gov) and to issue each of the 256 possible interrupt 13 commands (TEST-HDL.EXE). The TEST-HDL program was written in ANSI C and compiled with the Borland C++ compiler version 4.5. The TALLY13 program was written in assembler language and compiled with Borland Turbo Assembler version 5.0. The programs listed in Table 5-7 are required for testing.

### Table 5-7. Software Required for Testing

### 5.4 Run Protocol Selection

Most test cases follow the same test procedures. However, some test cases require a special procedure. The procedure for setting up a selection of hard drives for use in testing is as follows:

1. Select a hard drive.
2. Use the FS-TST diskwipe program to initialize the drive.
3. Create and format partitions on the drive (optional step).
4. Compute a reference SHA1 hash of the drive.

The general procedure for executing a test case is as follows:

1. Select a test case to execute.
2. Install the number of hard drives called for by the test case.
3. Boot the test computer into DOS.
4. Follow the run protocol for the selected test case.
5. Save test case results to an archive location.

The **run protocol** specifies the actual procedures to follow for the test case. Some test cases require different setup procedures and methods to measure results. The values for test parameters such as **return type**, **command category**, **N drives**, and **protection pattern** can be found in *Software Write Block Tool Specification & Test Plan, Version 3.0*. The following protocols are defined:

- **Typical**
  1. Execute the interrupt 0x13 monitor (TALLY13).
  2. Execute the SWB tool under test with the specified **return type**.
  3. Execute TEST-HDL for the specified **command category**.

- **Uninstall**
  1. Execute the interrupt 0x13 monitor (TALLY13).
  2. Execute the SWB tool under test with the specified **return type**.
  3. Execute TEST-HDL for the **write** command category.
  5. Uninstall the SWB tool.
  6. Execute TEST-HDL for each **command category**.
• Boot
  1. Install the SWB tool. (For DOS systems, include the tool and monitor in the AUTOEXEC.BAT file.)
  2. Boot the system.
  3. Execute TEST-HDL for the write command category.
  4. Shutdown the system.

The typical protocol applies to cases 01–36, the boot protocol applies to test cases 37 and 38, and the uninstall protocol applies to cases 39 and 40.

6. Interpretation of Test Results

The main item of interest for interpretation of the test results is determining the conformance of the tool to the test assertions. This section lists each test assertion and identifies the information in the log files relevant to conformance with the assertion. Conformance of each assertion tested by a given test case is evaluated by examination of the Commands Executed and the Log File Highlights boxes of the test report summary.

6.1 Test Assertion Verification

This section describes where to find the information needed to verify each test assertion in the test case report.

SWB-AM-01. If a drive is protected and a command from the write category is issued for the protected drive, then the tool shall block the command.

The protected drives are identified on the HDL command line in the Commands Executed box. The Test Harness Log lists each command sent to each drive. If the action column contains blocked for each command sent to a protected drive, the test case conforms to the assertion.

SWB-AM-02. If a drive is protected and a command from the configuration category is issued for the protected drive, then the tool shall block the command.

The protected drives are identified on the HDL command line in the Commands Executed box. The Test Harness Log lists each command sent to each drive. If the action column contains blocked for each command sent to a protected drive, the test case conforms to the assertion.

SWB-AM-03. If a drive is protected and a command from the miscellaneous category is issued for the protected drive, then the tool shall block the command.

The protected drives are identified on the HDL command line in the Commands Executed box. The Test Harness Log lists each command sent to each drive. If the action column contains blocked for each command sent to a protected drive, the test case conforms to the assertion.
SWB-AM-04. If a drive is protected and a command from the read category is issued for the protected drive, then the tool shall not block the command.

The protected drives are identified on the HDL command line in the Commands Executed box. The Test Harness Log lists each command sent to each drive. If the action column contains allowed for each command sent to a protected drive, the test case conforms to the assertion.

SWB-AM-05. If a drive is protected and a command from the control category is issued for the protected drive, then the tool shall not block the command.

