Protection of persons and facilities Mission Statement

Protection of Persons and Facilities - Ensure the safety and security of national leaders, visiting heads of state and government and other designated protectees. Safeguard the White House Complex, the Vice President's residence, foreign missions in the Washington, DC area and other high profile sites. Protection resources directly support the DHS strategic goal to protect critical infrastructure, which includes our nation's leaders, other high profile persons and designated sites. The Service ensures protectees' physical protection at all times. Protection includes all activities related to identifying threats, mitigating vulnerabilities and creating secure environments wherever protectees work, reside and travel. The requested amount addresses strategic challenges which include terrorists' sustained motivation to attack U.S. interests (including its leaders), and the increasing complexity and technological sophistication of the threat environment.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change

National Special Security Event Fund Mission Statement

National Special Security Events - Effectively lead and manage the planning, coordination and implementation of operational security plans at designated NSSEs. Ensure the physical protection of the President, the public, and other Secret Service protectees who participate in NSSEs. NSSE resources directly support the DHS strategic goal to protect critical infrastructure, which includes events of symbolic importance to American citizens. Protection includes all activities related to identifying threats, mitigating vulnerabilities and creating secure environments wherever these specially designated events take place. The requested amount ensures NSSE security measures continue to evolve at an appropriate pace to meet the challenges of an increasingly complex threat environment.

Protective intelligence activities Mission Statement

Protective Intelligence Activities - Ensure protective intelligence processes, policies and systems provide quality information and services to securely and efficiently support the protective mission by investigating subjects (individuals or groups) and activities that pose threats to protectees and protected events. Protective intelligence activities resources directly support the DHS strategic goal to protect critical infrastructure, which includes proactively leveraging advances in the behavioral and technological sciences in order to minimize the risk of harm to persons, property and events under Secret Service protection. The requested amount funds these activities in a strategic environment characterized by terrorists' sustained motivation to attack these targets, and by the increasing complexity and technological sophistication of the threat environment.

Domestic field operations Mission Statement

Domestic Field Operations - Investigate violations of laws relating to counterfeiting of obligations and securities of the United States; investigate financial crimes that include, but are not limited to, financial institution fraud, identity theft, access device fraud, and money laundering. Domestic field office resources directly support the DHS strategic goal to protect critical infrastructure, which includes protecting our nation's currency and financial systems within our borders. The requested amount funds field offices nationwide in a strategic context that includes advances in photographic and printing device technologies and the spread of the internet and other consumer-friendly technologies. These developments both facilitate electronic commerce and increase the scope and complexity of financial crimes. As criminal exploitation of available technologies increases, field resources must continue to demonstrate agility in combating criminal efforts.

International field office administration and operations Mission Statement

International Field Office Administration and Operations - Provide a comprehensive, internationally-coordinated response to threats to the integrity of U.S. currency and other transnational financial crimes. International field office administration and operations resources directly support the DHS strategic goal to protect critical infrastructure, which includes protecting our nation's currency and financial systems from threats originating abroad. The requested amount funds field offices in a strategic context that includes advances in photographic and printing device technologies and the worldwide spread of the internet, other consumer-friendly technologies and dollarization (when a developing country replaces its national currency with the U.S. dollar). These developments both facilitate electronic commerce and increase the scope and complexity of financial crimes. As criminal exploitation of available technologies and practices increases, field resources must continue to demonstrate agility in combating criminal efforts.

Headquarters, management and administration Mission Statement

Headquarters, Management and Administration - Support and sustain operational success through progressive planning and performance in the areas of science and technology, organizational effectiveness, professional responsibility, stewardship of resources, and communication. Headquarters, management and administration resources support the DHS strategic goal to protect critical infrastructure by enhancing the Service's administrative, professional, and technical infrastructure as well as the management systems and processes. In a strategic context of heightened threat, the Service must ensure that its business processes promote and strengthen the investigative and protective missions.

Rowley training center Mission Statement

Rowley Training Center - Strengthen the agency's ability to develop and retain a highly specialized and dedicated workforce to fulfill mission-critical requirements. Rowley Training Center resources support the DHS strategic goal to protect critical infrastructure by ensuring the Secret Service workforce is continuously prepared to meet the challenges of the investigative and protective missions. The requested amount will ensure that the Service's most important resource - its employees - have the knowledge and skills and abilities to execute the investigative and protective missions. In a strategic context of threat, the Service must ensure that its workforce planning and development practices outpace the threat environment.

Information Integration & Technology Transformation Mission Statement

The Secret Service relies heavily on Information Technology (IT) infrastructure and communications systems to achieve its protective and investigative missions. The Secret Service generated a classified mission needs statement for Information Integration and Transformation that identified existing deficiencies and disparities in the Secret Service IT infrastructure, database architecture, cyber security, communications, cross domain application multi-level security, access control, investigative technologies, information assurance, and resource management capabilities.

I. Appropriation Overview

A. Mission Statement for Acquisition, Construction, and Improvements:

The Acquisition, Construction, and Improvements (ACI) account contains funding for the support and maintenance of the James J. Rowley Training Center (JJRTC) and for Information Integration and Technology Transformation (IITT) project execution.

The JJRTC is the primary training center for the United States Secret Service. The overall support and maintenance provided through ACI funding is critical to the agency's missions – protection and criminal investigations. ACI funding provides critical support for JJRTC infrastructure, life cycle maintenance of structures and systems; as well as sustainment of existing facilities and program support assets. The JJRTC is utilized by special agents, uniformed officers, and support personnel.

JJRTC is comprised of 493 square acres of land, six miles of roadways, and 36 buildings featuring multiple classrooms, firearms ranges, physical fitness facilities, tactical villages, and a protective operations driving pad. This infrastructure fosters a quality training environment for new recruits and current employees. Additionally, JJRTC facilities are utilized to provide our Federal, State, and local law enforcement partners with collaborative training related to the Secret Service missions.

Information Integration and Technology Transformation (IITT), formerly known as Information Integration and Transformation, includes IT modernization and related investments. The IITT program resulted from the recognition that the previously existing Secret Service information technology infrastructure did not adequately address the requirements of the protective and investigative missions.

The IITT program was initiated to modernize the Secret Service enterprise-wide IT environment focusing on four capability areas: enabling (e.g., infrastructure, architecture); communications (e.g., White House Communications Agency Interoperability, worldwide tactical communications, classified messaging); control (e.g., security); and mission support (applications supporting mission operations).

The IITT program is being implemented in compliance with DHS Management Directive 102-01 which establishes consolidated acquisition management policy, standards and practices across all DHS Components. Initial funding appropriated for IITT was used for the stabilization program in FY 2010-11; installation of the stabilizing equipment was completed during the 4th quarter, FY 2013.

FY 2015 requested funding will be used to sustain the improvements made through the stabilization phase, modernize the networks, database, and security architecture, refactor (rewrite) applications currently resident on the legacy mainframe for migration to the upgraded network, and develop/upgrade projects such as Database Architecture, Cyber Security, Cross Domain and Multi-Level Security, Threat Management, and Combined Operations Logistics Database 2 (COLD2).

B. Budget Activities:

James J. Rowley Training Center

The protection and criminal investigation training required to meet the needs of the Service's dual mission is provided at the James J. Rowley Training Center in Beltsville, Maryland.

Information Integration and Technology Transformation

The Secret Service relies heavily on Information Technology (IT) infrastructure and communications systems to achieve its protective and investigative missions. The Secret Service generated a classified Mission Needs Statement for IITT that identified existing deficiencies and disparities in the Secret Service IT infrastructure, database architecture, cyber security, communications, cross domain application multi-level security, access control, investigative technologies, information assurance, and resource management capabilities.

C. Budget Request Summary:

The United States Secret Service requests \$49,835,000 for FY 2015. This level of funding includes the following:

- A base adjustment reduction of \$1,840,000 for the Information Integration and Technology Transformation IT modernization project.

2015 Current Services	-	-	5,380
2015 Total Request	-	-	5,380
Total Change 2014 to 2015	-	-	-

The United States Secret Service requests 0 positions, 0 FTE, and \$5.4 million for this activity.

CURRENT SERVICES PROGRAM DESCRIPTION:

Funding covers the cost of maintenance and improvement contracts associated with upkeep of the James J. Rowley Training Center in Beltsville, Maryland. This facility provides the protection and criminal investigation training required to meet the needs of the Service's dual mission.

The employees of the United States Secret Service (USSS) are the most important resource as they are the key to accomplishing our protective and investigative mission. The Service will ensure that they possess the skills and knowledge to maximize their potential and meet the challenges of the 21st Century.

The James J. Rowley Training Center (JJRTC) develops, administers, and coordinates basic training, in-service, leadership and continuing specialized skills development for all Secret Service personnel to include Special Agents, Uniformed Officers, Special Officers, and other professional and administrative personnel. JJRTC consistently maintains liaison with all operational components of the Secret Service, as well as numerous public and private sector organizations and manufacturers to remain current with developments in the law enforcement community, current technological trends, and economies of scale. The Secret Service conducts continuing needs assessments to identify critical job competencies for training development and implementation.

The Service conducts research and testing of firearms, ammunition, and firearms related equipment. Research finds are conveyed to the Assistant Director and the Use of Force Review Board regarding the state-of-the-art firearms and ammunition technology, as it relates to the protective and investigative missions. Administers and controls agency wide acquisition, storage, maintenance, and issuance of firearms and ammunition to all Secret Service offices and gun-carrying personnel.

The above requested amount provides funding for Secret Service operations in a strategic context specifically aligned with the missions and goals set forth by the 2010 DHS QHSR Mission 1: Preventing Terrorism and Enhancing Security, Objective 1.3.2 Protect Critical Infrastructure, Objective 1.3.4, protecting Government Leaders, Facilities, and Special Events; Mission 4: Safeguarding and Securing Cyber Space, Objective 4.1.3, Prevent Cyber Crime and Other Malicious Uses of Cyber Space; and Mission 6: Maturing and Strengthening the Homeland Security Enterprise.

Funding for this activity supports the complete range of Secret Service strategic and management Government Performance and Results Act (GPRA) measures.

Department of Homeland Security

2015 Total Request	-	-	44,555
Total Change 2014 to 2015	-	-	(1,840)

The United States Secret Service requests \$44.5 million for this activity. Included in this request is a base adjustment reduction of \$1.840 million for Information Integration and Technology Transformation (IITT).

CURRENT SERVICES PROGRAM DESCRIPTION:

The IITT program was established because the Secret Service's Information Technology infrastructure did not adequately serve the requirements of the protective and investigative missions. Additionally, the National Security Agency identified critical IT infrastructure, architecture and application vulnerabilities that required mitigation.

In response to NSA's findings, the Secret Service's IITT program was initiated in order to modernize the enterprise-wide IT environment focusing on four capability areas:

- Enabling (e.g., infrastructure, architecture)
- Mission Support (applications supporting mission operations)
- Control (e.g., Security)
- Communications (e.g., White House Communications Agency interoperability, and communications upgrades including worldwide tactical communications, classified messaging).

The IITT program is being developed in full compliance with DHS Management Directive 102-01 which established consolidated acquisition management policy, standards, and practices across all Components and Department of Homeland Security (DHS) Department Offices.

Initial funding appropriated for IITT was used for the stabilization program in FY 2010-11. Installation of the stabilizing equipment was completed in the 4th quarter of FY 2013. The modernization effort commenced in FY 2012 with the award of two modernization contracts, one for the major IT Modernization effort and the other for the Combined Operations Logistics Database 2 (COLD2) development (each further described below); however, execution delays have occurred as a result of a contract protest. As a result, we have been able to accelerate the mainframe refactoring portion of the IITT modernization effort in FY 2013 and plan to complete the refactoring in 2014 in order to stay on pace to reach Full Operating Capability of the modernized system by the end of FY 2016. We anticipate completing the refactoring (re-coding) of all 21 mainframe applications by 1st quarter FY 2015.

Requested funding in FY 2015 will enable the Secret Service's IT networks, data systems, applications, and system security to fully support present operational requirements. Modernization will be accomplished by means of an extensive redesign of the current infrastructure and the careful selection and integration of interoperable capabilities to support critical mission needs. Specifically the following activities are planned in each of the four capabilities areas:

Enabling Capabilities

With the award of the Enabling Contracts (EC) modernization contract in FY 2014, FY 2015 EC activities include:

- Build EC system test environment
- Conduct Integration Readiness Review
- Procure hardware and software not included in stabilization equipment
- Conduct development testing
- Prepare integrated logistics management plan including maintenance and Help Desk support requirements
- Finalize operational test plans and coordinate with operational test agent
- Conduct system acceptance and operational testing
- Conclude plans for database architecture requirements
- Establish operational readiness
- Conduct training of technical and operational personnel

Control Capabilities

The Cross Domain initiative (CD) provides advance security measures to electronically control, send, receive, and track access to Secret Service intelligence data across disparate systems and classifications. The CD strategy utilizes DHS Enterprise Services and will achieve Full Operational Capability (FOC).

The Multi-Level Security initiative (MLS) enables access of information securely across Sensitive but Unclassified (SBU), Secret (S) and Top Secret/Sensitive Compartmented Information (TS/SCI) domains. Development efforts will continue in FY 2015 with Full Operating Capability (FOC) anticipated in FY 2017.

Mission Support Capabilities

The Protective Threat Management System (PTMS) was deployed in 2012 and provides capabilities to conduct advanced search, reporting, notification, routing, and improved workflow with greater ease of use. The deployment of PTMS allowed the retirement of the Protective Research Information System Management (PRISM) and the Counter Surveillance Unit Reporting (CSUR) systems. PTMS completed deployment in FY 2013 and transitioned to sustainment in FY 2014. Further enhancements to the PTMS system will be considered in FY 2014 and beyond.

The Combined Operations Logistics Database 2 (COLD2) includes the software applications and systems related to event planning, human and technical resource deployment allocations, notification processes reporting and tracking. It will provide advanced business analytics which will allow greater visibility and efficiencies in our day to day operations. COLD2 will complete deployment and transition to sustainment.

Communications Capabilities

The White House Communications Agency (WHCA) Interoperability project brought parity between Secret Service and WHCA by correcting gaps in mission critical communication capabilities. The upgrades and sustainment phase began in FY 2014 and will continue in FY 2015 and beyond. Communications funding will allow the Service to provide operational and maintenance support for all Secure Voice phones, Secret and Top Secret messaging systems, Radio-over-IP (RoIP) infrastructure, Voice-over-IP (VoIP) phone systems, Tri-Band and Classified radios for Special Operations teams, video teleconferencing infrastructure, and BlackBerry enterprise services. Sustainment funding in FY 2015 will also begin the refresh of equipment purchased previously under this project.

The following table provides a detailed breakdown of the IITT funding request by project and capability area:

	<u>FY 2013</u>	<u>FY 2014</u>	<u>FY2014-15 Adjustment to Base</u>	<u>FY 2015</u>
Enabling Capabilities	\$30,514,300	\$34,873,400	(\$5,220,300)	\$29,653,100
<i>Development thru Full Operating Capability</i>				
IT Modernization	\$4,031,300	\$14,671,000	(\$5,532,100)	\$9,138,900
Mainframe Migration & Refactoring	\$7,050,000	\$4,083,600	(\$4,083,600)	
IT Infrastructure	\$4,473,700	\$4,073,000	\$2,098,000	\$6,171,000
Database Architecture	\$7,617,000	\$4,462,000	\$130,000	\$4,592,000
Cyber Security	\$3,466,400	\$3,729,000	\$167,400	\$3,896,400
Information Assurance	\$3,875,900			
<i>Sustainment post-Full Operating Capability</i>

Mainframe Migration & Refactoring			\$2,000,000	\$2,000,000
IT Infrastructure				
Database Architecture				
Cyber Security				
Information Assurance		\$3,854,800		\$3,854,800
Control Capabilities	\$2,437,700	\$1,834,700	\$2,977,500	\$4,812,200
<i>Development thru Full Operating Capability</i>				
Cross Domain	\$200,300			
Multi-Level Security	\$2,237,400	\$1,434,700	\$2,952,500	\$4,387,200
<i>Sustainment post-Full Operating Capability</i>				
Cross Domain		\$400,000	\$25,000	\$425,000
Multi-Level Security				
Mission Support Capabilities	\$8,450,000	\$5,487,500	(\$1,161,400)	\$4,326,100
<i>Development thru Full Operating Capability</i>				
PTMS	\$1,250,000			
COLD2	\$7,200,000	\$4,200,000	(\$4,200,000)	
<i>Sustainment post-Full Operating Capability</i>				
PTMS		\$1,287,500	\$38,600	\$1,326,100
COLD2			\$3,000,000	\$3,000,000
Communications Capabilities	\$6,130,000	\$4,199,400	\$1,564,200	\$5,763,600
<i>Development thru Full Operating</i>				

<i>Capability</i>				
WHCA Interoperability	\$6,130,000			
<i>Sustainment post-Full Operating Capability</i>				
WHCA Interoperability		\$4,199,400	\$1,564,200	\$5,763,600
Total	\$47,532,000	\$46,395,000	(\$1,840,000)	\$44,555,000

In FY 2012, IITT became a mixed life-cycle investment program and as such IITT investments include both development / modernization/enhancement (DME) and steady state aspects (as updated in OMB E-300 guidance dated June 2013). Investments for sustainment of new development under IITT will be part of the IITT requests until development is complete and FOC is achieved.

IITT encompasses a large number of diverse and unique capabilities. The Stabilization effort within IITT is now complete and has realized a number of notable accomplishments. These accomplishments include significantly improving the security and reliability of the IT infrastructure by replacement of critical network hardware in time for the increased operational demands associated with the 2012 Presidential Campaign and designated National Special Security Events (NSSEs). Upgrade of storage and backup systems allows for the recovery of critical application data in the event of a catastrophic failure of the network. Remote access capabilities via Virtual Private Network (VPN) were expanded to support significantly increased concurrent users (Continuity of Operations requirement), formerly limited to 500 simultaneous users. This allows for remote users to access the Secret Service Sensitive But Unclassified (SBU) network to support work in field locations. The Secret Service network was also upgraded with new capabilities to include Intrusion Prevention System (IPS) and network monitoring.

The EC portion of IITT will redesign the network architecture and network security components to allow a modernized structure for Secret Service mission applications. The IT Infrastructure provides the enabling foundation for all mission-critical IT systems, supports secure sharing of information with the organization, and provides direct access to external critical law enforcement systems. This also includes retiring components to better address the needs of the Service. For example, the “Bookstore” Data Center was closed and the planning and equipment installation for an alternate Data Center at a new location were completed. Also, completing tasks to ensure the Service is moving forward in the most effective manner is a task that remains paramount. For example, IITT was able to complete an analysis of all Secret Service applications and assigned mission criticality to each providing a critical starting point in making decisions for Data Center hosting. This was in addition to completing the EC Test & Evaluation Master Plan (TEMP) with the Joint Interoperability Test Command (JITC) as Operational Test Agency (OTA) to define test parameters, critical test issues, and scenarios to use in testing and the System Definition Review for IT Modernization; a program milestone required by DHS Management Directive 102-01.

The requested amount for IITT in FY 2015 will provide funding for Secret Service operations in a strategic context specifically aligned with the missions and goals set forth by the 2010 DHS QHSR Mission 1: Preventing Terrorism and Enhancing Security, Objective 1.3.2 Protect Critical Infrastructure, Objective 1.3.4, protecting Government Leaders, Facilities, and Special Events; Mission

4: Safeguarding and Securing Cyber Space, Objective 4.1.3, Prevent Cyber Crime and Other Malicious Uses of Cyber Space; and Mission 6: Maturing and Strengthening the Homeland Security Enterprise.

Funding for this activity supports the complete range of Secret Service strategic and management Government Performance and Results Act (GPRA) measures.

Information Integration & Technology Transformation Mission Statement

The Secret Service relies heavily on Information Technology (IT) infrastructure and communications systems to achieve its protective and investigative missions. Secret Service generated a classified Mission Needs Statement (MNS) for Information Integration and Transformation (IIT) that identified existing deficiencies and disparities in the Secret Service IT infrastructure, database architecture, cyber security, communications, cross domain application multi-level security, access control, investigative technologies, information assurance, and resource management capabilities. At present, the Secret Service IT networks, data systems, applications, and system security do not fully meet basic operational requirements.

Congressional Justification
Revised PPA Structure Budget Addendum

Table of Contents

Section 1: Proposal.....	2
Section 2: Description/Justification.....	3
Section 3: Background.....	4
Section 4: Impact Summary.....	5

Section 1: Proposal

As part of the FY 2015 Congressional Budget Submission, the Secret Service requests that its current Program, Project and Activity (PPA) composition be restructured to improve budget execution and better meet the operational demands of the agency. The current PPA structure does not achieve these objectives and, in some circumstances, negatively impacts protective and investigative operations by hamstringing the agency's ability to make critical staffing adjustments, particularly as it relates to anomalous protectee travel or protective events that occur late in the fiscal year.

The Secret Service requests that the FY 2015 Congressional Budget Submission continue the consolidations approved by Congress in FY 2014. Specifically, the former White House Mail Screening PPA is funded within the Protection of Persons and Facilities PPA, and the former Electronic Crimes Special Agent Program and Electronic Crimes Task Forces PPA is funded within the Domestic Field Operations PPA. In addition, the Secret Service requests that (1) all funding associated with pay and benefits that are currently spread across multiple PPAs be consolidated into one Pay and Benefits PPA, and (2) all non-pay and benefits funding associated with presidential candidate/nominee protection and National Special Security Events be consolidated into one Presidential Campaigns and Events of National Significance PPA as shown below.

SALARIES AND EXPENSES (CURRENT)	OPERATING EXPENSES (PROPOSED)
	<i>Pay and benefits [NEW]</i>
Protection of persons and facilities	Protection of persons and facilities
Protective intelligence activities	Protective intelligence activities
Presidential candidate nominee protection	<i>Presidential campaigns and events of national significance [NEW]</i>
National special security event fund	
Domestic field operations	Domestic field operations
International field office admin and ops	International field office admin and ops
Support for missing and exploited children	
Headquarters, management, and administration	Headquarters, management, and administration
Rowley Training Center	Rowley Training Center
Information Integration and Technology Transformation	

Section 2: Description/Justification

Operating Expenses:

The proposed Operating Expenses account would replace the Salaries and Expenses account and would include the following PPAs that comprise the core functions of the Secret Service: Pay and Benefits [NEW]; Protection of Persons and Facilities; Protective Intelligence Activities; Presidential Campaigns and Events of National Significance [NEW]; Domestic Field Operations; International Field Office Administration and Operations; Headquarters, Management, and Administration; and Rowley Training Center.

Should the proposed Pay and Benefits PPA be adopted, it would eliminate the Information Integration and Technology Transformation (IITT) PPA within the Salaries and Expenses account, although the IITT PPA within the Acquisitions, Construction, and Improvements account would remain. In addition, the Support for Missing and Exploited Children PPA is eliminated because grant funding associated with those activities is proposed to be consolidated under the Department of Justice.

Pay and Benefits:

The new Pay and Benefits PPA is a priority for the Secret Service as it consolidates all labor hours from the current PPA structure. This is important because labor distribution across the Secret Service is determined by external factors beyond the agency's control, namely the rate of travel for the President, Vice President, other protectees and unplanned events of national significance. When it involves the protection of the President and Vice President in particular, the Secret Service needs to ensure that the right staffing is in place to meet the demands of the protective mission. Due to the unpredictability of protectee travel, these decisions are often made days or weeks before a protective event takes place, which limits the Secret Service's ability to make staffing adjustments for fear that the agency will violate reprogramming guidelines. This is especially true for major protective events that regularly occur late in the fiscal year, such as the United Nations General Assembly, or for unforeseen international travel that encompasses multiple stops.

While in most instances imbalances between the Protection of Persons and Facilities and Domestic Field Operations PPA are caused by an increase in protectee travel resulting in a shift of labor hours from one PPA to the other, the opposite does occur. For example, during the summer of 2011 the Secret Service noted a sharp decrease in core protectee travel as a result of the budget ceiling negotiations between the White House and Congress. The impact of the President and Vice President not traveling for extended periods of time resulted in field office personnel working more investigative hours than were originally budgeted which led to a below-threshold reprogramming late in the fiscal year. In short, the existing PPA structure does not provide the agency with operational flexibility during the course of the fiscal year to place people where they are needed most.

Presidential Campaigns and Events of National Significance:

The merging of Presidential candidate and nominee protection and National Special Security Events activities is another priority for the Secret Service. Currently, the budget for Presidential candidate/nominee protection includes funding for security costs associated with the Democratic and Republican National Conventions and Presidential inaugurations, all of which are pre-designated NSSEs. Other pre-designated NSSEs, including State of the Union addresses and Presidential or global summits are typically budgeted in the National Special Security Event PPA. This revised PPA structure would combine all funding for NSSEs into one PPA.

Estimating an NSSE budget is challenging even when the event is known in advance because the major cost drivers for these events – event location, numbers of protectees, number of sites/site security, and threat environment – are unknown and difficult to predict months before the event occurs. The situation is even more challenging during a Continuing Resolution when an NSSE is designated off-budget and the Secret Service must plan, coordinate, and implement the operational security plan for an event in an uncertain fiscal climate. Combining all funding for NSSEs into one PPA would simplify and improve budget execution by introducing operational flexibility that does not exist under the current PPA structure while eliminating confusion about where funding resides.

Section 3: Background

The Secret Service's current budget structure splits pay and benefits costs across multiple PPAs. This structure does not provide the agency the ability to match pre-planned programmatic budgeting with the dynamic nature of protecting designated persons; often requiring either multiple reprogramming/transfer actions or the shifting of emphasis from other critical mission/program areas to compensate an identified variance in another.

An additional example of the current PPA structure's tendency to complicate budget execution is the separation of NSSEs between two separate PPAs: Presidential candidate nominee protection and NSSEs. In some cases, the Secret Service does not receive advanced notice of potential NSSEs in sufficient time to include them within the normal budget request cycle. Again, the existing structure does not provide the capability to shift resources from compatible areas to adequately support emerging NSSEs (whether they fall within the Presidential candidate nominee protection PPA or the NSSE PPA). As a result, the Secret Service is forced to rely upon multiple reprogramming/transfer actions, at times late into the fiscal year.

In response to these challenges, the President's FY 2014 budget request for the Secret Service included an addendum for a second year in a row requesting changes to the agency's PPA structure. Although the FY 2014 Consolidated Appropriations Act (P.L. 113-76) retained the majority of the Secret Service's current PPA structure in FY 2014, the following consolidations were included: the White House mail screening PPA is funded within the Protections of Persons and Facilities PPA, and the Electronic Crimes Special Agent Program and Electronic Crimes Task Forces PPA is funded within the Domestic Field Operations PPA.

While P.L. 113-76 did not consolidate Secret Service pay and benefits into one PPA as requested in the President's FY 2014 budget, the House report (113-91) acknowledged the challenges of "having to balance shifting demands between protection and investigations." To address this issue, the Act included bill language providing greater budget flexibility between the Protection of Persons PPA and the Domestic Field Operations PPA by raising Secret Service reprogramming thresholds for unanticipated shifts between protection and investigations from "\$5 million or 10 percent, whichever is less" to "\$15 million or 10 percent, whichever is less"..

Section 4: Impact Summary

The separation of all employees pay and benefits into a single PPA will ultimately provide the Secret Service the ability to match pre-planned programmatic budgeting with the dynamic nature of protecting designated persons and thus should reduce the amount of reprogramming/transfer actions needed to compensate an identified variance in another PPA. In addition to simplifying budget execution and providing a budgetary framework more in harmony with the inherent uncertainties associated with protectee travel, this proposal would increase transparency into the Secret Service's budget by providing quarterly reports on labor distribution throughout the agency.

The Secret Service's Office of Administration, with the cooperation of all directorate offices, the Human Capital Division, and employees from the National Finance Center (NFC), initiated enterprise-wide Labor Distribution to allocate labor hours and dollars to activities. This initiative will include all employees and provide the ability to associate hours worked vs. hours paid by major activity and to allocate those costs to appropriate PPAs.

The labor distribution tool is fully implemented across the ranks of the Secret Service and ties hours worked to pay across several specific activity codes for roughly 6,500 Secret Service employees. Data generated thus far is being analyzed and vetted to ensure accuracy and validity. Detailed quarterly reports will be generated to demonstrate the nature and magnitude of the work being produced by Secret Service employees, including the ability to distinguish between protection hours and investigation hours. These reports could also be provided as a supplement to the Monthly Execution and Staffing Report. Analysis of the data will inform Secret Service leadership decision-making regarding the monthly operating plan.

The tables below reflect the FY 2015 Secret Service request in the congressionally approved PPA structure, as well as the FY 2015 Secret Service request with the changes outlined in the budget addendum.

United States Secret Service (Current) Salaries and Expenses (\$000)	FY 2015 Request in Congressionally Approved PPA Structure

BUDGET REQUEST AND SUPPORTING INFORMATION

National Protection & Programs Directorate Management and Administration

I. Appropriation Overview

A. Mission Statement for Salaries and Expenses:

The Department of Homeland Security (DHS) National Protection and Programs Directorate (NPPD) Management and Administration (M&A) appropriation provides Directorate leadership and management, coordination of Directorate activities with DHS Headquarters and Components, and program oversight and mission support services. NPPD M&A leads and coordinates Directorate activities to reduce the risk to the Nation's critical physical and cyber infrastructure as well as provide biometric services and identity verification.

B. Budget Activities:

Management and Administration provides management and oversight of NPPD's programs. This consists of the Under Secretary, the Assistant Secretary for Cybersecurity & Communications, the Assistant Secretary for Infrastructure Protection, and the Director of the Office of Biometric Identity Management. In addition, the appropriation funds the full range of business support services necessary to ensure that programs operate effectively, as well as oversight responsibility to direct program policy and strategy, prioritize and determine resource allocation across programs, and oversee effective program execution.

C. Budget Request Summary:

NPPD requests \$65.910 million and 394 FTP/358 FTE for fiscal year (FY) 2015.

Financial Systems Modernization migration funds totaling \$7.280 million for NPPD are requested within the DHS Office of Chief Financial Officer's budget. Component-specific funding needs for this activity will be funded in the year of execution within this account.

2015 Total Request	394	358	65,910
Total Change 2014 to 2015	15	53	9,411

NPPD requests \$65.910 million for Directorate Administration, including 394 FTP/358 FTE. This is an increase of \$9.411 million and 15 FTP/53 FTE from the FY 2014 Enacted budget. It includes the following adjustments to base:

- Transfer in \$2.914 million and 18 FTP/18 FTE from the Office of Biometric Identity Management PPA to consolidate management and business support functions across the Directorate
- Transfer out \$0.668 million and 4 FTP/FTE to Infrastructure Analysis & Planning PPA to better align support functions for the Office of Cyber and Infrastructure Analysis
- Increase of \$6.840 million and 38 FTE for annualization of prior year positions
- Increase of \$0.089 million for the annualization of the FY 2014 pay raise
- Increase of \$0.345 million for the FY 2015 pay raise
- Increase of \$0.062 million for retirement contributions
- Increase of \$0.291 million for the FY 2015 Working Capital Fund increase
- Increase of 1 FTP/1 FTE for the FY 2015 DHS Balanced Workforce initiative to federalize a Facility Security Officer
- Decrease of \$0.462 million in contract efficiencies

Director for Office of Biometric Identity Management							18	18	2,914

NPPD Directorate Administration consists of several offices and functions that provide management and oversight of NPPD's programs.

Under Secretary

The Under Secretary provides Directorate leadership and management and coordinates activities throughout the Directorate. This office includes the Under Secretary and the Deputy Under Secretaries. This function continuously reviews program activities and performance, and works to ensure that they are executed effectively and efficiently. It also provides a range of mission support services as outlined below.

Chief of Staff

Information Management and Disclosure

Information Management and Disclosure is comprised of the following functions: Executive Secretariat, Freedom of Information Act (FOIA), Records Management, and Audit Liaison.

- *Executive Secretariat* – Responsible for managing external communications for NPPD. It provides NPPD and DHS with an efficient and collegial process for document management including tracking, monitoring, and editing of all formal documents and taskers sent to/from NPPD.
- *FOIA* – Works in concert with the Departmental FOIA office, providing requestors with timely, comprehensive access to NPPD documents while safeguarding sensitive information in accordance with Federal laws and regulations.
- *Records Management* – Provides leadership and direction for the NPPD records management program. Develops an overall records management strategy producing the policy, procedures, and guidance necessary to implement that program, develops policies and guidance on the application of technology to records management, and coordinates the program within and outside NPPD overall.

- *Audit Liaison* – Serves as a liaison among external Departmental offices, the Government Accountability Office (GAO), Office of the Inspector General (OIG) and NPPD offices for all audit activities undertaken by either GAO or OIG. Activities include working with NPPD components and GAO or OIG to facilitate entrance/exit conferences, fieldwork, release of draft and final reports, and recommendation follow-up and closure.

Public Affairs is the nexus for all NPPD communications, outreach, and awareness. This function promotes the coordination and unification of messaging that increases visibility and awareness of NPPD missions in synchronization with DHS Office of Public Affairs and other DHS components to promote cyber and physical infrastructure protection and biometric.

The Public Affairs function ensures coordination among Directorate programs on outreach, public affairs strategies, and provides communications support to leaders to ensure that all of the key efforts in infrastructure protection are included in proper context in the DHS narrative on resilience and preparedness. Effective communications is vital to infrastructure protection since the Nation relies so heavily upon private sector leaders to voluntarily strengthen community resilience.

The NPPD public affairs function manages external communications – specifically media relations and web content. It also provides Directorate news, program updates, and Department initiatives for all employees through the *Vision* weekly newsletter and the Intranet.

Legislative Affairs

NPPD Legislative Affairs develops legislative action plans to ensure congressional awareness of the full breadth of activities underway within the NPPD mission area. Legislative Affairs responds to congressional priorities and areas of interest with responsive engagements.

Budget and Financial Administration (BFA)

BFA supports the NPPD mission by conducting financial management, providing oversight and developing and enforcing fiscal services. BFA consists of the following activities and elements:

- *Requirements and Capabilities Planning* – Reviews program capabilities and requirements against NPPD leadership objectives to ensure that the Directorate is pursuing the most critical capabilities to achieve its mission, and developing those capabilities in the most effective and efficient manner. This function drives resource allocation in a strategic manner across the Directorate and develops future year funding plans.
- *Budget Formulation and Execution* – Guides programs in the development of resource requests, develops program funding levels based on NPPD Leadership direction (the output of Requirements and Capabilities Planning) and cost analysis, and builds and justifies funding requests to resource mission needs. In addition, this activity is responsible for the workflow and funds control process to ensure that resources are available when needed, do not exceed authorized levels, and are used in accordance with law and congressional intent.

- *Performance Management* – Constitutes the Performance Improvement Officer function, and includes managing internal and external performance management requirements; and the collection, analysis, monitoring, and reporting of performance data.
- *Financial Operations* – Responsible for the overall accounting operations of NPPD and ensuring that the Directorate meets financial execution and accounting requirements in support of DHS’s centralized financial management program. Functions include commitment/obligations input and tracking, travel and purchase card processing, status of funds monitoring, and payroll reconciliation.
- *Financial Reporting* – Responsible for the preparation and submission of financial reports to DHS and to the Immigration and Customs Enforcement (ICE) Chief Financial Officer (CFO). Works closely with the ICE CFO to monitor and reconcile Treasury Information Executive Repository reports and to provide analysis to validate accuracy of data. Responsible for the development and monitoring of NPPD internal control programs. Also support financial systems modernization efforts.
-
- *Internal Controls* - Responsible for developing and implementing NPPD’s internal controls program. The internal controls office manages the annual audit of financial statements, coordinates testing and corrective actions to improve improper payments, and coordinates the review of internal controls as required by OMB Circular A-123.
- *Regulatory and Economic Analysis* – Ensures that NPPD guidance and regulatory actions consider alternatives and impacts. Ensures that regulatory analyses are completed following the requirements of statute, executive order, and Office of Management and Budget (OMB) policy. Provides leadership with economic impact analysis related to NPPD programs and activities.

Acquisitions

Acquisitions is responsible for the oversight of NPPD’s large acquisition programs as well as overall procurement operations.

- Reviews and monitors NPPD’s acquisition programs, ensures compliance with Federal and DHS acquisition regulations, and ensures effective and efficient acquisition of material solutions.
- *Procurement Operations* – Reviews and tracks NPPD contracts and other purchases and establishes and manages procurement procedures across NPPD. This office also represents NPPD procurement interests to the DHS Office of the Chief Procurement Officer.

Human Resources Management (HRM)

HRM is responsible for classifying positions, recruiting, determining pay and compensation, and hiring and onboarding new personnel. In addition, the office provides guidance to and processes actions for

all NPPD managers and employees in the areas of performance management, awards, payroll, and benefits, as well as in employee and labor relations. HRM also includes:

- *Professional Development and Training* – Assesses, designs, develops, implements, and evaluates training designed to address needed workforce skills, competencies, and certifications, so that NPPD employees are provided with training and professional development/educational programs that enhance and support their positions.
- *Employee and Labor Relations* – Leads, assists, and represents management in its efforts to address employee conduct, performance, and labor-management relations matters in a manner that promotes the development and retention of a high-performing workforce.
- *Human Capital Operations* – Provides staffing, recruitment, payroll and personnel processing advisory and transactional services to the human capital liaisons within the NPPD sub-components and senior level officials.

Administrative Services

Administrative Services provides operational services for facilities maintenance and leasing, personal property management, fleet management, environmental planning and execution, logistics management, and management for various NPPD-wide administrative functions. Responsibilities include the following activities and elements:

- *Facilities* – Ensures that existing facilities are available and ready for NPPD personnel and missions by providing operations and maintenance support. Support ranges from providing heating/ventilation/air conditioning preventative and emergency maintenance to working with GSA to ensure that NPPD properties are safe, secure, and operational. Other responsibilities include furniture procurement and maintenance.
- *Real Property Management* – Responsible for ensuring that the Directorate's future facility needs are planned, developed, and executed to provide continuing support for NPPD personnel and missions. Support is provided in the form of leasing, planning, fit-out construction, and space alterations to support higher security levels. Manages, tracks, and disposes of more than the 600 leases that NPPD holds.
- *Environmental Management* – Ensures that NPPD facilities and missions operate in the most sustainable manner practical, establishing environmental and sustainability plans, energy management systems, historic preservation, and environmental protection. Ensures that all NPPD activities are executed in compliance with environmental laws and statutes.
- *Personal Property* – Manages and records Directorate property, ensures that accountable and sensitive assets are accounted for, tracked, and disposed of in accordance with Federal rules and DHS directives.

- *Fleet* – Ensures that the Directorate has access to vehicles appropriate with mission requirements and that those vehicles are adequately outfitted to execute missions. Responsible for reporting, ordering, and disposal of vehicles and developing policies and procedures.
- *Administrative Support* – Ensures that administrative support needs for the Directorate are obtained and managed in the most efficient manner to support NPPD personnel and missions. Services include mail management, sedan services, parking, and transit benefits disbursement and tracking.

Information Technology

IT actively participates in strategic planning by ensuring that systems and processes are integrated and consistent with the DHS Chief Information Officer Strategic Plan and overarching Departmental goals and objectives. In addition, IT evaluates new technology and advises NPPD leadership as to how IT solutions might offer opportunities and options to support the successful implementation of policy decisions and organizational goals and objectives. IT approves, oversees, and monitors IT investment requests for NPPD subcomponents programs. IT provides governance and oversight over DHS enterprise architecture processes and objectives, and IT security policies. Finally, IT staff serve as the NPPD representatives on various Departmental planning, oversight, leadership, and council committees sponsored by the DHS Chief Information Office.

Business Continuity and Emergency Preparedness

Manages requirements directed in Federal Continuity Directives 1 and 2. Builds and promotes a culture of individual and organizational emergency preparedness that enables and exercises the NPPD's readiness capabilities and ensures continuous execution of the NPPD mission so that operations continue during any emergency, with minimal disruption to mission essential functions.

Strategy and Policy

Strategy and Policy manages formal policy coordination within NPPD. As the principal catalyst for NPPD strategy and policy development, the function ensures strategic coherence, promotes independent thinking and innovation, provides objective analysis and net assessment, and integrates program planning, performance, and accountability for the cyber and physical infrastructure resilience mission space. The function represents NPPD on interagency and Departmental working groups that address crosscutting and integrated strategic objectives, policies, plans, and procedures that convey a consistent and coherent vision, strategy, and perspective. It also conducts analyses to identify gaps in policy and initiates policy planning and formulation to fill these gaps.

The function also develops and executes a Directorate-wide international affairs prioritization and strategic planning process. The function ensures cross-component coordination and alignment with international priorities and objectives. It also ensures coordination of international meetings and activities for NPPD leadership and manages international engagements that require representation across NPPD.

Privacy and Civil Liberties

The Privacy and Civil Liberties function is responsible for developing internal policies to protect personal privacy, promoting awareness of and compliance with privacy requirements, and ensuring that NPPD technology systems have appropriate privacy protections in place. The function promotes awareness through training and communications, ensures compliance with DHS privacy policies and incident handling guidelines, and provides subject matter expertise and advice to NPPD leadership on emerging privacy issues that may impact NPPD activities. The function also integrates full individual privacy and civil liberty protections into the management of a safe, secure, and resilient infrastructure.

Compliance and Security

The Compliance and Security function provides a safe and secure work environment and promotes organizational excellence, integrity, and accountability to NPPD stakeholders through its program areas of Internal Affairs and Program Review and Evaluation.

- *Internal Affairs* – Investigates and coordinates administrative and criminal allegations of employee misconduct in conjunction with the DHS Office of Inspector General, NPPD Employee and Labor Relations, Office of General Counsel, and Component management, as appropriate.
- *Program Review and Evaluation* – Plans, coordinates, and provides headquarters-level oversight of program evaluations to measure operations against best practices and objective criteria to determine if the programs and operations are effective and efficient, achieve the desired results, and/or operate in accordance with laws and regulations. Also manages the NPPD Self-Inspection Program.
- *Security Management* – Manages physical security projects for NPPD facilities in the National Capital Region, Administrative Security, Policy Integration, Education and Awareness, and Special Security Programs (SCIF, SSOs, and Electronic Countermeasures). Facilitates processing of background investigations and national security clearance matters with the Office of the Chief Security Officer.

Assistant Secretary for Infrastructure Protection (IP)

The Assistant Secretary for IP oversees mission support, including IP document and information management, human resources, budgeting, acquisition/procurement, security, facilities, planning, performance management, resource execution, policy, and legislative affairs. The function provides oversight while coordinating with external organizations—both national and international—to address the implications of the critical infrastructure global risk environment, in order to develop and implement specific strategic guidance and policies for U.S. and international critical infrastructure protection and resilience.

The Assistant Secretary for IP establishes and oversees management controls and a comprehensive governance structure to improve the planning, execution, and reporting activities performed within IP to manage major initiatives, drive mission accomplishments, and allocate resources that are consistent with approved organizational goals. The function has established feedback loops—such as the Critical

Infrastructure Risk Management Enhancement Initiative—that adjust IP efforts and resources to where they are needed most.

Assistant Secretary for Cybersecurity & Communications (CS&C)

The Assistant Secretary for CS&C manages cyber and communications policy initiatives and mission activities collaborations occurring across the United States Government. This staffing serves as a critical link to external stakeholders, OMB, and Congress. The requested salaries and support allow centralized resource allocation and outreach efforts with intergovernmental, international, private sector, and other stakeholders, in addition to providing staffing and oversight of the following functional areas: Strategic Planning and Policy, Mission Integration, External Affairs, Human Capital, Budget and Finance, Acquisitions and Procurement, Continuity of Government, and Facility Planning.

The Assistant Secretary for CS&C also establishes and oversees management controls and a comprehensive governance structure to improve the planning, execution, and reporting activities performed within CS&C to manage major initiatives, drive mission accomplishments, and allocate resources that are consistent with approved organizational goals.

Director for the Office of Biometric Identity Management

The Director of OBIM leads the effort to provide biometric identity services supporting DHS, other Federal agencies, the Intelligence Community and international partners. The function includes the prioritization, monitoring and reporting activities associated with the OBIM mission. The requested salaries provide staffing and oversight of the following functional areas: Strategic Planning and Policy, Privacy, Human Capital, Personnel and Mission Systems Training, Budget and Finance, Acquisitions and Procurement, Logistics and Facility Planning and sustainment.

The Director of OBIM also establishes and oversees management controls and a comprehensive governance structure to plan and execute major OBIM initiatives, drive mission accomplishments, and allocate resources that are consistent with approved organizational goals and objectives. The Director and staff established the Executive Stakeholder Board, which facilitates collaboration and informs customers of new initiatives.

Directorate Administration Mission Statement

The Department of Homeland Security (DHS) National Protection and Programs Directorate (NPPD) Management and Administration (M&A) appropriation provides Directorate leadership and management, coordination of Directorate activities with DHS Headquarters and Components, and program oversight and mission support services. NPPD M&A leads and coordinates Directorate activities to reduce the risk to the Nation's critical physical and cyber infrastructure as well as provide biometric services and identity verification.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	26,674	34,498	41,854	7,356
11.3 Other than Full-Time Permanent	533	690	837	147
11.5 Other Personnel Compensation	889	1,150	1,395	245
12.1 Civilian Personnel Benefits	7,469	9,659	11,718	2,059
Total, Salaries & Benefits	35,565	45,997	55,804	9,807

The FY 2015 Request includes \$55,451K for salaries and benefits for 358 FTE. The change includes transfers in of 18 FTP/18 FTE and \$2,914K from the OBIM appropriation for consolidation of the office of the Director for OBIM's management and business support, and transfers out of 4 FTP/4 FTE and \$544k to the IPIS Appropriation for business support functions. This includes 1 FTP/1FTE for \$210K for the balanced workforce. This also includes an increase of 38 FTE and \$6,840K for the annualization of prior year positions, and an increase of \$434K for pay inflation.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.1 Advisory and Assistance Services	\$3,883	\$2,490	\$1,927	(\$563)

Advisory and assistance services includes services acquired by contract from non-Federal sources as well as from other units within the Federal Government. The FY 2015 request includes a decrease of \$210K to offset 1 FTP/1 FTE for the balanced workforce and a decrease of \$563K for efficiencies.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.3 Other Goods and Services from Federal Sources	\$4,591	\$3,802	\$3,969	\$167

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2015 Request includes an increase of \$291K for Working Capital Fund and a transfer out of \$124K to the IPIS Appropriation for business support functions.

I. Changes In Full Time Employment

Total Working Capital Fund	\$7,273	\$7,064	\$6,900	-\$164

K. DHS Balanced Workforce Strategy

In order to establish a high-performing workforce comprised of a strong internal core of Federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience, and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment, the Department will realign contractor and/or Federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with Federal employees to better realize the full potential of our total workforce – both contracted and Federal. A strong internal core of Federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for Federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into tiered ranking.

NPPD requests \$0.210 million in M&A salaries and benefits dollars and an offset of \$0.210 million in program/contract dollars for 1 FTE/1 FTE as part of the FY 2015 DHS Balanced Workforce Strategy.

Position Type	FY 2013 Revised Enacted		FY 2014 Enacted		FY 2014 Annualization		FY 2014 Follow On		FY 2015 Increase		Total FY 2013 - FY 2015 DHS BWF Strategy

FY 2015 DHS Balanced Workforce Strategy

- Amount of salaries and benefits funding needed to hire Federal employees:
 - \$0.210 million for 1 FTP/1 FTE.
- Amount of program/contract funding that will be terminated:
 - \$0.210 million program/contract cost. There is no projected cost savings by hiring Federal employees and converting contractors to FTPs/FTEs.
- Implementation timeline:
 - NPPD’s FY 2015 Balanced Workforce Strategy will be completed in FY 2015.
 - Contractor functions will be reduced and positions will be converted in accordance with the Department’s Balanced Workforce Initiative with a particular focus on contractors who are performing “nearly government inherent” responsibilities.
 - Contractor reductions will be absorbed by the existing Federal Government employees and new FTE converted positions.

FY 2014 DHS Balanced Workforce Strategy

- Amount of salaries and benefits funding needed to hire Federal employees:
 - \$2.396 million for 16 FTP/16 FTE.

- Amount of program/contract funding that will be terminated:
 - \$3.466 million program/contract cost. There is a projected \$1.070 million cost savings by hiring Federal employees and converting contractors to FTPs/FTEs.
- Implementation timeline:
 - NPPD’s FY 2014 Balanced Workforce Strategy will be completed in FY 2014.
 - Contractor functions will be reduced and positions will be converted in accordance with the Department’s Balanced Workforce Initiative with a particular focus on contractors who are performing responsibilities. ♦♦ nearly government
 - Contractor reductions will be absorbed by the existing Federal Government employees and new FTE converted positions.

FY 2013 DHS Balanced Workforce Strategy

- Amount of salaries and benefits funding needed to hire Federal employees:
 - \$8.475 million for 40 FTP/40 FTE.
- Amount of program/contract funding that will be terminated:
 - \$8.475 million program/contract cost. There is no projected cost savings by hiring Federal employees and converting contractors to FTPs/FTEs.
- Implementation timeline:
 - NPPD’s FY 2013 Balanced Workforce Strategy will be implemented in FY 2013 and FY 2014, due to the FY 2013 Continuing Resolution.
 - Contractor functions will be reduced and positions will be converted in accordance with the Department’s Balanced Workforce Initiative with a particular focus on contractors who are performing “nearly government inherent” responsibilities.
 - Contractor reductions will be absorbed by the existing Federal Government employees and new FTE converted positions.

BUDGET REQUEST AND SUPPORTING INFORMATION

National Protection & Programs Directorate Infrastructure Protection and Information Security

I. Appropriation Overview

A. Mission Statement for Infrastructure Protection and Information Security:

Infrastructure Protection and Information Security (IPIS) seeks to understand and manage risk from natural disasters, terrorist attacks, or other disasters to the Nation's critical infrastructure and key resources (CIKR).

IPIS programs protect critical infrastructure by assisting security partners with identifying and mitigating vulnerabilities; increasing preparedness for facilities, systems, and surrounding communities; and assessing the impact of risk mitigation efforts.

IPIS also seeks to create a safe and secure cyber environment and to promote cybersecurity knowledge and innovation by: enabling Federal departments and agencies to address cybersecurity challenges; partnering with the private-sector, military, and intelligence communities to mitigate vulnerabilities and threats to information technology assets; and facilitating collaboration and partnerships on cyber issues with public and private sector partners.

Finally, IPIS is responsible for maintaining effective telecommunications for government users in national emergencies and for establishing policies and promoting solutions for interoperable communications at the Federal, State, and local levels.

B. Budget Activities:

Infrastructure Protection (IP) and the Office of Cyber and Infrastructure Analysis (OCIA)

Infrastructure Analysis and Planning – Infrastructure Analysis and Planning provides strategic, operational, and tactical products and services to DHS and its partners. These projects facilitate the identification, prioritization, protection, and resilience of the Nation's critical infrastructure, as well as the assessment of critical infrastructure risk. Infrastructure Analysis and Planning provides a comprehensive inventory of the Nation's critical infrastructure assets and collect vulnerability assessments and consequence information required to produce comprehensive asset and system risk assessments. These critical infrastructure protection assessments enable the analysis of interdependencies and cascading effects and increase partners' understanding of risks, potential protective measures, and best practices.

Sector Management and Governance – Sector Management and Governance increases the ability of all levels of government and private-sector critical infrastructure partners to assess risks, coordinate programs and processes, and execute risk management programs and activities. These projects support the framework that governs the Nation's approach to critical

infrastructure security and resilience, providing cross-sector preparedness, public education, and academic engagement to support the National Infrastructure Protection Plan (NIPP) 2013 implementation. Sector Management and Governance also provides a strategic and coordinated approach for enterprise critical infrastructure data management and IT development and employs a governance structure that enables the secure sharing of critical infrastructure data and analysis with its partners.

Regional Field Operations – Regional Field Operations builds a regional capacity across the sectors to secure critical infrastructure through the deploying of NPPD/IP products and services for State, local, tribal, and territorial (SLTT) government and private-sector partners. These projects support the regional implementation of Infrastructure Analysis and Planning and Sector Management and Governance projects, create a unifying information-sharing environment, and assess vulnerabilities and protective measures for the critical infrastructure community from the national to the local level.

Infrastructure Security Compliance – Infrastructure Security Compliance supports regulatory activities that coordinate and manage the Department's regulatory authority over high-risk chemical facilities and ammonium nitrate.

Cybersecurity and Communications (CS&C)

Cybersecurity – Cybersecurity programs work collaboratively with public, private, and international entities to secure cyberspace and America's cyber assets. Cybersecurity programs are comprised of the following PPAs:

Cybersecurity Coordination – The Cybersecurity Coordination program integrates information from the six Federal cybersecurity centers to provide a fused view of cyber activity across the intelligence, defense, civil, and law enforcement/counterintelligence domains. The program supports operational activities to facilitate integration and activities at the Federal centers, an information system for online collaboration, and information technology (IT) support and enterprise capability for the centers. Cybersecurity Coordination also supports an increased number of private-sector partners present in the National Cybersecurity and Communications Integration Center (NCCIC) environment.

United States Computer Emergency Readiness Team (US-CERT) Operations – As the cybersecurity operational arm of CS&C, US-CERT leads and coordinates efforts to improve the Nation's cybersecurity posture, to promote cyber information sharing, and to manage cyber risks to the Nation. As part of that mission, US-CERT analyzes and mitigates cyber threats and vulnerabilities; disseminates cyber threat warning information; coordinates with partners and customers to achieve shared cyber situational awareness of the Nation's cyber critical infrastructure; provides response and recovery support for national assets; and advises on national-level cybersecurity policy and guidance. US-CERT encompasses the activities that provide immediate customer support and incident response, including 24-hour support in the NCCIC.

Federal Network Security – Federal Network Security manages activities designed to enable Departments and agencies to secure their systems and networks, including the Continuous Diagnostics and Mitigation program. It provides a single, accountable focal point for achieving cyber infrastructure security and compliance throughout the Federal enterprise.

Network Security Deployment – Network Security Deployment manages the National Cybersecurity Protection System (NCPS), operationally known as EINSTEIN. NCPS is an integrated intrusion detection, analytics, information sharing, and intrusion prevention system utilizing hardware, software, and other components to support DHS responsibilities within the Comprehensive National Cybersecurity Initiative (CNCI).

Global Cybersecurity Management – Global Cybersecurity Management provides and facilitates access to training and education for cybersecurity professionals. This includes developing a common approach for Federal cyber education and development and ensuring that education and training keeps pace with technological changes. Global Cybersecurity Management also supports academic centers to invigorate the pipeline of talented cybersecurity professionals available for current and future employment. Finally, the program works to manage risks from the global information and communications technology supply chain through awareness, policies, and standards and practices.

Critical Infrastructure Cyber Protection & Awareness – Critical Infrastructure Cyber Protection and Awareness collaborates with the public and private sectors to assess and mitigate risk to the Nation's cyber CIKR and promotes cybersecurity awareness among and within the general public and key communities, maintains relationships with governmental cybersecurity professionals to share information about cybersecurity initiatives, and develops partnerships to promote collaboration on cybersecurity issues.

Business Operations – Business Operations ensures access to the appropriate resources to fulfill its mission. The program does so through resource and financial management, human capital activities, facilities management, performance management, policy development and implementation, information and personnel security, and strategic planning. The Business Operations program works to ensure that these activities are integrated to sustain overall cybersecurity strategies, mission operational support, and short/long-term planning.

Communications – Communications programs provide mission-critical national security and emergency preparedness (NS/EP) telecommunications for Federal, State, and local governments, and private industry. They also support and promote the ability of emergency responders and government officials to continue communicating in the event of natural disasters, acts of terrorism, or other man-made disasters, working to ensure, accelerate, and attain interoperable and operable emergency communications nationwide. Communications programs are comprised of the following PPAs:

Office of Emergency Communications (OEC) – OEC drives the development of emergency communications capabilities (operability, interoperability, and continuous communications) at all levels of government and across all public safety disciplines. To do so, OEC identifies and assesses interoperable emergency communications capabilities and drives Federal grants to meet emergency responder requirements and needs. OEC also engages with State, local, and tribal stakeholders to deliver targeted technical assistance and gather stakeholder input on policies, guidance, and initiatives. Additionally, OEC drives Federal emergency communications efficiencies through strategic planning, aligning grants, developing common investment and infrastructure planning approaches, and representing Federal users on national-level policy and standards issues, and coordinates between domestic and international stakeholders along the borders.

Priority Telecommunications Services (PTS) – The PTS PPA leverages the Nation’s public telephone networks, including cellular systems, to enable voice communications for response and recovery coordination efforts and to ensure that essential government functions and operations are maintained during a disaster. PTS accomplishes this by maintaining services that provide NS/EP voice telecommunications for the government and its industry organizations during times when networks are congested or degraded. These services are the Government Emergency Telecommunications Service (GETS), the Wireless Priority Service (WPS), and the Special Routing Arrangement Service (SRAS).

Next Generation Network (NGN) – NGN will leverage Internet Protocol infrastructures to provide government and its industry organizations with NS/EP telecommunications during an emergency. It will supplement PTS services as commercial telecommunications carriers transition from circuit-switched infrastructures to Internet Protocol infrastructures. The NGN-Priority Services (PS) Program Office works with major carriers as they make the transition to deploy features enabling NS/EP priority service. Over the long term, the NGN-PS will deliver priority voice, video, and data communication services.

Programs to Study & Enhance Telecommunications (PSET) – PSET conducts technical studies and analyses for identifying and improving approaches to assist Federal entities in fulfilling NS/EP telecommunications objectives. PSET models and analyzes priority communications capabilities, assists the State Department in recommending national and international telecommunications standards for networks supporting NS/EP goals, and maintains and supports the implementation of policy to address minimum communication capabilities requirements for departments and agencies to continue operations during emergency or crisis situations.

Critical Infrastructure Protection Programs – The Critical Infrastructure Protection Program supports operations to assist in the initiation, coordination, restoration, and reconstitution of NS/EP telecommunications. This includes the operation, maintenance, and supporting activities of the National Coordinating Center for Telecommunications, a joint industry-government body to coordinate the response to NS/EP telecommunications incidents. Additionally, the program conducts analyses of telecommunications

capabilities in the aftermath of a disaster, training and exercises to prepare to respond to disasters and other crises, and a regulatory, administrative, and operational system to authorize and provide priority treatment of NS/EP services after a disaster.

C. Budget Request Summary:

Financial Systems Modernization migration funds totaling \$7.280 million for NPPD are requested within the DHS Office of Chief Financial Officer's budget. Component-specific funding needs for this activity will be funded in the year of execution within this account.

NPPD requests \$1,197.566 million and 1,571 FTP/1,544 FTE for FY 2015. This request includes the following program changes:

Increases

Transition WPS to Internet-Based Technologies – \$48.417M (12 FTE)

This funding will provide support to maintain the number of wireless carriers deploying Priority Telecommunications Services, enabling the solution to maintain the same degree of coverage across the United States regardless of the underlying technology. These funds will transition the Wireless Priority Services (WPS) infrastructure to internet-based technologies through implementation of Phase 1, Increment 2 of the Next Generation Networks Priority Services program.

Enhance CFATS Compliance – \$3.420M (0 FTE)

This funding will enhance critical efforts related to compliance with the Chemical Facility Anti-Terrorism Standards (CFATS). Planned efforts include developing an automated process for identification of CFATS outliers, addressing concerns raised by the U.S. Government Accountability Office regarding the risk-tiering methodology, and fulfilling requirements resulting from Executive Order 13650, *Improving Chemical Facility Safety and Security*.

Implement Executive Order (EO) 13636 – \$6.437M (20 FTE)

This funding will augment the recently established C³ Voluntary Program and Enhanced Cybersecurity Services (ECS) capability to support EO 13636, *Improving Critical Infrastructure Cybersecurity*. These programs encourage the adoption of cybersecurity standards by critical infrastructure owners and operators and provide support for the deployment of ECS, making it available to all critical infrastructure sectors. Eleven FTE are included to expand support to the NCPS and the ECS program through the development and deployment of NCPS information sharing, core infrastructure, and program support capabilities. The funding increases total \$8.5M and are partially offset by \$2.1M in lower priority programs within Sector-Specific Agency (SSA) Management.

Implement Presidential Policy Directive (PPD) 21 – \$1.642M (14 FTE)

This net increase in funding implements PPD-21's direction to expand activities to enhance critical infrastructure resilience by developing, implementing, and promoting innovative best practices, improving design and construction standards, and fostering advanced operation and maintenance practices that consider the full infrastructure lifecycle. Included in these efforts is

development of a cyber and physical nexus within the Regional Resiliency Assessment Program (RRAP) to better understand the consequences and cascading impacts of disruptions to lifeline sectors. The funding increases total \$8.0M and are offset by \$6.4M in decreases by eliminating Site Assessment Visits as they are replaced with RRAPs and by reducing some support to non-IP SSAs.

Decreases

Cyber Exercise and Assessment Programs – (\$8.270M) (0 FTE)

In order to fund higher priority cybersecurity and communications activities, this decrease will reduce the number of cyber exercises and cyber hygiene analysis assessments conducted, as well as delay the development of plans, processes, and technology requirements for US-CERT operations.

Federal Cyber Support to SLTT – (\$11.405M) (0 FTE)

This reduction decreases funding to the Multi-State Information Security and Analysis Center as it implements a cost-share with the States. Funding for cyber education programs will also be reduced in order to fund critical communications investments. With available funding, NPPD will be able to target one community and 5,300 students over three years.

National Infrastructure Simulation and Analysis Center (NISAC) – (\$2.912M) (0 FTE)

The reduction in funds will maintain NISAC's infrastructure modeling capacity at the 2013 level.

Bombing Prevention – (\$2.089M) (0 FTE)

NPPD will realign resources previously dedicated to the development of new counter-Improvised Explosive Device (IED) training mechanisms and courses for Federal and State, local, tribal, territorial (SLTT), and private-sector stakeholders in order to accommodate higher NPPD priorities.

Interoperability Communications – (\$0.934M) (0 FTE)

This reduction will reduce the number of OEC-facilitated training and exercise opportunities including the development of exercise scenarios, injects, and after action reports.

PPA: Infrastructure Analysis and Planning

	Perm. Pos	FTE	Amount
2013 Revised Enacted	89	75	54,241
2014 Enacted	89	85	63,134
2015 Adjustments-to-Base	29	33	6,299
2015 Current Services	118	118	69,433
2015 Program Change	3	2	(5,434)
2015 Total Request	121	120	63,999
Total Change 2014 to 2015	32	35	865

NPPD requests \$63.999 million for Infrastructure Analysis & Planning, including 121 FTP/120 FTE. This is an increase of \$0.865 million and 32 FTP/35 FTE from the FY 2014 Enacted budget. It includes the following adjustments-to-base:

- Increase of \$1.771 million and 3 FTP/3 FTE with a related decrease in the Regional Field Operations PPA for geospatial analysis functions
- Increase of \$0.919 million with a related decrease in the Sector Management & Governance PPA for facilities functions
- Increase of \$2.500 million with a related decrease in the Critical Infrastructure Cyber Protection & Awareness (CICPA) PPA for cyber analysis
- Increase of \$0.668 million and 4 FTP/4 FTE with a related decrease in the Directorate Administration PPA to align support functions to the Office of Cyber and Infrastructure Analysis (OCIA)
- Increase of \$0.564 million and 4 FTE for annualization of prior year positions
- Increase of \$0.028 million for annualization of the FY 2014 pay raise
- Increase of \$0.084 million for the FY 2015 pay raise
- Increase of \$0.013 million for increased retirement contributions
- Decrease of \$0.100 million for salaries and benefits realignment to the Infrastructure Security Compliance PPA
- Decrease of \$0.104 million for efficiencies achieved by reducing Federal personnel grades
- Decrease of \$0.044 million for contract efficiencies

- Increase of 22 FTP/22 FTE for the DHS FY 2015 Balanced Workforce initiative

Infrastructure Sector Analysis Transfers FY 2015					
\$K	FTP	FTE	S&B	Program	Total
Infrastructure Analysis & Planning	7	7	845	5,013	5,858
Sector Management & Governance				(919)	(919)
Regional Field Operations	(3)	(3)	(301)	(1,470)	(1,771)
Critical Infrastructure Cyber Protection & Awareness				(2,500)	(2,500)
Directorate Administration (Assistant Secretary, IP)*	(4)	(4)	(544)	(124)	(668)
*This is in the Management & Administration appropriation.					

The Infrastructure Sector Analysis (ISA) transfers realign resources for the following purposes:

- Geospatial Analysis Transfer (\$1,771k and 3 FTP/FTE from RFO): This will transfer the geospatial analysis functions under the ISA project.
- Facilities Transfer (\$919k from Sector Management & Governance): This transfer will provide funding for facilities to the ISA project that were previously funded through the Facilities project in Sector Management & Governance.
- Cyber Analysis Transfer (\$2,500k from CICPA): This transfer will provide resources to the ISA project to provide additional integrated physical and cyber infrastructure analysis.
- Business Support Transfer (\$668k and 4 FTP/4 FTE from M&A): This transfer will align support functions to OCIA funded in the ISA project. These positions were previously funded through the Assistant Secretary for Infrastructure Protection.

In addition to the Budget request, the Opportunity, Growth, and Security Initiative dedicates \$10 million to NPPD to help our communities prepare for the effects of climate change. Specifically, these resources would be used to identify critical facilities in States and/or critical infrastructure sectors and analyze their ability to remain functional after disasters

CURRENT SERVICES PROGRAM DESCRIPTION:

\$K	FY 2013 Rev. Enacted			FY 2014 Enacted			FY 2015 Pres. Budget		
	FTP	FTE	Total	FTP	FTE	Total	FTP	FTE	Total
Infrastructure Analysis & Planning	89	75	54,241	89	85	63,134	121	120	63,999

Infrastructure Sector Analysis			16,711			23,413			21,187
Vulnerability Assessments			16,934			18,000			17,006
Bombing Prevention			9,457			10,504			8,415

Infrastructure Analysis and Planning (IA&P) facilitates the identification, prioritization, protection, and resilience of the Nation's critical infrastructure, as well as the assessment of critical infrastructure risk. The IA&P PPA provides the salaries and benefits for OCIA and various IP programs. The projects within the IA&P PPA provide a comprehensive inventory of the Nation's critical infrastructure assets and collect vulnerability assessments and consequence information required to produce comprehensive asset and system risk assessments. These critical IP assessments enable the analysis of interdependencies and cascading effects and increase partners' understanding of risks,

potential protective measures, and best practices. The chart below delineates funding for OCIA and IP, with OCIA comprised of \$11,654k in salaries and benefits and \$21,187k in the ISA project:

\$K	FY 2015 Pres. Budget		
	FTP	FTE	Total
Infrastructure Analysis & Planning			63,999
IA&P Salaries & Benefits	121	120	17,391
<i>IP</i>	38	37	5,737
<i>OCIA</i>	83	83	11,654
Bombing Prevention			8,415
Infrastructure Sector Analysis*			21,187
Vulnerability Assessments			17,006
Total, OCIA*			32,841
*OCIA includes the ISA project line.			

Infrastructure Sector Analysis

The ISA project provides funding for OCIA. The ISA project is an essential element of implementation of the Presidential Policy Directive (PPD) 21, *Critical Infrastructure Security and Resilience*, and EO 13636), *Improving Critical Infrastructure Cybersecurity*.

The ISA project supports all of NPPD by analyzing threats, vulnerabilities, consequences, dependencies, interdependencies, and cascading effects from incidents to critical infrastructure. The successful execution of this helps NPPD and other leaders better understand potential impacts and inform risk decisions to improve security and resilience of the Nation's critical infrastructure.

Specifically, the ISA project conducts operational and strategic analysis on incidents, threats, and emerging risks. ISA collates, assesses, and integrates vulnerability and consequence information with threat streams and hazard information to:

- Aid in prioritizing assets and managing risk to critical infrastructure
- Anticipate interdependencies and cascading effects
- Support the recommendation of security and resilience measures for critical infrastructure prior to, during, and after an event or incident
- Support incident management and restoration efforts related to critical infrastructure

ISA supports DHS's ability to maintain and share a real-time situational awareness capability for critical infrastructure and to support both NPPD operational centers, the National Infrastructure Coordinating Center (NICC) and the National Cybersecurity and Communications Integration Center (NCCIC), with real-time operational consequence analysis that includes actionable information about imminent threats, significant trends, and awareness of incidents that may affect critical infrastructure.

ISA provides infrastructure analytic products to DHS and its public-private sector partners. Current product lines include standardized risk assessment methodologies and tailored products for use by

critical infrastructure owners and operators, and Federal and SLTT government partners. These products identify and provide risk management options regarding vulnerabilities, consequences, and threats to critical infrastructure from both man-made and natural disasters and incidents.

ISA includes four primary capability areas: Prioritization, Operational Analysis, Modeling and Simulation, and Strategic Analysis. These capabilities are derived from mission needs and operational requirements. Each capability works in concert to provide models, products, and decision support analysis for a variety of NPPD, DHS, and external partners.

- Prioritization enables cross-functional national-level understanding of what systems and assets constitute critical infrastructure across 16 sectors. The three National Critical Infrastructure Prioritization Program (NCIPP) steady-state lists are the Level 1 and Level 2 lists for domestic assets and the Critical Foreign Dependencies Initiative for international assets. The ISA project develops Infrastructure of Concern lists during an incident or crisis action. The Infrastructure of Concern lists are tailored to a location and potential critical infrastructure impacts (e.g., physical and economic) specific to a particular incident. The lists help in the prioritization of Federal, State, and local response and recovery activities as they relate to critical infrastructure.
- Operational Analysis identifies and characterizes potential impacts to specific critical infrastructure sectors as well as cross-sector consequences within an affected region or as impacted by a particular threat. In addition, the Operational Analysis function plans, prepares for, and manages crisis action activities by coordinating with partners, developing standard operating procedures, conducting exercises, and managing the development of decision support products for DHS leadership and public-private sector critical infrastructure partners. The Operational Analysis responds during a threat or incident, identifying appropriate staffing, planning for shifts and rotations, managing Requests for Information and Assistance, and training and deploying liaisons to the Federal Emergency Management Agency (FEMA) and other organizations as the situation warrants. The Operational Analysis function includes the Integrated Analysis Cell, which, per PPD-21, will support the NICC and NCCIC by collating, assessing, and integrating vulnerability and consequence information with threat streams and hazard information to aid in prioritizing assets and managing risks to critical infrastructure, anticipate interdependencies and cascading impacts, recommend security and resilience measures for critical infrastructure prior to, during, and after an event or incident, and support incident management and restoration efforts related to critical infrastructure.
- Modeling and Simulation (M&S) builds and leverages unique capabilities of critical infrastructure modeling, simulation, and analysis resources, and capabilities of the NISAC to understand the impact and cascading effects of infrastructure failures and disruptions. M&S ensures that all analytical products are authoritative, valid, and standardized by developing and promulgating analytic tools, methodologies, and capabilities through the NISAC. NISAC conducts modeling, simulation, and analysis for steady-state products, including in-depth studies on critical infrastructure dependencies and interdependencies, and provides crisis action support for quick-turn analysis.

- Strategic Analysis assesses the likelihood and consequence of emerging and future risks to depict a holistic risk horizon for critical infrastructure across sectors and regions. This analysis identifies and provides risk management and mitigation options regarding vulnerabilities, consequences, and threats to critical infrastructure. For example, a National Risk Estimate would provide focused analysis of current and emerging critical infrastructure risks from a specific threat or event across a three- to five-year timeframe.

ISA is also receiving a transfer from CICPA for integrating cybersecurity and infrastructure analysis. This funding will be used to support DHS's ability to maintain and share a real-time situational awareness capability for critical infrastructure and to support the NICC and the NCCIC with real-time operational consequence analysis that includes actionable information about imminent threats, significant trends, and awareness of incidents that may affect critical infrastructure. The funding will allow DHS to provide integrated cyber and physical infrastructure analytic products to DHS and its public-private sector partners.

Bombing Prevention

The Bombing Prevention (BP) project, executed by the Office for Bombing Prevention (OBP), leads and coordinates DHS efforts to protect life and critical infrastructure by building capabilities within the general public, and across the private and public sectors to prevent, protect against, respond to, and mitigate bombing incidents. BP leads the Department's efforts to implement PPD-17, *Countering Improvised Explosive Devices*, and coordinate national counter-improvised explosive device (C-IED) efforts.

The BP project accomplishes its mission through four focus areas:

- Coordination of National and Intergovernmental Bombing Prevention Efforts: BP aligns DHS and national efforts through centralized and effective coordination of ongoing programs with national policy goals and recommends strategic adjustments based on understanding of global IED threats. Coordination and integration of national bombing prevention capabilities and programs is critical to effectively and efficiently prevent, protect against, respond to, and mitigate explosive attacks to the Nation's citizens and critical infrastructure. BP has a leading role in national c-IED policy implementation, serving as the Deputy Administrator for the interagency Joint Program Office for Countering IEDs, which coordinates and tracks Federal Government progress in building the c-IED capabilities enumerated in PPD-17. At the Department level, BP chairs the DHS IED Working Group to lead DHS implementation of the national C-IED policy and to optimize the complementary c-IED equities across DHS Components.
- Counter-IED Capabilities Analysis and Planning Support: BP systematically identifies and assesses the Nation's capabilities to counter IED threats and drive capability improvement through enhanced strategy, investment, and planning-based resource optimization.
 - The National Counter-IED Capabilities Analysis Database (NCCAD) (formerly known as NCAD) is an assessment program that uses a consistent and repeatable analytical methodology to assess and analyze the capabilities of bomb squads, SWAT teams, explosives detection canine units, and public safety dive teams. NCCAD information

supports national-level preparedness policy and grant guidance, as well as state and local planning and resourcing efforts. In addition, NCCAD supports crisis action decision support at multiple levels, including at the local, State, regional, and national levels.

- The Multi-Jurisdiction IED Security Planning Program (MJIEDSP) is a systematic process that fuses counter-IED capability analysis, training, and planning to enhance urban-area IED prevention, protection, mitigation, and response capabilities. BP works closely with stakeholders to provide planning and operational expertise that results in jurisdiction-specific guidance and a road-map to enhance multi-agency, multi-jurisdiction IED prevention, protection, and response capabilities.
- Information Sharing and Decision Support: BP increases stakeholder knowledge of IED threats, incidents, and their implications, along with C-IED principles, policies, and programs that increase capability and capacity to conduct critical functions of the C-IED strategy.
 - The Technical Resource for Incident Prevention (TRIPwire) is DHS's secure but unclassified online C-IED information sharing platform for Federal, SLTT, and private-sector officials, such as bomb technicians, first responders, military personnel, intelligence analysts, and security professionals. The information provided through TRIPwire increases awareness of evolving IED tactics, techniques, and procedures, as well as incident lessons learned and C-IED preparedness information. TRIPwire combines expert analyses and reports with relevant documents, images, and videos gathered directly from terrorist source materials to help users understand risks to their communities and to prepare for and prevent IED incidents.
 - TRIPwire Community Gateway (TWCG) provides bombing prevention guidance specifically tailored for the broader audience of private sector critical infrastructure owners, operators, and security personnel. TWCG includes IED-related information tailored to each of the 16 critical infrastructure sectors, as well as certain educational institutions, in accordance with the National Infrastructure Protection Plan (NIPP) 2013.
 - BP serves as a key partner in the National Explosives Task Force, a Federal Bureau of Investigation (FBI)-led interagency entity that fuses technical IED and explosives expertise from multiple Federal agencies, to assist in effective management of IED-related incidents and provide focused preparedness and protective security measure guidance and products.
- C-IED Training & Awareness: BP develops and delivers a diverse curriculum of training to reduce the risk to the Nation's critical infrastructure by building nationwide C-IED core capabilities and enhancing awareness of terrorist threats. BP C-IED training and awareness courses and products educate Federal and SLTT participants such as municipal officials and emergency managers, State and local law enforcement, and other emergency services, critical infrastructure owners and operators, and security staff on strategies to prevent, protect against, respond to and mitigate bombing incidents.

- Specialized, subject matter expert-led courses such as Surveillance Detection, Protective Measures, Bomb Threat Management, IED Search Procedures, IED Counterterrorism, and Vehicle-borne IED Detection enhance participants' knowledge and skills to effectively reduce the risks of explosive attacks to the Nation's citizens and critical infrastructure.
- The Bomb-making Materials Awareness Program is a collaborative effort between OBP and the FBI to increase public and private sector awareness of homemade explosives by promoting private sector point-of-sale awareness and suspicious activity reporting to prevent diversion and misuse of explosive precursor chemicals and components commonly used in IEDs. The course provides guidance and materials to help first responders conduct outreach to industries and businesses within their jurisdiction in order to increase prevention opportunities by building a network of vigilant and informed private sector partners who serve as the Nation's C-IED "eyes-and-ears."

Vulnerability Assessments

The Vulnerability Assessment (VA) project, in coordination with other projects across the Office of Infrastructure Protection, provides national leadership with the capability to identify infrastructure vulnerabilities and enhance security and resilience by developing and deploying a scalable assessment methodology, and tracking protective measures of other Federal, SLTT, and private-sector security partners. The VA project supports implementation of the NIPP 2013 by identifying vulnerabilities, supporting collaborative security planning, and recommending protective measures and risk mitigation strategies. These vulnerability assessments provide the foundation for DHS and critical infrastructure stakeholders' risk-informed implementation of protective programs designed to prevent, deter, and mitigate risk to infrastructure while enabling timely, efficient response and restoration in an all-hazards post-event situation.

The VA project includes the following efforts:

- Assess Critical Infrastructure Resilience and Vulnerabilities: The VA project's RRAP provides a regional analysis of the Nation's critical infrastructure within a geographical area. The RRAP is a cooperative, IP-led assessment of specific critical assets and a regional analysis of the surrounding infrastructure. The RRAP evaluates critical infrastructure on a regional level to examine vulnerabilities, threats, and potential consequences from an all-hazards perspective to identify dependencies, interdependencies, cascading effects, resilience characteristics, and gaps. Each multi-year RRAP involves the close coordination and participation of Federal, SLTT, and private-sector partners. Critical infrastructure listed on the Level 1 and Level 2 lists is being analyzed to identify clusters that will benefit from a comprehensive regional assessment. While the Protective Security Advisor (PSA) project leads the outreach and field activities of the RRAP, the VA project provides the majority of the support and analysis. The VA project also develops and oversees the production of the Resiliency Assessment, which is the RRAP deliverable to the State.
- Assess Critical Infrastructure Supporting Special Events: The VA project uses existing capabilities to assess critical infrastructure that supports National Special Security Events (NSSE) and Special Event Assessment Rating (SEAR) events. These capabilities include Computer-

based Assessment Tool (CBAT) imagery captures and Site Assistance Visits (SAV). The CBAT system captures 360-degree spherical color video of facilities, routes, and other specific areas of interest and combines it with technical site-assessment data, structural schematics, and other relevant site data to create an interactive visual guide of any location. The VA project jointly conducts the CBAT with Federal and SLTT officials, along with critical infrastructure owners and operators, in support of vulnerability assessments, special events, and contingency operations.

Sector Management & Governance increases the ability of all levels of government and private sector critical infrastructure partners to assess risks, coordinate programs and processes, and execute risk management programs and activities. These projects support the framework that governs the Nation's approach to critical infrastructure security and resilience providing cross-sector preparedness, public education, and academic engagement to support NIPP 2013 implementation. Sector Management & Governance also develops and delivers cutting-edge, innovative information technology (IT) and data management solutions that enable the secure sharing and protection of critical infrastructure data and analysis among all members of the infrastructure protection community.

Critical Infrastructure Technology and Architecture (CITA)

The purpose of the CITA project is to develop and deliver innovative IT solutions for the IP community. The IT solutions allow the IP community to efficiently gather, manage, share, and protect near-real time physical and cyber critical infrastructure (CI) information. To ensure that the CI information is useful and usable to the IP community, data is continually validated to ensure adherence to strict data standards. Innovative IT solutions, coupled with standardized data, allow for near-real time situational awareness and capabilities to conduct risk-based analysis and rapidly respond to incidents regarding physical and cyber CI. CITA's continual drive for excellence allows for the IP community to take proactive and coordinated efforts necessary to strengthen and maintain secure, functioning, and resilient physical and cyber CI; reduce vulnerabilities; minimize consequences; identify and disrupt threats; and hasten response and recovery efforts related to CI.

The CITA program includes the following activities:

- Critical Infrastructure Technology Development: The development of CI technology systems and capabilities is necessary to ensure efficient and effective collecting and reporting of CI data. CI data is collected via multiple methods (e.g., Federal assessments, self-reporting by private CI owners) and reported to varying audiences (e.g., Federal analysts and local first-responders). As a result, the development of various tools and reporting capabilities are necessary to ensure all CI stakeholders have the right tools and the right information at the right time. Further, as technology evolves, the expectations of CI stakeholders to have near-real time information in the format they need to make quick decisions increases.
- Critical Infrastructure Technology Operation and Maintenance: The maintenance of complex CI technology systems requires continued operation and maintenance (O&M) of the system, from its introduction to the production environment, through to disposal of the system. O&M includes hosting, updates, and upgrades of basic security and software patches, improvements to applications and capabilities, and technical refresh of hardware components as needed to ensure reliability and security of the systems. Security is of particular concern because of the sensitive infrastructure information (Protected Critical Infrastructure Information or other designations) contained within the CI technology systems.
- Critical Infrastructure Data Management: Due to the complex nature of the CI data collected, and the many different sources from which the data is received, it is imperative that a robust data management capability be maintained in order to ensure quality data is available to support our collective Federal and local steady-state and incident support mission efforts. To maintain a robust data management capability, the data must be thoughtfully collected and presented. The CI data management activity addresses three questions to ensure the value and usability of the data: what type of data needs to be collected and protected; how should the data be collected; and how should the data be presented and shared? Cascading effects and interdependencies of CI assets is a notable example of data management. Collecting and presenting how an incident affecting one CI asset (e.g., cyber-attack on the electrical grid) affects another CI asset (e.g., operation of water treatment facilities due to loss of electricity) provides invaluable information to CI stakeholders. Without quality data management, the usability, usefulness, and comprehensiveness of the collected CI data would be adversely affected.

Facilities

The Facilities project includes costs for all IP office spaces, such as IP's General Services Administration (GSA) rent and non-GSA facility items such as heating, ventilation, and air condition services, Federal Protective Service guard services, building escort services, furniture, building renovations, Continuity of Operations (COOP) facility costs, utilities, building overtime engineering services, parking, and miscellaneous repairs. This project also develops and maintains IP facilities policies and processes that ensure an appropriate and equitable work environment in order to effectively and efficiently execute IP's mission. The Facilities project is also responsible for the coordination of office moves and provides facilities planning, space management, and fleet oversight.

NIPP Management

The NIPP Management project establishes and supports the framework that governs the Nation's approach to CI security and resilience. The project oversees any updates to the NIPP and leads NIPP implementation processes, working to ensure the NIPP is implemented in alignment with direction contained in PPD- 21, *Critical Infrastructure Security and Resilience*, and EO 13636, *Improving Critical Infrastructure Cybersecurity*.

The NIPP Management project includes the following activities:

- Strategic Planning: Monitors emerging risks and CI vulnerabilities and strategic trends to identify areas where NIPP coordinating structures can increase the overall security resilience of the Nation by focusing efforts on the strategic environment. In coordination with the 16 sectors, SLTT, and regional stakeholders, identifies shared national priorities for CI security and resilience.
- Strategic Initiatives: Based on identified priorities, coordinates IP and stakeholder resources to ensure that analysis, appropriate coordination mechanisms, and other supporting structures are in place to support national progress toward increased security and resilience. NIPP resources here are focused on developing new strategic approaches to risk management and identifying and filling gaps, as needed, with the goal of institutionalizing and passing on to programs any structures which merit continuous resourcing.
- CI Risk Management Reporting and Metrics: Provides CI measurement and analysis support to DHS, NPPD, and IP, as well as national-level reporting requirements support to partners. Also develops the CI National Annual Report.
- Interagency Security Committee: The Interagency Security Committee (ISC) – which was established per EO-12977, *Interagency Security Committee* – works to enhance the quality and effectiveness of security in and protection of building and facilities in the United States occupied by Federal employees for nonmilitary activities. To do so, the ISC uses a standardized product development process to address risk management and best practice needs.

Together, the projects within NIPP Management ensure that the NIPP is focused on high-impact areas, has the resourcing and support that is required to effectuate the goals of the NIPP, and can demonstrate progress over time.

Sector-Specific Agency Management

The Sector-Specific Agency (SSA) Management project executes the DHS mission to lead the unified public-private sector effort to coordinate, develop, and implement comprehensive plans, programs, and strategies to enhance the security and resilience for six CI sectors (Chemical; Commercial Facilities; Critical Manufacturing; Dams; Emergency Services; and Nuclear Reactors, Materials, and Waste) and to collaboratively support information sharing and coordination activities for the 10 sectors whose programs are managed by other Federal agencies.

SSA Management executes this capability through strong partnerships with owners, operators, industry associations, academia, and all levels of government. The SSA Management project executes its mission through five primary program areas: Planning and Project Integration; Education and Training;

Information Sharing and Communication; Exercises and Incident Management; and Assessment and Mitigation.

SSA Management includes the following activities:

- Planning and Project Integration: The SSA Management project establishes and implements adaptable planning and project integration activities to build, sustain, and expand partnerships both internal and external to DHS; to synchronize and communicate common objectives, responsibilities, and initiatives across the six NPPD/IP SSAs; to readily share relevant cross-sector information addressing both physical and cybersecurity issues; to support effective integration of physical and cybersecurity elements into comprehensive risk management programs, and to identify and prioritize the security and resilience needs and requirements of sector partners.
- Education and Training: The SSA Management project provides the foundation for improving the state of practice regarding programs, policies, and procedures implemented across the CI sectors. These education and training efforts provide sector partners with sector-specific and cross-sector technical products, tools, and best practices addressing the physical, cyber, and human dimensions across the entire spectrum of CI security and resilience activities.
- Information Sharing and Communication: The SSA Management project establishes and sustains robust information sharing and communication mechanisms with public and private sector partners with particular focus on the coordinating councils established in the NIPP 2013. These mechanisms, which provide sector partners with useful and actionable information to inform risk management decisions, ensure the development of holistic CI security and resilience strategies that reflect sector needs and priorities.
- Exercises and Incident Management: The SSA Management project works with DHS components and sector partners to develop and participate in sector-specific, as well as national-level, cross-sector exercises. These initiatives assist the private sector in readiness by providing important avenues to test their state of preparedness, resilience, information-sharing processes, and best practices.

The SSA Management project prepares the IP-led sectors for responding to or recovering from all-hazards events. The private sector relies on the knowledge, skills, abilities, and tools provided through the SSA Management project to enable it to be more prepared and more resilient. SSA Management measures its success by the number of partners trained; number of partners using education products; number of partners implementing best practices, tools, and methodologies; and the overall feedback received from partners on SSA Management-developed products and services.

MAJOR ACQUISITIONS:

IP Gateway/Linking Encrypted Network System (LENS)

The IP Gateway, formerly the LENS, is a secure portal and the infrastructure on which various NPPD/IP applications are hosted. The IP Gateway infrastructure facilitates interoperability and data

sharing between the applications and their associated databases, and makes NPPD/IP IT more efficient by sharing bandwidth, hardware, and software for all of the applications on it. It will facilitate ease of use by replacing multiple sign-ons for users with single sign-on.

NPPD requests \$57.034 million for Regional Field Operations, including 163 FTP/161 FTE. This is an increase of \$0.484 million and an increase of 8 FTP/19 FTE from the FY 2014 Enacted budget. It includes the following adjustments-to-base:

- Increase of \$2.275 million for salaries and benefits realignment from the Sector Management & Governance PPA
- Increase of \$1.833 million and 13 FTE for the annualization of prior year positions
- Increase of \$0.048 million for the annualization of the FY 2014 pay raise
- Increase of \$0.148 million for the FY 2015 pay raise
- Increase of \$0.028 million for increased retirement contributions
- Decrease of \$1.771 million and 3 FTP/3 FTE with a related increase in the Infrastructure Analysis & Planning PPA for geospatial analysis functions
- Decrease of \$0.107 million for efficiencies achieved by reducing Federal personnel grades
- Decrease of \$0.167 million for contract efficiencies
- Increase of 6 FTP/6 FTE for the DHS FY 2015 Balanced Workforce initiative

Infrastructure Sector Analysis Transfers					
FY 2015

Regional Field Operations builds a regional capacity across the sectors to secure critical infrastructure through the deployment of NPPD Office of Infrastructure Protection (IP) products and services for SLTT government and private sector partners. These projects support the regional implementation of Infrastructure Analysis and Planning and Sector Management and Governance projects, create a unifying information-sharing environment, and assess vulnerabilities and protective measures for the critical infrastructure community from the national to the local level.

Critical Infrastructure and Key Resources Partnerships

The Critical Infrastructure and Key Resources (CIKR) Partnerships project enhances critical infrastructure protection and resilience by building and sustaining a comprehensive network of stakeholder engagement structures and processes, through which critical infrastructure stakeholders coordinate and communicate within their communities and across sectors and geographic jurisdictions. The project provides effective legal and policy-compliant structure and procedures for engagement within and among critical infrastructure public-private partnerships and a unifying information-sharing environment for the stakeholder community, from the national to the local level.

The CIKR Partnerships project supports more than 132 sector partnership councils and working groups. Implementation and operations of the Critical Infrastructure Information Sharing Environment includes more than 175 stakeholder portals on the Homeland Security Information Network - Critical Infrastructure (HSIN-CI), incorporating more than 27,000 information products. The project also includes Private Sector Security Clearance Program coordination and compliance activities with the national Information Sharing Environment framework.

The CIKR Partnerships project includes the following activities:

- Critical Infrastructure Stakeholder Engagement Capabilities: Provides partnership council and regional forum operational support, including logistical coordination and communication and oversight of the regulatory and policy compliance framework under which these mechanisms must operate. This initiative also provides necessary analytical support to collect information on requirements; develop studies, reports, and action roadmaps; mediate and facilitate issue resolution; and provide an additional means of meaningful feedback to the Federal government on the efficacy of the partnership and progress in its role in achieving the critical infrastructure protection and resilience mission. Such support is particularly essential for the effective functioning of the National Infrastructure Advisory Council, Regional Consortia Coordinating Council, and the SLTT Government Coordinating Councils (GCCs). Also, supports sector partnerships for those sectors external to the Office of IP, through Sector Liaison activities. Sector Liaisons assist external public and private sector partners by providing coordination on NIPP 2013 Partnership Framework matters, subject matter expertise on sector-specific matters, and outreach throughout IP and DHS on critical infrastructure partnership matters.
- Critical Infrastructure Information Sharing: Implementation and operation of the Critical Infrastructure Information Sharing Environment, which includes the Critical Sector component of the HSIN made available to all critical infrastructure owners and operators to access DHS-sensitive information; policy development and planning elements of the Private Sector Clearance Program, supporting classified information sharing for both physical and cybersecurity activities and information-sharing policy compliance with the requirements of the national Information Sharing Environment. In FY 2015, DHS plans to conduct outreach to 30,000 new critical infrastructure stakeholders, inclusive of all delivery mechanisms within the Critical Infrastructure Information Sharing Environment.
- Stakeholder Preparedness, Education, and Academic Engagement: Development and implementation of critical infrastructure training and education programs that enhance critical infrastructure security and resilience competencies, and build capabilities among the full range of partners and stakeholders, and serve as a Center of Excellence and Management for mission-focused training. Education and training is enabled through a variety of mediums including, but not limited to, cross-sector and sector-specific independent study and instructor-led courses, webinars, videos, workshops, and associated materials; and through continued outreach to promote participation in IP education and training programs. In addition, the activity promotes critical infrastructure as a profession through the Critical Infrastructure Higher Education Initiative that provides curricula and supporting resources available to colleges and universities across the country to implement graduate and certificate-level courses of study, and engages the academic community on critical infrastructure security and resilience issues. Guided by comprehensive needs assessments conducted in FY 2014, this activity will provide a unified approach to critical infrastructure and cybersecurity training programs, and inform, train, and educate partners and stakeholders about critical infrastructure preparedness, security, and resilience.

National Infrastructure Coordinating Center (NICC)

The NICC project is the information and coordination hub of a national network dedicated to protecting critical infrastructure essential to the Nation's security, health and safety, and economic vitality. The NICC consolidates, from a national perspective, reports regarding significant primary, secondary, and cascading impacts caused by operational degradation at critical infrastructure by maintaining a constant level of operational awareness of the Nation's critical infrastructure through ongoing contact with SSAs, other infrastructure protection entities, and critical infrastructure private sector partners, to include: Sector Coordinating Councils, GCCs, and private sector Information Sharing and Analysis Centers.

The NICC project also provides the structures necessary to maintain effective steady-state monitoring and incident-management information sharing for conditions and events that threaten the Nation's critical infrastructure. As the 24/7/365 operational component of IP and as the critical infrastructure functional element of the DHS National Operations Center (NOC), the NICC provides situational awareness and monitoring of incidents affecting critical infrastructure nationwide. This steady-state monitoring, alerting, and response planning enables a rapid transition to incident management in a crisis. The NICC is responsible for vetting, creating, disseminating, and tracking requests for information and requests for action from internal and external critical infrastructure partners, enabling partners to address the most demanding restoration priorities and make the most informed decisions throughout a crisis.

The operational elements of the NICC project include:

- Operational Partnerships Development and Coordination: This initiative supports all NICC activities related to maintaining close communications, coordination, and collaboration with Federal, State, and local operational entities and critical infrastructure private sector partners. The NICC leverages existing partnerships and programs to inform owners and operators in the event of an incident affecting the Nation's critical infrastructure.
- Readiness to Support Information Sharing and Incident Response: This initiative supports NICC activities to maintain and enhance the readiness and preparedness posture of the NICC and DHS's incident response capabilities by maintaining and enhancing the NICC, IP's Critical Infrastructure Crisis Action Team, and NPPD/IP's incident management responsibilities. As the critical infrastructure-focused element of the NOC, the NICC plays an integral role in the restoration of critical infrastructure after a catastrophic event, acting as the primary information hub for partners at the Federal and SLTT levels of government. The NICC also acts as a crucial information resource for critical infrastructure owners and operators. During steady state, the NICC's key value to partners is its ability to rapidly assess an incident and quickly determine if a particular occurrence warrants further action by the critical infrastructure community. The Homeland Security Information Network - Critical Sectors (HSIN-CS), a comprehensive information portal, ensures vetted critical infrastructure stakeholders have access to the most current and relevant reporting and products regarding an incident or event.

Protective Security Advisors(PSA)

The PSA project's overarching mission is to proactively engage with SLTT government mission partners and members of the private sector stakeholder community to protect the Nation's critical infrastructure. PSAs are strategically deployed across the United States and provide the SLTT and

private sector stakeholders with steady-state DHS risk-mitigation efforts and support response to all-hazard incidents through field-level coordination and information sharing as well as expertise on reconstituting critical infrastructure and surge capabilities to more effectively support threat-driven actions. They serve as onsite DHS critical infrastructure and vulnerability assessment specialists, while giving a local perspective to – and supporting the development of – the national risk picture by identifying, assessing, monitoring, and minimizing the risk to critical infrastructure at the State, local, and regional levels.

The PSA project includes the following activities:

- Security Surveys and Assessments: PSAs are responsible for planning, coordinating, and leading critical infrastructure security survey and assessment activities in their respective districts. These include conducting Enhanced Critical Infrastructure Protection (ECIP) security surveys that employ the Infrastructure Survey Tool to generate Protective Measure Indices (PMI) and Resilience Measures Index (RMI) that can be used to compare and contrast security preparedness and resilience aspects of similar facilities; working with the VA project to coordinate RRAPs and CBAT imagery captures. ECIP survey data and metrics support the findings and metrics of the National Annual Report, which contributes to the larger critical infrastructure Risk Management Enhancement Initiative to identify risks to the Nation’s critical infrastructure.
- Contingency and Incident-specific Outreach Activities: In support of execution of NIPP 2013, *Partnering for Critical Infrastructure Security and Resilience*, PSAs forge strong relationships with Federal and SLTT government mission partners and private sector stakeholders to enhance public/private collaborative efforts to protect critical infrastructure through conducting Threat-Based Outreach. IP and the PSAs remain focused on contingency outreach to owners and operators of critical infrastructure regarding the evolving terrorist threat. Recent domestic incidents have highlighted the need to remain vigilant. The PSA project also provides support to projects and programs across DHS, such as cyber assessments from the Office of Cybersecurity & Communications, self-assessments from the Sector-Specific Agency Executive Management Office, the Private Sector Security Clearance Program, the Critical Infrastructure Information Sharing Environment through the HSIN-CS delivery to critical infrastructure owners/operators, and many other tools and capabilities provided to critical infrastructure owners/operators and SLTT mission partners.
- Support to NSSEs and SEAR Events: PSAs provide support to officials responsible for planning and leading NSSEs and SEAR events. This includes providing expert knowledge of local critical infrastructure, participating in planning committees and exercises, conducting security surveys and assessments of event venues and supporting infrastructure, and coordinating the development and delivery of geospatial products. DHS maintains authority and responsibility for the Geospatial Support Team.
- Incident Response: PSAs deploy, in response to natural or man-made incidents, to State and local Emergency Operations Centers, and when appropriate, to FEMA Regional Response Coordination Centers. PSAs provide situational awareness and facilitate information exchange to and from the field. During major incidents, and when designated by the Assistant Secretary

of the Office of Infrastructure Protection, PSAs perform duties as Infrastructure Liaisons at Joint Field Offices or Unified Area Coordination Groups.

- Coordinate and Support Improvised Explosive Device (IED) Awareness and Risk Mitigation Training: PSAs work in conjunction with the BP project to deliver IED preparedness strategies. PSAs collaborate with the BP project to provide training products and services to SLTT partners to deter, detect, prevent, protect against, and respond to IED threats.

Infrastructure Security Compliance	253	230	71,696	253	242	81,000	263	263	86,976
ISC Salaries & Benefits	253	230	32,921	253	242	33,213	263	263	35,999
Infrastructure Security Compliance			38,775			47,787			50,977

The Infrastructure Security Compliance (ISC) project secures America's high-risk chemical facilities through the systematic regulation, inspection, and enforcement under the authority of the Chemical Facility Anti-Terrorism Standards (CFATS). In addition, the ISC project manages the proposed Ammonium Nitrate Security Program, which creates a proposed framework that would "regulate the sale and transfer of ammonium nitrate by an ammonium nitrate facility to prevent the misappropriation or use of ammonium nitrate in an act of terrorism."

ISC was established in response to Section 550 of the FY 2007 Department of Homeland Security Appropriations Act which directed the Department to develop and adopt a regulatory framework to address the security of chemical facilities that the Department determines pose high levels of risk. Specifically, Section 550(a) of the Act authorized the Department to adopt regulatory requirements for high-risk chemical facilities, to complete Security Vulnerability Assessments, develop Site Security Plans (SSPs), and implement protective measures necessary to meet risk-based performance standards established by the Department.

The CFATS rule establishes enforceable risk-based performance standards (RBPS) for the security of our Nation's chemical facilities. High-risk facilities have the flexibility to develop appropriate site-specific security measures that will effectively address risk by meeting these standards through SSPs or, if the facility so chooses, through Alternative Security Programs (ASPs). ISC will review and assess all final high-risk facility SSPs and ASPs to ensure they meet the applicable RBPS and will approve those that do. If necessary, ISC will work with a facility to revise and resubmit an acceptable plan and can disapprove security plans if an acceptable plan is not submitted. The Department continues to move forward with the Ammonium Nitrate Security Program's rulemaking process and expects to develop a final rule within a timeframe that ensures that DHS can consider and respond appropriately to issues and concerns raised during the public comment period and that enables DHS to comply with applicable federal rulemaking requirements and procedures.

The ISC project includes:

- Regulatory Mission Support: This initiative provides support for assessment of issues that affect CFATS implementation, communications, new policy development, and the proposed Ammonium Nitrate Security Program. It seeks to ensure that the public, federal and SLTT governments, private sector, and the regulated community are aware of the responsibilities of high-risk chemical facilities and sellers and purchasers of ammonium nitrate in helping to mitigate security risks related to high-risk chemical facilities and ammonium nitrate, of CFATS regulatory requirements, and of proposed Ammonium Nitrate Security Program regulatory requirements. This initiative also provides support to complete the regulatory process prescribed by the Administrative Procedures Act, and establish the business operations upon which the commerce of the sale and transfer of ammonium nitrate will rely once the Ammonium Nitrate Security Program is implemented.
- Regulation Compliance Determination: This initiative includes the review and analysis of data from facilities in order to determine if they are high-risk, as well as the review and assessment of SSPs or ASPs of high-risk chemical facilities and all inspections. In addition, it includes

compliance assistance visits, authorization inspections, and enforcement proceedings; and reporting on compliance, inspection, and enforcement progress.

- Field Operations Support: This initiative includes the management of equipment – to include vehicles, uniforms, and IT requirements – and facilities needed to support inspectors in the field.
- Technical Engineering: This initiative includes development, maintenance, operations, and support for the tools used to collect data from facilities, analyze that data, and manage information for the implementation of CFATS. Implementation of the CFATS regulation requires the Department to identify which facilities it considers high-risk. ISC developed the Chemical Security Assessment Tool (CSAT) to help the Department identify potentially high-risk facilities and to provide capabilities facilities can use to conduct Security Vulnerability Assessments (SVAs) and to develop SSPs. CSAT is a suite of online applications designed to facilitate compliance with the program; it includes user registration, the Top-Screen, an SVA tool, and an SSP template. CSAT is a secure system that can be accessed only by Chemical-terrorism Vulnerability Information authorized users.

In addition, ISC utilizes an internal content management system (CHEMSEC) to, among other things, manage the ISC activities integral to the review, inspection, and approval or disapproval of SSPs and ASPs.

MAJOR ACQUISITIONS:

Chemical Security Assessment Tool

The Infrastructure Security Compliance project has been implemented in response to Public Law 109-295, as amended, that provides DHS with the authority to regulate chemical facilities that present a high level of security risk. This investment provides for developing the Chemical Security Assessment Tool and the Chemical Security Management System collectively tagged “CSAT suite” (CSATs). It will include future development efforts addressing requirements resulting from: future Chemical Anti-terrorism Standards legislative changes, processes reengineering initiatives, and system migration to a DHS Data Center. This investment fills the gap of non-existing capabilities by providing for: the electronic submission of extensive facility data, controlled use of such data, inspection related and correspondence materials, and workflow processes.

Cybersecurity Coordination			1,209			1,842			1,839

The Cybersecurity Coordination program integrates information from the six federal cybersecurity centers to provide a fused view of cyber activity across the intelligence, defense, civil, and law enforcement/counterintelligence domains. The program supports operational activities facilitating integration and other actions at the federal centers, an information system for online collaboration, and Information Technology (IT) support and enterprise capability for the centers. Cybersecurity

Coordination also supports an increased number of private sector partners present in the NCCIC environment.

The NCCIC serves as a centralized location where operational elements involved in cybersecurity and communications reliance are coordinated and integrated. NCCIC partners include all federal departments and agencies; SLTT governments; the private sector; and international entities. NCCIC leads the protection of federal civilian agencies in cyberspace, collaborating with critical infrastructure owners and operators to share information and respond to incidents. NCCIC also disseminates cyber threat and vulnerability analysis information and assists initiating, coordinating, restoring, and reconstituting NS/EP telecommunications services and facilities under all conditions, crises, or emergencies, including executing Emergency Support Function 2-Communications (ESF #2) responsibilities under the National Response Framework.

The NCCIC will also provide strategic cyber-threat analysis, in conjunction with US-CERT and the NICC, to reduce malicious actors exploiting vulnerabilities. Threat management decisions must incorporate cyber threats based on technological as well as non-technological factors, and consider the varying levels of security required by different activities.

2015 Total Request	240	239	98,794
Total Change 2014 to 2015	15	21	(3,206)

NPPD requests \$98.794 million for US-CERT Operations, including 240 FTP/239 FTE. This is a decrease of \$3.206 million and an increase of 15 FTP/21 FTE from the FY 2014 Enacted budget. It includes the following adjustments to base:

- Increase of \$0.987 million and 7 FTE for the annualization of prior year positions
- Increase of \$0.057 million for the annualization of the FY 2014 pay raise
- Increase of \$0.221 million for the FY 2015 pay raise
- Increase of \$0.036 million for increased retirement contributions
- Decrease of \$0.168 million for efficiencies achieved by reducing Federal personnel grades
- Decrease of \$0.201 million for contract efficiencies
- Decrease of \$0.482 million and increase of 13 FTP/13 FTE for the DHS FY 2015 Balanced Workforce initiative

CURRENT SERVICES PROGRAM DESCRIPTION:

\$K	FY 2013 Rev. Enacted			FY 2014 Enacted			FY 2015 Pres. Budget		
	FTP	FTE	Total	FTP	FTE	Total	FTP	FTE	Total
US-CERT Operations	188	138	85,477	225	218	102,000	240	239	98,794
US-CERT Salaries & Benefits	188	138	22,807	225	218	29,449	240	239	33,107
Operations			28,159			37,729			34,929
Coordination & Integration			22,350			24,874			24,874
Technology & Readiness Planning			12,161			9,948			5,884

US-CERT Operations is the operational arm of the Office of CS&C. Its primary functions include analyzing and reducing cyber threats and vulnerabilities, disseminating cyber threat warning information to public and private sector partners, coordinating with government and industry partners to achieve shared cyber situational awareness of the Nation's cyber critical infrastructure, providing response and recovery support for national assets, and advising senior leadership on national-level cybersecurity policy and guidance.

US-CERT Operations improves national efforts to address threats and incidents affecting the Nation's critical IT assets and cyber infrastructure and serves as a key component of the National Cyber Incident Response Plan. US-CERT Operations leads cross-sector efforts to improve the Nation's cybersecurity posture, coordinates cyber information sharing, and manages cyber risks to the Nation while protecting constitutional liberties. US-CERT Operations' mission space includes federal civilian agencies; the intelligence community; State, local and tribal governments; private sector partners; critical infrastructure owners and operators; international partners, as well as the public.

US-CERT Operations activities provide immediate customer support and incident response, including 24x7x365 support to the NCCIC, which has connectivity to all major federal cyber operations centers, industry, international, and communications partners. Its analysts examine raw and summarized data from a wide variety of information sources to make determinations about potential attacks detected by the NCPS. US-CERT Operations also maintains a 24x7 operations center that provides situational awareness and risk mitigation information and support to the Federal Government customers and the public.

US-CERT Operations is comprised of the following three activities:

- Operations: Identifies, triages, and analyzes cyber activity to rapidly develop and disseminate mitigation and risk management strategies. It also ensures DHS representation during operational planning and the planning and implementation of technology development programs. Operations consist of the three areas: Incident Management, Detection and Analysis, and Digital Analytics.
- Coordination and Integration: Builds and manages trusted relationships to share information and coordinate with constituents to facilitate shared situational awareness and better protect assets against cyber threats.
- Technology and Readiness Planning: Develops plans, processes, and technology requirements to advance US-CERT Operations towards its strategic vision and ensure US-CERT matures in a coordinated and strategic fashion in response to a dynamic operational environment. It also manages and coordinates organizational resources critical to mission responsibilities

In FY 2015, US-CERT will leverage automated information delivery of feedback information (i.e., EINSTEIN 3 Accelerated data (E³A)). This data, when used in conjunction with current EINSTEIN 1, and EINSTEIN 2 data, will enable US-CERT to identify, triage, and analyze cyber activity, and rapidly develop and disseminate mitigation and risk management strategies. Analysts' workload will increase in FY 2015, as E³A provides more information for the analysts to process. Within FY 2015 current

service funding levels, annualization of positions will serve to ensure that US-CERT's analytical information is shared promptly across the Federal Government.

In FY 2015, US-CERT Operations' priorities will be:

- Add new/unique Government protection capabilities to augment managed security services for all departments and agencies.
- Maintain current protection measures.
- Leverage automated delivery of E³A data.
- Leverage classified Intrusion Detection System (IDS) signatures/indicators to detect malicious network activity.
- Support additional operational requirements, data, and volume sources from the CDM, ECS, and Cybersecurity Information Sharing and Collaboration programs.

US-CERT will incorporate countermeasure data into US-CERT analysis only when; 1) the data is relevant to a specific cyber threat; and 2) an IDS signature/indicator signals that the information is a match to a known or suspected cyber threat.

The chart below illustrates incidents reported to US-CERT from FY 2011 to FY 2013 3Q. In FY 2011, US-CERT received a total of 106,376 reports. Approximately 43,000 of those were Federal incidents and approximately 55,000 were reported phishing incidents. In FY 2012, US-CERT received over 161,000 incidents. That is a 52 percent increase from FY 2011. In FY 2013, US-CERT received 228,251 incident reports, representing a 41.3-percent increase from the 161,553 incidents received in FY 2012..

Federal Network Security (FNS) serves as the single, accountable focal point for achieving cyber infrastructure security and compliance throughout the federal enterprise. Overall, the activities within FNS will work collaboratively to more effectively execute its mission in two key areas:

- On-site agency compliance assessments to improve FNS’ analytical and reporting capabilities, which will also allow FNS to address the increased implementation of CDM capabilities within departments and agencies.
- Obtaining the quantity and quality of data necessary to definitively understand agency critical needs for CDM, and address organizational threats, vulnerabilities, and risks, thereby allowing DHS and its partner agencies to make deliberative and measurable improvements in securing agency networks and the federal enterprise.

The above are crucial activities to FNS ensuring and measuring compliance with the Federal Information Security Management Act (FISMA) and guidance outlined in Office of Management and Budget (OMB) M-10-15 and M-10-28.

Cybersecurity Performance Management (CPM): Provides operational support to Federal departments and agencies in securing Federal information systems, consistent with the implementation of OMB M-10-15, M-10-28, and subsequent memoranda and directives relative to evolving Federal cybersecurity requirements.

CPM executes DHS FISMA responsibilities by drafting the annual FISMA report to the Congress for OMB review; conducting Chief Information Officer/Chief Information Security Officer (CIO/CISO) interviews with agencies; and developing updated quarterly and annual FISMA metrics, including the Office of the Inspector General’s (OIG) measures. Further, CPM assesses the effectiveness of Federal civilian agency’s security programs and tracking the civilian Federal Executive Branch’s progress affecting improvement against the enterprise cybersecurity baseline established in FY 2011. CPM also addresses any identified solution gaps to provide Federal agencies clear guidance for migrating existing infrastructure and implementing new capabilities in a manner consistent with the overall federal security strategy.

CPM provides analysis of government-wide agency program reviews, consisting of an analysis of Federal department and agency’s information security profiles. These provide insight into the posture and maturity of Federal department and agency’s information security programs.

CPM measures an agency’s security capability through metrics it collects via CyberScope from the each agency’s CIO and OIG. Annually, CPM reviews, refines, and, if necessary, creates new security metrics measuring performance and identifying cyber risks across the Federal enterprise. CPM provides input to agency-specific and enterprise-wide cybersecurity posture assessments from data analysis of quarterly and annual FISMA reports; automated data feeds such as Cybersecurity Compliance Validations; OIG US-CERT data agency-submitted action plans; Trusted Internet Connections (TIC) Plan of Action and Milestones; and agency CIO FISMA interviews.

CPM conducts CyberStat reviews, at the direction of the Executive Office of the President's National Security Council Staff and OMB, by coordinating high-level meetings with agencies selected from the 24 Chief Financial Officers (CFO) Act agencies to address negative high-risk FISMA results. These meetings provide the agencies information and assistance enabling them to take remedial action and improve their security posture. For agencies not receiving a CyberStat Review, CPM is responsible for conducting FISMA interviews with the agency CIOs/CISOs. These reviews focus on threats and security issues specific to the respective agency and on fostering a partnership for improving the Federal security posture. The discussions center on unique security challenges to the agency's mission priorities based on risks, needs, and capabilities.