The protected drives are identified on the HDL command line in the Commands Executed box. The Test Harness Log lists each command sent to each drive. If the action column contains allowed for each command sent to a protected drive, the test case conforms to the assertion.

SWB-AM-06. If a drive is protected and a command from the information category is issued for the protected drive, then the tool shall not block the command.

The protected drives are identified on the HDL command line in the Commands Executed box. The Test Harness Log lists each command sent to each drive. If the action column contains allowed for each command sent to a protected drive, the test case conforms to the assertion.

SWB-AM-07. If the tool is executed, then the tool shall issue a message indicating that the tool is active.

If the Install HDL Log contains the text: “Write Lock successfully installed,” then the test case conforms to the test assertion.

SWB-AM-08. If the tool is executed, then the tool shall issue a message indicating all drives accessible by the covered interfaces.

HDL always issued the message “N Hard-Disk reported by Int_13h” to indicate that N drives were accessible by the interface. If N is the same as the number of drives specified on the TEST-HDL command line in the Commands Executed box, then the test case is in conformance with the test assertion.

SWB-AM-09. If the tool is executed, then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.

For each covered drive, HDL always issued either the messages “Hard-Disk N Locked!” or “Hard-Disk N Not Locked!” to indicate the protection status of each drive. If drive N is listed on the command line to HDL and the Install HDL log reports drive N as locked, then the test case is in conformance with the test assertion.
SWB-AM-10. If the tool is configured to return *success* on blocked commands and the tool blocks a command, then the return code shall indicate successful command execution.

HDL was configured to return *success* on blocked commands if an S flag was used on the HDL command line. The return value of blocked commands is *success* if in the Test Harness Log the value of the stat column is 0000 and the value of the Cry column is off.

SWB-AM-11. If the tool is configured to return *fail* on blocked commands and the tool blocks a command, then the return code shall indicate unsuccessful command execution.

HDL was configured to return *fail* on blocked commands if no S flag was used on the HDL command line. The return value of blocked commands is *fail* if in the Test Harness Log the value of the stat column is 0300 and the value of the Cry column is on.

SWB-AO-01. If a subset of all covered drives is specified for protection, then commands from the write category shall be blocked for drives in the selected subset.

The protected drives are identified on the HDL command line in the Commands Executed box. The Test Harness Log lists each command sent to each drive. If the action column contains *blocked* for each command sent to a protected drive, the test case conforms to the assertion.

SWB-AO-02. If a subset of all covered drives is specified for protection, then commands from the configuration category shall be blocked for drives in the selected subset.

The protected drives are identified on the HDL command line in the Commands Executed box. The Test Harness Log lists each command sent to each drive. If the action column contains *blocked* for each command sent to a protected drive, the test case conforms to the assertion.

SWB-AO-03. If a subset of all covered drives is specified for protection, then commands from the miscellaneous category shall be blocked for drives in the selected subset.

The protected drives are identified on the HDL command line in the Commands Executed box. The Test Harness Log lists each command sent to each drive. If the action column contains *blocked* for each command sent to a protected drive, the test case conforms to the assertion.

SWB-AO-04. If a subset of all covered drives is specified for protection, then commands from the read category shall not be blocked for drives in the selected subset.

The protected drives are identified on the HDL command line in the Commands Executed box. The TestHarness Log lists each command sent to each drive. If the action column contains *allowed* for each command sent to a protected drive, the test case conforms to the assertion.
SWB-AO-05. If a subset of all covered drives is specified for protection, then commands from the control category shall not be blocked for drives in the selected subset.

The protected drives are identified on the HDL command line in the Commands Executed box. The Test Harness Log lists each command sent to each drive. If the action column contains allowed for each command sent to a protected drive, the test case conforms to the assertion.

SWB-AO-06. If a subset of all covered drives is specified for protection, then commands from the information category shall not be blocked for drives in the selected subset.

The protected drives are identified on the HDL command line in the Commands Executed box. The Test Harness Log lists each command sent to each drive. If the action column contains allowed for each command sent to a protected drive, the test case conforms to the assertion.