CPM will utilize the requested FY 2015 funding to further the following key initiatives:

- Compile input for the annual FISMA report to Congress to serve as the initial drafts of agencies' OMB congressional reports. The FISMA report captures the current state of the cybersecurity posture of the Federal civilian agencies, as well as cybersecurity progress made during the previous fiscal year.
- Conduct recurring, quarterly, and annual department and agency analysis and compare year-over-year performance results to the baseline. This shows authorizing officials more complete, reliable and trustworthy information; thus facilitating more informed security authorization decisions.
- Continue developing and enhancing the Federal Cybersecurity Maturity Roadmap for departments and agencies, based on existing regulations, standards, and best security practices. This further enhances FISMA implementation through a risk-based approach coupled with a means of measuring the integrity of department and agencies' information security programs.
- Conduct and coordinate annual CyberStat reviews and agency CIO/CISO interviews to assist Federal civilian agencies in implementing key strategic enterprise cybersecurity capabilities.
- Continue to refine and develop CyberScope FISMA metrics collected from each agency's CIO and OIG to measure performance and identify cyber risks across the Federal enterprise.

Cybersecurity Assurance Program (CAP): Addresses DHS's responsibilities to certify and enforce Federal and civilian agency implementation of network and security operational standards and best practices; ensure agencies comply with federal standards and policies; and assess the state of operational readiness and cybersecurity risk for unclassified networks and systems across Federal Executive Branch civilian agencies.

CAP engages with departments and agencies to improve their cybersecurity posture by assessing capabilities; identifying vulnerabilities; evaluating risks; and providing prioritized guidance optimizing remediation activities to close capability gaps, limit exposure, reduce exploitation, and increase the speed and effectiveness of cyber-attack responses.

CAP engages in three crucial activities providing access to specialized skills and services; promoting a healthy, secure and resilient IT infrastructure across the Federal Government; measuring mandatory

cybersecurity capabilities implementation; and providing an enterprise view of the Federal Government's cybersecurity posture.

- *Cybersecurity Capability Validation (“CCV”)* assessments are conducted to assess and validate each agencies' implementation of technical (tools and technologies) and operational (people, processes, security program maturity) cybersecurity capabilities required by Federal laws, policies, and initiatives. CCV assessments incorporate document reviews, staff interviews, operational observations, and direct testing (when possible) to provide an objective, repeatable, and consistent methodology ensuring fairness, and facilitating government-wide trending and analysis.
- *Risk and Vulnerability Assessments (“RVA”)* combine national threat and vulnerability information with data collected through on-site assessment activities to provide agency specific risk analysis reports with actionable remediation recommendations prioritized by risk. Service capabilities include network (wired and wireless) mapping and system characterization; vulnerability scanning and validation; threat identification and evaluation; social engineering; application, database, and operating system configuration review; web application testing and incident response testing.
- *Cyber Hygiene* activities assess Internet accessible Federal unclassified civilian systems for known vulnerabilities and configuration errors on a recurring basis. CAP works with impacted agencies to mitigate risks prior to their exploitation as potential issues are identified.

CAP is the only centralized Federal civilian program proactively engaging with agencies to provide information and services helping them prepare and prevent cyber incidents, mitigating risks, and continuously improving their cybersecurity capabilities. CAP's services and activities improve the cybersecurity posture of the Federal Government, reduce risk, and achieve significant government-wide cost avoidance through enhanced prevention and decreased incident recovery expenditures. Analysis of the data collected through CAP activities aids policymakers and Federal departments and agencies in developing sound security and risk mitigation strategies.

CAP will utilize the requested FY 2015 funding to conduct between 26 - 30 CCV assessments, and 12 - 15 RVA's of selected civilian departments and agencies. Additionally, CAP will provide stakeholders with prioritized access to agency assessments from the CFO Act, and Trusted Internet Connection Access Provider (TICAP) agencies impacted by cyber incidents requiring post-incident strategic remediation support. Stakeholders include individual agencies and departments receiving a distinct report detailing their findings and recommendations, as well as policy makers and the cyber community having access to aggregated reports not attributable to any agency.

CAP will produce annual enterprise-level reports and white papers detailing the Federal Government's cybersecurity posture, information security trends and challenges, and remediation suggestions for short and long term mitigation activities, based on DHS-wide data sets (i.e. US-CERT incident data, NCPS data, FNS assessment data, and agency FISMA submissions). CAP will provide these enterprise-level reports and white papers to stakeholders, including policy makers and the cyber community members, such as State and local governments; the Intelligence Community; the Department of Defense; software/hardware vendors; and academic institutions.

Network and Infrastructure Security (N&IS): Leads the CNCI/TIC Initiative with OMB. N&IS will optimize network security capabilities into a common solution for the federal information enterprise and facilitate reducing and consolidating external connections, including Internet points of presence, through approved access points.

Reducing and consolidating external access points affords a number of benefits to the Federal Government, particularly when coupled with risk mitigation and added security measures. Among the benefits are identifiable locations for EINSTEIN 2 intrusion detection system sensor deployments, as well as a series of critical security capabilities that agencies must establish for TIC-compliance.

While OMB maintains oversight of the TIC Initiative, implementation relies on the technical expertise of N&IS, which will synchronize the efforts of all participating Federal partners. N&IS will also monitor and oversee Federal partners' TICAP transition, managing their baseline information systems security capabilities required under the TIC Initiative.

N&IS will provide individualized cybersecurity support to micro-agencies (i.e. agencies with less than 125 staff). Micro-agencies often lack the full-time IT security staff and expertise requisite to completing strategic cybersecurity initiatives on their own. A shared cadre of specialists will work with the smallest agencies on strategic cybersecurity initiatives. Support will include assistance developing appropriate policies; preparing technical solutions satisfying mandates or directives; validating solutions meet specific agency mission requirements; and coordinating with budget planners for each organization. Micro-agency support will not include day-to-day IT operations.

N&IS will utilize focused, short (3 – 6 month) inter-agency teams to develop government-wide reference architectures for individual cybersecurity initiatives, track agency TIC progress, coordinate inter-agency agreements for TIC services with GSA, and stand up a small cadre of cybersecurity experts to work collaboratively with small and micro-agencies.

N&IS will track performance against the following series of measures and deliverable milestones:

- Approving of TIC Reference Architecture v2.0, communicating with Federal civilian agencies and implementing new capabilities;
- Tracking TIC performance of agencies;
- Aligning the TIC strategy with other federal government mandates (e.g. cloud, mobile, etc.);
- Ensuring TICAP agencies' technical compliance with TIC critical capabilities;
- Ensuring TICAP agencies' connection/traffic consolidation; and
- Seeking service agencies' connection/traffic consolidation.

NI&S will utilize the requested FY 2015 funding to advance the following key initiatives:

- Providing agencies with practical, implementable, schematic designs for common information security functions. By sharing best agency designs and lessons learned across the Federal Executive Branch, agencies can reduce costs and improve their cybersecurity by not re-inventing technical reference architectures.

- Identifying common cybersecurity requirements across agencies, enabling DHS to help save agencies money conducting and sharing market research in areas identified as critical by agency CISOs. N&IS will also produce cybersecurity market research white papers (i.e., data protection, data loss prevention).
- Providing a small cadre of cybersecurity specialists dedicated to assisting small and micro-agencies, allowing DHS to improve its mission by helping small and micro-agencies respond to government-wide cybersecurity policies and directives. N&IS will also develop small and micro-agency specific cybersecurity strategies and implementation guidance.

Requirements and Acquisition Support (RAS): Supervises the long-term strategic prevention of attacks against Federal Government networks by addressing common challenges faced by all agencies. RAS works to assess and prioritize common cybersecurity needs and solutions; promote actionable cybersecurity policies, initiatives, standards, and guidelines; enable implementing cybersecurity risk mitigation strategies; and measure agency strategies and compliance implementation.

More specifically, RAS delivers strategic sourcing solutions enabling government-wide cost savings for IT security products and services. It also oversees and monitors the Information Systems Security Line of Business (ISSLoB) Shared Service Center (SSC) performance; manages the daily operations of the ISSLoB Program Management Office (PMO); and collaborates with other national cybersecurity and FNS programs to assess and maintain the Federal Government's strategic cybersecurity plan.

As the PMO for the ISSLoB, RAS identifies information systems security solutions that reduce costs through shared services; eliminate duplication; and increase specialized expertise, freeing up resources for mission-specific requirements and other tailored security requirements. RAS initiates strategic sourcing efforts for investments in security solutions, commoditized technologies, and processes, through cross-agency collaboration.

RAS additionally sponsors strategic sourcing and requirement development activities to identify and pursue strategic information security product and service acquisitions.

RAS will utilize the requested FY 2015 funds to achieve \$15 million in annual cost savings government-wide by using ISSLoB Blanket Purchase Agreements (BPAs) or SSCs. The ISSLoB BPAs are an efficient way of providing security solutions using specific tools and services. The main beneficiaries of such savings are federal, state, local, and tribal entities. These cost savings are achieved through the reduced acquisition cycle and ability to further negotiate pre-existing GSA schedule prices. The solutions are then vetted based on requirements gathered across the Government to meet the needs of end-users, who facilitate two ISSLoB BPAs or SSCs within FY 2015.

Continuous Diagnostics and Mitigation (CDM): The CDM program enables Federal agencies to identify more readily network security issues and enhance the overall security posture of their networks. The CDM program assists in protecting agencies against exploitation by unethical hackers of unauthorized and unmanaged hardware and software; known vulnerabilities; weak configuration settings (port, protocols, and services); insider attacks; and loss of confidentiality, integrity, or availability – due to unanticipated events and attacks requiring recovery or special responses.

The CDM program provides hardware, software, and services enabling continuous diagnostics and mitigation in support of activities to strengthen the operational security posture of Federal civilian networks. Available to all Federal civilian agencies, the CDM program involves the procurement, operations, and maintenance of diagnostic sensors and tools, and dashboards to provide situational awareness on agency and federal levels. CDM will enable agencies to identify which network security issues to address first and empower technical managers to prioritize and mitigate risks. DHS will receive aggregate information from each agency to provide network security situational awareness at the Federal level on network security.

FY 2014 supports a phased-in implementation of Phase II of the CDM program, executing current resources to procure tools, sensors and integration services using Blanket Purchase Agreements under the GSA IT Schedule 70 and other contract vehicles, managed by GSA FEDSIM. This approach provides the most efficient way to procure sensors and Continuous Monitoring as a Service integrator services for Departments and Agencies, as well as smaller agencies. The Departments and Agencies will acquire, install and integrate CDM capabilities into their network sensors/agents for diagnostic review using the federal dashboard and CDM provided dashboard.

FY 2015 efforts will focus on Phase 3 of the CDM program, specifically, detecting and responding to events that penetrate federal networks, and have the potential to cause (or have caused) compromise to confidentiality, integrity, and/or availability. This work supports earlier capabilities by looking at the behavior of machines, people, etc. to search for untrustworthy activity. Phase 3 provides a relatively complete Information Security Continuous Monitoring (ISCM) program, as called for in ISCM's concept of operations. In FY 2015, substantial savings from traditional certification and accreditation programs are anticipated.

Key components of the CDM program include:

- Sensor Licensing (Seat Cost) Hardware and Software
- Tool Installation and Sensor Feeds to DHS
- Federal-wide Dashboard, Department Priority Lists
- Assisted Automation and Continuous Reauthorization
- GSA Continuous Monitoring as a Service (CMaaS)
- EINSTEIN, US-CERT Continuous Monitoring (CM) Data Integration

The FY 2015 funding request will allow CDM to continue the following key initiatives:

- Procuring sensors and dashboards, developed by industry, through appropriate channels.
- Developing the tools for analyzing industry, software source code to find and identify vulnerabilities during the development process.
- Deploying sensors reporting directly into agency-level dashboards.
- Interfacing sensor data with the Federal-level dashboard, assuring diagnostic results compare with patterns of how the government network is attacked, and who on the network is attacked.
- Continuing configuration management, at both federal and agency levels, and promoting logistics management over agency deployment.
- Validating and verifying sensors and dashboards to ensure data accuracy while maintaining facilities and infrastructure availability.

- Obtaining state-of-the art dashboard graphics providing summaries to empower executives and details to empower technical managers for targeted, daily attention to remediation.
- Ensuring interfaces are fully functional between the sensors and local-level (technical manager) dashboard; as data is aggregated for targeted analysis, dashboards are capable of addressing large volumes of data between sensors and higher-level dashboards.
- Supporting a governance model that considers standing guidance and policy; considering individual department and agency operational requirements and risk acceptance posture; identifying a process for establishing acceptable thresholds for continuous authorization; and determining an approach for addressing departments and agencies falling outside of acceptable thresholds.

Please see the following page for the FY 2013-2015 spend plan.

FY 2013 - 2015 Spend Plan			
FNS PPA	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request

MAJOR ACQUISITIONS:

Information Systems Security Line of Business (ISSLoB)

The Information Systems Security Line of Business (ISSLoB) is a government-wide initiative that provides leadership and direction for improving effectiveness and consistency of information systems security across the Federal Government. Its purpose is to analyze current government sector conditions, determine immediate and root causes of security vulnerabilities and gaps, and provide leadership and direction for mitigating those causes. This cross-agency initiative is sponsored by OMB and managed by the DHS Federal Network Security Branch. Program outcomes are common solutions in the form of products and/or managed services that can be utilized government-wide to address information systems security mandates, policy, and National Institute of Standards and Technology guidance.

Network Security Deployment (NSD) will use the FY 2015 full funding request to sustain currently deployed capabilities and expand intrusion prevention, information sharing, and analytics capabilities of the NCPS. Expanding upon NCPS's existing capabilities is a critical element in the shift from a passive to active role in cyber defense and the delivery of enterprise cybersecurity services to decision-makers across cybersecurity communities.

NPPD is responsible for enhancing the protection of Federal civilian departments' and agencies' IT infrastructure from cyber threats. To achieve this mission, NSD develops, deploys, and sustains the NCPS, operationally known as EINSTEIN. NCPS is an integrated system delivering intrusion detection, analytics, intrusion prevention, and information sharing capabilities to public and private stakeholder groups across the Homeland Security Enterprise.

In 2009, NSD began deploying EINSTEIN 2, which passively collects network flow traffic to and from participating Federal executive agencies' networks, and provides intrusion detection that alerts when pre-defined specific cyber threats are detected. EINSTEIN 2's network intrusion detection capability uses signatures¹ derived from numerous sources such as commercial or public computer security information, incidents reported to US-CERT, information from Federal partners, and independent US-CERT in-depth analysis.

NCPS's analytic capabilities capture, organize, and analyze data collected from EINSTEIN sensors and other data feeds. These capabilities enable US-CERT to fuse information, correlate malicious network activities across participating Federal Executive Branch agencies to achieve situational awareness of high profile cyber threats. US-CERT shares situational awareness about current and potential cybersecurity threats and vulnerabilities with Federal, State, and local governments and agencies; private sector partners and infrastructure owners and operators; and the public.

Keeping pace with the ever-changing nature of cyber threats poses technological as well as financial challenges. To address these challenges, NSD seeks to ensure currently deployed NCPS technology remains relevant and reliable, while developing valuable new services for a broad cybersecurity community.

The FY 2015 NSD funding request reflects this strategy by focusing on four key program elements:

¹Signatures are specific machine readable patterns of network traffic that affect the integrity, confidentiality, or availability of computer networks, systems, and information. For example, a specific signature might identify a known computer virus that is designed to delete files from a computer without authorization.

- Sustaining deployed capabilities
- Expanding active defense
- Providing enterprise services
- Adopting tactical engineering and acquisition approaches

Sustaining Deployed Capabilities

In FY 2015, NSD will sustain the operational elements of NCPS, including detection, analytics, and significant core infrastructure. NSD delivers EINSTEIN 2 services directly to Federal department and agencies through TICAPs or through Internet Service Providers (ISP) at Managed Trusted Internet Protocol Service (MTIPS) locations. As of August 2013, NSD has deployed 90 data collectors and 72 EINSTEIN 2 sensors across 18 Federal departments and agencies and 4 MTIPS providers.

EINSTEIN sensors and NCPS are supported by extensive IT and capital infrastructure. The Mission Operating Environment (MOE) is a dedicated IT network environment that hosts NCPS intrusion detection, intrusion prevention, analysis, and information sharing capabilities. The MOE serves as the foundational infrastructure for the NCPS, including those exclusive communications tools and operating system used by US-CERT to conduct its daily operations.²

All data collected from the EINSTEIN sensors is stored and accessed on this dedicated network, which does not directly connect to any DHS networks, to protect the Department from harm resulting from potentially malicious data. The MOE allows NSD and US-CERT analysts to securely access, share, and analyze NCPS data. EINSTEIN sensors and the MOE are administered at the 50,000 square foot NCPS Operations and Service Center facility. This facility houses a majority of NCPS's operations support. NSD also maintains a significant communications infrastructure that connects the NCPS Operations Center with DHS Data Centers and headquarters' facilities in the Washington, D.C. area. NSD maintains NCPS to meet an operational system availability of 99.5 percent. Achieving this standard requires significant operations support; maintenance of hardware and software and technical refresh of both primary and redundant system locations.

- *Operations.* The mission-critical nature of the NCPS requires system and network administrators to be available 24x7x365. Help Desk professionals are located on-site at the NCPS Operations and Service Center performing hourly physical system checks and visual inspections; taking users' calls; isolating problems using standard troubleshooting procedures; opening trouble tickets; and forwarding trouble tickets to system administrators that administer fielded equipment on-site and remotely.
- *Hardware and Software Maintenance.* As NCPS hardware fails it is replaced with spares or through vendor warranty agreements. Replacement components are shipped as soon as possible to reduce potential system downtime.³ Some software for deployed systems, such as antivirus products, is purchased on the software support model with an annual renewal.
- *Technology Refresh.* Current network hardware is on a three-year refresh cycle, based on industry best practices. System overhaul, upgrade, or migration is considered to address the

² As the system developer and operator, NSD also uses the MOE to provide user support to US-CERT and to deploy and maintain NCPS capabilities.

³ The NCPS Program Office provides maintenance and supply chain services directly to the Data Centers.

pace of innovation, technology advancement, and IT obsolescence – particularly in the area of cybersecurity.

- *Redundancy.* NSD utilizes the two DHS Data Centers to provide redundancy for NCPS’s critical systems. Deployment to both Data Centers provides complete failover capability, which allows continued operations in the event of a system or catastrophic failure at one data center, or while a data center site is undergoing a technology refresh.

Expanding Active Defense

Currently deployed EINSTEIN 2 technology is passive – it monitors Federal network traffic and allows DHS to analyze Federal Executive Branch traffic and detect malicious traffic. In 2010, NSD began planning for an intrusion prevention capability complementary to EINSTEIN 2. In FY 2013 and FY 2014, NSD continued efforts supporting deployment of an initial operational capability known as E³A; the FY 2015 request expands this capability. With the adoptions of E³A, DHS will assume an active role in defending .gov network traffic and significantly reduce the threat vectors available to malicious actors seeking to harm Federal networks. In FY 2015, NSD will continue deployment of an intrusion prevention capability to the Tier 1 ISPs, allowing DHS to provide active, in-line defense for all Federal network traffic protocols.

Once fully deployed, E³A will leverage the latest available information from commercial and government sources to apply in-line protection measures to a wide set of Federal network traffic protocols. When a signature alerts on a known or suspected cyber threat, E³A will act on that threat to stop malicious traffic and prevent harm to the intended targets.

Providing Enterprise Services

DHS is in a unique position to coordinate an aggregated, national-level cyber situational awareness view to a broad set of cybersecurity stakeholders. Today, the NCPS consists of technological solutions for incident detection and collecting and analyzing information largely driven by the needs of US-CERT. In addition, the NCPS capacity to share US-CERT analysis with decision makers and stakeholders is limited and highly manual. Going forward, NSD will focus on working with Federal partners to enhance and expand cybersecurity enterprise services, access to information, and analytic capabilities to a broader set of stakeholders, including constituencies within the Federal Government, state and local authorities, and the private sector. The goal of this system will be to “connect the dots” in identifying cybersecurity threats by making relevant pieces of information easily accessible to those who need it, regardless of where they are in the Government: within the constraints of policy and law. In FY 2015, NSD will continue expansion of its development of secure mechanisms for the cyber community. These mechanisms will provide DHS with cyber-related data from the community, and community members will receive back trusted high-confidence information to enhance their own operational and decision processes.

Tactical Engineering and Acquisition Approaches

NSD employs technical and acquisition approaches to improve the efficiency and effectiveness of NCPS.

- *Enterprise Architecture Principals.* NSD’s IT enterprise architecture principles establish a common vision for the NCPS enterprise architecture while ensuring tactical decisions are made

without compromising overall program mission and objectives. These principals focus on designing a more service-oriented architecture that allows for greater flexibility in developing and integrating new components while improving system security.

- *Managed Services.* In FY 2011, NSD began evaluating whether acquiring managed security services could reduce the costs of developing and delivering cybersecurity services. This analysis concluded that managed security services offer an efficient and effective approach for delivering certain intrusion prevention services by leveraging services ISPs already provide to private sector customers. The FY 2015 full funding request reflects a continued expansion of the managed service acquisition approach for delivering intrusion prevention security. As NSD develops new capabilities, it will evaluate whether managed services is a technologically and financially preferred acquisition approach.

NSD is comprised of the following six activities:

Intrusion Prevention: In FY 2015, NSD will continue deployment of the intrusion prevention capability in which ISPs provide active, in-line defense for all Federal network traffic protocols with a completion date in FY 2016. The FY 2015 funding will sustain this prevention capability, including fees for ISP-provided intrusion prevention for traffic protocols, operations and maintenance of all traffic aggregation facilities, and a classified analytics capability. In FY 2013, NSD began deploying intrusion prevention capability for all Federal network traffic protocols. The FY 2014 funding continues these efforts and sustains this prevention capability including operations and maintenance of all traffic aggregation facilities and fees for one ISP, including the following services: Domain Name System, email traffic protocols, and intrusion prevention.

Information Sharing: Access to DHS threat analysis and increased collaboration opportunities will help members of the cybersecurity community prevent incidents and reduce response time when incidents occur. The FY 2015 funding request will support deploying advanced tools and technologies expanding the cybersecurity community's access to DHS threat information and analysis. In FY 2013, NSD began the planning and architectural design of a foundational set of information and collaboration tools that focus on the most pressing operational needs of DHS and its interaction with key constituencies. This effort began to produce a prioritized roadmap for incrementally deploying information sharing tools tailored to a broad set of cybersecurity customers across multiple security levels. These tools may include portals, identity credentialing and access management, document/content management, synchronous and asynchronous collaboration, automated data exchange, content discovery, and an operating environment infrastructure. The FY 2014 funding continues supporting information sharing efforts aimed at protecting Federal and private sector critical infrastructure. The FY 2015 request includes DHS's voluntary ECS program, allowing DHS to share information with owners and operators of critical infrastructure to enhance the protection of private sector critical infrastructure. NSD will also begin to deploy advanced tools and technologies to expand the broader cybersecurity community's access to DHS threat information and analysis.

The FY 2015 funding will sustain applications currently used by US-CERT Operations' to develop its common operating picture and threat landscape of the Federal Executive Branch's civilian network. Information Sharing sustainment costs include operations services, hardware and software maintenance, and technical refresh of equipment. In FY 2014 NSD began the acquisition of

information sharing capabilities outlined in the roadmap. The FY 2015 funding request supports deployment of the information sharing and collaboration capability, including infrastructure improvements such as a data management system; a cross domain solution; identity and access management; information sharing with commercial service providers through ECS, as well as customer facing information sharing capabilities (e.g., portal, collaboration services, and content management).

Analytics: FY 2015 funding will fund sustainment of NCPS's advanced analytic tool suite, including deployment of redundancy for the Security Incident and Event Management (SIEM) solution. The SIEM, which organizes threat data to support threat analysis, became operational in FY 2012. In FY 2014, NSD will deploy SIEM at the DHS Data Centers to improve system availability and reduce vulnerability to system failure. NSD will also sustain existing NCPS analytic tools that capture, organize, and analyze data collected and produced by the NCPS to improve the understanding of current or emerging cyber threats. These tools include Packet Capture, allowing US-CERT analysts to see "inside" the packet, and inspect the payload to analyze a specific cyber threat and the Digital Media Analysis Environment (Forensics) and Advanced Malware Analysis Center, which provide mechanisms to collect and contain information on cyber threats in a highly secure environment for evaluation by expert analysts. Analytics sustainment costs include operations services, analytics hardware and software maintenance, equipment technical refresh, and data center facility costs. The FY 2015 funding request supports the incorporation of more extensive commercial threat feed information into NCPS analytics.

Intrusion Detection: FY 2015 funding sustains EINSTEIN 1 and 2 technologies and provides for EINSTEIN 2 expansion to departments and agencies signing Memoranda of Agreements (MOAs) for detection services. Intrusion Detection sustainment and expansion costs include new sensor hardware and software deployed in Nest locations; compare and contrast traffic collected at TICS and Nest locations; operations services; maintaining TIC deployed flow collectors and intrusion detection sensors; technical refresh of equipment; and data center facility costs.

Core Infrastructure: The FY 2015 funding sustains existing classified and unclassified MOE at the DHS Data Centers and ISP traffic aggregation locations, the NCPS Development and Test Environment, and communications infrastructure, including operations services; hardware and software maintenance; equipment technical refresh; data center facility costs; and communications circuit leases. NSD will also fund utilities, telephones, and maintenance services for the NCPS Operations and Services Center.

Program Planning and Operations: Program Planning and Operations consists of mission support services and common operating costs.

- *Program Management, Planning, & Systems Engineering:* The FY 2015 request includes funding for NSD-level strategic and technical planning and assessments; system-level planning, architecture, and engineering; procurement support and contracts oversight; cost estimating and financial management; front office support for information management, executive secretariat, and personnel management; Federal travel; and training.

- *Mission Support Services:* The FY 2015 costs associated with NSD's contribution to enterprise-level IT, Human Capital, and support services, including those provided through the DHS Working Capital Fund.

FY 2013-2015 spend plan:

Activity	FY 2013 REVISED ENACTED	FY 2014 ENACTED	FY 2015 REQUEST

WCF	\$11,424	\$13,453	\$10,860

MAJOR ACQUISITIONS:

National Cybersecurity Protection System (NCPS)

Network Security Deployment (NSD) is responsible for the development, acquisition, deployment, operations, and maintenance of the NCPS, operationally known as EINSTEIN. NCPS is an integrated system, comprised of four increments—intrusion detection, analytics, intrusion prevention, and information sharing—used to defend Federal civilian departments’ and agencies’ information technology infrastructure from cyber threats. It consists of the hardware, software, supporting processes, training, and services that are being developed and acquired to support NSD’s mission requirements as delineated in the CNCI.

NCPS addresses a capability gap by defending Federal civilian departments and agencies information technology infrastructure from cyber threats. NCPS plans to accelerate department and agency adoption of EINSTEIN 3.0 Accelerated (E³A) services, conducting department and agency outreach and education on the E³A capability. NCPS employs an incremental modular approach to developing and contracting for its IT solutions.

2015 Total Request	23	23	17,613
Total Change 2014 to 2015	-	-	(8,279)

NPPD requests \$17.613 million for Global Cybersecurity Management, including 23 FTP/23 FTE. This is a decrease of \$8.279 million from the FY 2014 Enacted budget. It includes the following adjustments to base:

- Increase of \$0.007 million for the annualization of the FY 2014 pay raise
- Increase of \$0.020 million for the FY 2015 pay raise
- Increase of \$0.003 million for increased retirement contributions
- Decrease of \$0.016 million for efficiencies achieved by reducing Federal personnel grades
- Decrease of \$0.023 million for contract efficiencies

CURRENT SERVICES PROGRAM DESCRIPTION:

\$K	FY 2013 Rev. Enacted			FY 2014 Enacted			FY 2015 Pres. Budget		
	FTP	FTE	Total	FTP	FTE	Total	FTP	FTE	Total
Global Cyber Security Management	23	18	23,874	23	23	25,892	23	23	17,613

Cybersecurity Education			15,701			15,810			7,540
Software Assurance			1,184			1,679			1,679
Research & Standards Integration			1,536			1,530			1,530
Supply Chain Risk Management			2,745			4,141			4,118

Global Cybersecurity Management facilitates development and promulgation of sound cybersecurity practices and strategies for protecting the Nation's CIKR. This includes further development and implementation of the initiative to provide cybersecurity education to the Nation; vulnerability

analysis, software threat and risk assessments for the Information and Communications Technology (ICT) supply chain; and engagement and collaboration with stakeholders to ensure alignment with DHS CS&C's cybersecurity-interests.

Cybersecurity Education Office: Cybersecurity Education leads the national effort for cybersecurity formal education, workforce planning, training, and professional development, enabling our Nation to protect against and respond to threats to the Homeland. It assists in implementing the National Initiative for Cybersecurity Education by leading and coordinating efforts to improve the Nation's cybersecurity education posture and ensure a robust, competent cybersecurity workforce. The program will continue its support of the National Cybersecurity Workforce Framework, Federal and non-Federal cybersecurity workforces, and promoting cyber competitions and professionalization. Cybersecurity Education will continue the Scholarship for Service, enhancing the pipeline of well-trained information security professionals. It also will expand their Integrated Cybersecurity Education Communities (ICEC) project; strengthen cybersecurity education, awareness, and digital literacy at the high school level; and foster a dynamic workforce at the national level. From FY 2014 to FY 2024, Cybersecurity Education estimates reaching approximately 296,000 students, assuming four communities in FY 2014 and one community in FY 2015 through the end of the 10 year period.

The program will also provide the Federal Virtual Training Environment and the Federal Cybersecurity Training Events program, delivering role based training to Federal personnel. In addition, the program will continue work to develop and implement the National Initiative for Cybersecurity Careers and Studies (NICCS) Portal. The NICCS Portal provides nationwide access to cybersecurity education, training, and professional development resources. NICCS provides an online resource to enhance the Nation's ability to secure cyberspace and is critical to the success of related efforts.

Research and Standards Integration (RSI): RSI advances the future state of cybersecurity through efforts in standards development activities and the insertion of research and development (R&D) products into CS&C operations and programs. RSI serves as CS&C's technology transition facilitator, accelerating the integration of technologies into CS&C systems and programs. This encompasses promoting the development of needed new technologies and transitioning them to operational programs. RSI also promotes the advancement of cybersecurity standards and advocates the adoption of relevant standards into CS&C's operational systems and programs. On national and international levels, RSI influences cybersecurity standards and frameworks promoting interoperability and automation supporting CS&C's mission.

The FY 2015 funding will continue efforts in CS&C's identification, collaboration and integration of new, innovative technologies into CS&C operational systems and programs. RSI will identify and propose three technologies for transition into the CS&C operating environment. Additionally, RSI will work with the stakeholder to facilitate the transition of chosen technologies using the stakeholder's organization integration processes.

The FY 2015 funding request will further advance RSI's ability to promote advancement and adoption of national and international ICT and cybersecurity standards, both within and external to DHS. Externally, RSI will emphasize cooperative partnerships and information sharing between departments and agencies, the private sector, and standards organizations on national and international levels.

Further, RSI will identify and communicate emergent needs for enhancements to existing standards or the development of additional standards, based on identified gaps with respect to DHS interests.

FY 2015 funding enables continued leadership in standards committees within national and international standards developing organizations; for example, CS&C can continue to exert influence in developing standards critical to the CS&C mission in the areas of incident information sharing/exchange, security automation, continuous diagnostics and monitoring, cyber threat intelligence, identity and access management, privacy, and mobile computing security. These FY 2015 activities ensure the development of standards and frameworks align with national interests to enhance cybersecurity postures of networks, software, and other cyber domains.

Software Assurance (SwA): SwA improves software security by collaboratively advancing standards-based technologies, tools, processes, and practices in both the public and private sectors. SwA works to reduce software vulnerabilities, minimize exploitation, automate sharing, and address improving capabilities to routinely develop and deploy resilient and trustworthy software products, thus foster more resiliencies within the Nation's critical infrastructure.

The FY 2015 request funds SwA's continuing joint efforts with standards organizations and departments and agencies in establishing standards and certification mechanisms from which tools verify software is free of security vulnerabilities. This work supplements efforts to establish the enabling mechanisms (standards, processes, and technologies) for a SwA infrastructure capable of sharing test information, integrated tools and certified software information.

SwA promotes a collaborative partnership and information sharing with private industry, academia, Federal agencies, and international entities for improving software development and acquisition processes through various engagement opportunities and publishing best practices and methodologies.

The FY 2015 funding will advance security automation standards and community standards and sharing information adoption relevant to software analysis, and continue supporting the SwA Community of Practice infrastructure; thus, enhancing communications in support of stakeholder needs for software assurance best practices in developing, acquiring, and post-release support.

Supply Chain Risk Management (SCRM): SCRM helps protect the civilian Federal Government ICT supply chain. To execute this mission, SCRM works to support three critical mission objectives:

- ICT Supply Chain Risk Tools Refinement & Promotion
- Supply Chain Incident Response and Analysis
- Community of Practice Engagement (e.g., Standards and Best Practices)

The FY 2015 funding continues advancing SCRM's ability to protect the Federal civilian ICT supply chain and critical infrastructure. SCRM will address increasingly advanced supply chain threats by refining and promoting a series of tools designed for the acquisition officer and/or risk owner. The risk model tool determines the risk associated with an ICT product acquisition based on the trustworthiness of a product (vulnerabilities and indirect threats); specific threats to the product; and consequences if the product were to be compromised, defective, or attacked. The requirement analysis tool analyzes and integrates specific supply chain requirements language from best practices into procurement

language. The attack graph tool demonstrates how individual vulnerabilities in a system could lead to multi-stage attacks, and how to best prioritize resources and changes to a network to prevent these attacks. In FY 2015, SCRM will integrate new data sources into the toolset and work to expand their use throughout the supply chain. To fulfill this objective, SCRM will continue aggregating and analyzing US-CERT notifications to frame emerging supply chain threats by using the data to create a set of resources including courseware, sample contract language, and contract reviews.

The FY 2015 funding advances standards and best practices within the Supply Chain Community of Practice (SCCP). SCRM will expand upon a Supply Chain Exploitation Frame of Reference (SCEFOR), defining government categories of SCRM-related concerns and establishing common language and assumptions around SCRM issues with an associated Countermeasure Selection and Process Guidance, tying Key Decision Points to DHS acquisition guidance documents. SCRM will continue collaboration with program management and systems engineering organizations to improve supply chain risk awareness and provide possible mitigations. Finally, SCRM will continue providing subject matter expertise, supporting the National Institute of Standards and Technology (NIST) standards, policy recommendations, and remaining EO 13636 and PPD-21 transitions to steady-state activities.

America's national security and economic prosperity are increasingly dependent upon the cybersecurity of critical infrastructure. With today's physical and cyber infrastructure growing more inextricably linked, critical infrastructure and emergency response functions are inseparable from the information technology systems that support them. The government's role in this effort is to share information and encourage enhanced security and resilience, while identifying and addressing gaps not filled by the market-place. In February 2013, the President issued EO 13636 on Improving Critical Infrastructure Cybersecurity as well as PPD-21 on Critical Infrastructure Security and Resilience, strengthening the security and resilience of critical infrastructure through an updated and overarching national framework that acknowledges the increased role of cybersecurity in securing physical assets.

Critical Infrastructure Cyber Protection and Awareness' (CICPA's) enhanced information sharing programs support EO-13636 and PPD-21 and help secure critical infrastructure and increase its resilience against cyber and physical attacks, as well as natural disasters and terrorist attacks. EO-13636 expands the voluntary DHS ECS program, promoting cyber threat information sharing between government and the private sector. This engagement helps critical infrastructure entities protect themselves against cyber threats to the systems upon which so many Americans rely. The CICPA PPA manages the Program Management Office for the ECS program, including engagement and validation with Commercial Service Providers (CSPs) and critical infrastructure partners, coordination with interagency data providers, and research into development of new countermeasures. CICPA coordinates closely with the NCCIC technical staffs who develop, vet and transmit the indicators to the providers and with the Network Security Deployment team that reviews and accredits the CSPs. Additionally, in FY 2015 CICPA will support CS&C's implementation of the DHS Voluntary Framework program and NIST Cybersecurity Framework for long-term CIKR cybersecurity risk management awareness, national-level engagement, and cross-sector critical infrastructure risk planning.

In FY 2015 CICPA will collaborate with public and private sectors to assess and mitigate risk to the Nation's cyber CIKR, and promote cybersecurity awareness, maintain relationships with

Governmental cybersecurity professionals to share information regarding cybersecurity initiatives, and develop partnerships promoting cybersecurity collaboration.

Control Systems Security Program (CSSP): The CSSP will utilize its FY 2015 funding to reduce cyber risk to industrial control systems integrated in the Nation's CIKR. Specifically, CSSP will dedicate the majority of its funding to the operations of ICS-CERT, including malware analysis; vulnerability handling; vulnerability mitigation; incident response; a projected 75 voluntary cybersecurity assessments, production of alerts; advisories; and other informational products and operational duties. These activities will ensure CSSP continues to be the premier government organization and clearinghouse dedicated to the cybersecurity of industrial control systems in our Nation's critical infrastructure. CSSP will also dedicate funding to cybersecurity training courses for industrial control systems incident prevention and response, as well as revise and update the Cybersecurity Evaluation Tool, a self-assessment tool provided freely to critical infrastructure partners and support ICS cybersecurity standards development. CSSP will continue to work actively with law enforcement and the intelligence community to provide timely and actionable information for all CIKR stakeholders. Additionally, CSSP will continue to grow and use the Industrial Control Systems Joint Working Group in its ongoing effort to maintain effective trust-based relations with private sector asset owners and control systems vendors while jointly addressing emerging cybersecurity issues.

Critical Infrastructure Protection – Cybersecurity (CIP-CS): The FY 2015 request includes funding for CIP-CS to continue leading national planning efforts to prioritize and protect cyber elements of U.S. Critical Infrastructure (CI) sectors, and address requirements driven by PPD-21, EO-13636, and the NIPP 2013 by supporting, promoting and developing sector-wide cybersecurity risk management strategies. CIP-CS has visibility and access to partner cyber activities, performs national-level prioritization of cyber critical infrastructure and sector-wide capabilities and functions, performs sector-wide cybersecurity risk prioritization, and supports formal risk management evaluations supporting partner cyber risk decisions and cyber capabilities prioritization. CIP-CS will use the funding to manage and strengthen cyber CI partnerships with public and private entities, mature national cyber resiliency efforts, and implement cybersecurity strategies that build assurance and resilience into CI across the cyber sector community. This funding also will enable CIP-CS to integrate information from internal and external cyber capabilities and address National-level risk. Further, CIP-CS will collaborate and provide assistance to internal and external partners, including the Nationwide Public Safety Broadband Network cyber risk assessment planning efforts, and SLTT entities, to develop, communicate, and utilize planning frameworks and supporting capabilities to implement functions-based risk management approaches.

Cyber Exercises Program (CEP): The CEP plans, coordinates and conducts cyber-focused exercises that prepare and enhance incident operational capabilities for DHS, Federal, state, local, regional, international, and private sector partners. The FY 2015 request includes funding to further support two premiere cyber exercises, the Cyber Storm Exercise Series (the fifth iteration, "Cyber Storm V") and the National Level Exercise (NLE) effort. Cyber Storm and NLE both enable CEP to bring together its broad spectrum of partners and resources to bolster the Nation's readiness and preparation for a significant cyber incident. Other CEP activities, such as numerous exercises with other Federal, state, local, regional, international, and private sector partners, will be planned and executed as a way to further develop and grow CEP's ability to positively impact its diverse partnerships – these relationships are instrumental in strengthening national defenses to a cyber-attack. These exercises

fully embrace, incorporate and advance the intent and directives contained in EO- 13636, PPD-20 and PPD-21 strengthening the security and resilience of critical infrastructure through an improved national framework to prevent, protect, mitigate, respond to and recover from cyber threats and attacks.

Cybersecurity Evaluations Program (CSEP): CSEP conducts voluntary cybersecurity assessments across all 16 CIKR Sectors and SLTT Governments and provides regionally placed support through its Cybersecurity Advisor initiative. Cybersecurity Advisors are the principle field liaisons and provide a Federal resource to regions, communities, and businesses. Their primary goal is to assist in protecting cyber components within the Nation's CIKR by acting as individual representatives of the Department, forming personal, on-the-ground connections with CIKR owners and operators. The FY 2015 request will facilitate 55 Cyber Resilience Reviews, deploy two additional regional Cybersecurity Advisors, and provide cyber expertise to the RRAP and other joint operational activities within NPPD.

MS-ISAC: The MS-ISAC is a collaborative SLTT government-focused cybersecurity organization, bolstering SLTT capacity and network defense capabilities against cyber threats. The MS-ISAC provides a centralized forum for information sharing between the Federal Government and SLTT governments through a number of crucial "base" services, while providing opportunities to analyze information and correlation across its SLTT members. The MS-ISAC uses a consolidation of services, including hosting a 24x7 cybersecurity operations center, distributing cybersecurity advisories and bulletins, and directly responding to and assisting MS-ISAC members with response to cyber incidents. In FY 2015, the MS-ISAC will continue providing base services to all MS-ISAC members as well as supporting the Managed Security Services program, providing firewall monitoring and netflow analysis services to participating SLTTs. This will enhance cyber situational awareness of our nation's SLTT government network environments and provide DHS with real-time risk information that supports national cybersecurity situational awareness. Additionally in FY 2015, the Center for Internet Security will begin supporting state and local fusion centers and Homeland Security Advisors. Through this initiative, fusion centers will receive cyber-related products and information from many sources including the NCCIC, US-CERT, ICS-CERT, and the MS-ISAC. This initiative will ensure any actionable threat and vulnerability information collected and analyzed by both DHS and the MS-ISAC is shared with fusion centers and Homeland Security Advisors in a timely manner.

Outreach and Awareness: The FY 2015 request includes funding to support Outreach and Awareness, which coordinates domestic and international engagement and outreach by promoting cybersecurity awareness among and within the general public and key stakeholder communities. Outreach and Awareness will support key outreach events as well as ongoing CS&C speaking and media engagements. Funding will also support the planning, coordination, and execution of various Outreach and Awareness activities, including National Cybersecurity Awareness Programs (such as National Cybersecurity Awareness Month and the Stop.Think.Connect.TM Campaign); research and participation in large scale outreach opportunities; material development; digital outreach; and new partner engagement. FY 2015 funding will allow Outreach and Awareness to continue building international partnerships through various international forums including bilateral and multilateral venues, representing DHS programs and advancing U.S. cybersecurity objectives. Such participation promotes information sharing and collaboration, cooperation, and planning to achieve cybersecurity goals. Finally, Outreach and Awareness will utilize FY 2015 funding to further advance the ECS program, a voluntary information sharing program aimed at protecting Federal and private sector critical infrastructure. Outreach and Awareness' engagement and coordination with CSPs and SSAs,

information management and accreditation activities enable streamlined public-private partnerships, thus providing valued cybersecurity service to the private sector and Federal entities.

2015 Total Request	34	34	5,554
Total Change 2014 to 2015	5	5	465

NPPD requests \$5.554 million for Business Operations, including 34 FTP/34 FTE. This is an increase of \$0.465 million and 3 FTP/3 FTE from the FY 2014 Enacted budget. It includes the following adjustments to base:

- Increase of \$0.011 million for the annualization of the FY 2014 pay raise
- Increase of \$0.030 million for the FY 2015 pay raise
- Increase of \$0.005 million for increased retirement contributions
- Increase of \$0.036 million for technical adjustments due to the FY 2014 Omnibus
- Increase of \$0.446 million and 3 FTP/3 FTE for the DHS FY 2015 Balanced Workforce initiative
- Decrease of \$0.023 million for efficiencies achieved by reducing Federal personnel grades
- Decrease of \$0.040 million for contract efficiencies

CURRENT SERVICES PROGRAM DESCRIPTION:

\$K	FY 2013 Rev. Enacted			FY 2014 Enacted			FY 2015 Pres. Budget

Business Operations			552			415			411
Facilities			749			652			286

The FY 2015 Business Operations will support CS&C leadership by establishing policies and direction to sustain overall cybersecurity strategy and planning through effective integration of resource and financial management, human capital, facilities, performance management, policy development and

implementation, information and personnel security, and strategic planning. Business Operations also oversees the implementation of national cybersecurity policies and ensures that appropriate resources are available to support its mission and specialized information technology systems.

Business Operations: Provides oversight to financial management, human capital, information and personnel security, performance management, policy development, and strategic planning capabilities. Financial Management provides accounting and reporting activities and oversees the management of appropriated funding and expenditures, and prepares budgetary reports required by OMB and Congress. Human Capital manages staffing plans and processes, develops and institutes training and mentoring programs for current employees, provides personal development incentives to improve employee morale, and refines and supplements the existing workforce training programs. Human Capital also manages full-scale accelerated, promotional cybersecurity fellowship and internship programs. Information and Personnel Security establishes IT architecture enhancements, integrates system modifications to provide redundant capabilities, and provides collective resources necessary to support contingency of operations planning and sustainment. Performance Management manages process improvements to reduce response timelines for internal business processes and external informational inquiries. Policy Development and Implementation manages information and system security controls, oversight, and accreditation programs and processes. Strategic Planning supports standard budgeting, acquisition collaboration tools, operating policies and procedures to streamline budgeting, execution activities, and strategies throughout the Division.

Facilities: Coordinates the development of comprehensive facility plans addressing real estate requirements, security, and critical infrastructure issues. Facilities also manage real estate, IT, and supporting resources.

Business Support			5,958			5,926			5,652

The Office of Emergency Communications (OEC) will support and promote continuing communications for emergency responders and government officials in the event of natural disasters, acts of terrorism, or other man-made disasters, and work to ensure, accelerate, and attain interoperable and operable emergency communications nationwide. OEC serves as the coordination point for interoperable communications policies and holds key responsibilities, such as its leadership role in developing and implementing the National Emergency Communications Plan (NECP).

Emergency communications encompasses operability, interoperability, and continuity of communications across a full range of current and future voice, data, and video information exchange capabilities. OEC is committed to ensuring emergency response personnel government-wide and across all disciplines can communicate as needed, on demand, and as authorized. To achieve this vision, OEC developed six key strategic goals to improve emergency communications and support the DHS goals.

Goal 1: Fostering coordination between Federal, state, local, tribal, and private sector emergency communications stakeholders.

Goal 2: Improving emergency communications capabilities through targeted interaction with Federal, state, local, and tribal agencies.

Goal 3: Targeting Federal grants to states and localities with the most critical emergency communications needs in alignment with the NECP.

Goal 4: Developing policies and plans guiding, promoting, and enhancing efforts to improve emergency communications nationwide.

Goal 5: Developing innovative methods to address emergency communications gaps.

Goal 6: Creating a unified OEC headquarters and regional staff committed to ensuring programmatic success.

Interoperability Support: Provides administration and support of Critical Infrastructure Outreach, NECP; Federal grants and emergency responder training programs; and Project 25 support. Title XVIII of the Homeland Security Act directs OEC to coordinate with Federal and SLTT representatives in developing national policy and planning priorities targeting emergency communications gaps and vulnerabilities, and assesses progress regularly in strategically targeting resources and ensuring program effectiveness.

The requested funding will support increasing stakeholder input through various outreach mechanisms (e.g., SAFECOM, Emergency Communications Preparedness Center) to shape and inform policy and planning activities. OEC also collects data from these stakeholders toward measuring progress and identifying areas for follow-up improvement support. OEC will also provide for inter-governmental (Emergency Communications Preparedness Center) coordination efforts and intra-Departmental (OneDHS Emergency Communications Committee) activities, to improve emergency communications capabilities and coordination government-wide.

OEC will provide 150 requested technical assistance engagements to states, territories, and localities in supporting the implementation of Statewide Communication Interoperability Plans (Statewide Plans), including planning for deploying the Nationwide Public Safety Broadband Network (NPSBN), targeting those jurisdictions with the lowest capability and highest risk.

Additionally, OEC will deliver exercise and training support to fulfill Communications Unit Leader, Communications Technician, and Auxiliary Communications technical assistance offerings.

OEC will execute approximately 20 technical assistance engagements for tribal governments based upon tribal NECP Goal 2 capabilities data submitted to DHS in 2013. Through the collection of this data and through engagements, OEC will implement recommendations and initiatives to the NECP.

SAFECOM: An advisory group of public safety and intergovernmental associations plus at large emergency responders, assists DHS with developing guidance, policies, and products related to emergency communications. SAFECOM activities engage stakeholders at SLTT governments, across all disciplines, in addressing and improving interoperable emergency communications by sharing lessons learned, best practices, and priorities with DHS and among themselves. Through SAFECOM, products are developed to educate policymakers and the emergency communications community across all disciplines, and provide recommendations on OEC services.

Funding will allow OEC to continue in-depth stakeholder engagements with the National Council of Statewide Interoperability Coordinators (NCSWIC) through recurring in-person and virtual meetings. In coordination with the NCSWIC and SAFECOM communities, funding will support developing 10 quality products to educate policy makers and the emergency response community on stakeholder-identified lessons learned and best practices, plus other key priorities. Funding will additionally allow DHS to continue supporting the First Responders Network Authority (FirstNet), overseeing planning, construction, and operation of the network.

DHS, through OEC, is supporting the establishment of this network by advising the DHS Secretary and Under Secretary as members on the FirstNet Board and FirstNet Steering Committee, respectively, and supporting FirstNet's Public Safety Advisory Committee in an advisory role.

Stakeholder engagements and partnerships will inform stakeholders of DHS policies and activities, as well as providing the venue to receive feedback and guidance.

Outreach and Coordination: Supports convening and engaging stakeholders at all levels – Federal, SLTT, and the private sector – to address and improve interoperable emergency communications. Through this program, OEC informs stakeholders of DHS policies and activities, and provides the venue for receiving feedback and guidance on improving emergency communications capabilities. This includes policy development, investment planning, and direct assistance, such as facilitating collaborating, information sharing, identifying interoperability gaps, and standardization.

The requested funding will enable OEC to continue supporting workshops and webinars to approximately 25 – 30 States and territories. The goal of these workshops and webinars is to overhaul Statewide Plans, which set strategic planning priorities across each state and focus on improving public safety emergency communications. These updated Statewide Plans will address activities across all lanes of the Interoperability Continuum plus various technologies, such as land mobile radio, wireless broadband, satellite, amateur radio, etc.

The requested funding will also provide for border region efforts supporting the Southwest Border Communications Working Group, Canada-United States Communications Interoperability Working

Group as part of the Beyond-the-Border initiative, as well as participation in the High-Level-Consultative-Commission as a member of the United States delegation in discussions with Mexico on border-region communications issues.

Furthermore, OEC is assisting the Executive Office of the President (EOP) Office of Science and Technology Policy in meeting the requirements as outlined in EO-13616, “Accelerating Broadband Infrastructure Deployment.” This EO charges the Broadband Deployment of Federal Property Working Group with ensuring a coordinated and consistent approach in implementing streamlined agency procedures, requirements, and policies related to wired and wireless broadband infrastructure deployment on Federal lands, buildings, rights of way, Federally assisted highways, and tribal lands. Successful execution of this EO will assist in the deployment of the NPSBN.

Technical Assistance (TA) and Grants: Consists of activities providing support to state, local, and tribal governments to mitigate emergency communications gaps identified by national or statewide strategic planning through on-site and virtual technical assistance and NECP Goal 2 efforts. OEC collaborates and coordinates grant policy across the numerous Federal grant programs that support interoperable emergency communications.

In preparation for NPSBN, this funding will provide 56 “pre-consultation” workshops for states and territories developing the wireless coverage requirements needed by FirstNet and the Statewide Plans for network adoption. The requested funding will also develop and implement a process to educate and collect data from Federal agencies, as well as execute 14 coverage workshops for developing a nationwide perspective of the Federal coverage requirements for FirstNet.

The requested funding will also provide 20 TA engagements for Federal responders – targeting responders that have a high need for interoperability or mutual aid with state and local public safety.

Additionally, this funding will enable release of the *Fiscal Year 2015 SAFECOM Guidance on Emergency Communications Grants*. This document is updated annually to provide guidance for SLTT grantees on eligible activities and equipment standards applicable to Federal grants funding emergency communications projects. Through this funding, OEC will meet its statutory requirements under Title 18 to provide technical assistance to SLTT governments to improve interoperable communications.

Business Support: Consists of mission-support functions including budget and finance, executive secretariat, human capital, training and development, and other administrative functions. In addition, Business Support includes OEC’s external affairs functions. The external affairs team is responsible for strategic communications; legislative affairs; public affairs and media relations; external speaking engagements and conferences; internal communications; developing publications and educational materials; and supporting stakeholder outreach.

OEC will develop and roll out a competency model, targeting employee training to enhance staff ability to achieve the OEC mission, as well as improve mission alignment by defining workforce competencies and aligning resources to workforce needs. The requested funding will allow the external affairs team to continue and further develop its stakeholder support through strategic communications related to enhancing day-to-day communications capabilities and the ongoing planning involving the NPSBN.

MAJOR ACQUISITIONS:

SAFECOM

SAFECOM serves as DHS's program to coordinate standards, policies, procedures, and research to improve response through more effective and efficient interoperable communications nationwide. SAFECOM is coordinated with the input of the public safety community to drive the strategy for the improvement of public safety interoperable communications. The SAFECOM Executive Committee and Emergency Response Council have been instrumental in the creation of key documents such as the Interoperability Continuum, the Statement of Requirements (SoR), the Statewide Communication Interoperability Plan (SCIP) Methodology, and the NECP to assist emergency responders nationwide in improving communications and interoperability.

Consistent with public safety user requirements, SAFECOM addresses capability gaps by identifying and promulgating interoperability solutions that provide the vital links between local and State systems and Federal Government networks. For example, the Department of Homeland Security Office of Emergency Communications, in coordination with the Office for Interoperability and Compatibility, develops the annual SAFECOM Guidance on Emergency Communications Grants. The guidance provides recommendations to grantees seeking funding for interoperable emergency communications projects, including allowable costs, items to consider when funding emergency communications projects, grants management best practices for emergency communications grants, and information on standards that ensure greater interoperability. The guidance ensures that Federally funded investments are compatible and support national goals and objectives for improving interoperability nationwide.

SAFECOM addresses a capability gap by identifying and promulgating interoperability solutions that provide the vital links between local and State systems and Federal Government networks. SAFECOM will incrementally deliver this services system throughout its lifecycle.

E.O. 13618 assigns DHS the responsibility for providing NS/EP communications, including communications that support Continuity of Operations & Continuity of Government (COOP/COG); Federal and SLTT emergency preparedness and response communications under all circumstances, including conditions of crisis or emergency.

PTS leverages the Nation's public telephone networks, including cellular systems, enabling voice communications for response and recovery coordination efforts and maintaining essential government functions and operations during a disaster. PTS accomplishes this by maintaining priority services that provide NS/EP voice telecommunications for the Government and its industry organizations during times when networks are congested or degraded. PTS significantly enhances call completion capabilities for national leadership, other NS/EP users, and first responders. DHS will continue providing and sustaining the PTS services (GETS, WPS, and SRAS) under EO 13618.

PTS provides the availability of NS/EP communications during efforts to prevent, respond to, and recover from threatened and actual terrorist attacks, major disasters, and other emergencies, even when conventional communications services are congested or degraded.

Government Emergency Telecommunications Service: Provides priority communications on commercial landline communications networks, supporting the President, Federal, state, local, tribal, and other authorized users during times of commercial telephone network congestion caused during natural or man-made disasters. GETS will continue providing priority services covering the United States and its territories, and traverse three major long distance communications carriers and most of the local exchange carriers. GETS will continue to interoperate with the Defense Switched Network, GSA's Networx, and the Diplomatic Telecommunications Service. This architecture provides a greater than 90 percent call completion rate for GETS.

Wireless Priority Service: Enhances NS/EP user's ability to complete wireless calls (originating and/or terminating) during a crisis. WPS provides nationwide wireless subscriber coverage for the President, Federal, state, local and tribal users during commercial cellular telephone network congestion, which may be caused during times of natural or man-made disasters. These services coordinate response and recovery efforts while also facilitating COOPs and COG.

WPS will continue to provide service, ensuring maximum coverage of the U.S. and some of its territories, through nationwide and regional wireless providers. WPS Enhanced Overload Performance priority signaling capability will continue enhancing call completion in the Radio Access Network and continue receiving priority access during times of congestion. This architecture provides a greater than 80 percent call completion rate for WPS.

Special Routing Arrangement Service: This program provides non-traceable, priority communication service over commercial wireless and wireline telecommunications networks for a special user community. SRAS operates under all conditions, including natural and man-made disasters, cyber-attacks, threatened and actual terrorist attacks, major disasters, and other emergencies, even when conventional communications services are congested or degraded.

Government Industry Planning & Management (GIP&M): Executes the following priorities:

- Managing the President’s National Security Telecommunications Advisory Committee (NSTAC) under E.O. 12382, “President's National Security Telecommunications Advisory Committee”
- Directing the NS/EP Communications Executive Committee (EXCOM) under EO 13618
- Leading the Communications sector and its activities under Homeland Security Presidential Directive (HSPD)-7 – Critical Infrastructure Identification, Prioritization, and Protection

GIP&M manages relationships with key government and industry representatives across the communications sector and other critical infrastructure sectors, to assure information sharing among stakeholders and planning for all hazards responses to disruptions of communications infrastructure and services.

The President’s NSTAC was established under EO 12382, to advise the President on NS/EP telecommunications policy. The NSTAC is comprised of up to 30 presidentially-appointed, executive-level industry leaders representing various elements of the telecommunications industry. The NSTAC meets quarterly with the EOP and DHS leadership to prioritize NS/EP communications matters and identify specific topics of study. GIP&M provides the EOP with analysis for NSTAC membership, updates NSTAC authorities such as its charter and bylaws, and ensures that the NSTAC remains compliant with the Federal Advisory Committee Act.

GIP&M will support up to two subcommittees’ efforts for the NSTAC, resulting in final reports to the President, as well as supporting four committee level meetings.

The NS/EP EXCOM, created in 2012 by EO 13618, co-chaired by DHS and Department of Defense, serves as a government forum to address all NS/EP communications matters. The Joint Program Office (JPO), housed within GIP&M, is responsible for providing full-time, expert, and administrative support for the Executive Committee.

The EXCOM JPO will continue coordinating programs supporting NS/EP missions, priorities, goals, and policy; and, when directed by the EXCOM, convene governmental and non-governmental groups, coordinate activities, and development of policies for senior official review and approval. The JPO intends supporting a minimum of four EXCOM meetings in FY 2015, and assisting the EXCOM in developing quarterly updates to the Assistant to the President, Homeland Security and Counterterrorism; and Director of the Office of Science and Technology Policy.

DHS serves as the Sector-Specific Agency for the Communications sector in accordance with HSPD-7. GIP&M supports the Communications Government Coordinating Council (GCC) and the Communications Sector Coordinating Council (SCC). GIP&M is also responsible for the Communications Sector Specific Plan (CSSP) detailing the application of the National Infrastructure Protection Plan risk management framework to the unique characteristics and risk landscape of the Communications sector.

GIP&M will support four joint GCC/SCC meetings and one annual quad meeting with IT and Communications sectors’ stakeholders. GIP&M will also update the CSSP, the Sector Annual Report, and the National Sector Risk Assessment for the Communications sector.

MAJOR ACQUISITIONS:

NS/EP Priority Telecommunications Services

PTS is a White House-directed national-level NS/EP Telecommunications program that leverages the commercially owned Public Switched Network (PSN) to provide specially designed telecommunications services for the NS/EP user community during natural or man-made disasters when conventional communications services are ineffective. Specifically, PTS enhances the ability of NS/EP users to complete calls during a crisis or emergency through a congested or degraded PSN using any of the following three PTS components: GETS; WPS; SRAS, a classified service for special users.

2015 Total Request	12	12	69,571
Total Change 2014 to 2015	-	-	48,413

NPPD requests \$69.571 million for Next Generation Networks, including 12 FTP/12 FTE. This is an increase of \$48.413 million from the FY 2014 Enacted budget. It includes the following adjustments to base:

- Increase of \$0.001 million for the annualization of the FY 2014 pay raise
- Increase of \$0.012 million for the FY 2015 pay raise
- Increase of \$0.002 million for increased retirement contributions
- Decrease of \$0.009 million for efficiencies achieved by reducing Federal personnel grades
- Decrease of \$0.010 million for contract efficiencies

CURRENT SERVICES PROGRAM DESCRIPTION:

\$K	FY 2013 Rev. Enacted			FY 2014 Enacted			FY 2015 Pres. Budget		
	FTP	FTE	Total	FTP	FTE	Total	FTP	FTE	Total
Next Generation Networks	2	2	22,535	12	12	21,158	12	12	69,571

Next Generation Networks			22,255			19,580			67,987

EO 13618 assigns DHS the responsibility for satisfying priority communications requirements using commercial, government, and privately-owned communications resources, when appropriate.

Next Generation Networks Priority Services (NGN-PS) ensures NS/EP telecommunications during an emergency. NGN-PS facilitates the continuation of NS/EP priority services currently provided by PTS via commercial networks, as major commercial telecommunications carriers replace their current circuit-

switched infrastructure with Internet Protocol (IP)-based infrastructure. To continue providing authorized users with the ability to communicate during crises, DHS must ensure the new network infrastructures are also capable of satisfying priority telecommunications requirements as the commercial carriers evolve to their next-generation networks.

The first NGN-PS program objective addresses the transition of legacy, priority voice capabilities in the commercial carriers' long distance core networks. The acquisition strategy selected will achieve cost-effective priority services by continuing to leverage the highly survivable, commercially-owned, public telecommunications network assets. When deployed, NGN technologies will provide the Government with priority communications capabilities over robust and diverse nationwide communications networks at a fraction of the cost required to build and maintain a government-owned system.

Effective communications capabilities are essential during an emergency or crisis to mitigate damage to critical infrastructures, save lives, maintain a strong national defense posture, mitigate damage to the national economy, and maintain public confidence. When commercial communications services are congested or degraded, including natural or man-made emergencies, the NGN-PS program will provide authorized personnel with IP-based voice communications for response and recovery efforts. It will ensure essential government functions and operations such as Continuity of Operations and Continuity of Government. The program uses commercial networks, as they are more cost effective than private networks and provide ubiquity of service.

The NGN-PS program will continue evolving outdated PTS program circuit-based priority features and functions, and phasing in IP-based packet switching priority features. In FY 2015, NGN-PS will start the Phase 1, Increment 2. The Increment 2 effort will expand the NGN-PS efforts into wireless VoIP networks, in addition to current work on core backbone, with contracted telecommunications providers.

Please see the following page for the FY 2013-2015 spend plan.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request

NGN Wireless Access Verizon		\$ 655,501	\$ 15,875,129

MAJOR ACQUISITIONS:

Next Generation Network (NGN)

Next Generation Network Priority Services (NGN-PS) program responds to E.O. 13618, which directs the Secretary of DHS to “oversee the development, testing, implementation, and sustainment of NS/EP communications, including: communications that support Continuity of Government; Federal, State, local, territorial, and tribal emergency preparedness and response communications...” Legacy PTS provides priority over commercial service provider (CSP) networks. CSPs are replacing their aging circuit-switched networks with packet-switched networks creating the operational gap that NGN will address. NGN addresses a capability gap by providing highly survivable, commercial telecomm assets to provide the Government with priority communications capabilities over robust and diverse nationwide networks. NGN is a multi-phase, multi-increment tech insertion.

2015 Total Request	14	14	10,106
Total Change 2014 to 2015	-	-	32

NPPD requests \$10.106 million for Programs to Study & Enhance Telecommunications, including 14 FTP/14 FTE. This is an increase of \$0.032 million from the FY 2014 Enacted budget. It includes the following adjustments to base:

- Increase of \$0.010 million for the annualization of the FY 2014 pay raise
- Increase of \$0.014 million for the FY 2015 pay raise
- Increase of \$0.002 million for increased retirement contributions
- Increase of \$0.028 million technical adjustments due to the FY 2014 Omnibus
- Decrease of \$0.010 million for efficiencies achieved by reducing Federal personnel grades
- Decrease of \$0.012 million for contract efficiencies

CURRENT SERVICES PROGRAM DESCRIPTION:

\$K	FY 2013 Rev. Enacted			FY 2014 Enacted			FY 2015 Pres. Budget		
	FTP	FTE	Total	FTP	FTE	Total	FTP	FTE	Total
Programs to Study & Enhance Telecommunications	30	22	11,893	14	14	10,074	14	14	10,106
PSET Salaries & Benefits	30	22	4,002	14	14	1,813	14	14	1,829
Classified Program			998			1,128			1,128
Modeling, Analysis & Technical Assessments			5,036			5,031			5,047
NS/EP Standards			1,857			2,102			2,102

The Programs to Study & Enhance Telecommunications (PSET) PPA has a large role in EO 13618 by supporting the development of studies, standards, and assessments of communications infrastructures in support of National Security Emergency Communications. The PSET PPA encompasses programs

supporting each of the other PPAs, developing tools used by Critical Infrastructure Protection (CIP) and ensuring cost effective modeling and analysis of advanced telecommunications network technology for PTS and NGN.

PSET includes the following four activities:

Modeling, Analysis, and Technical Assessment (MATA): Predicts and mitigates the effect of communications failures on national leadership's ability to communicate during times of crisis. MATA provides specialized modeling and analyses of current and future protocols, algorithms, network designs, and capabilities affecting priority service communications in legacy and NGNs. DHS uses the modeling team's analysis tools to provide critical infrastructure and key resource risk assessments for the Communications sector during the response to a man-made or natural disaster, as well as assisting in restoration and recovery efforts. MATA also provides technical assistance to the DHS Office of Policy for the Committee on Foreign Investment in the United States (CFIUS) and Team Telecom in support of the Federal Communications Commission (FCC).

In FY 2015, MATA will develop end-to-end integrated data priority services testing and prototyping capabilities, using a mixture of modeling, simulation and actual test beds for various NGN technologies. The requested FY 2015 funding will allow MATA to complete 75 percent of AT&T, 65 percent of Sprint, and 45 percent of Verizon core networks models to support NGN Voice Priority Services. .

NS/EP Standards: Provides leadership and representation in international and national standards bodies to advance U.S. interests. The program authors, defends, and advances contributions to technical standards in support of National Communications System (NCS) and national goals. NS/EP focuses on a suite of standards regarding IP-based networks, the latest technology. These standards are critical to the success of the NGN-PS program's ability to ensure the continuity of priority communication for national, state, and local leadership during times of NSSEs.

The standards team will attend over 40 standards engagements within nine national and international standards bodies worldwide where they will track over two hundred contributions traversing the approval processes of the different bodies. They will also work with the commercial industry and collaborate on new communications standards in the wireless, satellite, and IP arenas.

Commercial Network Survivability/Advanced Technology: E.O. 13618 establishes and maintains the means to assess and make policy recommendations on new and advanced communications technologies that either have or satisfy NS/EP communications needs. DHS has established an Architecture and Advanced Technology (AAT) program, which houses Advanced Technology, Public Safety Communications Research, and NS/EP Executive Committee Support groups. Consistent with Sections 3.3 and 5.1 of EO 13618, the program leads much of DHS's NS/EP communications efforts, including supporting the NS/EP Executive Committee (EXCOM), a consortium of interagency partners with NS/EP communications responsibilities; conducting vulnerability assessments of new communications technologies; evaluating the impacts on commercially-owned and government-owned infrastructures; and coordinating with the Public Safety Communications Research program to reconcile NS/EP communications standards with the First Responder Network Authority Network (FirstNet). Additionally, the program also supports national-level exercises and NSSEs to support

broader DHS efforts to prevent, protect, respond to, and recover from acts of terrorism and natural disasters.

Classified Program: The justification for this program will be made available under a separate cover.

Network Security Information Exchange			336			56			56
Training & Exercises			593			591			591
Telecommunications Service Priority			472			406			406

Critical Infrastructure Protection (CIP) addresses EO 13618, specifically by receiving, integrating, and disseminating NS/EP communications information to the Federal Government and SLTT governments,

as appropriate, to establish situational awareness, priority setting recommendations, and a common operating picture for NS/EP communications information as required by Sec 5.2.(d) of the EO

CIP also facilitates leveraging this situational awareness and common operational picture through each of the other PPAs. CIP ensures the continued availability of NS/EP telecommunications services under all circumstances, including crisis or emergency, attack, recovery, and reconstitution. CIP performs analyses on the communication infrastructure; ensures continuity planning and operational support are in place; conducts Title Globe continuity communications testing and certification training for communications emergency response personnel; and produces operational procedures, policies, and support tools. CIP is comprised of the following activities:

National Coordinating Center (NCC) Operations: The NCC is a joint government-industry body providing a response mechanism to NS/EP telecommunications incidents. The NCC, collocated with the NCCIC, provides 24x7, real-time situational awareness and response readiness for events for events potentially affecting the nation's communications infrastructure. The NCC fulfills E.O. 13618, for a government-industry center capable of assisting in the initiation, coordination, restoration, and reconstitution of NS/EP telecommunications services or facilities under all conditions of emerging threats, crisis, or emergency. The NCC is the primary mechanism within DHS for executing Emergency Support Function 2 – Communications (ESF #2) under the National Response Framework during an incident.

The NCC also administers the SHARed RESources (SHARES) high-frequency (HF) radio program, which is a network of approximately 1,500 high-frequency radio stations forming a nationwide emergency message-handling network.

The requested funding will allow the NCC to continue 24x7 watch operations, improve real-time situational awareness reporting for NS/EP communications for Federal departments and agencies, and maintain baseline operational readiness to respond to events. Per DHS's responsibilities under National Security Presidential Directive 39 (NSPD-39), the NCC will continue to support coordination between operations centers responsible for radiated frequency interference events affecting government and private sector communications systems. Further, this funding will facilitate NCC IT system readiness (NCCLAN, station logs, tools) at 99 percent - available to support 24x7 operations. Additionally, it will support information sharing such as the weekly NCC government and industry meetings to ensure coordination and understanding of emergency communications. This funding will also support weekly SHARES Federal-state-local-volunteer operable/interoperable HF communications capability testing to ensure readiness.

Operations, Plans, and Policy: Provides telecommunication analyses during both emergency preparation and actual disaster response operations, and is responsible for assessing the national continuity communications system.

Operations, Plans, and Policy will co-lead and enhance ESF #2 response and restoration efforts when activated, supporting regional and state communications events. The three Communication Liaisons (Eastern, Central, and Western) will work on building emergency capabilities at the Federal, regional agency, state, and local levels, and in coordination of such initiatives and programs, with the communications industry. The Communication Liaisons will work closely with the Office of

Emergency Communications' 10 Regional Coordinators, each one located in the 10 Federal Regions, in continuing improvement of emergency communications operability and interoperability. Additionally, the Operations, Plans, and Policy will improve agency readiness and provide reporting to the EOP, for Category II – IV departments and agencies' compliance with NCS Directive 3-10.

Training and Exercises (T&E): Maintains a cadre of more than 100 emergency response personnel prepared to respond across the spectrum of crises and emergencies. In response to the recommendations of the *Hurricane Katrina After Action Report*, DHS is enhancing its readiness for emergency response operations with an increased tempo of training and exercises for multiagency personnel with ESF #2 collateral duties.

T&E will host 10 training webinars, an annual training event in which the focus will remain on training personnel in post-disaster infrastructure restoration, and two regional training events. T&E will also conduct one major ESF #2 exercise involving the entire ESF #2 community (FEMA, FCC, NTIA, Industry, and State Emergency Managers) and at least two National Team exercises involving the NCCIC/NCC and the FEMA National Response Coordination Center teams. T&E will also participate in the planning, control and execution of NCCIC's participation in the annual Eagle Horizon Continuity of Operations national exercise and DHS National Level Exercise events, as well as at least five internal NCCIC cyber exercises, and at least two interagency or national level cyber exercises. Finally, T&E will enhance its collaborative efforts with various departments and agencies; supporting travel to ESF #2 training events to further NPPD's mission of conducting state and local officials training and exercises and helping the Nation meet the overarching priorities of the National Preparedness Goals.

National Security Information Exchanges (NSIE): Supports the Government NSIE, representing Federal departments and agencies having responsibilities related to the public network, and departments and agencies that are major telecommunications users. The President's NSIE provides a trusted environment where industry and government representatives exchange threat and vulnerabilities information to reduce risk in the public network.

NSIE will increase industry information sharing partner membership and the Government NSIE membership by 10 percent. NSIE will also update their risk assessment report, *An Assessment of the Risk to the Cybersecurity of the Public Network*.

Telecommunications Service Priority (TSP): Established by a FCC Report and Order 88-341 in 1988, TSP is the regulatory, administrative, and operational system authorizing and providing priority treatment of NS/EP telecommunications services. The TSP program provides NS/EP users with priority restoration and provisioning of telecommunications services vital to maintaining readiness or response to an incident. Telecommunications service vendors may become overwhelmed with requests for new telecommunications services and requirements to restore existing telecommunications services due to any number of natural or man-made disasters. The TSP program provides service vendors with an FCC mandate for prioritizing service requests by identifying those services critical to NS/EP.

TSP will maintain the database of critical circuits requiring priority treatment, monitoring over 276,000 TSP assignments and over 1,900 organizations (Federal, State, local governments; and private industry) that participate in the program. To ensure restoration activities remain mission critical, TSP

will revalidate a third of user organizations to ensure restoration priorities and the NS/EP mission remain valid. Additionally, TSP will reconcile 75 percent of the previous year's vendor-supplied confirmation data to maintain accuracy of restoration data and priorities.

IV. Program Justification Changes

**Department of Homeland Security
National Protection & Programs Directorate
Infrastructure Protection and Information Security
Justification of Program Changes
(Dollars in Thousands)**

Program Increase 1: Transition Wireless Priority Services to Internet-Based Technologies
PPA: Next Generation Networks
Program Increase: Positions 0, FTE 0, Dollars \$48,417

Funding Profile

	FY 2013 Revised Enacted			FY 2014 Enacted			FY 2015 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	2,122
Program Increase							-	-	48,417
Total Request	-	-	5,345	-	-	2,122	-	-	50,539

Description of Item:

NPPD requests an increase of \$48.417 million to transition the WPS infrastructure to internet-based technologies through implementation of Phase 1, Increment 2 of the NGN-PS program. This will enable IP-based packet switching capabilities over wireless cellular networks and NGN-PS Phase 1, Increment 2 to meet IOC in FY 2018.

Justification:

NGN-PS ensures NS/EP telecommunications during an emergency. PTS currently provides NS/EP communications via commercial networks; however, commercial telecommunications networks are modernizing from the circuit-switched infrastructure upon which PTS is based no later than FY 2019. NGN-PS works with major commercial telecommunications carriers as they make the transition to IP-based infrastructures to ensure the continuity of NS/EP priority service.

The NGN-PS program must work diligently with service providers to stay ahead of the emerging priority-service capability gap on wireless networks.

Impact on Performance (Relationship of Increase to Strategic Goals):

This program change will provide support to maintain the number of wireless carriers deploying PTS, so the solution will maintain the same degree of coverage across the United States regardless of the

underlying technology. The increase will enable Phase 1, Increment 2 of the NGN-PS program to meet IOC in FY 2018. Without this funding, the Federal Government will risk losing voice priority-service capabilities in wireless networks as the legacy WPS becomes phased out and obsolete, currently estimated to occur in some markets as early as FY 2015, but no later than FY 2019.

**Department of Homeland Security
National Protection & Programs Directorate
Infrastructure Protection and Information Security
Justification of Program Changes**
(Dollars in Thousands)

Program Increase 2: Enhance CFATS Compliance
PPA: Infrastructure Security Compliance
Program Increase: Positions 0, FTE 0, Dollars \$3,420

Funding Profile

	FY 2013 Revised Enacted			FY 2014 Enacted			FY 2015 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							263	263	84,016
Program Increase							-	-	3,420
Total Request	253	230	71,696	253	242	81,000	263	263	87,436

Description of Item:

NPPD requests an increase of \$3.420 million and 0 FTP/0 FTE to enhance critical efforts related to compliance with the CFATS, led by the Infrastructure Security Compliance Division (ISCD).

Justification:

Identification of CFATS outliers – \$1.345 million, 0 FTP/0 FTE

ISCD is developing an automated process to ingest and analyze data provided by other Federal, State, and local partners to assist in the identification of facilities that should have filed a CFATS Top-Screen based on their possession of a threshold amount of one or more CFATS chemical(s) of interest, but either intentionally or unintentionally failed to do so (i.e., “outlier” facilities or “potentially noncompliant facilities”).

Improvements to CFATS risk-tiering methodology – \$0.500 million, 0 FTP/0 FTE

To address concerns raised by the U.S. Government Accountability Office regarding the CFATS risk-tiering methodology, ISCD will implement modifications to the tiering methodology based on recommendations made by an external peer review panel in FY 2013.

Implement E.O. recommendations – \$1.575 million, 0 FTP/0 FTE

ISCD will invest in enhancements to its internal information sharing platform and will improve its data analytic capabilities to better enable comparison between agency, State, and local lists of chemicals. Specifically, ISCD will run comparisons on the EPA Risk Management Program and the Superfund Amendments and Reauthorization Act Title III data from all 50 individual State data sets on an annual basis to identify potentially non-compliant facilities. Each discrepancy between the data sets will then be investigated and resolved to ensure all regulatory obligations by the reporting facilities are adhered to.

Impact on Performance (Relationship of Increase to Strategic Goals):

The requested funding will facilitate the automation of data analysis required to assist in the identification of facilities that should have filed a CFATS Top-Screen, therefore decreasing the likelihood that noncompliant facilities at a high risk of terrorist attack will go unregulated by CFATS. The requested funding will additionally contribute to the implementation of modifications made to the tiering methodology, allowing the Department to make more informed decisions on the risk level presented by potentially high-risk chemical facilities. Lastly, and importantly, the requested funding will allow for resources to be made available to support resulting requirements from the Executive Order deliverables (noted above) without decreasing availability for core mission functions.

**Department of Homeland Security
National Protection & Programs Directorate
Infrastructure Protection and Information Security
Justification of Program Changes**
(Dollars in Thousands)

Program Increase 3:

Implement Executive Order 13636

PPA:

Sector Management and Governance

Network Security Deployment

US Computer Emergency Readiness Team

Critical Infrastructure Cyber Protection and Awareness

Program Increase:

Positions 34, FTE 20, Dollars \$6,437

Funding Profile

	FY 2013 Revised Enacted			FY 2014 Enacted			FY 2015 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	-
Program Increase							34	20	6,437
Total Request	-	-	-	-	-	-	34	20	6,437

Description of Item:

NPPD requests an increase of \$6.437 million and 34 FTP/20 FTE to EO 13636, *Improving Critical Infrastructure Cybersecurity*. This increase will augment the recently established C³ Voluntary Program and Enhanced Cybersecurity Services (ECS) capability.

Together, these two programs will encourage the adoption of cybersecurity standards by critical infrastructure owners and operators and provide enough support to ECS as it moves to cover all critical infrastructure sectors.

Justification:

Voluntary Program - \$6.005 million, 10 FTP/6 FTE

The intention of the voluntary program is to support the adoption of the Cybersecurity Framework by owners and operators of critical infrastructure. The Cybersecurity Framework was developed by NIST in conjunction with the Department, , Sector-Specific Agencies and industry.

To support this effort, NPPD will:

- Establish a program management capability to develop guidance for participants in the program, increase efforts to engage with industry partners on cybersecurity issues, and provide evaluations based on the Cybersecurity Framework performance goals.

- Establish a national awareness campaign strategy and strategic partnerships that will leverage, participate in, and reinforce existing NPPD partnerships and programs that support cybersecurity risk awareness.
- Increase the number of voluntary evaluations completed (from 75 to 100) and enhance existing toolsets to account for the cybersecurity framework content and the ability to collect metrics on the adoption/implementation of the cybersecurity framework.
- Support the enhanced resource needs for SSAs, who will need to work with Sectors to design a voluntary program that will work for individual industries.

Enhanced Cybersecurity Services - \$2.517 million, 24FTP/14 FTE

NPPD will provide support to the ECS program, enabling owners and operators of critical infrastructure to enhance the protection of their networks from unauthorized access, exfiltration, and exploitation by cyber threat actors. ECS consists of the operational processes and security oversight required to share sensitive and classified cyber threat information with qualified CSPs that will enable them to better protect their customers who are critical infrastructure entities.

To make ECS available to all critical infrastructure sectors, NPPD must conduct analyses to establish operational procedures and ensure coordination with critical infrastructure owners and operators.

With \$0.518 million and 5 FTP/3 FTE, NPPD will:

- Coordinate ECS Memorandum of Agreements (MOAs), operational processes, and security oversight with qualified CSPs.
- Validate critical infrastructure (entities from all sectors for eligibility to participate in the ECS program.
- Provide sensitive and classified Government Furnished Indicators to qualified CSPs.
- Work directly with CSPs in support of incident response and recovery efforts and provide onsite assistance to partners and constituents based on requests for technical assistance.
- Analyze information specific to identifying known or suspected cyber threats from a number of sources in the form of indicators.

With \$1.999 million and 19 FTP/11 FTE, NPPD will expand its support to the ECS program through the development and deployment of NCPS information sharing, core infrastructure, and program support capabilities.

Offset: Reduction to SSA Management – (\$2.085 million)

NPPD is also realigning resources within the Sector Management & Governance PPA to support E.O. priorities.

Impact on Performance (Relationship of Increase to Strategic Goals):

These programs will enable the Department to partner with the owners and operators of critical infrastructure to improve cybersecurity information sharing and collaboratively develop and implement risk-based standards, which will ultimately enhance the security and resilience of the Nation's critical infrastructure and maintain a cyber environment.

Department of Homeland Security
National Protection & Programs Directorate
Infrastructure Protection and Information Security
Justification of Program Changes
(Dollars in Thousands)

Program Increase 4:

Implement Presidential Policy Directive 21

PPA:

Regional Field Operations

Sector Management and Governance

Critical Infrastructure Protection

Infrastructure Analysis and Planning

Critical Infrastructure Cyber Protection and Awareness

Program Increase:

Positions 24, FTE 14, Dollars \$1,642

Funding Profile

	FY 2013 Revised Enacted			FY 2014 Enacted			FY 2015 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							171	171	66,495
Program Increase							24	14	1,642
Total Request	161	132	58,613	170	157	64,336	195	185	68,137

Description of Item:

This net increase of \$1.642 million in funding and 24 FTP/14 FTE implements PPD 21's direction to expand activities to enhance critical infrastructure resilience by developing, implementing, and promoting innovative best practices, improving design and construction standards, and fostering advanced operation and maintenance practices that consider the full infrastructure lifecycle. Included in these efforts is development of a cyber and physical nexus within the RRAP to better understand the consequences and cascading impacts of disruptions to lifeline sectors. The funding increases total \$8.0M and are offset by \$6.4M in decreases by eliminating Site Assessment Visits as they are replaced with RRAPs and by reducing support to non-IP SSAs.

PPD-21 established national policy on critical infrastructure security and resilience. PPD-21 called for the Department to coordinate the overall Federal effort to promote the security and resilience of the Nation's critical infrastructure.

This increase would enhance three NPPD critical infrastructure capabilities aligned with the PPD:

- Better coordinate with SSAs to strengthen the security and resilience of critical infrastructure through an Infrastructure Design and Recovery Support function.
- Conduct additional comprehensive assessments of the vulnerabilities of the Nation's critical infrastructure through additional RRAP assessments.

- Ensure 24x7 capability to coordinate Federal Government responses to significant cyber and physical incidents affecting critical infrastructure.

The funding for these enhancements is partially offset by reducing legacy critical infrastructure protection activities. NPPD will stop conducting SAV assessments; instead, NPPD will conduct additional ECIP assessments using an improved tool that incorporates many of the capabilities currently provided through SAVs. .

Justification:

Infrastructure Design & Recovery Support - \$2.531 million, 10 FTP/5 FTE

NPPD will expand the range of activities to enhance critical infrastructure resilience by developing, implementing, and promoting innovative best practices, improving design and construction standards, and fostering advanced operation and maintenance practices that consider the full infrastructure lifecycle. NPPD will establish the initial framework and support required for a phased establishment of an Infrastructure Design and Recovery Support function. This will speed initial action on resilience activities and ensures that prior to introduction of any large-scale solution a substantive body of knowledge, to include field testing of funding approaches, supports any significant policy changes.

The expanded focus on resilience, in alignment with PPD-21, underlines the importance of security and protective measures. NPPD will provide a support office for infrastructure security and resilience, by interacting with multiple governance levels and developing a more robust and action-oriented public-private partnership. This will allow NPPD to set the stage for an informed national discussion regarding how to implement infrastructure resilience enhancements to combat the current risk from a range of high-priority challenges, including cybersecurity incidents, extreme weather and aging and failing infrastructure.

Specifically, NPPD will:

- Provide clearly articulated Federal resilience best practices and performance standards for infrastructure design and construction.
- Provide accessible climate change data crafted to support infrastructure investment decisions.
- Expand nascent infrastructure resilience principles to include both recovery and non-emergency investment decisions.
- Pilot initiatives exploring incentivized approaches to address aging infrastructure investment needs.

Regional Risk Assessment Program – \$4.508 million, 11 FTP/7 FTE

To meet requirements laid out in PPD-21, NPPD will develop a cyber and physical nexus within its RRAP to better understand the consequences and cascading impacts of disruptions to lifeline sectors. The findings from the increased regional assessment capabilities will provide the Department with a wealth of data about these sectors along with their reliance on cyber and communications infrastructure.

To accomplish this requirement, NPPD will hire 11 new positions with the appropriate skill set within both the Office of Infrastructure Protection and the Office of Cybersecurity & Communications. These new personnel will work together to build upon the cyber-security skill sets and ensure all RRAPs are conducted with an increased focus on cyber-security. The Office of Cyber and Infrastructure Analysis will provide analytic support for additional RRAPs.

NCC Operations - \$1.036 million, 3 FTP/2 FTE

As telephony and cyber converge, increased Federal support is required to ensure awareness and coordinated response as required in PPD-21. The National Coordinating Center for Telecommunications (NCC) leads and coordinates the initiation, restoration, and reconstitution of NS/EP telecommunications services or facilities under all conditions.

The increase will allow NPPD to maintain national critical infrastructure centers to provide a situational awareness capability by sustaining 24x7 communications infrastructure response readiness and requirements coordination between Federal, state, local, tribal, territorial, and industry responders. With current resources, the NCC will no longer be able to provide 24x7 readiness due to the loss of two staff members from the Department of Defense and one member of the Defense Intelligence Agency who are currently provided to DHS on a non-reimbursable basis.

The program increases for the Infrastructure Design and Recovery Support efforts, RRAPs, and NCC Operations is offset by decreases in support to SSAs and SAVs:

Offset: Non-Infrastructure Protection SSA Support – (\$2.939 million)

NPPD will reduce support to the non-IP SSAs and the public and private partner councils that are currently in place. This will require non-IP SSAs to assume more of the responsibilities identified in PPD-21 as it relates to their assigned sectors.

Offset: Site Assessment Visits – (\$3.494 million)

Resources formerly utilized for SAVs will be re-directed to the expansion of RRAP assessments and the enhancement of the Enhanced Critical Infrastructure Protection (ECIP)/Infrastructure Survey Tool (IST). SAVs and ECIP/ISTs have both traditionally been inputs to the RRAP process. Enhancements to ECIP/ISTs will include some of the capabilities of the foregone SAVs, and the ECIP/IST will be significantly less expensive than the SAV assessments. The enhanced ECIP/IST will be used to conduct facility level assessments in support of RRAPs, as well as National Special Security Events, Level I and Level II assets, and threat-driven activities.

Impact on Performance (Relationship of Increase to Strategic Goals):

These increases will strengthen and maintain secure, functioning, and resilient critical infrastructure through enhanced coordination, assessment, and situational awareness capabilities. By encouraging resilience in infrastructure investments across critical infrastructure sectors and funding agencies,

NPPD will reduce economic damage following a natural disaster or other incident, increase the reliability of infrastructure under normal operating conditions, and reduce Federal financial outlays to respond to and recover from a natural disaster or other incident. This new capability will be fully offset by reducing support from NPPD to other SSAs.

The five additional cyber-centric RRAPs will allow NPPD to identify cross-sector physical and cyber dependencies and interdependencies and to better understand the consequences and cascading impacts of disruptions to lifeline sectors. The findings from the increased regional assessments will provide the Department with a wealth of data about the energy, water, and transportation sectors and their reliance on cyber and communications infrastructure.

**Department of Homeland Security
National Protection & Programs Directorate
Infrastructure Protection and Information Security
Justification of Program Changes**
(Dollars in Thousands)

Program Decrease 1:

Cyber Exercise & Assessment Programs

PPA:

US Computer Emergency Readiness Team

Federal Network Security

Critical Infrastructure Cyber Protection and Awareness

Program Decrease:

Positions 0, FTE 0, Dollars \$(8,270)

Funding Profile

	FY 2013 Revised Enacted			FY 2014 Enacted			FY 2015 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							85	85	38,357
Program Decrease							-	-	(8,270)
Total Request	83	81	42,509	85	85	40,890	85	85	30,087

Description of Item:

NPPD requests a decrease of \$8.270 million for eliminating redundancies in cyber programs.

Justification:

Federal Network Testing & Hygiene Analysis – (\$2.780 million)

NPPD will reduce the number of Federal network testing and cyber hygiene analysis assessments by eight assessments.

US-CERT Technology Improvements – (\$3.863 million)

NPPD will reduce the development of plans, processes, and technology requirements for US-CERT Operations.

Cyber Exercises – (\$1.627 million)

NPPD will reduce the number of exercises it conducts by approximately 15 percent and limit the amount of planning it conducts for all other exercises it supports

Impact on Performance (Relationship of Increase to Strategic Goals):

The reductions to these programs will be mitigated by the deployments of the NCPS's E³A and the information sharing capabilities, as well as the deployment of CDM capabilities.

Department of Homeland Security
National Protection & Programs Directorate
Infrastructure Protection and Information Security
Justification of Program Changes
(Dollars in Thousands)

Program Decrease 2: Federal Cyber Support to SLTT
PPA: Global Cybersecurity Management
Critical Infrastructure Cyber Protection and Awareness
Program Decrease: Positions 0, FTE 0, Dollars \$(11,405)

Funding Profile

	FY 2013 Revised Enacted			FY 2014 Enacted			FY 2015 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	15,891
Program Decrease							-	-	(11,405)
Total Request	-	-	9,885	-	-	12,891	-	-	4,486

Description of Item:

NPPD requests a decrease of \$11.405 million due to reduced Federal cyber support to SLTT governments. Specifically, NPPD will reduce support to the MS-ISAC and the ICEC program.

The MS-ISAC is a collaborative SLTT government-focused cybersecurity organization enhancing SLTT governments' ability to prevent; protect against; respond to; and recover from cyber-attacks and compromises.

The ICEC program provides learning opportunities, courses, seminars, and classes through the creation and implementation of DHS Cyber Innovation Centers (CIC) that instruct on issues relating to cybersecurity and cyber awareness.

Justification:

MS-ISAC Managed Security Services – (\$3.135 million)

The MS-ISAC will continue to implement cost sharing between the Department and the states supported by MS-ISAC. The cost sharing will be used to integrate SLTT governments into the Department's larger and more comprehensive Managed Security Services approach through commercial service providers. The MS-ISAC will still serve as the primary entity to aggregate and analyze information coming from SLTTs and will continue funding this base activity.

ICEC DHS Cyber Innovation Centers (CIC) – (\$5.341 million)

Through the DHS CIC, ICEC will reduce its footprint by three communities, thus reducing the number of students reached by approximately 15,900 over three years.

National Initiative for Cybersecurity Education (NICE) – (\$2.929 million)

Cyber Education will reduce various NICE-related activities including the Federal Virtual Training Environment and the Federal Cybersecurity Training Events programs, and providing recommendations for professionalizing the federal government's key stakeholder agencies supporting critical infrastructure.

Impact on Performance (Relationship of Increase to Strategic Goals):

The reduction to MS-ISAC will be mitigated by cost sharing with SLTT governments that wish to use the Managed Security Service offering from MS-ISAC.

The ICEC program will reach approximately 211,440 students, assuming one community in FY 2015 through the end of the 10-year period.

Department of Homeland Security
National Protection & Programs Directorate
Infrastructure Protection and Information Security
Justification of Program Changes
(Dollars in Thousands)

Program Decrease 3: Interoperability Communications
PPA: Office of Emergency Communications
Program Decrease: Positions 0, FTE 0, Dollars \$(934)

Funding Profile

	FY 2013 Revised Enacted			FY 2014 Enacted			FY 2015 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	7,842
Program Decrease							-	-	(934)
Total Request	-	-	6,529	-	-	7,842	-	-	6,908

Description of Item:

NPPD requests a decrease of \$0.934 million for interoperability communications support.

Justification:

OEC provides approximately 150 technical assistance requests from SLTT for Next Generation 9-1-1, Long Term Evolution (LTE) to broadband/digital network and dispatch operations initiatives, developing new training for National Incident Management System Incident Command System communications positions. Currently, these technical assistance engagements reach across all 50 states and 6 territories.

Impact on Performance (Relationship of Increase to Strategic Goals): This decrease in funding will reduce OEC's ability to fulfill some state, local, tribal, and territorial requests for technical assistance. OEC will continue to provide requested technical assistance engagements to states, territories, and localities, but at a lower rate, in supporting the implementation of Statewide Communication Interoperability Plans (Statewide Plans), including facilitated training and exercise opportunities. OEC will also leverage other activities to mitigate this impact and continue supporting Statewide Plans.

**Department of Homeland Security
National Protection & Programs Directorate
Infrastructure Protection and Information Security
Justification of Program Changes**
(Dollars in Thousands)

Program Decrease 4: NISAC
PPA: Infrastructure Analysis and Planning
Program Decrease: Positions 0, FTE 0, Dollars \$(2,912)

Funding Profile

	FY 2013 Revised Enacted			FY 2014 Enacted			FY 2015 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	18,562
Program Decrease							-	-	(2,912)
Total Request	-	-	13,911	-	-	18,562	-	-	15,650

Description of Item:

NPPD is requesting a reduction of \$2.912 million for NISAC. NISAC was established by Congress to be a center of excellence for advanced modeling, simulation, and analysis of critical infrastructure systems. It is managed by NPPD's Homeland Infrastructure Threat and Risk Analysis Center (HITRAC). As a collaborative effort between Sandia National Laboratories and Los Alamos National Laboratory, NISAC provides strategic, multi-disciplinary analyses of dependencies, interdependencies, and cascading effects of infrastructure disruptions to critical infrastructure sectors. NISAC has developed an in-depth expertise in a wide array of subject domains and application areas. NISAC expertise and tools help inform DHS, Federal, State, local, territorial, tribal, and private sector partners' efforts to prepare for, mitigate, and recover from threats or incidents affecting critical infrastructure.

Justification:

NPPD will revert to FY13 spending levels for NISAC.

Impact on Performance (Relationship of Decrease to Strategic Goals):

OCIA will leverage available funds to conduct critical analyses to support NPPD's mission.

**Department of Homeland Security
National Protection & Programs Directorate
Infrastructure Protection and Information Security
Justification of Program Changes**
(Dollars in Thousands)

Program Decrease 5: Bombing Prevention
PPA: Infrastructure Analysis and Planning
Program Decrease: Positions 0, FTE 0, Dollars \$(2,089)

Funding Profile

	FY 2013 Revised Enacted			FY 2014 Enacted			FY 2015 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	10,504
Program Decrease							-	-	(2,089)
Total Request	-	-	9,457	-	-	10,504	-	-	8,415

Description of Item:

NPPD is requesting a reduction of \$2.089 million for Bombing Prevention (BP). BP leads and coordinates DHS efforts to protect life and critical infrastructure by building capabilities within the general public and across the private and public sectors to prevent, protect against, respond to, and mitigate bombing incidents. BP coordinates National and intergovernmental C-IED efforts, and conducts C-IED capabilities analysis and planning support, information sharing and decision support, and C-IED training and awareness programs.

Justification:

NPPD is realigning resources within the Infrastructure Analysis and Planning PPA to support priorities related to implementation of Presidential Policy Directive (PPD) 21, *Critical Infrastructure Security and Resilience*, and Executive Order (E.O.) 13636, *Improving Critical Infrastructure Cybersecurity*.

Impacts on Performance (Relationship of Decrease to Strategic Goals):

The proposed funding reduction would affect capabilities carried out in support of Presidential Policy Directive 17 (PPD-17), *Countering Improvised Explosive Devices (IEDs)*, Investments in new training mechanisms and courses will be deferred and BP will economize its Multi-Jurisdiction IED Security Planning (MJIEDSP). Support for the National Counter-IED Capabilities Assessment Database (NCCAD) will also be reduced to support alternate NPPD priorities.

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For necessary expenses for infrastructure protection and information security programs and activities, as authorized by title II of the Homeland Security Act of 2002 (6 U.S.C. 121 et seq.), [\$1,187,000,000] **\$1,197,566,000**¹, of which [\$225,000,000] **\$225,000,000**² shall remain available until September 30, [2015] **2016**³: Provided, That [\$168,061,000] **\$142,633,000**⁴ shall be used to deploy on Federal systems technology for improvement of the agency information security policies, practices, and systems covered by 44 U.S.C. 3543(a): Provided further, That funds provided under this heading shall be used to assist and support Government-wide and agency-specific efforts to provide adequate, risk-based, and cost-effective cybersecurity measures that address escalating and rapidly evolving threats to information security, including the acquisition and operation of a continuous monitoring and diagnostics program that includes equipment, software, and services supplied by the Department of Homeland Security.

Change	Explanation
¹ ... [\$1,187,000,000] <u>\$1,197,566,000</u>	Dollar change only. No substantial change proposed.

Infrastructure Analysis and Planning Mission Statement

Infrastructure Analysis and Planning includes projects and activities that support the identification, prioritization, and protection of the Nation's Critical Infrastructure and Key Resources (CIKR), as well as the assessment of CIKR vulnerabilities, consequences, and risks. These activities provide a comprehensive inventory of the Nation's CIKR assets.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	8,355	8,411	13,043	4,632
11.3 Other than Full-Time Permanent	167	169	261	92
11.5 Other Personnel Compensation	278	281	435	154
12.1 Civilian Personnel Benefits	2,339	2,356	3,652	1,296
Total, Salaries & Benefits	11,139	11,217	17,391	6,174

The FY 2015 Request includes \$17,391k for salaries and benefits for 120 FTE. The change includes transfers in of 7 FTP/7 FTE at \$845k for geospatial analysis and business support functions. It also includes 22 FTP/22 FTE offset by \$2,769k in program funding for balanced workforce, and an increase of \$592k for annualizations, \$84k for the 2015 pay raise, and \$13k for increased retirement contributions. Additionally, \$1,764k is being realigned from Infrastructure Analysis & Planning program funding to salary and benefit funding. \$311k will also be added in support of additional Regional Resiliency Assessment Programs. This change includes a decrease of \$104k for reducing Federal personnel grades and also a decrease of \$100k being realigned to the Infrastructure Security Compliance PPA.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
21.0 Travel and Transportation of Persons	\$300	\$378	\$446	\$68

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2015 Request includes an increase of \$68k in connection with the realignment of 9 FTP/9 FTE to the Infrastructure Analysis & Planning PPA.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.1 Rental Payments to GSA	\$0	\$0	\$919	\$919

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent-related services. The FY 2015 Request includes an increase of \$919k for GSA rent, resulting from the \$919k transfer from the Sector Management & Governance PPA.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.1 Advisory and Assistance Services	\$14,750	\$17,659	\$17,269	(\$390)

Advisory and assistance services includes services acquired by contract from non-Federal sources as well as from other units within the Federal government. The FY 2015 Request includes a decrease of \$390k resulting from reduced funding for the Office for Bombing Prevention.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.2 Other Services from Non-Federal Sources	\$15	\$85	\$149	\$64

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2015 Request includes an increase of \$64k for analytical services in connection with the business support, geospatial, and cyber functions transferred to the Infrastructure Analysis & Planning PPA.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.3 Other Goods and Services from Federal Sources	\$27,517	\$33,044	\$28,018	(\$5,026)

Purchases from Government Accounts include costs for purchases from other Federal government agencies or accounts that are not otherwise classified. The FY 2015 Request includes a decrease of \$5,026k associated with reduced funding for the National Infrastructure Simulation and Analysis Center and the realignment of funds from program to salary and benefits.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.7 Operation and Maintenance of Equipment	\$100	\$90	(\$854)	(\$944)

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal government account. The FY 2015 Request includes a decrease of \$944k in connection with the elimination of 150 planned Site Assistance Visits.

Regional Field Operations Mission Statement

Regional Field Operations funds program areas, voluntary projects, and activities that enable security partners to: identify and mitigate vulnerabilities; implement protective measures and report on risk mitigation activities; and increase preparedness and resilience for facilities, systems, and surrounding communities.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	14,495	14,844	19,164	4,320
11.3 Other than Full-Time Permanent	290	297	381	84

Total, Salaries & Benefits	19,327	19,792	25,549	5,757

The FY 2015 Request includes \$25,549k for salaries and benefits for 161 FTE. The change includes a realignment of \$2,275k from the Sector Management & Governance PPA. This also includes an increase of \$1,881k for annualizations, \$148k for the 2015 pay

raise, \$28k for increased retirement contributions, and 5 FTP/3 FTE at \$736k for implementation of Presidential Policy Directive 21 (PPD-21). In addition, 6 FTP/6 FTE will be added as part of the DHS FY 2015 Balanced Workforce initiative, prompting an increase of \$1,097k, offset by \$1,097k in program funding. This change also includes a decrease of \$301k for the transfer of 3 FTP/3 FTE to the Infrastructure Analysis & Planning PPA for geospatial analysis functions and a decrease of \$107k for the reduction of Federal personnel grades.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
21.0 Travel and Transportation of Persons	\$950	\$950	\$1,000	\$50

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2015 Request includes an increase of \$50k for protective security advisor travel related to additional Regional Resiliency Assessment Programs (RRAPs) planned in connection with implementation of PPD-21.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.1 Advisory and Assistance Services	\$22,500	\$22,153	\$16,830	(\$5,323)

Advisory and assistance services includes services acquired by contract from non-Federal sources as well as from other units within the Federal government. The FY 2015 Request includes a decrease of \$5,323k, primarily for the transfer of geospatial analysts to the Infrastructure Analysis & Planning PPA and reduced support to non-Office of Infrastructure Protection (IP) sectors.

Sector Management and Governance Mission Statement

Sector Management and Governance increases the ability of all levels of government and private sector partners to assess risks, coordinate programs and processes, and execute risk mitigation programs and activities. This PPA supports public awareness efforts, facilitates the sharing of Critical Infrastructure and Key Resource (CIKR) protection-related best practices and lessons learned, and enables infrastructure protection planning, readiness, and incident management.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	16,656	17,524	19,479	1,955
11.3 Other than Full-Time Permanent	333	350	388	38

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	16,656	17,524	19,479	1,955
Total, Salaries & Benefits	22,207	23,365	25,970	2,605

The FY 2015 Request includes \$25,970k for salaries and benefits for 208 FTE. The change includes an increase of \$3,863k for annualizations, \$175k for the 2015 pay raise, and \$33k for increased retirement contributions. In addition, 2 FTP/2 FTE will be added as part of the DHS FY 2015 Balanced Workforce Initiative, prompting an increase of \$366k, offset by \$366k in program funding. 15 FTP/8 FTE will join Sector Management and Governance for efforts related to implementation of Executive Order 13636 (E.O. 13636) and Presidential Policy Directive 21 (PPD-21), at an increase of \$1,518k. This change also includes a realignment of \$3,225k to the Regional Field Operations PPA and the Infrastructure Security Compliance PPA, as well as a decrease of \$125k for the reduction of Federal personnel grades.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
21.0 Travel and Transportation of Persons	\$480	\$500	\$400	(\$100)

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2015 Request includes a decrease of \$100k pursuant to the proposed reduced funding for the Sector-Specific Agency Management project.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.1 Rental Payments to GSA	\$5,085	\$3,000	\$1,622	(\$1,378)

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent-related services. The FY 2015 Request includes a decrease of \$1,378k for a reduction in GSA rent, including a \$578k transfer to the Infrastructure Analysis & Planning PPA.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.1 Advisory and Assistance Services	\$13,800	\$14,000	\$14,788	\$788

Advisory and assistance services includes services acquired by contract from non-Federal sources as well as from other units within the Federal government. The FY 2015 Request includes an increase of \$788k in connection with the implementation of PPD-21.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.2 Other Services from Non-Federal Sources	\$1,000	\$1,400	\$1,600	\$200

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2015 Request includes an increase of \$200k for activities associated with the Voluntary Program supporting E.O. 13636.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.3 Other Goods and Services from Federal Sources	\$14,100	\$12,500	\$12,159	(\$341)

Purchases from Government Accounts include costs for purchases from other Federal government agencies or accounts that are not otherwise classified. The FY 2015 Request includes a decrease of \$341k. These funds are being transferred to the Infrastructure Analysis & Planning PPA.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.4 Operation and Maintenance of Facilities	\$55	\$60	\$360	\$300

Operation and maintenance of facilities includes all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal account. The FY 2015 Request includes an increase of \$300k for activities associated with the Voluntary Program supporting E.O. 13636.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.7 Operation and Maintenance of Equipment	\$3,300	\$5,500	\$4,500	(\$1,000)

Operation and Maintenance of Equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal government account. The FY 2015 Request includes a decrease of \$1,000k stemming from efficiencies realized through transitioning the WebEOC tool to operation and maintenance and reducing the FY 2014 Omnibus increase for the Sector-Specific Agency (SSA) Management project.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
31.0 Equipment	\$1,000	\$1,000	\$500	(\$500)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2015 Request includes a decrease of \$500k, which stems from the reduction of the SSA Management project's FY 2014 Omnibus increase.

Business Operations Mission Statement

Business Operations ensures that NCSD has access to the appropriate resources to fulfill its mission. The program does so by resource and financial management, human capital activities, facilities management, performance management, policy development and implementation, information and personnel security, and strategic planning. The Business Operations program works to ensure these activities are integrated to sustain overall cybersecurity strategies, mission operational support, and short/long-term planning.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	3,308	3,016	3,643	627
11.3 Other than Full-Time Permanent	66	60	73	13

Cybersecurity Coordination Mission Statement

Cybersecurity Coordination ? The Cybersecurity Coordination program integrates information from the six federal cybersecurity centers to provide a fused view of cyber activity across the intelligence, defense, civil, and law enforcement/counterintelligence domains. The program supports operational activities to facilitate integration and activities at the federal centers, an information system for online collaboration, and information technology (IT) support and enterprise capability for the centers. Cybersecurity Coordination also supports an increased number of private sector partners present in the National Cybersecurity and Communications Integration Center (NCCIC) environment.

Summary Justification and Explanation of Changes

Global Cybersecurity Management Mission Statement

Global Cyber Security Management provides and facilitates access to training and education for cybersecurity professionals. This includes developing a common approach for Federal cyber education and development and ensuring that education and training keeps pace with technological changes. Global Cybersecurity Management also supports academic centers to invigorate the pipeline of talented cybersecurity professionals available for current and future employment. Finally, the program works to manage risks from the global information and communications technology supply chain through awareness, policies, and standards and practices.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	2,030	2,049	2,059	10

Network Security Deployment Mission Statement

Network Security Deployment manages the National Cybersecurity Protection System (NCPS), operationally known as EINSTEIN. NCPS is an integrated intrusion detection, analytics, information sharing, and intrusion prevention system utilizing hardware, software, and other components to support DHS responsibilities within the Comprehensive National Cybersecurity Initiative (CNCI) mission.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	8,160	12,290	14,589	2,299
11.3 Other than Full-Time Permanent	163	246	292	46
11.5 Other Personnel Compensation	272	410	486	76

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change

US Computer Emergency Readiness Team Mission Statement

As the cybersecurity operational arm of Cybersecurity and Communications, US-CERT leads and coordinates efforts to improve the Nation's cybersecurity posture, to promote cyber information sharing, and to manage cyber risks to the Nation. As part of that mission, US-CERT analyzes and mitigates cyber threats and vulnerabilities; disseminates cyber threat warning information; coordinates with partners and customers to achieve shared cyber situational awareness of the Nation's cyber critical infrastructure; provides response and recovery support for national assets; and advises on national-level cybersecurity policy and guidance. US-CERT encompasses the activities that provide immediate customer support and incident response, including 24-hour support in the NCCIC.

Summary Justification and Explanation of Changes

Priority Telecommunications Services Mission Statement

Priority Telecommunications Services leverages the Nation's public telephone networks, including cellular systems, to enable voice communications for response and recovery coordination efforts and ensuring that essential government functions and operations are maintained during a disaster. PTS accomplishes this by maintaining services that provide NS/EP voice telecommunications for the government and its industry organizations during times when networks are congested or degraded. These services are the Government Emergency Telecommunications Service (GETS), the Wireless Priority Service (WPS), and the Special Routing Arrangement Service (SRAS).

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change

Office of Emergency Communications Mission Statement

The Office of Emergency Communications drives the development of emergency communications capabilities (operability, interoperability, and continuous communications at all levels of government and across all public safety disciplines.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	7,225	7,922	8,100	178
11.3 Other than Full-Time Permanent	144	158	162	4
11.5 Other Personnel Compensation	241	264	270	6
12.1 Civilian Personnel Benefits	2,023	2,218	2,268	50
Total, Salaries & Benefits	9,633	10,562	10,800	238

The FY 2015 Request includes \$10,800k for salaries and benefits for 72 FTE. The change includes an increase of \$103k for pay inflation, an increase of 1 FTP/1 FTE and \$184k for balancing the workforce, \$11k for increased retirement contributions, and a decrease of \$60k for federal personnel grade reduction.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.1 Advisory and Assistance Services	\$12,245	\$12,275	\$11,067	(\$1,208)

Advisory and assistance services includes services acquired by contract from non-Federal sources as well as from other units within the Federal Government. The FY 2015 Request includes a decrease of \$1,134k for decreased requirements in advisory and assistance services.

I. Changes In Full Time Employment

	FY 2013	FY 2014	FY 2015

K. DHS Balanced Workforce Strategy

In order to establish a high-performing workforce comprised of a strong internal core of Federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience, and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment, the Department will realign contractor and/or Federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with Federal employees to better realize the full potential of our total workforce – both contracted and Federal. A strong internal core of Federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for Federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into tiered ranking.

NPPD requests \$8.532 million in IPIS salaries and benefits and an offset of \$8.798 million in programs/contracts for 65 FTP/65 FTE as part of the FY 2015 DHS Balanced Workforce Strategy.

FY 2015 DHS Balanced Workforce Strategy

- Amount of salaries and benefits funding needed to hire Federal employees:
 - \$8.532 million for 65 FTP/65 FTE.
- Amount of program/contract funding that will be terminated:
 - \$8.798 million program/contract cost. There is a projected \$0.266 million cost savings by hiring Federal employees and converting contractors to FTPs/FTEs.
- Implementation timeline:
 - NPPD's FY 2015 Balanced Workforce Strategy will be implemented in FY 2015.
 - Contractor functions will be reduced and positions will be converted in accordance with the Department's Balanced Workforce Initiative with a particular focus on contractors who are performing "nearly government inherent" responsibilities.
 - Contractor reductions will be absorbed by the existing Federal Government employees and new FTE converted positions.

FY 2014 DHS Balanced Workforce Strategy

- Amount of salaries and benefits funding needed to hire Federal employees:
 - \$10.434 million for 74 FTP/74 FTE.
- Amount of program/contract funding that will be terminated:
 - \$15.535 million program/contract cost. There is a projected \$5.101 million cost savings by hiring Federal employees and converting contractors to FTPs/FTEs.
- Implementation timeline:
 - NPPD’s FY 2014 Balanced Workforce Strategy will be implemented in FY 2014.
 - Contractor functions will be reduced and positions will be converted in accordance with the Department’s Balanced Workforce Initiative with a particular focus on contractors who are performing “nearly government inherent” responsibilities.
 - Contractor reductions will be absorbed by the existing Federal Government employees and new FTE converted positions.

FY 2013 DHS Balanced Workforce Strategy

- Amount of salaries and benefits funding needed to hire Federal employees:
 - \$5.943 million for 58 FTP/58 FTE.
- Amount of program/contract funding that will be terminated:
 - \$10.033 million program/contract cost. There is a projected \$1.128 million cost savings by hiring Federal employees and converting contractors to FTPs/FTEs.
- Implementation timeline:
 - NPPD’s FY 2013 Balanced Workforce Strategy will be implemented in FY 2013 and FY 2014, due to the FY 2013 Continuing Resolution.
 - Contractor functions will be reduced and positions will be converted in accordance with the Department’s Balanced Workforce Initiative with a particular focus on contractors who are performing “nearly government inherent” responsibilities.
 - Contractor reductions will be absorbed by the existing Federal Government employees and new FTE converted positions.

BUDGET REQUEST AND SUPPORTING INFORMATION
--

**National Protection & Programs Directorate
Office of Biometric Identity Management**

I. Appropriation Overview

I. Appropriation Overview

A. Mission Statement for Office of Biometric Identity Management:

The Office of Biometric Identity Management (OBIM) mission is to provide enduring identity services to the Department of Homeland Security (DHS) and its mission partners that advance informed decision making by producing accurate, timely, and high assurance biometric identity information and analysis.

OBIM has four goals: (1) enable homeland security missions, (2) accelerate the transformation of OBIM into the biometrically based Identity Services Provider for DHS, (3) institutionalize biometrics within the Department, and (4) provide integrated identity services management.

B. Budget Activities:

OBIM funding supports: Salaries and Expenses (S&E), Systems Engineering, Operations and Maintenance (O&M), and Identity and Screening Services (ISS).

Salaries and Expenses – Provides funding for OBIM Federal staff supporting mission capabilities, operations and maintenance of the Automated Biometric Identification System (IDENT) system, identity screening, fingerprint examinations, and information sharing. Support services, such as the Working Capital Fund, are also provided.

Systems Engineering – Provides specialized engineering, and resources to support capacity planning, system availability, service level management, performance and service quality analysis, and workload modeling and simulation, along with statistical analysis to support OBIM's IDENT system.

Operations and Maintenance – O&M for IDENT provides application support for adaptive, preventive, and perfective maintenance, release and configuration management, architecture support, interface support, configuration management, security certifications and accreditations, software licenses, and appropriate technology refreshes. O&M for IDENT includes data center operations support and services as well as internal corporate systems, consisting of hardware, software (maintenance and licensing agreements), and telecommunication services.

Identity and Screening Services – ISS consist of two components: biometric verification and identity analysis. Biometric verification services are provided by the Biometric Support Center

(BSC). OBIM provides automated and manual biometric verification services. Identity analysis responds to analytical, investigative, and operational requests from law enforcement, intelligence agencies, external agencies, and foreign partners. Together these two analytic services strengthen national security, immigration services, and enforcement needs of users at the Federal, State and local, the Intelligence Community, and international partners by identifying Known or Suspected Terrorists (KSTs) and watchlist matches.

C. Budget Request Summary:

OBIM requests 190 full-time positions (FTP), 190 full-time equivalents (FTE), and \$251.584 million for the FY 2015 Request.

The total adjustments-to-base is a reduction of 17 FTP/17 FTE and \$3.123 million.

- Realignment of 18 FTPs/18 FTEs and \$2.914 million for OBIM leadership and support functions to the Directorate Administration PPA to consolidate management and business support functions across the Directorate
- Increase of \$0.225 million for 2015 pay raise
- Increase of \$0.065 for annualization of 2014 pay raise
- Increase of 1 FTP/1 FTE for the FY 2015 DHS Balanced Workforce Initiative to federalize one Facility Security Officer position.
- Increase of \$0.032 million for increased retirement contribution
- Decrease of \$0.304 million for reductions to facility expenses
- Decrease of \$0.227 million for contract and personnel efficiencies

Total FY 2015 program change:

- Increase of \$27.599 million for IDENT system improvements

Financial Systems Modernization migration funds totaling \$7.280 million for NPPD are requested within the DHS Office of Chief Financial Officer's budget. Component-specific funding needs for this activity will be funded in the year of execution within this account.

II. Summary of FY 2015 Budget Estimates by Program/Project Activity (PPA)

FY 2013 Revised Enacted includes reprogrammings/transfers, and actual FTE/fee collections in FY 2013, as applicable.

III. Current Services Program Description by PPA

**Department of Homeland Security
National Protection & Programs Directorate
Office of Biometric Identity Management
Program Performance Justification**
(Dollars in Thousands)

PPA: Office of Biometric Identity Management

	Perm. Pos	FTE	Amount
2013 Revised Enacted	214	195	224,480
2014 Enacted	207	207	227,108
2015 Adjustments-to-Base	(17)	(17)	(3,123)
2015 Current Services	190	190	223,985
2015 Program Change	-	-	27,599
2015 Total Request	190	190	251,584
Total Change 2014 to 2015	(17)	(17)	24,476

The Office of Biometric Identity Management (OBIM) requests 190 FTP/190 FTE and \$251.584 million in FY 2015. This represents a total increase of \$24.476 million from the FY 2014 Enacted budget and includes the following adjustments-to-base:

- Realignment of 18 FTPs/18 FTEs and \$2.914 million for OBIM leadership and support functions to the Directorate Administration PPA to consolidate management and business support functions across the Directorate
- Increase of \$0.225 million for 2015 pay raise
- Increase of \$0.065 for annualization of 2014 pay raise
- Increase of 1 FTP/1 FTE for the FY 2015 DHS Balanced Workforce Initiative to federalize one Facility Security Officer position.
- Increase of \$0.032 million for increased retirement contribution
- Decrease of \$0.304 million for reductions to facility expenses
- Decrease of \$0.227 million for contract and personnel efficiencies

CURRENT SERVICES PROGRAM DESCRIPTION:

OBIM operates and maintains IDENT, which enables customers to quickly and accurately identify individuals and determine if they pose a threat to national security or public safety. After receiving biometrics collected from customer organizations, IDENT matches, stores, compares, analyzes, and shares data about an individuals' identity. Sharing this analysis with customers enables the rapid identification of KSTs, criminal aliens, or repeat immigration violators.

The Departments of State, Justice, and Defense, U.S. Customs and Border Protection, U.S. Immigration and Customs Enforcement, U.S. Citizenship and Immigration Services, and the U.S. Coast Guard utilize OBIM services to assist in operational decision making. In addition, OBIM exchanges biometric data with foreign partners to increase the distribution of law enforcement information across international borders and promote homeland security by presenting our partners with proven identity management practices.

OBIM's major budget activities include: S&E, Systems Engineering, O&M, and ISS. The table outlines funding requested in FY 2015.

\$K	FY 2013 Rev. Enacted			FY 2014 Enacted			FY 2015 Pres. Budget		
	FTP	FTE	Total	FTP	FTE	Total	FTP	FTE	Total
Office of Biometric Identity Management	214	195	224,480	207	207	227,108	190	190	251,584
OBIM Salaries & Benefits	214	195	26,710	207	207	29,940	190	190	27,499
Program Expenses			13,783			12,030			11,348
Systems Engineering			15,959			15,926			15,926
Operations & Maintenance			155,634			149,142			176,741
Identity & Screening Services			12,394			20,070			20,070

In FY 2015, S&E provides funding for 190 FTP/190 FTE. This reflects the realignment of 18 FTP/18 FTE to the NPPD M&A PPA and an increase of 1 FTP/1 FTE as part of the FY 2015 DHS Balanced Workforce Initiative to support the Facility Security Officer requirement. OBIM Federal staff manages and executes the program mission—sustaining IDENT operations and providing supplemental biometric identity management services. Federal staff also manages business activities including strategic and operational planning, human resource development and retention, budget and financial management, acquisition policies and procedures, and other mission related activities. Additionally, support services, such as those provided through the Working Capital Fund, are provided for in S&E.

Systems Engineering provides effective and efficient operations across a systems lifecycle. Activities and resources include capacity planning, system availability, performance and service quality analysis, system and workload modeling and simulation, and statistical analysis. Systems Engineering also offers technical recommendations to promote consistent and efficient information technology (IT) planning, design, development, testing, and deployment for IDENT. In FY 2015, OBIM will utilize modeling from system engineers to monitor system capacity and end-to-end performance to mitigate system failures and sustain IDENT operations to meet customer requirements.

O&M for IDENT provides application support for adaptive, preventive, and perfective maintenance, release and configuration management, architecture support, interface support, configuration management, security certifications and accreditations, software licenses, and appropriate technology refreshes. O&M supports IDENT's operations at the DHS data centers including hardware maintenance, network services, and system maintenance agreements. OBIM internal corporate systems, consisting of hardware, software (maintenance and licensing agreements), data circuit maintenance costs, and network and telecommunication services are also provided for by O&M. In FY 2015, OBIM will maintain IDENT operations to meet service level agreements in the face of increasing customer demands. The majority of IDENT O&M funding will provide IT production, service, and security operations. O&M will patch software and address hardware and software

maintenance renewals. Remaining funds allow OBIM to purchase additional 10-print matching hardware, fund an operational data store and platform integration. These activities are necessary to sustain current operations and meet projected organic growth.

As of September 30, 2013, IDENT contained 161 million fingerprint records. In FY 2015, IDENT is projected to contain the fingerprints of approximately 194 million individuals who travel to the United States, seek immigration benefits, or violate U.S. immigration laws. The table below illustrates IDENT's projected growth in annual transaction volumes and gallery size through FY 2019 based on current customers and their requirements.

Projected Growth for IDENT

(in millions)	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	FY 2014 (est.)	FY 2015 (est.)	FY 2016 (est.)	FY 2017 (est.)	FY 2018 (est.)	FY 2019 (est.)
Annual Transaction Volumes	47	51	60	69	74	81	93	102	109	115	122	128
Gallery Size (records)	95	106	120	132	146	161	190	194	203	216	230	244

Identity and screening services consists of two components: biometric verification and identity analysis. Biometric verification services are provided by the BSC. The BSC supports biometric capabilities by providing 10-print verification, latent print services, and supplemental biometric services. IDENT matches approximately 99.5 percent of all transactions, but BSC fingerprint examiners manually verify the remaining 0.5 percent. Manual fingerprint verification is necessary to analyze poor quality fingerprints and ensure derogatory data is not erroneously associated with an individual. BSC latent print examiners compare and verify known fingerprints with previously unidentified latent fingerprints collected by agencies at crime scenes and terrorist incidents. Supplemental biometric services include IDENT biometric watchlist enrollments and IDENT biometric searches. The BSC strives to complete urgent fingerprint verifications in less than 10 minutes, non-urgent verifications within 24 hours, and enrollment and verification of terrorism- related prints in 2 hours or less.

The table below illustrates the OBIM biometric workload for fingerprint comparisons (manual verifications), latent print comparisons, and other biometric support services since FY 2008, including FY 2013 data as of September 30, 2013.

FY 2008 – FY 2013 Biometric Workload Statistics

Activity	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013
Total 10 Print Verifications Completed	693,308	643,091	637,366	599,837	625,636	693,308
Urgent 10 Print Verification Requests Completed	181,175	180,123	185,866	183,007	191,852	181,175
Latent Comparisons Completed	2,502,934	4,616,604	5,169,509	4,194,714	4,483,604	4,624,869
Latent Identifications	114	139	139	343	1,041	1,207
IDENT Watchlist Enrollments	28,694	22,281	6,327	8,163	3,576	2,586
Biometric Searches	9,737	7,507	6,107	5,241	4,186	4,326
Unknown Deceased Identifications	339	397	242	173	132	100

The second component of ISS, identity analysis, responds to analytical, investigative, and operational requests from law enforcement, intelligence agencies, external agencies, and foreign partners. OBIM identity analysts coordinate with the Intelligence Community to promote KSTs to the IDENT biometric watchlist, routinely interact with the Federal Bureau of Investigation Terrorist Screening Center to verify the status of a KST, receive biographic information based on biometrics recently added or removed from the Terrorist Screening Database, conduct identity fraud detection activities, rectify stakeholder biometric queries, and notify stakeholders of recent watchlist promotions.

In FY 2015, ISS will continue to provide value-added biometric identity verification and analysis while meeting increased workloads. BSC analysts will meet increasing workloads while adhering to service-level targets for urgent and non-urgent fingerprint verification requests, provide latent print and supplemental biometric services by continuing to identify victims of accidents, crimes, and natural disasters. Identity analysts will expand operational and reporting capabilities to increase identity services capabilities to customers and international partners, and produce intelligence information reports with law enforcement and intelligence communities.

IV. Program Justification Changes

**Department of Homeland Security
National Protection & Programs Directorate
Office of Biometric Identity Management
Justification of Program Changes
(Dollars in Thousands)**

Program Increase 1: IDENT System Improvements
PPA:
Program Increase: Positions 0, FTE 0, Dollars \$27,599

Funding Profile

	FY 2013 Revised Enacted			FY 2014 Enacted			FY 2015 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	-
Program Increase							-	-	27,599
Total Request	-	-	-	-	-	-	-	-	27,599

Description of Item:

OBIM will increase IDENT operations and maintenance by \$27.599 million for additional 10-print matchers, platform integration, and an operational data store.

Justification:

OBIM will utilize these funds for IDENT system improvements, which are required to extend the life of the system and sustain current capabilities. These improvements are necessary to meet existing customer requirements and projected organic growth.

Impact on Performance (Relationship of Increase to Strategic Goals):

The purchase and deployment of additional 10-print matchers are required to maintain accuracy, transaction response time, and continue enrollments in IDENT. Platform integration leverages the existing DHS database operating platform. This activity simplifies and integrates the server, network, and storage requirements associated with the database operations of IDENT. The operational data store provides automated access to mission critical data. This capability enables reports, queries, and other analysis to be performed without impacting the production environment and removes overhead associated with manual data transfers.

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For necessary expenses for the Office of Biometric Identity Management, as authorized by section 7208 of the Intelligence Reform and Terrorism Prevention Act of 2004 (8 U.S.C. 1365b), [\$227,108,000] **\$251,584,000**¹: *Provided*, That of the total amount made available under this heading, [\$113,956,000] **\$124,367,000**² shall remain available until September 30, [2016] **2017**³.

Change	Explanation
¹ ... [\$227,108,000] <u>\$251,584,000</u>	Dollar change only. No substantial change proposed.
² ... [\$113,956,000] <u>\$124,367,000</u>	Dollar change only. No substantial change proposed.
³ ... [2016] <u>2017</u>	Year change only. No substantial change proposed.

B. FY 2014 to FY 2015 Budget Change

Office of Biometric Identity Management Mission Statement

The OBIM mission is to provide enduring identity services to DHS and its mission partners that advance informed decision making by producing accurate, timely and high assurance biometric identity information and analysis.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	20,276	22,130	20,264	(1,866)
11.3 Other than Full-Time Permanent	252	260	264	4
11.5 Other Personnel Compensation	92	122	125	3
12.1 Civilian Personnel Benefits	6,090	7,428	6,846	(582)
Total, Salaries & Benefits	26,710	29,940	27,499	(2,441)

The FY 2015 Request includes \$27,499k for salaries and benefits for 190 FTE. This includes an increase of \$65k for annualization of 2014 pay raise, an increase of \$225k for 2015 pay raise, an increase of \$32k for increased retirement contributions, an increase of 1 FTP/1 FTE for balanced workforce, a decrease of \$32k for personnel efficiencies, and a realignment of 18 FTP/18 FTE and \$2,914k for consolidation of business and management support.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
21.0 Travel and Transportation of Persons	\$182	\$170	\$156	(\$14)

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2015 Request includes a reduction of \$14k to travel.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
22.0 Transportation of Things	\$100	\$252	\$0	(\$252)

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. The FY 2015 Request includes a reduction of \$252k.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.1 Rental Payments to GSA	\$3,425	\$3,515	\$3,211	(\$304)

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent-related services. The FY 2015 Request includes a reduction of \$304k for facility efficiencies.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.2 Rental Payments to Others	\$655	\$468	\$470	\$2

Other rent includes all payments to a non-Federal source for rental space, land, and structures. The FY 2015 Request includes an increase of \$2k.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.3 Communications, Utilities, and Misc. Charges	\$3,649	\$1,108	\$1,140	\$32

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2015 Request includes an increase of \$32k.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.2 Other Services from Non-Federal Sources	\$22,929	\$26,215	\$26,624	\$409

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2015 Request includes an increase of \$409k for system improvements.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.3 Other Goods and Services from Federal Sources	\$14,146	\$14,421	\$14,854	\$433

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts. The FY 2015 Request includes an increase of \$433k for system improvements.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.7 Operation and Maintenance of Equipment	\$104,966	\$137,206	\$117,798	(\$19,408)

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2015 Request includes a decrease of \$19,408k due to equipment updates.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
26.0 Supplies and Materials	\$184	\$141	\$130	(\$11)

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2015 Request includes a decrease of \$11k.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
31.0 Equipment	\$46,734	\$54,804	\$59,702	\$4,898

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2015 Request includes an increase of \$4,898k for system improvements.

K. DHS Balanced Workforce Strategy

In order to establish a high-performing workforce comprised of a strong internal core of Federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience, and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment, the Department will realign contractor and/or Federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with Federal employees to better realize the full potential of our total workforce – both contracted and Federal. A strong internal core of Federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for Federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into tiered ranking.

NPPD requests \$0.183 million in OBIM salaries and benefits dollars and an offset of \$0.183 million in program/contract dollars for 1 FTP/1 FTE as part of the FY 2015 DHS Balanced Workforce Strategy.

Position Type	FY 2013 Revised Enacted		FY 2014 Enacted		FY 2014 Annualization		FY 2014 Follow On		FY 2015 Increase		Total FY 2013 - FY 2015 DHS BWF Strategy	
	Pos.	FTE	Pos.	FTE	Pos.	FTE	Pos.	FTE	Pos.	FTE	Pos.	FTE
OBIM - Facility Security Officer									1	1	1	1
Total	0	0	0	0	0	0	0	0	1	1	1	1

FY 2015 DHS Balanced Workforce Strategy

- Amount of salaries and benefits funding needed to hire Federal employees:
 - \$0.183 million for 1 FTP/1 FTE.
- Amount of program/contract funding that will be terminated:
 - \$0.183 million program/contract cost. There is no projected cost savings by hiring Federal employees and converting contractors to FTPs/FTEs.
- Implementation timeline:
 - NPPD's FY 2015 Balanced Workforce Strategy will be implemented in FY 2015.
 - Contractor functions will be reduced and positions will be converted in accordance with the Department's Balanced Workforce Initiative with a particular focus on contractors who are performing "nearly government inherent" responsibilities.
 - Contractor reductions will be absorbed by the existing Federal Government employees and new FTE converted positions.

FY 2014 DHS Balanced Workforce Strategy

- None.

FY 2013 DHS Balanced Workforce Strategy

- None.

BUDGET REQUEST AND SUPPORTING INFORMATION

National Protection & Programs Directorate Federal Protective Service

I. Appropriation Overview

A. Mission Statement:

The Federal Protective Service (FPS) protects Federal facilities and those who occupy them by conducting law enforcement and protective security services, and leveraging access to the intelligence and information resources of our network of Federal, state, local, tribal, territorial, and private sector partners. From our protective security and law enforcement personnel to those who support the operations of the Service, we approach our mission as one team. Every day we protect the homeland by managing risk and ensuring continuity for one of the most crucial elements of our national critical infrastructure—our Nation’s Federal facilities.

FPS has four strategic goals:

- Protect Federal facilities, their occupants, and visitors while facilitating the conduct of government business
- Inform and enhance operations through engagement with stakeholders and the interagency community
- Sustain a valued, highly skilled, and agile law enforcement, security, and mission support workforce
- Support operations with risk-based and accountability-focused management and oversight

FPS’ Strategic Goals and Objectives are aligned with the goals specified in the National Security Strategy of 2010, the Quadrennial Homeland Security Review (QHSR) of 2014, the DHS Strategic Plan 2012-2016, and NPPD’s Fiscal Year 2014-2018 Strategic Plan. The FPS relationship within the broader law enforcement community is a critical aspect of day-to-day operations. FPS’ mission and goals align to the mission and goals of NPPD, to lead the national effort to protect and enhance the resilience of the Nation’s physical and cyber infrastructure.

In FY 2015, FPS will employ a base workforce of 1,371 full-time equivalents (FTE) to accomplish its protective mission of providing law enforcement and security management services. FPS delivers security services through approximately 13,000 contracted Protective Security Officers (PSO), depending on customer requirements, along with technical countermeasure equipment and services, to more than 9,000 General Services Administration (GSA)-owned, -leased, or -operated facilities located in 11 regions across the country. These services provide a comprehensive risk-based approach to facility protection that allows FPS to prioritize its operations to prevent, detect, assess, respond to, and disrupt criminal and other incidents that endanger the Federal community. Consequently, the protection that FPS provides is not ‘one-size-fits-all.’ For each customer and/or facility, FPS configures the appropriate measure of protection that does not impede, but works in concert with facilitating the conduct of government services, and business of FPS customers in a secured environment.

B. Revenue Sources:

FPS is a full-cost recovery operation, which means that all expenses incurred must be funded by offsetting collections. For FPS, the revenues to fund its operations come from a basic security charge and an oversight fee¹ associated with providing building-specific and reimbursable agency-specific security services. Revenues collected from the basic security charge and the oversight fees fund the salaries and expenses for the Federal workforce (1,371 FTE) and operating costs of FPS.

The following is a brief description of the five revenue sources that fund all expenses associated with law enforcement, security management, and support activities incurred by FPS and its customers for whom security services are provided:

Basic Security Charge: A 74-cent-per-rentable-square-foot charge is assessed by FPS for all GSA-controlled space. The total rentable square footage in GSA inventory varies from month to month - due primarily to changes in building and tenant occupancy - but averages 372.653 million rentable square feet. At this rate, the revenue collected averages \$275.763 million annually and provides funding for operating expenses for statutory and regulatory service requirements resulting from activities associated with law enforcement, threat management and information sharing, protective and criminal investigations, risk management, and oversight and administration of the contracted PSOs and technical security countermeasures programs, as well as MegaCenter alarm monitoring and dispatch operations, training, and equipment.

Building-Specific Security Revenue: Building-specific security revenue is used to implement and maintain security countermeasure requirements specifically fashioned for a facility in accordance with ISC standards. Charges are assessed to Federal agency customers for building-specific security services that include the acquisition, oversight, and administration of PSOs, security equipment installation, operations, maintenance and repair, consultation on security fixtures, and contractor background suitability determinations.

Reimbursable Agency-Specific Security Revenue: Reimbursable agency-specific security revenue is funding via a Security Work Authorization (SWA), or reimbursable agreement, between FPS and another Federal agency for the occupants of Federally-owned or leased facilities requiring the same services provided as part of building-specific security but provided to an individual customer. Reimbursable agency-specific security agreements may include other traditional reimbursable activity, such as FEMA mission assignments.

Building-Specific Security Oversight Fee: A six-percent oversight fee is applied to the costs for building-specific security to fund FPS for direct and indirect costs associated with providing building-specific security. Revenue collected from the oversight fee is combined with the revenue from the basic security charge to fund FPS operating resource requirements.

Reimbursable Agency-Specific Security Oversight Fee: A six-percent oversight fee is applied to the cost for reimbursable agency-specific security to fund FPS for direct and indirect costs

¹As a result of the activity-based costing model work, the name of the fee has been changed from an administrative fee to an oversight fee. The terminology better captures the Federal oversight of the PSOs.

associated with delivering single customer requested protective services, to include PSO and technical countermeasure (TCM) services. Revenue collected from the oversight fee is combined with the revenue from the basic security charge to fund FPS operating resource requirements.

FPS identified the 20 agencies that generate 90 percent of the oversight fee revenue. The table below lists FY 2013 actual revenue by customer agency.

Agency Name	FY 2013 Basic Security Charge (\$0.74 / sq. ft.)	FY 2013 Pass-Through Revenue	Oversight Fee (6%)	Total Revenue Collected
Department of Homeland Security	31,432,453	182,957,101	10,977,426	225,366,980

C. Budget Request Summary:

For FY 2015, FPS is requesting \$1.343 billion. This amount breaks down into the following program, project, and activity (PPA) totals: \$275.763 million in Basic Security, \$600.615 million in Building-Specific Security, and \$466.228 million in Reimbursable Agency-Specific Security. Within these funds, FPS has a current services operating fund requirement of \$369.550 million with anticipated operating fund revenue of \$330.835 million to sustain a workforce of 1,371 FTE. For FY 2015, the FPS budget includes the following:

- A technical adjustment of 95 FTP to acknowledge the attrition lapse of the organization and sustain 1,371 FTE.
- A restructuring of the PPAs to formally establish an FPS Operations PPA and a Countermeasures PPA. (See addendum.)

- A \$55.000 million increase in offsetting collection authority to Building-Specific Security accompanied by a \$55.000 million decrease to Reimbursable Agency-Specific so that authority for pass-through countermeasures contracts is aligned to where customers are asking for services.
- Financial Systems Modernization migration funds totaling \$7.28 million for National Protection and Programs Directorate are requested within the DHS Office of Chief Financial Officer's budget. Component-specific funding needs for this activity will be funded in the year of execution within this account.

D. Budget Request Details:

FPS Operating Funds

FPS has developed an activity-based costing (ABC) model to improve its internal financial management and to more clearly identify the costs to protect Federal facilities and their occupants. The modeling effort identified the costs for FPS to deliver protection services. The model is a strong management tool that enables operational decisions and tradeoffs involving risk associated with the cost and performance of the impacted activities.

The first iteration of the cost model has informed this budget submission. The accompanying addendum clearly defines the results of the model by linking resources to services, with the request for a new PPA structure. The proposed PPA structure communicates clearer what FPS does with the resources it receives.

The table below displays the operating resources required to maintain current services. Specific adjustments in FY 2015 include:

- Increase of \$0.433 million for the annualization of the 2014 pay raise
- Increase of \$1.344 million for the 2015 pay raise
- Increase of \$5.428 million for FY 2015 career ladder and within-grade promotions
- Increase of \$0.260 million for increased retirement contributions

Operating Expenses (Dollars in Thousands)	FY 2013 Enacted	FY 2014 Enacted	FY 2015 Request
Personnel Compensation & Benefits	\$173,292	\$179,153	\$186,358
Working Capital Fund	\$5,377	\$8,147	\$7,466
Rent	\$28,866	\$29,328	\$29,328
Fleet	\$12,581	\$12,581	\$12,581
Facilities Projects	\$5,410	\$5,410	\$5,410
DHS Service Level Agreements	\$4,781	\$4,882	\$4,882
Department of Labor – Workers' Compensation	\$1,600	\$1,600	\$1,600
Information Technology Support	\$22,665	\$22,665	\$22,665
Law Enforcement Operations	\$35,811	\$35,811	\$35,811

MegaCenter and Tactical Communications	\$30,190	\$28,916	\$28,916
Business and Mission Support	\$30,850	\$33,299	\$29,533
Automated Tool Enhancement (MIST/PTS)	\$5,000	\$5,000	\$5,000
Total Operating Expenses	\$356,423	\$366,792	\$369,550

Revenue from the basic security charge provides base funding of resource requirements for FPS personnel and the services they perform in law enforcement, investigations, information and intelligence sharing, security assessments, crime prevention and awareness training, program administration of countermeasure programs, MegaCenter alarm monitoring and dispatch operations, capital investments for operations and business management tools, and mission support and oversight activities.

In addition to the revenue collected from the 74-cent-per-square-foot basic security charge, FPS is authorized to use revenue collected from the building-specific and reimbursable agency-specific security fees for operating expenses. The table below displays FPS operating funding levels for FY 2013, FY 2014, and FY 2015 at the current fee rates.

Base Operating Funding Sources (Dollars in Thousands)	FY 2013 Enacted	FY 2014 Enacted	FY 2015 Request
Basic Security	\$271,540	\$275,763	\$275,763
Building-Specific Security — Oversight Fee	\$28,308	\$29,984	\$31,723
Reimbursable Agency-Specific Security — Oversight Fee	\$24,617	\$24,006	\$23,349
Total Base Operating Funds	\$324,465	\$329,753	\$330,835

In FY 2015, FPS operating expense requirements are \$369.550 million, while operating revenue is estimated at \$330.835 million. FPS will use prior-year carryover and recoveries to resolve this \$38.715 million revenue shortfall.

FPS is working on a sustainable revenue model where the revenue collected sustains the requirements of the same year as long-term reliance on carryover and recoveries is a short-term fix and not a long-term solution.

The paragraphs below describe the major operating expense categories that are required to maintain current services in FY 2015.

Personnel Compensation & Benefits

Personnel compensation and benefits in FY 2015 include all salaries and benefits, career ladder promotions, within grade promotions, awards, and overtime.

FPS is responsible for deploying its law enforcement officers to Federal facilities adjacent to or in the vicinity of national security events (e.g., the national conventions and inauguration held every four years). These deployments are consistent with risk assessments and intelligence coordinated with other Federal, State, and local law enforcement organizations or to provide protective services during

national emergencies, exemplified by deployments after the Boston Marathon bombing or federally declared disasters like Hurricane Sandy. Additionally, FPS works closely with the Administrative Office of the U.S. Courts and the U.S. Marshals Service to provide for the additional protection of Federal Courthouses during high-profile trials (such as terrorists, cartel drug lords, and other trials where protests or other security incidents may occur).

Working Capital Fund (WCF)

FPS provides funding to the DHS WCF – a managed account from which a full range of oversight support services such as finance, accounting, and personnel administration are provided to all DHS components, including FPS. The DHS WCF determines a component's funding requirement employing algorithms to assess charges.

Rent

FPS maintains a law enforcement and security presence in all 50 states and the U.S. Territories of Guam and Puerto Rico. FPS occupies approximately 975,000 square feet of operational and support space obtained through GSA.

Fleet

FPS maintains a fleet of around 1,200 vehicles and motorcycles to ensure that FPS officers are in a position to respond and protect the people and buildings under its protection. The vast majority of the FPS fleet is leased through GSA, with the exception of specialty vehicles (i.e., mobile command vehicles, and x-ray vehicles) which are purchased because they aren't available to lease through GSA. Vehicle leasing has been an effective alternative to vehicle purchasing for FPS and ensures that vehicles are routinely replaced at the expiration of the lease period as well as normalizes the cost over a 3-year, 5-year, or 7-year period.

DHS Service Level Agreements

FPS participates in cooperative service level agreements (SLA) with other DHS components to receive support and services from those offices with specialized staff and skills. FPS achieves economies and efficiencies by avoiding the need to duplicate support that is available from these specialized service providers. In FY 2015, FPS will have SLAs with the Office of General Counsel for legal services, Office for Civil Rights and Civil Liberties for Equal Employment Opportunity support, and the DHS Office of Security for conducting background investigations of FPS employees.

Department of Labor Workers' Compensation Payments

The Department of Labor Office of Workers' Compensation Programs (OWCP) pays for costs associated with FPS work-related injuries and illnesses in real time (during the year in which they are incurred). However, FPS is required to reimburse OWCP for those payments. Reimbursements are due to OWCP in FY 2015 for payments made between July 1, 2013, and June 30, 2014.

Information Technology Support

Information technology support and services are anticipated to be fully transitioned from Immigration and Customs Enforcement to the DHS Office of the Chief Information Officer/Information Technology Services Office by 2016.

Law Enforcement Operations

FPS law enforcement operations encompass all aspects and resources required to deliver law enforcement protective services. FPS law enforcement personnel perform facility security assessments (FSAs) in accordance with ISC standards, and oversight and inspection of the approximately 13,000 PSOs at roughly 6,000 posts in over 3,000 buildings across the United States and its territories. FPS has a target of completing over 2,000 FSAs annually for high risk facilities. FPS law enforcement personnel also respond to more than 40,000 incidents per year at Federal facilities and perform a visible deterrence through mobile patrol and response activities. FPS law enforcement personnel are assigned to analyze criminal intelligence, investigate threats made against Federal Officials, and investigate incidents occurring in Federal facilities. Training, firearms, ammunition, and uniforms all support the ability of FPS law enforcement personnel to deploy each day to protect Federal facilities.

MegaCenter and Tactical Communications

As the provider of protection services to more than 9,000 Federal facilities, FPS personnel are required to respond to a variety of incidents 24 hours a day, some of which entail responding to criminal activity in progress, and others to protect life and property. To provide around-the-clock capabilities to take calls for assistance, dispatch personnel, and ensure the appropriate response to incidents, FPS has four MegaCenters strategically located throughout the country in Denver, Colorado; Suitland, Maryland; Battle Creek, Michigan; and Philadelphia, Pennsylvania. They provide a vital communications link between FPS law enforcement personnel; PSOs manning posts at or patrolling in Federal facilities; and other Federal, State, and local law enforcement entities; and facilitate the swift and efficient flow of information across the Nation and territories. FPS MegaCenters also monitor multiple types of alarm systems and wireless dispatch communications within Federal facilities throughout the Nation. The related alarm-monitoring function for GSA and other federally-owned and leased facilities includes approximately 8,800 alarms, and provides a dedicated capability to ensure prompt dispatch of law enforcement and emergency first responders to situations at those facilities nationwide. FPS MegaCenters are structured to allow for failover to a sister site in the event of a partial or catastrophic failure at one center without disruption to alarm and communication services. FPS MegaCenters are in operation 24 hours a day, 7 days a week.

Business and Mission Support

FPS business and mission support activities include headquarters leadership; management and operations; field operations oversight; training; resource management to include budget, finance, revenue, and performance management; administrative services; contracting and procurement; human capital coordination; program management; and acquisition program and information technology system planning and oversight.

Automated Tool Enhancement

In FY 2014, FPS will deploy Modified Infrastructure Survey Tool (MIST) 2.0 development, which includes converting MIST 1.0 functionality into a web-based application, building the approval work flow into the system, and creating management reports. In FY 2015, FPS will also continue to work closely with the DHS Science and Technology (S&T) Directorate to prototype a post tracking system, automating what is now a manual process of ensuring that the contracted PSOs are working at a post as scheduled and that they possess the required training and certifications.

III. Current Services Program Description by PPA

**Department of Homeland Security
National Protection & Programs Directorate
Federal Protective Service
Basic Security
Program Performance Justification**
(Dollars in Thousands)

PPA: Basic Security

	Perm. Pos	FTE	Amount
2013 Revised Enacted	1,371	1,260	271,540
2014 Enacted	1,371	1,371	275,763
2015 Adjustments-to-Base	95	-	-
2015 Current Services	1,466	1,371	275,763
2015 Total Request	1,466	1,371	275,763
Total Change 2014 to 2015	95	-	-

FPS collects a basic security charge of 74-cents-per-rentable-square-foot for GSA-controlled space. The total square footage inventory varies from month to month but averages 372.653 million square feet. Based on this inventory, FPS anticipates collecting \$275.763 million in FY 2015.

Adjustments in FY 2015 include:

- Increase of 95 positions to acknowledge the attrition lapse of the organization and sustain 1,371 FTE.

CURRENT SERVICES PROGRAM DESCRIPTION:

The FPS basic security charge provides operating funding for services associated with law enforcement, threat management and information sharing, protective and criminal investigations, risk management, and oversight and administration of the contracted PSOs and technical security countermeasure programs, as well as MegaCenter alarm monitoring and dispatch operations, training, and equipment.

Using FY 2012 expenses and FY 2013 distribution of labor survey results, FPS has projected an FY 2015 view of resource consumption using the ABC model. The deployment of the 1,466 positions/1,371 FTEs by activity groupings is set forth in the table below. The activity groupings in the table are not PPAs and are only used to present greater transparency into FPS' operational and mission support activities.

Activity Groups	Total Head-count*	Total FTE	Total Cost (\$M)
Primary	1,172	723	\$149.4
Law Enforcement Response	871	108	\$21.4
Protective Investigations	329	19	\$4.7

K-9 Operations	112	46	\$10.5
Criminal Intelligence and Information Sharing	327	24	\$6.0
PSO Suitability	104	15	\$6.7
Covert Security Testing	226	7	\$2.0
Operation Shield	698	23	\$5.0
Federal, State, and Local Coordination	597	25	\$5.5
Contingency Operations	215	5	\$1.0
Enabling	1,149	190	\$48.2
Field Entry Level Training	268	49	\$12.2
Field Standards and Certifications Training	654	35	\$9.8
Field Advanced and Refresher Training	749	37	\$11.3
Training Development and Delivery	210	12	\$3.5
Administrative Training	488	17	\$3.4
Stakeholder Engagement and Liaison	730	40	\$8.0
Support	676	264	\$100.8
Acquisition and Procurement	334	68	\$22.1
Budget, Finance, Revenue, and Performance Management	273	55	\$20.2
General Counsel	41	1	\$1.3
Human Capital Management	174	32	\$10.2
Information Technology	108	19	\$22.5
Logistics, Facilities, Fleet, and Property Accountability and Management	242	38	\$8.2
National Field Operations Oversight (Headquarters Operations)	73	24	\$5.4
Personnel Security Management	45	11	\$6.2
Policy and Contingency Planning	136	12	\$3.8
Public Affairs	62	3	\$0.9
Supplementary Services	286	23	\$8.8
Supplementary Services	286	23	\$8.8
Total	1,466**	1,371	\$369.6
Notes: * Individual positions within FPS are often required to support multiple activities; as such, each individual may be counted in multiple activities. The numbers do not distinguish the percentage of time an individual spends on each activity. **This is not the sum of the headcount outlined in the activity groupings, rather it is the number of positions requested in FY 2015.			

FPS can further look at resource consumption against the assignment of FTE directly supporting facilities by facility security level and by facility profile, which identifies resource consumption by facilities that have posts and/or TCMs or no countermeasures to begin to show how FPS is assigning staff to mitigate risk.

FY 2013 Cost Model Facility List

Facility Security Level (FSL)	No. of Facilities	Primary FTE
FSL 5	9	3
FSL 4	764	260
FSL 3	1,114	150
FSL 2	4,314	207
FSL 1	2,431	77
FSL 0 / TBD	823	26
Total	9,455	723

FY 2013 Cost Model Post Count¹

Posts & TCM		Posts Only		TCM Only		No Posts / No TCM		FY 2013 Total	
Primary FTE	No. of Bldgs	Primary FTE	No. of Bldgs	Primary FTE	No. of Bldgs	Primary FTE	No. of Bldgs	Primary FTE	No. of Bldgs
206	468	269	2,894	20	144	228	5,949	723	9,455

¹This chart does not reflect the distribution of these facilities by FSL level. As FPS continues to analyze operational and ABC data, we will provide greater fidelity into FTE workload.

It is important to note that these tables are based on FY 2013 survey results and will continue to be refined as FPS conducts facility security assessments, improves data integrity and collection capabilities, and implements management initiatives drawn from the initial model information.

MAJOR ACQUISITIONS:

FPS Tactical Communications Program (TACCOM) / TACCOM Equipment and Support

The FPS Tactical Communications Program (TACCOM) provides a centralized dispatch capability that supports 11 FPS regions, and FPS Headquarters. The TACCOM Land Mobile Radio (LMR) communication system is a vital link to performing FPS' mission of securing and protecting Federal facilities and those inside them, by providing centralized dispatch capabilities and office-to-officer

communications. Four MegaCenters, located across the country, provide these critical dispatch capabilities. Communication between the officers and their respective MegaCenters via radio is vital to providing effective protection of employees and visitors in Federal facilities nationwide. Radio communication is also imperative for maintaining continuity of operations and officer safety.

FY 2013 Activity Funding (\$\$\$ thousands)	FY 2014 Activity Funding (\$\$\$ thousands)	FY 2015 Activity Request (\$\$\$ thousands)
10,508	7,524	7,808

FY 2015 Funding Breakout:

Building Specific Security
Program Performance Justification
(Dollars in Thousands)

PPA: Building Specific Security

	Perm. Pos	FTE	Amount
2013 Revised Enacted	-	-	509,056
2014 Enacted	-	-	545,615
2015 Adjustments-to-Base	-	-	55,000
2015 Current Services	-	-	600,615
2015 Total Request	-	-	600,615
Total Change 2014 to 2015	-	-	55,000

For FY 2015, FPS requests \$600.615 million in offsetting collection authority for ongoing building-specific security requirements. Oversight fee revenue is combined with the basic security charge to provide FPS annual base operating revenue. Any carryover funds associated with this PPA may be used to fund operating or other expenses related to the protection of Federal facilities.

Increases in FY 2015 include:

- A \$28.985 million increase to countermeasure (PSO and TCM) contracts. This 5.8 percent increase from FY 2014 will address contract security cost escalation, labor rate adjustments that were either projected or exceeded, and collective bargaining-related cost increases.
- A \$1.739 million increase in the 6-percent oversight fees resulting from the increased countermeasures.
- A \$24.276 million increase in available authority for new customer requirements. This additional authority will allow FPS to provide new security countermeasures without potential procedural delays necessitated by having to request additional offsetting collection authority throughout the fiscal year. This increase includes additional oversight fee revenue associated with new building-specific security revenues that may be realized.

CURRENT SERVICES PROGRAM DESCRIPTION:

Building-specific security services are provided in accordance with security countermeasure requirements generated through a facility security assessment or a customer request specific to a particular building. These costs are funded by the tenants in a building. An annual cost estimate for the security services is prepared by building and the costs are recovered in monthly increments through

the DHS Monthly Security Bill process. The charge includes an oversight fee to fund FPS oversight and overhead costs. Building costs are distributed to tenants based on the square footage assigned to them in the GSA Occupancy Agreements.

The table below breaks down the available building-specific security resources into major expense categories. An explanation of the items included in those categories is provided below the table.

Program/Project/Activity (Dollars in Thousands)	FY 2013 Enacted	FY 2014 Enacted	FY 2015 Request	Change from FY 2014
Building-Specific Security				
<i>Countermeasures</i>	\$471,794	\$499,739	\$528,724	\$28,985
<i>Available Authority For New Customer Requirements</i>	\$8,447	\$14,992	\$37,894	\$22,902
<i>Oversight Fee</i>	\$28,308	\$29,984	\$31,723	\$1,739
<i>Oversight Fee Associated with New Requirements</i>	\$507	\$900	\$2,274	\$1,374
Total Revenue Collection Authority	\$509,056	\$545,615	\$600,615	\$55,000

Building-specific security will fund the following:

Protective Security Officers (PSO)

Contract PSO services are a key component of the execution of FPS' protective security mission. Individual risk assessments combined with the specific customer requirements of each facility drive the placement of PSO-staffed security posts at different facilities. These posts are charged with minimizing specific vulnerabilities to identified credible threats. The functions that PSOs provide include:

- Access Control: ensuring access to secured areas in accordance to access control procedures
- Control Center Operations: integrating multiple countermeasures through monitoring of security equipment and facilitating communication with other posts or law enforcement as necessary
- Patrol and Response: patrolling and monitoring the facility for safety, security, and enforcement purposes
- Screening: identifying and interdicting unlawful, dangerous, or prohibited items to ensure that they do not enter a secured area
- Visitor Processing: identifying and documenting visiting individuals

Technical Countermeasures (TCM)

TCMs allow FPS to provide an integrated and cost-effective level of protection. They include x-ray machines, magnetometers, alarm systems, and camera systems. The FPS national countermeasures program includes design, implementation, and oversight as well as collaborative efforts with Federal partners, such as DHS's S&T Directorate and TSA.

Available Authority for New Customer Requirements

At the beginning of each fiscal year, FPS requests authority, via OMB, to collect revenue sufficient to accommodate changing customer requirements. For example, new customer security requirements can be accommodated during the fiscal year for customer relocation to an expanded facility, to cover inflation, or to implement countermeasures at a higher facility security level building. When these situations occur, FPS has the available funding authority to provide new security without potential procedural delays necessitated by having to request additional offsetting collection authority.

Oversight Fee

Oversight fee activities are designed to recover the FPS management, administration, and oversight activities required to deliver PSO services and TCMs. The oversight fee revenue is combined with the basic security charge to provide FPS annual base operating revenue.

Oversight Fee Associated with New Requirements

FPS expects to collect additional oversight fee revenue if requested authority for new customer requirements is received and new building-specific security revenues are realized.

2015 Total Request	-	-	466,228
Total Change 2014 to 2015	-	-	(55,000)

For FY 2015, FPS requests \$466.228 million for offsetting collection authority for ongoing reimbursable agency-specific security operations. Oversight fee revenue is combined with the basic security charge to provide FPS annual base operating revenue. Any agreements that include requirements for FPS personnel will incur payroll expenses within this PPA. Any carryover funds associated with this PPA may be used to fund operating or other expenses related to the protection of Federal facilities.

Decreases in FY 2015 include:

- A \$10.956 million decrease to authority for countermeasure (PSO and TCM) contracts and a \$43.387 million decrease in available authority for new customer requirements. FPS is moving unutilized authority in reimbursable agency-specific security to building-specific security to better align authority with where customers are requesting services. Associated oversight fee revenue is included in this decrease.
- A \$0.657 million decrease in the 6-percent oversight fees resulting from the decreased countermeasures.

CURRENT SERVICES PROGRAM DESCRIPTION:

Reimbursable agency-specific security, also called tenant-specific, is negotiated via SWAs or reimbursable agreements between FPS and another Federal agency to provide for the same services performed as part of building-specific security (PSOs and TCMs), but is configured to meet the security needs of an individual customer agency rather than the needs of a multi-tenant facility.

Reimbursements consist of the estimated direct cost of the security services requested, plus the oversight fee to cover the oversight and overhead costs as with the building-specific oversight fee.

The table below breaks down the available reimbursable agency-specific security resources into major expense categories and an explanation of the items included in those categories is provided below the table. The explanations are the same as for building specific.

Program/Project/Activity (Dollars in Thousands)	FY 2013 Enacted	FY 2014 Enacted	FY 2015 Request	Change from FY 2014
Reimbursable Agency-Specific Security				
<i>Countermeasures</i>	\$410,279	\$400,107	\$389,151	(\$10,956)
<i>Available Authority For New Customer Requirements</i>	\$81,446	\$91,618	\$50,687	(\$40,931)
<i>Oversight Fee</i>	\$24,617	\$24,006	\$23,349	(\$657)
<i>Oversight Fee Associated with New Requirements</i>	\$4,886	\$5,497	\$3,041	(\$2,456)
Total Revenue Collection Authority	\$521,228	\$521,228	\$466,228	(\$55,000)

Reimbursable agency-specific security will fund the following:

Protective Security Officers

Contract PSO services are a key component of the execution of FPS' protective security mission. Individual risk assessments drive the placement of PSO-staffed security posts at different facilities. These posts are charged with minimizing specific vulnerabilities to identified credible threats. The functions that PSOs provide include:

- Access Control: ensuring access to secured areas in accordance to access control procedures
- Control Center Operations: integrating multiple countermeasures through monitoring of security equipment and facilitating communication with other posts or law enforcement as necessary
- Patrol and Response: patrolling and monitoring the facility for safety, security, and enforcement purposes
- Screening: identifying and interdicting unlawful, dangerous, or prohibited items to ensure that they do not enter a secured area
- Visitor Processing: identifying and documenting visiting individuals

Technical Countermeasures

TCMs allow FPS to provide an integrated and cost-effective level of protection. They include x-ray machines, magnetometers, alarm systems, and camera systems. The FPS national countermeasures

program includes design, implementation, and oversight as well as collaborative efforts with Federal partners, such as DHS's S&T Directorate, and TSA.

Available Authority for New Customer Requirements

At the beginning of each fiscal year, FPS requests authority to collect revenue sufficient to accommodate changing customer requirements. For example, with approved authority, new customer security requirements can be accommodated during the fiscal year due to temporary higher facility security levels based on current intelligence or a potential for increased risk at a specific location or geographic area.

This authority is also utilized to provide temporary additional security for FEMA disaster relief deployments, which can be substantial depending on the number of natural and weather-related disasters that FEMA request FPS assistance for in any given year (i.e., Hurricane Sandy, etc.). When these situations occur, FPS has the available funding authority to provide new security without potential procedural delays necessitated by having to request additional offsetting collection authority.

Oversight Fee

Oversight fee activities are designed to recover the FPS management, administration, and oversight of delivered protective services to include PSO and TCMs. The oversight fee revenue is combined with the basic security charge to provide FPS annual base operating revenue.

Oversight Fee Associated with New Requirements

FPS expects to collect additional oversight fee revenue if requested authority for new customer requirements is received and new reimbursable agency-specific security revenues are realized.

MAJOR ACQUISITIONS:

Protective Security Officer (Contract Guard) Services

As part of DHS' responsibilities under 40 USC §1315, the FPS Protective Security Officer (PSO) Program protects personnel and property at federally owned and leased locations throughout the United States and its territories. FPS PSOs provide mission-essential security services, including: screening occupants and visitors to prevent introduction of weapons and explosives; employee and visitor identification checks; monitoring security equipment; and roving patrols of the interior and exterior of Federal facilities. PSO services are anticipated to be a means of risk/threat reduction into the foreseeable future.

PSOs are funded out of multiple PPAs in FY 2015, as follows:

- Building-Specific Security \$544.233 million
- Reimbursable Agency-Specific Security \$400.565 million

FY 2013 Activity Funding (\$\$ thousands)	FY 2014 Activity Funding (\$\$ thousands)	FY 2015 Activity Request (\$\$ thousands)
853,291	897,229	944,798

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

The revenues and collections of security fees credited to this account shall be available until expended for necessary expenses related to the protection of federally owned and leased buildings and for the operations of the Federal Protective Service[: Provided, That the Secretary of Homeland Security and the Director of the Office of Management and Budget shall certify in writing to the Committees on Appropriations of the Senate and the House of Representatives, not later than February 14, 2014, that the operations of the Federal Protective Service will be fully funded in fiscal year 2014 through revenues and collection of security fees, including maintaining not fewer than 1,371 full-time equivalent staff and 1,007 full-time equivalent Police Officers, Inspectors, Area Commanders, and Special Agents who, while working, are directly engaged on a daily basis protecting and enforcing laws at Federal buildings (referred to as "in-service field staff"): Provided further, That if revenues and fee collections are insufficient to maintain the staffing levels in the previous proviso, the Secretary of Homeland Security shall submit an expenditure plan delineating the available revenue by staffing levels and critical infrastructure investments: Provided further, That in implementing the previous proviso, the Secretary shall ensure revenues are dedicated to ensure not fewer than 1,300 full-time equivalent staff: Provided further, That the Director of the Federal Protective Service shall submit at the time the President's budget proposal for fiscal year 2015 is submitted pursuant to section 1105(a) of title 31, United States Code, a strategic human capital plan that aligns fee collections to personnel requirements based on a current threat assessment]¹. (Department of Homeland Security Appropriations Act, 2014.)

Basic Security Mission Statement

Basic security services include law enforcement services on federally controlled property, preliminary investigations of incidents, and capture and arrest of suspects. This security also includes the 24-hour security alarm monitoring, nationwide dispatch services, facility security assessments, and assistance to Facility Security Committees. Carryover and recoveries in this PPA may be used to fund operating or other expenses related to the protection of Federal facilities.

Building Specific Security Mission Statement

Building-specific security is based on countermeasure requirements specific to a particular building based on a FPS vulnerability assessment. The two components are the contract Protective Security Officers (PSOs) and technical countermeasures. The PSO services includes access control, control center operations, patrol and response, screening, and visitor processing. Technical countermeasures include the purchase, installation, and maintenance of security equipment, such as cameras, alarms, magnetometers, and x-ray machines. FPS acquires countermeasures for our customers based on their needs, as identified through security assessments and other risk mitigation strategies, and manages to a standard replacement schedule. Carryover and recoveries in this PPA may be used to fund operating or other expenses related to the protection of Federal facilities.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.2 Other Services from Non-Federal Sources	\$497,531	\$555,412	\$602,090	\$46,678

Other services include report contractual services with non-federal sources that are not otherwise classified under Object Class 25. The contract Protective Security Officers and technical countermeasures are coded to this object class.

Reimbursable Agency Specific Security Mission Statement

Reimbursable agency-specific security, or Security Work Authorizations (SWA) - FPS enters into SWAs with customer agencies to procure countermeasures beyond those included within basic security and building-specific security. The requirement for these security services is determined by the operational security and risk mitigation needs of the customer agencies. Carryover and recoveries in this PPA may be used to fund operating or other expenses related to the protection of Federal facilities.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.2 Other Services from Non-Federal Sources	\$514,859	\$539,426	\$477,859	(\$61,567)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The contract PSOs and TCMs are coded to this object class. In FY 2015, a technical adjustment is requested to decrease offsetting collections authority and align it more closely with anticipated requirements.

Budget Addendum

Table of Contents

Overview	1
Current Program/Project/Activity Structure.....	1
Proposed Program/Project/Activity Structure.....	4

Overview

The National Protection and Programs Directorate (NPPD) is submitting this addendum to request a change to the Federal Protective Service (FPS) program, project, and activity (PPA) structure in FY 2015. Changes to the FPS budget structure will:

1. Accurately present how FPS operates, as opposed to how FPS collects its revenue
2. Increase transparency and accountability for execution and mission performance
3. Streamline NPPD financial execution and reporting

NPPD proposes a new budget structure that reduces the number of PPAs from three to two and clearly delineates the revenue that is available to fund FPS protective operations versus the pass-through revenue that funds security countermeasures. The proposed PPA structure more accurately represents how FPS uses the fees it collects to execute its mission and aligns the PPAs to the operating fund display in the Appropriation Overview, Section D, of the FY 2015 Congressional Justification.

Current PPA Structure

Since FY 2012, the FPS PPA structure has been reported and displayed for budget purposes in alignment with the three classifications of security that generate the five revenue resources described in the request. The three PPAs as currently structured by security classification and depicted in the tables below are: (1) Basic Security; (2) Building-Specific Security; and (3) Reimbursable Agency-Specific Security.

Program/Project/Activity (Dollars in Thousands)	FY 2013 Enacted	FY 2014 Enacted	FY 2015 Request
Basic Security	\$271,540	\$275,763	\$275,763
Total Basic Security	\$271,540	\$275,763	\$275,763

Program/Project/Activity (Dollars in Thousands)	FY 2013 Enacted	FY 2014 Enacted	FY 2015 Request
Building-Specific Security			
<i>Countermeasures</i>	\$471,794	\$499,739	\$528,724
<i>Available Authority For New Customer Requirements</i>	\$8,447	\$14,992	\$37,894
<i>Oversight Fee</i>	\$28,308	\$29,984	\$31,723
<i>Oversight Fee Associated with New Requirements</i>	\$507	\$900	\$2,274
Total Building-Specific Security	\$509,056	\$545,615	\$600,615

Program/Project/Activity (Dollars in Thousands)	FY 2013 Enacted	FY 2014 Enacted	FY 2015 Request
Reimbursable Agency-Specific Security			
<i>Countermeasures</i>	\$410,279	\$400,107	\$389,151
<i>Available Authority For New Customer Requirements</i>	\$81,446	\$91,618	\$50,687
<i>Oversight Fee</i>	\$24,617	\$24,006	\$23,349
<i>Oversight Fee Associated with New Requirements</i>	\$4,886	\$5,497	\$3,041
Total Reimbursable Agency-Specific Security	\$521,228	\$521,228	\$466,228
Total	<u>\$1,301,824</u>	<u>\$1,342,606</u>	<u>\$1,342,606</u>

Basic Security Charge: A 74-cent-per-square-foot charge is assessed by FPS for all GSA-controlled space. The total rentable square footage in GSA inventory varies slightly from month to month - due primarily to changes in building and tenant occupancy - but averages 372.653 million rentable square feet. At this rate, the revenue collected averages \$275.763 million annually and provides funding for operating expenses, for statutory and regulatory service requirements resulting from services associated with law enforcement, threat management and information sharing, protective and criminal investigations, risk management, and oversight and administration of the contracted Protective Security Officers (PSOs) and technical security countermeasures (TCMs) programs, as well as MegaCenter alarm monitoring and dispatch operations, training, and equipment.

Building-Specific Security Revenue: Building-specific security revenue is used to implement and maintain security countermeasure requirements specifically fashioned for a facility or in accordance with Interagency Security Committee (ISC) standards. Charges are assessed to Federal agency customers for building-specific security services that include the acquisition, oversight, and administration of PSOs, security equipment installation, operations, maintenance and repair, consultation on security fixtures, and contractor background suitability determinations.

Reimbursable Agency-Specific Security Revenue: Reimbursable agency-specific security revenue is funding via a reimbursable agreement between FPS and another Federal agency for the occupants of federally owned or leased facilities requiring the same services provided as part of building-specific security, but provided to an individual customer. Reimbursable agency-specific agreements (also referred to as Security Work Authorizations (SWAs) or “tenant-specific”) may include other traditional, reimbursable activity, such as FEMA mission assignments.

Building-Specific Security Oversight Fee: A-six percent oversight fee is applied to the costs for building-specific security to fund FPS for direct and indirect costs associated with providing building-specific security. Revenue collected from the oversight fee is

combined with the revenue from the basic security charge to fund FPS operating resource requirements.

Reimbursable Agency-Specific Security Oversight Fee: A six-percent oversight fee is applied to the cost for reimbursable agency-specific security to fund FPS for direct and indirect costs associated with providing the security services. Revenue collected from the oversight fee is combined with the revenue from the basic security charge to fund FPS operating resource requirements.

The table below provides a crosswalk from the current PPA structure to the proposed PPA structure (discussed in the following section).

		Proposed PPA #1	Proposed PPA #2	
	Program/Project/Activity (Dollars in Thousands)	FPS Operations	Countermeasures	Total
Current PPA #1	Basic Security			
	Security Fee	\$275,763		\$275,763
	Subtotal Basic Security	\$275,763		\$275,763
Current PPA #2	Building-Specific Security			
	Countermeasures		\$528,724	\$528,724
	Available Authority for New Customer Requirements		\$37,894	\$37,894
	Oversight Fee	\$31,723		\$31,723
	Oversight Fee for New Customer Requirements	\$2,274		\$2,274
	Subtotal Building Specific Security	\$33,997	\$566,618	\$600,615
Current PPA #3	Reimbursable Agency-Specific Security			
	Countermeasures		\$389,151	\$389,151
	Available Authority for New Customer Requirements		\$50,687	\$50,687
	Oversight Fee	\$23,349		\$23,349
	Oversight Fee for New Customer Requirements	\$3,041		\$3,041
	Subtotal Agency-Specific Security	\$26,390	\$439,838	\$466,228
	Total	\$336,150	\$1,006,456	\$1,342,606

Proposed PPA Structure

The purpose of this Budget Addendum is to describe the following changes:

- The three PPAs that are presently used will be replaced with two new PPAs:
 - An FPS Operations PPA that encompasses the basic security charge and the oversight fees
 - A Countermeasures PPA to include all pass-through countermeasure contracts funded by customer agencies

The current structure, although functional, has proven ineffective at logically connecting the FPS revenue sources to the protection services that it provides and the personnel required to support and manage these services. Through the development of an activity-based costing (ABC) model, FPS has identified the protection services delivered and can more clearly identify and capture the costs to protect Federal facilities and their occupants. In FY 2015, it is proposed that the three PPAs be realigned into two PPAs in an effort to delineate FPS' major lines of business and the resources necessary to deliver services for the protection of Federal facilities. FPS budget submissions will continue to include an exhibit that shows how the revenue streams align to program, projects, and activities.

Under this realignment, FPS will formally establish an FPS Operations PPA. This PPA was described as the Operating Fund in prior budget submissions and in the Appropriation Overview, Section D, of the FY 2015 Congressional Justification. FPS Operations will be funded by the basic security charge and the oversight fee revenue.

The second PPA proposes to combine Building-Specific Security Collections and Reimbursable Agency-Specific Security Collections under a Countermeasures PPA. These collections are then utilized to fund PSOs and technical countermeasures security requirements. The oversight fees charged to FPS customers will - under the proposed structure - be shown in the budget under the FPS Operations PPA. See the table below for a mapping of the revenue into the new PPAs and a clear view of the funding available to deliver FPS Operations and Countermeasures. A detailed description of each PPA is included below the table. As explained in the current services program description for Building Specific and Reimbursable Agency Specific the activities are the same.

Program/Project/Activity (Dollars in Thousands)	FY 2013 Enacted	FY 2014 Enacted	FY 2015 Request*
FPS Operations:			
Basic Security	\$271,540	\$275,763	\$275,763
Building-Specific Security – Oversight Fee	\$28,815	\$30,884	\$33,997
Reimbursable Agency-Specific Security – Oversight Fee	\$29,503	\$29,503	\$26,390
Total FPS Operations	\$329,858	\$336,150	\$336,150

Program/Project/Activity (Dollars in Thousands)	FY 2013 Enacted	FY 2014 Enacted	FY 2015 Request*
Countermeasures:			
Building-Specific Security Countermeasures	\$480,241	\$514,731	\$566,618
Reimbursable Agency-Specific Security Countermeasures	\$491,725	\$491,725	\$439,838
Total Countermeasures	\$971,966	\$1,006,456	\$1,006,456

Total	<u>\$1,301,824</u>	<u>\$1,342,606</u>	<u>\$1,342,606</u>
--------------	---------------------------	---------------------------	---------------------------

**To the extent pursuant to this request, the above revenues for countermeasures and the oversight fees are the estimates to be authorized by OMB (to include revenue associated with new customer requirements). Estimates will fluctuate since customer requirements are subject to change based on each customer's available resources.*

PPA: FPS Operations

The FPS Operations PPA will encompass the basic security charge and oversight fee that is assessed to all countermeasure contracts.

To organize its work, FPS has 11 regions, organized within three zones supported by a headquarters staff. The regions are the operational component of FPS, and are responsible for performing the operational mission of the organization. FPS currently provides law enforcement and security services within these zones with 1,371 full-time equivalents (FTE) of which 1,007 are designated as law enforcement.

PPA: Countermeasures

The Countermeasures PPA will encompass all the pass-through countermeasure contracts that were formerly included under building-specific security and reimbursable agency-specific security. The contracts fund PSOs and TCMs. A detailed description of the PPA is included below the table.

Program/Project/Activity (Dollars in Thousands)	FY 2013 Enacted	FY 2014 Enacted	FY 2015 Request
Countermeasures			
<i>Countermeasures</i>	\$882,073	\$899,846	\$917,875
<i>Available Authority For New Customer Requirements</i>	\$89,893	\$106,610	\$88,581
Total Countermeasures	\$971,966	\$1,006,456	\$1,006,456

Protective Security Officers

Contract PSO services are a key component of the execution of FPS' protective security mission. Individual risk assessments combined with the specific customer requirements of each facility drive the placement of PSO-staffed security posts at different facilities. These posts are charged with minimizing specific vulnerabilities to identified credible threats. The functions that PSOs provide include:

- Access Control: ensuring access to secured areas in accordance to access control procedures
- Control Center Operations: integrating multiple countermeasures through monitoring of security equipment and facilitating communication with other posts or law enforcement as necessary
- Patrol and Response: patrolling and monitoring the facility for safety, security, and enforcement purposes
- Screening: identifying and interdicting unlawful, dangerous, or prohibited items to ensure they do not enter a secured area
- Visitor Processing: identifying and documenting visiting individuals

Technical Countermeasures

TCMs allow FPS to provide an integrated and cost-effective level of protection. They include the purchase, installation, and maintenance of security equipment, such as x-ray machines, magnetometers, intrusion detection systems, and closed circuit television security camera systems. The FPS national countermeasures program includes design, implementation, and oversight as well as collaborative efforts with Federal partners, such as DHS's Science and Technology Directorate and the Transportation Security Administration. FPS acquires countermeasures for its customers based on their needs, as identified through security assessments and other risk mitigation strategies, and manages to a standard replacement schedule.

Available Authority for New Customer Requirements

At the beginning of each fiscal year, FPS requests authority, via OMB, to collect revenue sufficient to accommodate changing customer requirements. For example, new customer security requirements can be accommodated during the fiscal year for customer relocation to an expanded facility, to cover inflation, or to implement countermeasures at a higher facility security level building. When these situations occur, FPS has the available funding authority to provide new security without potential procedural delays necessitated by having to request additional offsetting collection authority.

This authority is also utilized to provide temporary additional security for FEMA disaster relief deployments, which can be substantial depending on the number of natural and weather-related disasters that FEMA requests FPS assistance for in any given year (i.e., Hurricane Sandy, etc.). When these situations occur, FPS has the available funding authority to provide new security without potential procedural delays necessitated by having to request additional offsetting collection authority.

FPS continues to improve the transparency and detail of information transmitted to Congress and looks forward to discussing this improved PPA structure with Committee staff.

BUDGET REQUEST AND SUPPORTING INFORMATION

Office of Health Affairs

I. Appropriation Overview

A. Mission Statement for Office of Health Affairs:

The DHS Office of Health Affairs (OHA) is at the intersection of homeland security and public health, better known as health security. OHA's mission is to advise, promote, integrate, and enable a safe and secure workforce and Nation in pursuit of national health security. OHA achieves this by enhancing the health and wellness of the DHS workforce, and by protecting the Nation from the health impacts of incidents, including biological and chemical events.

Specifically, OHA provides medical and health expertise in support of the DHS mission to prepare for, respond to, and recover from all threats. OHA serves as the Department's primary point of contact for State, local, territorial, and tribal governments on medical and health issues. OHA's responsibilities include serving as the principal advisor to the Secretary, Federal Emergency Management Agency (FEMA) Administrator, and other DHS officials and components on medical and health issues. In addition, OHA supports DHS chemical and biological defense activities, including pandemic preparedness; provides medical and health expertise for DHS preparedness, response, and resilience efforts; enhances national and DHS medical first responder capabilities; and supports the Department's occupational health and operational medicine activities, including providing policies and guidance. Through its Food, Agriculture, and Veterinary Defense Program, OHA provides oversight and management of DHS's implementation of *Homeland Security Presidential Directive (HSPD)-9, Defense of United States Agriculture and Food*.

B. Budget Activities:

OHA funding is structured into three programs, projects, and activities (PPA): Health Incidents Detection (HID), Health Incidents Resilience (HIR), and Salaries and Expenses (S&E). This three-PPA structure is a change from FY 2014, when OHA's activities were structured into five PPAs. The former BioWatch and National Biosurveillance Integration Center (NBIC) PPAs have been consolidated into HID and the Chemical Defense Program (CDP) and Planning and Coordination (P&C) PPAs have been consolidated into HIR. Salaries and Expenses remains one of OHA's PPAs. The change reflects the dynamic threat environment of health security and clearly aligns OHA programs with the Department's approach to managing disasters using a whole community approach.

Health Incidents Detection:

The activities of the HID PPA ensure the Department's capability to provide situational awareness, detection, early warning, and information sharing related to events having health security consequences and to inform a comprehensive response across the health threat spectrum, whether naturally occurring, accidental, or deliberately caused by an adversary. HID includes two major programs: BioWatch and NBIC.

BioWatch Program:

The BioWatch Program is the Nation's only Federally managed, locally operated nationwide biosurveillance system designed to detect the intentional release of select biological threat agents. BioWatch is a key part of the Department's layered approach for protection against a catastrophic biological terror attack, and early detection translates into lives saved. This program deploys collection devices and analytical capability in more than 30 high-risk metropolitan areas, called BioWatch jurisdictions. The BioWatch Program provides public health officials with a warning of potentially hazardous biological agent release before exposed individuals would typically develop symptoms of illness. This "detect-to-treat" approach provides public health officials with an opportunity to respond aggressively to help mitigate the potentially catastrophic impact on the population of a biological agent release.

National Biosurveillance Integration Center:

NBIC's mission is to enable early warning and shared situational awareness for acute biological events, for the purpose of supporting earlier, improved consequence-mitigation decision making. To accomplish this mission, NBIC works closely with Federal interagency, State, local, and private sector partners to detect health anomalies as rapidly as possible, and to effectively characterize potential human, animal, or plant health events as they unfold. NBIC provides to its customers: (1) products, such as daily monitoring lists of health issues around the world, and more in-depth Biosurveillance Event Reports; (2) tools, such as providing direct access to open-source data collection platforms for their biosurveillance use; and (3) services, such as weekly interagency biosurveillance calls, and the National Biosurveillance Integration System (NBIS) Protocol, which can be activated to assemble the entire interagency body of biosurveillance experts within a few hours of activation. In addition to the daily execution of current capabilities, NBIC is working with its partners to create innovative new processes, explore the use of new data sources, and develop new analytic approaches in support of the national biosurveillance mission.

Health Incidents Resilience:

The programs within the HIR PPA support a suite of activities that bolster health security preparedness and resilience, both within DHS and throughout the Nation. This includes providing medical and health subject matter expertise to support the Department in achieving its mission. In 2015, HIR will allocate resources to the following major programs: Chemical Defense; Food, Agriculture, and Veterinary Defense; and Health and Medical Support.

Chemical Defense:

The Chemical Defense program provides health and medical expertise related to chemical preparedness, detection, response, and resilience to provide a comprehensive approach to chemical defense.

Food, Agriculture, and Veterinary Defense:

This program provides health and medical expertise and is responsible for oversight and management of the Department's implementation of *HSPD-9, Defense of United States Agriculture and Food*.

Food, Agriculture, and Veterinary Defense works to ensure adequate response capability at the State, local, tribal, and territorial levels for incidents occurring within the food and agriculture sector, whether intentional or naturally occurring.

Health and Medical Support:

OHA leads health and medical support activities for the Department including Health Security Integration, Medical First Responder Coordination, Medical Quality Management, and Occupational Health, and provides direct health and medical expertise to DHS operational Components through the Medical Liaison Officer Program.

- **Health Security Integration:** Helps to build national resilience against health incidents through preparedness enhancement and capabilities development, and executes the Chief Medical Officer's (CMO) statutory responsibility to be the primary DHS point of contact with State and local stakeholders on medical and public health issues.
- Medical first responder coordination provides medical guidance, standards, policy, and outreach to medical first responder stakeholders, both internal to and external to the Department.
- Medical Quality Management provides expert advice, oversight, consultation, and assistance to directly enable the DHS Components to improve the quality, safety, efficiency, and effectiveness of health care provided to the workforce.
- Occupational Health mitigates the adverse health impacts of work-related risks for the DHS workforce by providing medical guidance and executing programs to provide standards, establish clear policy, and develop and implement enterprise solutions to resolve health issues. Occupational Health includes medical countermeasures and DHS *Together* resiliency programs and the Electronic Health Information System (eHIS) Initiative.
- The Medical Liaison Officer Program provides experienced health care clinicians who are embedded in DHS operational Components.

Salaries & Expenses:

The S&E PPA funds the salaries and benefits for all full-time equivalents (FTE) within OHA, the activities of the Office of the Assistant Secretary, and supports the work of OHA's programs. Expenses for OHA's share of the DHS Working Capital Fund, office supplies, training, travel for senior management, and other various shared services are funded out of S&E.

C. Budget Request Summary:

OHA requests \$125.767 million, 106 full-time positions (FTP), and 99 FTEs. Relative to 2014 Enacted, the total adjustments-to-base is \$0.996 million. Adjustment-to-base changes include savings from schedule adjustments in BioWatch recapitalization and termination of one-time costs for NBIC innovation projects.

II. Summary of FY 2015 Budget Estimates by Program/Project/Activity (PPA)

Department of Homeland Security Office of Health Affairs Summary of FY 2015 Budget Estimates by PPA/Appropriation

2014 Enacted ²	-	-	95,277
2015 Adjustments to Base			(2,626)
2015 Current Services	-	-	92,651
2015 Program Changes	-	-	-
2015 Total Request	-	-	92,651
Total Change 2014 to 2015	-	-	(2,626)

¹Comprised of FY 2013 Revised Enacted BioWatch funding (\$81,008K) and NBIC funding (\$12,334K).

²Comprised of FY 2014 Enacted BioWatch funding (\$85,277K) and NBIC funding (\$10,000K).

OHA requests \$92.651 million in FY 2015 for the Health Incidents Detection PPA. Of this amount, OHA will allocate \$84.651 million for BioWatch to support current operations and maintenance. OHA will allocate \$8.000 million for the NBIC, which will fund technical support services, information technology operations and improvements, biosurveillance acquisitions, and support coordination efforts with Federal, State, local, tribal, and territorial governments.

Adjustments-to-Base include:

- Decrease of \$2.0 million for termination of one-time costs for innovation projects at NBIC
- Decrease of \$0.626 million from savings in the BioWatch program achieved by extending the timeline for full replacement and recapitalization of laboratory equipment. The 24/7 biological detection capabilities will be maintained.

CURRENT SERVICES PROGRAM DESCRIPTION:

Health Incidents Detection:

The activities of the HID PPA ensure the Department's capability to provide situational awareness, detection, early warning, and information sharing related to events having health security consequences and to inform a comprehensive response across the health threat spectrum, whether naturally occurring, accidental, or deliberately caused by an adversary. HID includes two major programs: BioWatch and NBIC.

BioWatch:

Biological attacks can begin without overt signs, therefore early warning and detection capabilities will be essential for mitigating consequences and saving lives. BioWatch is a key part of the Nation's layered approach for protection against a catastrophic biological terror attack, and each hour gained in detection translates into lives saved. The BioWatch program is the Nation's only federally managed, locally operated nationwide biosurveillance system designed to detect the intentional release of select aerosolized biological agents. Deployed in more than 30 metropolitan areas throughout the country, the system is a collaborative effort of health personnel at all levels of government. Coordinated teams of field operators, laboratory technicians, and public health officials from city, county, State, and Federal organizations are responsible for installing biocollectors, collecting daily samples, analyzing and reporting laboratory results, and responding to the detection of a BioWatch Actionable Result (BAR). The current detection capabilities used by the BioWatch program consist of outdoor and limited indoor aerosol collectors whose filters are manually retrieved for subsequent analysis in BioWatch laboratories located in State or county public health laboratories that are members of the Centers for Disease Control and Prevention Laboratory Response Network.

The BioWatch program complements the existing public health surveillance systems, allowing information to be shared with health care providers, and has succeeded in bringing together State and local public health, first responder, and law enforcement personnel, resulting in communities that are better prepared not only for a biological attack, but also for an all-hazards response. Additionally, the BioWatch program manages the national notification process and offers laboratory support, environmental sampling, and event modeling.

The BioWatch program recognizes the essential role of State and local jurisdictions in responding to a bioterrorism event, and to this end, utilizes Jurisdictional Coordinators (JC) to assist in the operation of the BioWatch Advisory Committees, facilitate communications among State and local partners, assist in preparedness and response plan development, and to help coordinate exercise and special event planning. This locally embedded network of JCs provides jurisdictions and the BioWatch program leadership with information regarding challenges encountered across jurisdictions serving to inform operational and programmatic directions.

The performance of all aspects of current operations laboratory and field activities is monitored by a robust quality assurance (QA) program that was instituted in FY 2010. The QA program ensures the technical validity of field and laboratory operations and monitors the performance of reagents that are used for analysis in the laboratory at every facility on a daily basis.

In addition to detection and analysis technology, BioWatch develops national guidance documents to identify best practices and procedures as well as to create consistency of operations. Guidance documents are used by BioWatch jurisdictions as a basis of formulating their response concept of operations (CONOPS) and contain "points to consider" as well as program-required activities in event of a BAR. BioWatch assists local jurisdictions in the development of location-specific CONOPS guidance, conducts both tabletop exercises and walkthrough events, exercises BioWatch Advisory Committees, provides notification-response checklists, and conducts after-action reviews with the jurisdictions to improve operations.

The BioWatch program also supports National Special Security Events such as the Presidential Inauguration and national nominating conventions by providing laboratory analysis procedures, laboratory equipment, and personnel to assist with the large number of samples that such events produce, both in current BioWatch jurisdictions and in cities that are not already equipped with BioWatch systems. BioWatch has also worked with State and local public health agencies in formulating and conducting exercises based specifically on the event that is scheduled. BioWatch supports dozens of local special events every year such as the Super Bowl, college bowl games, parades, and marathons.

The requested funding for BioWatch will enable the continuation of current operations in all jurisdictions in which the BioWatch system is presently deployed and operating. This includes conducting QA audits and proficiency tests, supporting environmental sampling teams, performing analyses for current operations collector placement, and conducting rapid-response technical trade-off analyses.

National Biosurveillance Integration Center:

NBIC's mission is to enable early warning and shared situational awareness for acute biological events, for the purpose of supporting earlier, improved consequence-mitigation decision making. Since most biological events (both terrorism and emerging infectious diseases) are likely to arrive on U.S. soil unannounced, early warning is essential for mitigating consequences and saving lives. NBIC monitors potential biological events 24 hours a day, 7 days a week, by ingesting and integrating information from thousands of open sources and applying critical analysis to that and other information. Working with our interagency partners, this integration enables early warning and shared situational awareness of biological events so that critical decisions regarding response and recovery efforts are well-informed and ultimately save lives. NBIC serves the National Biosurveillance Integration System (NBIS), the 13 departments and agencies¹ that comprise the interagency biosurveillance community, by providing national biosurveillance and situational awareness.

NBIC maintains the capability to execute the "NBIS Protocol," a short-notice teleconference held with all Federal partners to rapidly share information on potentially significant biological events of national concern. This forum enables information sharing early in a biological event's discovery and development that in turn allows for better decision making and a coordinated, streamlined response.

NBIC analysts work with interagency partners to identify and analyze possible biological events, determining if they have reached reporting thresholds warranting more in-depth reporting. NBIC produces and delivers these reports in collaboration with NBIS partners, and disseminates them to Homeland Security Information Network portals and to the biosurveillance layer of the DHS Common Operating Picture. NBIC reports are disseminated to more than 15,000 Federal, State, and local users, many of whom work in the 72 fusion centers across the Nation.

¹ NBIS members include the Departments of Health and Human Services, Defense, State, Interior, Agriculture, Commerce, Energy, Homeland Security, Justice, and Veterans Affairs; the Environmental Protection Agency; the United States Postal Service; and the Office of the Director of National Intelligence.

Recognizing that there are opportunities for biosurveillance capability improvements, NBIC continues to develop innovation projects to evaluate opportunities to identify and use potential novel data sets and information, advanced analytic approaches and tools, and improved methods of collaborating with new and existing partners. Ongoing projects focus on building capabilities for the use of pre-hospital data, such as emergency medical services (EMS), 911, poison control center, and social media data, in biosurveillance operations. These projects seek to serve not only NBIC's ability to accomplish its mission, but also the needs of the interagency biosurveillance community.

OHA developed and released a strategic plan for NBIC in August of 2012, in collaboration with the NBIS member agencies. In the year since the NBIC Strategic Plan was finalized and released, NBIC continues to undergo a transformation in its processes and products. Specifically, among a number of activities, NBIC is: 1) improving the data and analytics it uses for biosurveillance based on new capabilities developed in its Innovation Section; 2) conducting an independent stakeholder and customer analysis to identify ways to improve operational products; and 3) preparing new processes and product lines for evaluation starting in the first quarter of FY 2014. These and other activities form the core of NBIC's implementation actions following the Strategic Plan's release last year, which aligns to the National Strategy for Biosurveillance Implementation Plan.

The requested funding will allow NBIC to continue monitoring biological events on a 24/7 basis for shared situational awareness. In addition, this includes funding for innovation projects to improve biosurveillance capabilities as described above.

2015 Current Services	-	-	5,819
2015 Program Change	-	-	-
2015 Total Request	-	-	5,819
Total Change 2014 to 2015	-	-	-

¹Comprised of FY 2013 Revised Enacted CDP funding (\$1,915K) and P&C funding (\$5,130K).

²Comprised of FY 2014 Enacted CDP funding (\$824K) and P&C funding (\$4,995K).

OHA requests \$5.819 million in FY 2015 for the Health Incidents Resilience PPA. This includes the Chemical Defense Program (CDP); Food, Agriculture, and Veterinary Defense; and Health and Medical Support. The funding requested in FY 2015 will support a suite of activities that bolster health security preparedness and resilience, both within DHS and throughout the Nation. This includes providing health and medical expertise related to chemical preparedness, detection, response, and resilience to provide a comprehensive approach to protection from a chemical attack. Additionally, this funding allows OHA to provide medical and health subject matter expertise for DHS preparedness and planning activities, supporting response to national disasters, integrating State and local public health within the national network of State and local fusion centers, and leading DHS health and medical support efforts.

CURRENT SERVICES PROGRAM DESCRIPTION:

Chemical Defense Program:

The OHA CDP is a comprehensive program to address Federal, State, and local risk awareness, planning, and response mechanisms in the event of a catastrophic chemical incident, directly supporting the CMO's statutory responsibility to provide health and medical guidance to the DHS Secretary and FEMA Administrator, as well as to all DHS Components. OHA provides subject matter expertise on medical toxicology, industrial hygiene, and responder workforce protection related to chemical threats and works directly with communities to understand their capabilities, limitations, and needs. The program provides fundamental links between Federal interagency efforts and unique community vulnerabilities, focusing on integrating threat-based risk assessments and detection capabilities into community preparedness.

CDP integrates medical/technical support to the missions of DHS components and Federal agencies, from critical infrastructure protection and private-sector partnerships to response and recovery operations, in order to provide a comprehensive chemical defense and preparedness framework. CDP also advises DHS leadership and interagency partners on emerging chemical threats and provides

technical guidance regarding health and medical preparedness, as well as medical expertise during a response.

In FY 2015, CDP will utilize lessons learned from its collaboration with local communities to further the development of its guidance documents, which are shared with Federal, State, and local partners. CDP will also continue to provide expertise in medical toxicology, industrial hygiene, and chemical detection to National Security Staff, Federal partners, FEMA, and other DHS components to enhance strategic policy and plans related to the preparation and response to high-consequence chemical events.

Food, Agriculture, and Veterinary Defense (FAVD)

FAVD is responsible for oversight and management of the Department's implementation of *HSPD-9: Defense of United States Agriculture and Food*. FAVD works to ensure adequate response capability at the State, local, tribal, and territorial levels for incidents occurring within the food and agriculture sector, whether intentional or naturally occurring. Additionally, FAVD provides subject matter advice and expertise to DHS leadership on matters related to food protection, agricultural production systems, and animals in disasters. The National Preparedness Goal under Presidential Policy Directive-8 established a requirement for Federal doctrine to embrace the full range of statutory authorities related to disasters and emergencies. This resulted in requests for FAVD to provide expertise beyond the Stafford Act requirements for care and sheltering of household pets and service animals to include a broader range of species and partner agencies that may be impacted during a disaster.

Health and Medical Support (HMS)

HMS supports ongoing health security technical assistance and activities that lead the Department's workforce health and medical oversight functions, including the Medical Liaison Officer program, Medical First Responder Coordination, Medical Quality Management, and Occupational Health.

Health Security Integration (HSI)

HSI helps build national resilience against health incidents through preparedness enhancement and capabilities development, and executes the CMO's statutory responsibility to be the primary DHS point of contact with State and local stakeholders on medical and health issues. HSI delivers medical and public health expertise and support to DHS Components, and to State and local entities and partners to further support communications, situational awareness, and effective operational planning.

HSI provides the medical interface between OHA and DHS component contingency and operational planning cells and supports the development of Federal plans and policies related to natural and man-made events having catastrophic consequences on human, agricultural, and animal health. OHA manages the cadre of Public Health Service Officers serving as medical experts embedded at FEMA and with the DHS Office of Operations Coordination and Planning (OPS) at the National Operations Center (NOC), the National Response Coordination Center, Crisis Action Teams, and Operational Planning Teams. HSI also provides medical expertise to support the FEMA National Exercise Division and others to develop, conduct, influence, and participate in a broad range of exercises that advance national preparedness and response capability for threats having catastrophic health consequences, with a focus on all hazards events and incidents. Expected FY 2015 activities include planning and exercise support for continuity of operations, 24/7 watch officer support to the NOC and DHS OPS, and support to the Health Security Intelligence Enterprise, as well as outreach to targeted State and local public health, the intelligence community, and homeland security partners.

HSI State and local engagement provides technical assistance to State and local public health and homeland security partners to help them build and improve their capability to prepare for and respond to health incidents. Key FY 2015 activities will include improving and facilitating sharing of public health threat information within the national network of State and local fusion centers; providing technical assistance to fusion centers for development of public health capabilities; providing medical and health subject matter expertise to DHS Office of Intelligence and Analysis to inform intelligence information by key disciplines; and accessing, analyzing, and promoting appropriate sharing of intelligence community health threat and risk information and products.

Medical First Responder Coordination (MFRC)

MFRC plays a key role in integrating the EMS community into Federal, State, local, territorial, and tribal disaster preparedness and policy activities. It builds and leverages collaborative working relationships between DHS and major EMS national associations to address gaps, enhance efficiency, and develop medical first responder and EMS best practices for use in disaster planning, preparedness, response, and recovery. MFRC represents the internal DHS EMS community to external stakeholders and other Federal agencies.

MFRC provides detailed guidance for external medical first responders and medical oversight and guidance to more than 3,500 internal DHS EMS providers. It supports EMS integration toward improved domestic preparedness for DHS, Federal, State, local, tribal and territorial governments and national EMS communities, and works closely with external and internal medical first responder communities across the Nation to address and resolve gaps identified in EMS coordination and integration.

MFRC provides oversight of essential DHS EMS functions. For example, it develops and maintains electronic systems to track pre-hospital patient care rendered by DHS EMS personnel and their professional credentialing, and guides the standardization of related training and education. MFRC develops policies and protocols for DHS EMS personnel and the greater EMS community, including guidance on chemical, biological, radiological, nuclear, and explosives response for DHS providers. MFRC also provides subject matter expertise to the DHS enterprise on health and medical topics ranging from education and training to technology. MFRC is also working closely with other Federal agencies and the National Security Staff to develop and distribute essential medical guidance for first responders on improving survivability in improvised explosive device and active shooter incidents.

Occupational Health

Occupational Health mitigates the adverse health impacts of work-related risks to the DHS workforce and those in DHS's custody by developing programs, strategy, policy, requirements, and metrics for the medical aspects of a Department-wide occupational health and safety program. DHS workforce-related activities are executed in partnership with the Office of the Chief Human Capital Officer Safety and Health division. Occupational Health also works with Components to find enterprise solutions to DHS medical issues for the DHS workforce and those in DHS custody, to include coordinating with U.S. Customs and Border Protection and U.S. Immigration and Customs Enforcement to find solutions to provide effective medical care on the border.

Occupational Health maintains three key activities/initiatives:

- Medical Countermeasures (MCM) - The MCM program ensures that the mission-essential functions of the Department continue following an anthrax attack or pandemic influenza outbreak. The program procures, manages, and distributes MCM to the entire DHS workforce, and those under DHS care and custody. The program also provides guidance to the DHS Components on proper use, including technical assistance in managing medical assets.
- DHSTogether Employee and Organizational Resilience Program - The DHSTogether program promotes employee wellness, resilience, stress management, and suicide prevention. DHSTogether is the only comprehensive agency-wide program that identifies and implements resilience interventions and best practices to ensure that employees have the tools and resources they need to manage the stresses inherent in their occupations. The program supports targeted activities that fill significant identified gaps in health and medical services, including strategic communication, training, peer-to-peer support, and health and medical expertise.
- Electronic Health Information System (eHIS) - eHIS is an electronic system that, once developed, will provide uniform collection, sharing, and analysis of health and safety data across the DHS enterprise, and will promote consistent policies, processes, and procedures. This includes use of a common set of tools available to all users, in order to improve the flow of health and safety communications within the DHS workforce and strengthen accountability for the execution of health-related programs and operations.

Medical Quality Management (MQM)

MQM advises, consults, and assists DHS Components on issues related to the improvement of the quality, safety, efficiency, and effectiveness of health care for all stakeholders. MQM provides quality management subject matter experts who ensure that health care service standards are consistently and appropriately applied across the Department. For example, the MQM project exercises oversight for the development of quality management including quality improvement, risk management documentation, medical record management, credentialing, clinical competency, performance measurement, and review of standard operating procedures and protocols. MQM also chartered and chairs the internal cross-component DHS Health Care Quality Committee, which develops, coordinates, and oversees detailed cross-component initiatives and works to improve the delivery of healthcare services across the Department.

OHA Medical Liaisons (MLO)

The MLO program provides senior medical advisors (physicians) to DHS components as direct representatives of the CMO, and offers subject matter expertise in developing the health and medical aspects of planning, response, and workforce protection policy. The program ensures that Component medical issues are rapidly identified and quickly resolved, and provides a direct link to OHA and the CMO. The MLO program also identifies common gaps in medical and health standards, policy, and guidance, and engages with a broad range of health and medical experts (including the CMO and OHA experts) to provide enterprise solutions to these common gaps. These solutions could aid in decreasing workers' compensation costs and other associated costs, improving medical quality. In addition, the MLO program supports the traveler health, medical first responder, and FEMA search and rescue programs in order to assure timely and valuable medical expertise.

Salaries and Expenses
Program Performance Justification
(Dollars in Thousands)

PPA: Salaries and Expenses

	Perm. Pos	FTE	Amount
2013 Revised Enacted	108	101	25,937
2014 Enacted	106	99	25,667
2015 Adjustments-to-Base	-	-	1,630
2015 Current Services	106	99	27,297
2015 Program Change			-
2015 Total Request	106	99	27,297
Total Change 2014 to 2015	-	-	1,630

OHA requests \$27.297 million for the Salaries and Expenses PPA, which will fund 106 FTP and 99 FTE, as well as, the activities of the Office of the Assistant Secretary.

Adjustments-to-Base include:

- Increase of \$1.026 million for hiring to achieve fullyauthorized level of 99 FTE
- Increase of \$0.045 million for annualization of 2014 pay raise
- Increase of \$0.149 million for 1.0 percent pay inflation in 2015
- Increase of \$0.565 million for Working Capital Fund activities
- Decrease of \$0.135 million for OHA-wide mission support contracts
- Decrease of \$0.020 million for training

CURRENT SERVICES PROGRAM DESCRIPTION:

The Assistant Secretary for Health Affairs and CMO leads a team of highly skilled professionals who provide expertise and specialized abilities that are essential to achieving OHA's mission. OHA's staff is composed of doctors, veterinarians, nurses, scientists, public health professionals, and other public servants recruited for their experience and skills. Because of OHA's unique role of providing medical and health security expertise to DHS and the Federal Government, the talents and abilities of its staff are a particularly important and valuable resource.

The Office of the Assistant Secretary (OAS) provides executive direction and leadership to all divisions and branches and ensures that OHA's critical mission can be accomplished efficiently and effectively. OAS includes both the immediate OAS and CMO and the Office of the Chief of Staff.

The Chief of Staff oversees the management operations activities of OHA, including finance, acquisition, human capital, information technology, emergency preparedness, continuity of operations, and facilities/property services. These functions ensure the resilience of OHA, and ensure that resources are effectively allocated to best support DHS's mission.

Additional expenses include OHA's share of the DHS Working Capital Fund, office supplies, contractor support for policy and administration, training and travel for senior management, and other various shared services. These expenses support the primary functions of the FTEs in the office, create efficiency in purchasing, and ensure that OHA's leaders are available to provide support to Federal, State, and local partners, and other stakeholders.

The request reflects an adjustment to Working Capital Fund assessments to fund the following activities: Treasury Information Executive Repository, Transit Subsidy, HSPD-12, Financial Statement Audit, Internal Control Audit, and Enterprise License Agreements.

Health Incidents Detection Mission Statement

The activities of the HID PPA ensure the Department's capability to provide situational awareness, detection, early warning, and information sharing related to events having health security consequences and to inform a comprehensive response across the health threat spectrum, whether naturally occurring, accidental, or deliberately caused by an adversary. HID includes two major programs: BioWatch and NBIC.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.8 Special Personal Services Payments	2,905	3019	2805	(214)
Total, Salaries & Benefits	2905	3019	2805	(214)

The amount requested in FY 2015 is to cover the Public Health Service Officers (PHSO) assigned to BioWatch and NBIC and a proportionate share of the watch desk officer operations.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
21.0 Travel and Transportation of Persons	\$70	\$196	\$185	(\$11)

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2015 requested funding level reflects a decrease in travel for all NBIC staff including those involved in partnership efforts between NBIC and Federal, State, and local stakeholders. This decrease is a result of OHA's continuing commitment to reduce government travel spending. Whenever possible, NBIC will use video teleconferencing in lieu of travel. In order to sustain these reductions, OAS evaluates whether each and every travel request is mission critical and the required number of traveling staff.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.3 Communications, Utilities, and Misc. Charges	\$0	\$62	\$77	\$15

FY 2014 funding provides for IT support and fees. The FY 2015 request reflects anticipated needs.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.1 Advisory and Assistance Services	\$41,047	\$40,089	\$37,806	(\$2,283)

Advisory and assistance services include services acquired by contract from non-Federal sources. The FY 2015 requested funding level reflects a commitment by OHA/BioWatch to engage industry experts in advisory and assistance services associated with Field Operations support; Laboratory Operations support; Public Health and Preparedness support; the National BioWatch Stakeholders' Workshop; Jurisdictional Coordinator Management and Training support; Quality Assurance (QA) support; and Program Management support. The request also reflects the Department's strategic sourcing initiatives to leverage the purchasing power of the entire Department. This request also reflects consideration of prior-year unobligated balances.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.3 Other Goods and Services from Federal Sources	\$14,904	\$11,636	\$8,875	(\$2,761)

Purchases from Government Accounts include costs for purchases (goods and services) from other Federal Government agencies or accounts. The FY 2015 funding level reflects changes to some Interagency Agreements for: Assays; Guidance; Site Modeling; Engineering/Data Analysis; Field Operation and Support; Public Health and Preparedness Support; and Logistics Support.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.7 Operation and Maintenance of Equipment	\$18	\$63	\$20	(\$43)

The FY 2015 request reflects anticipated needs.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
26.0 Supplies and Materials	\$10,199	\$10,288	\$12,288	\$2,000

The requested funding level reflects BioWatch purchases for supplies and materials associated with reagents and other supplies related to Laboratory Operations and QA support. The change in FY 2015 reflects increased support from the DOD Critical

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
--	----------------------------	--------------------	--------------------	------------------------------

Reagents Program in FY 2015 and beyond.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
31.0 Equipment	\$83	\$1,256	\$0	(\$1,256)

Purchase of lab instruments in FY 2014 will meet equipment needs for 2015.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
41.0 Grants, Subsidies, and Contributions	\$24,068	\$30,818	\$30,585	(\$233)

Grants/subsidies/contributions include cash payments to States, other Federal agencies, associations, individuals, commissions, proceedings, or projects. The requested funding level reflects the net changes associated with BioWatch and NBIC. BioWatch cost of operations in the 30+ BioWatch Jurisdictions is expected to increase by \$0.767 million. NBIC requirements will decrease by \$1 million.

Health Incidents Resilience Mission Statement

The programs within the HIR PPA support a suite of activities that bolster health security preparedness and resilience, both within DHS and throughout the Nation. This includes providing medical and health subject matter expertise to support the Department in achieving its mission. In 2015, HIR will allocate resources to the following major programs: Chemical Defense; Food, Agriculture, and Veterinary Defense; and Health and Medical Support.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.8 Special Personal Services Payments	616	946	1686	740
Total, Salaries & Benefits	616	946	1686	740

The amount requested in FY 2015 is to cover the PHSOs assigned to HIR and a proportionate share of the watch desk officer operations.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
21.0 Travel and Transportation of Persons	\$77	\$147	\$158	\$11

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2015 request reflects travel funding requirements including implementation of new travel policies in support of the Administration's Campaign to Cut Waste. The FY 2015 request funding level reflects a change in travel associated with a reduction in site visits and inspections for the Emergency Medical Service programs. In order to sustain travel reductions, OAS evaluates whether each and every travel request is mission critical and the required number of traveling staff.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.1 Advisory and Assistance Services	\$2,080	\$3,220	\$1,754	(\$1,466)

Advisory and Assistance Services include support for proprietary software for the electronic patient care record (ePCR) system, coordination for food-specific standardized response plan that will be integrated into the National Response Framework, recommendations on key preparedness policies, and subject matter experts and Federally funded research and development center support for key projects. Requested funding also supports CDP contract support to include OHA SETA support, the American College of Medical Toxicology, updates to the Patient Decontamination Guidance document, and publication of a best practices and lessons learned from the chemical defense demonstration projects. This request also reflects consideration of prior-year unobligated balances.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.3 Other Goods and Services from Federal Sources	\$3,364	\$2,876	\$1,723	\$(1,153)

The FY 2015 request reflects anticipated needs. In 2015, OHA will use goods and services from Federal partners to help develop a community health resilience comprehensive planning template. Additionally, the request supports IT hosting and SharePoint services for the ePCR database, MCM support, and DHS *Together* phase 1 & 2 projects. This request also reflects consideration of prior-year unobligated balances.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
26.0 Supplies and Materials	\$821	\$992	\$498	(\$494)

The FY 2015 request reflects anticipated needs for supplies and materials. OHA purchases and stockpiles MCM for the entire Department, including antibiotics for anthrax preparedness, and antivirals for pandemic preparedness. Funding also provides for replenishment of a specialized MCM stockpile and potassium iodide (KI), for nuclear exposure. Also included are the point-of-dispensing (POD) kits prepared for sending out to the DHS POD locations. The decrease from FY 2014 to FY 2015 reflects adjustment of the replenishment rate of antivirals expiring in FY 2015 to meet the projected need.

Salaries and Expenses Mission Statement

The Salaries and Expenses PPA funds the salaries and benefits for all full-time equivalents (FTE) within OHA and the activities of the Office of the Assistant Secretary (OAS). OAS supports OHA's mission by providing executive direction and leadership to all divisions and branches and ensures that OHA's critical mission can be accomplished efficiently and effectively through policy coordination, communications, external relations, strategic planning, and correspondence management. OAS also provides for the management of all relevant business operations including financial management, program analysis, facilities maintenance and planning, human capital management, and information technology support.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	10,071	11,078	12,063	985
11.3 Other than Full-time Permanent	83	-	-	-
11.5 Other Personnel Compensation	-	-	-	-
11.7 Military Personnel	209	-	-	-

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Emergency Management Agency Salaries and Expenses

I. Appropriation Overview

A.Mission Statement:

The FEMA Salaries and Expenses (S&E) appropriation provides core mission funding for the development and maintenance of an integrated, Nationwide capability to prepare for, mitigate against, respond to, and recover from the consequences of major disasters and emergencies regardless of cause, in partnership with other Federal agencies, State, local and Tribal governments, volunteer organizations, and the private sector. The account supports core operations for all FEMA organizations, providing resources for mission activities and administrative support. S&E resources are directed to both Headquarters and Regional operations.

B.Budget Activities:

Activities are organized according to the following program/project/activity (PPA) structure:

Administrative and Regional Offices (ARO)

ARO incorporates the essential command and control functions of the Agency. The Administrative arm coordinates all policy, strategic planning, resources, managerial, and administrative actions to include the Federal Coordinating Officers and National Capital Region Coordination. Regional Operations includes the leadership, management, and mission support functions of the 10 FEMA Regions. These Regions execute the operational direction received from Headquarters to ensure FEMA can execute its primary mission: preparedness; protection; response; recovery; and mitigation.

Preparedness and Protection

Preparedness - The Preparedness mission seeks to reduce the loss of life and property and protect the Nation by planning, training, exercising, and building the emergency management profession. FEMA provides assistance, support, and leadership to help Federal, State, Tribal and local governments and the private sector build the operational capabilities needed to implement preparedness strategies successfully.

Protection - The Protection mission seeks to protect our Nation's constitutional form of government and ensures that a system is in place to warn our citizens of impending hazards. FEMA is responsible for supporting the enhancement of protection capabilities for all hazards, which in turn helps to integrate the tools and mechanisms for capability building across mission areas; streamlines the delivery of assistance to State, Tribal and local governments, as well as non-governmental entities; and leverages existing

Intergovernmental coordination infrastructures. FEMA's primary continuity business lines and associated continuity activities include: Continuity Planning; Continuity Training and Exercises; and Continuity Operations.

Response

The Response mission is to conduct emergency operations to save lives and property through positioning emergency equipment, personnel, and supplies; evacuating survivors; providing food, water, shelter, and medical care to those in need; and restoring critical public services. FEMA conducts response operations in partnership with: State, Tribal and local governments; interagency Federal partners; nongovernmental organizations; and the private sector. Response also manages the Stafford Act Declarations process.

FEMA executes response operations through established incident management and incident support entities that capitalize on FEMA's Nationwide organizational structure, occupying specific disaster facilities at the National Headquarters level, in the affected Regional office, and in temporary field locations established near the scene of a disaster or emergency. FEMA's response operations include logistics, search and rescue, disaster emergency communications, and planning.

Recovery

The Recovery mission seeks to support communities in rebuilding so that individuals, civic institutions, businesses, and governmental organizations can function on their own, return to normal life, and protect against future hazards.

FEMA's Recovery mission is accomplished through a combination of programs and functions that provide direct and indirect support. These include recovery planning, and programs specifically designed to assist both individuals and local governments that have been affected by disasters.

Mitigation

The Mitigation mission seeks to reduce or eliminate long-term risks to people and property from hazards and their effects. Mitigation benefits society by creating safer communities, enabling people to recover more rapidly from floods and other disasters, and reducing the financial impact on Federal, State, Tribal and local governments and communities. FEMA's Mitigation mission is accomplished through the following basic mitigation business lines: Risk Analysis, Risk Reduction, and Risk Insurance.

Mission Support

Mission Support provides the corporate support, tools, and resources the agency needs to build, sustain, and improve its primary mission of preparedness, protection, response, recovery, and mitigation. Functions include information technology, human capital management, acquisition management, security, and administration which include facilities management, records management, and occupational health and safety.

Centrally Managed Accounts

Centrally managed accounts are critical bills that must be managed at the enterprise level to ensure efficient and effective cost management, including streamlining cost factors and prompt payment. The authority and responsibility for the individual accounts are assigned by the FEMA Office of the Chief Financial Officer (OCFO) to the individual functional components.

C. Budget Request Summary:

The Federal Emergency Management Agency requests 4,041 positions, 4,041 FTE and \$924.664 million for FY 2015. The total adjustments-to-base are decreases of 8 Positions, 8 FTE and \$23.317 million. The program decreases include \$4.007 million which is the result of the elimination of the awards and bonuses.

FEMA's workforce supported by the Salaries and Expenses (S&E) request are critical to executing FEMA's mission effectively. They are the vast majority of FEMA's permanent workforce and are the backbone of our operations. These critically important personnel work collaboratively with States, local government, communities, tribes, and other citizen and first responders to build, sustain, and improve our capability to prepare for, protect against, respond to, recover from, and mitigate all hazards.

The FY 2015 Budget request reflects FEMA's continued priority to maintain and strengthen the Agency's ability to respond to disasters while reducing costs and improving the efficiency of our operations. FEMA's swift and effective response to the tornadoes, floods, earthquakes, and hurricanes of recent years demonstrates the impact of internal capacity that FEMA has developed and will maintain at the requested level.

Even though FEMA provides response and recovery assistance through the auspices of other appropriations – the Disaster Relief Fund, Flood Hazard Mapping and Risk Analysis, Disaster Assistance Direct Loan Program, and the National Flood Insurance Fund – it is the personnel and programs in S&E that are the critical enablers. Without the people and programs funded by S&E, FEMA cannot run those programs, staff the response teams, service the survivor assistance applications, provide emergency communications or perform other immediate response activities. Some recent examples from Hurricane Sandy include:

- **Preparedness:** Prior to Hurricane Sandy making landfall, FEMA worked with its partners throughout all levels of government as well as within the private sector to assist our citizens and first responders as they prepared for the storm. As a result of these efforts, the Agency was able to support a prompt, coordinated response effort that brought to bear the full resources of Federal, State and local government, in conjunction with our private sector partners. The multifaceted coordination that took place on the front end provided the FEMA team with a keen understanding of the challenges that lay ahead which allowed for planning for the recovery phase to begin before the storm even made landfall.
- **Immediate Response Operations:** On October 28, 2012, the President authorized emergency declarations for the effected States and later authorized major disaster declarations for Connecticut, Delaware, Maryland, New Hampshire, New Jersey, New York, Rhode Island, Virginia, and West Virginia. FEMA deployed 1,032 personnel that very day in anticipation of Hurricane Sandy's impacts. Approximately one week after the storm there were 5,384 FEMA personnel deployed in support of Sandy and after approximately two weeks there were 7,770 FEMA personnel deployed to more than 11 States and the District of Columbia in support of survivors. At its peak FEMA deployed more than 1,800 or nearly 40% of its permanent workforce (mostly S&E funded), including

nine of ten regional and all three National Incident Management Assistance Teams (IMAT) and Mobile Emergency Response Support (MERS) units.

Procurement: FEMA's prepositioned disaster response contracts provide much needed commodities, resources and services to devastated communities, are put in place well before disaster strikes, ensuring competitively awarded contracts with firm fixed prices, and reduced risk to the government. Presently, there are dozens of prepositioned contracts available to those managing the response to Presidentially-declared disasters and emergencies. FEMA's procurement team also manages the Disaster Acquisition Response Team (DART), which following Hurricane Sandy's landfall was deployed to the States of New York and New Jersey. The DART focuses on providing high-level disaster contracting and quality assurance support, contract oversight and quality assurance monitoring and timely closeouts of disaster contracts.

FEMA's resource prioritization and the work of FEMA staff funded in S&E and other appropriations are framed and guided by the five strategic imperatives described in the *FEMA Administrator's Intent for FY 2015 – 2019*. Those are:

Priority 1: Be Survivor Centric in Mission and Program Delivery: FEMA will reorient its activities and improve its programs so they are "survivor centric," ensuring they support the delivery of services focused on easing the experience of survivors - as individuals, neighborhoods, and communities. This means redesigning programs to limit the burden placed on survivors and maximizing program efficiency and flexibility for individual employees to assist survivors in their time of need.

Key activities in Priority 1 include:

- Enhanced Survivor Outreach Coordination Between HQ & Field: This is an effort to minimize unnecessary, duplicative contacts in survivor outreach by defining disaster-specific roles and responsibilities among Joint Field Offices (JFO), National Processing Service Centers (NPSC), Individual Assistance (IA) staff, Disaster Recovery Centers (DRC), and Disaster Survivor Assistance (DSA) staff.
- Launch of America's PrepareAthon!: This is a nationwide, community-based campaign for action to increase emergency preparedness and resilience by increasing the number of individuals who:
 1. Understand the hazards most relevant to their community,
 2. Know the corresponding action to stay safe and mitigate damage,
 3. Practice a real-time behavior to increase their preparedness, and
 4. Participate in whole community planning.

Priority 2: Become an Expeditionary Organization: We will transform FEMA into an expeditionary organization that understands implicitly, at every level, that presence is a mission-that it is essential for survivors to see and encounter government representatives actively engaged in the area of impact-and that FEMA is nimble, flexible, and innovative enough to deliver on that mission effectively. This will include leaner logistics and more efficient deployment and force management processes that allow us to expeditiously establish a FEMA presence in the field while ensuring that the right people (those with the optimal skill sets and experiences) are deployed to the right place at the right time.

Key activities in Priority 2 include:

- National Exercise Program (NEP) Capstone Exercise 2014: This involves five component exercises conducted at multiple sites throughout the United States. The core exercise is Alaska Shield 2014, the State of Alaska's exercise commemorating the 1964 Great Alaska Earthquake, a magnitude 9.2 seismic event with substantial tsunami impacts. The nature of the event, with five exercises spanning a short timeframe and a majority of play in Alaska, mimics the nature of response challenges in Alaska.

- Organizational & Individual Expeditionary Performance Objectives: All FEMA offices will develop an “Expeditionary SOP” that identifies each individual’s incident management or support position with identification of level of events they would be deployed along with additional roles and responsibilities while others in the office are deployed. This would also include prioritization of essential organizational metrics and functions to ensure the day to day operations are maintained as required so that “Every Employee is an Emergency Manager” is better understood and incorporated into daily operations

Priority 3: Posture and Build Capability for Catastrophic Disasters: Our greatest challenge lies in preparing for an unprecedented catastrophic event where the human, materiel, and financial effects greatly exceed, or even destroy available response and recovery capabilities. The complexity and scale of catastrophic incidents requires that we think differently about how we approach addressing these incidents. In every program area, in every mission support effort, we must ensure we are leaning forward and going big, fast, and smart. FEMA will continue to develop the National Preparedness System (NPS) and leverage the expertise and resources of partners across the Whole Community to jointly achieve the National Preparedness Goal. FEMA also will continue to build upon the catastrophic planning under the "Maximum of Maximums" framework, applying Whole Community approaches to build out core capabilities. To improve FEMA's ability to provide immediate response in a catastrophic incident, we will leverage existing resources to prioritize the enhancement of the Reservist Workforce, FEMA Corps, the DHS Surge Capacity Force, and the IMATs.

Key activities in Priority 3 include:

- Analytics and Geospatial Tradecraft Group: Funded within existing resources, this \$2 million plus program will provide FEMA-wide geospatial planning, coordination, collaboration, technical development, training, and standardization of business procedures and products with the goals to:
 1. Advocate for the efficient and effective use of geospatial capabilities within FEMA and the broader emergency management community.
 2. Educate, train, and promote awareness of geospatial capabilities for the emergency management community.
 3. Capture, catalogue, and share data efficiently and effectively
 4. Analyze, produce, and disseminate products that enhance situational awareness and enable expeditious and effective decision making
- Satellite Ground Point Entry System Upgrade: This investment (\$3.7 million in FY 2014; \$1.3 million in FY 2015) eliminates FEMA’s need for several expensive, third-party satellite airtime contracts (GAP fillers) to meet mission needs and would allow enhanced and less expensive mobile system collaboration with disaster responders and other trusted partners to expedite more efficient disaster Response and Recovery across all levels of Whole Community.

Priority 4: Enable Disaster Risk Reduction Nationally: FEMA will work to enable and facilitate greater disaster risk reduction at all levels nationally, thereby enhancing our resilience to disasters. We will provide analysis, tools, and information that support choices that guide individuals, communities, and national decisions toward reducing disaster risk. FEMA will foster and support adaptation in the face of a changing climate through our programs and our interactions with our partners.

While much of the work involves FEMA staffing and programs funded through the National Flood Insurance Program and the Flood Hazard Mapping and Risk Analysis Program much of the work will also be undertaken by FEMA S&E staff that work the Hazard Mitigation Grant Program, Building Science, Public Assistance, and other related programs.

Priority 5: Achieve Business and Management Excellence: If we are to deliver effectively on our mission, FEMA must field a motivated, quality workforce supported by robust and agile business functions that are capable in the face of our greatest challenges. We will build a human capital system that can recruit, hire, train, and retain a quality workforce that meets our mission needs-both now and in the future. We will leverage technology to drive us forward in our capabilities and employ information technology systems that support a mobile workforce, enabling critical analysis, electronic record-keeping, and information sharing. Through work place transformation we will enhance the ability of employees to move seamlessly beyond a traditional office environment and into a range of mobile work settings for additional flexibility to achieve the mission.

The FY 2015 S&E Budget reflects FEMA's commitment to our strategic priorities and to helping mature and strengthen the homeland security enterprise to optimize mission success.

III. Current Services Program Description by PPA

**Department of Homeland Security
Federal Emergency Management Agency
Salaries and Expenses
Administrative and Regional Offices
Program Performance Justification
(Dollars in Thousands)**

PPA: Administrative and Regional Offices

	Perm. Pos.	FTE	Amount
2013 Revised Enacted	1,722	1,644	245,973
2014 Enacted	1,601	1,601	249,855
2015 Adjustments-to-Base	(22)	(22)	(3,062)
2015 Current Services	1,579	1,579	246,793
2015 Program Change	-	-	(1,575)
2015 Total Request	1,579	1,579	245,218
Total Change 2014 to 2015	-	-	(4,637)

FEMA requests \$245.218 million, 1,579 positions and 1,579 FTE in the Administrative and Regional Offices PPA. This includes the following adjustment-to-base:

- Increase of \$1.035 million for the 2015 pay increase
- Decrease of 22 positions, 22 FTE and \$10.496 million for the transfer of the Evaluations and Assessments division to the Preparedness PPA
- Increase of \$2.4 million for cyber security investments
- Increase of \$1.5 million to the 10 Regional Offices primarily for enhanced tribal engagements
- Increase of \$2.5 million for workplace transformation investments

This also includes a program decrease of \$1.575 million for the elimination of awards and bonuses.

CURRENT SERVICES PROGRAM DESCRIPTION:

Administrative and Regional Offices incorporates the essential command and control functions of the Agency. The following activities directly support FEMA's mission to support our citizens and first responders to ensure that as a Nation we work together to build, sustain and improve our capability to prepare for, protect against, respond to, recover from and mitigate all hazards.