SWB-AO-07. If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.

The protected drives are identified on the HDL command line in the Commands Executed box. The unprotected drives are the drives not listed on the HDL command line. The Test Harness Log lists each command sent to each drive. If the action column contains allowed for each command sent to an unprotected drive, the test case conforms to the assertion.

SWB-AO-08. If the tool is active during the operating system boot and shutdown processes, then no changes are made to any protected drives.

The protected drives are identified on the HDL command line in the Commands Executed box. The Test Harness Log lists each command sent to each drive. If the action column contains blocked for each command sent to a protected drive, the test case conforms to the assertion.

SWB-AO-09. If the tool is active and the tool is then deactivated, then no commands to any drive shall be blocked.

This assertion requires a special test protocol. In the first part of the test, the tool is activated and some write commands are blocked. In the second part of the test, the tool is deactivated and every command is sent to all installed drives. There are two log files for the tool and two log files for the test harness. The tool is allowed to refuse to deactivate. The tool refuses to deactivate if the tool has been configured to return success for blocked commands since deactivation might allow a buffered write to take place. If the tool is successfully deactivated, then all commands are allowed to all drives. If the tool does not deactivate, then no change occurs to the protection status of the drives.

A warning message appears in the second instance of the Test Harness Log file. This is normal for test cases SWB-39 and SWB-40. The warning message notes that write commands were allowed to unprotected drives while the tool was active during the first part of the test before the tool was deactivated.
SWB-AO-10. If the tool blocks a command, then the tool shall issue either an audio or a visual signal.

This optional feature is not supported by HDL.

### 6.2 Test Results Summary Key

A summary of the actual test results is presented in this report. Table 6-1 presents a description of each section of the test results summary.

<table>
<thead>
<tr>
<th>Heading</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>First Line:</td>
<td>Test case ID and name and version of software tested.</td>
</tr>
<tr>
<td>Case Summary:</td>

<td>The protected drives are identified on the HDL command line. HDL identifies the drives starting at 0.</td>
</tr>
<tr>
<td>Log File Highlights:</td>
<td>Selected entries from the test case log files. There are three log files that may appear. The log file created for TALLY13 is labeled <em>Monitor Execution</em>. The log file created for HDL is labeled <em>Install HDL Log</em>. The log file created by TEST-HDL is labeled <em>Test Harness Log</em>. For test cases SWB-39 and SWB-40, there are two separate logs for HDL and also for TEST-HDL because these cases require execution of HDL twice. The Monitor Execution log file records the program version and the date that the TALLY13 program was executed. The HDL log file is obtained by output redirection of the execution of HDL. The log file contains the version of HDL used (V0.8), the number of drives identified, and the protection status of each drive. The Test Harness Log is the record of commands sent to HDL and the action taken by HDL to either block or allow...</td>

Analysis: SWB-01 Expected results achieved

Case SWB-02 HDL -- Int_13 Hard Disk Write Lock V0.8 021126 © RCMP 1993–2002

Case Summary: SWB-02 Install two drives, configure return code to success, protect all drives, execute write commands.

Assertions Tested:
SWB-AM-01. If a drive is protected and a command from the write category is issued for the protected drive then the tool shall block the command.
SWB-AM-07. If the tool is executed then the tool shall issue a message indicating that the tool is active.
SWB-AM-08. If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
SWB-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
SWB-AM-10. If the tool is configured to return success on blocked commands and the tool blocks a command then the return code shall indicate successful command execution.

Tester Name: JRL
Test Date: Sun Aug 31 08:55:14 2003
Test PC: Wimsey
Test Software: SWBT 1.0
Hard Drives Used:
Drive 80, label 90 is a WDC WD300BB-00CAA0 with 58633344 sectors
Drive 81, label 64 is a WDC WD64AA with 12594960 sectors
Commands Executed:
Boot Test PC to (DOS 7.1) Windows 98 [Version 4.10.2222]

Case SWB-03 HDL -- Int_13 Hard Disk Write Lock V0.8 021126 © RCMP 1993-2002

Case Summary: SWB-03 Install one drive, configure return code to failure, protect all drives, execute configuration commands.

Assertions Tested:
SWB-AM-02. If a drive is protected and a command from the configuration category is issued for the protected drive then the tool shall block the command.
SWB-AM-07. If the tool is executed then the tool shall issue a message indicating that the tool is active.
SWB-AM-08. If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
SWB-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
SWB-AM-11. If the tool is configured to return fail on blocked commands and the tool blocks a command then the return code shall indicate unsuccessful command execution.

### Case SWB-06 HDL -- Int_13 Hard Disk Write Lock V0.8 021126 © RCMP 1993-2002

**Analysis:**
Swb-06 Expected results achieved

### Case SWB-07 HDL -- Int_13 Hard Disk Write Lock V0.8 021126 © RCMP 1993-2002

**Case Summary:**
Swb-07 Install all drives, configure return code to failure, protect all drives, execute read commands.

**Assertions Tested:**
- Swb-AM-04. If a drive is protected and a command from the read category is issued for the protected drive then the tool shall not block the command.
- Swb-AM-07. If the tool is executed then the tool shall issue a message indicating that the tool is active.
- Swb-AM-08. If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
- Swb-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
- Swb-AM-11. If the tool is configured to return fail on blocked commands and the tool blocks a command then the return code shall indicate unsuccessful command execution.

**Tester Name:** JRL

Case SWB-08 HDL -- Int_13 Hard Disk Write Lock V0.8 021126 © RCMP 1993-2002

Case Summary: SWB-08 Install two drives, configure return code to success, protect all drives, execute read commands.

Assertions Tested:

SWB-AM-04. If a drive is protected and a command from the read category is issued for the protected drive then the tool shall not block the command.

SWB-AM-07. If the tool is executed then the tool shall issue a message indicating that the tool is active.

SWB-AM-08. If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.

SWB-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.

SWB-AM-10. If the tool is configured to return success on blocked commands and the tool blocks a command then the return code shall indicate successful command execution.

### Case SWB-09 HDL -- Int_13 Hard Disk Write Lock V0.8 021126 © RCMP 1993–2002

**Case Summary:** SWB-09 Install one drive, configure return code to failure, protect all drives, execute information commands.

**Assertions Tested:**

SWB-AM-06. If a drive is protected and a command from the information category is issued for the protected drive then the tool shall not block the command.

SWB-AM-07. If the tool is executed then the tool shall issue a message indicating that the tool is active.

SWB-AM-08. If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.

SWB-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.

SWB-AM-11. If the tool is configured to return fail on blocked commands and the tool blocks a command then the return code shall indicate unsuccessful command execution.

**Analysis:** SWB-12 Expected results not achieved for assertions: AM-05

**Case SWB-13 HDL -- Int_13 Hard Disk Write Lock V0.8 021126 © RCMP 1993-2002**

**Case Summary:** SWB-13 Install all drives, configure return code to failure, protect with pattern odd, execute write commands.

**Assertions Tested:**

- **SWB-AM-07:** If the tool is executed then the tool shall issue a message indicating that the tool is active.
- **SWB-AM-08:** If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
- **SWB-AM-09:** If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
- **SWB-AM-11:** If the tool is configured to return fail on blocked commands and the tool blocks a command then the return code shall indicate unsuccessful command execution.
- **SWB-AO-01:** If a subset of all covered drives is specified for protection, then commands from the write category shall be blocked for drives in the selected subset.
- **SWB-AO-07:** If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.

Case SWB-16 HDL -- Int 13 Hard Disk Write Lock V0.8 021126 © RCMP 1993-2002

Case Summary: SWB-16 Install all drives, configure return code to success, protect with pattern mid, execute configuration commands.