1) Office of the Administrator

The Administrator and the Deputy Administrator have the ultimate responsibility for providing leadership and direction that enables FEMA to accomplish the Agency's mission. Collaborating with State and local governments and other emergency providers to build a National system of emergency management, the Administrator integrates the Agency's emergency preparedness, protection,

response, recovery and mitigation responsibilities to confront the challenges of a natural disaster, act of terrorism or other manmade disaster. The Administrator coordinates the implementation of a risk-based, all-hazards strategy.

2) Office of External Affairs

The mission of the Office of External Affairs (OEA) is to engage, inform, and educate all of FEMA's stakeholders in support of the Agency's programs and initiatives to achieve its mission. OEA accomplishes its mission by coordinating and maintaining visibility of public and internal communications; advising FEMA program and support offices on decision-making regarding policies, plans, and actions that affect stakeholder, media, and Congressional audiences; and organizing outreach efforts targeted at principal stakeholders to include local, State, territorial, and Tribal governments, the private sector, national organizations and associations, and the American public.

OEA accomplishes critical aspects of FEMA's overall strategic goals by implementing the "Whole Community" concept and striving to improve communications—along with the sharing of best practices— among all emergency management personnel. OEA also delivers the expertise necessary to effectively lead public disaster communications in a unified manner and executes a targeted National public readiness initiative to build and sustain preparedness through the Ready Campaign.

OEA provides operational services to FEMA's mission for Intergovernmental Affairs, Strategic Communications, Public Affairs, Congressional Affairs, Private Sector Initiatives, and the Ready Campaign.

3) Office of Policy and Program Analysis

The Office of Policy and Program Analysis (OPPA) fosters strategic coherence; ensures availability of critical resources through the Defense Production Act; supports Agency policy, strategy and innovation; provides objective analysis; and drives strategy, performance integration and accountability for FEMA.

4) Office of Equal Rights

The Office of Equal Rights (OER) serves the Agency and the Nation by promoting affirmative employment, a discrimination-free workplace, and equal access to FEMA programs and benefits. The OER proactively pursues a workforce that reflects the Nation's labor force for its employees, and a workplace climate that fully embraces the core values of Accountability, Compassion, Diversity, Integrity, Partnership, Respect, and Trust. OER performs its mission by providing expert guidance and proactive support to all its customers, including State and local government officials, and the American people. The overarching goals of the office are to bring the fullest human value to the work of the Agency and to fulfill the office responsibilities' under Federal law. The office is organized into three sections: Civil Rights – manages the Federally Assisted and Federal Conducted Programs; Informal EEO Programs – manages EEO counseling, dispute resolution, and training; and, Formal EEO Programs – manages formal EEO complaint processing and investigations. OER encompasses the following activities and elements:

5) Office of the Chief Counsel

The Office of Chief Counsel (OCC) supports FEMA's efforts to reduce loss of life and property and protect the Nation from all hazards by providing the Agency with legal advice, counsel, risk analysis, and dispute resolution services. The OCC is comprised of 11 legal divisions: Response and Recovery;

Mission Support; Federal Insurance and Mitigation; Protection and National Preparedness; Regulatory Affairs; Chief of Staff for Legal Policy; Professional Development; Alternative Dispute Resolution; Procurement and Fiscal Law; Regional and Field Operations and the Ethics Office.

6) Office of the Chief Financial Officer

The Office of the Chief Financial Officer (OCFO) provides funds control, financial information, financial operations, and financial policy support to FEMA's management and oversight organizations. The Chief Financial Officer (CFO) is the principal advisor to the Administrator, Deputy Administrator and other Agency Leadership on matters relating to FEMA's financial resources. The OCFO is comprised of the following seven organizational elements: Financial Management Division; Budget Planning and Analysis Division (BPAD); Financial Systems and Management Reporting Division; Risk Management and Compliance Unit; Financial Policy Unit; Field-Based Financial Operations Unit; and the Business Operations Unit. Starting in FY 2014 an External Coordination Unit will be stood up within BPAD. This new unit will be responsible for communicating with external FEMA partners regarding budgetary and other related fiscal issues.

7) Regional Operations

FEMA's Regional Offices are empowered to implement the programmatic and doctrinal guidance developed by Headquarters, serve as the Agency's primary point of contact with whole community stakeholders, and provide incident management and support during disasters. To perform this array of mission functions, each office is led by a Regional Administrator – who reports directly to the FEMA Administrator – and is organized into programmatic divisions that resemble the structure and scope of the Agency. Through the work of the Regional Offices and their staff, FEMA supports the development of an all-hazards, risk-based emergency management system across the Nation.

8) Office of Federal Disaster Coordination

The Office of Federal Disaster Coordination (OFDC) leads, trains, equips, and manages FEMA's Federal Coordinating Officers (FCO) and Federal Disaster Recovery Coordinators (FDRC). OFDC ensures their availability for rapid deployment in response to any disaster; delivers training to develop and sustain FCO and FDRC professional competencies; coordinates FCO and FDRC assignments to meet the on-scene needs of FEMA and its emergency management partners. In the event of a Presidential disaster declaration, a Federal Coordinating Officer (FCO) is designated by name in the President's letter. OFDC ensures disaster leadership is established in a timely manner and Stafford Act provisions are in place, resulting in critical support of States and Tribes in responding to and recovering from a disaster.

9) Office of National Capital Region Coordination

The Office of National Capital Region Coordination (NCRC) enhances preparedness and promotes resiliency by enabling better communication and planning between and among Federal, State, local, regional, nonprofit and private sector stakeholders in the National Capital Region (NCR). Established by Congress in the Homeland Security Act of 2002 (section 882), NCRC's work addresses a major gap identified on 9/11 within the NCR, which is home to a large number of Federal Departments and Agencies, numerous State and local jurisdictions and our Nation's Capital, among others. NCRC's funding level request within the PPA is \$3.4 million for FY 2015 consistent with enacted FY 2014 of \$3.4 million.

To enhance the region's emergency response capability, NCRC and its staff members currently develop, coordinate, and implement inter-agency activities and plans for the NCR by serving as a key member on committees at the Federal, State, and local levels. NCRC's efforts include chairing and/or supporting the following: Joint Federal Committee (JFC); Consequence Management Subcommittee for National Special Security Events; Senior Policy Group (SPG); the Metropolitan CIOs; and, committees sponsored by the Metropolitan Washington Council of Governments and other key stakeholders. Through these organizations, the NCRC plays a critical role in coordinating and improving workforce preparedness and integration between and among NCR jurisdictions by sharing best practices and resources as appropriate.

The NCRC also provides real time NCR-specific situational awareness and information sharing to emergency management and homeland security stakeholders in the NCR through the FEMA NCR Watch Desk reports, by maintaining the NCR portal in the Homeland Security Information Network (HSIN), and providing continuing interoperability technical support, as needed. The NCR Watch Desk is the only DHS entity within the NCR that provides real time situational awareness support to the full spectrum of emergency management and homeland security stakeholders in the NCR.

To further address the need for improved coordination and information sharing among Federal, State, and local governments within the National Capital Region, NCRC has worked with its stakeholders to identify and address the following priority areas and ultimately improve the planning and preparedness efforts within the region:

- Federal Coordination - Fosters preparedness, resilience and unity of effort among Federal Departments and Agencies by facilitating Federal interagency coordination on emergency and homeland security planning efforts within the NCR.
- Regional Governance and Integration - Ensures innovative solutions and a whole community approach to emergency management by proactively engaging, collaborating with, and providing leadership among Federal, State, and local partners within the NCR.
- Situational Awareness and Information Sharing - Provides DHS and Federal, State, and local partners with real time access to accurate information for emerging incidents, events, and training activities within the NCR.
- Regional Risk Reduction - Promotes understanding of all-hazards risks and supports regional risk analysis efforts in order to collaboratively set priorities and design solutions to ensure a strong response capability in the NCR.
- Technology and Interoperability Coordination - Organizes and supports efforts to improve interoperability of information (video, voice, data) and integration for information sharing among key Federal, State, local, and regional partners in the NCR.

PPA: Preparedness and Protection

	Perm. Pos	FTE	Amount
2013 Revised Enacted	528	509	171,093
2014 Enacted	470	470	173,406
2015 Adjustments-to-Base	22	22	12,113
2015 Current Services	492	492	185,519
2015 Program Change	-	-	(519)
2015 Total Request	492	492	185,000
Total Change 2014 to 2015	-	-	11,594

FEMA requests \$185.000 million, 492 positions and 492 FTE in the Preparedness and Protection PPA. This includes the following adjustment-to-base:

- Increase of \$341 thousand for the 2015 pay increase
- Increase of \$4.862 million for MW Capital Improvements
- Decrease of \$1.798 million management efficiencies
- Decrease of \$1.788 million one-time workplace transformation
- Increase of 22 positions, 22 FTE and \$10.496 million for the transfer of the Evaluations and Assessments branch from the Administrative and Regional Offices PPA

This also includes a program decrease of \$519 thousand for the elimination of awards and bonuses.

CURRENT SERVICES PROGRAM DESCRIPTION:

Protection and National Preparedness (PNP) is responsible for the coordination of preparedness and protection-related activities throughout FEMA. These activities include grants, planning, training, exercising, individual and community preparedness, assessments, lessons learned, and continuity. PNP is composed of the front office, Office of Counterterrorism and Security Preparedness (OCSP), Office of Preparedness Integration and Coordination (OPIC), National Preparedness Directorate (NPD), Grant Program Directorate (GPD) and National Continuity Programs (NCP).

PNP's coordination and oversight responsibilities include:

- Long-term strategic planning for all of PNP
- Integration of crosscutting activities such as business operations, preparedness initiatives, etc.
- Single coordinating body for preparedness and protection efforts across the agency

- Promotion of a culture of preparedness across the agency

PNP works to ensure that Headquarters preparedness activities and initiatives are coordinated effectively and efficiently with the Regional Federal Preparedness Coordinators (FPC).

PNP's Office of Counterterrorism and Security Preparedness (OCSP) is also focused on assisting the whole community preparing for the prevention of various threats, including active-shooter and mass casualty incidents. Specifically, OCSP provides strategic planning, project management, and policy support on a host of national initiatives, including guides for developing Emergency Operation Plans,. Furthermore, the Joint DOJ-DHS Fusion Center Technical Assistance Program provides targeted guidance to fusion centers for prevention of terrorism and other threats/hazards based on fusion center assessments. The Joint Counterterrorism Awareness Workshop Series (JCTAWS) prepares homeland security/emergency management officials and first responders for complex attacks, similar to events in Mumbai and Boston. PNP also works closely with all FEMA Offices and Directorates to help align prevention and protection programs and activities with current and emerging prevention and protection policies.

In FY15, PNP will be focused on implementation of the National Preparedness System. This effort includes ensuring our whole community partners are maturing the Threat and Hazard Identification and Risk Assessments (THIRAs)—developing or updating targets for the core capabilities in the National Preparedness Goal based on their unique threats and hazards across all five mission areas (i.e., prevention, mitigation, protection, response and recovery), and estimating the resources necessary to achieve those targets. Jurisdictions then use the THIRA as the basis to identify any gaps through the annual State Preparedness Reports (SPRs), and subsequently fill the gaps either by sustaining resources, making new investments, or conducting mutual aid with whole community partners. FEMA requires that grant investment justifications demonstrate how the funds would fill gaps identified in THIRAs and SPRs. Finally, our programs are designed to satisfy other priority needs through implementing the National Training and Education System, validating readiness through the National Exercise Program, assessing our nation's preparedness through the annual National Preparedness Report (NPR), publishing lessons learned and best practices, and ensuring corrective actions are implemented following real-world incidents and exercises.

The programs described below support continued implementation of the National Preparedness System and, as evidenced by events including Hurricane Sandy and the Boston bombings, are critical to preparing our nation for disasters.

Grants Management

Funding made available in this PPA is utilized by the Grant Programs Directorate (GPD) to provide oversight and leadership of grant-related activities across the Agency. Funding is divided into four areas which allows for complete management and accountability of the enacted funding.

Establish Grant Guidance

- Review and revise strategic objectives and priorities
- Meet with constituents to obtain feedback regarding programmatic priorities
- Ensure alignment of all preparedness programs across the Federal Government by collaborating with our Federal partners when developing guidance
- Develop, coordinate, and adjudicate Funding Opportunity Announcements (FOAs) with FEMA program offices

Review and Award Grants

- Conduct programmatic, fiscal, and peer reviews of applications to ensure effectiveness of proposed investments
- Establish a risk methodology to determine allocation amounts for several of the programs
- Collaborate across the Federal Government with our partners when reviewing applications to ensure that we are eliminating duplication and allocating funding to projects that promote national preparedness
- Assess fund availability and determine final awards
- Notify Congress of pending awards
- Create award packages and notify grantees

Manage Grant Awards

- Ensure compliance through regular grant monitoring and report reviews
- Implement corrective actions resulting from audit recommendations
- Process payments and perform cash analysis
- Process amendments
- Conduct Environmental Planning and Historic Preservation (EHP) reviews
- Maintain, modify, and enhance Non-disaster Grants (ND Grants) System-related capabilities to ensure provision of grants management lifecycle support
- Provide technical and administrative assistance to grantees to ensure that projects are on schedule and national preparedness outcomes are being realized
- Track expenditures to ensure that grantees will complete projects within the defined performance period
- Develop and refine internal controls, policies, and processes in order to ensure consistent grants management practices, particularly between FEMA Headquarter program offices, FEMA Headquarters grants management personnel, and FEMA Regional grants management personnel.

Grant Close-Out

- Evaluate final performance reports
- Review close out packets
- Conduct final financial reconciliation
- Establish disposition of funds process
- Inform grantee of closeout review
- Process appeals

FEMA has dedicated its efforts to grant process improvements and is driving these improvements through the development of improved performance measures for FY 2015, including:

- Focusing on closing grants, target a reduction of grants eligible for close out by 40% (from the 12,764 grants eligible for closeout on Oct. 1, 2013);
- Improve monitoring by ensuring 100% of open grants receive at least a desk review every year;
- Eliminate backlog of open audit findings -- both GPD's and those of grantees.

FEMA established and continues to co-lead (with FEMA's Office of the Chief Financial Officer) an Intra-Agency Grants Task Force dedicated to facilitate the exchange of ideas and information necessary to ensure that grants are administered consistently and effectively, to eliminate duplication of efforts, and to strengthen FEMA's pre- and post-award grant functions. FEMA has also been an active participant in the DHS Financial Assistance Line of Business efforts, an initiative championed by the DHS Deputy Secretary to improve the performance of all DHS financial assistance programs. FEMA intends to support the recommendation of the DHS Financial Assistance Line of Business efforts by standardizing grant file management in SharePoint 2013. GPD believes these improvements will strengthen grants administration and management across the organization.

National Preparedness (NP) Program

The National Preparedness Directorate (NPD) uses funding made available in this PPA to develop and provide doctrine, programs and resources to prepare the Nation to prevent, protect, mitigate, respond to, and recover from disasters while minimizing the loss of lives, property, and infrastructure. NPD is responsible for coordinating the Nation's preparedness through stewardship of a comprehensive cycle of activity to plan, organize, equip, train, exercise, evaluate and improve capabilities.

These activities support the ongoing management and maintenance of the National Preparedness Goal and System, as required in law and Presidential policy. The System is the instrument the Nation employs to achieve the Goal of a secure and resilient Nation, and includes the following components:

- Identifying and Assessing Risk
- Estimating Capability Requirements
- Building and Sustaining Capabilities
- Planning to Deliver Capabilities
- Validating Capabilities
- Reviewing and Updating Capabilities, Resources, and Plans

Each component of the System is comprised of programs, processes, and systems that are designed to foster a collaborative, whole community approach to national preparedness that engages individuals, families, communities, private and nonprofit sectors, faith-based organizations, and all levels of government. Many of these programs, processes, and systems are currently in use and linked together; others will be updated or developed as needed. Components are routinely evaluated and refined to ensure their continued effectiveness.

In FY 2015, NP will focus on full implementation of the National Preparedness System. NPD leads the ongoing development and refinement of preparedness doctrine, policy, guidance, and other tools related to the National Incident Management System (NIMS), including resource typing, credentialing, and mutual aid; and the National Planning System, including frameworks and operational plans and procedures. NP will work closely with partners to help them complete the third iteration of Threat and Hazard Identification and Risk Assessments (THIRAs) based on the revised Comprehensive Preparedness Guide (CPG). FEMA Regions, States, and urban areas are required to conduct THIRAs annually. THIRAs play a critical role in our efforts to work together more systematically as a Nation to manage risk and build, sustain, and deliver the capabilities identified in the National Preparedness Goal (the Goal) and improve our security and resilience.

National resilience stems from individual and community resilience. National preparedness harnesses the power of every individual to make communities safer, stronger, and better prepared to respond to disasters of all kinds. This mission is supported by a national network of State, local and tribal Citizen Corps Councils, and partner programs such as the Community Emergency Response Teams (CERT). In FY 2015, NP will conduct an ongoing campaign to build and sustain national preparedness, including public outreach and community-based programs. In order to move the needle from awareness to action, NP will engage people at a deeper level, by updating messages to reflect regional and demographic differences and by connecting with social networks, such as schools, the workplace, and community organizations.

Efforts to build and sustain preparedness depend on people—particularly the men and women who serve as first responders and coordinators across the range of emergency disciplines. NP will organize and link existing training efforts across FEMA and with our partners into a National Training and Education System (NTES). NTES will take information from the THIRAs and other sources to forecast the training and educational needs of

responders and coordinators in all disciplines based on the capabilities outlined in the Goal and ensure we are developing and delivering the best mix of high quality, cost-effective courses in a variety of formats. NP will complete development of the Emergency Management Professional Program, and will implement the second two-year progressive exercise series, program reforms, and technology enhancements as described in the National Exercise Program (NEP) Base Plan and Implementation Plan.

To monitor and assess the overall integration and effectiveness of efforts to implement the System and meet the Goal, NP will continue to build out the Comprehensive Assessment System (CAS). CAS provides assessment and reporting across the entire homeland security enterprise, culminating in the annual National Preparedness Report (NPR).

Technical Assistance Program

The technical assistance program provides specialized expertise and services to State, local, tribal and territorial homeland security and emergency management agencies as well as whole community partners that participate in FEMA homeland security grant programs.

Technical assistance addresses areas of greatest need based on risk and national priorities. It provides services, analytical capacities, and guidance in two primary areas: (1) capability-building across the five homeland security mission areas (prevention, protection, mitigation, response, and recovery) and (2) homeland security grants management. This two-pronged approach ensures that the assistance measurably enhances State and local programs and the specific capabilities they build and manage. The assistance results in knowledge transfer to requesting organizations and their whole community partners, greater unity of effort in planning for catastrophic disasters, more-effective fusion centers, and improved grants management and program delivery.

Evaluations and Assessments Program (EAP)

On an annual basis, the Federal Government provides millions of dollars in grants, thousands of hours of training, and hundreds of technical assistance visits and exercise support packages to improve our Nation's preparedness. EAP evaluates, assesses, and reports on these efforts and the Nation's overall preparedness. This program conducts evaluation and assessment across the entire homeland security enterprise.

At the State, local, tribal, territorial, and urban area level, the program establishes standardized reporting requirements and tools for each jurisdiction/grantee that receives Federal assistance. The program collects and analyzes these annual reports to identify trends and inform the broader assessment of National Preparedness. Additionally, the program is responsible for measuring the effectiveness of FEMA's non-disaster grant programs in building State and local preparedness by establishing measurable goals and objectives for grantees that align with the National Preparedness Goal and System. In FY 2015, the program is refining data collection to report in more detail on grantees' resource requirements to meet their capability targets, funding applied to building and sustaining capabilities, and the involvement of whole community partners in planning to deliver and assess capabilities.

At the Federal level, the program delivers the annual Catastrophic Resources Report (CRR) to the President and Congress in accordance with the Post Katrina Emergency Management Reform Act of 2006, as amended. The CRR reviews the resources that FEMA and Federal partners invest and the current and planned initiatives that FEMA and Federal partners are undertaking to improve catastrophic preparedness.

At the national level, the program delivers the annual National Preparedness Report (NPR) to the President and Congress in accordance with the Post Katrina Emergency Management Reform Act of 2006, as amended. The

NPR summarizes national progress with the whole community in building, sustaining and delivering the core capabilities outlined in the National Preparedness Goal. In addition, the program collects, analyzes, and disseminates lessons learned, best practices, and after-action reports to improve national preparedness through the Lessons Learned/Continuous Improvement Program (LL/CIP). In FY 2015, LL/CIP research and analysis will focus on the core capability gaps identified in the NPR and State Preparedness Reports, and on improving collaboration tools available to the whole community.

National Continuity Programs

FEMA's National Continuity Programs Directorate (NCP) serves the public by preserving our Nation's constitutional form of government across a wide range of potential threats and emergencies. NCP serves as the President's lead agent for ensuring the first National Essential Function of the Executive Branch, thereby allowing for the continuance of our Nation's constitutional government under all conditions.

NCP performs this mission by coordinating activities across all levels of government: Federal, State, Territorial, local, and Tribal. NCP is comprised of the Office of the Assistant Administrator, Continuity of Operations (COOP) Division, Readiness Division (Contingency Programs), Operations Division (COG), Integrated Public Alert Warning System (IPAWS), and the Mount Weather Emergency Operations Center (MWEOC).

Continuity of Operations Division

A solid Continuity of Operations (COOP) program is the cornerstone to ensuring that all levels of government can continue to provide essential services to the American public across a range of disasters and threats. The COOP Division leads FEMA's effort to ensure comprehensive and consistent COOP preparedness across Federal, State, Territorial, Tribal, and local governments, including coordinating and integrating Federal Executive Branch efforts to develop and improve Continuity capabilities and maintain the ability of all Federal departments and agencies (D/As) to perform the eight National Essential Functions through the performance of their Individual Mission Essential Functions and Primary Mission Essential Functions.

To maintain essential functions in support of the American people during emergencies, the COOP Division develops and provides a variety of products and technical assistance, tailored to the needs of all levels of governments, thereby allowing for identification of their essential functions, development of their Continuity capabilities, and integration of Continuity into their preparedness and operational plans. The Division develops and promulgates Continuity directives for the Federal Government and Continuity guidance to our non-Federal partners. At all levels of government, the COOP Division provides Continuity outreach by developing and managing an extensive Continuity training and certification program; conducting valuable Continuity webinars, working groups, and exercises; and providing Continuity program assessments to the President of the United States, elected officials, and agency heads that enable them to make program improvements.

Lastly, the Division leads the planning, implementation, and evaluation of the Continuity programs of FEMA Headquarters, the FEMA Regions, and other FEMA Components, ensuring FEMA's readiness and capability to perform its essential functions across all hazards and threats.

Contingency Programs (Readiness Division)

NCP's Readiness Division develops, maintains, and provides an array of continuity information technology systems, and communications capabilities which provides the Executive Office of the President, the National Security Staff, the DHS Secretary, the FEMA Administrator, and other senior Federal leaders with a robust capability that allows them to maintain situational awareness before, during, and after a continuity event.

These resources span the full spectrum of the National Security / Emergency Preparedness (NS/EP) community. The Readiness Division carefully plans, programs, and manages operations, maintenance, and life-cycle updates and enhancements of these assets to satisfy evolving and extremely complex objectives. This Division also tracks and influences changes in intra and inter-agency business rules and policies, and monitors stakeholder and security requirements to ensure interoperability and integration with all assets with which they must operate and coexist.

The Readiness Division ensures critical national security systems are available and evolve as necessary to meet continuity mission requirements. The Readiness Division also maintains the continuity communications architecture for all of FEMA to include Headquarters and the Regions, as well as the architecture for FEMA's High Frequency (HF) communications capabilities.

Two of the systems maintained and operated by Readiness Division include the Readiness Reporting System (RRS) and FEMA National Radio System (FNARS). RRS provides direct support to the White House for collecting and reporting the continuity readiness posture of the Executive Branch departments and agencies. The RRS also allows D/A leadership to report on their ability to perform Primary Mission Essential Functions (PMEFs) within their respective agencies. Since the RRS is the only reporting tool in the government used to report this capability during an event or every 30 days, it has become a vital component within the continuity repertoire for reliable and timely situational awareness.

Continuity of Government (Operations Division)

The mission of NCP Operations Division is to prepare, coordinate, and implement the continuity plans and programs of the Federal Government. The Operations Division develops policy documents and authoritative directives related to the continuity mission.

The Continuity Readiness Center (CRC) is led by the Operations Division and focuses on continuity-related mission areas. The CRC provides continuity-related situational awareness, coordinates with Federal Executive Branch (FEB) D/As and analyzes and reports the impact of events on the eight National Essential Functions (NEFs). The CRC provides continuity situational awareness which includes forecasting, gaps, impacts, and proposed remediation. As part of a coordinated Executive Branch effort, the CRC gives NCP and FEMA leadership, the Secretary of Homeland Security, FEB D/As, and other senior leaders and decision-makers a single combined repository of Executive Branch continuity capability information. This information includes long-term issues and readiness capabilities to preserve the continuation of Executive Branch Primary Mission Essential Functions (PMEF) in an all-hazards environment. When long-term relocation of the Federal Government is required, the CRC will also provide analytical support, decision support, prioritized resource allocation recommendations, and other government reconstitution-related needs. The CRC assists with tracking, coordinating and implementing leadership decisions.

To ensure FEMA leadership is available and able to perform their essential functions in support of COG and disaster response, this Division also manages and maintains the Operation Rendezvous (OPRON) relocation program. This program coordinates the evacuation, relocation movement, and accountability of key leadership and staff to Continuity of Operations sites. To effectively carry out its mission, the OPRON program utilizes a variety of communications, information technology and transportation assets. It also utilizes the Federal (and Mutual Aid) Emergency Response Official (F/ERO) Repository system; which is managed by the Operations Division. The F/ERO Repository system aligns with the President's cyber-security policy and provides the capability for public safety and security officials to validate the identities and attributes of continuity personnel for access permissions to relocation sites.

Integrated Public Alert & Warning System (IPAWS) Program Management Office

Executive Order (EO) 13407 established a policy requiring the United States to have an effective, reliable, integrated, flexible, and comprehensive system to alert and warn the American people. The Department of Homeland Security designated FEMA as the lead to implement the Executive Order. NCP established a program office to implement IPAWS. The IPAWS program is tasked with:

- Building and maintaining an effective, reliable, integrated, flexible, and comprehensive alert and warning system for the Nation
- Enabling Federal, State, Territorial, Tribal, and local alert and warning authorities to use the national system to send emergency alerts via multiple communications pathways to inform their citizens about threats to their safety and well-being
- Conducting training, tests, and exercises for public alert and warning systems
- Educating the public so that they understand the functions of public alert and warning systems and how to access, use, and respond to emergency alerts
- Ensuring that alerts and warnings are accessible to those with disabilities and those without an understanding of the English language
- Diversifying and modernizing the Emergency Alert System (EAS).
- Ensuring that under all conditions, the President of the United States can alert and warn the American people

The IPAWS Program has two primary system components: the National EAS and Primary Entry Point (PEP) system, which supports alerts and warnings from the President; and the IPAWS-OPEN system, which provides alert message exchange from Federal, State, Territorial, tribal, and local alert and warning authorities to multiple communications networks. The PEP system is a network of FEMA connected private radio stations. FEMA maintains communications equipment, power generation systems, electromagnetic pulse protection, and other back up equipment at each PEP station to enable broadcasting of a Presidential emergency alert to the public throughout all-hazards events. Starting from 34 legacy stations in 2009, the IPAWS program expanded the PEP network to 77 stations providing direct broadcast coverage to more than 90 percent of the United States population. The program modernized three of the legacy stations in FY 2013 and continues to update remaining legacy stations with EMP protection, and modernized fuel management and spill containment measures.

The IPAWS-OPEN system is a mission critical application that provides for access and authentication of alert messages from public safety officials at all levels of government to the Emergency Alert System (EAS), Wireless Emergency Alerts (formerly the Commercial Mobile Alerting System), NOAA All Hazards Weather Radio network, and Internet alert and warning communications services. IPAWS-OPEN enables public safety officials at all levels to provide timely alerts to citizens in danger over multiple communications paths simultaneously. Access to Wireless Emergency Alerts, short text messages alerts that are broadcast from cellular towers to cellular phones in a particular area regardless of the devices home origin, is a key capability used by the National Weather Service, the National Center for Missing and Exploited Children, and State and local authorities through the IPAWS-OPEN system.

Mount Weather Emergency Operations Center (MWEOC)

MWEOC is a 564-acre DHS facility approximately 64 miles west of Washington, D.C. MWEOC provides the infrastructure necessary to support COOP, Incident Management, classified programs, and other all-hazards activities. For example, MWEOC hosts the DHS/FEMA HQ COOP site as well as provides space for use by several D/As for their storage, offices, and operations. MWEOC also supports a variety of disaster response and continuity missions. It is a hub for our Nation's emergency response activities. In addition, MWEOC provides operational space for and maintains the capability to coordinate, track, and synchronize the relocation of key

leadership and staff from the DHS and FEMA Emergency Relocation Groups (ERG) to perform their essential functions. ERG members serve as emergency personnel responsible to perform their Agency mission-essential functions.

MWEOC's assets include:

- Offices and classified meeting space
- Dormitory and training rooms
- Cafeteria that seats more than 280 personnel
- Fully equipped fire department and emergency medical unit with an ambulance service operated and staffed by FEMA employees
- Health unit
- Federal police force providing 24/7 security
- Motor pool
- Storage facilities
- Electrical redundancy

In accordance with its Master Plan, MWEOC is in the middle of a massive infrastructure upgrade to demolish antiquated buildings and replace them with modern facilities capable of supporting 21st century technology and current Federal D/A requirements. MWEOC has improved internal financial and acquisition processes to allow more rapid use of and accountability over larger projects while maintaining operational capabilities.

PPA: Response

	Perm. Pos.	FTE	Amount
2013 Revised Enacted	835	801	171,457
2014 Enacted	767	767	178,692
2015 Adjustments-to-Base	-	-	(10,578)
2015 Current Services	767	767	168,114
2015 Program Change	-	-	(738)
2015 Total Request	767	767	167,376
Total Change 2014 to 2015	-	-	(11,316)

FEMA requests \$167.376 million, 767 positions, and 767 FTE in the Response PPA. This includes the following adjustment-to-base:

- Increase of \$490 thousand for the 2015 pay increase
- Decrease of \$2.833 million for one-time expenses related to work place transformation
- Decrease of \$7.667 million in urban search and rescue
- Decrease of \$568 thousand for deferral of certain facility renovations

This also includes a program decrease of \$738 thousand for the elimination of awards and bonuses.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Response mission is to conduct emergency operations to save lives and property through positioning emergency equipment, personnel, and supplies; evacuating survivors; providing food, water, shelter, and medical care to those in need; and restoring critical public services. FEMA conducts response operations in partnership with State, Tribal and local governments; interagency Federal partners; nongovernmental organizations; and the private sector.

Office of Assistant Administrator for Response and Recovery

The Office of the Associate Administrator for Response and Recovery (OAARR) provides leadership to build, sustain, and improve the coordination and delivery of support to citizens and State, local, Tribal and Territorial governments to save lives, reduce suffering, protect property and recover from all hazards. ORR fosters and leads innovation, integration, collaboration and coordination within the whole community for disaster response and recovery.

The OAARR provides executive direction and support to the three major Directorates that report to it directly: the Response Directorate, Logistics Management Directorate, and the Recovery Directorate. This support

includes long range strategic planning, the communication and coordination of ORR policies, conducting readiness assessments and evaluations, and providing enhanced GIS analytical capabilities. The OAARR also oversees the Declarations processes to ensure all gubernatorial requests to the President for emergency declarations and major disasters meet regulatory requirements and proceed as expeditiously as possible, and oversees other related actions under the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. §§ 5121-5208, including appeals, cost-share adjustments, and requests to reopen an incident period or expand the incident type.

Response Directorate

FEMA's Response Directorate provides and coordinates the core Federal response capabilities needed to save lives, minimize suffering, and protect property in communities throughout the Nation overwhelmed by the impact of an incident, regardless of cause. Response program activities encompass the coordination of all Federal emergency management response operations, response planning, and integration of Federal, State, tribal, and local disaster programs in order to ensure efficient and effective delivery of immediate emergency assistance to individuals and communities impacted and overwhelmed by these disasters, emergencies, or acts of terrorism.

The Directorate strives to strategically address future disaster requirements by establishing and maintaining program areas including doctrine, exercises, deliberate planning, and operations and disaster emergency communications support, as well as intra- and interagency coordination.

Office of the Assistant Administrator for Response

The Office of the Assistant Administrator (OAA) provides strategic and operational guidance and leadership to all stakeholders, including FEMA headquarters, regional offices, and interagency partners. It ensures that Federal emergency response systems and capabilities are properly poised to support States and communities. Key functions include providing leadership necessary to integrate the Nation's emergency response teams, systems, and capabilities; coordinating all Federal emergency management disaster operational planning and programs; and executing the response mission through its three major program areas: operations, planning, and disaster emergency communications.

A. Incident Workforce Management Division

IWMD deploys and supports a professional disaster workforce of personnel ready for the National, all-hazard response needs of FEMA headquarters and regional leadership and assists in the deployment of responders from FEMA's full-time workforce and the DHS-supported surge capacity force when required.

B. Operations Division

The Operations Division is responsible for the management and coordination of the core Federal disaster response teams, resources, and programs needed to support the regions; interagency partners; and State, tribal, and local governments, voluntary agencies, and disaster survivors impacted by a major disaster or emergency, regardless of cause.

C. Planning Division

The Planning Division leads the development of deliberate plans across the Federal Government for catastrophic incidents. The Division coordinates and is responsible for deliberate, adaptive, interagency analysis and plans for potential/actual incidents while directing regional planning efforts for all-hazard events; providing oversight

in the development and maintenance of special programs focused on CBRNE hazards to communities throughout the Nation impacted by an incident, regardless of cause. In addition to all-hazard planning, the Division is responsible for Remote Sensing, National Special Security Events, and the National Hurricane Program (NHP). Further, the Division is accountable for integrating and aligning all FEMA's response planning efforts, coordinating the efforts of the Emergency Support Leadership Group (ESFLG), and continuing to lead the agency's whole community, multiple simultaneous major disaster events "maximum of maximum efforts", as well as supporting the implementation of PPD-8.

D. Disaster Emergency Communications Division

The Disaster Emergency Communications (DEC) Division leads FEMA's integrated Federal communications support to emergency managers at all levels of government. It has a leading national role in the management, oversight, and development of emergency communications capabilities and doctrine. The Division develops, maintains and employs FEMA's capability to provide integrated tactical voice, data, and video communications systems and services before, during, and immediately after an incident to meet emergency manager and whole community requirements. The DEC Division accomplishes its mission through three highly successful core program activities: Regional Emergency Communication Coordination Working Groups, Mobile Emergency Response Support, and Mobile Communications Office Vehicles.

E. Business Management Division

The **Business Management Division (BMD)** coordinates the major support requirements of the Directorate. The Division is charged with making decisions about the Response Directorate's mission needs and providing support for the day-to-day mission of the Directorate. BMD accomplishes this mission through the coordinated efforts of the Contracts Management Branch, the Human Resources Management Branch, the Financial Management Branch, and the Facilities and Assets Management Branch.

Logistics Management Directorate

The mission of the Logistics Management Directorate (LMD) is to effectively plan, manage, and sustain national logistics response and recovery operations, in support of domestic emergencies and special events. As the whole community Logistics Coordinator, LMD establishes national procedures, fosters transparency through collaboration and coordination, and focuses on technology enhancements to expand Region & State level logistics capabilities.

PPA: Recovery

	Perm. Pos	FTE	Amount
2013 Revised Enacted	417	395	52,842
2014 Enacted	393	393	55,121
2015 Adjustments-to-Base	-	-	1,273
2015 Current Services	393	393	56,394
2015 Program Change	-	-	(364)
2015 Total Request	393	393	56,030
Total Change 2014 to 2015	-	-	909

FEMA requests \$56,030 million, 393 positions, and 393 FTE in the Recovery PPA. This includes the following adjustment-to-base:

- Increase of \$241 thousand for the 2015 pay increase
- Increase of \$1.032 million for Sandy Recovery Improvement Act investments

This also includes a program decrease of \$364 thousand for the elimination of awards and bonuses.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Recovery mission supports individuals and communities affected by disasters of all sizes, including catastrophic events and terrorist attacks, in their efforts to recover.

Recovery Directorate

The Recovery Directorate provides program oversight for disaster assistance averaging more than \$8.0 billion annually. The Recovery Directorate oversees Federal disaster assistance programs; manages resources for readiness and recovery capability development; develops recovery strategies, policies, and doctrine for delivering assistance; plans for catastrophic events and continuity of operations; delivers grants and assistance for community and individual recovery; and develops and coordinates partnerships.

The Recovery Directorate is also FEMA's agent in the implementation of the National Disaster Housing Strategy, the National Disaster Recovery Framework (NDRF), the National Catastrophic Infrastructure Recovery Plan, Emergency Support Function (ESF) #3 (Public Works and Engineering), ESF #6 (Mass Care, Emergency Assistance, Housing, and Human Services), the Community Planning and Capacity Building (CPCB) Recovery Support Function (RSF), and the Sandy Recovery Improvement Act (SRIA)

A. Office of the Assistant Administrator for Recovery

The Office of the Assistant Administrator provides strategic leadership and direction to support and strengthen Recovery Directorate programs and activities through program analysis and evaluation; policy coordination and analysis; performance measurement and management; development of doctrinal guidance; information management, analysis, and reporting; and internal and external partner coordination and integration. In FY 2013, the Recovery Operations and Readiness Coordination Section was established to provide management and leadership to execute the Disaster Survivor Initiative.

B. National Disaster Recovery Planning Division

The NDRPD is responsible for leading the development, implementation, coordination and other activities associated with the National Disaster Recovery Framework (NDRF) and the Federal Interagency Operations Plan (FIOP). The NDRF describes the concepts and principles that guide recovery efforts in response to large-scale or catastrophic disasters; identifies scalable, flexible, and adaptable coordinating structures to align key roles and responsibilities; and links local, State, Tribal and Federal governments, the private sector, and voluntary, faith-based, and community organizations that play vital roles in recovery. The Division provides leadership and support to Federal Disaster Recovery Coordinators (FDRCs) and manages the Recovery Support Functions Leadership Group (RSFLG), which is comprised of senior leadership from other Federal Agencies including RSF National Coordinators.

The NDRPD strengthens recovery programs and assistance by developing and coordinating national-level plans and exercises, including catastrophic, all-hazards, contingency, COOP, and devolution planning; coordinating and leading the Recovery Support Function (RSF) Community Planning and Capacity Building; and supporting FEMA Regional Office recovery planning activities. Additionally the Division manages the National Disaster Support Cadre.

C. Public Assistance (PA) Division

PA Division programs provide assistance to State, Tribal, and local governments, and certain nonprofit organizations to alleviate suffering and hardship resulting from major disasters or emergencies declared by the President. The S&E appropriation funds PA full-time permanent employees plus operating expenses for consistent implementation and management of PA programs including development and maintenance of policies and doctrine, planning, training development and delivery, technology sustainment, and outreach to improve integration and coordination.

D. Individual Assistance (IA) Division

IA Division ensures that disaster survivors have timely access to a full range of programs and services to maximize their recovery, through coordination among Federal, State, Tribal and local governments, voluntary agencies, and the private sector. IA programs and functions are executed under Sections 403, 408, 410, 415, 416, 425, and 426 of the Stafford Act and funded by the DRF. The S&E appropriation funds all IA full-time permanent employees, plus operating expenses for consistent implementation and management of IA programs including development and maintenance of policies and doctrine, planning, training development and delivery, technology sustainment, and outreach to improve integration and coordination among Federal, State, Tribal and local governments, voluntary agencies, and the private sector.

E. National Processing Service Centers (NPSC)

NPSCs are a key component of the Agency's ability to support survivors' resilience to disaster through recovery programs. The NPSCs are FEMA's full-service disaster assistance processing and solution centers responsible for: registering individuals for assistance by phone and via the internet; verifying home and personal property losses through onsite inspections; processing applicant registrations to determine and communicate assistance eligibility; and responding to applicant questions by phone and mail throughout the disaster assistance process. Funding from the S&E appropriation supports full-time positions in the NPSCs as well as other activities, such as technology requirements needed to maintain call centers, equipment, and training.

F. Business Management Division

The BMD provides the Recovery Directorate coordination of internal controls, contracting, facility and asset management, financial management, human resources support, and training. Activities focus on improving efficiency, building sustainable business and workforce capabilities, supporting the implementation and modernization of service delivery with cost-effective technology systems and solutions, and effecting coordination throughout FEMA to enable successful execution of Recovery programs and delivery of services.

2015 Total Request	62	62	25,782
Total Change 2014 to 2015	-	-	(2,076)

FEMA requests \$25.782 million, 62 positions, and 62 FTE in the Mitigation PPA. This includes the following adjustment-to-base:

- Increase of \$44 thousand for the 2015 pay increase
- Decrease of \$1.254 million for reduction of onetime non-recurring increase to Dam Safety programs at the National Earthquake Program
- Decrease of \$600 thousand in management efficiencies
- Decrease of \$200 thousand for one-time expenses related to work place transformation

This also includes a program decrease of \$66 thousand for elimination of awards and bonuses.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Federal Insurance and Mitigation Administration (FIMA) creates safer communities by reducing risk of loss of life and property and preventing implementing measures to minimize potential disaster losses. This is accomplished through three core competencies and one support activity: analyzing risk through identification and assessment; reducing risk through land use, building codes, and the Hazard Mitigation Grant Program; spreading risk of flood loss through the National Flood Insurance Program; environmental planning and historic preservation; and the regional and disaster support activity.

These core competencies and support activity work jointly to reduce the likelihood of future losses, to enable individuals to recover more rapidly from floods and other disasters, and to minimize the financial impact of disasters on the U.S. Treasury, States, Tribal and local communities.

1) National Dam Safety Program (NDSP)

As a critical element of the Nation's infrastructure, dams bring water, power, flood control, recreation, economic possibilities, and many other advantages to people. Safe operations and maintenance are critical to

sustaining these advantages and avoiding potential disaster. Since 1998, the recorded number of deficient dams (those with structural or hydraulic deficiencies, leaving them susceptible to failure) has risen by 85% from 1,818 to 4,095. While federally owned dams are in good condition, and there have been modest gains in repair, the number of dams identified as unsafe is increasing at a faster rate than those being repaired. The number of high-hazard potential dams (dams whose failure would cause loss of human life) is increasing dramatically – from 9,281 in 1998 to 13,000 in 2009.

FEMA's role in addressing this problem is to aid States and communities in recognizing their risk and developing plans to mitigate that risk as the lead Federal agency for NDSP. FEMA coordinates efforts through collaborative partnerships between States, Federal agencies, and private sector and other stakeholders to secure the safety of these dams through research, training, and public awareness. The NDSP provides financial assistance to States' dam safety programs to support dam safety activities including:

- Inspecting and monitoring dams
- Training dam safety staff and inspectors
- Data analysis and research to support the improvement of State Dam Safety Programs.
- Preparation of Emergency Action Plans
- Public awareness campaigns aimed at both the public and emergency management on the risks associated with dam failure

The FY 2015 budget request includes a performance-based approach for evaluating State performance that ultimately will afford us the opportunity to allocate grant funds based on State performance versus a funds distribution based on the number of regulated dams in each State.

The FY 2015 budget supports updating and modernizing the Training Aids for Dam Safety (TADS) series. TADS is a comprehensive training program, containing 21 modules, designed to train individuals involved with or having responsibility for the safety of dams. TADS modules are self-contained, self-paced text supplemented by video presentations. Users include: engineers, technicians, dam owners, water resource managers, public officials, and the general public. The TADS series, developed in the 1980s, was the premier learning tools for the dam safety community. TAD is still a highly valued and important tool for training federal, state and private sector dam safety professionals. However, the TADS has not been updated since its inception and some of the modules do not reflect the current state of dam safety practice, and the delivery medium is not aligned with contemporary educational and training delivery technology.

2) National Earthquake Hazards Reduction Program (NEHRP)

Congress established NEHRP in 1977, and authorized the member agencies to conduct research on the causes and effects of earthquakes, produce technical guidance to develop earthquake resistant design and construction standards, and develop techniques to educate the public about earthquake hazards and mitigation.

Ongoing efforts to support the creation and maintenance of disaster-resistant building codes and standards is a major focus of the NEHRP and is an important factor in reducing the losses from major U.S. earthquakes over the past 30 years.

Each year, approximately 3,000 to 4,000 earthquakes strike our Nation. FEMA, along with partners from the U.S. Geological Survey, the National Institutes of Standards and Technology and the National Science Foundation, works to help communities identify earthquake risk and develop plans for reducing those risks.

Specifically, NEHRP manages initiatives that reduce the risk to life and property from earthquakes, including the following:

- Translating research into technical guidance publications and best practices on seismic safety, building design and construction, building codes and standards, and reducing economic losses
- Working with States, territories, regional partners and local governments in building capabilities for determining potential damage and reducing the effects of earthquakes before they occur
- Working with national codes and standards organizations to develop and improve seismic building standards
- Providing technical assistance and support to public and private stakeholders

3) Building Science Program

Building Science Program develops mitigation guidance that focuses on creating disaster-resilient communities. The program's mitigation activities include:

- Acting as a Technical Services Bureau for FIMA and FEMA for the development and maintenance of over 100 technical manuals regarding evaluation, design, and construction standards for multiple hazards, which are used by builders and building owners, designers, and local officials.
- Assessing structural resiliency in post-disaster environments through immediate deployment of mitigation assessment teams following disasters.
- Developing timely publications, guidance materials, tools, technical bulletins, and recovery advisories that incorporate the most up-to-date building codes, flood proofing requirements, and wind-resistant requirements for new construction or repairing existing buildings.
- Supporting the development and adoption of disaster-resistant model building codes and standards.
- Providing building science technical support to public and private sector stakeholders.

4) Environmental Planning and Historic Preservation

The Environmental Planning and Historic Preservation (EHP) program manages FEMA's responsibilities to be stewards of the natural and cultural environment and related compliance with all environmental planning and historic preservation laws, executive orders, and regulations across all FEMA programs. EHP's mission is to help communities reduce the impact that disasters and emergency management decisions and operations have on the Nation's natural and cultural resources. The program activities:

- Helps build a unity of effort across the emergency management team as it relates to EHP issues and requirements.
- Acts as the functional authority on environmental planning and historic preservation (EHP) activities.
- Oversees the development of all EHP regulations, policy, systems, human capital (including the EHP Disaster Workforce), outreach, and performance management aspects of these requirements. OEHP's.

The program is working closely with FEMA Directorates and Program Offices to provide technical assistance and support in integrating these stewardship responsibilities into program decision-making and policy implementation, and how to use the EHP process to further the whole community objectives of stakeholder engagement and collaboration as part of the decision-making process.

5) Regional and Disaster Support Branch

Regional and Disaster Support (R&DS) Branch works to define and manage FIMA's role in FEMA's response and recovery operations as well as to ensure regional integration into National programmatic issues.

This responsibility requires the R&DS design consensus-based solutions to prepare the disaster workforce to consistently deliver program and technical assistance to affected local governments and disaster applicants, along with facilitating Regional input regarding crosscutting initiatives. The main goals of Regional and Disaster Support are:

- Translate Headquarters programs and initiatives into tools and resources to equip the Hazard Mitigation Disaster Workforce with standards, training, and job aides to consistently deliver hazard mitigation assistance and flood insurance in the disaster setting, and to further the efforts of FIMA programs.
- Build and facilitate a National network of Regional Managers to effectively integrate FIMA's performance.
- Coordinate FIMA disaster operations, National disaster policy analysis, and crosscutting program and administrative issues in support of the Regions and the field office organizations.

6) FIMA Mission Support Activities

FIMA's mission support activities include management and oversight of Agency programs, business operations support, stakeholder engagement and outreach support, business process management and improvement activities, and information systems support activities.

7) Hazard Mitigation Grant Program (HMGP)

HMGP is authorized by Section 404 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act, as amended (the Stafford Act), Title 42, U.S. Code (U.S.C.) 5170c. The key purpose of HMGP is to ensure that the opportunity to take critical mitigation measures to reduce the risk of loss of life and property from future disasters is not lost during the reconstruction process following a disaster. HMGP is available, when authorized under a Presidential major disaster declaration, in the areas of the State requested by the Governor. Indian Tribal governments may also submit a request for a major disaster declaration within their impacted area. The amount of HMGP funding available to the Applicant is based upon the estimated total of Federal assistance, subject to the sliding scale formula outlined in 44 CFR Section 206.432(b) that FEMA provides for disaster recovery under the Presidential major disaster declaration.

Applications for HMGP are processed through the National Emergency Management Information System (NEMIS) – Mitigation module (NEMIS-MT). The Risk Reduction Division will continue to maintain and enhance the NEMIS-MT system by:

- Repairing user created and system generated errors
- Operating & maintain the legacy HMGP-NEMIS system
- Maintaining DHS mandated IT security requirements on an ongoing basis
- Providing helpdesk support to state and FEMA program users

Additionally, the Risk Reduction Division provides Benefit-Cost Analysis (BCA) training, BCA tool sustainment and enhancement. BCA training allows Applicants to be familiar with HMGP cost-effectiveness requirements and how to meet those requirements. The BCA tool is the means by which an Applicant demonstrates that an Application is cost-effective. This tool requires modifications as policies are updated and is modified when regular sustainment/improvements are implemented to reduce Applicant burden.

PPA: Mission Support

	Perm. Pos	FTE	Amount
2013 Revised Enacted	844	811	150,535
2014 Enacted	756	756	151,744
2015 Adjustments-to-Base	(8)	(8)	(9,190)
2015 Current Services	748	748	142,554
2015 Program Change	-	-	(745)
2015 Total Request	748	748	141,809
Total Change 2014 to 2015	(8)	(8)	(9,935)

FEMA requests \$141.809 million, 748 positions, and 748 FTE in the Mission Support PPA. This includes the following adjustments to base:

- Increase of \$493 thousand for the 2015 pay increase
- Decrease of \$2.863 million for workplace transformation
- Decrease of \$4.0 million related to FY 2014 IT modernization
- Decrease of \$886 thousand for the reduction of contract support
- Decrease of \$500 thousand for the reduction of licenses & software
- Decrease of \$500 thousand for overtime utility
- Decrease of 8 positions, 8 FTE and \$934 thousand for requested transfer of career development personnel to FEMA's State and Local Programs appropriation

This also includes a program decrease of \$745 thousand for elimination of awards and bonuses.

CURRENT SERVICES PROGRAM DESCRIPTION:

Mission Support (MS) enables all facets of the Agency mission by providing strategic leadership to, and assuring the timely, efficient, and effective delivery of administrative, property management, health and safety, human capital, Information Technology (IT), procurement, security services and business function capabilities. This community of capabilities provides the support infrastructure necessary for the entire FEMA enterprise of mission activities.

The functional responsibilities of each MS Office are detailed below.

The Mission Support Executive Office (MS EO)

The Mission Support Executive Officer (EO) provides primary strategic oversight to focus on integrating activities within, and seeks efficiencies among the 5 Mission Support component offices. Additionally, specific EO responsibilities include the functions of the Component Acquisition Executive; coordinating administrative, human capital, and acquisition needs in FEMA headquarters and the 10 Regional Offices; coordinating cross-organization COOP planning; and managing and overseeing basic administrative functions and activities.

Enterprise Business Unit (EBU)

EBU drives integration across Mission Support by spearheading the integration of MS strategy with budget development and execution, and by driving the strategic planning process and providing tools to allow senior leaders to manage financial and human resources across the entire enterprise.

The Office of the Chief Administrative Officer (OCAO)

OCAO provides critical support to FEMA's mission through a full range of administrative and management services, including real and accountable property management; occupational safety, health and environmental programs; records management; printing and graphics support services; facilities management, both at HQ and in the Regions; fleet support and management; support to Freedom of Information Act (FOIA) requests; and privacy protection to programs, partners, and stakeholders.

Workplace Transformation: OCAO is leading the effort to transform FEMA's workplace into a highly flexible, mobile, and collaborative environment. The first phase of this transformation is focused on the National Capital Region (NCR) through investments in vital facilities, furniture and information technology improvements that will increase capacity and employee collaboration at 500 C St. This will enable FEMA to exit two buildings achieving rent cost avoidance of over \$4M in FY 2014 and \$6.5M annually by FY 2015. Several floors will be renovated and all floors will replace outmoded cubicles with furniture to create an open-space workplace. Mobile work approaches such as telework and "hoteling" will increase FEMA's flexibility and agility, thus enabling a minimum of 20% of employees to work from out-of-office locations and improving FEMA's capability in achieving mission success as a mobile workforce. Lessons learned from this phase will be expanded throughout the NCR and to the Regions providing a foundation for culture change across the Agency. The portfolio of OCAO includes the Support Services and Facilities Management Division (SSFMD); the Occupational Safety, Health, and Environment (OSHE) Division; and the Records Management Division.

The **Support Services and Facilities Management Division** is responsible for managing real property and accountable personal property, products, services, and solutions, to include the acquisition, leasing, repair, maintenance, and disposal of fixed and temporary facilities, and inventory management of accountable personal property. SSFMD manages space optimization planning, furniture acquisition, public benefit conveyance; facilities support services, and the transit subsidy program. In addition, the Division provides or coordinates critical mission support services, such as mail management, graphic/multimedia support, publications ordering/shipment, fleet management, and printing for both steady-state and disaster support operations.

The **Occupational Safety, Health, and Environment Division** provide leadership, oversight, guidance, and support to ensure the protection of all FEMA employees and programs nationwide.

The **Records Management Division and Privacy Office** administer statutory programs that include Records Management, Privacy Act, Freedom of Information Act (FOIA), Information Quality Act, Paperwork Reduction Act (PRA), and Federal Advisory Committee Act (FACA).

The Office of the Chief Component Human Capital Officer (OCCHCO)

Overall, OCCHCO provides leadership and direction to all agency stakeholders, including FEMA headquarters, regional offices, and interagency partners on human capital programs, products, and services. It is responsible for the development and management of policies, programs, and activities designed to ensure the strategic management of the Agency's human capital assets. It is responsible for ensuring that the strategic management of human capital is integrated into all aspects of the Agency's operations. It also ensures compliance with Merit System Principles, Federal human resources (HR) laws, rules, and regulations.

The Office of the Chief Information Officer (OCIO)

OCIO supports FEMA's mission by maintaining and enhancing the Agency's IT infrastructure, and developing and enhancing key systems to support operating programs. The requested funding supports the mission by building, sustaining, and improving the capabilities that provide operations and maintenance support for 99 applications; supporting increased mobility for the FEMA workforce; providing IT governance and administrative support for programs and offices; and delivering IT services (including information security, Internet, telecommunications, and desk-side technical help), support, and oversight across the enterprise which includes more than 20 fixed locations, over 9,000 employees, and, during an event, can include up to 25,000 employees supporting our citizens and first responders. Funding supports plans to build on OCIO's FY 2014 cyber security review of all FEMA's systems. In FY 2015 OCIO will begin to make the changes necessary to ensure FEMA IT systems continue to support the country during all disasters, emergencies, and cyber events. FEMA's IT initiatives are closely aligned with those who carry out the Agency's mission and with the broader framework provided by the President's Management Agenda, and relevant legislation and guidance.

The Office of the Chief Procurement Officer (OCPO)

OCPO provides a full range of acquisition services and business solutions to all FEMA programs, partners, and stakeholders, in support of both steady state and disaster activities and operations. OCPO ensures quality contracting in a timely manner, and delivers acquisition services using the most efficient and effective means possible, by:

- Providing pre and post-award contracting and acquisition support to our customers thus ensuring stewardship of public funds by following Federal Acquisition Regulation, its supplements, and the tenets of best practices in acquisition.
- Conducting acquisition oversight and monitoring of internal controls pertinent to the acquisition process to detect and prevent fraud, waste, and abuse of acquisition resources.
- Updating, maintaining, and providing access to electronic procurement systems, to ensure uniform as well as statutory and regulatory-compliant contract documents.
- Improving the delivery of sound acquisition and business solutions and increasing the number of

strategic sourcing opportunities.

- Providing program management oversight and inventorying of acquisition programs, ensuring that acquisition lifecycle oversight complies with FEMA/DHS policies.
- Conducting acquisition investment reviews.

The Office of the Chief Security Officer (OCSO)

OCSO provides comprehensive and values based security services, programs, and activities designed to protect FEMA personnel, facilities, information, equipment, and to mitigate the risk of loss to the Government due to fraudulent activity.

Business and Program Management Unit (BPMU)

The BPMU provides program management and analysis, continued process improvement, and change management support. The BPMU also creates a formal management framework to coordinate security related activities and tasks by tracking customer service and mapping out strategy for various functions in each Division.

Policy, Training and Compliance Unit (PTCU)

PTCU is responsible for developing FEMA-wide security policies, programs, and planning to promote and ensure quality, consistency, and integration of security programs across FEMA.

Field Operations Division (FOD)

FOD ensures security policies and procedures are uniformly applied in both regional and disaster environments. FOD also ensures synchronization, coordination, and application of OCSO programs throughout regional and disaster facilities.

Support Operations Division (SOD)

SOD is responsible for the Counterintelligence, Information, Industrial, Operations, and Physical Security Programs, as well as the Identity Credential, Access Management, and HSPD-12 programs, including policies and procedures.

Personnel Security, Fraud and Internal Investigations Division (PFID)

PFID reviews allegations of employee misconduct, prevents fraudulent loss of FEMA funds, and safeguards FEMA personnel, buildings, and facilities. PFID also provides FEMA with a trustworthy and suitable workforce and delivers integrated personnel security services.

Total Change 2014 to 2015	-	-	(6,857)

FEMA requests \$103.449 million in the Centrally Managed PPA. This includes the following adjustment to base:

- Decrease of \$324 thousand in management efficiencies of reduction to contract services
- Decrease of \$5.5 million in data center operations and management
- Decrease of \$1.033 million in the Working Capital Fund (WCF)

CURRENT SERVICES PROGRAM DESCRIPTION:

Centrally managed accounts are critical bills that must be managed at the enterprise level to ensure efficient and effective cost management which includes streamlining cost factors and prompt payment. Centrally managed accounts include:

- DHS WCF
- Mount Weather WCF contributions
- Rent
- Printing
- Postage
- Mail Operations (DHS Mail Facility Ops)
- Transit Subsidy Benefits
- Federal Protective Service (FPS) Guard Services
- Building Specific Security
- Office of Personnel Management (OPM) Investigations

Centrally Managed Accounts Mission Statement

Centrally managed accounts are critical bills that must be managed at the enterprise level to ensure efficient and effective cost management which includes streamlining cost factors and prompt payment. The authority and responsibility for the individual accounts are assigned by the FEMA Office of the Chief Financial Officer (OCFO) to the individual functional components.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
12.1 Civilian Personnel Benefits	3,038	4,026	4,093	67
Total, Salaries & Benefits	3,038	4,026	4,093	67

Increase relates to a projected increase in transit benefit participation by Agency employees.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.1 Rental Payments to GSA	\$24,594	\$25,000	\$26,934	\$1,934

Increase in rent costs for additional space needed for information technology equipment.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.3 Communications, Utilities, and Misc. Charges	\$16,081	\$22,855	\$21,571	(\$1,284)

Decrease reflects management efficiencies proposed in FY 2015.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
24.0 Printing and Reproduction	\$200	\$290	\$266	(\$24)

Reduction relates increase in use of the internet to publish and share documents.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.3 Other Goods and Services from Federal Sources	\$11,958	\$17,368	\$15,318	(\$2,050)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2015 Request is a decrease related to management efficiencies by reducing contractual services with other Federal entities.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.4 Operation and Maintenance of Facilities	\$0	\$1,244	\$0	(\$1,244)

One- time expenses in facilities in FY 2014 will result in management efficiencies in future fiscal years.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.7 Operation and Maintenance of Equipment	\$0	\$4,256	\$0	(\$4,256)

One time increase expenditures in FY 2014 will result in management efficiencies in future fiscal years.

Recovery Mission Statement

The Recovery mission seeks to support communities in rebuilding so individuals, civic institutions, businesses, and governmental organizations can function on their own, return to normal life, and protect against future hazards.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	33,400	32,849	33,272	423
11.5 Other Personnel Compensation	-	342	-	(342)
12.1 Civilian Personnel Benefits	13,151	13,094	13,262	168
Total, Salaries & Benefits	46,551	46,285	46,534	249

The FY 2015 request includes an increase of \$249,000 for 2015 pay increase and rebaselining of personnel costs.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.3 Communications, Utilities, and Misc. Charges	\$707	\$1,112	\$1,202	\$90

Increase cost relates to continued efforts to implement the Sandy Recovery Improvement Act.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
24.0 Printing and Reproduction	\$33	\$51	\$56	\$5

Increase cost relates to continued efforts to implement the Sandy Recovery Improvement Act.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.1 Advisory and Assistance Services	\$2,419	\$3,804	\$4,113	\$309

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2015 request includes a net increase of \$309,000 reflecting continued implementation of the Sandy Recovery Improvement Act.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.2 Other Services from Non-Federal Sources	\$1,085	\$1,706	\$1,845	\$139

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2015 request has an increase of \$139,000 related to the continued implementation of the Sandy Recovery Improvement Act.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.7 Operation and Maintenance of Equipment	\$289	\$455	\$491	\$36

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
26.0 Supplies and Materials	\$63	\$99	\$107	\$8

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2015 request includes an increase of \$8,000.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
31.0 Equipment	\$571	\$898	\$971	\$73

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2015 request includes increase of \$73,000 related to the continued implementation of the Sandy Recovery Improvement Act.

Preparedness and Protection Mission Statement

The Preparedness mission seeks to reduce the loss of life and property, and protect the Nation by; planning, training, exercising, and building the emergency management profession. As manager and coordinator of the preparedness cycle, FEMA provides assistance, support, and leadership to help Federal, State, Tribal and local governments and the private sector build the operational capabilities needed to successfully implement preparedness strategies. The Protection mission seeks to protect our Nation's constitutional form of government and ensures that a system is in place to warn our citizens of impending hazards. FEMA is responsible for supporting the enhancement of protection capabilities for all hazards, which in turn helps to integrate the tools and mechanisms for capability building across mission areas; streamlines the delivery of assistance to State, Tribal and local governments, as well as nongovernmental entities; and leverages existing inter-governmental coordination infrastructures. FEMA's primary continuity business lines and associated continuity activities include: Continuity Planning, Continuity Training and Exercises, and Continuity Operations.

Summary Justification and Explanation of Changes

Mission Support Mission Statement

Mission Support provides the corporate support, tools, and resources that the Agency needs to build, sustain and improve our primary mission of preparedness, protection, response, recovery and mitigation. Functions include information technology, human capital management, acquisition management, security, and administration which include facilities management, records management, and occupational health and safety.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	72,923	67,433	67,454	21
11.5 Other Personnel Compensation	17	712	-	(712)
12.1 Civilian Personnel Benefits	28,718	26,879	26,887	8
Total, Salaries & Benefits	101,658	95,024	94,341	(683)

The FY 2015 request for Salaries & Benefits is a net decrease of \$683,000, reflecting the elimination of awards and other personnel

compensation adjustments.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
22.0 Transportation of Things	\$227	\$267	\$239	(\$28)

Decrease reflects management efficiencies proposed in FY 2015.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.3 Communications, Utilities, and Misc. Charges	\$307	\$361	\$320	(\$41)

Decrease reflects management efficiencies proposed in FY 2015.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.1 Advisory and Assistance Services	\$3,413	\$4,015	\$2,900	(\$1,115)

Reduction relates to management efficiencies through the reduction of contractual services.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.2 Other Services from Non-Federal Sources	\$18,941	\$22,283	\$18,590	(\$3,693)

Reduction relates to management efficiencies through the reduction of contractual services.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.3 Other Goods and Services from Federal Sources	\$1,542	\$1,814	\$1,594	(\$220)

Reduction relates to management efficiencies through the reduction of contractual services.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.4 Operation and Maintenance of Facilities	\$812	\$955	\$820	(\$135)

Reduction relates to the one time expenditures being completed in FY2014 which will improve FEMA's facilities and reduce cost in future fiscal years.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.7 Operation and Maintenance of Equipment	\$2,493	\$2,933	\$2,502	(\$431)

Reduction relates to the one time expenditures being completed in FY2014 which will reduce cost in future fiscal years.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
26.0 Supplies and Materials	\$944	\$1,111	\$902	(\$209)

Decrease reflects management efficiencies proposed in FY 2015.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
31.0 Equipment	\$5,034	\$5,922	\$4,920	(\$1,002)

Reduction relates to increasing the life cycle replacement of equipment from three years to four years.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
32.0 Land and Structures	\$13,738	\$16,162	\$13,784	(\$2,378)

Reduction will hold FEMA's expenses similar to FY 2013 actuals through management efficiencies.

Administrative and Regional Offices Mission Statement

Administrative and Regional Offices incorporates the essential command and control functions of the Agency. Administrative coordinates all policy, strategic planning, resources, managerial and administrative actions to include the Federal Coordinating Officers, the National Capital Region Coordination (NCRC) and the Evaluations and Assessment Program. Regional Operations includes the leadership, management, and mission support functions of the 10 FEMA Regions. The Regions execute the operational direction received from headquarters to ensure that FEMA can execute its primary mission: preparedness, protection, response, recovery and mitigation.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	150,355	149,787	148,343	(1,444)

Response Mission Statement

The Response mission seeks to conduct emergency operations to save lives and property through positioning emergency equipment, personnel, and supplies; evacuating survivors; providing food, water, shelter, and medical care to those in need; and restoring critical public services. FEMA conducts response operations in partnership with State, Tribal, and local governments; interagency Federal partners; nongovernmental organizations; and the private sector.

Mitigation Mission Statement

The Mitigation mission seeks to reduce or eliminate long-term risks to people and property from hazards and their effects. Mitigation benefits society by creating safer communities, enabling people to recover more rapidly from floods and other disasters, and reduce the financial impact on Federal, State, Tribal and local governments and communities. FEMA's mitigation mission is accomplished through the following basic mitigation business lines: Risk Analysis, Risk Reduction and Risk Insurance.

Summary Justification and Explanation of Changes

Salaries and Expenses -- Addendum

Salaries and Expenses PPA Consolidation Consolidation of the Response & Recovery PPA's

FEMA is requesting to consolidate the two separate Response and Recovery PPAs into a single PPA. This consolidation will align the budget structure with the organizational management structure while increasing transparency and accountability for mission execution and performance. With one Response and Recovery PPA, FEMA will elicit stronger partnerships within ORR Directorates and narrow exploitable gaps. As a result, the Office of Response and Recovery will become more efficient and effective in responding effectively to some of the busiest, and most costly, disaster seasons on record.

This realignment is consistent with Congress' expressed desire to sustain change, discipline, and transparency¹ in FEMA. Prior to 2008, FEMA's appropriation included the Administrative and Regional Operations appropriation account, and Readiness, Response, Mitigation, and Recovery appropriation account. Subsequently P.L. 109-296, title VI² initiated the 2008 reorganization, which created the Management and Administration (M&A) appropriation account. This single account merged the former Administrative and Regional Operations PPA with the Readiness, Mitigation, Response, and Recovery PPA, thus maintaining funding for response, recovery, logistics activities in one PPA.

The M&A account, as well as the prior structure, enabled FEMA to manage response, recovery, and logistics resources holistically by employing resources and realigning activities to more effectively serve disaster survivors. During this period FEMA was able to move management of the disaster workforce from the Mission Support Bureau into the Response Directorate, and the procurement and storage of temporary housing units from the Recovery Directorate to the Logistics Management Directorate without significant programmatic impacts or delays. In December 2009, FEMA created the Office of Response and Recovery (ORR) combining the Response, Recovery and Logistics Management Directorates into one organization. One unified office streamlines the oversight structure at FEMA Headquarters by decreasing the number of direct reports to the Administrator and more closely aligns FEMA's form with its functions by grouping various programs together based on the nature of their mission. The response, recovery and logistics missions are closely interrelated and this realignment placed them under a single Senior Executive who reports directly to the FEMA Administrator. This realignment was supported and maintainable within the previous consolidated PPA structure.

In 2012 Congress created a new PPA structure for FEMA's Salaries and Expenses account (the successor account to M&A) which includes separate PPAs for response and recovery activities. This restructure separates the Recovery Directorate from the rest of the ORR organization causing an increased burden on ORR to dissect the interrelated response, recovery, and logistics functions that continuously overlap in support of individuals and communities affected by disasters.

As the organization has matured and common functions across ORR have evolved, leadership has identified opportunities for greater mission effectiveness and efficiency through integration of ORR's activities. However, the current appropriations structure does not align with the organization and mission presenting a barrier to change. ORR proposes consolidating the Response and Recovery PPAs to further the synergistic alignment that was envisioned in December 2009.

¹ FY 2012 Senate Appropriations Committee Report

² FY 2008 Senate Appropriations Committee Report

Currently ORR is experiencing difficulty realigning resources among directorates in order to better match operational requirements. One example is seen in the Declarations Unit move from the Recovery Directorate to the Office of the Associate Administrator for Response and Recovery. Moving the Declarations Unit was vital to achieving ORR's mission as it elevated the level of decision making and review. Since this reorganization crossed PPAs it took over two years to accomplish.

Under the current PPA structure, management of the proper allocation of resources in accordance with appropriations law becomes difficult and time consuming as there are many overlapping duties. By combining the Response PPA and the Recovery PPA into one Response and Recovery PPA, FEMA will:

- Enhance budgetary planning and control;
- Promote performance reporting and evaluation;
- Facilitate management oversight;
- Ensure alignment between major investments and budgetary resources; and
- Link strategy with resources.

These benefits will particularly be evident in the following ORR activities:

1. The Geospatial Enterprise Office (GEO) is in the Response PPA, but it serves Recovery as much as Response. For example, GIS provided significant support to response and recovery during the first two weeks of the Hurricane Sandy operations. GIS simultaneously provided the geospatial common operating picture for response coordination and aided the Recovery Directorate in making Individual Assistance determinations. Although the funding for GEO is derived from the Response PPA, the capability development, operations, and maintenance costs support the full spectrum of the response and recovery mission.
2. The Office of Readiness Assessment (ORA) conducts operational readiness assessments, after action reviews, and coordinates the Continuous Improvement Work Group that determines corrective actions for all ORR operational activities. ORA is a supporting activity for all three ORR Directorates. Funding for ORA comes from the Response PPA, and the DRS/F as appropriate.
3. The Declarations Unit processes all requests for Emergency and Major Disaster declarations, which authorize the use of both Response and Recovery programs. The Declarations Unit is a component of the Office of the Associate Administrator for Response and Recovery. Funding for the Declarations Unit comes from the Response PPA.
4. The Response Directorate manages the Mobile Communications Office Vehicle fleet and the Logistics Management Directorate manages Temporary Housing Unit (THU) storage, using the Response PPA. Both of these activities support both response and recovery field operations.
5. Each Directorate is involved in the planning activities of the other Directorates, though each Directorate has a Planning division designed to meet its own requirements. Staff resources are commonly shared to insure the appropriate subject matter experts contribute to plans. For example, Recovery routinely provides Mass Care staff to assist with Response plans. Though response and recovery are separate disciplines they are functionally in a continuum which is gradual and overlapping. They use many of the same tools, systems, and organizational resources. Planning Divisions would benefit from the ability to share contract resources and potentially realign staff.
6. FEMA has committed itself to promulgating a comprehensive set of doctrine with the associated training curriculum necessary to conduct consistent and effective response and recovery operations. Training and doctrine development is resourced from the Response PPA to serve the ORR mission by developing full spectrum response and recovery training, exercise, and documents, but in reality its focus is on the Response aspects of FEMA's mission. Similar to Planning, there could be efficiencies and benefits from creating shared ORR Training and Doctrine resources. Similarly, OR&R may realize efficiencies through a consolidation and streamlining of administrative overhead.

To ensure the proper allocation and expenditure of resources all directorates within the Office of Response and Recovery will continue to maintain distinct spend plans and separate accounting codes in the financial system. The

Office of Management and Budget will continue to apportion funds separately in accordance with these spend plans. If FEMA continues forward with two separate PPAs, there will be a continuation of risks. These risks include loss of programmatic synergies, redundancy, as well as duplication as previously mentioned. In addition there is the risk for inadvertent misallocation of fiscal resources. FEMA is normally provided the flexibility to reprogram funds between PPAs up to \$5M or 10% of the PPA amount, whichever is less, without first notifying Congress. However, the reprogramming is confined to the year in which it occurs and does not result in a permanent realignment of activities, staff, or funds. This is particularly challenging under a Continuing Resolution (CR), which requires an additional level of planning and program management. This additional funding restriction further limits ORR's ability to manage limited available resources. Combining the Response and Recovery PPAs will allow FEMA to have more flexibility during a shortened period of funding availability. This flexibility will enable FEMA to realign resources to better support individuals and communities during disasters.

ORR has two organizational significant management challenges ahead: (1) Continue to develop and implement a seamless, holistic approach to response and recovery, and (2) find efficiencies that will empower effective operations in a contracting budget environment. The ORR directorates currently provide significant support to one another. A consolidated PPA would enable a more focused management of our resources to achieve these efficiencies and maintain effectiveness.

Detailed Crosswalk Table:

The table below crosswalks the approved PPA structure into the structure outlined in this budget addendum.

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Emergency Management Agency State and Local Programs

I. Appropriation Overview

A. Mission Statement:

Through the appropriation for State and Local Programs (SLP), FEMA fulfills its role as the principal component of the Department of Homeland Security (DHS) responsible for preparing State, local and tribal governments to prevent, protect against, respond to, and recover from incidents of terrorism and other catastrophic events. The appropriation provides for grants, training, exercises, and other support to assist Federal agencies, States, territories, and tribal and local jurisdictions to prepare for terrorism and natural disasters.

B. Budget Activities:

The National Preparedness Grant Program (NPGP) consolidates current State and local preparedness grant programs, improves coordination among grantees, eliminates duplicative efforts and supports the sustainment and development of the core capabilities described in the National Preparedness Goal.

Firefighter Assistance Grants (AFG) provide funds directly to fire departments and unaffiliated EMS organizations throughout the United States to support one-year projects that improve the effectiveness and safety of the Nation's first responders in homeland security, firefighting, and emergency medical services (EMS) operations. The AFG request also includes funding for the Staffing for Adequate Fire and Emergency Response (SAFER) Grants; which provide support to fire departments and unaffiliated EMS to improve the readiness and capability of local first responders during all-hazards emergencies, including firefighting and EMS operations.

The Emergency Performance Management Grants (EMPG) program provides assistance to State and local governments in order to sustain and enhance the effectiveness of their emergency management program.

The Education, Training and Exercises umbrella program includes:

- 1) The National Exercise Program, which designs, coordinates, conducts, and evaluates exercises that rigorously test the Nation's ability to perform missions and functions that prevent, protect against, respond to, recover from, and mitigate all hazards.

- 2) The Center for Domestic Preparedness provides specialized all-hazards preparedness training to State, local, and tribal emergency responders on skills tied to national priorities, in particular those related to Weapons of Mass Destruction (WMD). It is the Nation's only live agent training facility for civilian responders and offers a unique environment that enables responders to train using toxic nerve agents and live biological agents while ensuring their safety.

3) The Emergency Management Institute provides training to Federal, State, local, tribal, volunteer, public, and private sector officials to strengthen emergency management core competencies, knowledge and skills thus improving the nation's capability to prepare for, protect against, respond to, recover from, and mitigate all hazards.

C. Budget Request Summary:

FEMA requests 239 positions, 239 FTE, and \$2.2 billion for FY 2015 as described below:

- \$1,043,200,000 for grants under the National Preparedness Grant Program
- \$670,000,000 for the Firefighter Assistance Grants (\$335,000,000 for SAFER and \$335,000,000 for AFG)
- \$350,000,000 for Emergency Management Performance Grants (EMPG)
- \$60,000,000 for Training Partnership Grants
- \$102,269,000, 239 positions and 239 FTE to support the Emergency Management Institute, the Center for Domestic Preparedness and the National Exercise Program.

The Administration's Opportunity, Growth, and Security Initiative proposal would build upon this request by providing an additional \$300 million for the NPGP.

2015 Total Request	-	-	1,043,200
Total Change 2014 to 2015	-	-	1,043,200

FEMA requests \$1 billion for the National Preparedness Grant Program (NPGP). In addition, in support of the President's Opportunity, Growth and Security Initiative, FEMA requests \$300 million as part of the National Preparedness Grant Program to provide competitive grants to state, local and tribal governments to develop, sustain and leverage core capabilities across the country in support of national preparedness.

CURRENT SERVICES PROGRAM DESCRIPTION:

Federal investments in state, local and tribal preparedness capabilities have contributed to the development of a national-level capacity to prevent, protect against, respond to, and recover from disasters of all kind. As we look ahead, to address evolving threats the NPGP will focus on building and sustaining core capabilities associated with the five mission areas within the National Preparedness Goal (herein referred to as the "Goal") that are readily deployable and cross-jurisdictional, prioritizing cost-effective options to advance local and collective national preparedness.

The Administration's FY 2015 Budget re-proposes the NPGP, originally presented in the FY 2013 President's Budget, to create a robust national preparedness capability, with some adjustments made to respond to broad stakeholder and solicited feedback received since 2012. In particular, the FY 2015 NPGP provides grantees and other stakeholders greater certainty regarding the sources and uses of available funding while maintaining the core priorities.

Similar to the FY 2014 NPGP, the FY 2015 proposal consolidates current state and local preparedness grant programs into one overarching program (excluding Emergency Management Performance Grants and First Responder Assistance Programs, i.e., Fire grants) to enable grantees to build and sustain core capabilities outlined in the Goal collaboratively. As a single comprehensive grant program, the NPGP eliminates the redundancies and requirements placed on both the Federal Government and the grantees resulting from a current system of multiple, stovepiped grant programs. The legislative package for NPGP will be transmitted concurrently with this Congressional Justification.

The FY 2015 NPGP prioritizes the development and sustainment of core capabilities as outlined in the Goal. Particular emphasis will be placed on building and sustaining capabilities that address high consequence events which pose the greatest risk to the security and resilience of the United States and can be used to address multiple threats and hazards. FEMA continues to comprehensively assess regional and national capability requirements through the Threat and Hazard Identification and Risk Assessment (THIRA) and State Preparedness Reporting processes, to prioritize capability needs and invest in critical national capabilities.

As part of the THIRA process, jurisdictions identify the resources needed to deliver core capabilities to the desired target levels, review the resources they currently have to meet those needs, and determine where they may need to maintain or rebalance resources to meet those targets. Jurisdictions examine current capability levels through the lens of real-world incidents, exercises, and assessments to determine whether changes to current capability levels are warranted. This capability estimation process incorporates community resources by engaging the expertise and capability of the Whole Community: individuals, communities, the private and nonprofit sectors, faith-based organizations, and all levels of government.

The outputs of the THIRA process serve as the foundation for jurisdictions to work with whole community partners. Together, jurisdictions and community partners develop strategies to reduce resource requirements through mitigation and protection activities, sustain resources for existing capabilities that meet target levels, add resources from whole community partners or mutual aid to bridge shortfalls in existing capabilities, and build new capabilities as needed to address emerging threats and hazards. Jurisdictions consider all resources available to them, including, for example, local and State appropriations, bond initiatives, mutual aid, and Federal grants (as appropriate) to build and sustain capabilities.

The NPGP draws upon and strengthens existing grants processes, procedures, and structures—emphasizing the need for greater collaboration and unity among Federal, State, local and tribal partners. This is particularly important as stakeholders work together to make smarter investment decisions, develop shared or deployable capabilities, and share resources through Emergency Management Assistance Compacts (EMAC) or other mutual aid/assistance agreements. In many ways, the NPGP structure mirrors the collaboration and decision making process that occurs during disasters, when various stakeholders and jurisdictions come together to plan, build, and execute capabilities together.

Grant Priorities

The primary purpose of FY 2015 NPGP is to build and sustain core capabilities associated with the five mission areas described in the Goal. In addition, NPGP focus areas include (1) enhancing

terrorism prevention and protection, and (2) strengthening critical infrastructure security and resilience, including port and transit facilities.

Core Capabilities: The highest priority of the NPGP is to develop and sustain the core capabilities identified in the Goal. Particular emphasis will be placed on capabilities that address high consequence events which pose the greatest risk to the security and resilience of the United States and its borders, and can be used to address multiple threats and hazards. Funding will support deployable assets that can be used anywhere in the country via EMAC or other mutual aid/assistance agreements. In addition, states may use funding to sustain core capabilities that may or may not be deployable, such as interoperable communications systems, mitigation-related capabilities, and fusion centers. A portion of the funding will also be placed in a competitive pool for the development of new capabilities for which a need is identified in the THIRAs.

Enhancing Terrorism Prevention Capabilities: The NPGP will prioritize programs and initiatives that directly support local efforts to understand, recognize, and prevent pre-operational activity and other crimes that are precursors or indicators of terrorist activity, in accordance with applicable privacy, civil rights, and civil liberties protections. Those programs and initiatives include: maturation and enhancement of state and major urban area fusion centers, implementation of the Nationwide Suspicious Activity Reporting (SAR) Initiative, and continued implementation of the “If You See Something, Say Something™” campaign to raise public awareness of indicators of terrorism and violent crime.

Critical Infrastructure Security and Resilience: The NPGP also will support strengthening the security and resilience of critical infrastructure and reducing its long-term vulnerability. This includes physical security enhancements to: Level 1 and 2 Critical Infrastructure/Key Resource sites in the National Critical Infrastructure Prioritization Program, transit facilities on the Top Transit Asset List, port facilities identified in Port Wide Risk Management Plans, and at risk non-profit organizations.

Allocation of Grant Funding

All NPGP awards will continue to be risk-informed. FEMA will base funding allocation decisions on risk and population and will emphasize the sustainment or building of the core capabilities identified in the National Preparedness Goal. A competitive allocation will be introduced to focus on areas of need identified in the National Preparedness Report as well as on comprehensive threat/risk assessments and gap analyses. Priorities for the competitive allocation are expected to vary by region according to the risks and hazards therein (i.e., hurricane risk for Gulf and East Coast states, flooding in the Midwest, and earthquakes and wildfires on the West Coast). State Administrative Agencies (SAAs) will each submit one coordinated statewide application, which includes investment justifications for sustainment/maintenance, as well as competitive funding, including funding for urban areas, port areas, transit agencies and non-profits, as appropriate. The sub-grantee proposals must reflect activities that are tied to the results of the state, urban area (UA) or local THIRAs, and must support a concept of building and/or sustaining national capabilities. Likewise, urban areas, port and transit authorities will be required to participate in state-generated THIRAs in FY 2015.

Competitive funding for SAA and UAs will be used to build capabilities to address the threats and hazards identified through FEMA regional THIRAs. Regional capability gaps will be published in the annual grant guidance by region, and proposals for competitive funding will be evaluated by national

and regional review panels on the ability for a jurisdiction to build, maintain and sustain the capability as a nationally deployable resource that will benefit multiple jurisdictions and increase the core capabilities for the region. The review process will be in two parts – regional review panel score and national review panel score.

Tribal nations will continue to apply directly to FEMA under a competitive process. FEMA will ensure a portion of the overall funding is dedicated to Tribal nations.

Grants Governance

The FY 2015 NPGP builds upon existing state and local administrative/governing structures, strengthening coordination among grantees to ensure that preparedness grant dollars are utilized in a manner that promotes collaboration and coordination in the maintenance and sustainment of existing capabilities, and the development of new capabilities as prioritized in the UA, State, and regional THIRAs. This collaborative process is designed to break down stovepipes among various stakeholders and give all grantees enhanced awareness of initiatives in the state and region as well as the overall strategic direction and priorities. Additional requirements and methods of increasing collaboration include:

- SAAs must be a member of the Urban Area Working Group (UAWG) and concur with the final budget proposal by the UAs in their state/territory.
- The SAA and the senior member of the Urban Area Working Group must also be members of the Regional Transit Security Working Group(s) and the Area Maritime Security Committee(s).
- Tribes should provide the regional review panels and SAAs with copies of their THIRA to ensure visibility and coordination. Similarly, SAAs should share copies of their THIRA with tribes for similar visibility and coordination.
- Port and transit authorities will be required to share their regional strategies (Port Wide Risk Management Plan or Regional Transit Security Strategy) with the SAA and the SAA will participate in the budget formulation process at the port and transit area level where applicable.
- SAAs and UAs will be required to coordinate with port and transit areas to ensure that statewide THIRAs consider the full scope of statewide risk and hazards, to include risks identified in the port and transit risk strategies.
- SAA and Urban Areas will need to integrate non-profit preparedness activities with broader State and local preparedness efforts.

Peer Review

All FEMA-funded grant projects will be validated via peer review to ensure that projects support the development and sustainment of regional and national core capabilities. The peer review process will incorporate elements of the DHS/Infrastructure Protection (IP) State, Local, Tribal, and Territorial Government Coordinating Council structure and engage representatives from stakeholder agencies from the jurisdiction receiving grant funds, peers from comparable jurisdictions, Federal preparedness coordinators and analysts from multiple state and regional grant program offices, DHS Component representatives, and representatives from national associations. Grantees will be expected to justify how projects align to their THIRA. Further, grantees will articulate how these projects will, over the lifecycle of funding, sustain current capabilities and address gaps in capabilities. Proposals for the development of new assets will be evaluated to ensure that all new capabilities can be leveraged through EMAC to benefit the region as a whole in addition to the state or local jurisdiction. This

approach will streamline existing application review processes into one coordinated approach, while at the same time, increasing accountability over the use of Federal grant funds. Additionally, direct involvement by regional FEMA representatives during the review process will assist in targeting funds for regionally critical projects, and will reduce the redundancy of like assets throughout the region.

Multiyear Program Guidance

While the period of performance will remain two years to ensure grants are drawn down in a timely manner FEMA will issue multi-year guidelines enable measurement of progress on building and sustaining the core capabilities identified in the Goal throughout the period of performance.

Monitoring and Feedback

FEMA will use project-based monitoring as the principal means of measuring project progress. Project-based monitoring is a method of following projects from creation to completion, providing basic data to measure impact over time, improving accountability, and enabling FEMA to identify progress made in preparedness and to determine current and future gaps. The FY 2015 NPGP will encourage the use of complete lifecycle planning of inventories and resources. This will allow grantees to plan and budget for equipment upgrades, develop and maintain skills through training and exercises, and update plans and procedures to enable delivery of core capabilities across the prevention, protection, mitigation, response, and recovery mission areas.

DHS will continue to solicit stakeholder feedback to ensure NPGP enables all levels of government to build and sustain, in a collaborative way, the core capabilities necessary to prepare for incidents that pose the greatest risk to the security of the Nation.

FY 2015 NPGP Funding Opportunity Announcement

SAAs will each submit one application, which includes funding for sustainment and maintenance, as well as competitive funding. Investment justifications from urban areas, port areas, transit agencies, nonprofits, and other local jurisdictions will be provided to the SAA for inclusion in the final application. The SAA, in conjunction with the State Advisory Council, will develop a process for reviewing and evaluating investments from across the State to determine the most effective proposals. The sub-grantee proposals must reflect activities that are tied to the results of the state, UA or local THIRAs, and must support a concept of building and/or sustaining national capability.

NPGP will highlight the following in the FOA:

- Alignment to PPD-8 and the Goal, National Preparedness System, core capabilities and mission areas including corresponding national planning frameworks.
- Focus on the development and sustainment of core capabilities.
- Grantees must implement programs based on the FEMA regional and state THIRAs.
- Focus on regionally and nationally deployable assets sharable through EMAC and other interstate and intrastate mutual aid agreements.

Funding availability

Maintenance and sustainment funding for SAAs, UAs, port authorities and transit agencies Each SAA and eligible UA will receive funding for building and sustaining core capabilities for terrorism prevention and protection.

- Funding will be allocated through a modified version of Section 2007 of the Homeland Security Act of 2002, Pub. L. 107-296, as amended (6 U.S.C. 608), which would require consideration of threat, vulnerability, and consequence factors, as well as the presence of fusion centers, border security threats, and other known Federal priorities to include all-hazards.
- Sustainment funding amounts for SAAs, UAs, port authorities and transit agencies will be published in the FOA. These entities will submit an investment justification (IJ) to support the implementation of that funding. The activities in the IJ must align with the state and/or UA THIRA.

Competitive funding for SAAs, UAs, and Tribes

Each SAA and any current or past eligible UA that has maintained its Urban Area Working Group (UAWG) can submit a competitive application (through the SAA) for additional funding to address regional priorities. The SAA will submit one application to FEMA that will cover competitive requests for the entire state and any eligible UAs. The UAWG must include port and transit membership since competitive funding for port and transit projects will be included in this proposal. Competitive funding for SAAs and UAs will be based on regional capability gaps as identified in the FEMA regional THIRAs.

Regional capability gaps will be published in the FOA (by region), and competitive applications will only be accepted for those regional priorities. The review process will be in two parts – regional review panel score and national review panel score. The scores will be based on the following:

- Does the application address a gap in capability identified in the applicants THIRA?
- Does the proposed project support the development or sustainment of a NIMS-typed resource?
- Does the applicant belong to or is it located in member states of EMAC (exception for tribal governments, American Samoa, and the Commonwealth of the Northern Mariana Islands)?
- Does the applicant have the ability to sustain the capability into the future in order to ensure the capability gap is filled in the long-term?
- Is the capability redundant of a capability that already exists within a reasonable response time?
- Can the project be completed within 24 months?
- Has the grantee been able to expend funding in a timely fashion for past projects?

Tribal nations will continue to apply directly to FEMA under a competitive process. FEMA will ensure a portion of the overall funding is dedicated to the tribal nations.

Stakeholder Feedback/Recommendations

In support of the Administration's FY 2013 proposal, FEMA conducted over 70 briefings, meetings and conference presentations with diverse stakeholder groups across the country throughout FY 2012 and these outreach efforts continued into 2013. The following major themes emerged and have been addressed in the Administration's FY 2015 proposal.

1. Desire to retain funding for law enforcement prevention, fusion centers and Operation Stonegarden.

FY 2015 Proposal: Maintenance and sustainment of core law enforcement prevention capabilities – including fusion centers, countering violent extremism and state and local information sharing – remain key Administration priorities. In addition, eligible law enforcement activities previously funded under other grants such as Operation Stonegarden, and port/transit operations will continue to be funded based on priorities outlined in state and urban area THIRAs.

2. Desire by cities to retain the mandatory pass through of 80% of grant funding to local units of government coupled with concern voiced by states about the need for a higher percentage of the overall funding and allowable M&A to manage the proposed NPGP.

FY 2015 Proposal: Currently, port authorities, transit agencies, private sector and non-profit organizations may be classified as private organizations or State organizations which make them ineligible as a “local” designee, even though their activities are in support of local capabilities. The Administration’s legislative proposal will change to the definition of a “local unit of government” in the 9/11 Act to include all port areas, transit agencies, and non-profit organizations.

3. Concern about the two year period of performance and desire to change the time allotted to complete projects to three or four years.

FY 2015 Proposal: Given the drawdown initiatives and shortened period of performance in FY 2012 and FY 2013, the Administration will maintain the two-year performance period.

4. Concern for how the THIRAs would be used, who would be required to complete them, engagement and transparency of the THIRA process and the relationship of the THIRA to funding allocation decisions.

FY 2015 Proposal: Mandatory engagement of urban areas and port and transit authorities in SAA generated THIRAs and investment justifications will be required in FY 2015. In FY 2012 and FY 2013, states were highly encouraged to collaborate with all levels of government when completing their THIRA. FEMA will require this collaboration in FY 2014 through grant guidance.

5. Concern for how existing governance structures such as State Senior Advisory Committees, Urban Area Working Groups, Regional Transit Security Working Groups and Area Maritime Security Committees continue to be used within the NPGP construct.

FY 2015 Proposal: Grantees will leverage existing governance structures, and enhance them where appropriate. NPGP will continue to require a State Advisory Council to oversee all grant-funded homeland security projects and programs to maximize coordination and ensure there is no unnecessary duplication of effort and resources. [See Governance Structures section above]

6. Concern that regulated port entities and transit systems would be required to apply through the SAA.

FY 2015 Proposal: Since a primary objective of the NPGP is to ensure SAAs have complete visibility on all grant funded projects within a state, the SAA will continue to be the only eligible applicant for NPGP funding in FY 2015. However, the FY 2015 NPGP will allow for transit agencies and ports areas to include their own individual applications along with the SAA application, consistent with urban area requests.

7. Concern for how mitigation activities will be funded.

FY 2015 Proposal: The FEMA preparedness grant programs have always included mitigation planning activities as eligible expenses, and NPGP will continue to do so.

FEMA requests \$670 million for Firefighter Assistance Grants.

CURRENT SERVICES PROGRAM DESCRIPTION:

Assistance to Firefighter Grants

The AFG program, in cooperation with the U.S. Fire Administration, awards grants directly to fire departments and unaffiliated EMS organizations throughout the United States to support one-year projects that improve the effectiveness and safety of the Nation's first responders in homeland security, firefighting, and EMS operations.

The entire AFG process is fully automated in an electronic grants system. Applicants apply online; grants are awarded electronically; grantees manage their grants (payment requests, amendments, etc.) online; and grants are monitored and closed out electronically. For FY 2015, eligible applicants will be invited to submit an application for assistance in the following program areas most critical to enhancing the capabilities of the fire and EMS services:

- Operations and Safety programs, which include training, equipment, and personal protective equipment
- Firefighting Vehicle Acquisition program, which includes but is not limited to: pumpers, brush trucks, tankers/ tenders, rescue vehicles, ambulances, turntable ladder trucks with quintuple capabilities (quints), aerials, foam units, and fireboats less than 20 feet
- Wellness/fitness activities
- Support for State Fire Training Academies

- Increasing the number of trained, "front-line" firefighters
- Modifications to facilities
- Fire Prevention and Safety (FP&S) activities, which include awareness and education, arson prevention, code enforcement, burn prevention, and firefighter safety research and development

Funding priorities for each of the funding activities are determined by DHS/FEMA and are based on the National Preparedness Goal and on recommendations from the Nation's fire service (represented by nine major fire service organizations). The applications that most closely align to those announced priorities are reviewed by peer panels. Peer review panels typically commence within two weeks of the end of the grant application period and take three weeks to complete. Grant awards are based primarily on the results of the peer review panels.

Under the reauthorization legislation, AFG must also expend a minimum of ten percent of available grant funding for fire prevention activities. The FP&S Grants support projects that enhance the safety of the public and firefighters from fire and related hazards. The primary goal is to target high-risk populations and reduce injury and prevent death.

Staffing for Adequate Fire and Emergency Response (SAFER) Act Grants

SAFER grants provide support to fire departments to improve the readiness and capability of local first responders during all-hazards emergencies, including firefighting operations. FEMA strongly encourages applicants, to the extent practicable, to seek, recruit, and hire post-9/11 veterans to increase their ranks within their department in order to take advantage of the provisions of the Veterans Opportunity to Work (VOW) to Hire Heroes Act of 2011.

FEMA requests \$350 million for the Emergency Management Performance Grants program.

CURRENT SERVICES PROGRAM DESCRIPTION:

EMPG is a formula-based grant program that provides assistance to State and local governments in order to sustain and enhance the effectiveness of their emergency management program. Funds are provided to all 50 States and six territories as well as to the Federated States of Micronesia and the Republic of the Marshall Islands. FEMA provides States with the flexibility to allocate funds according to risk and to address the most urgent State and local needs in disaster mitigation, preparedness, response, and recovery. EMPG works within the Federal government grant administration process to provide the support that State and local governments need to achieve measurable results in key functional areas of emergency management: laws and authorities; hazard identification and risk assessment; hazard management; resource management; planning; direction, control, and coordination; communications and warning; operations and procedures; logistics and facilities; training; exercises; public education and information; and finance and administration. EMPG is allocated at a 50 percent Federal cost share.

2015 Total Request	-	-	60,000
Total Change 2014 to 2015	-	-	60,000

FEMA requests \$60 million for the Training Partnership Grants

CURRENT SERVICES PROGRAM DESCRIPTION:

Training Partnership Grants, formerly funded separately as the Continuing Training Grants (CTG) and National Domestic Preparedness Consortium (NDPC), will be awarded on a competitive basis to entities (e.g., State, local, tribal, and territorial governments; universities and higher education institutions; and non-profits) that have demonstrable expertise and can develop and deliver curricula that tie to the core capabilities in the National Preparedness Goal. The aim is to incentivize innovation in homeland security training through its competitive approach to awarding funds.

Awards to first-time grant recipients that are facility-based training and education centers will be for the development of curricula and to assist with other programmatic start-up costs as they establish a reimbursable training program or course. The grant funding for these recipients will be phased out over several years, as the grantee builds a customer base to reimburse the grantee for the training they receive. Established grant recipients (including former recipients under the NDPC and CTG) will compete for funding based on the merit of their respective proposals. All grant recipients will be required to sustain the programs and courses developed utilizing funding they collect from attendees.

This competitive approach will enable FEMA to develop new venues and vehicles to train and educate the State and local first responder community.

Total Change 2014 to 2015	8	8	(131,385)

FEMA requests \$102 million for Education, Training and Exercises.

CURRENT SERVICES PROGRAM DESCRIPTION:

National Exercise Program (NEP)

The NEP serves as the principal mechanism for examining the preparedness and readiness of the United States across the entire homeland security and emergency management enterprise. The purpose of the NEP is to design, coordinate, conduct, and evaluate exercises that rigorously test the Nation's ability to perform missions and functions that prevent, protect against, respond to, recover from, and mitigate all hazards.

The NEP fosters meaningful and systematic interaction of public officials at every level of jurisdiction while incorporating the participation of private-sector, faith-based, and non-governmental organizations, along with the public, against a set of common objectives. Each two-year NEP cycle is risk-driven, capabilities based, guided by objectives, and responsive to changes in policy and lessons learned from previous exercises and actual events.

The exercises conducted in the NEP employ the doctrine and methodology of the Homeland Security Exercise and Evaluation Program (HSEEP) which provides exercise guidance and principles constituting a national standard for homeland security exercises. The HSEEP Toolkit serves as the supporting technology platform, providing the homeland security enterprise with access to preparedness services and technologies to meet current and emerging needs and support integration capabilities.

In FY15, FEMA will begin executing the second two-year NEP cycle which will continue to use realistic, efficient, and collaborative exercises that are scheduled throughout the country, culminating in a capstone full-scale exercise to be conducted in the second year of the cycle. This cycle will include the incorporation of improved processes identified throughout the inaugural cycle, and will result in exercises that validate objectives identified by principals from the whole community. Further, the NEP will support the conduct of approximately 75 exercises designed to monitor, measure, and improve the preparedness of the Nation across the core capabilities defined in the National Preparedness Goal.

National Training Program

The National Training Program provides training tailored to first responders that enhances the capacity of State, local, Tribal and Territorial (SLTT) jurisdictions to prepare for, prevent, deter, respond to, and recover safely and effectively from potential manmade and natural catastrophic events, including terrorism. This program manages and administers the Training Partnership Grants (described in the State and local Appropriation CJ) and draws upon the expertise of a diverse group of training partners to develop and deliver approved training courses in support of the National Training and Education System. To date, FEMA training partners have delivered training to over 1.7 million first responders.

The National Training Program manages two major training related databases: the First Responder Training System (FRTS) and the Registration and Evaluation System (RES). The FRTS is the outward-facing system that offers training and education materials and support tools for State and local stakeholders. These training support tools include the Responder Training Development Center (RTDC) which leads course developers through all the stages of course development and provides check points for approval by program managers.

Center for Domestic Preparedness (CDP)

The CDP provides specialized all-hazards preparedness training in support of NTES to SLTT emergency responders on skills tied to national priorities, particularly those related to chemical, biological, radiological and nuclear Weapons of Mass Destruction. To date, the CDP has trained more than 784,000 students from SLTT agencies. Training for SLTT responders is provided for 10 disciplines and is designed to build the Nation's capacity to respond to and stabilize a catastrophic event within 72 hours and restore basic services and community functionality within 60 days thereafter.

The Chemical, Ordnance, Biological, and Radiological Training Facility is the Nation's only toxic-agent training facility for civilian responders, providing a unique environment that enables them to train using military nerve agents and live biological materials in a safe and realistic training environment. NTP operates the Noble Training Facility, the only hospital facility in the United States dedicated solely to training hospital and healthcare professionals in disaster preparedness and mass casualty operations. The Noble Training Facility addresses training gaps identified by the healthcare response community and trains healthcare professionals to meet all-hazard threats in a realistic hospital environment. In addition to developing and delivering emergency responder training at various levels for a broad range of emergency response disciplines, the CDP also participates in efforts to standardize this training for SLTT responders while maintaining training quality and gathering meaningful evaluation data for continuous program improvement and effective

program management. The CDP maintains a campus of 124 acres and approximately 935,000 square feet of training and support facilities.

Emergency Management Institute (EMI)

EMI is the emergency management community's flagship training institution for Federal, SLT, volunteer, public, and private sector officials to strengthen emergency management core competencies. EMI directly supports the implementation of the National Preparedness Goal, National Incident Management System, and the National Planning Frameworks by developing critical knowledge and skills to improve and sustain the Nation's capability to prepare for, protect against, respond to, recover from, and mitigate all hazards utilizing the Whole Community approach. EMI trains more than 2 million students annually. Training delivery systems include residential onsite training; offsite delivery in partnership with emergency management training systems, colleges, and universities; and technology- based platforms to conduct individual training courses for emergency management personnel across the Nation.

As part of the National Training and Education System, EMI, in partnership with academia and professional associations, is working to establish a common body of knowledge through the Emergency Management Professional Program that is designed to improve national capabilities. This program includes the National Emergency Management Academy, National Emergency Management Leaders Academy, and National Emergency Management Executive Academy.

Training Partnership Grants Mission Statement

Funds for the Training Partnership Grants, formerly funded separately as the Continuing Training Grants (CTG) and National Domestic Preparedness Consortium (NDPC), will be awarded on a competitive basis to entities (e.g., State, local, tribal, and territorial governments; universities and higher education institutions; and nonprofits) that have demonstrable expertise and can develop/deliver training and education curricula that tie to the core capabilities in the National Preparedness Goal. The program will aim to incentivize innovation in homeland security training techniques through its competitive approach to awarding funds.

National Preparedness Grants Program Mission Statement

Federal investments in State, local and tribal preparedness capabilities have contributed to the development of a national-level capacity to prevent, protect against, respond to, and recover from catastrophic events. It is the purpose of the FY 2015 National Preparedness Grant Program (NPGP) to continue supporting the development of a robust cross-jurisdictional and readily deployable suite of State and local assets. The National Preparedness Goal recognizes that a secure and resilient Nation is one with the capabilities required, across the whole community, to prevent, protect against, mitigate, respond to, and recover from the threats and hazards that pose the greatest risk. With this in mind, the FY 2015 NPGP will work to build and sustain core capabilities in the National Preparedness Goal.

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Emergency Management Agency Radiological Emergency Preparedness

I. Appropriation Overview

A. Mission Statement for Radiological Emergency Preparedness:

The Radiological Emergency Preparedness Program (REPP) ensures that the public health and safety of citizens living near commercial nuclear power plants will be adequately protected in the event of a nuclear power station incident. In addition, the program informs and educates the public about radiological emergency preparedness. REPP provides funding only for emergency preparedness activities of State and local governments that take place beyond nuclear power plant boundaries.

B. Budget Activities:

Drills and Exercises

In conjunction with State, tribal, local and industry officials, REPP conducts and evaluates exercises and drills in the communities surrounding commercial nuclear power plants. These drills and exercises ensure there is adequate off-site emergency preparedness to protect the health and safety of citizens living around commercial nuclear power plants.

Rulemaking and Policy Development

REPP develops policy and guidance and coordinates regulatory basis of program with the Nuclear Regulatory Committee (NRC) as they relate to offsite planning and preparedness. This includes implementation of Presidential Policy Directive (PPD)-8. These changes require education of Federal, State, tribal and local stakeholders on refined or newly developed REPP guidance and how it should be incorporated into REPP plans and exercise programs.

New Reactor Licensing Process

The New Reactor Licensing Program is a joint effort between FEMA and the NRC. Both organizations share a common objective of maximizing public health and safety through the evaluation of emergency plans and conduct a qualifying exercise prior to startup of proposed new reactor applicants. Early involvement during the process of constructing new reactors and prior to any power generation ensures that there is “reasonable assurance” that both onsite and offsite personnel can take the appropriate protective measures to protect public health and safety in the event of a nuclear accident.

Federal Radiological Preparedness Coordinating Committee (FRPCC)

REPP also maintains the functionality of the FRPCC as a coordinating body for radiological preparedness across the Federal government. The FRPCC, some of whose functions are funded by REPP user fee collections, coordinates the activities of Federal agencies with responsibilities in the radiological emergency planning and preparedness process. The FRPCC serves as a radiological information clearinghouse among Federal departments and agencies and is responsible for updating the Nuclear/Radiological Incident Annex of the National Response Framework.

Radiological Emergency Preparedness Training Curriculum

REPP developed and continues to employ a robust professional development path to assist FEMA staff and Federal, State, tribal and local emergency planning, preparedness and response personnel in their emergency preparedness planning and training. This is accomplished by maintaining a high-quality national level cadre of Federal employee instructors to deliver training courses throughout the country.

C. Budget Request Summary:

FEMA requests 170 positions, 170 FTE, and \$40.143 million in offsetting collections for FY 2015. REPP projects \$38.343 million in operating expenses in FY 2015 resulting in a net budget authority of -\$1.815 million.

Total Change 2014 to 2015	-	20	(39,160)

FEMA requests to use \$38.343 million in FY 2014 Offsetting Collections for FY 2015 operating expenses in support of REPP activities. This funding will support 170 positions and provide for FY 2015 program costs. The request also includes \$40.143 million in FY 2015 budget authority for the collection of licensing fees.

CURRENT SERVICES PROGRAM DESCRIPTION:

REPP ensures that the public health and safety of citizens living near commercial nuclear power plants will be adequately protected in the event of a nuclear power station incident. In addition, the program informs and educates the public about radiological emergency preparedness. REPP provides funding only for emergency preparedness activities of State and local governments that take place beyond nuclear power plant boundaries.

Drills and Exercises

REPP maintains its support to other FEMA, DHS, Department of Defense, and Federal partners involved in improvised nuclear device (IND) and radiological dispersal device (RDD) planning and exercises, as these programs share common elements with REPP's primary mission to ensure the health and safety of citizens in the event of a radiological emergency.

In FY 2015, REPP will complete 34 exercises in the states and counties within the Emergency Planning Zones of NRC licensed commercial nuclear power plant facilities. Ongoing hostile action

based (HAB) exercises continue to increase REPP's nuclear and radiological preparedness responsibilities. Currently there are 22 REP exercises planned for FY 2015 that involve a HAB component. REPP Regional and Headquarters staff will assist the State and local stakeholders in updating their plans.

New Reactor Licensing Process

Two new reactor applications are expected to be submitted for review in FY 2015. REPP has provided reviews of the offsite emergency planning for eighteen new reactor applications to date. We continue to oversee the review process through changes/updates to the State and local emergency plans.

In FY15, REPP will develop, in conjunction with the NRC, new guidance concerning the review of emergency planning for the advanced small modular reactor (SMR) units being developed by several companies. REPP will be updating guidance to reflect these new and updated policies. At this time we are expecting development of two SMRs, one in Tennessee and one in Idaho.

Radiological Emergency Preparedness Training Curriculum

In FY15, REPP will deliver and conduct 35 REP Training courses. The REPP Course curriculum consists of: the REP Accident Assessment Course, REP Core Concept Course (RCCC), REP Exercise Evaluation Course and the REP Plan Review Course (RPRC). These courses are taught throughout the FEMA Regions as requested by our stakeholders. Additional courses conducted at the Center for Domestic Preparedness (CDP) are the Radiological Emergency Response Operation and the Advance Radiological Incident Operations. Currently REP Training is revising the RPRC, which was formerly the REP Plans and Programs Course, and plans to extend the RCCC to add a section that would address Hostile Action Based event response. REP Training is currently partnering with the CDP and Emergency Management Institute, along with States and local throughout the regions to provide courses to over 995 emergency responders.

Rulemaking and Policy Development

The new major initiative in FY 2015 for REPP will be reviewing the program regulations that govern the program (44 CFR Parts 350-354). This will be a significant undertaking to ensure that the REPP regulations reflect contemporary emergency management doctrine, tenets, and lessons learned from the Fukushima accident in 2011. Some examples include risk communications strategies to the public during an incident, enhancing coordination with Federal, State, local and tribal partners and stakeholders, and developing more precise financial models and methodologies for the assessment and collection of user fees from the nuclear industry.

REPP develops policy and guidance and coordinates the regulatory program foundation with the NRC as they relate to offsite planning and preparedness, including the implementation of Presidential Policy Directive (PPD)-8 "National Preparedness. Outreach and implementation guidance is required for Federal, State, tribal, and local stakeholders on any refined or newly developed REPP guidance.

Federal Radiological Preparedness Coordinating Committee (FRPCC)

In FY 2015, REPP will co-chair (with FEMA Office of Response & Recovery) the FRPCC. In FY 2015, the FRPCC will serve as the lead in updating the Nuclear/Radiological Incident Annex (NRIA) of the National Response Framework. This update will encompass all phases of emergency response and recovery from all types of nuclear and radiological emergencies.

In FY 2015, REPP will provide ongoing training and certifications through the “A-Team University.” This program develops and maintains the members of the Advisory Team for Environment, Food and Health. The A-Team is a radiological emergency response group tasked with providing protective action recommendations to State and local governments on behalf of its member agencies. The permanent membership includes representatives from the Environmental Protection Agency (EPA), the Food and Drug Administration (FDA), the Centers for Disease Control and Prevention (CDC) and the U.S. Department of Agriculture (USDA).

Alert and Notification Enhancements

REPP maintains oversight of Public Alert and Notification systems at over 64 sites in 36 States. These systems are designed to provide prompt alerting to the public in the event of an emergency. In FY 2015, REPP, in partnership with the Chemical Stockpile Emergency Preparedness Program (CSEPP), the National Integration Center (NIC), National Continuity Programs (NCP) and the Integrated Public Alert and Warning System (IPAWS) Office will provide direct technical support to State and local governments in implementing the latest public alert and notification technologies and procedures, enhancing emergency preparedness for both radiological and all hazards.

User Fee Improvements

In FY 2013, \$5.0 million of carryover user fee collections were refunded to nuclear power station licensees a result of REPP’s increased ability to produce more accurate, transparent cost estimates. In addition, in FY 2013 the REP program undertook a cost study in an effort to better refine its cost models. REPP anticipates further adjustments as we mature our modeling capabilities, thus, ultimately diminishing the need for sizeable refunds to industry, and ensuring that refunds are conducted more timely.

BUDGET REQUEST AND SUPPORTING INFORMATION
--

**Federal Emergency Management Agency
National Pre-Disaster Mitigation Fund**

I. Appropriation Overview

A. Mission Statement for National Pre-Disaster Mitigation Fund:

The National Pre-disaster Mitigation Fund (PDM) provides technical assistance and grants to State, territory, local, and tribal governments to reduce the risks associated with disasters. The resources support the development and enhancement of hazard mitigation plans, as well as the implementation of disaster mitigation projects.

B. Budget Activities:

The PDM supports the Department's goal of strengthening capacity at all levels of society to withstand threats and hazards. PDM accomplishes this by providing Federal funding to State, territorial, local, and tribal governments for eligible planning and project activities. PDM supports the development of hazard mitigation planning and/or project applications that implement physical measures to avoid and/or reduce damage associated with natural disasters. FEMA proposes no new funding in FY 2015 for the PDM fund due to sufficient unobligated balances for the continuation of grant awards and sustaining current operating levels.

C. Budget Request Summary:

The Federal Emergency Management Agency requests 3 positions, 3 FTE. Enactment of the Administration's Opportunity, Growth, and Security Initiative would provide \$400 million for this fund.