Assertions Tested:

- SWB-AM-07. If the tool is executed then the tool shall issue a message indicating that the tool is active.
- SWB-AM-08. If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
- SWB-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
- SWB-AM-10. If the tool is configured to return success on blocked commands and the tool blocks a command then the return code shall indicate successful command execution.
- SWB-AO-02. If a subset of all covered drives is specified for protection, then commands from the configuration category shall be blocked for drives in the selected subset.
- SWB-AO-07. If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.

### Case SWB-17 HDL -- Int_13 Hard Disk Write Lock V0.8 021126 © RCMP 1993–2002

#### Case Summary:
SWB-17 Install all drives, configure return code to failure, protect with pattern random, execute miscellaneous commands.

#### Assertions Tested:

- **SWB-AM-07.** If the tool is executed then the tool shall issue a message indicating that the tool is active.
- **SWB-AM-08.** If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
- **SWB-AM-09.** If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
- **SWB-AM-11.** If the tool is configured to return fail on blocked commands and the tool blocks a command then the return code shall indicate unsuccessful command execution.
- **SWB-AO-03.** If a subset of all covered drives is specified for protection, then commands from the miscellaneous category shall be blocked for drives in the selected subset.
- **SWB-AO-07.** If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.

Case SWB-20 HDL -- Int_13 Hard Disk Write Lock V0.8 021126 © RCMP 1993-2002

Case Summary: SWB-20 Install all drives, configure return code to success, protect with pattern not mid, execute read commands.

Assertions Tested:

SWB-AM-07. If the tool is executed then the tool shall issue a message indicating that the tool is active.
SWB-AM-08. If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
SWB-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
SWB-AM-10. If the tool is configured to return success on blocked commands and the tool blocks a command then the return code shall indicate successful command execution.
SWB-AO-04. If a subset of all covered drives is specified for protection, then commands from the read category shall not be blocked for drives in the selected subset.
SWB-AO-07. If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.

Analysis: SWB-20 Expected results achieved

Case SWB-21 HDL -- Int_13 Hard Disk Write Lock V0.8 021126 © RCMP 1993–2002

Case Summary: SWB-21 Install all drives, configure return code to failure, protect with pattern high, execute information commands.

Assertions Tested:

- SWB-AM-07. If the tool is executed then the tool shall issue a message indicating that the tool is active.
- SWB-AM-08. If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
- SWB-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
- SWB-AM-11. If the tool is configured to return fail on blocked commands and the tool blocks a command then the return code shall indicate unsuccessful command execution.
- SWB-AO-06. If a subset of all covered drives is specified for...
Case SWB-21 HDL -- Int_13 Hard Disk Write Lock V0.8 021126 © RCMP 1993–2002

protection, then commands from the information category shall not be blocked for drives in the selected subset. SWB-AO-07. If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.

Analysis: SWB-22 Expected results achieved

### Case SWB-23 HDL -- Int_13 Hard Disk Write Lock V0.8 021126 © RCMP 1993–2002

Case Summary: SWB-23 Install all drives, configure return code to failure, protect with pattern random_u, execute control commands.

**Assertions Test:**

- **SWB-AM-07.** If the tool is executed then the tool shall issue a message indicating that the tool is active.
- **SWB-AM-08.** If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
- **SWB-AM-09.** If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
- **SWB-AM-11.** If the tool is configured to return fail on blocked commands and the tool blocks a command then the return code shall indicate unsuccessful command execution.
- **SWB-AO-05.** If a subset of all covered drives is specified for protection, then commands from the control category shall not be blocked for drives in the selected subset.
- **SWB-AO-07.** If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.

**Tester Name:** JRL
**Test Date:** Sun Aug 31 09:49:24 2003
**Test PC:** Wimsey
**Test Software:** SWBT 1.0

**Hard Drives Used:**
- Drive 80, label 90 is a WDC WD300BB-00CAA0 with 58633344 sectors
- Drive 81, label 8A is a WDC WD200EB-00CSF0 with 39102336 sectors
- Drive 82, label E4 is a QUANTUM ATLAS10K2-TY092J with 17938985 sectors
- Drive 83, label 2B is a Quantum QM39100TD-SCA Drive with 17783249 sectors

**Commands Executed:**
- Boot Test PC to (DOS 7.1) Windows 98 [Version 4.10.2222]
- tally13
- hd18 023
- 84,t-hdl SWB-23 Wimsey JRL c 90 8A E4 2B
- Shutdown Test PC

**Log File Highlights:**

Analysis: SWB-23 Expected results not achieved for assertions: AO-05
Case SWB-24 HDL -- Int_13 Hard Disk Write Lock V0.8 021126 © RCMP 1993-2002

Case Summary: SWB-24 Install all drives, configure return code to success, protect with pattern even, execute control commands.

Assertions Tested:

- SWB-AM-07. If the tool is executed then the tool shall issue a message indicating that the tool is active.
- SWB-AM-08. If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
- SWB-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
- SWB-AM-10. If the tool is configured to return success on blocked commands and the tool blocks a command then the return code shall indicate successful command execution.
- SWB-AO-05. If a subset of all covered drives is specified for protection, then commands from the control category shall not be blocked for drives in the selected subset.
- SWB-AO-07. If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.

Test Date: Sun Aug 31 09:18:25 2003

Analysis: SWB-26 Expected results achieved

Case SWB-27 HDL -- Int_13 Hard Disk Write Lock V0.8 021126 © RCMP 1993-2002

Case Summary: SWB-27 Install three drives, configure return code to failure, protect with pattern UUP, execute write commands.

Assertions Tested:

- SWB-AM-07. If the tool is executed then the tool shall issue a message indicating that the tool is active.
- SWB-AM-08. If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
- SWB-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
- SWB-AM-11. If the tool is configured to return fail on blocked commands and the tool blocks a command then the return code shall indicate unsuccessful command execution.
- SWB-AO-01. If a subset of all covered drives is specified for protection, then commands from the write category shall be blocked for drives not in the selected subset.
- SWB-AO-07. If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.

Tester Name: JRL
Test Date: Sun Aug 31 09:16:57 2003

### Case SWB-32 HDL -- Int_13 Hard Disk Write Lock V0.8 021126 © RCMP 1993–2002

Case Summary: SWB-32 Install three drives, configure return code to success, protect with pattern UPU, execute read commands.

Assertions Tested:

- **SWB-AM-07**: If the tool is executed then the tool shall issue a message indicating that the tool is active.
- **SWB-AM-08**: If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
- **SWB-AM-09**: If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
- **SWB-AM-10**: If the tool is configured to return success on blocked commands and the tool blocks a command then the return code shall indicate successful command execution.
- **SWB-AO-04**: If a subset of all covered drives is specified for protection, then commands from the read category shall not be blocked for drives in the selected subset.
- **SWB-AO-07**: If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.

Case SWB-33 HDL -- Int_13 Hard Disk Write Lock V0.8 021126 © RCMP 1993-2002

Case Summary: SWB-33 Install three drives, configure return code to failure, protect with pattern UUP, execute read commands.

Assertions Tested:

- SWB-AM-07. If the tool is executed then the tool shall issue a message indicating that the tool is active.
- SWB-AM-08. If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
- SWB-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
- SWB-AM-11. If the tool is configured to return fail on blocked commands.
Case SWB-33 HDL -- Int_13 Hard Disk Write Lock V0.8 021126 © RCMP 1993–2002

and the tool blocks a command then the return code shall indicate unsuccessful command execution.
SWB-AO-04. If a subset of all covered drives is specified for protection, then commands from the read category shall not be blocked for drives in the selected subset.
SWB-AO-07. If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.

Analysis: SWB-36 Expected results achieved

Case SWB-37 HDL -- Int_13 Hard Disk Write Lock V0.8 021126 © RCMP 1993-2002

Case Summary:
- SWB-37: Install all drives, configure to be active at boot and shutdown, configure return code to failure, protect with pattern odd, execute write commands.