III. Current Services Program Description by PPA

**Department of Homeland Security
Federal Emergency Management Agency
National Pre-Disaster Mitigation Fund
Program Performance Justification**
(Dollars in Thousands)

PPA: National Pre-Disaster Mitigation Fund

	Perm. Pos.	FTE	Amount
2013 Revised Enacted	7	5	23,806
2014 Enacted	3	3	25,000
2015 Current Services	3	3	25,000
2015 Program Change	-	-	(25,000)
2015 Total Request	3	3	-
Total Change 2014 to 2015	-	-	(25,000)

PPA: National Pre-Disaster Mitigation Fund

FEMA is not requesting funding for the PDM fund in FY 2015. Through FY 2017, PDM will continue to provide technical assistance to applicants, as well as monitor and close out open projects. FEMA will work to aggressively process grant applications funded by prior years' appropriations. PDM positions will be reduced through natural attrition and reassignment to other mitigation programs.

FEMA proposes a separate, fully paid for programs outlined in the Opportunity, Growth, and Security Initiative (OGSI). The OGSI shows how additional discretionary investments in 2015 can spur economic progress, promote opportunity, and strengthen national security. Building on the model established in the Balanced Budget Agreement of 2013 (BBA), the Budget outlines a specific set of mandatory spending reforms and tax loophole closers that would fully offset the cost of the Opportunity, Growth, and Security Initiative. Specifically, FEMA requests \$400 million in competitive grants to State, local and tribal governments through the PDM fund. This fund provides grants for eligible mitigation planning and projects that reduce disaster losses and protect life and property from future disaster damages. This can include planning grants to prepare flood mitigation plans; cost-effective project grants to reduce flood losses, structure elevation, retro-fitting of existing buildings, soil stabilization; and management costs for the State to help administer mitigation programs.

IV. Program Justification Changes

**Department of Homeland Security
Federal Emergency Management Agency
National Pre-Disaster Mitigation Fund
Justification of Program Changes**
(Dollars in Thousands)

Program Decrease 1: National Pre-disaster Mitigation Fund

PPA:

Program Decrease: Positions 0, FTE 0, Dollars \$(25,000)

Funding Profile

	FY 2013 Revised Enacted			FY 2014 Enacted			FY 2015 Request		
	Pos.	FTE	Dollars (\$000)	Pos.	FTE	Dollars (\$000)	Pos.	FTE	Dollars (\$000)
Current Services Level							3	3	25,000
Program Decrease							-	-	(25,000)
Total Request	7	5	23,806	3	3	25,000	3	3	-

Description of Item:

This represents an overall reduction of \$25 million.

Justification:

FEMA proposes to utilize congressionally directed funds from FYs 2008, 2009, and 2010, for new grant awards when either the applicant informs FEMA that it does not intend to use the earmark funding or when an application for the funding is not submitted to FEMA within two years of the date of the appropriated funding. Moreover, enactment of the Administration's Opportunity, Growth, and Security Initiative would provide \$400 million for this fund.

Impact on Performance (Relationship of Increase to Strategic Goals):

The fund's available unobligated balances from prior years will enable the continued issuance, oversight, and closeout of grants until funding is depleted. PDM positions will be reduced through natural attrition and reassigned to other mitigation programs once PDM has successfully closed out all grants and funds have been exhausted.

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

[For the pre-disaster mitigation grant program under section 203 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5133), \$25,000,000, to remain available until expended.]

Proposed New Language

FEMA is not requesting funding for PDM in FY 2015. Instead, FEMA requests that the following language be included in the General Provisions to make available previously earmarked funding for new grant awards and allow prior year appropriations to be used for management and administration of the fund as it sunsets:

The FEMA Administrator may make grant awards at his discretion pursuant to Section 203 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5133) with funds otherwise designated as congressionally directed spending and appropriated in any fiscal year under FEMA National Pre-disaster Mitigation Fund”, if either: (a) the intended applicant for such earmarked funding informs FEMA in writing that no application will be submitted to use the funding; or (b) no application for such earmarked funding is submitted to FEMA within two years of the date of the respective appropriation for such funds; Provided, That amounts appropriated under “National Pre-disaster Mitigation Fund” in any fiscal year shall be available for necessary and reasonable costs to administer and to close out Pre-disaster Mitigation grants.

National Pre-Disaster Mitigation Fund Mission Statement

The National Pre-Disaster Mitigation Fund provides technical assistance and grants to State, local, and tribal governments to reduce the risks associated with disasters. Resources support the development and enhancement of hazard mitigation plans, as well as the implementation of disaster mitigation projects.

Summary Justification and Explanation of Changes

BUDGET REQUEST AND SUPPORTING INFORMATION
--

**Federal Emergency Management Agency
Emergency Food and Shelter**

I. Appropriation Overview

A.Mission Statement for Emergency Food and Shelter:

The Emergency Food and Shelter (EFS) program, entrusted through the McKinney-Vento Homeless Assistance Act of 1987 (P.L. 100-77), provides grants to nonprofit and governmental organizations at the local level through the National Board to supplement and expand ongoing efforts to provide shelter, food, and supportive services for hungry and homeless people across the Nation.

B.Budget Activities:

EFS funds are used to supplement food, shelter, rent, mortgage, and utility assistance programs for people with non-disaster related emergencies.

The EFS program is administered via a national board of volunteer agencies currently chaired by FEMA. The National Board qualifies jurisdictions for annual EFS funding awards based on criteria involving current population, unemployment, and poverty levels. Grants are awarded to nonprofit community and government organizations that are chosen by local boards in the qualifying jurisdictions. In FY 2015, FEMA proposes to transfer EFS program funding and authorities to the Department of Housing and Urban Development.

C.Budget Request Summary:

The FEMA FY 2015 request for the EFS program is 0 positions, 0 FTE, and \$100 million.

2015 Total Request	-	-	100,000
Total Change 2014 to 2015	-	-	(20,000)

CURRENT SERVICES PROGRAM DESCRIPTION:

The EFS program provides grants to nonprofit and governmental organizations at the local level to supplement their programs for emergency food and shelter.

Funding for this program is distributed by the National Board, currently chaired by FEMA, which consists of designees from six charitable organizations: American Red Cross, Catholic Charities USA, Jewish Federations of North America, and National Council of Churches of Christ in the USA, Salvation Army, and United Way Worldwide.

Local jurisdictions (cities or counties) qualify for EFS program support when they demonstrate the highest need for emergency food and shelter services as determined by unemployment and poverty rates. Funding also may be provided to jurisdictions that do not qualify for funding under the formula through the National Board's State Set-Aside Committee process. The National Board allocates a portion of appropriated funds to each state based upon the unemployment rates in jurisdictions that did not qualify for direct funding from the National Board. The State Set-Aside Committee process allows states to address pockets of homelessness and poverty or address the immediate needs of a locality that might be going through a high economic impact event. Of note, disaster events are not a factor currently used to determine the allocation of EFS grants.

In FY 2015, FEMA is proposing legislative language granting FEMA the authority to transfer funding for EFS to the Department of Housing and Urban Development (HUD) to be administered with other homeless assistance grants by the Office of Special Needs Assistance

Programs. Because the EFS program does not support disaster survivors, it is not well-aligned with FEMA's core mission to prepare for, mitigate against, respond to, and recover from the consequences of major disasters and emergencies. Federal expertise in homelessness assistance is largely resident at HUD, and HUD is already responsible for implementing many of the other authorities granted by the McKinney-Vento Homeless Assistance Act. This includes the Emergency Solutions Grants, which similar to EFSP, provides funds to states, cities, and counties for emergency shelters, street outreach, and other essential services to engage people who are living on the streets, as well as newer interventions such as rapid re-housing and homelessness prevention.

As highlighted by GAO and others, fragmentation and overlap of services exists among federal homeless assistance programs.¹ However, through improved coordination between Federal, State and local partners, the Administration has made significant progress toward the goals of *Opening Doors: The Federal Strategic Plan to End Homelessness*. By allowing HUD to administer this program, the Administration is better aligning its dedicated homeless assistance resources, avoiding duplication between programs, and ensuring that the funding appropriated for EFS supports the appropriate agency's mission set. FEMA will continue to support disaster food and shelter requirements under its emergency assistance authorities in the Stafford Act.

¹ GAO. *Homelessness - Fragmentation and Overlap in Programs Highlight the Need to Identify, Assess, and Reduce Inefficiencies*, GAO-12-491 (Washington, D.C., May 2012).

IV. Program Justification Changes

**Department of Homeland Security
Federal Emergency Management Agency
Emergency Food and Shelter
Justification of Program Changes
(Dollars in Thousands)**

Program Decrease 1: Reduction of Emergency Food and Shelter Program

PPA:

Program Decrease: Positions 0, FTE 0, Dollars \$(20,000)

Funding Profile

	FY 2013 Revised Enacted			FY 2014 Enacted			FY 2015 Request		
	Pos.	FTE	Dollars (\$000)	Pos.	FTE	Dollars (\$000)	Pos.	FTE	Dollars (\$000)
Current Services Level							-	-	120,000
Program Decrease							-	-	(20,000)
Total Request	-	-	113,805	-	-	120,000	-	-	100,000

Description of Item:

FEMA requests \$100 million for EFS in FY 2015.

Justification:

The EFS program is a valuable tool for communities to address the needs of the homeless and hungry. However, this program is not currently structured to help communities respond to or recover from disasters. As such, it is not in line with the primary missions of DHS/FEMA.

Impact on Performance (Relationship of Increase to Strategic Goals):

FEMA will continue to support disaster food and shelter requirements under its emergency assistance authorities in the Stafford Act. If necessary, additional Federal resources for EFS needs may be available through other Federal partners such as those who serve on the U.S. Interagency Council on Homelessness (HUD, VA, etc.). FEMA's current responsibility is to chair the annual National Board meeting to allocate EFS grant assistance, identify local communities to receive funding based on poverty and unemployment data, resolve compliance issues of local boards, and monitor, audit, and closeout the EFSP. These functions will be carried out by HUD should FEMA transfer funding for the ESF program to the "Department of Housing and Urban Development—Homeless Assistance Grants." The transfer will further the impact of these funds by allowing HUD to coordinate EFS grants across the range of Federal homelessness assistance funding.

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

To carry out the emergency food and shelter program pursuant to title III of the McKinney-Vento Homeless Assistance Act (42 U.S.C. 11331 et seq.), \$100,000,000, to remain available until expended: Provided, That total administrative costs shall not exceed 3.5 percent of the total amount made available under this heading: Provided further, That the Administrator of the Federal Emergency Management Agency (Administrator) may transfer funds appropriated under this heading to "Department of Housing and Urban Development--Homeless Assistance Grants": Provided further, That, if funds are transferred pursuant to the previous proviso, notwithstanding the references to the Administrator in 42 U.S.C 11331 through 11335 and 11341, the Secretary of Housing and Urban Development shall carry out the functions of the Administrator with respect to the Emergency Food and Shelter Program, including with respect to the National Board. (Department of Homeland Security Appropriations Act, 2014.)

Language Provision	Explanation
¹ [\$120,000] <u>\$100,000</u> ...	Proposed transferring the program to Department of Housing and Urban Development to better align the program's purpose to Department of Housing and Urban Development's mission set.

Emergency Food and Shelter Mission Statement

The Emergency Food and Shelter (EFS) program entrusted through the McKinney-Vento Homeless Assistance Act of 1987 (P.L. 100-77), provides grants to nonprofit and governmental organizations at the local level through the National Board to supplement and expand ongoing efforts to provide shelter, food, and supportive services for hungry and homeless people across the Nation.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
41.0 Grants, Subsidies, and Contributions	\$113,805	\$120,000	\$100,000	(\$20,000)

Grants/Subsidies/Contributions include cash payments to State, other political sub-divisions, corporations, associations, individuals and contributions to foreign countries, international societies, commissions, proceedings or projects.

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Emergency Management Agency Disaster Relief Fund

I. Appropriation Overview

A. Mission Statement for Disaster Relief Fund:

The Disaster Relief Fund (DRF) allows FEMA to direct, coordinate, manage, and fund eligible response and recovery efforts associated with domestic major disasters and emergencies that overwhelm State and tribal resources pursuant to the Robert T. Stafford Disaster Relief and Emergency Assistance Act. Through the DRF, FEMA can fund authorized Federal disaster support activities as well as eligible State, territorial, tribal, and local actions, such as providing emergency protection and debris removal. The DRF also funds:

- The repair and rebuilding of qualifying disaster-damaged infrastructure
- Eligible hazard mitigation initiatives
- Financial assistance to eligible disaster survivors
- Fire Management Assistance Grants for qualifying large wildfires

B. Budget Activities:

Major disasters and emergencies may be the result of hazards of all kinds and are declared by the President, typically in response to gubernatorial requests for assistance. States request Federal assistance to supplement their available resources and to certify that a given disaster is beyond their capacity or capability to respond. The DRF also supports fire management assistance activities for the mitigation, management, and control of fires on public and private lands.

FEMA coordinates three major disaster assistance programs:

- Federal Assistance to Individuals and Households
- Public Assistance
- Hazard Mitigation assistance

Non-declaration specific readiness and support activities also are funded under the DRF. These activities provide indirect support across FEMA (and to our Federal partners) and are managed separately as Disaster Readiness and Support activities.

C. Budget Request Summary:

FEMA requests 55 temporary full-time positions, 7,134 FTEs, and \$7,033,465,000 for the Disaster Relief Fund in FY 2015. This includes \$595,672,000 for base/non-major disaster activities, including a transfer of \$24,000,000 to DHS Office of Inspector General, and \$6,437,793,000 for major disasters declared pursuant to the Stafford Act and designated by the Congress as being for disaster relief pursuant to section 251(b) (2) (D) of the Balanced Budget

and Emergency Deficit Control Act of 1985 (BBEDCA), as amended by the Budget Control Act of 2011 (BCA).

The DRF request is projected to support estimated requirements for all past declared catastrophic events (where expected Federal obligations exceed \$500 million) and the 10-year average obligation level for non-catastrophic disaster activity (where Federal obligations were under \$500 million). Additionally, estimated prior year recoveries and carryover funds are factored into formulating the request.

¹FY 2013 Revised Enacted includes reprogrammings/transfers, and actual FTE/fee collections in FY 2013, as applicable.

Note: The FY 2014 Omnibus rescinded \$300.5 million in unobligated prior year balances in the “Base” DRF. The FY 2015 Budget similarly proposes to cancel \$200 million in the same manner. The rescission and proposed cancellation are not reflected in the current-year figures above.

III. Current Services Program Description by PPA

**Department of Homeland Security
Federal Emergency Management Agency
Disaster Relief Fund
Program Performance Justification
(Dollars in Thousands)**

PPA: Disaster Relief Fund

	Perm. Pos	FTE	Amount
2013 Revised Enacted	45	5,569	6,629,117
2014 Enacted	55	7,134	6,196,908
2015 Adjustments-to-Base	-	-	815,797
2015 Current Services	55	7,134	7,012,705
2015 Program Change	-	-	(3,240)
2015 Total Request	55	7,134	7,009,465
Total Change 2014 to 2015	-	-	812,557

Notes:

The 55 positions reflected above are FEMA's cadre of temporary full-time Federal Coordinating Officers (FCO) and Federal Disaster Recovery Coordinators (FDRCs). The bulk of the FTE reflected herein is made up of Disaster Reservists and Cadre of On-call Response Employees (CORE), primarily deployed for specific disasters.

FY 2013 does not include the \$11.487 billion and 2,348 FTE provided by the Disaster Relief Appropriations Act, 2013 (P.L. 113-2), or the \$3.414 million transfer to USAID for the Republic of Marshall Islands (RMI).

The FY 2014 Omnibus rescinded \$300.5 million in unobligated prior year balances in the "Base" DRF. The FY 2015 Budget similarly proposes to cancel \$200 million in the same manner. The rescission and proposed cancellation are not reflected in the current-year figures above.

FEMA requests \$7.03 billion for the DRF in FY 2015, of which \$596 million is for base/non-major disaster activities, including a \$24 million transfer to the DHS OIG, and \$6.4 billion is for major disasters declared pursuant to the Stafford Act and designated by the Congress as being for disaster relief pursuant to section 251(b)(2)(D) of the BBEDCA, as amended by the BCA. The DRF request is projected to support estimated requirements for all past declared catastrophic events (where expected Federal obligations exceed \$500 million) and the 10-year average obligation level for non-catastrophic disaster activity (where Federal obligations were under \$500 million). Additionally, estimated prior year recoveries and carryover funds are factored into formulating the request.

The FY 2015 request for the DRF includes the following:

- Increase of \$1.2 million for the 2015 pay increase
- Increase of \$814.6 million for the 10-year average adjustment obligation level
- Decrease of \$3.2 million to reflect elimination of awards

CURRENT SERVICES PROGRAM DESCRIPTION:

The Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act), 42 U.S.C. 5121-5207 (P.L. 93-288, as amended), authorizes the President to provide Federal assistance to supplement State, local, tribal and territorial disaster response, recovery, readiness, and mitigation efforts. Under Section 504 of the Homeland Security Act, as amended, FEMA's Administrator has been delegated the responsibility for administering the Stafford Act's Federal assistance programs. The DRF provides funding for the following Stafford Act declarations or activities: (1) major disaster; (2) emergency; (3) fire management assistance; (4) pre-declaration surge; and (5) Disaster Readiness and Support (DRS).

By amending the BBEDCA, the BCA necessitated a new approach to accounting for disaster-related activity. Essentially, requests for DRF funding for FEMA's Stafford Act programs and disaster support activities fall into two categories: (1) disaster relief cap adjustment; and (2) base/non-major disasters. Funding requested under the disaster relief cap adjustment is for major disasters declared pursuant to the Stafford Act and designated by the Congress as being for disaster relief pursuant to section 251(b)(2)(D) of the BBEDCA, as amended by the BCA. Funding requested under the base/non-major disasters category includes Emergencies, Pre-disaster Surge Support, Fire Management Assistance Grants and activities that are non-disaster specific, such as Disaster Readiness Support (DRS) activities (e.g., distribution centers, reservist training, etc.).

(Dollars in millions)	
DRF Need in 2015	7,033
Catastrophic	2,871
Non-catastrophic	3,912
Reserve	1,000
Estimated Recoveries	(750)
Breakdown per BCA	7,033
Disaster Relief Cap Adjustment	6,438
Base/Non-Major Disasters	596

The above figures are gross and do not include the proposed \$24 million transfer to the DHS Office of the Inspector General or the proposed \$200 million cancellation to the "Base" of prior year unobligated balances.

The funding level required for the catastrophic category (events with a total projected Federal cost in excess of \$500 million) is based on FEMA expenditure plans for all past declared catastrophic events. The DRF 2015 request includes no funds for new catastrophic events that may occur in 2015. The non-catastrophic funding level is based on an approach that uses the 10-year average for non-catastrophic events in order to normalize the effects of outlier years and provide a more accurate projection of non-catastrophic needs. The request assumes that new catastrophic events in 2015 will be funded with emergency supplemental funds as provided for in the BCA/BBEDCA.

The \$750 million in recoveries represents an estimate of the amount that FEMA will de-obligate and recover from unused prior year obligations. In FY 2013, FEMA undertook an effort to improve the efficiency of the disaster closeout process. This effort streamlined the closeout process by issuing and enforcing standard closeout policies, procedures, and metrics. FEMA has aggressively recovered funds since implementing the streamlined process and will continue to do so in FY 2015.

Given the uncertainties associated with projecting disaster activity, the DRF request for FY 2015 includes a \$1 billion reserve to ensure solvency at year-end as we approach the most active months of hurricane season.

The amount provided via the BCA disaster relief cap adjustment may only be obligated on declared major disasters. In analyzing the last 10 years of obligations for non-major disasters, FEMA determined that base/non-major disasters comprise an average of 9-percent of the gross DRF requirement. Therefore, the estimated requirement for base/non-major disasters is \$596 million (includes OIG transfer of \$24 million), or 9- percent of the gross DRF requirement (not including recoveries or the reserve fund).

In FY 2013 FEMA supported 65 major disaster declarations and 17 emergency declarations. FEMA led the activation of the National Response Coordination Center for 29 days in response to 4 major incidents, and maintained Enhanced Watch operations over 18 days for an additional 9 incidents. These incidents included major responses to Hurricane Sandy, the Northeast Winter Storms, the Oklahoma City Tornado and the Colorado Flash Flooding Event. The National Watch Center (NWC) Enhanced Watch supported incidents such as the Presidential Inauguration, the Boston Marathon, two incidences of Midwest Severe Weather, Tropical Storm Andrea, Severe Storms in the Ohio Valley and Tropical Storm Flossie.

Year in Summary

1. West Virginia – Chemical Spill

On January 10, 2014, the President declared that an emergency existed in the State of West Virginia as result of a chemical spill occurring on January 9, 2014, in Charleston, West Virginia.

The President's action authorized FEMA to coordinate disaster relief efforts to alleviate the hardship and suffering caused by the emergency on the local population, and to provide appropriate direct Federal assistance for required emergency measures, authorized under Title V of the Stafford Act, to save lives and to protect property and public health and safety, and to lessen or avert the threat of a catastrophe in the counties of Boone, Cabell, Clay, Jackson, Kanawha, Lincoln, Logan, Putnam, and Roane.

FEMA was on site in Charleston, West Virginia, and through its regional office in Philadelphia, Pennsylvania, continued to work in close coordination with the West Virginia Division of Homeland Security and Emergency Management to support State and local efforts to ensure public health and safety. Direct Federal assistance was available for Boone, Cabell, Clay, Jackson, Kanawha, Lincoln, Logan, Putnam and Roane counties to alleviate the impacts of the emergency.

2. Alaska

On January 23, 2014, the President declared that a major disaster existed in the State of Alaska and ordered Federal aid to supplement State and local recovery efforts in the areas affected by severe storms, straight-line winds, and flooding during the period of November 5-14, 2013.

Federal funding was made available to State and eligible local governments and certain private nonprofit organizations on a cost-sharing basis for emergency work and the repair or replacement of damaged facilities in the areas of the Bering Strait Regional Education Attendance Area (REAA), Fairbanks North Star Borough, Lower Kuskokwim REAA, and the Lower Yukon REAA.

3. Colorado – Severe Storms

Since heavy rains brought flooding in September 2013, Colorado survivors have received more than \$267 million in Federal and State recovery assistance. More than \$219 million has come from disaster grants, flood insurance payments and low-interest disaster loans.

This includes \$55 million in FEMA grants for housing assistance and more than \$4.7 million in other needs assistance, such as disaster-related medical expenses or personal property loss, in 11 designated counties. As part of the other needs assistance program, the State is funding another \$1.6 million. Flood survivors have also received disaster unemployment assistance and disaster legal services, and FEMA is providing manufactured housing units for 44 households who have no other suitable housing

available. In total, 24 Disaster Recovery Centers (DRC) were opened to help Colorado residents who had damage due to the severe weather in September.

In addition, more than \$48 million has been obligated through the FEMA's Public Assistance program to public entities and certain private nonprofit organizations in 18 designated counties for debris removal, emergency measures and permanent work to repair and replace disaster-damaged public facilities.

4. Hurricane Sandy – A year later

On the evening of October 29, 2012, Hurricane Sandy made landfall in southern New Jersey, with impacts felt across more than a dozen States. The storm battered the East Coast, particularly the densely-populated New York and New Jersey coasts, with heavy rain, strong winds, and record storm surges.

In Sandy's immediate aftermath, more than 23,000 people sought refuge in temporary shelters, and more than 8.5 million customers lost power. The storm flooded numerous roads and tunnels, blocked transportation corridors, and deposited extensive debris along the coastline.

Since the storm, at the direction of President Obama, FEMA has coordinated the Federal government's response and provided support for the critical emergency needs of affected States. Today, FEMA continues to coordinate the ongoing recovery efforts to help survivors rebuild their communities and give residents the assistance they need to move forward.

In anticipation of Sandy's impact, FEMA deployed nearly 300 people to New York in advance of the hurricane to begin coordinating assistance for survivors. Within 48 hours of Sandy's landfall, the number of FEMA personnel on the ground swelled to 1,200. Eventually, more than 4,000 FEMA personnel were part of the Federal response team. Also within 48 hours, the first FEMA grants for New York individuals and households, totaling \$1.7 million, were approved to help eligible survivors with home repairs, temporary rental costs and other uninsured hurricane-related expenses.

In the months after Hurricane Sandy, FEMA dispatched nearly 1,200 community relations specialists to devastated neighborhoods to determine survivors' individual needs, and to help them navigate the FEMA application process and access other services. More than 500 national, State and local voluntary and faith-based organizations helped people in need. They coordinated donations, volunteer management, home repair, child care, counseling services and removal of muck and mold from homes.

FEMA opened 65 disaster recovery centers, many of them located in hard-hit areas, where survivors received face-to-face help. There were more than 183,000 visits to the centers. With thousands of New Yorkers and New Jerseyans displaced in the wake of Hurricane Sandy, FEMA worked with the State and New York City to implement innovative programs to respond to the unique challenges posed by the shortage of rental housing in a densely populated, vertically built and linguistically diverse region.

Thanks to the Sheltering and Temporary Essential Power program that was coordinated by local governments and funded by FEMA, more than 21,000 families were able to remain in their storm-damaged homes while repairs were made. In addition, FEMA temporarily housed nearly 6,000 individuals and families in hotels and motels through its Transitional Sheltering Assistance program.

FEMA and its Federal partners continue to work closely with disaster survivors to ensure they receive all eligible assistance as they recover from this devastating event. One year later, more than \$1.4 billion in Individual Assistance has been provided to more than 182,000 survivors, and an additional \$2.4 billion in low-interest disaster loans have been approved by the U.S. Small Business Administration. FEMA has approved more than \$3.2 billion to fund emergency work, debris removal, and repair and replacement of infrastructure.

REBUILDING COMMUNITIES

From the beginning, FEMA worked closely with its partners to help individuals recover and restore critical services as quickly as possible following the aftermath of Hurricane Sandy. To date, more than 11,900 grants have been approved for emergency work, to remove debris and to rebuild or replace public infrastructure, and more than \$3.2 billion has been obligated toward these projects.

Sheltering and Temporary Essential Power (STEP) – This initiative was made available to affected States to provide emergency home repairs such as restoration of temporary electricity, heat and hot water so that survivors could remain in their homes while permanent repair work continued. Nearly \$402 million has been obligated to the New York City Department of Environmental Protection for emergency repairs to homes, and infrastructure repairs to waste water treatment plants, pump stations, drinking water facilities and sewers that allowed survivors to remain in their disaster-damaged homes.

Tools to Rebuild Stronger – Within three months following Hurricane Sandy's landfall, FEMA released Advisory Base Flood Elevations to depict a more current picture of flood risk to communities based on information gathered as a result of the storm's impacts. By delivering revised flood risk information, FEMA empowered communities and property owners to make more informed decisions about rebuilding and recovery that will increase their resilience to future disasters, and provide potential cost savings on flood insurance premiums. FEMA also has obligated more than \$74 million in FEMA hazard mitigation grants to prevent or minimize future damages through projects that include elevating buildings and acquiring structures in flood-prone areas, and assisting in the development of county mitigation plans.

Restoring Hospital Services --Nearly \$180 million was obligated to New York University Langone Medical Center to, among other things, restore critical services and facilities. The New York City Health and Hospitals Corporation was granted \$130 million for emergency work, cleanup, temporary relocation, repairs and replacement of contents at facilities that serve more than 1.4 million New Yorkers every year.

Repairing Schools – To date, more than \$19 million has been obligated to repair schools flooded and damaged by Hurricane Sandy, including \$3.1 million to repair the West Elementary School building

that was inundated by three feet of salt water from storm surge.

Recovery Framework – FEMA activated all six Recovery Support Functions (RSFs) outlined in the National Disaster Recovery Framework, for New York, New Jersey and Connecticut. These six recovery support functions are helping local communities provide a structure to facilitate problem solving, improve access to resources and foster coordination.

5. North Carolina – Tribal Recovery Effort

FEMA funded repair and recovery projects for the Eastern Band of Cherokee Indians (EBCI) following severe weather that caused flooding and landslides in January, 2013.

The Sandy Recovery Improvement Act authorized Tribes to submit requests for Stafford Act declarations directly to the Federal government in recognition of tribal sovereignty and FEMA's government-to-government relationship with federally recognized Tribes. Because the EBCI was already assessing damage from a storm that had struck earlier in the month, they became the first Tribe to request and receive a declaration under the new law. The financial assistance provided for repair and recovery projects for the EBCI topped \$2.4 million. Most of the damage involved roads or landslides. The largest single project, by far, was repairing U.S. 441 between Cherokee, N.C., and East Tennessee. FEMA assisted with dozens of PA projects, from Tribal-owned roads to landslides to repairs to a Tribe-owned golf course.

DIRECT DISASTER ACTIVITIES

Individual Assistance (IA), Public Assistance (PA), and the Hazard Mitigation Grant Program (HMGP) are FEMA's primary Direct Disaster programs. These programs are managed and administered by the Recovery and Mitigation Directorates within FEMA. These activities may fall under either the cap adjustment allowance or the base amount depending on whether they are in response to a major disaster or emergency declaration.

These programs constitute the majority of the resources provided by the Federal Government (through FEMA) to directly address the short-, medium-, and long-term impacts of a disaster on individuals and communities. Disaster assistance under the authorities of the Stafford Act can be provided to States (and further provided to local or tribal governments), the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands and Tribes.

Individual Assistance

The DRF provides funding for the following IA Programs:

Individual and Households Programs – 100-percent federally funded

- Temporary housing (rent and lodging expense): Funding is provided to rent alternate housing or a temporary housing unit when rental properties are not available.
- Repair: Funding is provided for homeowners to repair damage (to their primary residence) from the disaster that is not covered by insurance. A flood insurance purchase and maintenance requirement may be placed on the home if the home is in a Special Flood Hazard Area. Repair assistance is intended to repair the home to a safe, sanitary, and functional living condition.
- Replacement: Funds are made available to homeowners to assist with the replacement of a destroyed primary residence that is not covered by insurance. The goal is to help the homeowners with the cost of replacing their destroyed homes.
- Permanent Housing Construction: Funds are made available for the construction of a home, or FEMA will provide direct assistance with the construction. This type of assistance only occurs in insular areas or remote locations specified by FEMA, where no other type of housing assistance is possible, or where other temporary housing options are unavailable or infeasible. Construction shall follow current minimal local building codes and standards (where they exist), or minimal acceptable construction industry standards in the area. Construction will aim toward average quality, size, and capacity, taking into consideration any unique needs (such as disability requirements) of the occupant.

Other Needs Assistance (ONA)

ONA is available for necessary expenses and serious needs of survivors of the declared disaster. Assistance provided by the ONA program is cost-shared between FEMA (75-percent) and the State (25-percent).

Assistance is provided to individuals contingent on their ability or inability to secure a loan from the U.S. Small Business Administration (SBA). If SBA determines that an applicant cannot afford a loan, SBA automatically will refer the applicant to the ONA program for assistance.

ONA can be provided for disaster-related serious needs in five categories:

- **Repair or Replacement of Personal Property:**
 - Clothing
 - Household items (i.e., home furnishings, appliances)
 - Specialized tools or job-related protective clothing and equipment
 - Educational materials (i.e., books)
 - Cleaning supplies (i.e., wet/dry vacuum, air purifier, dehumidifier)
- **Transportation:** Repair or replacement of a vehicle that is deemed unusable due to disaster-related damage.
- **Medical and Dental Expenses:** Medical treatment or the purchase of medical equipment required due to physical injuries resulting from a disaster.
- **Funeral and Burial Expenses:** Funeral services, burial, or cremation and other funeral expenses related to a death caused by the disaster.
- **Other Items:** The State and FEMA can agree to pay for specific disaster-related costs that are not listed above. Some examples are generators, moving and storage expenses, and the cost of a National Flood Insurance Program Group Flood Insurance Certificate.

Crisis Counseling Assistance and Training Program

The Crisis Counseling Program, which is 100-percent federally funded, supports short-term interventions with individuals and groups experiencing psychological effects resulting from large-scale disasters. These interventions involve the counseling goals of assisting disaster survivors in understanding their current situation and reactions, mitigating additional stress, assisting survivors in reviewing their options, promoting the use or developments of coping strategies, providing emotional support, and encouraging linkages with other individuals and agencies that may help survivors recover to their pre-disaster level of functioning. Supplemental funding for crisis counseling is available to State mental health authorities through two grant mechanisms: (1) the Immediate Services Program; and (2) the Regular Services Program, which provide funds for up to nine months following a major disaster declaration. Grantees can apply for both programs if they choose to do so.

Substance Abuse and Mental Health Services Administration (SAMHSA) provides technical assistance for FEMA's Crisis Counseling Program (CCP) under an Interagency Agreement with FEMA. FEMA HQ, Regions and Joint Field Office (JFO) staff work together with SAMHSA to award and monitor CCP grants to Grantees (States or Tribes) who apply and who are approved for the CCP.

Disaster Unemployment Assistance (DUA)

Through the Disaster Unemployment Assistance Program (DUA), FEMA provides unemployment benefits to disaster survivors who lose their job as a direct result of a disaster and who are ineligible to receive regular unemployment insurance compensation (UI) from their employer. FEMA delegates the administration of this program to the Department of Labor (DOL) and funds the program through an IAA with DOL. FEMA obligates the money for the program to DOL and DOL acts as a pass-through to the States, who draw down the funds from DOL in order to administer benefits to eligible survivors.

Legal Services

Legal services, which is 100-percent federally funded, may be provided to low-income individuals unable to secure such services adequate to meet their needs as a consequence of a major disaster.

Disaster Case Management Program

This program, which is 100-percent federally funded, provides case management services, including financial assistance, to States, local government agencies, and qualified private organizations.

Public Assistance (PA)

The PA program offers assistance to State, local, and tribal governments after a declared major disaster or emergency for eligible disaster-related damage. In addition, certain private non-profit organizations that operate eligible facilities and provide services to the public that are typically provided by a government agency may receive public assistance. PA is a cost-shared (75-percent Federal, 25-percent non-Federal) grant program. However, States may request, and the President may grant, a higher Federal cost share, pursuant to FEMA regulations, in situations in which the disaster has had a significant economic impact on the State.

PA provides funding to grantees for the repair and restoration of damaged public and eligible private nonprofit facilities, for emergency measures taken to protect lives and property, and in support of disaster-related debris removal. When PA is authorized, such assistance may be provided under one or more of the following seven categories:

- Category A – Debris Removal
- Category B – Emergency Protective Measures
- Category C – Repair of Roads and Bridges
- Category D – Water Control Facilities
- Category E – Public Buildings
- Category F – Public Utilities
- Category G – Other Facilities

Alternative Procedures (Section 428)

The Sandy Recovery Improvement Act of 2013 amends the Stafford Act to authorize alternative procedures for the Public Assistance Program. It also authorizes FEMA to implement the alternative procedures through a pilot program. The program will remain in place for one year, at which point FEMA will assess the pilot's effectiveness at achieving its goals. Based on the evaluation of the pilot, FEMA may elect to discontinue the program, extend the pilot for an additional performance period, or issue regulations that would institute the program changes authorized by the law. If successful, the new authorities will enable FEMA to reduce costs, expedite assistance, provide incentives for timely completion of projects, and increase flexibility for applicants so they can best meet their post-disaster recovery needs. The pilot allows FEMA to implement and evaluate the following alternative procedures for permanent work subgrants:

- Subgrants Based on Fixed Estimates (required for participation)
- FEMA Validation of Subgrantee-Provided Cost Estimates
- Referral of Cost Estimates to an Expert Panel (subgrants with a Federal share of \$5 million or greater)
- Consolidation of Multiple Fixed Subgrants into a Single Subgrant
- Elimination of the Alternate Project Penalty (for in-lieu contributions)
- Use of Excess Funds for Allowable Activities

An applicant's decision to use the alternative procedures is voluntary. If the applicant does not elect to use the alternative procedures, PA's standard program procedures will be in effect.

Hazard Mitigation Grant Program (HMGP)

HMGP provides State, local, and tribal governments with cost-shared grants (75-percent Federal, 25-percent non-Federal) to reduce the risk of potential damage, hardship, loss, and suffering in an area affected by a major disaster. Ultimately, HMGP reduces future need for Federal disaster assistance by reducing the impact of and increasing the resistance to natural hazards.

HMGP funding is made available to States based on 15-percent of the total Federal funds spent in the PA and IA programs (minus administrative expenses) for each major disaster costing up to \$2 billion; 10-percent for disasters between \$2 billion and \$10 billion; and 7.5-percent for major disasters between \$10 billion and not more than \$35.3 billion.

HMGP projects vary and may include retrofitting structures to resist flooding, winds, and earthquakes; elevating structures above base flood levels; property acquisition and demolition or relocation for open space; and minor flood reduction and drainage measures.

In 2005, the Multi-hazard Mitigation Council, a part of the National Institute of Building Sciences, published a report that analyzed the overall impact of FEMA's Hazard Mitigation Programs. The findings show that, on average, a dollar spent on hazard mitigation activities will save the Nation approximately four dollars in future payouts for damage caused by natural hazards.

Compacts of Free Association

The DRF provides funding for disaster relief and reconstruction activities in the Federated States of Micronesia and the Republic of the Marshall Islands pursuant to the Compacts of Free Association. This funding is provided through a direct transfer of DRF funds to the United States Agency for International Development.

OTHER DISASTER ACTIVITIES

Fire Management Assistance

FEMA provides assistance for the mitigation, management, and control of any fires burning on publicly or privately owned forest or grasslands that threatens such destruction that would constitute a major disaster. Items eligible for funding under the Fire Management Assistance Grant Program include equipment and supplies, labor costs, emergency work, pre-positioning of resources, and temporary repair of damage caused by work directly related to firefighting activities associated with the declared fire.

Disaster Readiness and Support (DRS) Programs

DRS funding was established to bolster FEMA's general steady-state effectiveness and readiness. It enables FEMA to be more proactive and advance a robust readiness posture to respond to large-scale, complex, presidentially declared major disasters instead of waiting for disasters to occur and reacting with more costly and less efficient response actions.

FEMA manages DRS costs throughout the year. These expenses are essential for: (1) timely disaster response; (2) responsive customer service; and (3) cost-effective program oversight and delivery.

DRS funds key activities and initiatives, such as:

- Strategic pre-positioning and management of disaster commodities
- Improved inventory of specialized assets
- Standby support to enable FEMA to increase response and recovery capacity as quickly as needed

DRS activities support FEMA's all-hazards mission. They include initiatives and resources formerly funded from the DRF's legacy disaster support activities and readiness contracts. Many of these costs are predictable on an annual basis and allow FEMA to support a cross-section of disasters utilizing an infrastructure of processing and distribution centers and information technology systems. In addition, the DRS include certain costs to help FEMA pre-position for disasters, including the establishment of large commodity and transportation service contracts that can be activated in the event of a major disaster.

These efforts (including better communications, a more effective intake process, more efficient delivery systems for disaster commodities, and improved oversight of disaster aid through our technical assistance contractors) will continue to improve the quality of FEMA support to disaster survivors.

FEMA has increased transparency and budgetary discipline of the DRS through the implementation of detailed spending plans and program reviews. As a result, FEMA is better equipped to maintain its critical disaster support activities and infrastructure; and ensure the timely delivery of disaster assistance.

Response Directorate

FEMA's Response Directorate provides and coordinates the core Federal response capabilities needed to save lives, minimize suffering, and protect property in communities throughout the Nation overwhelmed by the impact of an incident, regardless of cause. Response program activities encompass the coordination of all Federal emergency management response operations, response planning, and integration of Federal, State, tribal, and local disaster programs in order to ensure efficient and effective delivery of immediate emergency assistance to individuals and communities impacted and overwhelmed by these disasters, emergencies, or acts of terrorism. The Response Directorate encompasses the following programs:

FEMA Qualifications System (FQS) Program works to establish the system for qualification and certification of the FEMA workforce through experience, training, and demonstrated performance; ensures a qualified workforce based on performance standards; establishes minimum, consistent, and fair qualification requirements for all workforce positions regardless of employment status; and works to strengthen the training and qualification standards for all workforce positions by implementing improvements based on analysis.

FEMA Corps Program is a partnership between FEMA and the Corporation for National and Community Service (CNCS) which establishes an AmeriCorps component within FEMA of up to 1,600 members to support the whole community approach to disaster management operations and emergency preparedness activities. The partnership leverages CNCS infrastructure, training programs, community-based experience and devoted members to provide a reliable, full-time, energized and motivated staff within FEMA disaster management operations and emergency preparedness activities. The Program strengthens the Nation's capability to prepare for, respond to and recover from disasters, promote an ethos of community and national service by focusing on community engagement, and increase the depth, reliability, diversity and stability of the FEMA disaster workforce. FEMA Corps response, recovery and mitigation assignments are funded under the non-base DRF. FEMA Corps preparedness assignments are funded under the DRS.

Federal Surge Capacity Force Program manages and coordinates all aspects of cadre and surge readiness and provides oversight for the surge and volunteer workforce programs that will ultimately roster more than 40,000 employees within the Department. The staff coordinates directly with Departmental headquarters and component agencies on surge capacity force selection, training, exercises and readiness, it also manages all facets of external surge capacity force training requirement validation, accountability of individual and cadre/surge readiness status.

Reservist Management Program provides the communication, coordination, and outreach of workforce procedures and program guidance to the National and regional cadre managers and liaisons on workforce deployment, readiness, and the FQS. The staff sponsors and develops routine communications via monthly conference calls, office visits, and other media and works with the FEMA Assessment Readiness Program F-RAP team to develop surveys and other tools to assess customer fulfillment and satisfaction.

National Evacuation Support provides FEMA with the ability to plan, execute, and exercise multi-modal evacuation capability in the event of catastrophic disasters. Program activities address

evacuation capabilities by motor coach, rail, air, and ambulance. The program consists of an ambulance contract, which provides for the evacuation of medical/mobility challenged persons; motor coach planning and operational support contract (National bus evacuation), which provides detailed and robust pre-event bus evacuation planning efforts in support of States; air evacuation ground support contract, which provides airfield assessments and operational planning to pre-identified airfield evacuation points; provides ground and passenger support services during a disaster; and air transportation support services contract, which provides turnkey air support in the event of a disaster (both evacuation and non-evacuation). Together, the program provides the full-spectrum (planning, readiness, execution) support to States requiring Federal assistance to evacuate all populations in threatened areas.

Mobile Communications Office Vehicles (MCOV) Program includes vehicles that are multi-purpose central office facilities activated to support FEMA response and recovery disaster missions. The thirty-nine foot long recreational vehicles have been modified and retrofitted with eight to nine work stations and satellite communications to provide voice and data connectivity into the FEMA network. During initial deployment, MCOVs are driven by Federal team requirements, to include support to Logistics Incident Support Bases (ISBs). MCOVs provide a seamless transition from response to recovery using reliable mobile communications platforms to provide incident response support to the public.

The **National Incident Management Assistance Teams (IMATs)** provide the initial National rapid response to major incidents, disasters, special events, and exercises. The primary mission of the National IMATs is to deploy rapidly to an incident or threatened area, State, or FEMA region to work with affected States to identify and satisfy initial requirements for Federal assistance. IMATs coordinate and integrate inter-jurisdictional response in support of affected States or U.S. territories. Additionally, IMATs specialize in management and assistance for chemical, biological, radiological, nuclear, and explosives (CBRNE) incidents. National IMATs provide initial situational awareness for Federal decision-makers, and support the initial establishment of a unified command.

Recovery Directorate

The Recovery Directorate works to ensure that individuals and communities affected by disasters of all sizes are able to return to normal with minimal suffering and disruption of services. Program activities focus on improving efficiency and expediting delivery of disaster assistance to eligible individuals; to State, local, and tribal governments; and to eligible private nonprofit organizations. This is accomplished through a commitment to streamlined procedures to improve program policy, minimize error, and modernize service delivery technology.

Annual costs for the following readiness contracts, staff, and activities are funded through the DRS (actual deployment or assistance costs incurred pursuant to declarations will continue to be funded from the specific declarations):

- Contract Support
 - Individual Assistance Technical Assistance (IA-TAC)
 - Public Assistance Technical Assistance (PA-TAC)
 - Housing Inspection Services

- Mail Operations
- Enterprise Application Development Integration and Sustainment and Recovery Management Tools
- Corporate Lodging Consultants
- Surge Staffing for Registration Intake
- Disaster Legal Services Training and Support
- National Processing Service Centers (NPSCs)
 - Readiness costs, including equipment, rent, and security, for FEMA's three NPSCs located in Maryland, Texas, and Virginia. The NPSC facilities provide FEMA call center and benefits processing capabilities to register and process disaster survivors' applications.
 - Developers to make continuous updates to the National Emergency Management Information System to ensure that processing complements the most up-to-date IA policies.
- Individual Assistance Readiness Support
 - Funding is utilized to support travel and equipment needed to ensure the delivery of IA programs under Emergency Support Function #6. This includes costs for all-hazard disaster planning with State, local, Regional, Federal, nongovernmental and voluntary agency partners; recovery program evaluations; travel and salaries to support Reservists engaged in readiness planning, training, and delivery, as well as program closeout.
- Interagency Agreements (IAAs)
 - The Center for Mental Health Services of the U.S. Department of Health and Human Services provides critical technical support in the management of FEMA's Crisis Counseling Assistance and Training Program (CCATP). FEMA annually funds three permanent full-time positions, contract support, travel, equipment supplies, and administrative costs through IAAs. When the program is activated pursuant to a disaster declaration, assistance is charged to the declaration's costs under the DRF.
 - The Employment and Training Administration within the Department of Labor (DOL) administers the Disaster Unemployment Assistance (DUA) program on FEMA's behalf. As such, FEMA annually funds DOL through an IAA to perform this function. When the program is activated pursuant to a disaster declaration, assistance is charged to the declaration's costs under the DRF.
- Maintain a Web-based Public Assistance Program
 - DRS funding is used to maintain a web-based capability (Emergency Management Mission Integrated Environment) for the PA Program that allows FEMA staff, PA applicants, and States to perform all PA grant management activities online and supports the use of state-of-the-art technology such as wireless handheld devices used by PA staff and contractors to perform inspections on damaged facilities. The inspection information is uploaded automatically into the Web-based system, eliminating a paper-based process, improving efficiency, and attaining cost savings.

Logistics Management Directorate (LMD)

The mission of the Logistics Management Directorate (LMD) is to effectively plan, manage and sustain national logistics response and recovery operations, in support of domestic emergencies and special events to act as the Whole Community Logistics Coordinator and single logistics integrator for National incident support.

Disaster Logistics Distribution Management Operations (DM) manages the Agency's warehouse facilities and transportation systems used to receive, store, maintain, issue, distribute and track supplies, services, material, and equipment.

Logistics System Office (LSO) Supports FEMA's mission of responding to all hazards expediently and efficiently by managing the Nation's end-to-end supply chain of critical disaster assets and commodities. The Logistics Supply Chain Management System (LSCMS) is one of FEMA's mission critical systems that enable FEMA to manage the supply chain process for assets and commodities.

Disaster Logistics Operations (LO) Manages and executes whole community logistics collaboration, coordination, resource tracking and reporting. This includes the Manufactured Housing Unit, Responder Support Camp and National Incident Support Base programs and assures operational readiness and support to Regions.

Disaster Logistics Property Accountability Oversight and Coordination (PM) Uses the industry standards (using American Society for Testing and Materials voluntary consensus standards) to provide quality assurance, customer assistance and technical reviews of property accountability, inventory services and oversight of disposal and donations of agency disaster-funded supplies and equipment.

Office of the Federal Disaster Coordinating Officer (OFDC)

OFDC leads, trains, equips, and manages FEMA's Federal Coordinating Officers (FCO) and Federal Disaster Recovery Coordinators (FDRC) to ensure their availability for rapid deployment in response to any disaster; deliver training to develop and sustain FCO and FDRC professional competencies; and coordinate FCO and FDRC assignments to meet the on-scene needs of FEMA and its emergency management partners. In the event of a Presidential disaster declaration, a FCO is designated by name in the President's letter.

Upon declaration of a major disaster or emergency, the FEMA Administrator appoints an FCO who is charged with initiating all actions necessary to assure that Federal assistance is provided in accordance with the declaration, applicable laws, regulations, and the FEMA-State agreement.

Mission Support Bureau (MSB)

The MSB supports all facets of the Agency's mission by providing strategic leadership and assuring the timely, efficient, and effective delivery of administrative, property management, health and safety, human capital, Information Technology (IT), procurement, security services, and business function capabilities. This range of capabilities supports the entire enterprise of FEMA's mission activities that range from performing Urban Search and Rescue; taking in and managing requests for IA and PA

grants; and approving and paying those grants; to managing flood insurance policies for the Nation's citizens.

Office of Chief Financial Officer (OCFO)

OCFO leads the effort to maximize the impact of financial resources and ensure accountability to support the mission of FEMA.

OCFO oversees planning and response activities of the financial management members of FEMA's emergency teams and management of the national Disaster Comptroller cadre. FEMA maintained a class of employees referred to as non-disaster specific (NDS) COREs to perform essential duties that cannot reasonably be attributed on a disaster-specific basis.

FEMA – (WEB) Integrated Financial Management Information System (WebIFMIS)	The Integrated Financial Management Information System (IFMIS) is Federal Emergency Management Agency's (FEMA) current core financial management system. The purpose of IFMIS is to maintain all of FEMA's financial data and be the source of financial data for both internal and external financial reporting. IFMIS receives data from other financial and mixed systems and from direct user input and it provides data and supports processing for those systems that need it, including DHS and government-wide reporting systems. IFMIS supports a number of interfaces to disaster mission, payroll processing, travel management, credit card transaction, procurement and other accounting related information systems. Because IFMIS records all entries in the General Ledger, the entire enterprise is its key customers.

FEMA – (Contribution to) Disaster Assistance Improvement Plan (DAIP)	The Disaster Assistance Improvement Program (DAIP) was developed to meet the requirements of Executive Order 13411 which mandates the improvement of delivery of Federal disaster assistance. DAIP is a response to disaster victims' confusion and frustration with conflicting information and misdirected referrals as they sought disaster assistance from multiple Federal programs in the immediate aftermath of Hurricane Katrina. Executive Order 13411 mandates that DAIP ease the burden of victims by creating a single access point for Federally-funded forms of assistance. DAIP consolidates benefit information, application intake, and status information into a unified system.

FY 2014 to FY 2015 Change	-	-	\$812,557

Notes:

The 55 positions reflected above are FEMA's cadre of temporary full-time (TFT) Federal Coordinating Officers (FCOs) and Federal Disaster Recovery Coordinators (FDRCs). The bulk of the FTE reflected herein is made up of Disaster Reservists and Cadre of On-Call Response Employees (COREs), primarily deployed for specific disasters.

The figures displayed above are net of the \$24 million transfer to the DHS OIG.

FY 2013 does not include the \$11.487 Billion and 2,348 FTE provided by the Disaster Relief Appropriations Act, 2013 (P.L. 113-2) or the \$3.414 million transfer to USAID for the Republic of Marshall Islands (RMI).

The FY14 Omnibus rescinded \$300.5 million in unobligated prior year balances from the "Base" DRF. The FY 2015 Budget similarly proposes to cancel \$200 million in the same manner. The rescission and proposed cancellation are not reflected in the current year figures above.

Recoveries of Prior Year Obligations	-	(\$800,000)	(\$750,000)	\$50,000
Offsetting Collections	-	-	-	-
Total Requirements	\$6,629,117	\$6,196,908	\$7,009,465	\$812,557
Full Time Equivalents	5,569	7,134	7,134	-

Notes:

FY 2013 does not include the \$11.487 Billion and 2,348 FTE provided by the Disaster Relief Appropriations Act, 2013 (P.L. 113-2) or the \$3.414 million transfer to USAID for the Republic of Marshall Islands (RMI).

The above table may not align with the FY 2015 Budget Appendix. FY15 CJ object class amounts displayed above are based on FY 2013 Revised Enacted; the FY 2015 Budget Appendix reflects FY 2013 Actuals.

The figures displayed above are net of the \$24 million transfer to the DHS OIG.

The FY14 Omnibus rescinded \$300.5 million in unobligated prior year balances from the "Base" DRF. The FY 2015 Budget similarly proposes to cancel \$200 million in the same manner. The rescission and proposed cancellation are not reflected in the current year figures above.

Disaster Relief Fund Mission Statement

Operating Activities includes the essential functions for all of FEMA's major mission organizations and directly supports FEMA's primary mission to reduce the loss of life and property and to protect the Nation from all hazards. Operating Activities leads and supports the nation through a risk-based, comprehensive emergency management system of preparedness, protection, response, recovery, and mitigation.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Emergency Management Agency Flood Hazard Mapping and Risk Analysis

I. Appropriation Overview

A. Mission Statement for Flood Hazard Mapping and Risk Analysis:

The mission of the Flood Hazard Mapping and Risk Analysis fund (Risk MAP) is to deliver quality data that increases public awareness and leads to action that reduces risk to life and property through collaboration with State, local, and tribal entities. Risk MAP drives national actions to reduce flood risk by addressing flood hazard data update needs, supporting local government hazard mitigation planning, and providing the flood risk data needed to manage the National Flood Insurance Program (NFIP) financial exposure.

B. Budget Activities:

Mapping and Risk Analysis

FEMA is charged with maintaining reliable flood hazard information to support NFIP, where the U.S. Government has an exposure of \$1.2 trillion. The flood hazard maps determine who is required to purchase flood insurance in order to reduce taxpayer costs for flooding damage and they are used to price the insurance to support the financial strength of the NFIP.

These NFIP mapping efforts also provide communities and citizens with information they need to reduce the risk of loss of life and property from flooding. Funding for Risk MAP supports FEMA's efforts to address existing gaps in the flood hazard data inventory and address changes that continue to occur over time. The reliability of flood hazard analyses and maps erodes over time. Changes in the environment, additional storm and precipitation data, and improvements in engineering science affect the currency of the risk analysis products. These changes can increase or decrease the risk and the changes can vary a lot over relatively small areas. As the precision of maps has been refined in recent years as many structures have been taken out of designated Special Flood Hazard Areas (SFHA) as have been newly designated inside the SFHA.

Risk Communications and Outreach

Through Risk MAP, FEMA is increasing its focus on community engagement activities as an integral part of flood risk study projects in order to increase local officials' awareness of flood risk so that they take actions to reduce the risk. The primary mechanism through which Risk MAP increases local officials' awareness is through the interactions that occur during flood map updates. Awareness tends to decrease over time when years can pass between major flood events and flood map updates. The updating process helps to ensure that the topic of flooding remains prevalent at the local level.

Actions to Reduce Risk

During the Risk MAP process, FEMA works with community officials to identify specific steps communities and individuals can take to mitigate their flood risk. Risk MAP is leveraging the community engagement process to drive local actions to reduce risk by increasing local officials' awareness of risk and identifying actions to reduce that risk.

C. Budget Request Summary:

FEMA requests 57 positions, 57 FTE, and \$84.403 million for the FY 2015 Request. The Request includes a reduction of \$10.804 million from the FY 2014 Enacted.

2015 Total Request	57	57	84,403
Total Change 2014 to 2015	-	-	(10,799)

FEMA requests \$84.403 million in FY 2015 for this activity. The requested funding will allow FEMA to continue implementing Risk MAP to perform flood hazard mapping and risk analysis, increase awareness of flood risk and work with communities to identify action to reduce flood risk. This includes making progress towards meeting the statutory requirement to review the flood hazards maps on a five-year cycle and address flood hazard data update needs over time.

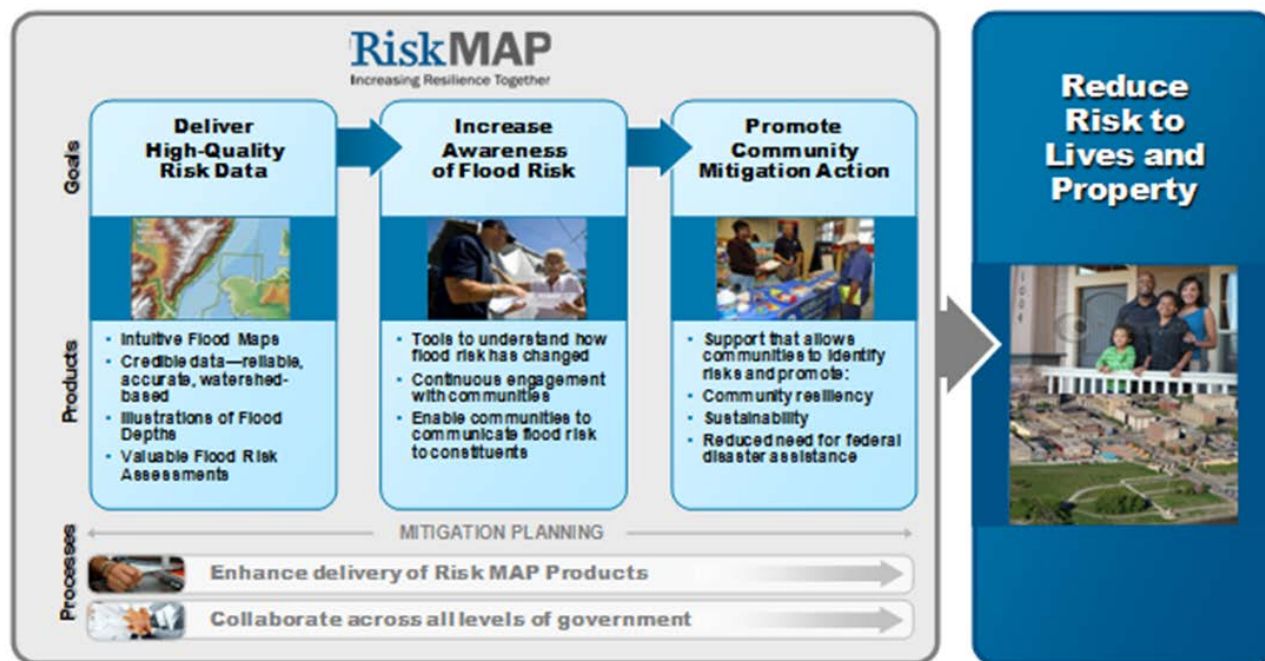

TABLE 1

FY 2015 Budget Activity	Flood Hazard Mapping and Risk Analysis	National Flood Insurance Fund	Total
Salaries & Expenses	\$6,170,000	\$11,140,000	\$17,310,000
Program Funds	\$78,233,000	\$109,460,000	\$187,693,000
TOTAL	\$84,403,000	\$120,600,000	\$205,003,000
FTE	57	81	138

CURRENT SERVICES PROGRAM DESCRIPTION:

FEMA's Risk MAP and NFIP are essential to managing and reducing the risk from flood. Risk MAP provides the intelligence that enables NFIP and the communities implementing the program to reduce the costs of flooding by supporting management and mitigation of flood risks.

The maps and community engagement throughout the Risk MAP process identify areas most vulnerable to flooding and alert homeowners of the inherent risk and necessity for flood insurance. They inform communities to support effective floodplain management, leading to improved building practices and site development for new construction, and drive other actions to reduce flood risk. Without Risk MAP, disaster survivors and their communities are more reliant on the Disaster Relief Fund (DRF) to aid their recovery.

FEMA has defined measures in four key areas. These measures track progress in addressing gaps in flood hazard data, deploying Risk MAP, increasing risk awareness of local officials, and other risk reducing actions. The measures are:

- Ensure 80-percent of the Nation's flood hazard data is current – the flood hazard data are new, have been updated, or are deemed still valid through the Risk MAP review and update process during the initial implementation of Risk MAP.
- Continue to initiate Risk MAP on a watershed basis for an increasing amount of the U.S. population.
- Ensure 70-percent flood risk awareness among local officials in Risk MAP communities.
- Increase mitigation activities instituted by communities throughout the U.S. taking mitigation actions in order to increase their resilience to natural disasters and reduce the risk to life and property.

Benefits of Risk MAP to Disaster Resilience

FEMA's Risk MAP program builds State, local, and tribal resilience before, during and after major flood events like Hurricane Sandy. Prior to landfall, the Risk MAP program significantly invested in developing improved coastal flood hazard and risk data along the New York and New Jersey shorelines. Further, FEMA regional offices had already begun building and supplementing state and local coastal flood risk management capabilities and strengthening relationships among those

responsible for public safety along the coast. Specific partnerships in New Jersey, New York, and New York City were well established prior to landfall with the New Jersey Department of Environmental Protection, New York State Department of Environmental Conservation, and New York City Mayor's Office of Long Term Recovery and Sustainability.

The relationships, flood risk data, and risk management capabilities developed through Risk MAP prior to landfall had a profound impact on the speed and strength of recovery from this devastating event. The ongoing Risk MAP projects show that existing flood hazard data understates the threat in many cases. Without Risk MAP, reconstruction of the hardest hit areas would have been based on the understated risk data, thus subjecting people to further harm and damage down the road and resulting in greater exposure and increased future disaster relief costs.

Similarly, the necessities and effects of updated flood maps were demonstrated explicitly during Hurricane Irene. Communities that had current flood threat data were more resilient and needed less DRF resources to recover. In Broome County, New York, a high school and hospital, which had experienced \$20 million in damages during a smaller flood in 2006, avoided flood during the more severe flooding caused by Irene.

Risk MAP is the principal way that FEMA equips communities with the knowledge to analyze their flood threat as the community prepares its Threat and Hazards Identification and Risk Assessment (THIRA). Risk MAP is the primary vehicle for implementing the community resilience doctrine articulated in Presidential Policy Directive (PPD)-8 and the Presidentially-mandated National Mitigation Framework.

Delivery of Risk MAP

FEMA's FY 2015 Risk MAP approach will support local risk assessment and planning activities while addressing the flood hazard data update needs. The primary focus areas are significant riverine flood hazard data update needs, mapping of areas impacted by levees and implementation of the requirements of the Biggert-Waters Flood Insurance Reform Act of 2012 (BW-12). FEMA will dedicate funding to updating riverine hazard engineering analyses using a watershed approach. This also includes other non-coastal flood hazards like ponding and shallow flooding.

FEMA will initiate new Risk MAP projects in watersheds with high risk; significant flood hazard data update needs; the potential to generate community actions to reduce flood risk; and the potential for partner cost sharing. This investment will maintain the existing level of flood hazard data update needs by initiating updates for 9,000 miles of inland flooding sources, increasing the number of miles of flooding sources in FEMA's inventory with valid flood hazard data or updates initiated. This will increase the population in watersheds where Risk MAP has begun by approximately 4,750,000 people.

The current inventory of modernized stream miles in the U.S. is approximately 800,000 miles. This is the inventory that was the focus on the Map Modernization effort and covers over 92-percent of the population. However, NFIP stakeholders continue to express concern about the remainder of the unmodernized inventory. The modernized and unmodernized inventories combined comprise 1.1 million miles of studied flooding source. Stakeholders are concerned that future development may occur in these areas and be built needlessly at risk because of the lack of modern flood hazard

information and express concerns that these less populated areas are not treated fairly compared to the higher population areas that have modernized flood data. As a result FEMA has begun to consider inventory maintenance strategies that better encompass the full modernized and unmodernized mapping inventory.

There are currently approximately 21,900 communities participating in the NFIP out of approximately 28,350 communities, total, in the U.S. The total population for the U.S. is approximately 312,470,000 people.

When FEMA initiates a Risk MAP project in a watershed, it begins a community engagement process that continues throughout the lifecycle of the project. FEMA's community engagement activities are an effort to work with community officials to provide actionable flood risk information, build relationships which can be leveraged during and after a disaster, increase State and local risk management capability, and advance specific mitigation actions. FEMA also tracks where Risk MAP helped identify new strategies or improve current planned mitigation actions in direct collaboration with communities and where communities that have had Risk MAP deployed advanced identified mitigation actions. Through the 'whole community' engagement processes, FEMA is working to:

- Understand specific community needs and capabilities;
- Deliver flood risk products that inform communities; and
- Build long-term relationships with key officials.

The reliability of flood hazard analyses and maps erodes over time. Changes in the built environment, additional storm, and precipitation data, and improvements in the engineering science all affect the currency of the risk analysis products. In FY 2015, FEMA will continue its watershed validation strategy to identify physical, climatological, and scientific changes that impact the currency of existing flood hazard information. The large scale updates of so many FEMA flood maps during Map Modernization will result in a large number of flooding sources needing assessment over the next several years, potentially reducing the total number of miles in FEMA's inventory that are valid.

These accomplishments aim to provide communities and citizens with current flood risk information and increase the public's and communities' awareness of risk so that they may take mitigation actions to increase their resilience.

Over the past several years, FEMA has funded nearly all the engineering work to update the flood hazards for the populated coastline of the U.S. This represents a significant investment, massive updates to flood hazard data in the riskiest areas of the Nation, a very large number of people impacted and substantial financial impacts to many of those affected. As a result, FEMA expects there will be a need for enhanced community engagement and additional investment to defend the validity of revised coastal flood hazards as the final products are rolled out.

During the implementation of Risk MAP, sustainable partnerships will continue to be vital. FEMA will maintain its partnerships and seek out new collaborations to support the Risk MAP program. When targeted at known flood hazard data update needs and included in the partnership agreement, FEMA will give its highest investment priority to capable partners who provide a 25-percent cost

share. FEMA typically receives these partner contributions through existing successful partnerships within the Cooperating Technical Partners (CTP) Program.

In addition, the passage of BW-12 has created several new elements to the NFIP flood hazard mapping program and a Technical Mapping Advisory Council that will make ongoing recommendations for changes to the mapping program. As the details and scope of this new work are defined, this may impact the program.

IV. Program Justification Changes

Program Decrease							-	-	(30)
Total Request	-	-	-	-	-	30	-	-	-

Description of Item:

Eliminate personnel funding associated with awards and bonuses.

Justification:

Funding is eliminated to support critical mission needs and frontline operations.

Impact on Performance (Relationship of Increase to Strategic Goals):

N/A

**Department of Homeland Security
Federal Emergency Management Agency
Flood Hazard Mapping and Risk Analysis
Justification of Program Changes**
(Dollars in Thousands)

Program Decrease 2: Risk MAP Program
PPA:
Program Decrease: Positions 0, FTE 0, Dollars \$(10,774)

Funding Profile

	FY 2013 Revised Enacted			FY 2014 Enacted			FY 2015 Request		
	Pos.	FTE	Dollars (\$000)	Pos.	FTE	Dollars (\$000)	Pos.	FTE	Dollars (\$000)
Current Services Level							57	57	95,177
Program Decrease							-	-	(10,774)
Total Request	57	46	90,288	57	57	95,202	57	57	84,403

Description of Item:

The FY 2015 Budget request will provide for additional Risk MAP projects sufficient to maintain the percentage of flood hazard data that meet new, valid, or updated engineering standards, maintain local officials' flood risk awareness, and encourage local actions to reduce risk.

Justification:

Funding in FY 2015 will provide for the annualization of salaries and benefits, and support the continuation of activities as described in the Risk MAP Multi-Year Plan.

FEMA staff is critical to the effectiveness of the Risk MAP outreach mission as the primary, most credible interface with local governments. As more Risk MAP projects reach the delivery phase in FY 2015 and beyond, the responsibility for FEMA staff to support outreach to communities and local officials will increase.

Impact on Performance (Relationship of Increase to Strategic Goals):

N/A

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For necessary expenses, including administrative costs, under section 1360 of the National Flood Insurance Act of 1968 (42 U.S.C. 4101), and under sections 100215, 100216, 100226, 100230, and 100246 of the Biggert-Waters Flood Insurance Reform Act of 2012, (Public Law 112–141, 126 Stat. 916), [\$95,202,000] **\$84,403,000**¹, and such additional sums as may be provided by State and local governments or other political subdivisions for cost-shared mapping activities under section 1360(f)(2) of such Act (42 U.S.C. 4101(f)(2)), to remain available until expended.

Explanation of Changes

Flood Hazard Mapping and Risk Analysis Mission Statement

The mission of the Flood Hazard Mapping and Risk Analysis fund (Risk MAP) is to deliver quality data that increases public awareness and leads to action that reduces risk to life and property through collaboration with State, Local, and Tribal entities.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Emergency Management Agency National Flood Insurance Fund

I. Appropriation Overview

A. Mission Statement for National Flood Insurance Fund:

National Flood Insurance Fund

Established in the Treasury by the National Flood Insurance Act of 1968 (Act), the National Flood Insurance Fund (NFIF), is a premium and fee-generated fund that supports the National Flood Insurance Program (NFIP). The Act, as amended, authorizes the Federal Government to provide flood insurance on a national basis.

National Flood Insurance Reserve Fund

The Biggert-Waters Flood Insurance Reform Act of 2012 (BW-12) requires FEMA to establish an additional fund in the U.S. Treasury, the National Flood Insurance Reserve Fund, to meet the future obligations of the NFIP.

B. Budget Activities:

Biggert-Waters Flood Insurance Reform Act of 2012

BW-12 was signed into law July 6, 2012, to strengthen and improve the fiscal soundness of the NFIP. Prior to this Act, the NFIP was, by statute and design, not actuarially sound. At the time the Act was passed, the percentage of NFIP policyholders that paid premiums that were actuarially sound was only around 80-percent leaving the remaining 20-percent of the policyholders paying premiums that were less than actuarially sound, including many of the NFIP's highest risk structures. This resulted in subsidized premiums. The level of the subsidy was set so that the combined aggregate premium of the actuarial and subsidized policyholders would at least cover a "typical" loss year referred to as the "historical average non-catastrophic loss year." BW-12 improves fiscal soundness by phasing out subsidies and establishing a reserve fund to pay the expected future obligations of the flood insurance program.

Subsidy Phase Out

The Act phases out the subsidy for structures built before their flood risk was identified on a Flood Insurance Rate Map (FIRM). These structures are referred to as pre-FIRM structures. Premiums for pre-FIRM subsidized second homes, businesses, Severe Repetitive Loss properties, and substantially damaged or improved structures are to be increased 25-percent per year until the premiums are actuarially sound. Subsidies for primary residences may continue until the home is sold to a new owner or the policy is allowed to lapse. All new policies must pay full actuarial premiums.

Establishment of Reserve Fund

The Act requires establishment of the NFIP Reserve Fund and sets the required fund balance at one percent of the prior fiscal year's insurance in force. The NFIP is authorized to collect and deposit 7.5-percent of the reserve fund target through additional Reserve Fund charges until the required balance is achieved. The amounts in the Reserve Fund can be used for the payment of claims and claims handling expenses, as well as principal and interest payments on any outstanding Treasury loans. The Reserve Fund was established in late FY 2013 and became active on October 1, 2013.

Mapping Program

The Act requires that the most accurate data be used for ongoing reviews, updates and maintenance of flood insurance rate maps. In addition, the Act established a Technical Mapping Advisory Council to review and recommend standards for mapping activities.

Loss Estimates

Estimating the NFIP losses is challenging, because losses vary greatly from year to year. NFIP losses during non-catastrophic years can range from a few hundred million to several billion dollars. Catastrophic events like Hurricane Katrina can result in tens of billions of dollars in losses. The NFIP has had only one catastrophic loss year prior to 2013. That year was 2005, which included losses from Hurricanes Katrina, Rita and Wilma.

Loss estimates in budgets prior to FY 2014 reflected only the expectation of non-catastrophic losses. Non-catastrophic losses were used because they illustrate typical annual losses. However, these estimates did not acknowledge the enormous loss potential of catastrophic loss years, which were experienced during Hurricanes Katrina and Sandy.

To more accurately estimate the full potential loss for the NFIP, the model underlying the FY 2015 Budget estimates catastrophic NFIP losses beyond the ten-year budget window. If no catastrophic events occur during the forecast period, estimated losses may be less than actual losses. Conversely, if one or more catastrophic events occur during the forecast period, actual losses may far exceed the estimated losses.

NFIP Program Elements

Funding for the NFIP is derived from offsetting collections from two primary sources:

- Flood insurance premiums, which are used to pay claims and flood-related grants, and provides funding to support the operating and administrative costs associated with maintaining the program.
- Policy fee income, also paid by flood insurance policy holders, supports floodplain management, flood mapping, insurance operations, and NFIP management.

The NFIP appropriation supports the following key program elements:

NFIP Management and Flood Insurance Operations

NFIP Management supports the overall management of NFIP. FEMA makes consumer-oriented flood insurance available to reduce the Nation's vulnerability to flood hazards and accelerate recovery from floods, mitigate future flood losses, and reduce personal and national costs of flood disasters. FEMA administers NFIP so that insurance and floodplain management policies and operations are mutually

reinforcing. Further, FEMA works to increase the NFIP policy base so that more people are indemnified by insurance from future financial losses from flood, facilitating their recovery, rebuilding communities, and reducing costs to taxpayers.

Flood Insurance Operations provides for all aspects of managing the insurance program including: (1) development and oversight of insurance coverage policy and regulations; (2) analysis and evaluation of insurance risks and claims data used to determine actuarial premium rates; and (3) oversight of insurance companies that write flood insurance policies and adjust claims.

Floodplain Management and Flood Mapping

Flood Hazard Mapping and Risk Analysis (Risk MAP) is a multi-year mapping effort intended to meet the FEMA statutory requirement to review the flood hazards maps on a five-year cycle and address flood hazard data update needs over a longer time horizon. Risk MAP is an integrated flood risk management approach, weaving county-level flood hazard data developed in support of NFIP into watershed-based risk assessments that serve as the foundation for local Hazard Mitigation Plans and targeted risk communication activities.

Floodplain Management funds salaries and expenses for the implementation staff at FEMA's Headquarters and ten Regional offices to administer and deliver floodplain management activities that reduce flood risk. These activities include development of policy, guidance, regulations, and publications, administration of the Community Assistance Program-State Support Services Element (CAP-SSSE) grant program, as well as the provision of compliance monitoring and technical assistance.

National Flood Insurance Fund (Mandatory)

The National Flood Insurance Act of 1968 (42 U.S.C. § 4001 et seq.), as amended, authorizes the Federal Government to provide flood insurance on a national basis. Flood insurance may be sold or continued only in communities that participate in NFIP, and that enact and enforce appropriate floodplain management measures. Federally regulated funding institutions cannot provide loans for properties in nonparticipating communities with an identified flood hazard.

Flood-Related Grants

NFIF supports flood hazard reduction efforts facilitated through its flood-related grants and assistance program, Flood Mitigation Assistance (FMA). The FMA provides grants to States, communities and Indian Tribal Governments to reduce the risk of flood damage to existing buildings and infrastructure. Flood-Related grants fund activities that decrease or eliminate risk of flood damage to structures insured under NFIP. Flood-Related grants also fund activities that decrease the long-term risk of flood damage to structures insured under NFIP that have experienced losses from previous flood damage.

C. Budget Request Summary:

FEMA requests spending authority from mandatory and discretionary offsetting collections for FY 2015. NFIF spending authority consists of \$4 billion from premium income, \$179 million from Federal Policy Fee income, and \$383 million in contributions and accrued interest to the Reserve Fund. For FY 2015, FEMA projects a \$359 million increase in offsetting collections from FY 2014 enacted. The additional revenue anticipated from implementing provisions of BW-12 will enhance NFIP's fiscal solvency, and flood insurance rate increases. This is also FEMA'S second year using a model that estimates catastrophic NFIP losses for over the ten-year budget window. Premium collections will be used to pay NFIP claims, operating expenses and fund flood mitigation grants. Federal Policy Fee collections will support flood insurance operations, floodplain management and flood mapping efforts.

2015 Total Request	124	114	23,759
Total Change 2014 to 2015	14	13	1,759

FEMA requests \$24 million in FY 2015 for this activity. Funding will support salaries and operating costs for flood insurance operations and flood mitigation activities and for implementing provisions of BW-12.

CURRENT SERVICES PROGRAM DESCRIPTION:

Flood Mitigation and Flood Insurance Operations activities include management and oversight of NFIP insurance activities, business operations support, stakeholder engagement, outreach support, business process management and improvement activities. Appropriated funding also supports information systems support activities associated with the Federal Insurance and Mitigation Administration's (FIMA) executive oversight.

Flood Insurance Operations activities include:

- Actuarial management to analyze insurance risks, set insurance rates, and ensure the financial solvency of the program.
- Operations management for more than 5.6 million NFIP flood policies with more than \$1.2 trillion of insurance in force to include policy issuance and renewal, oversight of claims payments, and training program partners.

- Underwriting management to define policy and develop regulations for insurance coverage eligibility and classification of risks.
- Claims management to set policy and develop regulations regarding the adjustment and payment of claims.
- Management of the private insurance companies that write flood insurance policies and adjust claims for the NFIP, including oversight required by the Write Your Own (WYO) Financial Control Plan.
- Education, training, and technical assistance for private insurance company agents and adjustors.
- Management of contractor that supply services to NFIP, such as the Bureau and Statistical Agent and the Direct Servicing Agent.
- Management of flood insurance marketing and public communications, including advertising, community outreach programs, and publicity.
- Partnering with stakeholders in the private sector and other government agencies, including lenders who require the purchase of flood insurance for certain loans.

Floodplain Management

Floodplain Management programs are designed to reduce risk through land use and building code regulations. Floodplain management activities are authorized under the National Flood Insurance Act, as amended. Through these programs, FEMA encourages communities and their citizens to take informed and effective mitigation actions before a flood in order to reduce the long-term risk to people and property. Structures built to NFIP standards experience 80-percent less damage than structures not built to these standards.

FEMA and States partner in the CAP-SSSE program to provide a means to ensure that communities participating in NFIP are achieving the flood loss reduction goals of the NFIP through a state grant mechanism. CAP-SSSE funds States to provide significant technical assistance to NFIP communities, evaluate community performance in implementing NFIP floodplain management activities, and building State and community floodplain management expertise and capability. The grant is a product-oriented program directly related to the flood loss reduction objectives of NFIP.

FIMA has initiated a study to validate and improve the methodology it uses to estimate the future losses related to structures built in compliance with NFIP floodplain management's standards. FEMA will complete the study by the end of 2014.

The Federal Policy Fee supports the salaries and operating expenses of program management and implementation staff at FEMA's Headquarters and ten regional offices that administer floodplain management programs. The responsibilities of these offices include reducing flood risk through floodplain management and flood hazard reduction efforts, providing technical assistance to communities participating in NFIP, and administration of the CAP-SSSE grant program. FY 2015 funding will support the delivery of technical assistance to NFIP participating communities and strengthening local flood loss reduction programs through onsite visits.

Flood Hazard Mapping and Risk Analysis

FEMA's Risk MAP program is essential to managing and reducing flood risk. Risk MAP provides the intelligence that enables the NFIP and the communities implementing it to reduce the costs of flooding by supporting management and mitigation of flood risks.

The maps generated through the Risk MAP program identify areas most vulnerable to flooding. They alert homeowners of the inherent risk and necessity for flood insurance. They inform communities to support effective floodplain management, leading to improved building practices and site development for new construction. Without updated maps, disaster survivors and their communities are more reliant on the Disaster Relief Fund (DRF) to aid their recovery.

FEMA's FY 2015 Risk MAP approach will support local risk assessment and planning activities while addressing the flood hazard data update needs. The primary focus areas are significant riverine flood hazard data update needs, mapping of areas impacted by levees, and implementation of the requirements of BW-12. FEMA will dedicate funding to updating riverine hazard engineering analyses using a watershed approach. This also includes other non-coastal flood hazards like ponding and shallow flooding.

FEMA's Risk MAP activities are funded from two primary sources of funds – the Flood Hazard Mapping and Risk Analysis Fund and the NFIF. Both sources of funding are critical to the development and implementation of new flood maps in communities across the Nation. The NFIF funding is the core funding for the program and supports all aspects of the program including map production and technical services.

Total Change 2014 to 2015	-	-	581,320

FEMA requests \$4 billion in anticipated premium revenue in FY 2015 and anticipates financing \$1.3 billion in loans through the Treasury. Funding will provide for the payment of flood claims and operating costs of the program including WYO expenses and commissions and interest expenses, as well as implementing the provisions of BW-12.

CURRENT SERVICES PROGRAM DESCRIPTION:

NFIP Management

NFIP Management is the overall management and oversight of the NFIP operations including the selling and servicing of policies provided by the NFIP WYO partners. FEMA and its partners apply insurance industry concepts and methods to provide consumer-oriented flood insurance to accelerate recovery from floods. FEMA administers the NFIP so that insurance and floodplain management policies and operations are mutually reinforcing. Furthermore, FEMA works to increase the NFIP policy base so that more people are indemnified by insurance for future flood losses, facilitating their recovery, rebuilding communities, and reducing costs to taxpayers. Activities in this category include selling and servicing flood insurance policies, claims, and establishing appropriate premium rates.

NFIP Operation Expenses

FEMA provides for management and oversight of the insurance component of NFIP. This includes the development and oversight of insurance coverage policy and regulations; analysis and evaluation of insurance risks and claims data used to determine premium rates; and oversight of insurance companies that write flood insurance policies and adjust claims. It also includes crosscutting activities such as the Community Rating System (CRS) program, a Federal incentive program that rewards communities that take action to reduce flood losses and NFIP operations in a post-disaster environment.

2015 Total Request	29	29	150,000
Total Change 2014 to 2015	-	-	50,000

FEMA requests \$150 million in FY 2015 for this activity.

CURRENT SERVICES PROGRAM DESCRIPTION:

Flood Mitigation Assistance

A component of the business strategy is to reduce the risk associated with flood events through Flood-Related grants via FMA. FMA provides funding to States, federally recognized Indian tribal governments, and communities for reduction and elimination of the long-term risk flood damage poses. FMA also provides funds on an annual basis so that measures can be taken to reduce or eliminate risk of flood damage to buildings insured under the NFIP. On average, each dollar spent on Flood Mitigation grant activities reflects approximately \$2 in future losses avoided.

FEMA requests \$150 million in FY 2015 for this activity so that important loss reduction measures are completed. These measures include the acquisition and demolition of flood prone structures, elevation of homes above expected flood levels, and construction of minor drainage projects to reduce the impact of storms.

BW-12 mandated a unified grant assistance process previously delivered by the Flood Mitigation Assistance, Repetitive Flood Claims and Severe Repetitive Loss programs. In FY 2013, these were merged into the Flood Mitigation Assistance program resulting in a more efficient delivery of flood-related grants to States and local communities, thereby reducing future claims to NFIP.

Severe Repetitive Loss

Section 100225 of BW-12 rescinds the authorization for the Severe Repetitive Loss (SRL) Program. Through 2016, the program office will continue to provide technical assistance to applicants, as well as monitor and closeout open projects. SRL program funded positions will be reduced through natural attrition and reassigned to other mitigation programs.

Repetitive Flood Claims

Section 100225 of BW-12 rescinds the authorization for the Repetitive Flood Claim (RFC) Program. Through 2016, the program office will continue to provide technical assistance to applicants, as well as monitor and closeout open projects.

Total Change 2014 to 2015	-	-	220,000

FEMA requests \$380 million in offsetting collections for FY 2015 and \$3 million in accrued interest for the Reserve Fund. FEMA estimates an overall balance of \$543 million by the end of FY 2015.

CURRENT SERVICES PROGRAM DESCRIPTION:

BW-12 required FEMA to establish an additional fund in the U.S. Treasury, National Flood Insurance Reserve Fund, to meet the future obligations of the NFIP. These obligations include paying claims, claims adjustment expenses, and repayment of any outstanding debt owed to the U.S. Treasury under section 1309(a) [42 U.S.C. § 4016] of the Act. BW-12 also authorized FEMA to increase or decreases assessments to enable FEMA to credit the Reserve Fund with a balance equal to one percent of the sum of the total potential loss exposure of all outstanding flood insurance policies in force in the prior fiscal year or a higher amount as determined necessary by the Administrator of FEMA. FEMA established the Reserve Fund at the end of FY 2013 and began depositing contributions into the account in October 2013.

Current Services Level							-	-	-
Program Increase							14	9	846
Total Request	-	-	-	-	-	-	14	9	846

Description of Item:

Increase positions to implement BW-12 provisions.

Justification:

On July 6, 2012, the President signed BW-12 into law that would reform and reauthorize NFIP through 2017 to strengthen the program and its fiscal soundness. Many of the reforms required by the reauthorization represent significant changes in the structure and operation of the NFIP that will require rulemaking and additional staff capacity.

Impact on Performance (Relationship of Increase to Strategic Goals):

An increased percentage of households surveyed are reporting they have taken steps to mitigate damage to property and themselves in the event of a disaster, as well as the percentage of the U.S. Population (excluding Territories) covered by planned mitigation strategies.

Current Services Level							-	-	-
Program Increase							3	1	113
Total Request	-	-	-	-	-	-	3	1	113

Description of Item:

Increase positions to improve compliance with the Endangered Species Act (ESA).

Justification:

Over the last few years NFIP has encountered litigation associated with its compliance with ESA. As a remedy to further litigation, FEMA developed a strategy for improving its ESA compliance. The first phase of the strategy involved performing a programmatic environmental impact assessment and the second phase will promulgate rulemaking that will require communities participating in the NFIP to adopt changes in their ordinances.

Impact on Performance (Relationship of Increase to Strategic Goals):

Reduce the potential cost of natural disasters to communities and their citizens.

Flood Mitigation and Flood Insurance Operations Mission Statement

Resources under this activity support the salaries and expenses of FTE managing the National Flood Insurance Program (NFIP) and flood mitigation programs.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	10,344	11,020	12,132	1,112
11.5 Other Personnel Compensation	55	90	-	(90)
12.1 Civilian Personnel Benefits	2,982	3,020	3,720	700
Total, Salaries & Benefits	13,381	14,130	15,852	1,722

Includes a net increase of \$1,487,000 which includes an increase for COLA and Biggert-Water Implementation and a decrease for awards funding.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
21.0 Travel and Transportation of Persons	\$244	\$600	\$500	(\$100)

FY 2015 request reflects a decrease in travel needs with no impact on program's ability to successfully carry out mission.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.1 Rental Payments to GSA	\$851	\$851	\$943	\$92

Provides for increase in cost for leased office space to accommodate new staff.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.3 Communications, Utilities, and Misc. Charges	\$428	\$424	\$432	\$8

Provides for additional communication needs and inflationary increases in service costs.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.3 Other Goods and Services from Federal Sources	\$475	\$552	\$566	\$14

Reflects anticipated DHS Working Capital Fund contribution.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
26.0 Supplies and Materials	\$19	\$19	\$23	\$4

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. The FY 2015 estimate of reimbursables reflects the anticipated need for supplies and material cost.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
31.0 Equipment	\$23	\$23	\$42	\$19

To provide staff with the necessary equipment to perform their work. Also supports the replacement of worn or damaged office equipment.

Floodplain Management and Flood Mapping Mission Statement

Through Floodplain Management programs, FEMA encourages communities and their citizens to take informed and effective mitigation actions before a flood in order to reduce the long-term risk to people and property. Through the delivery of mitigation programs, FEMA leads a national effort to: identify and improve the understanding of communities' hazards and their risks; develop and improve techniques and planning processes which mitigate those risks; provide an environment at the State and local levels that is conducive to applying those techniques and processes; provide financial and technical assistance to facilitate application of those techniques and processes; and support development of incentives and disincentives which make application of those techniques and processes a social, political and/or economic priority.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change

National Flood Insurance Fund - Mandatory Mission Statement

The National Flood Insurance Act of 1968, as amended, authorizes the Federal Government to provide flood insurance on a national basis. Flood insurance may be sold or continued in force only in communities that enact and enforce appropriate floodplain management measures. Communities must participate in the program within 1 year of the time they are identified as flood-prone in order to be eligible for flood insurance and some forms of Federal financial assistance for acquisition or construction purposes. In addition, Federally regulated funding institutions cannot provide loans to nonparticipating communities with an identified flood hazard. More than 20,000 communities in all States and Territories participate in the NFIP. Structures built to NFIP criteria experience 80 percent less damage through reduced frequency and severity of losses. The flood mitigation program requirements are estimated to save in excess of \$1 billion per year in flood losses avoided. The NFIP limits the impact of disaster by encouraging property owners and others to manage their risk through flood insurance and other hazard insurance mechanisms.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
42.0 Insurance Claims and Indemnities	\$9,193,063	\$3,395,566	\$3,756,099	\$360,533

Includes a projected increase in policy payouts.

Flood Related Grants Mission Statement

A component of the NFIP business strategy is to reduce the risk associated with flood events through floodplain management as well as through Flood-Related grants and assistance. FEMA provides funding to reduce the risk of flood damage to existing buildings and infrastructure by providing flood related grants to states, communities, and tribal nations. The FMA program provides funds on an annual basis so that measures can be taken to reduce or eliminate risk of flood damage to buildings insured under the NFIP.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change

BUDGET REQUEST AND SUPPORTING INFORMATION
--

**Federal Emergency Management Agency
United States Fire Administration**

I. Appropriation Overview

A.Mission Statement for U. S. Fire Administration:

The mission of the United States Fire Administration (USFA) is to provide National leadership to foster a solid foundation for our fire and emergency services stakeholders in prevention, preparedness, and response.

B.Budget Activities:

The USFA coordinates with other Federal, State, and local emergency service agencies; the private sector; colleges and universities; and other DHS educational consortium participants in fostering a solid foundation for our citizens and stakeholders in prevention, preparedness, and response. In fulfilling its mission, USFA utilizes the assets of the National Fire Academy (NFA); the National Emergency Training Center (NETC); Management, Operations, and Support Services (MOSS); and the National Fire Programs (NFP) Division.

C.Budget Request Summary:

The Federal Emergency Management Agency requests \$41,407,000, 134 positions, and 134 FTE for the USFA FY 2015 request.

II. Summary of FY 2015 Budget Estimates by Program/Project Activity (PPA)

**Department of Homeland Security

*National Fire Incident Reporting System (NFIRS)

The USFA prepares the Nation's first responders through ongoing training on how to evaluate and minimize community risk; improving protection of critical infrastructure; and preparing them to respond to all-hazard emergencies. The USFA coordinates with other Federal, State, and local emergency service agencies; the private sector; colleges and universities; and other DHS educational consortium participants in fostering a solid foundation for our citizens and stakeholders in prevention, preparedness, and response. In fulfilling its mission, USFA utilizes the assets of the NFA, NETC Facilities and Support Services, and the National Fire Programs Division.

National Fire Academy

The NFA promotes the professional development of the fire and the emergency response community and its allied professionals. Its programs are designed to support DHS and FEMA missions to help State and local first responders prevent, mitigate, prepare for, and respond to all hazards incidents during local, regional, and National emergencies. NFA supports State and local training organizations to fulfill their obligation to the career and volunteer fire and emergency services. NFA also develops, delivers, and manages educational and training programs with a National focus that are outside State and local training missions or that exceed State and local capabilities because of cost or audience. With its State and local partnerships, NFA trains more than 105,000 students per year, about 7.5% of America's fire service population.

To address changing student demographics and increase academic efficiency, NFA is exploiting distance learning strategies to reach more students. In FY 2013, NFA offered 62 self-study courses through its distance learning platform, NFA Online. By FY 2015, the number of courses will increase to 94 and delivery methods will expand to include blended learning (mixing online and classroom content), as well as mediated learning wherein students take college-level content entirely online.

NFA is exploring cost-effective solutions to deliver its popular on-campus Command-and-Control Decision-Making courses using high-end 3D graphics to off-campus venues. This will enable students to train with their local personnel and local resources to enhance learning transfer and application.

NFA has begun developing performance support tools and references that provide "at the moment of need" guidance and informational support focusing on direct accomplishment of tasks by the end user. An example of a support tool currently being developed is the electronic Field Operations Guide. Using smart phones, tablets or laptops this electronic tool will provide an immediate reference for fire and emergency personnel when using the incident command system during field operations.

In FY 2013 NFA began the conversion from paper-based student manuals to electronic products using an easily accessible and intuitive platform. The Bring Your Own Device program has been implemented where students provide their own computer, tablet or electronic reading device and have full access to the course content. As a result, students report they are better prepared for their class work, the conversion has reduced their costs for shipping materials home and it comports with environmentally friendly green initiatives. In addition, the NFA launched an on-line course materials download feature for all 50 States. This feature gives each State fire training agency the ability to download NFA course materials, saving both time and money for our State and local training partners.

To document and track the transfer of learning of its classes and to gauge its impact, the NFA regularly conducts long-term evaluation of its students. Each year, the NFA reports statistical data from both students and their supervisors. FY 2013 data shows:

- 89.9% of supervisors report the course has improved their subordinate's/student's job performance an increase from 88.6% in FY 2012;
- 89.4% of supervisors report the information from the course is likely to improve their department's performance an increase from 88.8% in FY 2012; and
- 96.7% of students report that what they learned in the course will help them do their job better which is materially consistent with FY 2012 of 97.1%.

NETC Management, Operations, and Support Services Division

The MOSS manages, operates, and maintains the NETC facilities, comprised of 26 buildings covering 107 acres, and training resources. MOSS provides administrative, operational, and emergency services in support of the program activities and special groups at NETC.

Applicants are now notified of their acceptance or non-acceptance by email rather than U. S. mail or facsimile, reducing Admission's annual postage costs by 50%. Qualified individuals who were not accepted for classes are referred to other available course offerings, increasing the operating efficiency of NETC and NFA classes by filling the classroom to capacity.

The NETC currently has 18 buildings on target for "sustainable" classification by the U.S. Green Building Council. NETC has experienced an overall decrease of approximately 40% in energy consumption. Cost savings have been applied to NETC infrastructure, assisting in reducing the backlog of deferred maintenance projects. In addition, the NETC is pursuing a composting procedure to reduce waste being directed to landfills and to supplement mulch purchases for use at the NETC.

National Fire Programs Division

The NFP manages USFA public education and information efforts. NFP operates the National Fire Data Center for the collection, analysis, publication, dissemination, and marketing of information related to the Nation's fire problem and USFA programs. NFP also manages USFA research efforts in fire detection, prevention, and suppression; first responder health, safety and effectiveness; and special programs that enhance USFA and partner roles in all-hazard preparedness and response.

The NFIRS is the cornerstone of the USFA's data collection and analysis. NFIRS provides the sole National standard for fire department incident data at the local, State, and National levels. USFA invests in the development, maintenance and analysis of NFIRS with an emphasis on accessibility and ease of use in order to encourage and facilitate data-based needs assessment, planning, and evaluation.

Through the NFP, USFA leads a National public education effort to unite the fire service and fire and life safety organizations in a collaborative effort to reduce home fire injuries, deaths and property loss. Fire departments, safety advocates, community groups, schools and others rally behind a common and compelling theme--*Fire is Everyone's Fight*TM. By leveraging shared resource materials, expertise, and delivery channels, all partners benefit in terms of efficiency and effectiveness.

IV. Program Justification Changes

United States Fire Administration Mission Statement

The mission of the United States Fire Administration (USFA) is to provide National leadership to foster a solid foundation for our fire and emergency services stakeholders in prevention, preparedness, and response.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	10,538	10,615	10,621	6
11.5 Other Personnel Compensation	17	101	-	(101)
12.1 Civilian Personnel Benefits	4,149	4,231	4,286	55
Total, Salaries & Benefits	14,704	14,947	14,907	(40)

This section covers gross compensation (before tax deductions and other responsibilities) directly related to duties performed for the Government by Federal civilian employees and cash payments to other funds for the benefit of currently employed Federal civilian personnel or direct payments to these employees. Salaries and Benefits include costs for 134 FTEs. The FY 2015 request includes the proposed January 2015 1.0% cost of living adjustment and directed elimination of awards & bonuses.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.1 Advisory and Assistance Services	\$6,291	\$7,011	\$6,011	(\$1,000)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. Reflects a decrease of \$1M for a one-time increase in FY 2014 related to completed NFIRS System Enhancements.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.2 Other Services from Non-Federal Sources	\$1,042	\$2,111	\$1,752	(\$359)

Contractual services for services not otherwise classified under Object Class 25. Reflects a decrease of \$359K for a one-time increase in FY 2014 in online course conversions.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.4 Operation and Maintenance of Facilities	\$6,467	\$7,094	\$6,900	(\$194)

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. For FY 2015 there will be a reduction in the scope of work for facility operations and maintenance support services contracts.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
41.0 Grants, Subsidies, and Contributions	\$2,700	\$2,912	\$1,912	(\$1,000)

Cash payments to States, other political subdivisions, corporations, associations, and individuals for grants (including revenue sharing), subsidies (including credit program costs), and gratuities and other aid. Reflects a decrease of \$1M related to State Fire Training Grants and the request to permit State fire academies to compete for Firefighter Assistance Grants.

BUDGET REQUEST AND SUPPORTING INFORMATION

U.S. Citizenship & Immigration Services Salaries and Expenses

I. Appropriation Overview

The Salaries and Expenses account encompasses all of the discretionary funding for U.S. Citizenship and Immigration Services (USCIS). Appropriated funds support E-Verify and the Citizenship and Integration Grant Program.

A. Mission Statement for Salaries and Expenses:

USCIS is the component of the Department of Homeland Security (DHS) that facilitates legal immigration for people seeking to enter, reside, or work in the United States. USCIS possesses the authority to grant or deny immigration benefits—approving approximately 6 million immigration benefit requests each year. These immigration benefits range from work authorization documents to asylum and refugee applications, to petitions for immediate relatives to immigrate to the United States.

USCIS has established six goals: (1) strengthen the security and integrity of the immigration system, (2) provide effective customer-oriented immigration benefits and information, (3) support immigrants' integration and participation in American civic culture, (4) promote flexible and sound immigration policies and programs, (5) strengthen the infrastructure supporting the USCIS mission, and (6) operate as a high-performance organization that promotes a highly talented workforce and a dynamic work culture.

Through the Salaries and Expenses appropriation, USCIS ensures the integrity of the immigration system through the operation and enhancement of E-Verify and promotes awareness and understanding of citizenship through the Citizenship and Integration Grant Program.

- E-Verify is an Internet based program that enables an employer to determine an employee's eligibility to work in the United States by verifying information reported on an employee's Form I-9 against DHS, Social Security Administration (SSA), Department of State data and participating state departments of motor vehicles (DMV) data.
- The Citizenship and Integration Grant Program is the sole Federal program that supports the civic integration of lawful immigrants through citizenship preparation programs. Citizenship and Integration competitive grants expand the availability of high quality citizenship preparation programs for permanent residents in communities nationwide and assists in the identification of effective citizenship education practices that are most closely associated with positive outcomes for lawful immigrants seeking services.

B. Budget Activities:

E-Verify Program

In FY 2013, the Salaries and Expenses appropriation funded activities related to both the operation of E-Verify and the Citizenship and Integration Grant program. E-Verify is an Internet based program that enables an employer to determine an employee's eligibility to work in the United States by verifying information reported on an employee's Form I-9 against DHS, Social Security Administration (SSA), Department of State data and participating state departments of motor vehicles (DMV) data.

The FY 2014 Omnibus includes funding for the Verification Information System (VIS) Modernization initiative. VIS is the IT system that supports all verification activities related to the E-Verify program. The VIS Modernization initiative will tailor the E-Verify experience for each employer, automate the employer enrollment process, and provide additional system capacity for expected increased workloads. At the end of the first quarter of FY 2014, 500,423 employers were enrolled in E-Verify and they ran more than 6 million queries. The program continues to grow by approximately 1,500 new employers per week.

The FY 2015 budget request includes funding to continue E-Verify operations, and to support the continued enhancement of E-Verify Self Check and the VIS Modernization initiative. In addition, funding is requested for the identification and implementation of a Final Non-Confirmation (FNC) appeals process.

Citizenship and Integration Grant Program

Since FY 2009, USCIS has received \$43.1 million (in both discretionary and fee funding) to support the Citizenship and Integration Grant Program. Since the inception of the program, 182 grants to non-profit recipients have allowed for the provision of citizenship preparation services to more than 72,483 permanent residents in 33 states and the District of Columbia. Through September 30, 2014, USCIS anticipates that the current 71 grant recipients will provide an additional 20,000 permanent residents with citizenship preparation services. Grant activities focus on the direct provision of high quality English language and civics instruction and naturalization application services to prepare permanent residents for citizenship and ensure they have the knowledge to fully exercise their rights and meet their responsibilities as United States citizens.

C. Budget Request Summary:

In FY 2015, USCIS requests \$134.8 million and 419 positions, 398 full-time equivalent (FTE) for the Salaries and Expenses account. The FY 2015 request represents an increase of \$18.4 million, an increase of 31 positions, and an increase of 10 FTE from FY 2014 Omnibus level.

Adjustments to base include an increase of \$13.9 million, which includes \$7.5 million (0 FTP / 0 FTE) of discretionary funding to support the Citizenship and Integration Grant Program and \$6.4 million (31 FTP / 10 FTE) for E-Verify. In FY 2014, \$2.5 million in funding for the Citizenship

and Integration Grant Program was provided in discretionary funds and \$7.5 million from fees paid by immigration benefit applicants and deposited into the Immigration Examinations Fee Account (IEFA) account. The FY 2015 Budget requests that \$10 million be provided through the discretionary Salaries and Expenses Account to fund the grants program.

In addition to these base adjustments, the FY 2015 request includes \$4.5 million (0 FTP / 0 FTE) for the following program increase:

- Final Non-Confirmation (FNC) Review Process: A total of \$4.5 million (0 FTP / 0 FTE) is requested for the identification and implementation of an FNC appeals process. The purpose of the FNC appeals process is to provide a formalized pathway for individuals to identify FNCs they believe to have been issued in error so that those E-Verify cases may be reviewed further by DHS and SSA. This process is designed to mitigate the potential adverse effects caused by FNCs erroneously issued to work-authorized individuals.

2015 Total Request	419	398	124,755
Total Change 2014 to 2015	31	10	10,866

U.S. Citizenship & Immigration Services (USCIS) requests 419 FTP, 398 FTE, and \$124.8 million for this activity in FY 2015. Adjustments to base include \$320 thousand for the 2015 pay raise; \$109 thousand for the annualization of the 2014 Pay Raise; \$4.8 million for the annualization of Self Check; \$382 thousand for retirement contributions; \$674 thousand for Working Capital Fund contributions; and \$81 thousand for program evaluation requirements.

CURRENT SERVICES PROGRAM DESCRIPTION:

E-Verify was established by the *Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IIRIRA)* and is based on the Employment Eligibility Form (Form I-9). E-Verify is an Internet based program that enables an employer to determine an employee's eligibility to work in the United States by verifying information reported on an employee's Form I-9 against DHS, Social Security Administration (SSA), Department of State data and participating state departments of motor vehicles (DMV) data. At the end of the first quarter of FY 2014, 500,423 employers were enrolled in E-Verify and they ran more than 6 million queries. The program continues to grow by approximately 1,500 new employers per week.

USCIS launched the E-Verify Self Check service in March of 2011, and gradually made it available to the public through a three-phased approach, culminating in a nationwide expansion in February 2012. Self Check was developed through a partnership between DHS and SSA to provide individuals with a tool to check their own employment eligibility status, as well as to provide guidance on how to update their DHS and SSA records. It is the first online E-Verify service offered directly to workers.

Self Check helps businesses by providing U.S. workers with the opportunity to ensure their employment related records are accurate before getting a job. It also improves employee understanding of the employment eligibility process. USCIS began offering this service in Spanish in August 2011, and plans further Self Check enhancements in FY 2014 and FY 2015, including additional access to Department of State and state drivers' license databases.

E-Verify launched the first phase of a Data Analytics Tool (DAT) in FY 2012. The first phase of DAT offered key advanced analytic techniques, including models addressing compliance and program effectiveness. E-Verify deployed Voice of the Customer analytics tool, designed to use customer feedback from E-Verify Listens initiative to improve service, policy, and operation systems.

In FY 2013, USCIS began emailing Tentative Non-Confirmation (TNC) notices and TNC reminders directly to employees in an effort to reduce Final Non-confirmations (FNCs) that may have been issued in error. These initiatives were part of a multi-year plan to reduce FNCs. In FY 2013, USCIS began development for myE-Verify - a suite of online services available to employees who want to check their own work authorization and manage other tasks related to E-Verify that will enhance the Self Check user experience. After completing a Self Check query, users will now be able to establish an account with a unique user ID and password. Through these accounts, employees will eventually be able to: 1) protect against the fraudulent use of their social security number (SSN) in E-Verify by locking their SSN; 2) check the status of their E-Verify or Self Check case and obtain more detailed information on how to correct their record if a mismatch is identified; 3) receive reminders of employment authorization document expiration; and 4) run reports that provide a detailed case history for how the user's SSN has been used in the E-Verify system. The case history reports will include information such as the names and location of employers where their SSN was used, dates when their SSN was used, and E-Verify case results.

In FY 2014, USCIS will roll out the myE-Verify initiative to the public. USCIS also plans to begin development of the Verification Information System (VIS) Modernization initiative. This initiative will phase in an enhanced enrollment process that reduces the enrollment burden on the employer and the government and will provide more detailed user information for compliance assistance activities. It will also tailor the E-Verify enrollment experience for the employer, increasing the likelihood of user compliance, and will provide additional system capacity to handle the increased workload that is anticipated for future years. USCIS will also launch fraud and discrimination modeling capabilities developed as a part of the DAT initiative. These fraud and discrimination models build upon earlier monitoring and compliance activities aimed at decreasing the incidences of non-compliant behavior by E-Verify employers. USCIS will continue to test the DAT fraud and discrimination models and will work to incorporate them into existing monitoring and compliance processes. Additionally, USCIS will finalize the requirements for the electronic Form I-9 and its supporting processes. These enhancements will deploy in phases in FY 2014 and subsequent out-years.

In FY 2015, USCIS will complete the multi-year initiative for reducing FNCs that may have been issued in error. A new FNC letter will be issued and cases that are submitted for review can be tracked and monitored in E-Verify. USCIS will also begin phasing in the VIS Modernization initiative. Some of the planned changes include:

- An enhanced employer enrollment process and account maintenance initiative for E-Verify.
- Development of an electronic Form I-9 that is compatible with E-Verify. This electronic Form I-9 will enable users to automatically populate and submit Form I-9 data into E-Verify. Users will also be able to store and manage their electronic Form I-9s as required.

	Perm. Pos	FTE	Amount
2013 Revised Enacted	-	-	2,384
2014 Enacted	-	-	2,500
2015 Adjustments-to-Base	-	-	7,500
2015 Current Services	-	-	10,000
2015 Total Request	-	-	10,000
Total Change 2014 to 2015	-	-	7,500

USCIS requests 0 FTP, 0 FTE, and \$10 million for this activity in FY 2015. In FY 2014, the Citizenship and Integration Grant Program received \$2.5 million in discretionary funding while \$7.5 million is being supported by the Immigration Examinations Fee Account. The adjustment to base of 0 FTP, 0 FTE, and an increase of \$7.5 million is to request appropriated, discretionary funding for the Citizenship and Integration Grant Program.

CURRENT SERVICES PROGRAM DESCRIPTION:

Our continued success as a nation of immigrants depends on the ability of lawful newcomers to permanently settle in communities and enjoy the rights and freedoms that define our Nation. Naturalization is a critical milestone for immigrants in achieving full participation, gaining a sense of belonging, and receiving equality under the law. The Citizenship and Integration Grant Program (CIGP) is an important capacity-building initiative that supports immigrant civic integration through the naturalization preparation process.

Program Results

The program funds competitive grants with the goal of expanding the availability of high quality citizenship preparation programs for permanent residents in communities nationwide, to include citizenship instruction and naturalization application services. This is the only federally funded program that prepares lawful permanent residents for naturalization, to include an understanding of the rights and responsibilities of citizenship and information needed for the civics (U.S. history and government) and English (reading, writing, and speaking) components of the naturalization test.

- To date, USCIS grant recipients have provided citizenship preparation services to 72,483 permanent residents in 33 states and the District of Columbia. Specifically, grant recipients enrolled 40,392 students in citizenship classes, offered 116,374 hours of instruction, provided naturalization eligibility screenings to 48,457 permanent residents, and prepared and submitted 28,965 naturalization applications.
- In FY 2013, CIGP recipients provided citizenship preparation services to 26,202 permanent residents under the program. Specifically, grant recipients enrolled 13,605 students in citizenship classes, provided naturalization eligibility screenings to 19,503 permanent residents, and prepared and submitted 12,175 naturalization applications.
- Through September 30, 2014, USCIS anticipates that the current 71 grant recipients will provide an additional 20,000 permanent residents with citizenship preparation services.

Summary Table of Citizenship and Integration Grant Program Results

Type of Service	Total
Permanent residents provided with citizenship preparation services to date	72,483
Permanent residents provided with citizenship preparation services in FY 2013	26,202
Anticipated number of permanent residents provided with citizenship preparation services in FY 2014	20,000
Total number of states (including DC) offering grant services to date	33
Permanent residents enrolled in citizenship classes to date	40,392
Permanent residents enrolled in citizenship classes in FY 2013	13,605
Hours of classroom instruction to date	116,374
Permanent residents provided with naturalization eligibility screenings to date	48,457
Permanent residents provided with naturalization eligibility screenings in FY 2013	19,503
Naturalization applications prepared and submitted to date	28,965
Naturalization applications prepared and submitted in FY 2013	12,175

Program Impact and Legacy

- **Legacy:** *Under the program, 18 grant-receiving organizations attained recognition by the Board of Immigration Appeals (BIA), and 57 individuals were accredited by the BIA. BIA recognition and accreditation are valuable assets that organizations can utilize to respond to the citizenship preparation needs of the community for years to come.*

Impact: *In FY 2013 alone, USCIS conducted 32 citizenship education training seminars across the country for approximately 1,960 adult educators and volunteers, including 90 representatives from Citizenship and Integration Grant Program recipients.*

Through the Citizenship and Integration Grant Program, grant recipients have helped to increase access to citizenship services as well as engage the general public in the successful integration of newcomers.

- **Impact:** *Promising practices include novel use of technology in the citizenship classroom, effective instructional strategies, and innovative use of volunteers to support citizenship instruction. Several of these promising practices are highlighted on the online USCIS Citizenship Resource Center (www.uscis.gov/citizenship).*

Summary Table of Program Impact and Legacy

Type of Service	Total
Grant receiving organizations that attained recognition by the Board of Immigration Appeals (BIA) to date	18
Individuals accredited by the BIA as a result of the program to date	57
Monitoring visits conducted to date	80
Citizenship education training seminars in FY 2013	32
Adult educators and volunteers attending seminars in FY 2013	1,960
Representatives of grant receiving organization attending seminars in FY 2013	90
Promising practices published to Citizenship Resource Center to date	9

MAJOR ACQUISITIONS:

Benefits Provision – Verification Information System/Employment Eligibility Verification (VIS/EEV)

USCIS VIS supports the E-Verify program, to allow participating employers to verify the employment eligibility of all newly hired employees. The E-Verify program is mandated by the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IIRIRA). Any legislation enacted making participation in the E-Verify program mandatory will necessitate the usage of VIS as the primary information system used. VIS also supports the Systematic Alien Verification for Entitlements (SAVE) Program, allowing federal, state and local benefit granting agencies to verify the immigration status of applicants/customers applying for a government benefit. The SAVE program is mandated by the Immigration Reform and Control Act of 1986 (IRCA) and the Personal Responsibility and Work Opportunity Reconciliation Act of 1996 (PRWORA).

This investment proposed to be funded out of the Salaries and Expenses PPA in FY 2015, as follows:

- Salaries and Expenses \$63.947 million

FY 2013 Activity Funding (\$\$\$ thousands)	FY 2014 Activity Funding (\$\$\$ thousands)	FY 2015 Activity Request (\$\$\$ thousands)
\$58,527	\$61,170	\$63,947

FY 2015 Funding Breakout:

Program Area (Funding in \$\$\$ thousands)	Sub-Program	Mission Need
Benefits Administration (\$63,947)	Immigration Management	The VIS system allows participating employers to verify the employment eligibility of all newly hired employees and also addresses a capability gap by allowing federal, state, and local benefit granting agencies to verify the immigration status of applicants/customers applying for a government benefit.

Total Request	-	-	-	-	-	-	-	-	4,500

Description of Item: E-Verify Final Non-Confirmation Review Process

USCIS requests \$4.5 million to fund the identification and implementation of a Final Non-Confirmation (FNC) appeals process. The purpose of the FNC appeals process is to provide a pathway for individuals to identify FNCs they believe to have been issued in error so that those E-Verify cases may be reviewed further by DHS and SSA. This process is designed to mitigate the potential adverse effects caused by FNCs erroneously issued to work-authorized individuals. Currently, USCIS has an informal FNC review process for DHS cases.