Assertions Tested:
- SWB-AM-07. If the tool is executed then the tool shall issue a message indicating that the tool is active.
- SWB-AM-08. If the tool is executed then the tool shall issue a message
indicating all drives accessible by the covered interfaces.

SWB-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.

SWB-AM-11. If the tool is configured to return fail on blocked commands and the tool blocks a command then the return code shall indicate unsuccessful command execution.

SWB-AO-08. If the tool is active during the operating system boot and shutdown processes then no changes are made to any protected drives.

Analysis: SWB-39 Expected results achieved

Case SWB-40 HDL -- Int_13 Hard Disk Write Lock V0.8 021126 © RCMP 1993–2002

Case Summary: SWB-40 Install all drives, configure return code to success, protect with pattern low, execute write commands, uninstall, execute all commands.

Assertions Tested:
SWB-AM-07. If the tool is executed then the tool shall issue a message indicating that the tool is active.
SWB-AM-08. If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
SWB-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
SWB-AM-10. If the tool is configured to return success on blocked commands and the tool blocks a command then the return code shall indicate successful command execution.
SWB-AO-09. If the tool is active and the tool is then uninstalled then no commands to any drive shall be blocked.

Tester Name: JRL
Test Date: Sun Aug 31 09:27:36 2003
Test PC: McMillan
Test Software: SWBT 1.0

Hard Drives Used:
Drive 80, label F6 is an IBM-DTLA-307020 with 40188960 sectors
Drive 81, label 6F is a Maxtor 6Y060L0 with 120103200 sectors
Drive 82, label 64 is a WDC WD64AA with 12594960 sectors
Drive 83, label E3 is a QUANTUM ATLAS10K2-TYO92J with 17938985 sectors
Drive 84, label 1F is a Quantum ATLAS10K3_18_SCA Drive with 35916548 sectors

Commands Executed:
Boot Test PC
Windows 98 [Version 4.10.2222]

About the National Institute of Justice

NIJ is the research, development, and evaluation agency of the U.S. Department of Justice. The Institute provides objective, independent, evidence-based knowledge and tools to enhance the administration of justice and public safety. NIJ's principal authorities are derived from the Omnibus Crime Control and Safe Streets Act of 1968, as amended (see 42 U.S.C. §§ 3721–3723).

The NIJ Director is appointed by the President and confirmed by the Senate. The Director establishes the Institute's objectives, guided by the priorities of the Office of Justice Programs, the U.S. Department of Justice, and the needs of the field. The Institute actively solicits the views of criminal justice and other professionals and researchers to inform its search for the knowledge and tools to guide policy and practice.

Strategic Goals

NIJ has seven strategic goals grouped into three categories:

Creating relevant knowledge and tools
1. Partner with State and local practitioners and policymakers to identify social science research and technology needs.
2. Create scientific, relevant, and reliable knowledge—with a particular emphasis on terrorism, violent crime, drugs and crime, cost-effectiveness, and community-based efforts—to enhance the administration of justice and public safety.
3. Develop affordable and effective tools and technologies to enhance the administration of justice and public safety.

Dissemination
4. Disseminate relevant knowledge and information to practitioners and policymakers in an understandable, timely, and concise manner.
5. Act as an honest broker to identify the information, tools, and technologies that respond to the needs of stakeholders.

Agency management
6. Practice fairness and openness in the research and development process.
7. Ensure professionalism, excellence, accountability, cost-effectiveness, and integrity in the management and conduct of NIJ activities and programs.

Program Areas

In addressing these strategic challenges, the Institute is involved in the following program areas: crime control and prevention, including policing; drugs and crime; justice systems and offender behavior, including corrections; violence and victimization; communications and information technologies; critical incident response; investigative and forensic sciences, including DNA; less-than-lethal technologies; officer protection; education and training technologies; testing and standards; technology assistance to law enforcement and corrections agencies; field testing of promising programs; and international crime control.

In addition to sponsoring research and development and technology assistance, NIJ evaluates programs, policies, and technologies. NIJ communicates its research and evaluation findings through conferences and print and electronic media.