Justification:

The benefits of the FNC appeal include:

- Ensuring that employees have a way to resolve the discrepancies in their records if they receive an FNC.
- Ensuring that all U.S. citizens and non-citizens have access to reviews by the Department of Homeland Security (DHS) and the Social Security Administration (SSA). The current process is only available for DHS cases.
- Demonstrating the program's willingness to respond to stakeholder suggestions and concerns about implementing an FNC review process, thereby improving customer satisfaction with the program.

Impact on Performance (Relationship of Increase to Strategic Goals):

This initiative supports DHS Mission 3: Enforcing and Administering Our Immigration Laws.

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For necessary expenses for citizenship and immigration services, [\$113,889,000]**\$134,755,000**¹, of which **\$124,755,000**² is for the E-Verify Program, as described in section 403(a) of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (8 U.S.C. 1324a note), to assist United States employers with maintaining a legal workforce, **and of which \$10,000,000 is for the Citizenship and Integration Grant Program**³: Provided, That, notwithstanding any other provision of law, funds otherwise made available to United States Citizenship and Immigration Services may be used to acquire, operate, equip, and dispose of up to 5 vehicles, for replacement only, for areas where the Administrator of General Services does not provide vehicles for lease: Provided further, That the Director of United States Citizenship and Immigration Services may authorize employees who are assigned to those areas to use such vehicles to travel between the employees' residences and places of employment.

Language Provision	Explanation
¹ ...[\$113,889,000] <u>\$134,755,000</u> ...	Dollar change only. No substantial change proposed.
² ... <u>\$124,755,000</u> ...	Dollar change only. No substantial change proposed.
³ ... <u>and of which \$10,000,000 is for the Citizenship and Integration Grant Program</u> ...	Provides USCIS with authority for \$10,000,000 in appropriated funding for the Citizenship and Integration Grant Program.

Immigrant Integration & Citizenship Mission Statement

The Office of Citizenship promotes the rights and responsibilities of citizenship and provides integration tools and resources for immigrants, organizations, and other stakeholders. Our continued success as a nation of immigrants depends on the ability of lawful newcomers to permanently settle in communities and enjoy the rights and freedoms that define our Nation. Naturalization is a critical milestone for immigrants in achieving full participation, gaining a sense of belonging, and receiving equality under the law. American society must remain open and welcoming to immigrants and provide essential tools and support for them to gain a sense of belonging and ownership in the future of our country. This program supports these goals.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
41.0 Grants, Subsidies, and Contributions	\$2,384	\$2,500	\$10,000	\$7,500

An increase of \$7,500,000 is requested for Grants/Subsidies/Contributions, including cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. This request reflects the transfer of \$7,500,000 in Citizenship and Integration Grant Program funding from the Immigration Examinations Fee Account.

BUDGET REQUEST AND SUPPORTING INFORMATION

U.S. Citizenship & Immigration Services Immigration Examinations Fee Account

I. Appropriation Overview

The Immigration Examinations Fee Account (IEFA) is the primary funding source for U.S. Citizenship and Immigration Services. Fees collected from the filing of immigration benefit applications are deposited into the IEFA and used to fund the cost of processing immigration benefit applications and associated support benefits, as well as to cover the costs of providing similar benefits to applicants without fees for purposes of fulfilling humanitarian objectives.

A. Mission Statement for Immigration Examinations Fee Account:

The IEFA account provides necessary resources for USCIS to:

- Strengthen and effectively administer the immigration system.
- Strengthen national security safeguards and combat fraud.
- Reinforce quality and consistency in administering immigration benefits.
- Enhance customer service and public engagement.

B. Budget Activities:

Adjudication Services

Through a network of approximately 224 domestic and foreign offices, USCIS is responsible for the timely and quality processing of:

- ***Family-based petitions*** - facilitating the process for close relatives of U.S. citizens and permanent residents to immigrate, gain permanent residency, work, etc.
- ***Employment-based petitions*** - facilitating the process for current and prospective employees to immigrate or work in the United States temporarily.
- ***Asylum and Refugee applications and petitions*** - adjudicating asylum and refugee status applications for individuals seeking protection from persecution and facilitating the process for close relatives of approved refugees and asylees to immigrate to the United States.
- ***Naturalization applications*** - processing applications of those who wish to become U.S. citizens.

Secure identity cards and travel document booklets are personalized and provided to recipients of certain immigration benefits as evidence of immigration status and for use in proving eligibility to work and live in the United States and/or to re-enter the United States after travel abroad. Premium processing revenues that are deposited into this account fund the Transformation Program, which is a multi-year effort to modernize USCIS business processes and supporting systems.

Information and Customer Services

The Customer Service and Public Engagement Directorate (CSPED) provides clear, accurate, and timely responses to customer concerns and questions, and engages the public through transparent dialogue that promotes participation and feedback. The Customer Service Division (CSD) is dedicated to proactively providing information and guidance to USCIS applicants, petitioners, and advocates regarding immigration benefits. The Public Engagement Division (PED) is dedicated to coordinating and directing agency-wide dialogue with external stakeholders to actively collaborate and maintain open and transparent communication, and seek feedback regarding policies, priorities, and organizational performance reviews.

Administration

The Administration activity supports a variety of headquarters offices including the Office of the Director, Administration, Chief Financial Officer, Chief Counsel, Contracting, Communications, Legislative Affairs, Policy and Strategy, Equal Opportunity and Inclusion, Chief Human Capital Officer, and Security and Integrity.

Systematic Alien Verification for Entitlements (SAVE)

SAVE is an intergovernmental information-sharing program that verifies an individual's immigration status to provide Federal, State, and local benefit-granting agencies the immigration information needed to ensure that only persons eligible for those benefits receive them.

C. Budget Request Summary:

In FY 2015, USCIS requests \$3.07 billion, 13,277 positions, and 12,613 FTE for the Immigration Examinations Fee account. The FY 2015 request represents an increase of \$21.9 million, 37 positions, and 35 FTE above the FY 2014 President's Budget. The increase in projected spending authority is the net result of the following: \$10.4 million for the 2015 pay raise; \$3.2 million for the annualization of the 2014 pay raise; an increase of \$11.3 million for retirement contributions; a \$1.5 million increase associated with projected changes in workload requirements; and a decrease of \$7.5 million associated with a proposed transfer of the Citizenship and Integration Grant Program to the USCIS Salaries and Expenses discretionary account.

III. Current Services Program Description by PPA

**Department of Homeland Security
Citizenship & Immigration Services
Immigration Examinations Fee Account:
District Operations
Program Performance Justification
(Dollars in Thousands)**

PPA: District Operations

	Perm. Pos	FTE	Amount
2013 Revised Enacted	5,965	5,350	1,395,656
2014 Enacted	6,839	6,496	1,518,336
2015 Adjustments-to-Base	106	101	18,523
2015 Current Services	6,945	6,597	1,536,859
2015 Program Change	-	-	3,000
2015 Total Request	6,945	6,597	1,539,859
Total Change 2014 to 2015	106	101	21,523

USCIS requests 6,945 positions, 6, 597 FTE, and \$1.5 billion to process millions of immigration benefit applications while maintaining backlog goals and ensuring the security and integrity of the immigration system. Adjustments to base include \$5.7 million for the 2015 pay raise; \$1.6 million for the annualization of the 2014 pay raise; \$1.4 million for a realignment of positions from Records Operations, \$13.0 million for a realignment of positions from Service Center, \$6.2 million to reflect revised assumptions for retirement contributions, a decrease of \$7.5 million associated with Citizenship and Integration grants; and a decrease of \$2.0 million to realignment positions to Information and Customer Service. In addition to the adjustments to base listed above, a \$3.0 million increase is included to fund the establishment of the U.S. Citizenship Foundation.

CURRENT SERVICES PROGRAM DESCRIPTION:

Field Operations

Field Operations ensures the efficient and accurate adjudication of all applications and petitions for immigration benefits requiring in person interviews, timely action on related ancillary applications and other assigned product lines, provision of direct customer service, immigration information, assurance of the integrity of the immigration system, and assistance to applicants, petitioners, and beneficiaries.

Fraud Detection and National Security (FDNS)

The Fraud Detection and National Security Directorate (FDNS) develops and hones strategies in regards to U.S. Immigration and Nationality laws, regulations, and policies and programs that administer immigration benefits to:

- Detect, assess, deter and eliminate the types of fraud that pose a severe threat to national security and public safety because they create a vulnerability that may enable terrorists, criminals and illegal aliens to gain entry to and remain in the United States;
- Represent USCIS interests and collaborate with interagency law enforcement and intelligence community partners in order to maximize USCIS program impact;
- Provide national security program advice and guidance to USCIS operations;
- Develop and maintain national security-related policies, programs, and projects;
- Facilitate interagency screening coordination; and
- Initiate, develop, and implement screening projects to enhance the security process.

Office of Information Technology

The Office of Information Technology, a component within the Management Directorate, supports USCIS operations with technology services and solutions.

Biometrics

Enterprise Services Directorate's Biometrics Division is responsible for collecting biometric and biographic data from applicants who seek to obtain immigration benefits in the United States. Applicants appear at one of the 137 Application Support Centers located nationwide, by scheduled appointment, for biometric and biographic data collection. The biometrics are used by USCIS adjudicators to determine benefit eligibility and are also incorporated in DHS-issued benefit documents. The Biometrics Division plays a vital role in fulfilling the DHS and USCIS missions of ensuring the integrity of the immigration system through the collection of biographic and biometric data that is used to detect persons with known criminal or terrorist history by sending name check and biometric data to the Federal Bureau of Investigation (FBI). The Biometrics Division provides agency wide and enterprise service requirements to USCIS management for biometric systems. In addition, the Biometrics Division collects, on a cost reimbursable basis, biometrics and biographic data for applicants seeking visas to the United Kingdom and Canada.

Office of Citizenship

The Office of Citizenship promotes the rights, responsibilities, and importance of citizenship and provides educational tools and resources for immigrants, organizations, and other stakeholders. Our continued success as a nation of immigrants depends on the ability of lawful newcomers to permanently settle in communities and enjoy the rights and freedoms that define our Nation. Naturalization is a critical milestone for immigrants in achieving full participation, gaining a sense of belonging, and receiving equality under the law.

The Citizenship and Integration Grant Program, funded partially through fee collections in FY 2014,¹ is an important capacity-building initiative that supports immigrant civic integration through the naturalization preparation process. The program funds competitive grants with the goal of expanding the availability of high quality citizenship preparation programs for permanent residents in communities nationwide, to include citizenship instruction and naturalization application services. With Immigration Examinations Fee Account (IEFA) funding in FY 2013 and FY 2014, the Office of Citizenship:

- Provides educational products and resources that promote English language learning and education on the rights and responsibilities of citizenship to prepare immigrants for naturalization;
- Supports community-based capacity to prepare immigrants for citizenship and civic integration through competitive grants and technical assistance;
- Improves access to information on citizenship education opportunities and resources; and
- Promotes citizenship-focused public education and awareness efforts designed to steer permanent residents, educators, and immigrant-serving organizations to the online USCIS Citizenship Resource Center.

Office of Performance and Quality

The Office of Performance and Quality (OPQ) maintains the integrity and quality of the immigration process by developing annual performance goals and metrics. OPQ also administers the USCIS's national quality management program that helps ensure the integrity of the adjudication process and the effective delivery of immigration services.

MAJOR ACQUISITIONS

Customer Service Web Portal

The USCIS Office of Communications (OCOMM) and the Office of the Chief Information Officer (OCIO) maintain the public-facing Customer Service Web Portal (CSWP). The primary goal of the CSWP is to provide the public with a positive, understandable and effective online experience. A public user, with minimal computing skills, can access the CSWP and easily access information, download forms, educational and instructional materials, and gain access to other systems responsible for scheduling interviews and applying for immigrant benefits. Customer access to the CSWP is seamless, regardless of technical sources, so that all information sources have a similar, if not the same, look and feel and apply a consistent and intuitive navigation strategy.

This investment is proposed to be funded out of the District Operations PPA in FY 2015, as follows:

- District Operations: \$22.264 million
-

FY 2013 Activity Funding (\$\$\$ thousands)	FY 2014 Activity Funding (\$\$\$ thousands)	FY 2015 Activity Request (\$\$\$ thousands)
23,936	20,662	22,264

¹ The FY 2015 Budget continues funding for this program through USCIS's appropriated Salaries and Expenses account.

FY 2015 Funding Breakout:

Program Area (Funding in \$\$\$ thousands)	Sub-Program	Mission Need
Benefits Administration (22,264)	Knowledge Management	Customer Service Web Portal closes a gap in technical capabilities by implementing a content management system that provides the technical capability for managing the information, establishing a workflow for content reviews, and creating a capability for simply and safely publishing content to the internet.

Immigration - CLAIMS 3.0

CLAIMS 3 is a legacy case application tracking and processing system used for the adjudication of applications and petitions for immigration benefits and services except for asylum and naturalization. It is the primary source of applicant/petitioner information used to perform background checks, conduct the examination (review of information that is being provided by petitioners), and adjudication. The information within CLAIMS 3 is used to assist the examiner in verifying and corroborating applicant petitions through the use of business rules to ensure that the process is consistent with all applicable laws and regulations. CLAIMS 3 resides in USCIS's four service centers, the National Benefits Center, the Administrative Appeals Office, and Baltimore Field Office. It channels information to over 90 district offices via the Integrated Case Management System (ICMS) Web Interface for Family-based 485 Forms, and is a source for accessing information for performance measures and production numbers.

This investment is proposed to be funded out of the District Operations PPA in FY 2015, as follows:

- District Operations: \$15.87 million

FY 2013 Activity Funding (\$\$\$ thousands)	FY 2014 Activity Funding (\$\$\$ thousands)	FY 2015 Activity Request (\$\$\$ thousands)
16,546	16,240	15,870

FY 2015 Funding Breakout:

Program Area (Funding in \$\$\$ thousands)	Sub-Program	Mission Need
Benefits Administration (15,870)	Immigration Management	CLAIMS 3 addresses a capability gap by allowing USCIS to effectively and efficiently adjudicate immigration benefits. CLAIMS 3 LAN allows USCIS to process over 6 million benefits annually and plays an important role in closing performance gaps within USCIS for benefit timeliness, data-sharing, and completing immigration services reports to USCIS stakeholders

Infrastructure (End User Support)

Infrastructure-End User Support (I-EUS) investments support the operations and maintenance infrastructure of the immigration system. These investments include an enterprise Service Desk which includes Tier I, Incident and Problem Management support, Deskside Support, Deployment Services, Hardware Maintenance, and Asset Management. I-EUS provides Systems Assurance solutions to support systems engineering; Independent Testing and Integration services to sustain system acceptance, user acceptance, interoperability and performance testing; Change, Configuration, and Release Management to manage changes to the USCIS operating environment; and Master Delivery Order vehicle for purchasing information technology hardware and minimal maintenance support.

This investment is proposed to be funded out of the District Operations PPA in FY 2015, as follows:

- District Operations: \$137.113 million

FY 2013 Activity Funding (\$\$\$ thousands)	FY 2014 Activity Funding (\$\$\$ thousands)	FY 2015 Activity Request (\$\$\$ thousands)
128,241	138,285	137,113

FY 2015 Funding Breakout:

Program Area (Funding in \$\$\$ thousands)	Sub-Program	Mission Need
Enterprise IT Services (137,113)	Provided IT Infrastructure	The (I-EUS) program addresses a capability gap by covering operations and maintenance of the USCIS IT Infrastructure.

Infrastructure (Enterprise)

This investment is proposed to be funded out of the District Operations PPA in FY 2015, as follows:

- District Operations: \$132.626 million

FY 2013 Activity Funding (\$\$\$ thousands)	FY 2014 Activity Funding (\$\$\$ thousands)	FY 2015 Activity Request (\$\$\$ thousands)
110,496	133,657	132,626

FY 2015 Funding Breakout:

Program Area (Funding in \$\$\$ thousands)	Sub-Program	Mission Need
Enterprise IT Services (132,626)	Provided IT Infrastructure	The Infrastructure Enterprise program addresses a capability gap by providing the basic infrastructure that represents information technology utility to USCIS and the comprehensive support of that infrastructure.

Naturalization - CLAIMS 4.0

CLAIMS4 (C4) is the primary case processing system for the adjudication of Applications for Naturalization (N-400, N600, N600K, N336). C4 is operational at ninety-eight locations nationwide (4 Service Centers, the National Benefit Center, 92 Field Offices, and Headquarters) and offers a standardized automated process for adjudicating applications. The C4 system was designed to meet the USCIS vision and mission to provide: 1) customer-focused benefits processing; 2) credible source of useful information and contributor to the US security; 3) accurate and useful information to our customers; 4) immigration and citizenship benefits; and 5) ensuring the integrity of our immigration system. C4 continues to be one of the primary multi-tier client/server workflow management systems that is designed to strengthen America's future and secure America's promise by providing Citizenship and Naturalization benefits to our applicants.

This investment is proposed to be funded out of the District Operations PPA in FY 2015, as follows:

- District Operations: \$9.383 million

FY 2013 Activity Funding (\$\$\$ thousands)	FY 2014 Activity Funding (\$\$\$ thousands)	FY 2015 Activity Request (\$\$\$ thousands)
9,656	9,120	9,383

FY 2015 Funding Breakout:

Program Area (Funding in \$\$\$ thousands)	Sub-Program	Mission Need
Design (9,383)	Immigration Management	CLAIMS 4 addresses a capability gap by providing immigration and citizenship benefits on time, providing data sharing and reporting, and consolidating information from all naturalization forms (NForms) into a single system.

Biometrics Division Program

U. S. Citizenship and Immigration Services (USCIS), Biometrics Division (BD), is responsible by law (DOJ Appropriations Act of 1998, Public Law 105-119 and 63 CFR 12979, 6 U.S.C. §§ 112 AND 122; 8 U.S.C. §§ 1103 AND 1105; AND 5 U.S.C. § 552a AND 8 USC 1158(d)(5)(A)(i)) for collecting biometric and biographic data from applicants who seek to obtain immigration benefits in the United States. Applicants appear at one of the 136 Application Support Centers (ASC) located nationwide, by scheduled appointment, for data collection. The biometrics are used by USCIS adjudicators to determine benefit eligibility and are also incorporated in DHS-issued benefit documents. It is essential to the mission of DHS and USCIS, that the identity of individuals who seek to obtain immigration and naturalization benefits is verified and biometric data is checked to identify any known criminal or terrorist history.

This investment is proposed to be funded out of the District Operations PPA in FY 2015, as follows:

- District Operations: \$177.274 million

FY 2013 Activity Funding (\$\$\$ thousands)	FY 2014 Activity Funding (\$\$\$ thousands)	FY 2015 Activity Request (\$\$\$ thousands)
134,625	154,842	177,274

FY 2015 Funding Breakout:

Program Area (Funding in \$\$\$ thousands)	Sub-Program	Mission Need
Screening and Screening (177,274)	Credential Management	The BD addresses a capability gap by capturing the biometrics of approximately 3.2 million immigrants (units) on an annual basis.

2015 Total Request	3,057	2,904	542,449
Total Change 2014 to 2015	(110)	(105)	(8,204)

USCIS requests 3,057 positions, 2,904 FTE, and \$542.4 million for Service Center Operations to adjudicate applications and ensure improved customer service while delivering the right benefit, to the right person, without delay. Adjustments to base include \$2.0 million for the 2015 pay raise; \$710 thousand for the annualization of the 2014 pay raise; \$2.1 million for retirement contributions; and a decrease of \$13.0 million for the realignment of positions to District Operations.

CURRENT SERVICES PROGRAM DESCRIPTION:

Service Center Operations (SCOPS)

SCOPS is one of the key operational components of USCIS. Tasked with the adjudication of the largest volume of applications across the broadest and most diverse cross-section of immigration benefits, SCOPS is a strong and vital partner in the development of immigration policies and programs to ensure improved customer service while delivering the right benefit, to the right person, without delay. SCOPS continuously evaluates and modifies workflow processes in order to more effectively and efficiently administer immigration laws within the established cycle times, and is dedicated to ensuring the security of the United States through a vigilant workforce of officers who incorporate numerous security checks on a broad range of immigration benefit applications. Specialized teams of adjudications staff, law enforcement agencies, and other government agencies work together to conduct extensive research and vetting of individuals and organizations that may pose a threat to the national security of the United States.

Office of Intake and Document Production

The Office of Intake and Document Production leads the processes that support the beginning and end of most immigration transactions. Support for the beginning of the immigration process includes managing USCIS's forms design, printing and distribution processes, as well as those associated with application intake and fee collection. Support for the end of the immigration process includes production and delivery of secure proof of benefits documents.

USCIS requests 1,125 positions, 1,069 FTE, and \$238.8 million to extend humanitarian protection, citizenship, and other immigration benefits to eligible individuals as well as detecting fraud and protecting national security. Adjustments to base include \$965 thousand for the 2015 pay raise; \$242 thousand for the annualization of the 2014 pay raise; and \$1.1 million for retirement contributions.

CURRENT SERVICES PROGRAM DESCRIPTION:

Refugee, Asylum, and International Operations Directorate (RAIO) extends humanitarian protection, citizenship, and other immigration benefits to eligible individuals, while detecting fraud and protecting national security. RAIO is comprised of three operational divisions. The Refugee Affairs Division is a headquarters-based operation whose officers travel internationally to conduct refugee processing in accordance with U.S. law and international obligations. The Asylum Division has eight domestic offices which conduct adjudications of affirmative asylum applications and conduct credible fear screening for all persons placed in expedited removal who request asylum or express a fear of persecution or torture on return to their country of origin. With worldwide jurisdiction, the International Operations Division adjudicates immigration petitions and applications and provides immigration services in 25 embassies and consulates abroad in 22 countries. The International Operations Division also adjudicates requests for parole and oversees a cooperative agreement to provide resettlement services to qualified Cuban and Haitian migrants in the United States. In addition, the International Operations Division is involved with the naturalization of military service members overseas. With a broad footprint extending from U.S. embassies and consulates to additional refugee processing locations, RAIO is the face of USCIS abroad.

In furtherance of USCIS's mission and United States interests, RAIO engages in liaison with the United States and foreign governments, international organizations, civil society, non-governmental organizations, and private entities worldwide.

USCIS requests 355 positions, 337 FTE, and \$93.2 million for the management of U.S. immigration records. Adjustments to base include \$247 thousand for the 2015 pay raise; \$71 thousand for the annualization of the 2014 pay raise; \$271 thousand for retirement contributions; and a decrease of \$1.4 million for the realignment of positions to District Operations .

CURRENT SERVICES PROGRAM DESCRIPTION:

Records Operations

The Records Operations PPA funds the management of U.S. immigration records, which includes both the Records Division and the National Records Center (NRC) which are part of USCIS' Enterprise Services Directorate.

The Records Division administers both immigration records created by USCIS and enforcement records created by other DHS entities, including alien registration files (A-files). Functions performed by the Records Division include: 1) development, implementation, monitoring, and training of records management policy to ensure accuracy, availability, and security of immigrants' information held both in paper and electronic form; 2) cataloging, maintaining, and researching historical agency information; 3) implementation of the 8 CFR 103.38 genealogy program; and 4) performing specialized search, retrieval, and interpretation of immigration records in response to authorized government agency, Congressional, and public inquiries.

The NRC is responsible for overseeing policies and operations as the custodian of immigration files, i.e. A-files. NRC stores and accesses over 18 million A-files, providing customers with timely and

appropriate access to requested records and information in an efficient manner. NRC is also responsible for overseeing operations to store and manage destruction of over 25 million receipt files. Customers requiring access to A-files include federal, state, and local agencies. In addition, NRC is responsible for the largest Freedom of Information Act (FOIA) program of all government agencies. In FY 2013, the NRC received approximately 133,000 FOIA requests.

Total Change 2014 to 2015	-	-	1,459

USCIS requests 0 positions, 0 FTE, and \$184.9 million to transition USCIS from a fragmented, paper-based operational environment to a paperless, centralized, and consolidated environment, utilizing electronic processing for benefits filing and adjudication. Adjustments to base include an increase of \$1.5 million to reflect revised estimates for Transformation funding requirements.

CURRENT SERVICES PROGRAM DESCRIPTION:

Business Transformation

As part of a comprehensive set of initiatives to modernize the agency, USCIS embarked on an enterprise-wide Transformation investment that has begun transitioning the agency from a fragmented, paper-based operational environment to a centralized and consolidated environment facilitating electronic processing of the adjudication function. This investment is a large-scale, complex undertaking with the goal of modernizing USCIS-wide business processes using information technology (IT) - enabled reengineering. Transformation will be accomplished through implementation of an integrated operating environment system called Electronic Immigration System (ELIS). USCIS ELIS will employ the types of online customer accounts used in the private sector to manage transactions and track activities while accomplishing USCIS's mission of enforcing and administering our immigration laws. The revised processes, enabled by USCIS ELIS, will help USCIS meet customer expectations for on-demand information and immediate real-time electronic service over the Internet.

The Office of Transformation Coordination provides a centralized management structure to oversee all transformation activities within USCIS, including the coordination of several initiatives converting the current mix of legacy infrastructure and paper-based business processes to electronic-based business

processes. The USCIS goals for the Transformation Investment address four major initiatives: (1) National Security and Integrity: USCIS will ensure the integrity of the immigration system and help safeguard the country by effectively collecting, analyzing, and sharing information used to verify identity, eligibility, and the status of individuals seeking to become U.S. citizens, lawful permanent residents or seeking to study, live, or work temporarily in this country; (2) Customer Service: USCIS will deliver world-class customer service by adjudicating requests for benefits accurately and within acceptable timeframes, by providing timely and accurate information about immigration benefits and the status of customer requests, and by promoting civic values; (3) Operational Efficiency: USCIS will be an innovative, flexible, and accountable organization that invests in its people and infrastructure to ensure cost-effective and consistent results; and (4) Quality: USCIS will consistently issue high-quality immigration benefit decisions. An overview, by fiscal year, of USCIS ELIS enhancements and deployments is provided below:

FY 2013

- In January 2013, USCIS deployed expanded functional capabilities for additional roles-based access improvements, national security and fraud detection enhancements, customer and representative interface improvements, service motion support, and payment processing enhancements.
- In May 2013, USCIS deployed capability adding the USCIS Immigrant Fee to ELIS. This high volume product line allows all new immigrants to pay the \$165 Immigrant Fee in ELIS.
- In July 2013, USCIS deployed the Immigrant Petition by Alien Entrepreneur (Form I-526). Additional features in this deployment include added technology allowing for fast uploads and searchability of documents. This deployment supported the Immigrant Investor Program and represented a significant step forward in streamlining the filing and adjudication process for immigrant investors. Form I-526 in ELIS was made available to the public on November 16, 2013.

FY 2014

- In November 2013, USCIS deployed the Document Library in USCIS ELIS. The Document Library will eliminate immigrant investors' need to submit stacks of documents as part of the Form I-526 Petition. It allows Regional Center employees to use the Document Library to upload documents and create an electronic deal package² for one or many investors. The document library was made available to the public on December 21, 2013.
- USCIS plans to deploy the Application to Replace Green Card (Form I-90) in a new simplified architecture.
- USCIS also plans to start development that will allow for currently delivered capabilities to be deployed in the new architecture.

FY 2015

- In FY 2015, USCIS will deliver a Transformation Investment release every four to six months using agile development. With each agile release, USCIS intends to provide additional capabilities to e-file and adjudicate applications.

² A Deal Package consists of a grouping of electronic documents common to those who have invested in a particular enterprise. Immigrant investors view, validate, and connect their deal packages with their individual I-526 petitions.

- In FY 2015, USCIS tentatively plans to deploy the Temporary Protected Status Form (Form I-821) and Deferred Action for Childhood Arrivals Form (Form I-821D) as well as completing the transition of currently delivered capabilities to the new architecture.

USCIS will remain committed to developing capability with flexibility to handle its current workload of benefit requests, estimated at more than 6 million annually, as well as changes in laws or regulations.

Transformation

This investment is proposed to be funded out of the Transformation PPA in FY 2015, as follows:

- Transformation: \$177.268 million

FY 2013 Activity Funding (\$\$\$ thousands)	FY 2014 Activity Funding (\$\$\$ thousands)	FY 2015 Activity Request (\$\$\$ thousands)
162,337	176,395	177,268

FY 2015 Funding Breakout:

Program Area (Funding in \$\$\$ thousands)	Sub-Program	Mission Need
Benefits Administration (177,268)	Immigration Management	The Transformation program addresses a capability gap by deploying an enterprise-wide investment that will transition the Agency from a fragmented, paper-based operational environment to a paperless, centralized and consolidated environment, utilizing electronic adjudication.

Immigration Examinations Fee Account:
Information and Customer Services
Program Performance Justification**
(Dollars in Thousands)

PPA: Information and Customer Services

	Perm. Pos	FTE	Amount
2013 Revised Enacted	284	252	102,763
2014 Enacted	284	270	96,409
2015 Adjustments-to-Base	15	14	2,459
2015 Current Services	299	284	98,868
2015 Total Request	299	284	98,868
Total Change 2014 to 2015	15	14	2,459

USCIS requests 299 positions, 284 FTE, and \$98.9 million to provide timely, consistent, and accurate information to our customers. Adjustments to base include \$211 thousand for the 2015 pay raise; \$60 thousand for the annualization of the 2014 pay raise; and \$206 for retirement contributions; and \$2.0 million for the realignment of positions from District Operations.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Customer Service and Public Engagement Directorate (CSPED) provides clear, accurate, and timely responses to customer concerns and questions, and engages the public through transparent dialogue that promotes participation and feedback. The Customer Service Division (CSD) is dedicated to proactively providing information and guidance to USCIS applicants, petitioners, and advocates regarding immigration benefits. The Public Engagement Division is dedicated to coordinating and directing agency-wide dialogue with external stakeholders to actively collaborate and maintain open and transparent communication, and seek feedback regarding policies, priorities, and organizational performance reviews.

To meet the demand for telephone customer service, CSD designed and operates a triage process whereby callers can access and obtain general information and case status through a network Interactive Voice Response (IVR) system. Callers whose inquiries require additional information can be transferred to receive live assistance.

CSD manages the National Customer Service Center (NCSC) 1-800 number for USCIS. This number provides the general public with prompt and accurate information to their telephonic inquiries

regarding immigration laws and benefits. The NCSC 1-800 number averages nearly 1 million telephonic inquiries per month. When a customer calls the NCSC, the call is routed directly to the IVR system, which is available in English and Spanish. If the customer cannot resolve his or her inquiry through the IVR, the customer is transferred to a Customer Service Representative (CSR) at a Tier 1 Contract Call Center. CSD operates four Tier 1 Contract Call Center locations providing first line support to our customers. These centers are located in Barbourville and London, Kentucky, and Fort Worth and El Paso, Texas. After speaking to a CSR, if the customer requires additional support or has a unique and complex inquiry, the CSR will transfer the call to a Tier 2 Call Center to speak with an Immigration Services Officer (ISO). These USCIS employees have an extensive immigration law and operational background. The Tier 2 call centers are located in New York City and Los Angeles.

In FY 2014, CSD is expanding the capabilities of the NCSC so that customers will be empowered with more options to communicate with USCIS. Customers who use the agency's Electronic Immigration System (USCIS ELIS) and have a need to contact customer service for a technical or immigration question will be able to send their inquiry electronically. An ISO and/or technical help desk agent will respond to them via email or by telephone.

In FY 2015, CSD plans to deploy remote agent technology that allow enable USCIS to deploy customer service representatives throughout the country and not be limited to the two existing call centers. These agents will be Immigration Service Officers and will work primarily from their home, extending the customer engagement network of the CSD contact center operation. Through a direct connection with the engagement center, the remote agents will react quickly to problems that customers report electronically. As an extension of the customer engagement center operation, these remote agents will serve as the customers' liaison in the field office to resolve problems with customers cases; and serve as overflow sites for the engagement center.

In addition, CSD plans to complete a migration from a premise-based to a cloud-based architecture. Premise-based architecture requires computers to be installed and operated at the actual site. This is an outdated practice in the call center business. In a cloud-based environment, the systems needed to run the engagement center will be centrally located at a data center. The information is then accessed remotely from various locations; this allows implementation of new technology (i.e., chat, email) that is faster and more cost effective.

Total Change 2014 to 2015	-	-	2,887

U.S. Citizenship & Immigration Services (USCIS) requests 1,273 positions, 1,209 FTE, and \$342.3 million to strengthen key management processes, systems, and administrative support activities; and to facilitate mission success and enhance the timeliness, accountability, efficiency, and effectiveness of service delivery. Adjustments to base include \$1.2 million for the 2015 pay raise; \$394 thousand for the annualization of the 2014 pay raise; and \$1.3 million for retirement contributions.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Administration Program includes the Office of the Director, offices aligned under the Management Directorate, as well as other program offices. The Management Directorate is responsible for procurement operations; management of property plant and equipment, and other material resources; budget, planning and performance, strategic sourcing, financial and capital asset management; ensuring equal employment opportunities and inclusion for current and potential USCIS employees; human resources and personnel recruitment, hiring, training, leadership development, employee benefits, and work-life programs; immigration forms, print services, and the management of security and emergency management operations.

The **Management Directorate** is comprised of the following:

Investment Management Division strives to provide transparency in acquisition and investment management within USCIS programs by analyzing contract performance, assessing and mitigating risks, ensuring effective utilization of resources, and enabling effective decision-making by senior

leadership. The division is also responsible for managing, promoting and implementing the Agency's Balanced Workforce Strategy (BWS) and In-Sourcing initiatives.

Office of Administration plans, develops, implements, and evaluates agency-wide policies, procedures, and programs for personal property, facilities, and mail management, for the operation of centrally-managed, agency-wide support activities, and for the direct delivery of administrative support to Headquarters.

Office of the Chief Financial Officer coordinates the development and execution of the budget and biennial fee reviews; manages the performance measurement processes; and conducts financial management activities consistent with law, regulation, standards, and best practices.

Office of Contracting provides the execution management, oversight, and guidance for the Contracting program. The primary role of the office is to provide USCIS with the supplies/services necessary to accomplish the mission in accordance with the Federal Acquisition Regulation and Departmental policy.

Office of Equal Opportunity and Inclusion provides services and programs to help USCIS maintain an efficient, fair and impartial employment discrimination complaint resolution process; promote inclusion and diversity at all levels of the organization through workforce analysis and barrier elimination/mitigation; and, provide an effective disability accommodation program to ensure that individuals with disabilities receive full access to employment opportunities.

Office of Human Capital & Training provides oversight, direction, and operational support for an integrated program of recruitment, hiring, training, leadership development, performance management, employee benefits, and work-life programs for the USCIS workforce.

Office of Security and Integrity provides leadership in security and emergency management within USCIS to protect employees, facilities, assets and information to advance the USCIS mission by ensuring effective, efficient, and continual operations.

In addition, other core offices not part of the Management Directorate include the following:

Office of the Chief Counsel consists of dedicated legal divisions advising and representing USCIS operational components both at Headquarters and in the field. Divisions include Adjudications Law, Refugee and Asylum Law, Commercial and Administrative Law, Ethics, Transformation Law, Training and Knowledge Management, and Field Operations. Each division is responsible for reviewing, interpreting, and providing legal advice and guidance to USCIS operational components.

Office of Communications oversees and coordinates communication to both internal and external stakeholders to empower employees with the tools needed to perform their jobs, educate the public regarding USCIS benefits and services, and facilitate consistent messaging and imaging for USCIS.

Office of Legislative Affairs maintains communication with Congress through its responses to constituent concerns, promotion of USCIS priorities, proactive outreach on issues of interest, and ongoing educational activities for Members of Congress and staff.

Office of Policy and Strategy directs, prioritizes, and sets the agenda for agency-wide policy, strategy, and long-term planning activities. In addition, the Office undertakes economic analysis supporting regulations development and conducts research and analysis on immigration services issues.

2015 Adjustments-to-Base	37	35	322
2015 Current Services	223	213	30,259
2015 Total Request	223	213	30,259
Total Change 2014 to 2015	37	35	322

USCIS requests 223 positions, 213 FTE and \$30.3 million for Systematic Alien Verification for Entitlements (SAVE) in FY 2015. Adjustments to base include an increase of \$146 thousand for the 2015 pay raise; \$40 thousand for the annualization of the 2014 pay raise; an increase of \$136 thousand for retirement contributions; an increase of \$3.5 million for changes in workload requirements and an offsetting decrease of \$3.5 million in spending authority based on changes in operating requirements.

CURRENT SERVICES PROGRAM DESCRIPTION:

SAVE assists federal, state and local agencies in determining a non-citizen's eligibility for public benefits by checking their immigration status against U.S. Department of Homeland Security immigration databases. By the end of FY 2013, the SAVE Program processed more than 14.5 million queries and registered 70 new agencies, a 7.0 percent increase over SAVE's FY 2012 customer base. Large agency customers include the Social Security Administration, the U.S. Department of Housing and Urban Development, the U.S. Department of Education, and the California Department of Motor Vehicles. Every State and the District of Columbia are represented in SAVE's customer base. The SAVE Program is funded by a combination of user fees paid by its agency customers and general fee receipts paid by USCIS immigration benefit applicants and petitioners. USCIS is committed to ensuring that SAVE user fees are set at a level that supports effective program operations and encourages SAVE users to utilize the system correctly.

Under the Patient Protection and Affordable Care Act (PPACA) partner agencies, such as USCIS, are required to verify the current status of qualified immigrants and non-immigrants. Eligibility for benefits under the PPACA is limited to citizens, nationals and lawfully present aliens.

Undocumented/illegal aliens cannot purchase private health insurance through the exchanges or qualify for premium tax credits or cost-sharing reductions.

With the exchanges being operational, and new benefits incrementally taking effect in 2014, SAVE expects a case volume increase equivalent to the number of eligible aliens not already covered by health insurance programs. Department of Health and Human Services (HHS) estimates that in FY 2014, SAVE could see about 1.7 to 3.5 million first step queries and 175,000 to 355,000 additional verifications. Current estimates for FY 2015 range between 1.7 million and 3.5 million requests and 323,000 and 665,000 additional verification queries.

The SAVE Program and associated technology are fully capable of supporting and implementing the requirements of the PPACA. The IT infrastructure in place is adequate to support this increased verification requirement. Additionally, SAVE completed several verification system capability enhancements in FY 2013 that support PPACA and existing SAVE customers. These include:

- Electronic Grant Dates for Lawful Permanent Residents, Refugees, Asylees and Parolees. Previously, agencies submitted a G-845 and G-845 Supplement by mail to determine when an applicant was granted status. Agencies need this information for means-tested benefits. SAVE now provides this functionality electronically on initial verification;
- Scan and Upload: agencies can now upload copies of the applicant's immigration document for additional verification as required instead of mailing them in with a Form G-845.
- The Form G-845s can now be submitted electronically using a scan and upload feature; and
- Sponsorship Information: Previously, agencies requested sponsorship information on additional verification. SAVE now provides this on initial verification.

In FY 2015, SAVE will direct its focus on its customers by improving program, system and training capabilities to enhance the customer experience. These efforts will begin in FY 2014 and will continue through FY 2015:

- SAVE System Redesign: This initiative will improve the web-based interface and will meet the following three goals:
 1. Improve user experience;
 2. Modernize the navigation and data-gathering processes;
 3. Drive user compliance through effective design that will guide them through the SAVE verification process.

The first phase will include an update of the visual style along with improvements to and standardization of menus and navigation without affecting core processes. The second phase will focus on user experience. This will include changes to system content and the verification process to improve customer experience and compliance. SAVE will continue to solicit and apply customer feedback from volunteers willing to share their experiences and provide input into the next phase.

- **Mandatory Tutorial:** In order to support the on-boarding process, SAVE is developing an online tutorial which will be made mandatory before SAVE user agency personnel are granted access to the system. The tutorial will educate users on the verification process and proper use of the system to facilitate greater compliance, as well as serve as an accessible, user-friendly avenue for training and customer support.
- **Training Platform:** Provide internal and external users with access to a training environment. Users of the SAVE system are required to undergo training and to demonstrate proficiency with the system in accordance with our published guidance and documents. Access to a training environment will significantly enhance accomplishment of the SAVE mission.
- **SAVE Independent Program Evaluation:** Conduct the first independent evaluation to analyze how the program is implemented by user agencies and the experience of individuals attempting to correct their records in response to SAVE-issued information.

IV. Program Justification Changes

**Department of Homeland Security
Citizenship & Immigration Services
Immigration Examinations Fee Account:
Justification of Program Changes**
(Dollars in Thousands)

Program Increase 1: U.S. Citizenship Foundation
PPA: District Operations
Program Increase: Positions 0, FTE 0, Dollars \$3,000

Funding Profile

	FY 2013 Revised Enacted			FY 2014 Enacted			FY 2015 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	-
Program Increase							-	-	3,000
Total Request	-	-	-	-	-	-	-	-	3,000

Description of Item:

Funding supports the proposal to establish the United States Citizenship Foundation. The FY 2015 Budget proposes a one-time provision providing USCIS authority to use \$3.0 million of USCIS premium processing fee collections in order to fund the Foundation's creation and initial three years of operation. The U.S. Citizenship Foundation would function as a charitable and nonprofit corporation authorized to accept private donations to support the purposes of the Foundation, which include expanding instruction and training on citizenship rights and responsibilities, supporting a multi-sector approach to immigrant civic integration in the United States, and promoting the importance of United States citizenship.

Justification:

With an estimated 8.8 million permanent residents eligible to apply for naturalization, the United States Citizenship Foundation will provide expanded opportunities by leveraging funds from the private sector to complement and further develop immigrant civic integration initiatives.

To support the establishment of the Foundation, USCIS plans a three-year transition period (FY 2015-2017). During this time, the Foundation would utilize existing USCIS network and building infrastructure along with subject matter experts from agency components. In addition to the \$3.0 million in initial funding, USCIS non-reimbursable support to the Foundation would not exceed \$500,000 in non-monetary resources per fiscal year. This will enable the Foundation to establish an

initial Board of Directors, hire an Executive Director, formulate an operating plan, and begin fundraising activities.

Foundation board members will represent a variety of interests including business and the private sector, educational institutions, service clubs, community and faith-based organizations, and philanthropy. The USCIS Director will appoint members to the Board of Directors and will also maintain a standing seat on the board along with the Chief of the USCIS Office of Citizenship. Following this initial transition period ending in FY 2017, the Foundation would attain financial self-sufficiency, requiring no further appropriation nor ongoing use of USCIS resources.

Impact on Performance (Relationship of Increase to Strategic Goals):

This initiative supports DHS Mission 3: Enforcing and Administering Our Immigration Laws.

District Operations Mission Statement

USCIS ensures through program directorates and offices the efficient adjudication of immigration benefits; timely action on related ancillary applications and other assigned product lines; direct customer service, immigration information, assurance of the integrity of the immigration system; assistance to applicants, petitioners, and beneficiaries; detects and combats immigration benefit fraud; identifies threats to national security and public safety; and serves as an effective conduit of information between USCIS and the law enforcement and intelligence communities to address threats to national security and public safety.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	426,855	550,442	565,293	14,851
11.3 Other than Full-Time Permanent	5,527	7,127	7,319	192
11.5 Other Personnel Compensation	19,082	24,607	25,271	664
12.1 Civilian Personnel Benefits	133,695	172,404	177,055	4,651
Total, Salaries & Benefits	585,159	754,580	774,938	20,358

An increase of \$20,358,000 is requested in Salaries and Benefits for costs for the annualization of the 2014 pay raise; the 2015 pay raise; increased retirement contributions; realignment of positions from Records Operations and Service Centers; and a realignment of positions to Information and Customer Service.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
22.0 Transportation of Things	\$3,453	\$2,834	\$2,838	\$4

An increase of \$4,000 is requested for the transportation of things, including all costs of the care of such things while in process of being transported, and other services incident to the transportation of things.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.1 Rental Payments to GSA	\$52,921	\$139,437	\$144,256	\$4,819

An increase of \$4,819,000 is requested for GSA Rent, including all payments to General Services Administration (GSA) for rental of space and rent related services.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.2 Rental Payments to Others	\$9,721	\$7,978	\$7,989	\$11

An increase of \$11,000 is requested for other rent, including all payments to a non-Federal source for rental space, land, and structures.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.3 Communications, Utilities, and Misc. Charges	\$6,697	\$5,496	\$5,849	\$353

An increase of \$353,000 is requested for communications, utilities, and miscellaneous charges, including all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
24.0 Printing and Reproduction	\$2,825	\$2,318	\$2,321	\$3

An increase of \$3,000 is requested for printing and reproduction costs, including all costs for printing and reproduction obtained from the private sector or from other Federal entities.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.1 Advisory and Assistance Services	\$319,172	\$261,931	\$261,998	\$67

An increase of \$67,000 is requested for advisory and assistance services, including services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.2 Other Services from Non-Federal Sources	\$138,494	\$113,656	\$114,025	\$369

An increase of \$369,000 is requested for other services, including contractual services with non-Federal sources that are not otherwise classified under Object Class 25.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change

Service Centers Mission Statement

Service Center Operations partners in the development of immigration policies and programs to ensure improved customer service while delivering the right benefit, to the right person, without delay. USCIS continuously evaluates and modifies workflow processes at the four service centers in order to more effectively and efficiently administer immigration laws within the established cycle times, and ensures the security of the United States through a vigilant workforce of officers who incorporate numerous security checks on a broad range of immigration benefit applications.

Records Operations Mission Statement

The Records Division is the caretaker of the country's immigration records, commonly known as alien files or A-files, which document individuals' journeys from (or even before) their original entries into the United States to naturalization. NRC provides customers with timely access to information from the agency's A-files and subsidiary data systems.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change

Information and Customer Services Mission Statement

Through the Customer Service and Public Engagement Directorate (CSPED), USCIS provides clear, accurate, and timely responses to customer concerns and questions, and engages the public through transparent dialogue that promotes participation and feedback. USCIS also proactively provides information and guidance to USCIS applicants, petitioners and advocates regarding immigration benefits.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	17,035	18,553	20,297	1,744
11.3 Other than Full-Time Permanent	699	761	833	72
11.5 Other Personnel Compensation	829	903	988	85
12.1 Civilian Personnel Benefits	5,453	5,939	6,497	558
Total, Salaries & Benefits	24,016	26,156	28,615	2,459

An increase of \$2,459,000 is requested in Salaries and Benefits for costs for the annualization of the 2014 pay raise; the 2015 pay raise; increased retirement contributions; and a realignment of positions from District Operations.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.1 Rental Payments to GSA	\$2,553	\$2,470	\$2,556	\$86

An increase of \$86,000 is requested for GSA Rent, including all payments to General Services Administration (GSA) for rental of space and rent related services.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.3 Communications, Utilities, and Misc. Charges	\$2,492	\$2,215	\$2,212	(\$3)

A decrease of \$3,000 is requested for communications, utilities, and miscellaneous charges, including all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.1 Advisory and Assistance Services	\$67,209	\$59,727	\$59,650	(\$77)

A decrease of \$77,000 is requested for advisory and assistance services, including services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.3 Other Goods and Services from Federal Sources	\$2,106	\$1,872	\$1,870	(\$2)

A decrease of \$2,000 is requested for purchases from Government Accounts, including costs for purchases from other Federal Government agencies or accounts that are not otherwise classified.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.4 Operation and Maintenance of Facilities	\$622	\$553	\$552	(\$1)

A decrease of \$1,000 for operation and maintenance of facilities, including all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
26.0 Supplies and Materials	\$760	\$675	\$674	(\$1)

A decrease of \$1,000 is requested for supplies and materials that are ordinarily consumed or expended within one year after they are put into use, converted in the process of construction or manufacture, used to form a minor part of equipment or property, or other property of little monetary value that does not meet any of the three criteria listed above.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
31.0 Equipment	\$1,358	\$1,207	\$1,205	(\$2)

A decrease of \$2,000 is requested for equipment, including all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract.

K. DHS Balanced Workforce Strategy

In order to establish a high performing workforce comprised of a strong internal core of federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment the Department will realign contractor and/or federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with federal employees to better realize the full potential of our total workforce – both contracted and federal. A strong internal core of federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into tiered ranking. The results of Tier 1 contract review are listed below. The results of the lower-priority contracts will post-date this budget submission and will be included in the FY 2015 budget.

USCIS requests \$0.0 and 0 FTE for the FY 2015 DHS Balanced Workforce Strategy.

BUDGET REQUEST AND SUPPORTING INFORMATION

U.S. Citizenship & Immigration Services H-1B Nonimmigrant Petitioner Account

I. Appropriation Overview

The American Competitiveness and Workforce Improvement Act requires employers who participate in the H-1B program to pay \$1,500 (or \$750 for those petitioners who employ fewer than 25 full-time equivalent employees, in addition to the base processing fee (currently \$325). U.S. Citizenship & Immigration Services (USCIS) receives 5 percent of the H-1B program funds, and the remaining H-1B program revenue is shared between the Department of Labor and the National Science Foundation. H-1B revenue accounts for less than 1 percent of the total USCIS budget. In FY 2012, the USCIS share of the H-1B revenue collection was \$16.1 million and, in FY 2013 USCIS received \$15.1 million.

The FY 2010 Emergency Supplemental Appropriation for Border Security Act increased the supplemental H-1B and L-1 application fees for certain employers. This law requires an additional filing fee of \$2,000 for H-1B petitions and \$2,250 for certain L-1 petitions where the petitioner employs 50 or more individuals in the United States and more than 50 percent of its employees are in H-1B or L-1 nonimmigrant status. Revenue from this additional fee is deposited into the General Fund of the Treasury, not the H-1B Nonimmigrant Petitioner or Fraud Prevention and Detection Accounts.

A. Mission Statement for H-1B Nonimmigrant Petitioner Account:

Resources from the H-1B Nonimmigrant Petitioner Account support USCIS' efforts to reinforce quality and consistency in administering immigration benefits.

B. Budget Activities:

Funding from the H-1B Nonimmigrant Petitioner Account supports the Service Center Operations Directorate. Fee revenues primarily fund contract activities (mail, filing, biometric and data entry) and facility rent expenses related to the processing of immigration benefit applications at the USCIS Service Centers.

The USCIS Service Center Operations Directorate manages four regionally-based Service Centers which receive, process, and adjudicate applications, petitions, and their related fees for immigration benefits not requiring face-to-face contact with the applicant, petitioner, or beneficiary.

C. Budget Request Summary:

In FY 2015, USCIS requests \$13.5 million and 0 positions, 0 FTE for the H-1B Nonimmigrant Petitioner account. The FY 2015 request represents an increase of \$500 thousand from the FY 2014 Enacted Level and represents an adjustment to base for changes in workload requirements.

H-1B Nonimmigrant Petitioner account funds will continue to support contract activities and facility rent expenses for the processing of immigration benefit applications. The FY 2015 funding level is fully supported by projected fee receipts in FY 2015.

**Department of Homeland Security
Citizenship & Immigration Services
H-1B Nonimmigrant Petitioner Account
Adjudication Services
Program Performance Justification
(Dollars in Thousands)**

PPA: Adjudication Services

	Perm. Pos	FTE	Amount
2013 Revised Enacted	-	-	13,000
2014 Enacted	-	-	13,000
2015 Adjustments-to-Base	-	-	500
2015 Current Services	-	-	13,500
2015 Total Request	-	-	13,500
Total Change 2014 to 2015	-	-	500

USCIS requests \$13.5 million for contract activities and facility rent expenses that support the processing of immigration benefit applications. Adjustments to base include \$500 thousand for changes in workload requirements. The fee associated with the requested amount is set by Congressional statute providing USCIS with 5 percent of the fees collected for the H-1B visa (Nonimmigrant Petitioner), in addition to the base-processing fee to file a Petition for a Nonimmigrant Worker (Form I-129).

CURRENT SERVICES PROGRAM DESCRIPTION:

The USCIS Service Center Operations Directorate receives, processes, and adjudicates applications, petitions, and related fees for immigration benefits not requiring face-to-face contact with the applicant, petitioner, or beneficiary, which includes:

- *Family-based petitions* -- facilitating the process for close relatives to immigrate, gain permanent residency, work, etc.
- *Employment-based petitions* -- facilitating the process for current and prospective employees to immigrate or stay in the United States temporarily.

USCIS annually processes millions of immigration benefit applications at its Service Centers. The \$13.5 million for contract activities and facility rent expenses is a portion of the total operations contract support and Service Center rent. The balance is covered by fees from the Immigration Examinations Fee Account.

BUDGET REQUEST AND SUPPORTING INFORMATION

U.S. Citizenship & Immigration Services Fraud Prevention and Detection Account

I. Appropriation Overview

The Fraud Prevention and Detection Account supports activities related to preventing and detecting fraud for all immigration benefit types. These funds primarily support the United States Citizenship and Immigration Services (USCIS) goal to ensure the security and integrity of the immigration system.

The L-1 Visa and H-1B Visa Reform Act of 2004 (title IV of Div. J of Pub. L. 108-447, later amended by Pub. L. 109-13) requires petitioners to pay \$500 when filing a petition for a beneficiary's initial grant of H-1B or L nonimmigrant classification, as well as for a beneficiary who is changing employers within these classifications. Petitioners also pay \$150 when filing a petition on behalf of H-2B workers, in addition to the base processing fee of \$325 for a Petition for Nonimmigrant Worker (Form I-129). These fees are used for anti-fraud purposes. USCIS receives one-third of the revenue, and the remaining revenue is shared between the Department of Labor and the Department of State. USCIS received \$45.4 million in fraud fees in FY 2012 and \$42.3 million in FY 2013.

A. Mission Statement for Fraud Prevention and Detection Account:

USCIS uses resources from the Fraud Prevention and Detection account to combat fraud, safeguard national security, and ensure public safety.

B. Budget Activities:

The Fraud Detection and National Security Directorate (FDNS) leads agency efforts to determine whether individuals or organizations filing for immigration benefits pose a threat to national security, public safety, or the integrity of the nation's legal immigration system by:

- Detecting, deterring, and administratively investigating immigration-related fraud, and working to eliminate systemic vulnerabilities that could present a threat to national security and public safety;
- Serving as primary conduit for information sharing and collaboration with interagency law enforcement and intelligence community partners;
- Establishing guidance and overseeing the process for identifying, reviewing, vetting, and adjudicating cases involving national security concerns;
- Developing and implementing efficient and effective security screening policies, programs, and procedures; and

C. Budget Request Summary:

In FY 2015, USCIS requests \$41.0 million, 185 positions, and 185 FTE for the Fraud Prevention and Detection account. These figures do not represent a change from FY 2014. The FY 2015 funding level is fully supported by projected fee receipts in FY 2015.

2015 Total Request	115	115	26,044
Total Change 2014 to 2015	-	-	-

U.S. Citizenship & Immigration Services (USCIS) requests \$26.0 million, 115 positions, and 115 FTE for this activity in FY 2015. Adjustments to base include increases of \$133 thousand for the 2015 pay raise; \$44 thousand for the annualization of the 2014 pay raise; \$151 thousand for retirement contributions; and an offsetting decrease of \$328 thousand to reflect changes in operating requirements.

CURRENT SERVICES PROGRAM DESCRIPTION:

Fraud Detection and National Security Directorate (FDNS) personnel in the field participate in a wide range of activities to combat fraud and safeguard national security: conduct administrative investigations of immigration-related fraud; manage cases involving national security concerns; conduct background checks; perform site visits and compliance reviews; liaise with law enforcement counterparts; and develop intelligence reporting and analysis regarding key trends and threats. As part of a joint anti-fraud strategy in partnership with U.S. Immigration and Customs Enforcement (ICE), FDNS refers select cases for criminal investigation, such as those involving mass conspiracy.

FDNS Officers are posted in every USCIS Service Center, Regional, District, Field, and Asylum Office within the United States, as well as Frankfurt, Germany, Monterrey, Mexico, and New Delhi, India . FDNS Officers participate in ICE's Document Benefit Fraud Task Forces, the Federal Bureau of Investigation's Joint Terrorism Task Forces, State and Local Fusion Centers and other Federal and local law enforcement initiatives. In FY 2013 FDNS Officers completed over 27,000 administrative fraud investigations, finding fraud in over 14,000 of those investigations. FDNS's activities support USCIS's dual priorities of ensuring the integrity of the U.S. immigration system and safeguarding national security.

.

In FY 2014, FDNS will expand the Administrative Site Visit and Verification Program (ASVVP) to include petitions for L-1A Intracompany Transferee Executive or Manager; FDNS is considering expanding ASVVP in FY2015 to include petitions for the EB-5 Immigrant Investor program. Under ASVVP, site visits are performed on organizations filing Form I-129 petitions for H1-B temporary workers and Form I-360 petitions for religious workers. Pursuant to regulation, site inspections are conducted prior to the adjudication of religious worker petitions. Compliance reviews are also conducted on a random sample of approved petitions for religious workers and H-1B temporary workers. The ASVVP enhances the integrity of the U.S. immigration system by creating a culture of compliance, and produces data that is useful in determining fraud risks and patterns

Total Change 2014 to 2015	-	-	(94)

U.S. Citizenship & Immigration Services (USCIS) requests \$14.6 million, 70 positions, and 70 FTE for this activity in FY 2015. Adjustments to base include increases of \$60 thousand for the 2015 pay raise, \$17 thousand for the annualization of the 2014 pay raise, \$92 thousand for retirement contributions, and a decrease of \$263 thousand for operating requirements.

CURRENT SERVICES PROGRAM DESCRIPTION:

Service Center Operations (SCOPS) is one of the key operational components of USCIS. Tasked with the adjudication of the largest volume of applications across the broadest and most diverse cross-section of immigration benefits, SCOPS is a strong and vital partner in the development of immigration policies and programs to ensure improved customer service while delivering the right benefit, to the right person, without delay. SCOPS continuously evaluates and modifies workflow processes in order to more effectively and efficiently administer immigration laws within the established cycle times, and is dedicated to ensuring the security of the United States through a vigilant workforce of officers who incorporate numerous security checks on a broad range of immigration benefit applications. Specialized teams of adjudications staff work with law enforcement agencies and other government agencies to conduct extensive research and vetting of individuals and organizations that may pose a threat to the national security of the United States.

District Operations Mission Statement

Provide efficient adjudication of all applications and petitions for immigration benefits requiring face-to-face interviews, timely action on related ancillary applications and other assigned product lines, provision of direct customer service, immigration information, ensuring the integrity of the immigration system, and assistance to applicants, petitioners, and beneficiaries.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	68,450	13,304	13,551	247
11.3 Other than Full-Time Permanent	203	39	12	(27)
11.5 Other Personnel Compensation	1,132	220	224	4
12.1 Civilian Personnel Benefits	21,143	4,109	4,057	(52)
Total, Salaries & Benefits	90,928	17,672	17,844	172

An increase of \$172,000 is requested in Salaries and Benefits for costs for the annualization of the FY 2014 pay raise; the FY 2015 pay raise; increased retirement contributions; and a change in operating requirements.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
21.0 Travel and Transportation of Persons	\$1,089	\$1,009	\$911	(\$98)

A decrease of \$98,000 is requested for travel, including all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.1 Rental Payments to GSA	\$774	\$774	\$903	\$129

An increase of \$129,000 is requested for GSA Rent, including all payments to General Services Administration (GSA) for rental of space and rent related services.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.2 Rental Payments to Others	\$121	\$29	\$27	(\$2)

A decrease of \$2,000 is requested for other rent, including all payments to a non-Federal source for rental space, land, and structures.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.3 Communications, Utilities, and Misc. Charges	\$144	\$35	\$41	\$6

A decrease of \$6,000 is requested for communications, utilities, and miscellaneous charges, including all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.1 Advisory and Assistance Services	\$12,434	\$3,008	\$2,799	(\$209)

A decrease of \$209,000 is requested for advisory and assistance services, including services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.2 Other Services from Non-Federal Sources	\$4,739	\$1,147	\$1,195	\$48

A decrease of \$48,000 is requested for other services, including contractual services with non-Federal sources that are not otherwise classified under Object Class 25.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.3 Other Goods and Services from Federal Sources	\$379	\$92	\$86	(\$6)

A decrease of \$6,000 is requested for purchases from Government Accounts, including costs for purchases from other Federal Government agencies or accounts that are not otherwise classified.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.7 Operation and Maintenance of Equipment	\$7,754	\$1,876	\$1,847	(\$29)

A decrease of \$29,000 is requested for the operation and maintenance of equipment, including costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
26.0 Supplies and Materials	\$763	\$185	\$177	(\$8)

A decrease of \$8,000 is requested for supplies and materials that are ordinarily consumed or expended within one year after they are put into use, converted in the process of construction or manufacture, used to form a minor part of equipment or property, or other property of little monetary value that does not meet any of the three criteria listed above.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
31.0 Equipment	\$679	\$164	\$163	(\$1)

A decrease of \$1,000 is requested for equipment, including all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
32.0 Land and Structures	\$100	\$24	\$22	(\$2)

A decrease of \$2,000 is requested for land and structures, including the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural (or resource) improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease.

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Law Enforcement Training Center Salaries and Expenses

I. Appropriation Overview

A. Mission Statement for Salaries and expenses:

We train those who protect our homeland.

B. Budget Activities:

The Federal Law Enforcement Training Center (FLETC) is the Nation's largest provider of law enforcement training. FLETC serves as an interagency law enforcement training organization for over 90 Federal Partner Organizations (POs) and numerous State, local, tribal, and international law enforcement agencies.

Most of the Federal POs that train with FLETC attend one of its multi-agency basic programs, and then continue with their unique agency-specific follow-on programs at their own academies, most of which are co-located at one of FLETC's four domestic training sites. In addition to basic training, FLETC also offers a variety of advanced law enforcement training programs.

FLETC has embraced the philosophy that homeland protection is not the sole province of the Federal Government, and therefore offers specialized training programs for State, local, tribal, and, through partnerships with the Department of State, the Department of Justice, and the Department of the Treasury, international law enforcement personnel. These programs are designed to meet critical training needs and to enhance networking and cooperation domestically and globally.

In furtherance of FLETC's mission, our reach is extended through the use of non-traditional training delivery techniques, including online training and technology-based simulation. Additionally, FLETC exports training programs to various locations when a concentrated law enforcement audience in need of training is identified and the programs being conducted do not require the use of specialized facilities.

Training law enforcement officers in a collaborative, multi-agency environment offers both fiscal and qualitative advantages. FLETC teams with its training partners to jointly prepare Federal law enforcement professionals to perform their duties in the safest possible manner, at the highest possible level of proficiency. It endeavors to accomplish this critical mission by delivering consistent, accredited instruction using a proven consolidated training model.

C. Budget Request Summary:

The Federal Law Enforcement Training Center requests 1,119 positions, 1,092 FTE and \$231,754,000. The adjustments- to-base include:

- An increase of \$957,000 for the FY 2015 pay raise.
- An increase of \$319,000 for the annualization of the FY2014 pay raise.
- An increase of \$383,000 for the FY2015 increased retirement contributions.
- A \$75,000 enhancement for WCF activities.
- Efficiencies of \$6,271,000
- A reduction of \$7,768,000 to non-recur the costs associated with training the additional Customs and Border Protection (CBP) officers requested in the FY 2014 President's Budget (-31 FTE).

There is one program change of \$16,214,000 to train 1,200 additional CBP officers (24 FTE).

D. Efficiencies:

Mission Support Personnel

(\$0.523M)

Pay efficiencies will be realized by reducing Permanent Change of Station (PCS) moves and premium pay in the Law Enforcement Training PPA (\$0.505M), and the Management and Administration PPA (\$.007M). Non-pay efficiencies will be realized by reducing the amount of tort claims paid out in the Management and Administration PPA (\$.011M).

Travel

(\$0.273M)

Efficiencies will be realized by reductions in staff travel and PCS expenses in the Law Enforcement Training PPA (\$0.163M), the Management and Administration PPA (\$0.106M) and the Accreditation PPA (\$0.004M).

Transportation of Things

(\$0.068M)

The reduced number of funded PCS moves will reduce the associated cost of the transportation of things in the Law Enforcement Training PPA (\$0.023M) and the Management and Administration PPA (\$0.045M).

Rent, Communication and Utilities

(\$0.472M)

Efficiencies will be realized primarily by implementing and maintaining energy efficient utility services in the Law Enforcement Training PPA (\$0.469M), the Management and Administration PPA (\$.003M).

Printing

(\$0.023M)

Efficiencies will be realized by minimizing all non-mission critical products in the Law Enforcement Training PPA (\$0.022M) and the Accreditation PPA (\$0.001M)

Advisory and Assistance Contracts

(\$3.863M)

FLETC will complete a review of law enforcement training support requirements and adjust the levels on non-mission critical service contracts accordingly, generating savings in the Law Enforcement Training PPA (\$3.337M) the Management and Administration PPA (\$0.521M),

and the Accreditation PPA (\$0.005M)

Supplies, Materials and Equipment

(\$1.049M)

FLETC will complete a review of non-mission critical supplies, materials and equipment requirements and adjust accordingly, generating savings in the Law Enforcement Training PPA (\$.967M), the Management and Administration PPA (\$0.081M) and the Accreditation PPA (\$0.001M)

2015 Total Request	223	217	27,982
Total Change 2014 to 2015	-	-	(438)

FLETC requests 223 positions, 217 FTE, and \$27.982 million for this activity. Adjustments-to-base include:

- 2015 pay raise of \$.193 million
- Annualization of FY 2014 pay raise of \$.063 million
- \$.080 million for increased retirement contributions
- Efficiencies of \$.774 million

CURRENT SERVICES PROGRAM DESCRIPTION:

The Management and Administration program includes the FLETC Director, Director's Office, and immediate staff including the Office of Chief Counsel, Washington Office, Protocol and Communications Office, Office of Organizational Health, and Inspection and Compliance Division. Also included is the Chief Financial Officer Directorate, providing budget, finance, accounting, financial systems, financial statements, relocation, travel, and strategic planning functions.

The Management and Administration program also includes Asset Management functions, such as Procurement, Real and Personal Property Management, Environmental Compliance and Safety. It includes the Operation Support functions such as Human Capital to promote consistency and efficiency in the utilization of human capital.

2015 Total Request	889	868	202,472
Total Change 2014 to 2015	(7)	(7)	4,347

FLETC requests 889 positions, 868 FTE, and \$202.472 million for this activity. Adjustments-to-base include:

- 2015 pay raise of \$.758 million
- Annualization of FY 2014 pay raise of \$.254 million
- An increase for WCF of \$.075 million
- \$.300 million for increased retirement contributions
- Efficiencies of \$5.486 million
- Reduction of \$7.768 million to non-recur the cost of training 1,600 additional CBP officers as requested in the FY2014 President's Budget

There is one program change of \$16,214 million to train 1,200 additional CBP officers.

CURRENT SERVICES PROGRAM DESCRIPTION:

Law Enforcement Training: FLETC's services to its three major client groups underscore its homeland security support mission in promoting intergovernmental cooperation in law enforcement preparedness.

Federal – FLETC provides law enforcement training to over 90 Federal agencies with law enforcement responsibilities. FLETC prepares new and experienced law enforcement professionals to fulfill their responsibilities in a safe manner and at the highest level of proficiency. The average basic student spends 12 weeks training at FLETC, and receives a combination of classroom instruction and hands-on practical exercise training in all aspects of law enforcement from firearms and high-speed vehicle operations to legal case instructions and defendant interview techniques. Students must apply their classroom

knowledge during exercises that simulate typical situations encountered on the job. Each of the basic programs provides core knowledge essential for new Federal officers or agents to carry out their duties in a safe and efficient manner.

In addition to basic training, FLETC offers advanced and specialized training for career-long law enforcement preparation in subjects that are common to two or more of its Partner Organizations. Examples include Antiterrorism Port Security Boat Operations, Cyber Counterterrorism Investigator Training, Covert Electronics Surveillance, Critical Infrastructure Protection, Financial Forensics Techniques, Intelligence Analysts Training and Land Transportation Antiterrorism Training.

State and local – FLETC trains personnel from State and local law enforcement agencies in advanced topics designed to develop specialized law enforcement skills. The participants benefit from Federal expertise, specialized training, and instruction specific to their needs.

International – In the interest of combating global crime and protecting U.S. interests abroad, FLETC offers a range of training programs to foreign law enforcement agencies in coordination with the Department of State, the Department of Justice, and the Department of the Treasury. Training focuses on the U.S. Government's Law and Democracy Program and the International Law Enforcement Academy programs in Europe, Asia, Africa, and other regions in the world. In cooperation with the Department of State, FLETC manages the International Law Enforcement Academy in Gaborone, Botswana, and a FLETC staff member serves as Deputy Program Director at the International Law Enforcement Academy in Bangkok, Thailand. Additionally, FLETC provides training and technical assistance at locations worldwide in collaboration with and support of the respective U.S. embassies.

**Department of Homeland Security
Federal Law Enforcement Training Center
Salaries and Expenses:
Accreditation
Program Performance Justification
(Dollars in Thousands)**

PPA: Accreditation

	Perm. Pos	FTE	Amount
2013 Revised Enacted	7	7	1,230
2014 Enacted	7	7	1,300
2015 Current Services	7	7	1,300
2015 Total Request	7	7	1,300
Total Change 2014 to 2015	-	-	-

FLETC requests 7 positions, 7 FTE, and \$1.300 million for this activity. Adjustments-to-base include:

- 2015 pay raise of \$.006 million
- Annualization of FY 2014 pay raise of \$.002 million
- \$.003 million for increased retirement contributions
- Efficiencies of \$.011 million

CURRENT SERVICES PROGRAM DESCRIPTION:

Accreditation: The Federal Law Enforcement Training Accreditation (FLETA) process sets the standards for Federal law enforcement training. The accreditation of a Federal law enforcement academy or program provides assurance to the citizens they serve that they have voluntarily submitted to a process of self-regulation, and that they have successfully achieved compliance with a set of standards that have been collectively established by their peers within their professional community that demonstrate their adherence to quality, effectiveness and integrity. To accomplish this goal, trainers in the same discipline, working through a professional accrediting body, assist each other in evaluating and improving their professionalism. The focus of the effort is to accredit Federal academies, entry-level and advanced or specialized training programs, instructor training, and other programs that affect multiple Federal, State and local law enforcement officers.

IV. Program Justification Changes

**Department of Homeland Security
Federal Law Enforcement Training Center
Salaries and Expenses:
Justification of Program Changes
(Dollars in Thousands)**

Program Increase 1: Train 1,200 Additional CBP Officers
PPA: Law Enforcement Training
Program Increase: Positions 24, FTE 24, Dollars \$16,214

Program Increase							24	24	16,214
Total Request	-	-	-	-	-	-	24	24	16,214

Description of Item

FLETC will provide basic training for up to 1,200 additional new CBP officers to support increased travel and trade through air, land, and sea ports of entry.

Justification

Newly hired CBP officers must attend an 89 day basic training program at FLETC. Trainees receive extensive training in Title 8 Immigration Law, Title 19 Customs law, and all other laws, rules and regulations that CBP enforces nationwide. The training emphasizes basic law enforcement skills such as integrity, firearms handling, defensive tactics and driving, arrest techniques, entry and control procedures, interviewing skills, behavioral analysis, and report writing. CBP officers who graduate from the basic program and are selected for certain duty locations may also receive an additional 30 days of Spanish language training.

Impact on Performance (Relationship of Increase to Strategic Goals)

This initiative supports Homeland Security Mission 2 – Securing and Managing Our Borders, which is derived from the Quadrennial Homeland Security Review.

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For necessary expenses of the Federal Law Enforcement Training Center, including materials and support costs of Federal law enforcement basic training; the purchase of not to exceed 117 vehicles for police-type use and hire of passenger motor vehicles; expenses for student athletic and related activities; the conduct of and participation in firearms matches and presentation of awards; public awareness and enhancement of community support of law enforcement training; room and board for student interns; a flat monthly reimbursement to employees authorized to use personal mobile phones for official duties; and services as authorized by section 3109 of title 5, United States Code; [\$240,544,000] **\$ 231,754,000**; of which up to [\$53,625,000] **\$ 54,154,000** shall remain available until September 30, [2015]**2016**, for materials and support costs of Federal law enforcement basic training; of which \$300,000 shall remain available until expended to be distributed to Federal law enforcement agencies for expenses incurred participating in training accreditation; and of which not to exceed \$9,180 shall be for official reception and representation expenses: *Provided*, That the Center is authorized to obligate funds in anticipation of reimbursements from agencies receiving training sponsored by the Center, except that total obligations at the end of the fiscal year shall not exceed total budgetary resources available at the end of the fiscal year: *Provided further*, That section 1202(a) of Public Law 107-206 (42 U.S.C. 3771 note), as amended by Public Law [111-83 (123 Stat. 2166)] 112-74, is further amended by striking “December 31, [2012]**2016**” and inserting “December 31, [2014]**2017**”: *Provided further*, That the Director of the Federal Law Enforcement Training Center shall schedule basic or advanced law enforcement training, or both, at all four training facilities under the control of the Federal Law Enforcement Training Center to ensure that such training facilities are operated at the highest capacity throughout the fiscal year: *Provided further*, That the Federal Law Enforcement Training Accreditation Board, including representatives from the Federal law enforcement community and non-Federal accreditation experts involved in law enforcement training, shall lead the Federal law enforcement training accreditation process to continue the implementation of measuring and assessing the quality and effectiveness of Federal law enforcement training programs, facilities, and instructors.

12.1 Civilian Personnel Benefits	5,209	5,365	5,497	132
12.4 Allowances	6	6	6	-
13.0 Benefits for Former Personnel	161	166	167	1
Total, Salaries & Benefits	24,160	24,885	25,209	324

Salaries and Benefits includes costs for 217 FTEs. The FY 2015 request includes a \$193,000 in pay inflation, a \$63,000 annualization of the FY 2014 pay raise, \$80,000 increase for retirement contributions and a \$7,000 reduction for efficiencies.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
21.0 Travel and Transportation of Persons	\$518	\$533	\$427	(\$106)

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2015 request includes a decrease of \$106,000 for efficiencies.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
22.0 Transportation of Things	\$167	\$172	\$127	(\$45)

Transportation of things include all costs of the care of such things while in the process of being transported, and other services incident to the transportation of things. The FY 2015 request includes a decrease of \$45,000 for efficiencies.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.3 Communications, Utilities, and Misc. Charges	\$12	\$12	\$9	(\$3)

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY2015 request includes a decrease of \$3,000 for efficiencies.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.1 Advisory and Assistance Services	\$171	\$177	\$131	(\$46)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2015 request includes a decrease of \$46,000 for efficiencies.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.2 Other Services from Non-Federal Sources	\$961	\$990	\$731	(\$259)

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
--	----------------------------	--------------------	--------------------	------------------------------

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2015 request includes a decrease of \$259,000 for efficiencies.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.3 Other Goods and Services from Federal Sources	\$42	\$43	\$32	(\$11)

Purchases from government accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2015 request includes a decrease of \$11,000 for efficiencies.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.4 Operation and Maintenance of Facilities	\$9	\$10	\$7	(\$3)

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. The FY 2015 request includes a decrease of \$3,000 for efficiencies.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.6 Medical Care	\$35	\$36	\$27	(\$9)

Medical care includes payments to contracts for medical services, but excludes contracts with individuals who are reportable under OPM regulations as federal employees or payments to compensate casual workers and patient help. The FY 2015 request includes a decrease of \$9,000 for efficiencies.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.7 Operation and Maintenance of Equipment	\$718	\$739	\$546	(\$193)

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2015 request includes a decrease of \$193,000 for efficiencies.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.8 Subsistence & Support of Persons	\$7	\$7	\$5	(\$2)

Subsistence and support of persons includes costs for contractual services with the public or another Federal government account for the board, lodging, and care of persons, including prisoners. The FY 2015 request includes a decrease of \$2,000 for efficiencies.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
26.0 Supplies and Materials	\$203	\$209	\$154	(\$55)

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property,

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
--	------------------------------------	----------------------------	----------------------------	--------------------------------------

or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2015 request includes a decrease of \$55,000 for efficiencies.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
31.0 Equipment	\$90	\$93	\$69	(\$24)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2015 request includes a decrease of \$24,000 for FY 2015 efficiencies.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
42.0 Insurance Claims and Indemnities	\$36	\$37	\$27	(\$10)

Insurance claims and indemnities includes all benefit payments from the social insurance and Federal retirement trust funds and payments for losses and claims including those under the Equal Access to Justice Act. The FY 2015 request includes \$10,000 for efficiencies.

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. The FY 2015 request includes a increase of \$30,000 for the additional CBP training and reductions of \$23,000 for efficiencies and \$43,000 for adjustments.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.2 Rental Payments to Others	\$11	\$12	\$10	(\$2)

Other rent includes all payments to a non-Federal source for rental space, land, and structures. The FY 2015 request includes decreases of \$1,000 for efficiencies and \$1,000 for adjustments.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.3 Communications, Utilities, and Misc. Charges	\$8,730	\$9,809	\$9,074	(\$735)

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY2015 request includes a increase of \$603,000 for the additional CBP training offset by reductions of \$468,000 for efficiencies and \$870,000 for adjustments.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
24.0 Printing and Reproduction	\$404	\$453	\$419	(\$34)

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
--	----------------------------	--------------------	--------------------	------------------------------

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2015 request includes an increase of \$28,000 for the additional CBP training and reductions of \$22,000 for efficiencies and \$40,000 for adjustments.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.1 Advisory and Assistance Services	\$2,874	\$3,230	\$2,987	(\$243)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2015 request includes an increase of \$198,000 for the additional CBP training and reductions of \$154,000 for efficiencies and \$287,000 for adjustments.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.2 Other Services from Non-Federal Sources	\$8,981	\$10,994	\$10,171	(\$823)

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2015 request includes a increase of \$676,000 for additional CBP training and reductions of \$524,000 for efficiencies and \$975,000 for adjustments.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.3 Other Goods and Services from Federal Sources	\$4,978	\$5,593	\$5,249	(\$344)

Purchases from government accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2015 request includes an increase of \$75,000 from WCF, a increase of \$344,000 for the additional CBP training offset by reductions of \$267,000 for efficiencies and \$496,000 for adjustments..

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.4 Operation and Maintenance of Facilities	\$29,610	\$33,272	\$30,781	(\$2,491)

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. The FY 2015 request includes a increase of \$2,047,000 for the additional CBP training and reductions of \$1,587,000 for efficiencies and \$2,951,000 for adjustments.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.6 Medical Care	\$2,533	\$2,846	\$2,633	(\$213)

Medical care includes payments to contracts for medical services, but excludes contracts with individuals who are reportable under OPM regulations as federal employees or payments to compensate casual workers and patient help. The FY 2015 request includes a increase of \$175,000 for the additional CBP training and reductions of \$136,000 for efficiencies and \$252,000 for adjustments.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
--	----------------------------	--------------------	--------------------	------------------------------

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.7 Operation and Maintenance of Equipment	\$11,946	\$13,423	\$12,394	(\$1,029)

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2015 request includes, a increase of \$826,000 for the additional CBP training, and reductions of \$664,000 for efficiencies and 1,191,000 for adjustments.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.8 Subsistence & Support of Persons	\$99	\$111	\$103	(\$8)

Subsistence and support of persons includes costs for contractual services with the public or another Federal government account for the board, lodging, and care of persons, including prisoners. The FY 2015 request includes a increase of \$7,000 for the additional CBP training and reductions of \$5,000 for efficiencies and \$10,000 for adjustments.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
26.0 Supplies and Materials	\$7,713	\$9,693	\$8,968	(\$725)

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2015 request includes a increase of \$597,000 for the additional CBP training and reductions of \$462,000 for efficiencies and \$860,000 for adjustments.

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Law Enforcement Training Center Acquisition, Construction, Improvements & Related Expenses

I. Appropriation Overview

A. Mission Statement for Acquisition, Construction, Improvements & Related Expenses:

We train those who protect our homeland.

B. Budget Activities:

The Federal Law Enforcement Training Center (FLETC or Center) is the leading provider of Federal law enforcement training. FLETC serves as an interagency law enforcement training organization for over 90 Federal Partner Organizations (POs) with personnel located throughout the United States and its territories. FLETC's personnel conduct instructional programs for basic law enforcement recruits and some advanced training based on agency requests. FLETC also provides the necessary facilities, equipment, and support services for conducting advanced, specialized, and refresher training for Federal law enforcement personnel.

FLETC provides services to state, local, tribal, international and other Federal law enforcement agencies with related law enforcement missions on a space-available basis. FLETC also provides export training conducted at other locations when the programs being conducted do not require the use of certain specialized facilities and when a geographical concentration of personnel is identified.

Consolidation of law enforcement training permits the Federal Government to emphasize training program excellence and shared experiences in cooperative training in a cost-effective manner. Professional instruction and practical application provide students with the skills and knowledge necessary to meet the demanding challenges of a Federal law enforcement career. New Federal hires and journey-level personnel learn not only the responsibilities of a law enforcement officer and agent, but through interaction with students from many other agencies, they also become acquainted with the missions and duties of their colleagues. This interaction provides the foundation for a more cooperative Federal law enforcement effort.

FLETC's POs have considerable input regarding training issues as well as operational and functional aspects of the Center. Representatives from these agencies take part in regular curriculum development and review conferences. This relationship is characteristic of a "true partnership," which is responsive to the training mission.

C. Budget Request Summary:

The Federal Law Enforcement Training Center requests \$27,841,000 for Acquisition, Construction, Improvements & Related Expenses. The adjustments-to-base include:

- Efficiencies of \$1.544 million
- A reduction of \$1.500 million to non-recur the cost of FLETC's Energy Savings Performance Contract

D. Efficiencies:

Land and Structure

(\$1.544M)

Efficiencies will be realized by deferring maintenance

III. Current Services Program Description by PPA

**Department of Homeland Security
Federal Law Enforcement Training Center
Acquisition, Construction, Improvements & Related Expenses:
Program Performance Justification
(Dollars in Thousands)**

PPA: Acquisition, Construction, Improvements & Related Expenses:

	Perm. Pos	FTE	Amount
2013 Revised Enacted	-	-	26,948
2014 Enacted	-	-	30,885
2015 Adjustments-to-Base	-	-	(3,044)
2015 Current Services	-	-	27,841
2015 Total Request	-	-	27,841
Total Change 2014 to 2015	-	-	(3,044)

FLETC requests \$27.841 million for this activity. The adjustments-to-base include:

- Efficiencies of \$1.544 million
- Non-recur the one-time \$1.5 million enhancement/investment in the Energy Savings Performance Contract

CURRENT SERVICES PROGRAM DESCRIPTION:

Acquisition, Construction, Improvement & Related Expenses: This account provides for the acquisition and related costs for the expansion and maintenance of FLETC, to include funding for the Facilities Master Plan, Minor Construction and Maintenance, Environmental Compliance, and Communications Systems. The Master Plan provides the long range blueprint for expansion of facilities to meet the training requirements of over 90 Partner Organizations. Minor Construction and Maintenance provides alterations and maintenance funding for approximately 300 buildings. Environmental Compliance funding is to ensure compliance with the Environmental Protection Agency and state environmental laws and regulations. Communications Systems funding is to maintain and repair or replace the fiber optics telecommunications cable system.

IV. Program Justification Changes

Acquisition, Construction, Improvements & Related Expenses: Mission Statement

We train those who protect our homeland.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.1 Rental Payments to GSA	\$265	\$66	\$0	(\$66)

GSA Rent includes all payment to General Services Administration (GSA) for rental of space and rent related services. The FY 2015 request includes a decrease of \$66,000 in efficiencies.

	FY 2013	FY 2014	FY 2015	FY 2014 to
--	---------	---------	---------	------------

	Revised Enacted	Enacted	Request	FY 2015 Change
26.0 Supplies and Materials	\$61	\$105	\$100	(\$5)

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2015 request includes a decrease of \$5,000 for efficiencies.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
31.0 Equipment	\$93	\$112	\$100	(\$12)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2015 request includes a decrease of \$12,000 for efficiencies.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
32.0 Land and Structures	\$23,984	\$33,733	\$24,820	(\$8,913)

Land and Structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural (or resource) improvements such as fences and landscaping, and fixed equipment additions and replacements when required under contract or by capital lease. The FY 2015 requests includes a decrease of \$1,500,000 to non-recur the costs associated with the FLETC Energy Savings Performance Contract, a decrease of \$1,461,000 for efficiencies, and an adjustment of \$5,952,000.

BUDGET REQUEST AND SUPPORTING INFORMATION

Science & Technology Management and Administration

I. Appropriation Overview

A. Mission Statement for Management and Administration: Fund the effective and efficient management and leadership of the Science and Technology (S&T) Directorate activities to deliver advanced technology solutions to DHS Components and first responders.

B. Budget Activities: The Management and Administration (M&A) appropriation provides for salaries and benefits related to 337 FTE at the S&T Directorate headquarters. The 337 FTE provide executive direction to the S&T Directorate for program management, program execution oversight, program analysis, policy analysis, planning, financial management, guidance formulation, and operations and maintenance support for all S&T Directorate programs.

The M&A appropriation funds business operations and the S&T Directorate's share of the DHS Working Capital Fund. The Business Operations functions include paying for rent, office supplies, utilities, and other operational functions associated with the S&T Directorate's Washington, D.C., headquarters. This account pays for the training and travel associated with senior management of the S&T Directorate and contractor staff who support the execution of headquarters functions including financial management, facility planning, maintenance, and other administrative functions. M&A also funds the administration of the S&T Directorate's regulatory and treaty compliance activities, headquarters shared services agreements, and the financial and programmatic databases. The M&A appropriation does not fund contractor support or travel associated with the direct execution of Research, Development, Test, and Evaluation (RDT&E) programs across the S&T Directorate.

C. Budget Request Summary:

The S&T Directorate requests 337 positions, 337 FTE and \$130.147 million for M&A in FY 2015, an increase of \$1.147 million from FY 2014. The FY 2015 funding includes an increase of \$0.592 million for the 2015 pay raise, \$0.495 million for the increased retirement contribution, and \$2.300 million for the Working Capital Fund.

III. Current Services Program Description by PPA

**Department of Homeland Security
Science & Technology
Management and Administration:
Salaries and Expenses
Program Performance Justification**
(Dollars in Thousands)

PPA: Salaries and Expenses

	Perm. Pos	FTE	Amount
2013 Revised Enacted	334	334	126,519
2014 Enacted	337	337	129,000
2015 Adjustments-to-Base	-	-	1,147
2015 Current Services	337	337	130,147
2015 Total Request	337	337	130,147
Total Change 2014 to 2015	-	-	1,147

The S&T Directorate requests \$130.147 million for this activity. There is an increase of \$1.147 million from FY 2014 and includes the following adjustments to base:

- Increase of \$0.592 million for the 2015 pay raise
- Increase of \$0.495 million for the increased retirement contributions
- Increase of \$2.300 million for the following Working Capital Fund (WCF) activities: Treasury Information Executive Repository (TIER), Transit Subsidy, HSPD-12, Financial Statement Audit, Internal Control Audit, and Enterprise Licenses Agreements
- Decrease of \$2.240 million in efficiencies

CURRENT SERVICES PROGRAM DESCRIPTION:

The M&A appropriation funds salaries and benefits related to 337 FTE at the S&T Directorate headquarters. The 337 FTE provide executive direction to the S&T Directorate for policy analysis, planning, financial management, and guidance formulation. These FTE also conduct program management, execution, oversight, and analysis, as well as operations and maintenance support for all S&T Directorate programs.

Financial Systems Modernization migration funds totaling \$9 million for S&T are requested within the DHS Office of Chief Financial Officer's budget. Component-specific funding needs for this activity will be funded in the year of execution within this account.

The M&A appropriation funds all of the corporate-level functions in the S&T Directorate that allow the technical divisions to manage the Research, Development, Test, and Evaluation (RDT&E) programs. Those functions include the Finance and Budget Division, including the Chief Financial Officer; the Administration and Support Division, which manages the facilities, personnel, and information technology infrastructure (IT); and the Corporate Communications Division, which coordinates internal and external information dissemination. The DHS Working Capital Fund (WCF) provides those shared services that the components rely on to execute their missions, such as contracting officers and the DHS-wide IT infrastructure.

This budget request supports the overhead and administration of the four Groups, each of which has an important role in implementing RDT&E activities. These Groups are: First Responders, Homeland Security Advanced Research Projects Agency (HSARPA), Acquisition Support and Operations Analysis (ASOA), and Research and Development Partnerships (RDP).

First Responders

The First Responders Group (FRG) identifies, validates, and facilitates the fulfillment of First Responder capability gaps through the use of existing and emerging technologies, knowledge products, and the acceleration of standards. FRG manages working groups, teams, and other stakeholder outreach efforts in order to better understand the needs and requirements of local, tribal, state, and Federal first responders, including those on the front line of border protection and transportation security. Additionally, FRG directs all Office for Interoperability and Compatibility, National Urban Security Technology Laboratory, and Technology Clearinghouse/R-Tech activities.

Homeland Security Advanced Research Projects Agency (HSARPA)

HSARPA manages a portfolio of highly innovative programs that are transforming the future mission space for Homeland Security. Complementary to the S&T Directorate's other programs and projects, HSARPA projects push scientific limits to address customer-identified gaps in areas where current technologies and research and development (R&D) are inadequate or non-existent. HSARPA program managers lead teams of national experts in the development of new homeland security technologies, demonstrations, and applications that offer significant breakthroughs for DHS operations. HSARPA also manages the Small Business Innovation Research program for DHS, engaging the small business innovation engine of America to create new products and services for the homeland security enterprise (HSE).

Acquisition Support and Operations Analysis

The ASOA Group is a customer-driven organization that supports S&T and other DHS Components with systems analysis, requirements analysis and development, and advisory services to achieve successful acquisition implementation. Through the engagement and partnership with the DHS Enterprise, ASOA provides the corporate oversight of operational test and evaluation, standards, and the management of the Federally Funded Research and Development Centers (FFRDCs), Homeland Security Studies and Analysis Institute, and the Homeland Security System Engineering and Development Institute.

Research and Development Partnerships

The RDP Group manages a set of core competencies that provide measureable value to DHS S&T in facilitating “win-win” relationships with members of the HSE comprised of both government and nongovernment agencies and organizations. RDP conducts extensive outreach efforts with members of the HSE based on the strategic and programmatic needs of the Department and S&T. RDP assists in both transmitting and receiving information to stakeholders across the HSE. RDP enables opportunities for evaluating, expediting, and monitoring the execution of programs with an increased speed-of-execution compared to “in-house only” activities. RDP maintains extensive contacts and key references to conduct outreach and to provide research and funding opportunities to the public and private sectors both domestically and internationally.

Finance and Budget Division (FBD)

FBD provides the S&T Directorate with high-quality, efficient, and cost-effective financial management services through six branches. The Budget and Performance Office develops long-term plans for resource allocation, execution plans, Congressional Justifications, and management of financial resources within the S&T Directorate. It also develops and implements internal and external performance metrics for S&T Directorate programs, as well as risk assessment methodologies to help inform programming decisions. The Acquisition Branch develops the S&T Directorate’s acquisition strategy. The Financial Services Branch manages the travel and purchase card programs. The Financial Operations Branch is dedicated to sound fiscal stewardship of the S&T Directorate’s appropriations and reimbursable funding; timely and accurate budget execution, financial management, and financial reporting. The Internal Controls Branch monitors programs and activities to provide assurance about the adequacy of internal controls within the S&T Directorate. The Conferences and Contracts Services Branch streamlines the conference approval processes, implements processes that achieve cost savings in conference planning, and supports the management and oversight of major contracts.

Administration and Support Division

The Administration and Support Division provides critical infrastructure support to the S&T Directorate and is composed of seven components: Facilities, Human Capital Office, Office of the Chief Information Officer, Office of the Chief Administrative Officer, Office of Administration and Audits, Central Security Office, and Readiness and Operational Coordination. In compliance with Presidential Directives, Federal regulations, and Departmental guidance, the Administration and Support Division provides support and continuous process improvement through problem identification and solution, sound policy and procedure development, and high-quality service.

Corporate Communications Division

The Corporate Communications Division communicates the objectives and status of homeland security technology programs, disseminates information regarding opportunities for private-sector entities (corporate and academic), and ensures that the media understands and accurately represents DHS technologies and programs. The Corporate Communications Division holds conferences and manages the S&T Directorate’s presence at other information-sharing events to improve contact among technology developers, vendors, and acquisition personnel. It also promotes the participation of colleges, universities, private research institutes, and companies (and consortia thereof) in the research process by disseminating information regarding research conducted or sponsored by the Department, and provides public-communication support to the S&T Directorate-sponsored FFRDCs.

Working Capital Fund

Funds provided within the M&A appropriation are also used to acquire services through the DHS WCF, which includes: IT services, human resources, procurement operations, and financial systems. The WCF also provides consolidated subscriptions, government-wide mandated services, and DHS crosscutting activities.

Salaries and Expenses Mission Statement

The Management and Administration (M&A) appropriation provides for salaries and expenses related to 337 full time equivalent (FTE) personnel in Washington, D.C. This appropriation also provides for the operation of the S&T Directorate's Washington, D.C., headquarters including business operations, contributions to the DHS Working Capital Fund, and other administrative costs associated with the management of the S&T Directorate and its resources.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	41,370	41,788	42,226	438
11.3 Other than Full-Time Permanent	3,505	3,540	3,575	35
11.5 Other Personnel Compensation	1,492	1,508	1,508	-

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	41,370	41,788	42,226	438
12.1 Civilian Personnel Benefits	11,752	11,871	12,485	614
Total, Salaries & Benefits	58,119	58,707	59,794	1,087

Includes an increase of \$592,000 for a 1.0% federal pay raise. Also, includes an increase of \$495,000 for increased retirement contributions.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.1 Advisory and Assistance Services	\$24,031	\$24,562	\$22,322	(\$2,240)

Includes a decrease of \$2,240,000 for efficiencies.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.3 Other Goods and Services from Federal Sources	\$39,000	\$39,418	\$41,718	\$2,300

Includes an across the Department increase for Treasury Information Executive Repository (TIER), Transit Subsidy, HSPD-12, Financial Statement Audit, Internal Control Audit, and Enterprise Licenses Agreements.

BUDGET REQUEST AND SUPPORTING INFORMATION

Science and Technology Research, Development, Acquisitions, and Operations

I. Appropriation Overview

A. Mission Statement for Research, Development, Acquisitions, and Operations:

The mission of DHS S&T is to *strengthen America's security and resiliency by providing knowledge products and innovative technology solutions for the Homeland Security Enterprise*. Congress created the S&T Directorate under the Homeland Security Act of 2002, to among other things “[conduct] basic and applied research, development, demonstration, testing, and evaluation activities relevant to any or all elements of the Department.”¹ S&T also has a statutory responsibility for establishing a system for transferring homeland security developments or technologies to Federal, State, local governments, and private sector entities.

In the past decade, S&T has undergone many changes and continues to evolve. The extraordinary breadth and diversity of DHS's missions requires S&T to address a wide range of programs including DHS Components' near-term needs for new operational capabilities and improved operational effectiveness, efficiency, and safety. S&T also has responsibilities related to understanding and creating solutions to biological and chemical threats, and to conducting the research and development (R&D) required to meet homeland cybersecurity needs. While DHS S&T's work is often identified with technology development, equally important are the Directorate's contributions to homeland security in the form of analyses or “knowledge products.” These include analyses of alternative technology options; assessments of complex issues such as the relative risk of different chemical, biological, radiological and nuclear threats; operational testing and evaluation of technologies proposed for acquisition; detailed technical characterization of potential biological threat organisms to support both human and agricultural biodefense; and the creation of consensus standards that enable cost-effective progress across many fields. S&T also manages five national laboratories that provide unique homeland and national security capabilities and has direct access to the Department of Energy's extensive national laboratory system. In addition, the Directorate's capacity to engage R&D activities worldwide is greatly augmented by S&T's nine university-based Centers of Excellence (COEs) and 13 bilateral international agreements.

In order to meet the broad scope of our mission, S&T has built a highly trained and technically-proficient staff that is DHS's core source of science, engineering, and analytical expertise. Using our staff and budget for maximal impact, we have focused our energies on efforts that have a direct and demonstrable link to improving the efficiency, effectiveness, and safety of DHS's operational missions and enhancing the safety, interoperability, and communications capabilities of the first responder community. S&T's contributions to the Department and the Homeland Security Enterprise (HSE) fall into four general categories:

- *New capabilities and knowledge products* – S&T creates new technological capabilities that address DHS operational needs or are necessary to address evolving homeland security threats.
- *Process enhancements and efficiencies* – S&T conducts systems-based analysis to provide streamlined, resource-saving process improvements to existing operations.

¹ Sec. 302(4) of Public Law 107-296 (codified at 6 U.S.C. § 182(4)).

- *Acquisition support* – The Department achieves more effective and efficient operations and avoids costly acquisition failures and delays by leveraging S&T’s technical expertise to improve project management, operational analysis, and acquisition management.
- *Understanding of homeland security risks and opportunities* – S&T’s relationships across DHS and the HSE contribute to strategic understanding of existing and emerging threats as well as opportunities for collaboration across departmental, interagency, and state/local boundaries.

B. Budget Activities:

The Directorate has four RDT&E program, project, and activities (PPA), and various thrust areas, each of which has an important role in implementing research and development activities. These four PPAs are: Acquisition and Operations Support; Laboratory Facilities; Research, Development, and Innovation; and University Programs.

Acquisition and Operations Support (AOS)

AOS provides expert assistance to entities across the homeland security enterprise (HSE) to ensure that the transition, acquisition, and deployment of technologies, information, and procedures improve the efficiency and effectiveness of the operational capabilities across the HSE mission. The five thrust areas of Acquisition and Operations Support are: Operations Research and Analysis; Safety Act; Standards; Technology Transition Support; and Testing and Evaluation.

Laboratory Facilities

The Office of National Laboratories (ONL) manages the Laboratory Facilities Programs. ONL provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations and institutions, which can provide the knowledge and technology required to secure our homeland. ONL executes two thrust areas: Construction and Lab Operations.

Research, Development, and Innovation (RD&I)

RD&I provides state-of-the-art technology and/or solutions to meet the needs of the operational components of the Department and the first responder community. It includes customer-focused and output-oriented RDT&E programs that balance risk, cost, impact, and time to delivery. RD&I includes: APEX; Border Security; CBE Defense; Counter Terrorist; Cyber Security/Information Analytics; and First Responder/Disaster Resilience.

University Programs

University Programs supports critical homeland security-related research and education at U.S. colleges and universities to address high-priority DHS-related issues and to enhance homeland security capabilities over the long term. University Programs includes Centers of Excellence and Minority Serving Institutions.

C. Budget Request Summary:

The S&T Directorate requests 130 positions, 130 FTE, and \$941,671,000 for RDA&O in FY 2015, a decrease of \$149,541,000 from FY 2014. The FY 2015 funding reflects a decrease in the CBE Defense, Counter Terrorist, Cyber Security/Information Analytics, and First Responder/Disaster Resilience RDT&E thrust areas. It also includes an increase of \$0.191 million for a one-percent Federal pay raise.

FY 2013 Revised Enacted includes reprogrammings/transfers, and actual FTE/fee collections in FY 2013, as applicable.

III. Current Services Program Description by PPA

**Department of Homeland Security
Science & Technology
Research, Development, Acquisitions, and Operations
Acquisition and Operations Support
Program Performance Justification**

(Dollars in Thousands)

PPA: Acquisition and Operations Support

	Perm. Pos	FTE	Amount
2013 Revised Enacted	-	-	45,991
2014 Enacted	-	-	41,703
2015 Current Services	-	-	41,703
2015 Total Request	-	-	41,703
Total Change 2014 to 2015	-	-	-

S&T requests \$41.703 million for AOS in FY 2015. This will continue current funding levels for Operations Research and Analysis, SAFETY Act, Standards, Testing & Evaluation, and Technology Transition Support. In addition, this project supports S&T's role in providing support for Department capabilities and requirements analysis including at least \$0.500 million in FY 2015.

CURRENT SERVICES PROGRAM DESCRIPTION:

Acquisition and Operations Support PPA – Provides expert assistance, including systems engineering, to entities across the HSE to ensure that the transition, acquisition, and deployment of technologies, information, and procedures improve the efficiency and effectiveness of the operational capabilities across the HSE mission. This includes providing technological assessment of major acquisition programs in the DHS to help ensure that technologies, concept of operations (CONOPS), and procedures meet operational requirements, technology analysis and technology review of analysis of alternatives at the beginning and throughout an acquisition program's life; oversight of the T&E of DHS major acquisition programs; standards to support the homeland security mission; and administration of the Support Anti-Terrorism by Fostering Effective Technologies (SAFETY) Act program.

The five thrust areas of AOS are: Operations Research and Analysis; SAFETY Act; Standards; Technology Transition Support; and Testing and Evaluation.

Operations Research and Analysis Thrust – FY 2014: \$6.451 million. FY 2015 Request: \$6.200 million. Provides science-based analytic capability and capacity to DHS to better understand threats and the implications of major decisions, evaluates alternatives, improves DHS mission operations and the use of technology across the HSE, and improves the Department's risk management capabilities.

Homeland Security Studies and Analysis Institute (HSSAI)

HSSAI is a Federally Funded Research & Development Center (FFRDC) working in the public interest to ensure the highest levels of excellence by bringing together the expertise and point-of-view of government, industry, and academia. The Institute works to solve complex Homeland Security Enterprise (HSE) problems based on their core technical capabilities, their long-term relationship with the Department, their special access to data, and their inherent objectivity and independence. HSSAI supports DHS Components by providing specialized expertise in a spectrum of mission-critical capacities, to include program analyses and evaluation, targeted tradeoff studies of mission-level goals and strategies; analyzing operations and operational requirements; assessing DHS organizations and their governance; and evaluating performance metrics to effectively meet the future challenges facing the Nation.

Knowledge Management and Tech Foraging

This program enhances the Directorate's ability to gather and manage accumulated knowledge and essential information for the benefit of the HSE to identify and evaluate existing or developing technologies, services, and emerging trends.

The Knowledge Management program develops and maintains an environment where S&T employees share and access relevant knowledge and lessons learned, and foster collaborative development efforts. Proper management of knowledge and information helps to protect the privacy of all individuals, ensures compliance with Freedom of Information Act (FOIA) requirements, and cost-effectively shares important information with a wide and diverse HSE audience. Knowledge Management works with S&T staff to assess privacy risks, recommend privacy protections, and mitigate improper disclosures and breaches of personal information, while also facilitating efforts to promote an open and transparent government.

Technology foraging is the identification of promising research and existing or emerging technology in government, academia, and industry. Results of foraging improve alternative options, may increase speed of project execution, and may reduce costs for projects. Technology foraging leverages domestic and international public and private sector technologies, products, services, and emerging trends. This approach enables S&T to rapidly match existing or near-term technologies to the operational requirements of the HSE, increasing efficiency in the expenditure of funds and accelerating time to fielding.

SAFETY Act Thrust – FY 2014: \$7.880 million. FY 2015 Request: \$8.043 million. This program creates legal liability protection for providers of qualified anti-terrorism technologies and incentivizes the private sector to commit additional resources to significantly improve anti-terrorism preparedness and resiliency. In accordance with the SAFETY Act of 2002, this program removes barriers to industry investments. This program enables potential providers of effective anti-terrorism technologies to develop, deploy, and commercialize these technologies with liability limitations for claims arising out of, relating to, or resulting from an act of terrorism. In addition, the SAFETY Act Program actively supports DHS programs and initiatives (e.g., TSA's Certified Cargo Screening Program, CBP's Targeting & Analysis Systems Program Office) and critical R&D investments and programs in the S&T Directorate.

Standards Thrust – FY 2014: \$8.220 million. FY 2015 Request: \$8.220 million.

- *Problem:* The need to ensure that technologies and equipment are safe, stable, and successful in the field.
- *Solution:* Identify standards and test methods that verify equipment performance and meet acquisition requirements by working with end users to develop appropriate documentation.

- *Impact:* Ensures that first responders receive quality, high-performing, safe equipment and the right tools to protect the public and their own lives.

Chemical and Biological Systems Standards

This project improves the ability of first responders to access and receive information on CBRN sensor technologies interfaced with other instruments used to respond to developing events and incidents.

The project standardizes device interfaces, facilitates seamless integration, and provides the necessary interoperability of CBRN devices with other equipment to first responders. It supports cost-effective deployment of chemical and biological countermeasure technologies at the Federal, State, and local levels by working with other DHS Components and Federal agencies and by providing an effective, coordinated response to chemical and biological events through standards development. This project has developed validated performance standards, technical methods, and training curricula that encourage capability building at the jurisdiction level that will provide manufacturers, responders, and facility operators with performance specifications, testing criteria, and application guidance.

Prior Year Key Events

- Complete American Society for Testing and Materials (ASTM) regional resiliency planning standards, including radiological response planning standards.
- Complete international x-ray standards development on whole-body imaging technical performance and air cargo inspection.
- Finalize National Fire Protection Association (NFPA) standards for fire and arson resistance.

Current Year Key Events

- Publish guidance and/or standards to communicate metrics and measurement uncertainty for assessing the quantity of microbial agent test materials.
- Publish performance metrics for methods chosen to characterize microbial identity and identify needed standards to support microbial identity measurements.

Budget Year Key Events

- This project will develop standards and test methods to support an integrated response to suspected biological incidents, fostering a coordinated response from first responder through law-enforcement, and forensics.

Explosives Countermeasures Standards

This project enables technologies that keep explosives out of transportation systems, Federal buildings, and critical infrastructure. These technologies detect both small amounts of explosive (i.e., trace detection) on people or objects, as well as larger amounts of concealed explosives (i.e., screening standards). These standards include standard test materials and protocols for next-generation deployed trace explosives detection equipment, including new and emerging explosive threats.

Prior Year Key Events

- Develop standards for the next class of chemical detectors.
- Implement a conformity assessment program for handheld and stationary chemical detectors.

Current Year Key Events

- Develop methods to produce cost effective test materials for mass applications and complete development of particle test materials.

- Initiate standards development for security screening of luggage and liquids for computed tomography-based explosives detection system (CT/EDS) X-Ray.

Budget Year Key Events

- Develop detection standards for prevention and deterrence of homemade explosives.

Responder & Resiliency Standards

This project safeguards the Nation's HSE by facilitating coordinated responses to emergencies. Specifically, this project supports standards-based capabilities and standardized response plans and training for responders, localities, and communities. This project also develops performance-based design methodologies for buildings and infrastructures subjected to a variety of hazards and defined performance specifications, test methods to determine performance specifications, and guidance related to Federal, State, and local response to emergencies.

Prior Year Key Events

- Complete standard performance specifications for multimodal biometric sensors.
- Expand test methods development to support bomb disposal robot platforms.
- Initiate projects in biometric client technologies, latent fingerprint analysis, biometric quality, and biometric human factors and usability.

Current Year Key Events

- Host robot evaluation and training at National Institute of Standards and Technology (NIST) and other locations.
- Design and develop an executive management module for usability tests and symbols for fingerprint, face and iris collection.
- Develop and publish a conformance testing suite for the web services (WS)-biometric device profiles.

Budget Year Key Events

- This project plans to initiate projects in biometric client technologies, latent fingerprint analysis, biometric quality, and biometric human factors and usability.
- This project plans to finalize standards for fire and arson resistance as well as complete regional resiliency planning standards, including radiological response planning standards.
- Support to APEX Secure Transit Corridors for performance standards and test methods.
- Design and retrofit strategies for resilience.

Standards Infrastructure

This project supports S&T's participation in national and international standards organizations and activities to ensure that DHS equities are addressed and that the development and use of standards meet Departmental mission needs. It enables DHS and its customers to procure and acquire reliable, interoperable, and effective technologies and processes. This project promotes and maintains relationships with standards-development organizations to ensure communication with and commitment to partnerships, as well as ongoing infrastructure such as databases and working groups. This project also supports programs across DHS and the Federal space with standards and test methods for key applications within DHS Components.

Prior Year Key Events

- Complete draft performance specification standards for biological detection technologies according to capability (i.e., screening tools, autonomous monitors, portable and laboratory based polymerase chain reaction (PCR) assays) and develop proficiency testing protocols in concert with users.
- Develop standard test materials and protocols for next generation deployed trace explosives detection equipment, including new and emerging explosive threats.
- Supported component needs in standards activities, including key report generation, access to standards, and requirements gathering.
- Supported DHS representation in national and international standards organizations.

Current Year Key Events

- Support DHS representation in national and international standards organizations.

Budget Year Key Events

- Draft, develop, adopt, and/or update standards, standard test/reference material, technical performance standards, test methods, and/or protocols for DHS equipment, systems, and programs/projects.
- Finalize standards for RF PASS devices.

Human Systems Engineering

This project improves DHS customer component capability to design and develop products that include human performance requirements resulting in systems that are more safe, reliable, affordable, supportable, and easy to use. It develops and defines requirements, methods, and measures to influence and evaluate the design of user interfaces for new and existing systems and technologies. To date, the project successfully transitioned the process to the USCG and has a second technology transition agreement (TTA) in place with Immigration and Customs Enforcement's (ICE) Office of the Chief Information Officer. Future TTAs with various other Operational Components are in progress.

Human Systems Research

This project maximizes the understanding of human performance capabilities of DHS end-users to increase overall system efficiency and effectiveness by analyzing current and emerging human performance risks and issues in DHS technology development and deployed systems, as well as considering the use of modeling and simulations tools and techniques as predictors of human performance. This project plans to complete research and transition of a Checkpoint Screening Human Performance Research Roadmap for aviation security operations to the TSA, provide an improved safe and efficient patient compartment ambulance design to the first responder community, and enhance current human performance modeling practices. Future efforts include investigating human performance issues for DHS end- users in trace detection methodologies and information display commonalities across the Components.

Technology Transition Support Thrust – FY 2014: \$13.813 million. FY 2015 Request: \$13.790 million. This thrust facilitates the transition of S&T Directorate solutions to customers. These activities involve integrating technology development efforts across the S&T Directorate to develop the most cost-effective and timely solutions and processes to meet customer requirements, including first responders.

Acquisitions Support and Operations Analysis (ASOA)

This project provides S&T and DHS with leadership and oversight of: 1) standards, 2) systems analysis, 3) research and development testing and evaluation (T&E), and 4) operational T&E. Working with the Under Secretary for Management, ASOA leverages S&T's critical mass of scientific and

engineering expertise to ensure that DHS develops and/or procures technologies that work as expected, and that are delivered or transitioned on time and on budget. ASOA serves as the Executive Agent for DHS's two FFRDCs: Homeland Security Systems Engineering and Development Institute and HSSAI. In addition, this project supports S&T's role in providing support for Department capabilities and requirements analysis including at least \$0.500 million in FY 2015.

Interagency Programs

This program addresses high-priority homeland security needs through operational experimentation, facilitation and collaboration with cooperative science, technology, research, development, testing, and evaluation (RDT&E) endeavors with other federal agencies. It leverages the capabilities and investments of external organizations to reduce duplication and identify unmet needs pursuant to §302 (13) of the Homeland Security Act of 2002. Outreach is conducted with federal, state, local, territorial and tribal government partners to strengthen collaborative efforts of and to collect input on their technology gaps.

International Cooperative Programs

- *Problem:* As security challenges continue to emerge and evolve, S&T is developing relationships with international allies to enhance our innovative R&D knowledge, funding, and other unique capabilities and resources.
- *Solution:* Develop understandings and agreements and facilitate the planning and implementation of international cooperative activity to address the strategic priorities developed for the Department in support of the Homeland Security Enterprise.
- *Impact:* The United States and its allies in the global war on terrorism will mutually benefit from the sharing of technological expertise to combat domestic and international terrorism.

Prior Year Key Events

- Facilitated nine bilateral meetings for the Under Secretary and Deputy Under Secretary for S&T.
- Jointly funded project on Malware on Smartphones: Collection, Analysis and Defensive Measures with the Visual Analytics for Command, Control, Interoperability Environments (VACCINE) Center and the University of California--Santa Barbara (UCSB) to execute.
- Jointly funded project on Dynamic Ink Aging to determine the optimized parameters for assessing the short term age of a ballpoint writing ink.
- Funded additional work packages for four international grants awards from prior fiscal years.

Current Year Key Events

- Facilitate nine bilateral meetings for the Under Secretary and Deputy Under Secretary for S&T.

Budget Year Key Events

- Facilitate nine bilateral meetings for the Under Secretary and Deputy Under Secretary for S&T.
- Jointly funded European Union – U.S. Supply Chain Security Demonstration Pilot Project.

Program Transition

This project establishes and implements a technology development program to focus near-term S&T work on the transitioning projects and capabilities needed by DHS Operational Components, Directorates, and their external customers. This includes partnering with In-Q-Tel, the not-for-profit venture capital firm that invests in high-tech companies for the Central Intelligence Agency (CIA), on projects for homeland security in high-tech, cutting-edge technologies such as DNA analysis, standoff explosives trace detection, cybersecurity, and secure covert surveillance. This program administers a

requirements-driven, delivery-oriented effort that draws upon technologies that can be developed, matured, and delivered to DHS acquisition programs, commercialized, or validated as a standard within a three-year period.

Testing and Evaluation Thrust – FY 2014: \$5.339 million. FY 2015 Request: \$5.450 million. The T&E Thrust establishes policies and procedures and coordinates T&E resources to verify attainment of technical performance specifications and to evaluate operational effectiveness/suitability prior to system deployment. T&E works to ensure that DHS integrates a uniform and centrally managed departmental T&E process into the systems engineering and acquisition lifecycle. The infrastructure area will assess, integrate, and coordinate DHS and non-DHS test assets to ensure that adequate test capabilities are available to support DHS programs and projects.

First Responder Technologies (System Assessment and Validation for Emergency Responders [SAVER])

This project provides high-quality, impartial, operationally relevant evaluations, and specification verification for critical emergency responder-related equipment based on current national challenges and the needs of first responders. SAVER provides decision makers and responders with information to better select, procure, use, and maintain emergency response equipment. This sharing of information is a life-saving and cost-saving asset for DHS, as well as for Federal, State, local, and tribal users of emergency response equipment.

Oversight T&E Activities for DHS T&E Products

This project increases the quality of information provided to decision makers and improves the quality of systems and technologies fielded to the end-user by working directly with all DHS major acquisition programs on the DHS Major Acquisition Oversight List that require T&E to assist in the development and execution of a robust T&E program. This project meets Clinger-Cohen Act requirements for Information Technology (IT) programs, and similarly supports acquisition T&E oversight of non-IT Programs by increasing the quality of information relating to progress towards meeting operational requirements.

T&E Infrastructure Development

This project provides the Department with a searchable database to identify existing testing infrastructure available for DHS use, such as facilities, equipment, and analytical capabilities, by creating an inventory of current T&E infrastructure resources that identifies infrastructure needs and eliminates excess. This project decreases the cost of testing through efficient infrastructure utilization while increasing the awareness of test capabilities available for use by the T&E community, program managers, and other users.

T&E Policy Analysis and Development

This project improves the quality of T&E conducted throughout DHS by developing T&E policies and procedures that define T&E activities required of all DHS Components throughout the acquisition process to verify the attainment of technical performance specifications and to evaluate operational effectiveness/suitability prior to system deployment. This project continually maintains and revises the T&E directives, guidebooks, and training courses that support T&E efforts throughout the Department.

Department of Homeland Security
Science & Technology
Research, Development, Acquisitions, and Operations
Laboratory Facilities
Program Performance Justification
(Dollars in Thousands)

PPA: Laboratory Facilities

	Perm. Pos	FTE	Amount
2013 Revised Enacted	128	128	158,083
2014 Enacted	130	130	547,785
2015 Adjustments-to-Base	-	-	(432,883)
2015 Current Services	130	130	114,902
2015 Program Change	-	-	320,278
2015 Total Request	130	130	435,180
Total Change 2014 to 2015	-	-	(112,605)

The S&T Directorate requests \$435.180 million for this activity in FY 2015. This \$112.605 million decrease includes a one-percent Federal pay raise, and includes the following adjustments to base:

- Decrease of \$433.250 million for Laboratory Construction
- Increase of \$0.191 million for the 2015 pay raise

CURRENT SERVICES PROGRAM DESCRIPTION:

Laboratory Facilities PPA – ONL manages the Laboratory Facilities Programs. ONL provides the Nation with a coordinated, enduring core of productive science, technology, and engineering laboratories, organizations, and institutions, which can provide the knowledge and technology required to secure our homeland.

Construction Thrust – FY 2014: \$433.250 million. FY 2015 Request: \$315.230 million. This program oversees the planning, budgeting, and management of laboratory infrastructure construction and upgrade projects. Construction projects provide and maintain R&D capabilities to support the missions of the S&T Directorate, the Department, and other government agencies that have interrelated homeland security missions. The investments include the construction of future laboratories, where a current capability does not exist, and upgrades to extend the life and capabilities of present laboratory facilities.

Infrastructure Upgrades Project

This project ensures that S&T Directorate Laboratories do not reach a point where obsolete or insufficient infrastructure prohibits continued R&D operations. Capital upgrades are more than routine operations and maintenance or expected upkeep of infrastructure. In addition to major repairs of infrastructure systems (e.g., electrical, water/sewage), they may include new construction, renovation, or remodeling to structures that enable scientists to pursue new capabilities based on customer

requirements. These efforts are planned and coordinated to help prevent an unmanageable and unaffordable situation where multiple key facilities require upgrades simultaneously. The highest priority for lab facility upgrades is the Plum Island Animal Disease Center (PIADC), to ensure that there is operational continuity until NBAF comes on line. In FY 2015, construction is expected to begin for the Waste Water Decontamination System at PIADC.

Laboratory Operations Thrust – FY 2014: \$114.535 million. FY 2015 Request: \$119.950 million. This program manages the operations, core capabilities, maintenance, and personnel requirements of the DHS S&T Laboratories and infrastructure. This program also oversees the continued operations of facilities to meet the mission requirements while maintaining safe, secure, compliant, and efficient operations.

Chemical Security Analysis Center (CSAC) Operations

This facility develops and informs risk assessments related to national chemical defense. CSAC is co-located at the DOD Edgewood Chemical Biological Center (ECBC) at the Aberdeen Proving Grounds in Maryland. CSAC supports a variety of customers within DHS, the Federal Government, and the HSE, to include the S&T Directorate's Chemical and Biological Division, DHS components such as the National Protection and Programs Directorate (NPPD) and TSA, and Federal agencies, such as the Environmental Protection Agency (EPA), Federal Bureau of Investigation (FBI), and DOD. CSAC also provides science- and technology-based quality assurance information regarding chemical threats to support the unified national effort to secure the Nation. The DOD Sample Receipt Facility at ECBC houses CSAC, providing the capability to integrate knowledge across the full chemical threat spectrum. Operational costs for this facility include rent, security, utilities, and information technology.

National Urban Security Technology Laboratory (NUSTL) Operations

NUSTL provides T&E capabilities to the S&T Directorate and other DHS Components such as the Domestic Nuclear Detection Office (DNDO). NUSTL also is the liaison for the deployment of experimental technologies in the New York City metropolitan area and provides technical support to the regional first responder community. NUSTL is a government-owned, government-operated laboratory located in the borough of Manhattan, New York, NY. Major operational costs include rent, information technology, and security.

National Biodefense Analysis and Countermeasures Center (NBACC) Operations

NBACC provides the capability to characterize current and future biological threats, assess their impacts, and inform the development of countermeasures and vaccines in response to events and identified threats. The NBACC mission is to provide the Nation with the scientific basis for characterization of biological threats and bioforensic analysis to support attribution of their planned and actual use. NBACC is part of the National Interagency Biodefense Campus that includes the Department of Health and Human Services (HHS), DOD, and Department of Agriculture (USDA). The unique missions of threat characterization and bioforensics enhance the Nation's overall biodefense capabilities. NBACC closely collaborates with the FBI and other law enforcement agencies. NBACC also continues to examine opportunities for the cooperative use of existing capacity for work needed by other Federal agencies. S&T operates NBACC as an FFRDC. The FFRDC plans, manages, and executes the NBACC research programs and operates the facility. NBACC has achieved all of the required certifications and registrations for its biosafety level (BSL) 2, 3, and 4 laboratories.

Plum Island Animal Disease Center (PIADC) Operations

PIADC conducts research on contagious foreign animal diseases (FAD) (e.g., foot-and-mouth disease [FMD]) and develops strategies and vaccines to protect the Nation's animal industries and exports from foreign animal diseases accidentally or deliberately introduced into the United States. DHS and USDA jointly perform the R&D work at PIADC. The combined work of both agencies supports the S&T Directorate's agro-terrorism countermeasures programs. Research at the facility occurs in BSL-2, BSL-3, and BSL-3Ag laboratory spaces. DHS is responsible for the management, operations and maintenance of the facility. The laboratory is a self-sustaining operation, with its own power plant, fuel storage, fire protection, waste disposal, and security systems. S&T provides the only ferry transport to and from the island and is responsible for operating and maintaining the ferries, docks, and harbor. S&T delivers the day-to-day operational support, including the operations work force. Major operational costs include security, an operations & maintenance contract, utilities, and fuel.

Transportation Security Laboratory (TSL) Operations

TSL performs research, development, and validation of solutions to detect and mitigate the threat of explosives. TSL is an RDT&E laboratory that develops promising explosive detection technologies to the point of operational T&E. TSL supports S&T's Explosives Division and ASOA, and TSA. The real property and facilities belong to the Federal Aviation Administration (FAA). Major operational costs include rent, operation support contracts, building maintenance, utilities, security, and information technology. TSL is located at the FAA William J. Hughes Technical Center in Atlantic City, N.J.

Salaries and Benefits

Funds salaries and benefits for non-headquarters, Federal employees located at S&T's field laboratories. These employees operate and execute programs at the S&T Laboratories in support of S&T divisions, DHS components, and other government agencies.

MAJOR ACQUISITIONS:

FY 2013 Activity Funding (\$ thousands) 62,832	FY 2014 Activity Funding (\$ thousands) 438,132	FY 2015 Activity Request (\$ thousands) 337,156
<i>NBACC Operations</i>	<ul style="list-style-type: none"> The NBACC facility is comprised of the National Bioforensic Analysis Center (NBFAC) and the National Biological Threat Characterization Center (NBTCC). The NBFAC conducts bioforensic analysis of evidence from a biocrime or terrorist attack to attain a "biological fingerprint" to help investigators identify perpetrators and determine the origin and method of attack. The NBFAC supports the FBI in conducting and facilitating technical forensic analyses and interpretation of material recovered following a real or suspected bioterrorist attack. The NBTCC conducts studies and laboratory experiments to fill in information gaps to better understand current and future biological threats; to assess vulnerabilities and conduct risk assessments; and to determine potential impacts to guide the development of countermeasures such as detectors, drugs, vaccines, and decontamination technologies. The NBACC is a key component in implementing the President's National Strategy for Homeland Security, as it addresses the need for substantial scientific research to better anticipate, prevent, and mitigate the consequences of biological attacks. The NBACC provides dedicated, secure, and responsive 	

	<p>biocontainment laboratories to conduct biothreat characterization and vulnerability assessments, as well as dedicated bioforensics operational capacity; and capacity for high-containment research and development.</p> <ul style="list-style-type: none"> • Construction of the facility (one unit) has been completed and the NBACC is now operating in steady-state mode. • FY 2013: 32,132; FY 2014: 34,132; FY 2015: 37,156
<i>NBAF Construction</i>	<ul style="list-style-type: none"> • The proposed NBAF is an integrated foreign animal and zoonotic disease research, development and testing facility that will support complementary missions of DHS and USDA to protect the United States from the numerous infectious foreign animal and zoonotic diseases present throughout the world that could threaten our public health, agriculture, and economy, and bring effective countermeasures and vaccines to industry for further development. Several Presidential Directives and congressional mandates assign agricultural defense responsibilities to both DHS and USDA. Any animal disease outbreak posing a nationally significant impact on U.S. agriculture is within DHS's Homeland Security Presidential Directive 9 (HSPD-9) coordination responsibilities. DHS was authorized as the lead for bio- and agro-defense research and development at PIADC by the Homeland Security Act of 2002. PIADC is at the end of its lifecycle – as a facility it does not meet modern bio-containment standards and has several critical capability limitations. It does not possess large animal biosafety level 4 (ABSL-4) laboratory space, meaning that any outbreak of emerging or zoonotic disease requiring this bio-containment level could not involve direct livestock research, which would severely inhibit U.S. response capability. As a BSL-3 facility, PIADC also has a limited capacity to perform R&D. NBAF will provide the U.S. with these capabilities to protect our agricultural economy, food supply, and public health. NBAF will provide the U.S. with BSL-4 diagnostic and research capabilities rather than relying on limited large animal ABSL-4 facilities located in other countries. • NBAF will be incrementally constructed in three segments as follows: 1) site Preparation (complete), 2) central utility plant (in progress), and 3) main laboratory. • FY 2013: 30,700; FY 2014: 404,000; FY 2015: 300,000

PPA: Research Development and Innovation

	Perm. Pos	FTE	Amount
2013 Revised Enacted	-	-	425,295
2014 Enacted	-	-	462,000
2015 Current Services	-	-	462,000
2015 Program Change	-	-	(28,212)
2015 Total Request	-	-	433,788
Total Change 2014 to 2015	-	-	(28,212)

The S&T Directorate requests \$433.788 million for RD&I in FY 2015. The \$28.212 million decrease in FY 2015 reduces R&D work in areas such as: CBE Defense; Counter Terrorist; Cyber Security/Information Analysis, and First Responder/Disaster Resilience.

CURRENT SERVICES PROGRAM DESCRIPTION:

RD&I PPA – Provides state-of-the-art technologies and solutions to meet the needs of the operational components of the Department and the first responder community. Includes customer-focused and output-oriented RDT&E programs that balance risk, cost, impact, and time to delivery. The six thrust areas of RD&I include: APEX; Border Security; CBE Defense; Counter Terrorist; Cyber Security/Information Analytics; and First Responder/Disaster Resilience.

APEX – FY 2014: \$15.013 million. FY 2015 Request: \$15.013 million. Consists of crosscutting, multi-disciplinary projects agreed to by the requesting DHS Component Head and the Under Secretary for Science and Technology.

Apex Air Entry/Exit Re-Engineering (AEER)

- *Problem:* Increases in international travel have strained CBP resources, resulting in increased wait times and delays for passengers to clear some Federal Inspection Service areas. In addition, DHS is required by law to implement a cost-effective biometric exit process to increase CBP's ability to confirm the identity of persons departing the U.S.
- *Solution:* Analyze current entry operations, and implement technologies and enhancements to existing airport operations, to increase CBP's capability to expedite screening of travelers entering the U.S. AEER will also develop recommended approaches and implement technologies for cost-effective and integrated biometric exit capabilities to meet the Congressional mandate for biometric exit. Throughout the project, AEER will actively engage its industry stakeholders to understand the challenges and impacts of current operations and proposed changes.

- *Impact:* With S&T's assistance, CBP will increase its ability to confirm the identity of persons entering and departing the U.S., fulfill its obligation to implement a biometric air exit solution, and ensure that processes are efficient and keep pace with growth in international air travel.

Prior Year Key Events

- Engaged industry stakeholders to discuss project goals, gather operational requirements, and address potential concerns.
- Delivered Survey Methodology for OFO POE Operations Data Collection.
- Completed Test Bed Facility architecture design and engineering drawings.
- Completed eight Airport Operational Surveys and documented findings in an As-Is Operational Survey Report.
- Drafted entry and exit capability gap assessment, and included targeted areas for potential solutions.

Current Year Key Events

- Conduct joint working session with key industry stakeholders to discuss pros and cons of notional biometric exit CONOPs.
- Conduct a biometric technology market survey of initial device capabilities and maturity report.
- Establish Test Bed Capability and Facility.
- Complete iris, fingerprint, and face biometric device laboratory qualification testing.
- Validate biometric air entry/exit CONOPs and technologies with scenario based testing.
- Conduct performance and cost-benefit analysis of biographic and biometric exit.
- Complete airport entry/exit analytical tools and document for transition to CBP.

Budget Year Key Events

- Select biometric technology candidates for field evaluation.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	N/A	7,500	7,506	7,506

APEX Border Enforcement Analytics Project (BEAP)

- *Problem:* ICE Homeland Security Investigations (HSI) requires data driven business models for lead development, senior agent knowledge capture, and improved access to a wide variety of authorized information sources.
- *Solution:* S&T is partnering with ICE HSI to develop and deliver emerging Big Data capability in the form of new information architectures and algorithms that improve the efficiency of law enforcement operations.
- *Impact:* S&T will provide a scalable and efficient information analytics system that can assimilate authorized data sets to improve lead development and law enforcement operations using the best of breed commercially open source technology. This will improve ICE investigation capabilities and improve ICE's ability to interdict illegal exports.

Prior Year Key Events

- Program Charter Agreement between ICE and S&T Leadership.
- Statistical reports relevant to export control reform.
- Established S&T processing enclave for algorithm development.

Current Year Key Events

- Transition Initial Operational Capability to DHS Data Center.
- Evaluation of Geocoding Algorithms.
- Evaluation of leading emerging analytic and storage technologies.
- Demonstration of algorithms that reflect best analytic practices of senior ICE investigative agents.

Budget Year Key Events

- Transition exploratory methodology mapping capabilities to ICE.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	N/A	7,500	7,507	7,507

Border Security – FY 2014: \$43.856 million. FY 2015 Request: \$51.100 million. DHS secures the borders, territorial waters, ports, terminals, waterways, and air, land, and sea transportation systems of the United States. S&T invests in border security research and development for technologies and solutions to prevent the illicit movement and illegal entry or exit of people, weapons, dangerous goods, and contraband, and to manage the risk posed by people and goods in transit.

Cargo Security – FY 2014: \$16.456 million. FY 2015 Request: \$18.300 million. This program develops technologies to ensure the integrity of cargo shipments (including sea, air, and land conveyance) and enhances the end-to-end security of the supply chain, from the manufacturer of goods to final delivery, while ensuring economic throughput for the U.S. economy. This work will reduce the risk of terrorists manipulating cargo as it conveys across various transit modes in the international supply chain.

Air Cargo Screening

- *Problem:* Current screening systems offer inadequate detection performance across the full range stream of commerce. There is a need for more effective and affordable air cargo screening equipment and the cost of adequately effective equipment is an issue that affects Independent Air Cargo (IAC) facilities and Air Carrier procurement decisions.
- *Solution:* Develop the Opacity and Complexity Assessment Software Tool (OCAST) to automatically predict the likelihood that an explosive threat could be reliably detected by a human operator using an X-ray image for a particular package, develop palletized screening X-ray systems offering Computed Tomography (CT) images to enable effective screening of medium and high-density pallets, and develop field deployable Mass Spectrometry (MS) for Explosives Trace Detectors (ETDs) to enable more effective identification of complex homemade explosives.
- *Impact:* The development of low cost air cargo screening systems, offering improved probabilities of detection, would enhance TSA's ability to ensure a more effective air cargo screening capability by enabling the procurement of these systems by IACs and Air Carriers at costs that are deemed acceptable.

Prior Year Key Events

- Completed preliminary design of handheld trace direct analysis tool for break bulk and palletized air cargo screening.
- Developed prototype palletized cargo screening systems through critical design phase.

Current Year Key Events

- Deliver Opacity and Complexity Assessment Software Tool (OCAST) to assist personnel in air cargo screening.
- Complete development and test Quantum Magnetics' prototype palletized cargo screening system.
- Demonstrate new portable trace detection systems for air cargo screening.
- Complete meta-study to determine effectiveness of screening systems against various streams of commerce. Study will include recommendations to address technology gaps.

Budget Year Key Events

- Complete development and test Astrophysics' prototype palletized cargo screening systems.
- Complete "ground truth" cargo IED study to determine available trace signatures for ETDs.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
11,795	15,920	12,083	11,944	2,000	5,000

Cargo Container Security

- *Problem:* The lack of actionable information used in the targeting of cargo for inspection, diverts resources from higher risk shipments, while reducing the efficient flow of low risk/legitimate cargo. Inefficient targeting and lack of confidence in the security of containerized cargo in the global supply chain, costs U.S. importers billions in lost revenue per year. Moreover, the volume of inbound cargo to U.S. ports-of-entry (POEs) is projected to continue to increase from year to year while CBP manpower will not be increased proportionately. As such, new or improved technology can be a force multiplier or enabler to help address these problems.
- *Solution:* This project develops technologies for collecting additional cargo security data, while also investing in the analysis methods for transforming new and existing cargo security data into actionable information in the form of improved targeting that leads to a higher probability of detecting illegal or hazardous materials in cargo while expediting the delivery of legitimate cargo.
- *Impact:* Improved targeting and improvements in container security through the use of technology will reduce the number of containers requiring scanning and/or manual inspection saving CBP millions annually in labor and facility costs, while increasing the throughput of legitimate cargo. The use of technology could yield millions of dollars of additional tax revenue and would allow the automation of manual processes at the Points of Entry (POEs), freeing up thousands of hours/yr of CBP labor.

Prior Year Key Events

- Delivered performance specification for the Secure Hybrid Composite Container (SHCC) to CBP.
- Delivered two fabricated Secure Hybrid Composite Containers. One container for testing and one for delivery to the Government of Singapore (funded by Singapore Ministry of Home Affairs).
- Developed and delivered US-EU Maritime Cargo Security Pilot Project Charter to the European Union (EU) for review and signature.

Current Year Key Events

- Pilot a supply chain management system using RECONS for CBP's Centralized Examination Station (CES) and In-bond Operations.
- Pilot a supply chain management system using RECONS to secure deliveries in the National Capital Region for the Federal Protective Service (FPS).
- Deliver Secure Hybrid Composite Container draft standard to International Organization for Standardization (ISO) for certification/adoption.

- Deliver Secure Hybrid Composite Container Environmental Testing Report.
- Deliver Secure Hybrid Composite Container Operational Evaluation Report.
- Finalize US-EU Maritime Cargo Security Pilot Test Plan.

Budget Year Key Events

- Preliminary assessment of the efficacy of various cargo security devices for use in the US-EU Maritime Cargo Security Pilot.
- Deliver CES/In-Bond prototype to CBP.
- Deliver National Capital Region Secure Delivery prototype to FPS.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
12,760	1,450	1,000	2,812	3,450	1,400

Cargo Validation

- *Problem:* CBP has limited capability to collect and analyze evidence from cargo and cargo containers to enforce trade law. Currently, CBP Agriculture Inspectors search for pests/invasive species using time-consuming manual techniques. CBP/ICE has limited ability to detect/interdict counterfeit merchandise entering the U.S. and the estimated \$65 billion in bulk cash being illegally smuggled out of the U.S. each year.
- *Solution:* This project provides CBP with the capability to (1) detect the transport of contraband, counterfeit merchandise, or invasive species for inbound and outbound cargo at the POEs and (2) detect and prosecute illegal activity through the forensic analysis of material collected from suspicious cargo/packages.
- *Impact:* Improved tools and methods to validate cargo and enforce trade compliance, and detect invasive species will: 1) increase throughput of legitimate cargo, 2) increase the availability of forensic evidence enabling enhanced trade compliance enforcement, and 3) reduce industry complaints/ costs caused by delaying the processing of cargo at the POE. Improved enforcement of trade law will allow for the collection of millions of dollars of currently uncollected tariffs and duties.

Prior Year Key Events

- Developed seedling/Tech Foraging report that identifies one or more paths forward for developing low power microwave and passive acoustic technology that can be used to detect a broad spectrum of invasive species that infest both shipping containers and bulk cargo.
- Developed seedling Study report that determined that sufficient DNA can be collected off of highly compromised surfaces and that it is feasible to develop a sampling kit to collect and preserve the integrity of a DNA sample.
- Determined that existing Ion Mobility Spectrometry (IMS) equipment being used for drug detection at Ports of Entry (POEs) can be modified to also detect currency.

Current Year Key Events

- Test IMS system with real currency samples and backgrounds. Develop algorithms to optimize signal use and analytical figures of merit. Deliver3 Tech Foraging report on bulk currency detection using X-ray technology.
- Determine the size, mobility, and water content range of detectable pests and vermin via microwave and acoustic sensor modalities to support design trades for invasive species detection equipment.

- Identify unique physical properties of key counterfeit goods that can be exploited with the use of non-invasive sensors.

Budget Year Key Events

- Laboratory prototype and testing of microwave and acoustic systems for detection of invasive species. Performance comparison will be made with human operators.
- A currency detection system will be field tested at a border crossing in order to assess performance under real conditions. Detection performance, usability, and operational reliability will be evaluated.
- DNA and metadata evidence collection, characterization and database development.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	12,633	2,000	5,302	8,406	8,300

Land/Sea Cargo Screening

- *Problem:* Several CBP non-intrusive cargo scanning systems are reaching the end of their service life and are exhibiting reduced performance and rising maintenance costs. Other scanning systems are using technology that needs to be refreshed to maintain parity with the smuggling threat. In addition, CBP lacks the capability to non-intrusively detect contraband hidden in the walls of refrigerated cargo containers and in structural voids of conveyances and vehicles, requiring them to use time intensive manual inspection techniques.
- *Solution:* This project develops software and hardware upgrades for the legacy cargo scanning units, infusing state-of-the-art technology which will enhance their detection performance and extend their service life, and prototypes non-intrusive scanning capabilities for refrigerated cargo containers and structural voids.
- *Impact:* The S&T Directorate's efforts will enhance CBP's effectiveness in detecting contraband at Ports of Entry while increasing the throughput of legitimate cargo. Upgrades to CBP cargo scanning systems will improve performance, while significantly reducing O&M costs.

Prior Year Key Events

- None

Current Year Key Events

- Contract award of the Mid-Level Energy Scanning System Upgrade.
- Technology foraging report identifying the option(s) for development of a Refrigerated Cargo Container Scanner.
- Technology foraging report identifying the option(s) for development of a Void and Anomaly Detector.
- Technology foraging report identifying the option(s) for development of the Mobile Backscatter Scanning System Upgrade.

Budget Year Key Events

- Critical design of the Mid-Level Energy Scanning System Upgrade.
- Preliminary design of the Refrigerated Cargo Container Scanner.
- Preliminary design of the Void and Deck Anomaly Detector.
- Preliminary design of the Mobile Backscatter Scanning System Upgrade.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
1,963	N/A	N/A	N/A	2,600	3,600

Land Border Security – FY 2014: \$16.342 million. FY 2015 Request: \$22.550 million. This program develops and transitions technical capabilities that strengthen U.S. land border security by safeguarding lawful trade and travel and by helping to prevent illegal goods and people from crossing the border.

Air Based Technologies

- **Problem:** DHS operating components have the responsibility to detect and interdict illegal entry and smuggling activity along the vast expanses of U.S. land and maritime borders between the POEs. DoD-developed airborne surveillance systems could be repurposed/adapted/leveraged to dramatically improve CBP's situational awareness of remote regions of the U.S. border. Small unmanned aircraft systems (SUAS) are unavailable for DHS component and First Responder use due to limited access to the National Air Space (NAS).
- **Solution:** This project identifies, tests, and evaluates sensors mounted on fixed and rotary wing manned aircraft, unmanned aerostats, and small unmanned aircraft systems (SUAS) for possible use by DHS components for improved detection, classification, and tracking of illicit activity. It also provides DHS components and the First Responder community unbiased evaluation of available airborne sensors in realistic, operationally relevant scenarios for improved situational awareness for both law enforcement and during emergency events (e.g. floods, forest fires). In addition, the project is developing technologies to enable/enhance SUAS access to the NAS.
- **Impact:** Airborne sensors and sensor systems can provide DHS operating components and First Responders with invaluable situational awareness before making the decision to dispatch agents/assets to respond to and engage in potentially dangerous operations. The project will improve CBP, USCG, and the first responder community's awareness and understanding of the utility of mature airborne sensor systems and platforms for border security and public safety missions.

Prior Year Key Events

- Posted online operational field assessment reports of Small Unmanned Aircraft Systems (SUAS) for improved detection, identification, and classification of illicit activity and improved situational awareness during emergency events (e.g. floods, forest fires).

Current Year Key Events

- Continue to post online operational field assessment reports of SUAS for improved detection, identification, and classification of illicit activity and improved situational awareness during emergency events (e.g. floods, forest fires).
- Deliver Wide Area Airborne Surveillance System Operational Evaluation Report to CBP.

Budget Year Key Events

- Publish reports assessing performance of SUAS in the maritime operational context.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	1,219	5,000	4,469	2,618	5,250

Ground Based Technologies

- *Problem:* CBP is in need of new or improved border surveillance capabilities, especially for difficult terrains, harsh weather, and remote locations. Border Spotters interfere with U.S. law enforcement efforts.
- *Solution:* In 2008, the S&T Directorate established the Border Surveillance Working Group comprised of Border Patrol personnel and other subject matter experts to: (1) assess capability gaps on both the Northern and Southern borders and (2) develop the Border Surveillance Technology Roadmap (2009). This project is pursuing technologies to provide the capabilities outlined in the roadmap including radars, imagers, unattended ground sensors (UGS), tripwires, and related communication/power technologies. The recently developed Border Patrol Research and Development Strategic Plan validates the roadmap and the technologies being pursued under GBT. The project is also identifying methods and technology to effectively counter Border Spotters.
- *Impact:* CBP's improved situational awareness of U.S. terrestrial borders between the POEs will result in higher interdiction rates of illegal activity through higher detection rates, fewer false alarms, and better utilization of Border Patrol agents and assets.

Prior Year Key Events

- Developed Mobile Surveillance System Upgrade (MSS-U) Agent Feedback Compilation report.
- Delivered MSS-U capability to BP for Operational Assessment.

Current Year Key Events

- Turnover Buried Tripwire capability to CBP for Operational Assessment.
- Turnover Automated Scene Understanding (ASU) Surveillance Capability to CBP for Operational Assessment.
- Turnover Slash CameraPole capability to CBP for Operational Assessment.
- Conduct Canadian-U.S. Sensor Sharing Pilot (CUSSP) implementation and engineering test.

Budget Year Key Events

- Provide technical assessment of key Border Spotter design issues

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
11,099	5,385	4,000	4,002	5,219	8,400

Rapid Response Prototyping Team

- *Problem:* CBP/OTIA needs the ability to inexpensively and rapidly field prototypes for use and assessment in order to gather input for future OTIA acquisitions.
- *Solution:* This project enables short term delivery of high priority new technology prototypes to the field. This project will jointly assess COTS or near-COTS solutions for use in areas of critical need for border security. The need will be identified by CBP; the near-term requirements will be jointly evaluated, and the S&T Directorate will provide one or more prototype units for field use and evaluation.
- *Impact:* This project will enhance CBP's ability to quickly adopt available technology to improve their capabilities and/or reduce O&M costs of existing capability.

Prior Year Key Events

- Installed Forward Operating Base (FOB) Camp Grip power assessment and fuel efficient generator.

Current Year Key Events

- Transition FOB Camp Grip power assessment and fuel efficient generator to CBP.

Budget Year Key Events

- Provide engineering analysis and system design for a fuel efficient power system for FOB in Ajo, Arizona.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	N/A	1,045	979	1,100

Small Dark Aircraft

- *Problem:* Unmanned Air Vehicles (UAVs) in the form of small-factor Remote Control (RC) aircraft are becoming highly proliferated and represent a potential threat to the entire Homeland Security Enterprise. DHS/S&T/HSARPA is studying the nature and intent of means to detect UAVs/RCs being used improperly or as a threat to Responders, notionally at Public gathering spaces or other targets within an urban environment.
- *Solution:* This project aims to validate the usefulness of continuous, distributed RF spectrum monitoring in an urban environment to provide a “change recognition” capability that will detect the presence of anomalous signals associated with the operation of remotely controlled small UAV devices.
- *Impact:* Development and demonstration of an effective and affordable capability to detect (and counter) remotely controlled UAVs will provide additional capability to our HSE Law Enforcement and Responder partners to address the improper or terrorist use of these readily available and exploitable threats.

Prior Year Key Events

- Tested, demonstrated, and evaluated the Small Dark Aircraft (SDA) developmental system operating on the northwest border over all weather conditions and in challenging terrain.
- Augmented the existing system with a visual/IR camera that could be slewed by track sensors to take a picture of the target of interest and to display the target image with all track data of that target.
- Conducted system analysis of the sensor performance and identification of additional sensors and/or data processing techniques to ensure robust performance in multiple environments under extreme weather conditions.

Current Year Key Events

- Conducted Analysis of Alternatives Study of methods to detect Radio Frequency signals and characteristics typically associated with Remote Control UAV devices.
- Performed an end-to-end Systems Study addressing engineering issues associated with the detection, processing, tracking, and identification of small remotely controlled UAVs.
- Conducted a RDT&E “rodeo” of candidate detection technologies found in the AoA study.
- Conducted a “background environment” study of the RF signals present in a typical urban environment.

Budget Year Key Events

- Use the FY14 Analysis of Alternatives Study to select candidate technology for a full-scale end-to-end system development effort.
- Conduct a large scale urban environment “Pilot” using a prototype setup of the selected detection and signal processing capability.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	1,015	N/A	2,759	2,900	2,000

Tunnel Detection and Surveillance

- *Problem:* Cross-border tunnels are dug by transnational criminal organizations to smuggle contraband into the U.S. Current detection capabilities rely on random tips and a laborious human intelligence (HUMINT) collection process, and when tunnels are discovered, CBP/ICE lack the ability to exploit the tunnel to arrest and prosecute those involved in the creation and use of the tunnel.
- *Solution:* This project provides CBP and ICE the capability to locate clandestine tunnels, and the ability to perform forensic analysis of a detected tunnel to support investigations and prosecution.
- *Impact:* Using the S&T Directorate-developed tools, there should be a 50% increase in the number of detected tunnels resulting in a reduction in the flow of contraband smuggled into the U.S. via tunnels, keeping 100s of tons of drugs off U.S. streets while saving thousands of CBP labor hours. Forensic tools/processes developed will increase the ability to arrest and prosecute individuals involved in the creation/use of tunnels for smuggling.

Prior Year Key Events

- Delivered geophysical data sets of the 50 mile “high priority intervals” along the SW border.
- Delivered noise data sets of the 50 mile “high priority intervals” along the SW border.
- Identified a physical mechanism that can be measured with available laboratory equipment to determine the age of a tunnel.

Current Year Key Events

- Deliver Sensor Performance Tool & Sensor Guidebook to help CBP make better use of tunnel detection equipment they already bought and better understand their performance limitations.
- Demonstrate Sensor Performance Tool on southwest border with currently deployed CBP Tunnel Van being used for tunnel detection, location, surveying, and remediation efforts.
- Determine key physical attributes to discriminate tunnels from underground clutter and identify one or more sensor modalities that can utilize those attributes effectively.

Budget Year Key Events

- Demonstrate method for sample collection and analysis to determine tunnel age in a controlled (lab) environment Demonstrate prototype system in a field environment.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
3,077	1,524	N/A	2,894	4,626	5,800

Maritime Border Security – FY 2014: \$11.058 million. FY 2015 Request: \$10.250 million. This program develops and transitions technical capabilities that enhance U.S. maritime border security by

safeguarding lawful trade and travel and helps to prevent illegal use of the maritime environment to transport illicit goods or people.

Arctic Communications

- *Problem:* The Coast Guard is extending operations into the Arctic in areas that were once inaccessible but are now ice-free during summer months. The vast distances, lack of communications infrastructure, harsh weather, and high latitude ionic disturbances combine to make communications in the Arctic difficult.
- *Solution:* The S&T Directorate, in close coordination with the USCG Research and Development Center, will identify and evaluate appropriate terrestrial radio frequency (RF) and space-based solutions to support USCG missions in the Arctic region.
- *Impact:* Terrestrial and space-based communication and protocol solutions will guide the USCG in the acquisition and implementation of reliable communications capabilities in the Arctic, essential for safe and effective operations.

Prior Year Key Events

- Determine paths toward identifying and evaluate terrestrial-based radio and antenna solutions to support USCG missions in the Arctic region.

Current Year Key Events

- Deliver modeling report of existing communications propagation in the HF, VHF, and UHF frequency bands including modeling of likely radio and antenna locations to improve communications reliability.
- Conduct all planning (logistics, test plan development, etc.) to support a field test of space-based systems to determine communications signal strength and clarity.
- Execute an abbreviated test of candidate communication solutions at latitudes exceeding 70 degrees north.

Budget Year Key Events

- Based on FY14 test results, determine candidate solutions.
- Demonstrate and analyze candidate solution(s) performance during USCG's Arctic Shield 2015.
- Develop a preliminary Life Cycle Cost projection for high likelihood solutions.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	N/A	101	N/A	750

Port and Coastal Surveillance

- *Problem:* DHS operating agencies have limited capability to detect, track, identify, and interdict maritime threats such as self-propelled semi-submersible (SPSS), fully submersible vessels (FSV), and small vessels transporting contraband or people unlawfully into the U.S.
- *Solution:* This project develops solutions to improve maritime situational awareness, informational analytics, and information sharing/distribution to enable an appropriate and rapid tactical response to maritime threats as well as enhancing strategic planning/resource allocation at the regional and national level.
- *Impact:* The S&T Directorate developed technology will dramatically improve the maritime domain awareness of DHS components in the coastal regions of the U.S., increasing small vessel interdiction efficiency eight fold in five years.

Prior Year Key Events

- Coastal Surveillance System (CSS) pilot installation at CBP's Air and Marine Operations Center.
- Smart Chart AIS app for android smart phones developed and made available via Google.

Current Year Key Events

- Expand CSS Pilot to include USCG Sector Los Angeles.
- Deliver CSS Mission Needs Statement.
- Expand CSS Pilot to include USCG Sector San Diego.
- Expand CSS Pilot to include CBP OIC Detroit.
- Deliver Smart Chart AIS app for other smart phone platforms.

Budget Year Key Events

- Deliver CSS Information Sharing Tools.
- Expand CSS Enterprise to USCG Sector Seattle.
- Integrate new data sources into CSS.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
5,128	6,306	3,134	6,683	7,250	9,500

CBE Defense – FY 2014: \$141.848 million. FY 2015 Request: \$125.426 million. S&T Directorate invests in R&D to support prevention and protective strategies and coordinated surveillance and detection to address CBE threats. R&D work includes: prevention of terrorism; reduction of vulnerability of critical infrastructure from terrorist attacks and other hazards; and prevention of the illicit movement and illegal entry or exit of people, weapons, dangerous goods, and contraband by providing technology, methods, and procedures to detect CBE threats.

Bioagent Detection – FY 2014: \$39.570 million. FY 2015 Request: \$35.676 million. This program conducts research and develops and identifies tools to enable rapid detection and provide advanced warning of attacks or releases of biological threat agents against the population and agriculture of the United States. It defines the intended use and application, develops the requirements, and executes the technology developmental efforts to support early detection and warning of potential bioagent threats to humans and animals.

Agricultural Screening and Surveillance

- *Problem:* High-priority foreign animal diseases in livestock and wildlife threaten the U.S. agricultural critical infrastructure.
- *Solution:* This project will develop and standardize technologies and protocols, including immunoassay-based approaches and real-time polymerase chain reaction processes, to identify infected animals and thereby address current and emerging agricultural threats.
- *Impact:* The screening tools developed and deployed to the USDA National Animal Health Laboratory Network (NAHLN) will help prevent high-priority foreign animal diseases such as foot-and-mouth disease, and Rift Valley fever.

Prior Year Key Events

- Completed development of priority Pen-side assays for use in the NAHLN for the detection of foreign animal diseases including foot-and-mouth disease, classical swine fever, and rift valley fever.

Current Year Key Events

- Develop molecular screening tool for the detection of Foot and Mouth Disease (FMD) in bulk milk tanks in collaboration with key dairy state partners.
- Complete and demonstrate prototype capability for inter-state livestock transportation network models to support planning and response options for high priority diseases (e.g., Foot-and-Mouth Disease).
- Field Enhanced Passive Surveillance System in at least four states.

Budget Year Key Events

- Transition validated sensitive molecular screening tool for the detection of FMD in bulk milk tanks using the existing dairy industry milk transportation and quality control infrastructure in the NAHLN and key dairy states.
- Enhanced Passive Surveillance iOS app in Apple store/ Droid App available in Google Play. Store to promote and enable wider use of animal disease surveillance toolset.
- Report summarizing the occurrence of FADs in wildlife species in endemic regions, including a compilation of susceptible US species with data on ecological, behavioral and environmental factors that could influence disease severity and spread.

Bioassays

- *Problem:* First Responders and Public Health officials do not have well-validated detection assays to analyze potential bio-threat samples and inform appropriate actions to ensure public safety and public health actions and decision.
- *Solution:* Develop highly robust assays; that includes test, evaluation, and validation of nucleic acid detection assays (TaqMan PCR); antigen detection assays (immunoassays); and rapid antimicrobial susceptibility assays (based on micro-culture and PCR) for deployment and employment through the Centers for Disease Control and Prevention (CDC) Laboratory Response Network and other federally sponsored laboratory response networks to support rapid detection of an event, respond to an event, and recover from an event. These assays are intended to be dual-use assays that can be used for environmental sample analysis as well as clinical specimen analysis.
- *Impact:* Enables capabilities to rapidly screen and detect high-consequence biological pathogens and toxins to provide critical information to support actions and decisions regarding public safety. This project will also develop bioinformatics resources, reference strain and antibody repositories along with appropriate standards to recognize and identify traditional, emerging, advanced, and enhanced threat agents.

Prior Year Key Events

- Validated Public Health Actionable Assays (PHAA) for Ricin toxin and *Francisella tularensis* transitioned to the Centers for Disease Control and Prevention Laboratory Response Network (CDC LRN).

- Completed evaluation of Ricin and Abrin lateral flow assays for First Responder Use in the field for screening and to evaluate suspicious materials.
- Completed the Government Unique Standards for PHAA Antigen/Toxin based detection Assay with Inter Agency participation and agreement.

Current Year Key Events

- Transition validated laboratory detection assays for high consequence (*Y. pestis*, *Rickettsia* and *Variola*) pathogens and toxins (*C. botulinum* and Abrin) to the Centers for Disease Control and Prevention Laboratory Response Network (CDC LRN) for deployment and employment.
- Conduct test, evaluation and validation of Lateral Flow assays for *Bacillus anthracis*, *Yersinia pestis* and *Francisella tularensis* for First Responder use in support of public safety actions and screening of suspicious material in the field.
- Complete Rapid Antimicrobial Susceptibility tests for *Y. pestis*.

Budget Year Key Events

- Complete testing, evaluation and validation of *Bacillus anthracis*, *Burkholderia mallei* and *pseudomallei* PHAA assays.
- Complete testing, evaluation of *Bacillus anthracis*, *Yersinia pestis* and *Francisella tularensis* lateral flow assays for First Responder use in support of public safety actions and screening of suspicious materials in the field.
- Complete Rapid Antimicrobial Susceptibility tests for *Francisella tularensis*.

Biosurveillance Systems

- *Problem:* There is a lack of prompt recognition, coordination and early response action protocols within the Federal, State governments and industry's in the event of a biological attack or disease outbreak.
- *Solution:* This project assembles and demonstrates biosurveillance technology advances and data fusion concepts to build CONOPS with strong coordination in the Federal interagency and local community arenas. It explores a variety of methods and systems to rapidly collect and exploit information useful for identifying outbreaks or unusual events using existing cloud-based computing architectures. To inform requirements and potential operational architectures, a demonstration will be conducted in partnership with Department of Defense (DOD), the U.S. Department of Agriculture, and Health and Human Services (HHS) and will be based on scenario(s) of interest to these stakeholders and selected local communities.
- *Impact:* Optimized collection and integration of relevant environmental, animal and public health data will promote prompt awareness of a bio-attack or disease outbreak, resulting in reduced casualties and the application of early mitigation steps.

Prior Year Key Events

- None

Current Year Key Events

- Initiate biosurveillance analysis of alternatives and market survey for applicable technologies

- Deliver conceptual architecture for national bio-surveillance system of systems and deliver pilot project to link data from clinical and diagnostic networks.
- Establish stakeholder group and hold workshops to begin evaluation of surveillance response SOPs/CONOPs and requirements.

Budget Year Key Events

- Conduct stakeholder workshops to refine requirements.
- Down select appropriate commercial and prototype technologies for future year demonstrations.
- EPS iOS app in Apple Store / Droid app available in Google Play Store.
- Initiate development of integrated biological, chemical, and radiological surveillance architectures.

Funding History (thousands)

Point-of-Care Diagnostics

- *Problem:* The need exists to enhance rapid bio-diagnostic capabilities to inform bio-surveillance systems on the scope and scale of a bio-event and to enable rapid and effective treatment and triage of individuals exposed or infected during an event.
- *Solution:* Develop and validate inexpensive, easy-to-use, high specificity and sensitivity diagnostics tests for point of care/need use during bioterrorism events and disease outbreaks.
- *Impact:* This project provides Health Care Providers with Rapid Point of Care/Need (POC/PON) diagnostic tests to dramatically enhance bio-diagnostic capabilities and to enable rapid response and clinical decisions to high-consequence pathogens, associated disease outbreaks, and/or terrorism events. These tests will be critical for rapid response and triage to optimize clinical interventions and to support public health action and decisions.

Prior Year Key Events

- Developed point of care/need diagnostic assays to differentiate viral vs bacterial infection to support therapeutic decisions and triage.
- Developed point of care/need Rapid Anthrax diagnostic test to support event response and mitigation after an anthrax event.

Current Year Key Events

- Complete Phase I testing and evaluation of bacterial vs. viral infection discriminator lateral flow assays from healthy populations.
- Complete Phase I testing and evaluation of rapid anthrax diagnostic test using appropriate clinical sample matrices from healthy populations.
Complete Phase I testing and evaluation of Random Peptide Array for clinical diagnostics application.

Budget Year Key Events

- Establish clinical specimen repository to support test, evaluation and validation of clinical diagnostic tests developed by DHS S&T.
- Evaluate appropriate clinical sample matrices to support Phase II evaluation of rapid anthrax diagnostic tests and validation of bacterial vs. viral infection discriminator lateral flow assays in disease-affected versus healthy populations.
- Develop rapid point of need test for Plague and Tularemia for POC and triage use.

- Complete Phase II Testing and Evaluation of Random Peptide Array technology to determine its potential use and application for Clinical diagnostic applications.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
6,154	12,829	9,800	4,889	9,273	9,300

Rapid Biodetection

- *Problem:* There is a need for Federal, State, and local responders to rapidly identify biological threat agents and toxins in the field through use of fixed installation sensors, person-portable sensors, and/or mobile laboratory systems, to rapidly provide advance warning of biological attacks.
- *Solution:* This project will develop affordable and effective environmental biological detection and collection systems that are suitable for urban environments use for event detection and characterization purposes following an attack. The detection system outputs will feed into the emerging local, state, or national-level cloud processing architecture for rapid awareness and response in the event of a biological event/attack.
- *Impact:* The resulting advanced warning system will support indoor, outdoor, national security, and other biosurveillance monitoring in order to reduce the time it takes to identify biological threat agents in the field and increase effective response efforts.

Prior Year Key Events

- Completed Analysis of Alternatives for detection architectures and technology solutions.
Completed Environmental Surveillance requirements to document decision points and information needs in response to a biological incident.

Current Year Key Events

- Prototype testing of improved laboratory modules for bio-threat agent sample preparation techniques.
- Analysis of alternatives for new assay concepts to detect emerging, advanced, or engineered threats.
- Finalize Environmental Monitoring requirements, issue broad agency announcement, and competitively select performers.

Budget Year Key Events

- Evaluate and down select feasible system solutions for continuous environmental monitoring.
- Feasibility of creating a model to predict virus function (i.e. pathogenicity) from genetic sequence information.
- Define requirements for distributed sensor architecture data integration networks.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
10,426	11,708	4,163	12,488	8,191	14,726

Chemical Detection – FY 2014: \$0.000 million. FY 2015 Request: \$3.000 million. This program seeks to develop more reliable chemical detectors, which will promote their use and reduce vulnerabilities of the population and critical infrastructure in a wide array of operational applications.

Integrated Chemical Detection System

- *Problem:* Currently available chemical detectors experience significant false positive responses in varying backgrounds, undermining the confidence of response assets in their value in responder and infrastructure protection scenarios. This problem results in delay in improving the defensive posture to chemical attack or major accident scenarios.
- *Solution:* This project will consider evolving technologies that offer “orthogonal” approaches (examining data on different physical features of chemicals) to increase the probability of correct identification and explore the application of these technologies in operational scenarios.
- *Impact:* The development of more reliable chemical detectors will promote their use and reduce vulnerabilities of the population and critical infrastructure in a wide array of operational applications. The outcome of this project will affect operational capabilities of multiple DHS components (e.g. USSS, USCG, TSA, CBP, OHA), critical infrastructure owners and first responders.

Prior Year Key Events

- None

Current Year Key Events

- None

Budget Year Key Events

- Develop and document requirements in cooperation with user community.
- Initiate concept exploration with market survey and analysis of alternatives of applicable technologies guided by lessons learned from prior year pilot demonstrations.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	N/A	N/A	N/A	3,000

Explosives Detection – FY 2014: \$102.278 million. FY 2015 Request: \$86.750 million. This program researches, develops, and/or identifies tools to detect and locate explosives intended to be used as terrorist weapons and strengthens aviation security by bolstering the international aviation security system, processes, and technologies, and by encouraging partnerships with industry. It defines concepts, requirements, and procedures for improved techniques for early detection and warning of potential explosive threats, including explosive threats to the Nation’s transportation systems and large public gatherings.

Advanced Imaging Displays

- *Problem:* Current training for Transportation Security Officers (TSOs) does not use the latest methods, tools, technologies, or data and require dramatic improvement to increase both operational performance and efficiency.
- *Solution:* S&T will develop a prototype hardware and software adaptive training system that provides an improved x-ray image analysis training capability. The system will maximize screener operational performance by utilizing new training methods, data, and technological capabilities, such as eye tracking and cognitive state assessment. The program will then expand beyond x-ray image analysis training to also provide an improved training capability for ticket and document checking.

- *Impact:* Implementing the new training system, methods and materials will make screening operations more effective and efficient, and will save TSA money by reducing training time up to 2 hours per TSO resulting in almost \$3 million in annual cost savings/avoidance and will correspondingly free up the trainer/mentor for same amount of time resulting in a force multiplier.

Prior Year Key Events

- Integrated the Exceptional Performing (EP) Screener methods and materials into a next generation hardware and software adaptive training platform to maximize screener operational performance by utilizing new technological capabilities, such as eye tracking and cognitive state assessment.

Current Year Key Events

- Expand existing imagery, revise, and enhance existing image based training solutions.
- Conduct a task analysis to identify critical cues and techniques required for Ticket and Document Checker (TDC) job functions, develop methods to quantify evaluation of performance utilizing performance and eye gaze data.

Budget Year Key Events

- Conduct software-based training enhancement.
- Develop and execute field validation of image based training solutions.
- Deliver Technical Report.
- Transition training materials and train trainers.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	N/A	N/A	1,000	1,200

Canine Explosives Detection

- *Problem:* The screening community needs enhanced tools, techniques and knowledge to better understand, train, and employ dogs utilized for explosive detection. *Solution:* The project has two primary goals. The first is to develop non-hazardous canine training aids for homemade explosives (HME) that will provide for more frequent training of canine explosives detection teams to improve the teams' proficiency and to evaluate and improve upon detection techniques. The second goal is to provide scientifically rigorous independent test and evaluation of canine teams in their operational environment in order to validate training methodologies and assess the strengths and weaknesses of canine employment techniques.
- *Solution:* This project will develop and test non-hazardous HME canine training aids which will provide performance results equivalent to or better than the actual explosive. Also, create and execute a rigorous independent test and evaluation capability which will provide the TSA National Explosive Detection Canine Team Program (NEDCTP) and any other DHS and HSE explosive canine team users with operational performance data to make decisions on improved concept of operations, techniques, and training.
- *Impact:* The project will deliver field tested non-hazardous canine training aids for peroxide-based HMEs to allow explosive detection canine teams to improve overall detection proficiency by allowing for more frequent training in the operational environment. The project will provide a scientifically rigorous independent test and evaluation of canine teams in their operational environment. Ensuring canine teams are effective in the operational environment is paramount to protecting the public from explosive threats. Statistically significant data on the operational performance of the explosive detection canine team will allow canine end users to validate training

methodologies and provide for an independent assessment of the strengths and weaknesses of the operational deployment strategies.

Prior Year Key Events

- Delivered improved prototype canine training aids for peroxide-based HMEs for operational field assessment.
- Evaluated advanced off-leash canine screening methods for stadium search operations.
- Conducted operational assessment of the TSA person-search canine teams support airport operations.

Current Year Key Events

- Deliver two field validated low-cost non-hazardous canine training aids for peroxide-based HMEs.
- Deliver results of person search canine testing at mass transit rail environments.
- Deliver canine nuisance alarm laboratory analysis protocols.
- Test and deliver results to TSA on the operational performance of the Remote Explosive Sensing Techniques (REST) systems used by UK, FR, and NL to screen air cargo.

Budget Year Key Events

- Deliver results of testing person-search canines in support of final TSA RBS-MI.
- Deliver explosive odor generalization study to support reducing the current number of trained odors.
- Determine operational performance parameters of person-search canine in high throughput subway rail environment.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
2,000	2,489	2,513	2,497	4,200	4,500

Checked Baggage

- *Problem:* TSA has a limited capability to detect the array of improvised explosives threats, while managing operating costs and CONOPS to meet budget constraints.
- *Solution:* In collaboration with Defense Advanced Research Projects Agency (DARPA) and TSA, Science and Technology Directorate (S&T) is developing next generation X-ray systems that incorporate advanced measurement methods (compressive sensing) from DARPA's Knowledge Enhanced Compressive Measurement (KECoM) program along with integration of coherent X-ray scattering material discrimination and advanced X-ray component technology.
- *Impact:* These next generation X-ray systems are anticipated to provide TSA with enhanced threat detection capabilities and reduced false alarm rates (below 10%) for checked baggage screening operations allowing the TSA to be more efficient and effective.

Prior Year Key Events

- Delivered prototype 5th generation X-ray CT imaging systems with novel electron beam source for laboratory assessment.
- Delivered initial assessment of X-ray diffraction based liquid explosive identification capabilities to TSA.

Current Year Key Events

- Delivery of Phase 2 X-ray diffraction (XRD) proof of product design.

- Complete DPC/PeXsa System Concept Review.

Budget Year Key Events

- Delivery of X-ray diffraction based (XRD) hold baggage screening system prototype.
- Complete Adaptive X-ray explosives detection system (EDS) preliminary design review (PDR).

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
16,954	19,698	16,697	21,701	21,700	20,700

Dynamic X-Ray Imaging

- *Problem:* Screeners do not have the ability to adjust internal equipment screening parameters rapidly during screening operations to increase efficiency in baggage screening.
- *Solution:* Integrate advanced measurement algorithms, and adaptive X-ray components, into X-ray screening systems to provide real-time dynamic X-ray imaging. This will provide an agile response to improvised explosive threat detection with false alarm rate reduction and increased system throughput.
- *Impact:* The ability to dynamically adjust X-ray system parameters during baggage screening will allow enhanced threat material detection, real-time reduction of false alarm rates, and increased screening throughput. TSA operations will be able to respond to security levels by adjusting X-ray screening system parameters and throughput during baggage screening to increase overall security system efficiency.

Prior Year Key Events

- Initial work on the collection of a broad range of threat signatures and initial baggage data for vendor evaluation has begun within the framework of other existing EXD and TSA project areas. It is expected that in 2014, initial capability review will be completed.

Current Year Key Events

- Develop a new start pitch to drive a targeted BAA. For the development of this BAA, this effort may be combined with other algorithm development target areas to become a more comprehensive algorithm development solicitation.

Budget Year Key Events

- None

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	N/A	N/A	6,600	3,500

High Resolution Explosives Trace Detectors

- *Problem:* Current bench-top Explosive Trace Detectors (ETDs) have a limited ability to expand their threat detection capability, or decrease processing time without substantial performance penalties. Current Ion Mobility based systems lack the inherent sensitivity to expand the library of trace explosives, and detect lower concentrations of explosives.
- *Solution:* Develop next generation ETDs with improved threat detection capabilities to enhance detection capability and screening throughput.

- *Impact:* This project will provide TSA and other DHS Components with the ability to broaden their threat detection capabilities and increase screening throughput for primary and secondary screening operations.

Prior Year Key Events

- None

Current Year Key Events

- Release of BAA 13-03 to begin multiple 1-3 year projects for the development of next generations desktop and portable ETDs.

Budget Year Key Events

- Completion and delivery of Retrofit ETD prototype.
- Develop next generation desktop ETDs through CDR.
- Develop next generation desktop ETDs through critical design review (CDR).
- Develop next generation portable ETDs through CDR.
- Completion and delivery of next generation desktop ETDs prototypes.
- Completion and delivery of next generation portable ETDs prototypes.
- Completion of advanced detection tools and methods Government testing and evaluation.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
2,872	5,612	N/A	587	12,100	16,300

Integrated Passenger Screening Systems

- *Problem:* Current Advanced Imaging Technology (AIT) for personnel screening have limited throughput and deployment options due to the mode of operation and the physical system size and cost. Current AIT systems require full divestiture of shoes and personal items due to their creating high-false alarms, therefore screening time is slowed and passengers are inconvenienced. The AIT system's large size and lack of modularity prohibits efficient deployment at highly congested tier 1 airports in floor space that could be repurposed for additional checkpoint screening lanes.
- *Solution:* Modular, flat panel AIT solutions provide a less expensive, more flexible solution for screening of personnel and potentially reduce the need for divestiture by allowing some passengers to keep their shoes on during screening. Application of innovative compressive measurement techniques and advanced antenna components along with agile multi-band imaging will provide higher imaging resolution and screening throughput while reducing system architecture complexity and product cost.
- *Impact:* Flat panel AIT solutions provide higher throughput screening of personnel at reduced cost. Inexpensive, modular flat panel AIT systems will enable widespread deployment and improved threat detection capability at lower false alarm rates thereby reducing airport operational costs. Reduced divestiture will lessen passenger inconvenience and speed throughput.

Prior Year Key Events

- Duke University meta-materials program develops fundamental experimental and theoretical principals to enable technology.

Current Year Key Events

- New start brief with HSARPA Front Office.

Budget Year Key Events

- Development of flat panel AIT systems with integrated shoe screeners through critical design phase as part of Duke University metamaterials program.
- Broad Area Announcement solicitation release. BAA funds vendor based system development teams and will build on current EXD project activities with PNNL and Duke University building technical capability to support the solicitation.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
4,308	1,117	N/A	1,202	15,533	19,250

Mass Transit

- *Problem:* Current security capabilities for screening of people, vehicles, and baggage in mass transit environments are extremely limited. The mass transit end-user community has unique requirements for an open system with no fixed checkpoints, extremely high throughput, and an unalterable existing infrastructure within which technologies for explosives detection must fit necessitates a dedicated program to address this significant vulnerability to terrorist attack.
- *Solution:* Develop intelligent video capabilities to automatically detect and rapidly assess leave behind packages, continue the evaluation of advanced security technologies for mass transit applications, provide the mass transit end-user community with a layered and integrated capability to detect and mitigate the explosive threat, and develop a system capable of detecting Person-borne and Leave-behind Improvised Explosive Devices (IED) in a mass transit environment during rush hour without impeding passenger throughput.
- *Impact:* Program will develop next generation security technology requirements for mass transit systems, assessments of security technology for mass transit applications, development of low cost security solutions for mass transit. The result will address a critical vulnerability for which there is currently no viable, affordable solution for the mass transit end-user community.

Prior Year Key Events

- Developed enhanced video camera software for leave behind detection on mass transit rail platforms to the preliminary design phase.
- Performed assessment of sources of false alarms in commercial off of the shelf (COTS) handheld detection systems in operational mass transit environments.

Current Year Key Events

- Delivery of Sensor Integration Analysis field test report.
- Demonstrate advanced leave-behind detection software in operational mass transit environment.

Budget Year Key Events

- Delivery of Intelligent Video Analytics final report.
- Delivery of integrated sensor suites final report.
- Test stand-alone sub-millimeter wave (MMW) system in TSA sponsored mass transit test beds.
- Initial demo of leave behind package detection software in operational environment.
- Assess emerging technologies for potential application within integrated layered detection system architecture for subway rail passenger screening operations.

Funding History (thousands)

25,011	23,400	15,750	14,261	9,400	5,600

Next Generation Passenger Checkpoint Technologies

- *Problem:* Current aviation checkpoints lack technologies with enhanced threat detection performance that will reduce false alarm rates due to an increased volume of travelers, as well as screen for an expanding number of threats. Technology advances are required to meet TSA increased detection requirements as well as the changing TSA checkpoint functional and operational requirements.
- *Solution:* Develop new personnel and carry-on baggage screening technologies to improve detection capability, minimize checkpoint footprint, increase passenger throughput while maintaining or improving life cycle costs.
- *Impact:* The checkpoint will be an interoperable system that allows Transportation Security Officers (TSOs) to screen passengers for threats concealed on the passenger, and/or in carry-on items in a faster and more efficient method while increasing operational effectiveness, increasing passenger throughput from 180 to 210 passengers per hour, and decreasing traveler stress at the checkpoint by allowing passengers to retain outer wear and shoes.

Prior Year Key Events

- Delivered prototype handheld trace detection system.
- Developed next generation X-ray screening systems for the detection novel explosives in carry-on baggage through the preliminary design phase.
- Evaluated prototype portable personnel screening systems.
- Completed development of walk through AIT to preliminary design phase.

Current Year Key Events

- AT screening demonstration.
- Deliver the Department of Homeland Security (DHS) Explosives Detection Images Database Final Report.
- Deliver AT remote screening ConOps Final Report.

Budget Year Key Events

- K-band field prototype demonstration.
- Deliver sensor test bed hardware, documentation, software, and test reports.
- Hold W-band metrics review.
- Deliver low rate initial production (LRIP) metamaterials units.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
4,615	4,038	15,732	18,080	19,045	8,000

Screener Training and Selection

- *Problem:* Current methods, tools, and technologies used by Transportation Security Officers (TSOs) at operational screening checkpoints result in more than 84,876,000 searched items taking more than 3,536,500 man hours annually. There is a need to provide new screener training and selection methods and tools to increase operational security and efficiently. Current training evaluation methods are unable to identify root causes of performance errors and do not leverage the latest research developments and technology innovations.

- *Solution:* A protocol analysis on high performing TSOs was conducted to identify cues, techniques, methods, and strategies related to X-ray imagery analysis that were consistently used by the highest of these top performers. In this effort, the resultant training material developed for Improvised Explosive Devices (IEDs) and IED components will be evaluated to determine the impact of the new training system/procedures/methods through a Training Effectiveness Evaluation (TEE) in the field with current TSOs.
- *Impact:* Implementing the training materials from the best practices of TSA's best screeners will make screening operations more effective and efficient by lowering secondary screening rates at checkpoints and increasing checkpoint throughput, thereby saving TSA money and lowering wait times for the traveling public.

Prior Year Key Events

- Draft Training Material on Improvised Explosive Devices (IEDs) and IED components were piloted.

Current Year Key Events

- Enhance X-ray skills threat detection instructional framework.
- Develop comprehensive test plan outlining experimental design, procedures, and planned analyses.

Budget Year Key Events

- Develop and execute field validation of image based training solutions.
- Deliver Final Technical Report.
- Transition training materials and train trainers.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	N/A	N/A	501	500

Stand-off Trace Detection

- *Problem:* Federal Protective Service (FPS) has an operational requirement to detect explosives on vehicles and people prior to entry into Federal facilities. Portable ETDs are expensive, labor intensive, and require too much time to screen each vehicle and individual without impacting throughput. Therefore, a layered, high-throughput, screening capability for vehicles, people, and personal items is needed to provide more time for security response in buildings and other public venues.
- *Solution:* Develop an effective stand-off explosives trace detection system that will allow the implementation of a more efficient, layered stand-off security system.
- *Impact:* A stand-off explosives trace detection system would enable 100% screening of vehicles and people for the detection of potential explosives threats and weapons which would significantly improve security response effectiveness.

Prior Year Key Events

- Completed initial capabilities assessment for existing standoff trace explosives detection equipment.
- Developed standalone prototype standoff explosives trace detections systems for personnel screening to preliminary design review.

Current Year Key Events

- Complete EOS Photonics Widely Tunable Infrared Source (WTIRS) preliminary design review (PDR).
- Complete Maxion WTIRS PDR.
- Complete EOS Photonics WTIRS critical design review (CDR).
- Complete Northwestern University WTIRS PDR.
- Complete Maxion WTIRS CDR.
- Delivery of standoff quantum cascade laser final report.
- Develop new start” pitch for Vehicle Eye-Safe Trace (VEST).

Budget Year Key Events

- Complete Corning WTIRS PDR.
- Complete Northwestern University WTIRS CDR.
- Complete Corning WTIRS CDR.
- Delivery of EOS Photonics WTIRS Prototypes.
- Delivery of Maxion WTIRS Prototypes.
- Complete Vehicle Eye-safe Trace (VEST) concept readiness review.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	N/A	571	6,300	7,200

Counter Terrorist – FY 2014: \$76.631 million. FY 2015 Request: \$64.650 million. The S&T Directorate invests in the R&D technologies, methods, and procedures to counter terrorists. Efforts include R&D to identify individuals or groups that intend to conduct terrorist attacks or to illicitly move weapons, dangerous goods, and contraband. It also includes providing threat assessments of the high-consequence attack methods such as CBE that terrorists may use to attack the Nation.

Bioagent Threat Assessment – FY 2014: \$31.600 million. FY 2015 Request: \$26.000 million. This program addresses biological and agricultural knowledge gaps and develops defensive strategies to counter potential threats. It also supports a full spectrum of knowledge products (e.g. reports/studies) to better inform policy makers on the attributes, risks, and consequences associated with the intentional release of a biological or agricultural (livestock) agent.

Biodefense Knowledge Center (BKC)

- *Problem:* Customers from around the Homeland Security Enterprise require vetted information, knowledge and expertise to help them make decisions that involve biological sciences and bio-threats. HSE customers’ information and decision needs vary considerably across DHS Components, multiple Federal agencies, and State/local agencies.
- *Solution:* The BKC is an enduring DHS center of expertise and products that bridge science, technology, intelligence, health threats, and law enforcement. BKC provides customer requested bio-threat and science assessments as well as in-depth analyses of biodefense issues and biotechnologies. Its key assessments and analytical products include: biological threat agent Fact books; material threat assessments; a Biodefense Knowledge Management System which extracts and develops information for multiple Federal, state, and local users.
- *Impact:* The Biodefense Knowledge Center increases the awareness and understanding of biological threats across the Homeland Security Enterprise at multiple levels of classification. This project increases the probability of preventing and minimizing the impact of biological threat attacks.

Prior Year Key Events

- Updated Biothreat Agent Fact book (to include plant pathogens as well as a classified version).
- Increased scientific and sensitive holdings for Biodefense Knowledge Management System.
- Delivered BKMS to a subset of State/Local Fusion Centers.

Current Year Key Events

- Deliver upgraded Biodefense Knowledge Management System with user community data and finalize hosting of historical biological data for community access.
- Roll-out BKMS to intelligence analysts at fusion centers from two Homeland Security Intelligence Network regions (comprising 15 states total).
- Publication of classified BioAgent Fact book (electronic publication only).

Budget Year Key Events

- Deliver three Material Threat Assessments v2 requested by customers within Integrated Product Team.
- Deploy BKMS to intelligence analysts at fusion centers at remainder of Homeland Security Intelligence Network regions (all 50 states plus 22 metropolitan areas).

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
10,799	4,800	1,600	5,433	6,000	6,000

Biodefense Net Assessments

- *Problem:* The United States requires a periodic, senior-level policy net assessment that evaluates progress in implementing biodefense policy (as outlined in Homeland Security Presidential Directive [HSPD]-10). This project works with the Homeland Security Enterprise (HSE) to identify continuing gaps or vulnerabilities in our Nation's biodefense posture, and makes recommendations for re-balancing and refining investments among the pillars of our overall biodefense architecture.
- *Solution:* On an annual basis, strategic and topical assessments are conducted using subject matter experts (SME) from government, academia, and private industry to support ongoing and future biodefense programs, policies, and operational activities across the HSE. A panel of SMEs and senior government officials from the HSE propose and prioritize a set of timely, actionable topics for analysis.
- *Impact:* A group of vetted experts in the field develops the assessments, which are then provided to HSE stakeholders to input into their annual program planning process to strengthen the overall biodefense posture of DHS.

Prior Year Key Events

- Examined alternative approaches to assess the risk posed by bioterrorism and determined that the currently used probabilistic risk assessment (PRA) approach is the most appropriate for continued use in prioritizing biodefense programs and policies.
- Assessed unclassified aspects of the historical offensive biological weapons program to determine if there were any key threats or vulnerabilities available to the public that should be incorporated into the bio-risk picture.

- Examined classified reports from the historical offensive weapons programs to determine if any data gaps could be addressed by information not yet incorporated into the bioterrorism risk assessment.

Current Year Key Events

- Deliver three studies pertinent to chemical and biological defense strategy, customer/stakeholder engagement and future investment planning.
- Deliver final proceedings resulting from BNA senior expert panel meetings to stakeholders for integration into the respective strategic biodefense program plans.

Budget Year Key Events

- Deliver four targeted analytical studies specific to biodefense concern areas defined by BNA senior subject matter expert panel and released to key stakeholders.
- Deliver updated chemical and biological defense strategic documentation for internal program planning.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
1,851	500	N/A	993	727	1,000

Biothreat Characterization (BTC)

- *Problem:* There is a need to improve the Homeland Security Enterprise's (HSE) estimation of the impacts of a bioterrorism attack on the U.S. through experimental research and analysis to understand the critical physical, chemical, and physiological parameters associated with potential bioterrorism agents.
- *Solution:* The BTC projects provides knowledge products (technical reports) generated through laboratory experiments to understand the critical physical, chemical, and physiological parameters associated with potential bioterrorism agents that are made available to the BTRA modeling community as a source of input in their assessment of risk uncertainty.
- *Impact:* The Biothreat Characterization project establishes and leverages innovative science-based capabilities to provide the HSE with data and knowledge products which improve pre-event planning and event-specific operational decisions. BTCP provides the knowledge products and capabilities required for effective preparedness & response to current and future biological threats.

Prior Year Key Events

- Fully registered ABSL/BSL-3 & ABSL/BSL-4 laboratories.
- Expanding set of capabilities including aerobiology, comparative medicine, synthetic genetics, and production/formulation capabilities.
- Published reports addressing key knowledge gaps related to differential yields, losses and stability of in-vivo and culture-produced agents; the relative stability of toxin serotypes; the feasibility of using improvised dissemination devices with traditional agents; and the stability of rickettsia, including the development of a unique assay to test for viability.

Current Year Key Events

- Lead development of Interagency and International requirements for biological threat characterization.
- Develop plans and experimentation to address top five traditional biological key threat-related knowledge gaps identified by stakeholders to provide actionable information on agent

characteristics such as the environmental decay of aerosolized spores and viruses; the differential virulence and pathogenesis of vegetative-contaminated spore preps; the survival of deposited agents on operationally-relevant surfaces; and the development of a BSL-3 rotating drum for long-duration environmental decay studies.

- Develop aerosol operational capability to characterize vulnerabilities associated with identified threats capable of analyzing from BSL-3 and BSL-4 agents.

Budget Year Key Events

- Develop plans and establish experimentation to address top ten traditional biological threat-related knowledge gap requirements identified by stakeholders to provide actionable information.
- Develop bacteriology capability to characterize vulnerabilities associated with newly identified threats.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
27,726	17,500	8,000	12,247	14,000	11,400

Bioterrorism Risk Assessment (BTRA)

- *Problem:* Homeland Security Presidential Directive 10 directs the need for the comprehensive computational analysis program to help inform investments for national strategic biodefense planning, while identifying key knowledge and capability gaps and also evaluating critical vulnerability mitigation strategies.
- *Solution:* This project is responding to the needs of interagency partners by enhancing reliance on national strategic guidance to frame the problem space; redesigning the analytic process to ensure maximal partner input; and refining, updating, and validating BTRA models. An important evolution in this process is the development of a Countermeasure Assessment and Planning Tool, which will inform assessment of the relative importance and value of various defensive options (e.g., detectors, medical countermeasures, etc.) to reduce risk associated with bioattack scenarios. A variety of rapid analysis tools are being developed to allow users to explore a variety of CONOPS and make judgments regarding which scenarios merit further investment.
- *Impact:* This project informs decision-making and shapes resource allocations across Federal agencies through the development and execution of a probabilistic risk assessment and alternative methodologies for comparison and verification. These risk assessments integrate the judgments of the intelligence and law enforcement communities (threat) with input from the scientific, medical, and public health communities to estimate the probability of an attack occurring and the consequences of an attack.

Prior Year Key Events

- Revised project execution in response to stakeholder input (yielding a project with enhanced ability to provide analysis impactful to stakeholders' missions and strategic objectives), and initiated process to collect stakeholder requirements for the next assessment.
- Incorporated stakeholder suggestions for changes to models (e.g. development of new tools, including b-CAPT, the Countermeasure Assessment and Planning Tool) and initiated model and data vetting (approval) effort with stakeholders.
- Developed model that allows one to ground truth outdoor aerosol casualties proposed by other models.

Current Year Key Events

- Gather, incorporate, and vet suggested changes for alternative data and models (including Bioterrorism Countermeasure Assessment and Planning Tool) with stakeholders.
- Gather requirements from external and internal stakeholders for next generation BTRA.
- Conduct SME elicitation of law enforcement, intelligence, and operational communities to obtain data that is current of the current threat picture.

Budget Year Key Events

- Release beta-version of b-CAPT (the Countermeasure Assessment and Planning Tool) for pilot testing with three to four Federal Agency partners.
- Develop tailored interim assessments (to be published 2014-2016, as completed) that address stakeholder requests. The interim assessments will be subcomponents of the more comprehensive Bioterrorism Risk Assessment (BTRA) report (BTRA 5.0).
- Gather requirements from external and internal stakeholders for next generation BTRA, by taking an agent agnostic approach to capture risks associated with unknown and emerging threats, and to develop a robust adaptive adversary model.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	2,500	2,485	4,073	3,800

Integrated Terrorism Risk Assessment (ITRA)

- *Problem:* HSPD-18, requires the Secretary of Homeland Security to “develop a strategic, integrated all-CBRN risk assessment that integrates the findings of the intelligence and law enforcement communities with input from the scientific, medical, and public health communities.”
- *Solution:* This project supports national preparedness initiatives by providing a systematic, scientifically-defensible integrated CBRN terrorism risk assessment product that provides insights into likelihoods, consequences, and relative risks of terrorism, which complements the individual class-specific terrorism risk assessments.
- *Impact:* The Integrated Terrorism Risk Assessment informs resource allocation for medical countermeasures and will be used by a broader range of Federal decision makers to support development of risk management strategies that have tangible operational impact on cross-CBRN terrorism risk such as prevention, protection, mitigation, surveillance and detection, and response and recovery activities.

Prior Year Key Events

- Developed risk informed planning scenarios for FEMA and state and local first responders to aid them in establishing CONOPS for specific emergency situations.
- Verified 2011 Integrated CBRN Terrorism Risk Assessment software code in response to external review and to build stakeholder confidence in the models.
- Presented Risk Informed Resource Allocation Study for the Strategic National Stockpile (SNS) to inform priorities for Medical Countermeasures procurement.

Current Year Key Events

- Finalize risk informed study for Strategic National Stockpile (SNS) for use in establishing resource allocation priorities in determining the Stockpile’s makeup .
- Complete draft of the ITRA 3.0 for release to key stakeholders with harmonized event tree across CBRN probabilities. Implement adaptive adversary in TRA risk model in response to external review and to build stakeholder confidence in the models.

Budget Year Key Events

- Finalize comprehensive model updates to include public health response model, economic impact, food, water, indoor and outdoor release, and initiate building an integrated Countermeasure Assessment and Planning Tool (i-CAPT).
- Gather requirements from external and internal stakeholders for next generation ITRA to target analysis with outputs that comprise greater relevance to stakeholder mission objectives.
- Deliver comprehensive 2015 Integrated Terrorism Risk Assessment, in addition to including the above updates along will feature an enhanced Intel elicitation.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	2,500	2,489	3,800	3,800

Chemical Threat Assessment – FY 2014: \$7.000 million. FY 2015 Request: \$7.000 million. This program researches and identifies current and potential chemical threats to understand the risk posed to the United States by their illicit use. This program encompasses risk-based, chemical threat agent characterization programs, domestic defense strategic planning, and analytical technologies, strategies, and procedures.

Chemical Security Analysis Center (CSAC)

- *Problem:* The need exists for a single centralized repository of chemical threat information (hazard and characterization data) for analysis of the Nation’s vulnerabilities to such chemical events to serve key customers.
- *Solution:* The Chemical Security Analysis Center (CSAC) conducts key analytical assessments, including hazard assessments and Material Threat Assessments (MTAs), and the Chemical Terrorism Risk Assessment. In addition, CSAC is funded to develop knowledge management capabilities such as the chemical knowledge management system, the CARD (chemical agent reactions database), and several other user-specific electronic libraries. This project will also identify, finalize, and secure the selection of a test site for a robust analysis of chlorine tank release (known as Jack Rabbit II).
- *Impact:* CSAC serves key customers such as NPPD, Office of Health Affairs (OHA), TSA, and I&A within DHS, as well as several Interagency partners. CSAC is the Nation’s first and only Federal studies, analysis, and knowledge management center for assessing the threat or hazard associated with an accidental or intentional large-scale chemical event in the American homeland.

Prior Year Key Events

- Transition of chemical threat knowledge information and products to the operational and policy community by addressing 75 Reach back queries to 13 Government organizations and maintaining the CSAC website, making available 195 DHS reports and over 1500 reports from the Interagency library.
- Implemented a detailed reaction pathway search algorithm for the CARD (or Chemical Agent Reactions Database), specifically requested by and relevant for FBI/IC “attribution” searches.
- Completed development of the CTRA Desktop Tool.

Current Year Key Events

- Deliver v2.0 of the CTRA Desktop Tool.

- Conduct three detailed risk analyses using the Chemical Terrorism Risk Assessment: 1) Mitigation techniques; 2) Application of Detectors for various scenarios; and 3) Food Sensitivity.
- Develop the Test Execution Plan for the Jack Rabbit II Field Trials.
- Complete market survey and analysis of computational toxicology software, methodologies, and the use of in vitro studies to support this approach.

Budget Year Key Events

- Deliver v2.0 of the CARD (Chemical Agent Reactions Database) system, incorporating requirements from the FBI chemical forensics program.
- Conduct 1-2 detailed risk analyses identified by stakeholders, using the Chemical Terrorism Risk Assessment.
- Conduct Phase I of Jack Rabbit II Field Trials.
- Develop Computational Toxicology Methodology for key toxidromes.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
4,762	4,638	4,000	5,250	7,000	7,000

Explosives Threat Assessment – FY 2014: \$16.000 million. FY 2015 Request: \$14.100 million. This program researches and identifies current and potential explosive threats to understand the risk posed to the United States, strengthens aviation security by bolstering the international aviation security system, improves security processes and technologies, and encourages partnerships with industry. It encompasses risk-based threat characterization, attribution, strategic planning, prediction of magnitude of explosive disasters, and analytical technologies, strategies, and procedures.

Aircraft Vulnerability

- *Problem:* Vulnerability of the wide variety of commercial aircraft types (e.g., wide body, narrow body, regional jet) to the broad range of conventional and emerging Improvised Explosive Device (IED) threat configurations is not thoroughly understood and/or characterized, including blast effects vulnerability of new composite aircraft structures currently entering the civil transport fleet (e.g. Airbus A380, A350, Boeing B787).
- *Solution:* Identify the minimum size of the explosive threat that would result in catastrophic aircraft loss if undetected, and develop commercial aircraft blast mitigation technology that will provide protection to commercial aircraft from explosive threats that fall outside the range of current Explosive Detection Systems (EDS) capabilities.
- *Impact:* Commercial aircraft vulnerability data collected under this project will be used by TSA to validate and refine explosives detection standards for checkpoints, checked luggage and air cargo. TSA will ensure that EDS threat mass detection thresholds are sufficient to prevent introduction of explosive threats onboard the aircraft, that would otherwise result in catastrophic aircraft loss if detonated during operational flight

Prior Year Key Events

- Commenced cost benefit analysis of Hardened Unit Load Device technology for TSA.
- Evaluated blast protection capability of reduced threat composite Hardened Unit Load Device (HULD-R) prototype for explosive threats in air cargo contents.
- Conducted initial live fire testing to evaluate effectiveness of Modified Least Risk Bomb Location (M-LRBL) procedure for TSA.

- Completed evaluation of Tail Cone Exit Aircraft (e.g., DC9, MD80/88, B717) Least Risk Bomb Location (LRBL) procedures for TSA

Current Year Key Events

- Deliver Hardened Unit Load Device-R (HULD-R) prototypes.
- Deliver Commercial Aircraft Vulnerability Report, Boeing 737 Explosive Vulnerability Testing.
- Deliver HULD-A prototype.
- Evaluate blast mitigation capability of composite Hardened Unit Load Device prototypes (HULD-R and HULD-A variants) to IED threats in checked passenger luggage and air cargo contents.
- Deliver Hardened Unit Load Device (HULD) cost benefit analysis report and analysis tool to TSA.

Budget Year Key Events

- Deliver updated DHS SharePoint-based Explosive Testing Database (ETDB) to TSA.
- Conduct explosive testing on primary structure composites used in new commercial aircraft designs (e.g. B787, A380, A350) and deliver initial report on improvised explosive device (IED) blast effects on commercial aircraft composite design vulnerability.
- Deliver Wide Body Commercial Aircraft Vulnerability Report, Boeing 767 Explosive Vulnerability Testing.
- Conduct testing of Modified Least Risk Bomb Location (M-LRBL) procedure on Wide Body Commercial Aircraft and deliver report.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
2,256	1,219	700	1,242	1,750	1,750

Home Made Explosives Characterization

- *Problem:* Lack of explosives chemical signature data will hinder the success of proposed or future DHS explosives detection technology due to the millions of chemical combinations to create explosives.
- *Solution:* Provide Home Made Explosives (HME) signature data to TSA for checked baggage systems to support vendor development of HME detection capabilities in commercial screening systems for X-ray based baggage inspection, trace detection systems, and personnel screening systems.
- *Impact:* Direct support for deployment of enhanced improvised explosive threat detection capabilities.

Prior Year Key Events

- Delivered explosives characterization data on improvised nitrate-based explosives to TSA.
- Delivered X-ray detection signatures on four additional HMEs threats and eight precursor materials to TSA.
- Delivered trace detection signatures on four additional HME threats to TSA.

Current Year Key Events

- Delivery of PETN explosive characterization report.
- Delivery of chlorates/fuel explosive characterization report.
- Delivery of hydrogen peroxide/foodstuffs explosive characterization report.
- Characterized the chemical, physical, and explosive properties of HME's and reported the findings to TSA and other interagency partners.

- Terrorist Explosive Device Analytical Center's (TEDAC) Improvised Explosives Detection and Synthesis (TIEDS) Laboratory Built.
- Delivered new HME detection windows to TSA for incorporation into existing and future bulk and trace explosives screening systems.

Budget Year Key Events

- Characterize the chemical, physical and explosive properties of HMEs and report findings to TSA and interagency partners to support requirements development.
- Deliver new HME detection windows to TSA for incorporation into existing and future bulk and trace explosives screening systems.
- Delivery of nitrated sugars characterization report.
- Delivery of select Liquid, Military, and HME explosive data to the TSA Rapid Algorithm Development program.
- Start of explosive performance signature collection effort in conjunction with the DOJ.

3,385	8,077	9,000	13,787	10,850	10,350

Risk Prediction

- *Problem:* Approximately 400 million people, 123 million land vehicles, and 9 million sea containers entering the United States annually. The challenge is to identify threats prior to United States entry without negatively impacting travel and commerce.
- *Solution:* S&T is developing technologies to increase the accuracy of Customs Border Protection's automated passenger and container targeting processes and to decrease the time required for analysts to adjudicate the risk.
- *Impact:* Increased effectiveness through higher targeting accuracy and increased efficiency through reduced time to adjudicate passenger and container risk.

Prior Year Key Events

- Transitioned automated threat detection software to CBP to reduce the time required for CBP analysts to adjudicate Automated Targeting System (ATS) risk scores for air passenger by a factor of ten.

Current Year Key Events

- Transition threat characterization report.

Budget Year Key Events

- Transition automated threat detection software to CBP to reduce the time required for CBP analysts to adjudicate Automated Targeting System (ATS) risk scores for land passenger and sea cargo by a factor of ten.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
6,051	4,631	N/A	2,344	3,400	2,000

Hostile Behavior Predict and Detect - FY 2014: \$11.531 million. FY 2015 Request: \$9.200 million. This program leverages social and behavioral science research, data, and theory to understand the

determinants and timing of group conversions to terrorism and the intent to engage in violence. Knowledge from this program informs analytical, operational, and policy concerns related to terrorists and terrorist activities. This program also develops and builds the capability to noninvasively detect suspicious behavior that indicates the intent to cause harm.

Actionable Indicators and Countermeasures

- *Problem:* The United States has been attacked by violent extremists over 2500 times since 1970. Analyses of extremist violence based on a limited number of case studies, and the effectiveness of programs developed to counter violent extremism is often not clear.
- *Solution:* S&T will collect and analyze data on extremist violence in the U.S., measure the impact of Countering Violent Extremism (CVE) programs, and develop tools to support policymakers and practitioners in their efforts to counter violent extremism.
- *Impact:* New capabilities will support more efficient and accurate analysis of the threats posed by violent extremists and evidence-based CVE policies and programs.

Prior Year Key Events

- Delivered reports on surveys of public attitudes towards violent extremism and support for efforts to counter it.

Current Year Key Events

- Deliver reports on factors that influence terrorist disengagement, re-engagement, and recidivism.

Budget Year Key Events

- Deliver integrated database to support analysis of violent extremism in the United States at the incident, perpetrator, and geospatial levels.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
1,846	3,708	N/A	1,277	1,001	1,000

Hostile Intent Detection and Surveillance

- *Problem:* Approximately 1.2 million passengers fly within the United States daily with a projected increase of approximately four percent per year. With passenger volumes increasing, the challenge is to increase the scale and accuracy of the existing screening processes while continuing to secure aviation and ground transportation portals without an attendant increase in the number of screening personnel.
- *Solution:* S&T will develop technologies to increase the scale of the operational components' screening process to accommodate higher passenger volumes, extend observation/screening area to include the entire portal, and increase screening accuracy.
- *Impact:* Increased efficiency and effectiveness through screening higher passenger volumes with fewer operational personnel (force multiplier) and increased screening accuracies.

Prior Year Key Events

- Identify potential video test bed.
- Conduct pilot experiment to assess the viability of replicating suspicious behaviors to support Go/No Go experimental milestones.

Current Year Key Events

- Risk reduction demonstration/pilot to be conducted at the Transportation Security Administration's Systems Integration Facility (TSIF).
- Deliver market survey of video tracking software.
- Establish video test bed operational partner.
- Release competitive Broad Agency Announcement (BAA).

Budget Year Key Events

- Deliver report on the feasibility of video-based versus direct-based suspicious behavior detection.
- Conduct analysis and provide a report on the outcomes of the risk reduction demonstration/pilot at the TSIF.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
16,026	12,280	N/A	2,644	4,950	5,700

Insider Threat Detection

- *Problem:* There is limited understanding of the current research base which could be used to recognize the most feasible approaches to identify potential insider threats; conduct comparative analyses of existing and emerging technological approaches to detecting potential insider threats; and developing a fully-informed research agenda to develop and evaluate insider threat detection software.
- *Solution:* Identify and evaluate the feasibility and growth potential of existing and emerging research approaches; establish the performance baseline of threat detection software; draft an experimental plan leveraging the results of the literature review and market survey to establish a feasible research, development, and evaluation plan to support the speed and accuracy requirements of DHS's operational screening environment.
- *Impact:* A relatively modest investment directly and simultaneously addressing several priority and focus areas articulated in the three R&D strategies signed to date for four key DHS constituencies: U.S. Secret Service; Transportation Security Administration; Federal Protective Service; and the General Services Administration.

Prior Year Key Events

- None

Current Year Key Events

- None

Budget Year Key Events

- Identify and evaluate the feasibility and growth potential of existing and emerging research approaches; establish the performance baseline of threat detection software; and develop one or more research and experimental plans to develop and evaluate insider threat detection software.

Funding History (thousands)

1,185	N/A	N/A	N/A	N/A	500

Risk-based Resource Deployment Decision-aid (R2D2)

- *Problem:* The Transportation Security Administration employs risk-based, intelligence-driven operations to prevent terrorist attacks and to reduce the vulnerability of the Nation's transportation system to terrorism. TSA's security resources require proper allocation to create a multi-layered system of transportation security that mitigates risk and, the Federal Air Marshal Service (FAMS) requires that system to allocate its limited resources to the highest risks as the last line of defense for air, rail, subway, and water security transportation modes.
- *Solution:* R2D2 integrates multi-modal threat forecast algorithms that combine infrastructure vulnerability and consequence to the Nation into a single, interactive, visually intuitive risk assessment tool that dynamically communicates the highest, current transportation risk for TSA operations to allocate resources to counter the risk.
- *Impact:* R2D2 provides the needed risk assessment in an operationally timely fashion to enable TSA/FAMS operations personnel to assign Federal Air Marshals, and other TSA resources, to the highest transportation risk. The R2D2 solution addresses and aligns with TSA's policy to continue employing risk-based, intelligence-driven operations to prevent terrorist attacks.

Prior Year Key Events

- Conduct an inventory of risk analysis tools that are in use by FAMS for resource allocation.
- Engaged FAMS to develop Concept of Operations for R2D2.

Current Year Key Events

- Finalize ConOps of the FAMS current resource deployment.
- Develop R2D2 technical architecture.
- Implement R2D2 Version 1.

Budget Year Key Events

- Develop integration architecture to combine selected analytic technologies with data sharing middleware.
- Incorporate requirements collected from end-users to design an end-user interface.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	N/A	277	1,200	500

Wide Area Surveillance

- *Problem:* During emergency operations, useful information to guide emergency managers and to inform forensic investigators usually exists in some form in the imagery records of multiple cameras but its value is perishable. To be useful, imagery is collected, compiled, and analyzed in a readily accessible form that enables timely action to save lives, care for the afflicted, and prevent further damage. Currently, efficient collection, sharing and analysis of video data is impeded by many factors such as resolution, standards, format, camera hardware, software limitations, video management system incompatibilities, and limited video analytic capabilities.
- *Solution:* This project will leverage advances in video analytic technologies to develop an overall architecture that will integrate disparate pictures and video to enable the local users to sort through a myriad of elements in the integrated imagery to isolate key indicators of events, for example post event tracking of suspects and the damage. S&T will develop the open video management system architecture and standards to support integration of third-party video analysis tools, easy system adaptability, and built-in mechanisms for sharing and analyzing city-scale data.

- *Impact:* This project will result in significantly improved large-scale video data integration, access, and analysis for major incidents. It also allows for routine use to help first responders approach disaster scenes and forensic investigators collect physical evidence to identify the scale of the event and, in the case of a terrorist event, the sophistication and type of the attack vector.

Prior Year Key Events

- Conducted Imaging System for Immersive Surveillance (ISIS) demonstration for the Boston Police Department at July 4th celebration.

Current Year Key Events

- Identification of commercial partner for ISIS transition.
- Acquire data for concept validation.

Budget Year Key Events

- Production of ISIS prototype units.
- Initial concept demonstration of large scale video data analysis.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
3,500	2,500	N/A	90	2,000	1,500

Identity Management FY 2014: \$10.500 million. FY 2015 Request: \$8.350 million. This program researches and develops biometrics-based technologies, procedures, CONOPS, and information to identify known terrorists and criminals and prevent their movement into and out of the U.S. through effective, interoperable multi-biometrics in diverse areas, including border crossings, ports of entry, and visa application sites.

Biometric Database Interoperability

- *Problem:* Increases in international travel have strained CBP resources, resulting in increased wait times and delays for passengers to clear some Federal Inspection Service areas. In addition, it is a DHS legal requirement to implement a cost-effective biometric exit process to increase CBP's ability to confirm the identity of persons departing the U.S.
- *Solution:* Analyze current entry operations, and implement technologies and enhancements to existing airport operations to increase CBP's capability to expedite screening of travelers entering the U.S. In addition, S&T will develop recommended approaches, including technology, for cost-effective and integrated biometric exit capabilities to meet the Congressional mandate for biometric exit. Throughout the project, industry stakeholders will be engaged to understand the challenges and impacts of current operations and proposed changes.
- *Impact:* With S&T's assistance, CBP will increase its ability to confirm the identity of persons entering and departing the U.S., fulfill its obligation to implement a biometric air exit solution, and ensure that processes are efficient and keep pace with growth in international air travel.

Prior Year Key Events

- Engaged industry stakeholders to discuss project goals, gather operational requirements, and address potential concerns.
- Delivered Survey Methodology for OFO POE Operations Data Collection.
- Completed Test Bed Facility architecture design and engineering drawings.

- Completed eight Airport Operational Surveys and documented findings in an As-Is Operational Survey Report.
- Drafted entry and exit capability gap assessment, and included targeted areas for potential solutions.

Current Year Key Events

- Conduct joint working session with key industry stakeholders to discuss pros and cons of notional biometric exit CONOPs.
- Conduct a biometric technology market survey of initial device capabilities and maturity report.
- Establish Test Bed Capability and Facility.
- Complete iris, fingerprint, and face biometric device laboratory qualification testing.
- Validate biometric air entry/exit CONOPs and technologies with scenario based testing.
- Conduct performance and cost-benefit analysis of biographic and biometric exit.
- Complete airport entry/exit analytical tools and document for transition to CBP.

Budget Year Key Events

- Select biometric technology candidates for field evaluation.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	N/A	1,458	1,200	900

Cooperative Biometrics

- *Problem:* Biometric collection systems are not intuitive and rely on trained operators to ensure successful collection of usable biometric data.
- *Solution:* Focus on developing biometric collection system interfaces that (1) are more intuitive; (2) accommodate users with disabilities; and (3) reduce reliance on operators to obtain usable biometric information and lower operational costs. Further, enhance signal collection and processing to produce higher quality data will support the achievement of increased matching performance and improve detection of false biometric presentations.
- *Impact:* Reduced operator labor requirements; increased quality of biometric samples; i.e., iris or fingerprint; matching error rates reduced by as much as 50%; and the development of automated signal processing techniques without requiring additional manpower.

Prior Year Key Events

- None

Current Year Key Events

- RSD Office of Border Patrol / Tactical Awareness and Biometrics Build (OBP TABB) Activity Charter signed.

Budget Year Key Events

- Final Technical Specification Document delivered to Customs and Border Protection, US Border Patrol (CBP USBP) for acquisition.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
6,282	4,658	N/A	4,475	4,150	2,250

Non-Cooperative Biometrics

- *Problem:* Due to increasing travel and evolving border threats, there is an identified capability need to assist operations with screening technology to increase efficiency and agent safety by developing technologies to identify non-cooperative individuals.
- *Solution:* S&T will develop technical specifications for biometric systems that identify persons encountered by operational end users. In addition, S&T will evaluate face recognition systems and report on their capabilities in operationally realistic environments.
- *Impact:* Provide component end-users with technical specifications for biometric systems designed to identify persons prior to being processed, increasing security, and promoting agent safety.

Prior Year Key Events

- Privacy Threshold Assessment and Institutional Review Board approval was received for face video collection.

Current Year Key Events

- Collect and ground truth face video data.
- Analyze face video data using vendor algorithms.

Budget Year Key Events

- Video face data collections.
- Report on vendor face recognition algorithm performance.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	N/A	1,100	2,000	3,900

Rapid DNA

- *Problem:* DHS Components such as ICE, CBP, USCG, and USCIS require a rapid and low-cost method to verify family relationships is required in the field due to refugee applicants lacking sufficient documentation as well as fraud reduction in other immigration applications.
- *Solution:* Integrate and automate 10 hours of laboratory Deoxyribonucleic Acid (DNA) processes, currently requiring five instruments and a trained technician, into a single field instrument operated by immigration officers that returns results in one hour.
- *Impact:* Refugee applicants can volunteer to be tested on-site proving their family relationships and informing officer responses to interview questions. Rapid-DNA assists legitimate immigration applicants while deterring fraudulent ones while improving officer efficiency and immigration processes.

Prior Year Key Events

- Technology Transition Agreement signed with USCIS Refugee Affairs Division.
- Jointly-funded Rapid DNA prototypes delivered to NIST for laboratory evaluations.

Current Year Key Events

- Extended kinship system ready for commercial product delivery.
- IRB approval for pilot field testing.

Budget Year Key Events

- Pilot field tests with USCIS.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	3,352	1,000	2,077	2,300	1,300

Cyber Security/Information Analytics – FY 2014: \$80.254 million. FY 2015 Request: \$77.010 million. Conducts and supports RDT&E and transition for advanced cybersecurity and information assurance technologies to secure the Nations current and future cyber and critical infrastructures. These solutions include user identity and data privacy technologies, end system security, research infrastructure, law enforcement forensic capabilities, secure protocols, software assurance, and cybersecurity education.

Cyber Security Research Infrastructure – FY 2014: \$11.800 million. FY 2015 Request: \$13.200 million. This program provides the infrastructure necessary to support the cyber R&D that is critical for matching the growing and adapting threat. Much like testing for CBE R&D, special testbeds and data sets must be made available to the cyber research community, and unlike CBE, there is not a large selection of facilities or capabilities like missile ranges or BSL-4 labs that can be used to safely test malicious code somewhere other than on the live Internet or on real data.

Experimental Research Testbed

- *Problem:* Due to the increasing sophistication of cybersecurity attacks, it is necessary to test new cybersecurity defenses and research in a repeatable manner at a realistic scale in order to determine the best approach. Furthermore, such research and experimentation must be conducted in a secure environment to allow for testing against “live” threats, without endangering the larger Internet.
- *Solution:* Provide the Defense Technology Experimental Research (DETER) Testbed, which provides a contained “virtual Internet” environment to conduct large scale, repeatable cybersecurity research experiments.
- *Impact:* As the only freely available testbed of this scale, DETER improves attack mitigation and confinement strategies and the quality of new cybersecurity technologies as it is used by hundreds of organizations, including other government agencies, for test and evaluation purposes. Furthermore, DETER is also used as a tool for academia to enhance the educational experience of cybersecurity students, providing a realistic “hands-on” experimentation platform for thousands of university students.

Prior Year Key Events

- Upgraded testbed hardware for “Cloud” like virtualization to dramatically expand experiments conducted in the testbed.

Current Year Key Events

- Extend federation of testbed facilities to support Process Control System focused experiments.

Budget Year Key Events

- Expand experiment and test tools to allow for quicker experimentation cycles and greater insight.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
2,872	3,962	2,962	4,795	3,940	4,000

Research Data Repository

- *Problem:* Without access to large scale, real-world data, cybersecurity technology developers and evaluators often have to determine the value of their technical solutions based on anecdotal evidence or small-scale test experiments.
- *Solution:* Develop and maintain the Protected Repository for the Defense of Infrastructure Against Cyber Threats (PREDICT), the only freely-available, legally and ethically collected, repository of large-scale datasets containing real network traffic and system logs for use by cybersecurity researchers.
- *Impact:* PREDICT is helping users accelerate the design, production, and evaluation of next-generation cybersecurity solutions, including commercial products by allowing solutions to be based on more comprehensive real-world data. Further, PREDICT is improving the ethics of cybersecurity research on a larger scale through the development of an ethics framework and disclosure control principles available to the broader community.

Prior Year Key Events

- New customers and partners were added to the project, including 17 from academia, 21 commercial, 3 foreign, 8 government, and 2 non-profit organizations.
- 97 new datasets were added to the repository.

Current Year Key Events

- Create a program structure to support the cataloging, hosting and/or mirroring of publicly available research grade datasets.
- Develop draft agreement supporting limited trials with several international partner countries.

Budget Year Key Events

- Development of several analytical/policy papers that address fostering Information and Communication Technology Research (ICTR) ethics from principles to practice in the form of IEEE and other community working groups.
- Creation of a legal framework and infrastructure to facilitate live streaming of data sets.
- Expand mobile data availability to support context aware computing paradigms.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
3,150	3,556	3,500	3,846	3,515	4,000

Software Assurance Marketplace

- *Problem:* There is a need to develop more secure and resilient software code as defects in code cost billions of dollars to fix each year, particularly when these defects are not identified until late in the software development process, and introduce vulnerabilities into the systems in which the code is deployed.
- *Solution:* Initiate the Software Assurance Marketplace (SWAMP), to improve development activities by offering a collection of software quality assurance tools and assurance services for developers to test and evaluate code for weaknesses and vulnerabilities; and provide tool developers an environment where they can test, calibrate, and improve the coverage area in their tools.

- *Impact:* SWAMP will reduce the number of vulnerabilities found in software, by applying the principle of continuous assurance throughout the software development process, affording developers the opportunity to detect bugs and defects in their code before it leaves their desktops.

Prior Year Key Events

- Developed test infrastructure capable of supporting software accreditation/certification for security.

Current Year Key Events

- Deliver the initial operating capability of SWAMP.

Budget Year Key Events

- Conduct 2nd SWAMP Community User Meeting to improve the community's understanding of the SWAMP capability.
- Transition Code Pulse (developed as part of the Software Quality Assurance activity in the Improving Foundational Elements of Cybersecurity project) into the SWAMP.
- Transition Code Hawk (developed as part of the Software Quality Assurance activity in the Improving Foundational Elements of Cybersecurity project) into the SWAMP to measure and provide benchmark for C Source Code static analysis tools.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	5,078	2,925	4,216	4,345	5,200

Cyber Transition and Outreach – FY 2014: \$13.588 million. FY 2015 Request: \$8.960 million. This program provides outreach to the next generation of the cybersecurity workforce.

Cybersecurity Outreach

- *Problem:* As cybersecurity becomes significantly more important each year, there is an increasingly growing need to improve awareness, training, and education in this area.
- *Solution:* Improve cybersecurity training and education of the cybersecurity workforce. In particular, S&T sponsors cybersecurity competitions for high school and college students and runs activities to identify and address educational needs of those individuals working on Computer Security Incident Response Teams (CSIRTs).
- *Impact:* S&T's sponsored cybersecurity competitions improve the quality and skill set of the next generation of cybersecurity professionals by providing an opportunity for students in a competitive environment exposing them to the latest defense technologies and solutions, including those developed by S&T. S&T's work with CSIRTs will improve the performance of these groups by identifying needed knowledge, skills, and abilities for key CSIRT roles, providing recommendations for optimal performance, and developing and transitioning decision aids into commercial use.

Prior Year Key Events

- Conducted a Panoply competition at the Australia Security in Government (SIG) Conference.
- Over 160 colleges and universities participated in the S&T supported Collegiate Cyber Defense Competition in 2013.

Current Year Key Events

- Deliver initial research results of dynamics and effectiveness development of Cyber Security Incident Response Teams (CSIRT).
- Engage with internal DHS customers and relevant Government wide organizations to develop a strategy to identify emerging cyber security threats and develop a methodology for scenario development for use in innovation competitions.
- Pilot and deploy S&T funded visualization, network analysis and open source technologies within customer network infrastructures.

Budget Year Key Events

- Deliver a series of tools and capabilities for transition to on-going DHS supported competitions.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	1,000	1,748	2,481	1,500

Transition to Practice

- *Problem:* Each year the Federal Government spends a significant amount of money on cybersecurity research. However, only a minimal amount of that research transitions into operational and commercial products.
- *Solution:* Transition research that addresses imminent needs in cybersecurity systems that impact national security. These activities include test and evaluation of technologies, setting up forums to introduce technologies to potential transition partners, and funding pilots of technologies in a variety of operational environments.
- *Impact:* By creating a heightened focus around transition, technology that could have otherwise “sat on the shelf” is now introduced to partners and end users who can take advantage of solutions to enhance the cybersecurity of the systems the nation relies on. S&T is leveraging millions of dollars of research investment while ensuring that technologies and solutions developed with federal research dollars meet operational needs to protect the nation’s critical infrastructure and systems.

Prior Year Key Events

- CSD reviewed 60 federally funded cybersecurity technologies at seven Department of Energy (DOE) National Laboratories and three Department of Defense (DOD)-affiliated Labs and selected nine promising technologies to transition.
- Conducted red-teaming and assessments of priority project areas, including experimental research testbeds, open source project technologies and select outside technologies.
- Conducted 3 industry specific technology demonstrations with the public and private sectors.

Current Year Key Events

- Design and conduct the first phase of a cybersecurity net technical assessment.
- Conduct four to six cybersecurity collaboration events.
- Conduct 5 industry specific technology demonstrations with the public and private sectors to include the Finance and Energy sections.

Budget Year Key Events

- Identify and test/pilot/deploy at least two S&T Cyber Security Division funded technologies based on customer requirements.
- Pilot three to six technologies in production environments in the Homeland Security Enterprise.

- Provide three to five red-teaming reports and vulnerabilities assessments.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
6,251	2,794	5,338	10,706	11,108	7,460

Information Analysis – FY 2014: \$10.000 million. FY 2015 Request: \$5.000 million. This program researches, analyzes, and develops technologies to strengthen interoperable communications and improve effective information sharing at all levels of government.

Predictive Analytics and Informatics

- **Problem:** DHS component organizations have identified numerous gaps in information analytics that would vastly improve operational efficiencies and homeland security missions.
- **Solution:** S&T is leveraging academic, government and commercial solutions as well as investing in national laboratory research to solve some of the more difficult challenges identified by the components. HSARPA has developed an analytics center where operational problems identified by the components can be defined and potential solutions examined. The analytics center utilizes authorities to conduct experiments to expose key information regarding future potential architectures, system performance, as well as potential security and privacy issues.
- **Impact:** Delivery of technical and information services that assist the components with key information architecture strategy, provide data for alternatives analysis, and validate vendor claims with respect to information analytics in far less time and with much greater accuracy than DHS components.

Prior Year Key Events

- Collaborated with National Labs to address key computing issues in storage, processing and analytic support to Big Data needs of 43 component requirements.
- Initiated evaluation of new entity scoring methods, machine learning, and methods for transitioning machine learning into operations.
- Initiated partnerships with TSA to evaluate third party risk computations.

Current Year Key Events

- Complete assessment of 43 Big Data requirements for DHS components.
- Evaluate distributed storage systems, graph processing and big data analytics capabilities.
- Complete third party risk computation study for TSA, initiate independent risk modeling, support operational evaluation for third party risk computation services.
- Introduce leading edge information ingestion capabilities, NoSQL data bases, and analytic services models for DHS Components.
- Establish general purpose laboratory environment for in-house evaluations of DHS and vendor algorithm performance.

Budget Year Key Events

- Develop and deliver cross cutting solutions for application to DHS component missions: cross domain information analytics, entity resolution techniques, secure data access evaluations, and fraud detection algorithms.

Funding History (thousands)

Network and System Security and Investigations – FY 2014: \$35.766 million. FY 2015 Request: \$43.350 million. This program produces technologies needed to secure information and software that resides on the networks and systems that make up the Internet and provide analytic tools for the law enforcement community to investigate crimes committed in cyberspace.

Cybersecurity for Law Enforcement

- *Problem:* A significant barrier for law enforcement is keeping abreast of technology changes. New technology, both hardware and software, is released into the market at a very rapid pace and used in criminal and terrorist activity almost immediately.
- *Solution:* Develop new technologies, capabilities, and standards to assist law enforcement in investigations and the forensic analysis of technologies used in criminal activity, and to aid organizations in mitigating the potential impact and damage posed by insider threat activity.
- *Impact:* These technologies, capabilities, and standards will reduce the amount of time needed to analyze technology used in illicit activity, reduce the cost of acquisition for law enforcement agencies whose budgets are stretched thin, and narrow the technology capability gap between criminals and law enforcement.

Prior Year Key Events

- Delivered final reports regarding the testing and validation of various cyber forensic tools through the Cyber Forensic Tool Testing (CFTT) effort.
- Developed tools that analyze gaming systems that are increasingly used for criminal activity.
- Briefed *Insider Threat Study: Illicit Cyber Activity Involving Fraud in the U.S. Financial Services Sector* to United States Secret Service (USSS) sponsored Electronic Crimes Task Forces.

Current Year Key Events

- Commence development of, and deliver, link analysis tools for mobile device forensics.
- Conduct testing on a Database Monitoring System algorithm prototype.

Budget Year Key Events

- Deliver tool capable of performing a forensic comparison of individual storage profiles across an organization to detect anomalous behavior.
- Test and evaluate deployable cloud forensics solutions and new capabilities in partnership with law enforcement customers.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
6,657	6,088	4,100	6,126	9,704	9,800

Data Privacy and Identity Management

- *Problem:* Agencies and organizations are experiencing a lack of processes and tools to share and coordinate information effectively because of an inadequate amount of security, trust, usable tools, policies, and procedures.
- *Solution:* Enhance the security of information sharing environments and the protection of users by improving authentication for persons, hardware devices, and software applications across all levels of government.

- *Impact:* This project provides interoperable access control technologies that provide a cost effective solution to all levels of government, including State and local levels. Additionally, this work enables information sharing without compromising the privacy of individuals (i.e. Personally Identifiable Information) or organizations.

Prior Year Key Events

- Developed a prototype policy-based engine and automated tools for complying with privacy policies to enable secure information sharing environments for State fusion centers.
- Developed knowledge products and tools to prevent privacy-related data breaches for agencies, states, and other private organizations.
- Transitioned open source middleware to industry to allow physical access control commercial vendors to interoperate with the cyber systems for a more secure, cost-efficient, effective access management system.

Current Year Key Events

- Identify and prioritize privacy research and development projects through continued collaboration with DHS component and Headquarters Privacy Offices.
- Conduct proof-of-concept demonstrations to validate the use of open standards based on federal, state, local, public, private sector logical and physical access control use-case and capability needs.

Budget Year Key Events

- Issue Broad Agency Announcement for specific topic areas with a focus on data privacy technologies.
- Conduct system integration and interoperability tests and evaluations for capability needs provided by local, tribal, State, and DHS operational components through the Identity Management Testbed.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
2,568	2,599	2,597	4,994	4,837	8,500

Disrupting Cyber Threats and Inducing Change

- *Problem:* As cyber threats and crime have become more persistent and sophisticated, there is a need to invest in research, technologies, and solutions that address the root cause of known threats.
- *Solution:* Develop fundamentally different approaches to improving the cybersecurity of critical infrastructure with activities focused on areas such as understanding cyber economic incentives and the development of dynamic new system defenses.
- *Impact:* By disrupting the status quo through radically different techniques, S&T will be able to address some of the most difficult cybersecurity issues.

Prior Year Key Events

- Conducted cybersecurity investment case studies.
- Developed and demonstrated a model for data provenance to examine trustworthiness and reliability of data that has been manipulated by multiple entities.
- Developed prototype framework architecture to reduce predictability of a system's attack surface.

Current Year Key Events

- Develop initial draft models of cyber economic incentives, and the coupling of cyber economics and cyber/user behaviors.
- Deliver analytic models for cybersecurity investment (private sector focus).
- Develop and conduct initial testing of a commercially viable and operational ready network appliance for enterprise-level implementation.
- Deliver nature inspired algorithms for testing malware detection in computer networks.

Budget Year Key Events

- Complete testing and large scale experimentation of Bio-Inspired Distributed Decision Algorithms based on social insect behavior.
- Complete transition of network traffic monitoring capability to at least one Information Sharing and Analysis Center (ISAC) member group.
- Complete development of software to tag, track, and block access to digital objects.
- Initial development of a research community oriented on the different areas of cyber economic incentives.
- Provide recommendations for policies, procedures, (and regulations) that incentivize the appropriate level of private sector cybersecurity investment.
- Development of economic models that can be transferred for use by different users and organizations.
- Complete and publish for collaboration draft Moving Target Defense (MTD) architectures.
- Prototype hardware/software system elements to expand MTD capabilities.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	9,300	6,151	5,562	4,450

Improving Foundational Elements of Cybersecurity

- *Problem:* Many of today's networking and information technologies contain inherent vulnerabilities, a legacy of a time when systems were designed without security in mind.
- *Solution:* To focus R&D activities on the characteristics essential to the desired end states of trustworthy systems with activities that include securing cloud based systems, improving the quality of software assurance tools, and developing metrics that aid organizations in measuring the security of their cyber systems.
- *Impact:* This project will develop new cybersecurity technologies and solutions that are designed with security built in from the ground up rather than needing to secure a technology's vulnerabilities once it is already in operational use.

Prior Year Key Events

- Developed tools to measure change in enterprise security posture based on changing threats, tools to assess impact of not deploying security solutions, and tools to determine balance of security and performance within an enterprise.
- Produced tools for identifying, analyzing, and rectifying latent vulnerabilities in software.

Current Year Key Events

- Study the feasibility of applying new metrics to existing security processes.
- Transition software quality assurance technologies to commercial products.

Budget Year Key Events

- Develop test and evaluation facilities to investigate new and existing capabilities of software analysis.
- Develop a systematic method to map natural language security controls to Common Weakness Enumerations (CWE).
- Develop software/Tools to enhance usability and security of identity and user authentication.

Funding History (thousands)

Leap Ahead Technologies

- *Problem:* As cyber attacks and crime are constantly evolving, government and industry face a continuing need to respond to emerging cyber threats.
- *Solution:* Identify, incubate, and execute early research projects that may significantly advance current capabilities through moderate risk and high-payoff outcomes in areas such as Open Source technology development and mobile device security.
- *Impact:* These activities give organizations the ability to quickly shift to and respond to new and potential threats by focusing attention on cutting edge issues that are not currently being addressed. For example, efforts in the area of mobile device security focus attention on the vulnerabilities this computing platform presents to an organization as their use becomes more prevalent.

Prior Year Key Events

- Developed a resource for open source acquisition and accreditation in the Government.
- Updated the inventory of open source software being used across the Government.
- Developed technologies that will improve the survivability and resiliency of cyber systems while experiencing attacks, failures and other accidents.

Current Year Key Events

- Develop a portal and repository for security research of open source products.

Budget Year Key Events

- Complete transition of mobile security solutions initiated in FY13.
- Complete evaluation of existing mobile security solutions being used in the Homeland Security Enterprise.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	3,155	2,100	7,735	7,092	12,800

Trustworthy Cyber Infrastructure – FY 2014: \$9.100 million. FY 2015 Request: \$6.500 million. This program provides security for the building blocks that comprise the infrastructure of the Internet such as routers and routing protocols.

Internet Measurement and Attack Modeling

- *Problem:* As the Internet has grown organically and exponentially since its original conception, the protection of cyber infrastructure depends on the ability to identify critical Internet resources that are subject to attack.

- *Solution:* To measure the infrastructure as it exists today, then make periodic or continuous measurements to identify changes, recognize attacks, and provide analysis.
- *Impact:* The development and application of modeling and analysis capabilities affords the ability to predict the effects of cyber-attacks on federal government installations and other critical infrastructure through the detection of malware and botnets, situational understanding, and attack attribution.

Prior Year Key Events

- Deliver tools to US-CERT providing better capabilities in visualization as well as identification of cyber attacks.

Current Year Key Events

- Apply modeling capabilities and results to customers' operational infrastructures and representative environments to improve the understanding and situational awareness of potential impact of cyber attacks.

Budget Year Key Events

- Transition technologies to the customer and/or end user as appropriate, examples include router traffic monitors, route tracing tools, internet traffic visualization tools, etc.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
5,585	3,556	3,772	5,435	5,000	6,500

First Responder/Disaster Resilience – FY 2014: \$104.397 million. FY 2015 Request: \$100.588 million. Work includes reduction of vulnerability of critical infrastructure, key leadership, and events to terrorist attacks and other hazards; working with state, local, tribal, and territorial governments to secure their information systems; working with local and regional partners to identify hazards, assess vulnerabilities, and develop strategies to manage risks associated with all hazards; increasing the state of preparedness of state, local, regional, tribal, and territorial partners, as well as nongovernmental organizations, the private sector, and the general public; advancing and improving disaster emergency and interoperable communications capabilities; and, improving the capabilities of DHS to lead in emergency management.

Bioagent Attack Resiliency – FY 2014: \$33.776 million. FY 2015 Request: \$35.300 million. This program provides advanced planning; develops CONOPS; develops and provides capabilities to support forensics, laboratory response, personnel protection, and decontamination; and utilizes exercises and training for responding to and recovering from a biological disaster. This program includes actions to limit the spread of disease among animal species to protect the United States economy.

Adaptive Facility Protection (Bio and Chem)

- *Problem:* There is a need to improve the ability of facility operators to protect buildings and transit systems from a chemical release by using a comprehensive, rapid-detection architecture for infrastructure, and developing response networks to effect low-regret protective action for the occupants of nearby buildings.
- *Solution:* This project will develop key elements for a complete architecture that incorporates existing chemical detection technologies with both active and passive facility response systems.

The project will allow for detection of chemical agents via chemical detection systems developed by S&T.

- *Impact:* The outcome of the project will be improved facility and transit system protection from chemical threats. The project will also evaluate expanding the architecture to include biological protection by incorporating biological detection systems developed by S&T.

Prior Year Key Events

- Conduct needs analysis and develop initial CONOPs for building responsive measures for building protection.

Current Year Key Events

- Support GSA efforts to establish a standardized Physical Access Control configuration.
- Conduct Analysis of Alternatives Study for advanced Video Analytics capability to recognize anomalies associated with the ISC Design Basis Threat list of 31 undesirable events.
- Conduct market survey of candidate COTS/GOTS chemical detectors for customer-selected analytes.
- Chemical detector prototypes fabricated and integrated.

Budget Year Key Events

- Conduct Pilot to demonstrate methods to improve FPS Protective Security Officers (PSOs) security mission resource utilization.
- Conduct Pilot to demonstrate performance of selected advanced Video Analytics engines integrated with GSA's Physical Security Information Management system.
- Conduct Analysis of Alternatives Study for exterior-based standoff Chemical detection capability.
- End-User Field testing of Chemical detector prototypes.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	N/A	N/A	3,500	4,000

Bio Event Recovery

- *Problem:* The Emergency Responder community needs operational tools to respond to and recover from biological events. Currently there are only limited and time-consuming means of cleaning up large areas after a biological event.
- *Solution:* This project will assess requirements and potential technology solutions for biological agent clean-up, including the feasibility of modifying COTS technologies, developing methods for rapid recovery, and developing protocols for rapidly determining the extent of contamination to inform risk-based clearance goals.
- *Impact:* This project will provide public health officials environmental cleanup managers, and emergency management at the Federal, State, and local levels a system of tools and methods for decontamination of many facility types, to conduct emergency response and recovery actions. It will enable building and system owners and operators the tools to decontaminate facilities, as well as large vehicles, such as aircraft, train cars, buses, and emergency vehicles, among others, following a chemical or biological incident and enable the vehicles and system to return to service after remediation.

Prior Year Key Events

- Establish requirements and assess technology solutions for rapid recovery of an underground transit system following biological agent contamination.

Current Year Key Events

- Initiate Field Demonstrations to establish efficacy and operational parameters of current decontamination technologies for recovery of subway system rolling stock.
- Initiate fate and transport field tests in a subway system to update capability of existing dispersion and airflow models to predict extent of contamination and enable faster start of remediation actions.

Budget Year Key Events

- Validate ability of updated dispersion and airflow models, combined with targeted environmental sampling, to rapidly map extent of contamination following a biological agent event in the subway.
- Initiate evaluation of decontamination technologies and area isolation methods in limited locations of a partner subway.
- Demonstrate ability of composite sampling and an improved rapid viability PCR technique to speed a clearance process through reduction and better prioritization of environmental samples requiring traditional laboratory analysis (i.e., culturing).

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
7,025	9,375	7,147	6,261	5,000	5,000

Bio-Forensics

- *Problem:* Bio-Forensics research and development (R&D) is required to improve the ability to identify and characterize source material collected from a bio-crime in order to pursue legal prosecution against the responsible party (or parties). This research provides investigators such as FBI and USSS with critical tools that provide investigative leads for attribution.
- *Solution:* This Project develops advanced forensic capabilities to determine the source and production method of biological threat agents (BTAs) collected from crime scenes. Specifically, the project develops protocols for characterization and identification of BTAs, and utilizes a robust sample management, molecular signatures, and physical/chemical analysis research program. Bio-Forensics R&D is currently focused on establishing a methods-based approach to BTA characterization, which does not depend on prior knowledge of the organism and can detect novel and/or emerging organisms. Establishment of this approach includes development of orthogonal approaches to agent characterization initiation of an effort to build a national sequence database for whole genome comparison and development of computational algorithms for data analysis.
- *Impact:* The Bio-Forensics R&D project leads national research efforts in microbial forensics and transitions analytical techniques to the National Bio-forensics Analysis Center (NBFAC) and other government stakeholders.

Prior Year Key Events

- Delivered 100 unique *Burkholderia pseudomallei* isolates to NBFAC repository through collaboration with Australia.
- Established genomic signatures for select agent viruses.
- Established database of mobile genetic element signatures for select agent bacteria.

Current Year Key Events

- Transition improved vacuum sampling technology and test criteria to the FBI and other first responders for validation.
- Transition ultraclean reagents to support whole genome comparative analysis in bioforensics operations.
- Validate end-to-end sample processing pipeline.

Budget Year Key Events

- Develop and populate databases for comparative whole genome analysis of select agents for forensics characterization.
- Transition mass spectrometer-based methods of determining production methods (production deduction) of organisms used in a biocrime to bioforensics operations.
- Develop computational methods for analyzing metagenomic data.
- Identify gaps in toxin detection and characterization technologies.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
11,847	11,049	4,000	4,870	4,000	6,500

National Bioforensics Analysis Center (NBFAC)

- *Problem:* There is a need to ensure unimpeachable technical data for use by law enforcement authorities, particularly the FBI, in the investigation and prosecution of crimes involving biological agents.
- *Solution:* The NBFAC, located at the NBACC, is the Nation's lead facility for technical analysis of samples from biocrime and bioterror investigations. NBFAC validates protocols for the identification and characterization of the biological, chemical, and physical "fingerprints" that those samples may contain, rigorous chain-of-custody and quality-control procedures to ensure the integrity of the sample and its analysis, and maintains 24/7 continuous hub-and-spoke laboratories to provide casework support and additional specialized capabilities.
- *Impact:* NBFAC provides Federal law enforcement agencies with centrally coordinated and validated capabilities for sample handling, sample processing, and bioforensic analyses of evidentiary material derived from biocrime and bioterror investigations or from the actual use of a biological agent.

Prior Year Key Events

- Conducted casework analysis in support of 45 law enforcement investigations from 17 individual cases.
- Established first ISO 17025 sequencing and bioinformatics capability.
- Demonstrated application of genomics for casework.

Current Year Key Events

- Enhance metagenomic analysis capabilities by enabling identification of rare variants through the bioinformatic subtraction of host nucleic acids.
- Establish next generation sequencing capability at BSL-4.
- Establish statistical confidence for whole genome SNP genotyping.

Budget Year Key Events

- Provide 24/7 bioforensic casework support.

- Develop/demonstrate an operational capability to characterize individual components of a sample to support the analysis of: limited sample, non-cultureable agents, rare variants, and metagenomic.
- Transition mass spectrometer-based toxin identification and production deduction capability from Bioforensics R&D project.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
17,228	13,639	8,333	8,483	5,875	6,500

Foreign Animal Disease Vaccines, Diagnostics, and Countermeasures

- *Problem:* This project directly addresses HSPD-5 and HSPD-9 by ensuring that USDA and other first responders in the animal agriculture community have the countermeasure tools needed to safely and effectively respond to and recover from foreign animal and zoonotic disease outbreaks.
- *Solution:* New and next-generation countermeasures are developed and transitioned directly to USDA response labs or through veterinary biologic industry partners for commercialization and access by USDA. This project plans to complete the regulatory requirements (master-seed, pre-licensing serials, clinical trials) for additional Foot and Mouth Disease (FMD) serotypes/subtype molecular vaccine candidates. It also coordinates with animal health industry partners on regulatory development programs for vaccine candidates for African Swine Fever (ASF), Classical Swine Fever (CSF), and zoonotic diseases including Rift Valley fever and Henipavirus.
- *Impact:* This project strengthens the defense of the U.S. agricultural infrastructure by developing new and next- generation countermeasures (vaccines and diagnostics) to protect the livestock industry against FMD and other high-consequence FADs. Efforts from this project will provide data to support the regulatory licensing and/or use of new countermeasures by USDA in the event of a high-consequence FAD outbreak in the U.S.

Prior Year Key Events

- Complete proof of concept immunogenicity studies for African swine fever vaccine candidates.
- Produce master seeds for FMD molecular vaccine candidates for two additional serotypes.

Current Year Key Events

- Transition additional licensable FMD master seed virus to industry to produce vaccine pre-licensing serials.
- Produce master seeds for four additional (4th – 7th) serotypes.
- Transition 3ABC cELISA diagnostic assay compatible with FMD DIVA vaccines to industry and initiate assay development regulatory program.

Budget Year Key Events

- Transition the production of 2nd serotype for the Ad-5 FMD vaccine to industry partners for development and regulatory processes.
- Produce master seeds for three additional (8th – 10th) serotypes.
- Conclude assessment of broad spectrum countermeasure alternatives to address emerging disease threats.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
13,450	13,846	11,000	10,932	14,125	12,300

Livestock Decontamination, Disposal, and Depopulation (3D)

- *Problem:* There is a need to improve Federal, State, and local animal health officials' emergency response capabilities to control the spread of Foreign Animal Diseases (FADs) and mitigate the impact on the livestock industry by using validated data to develop new and improved response tools.
- *Solution:* This project will develop, in coordination with USDA, EPA, and other Federal agencies, new and/or enhanced animal health emergency response tools, technologies, and associated CONOPS to increase response capacity and to ensure that 3D activities are performed rapidly, humanely, and in an environmentally protective manner.
- *Impact:* Products from this Project will not only help preserve the safety and availability of a plentiful food supply, they will also minimize economic losses and speed recovery after an outbreak. This project plans to transition new technologies such as transportable, high-speed disposal units and portable nonfreezing vehicle decontamination units; validate depopulation equipment; publish research data and science-based protocols to improve capabilities; and develop tools to facilitate responder decision-making.

Prior Year Key Events

- Validated and published conceptual design of humane swine CO₂ depopulation protocol for emergency use.
- Validated and published findings and best practices for humane livestock mass depopulation using captive bolt.
- Published study on use of rendering plants for disposal of infectious carcasses during an animal disease outbreak and efficacy of mitigation strategies.

Current Year Key Events

- Deliver comprehensive report on Logistical Infrastructure for Animal Disease Outbreak Emergency Response.
- Launch website of online agricultural emergency response tools.
- Test and evaluate full-scale transportable gasifier at full capacity over a 72-hour period.
- Complete evaluation of foot-and-mouth disease surrogates when subjected to vaporous hydrogen peroxide and chlorine dioxide fumigation methods.

Budget Year Key Events

- Validate and commercialize non-freezing portable vehicle wash tunnels for decontaminating vehicles during an animal health emergency response.
- Publish ASTM standard for validating efficacy of antimicrobials on porous surfaces.
- Publish quantitative carcass disposal risk assessment for all hazards.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	N/A	1,842	2,000	3,000

Chemical Attack Resiliency – FY 2014: \$7.500 million. FY 2015 Request: \$5.000 million. Provides advanced planning; develops CONOPS; develops and provides capabilities in forensics, laboratory response, personnel protection, and decontamination; and utilizes exercises and training for responding to and recovering from a chemical disaster.

Chemical Forensics

- *Problem:* There is a need to provide timely and comprehensive forensic support to investigations of chemical terrorist and criminal acts by collecting, preserving, analyzing and matching chemical samples collected at scenes with samples obtained from people, places, and other events, as well as production sources.
- *Solution:* The Chemical Forensics project develops and maintains a robust and enduring national capability for the collection, preservation, and processing of chemical threat agents and associated evidence to provide comprehensive and timely forensic analysis and attribution. This project will develop and transition additional collection and preservation methods and devices, as well as expanded laboratory analytical methods to provide the capability to address the numerous chemical threat agents of interest in a prioritized manner.
- *Impact:* This project will provide law enforcement official with the capability to promptly conduct chemical forensics analysis and attribute terrorist acts to their source to provide highly valuable investigative leads that can identify perpetrators and prevent follow-on and copycat attacks.

Prior Year Key Events

- Published two Chemical Forensics articles in relevant scientific journals.
- Presentation of second biennial Chemical Forensics Symposium at annual American Chemical Society National meeting, Indianapolis, IN, 9/9-10/2013.

Current Year Key Events

- Publishing and transition to customers of at least four Chemical Forensics Standard Methods for the collection or analysis of Chemical Threat Agents of interest.
- Publishing at least two Chemical Forensics articles in relevant scientific journals.
- Development of comprehensive standard chemical forensic samples (chemical cocktails and substrates) for standardized testing of chemical sampling and analysis methods.

Budget Year Key Events

- Publishing and transition to customers of at least four Chemical Forensics Standard Methods for the collection or analysis of Chemical Threat Agents of interest.
- Publishing of at least two Chemical Forensics articles in relevant scientific journals.
- Provide a Chemical Sampling Guidebook for use of law enforcement and first responders both in hard copy and an application useable on handheld device.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
4,762	4,718	2,643	3,478	3,500	2,000

Integrated Consortium of Laboratory Networks

- *Problem:* Recovery from large-scale chemical, biological, or radiological (CBR) contamination and/or disease events can require the collection and analysis of very large numbers of samples. The laboratory capacity available in the US to accommodate this load of samples limits the rate of resolution of these samples and inhibits the return of contaminated spaces to normal condition.
- *Solution:* The project develops operational procedures and information technology systems to enable joint action of the several Federally-sponsored laboratory response networks for both intentional and naturally evolving events of sufficient scale to over-run the resources of any one network.
- *Impact:* Effective laboratory capacity is increased through the organized sharing of resources rather than investment of new funding. The optimized action of six laboratory response networks

comprising some 450 laboratories across the US will greatly decrease the time to return to normal state after a CBR event.

Prior Year Key Events

- Completed and demonstrated capability to share lab data across networks via a data exchange utility on ICLN web portal.
- Conducted planning in concert with FEMA National Exercise Division to conduct an ICLN Validation Exercise to demonstrate ICLN interface with an incident command responding to bio contamination in urban area.

Current Year Key Events

- Initiate lab response-focused risk assessment for emerging threats.
- Complete conduct of ICLN Validation Exercise.
- Conduct test measuring capacity across multiple networks for priority chemical agent, following methodology used for *B. anthracis* analytical capacity measurement.

Budget Year Key Events

- Complete assessment of existing capabilities against emerging biological and chemical threats.
- Transition operational ICLN to DHS Office of Health Affairs.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
1,447	1,826	2,000	2,485	2,500	1,000

Explosives & Rad/Nuc Attack Resiliency – FY 2014: \$5.000 million. FY 2015 Request: \$3.250 million. This program provides advanced planning, develops CONOPS, develops advanced materials, and funds exercises and training for responding to and recovering from a disaster employing explosives.

Radiological/Nuclear Response and Recovery (RNRR)

- *Problem:* The detonation of a Radiological Dispersal Device or Improvised Nuclear Device would be high consequence incidents and pose tremendous challenges to the first responder community and homeland security enterprise.
- *Solution:* Improve responder preparedness for the complexity of a radiological incident response and recovery operations by working with partner agencies, Federal interagency working groups, and first responders to identify impactful opportunities that address technology and research needs in the areas of radiological response management, incident characterization, initial response capabilities, medical care/triage, casualty/evacuee care, impacted area stabilization/control, and site cleanup/decontamination.
- *Impact:* Improved radiological response capabilities at both the local and national level through strategic investment in projects focused on increasing agency preparedness, improving government understanding of impacts and risks, and finding technological solutions to radiological capability gaps and mission needs.

Prior Year Key Events

- Initiated the project, including establishing seats on and providing briefings to relevant radiological response interagency committees, guiding and coordinating the future work of this project.

- Initiated the development of a Radiological/Nuclear Response and Recovery Investment Plan for Fiscal Years 2015-2019 that correlates prioritized responder needs with emerging and next generation technology solutions.

Current Year Key Events

- Complete first responder prioritization of existing radiological/nuclear response mission requirements, and work with technologists and subject matter experts to identify current/emerging solutions.
- Finalize the Rad/Nuc Response and Recovery Investment Plan for Fiscal Years 2015-2019, and initiate priority efforts.

Budget Year Key Events

- Fund top priority portfolio from the Rad/Nuc Response and Recovery Investment Plan with available budget and initiate the development of program/project management document for future fiscal years based on unfunded responder priorities.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	N/A	4,928	5,000	3,250

First Responder Capability – FY 2014: \$20.028 million. FY 2015 Request: \$17.900 million. This program develops technologies, information, procedures, and CONOPS to aid first responders, emergency managers, and incident commanders as they respond to hazardous situations. It assists the emergency response communities to establish requirements and tests technologies and assesses them for usability to help make the technologies available across all first responder communities.

First Responder Technologies

- *Problem:* The response environment that our Nation's first responders operate in on a day to day basis is constantly changing and requires an ongoing evaluation of needs, required capabilities, and potential investments and/or innovations, to allow them to conduct their missions more safely, effectively, and efficiently. Due to the lengthy process it normally takes to commercialize technology that fully meet these challenges, there is a need to rapidly develop technologies that address high priority capability gaps identified by local, tribal, state, and Federal first responders.
- *Solution:* Identify high priority needs, develop prototype solutions, and conduct operational field assessments of next generation technologies to address gaps, with the goal of rapidly fielding technologies that meet at least 80% of the operational requirement in a 12 to 18 month timeframe.
- *Impact:* This will strengthen the response community's ability to protect the homeland, respond to disasters, and to save lives through the increased availability and reliability of technology for first responders.

Prior Year Key Events

- Transitioned a virtual training capability, based on an active shooter scenario, to first responders in Sacramento, CA. The simulation tool was designed so that it could be used by first responders from any jurisdiction.
- Developed a prototype wireless patient vital signs monitor, to improve the safety, and efficiency of emergency services personnel while transporting ambulatory patients. The performer plans to submit the device for Federal Drug Administration approval and commercialize the product in 2014.

- Developed a strategic plan to guide the implementation of the Next Generation Personal Protective Equipment (PPE) Program for first responders. The key objective of the Program is development of a multi-hazard, multi-discipline ensemble that will focus on 1) hazard protection and 2) hazard perception and detection.

Current Year Key Events

- Develop readily accessible, high-fidelity simulation tools to support training and exercises in incident management and response for an active school shooting scenario.
- Begin development of technology to provide the ability to remotely monitor the tactical actions and progress of all responders involved in the incident in real time.
- Use the PPE Strategic Plan to begin development of protective clothing and equipment for all first responders that protects against multiple hazards.

Budget Year Key Events

- Complete development of an improved structural firefighter glove, to provide improved dexterity and don/doff ability.
- Complete development of a low light covert camera for law enforcement, to provide ICE and other law enforcement agencies with a non-existent capability.
- Complete development of an internet protocol encoder, which provides the ability to stream data from the low light camera in real time, at a low cost.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
11,173	8,669	4,798	10,947	7,978	11,400

Response and Defeat Operations Support (REDOPS)

- *Problem:* Improvised Explosive Devices (IED) are generally easy to develop, difficult to combat, and cause damage to life and/or property.
- *Solution:* Establish a systems analysis approach involving explosives countermeasures experts from all levels of government and direct Research, Development, Testing & Evaluation (RDT&E) of technologies needed by state and local bomb squads (SLBS).
- *Impact:* The new capabilities developed as well as the performance and training standards will help protect and save the lives of State and Local Bomb Techs and the public. In addition, the outputs associated with this project will provide SLBS the confidence and authority to perform activities associated with response and defeat operations.

Prior Year Key Events

- None

Current Year Key Events

- None

Budget Year Key Events

- Convene C-IED Requirements Review Panel.
- Perform RDT&E on Camera Boom for robots.
- Update VBIED Tool Kit.

Funding History

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	N/A	N/A	N/A	1,500

Tech Clearinghouse

- *Problem:* S&T must maintain effective communication with the first responder and emergency preparedness and response communities in order to gather necessary information for its program and to keep those communities informed about the technologies and knowledge products the Directorate is developing on their behalf.
- *Solution:* A three-pronged communications effort that includes:
 1. FirstResponder.gov: S&T's premiere online portal for sharing information about its own projects and initiatives as well as outside technology-related programs and events of interest to first responders
 2. First Responder Communities of Practice: a vetted online forum that enables first responders to collaborate and share best practices while also providing: 1) developers with operational requirements and information needed to design and manufacture increasingly useful tools and technologies, as well as 2) users with information related to procuring, deploying, and maintaining technologies and training for their proper use
 3. Outreach and Engagement: an ongoing suite of communications activities that enables S&T to gain a fuller understanding of the capability gaps, needs and requirements of first responders and thus strengthen its focus on essential technologies with the greatest potential for transition to use.
- *Impact:* Tech Clearinghouse increases first responder awareness of the Directorate's work, facilitates the flow of important information throughout the emergency response community, and enables the Directorate to design and manage projects that truly meet its mission. It is a cost-effective, multi-channel communications effort that steadily expands the S&T's reach into stakeholder communities.

Prior Year Key Events

- Conducted First Responder Resource Group (FRRG) meeting which resulted in the development of twelve operational requirements documents.
- Increased membership of Communities of Practice by 10%.
- Created a Community of Practice to specifically support the Quadrennial Homeland Security Review.

Current Year Key Events

- Develop a prototype social media aggregator tool and demonstrate it through a pilot program.
- Refreshed FirstResponders.gov website that included an improved search capability, added a document library, and included links to key resources (eg. Grants and Training information, SAVER, etc.) for first responders.
- Launched a social media experiment with Facebook to increase traffic to firstresponder.gov

Budget Year Key Events

- Develop and publish the ORDs for each of the FRRG identified capability gaps following FRG's Solution Development Process
- Implement and refine the development of partnerships with the public and private sectors to facilitate and create efficiencies to collect feedback and reviews on responder safety and knowledge products that could evolve into requirements

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
5,026	3,284	5,616	2,273	2,000	5,000

Information Sharing and Interoperability – FY 2014: \$15.500 million. FY 2015 Request: \$14.638 million. This program creates an integrated information sharing architecture and links that architecture to interagency efforts to prevent terrorism while protecting privacy, civil rights, and civil liberties.

Cross Border Communications

- *Problem:* Coordinating responses and sharing information for situational awareness and decision making during critical incidents involving multiple agencies on both sides of the United States border is a challenge.
- *Solution:* Conduct carefully designed, robust experiments to identify how best to address issues that make it difficult to share essential capabilities across the border when bi-national responses are essential.
- *Impact:* Nations will better handle cross-border technology and policy issues and will leave behind trusted relationships, collaborative processes, and international technology solutions. Binational coordination is extended to public safety issues that simultaneously affect both nations, regardless of where incidents occur.

Prior Year Key Events

- Conducted planning sessions of the Communications Interoperability Working Group (CIWG), which was established by the BTB Action Plan.
- The Canada-US Resiliency Experiment II (CAUSE II), which occurred March 4-6, 2013, demonstrated the ability to exchange information between local, state, provincial and national agencies using various systems and software applications, including Canada's Multi Agency Situational Awareness System (MASAS), and the U.S.'s Integrated Public Alert and Warning System (IPAWS) and Virtual USA (vUSA). CAUSE II also involved the use of Virtual Maine and the Mutual Aid Support System and Mission Ready Package Tools (MASS MRP).

Current Year Key Events

- The Canada-US Resiliency Experiment III (Cause III) is scheduled to occur in the September-October timeframe of 2014, spanning FY 14/15. CAUSE III is to build on the lessons learned from CAUSE I and II, and seeks to address improving interoperable communications (Land-Mobile Radio, Data, GIS), resource management/sharing protocols, and to develop a cross-border Concept of Operations (CONOPS). The intended outcomes include:
 - Conduct planning sessions of the Communications Interoperability Working Group (CIWG),
 - Building upon CAUSE II, the Canada-US Resiliency Experiment III (CAUSE III), will involve different agencies and systems/software applications to continue to demonstrate the ability to exchange information;
 - CAUSE III will also demonstrate enhanced resilience through improved interoperable shared situational awareness during major events;
 - Enhance resilience in a border region by leaving behind working operational interfaces that will improve shared situational awareness;
 - Execute CAUSE III as a catalyst to build trust relationships in support of the Beyond the Border Action Plan; and
 - Build enhanced cross border trust relationships.

Budget Year Key Events

- Much of the outcome from CAUSE III will inform the activities of CAUSE IV in FY15. For example, while CAUSE I and II focused primarily on the interoperability of data, CAUSE III and IV will focus on data with the introduction of voice communications interoperability. CAUSE IV will include data and a stronger focus on voice communications interoperability.
- The development of a CONOPS will result from the efforts of CAUSE III. This CONOPS will be further refined and validated for the CAUSE IV activities.
- With CAUSE “experiments” occurring in CAUSE I through III, it is anticipated that CAUSE IV will culminate in an actual exercise, perhaps with all previous CAUSE participants.

Emergency Response and Management Tools for First Responders

- *Problem:* First responders often lack timely access to the information they need to operate safely and enhance their ability to save lives and protect property. Whether they are not sharing due to unfamiliarity with their response partners or because their systems are not interoperable, decisions are not made in the most effective and timely manner.
- *Solution:* Develops and transitions to operational use the technologies required so that emergency managers and first responders will have the incident information they require when and how they need it. In addition, this project will provide the standard operating procedures, training, and governance needed to effectively and efficiently conduct response and recovery efforts from day-to-day incidents to large-scale emergencies, including visualization, geospatial and analytics technologies.
- *Impact:* Increased safety of US citizens and first responders, more effective incident response and recovery leading to fewer lives lost, decreased property damages, and increased national resilience from incidents of all types and scales.

Prior Year Key Events

- Deployed the National Capital Region-Geospatial Data Exchange (NCR-GDX), the operational instance of the Virtual USA Library (used by 22 jurisdictions and 500+ users, used in daily operations for Police/Fire computer aided dispatch (CAD) situational awareness, and used for major events such as Hurricane Sandy and 2013 Presidential Inauguration).
- Installed and utilized the Next-Generation Incident Command System (NICS) in California for 1000+ users at over 161 events (including: the Yosemite Rim Fire, other vegetation fires and prescribed burns, planned events, and exercises) by participating Federal, state and local jurisdictions for situational awareness, collaboration and resource deployment.
- Provided 13 web-based educational presentations, known as the Capacity Building Webinar Series, to 2,300 first responders at all levels of government (primarily state and local practitioners), to educate the first responders community for augmenting their abilities and capabilities to share information during critical incidents.
- Activated the National Information Sharing Consortium (NISC) that strives to bring together data owners, custodians, and users involved in the fields of homeland security, public safety, and emergency management. NISC responds to leveraged efforts related to governance, standards, and development. It also encourages sharing of technology, data processes, and best practices. The NISC currently has 92 members comprised of the first responder domain (police, fire, emergency

management) that represent 64 member organizations from state, local and regional governments, the private sector, and academia.

Current Year Key Events

- Capstone 2014 Demonstration in 8 Central US Earthquake Consortium (CUSEC) states using the Mutual Aid Support System (MASS) resource identification and sharing solution as well as demonstrating the enhanced Virtual USA Library tools.
- Full transition of the Virtual USA Library to 1) have the “Refresh” be deployed to the NCR-GDX; and 2) the NISC whereby the existing Virtual USA Library will retire and the NISC will work with ESRI to deploy information-sharing tools via ESRI’s cloud-based, geospatial solution.
- Present 10+ Capacity Building Webinars to educate the first responders community for augmenting their abilities and capabilities to share information during critical incidents.
- Develop an Incident Management Information Sharing Capability Maturity Model (IMIS-CMM) for jurisdictions to objectively assess their maturity to share information during critical incidents.

Budget Year Key Events

- Refine and validate the IMIS-CMM with practitioners and publish a guide for its application within a jurisdiction to assess and augment their information sharing capabilities.
- Assist in publishing grant funding guidance for jurisdictional recipients to augment their capabilities to conform to FRG’s IMIS-CMM.
- Finalize and validate the Public Safety Cloud strategy that addresses identity management issues and computer aided dispatch (CAD to CAD) jurisdictional interoperability for information sharing.
- Via the IMIS Committee, provide recommendations to the PM-ISE detailing the standards needed to meet requirements and fill gaps from the first responders community at all levels of government.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	2,673	6,953	2,000	4,000

Interoperability and Compatibility Standards

- *Problem:* The proliferation of new technologies makes it difficult for first responders to communicate with each other during emergencies.
- *Solution:* Identify and develop standards essential to ensuring that all the new technologies are interoperable so first responder agencies can make good decisions about new technologies.
- *Impact:* These new and strengthened standards will help first responders to make smart choices of new technologies so they will be interoperable and can migrate successfully to the new nationwide public safety broadband network without putting that \$7 billion national investment at risk.

Prior Year Key Events

- Developed draft direct mode and Push to Talk (PTT) requirements through the National Public Safety Telecommunications Council (NPSTC). These requirements were shared with the First Responder Network Authority (FirstNet) in support of the creation of the nationwide public safety broadband network.
- Obtained Expressions of Interest from International Laboratory Accreditation Corporation (ILAC) accreditation organizations, through the Federal Register, to become a part of P25 Compliance Assessment Program (P25 CAP).

Current Year Key Events

- Work with Accreditation Bodies and P25 CAP Laboratories to develop the DHS OIC – P25 CAP Laboratory Policy Document.
- Develop Quantitative Broadband Launch Requirements and submit to FirstNet for consideration.
- Develop public safety console requirements for Long Term Evolution (LTE).

Budget Year Key Events

- Develop and publish Public Safety 1-2 Year Qualitative Broadband Communications Requirements.
- Develop and publish Public Safety Location Requirements.
- Add P25 Common Air Interface (CAI) Conventional Interoperability Tests to the program.
- Add P25 CAI Conventional Conformance Tests to the program.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	N/A	4,112	2,000	2,000

Operational Assessment Tools to Strengthen Agency Acquisition

- *Problem:* New infrastructure installations are extremely expensive but neither public safety nor the new nationwide public safety broadband network have reliable ways to assess the best solutions before they make major investments in new infrastructure.
- *Solution:* Leverage existing modeling and simulation tools to make more informed procurement decisions for everything from user equipment to applications and services and make them available to first responders before they make major investments.
- *Impact:* These tools will make it possible for first responder agencies to determine whether a given investment is the best possible and thus avoid wasting significant resources.

Prior Year Key Events

- None

Current Year Key Events

- None

Budget Year Key Events

- Publish results of subjective video tests for new/advanced video codecs.
- Study the performance of LTE in the presence of device to device interference and characterize the effects of out-of-coverage device to device transmissions on an infrastructure uplink. Publish results in a conference/journal article.
- Investigate extensions to mobility state estimation and mobility based inter-subchannel interface (ICIC) to mitigate interference resulting from handovers to small-cells and improve the overall network performance. Document findings in a conference/journal article.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
743	745	N/A	N/A	N/A	3,000

Wireless Communications

- *Problem:* Technologies capable of bridging disparate but essential communications systems are not currently available, making it difficult for first responders to communicate with each other during emergencies.
- *Solution:* Develop a viable testing and evaluation capability to ensure that new technologies that claim to be interoperable with existing public safety systems actually are.
- *Impact:* This project provides a critical testing and evaluation capability for first responders to gain knowledge on how communications devices work on broadband networks and determine how the systems will meet user needs. This project brings together public safety practitioners, Federal partners, manufacturers, and representatives of standards making bodies to improve the way in which video and other technologies serve the public safety community.

Prior Year Key Events

- Developed a software tool that allows users to specify the following: speed of a mobile device, cell density, coverage radius for an arbitrary number of heterogeneous network tiers, the number of handover events to simulate, and statistics for reselections involving all possible combinations of cell types.
- Extended and executed new Cooperative Research and Development Agreements (CRADA) with industry to build a more robust 700MHz broadband demonstration network which currently has over 60 industry partners through CRADAs.

Current Year Key Events

- Engage LTE, P25 land mobile radio (LMR), and technology bridging device manufacturers to help create and define a test suite.
- Develop an initial test suite that can be used to exercise mobile application testing tools abilities to identify software weaknesses of concern to public safety.
- Complete a draft use case containing public safety requirements for securing interfaces between network equipment and data traversing the network, which is suitable for developing test cases for the 700MHz broadband Demonstration Network.

Budget Year Key Events

- Investigate PTT LTE interface possibilities to other than P25 LMR technologies.
- Investigate viability of a single, ubiquitous public safety broadband LTE to multi-LMR-technology.
- Develop draft document(s) suitable for publication on public safety security requirements for mobile applications and conformity assessment strategies for the requirements.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
1,867	1,163	2,676	5,587	8,500	5,338

Natural Disaster Resiliency – FY 2014: \$22.592 million. FY 2015 Request: \$24.500 million. This program develops and provides advanced planning, CONOPS, disaster management tools, and training aids for responding to and recovering from a large-scale natural disaster. This includes providing assistance to the private sector to “design-in” greater resilience for critical infrastructure and providing DHS with more robust tools for disaster response, disaster logistics, individual and public assistance programs, and national continuity programs.

Community Resilience and Communications

- *Problem:* There is insufficient social and behavioral science research to support the development of effective communication strategies to successfully promote resilience to disasters in U.S. communities and that focus on helping disaster survivors, enhancing communities' robustness, adaptability, and recovery capabilities.
- *Solution:* Develop more targeted and effective risk and crisis communications in order to produce evidence-based guidance to promote resilience in communities.
- *Impact:* Communities that are more resilient will support dramatically improved response efforts and significantly reduce the time and resources required for recovery from natural and manmade disasters.

Prior Year Key Events

- Completion of research projects in:
 - Building Resilience with Diverse Communities: Faith-Based and Community Organizations in Emergency Preparedness; and
 - Enhancing the Effectiveness of State 2-1-1 Call Systems.
- Delivery of Knowledge Products and Training:
 - Executive Summary: Understanding Risk Communication Best Practices and Theory.
 - Training in Risk and Crisis Communication (TRACC).
 - Social Media Use During Disasters: A Nationally Representative Field Experiment.

Current Year Key Events

- Begin evidence-based analysis in support of whole community implementation. As part of this activity, the program will begin the conduct of social and behavioral science research to develop communication strategies to successfully promote resilient to disasters in U.S. communities focusing on helping disaster survivors, enhancing communities' robustness, adaptability, and recovery capabilities.

Budget Year Key Events

- Deliver a knowledge product that provides the result of the evidence-based analysis completed to date with a goal of developing more targeted and effective risk and crisis communications in order to provide evidence-based guidance that can be used by communities to promote resilience.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
12,468	1,433	N/A	583	1,000	700

Cyber Physical Security (CPS)

- *Problem:* The increased integration of cyber systems into many critical physical infrastructure and systems including, electric, water, transportation, and more, has introduced new and unknown possible vulnerabilities within single and potentially across multiple systems. As the systems are relatively new and growing in complexity and number, an understanding of the new challenges and information and decision support tools for owners and operators are needed for continued safe and secure operation and avoidance or limitation of disruptions or destruction from natural or manmade hazards.
- *Solution:* Focusing on high priority sectors such as energy (electrical grid) and water, this project will leverage past and current assessments and research efforts to provide decision support tools and mitigation solutions to address critical infrastructure vulnerabilities and the associated risks. Partnerships in government; Federal, State, local, and the private key critical sectors will be

developed to ensure resilience will be implemented into the systems such as the electrical grid and water.

- *Impact:* This program will enhance resilience of the Nation's many critical infrastructure systems that are controlled by cyber systems in an interconnected environment. This increased level of resilience from all hazards allows the owners and operators to have an increased ability to assess and militate against potential threats and vulnerabilities from manmade and natural hazards. There will be an increase in overall understanding and security development for cyber-physical systems which will benefit security of future systems ensuring security is included from design.

Prior Year Key Events

- Built on findings from earlier project studies and workshops on the CPS vulnerabilities in several of the CI Sectors.

Current Year Key Events

- In collaboration with NPPD, engage the critical infrastructure sectors, owners, and operators to identify key requirements, gaps, and capture vulnerabilities.

Budget Year Key Events

- Develop initial overarching architecture for CPS analysis and experimentation with high priority sectors.
- Develop pilot plans for engaging the energy and water sector.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
1,333	1,524	1,638	1,788	8,242	5,750

Drinking Water Resilience

- *Problem:* The drinking (potable) water infrastructure is aging and experiencing serious failures. The water infrastructure supports commerce and a major dependency for emergency response, healthcare, and community resilience.
- *Solution:* Develop a bottom-up risk assessment approach that works by enabling utility owners to self-assess risk with the aid of advanced scientific input from the national labs. Feed the outcome of those assessments into regional and national-scale risk models. Develop guidance for decisions on investing in the water infrastructure for maximum resilience improvements based on risk.
- *Impact:* Water utilities will save 50 % over the current cost of manual risk assessment with a web-based interactive tool. Safe, reliable, and resilient drinking water systems planned for anticipated risks over the next few decades will meet the dependencies of the health, emergency response, community preparedness, electronics, communications, power generation, industrial and many other vital sectors of the nation's economy and well-being.

Prior Year Key Events

- Developed an investigative framework for the risk assessment model and identified knowledge support for the integrated utility self-assessment methodology.

Current Year Key Events

- Prototype utility self-assessment methodology, web-based and interactive, utilizing the existing RAMCAP ANSI-certified J100-10 risk assessment method endorsed by the American Water Works Association.

- Framework interface for national model with identified data interlinks for FY15 upgrade to the J100 tool.
- Prototype testing with one or more volunteer water utility companies.

Budget Year Key Events

- Upgrade J100 Web tool to enable interactive risk scenario development & consequence assessments.
- Implement framework interface between the national labs, J100 tool and data links to provide scientific support for J100.
- Implement secure data sharing from J100 to national labs.
- Implement national/regional risk assessment.
- Plan/socialize national risk-based prioritization for water infrastructure investment

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	N/A	394	1,200	2,500

Incident Logistics and Resource Tracking

- *Problem:* Currently, the entire logistics supply chain when activated during disasters is inefficient and lacks agility to support national resilience. System-to-system data interfaces exist in various forms and standards. Transportation processes do not handle resource management automation for planning, selecting, and delivery at the local and vendors levels, and distribution centers receipts, shipments, and inventory technology processes are not fully automated to ensure fully automated just-in-time reporting and resource typing.
- *Solution:* Development of Incident Logistics and Resource Tracking injects a set of integrated technologies to enhance the current FEMA Logistics system to better support local responders and EOCs by improving asset visibility in the areas of status, tracking, and correct fulfillment. The automated connectivity relies upon the National Information Exchange Model standards to enable resource data exchange at the local, States, and Federal levels. The system provides a standardized resource management at the state, local, and Federal level and eliminates duplicate systems, requests, shipments, while enhancing visibility throughout the entire logistics supply chain through the secured cloud/web.
- *Impact:* This system provides increased end-to-end situational awareness, enhances just-in-time status and progress reports, improves real-time resource typing and inventory information thus improves better sourcing decisions, reduces operational costs, and increases resource/inventory accuracy. The improved cycle times help to deliver resources to the local and states easier and faster thereby making the entire logistical supply chain resilient and effective.

Prior Year Key Events

- None

Current Year Key Events

- Conduct an investigation of current (stove-piped) systems; perform a systems analysis; and identify a framework for system(s) integration.

Budget Year Key Events

- Based on the inventory of current state-of-the-art systems; gap analysis; results of technology foraging; and requirements definition, a go/no go decision will be made as to the feasibility of proceeding with the program.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
2,244	3,047	N/A	N/A	500	1,000

Overhead Imagery Data

- Problem:* Improvements are required in the delivery of disaster relief programs using damage assessment products derived from remote sensing system in aircraft and satellites.
- Solution:* A set of projects that bring together academia, industry, research laboratories, and government partners to develop a more effective and efficient process for the tasking of satellite and aircraft assets, the acquisition of remote sensing data, the analysis of these data, and the delivery of the derived product.
- Impact:* The rapid provision of accurate post-disaster imagery will speed up the determination of damage, reduce the time to deliver disaster assistance to victims and reduce the cost of existing damage assessment procedures. These projects will improve the utility of existing satellite and airborne remote sensing assets through advanced analytical techniques designed to address specific hazard-related issues. This will include the leverage of basic and applied research by DOD, NASA, NOAA, and other Federal partners.

Prior Year Key Events

- Refined the satellite model and developed an initial aircraft asset planning module within the Remote Sensing Planning Tool (RESPT) for improved tasking of remote sensing assets.
- Tested and evaluated the Real time Airborne Management System (RAMS) for real time acquisition of imagery and downlink to response teams in the field with the Civil Air Patrol (CAP). CAP is a primary provider of imagery to FEMA for disaster assessment.
- Initiated the definition of technical specifications with FEMA for the construction of an advanced image analysis tool to improve FEMA's post-disaster debris volume estimation process.

Current Year Key Events

- Complete development of the satellite modeling capability, enhance the aircraft asset location tool, and improve the collaborative sharing of imagery request within RESPT.
- Install a two-camera RAMS system in a CAP aircraft and test and evaluate acquisition and data transfer from the CAP infrastructure to FEMA Geo-portal.
- Complete a requirements definition study to determine the opportunity for remote sensing technologies to improve the FEMA post-disaster debris volume estimation process.

Budget Year Key Events

- Install a two-camera RAMS system in a CAP aircraft and test and evaluate acquisition and data transfer from the CAP infrastructure to FEMA Geo-portal.
- Initiate remote sensing based tools to improve the FEMA post-disaster debris volume estimation process.

Funding History (thousands)

N/A	1,429	1,900	2,309	2,950	2,000

Resilient Structures

- *Problem:* Critical infrastructures are vulnerable to manmade and natural hazards, resulting in crippling effects on mass transportation, buildings, and other critical infrastructure.
- *Solution:* This project will design, fabricate, and test protective measures for tunnels, subway systems, bridges, buildings, and other critical transportation infrastructure. S&T will also develop software analysis tools to aid in analysis of vulnerabilities and improved design. Includes development of tunnel plugs under the Resilient Tunnel Project.
- *Impact:* The project will minimize and/or prevent the disruption to transportation services associated with terrorist attacks and natural disasters, to include Sandy-like storm surge flooding. Other solutions will increase structural resilience of high-risk critical infrastructure, to include tunnels, bridges, and buildings, such as commercial establishments, government buildings, and schools.

Prior Year Key Events

- Completed full-scale tunnel plug container testing.

Current Year Key Events

- Integrated system and subsystem designs for tunnel plug.
- Reconfiguration of tunnel plug testing facilities.
- Production of tunnel plug prototype.

Budget Year Key Events

- Full-scale tunnel plug pressure testing.
- Full system testing of tunnel plug prototype.
- Small-scale blast testing for unmitigated masonry tunnels.
- Small-scale blast testing of protective schemes for masonry tunnels.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
8,026	3,309	N/A	2,375	3,050	7,050

Solar Storm Mitigation

- *Problem:* Extreme solar storm activity produces ground induced currents (GIC) that can impact the electric grid performance and significantly damage critical components of the grid. There is very limited capability to accurately forecast a GIC-related event that would impact critical infrastructure in a timely manner.
- *Solution:* Develop the capability to forecast and model GICs and their impacts at specific nodes in the US power grid.
- *Impact:* Provide the utility owners and operators with timely and accurate GIC forecast information, allowing them to make key operational decisions, such as shutting down, reducing load, or rerouting load to minimize the impact of a GIC event.

Prior Year Key Events

- None

Current Year Key Events

- Development of user-defined requirements.

- Development and coupling of key models as inputs into the GIC forecasting system.

Budget Year Key Events

- Develop the GIC forecasting model.
- GIC forecasting model validation and verification.

Funding History (thousands)

FY10	FY11	FY12	FY13	FY14	FY15
N/A	N/A	N/A	N/A	500	2,000

Standard Unified Modeling Mapping Integrated Toolkit (SUMMIT)

- *Problem:* Planning and conducting exercises are costly as they require significant resources to develop objectives, analyze and design scenarios, and support the conduct phase by providing reach back subject matter expertise, data needs, and injects. This cycle of activities, from pre-event planning, to training and exercise, to evaluation and improvement, is often repeated for every exercise and is inefficient.
- *Solution:* SUMMIT is a modeling and simulation toolkit/platform that enables the emergency management community to access and connect suites of modeling tools and data sources for planning, exercises, or operational response on the web. SUMMIT improves the preparedness effectiveness by providing a collaborative environment that makes the linking of models and underlying data reusable so as to decrease the time and cost needed to train for, analyze, and respond to real or potential incidents.
- *Impact:* SUMMIT is available to Federal, State, and Local agencies at no cost and used at various F/S/L exercises and operational planning efforts including: NLE11, NLE12, FEMA Region 2 Blue Surge 2013 Exercise and Anaheim/Santa Ana Urban Area Threat and Hazard Identification and Risk Assessment (THIRA) planning process. FEMA adopted this tool and saved approximately \$2M per National Level Exercise. Sweden's Civil Contingencies Agency (MSB) adopted it internationally for regional exercises.

Prior Year Key Events

- Transitioned SUMMIT reporting capability to FEMA operational environment at National Exercise Division.
- SUMMIT was used by FEMA personnel to support the design and execution of FEMA Region II Blue Surge and FEMA Region IV Ardent Sentry exercises, which were both apart of FEMA's National Exercise Program.

Current Year Key Events

- Deploy SUMMIT at FEMA Region II Wildcat exercise and planning efforts in preparation for 2014 NFL Super Bowl.
- Deploy SUMMIT at the state of Georgia to generate scenarios and preparedness considerations for regional hospital need planning.
- Complete DHS-Sweden, Swedish Civil Contingencies Agency (MSB) 3-year pilot of SUMMIT for country preparedness.
- Integrate SUMMIT into Homeland Security Exercise and Evaluation Program Enterprise Platform (HSEEP-EP).
- Upgrade SUMMIT capabilities to handle FEMA Region II Threat and Hazard Identification and Risk Assessment (THIRA) process to enhance effectiveness of FEMA preparedness grant dispersal.

Budget Year Key Events

- Develop SUMMIT analytical capabilities to support FEMA Threat and Hazard Identification and Risk Assessment (THIRA) process to enhance effectiveness of FEMA preparedness grant dispersal.
- Complete pilot deployment of SUMMIT in FEMA response environment to enhance effectiveness of emergency response during declared national disasters.

Funding History (thousands)

Note: Amounts may not add to total due to rounding.

S&T Framework for Prioritizing R&D Projects

DHS has a mission to strengthen America's security and resiliency by providing knowledge products and innovative technology solutions for the HSE. To achieve this mission, S&T has outlined three critical areas of strategic focus. Firstly, S&T will pursue technology options and process enhancements that are focused on DHS Component operational priorities. Secondly, S&T will seek innovative, systems-based solutions to operationally complex problems. Thirdly, S&T will foster robust partnerships across the USG; State, local, and tribal governments; and universities, the private sector, and internationally in order to leverage expertise and solutions and share resources. S&T priorities for areas of research, development, and analysis are derived from an understanding of near- and long-term threats, national needs, and DHS mission needs and operational vulnerabilities, as articulated in the Administration's National Security Strategy, the QHSR, and the capability gaps and operational requirements of DHS Components and first responder communities.

To ensure that individual R&D projects are meeting the priorities established by its partners in the operating Components and the broader HSE, S&T has instituted an annual review of its portfolio of basic and applied R&D and all proposed "new start" projects. The review process consists of written materials, an oral presentation by the project manager, and careful analysis of the project's likely impact and feasibility (or "riskiness") as judged against specific metrics determined by S&T with input from the operating Components. The metrics are designed to address elements essential to programmatic success in the context of DHS's QHSR missions and include:

- Systems Analysis: How well does the project's product(s) align with a customer's existing operational context/concept of use or an alternative that is agreeable to the customer?
- Customer Buy-in: Have the project objectives been developed through close consultation with appropriate decision authorities?
- Efficiency: What level of savings can be achieved by this project with respect to the customer's operations?
- Capability: To what extent does this project provide risk or threat reduction and/or improved fidelity, performance, etc.?

- Technical/Research Feasibility: How likely is it that the team will overcome the technical and/or research challenges facing this technology and/or knowledge product?
- Transition Likelihood: Is there a clear path/mechanism to enable transition/commercialization?
- Customer readiness: Are there any secondary issues related to the concept of use, prepotency, budgeting, affordability, regulatory or statutory realities, or business value?
- Timeline: When will the project achieve either an efficiency or capability improvement, as part of normal operations? Or, when will the first demonstration of the capability/efficiency be observed in an operational context?
- Innovation: Does the project attempt to realize its objectives in a way that others have not previously considered or exploited?
- Resource Leverage: What level of interaction exists between the project team and the target Component or customer?
- Foraging: Does the project exploit existing technology or research, and/or new or existing partnerships to minimize time and expense?
- Cost Realism: Is the cost projection credible?
- Project Clarity: How well is the project described, laid-out – is it clear what the team will do? Are the problems well defined and the approach clear? Has a letter of intent or technology transition agreement been obtained?

In addition, S&T established the following methods to ensure that S&T projects support the Component's highest priorities in supporting DHS QHSR missions:

- S&T Component Liaisons: Component liaisons are a primary coordination mechanism for both S&T and the Components to ensure strong communication throughout the R&D process. Liaisons from TSA, CBP, ICE, NPPD, USSS, and USCG are detailed to S&T and S&T has provided liaisons to CBP, USSS, DHS's Office of Policy, DHS Tactical Communications Program Office, DNDO, TSA, and FEMA.
- Component R&D Agreements: R&D agreements with Components strengthen cooperation, coordination, and investment in projects. S&T's APEX projects begin with a memorandum of understanding signed by the Undersecretary of Science and Technology and Component leadership. This process solidifies the agreement that both entities will provide resources and oversight for the length of the project. S&T has agreements with CBP and USSS regarding ongoing R&D efforts in various stages of completion, and plans to expand partnerships with other DHS Components.
- Component R&D Strategies: S&T and TSA issued a joint R&D strategy for aviation security that identified TSA's R&D priorities. That plan was a result of an internal planning process that prioritized capability gaps and focused on the work between TSA's and S&T's Explosives and Human Factors/Behavioral Sciences Divisions. S&T also is planning to work with USSS,

CBP, ICE, and FEMA to build component-specific R&D strategies that are linked to component acquisition programs.

R&D Coordination Teams: S&T plans to replace the current Integrated Product Team process with two new coordination teams—a cross-functional team comprised of S&T personnel focusing on strategic priorities and an integral partner team—led by S&T’s newly created ASOA division to focus on components’ operational needs.

PPA: University Programs

	Perm. Pos	FTE	Amount
2013 Revised Enacted	-	-	38,339
2014 Enacted	-	-	39,724
2015 Current Services	-	-	39,724
2015 Program Change	-	-	(8,724)
2015 Total Request	-	-	31,000
Total Change 2014 to 2015	-	-	(8,724)

The S&T Directorate requests \$31.000 million for University Programs in FY 2015. The \$8.724 million decrease in FY 2015 will reduce operational support to current COEs and will impact the number of future competitions for COEs.

CURRENT SERVICES PROGRAM DESCRIPTION:

University Programs PPA – FY 2014: \$39.724 million. FY 2015 Request: \$31.000 million. The Office of University Programs (OUP) supports critical homeland security-related research and education at U.S. colleges and universities to address high-priority DHS-related issues and to enhance homeland security capabilities over the long term. The program brings together scientists, mathematicians, and engineers from many academic disciplines and institutions. These researchers are investigating research questions important to DHS as well as developing new technologies and approaches to solve complex and challenging homeland security problems. The program focuses on building homeland security expertise in the academic community, creating strategic partnerships among universities and public agencies, and developing a new science and engineering workforce dedicated to homeland security. The primary customers for OUP are the S&T Directorate's divisions, the DHS Component agencies, and Federal, State, and local government agencies.

Investments in university research and support for students in relevant fields are critical to preserving the United States' strategic/economic security and carrying out activities in two program areas: the S&T Directorate University COEs and MSI program.

Centers of Excellence

The COEs work with the S&T Directorate, the DHS Component agencies, and State, local, and tribal first responders. COE research complements existing DHS R&D programs including those of Federal laboratories and FFRDCs. They take advantage of other relevant Federal agency-sponsored research and provide outcomes useful to Federal, State, and local governments, the private sector, and international partners. The selection process for the COEs is highly competitive, rigorously peer-reviewed, and merit-based.

In 2015, OUP will continue to focus on transition-related activities. The COEs have recently participated in a series of highly successful technology demonstrations to DHS Components and first responders. The demonstrations increase exposure of new and existing COE tools, technologies, and knowledge products to end-users. In 2015, the COEs will increase resources dedicated to their flagship End-to-End projects – larger research efforts with particular emphasis on end-user engagement from inception to product use.

The COEs are funded through research cooperative agreements, grants, and contracts, depending on the nature of the projects. The COEs are building expertise and reachback capabilities in multi-disciplinary fields of study important to homeland security.

Research will be focused on:

1. Areas identified as priorities in the QHSR
2. Research that is clearly within DHS's purview and closely related to DHS missions
3. Research that is not being done elsewhere
4. Research that can make a difference in operations or intelligence-gathering

The current COEs include:

- The National Center for Border Security and Immigration (NCBSI), co-led by the University of Arizona at Tucson and the University of Texas at El Paso (<http://www.borders.arizona.edu/> <http://osi.utep.edu/NCBSI/index.html>)
- Center of Excellence for Visualization and Data Analytics (CVADA), co-led by Rutgers and Purdue Universities, (<http://ccicada.rutgers.edu/>, <http://www.purdue.edu/discoverypark/vaccine/>)
- The Center for Awareness and Location of Explosives-Related Threats (ALERT), (formerly Center of Excellence for Explosives Detection, Mitigation, and Response), co-led by Northeastern University and the University of Rhode Island (<http://www.northeastern.edu/alert/>, <http://energetics.chm.uri.edu/?q=node/6>)
- The National Center for Food Protection and Defense (NCFPD), led by the University of Minnesota (www.ncfpd.umn.edu)
- The Center of Excellence for Maritime, Island and Remote and Extreme Environment Security (MIREES), co-led by the University of Hawaii and Stevens Institute of Technology (<http://www.cimes.hawaii.edu/>, <http://www.stevens.edu/csr/>)
- The National Center for Zoonotic and Animal Disease Defense, (formerly National Center for Foreign Animal and Zoonotic Disease Defense (FAZD)), co-located at Texas A&M University and Kansas State University (<http://fazd.tamu.edu/>, <http://www.ceedad.org>)
- The Consortium for the Study of Terrorism and Responses to Terrorism (START), led by the University of Maryland (www.start.umd.edu)

- The National Center for Risk and Economic Analysis of Terrorism Events (CREATE) led by the University of Southern California (<http://create.usc.edu>)
- The Coastal Hazards Center of Excellence (formerly the Center of Excellence for Natural Disasters, Coastal Infrastructure, and Emergency Management (NDCIEM)), co-led by the University of North Carolina at Chapel Hill and Jackson State University (<http://hazardscenter.unc.edu/diem/>, <http://www.jsu.edu/cset/or/centers/centndciem.htm>)

The following section describes specific activities conducted by COEs managed by OUP.

The National Center for Border Security and Immigration (NCBSI)

This Center improves the capabilities of the U.S. Customs and Border Protection (CBP), U.S. Immigration and Customs Enforcement (ICE), U.S. Citizenship and Immigration Services (USCIS), U.S. Coast Guard (USCG), and other federal, state and local agencies to detect people and goods moving across U.S. borders (legally or illegally), using a fully integrated, system-of-systems approach. NCBSI provides fundamental research in support of DHS's goals of strengthening border security, immigration enforcement, and immigration services.

Center for Visualization and Data Analytics (CVADA)

This Center's tools and analyses improve the data analysis abilities of the Federal Emergency Management Agency (FEMA), CBP, ICE, USCG, Intelligence and Analysis (I&A), and more than 25 regional, state and local public safety and emergency response agencies. CVADA develops new methods, algorithms, and technologies that enable federal, state, and local homeland security agencies to efficiently manage, analyze, visualize, and understand vast amounts of diverse, ever-changing, and distributed data. Such capabilities help to identify vulnerabilities, detect threats, improve information analysis techniques, improve resource management and operational analysis capabilities, mitigate catastrophic events, and plan post-event analysis for remediation activities.

The Center for Awareness and Localization of Explosives-Related Threats (ALERT)

This Center supports the National Protection and Programs Directorate (NPPD) Office of Infrastructure Protection (OIP) and Office for Bombing Prevention (OBP), DHS Office of Policy, Transportation Security Administration (TSA), ICE, state homeland security agencies, and state and local police bomb squads by providing research and training to prepare for, prevent, mitigate, respond to, and recover from terrorist attacks involving explosives. ALERT provides basic explosives-related research to advance the technical tools and information that the Science and Technology (S&T) Directorate's customers will need in the future.

The National Center for Food Protection & Defense (NCFPD)

This Center improves the ability of the S&T Directorate, NPPD Office of Infrastructure Protection (OIP), Office of Health Affairs (OHA) Food, Agriculture, Veterinary Defense, CBP, U.S. Department of Agriculture (USDA), the Food and Drug Administration, Centers for Disease Control (CDC), U.S. Environmental Protection Agency (EPA), state and local agencies, and the food and agriculture private sector to respond to catastrophic food system events by minimizing or eliminating food/agriculture system vulnerabilities. NCFPD conducts research and education aimed at reducing the potential for contamination at any point along the food supply chain and at mitigating the potentially catastrophic public health and economic effects of such attacks.

National Center for Zoonotic & Animal Disease Defense (ZADD)

This Center conducts research and develops products that improve the ability of the S&T Chemical and Biological Division, OHA, NPPD, Plum Island Animal Disease Center (PIADC), National Biodefense Analysis and Countermeasures Center (NBACC), USDA, CDC, state and local governments, and the agricultural industry to protect the Nation's agriculture and public health sectors against high-consequence foreign, emerging, and/or zoonotic animal disease threats in the United States.

Center of Excellence for Maritime, Island & Remote, and Extreme Environmental Security (MIREES)

This Center enhances USCG, CBP, FEMA and state homeland security agencies' ability to detect, prevent and respond to catastrophic events, particularly for U.S. ports, coasts, islands, and extreme environments. The Center develops both fundamental and applied research to support DHS's and other agencies' maritime security mission goals, including improved detection and interdiction capabilities, and a more resilient marine transportation system.

The National Consortium for the Study of Terrorism and Responses to Terrorism (START)

This Center provides DHS Components, other federal, state, and local agencies, private security agencies, and academia with data-driven research and capability strategies to disrupt terrorist networks, reduce the incidence of terrorism, and enhance the preparedness of American society. The Center uses advanced behavioral and social science theories, methods, and data analysis to better understand the origins, dynamics, and impacts of terrorism and counterterrorism strategies. START is used by agencies throughout federal, state, and local governments, industry, academia and the news media as a source of objective data and analysis regarding terrorism and trans-national criminal activities.

Coastal Hazards Center of Excellence (CHC)

This Center provides FEMA, USCG, National Oceanic and Atmospheric Administration (NOAA), U.S. Army Corps of Engineers (USACE), state and local emergency managers, and infrastructure managers with improved coastal hazards planning, response, and recovery capabilities such as providing more accurate storm surge estimates within minutes instead of hours. CHC conducts basic and transformational research in coastal hazards modeling, coastal engineering, disaster response, and resiliency planning, and also develops expertise in related disciplines through education.

National Center for Risk & Economic Analysis of Terrorism Events (CREATE)

This Center's models and analyses improve the ability of DHS Components, federal, state, and local agencies, private sector security/operators, and academia to predict, evaluate and counter terrorist attacks, and allocate limited resources more efficiently. CREATE develops advanced models and tools to evaluate the risks, costs, and consequences of terrorism and security operations, and to identify economically efficient investments to improve security and resilience.

New Center of Excellence

S&T anticipates competing a new Center of Excellence based on funding received in the 2014 appropriations bill.

Minority Serving Institutions

Minority Serving Institutions Program

The MSI programs enhance the capabilities of MSIs to conduct HS-STEM related research and move MSI students into successful HSE careers. Current MSI programs, including the Scientific Leadership Award program and the Summer Research Team program, are developing course content and training in areas critical to homeland security, while they also build enduring partnerships with the COEs. With small investments, S&T will realize significant returns in the development of a new generation of scientists and engineers focused on homeland security. In addition, the programs can increase diversity and representation within the future homeland security science and engineering workforce.

IV. Program Justification Changes

**Department of Homeland Security
Science & Technology
Research, Development, Acquisitions, and Operations
Justification of Program Changes
(Dollars in Thousands)**

Program Increase 1: Laboratory Operations
PPA: Laboratory Facilities
Program Increase: Positions 0, FTE 0, Dollars \$5,048

Funding Profile

	FY 2013 Revised Enacted			FY 2014 Enacted			FY 2015 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							130	130	114,902
Program Increase							-	-	5,048
Total Request	128	128	112,432	130	130	114,535	130	130	119,950

Description of Item

The increase provides funding for laboratory operations.

Justification

ONL manages the Laboratory Facilities Programs. ONL provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations, and institutions, which can provide the knowledge and technology required to secure our homeland.

Laboratory Operations – The Directorate requests \$119.950 million to manage the operations, core capabilities, maintenance, and personnel requirements of the DHS S&T Laboratories and infrastructure. This program also oversees the continued operations of facilities to meet the mission requirements while maintaining safe, secure, compliant, and efficient operations. The increase in funding to Laboratory Operations will support the operations and maintenance of laboratories.

Impact on Performance (Relationship of Decrease to Strategic Goals)

The FY 2015 funding will increase Laboratory Facilities' ability to establish additional direct relationships between its researchers and customers across DHS and expand future funding mechanisms for its wide range of programs.

Department of Homeland Security
Science & Technology
Research, Development, Acquisitions, and Operations
Justification of Program Changes
(Dollars in Thousands)

Program Increase 2: Laboratory Construction
PPA: Laboratory Facilities
Program Increase: Positions 0, FTE 0, Dollars \$315,230

Funding Profile

	FY 2013 Revised Enacted			FY 2014 Enacted			FY 2015 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	-
Program Increase							-	-	315,230
Total Request	-	-	45,651	-	-	433,250	-	-	315,230

Description of Item

The increase provides funding for NBAF, which will replace PIADC as the Nation's first line of defense against Foreign Animal Diseases (FADs), as well as for critical infrastructure upgrades for PIADC.

Justification

ONL manages the Laboratory Facilities Programs. ONL provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations, and institutions, which can provide the knowledge and technology required to secure our homeland.

Construction and Upgrades – The Directorate requests \$315.230 million to oversee the planning, budgeting, and management of laboratory infrastructure construction and upgrade projects. Construction projects provide and maintain R&D capabilities to support the missions of the S&T Directorate, the Department, and other government agencies that have interrelated homeland security missions. The investments include the construction of future laboratories, where a current capability does not exist, and upgrades to extend the life and capabilities of present laboratory facilities. The increase in funding to Construction will fully fund the construction of the NBAF main laboratory and provide funding for the construction of the new wastewater thermal decontamination facility at PIADC.

NBAF Construction

The Directorate requests \$300 million for NBAF construction. NBAF will be a state-of-the-art bio-containment facility for the study of foreign animal, emerging and zoonotic (transmitted from animals to humans) diseases that threaten the U.S. animal agriculture and public health. It will provide and strengthen our Nation with critical capabilities to conduct research, develop vaccines and other

countermeasures, and train veterinarians in preparedness and response against these diseases. For the past 50 years, PIADC has served our Nation as the primary facility to conduct this research. However, PIADC is at the end of its lifecycle and needs to be replaced in order to meet U.S. research requirements and ensure the timely development of countermeasures in the event of an outbreak. NBAF meets that need and will serve as a replacement for the PIADC facility. Strategically, NBAF will boast of new and expanded capabilities, specifically, BSL-4 containment for the study of high-consequence diseases affecting large livestock and a biotechnology development module to expedite the licensure of vaccines.

PIADC Infrastructure Upgrades

The Directorate requests \$15.230 million for critical life and safety infrastructure upgrades at PIADC. Specifically, the construction of the new wastewater thermal decontamination facility is a high-priority project necessary to maintain capacity and safety at PIADC. The Directorate recently completed an engineering assessment to refine the estimate of PIADC infrastructure costs for FY 2014 and beyond. The assessment was risk-based to provide reliable and safe operations for at least 10 years while NBAF is constructed and certified.

Additionally, S&T has established a partnership with USDA to explore possible opportunities to transition non-FMD research from PIADC to other facilities, including Kansas State, before NBAF is opened, with the intent to minimize the load on the PIADC infrastructure and reduce the cost of out-year upgrades and operations.

Impact on Performance (Relationship of Increase to Strategic Goals)

The FY 2015 funding will increase Laboratory Facilities' ability to establish additional direct relationships between its researchers and customers across DHS and expand future funding mechanisms for its wide range of programs.

**Department of Homeland Security
Science & Technology
Research, Development, Acquisitions, and Operations
Justification of Program Changes**
(Dollars in Thousands)

Program Decrease 1: University Programs
PPA: University Programs
Program Decrease: Positions 0, FTE 0, Dollars \$(8,724)

Funding Profile

	FY 2013 Revised Enacted			FY 2014 Enacted			FY 2015 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	39,724
Program Decrease							-	-	(8,724)
Total Request	-	-	38,339	-	-	39,724	-	-	31,000

Description of Item:

Reduction of the Office of University Programs budget from \$39,724,000 to \$31,000,000, or a net decrease of \$8,724,000 would have several impacts on FY 2015 activities for the COEs. OUP does not anticipate any changes in its Minority Servings Institutions programs. Effects on the COEs would include:

1. S&T will re-compete COEs at a lower proposed funding level.
2. The decrease would reduce the number of research opportunities per year available through this program .

Justification:

Funding was realigned to support other R&D and capital needs within S&T.

Impact on Performance (Relationship to Strategic Goals):

This decrease will reduce the number of COEs that can be maintained at current operational levels and will impact the number of future competitions for COEs. This will also decrease OUP's ability to establish additional direct relationships between its researchers and customers across DHS .

Department of Homeland Security
Science & Technology
Research, Development, Acquisitions, and Operations
Justification of Program Changes
(Dollars in Thousands)

Program Decrease 2: Research, Development and Innovation
PPA: Research Development and Innovation
Program Decrease: Positions 0, FTE 0, Dollars \$(28,212)

Funding Profile

	FY 2013 Revised Enacted			FY 2014 Enacted			FY 2015 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	462,000
Program Decrease							-	-	(28,212)
Total Request	-	-	425,295	-	-	462,000	-	-	433,788

Description of Item:

Reduction of the Research, Development, and Innovation budget from \$462,000,000 to \$433,788,000, or a net decrease of \$28,212,000 would have several impacts on FY 2015 activities for the CBE Defense, Counter Terrorist, Cyber Security/Information Analytics, and First Responder/Disaster Resilience thrust areas.

Border Security – Net increase of \$7.244 million. Enhances security at our nation’s borders and waterways without impeding the flow of commerce.

CBE Defense – Net decrease of \$16.422 million. Detects, protects against, responds to, and recovers from chemical and biological incidents, and protects citizens and infrastructure from the devastating effects of explosives.

Counter Terrorist – Net decrease of \$11.981 million. Identifies individuals or groups that intend to conduct terrorist attacks or to illicitly move weapons, dangerous goods, and contraband.

Cyber Security/Information Analytics – Net decrease of \$3.244 million. Contributes to a safe, secure, and resilient cyber environment.

First Responder/Disaster Resilience – Net decrease of \$3.809 million. Expands first responder capabilities and improves their effectiveness, efficiency, and safety. Improves the nation’s preparedness for natural and man-made catastrophes.

Justification:

RD&I provides state-of-the-art technology and/or solutions to meet the needs of the operational Components of the Department and the first responder community. It includes customer-focused and output-oriented RDT&E programs that balance risk, cost, impact, and time to delivery. The six thrust areas of RD&I include: APEX; Border Security; CBE Defense; Counter Terrorist; Cyber Security/Information Analytics; First Responder/Disaster Resilience. The S&T Directorate will use available funding to conduct R&D in a manner that drives investments towards clear priorities, aids transparency and accountability, eliminates unwanted project redundancies and fragmentation, and effectively leverages other organizations' R&D investments.

Impact on Performance (Relationship to Strategic Goals):

The reduction in funding will impact the S&T Directorate's ability to meet the operational needs of DHS Components and first responders. Reductions will be in the following areas: Explosives Detection, Bioagent Threat Assessment, Hostile Behavior Predict and Detect, Identity Management, and Information Analysis. S&T will focus available resources on the projects most critical to DHS operating components and first responders.

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For necessary expenses for science and technology research, including advanced research projects, development, test and evaluation, acquisition, and operations as authorized by title III of the Homeland Security Act of 2002 (6 U.S.C. 181 et seq.), and the purchase or lease of not to exceed 5 vehicles [\$1,091,212,000] **\$941,671,000**, of which [\$543,427,000] **\$506,491,000**, to remain available until September 30, [2016] **2017**; and of which [\$547,785,000] **\$435,180,000**, to remain available until September 30, [2018] **2019**, solely for operation and construction of laboratory facilities.

Language Provision	Explanation
¹ ...[\$1,091,212,000] \$941,671,000...	Dollar change only. No substantial change proposed.
² ...[\$543,427,000] \$506,491,000...	Dollar change only. No substantial change proposed.
³ ... [2016] 2017...	Fiscal year change only. No substantial change proposed.
⁴ ... to remain available until...	Provides S&T with 3-year authority for the \$506,491,000 available for advanced research projects, development, test and evaluation, acquisition, and operations
⁵ ...[\$547,785,000] \$435,180,000...	Dollar change only. No substantial change proposed.
⁶ ... [2018] 2019...	Fiscal year change only. No substantial change proposed.
⁷ ... to remain available until...	Provides S&T with 5-year authority for the \$435,180,000 available solely for operation and construction of laboratory facilities

NATIONAL BIO-AND AGRO-DEFENSE FACILITY

1. Project Description, Justification, and Scope

The NBAF will be an integrated foreign animal and zoonotic disease research, development, and testing facility to support the complementary missions of DHS and the United States Department of Agriculture (USDA). Currently, some of this research occurs at Plum Island Animal Disease Center (PIADC), where researchers have contributed significantly to protecting against Foreign Animal Diseases (FAD) for the past 50 years. The Homeland Security Act of 2002 (Public Law 107-296) transferred the operation of the PIADC from USDA to DHS. DHS and USDA discussed a coordinated agricultural research strategy, as called for in the Homeland Security Act of 2002 and Homeland Security Presidential Directive 9 (HSPD-9), "Defense of United States Agriculture and Food (January 30, 2004)." These discussions revealed a capability gap that must be filled by an integrated research, development, test, and evaluation infrastructure for combating agricultural and public health threats

posed by FADs, emerging, and zoonotic diseases in livestock. The DHS Science and Technology (S&T) Directorate is responsible for addressing this gap.

Accordingly, DHS proposed building NBAF to bridge the capability gap and to comply with HSPD-9. Co-locating DHS with USDA's Animal and Plant Health Inspection Service – Veterinary Services and Agricultural Research Service at NBAF would increase capabilities in research, diagnostics, and responses to outbreaks in agricultural animals (i.e., cattle, swine, and sheep). NBAF will provide a domestic, modern, integrated high-containment facility that includes Biosafety Level (BSL)-2, BSL-3E, BSL-3Ag, and BSL-4 laboratories for an estimated 350 scientists and support staff to safely and effectively prevent the accidental or intentional introduction of animal diseases of high consequence into the United States.

PIADC, the current facility built in the 1950s, is nearing the end of its lifecycle, and does not contain the necessary BSL facilities to meet research requirements. NBAF would fulfill the need for a secure U.S. facility to support collaborative efforts among researchers from Federal and state agencies, academia, and international partners to perform necessary research to protect the agricultural economy and public health. Additionally, the NBAF mission supports the recommendations of the *Report of the Commission on the Prevention of Weapons of Mass Destruction (WMD) Proliferation and Terrorism (December 2008)*, which advises the U.S. to undertake a series of mutually reinforcing domestic measures to prevent agro and bioterrorism.

NBAF Space Justification – NBAF will satisfy the requirements identified in HSPD-9 by providing an integrated facility for studying foreign animal and zoonotic diseases. The existing animal holding, laboratory, training, and support spaces at PIADC present challenges for scientists and building operators since they are inefficiently designed and not designed to modern bio-containment standards. Major limitations exist in the ability to conduct large-animal research trials necessary for assessing and countering emerging threats and developing necessary vaccines. NBAF will be designed to maximize laboratory space and research efficiencies while providing state-of-the-art technologies that meet modern bio-containment standards.

NBAF will have approximately 176,000 net square feet and 574,000 gross square feet, which includes the necessary support space to safely operate and maintain NBAF at the various biosafety levels. Foot and Mouth Disease research requires BSL-3Ag laboratory space while zoonotic disease research requires BSL-4 laboratory space. The overall space is broken out as follows:

Space	NSF
Office/Support	63,500
BSL-2	9,700
BSL-3	81,100
BSL-4	13,400
Vaccine Prod.	8,300
	176,000
NBAF GSF	574,000

2. Significant Changes

Description of Item

The FY 2015 program change reflects an increase of \$300.000 million for construction of the NBAF main laboratory building and associated support infrastructure. The State of Kansas will provide an additional \$202.000 million in gift funds that, when combined with the 2015 request and previously appropriated amounts, will fully fund the construction contract award.

Justification

The \$300.000 million will provide the funding for the construction of the NBAF main laboratory that will provide an integrated animal, foreign animal, and zoonotic disease research, development, and testing facility to support the complementary missions of DHS and USDA. NBAF will replace PIADC and provide additional capabilities in state-of-the-art research, development, testing, and evaluation infrastructure to conduct research on high-consequence zoonotic (i.e., transmitted from animals to humans) diseases that could be a threat to public health. Expanded capabilities from the existing PIADC mission will allow NBAF to address a broader and more complete spectrum of threats. Research and development at NBAF will additionally address multiple threats/vulnerabilities related to bio- and agro-attacks and improve our understanding of potential agro-terrorism such as employing foreign animal and zoonotic disease pathogens against U.S. targets.

FY 2013 Accomplishments

For FY 2013, the S&T Directorate took ownership of the NBAF land in the State of Kansas and awarded the construction of the central utility plant (CUP). The scope of the construction of the CUP includes mass site excavation, foundations, substructure, superstructure, utility rough-ins, and installation of mechanical equipment.

FY 2014 Accomplishments

In FY 2014, construction of the CUP continues and major construction milestones include installing major equipment (boilers, chillers, generators) and completing a weather-tight exterior.

FY 2015 Accomplishments

In FY 2015, the S&T Directorate will award the construction of the NBAF main laboratory. The construction activities will primarily include foundation and structural work for the laboratory facility and early procurement of major mechanical systems and equipment. The \$300.000 million will provide funding for the construction of the NBAF main laboratory facility as well as construction administration activities, site security, and procurement support. Once this award is made, the construction contractor will mobilize to the site and begin laboratory construction activities. The CUP construction will be 98% complete by the end of FY 2015.

3. Project Schedule and Current Cost Estimate (Dollars in Thousands)

NBAF Project Milestones	Fiscal Quarter and Year				Total Estimated Completion Cost (\$000)	Total Project Cost (\$000)
	Work Initiated	Work Completed	Physical Construction Start	Physical Construction Complete		
Management and Procurement Support	1Q FY 2005	3Q FY 2021			38,200	38,200
Planning and Studies (including site selection, EIS, risk assessments, Mission Need Assessment)	2Q FY 2006	4Q FY 2012			14,900	14,900
Technical Services (including pre-design and pre-construction services, cost estimating, title services, site security)	3Q FY 2009	3Q FY 2021			34,100	34,100
Facility Detailed Design	4Q FY 2009	4Q FY 2012			78,700	78,700
Existing Infrastructure and Utility Improvements ⁽¹⁾	2Q FY 2010	3Q FY 2013			26,600	26,600

Construction Support Services (including construction administration and materials testing)	4Q FY 2010	3Q FY 2021			41,600	41,600
Physical Construction-CUP (Construction)			2Q FY 2013	1Q FY 2016	80,200	80,200
Physical Construction-Lab Facility (Construction)			3Q FY 2015	1Q FY 2021	911,800	911,800
Commissioning (for both CUP and Lab Facility)			3Q FY 2015	3Q FY 2021	9,200	9,200
Total					\$1,250,300	\$1,250,300

PIADC D&D Project Durations	Work Initiated	Work Completed	Physical Construction Start	Physical Construction Complete	Total Estimated Completion Cost (\$000)	Total Project Cost (\$000)
-----------------------------	----------------	----------------	-----------------------------	--------------------------------	---	----------------------------

Preliminary Planning & Development	2Q FY 2009	4Q FY 2016			5,000	5,000
Management	3Q FY 2016	4Q FY 2023			25,000	25,000
Transition ⁽²⁾	1Q FY 2017	4Q FY 2023			90,000	90,000
Closure Activities ⁽³⁾	2Q FY 2021	4Q FY 2023			70,000	70,000
Total					190,000	190,000
Grand Total NBAF Construction + PIADC Transition/D&D					\$1,440,300	\$1,440,300

(1) Funded through in-kind contributions that will be executed by Kansas State University.

(2) PIADC Transition/D&D is based on preliminary estimates and is subject to change.

(3) PIADC closure activities costs may be partially offset by the sale of Plum Island.

4. Schedule of Project Funding (Dollars in Thousands)

	Prior	FY 2013	FY 2014	FY 2015	FY 2016-2021 ⁽³⁾	Total ⁽³⁾
Fund Source						
Appropriation	203,600	30,700	404,000	300,000		938,300
Kansas In-Kind Contribution ⁽¹⁾	40,700	40,000		231,300		312,000
Obligations (Planned)						
S&T – Obligation	163,500	11,800	4,200	707,800	51,000	938,300
Kansas In-Kind – Obligation	40,700	40,000		231,300		312,000
Expenditures (Planned)						
S&T – Expenditure	119,900	7,800	35,000	73,000	702,600	938,300
Kansas In-Kind – Expenditure	30,800	5,200	5,000	50,000	221,000	312,000
Total	150,700	13,000	40,000	123,000	923,600	1,250,300
NBAF Project Expenditures ⁽²⁾						
Management and Procurement Support	12,700	200	3,000	2,800	19,500	38,200
Planning and Studies (including site selection, EIS, risk assessments, Mission Need Assessment)	14,400	500				14,900
Technical Services (including pre-design and pre-construction services, cost estimating, title services, site security)	16,000	1,900	2,300	2,000	11,900	34,100
Facility Detailed Design	76,600	2,100				78,700
Existing Infrastructure and Utility	15,000	4,400		5,200	2,000	26,600

Improvements						
Site Preparation	14,500	500				15,000
Construction Support Services (including construction administration and materials testing)	1,500	500	1,200	2,000	36,400	41,600
Physical Construction-CUP (Construction) – Gift Funds		2,900	33,500	43,300	500	80,200
Physical Construction-Lab Facility (Construction)				66,500	845,300	911,800
Commissioning (for both CUP and Lab Facility)					9,200	9,200
Total NBAF Project Expenditures	150,700	13,000	40,000	123,000	923,600	1,250,300
PIADC Transition/D&D⁽³⁾					190,000	190,000
Grand Total NBAF + PIADC Transition/D&D	\$150,700	\$13,000	\$40,000	\$123,000	\$1,113,600	\$1,440,300

- (1) In addition to appropriations, the State of Kansas offered DHS gift funding of \$110.000 million to offset construction costs for the NBAF as part of its site offer package. To further support NBAF construction, the State of Kansas and DHS have formalized a Memorandum of Agreement which will provide up to \$202.000 million in additional gift funds. DHS will not receive the entire amount of gift funding directly, as portions are managed as in-kind contributions.
- (2) Expenditures include Kansas gift funds and in-kind contributions.
- (3) PIADC Transition/D&D is based on preliminary estimates and is subject to change.

5. Cost Estimate Detail and Changes

The FY 2014 Consolidated Appropriations Act provides \$404.000 million for NBAF construction without incremental funding authority. Therefore construction of the main laboratory will be delayed until FY 2015 when DHS will request an additional \$300.000 million to continue construction with the award of the laboratory construction contract.

6. Method of Performance

The NBAF project consists of three phases: design; site preparation and CUP construction; and NBAF building construction. For accountability and in accordance with sound project management principles, the program management team will track all of the project's activities in an organizational work breakdown structure (WBS) to manage cost, scope, and schedule. The S&T Directorate's Office of National Laboratories (ONL), DHS Federal Law Enforcement Training Center (FLETC) Bio-containment Branch, the Construction Contractor (known as the Construction Manager as Contractor (CMc)), and the Architecture and Engineering (A/E) team will form the integrated project team and will coordinate inputs into the WBS. The project execution plan includes the following components:

- Program Organizational Structure

- Contract Administration Oversight
- Quality Assurance
- Status and Cost Reporting
- Communications with Stakeholders
- Cross-Task Linkages
- Risk Management
- Cost Controls

A robust, well-integrated plan that includes a WBS is an essential ingredient in effective project management and will provide the source data for internal and external reporting requirements. Such a plan provides a detailed blueprint for project execution and facilitates project coordination, control, reporting, and communications between team components, and all stakeholders.

The FLETC Bio-containment Procurement Branch (FLETC-BPB) will provide day-to-day management and execution of the NBAF design and construction activities and will lead an experienced team of contracting officers, technical managers, and procurement specialists. The NBAF Project Management Office (PMO) will provide analytical and management support and maintain constant communication and coordination among the project team members, cooperating agencies, stakeholders, regulatory agencies, senior leaders, and other local and regional interests. Project communication will occur both internally and externally. Additionally, the ONL Director and NBAF Project Director may establish other critical interfaces throughout the development process.

The NBAF Project Director and the PMO will implement project controls, address reporting requirements, and produce documents to support this project. Project controls include an integrated project schedule, earned value management (EVM) system, and project communication portal. The EVM will effectively integrate the project's scope, schedule, and cost elements to assess and optimize project planning and performance. The NBAF project will meet all reporting requirements.

The NBAF Steering Committee, consisting of individuals from the integrated project team, will execute the NBAF Risk Management Plan. The Committee will identify, manage, track, and control risks in order to minimize adverse impacts that would jeopardize mission success.

The Acquisition Strategy for NBAF includes the involvement of a CMc early in the design process, prior to actual construction. This approach improves the project decision-making framework, resulting in a blended perspective on the design and associated construction cost estimates. The CMc and A/E participated in cost reconciliation exercises to maximize the reliability of the construction cost estimates.

7. Related Annual Funding Requirements

Once operational, the estimated annual operating and support cost for NBAF is approximately \$68.000 million (beginning in FY 2024) and is based on the current program cost model. This figure includes research costs, operating and maintenance (O&M) costs, utilities, and DHS staffing costs. Annual operating costs will be refined as more information becomes available during

8. Budget Allocation to Programs

Program	Allocated Budget (\$000)	
	FY 2014	FY 2015
Laboratory Facilities	\$404,000	\$300,000
Total	\$404,000	\$300,000

9. Compliance with applicable Public Laws, Regulations, Standards and Executive Orders

Identify and certify compliance with all applicable laws, regulations, standards, and executive orders to this project.

- DHS, in coordination with USDA, is fulfilling requirements from HSPD-9: *Defense of the United States Agriculture and Food* (January 2004) by constructing the NBAF to replace the PIADC.
- The FY 2006 Appropriations House Report directed S&T to pursue NBAF:
 - The Committee recognized that the PIADC facility would need to be replaced in the near future and that other potential locations needed to be explored.
 - NBAF will provide safe, secure, and state-of-the-art agriculture biocontainment laboratories that research and develop diagnostic capabilities for foreign animal and zoonotic diseases. It will house BSL-3 and -4 laboratories. There is currently no BSL-4 lab for livestock in the United States.
- DHS completed a 3-year, multi-agency competitive site selection process including an EIS assessing the impacts of accidental release of foot-and-mouth disease on the mainland.
- DHS and USDA evaluated the existing Biosecurity Research Institute at Kansas State University during the design phase and found that the use of this facility may be appropriate to offset some transition costs.
- Final security requirements and design criteria may affect construction costs.
- The FY 2010 Appropriations language (H.R. 2892, Section 540) directs that should the DHS Secretary determine that Plum Island will not be the future site of NBAF, the Secretary will have the GSA Administrator sell Plum Island's real and related personal property along with transportation assets supporting PIADC operations through public sale. Gross proceeds from the sale will be available in an offsetting account of the S&T Directorate's RDA&O appropriation to offset site acquisition, NBAF construction, and related costs including due diligence requirements necessary to remediate Plum Island.
- The FY 2010 Appropriations directed DHS to complete a site-specific Bio Safety and Bio Security Risk Assessment followed by the National Academies of Science review prior to beginning construction. DHS completed this assessment in FY 2010.
- The FY 2011 Appropriations directed DHS to complete an updated site-specific Bio Safety and Bio Security Risk Assessment followed by the National Academies of Science review prior to beginning construction. DHS completed this assessment in FY 2012.
- The FY 2012 Appropriations direct DHS to complete a construction plan and schedule. DHS provided this plan, entitled NBAF Construction Plan Update," to Congress on August 16, 2013.

Prior to passage of the Food, Conservation, and Energy Act of 2008 (H.R. 6124 [2008 Farm Bill]) which became law on May 22, 2008, the United States Code (21 U.S.C. Section 113a) stipulated that live foot-and-mouth disease virus (FMDV) could not be studied on the U.S. mainland unless the Secretary of Agriculture made a determination that such study was necessary and in the public interest and issued a permit for such research to be conducted on the mainland. Section 7524 of the 2008 Farm Bill directs the Secretary of Agriculture to issue a permit to the Secretary of Homeland Security for work on the live FMDV at any facility that is a successor to PIADC and charged with researching high-consequence biological threats involving zoonotic and FADs. The permit is limited to a single successor facility. On December 18, 2008, Michael Chertoff, the Secretary of Homeland Security, sent a letter to Ed Schafer, the Secretary of Agriculture, requesting that USDA issue a permit if the evaluation process selects a mainland site. On January 9, 2009, DHS received a letter from Secretary Schafer that affirmed USDA's intention of complying with congressional direction to issue a permit for the movement and use of live FMDV at the NBAF.

University Programs Mission Statement

Supports critical homeland security-related research and education at U.S. colleges and universities to address high-priority DHS-related issues and to enhance homeland security capabilities over the long term. The three thrust areas of University Programs include: Centers of Excellence, Education, and Minority Serving Institutions.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
41.0 Grants, Subsidies, and Contributions	\$36,345	\$37,793	\$29,069	(\$8,724)

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. This includes funding provided to Centers of Excellence (COEs), homeland security related science, technology, engineering and mathematics (HS-STEM) Career Development Grants, and Minority Serving Institutions (MSI) Leadership Grants. The decreases in funding are for Centers of Excellence.

32.0 Land and Structures	45,651	433,250	315,230	(118,020)
Total, Other Object Classes	139,160	528,672	415,700	(112,972)
Adjustments	-	-	-	-
Unobligated Balance, start of year	-	-	-	-
Unobligated Balance, end of year	-	-	-	-
Recoveries of Prior Year Obligations	-	-	-	-
Total Requirements	158,083	547,785	435,180	(112,605)
Full Time Equivalents	128	130	130	-

Laboratory Facilities Mission Statement

Manages the Laboratory Facilities programs. The Office of National Laboratories (ONL) provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations and institutions, which can provide the knowledge and technology required to secure our homeland. ONL executes two programs: Construction and Laboratory Operations.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	13,512	13,702	13,893	191
11.7 Military Personnel	1,561	1,561	1,561	-
12.1 Civilian Personnel Benefits	3,850	3,850	4,026	176
Total, Salaries & Benefits	18,923	19,113	19,480	367

Salaries and Benefits includes costs for FTEs located at DHS S&T-operated laboratories. The 2015 pay increase of 1% and increased retirement contribution are also included.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.4 Operation and Maintenance of Facilities	\$48,384	\$50,475	\$55,523	\$5,048

Operation and maintenance of facilities provides normal daily operations of PIADC, NUSTL, TSL, and NBACC. The costs include maintenance and repair of buildings and land.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
32.0 Land and Structures	\$45,651	\$433,250	\$315,230	(\$118,020)

Land and Structures provides costs for construction and capital improvement activities.

BUDGET REQUEST AND SUPPORTING INFORMATION

Domestic Nuclear Detection Office Management and Administration

I. Appropriation Overview

A. Mission Statement for Management and Administration:

The Domestic Nuclear Detection Office (DNDO) was established by National Security Presidential Directive (NSPD)-43 and Homeland Security Presidential Directive (HSPD)-14 to protect against radiological and nuclear (rad/nuc) attacks directed against the United States or its interests. Title V of the Security and Accountability for Every Port Act of 2006 (SAFE Port Act of 2006, P.L. 109-347) directs DNDO to serve as the primary entity of the United States Government (USG) to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop, or use an unauthorized nuclear explosive device, fissile material, or radiological material in the United States, and to improve that system over time.

The Nuclear Forensics and Attribution Act of 2010 codified the mission of the National Technical Nuclear Forensics Center (NTNFC) within DNDO and included specific requirements to lead the development and implementation of the National Strategic Five-Year Plan for Improving U.S. Nuclear Forensic and Attribution Capabilities and to establish a National Nuclear Forensics Expertise Development Program to address the workforce pipeline needs in nuclear forensics. The NTNFC provides the technical capability to determine the origin and nature of nuclear or radiological attacks, interdicted source materials, and devices to support national priorities for deterrence, attribution, and prosecution.

To fulfill the mandates of the authorizing legislation and directives, DNDO's activities are focused on developing and implementing a Global Nuclear Detection Architecture (GNDA) and advancing technical nuclear forensics capabilities through the National Technical Nuclear Forensics (NTNF) program. Together, the GNDA and NTNF work to strengthen prevention and deterrence by detecting weapons and rad/nuc materials that are out of regulatory control,¹ enabling the identification and closure of illicit radiological and nuclear trafficking networks, promoting nuclear security, and deterring potential adversaries by increasing their perceived risk of failure and the prospect of being held accountable for planned and executed attacks.

The Management and Administration (M&A) appropriation provides for the support to accomplish the DNDO mission. M&A includes all costs related to Federal personnel (including detailees from other organizations), supplies and materials, and information technology (IT) equipment and support, as well as financial management support. DNDO also contributes M&A funds to the DHS Working Capital Fund (WCF) for facilities, other infrastructure and security costs, human resource support, acquisition support, IT services, training, and travel costs. Most of DNDO's contributions to the DHS WCF are included within the M&A request with the exception of procurement support costs, and the costs for hosting of the Joint Analysis Center Collaborative Information System at the DHS Datacenter.

¹ The term "out of regulatory control" refers to materials that are being imported, possessed, stored, transported, developed, or used without authorization of the appropriate regulatory authority, either inadvertently or deliberately.

B. Budget Activities:

PPA	STRATEGIC OBJECTIVE
	Provide managerial and administrative support to accomplish the DNDO mission.
Management and Administration	To enable DNDO to conduct the technical programs involved with rad/nuc detection and forensics capability development, this account provides management and administrative support resources. Funding for Federal salaries and expenses, as well as other administrative that support these efforts, are part of the appropriation.

The DNDO FY 2015 request for M&A provides for 127 full-time positions (FTP) and 127 full-time equivalents (FTE), of which approximately 12 are detailees. As a jointly staffed office with personnel from across the Federal Government, DNDO provides reimbursement to parent organizations for detailed staff.

DNDO anticipates completing the transition to an integrated acquisition, asset, and financial management solution in FY 2015 that will address inefficiencies and duplicative work in its current business operations. With support from the DHS Under Secretary of Management, Office of the Chief Financial Officer, and Office of the Chief Procurement Officer, DNDO will begin the transition process in FY 2014. This transition will provide DNDO with a fully integrated solution to enable more efficient processes, improved reporting and controls over financial management operations, and will ensure accurate and timely reporting.

C. Budget Request Summary:

The Domestic Nuclear Detection Office requests \$37.494 million and 127 FTE within M&A for FY 2015.

.

III. Current Services Program Description by PPA

**Department of Homeland Security
Domestic Nuclear Detection Office
Management and Administration
Program Performance Justification**
(Dollars in Thousands)

PPA: Management and Administration

	Perm. Pos	FTE	Amount
2013 Revised Enacted	130	130	37,740
2014 Enacted	127	127	37,353
2015 Adjustments-to-Base	-	-	141
2015 Current Services	127	127	37,494
2015 Total Request	127	127	37,494
Total Change 2014 to 2015	-	-	141

DNDO requests \$37.494 million and 127 FTE within M&A for FY 2015.

Adjustments-to -base include:

- Increase of \$0.580 million for WCF adjustment
- Increase of \$0.053 million for annualization of 2014 pay raise
- Increase of \$0.155 million for 2015 pay increase
- Increase of \$0.627 million for GSA rent
- Increase of \$0.034 million for Increased Retirement Contributions
- Decrease of \$1.308 million for Operating Expenses

Management & Administration

Program	Project	Level of Effort	General Description
Operating Expenses	Business Operations	Ongoing	Provides support for financial management systems and services, IT, events, supplies, security, accounting operations, reception and representation, professional development, and travel management.
	DHS Shared Expenses (WCF)	Ongoing	Includes fee-for-service, Governmentwide mandated service activities, DHS crosscutting activities, and WCF management activities.

	Facility Management	Ongoing	Supports operation and maintenance of equipment, appliance replacement and repair, storage services, building services and utilities, and preventative facility maintenance.
Work Force	Human Resources	Ongoing	Includes personnel, compensation, and benefits for Federal employees and reimbursable detailees, as well as support for DHS's Balanced Workforce Strategy, and annual performance awards.

CURRENT SERVICES PROGRAM DESCRIPTION:

The M&A appropriation funds the administration of DNDO and provides for the execution of salaries, benefits, and expenses related to 127 FTE. Additionally, funds are provided to the WCF, which provides such services as rent, acquisition support from OPO, and IT infrastructure support.

As stated previously, DNDO anticipates completing the transition to an integrated acquisition, asset and financial management solution in FY 2015 that will address inefficiencies and duplicative work in our current business operations. Efforts made in previous years to improve transparency in all aspects of financial management operations, from formulation through execution, will be greatly enhanced with an integrated solution.

In addition to providing funding for Federal salaries and benefits for DNDO personnel, M&A funds support detailees from other DHS Components and from other Federal agencies such as Department of Energy, the Federal Bureau of Investigation, the Department of Defense, and the Nuclear Regulatory Commission.

The M&A appropriation also supports the following:

- DNDO Professional Development Program – Upgrades employees' knowledge, skills, and abilities and supports required certifications and training. This program supports individual development plans, departmental requirements, and DNDO's need to employ and retain skilled personnel.
- Facilities – Provides day-to-day building and maintenance services, utilities, security upgrades, document destruction service, moving services, furniture repair and replacement, and any additional services that directly support the physical work environment.
- Information Technology – Includes all IT services not directly procured through the WCF such as maintenance support, printing supplies, video conferencing equipment, operations and maintenance of the secure network, and database management applications such as SharePoint.
- Official Reception and Representation – Provides a small amount of funding to host official events and extend official courtesies on behalf of DHS, within the limitations established by Congress.
- DNDO Accounting Systems and Services – Provides funding for support systems and services for operations and maintenance of financial management solution. Includes support services to provide compensating controls to ensure financial data integrity.

The M&A appropriation provides funding that assists in the achievement of DNDO's mission through the following leadership and administrative elements:

Office of the Director

- **Director's Office**

The Director's Office supports the Director in disseminating information and communicating the DNDO vision, plans, strategies, and activities to partners including DHS Components, other Executive Branch agencies, Congress, international partners, and the American public. Communications and policy support for the Director and Deputy Director include coordination of DNDO messaging and external affairs and associated preparation of materials (papers, responses, speeches, testimony, fact sheets, briefings, etc.), as appropriate.

- **Budget and Finance Office**

DNDO's Office of the Chief Financial Officer oversees financial management activities including budget planning and formulation, budget execution, internal controls, data management, and performance-based budgeting.

- **Office of the Assistant General Counsel**

The Office of the Assistant General Counsel serves as primary advisor to DNDO regarding legal issues arising under all aspects of the DNDO mission. This includes advising on the scope of authority of DNDO, procurement contracts, assistance agreements, claims, protests, litigation, ethics, privacy, and other areas. In addition, the office serves as liaison between DNDO and the DHS Headquarters Office of the General Counsel. In FY 2013, DNDO absorbed support for one position previously provided as onsite support from the Office of General Council.

- **Red Team and Net Assessments (RTNA)**

RTNA serves as DNDO's primary means to assess the operational effectiveness and performance of DNDO programs and deployed rad/nuc detection capabilities at the Federal, State, local, and tribal levels in support of the GNDA.

Office of the Chief of Staff

- **Information Technology**

Provides oversight of and leads DNDO IT initiatives and programs and coordination with the Office of the Chief Information Officer.

- **Executive Secretariat**

Collaborates within DNDO and with other Component Executive Secretariats to ensure full compliance with and cross-coordination for tasks assigned to DNDO. Coordinates internally generated tasks, ensuring timely response.

- **Security**
Implements, directs, and manages the following programs for DNDO: Counterintelligence, Information Security, Foreign Disclosure, Operations Security, Physical Security, Personnel Security, Anti-Terrorism/Force Protection, and Crime Prevention.
- **Human Resources**
Executes the functions of the Human Resources Officer and ensures the provision of a variety of human capital services in support of DNDO personnel in accordance with DHS Chief Human Capital Office requirements. This includes overseeing recruitment, staffing, performance management, professional development, and employee relations.
- **Administration and Facility Resources**
Oversees and provides various administrative support services pertaining to general office operations, facilities, purchase cards, travel, and records management.

M&A also provides support to the Directorates operating within the organizational structure of DNDO. The functions of each Directorate include:

- **Architecture and Plans Directorate (APD)**
In cooperation with DNDO's intra- and interagency partners, APD develops the GNDA strategies and plans for improving the Nation's ability to detect and prevent rad/nuc attacks. APD also identifies, coordinates, and prioritizes programs across DNDO that meet the needs and enhance the capabilities of stakeholders, thereby reducing the risk of rad/nuc terrorism.
- **National Technical Nuclear Forensics Center (NTNFC)**
Provides national-level integration, centralized planning, and stewardship for the technical nuclear forensics community and leads the USG efforts in establishing a robust and enduring pre-detonation nuclear materials forensics capability.
- **Operations Support Directorate (OSD)**
OSD provides the capability to monitor the status of GNDA resources and provides the information sharing and analytical capability necessary to support decision makers. OSD also fosters standard-based training, exercises, outreach, and technical assistance in support of rad/nuc detection programs, fulfilling GNDA goals among Federal, State, local, and tribal partners.
- **Product Acquisition and Deployment Directorate (PADD)**
Carries out the engineering development, production, logistics, procurement, and deployment of current and next-generation nuclear detection systems in support of DNDO's end-user partners, including U.S. Customs and Border Protection, the United States Coast Guard, and the Transportation Security Administration.

- **Systems Engineering and Evaluation Directorate (SEED)**
Characterizes and evaluates technical solutions for rad/nuc detection and ensures that systems are thoroughly tested prior to deployment. SEED also maintains DNDO's test infrastructure and works to develop standards for rad/nuc detection equipment.
- **Transformational and Applied Research Directorate (TARD)**
Through an aggressive and expedited research and development program, TARD develops break-through technologies that will address gaps in the GNDA and will have a positive impact on capabilities to detect nuclear threats.

IV. Program Justification Changes

N/A

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For salaries and expenses of the Domestic Nuclear Detection Office, as authorized by title XIX of the Homeland Security Act of 2002 (6 U.S.C. 591 et seq.), for management and administration of programs and activities, [\$37,353,000] \$37,494,000¹: Provided, That not to exceed \$2,250 shall be for official reception and representation expenses. Provided further, That not later than 120 days after the date of enactment of this Act, the Secretary of Homeland Security shall submit to the Committees on Appropriations of the Senate and the House of Representatives a strategic plan of investments necessary to implement the Department of Homeland Security's responsibilities under the domestic component of the global nuclear detection architecture that shall:

- (1) define the role and responsibilities of each Departmental component in support of the domestic detection architecture, including any existing or planned programs to pre-screen cargo or conveyances overseas;
- (2) identify and describe the specific investments being made by each Departmental component in fiscal year [2014] 2015² and planned for fiscal year [2015] 2016³ to support the domestic architecture and the security of sea, land, and air pathways into the United States;
- (3) describe the investments necessary to close known vulnerabilities and gaps, including associated costs and timeframes, and estimates of feasibility and cost effectiveness; and
- (4) explain how the Department's research and development funding is furthering the implementation of the domestic nuclear detection architecture, including specific investments planned for each of fiscal years [2014] 2015⁴ and [2015] 2016⁵.

Explanation of Changes:

Language Provision	Explanation
¹ ...[\$37,353,000] <u>\$37,494,000</u> ...	Dollar change only. No substantial change proposed.
² ... [2014] <u>2015</u> ...	Fiscal year change only. No substantial change proposed.
³ ... [2015] <u>2016</u> ...	Fiscal year change only. No substantial change proposed.
⁴ ... [2014] <u>2015</u> ...	Fiscal year change only. No substantial change proposed.
⁵ ... [2015] <u>2016</u> ...	Fiscal year change only. No substantial change proposed.

Management and Administration Mission Statement

Per the National Security Presidential Directive (NSPD) 43 / Homeland Security Presidential Directive (HSPD) 14, the mission of Domestic Nuclear Detection Office (DNDO) is to substantially reduce the risk of nuclear terrorism against the United States by continuously improving capabilities to deter, detect, respond to, and attribute attacks, in coordination with domestic and international partners. The M&A appropriation provides for the management and administrative support of that goal. M&A includes all costs related to Federal personnel, including detailees from other organizations. The M&A appropriation accounts for the funding that assists in the achievement of DNDO's mission through the maintenance of an operations level that provides facilities, supplies and materials, IT equipment and administrative support. Most of DNDO's contributions to the DHS Working Capital Fund are included within the M&A request.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
11.1 Full-time Permanent	15,048	16,130	16,841	711
11.5 Other Personnel Compensation	158	445	200	(245)
12.1 Civilian Personnel Benefits	5,620	3,989	4,165	176
Total, Salaries & Benefits	20,826	20,564	21,206	642

The FY 2015 request is \$21,206,000 for personnel compensation and benefits. The FY 2015 request for Management and Administration includes funding for a staffing level of 127 FTEs.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
21.0 Travel and Transportation of Persons	\$2	\$51	\$100	\$49

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2015 request is \$100,000.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
23.1 Rental Payments to GSA	\$5,214	\$4,671	\$5,298	\$627

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2015 request is \$5,298,000. Factored into the GSA cost is the rental of space through GSA to accommodate DNDO office requirements at a secondary location in Washington D.C.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
24.0 Printing and Reproduction	\$0	\$15	\$20	\$5

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2015 request is \$20,000.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.1 Advisory and Assistance Services	\$1,573	\$1,229	\$1,046	(\$183)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc) as well as from other units within the Federal Government. The decrease in advisory and assistance services reflects a shift in the allocation of DNDO's resources in support of the Financial, Acquisition, Asset Management Solution Project. The FY 2015 request is \$1,046,000.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.2 Other Services from Non-Federal Sources	\$386	\$269	\$174	(\$95)

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25 including training development and delivery. The FY 2015 request is \$174,000.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.3 Other Goods and Services from Federal Sources	\$8,784	\$9,908	\$8,920	(\$988)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. Included in the budget request is an allocation of funding to support the Financial, Acquisition, Asset Management Solution Project with a new integrated management system. The FY 2015 request is \$8,920,000.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.7 Operation and Maintenance of Equipment	\$183	\$239	\$385	\$146

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2015 request is \$385,000.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
26.0 Supplies and Materials	\$207	\$305	\$146	(\$159)

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2015 request is \$146,000.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
31.0 Equipment	\$565	\$102	\$199	\$97

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2015 request is \$199,000.

K. DHS Balanced Workforce Strategy

In order to establish a high performing workforce comprised of a strong internal core of Federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment the Department will realign contractor and/or Federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with Federal employees to better realize the full potential of our total workforce – both contracted and Federal. A strong internal core of Federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into Tiered ranking. The results of Tier 1 contract review are listed below. The results of the lower-priority contracts will post-date this budget submission and will be included in the FY 2015 budget.

Appropriation	FY 2013			FY 2014			FY 2015	
	Govt. FTPs		Contract Staff	Govt. FTPs		Contract Staff	Govt. FTPs	Contract Staff
	Filled	Vacant		Filled	Vacant			
Management & Administration	126	4	12	127			127

BUDGET REQUEST AND SUPPORTING INFORMATION

Domestic Nuclear Detection Office Research, Development, and Operations

I. Appropriation Overview

A. Mission Statement for Research, Development and Operations:

The Domestic Nuclear Detection Office (DNDO) was established by National Security Presidential Directive (NSPD)-43/Homeland Security Presidential Directive (HSPD)-14 to protect against radiological and nuclear (rad/nuc) threats directed against the United States or its interests. Title V of the Security and Accountability for Every Port Act of 2006 (SAFE Port Act of 2006) (P.L. 109-347) directs DNDO to “serve as the primary entity of the United States Government (USG) to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop, or use an unauthorized nuclear explosive device, fissile material, or radiological material in the United States, and improve that system over time.”

The Nuclear Forensics and Attribution Act of 2010 (P.L. 111-140) codified the mission of Nuclear Forensics (NF) within DNDO and included specific requirements to lead the development and implementation of the National Strategic Five-Year Plan for Improving the Nuclear Forensics and Attribution Capabilities of the United States and to establish a National Nuclear Forensics Expertise Development Program (NNFEDP) to address the workforce pipeline needs in nuclear forensics. In addition to serving as the integrator for the USG nuclear forensics community, NF develops the technical capability to determine the origin and nature of rad/nuc materials to support national priorities for deterrence, attribution, and prosecution.

To fulfill its mandates, DNDO’s activities are focused on developing the Global Nuclear Detection Architecture (GNDA) and implementing its domestic component and advancing technical nuclear forensics capabilities through the NF program. Together, the GNDA and NF work to strengthen the detection of rad/nuc materials that are out of regulatory control,¹ enabling the identification and closure of illicit radiological and nuclear trafficking networks, promoting nuclear security, and deterring potential adversaries by increasing their perceived risk of failure and the prospect of their facilitators being held accountable for planned and executed attacks.

To be effective, the GNDA requires close coordination between Federal, State, local, tribal, private sector, and international partners. DNDO has been charged with the role of coordinating the development of the GNDA among the USG partners. In December 2010, DNDO delivered the GNDA Strategic Plan 2010 to Congress. This interagency product is designed to guide the Nation’s nuclear terrorism detection capacity and capability development over the next five years. The GNDA incorporates detector systems, telecommunications, and personnel, with the supporting information exchanges, programs, and protocols that serve to detect, analyze, communicate, and coordinate on

¹ The term “out of regulatory control” refers to materials that are being imported, possessed, stored, transported, developed, or used without authorization of the appropriate regulatory authority, either inadvertently or deliberately.

rad/nuc materials that are out of regulatory control. DNDO seeks to make nuclear terrorism prohibitively difficult for our adversaries through the implementation of an architecture that is responsive to intelligence cues and relies on effective detection technologies in the hands of well-trained law enforcement officers and public safety officials.

Through the implementation of the NNFEDP and the National Strategic Five-Year Plan for Improving the Nuclear Forensics and Attribution Capabilities of the United States, DNDO is striving to advance NF capabilities to hold fully accountable any State, terrorist group, or other non-State actor that enables terrorist efforts to obtain or use weapons of mass destruction.

Research, Development, and Operations (RD&O) requests funds to advance technology development, testing, product acquisition, red team and net assessments required for GNDA implementation, and technical capabilities to support deterrence, attribution, and prosecution via NF.

B. Budget Activities:

PPA Overview

DNDO's activities are focused on achieving several strategic objectives related to DHS's overall security missions and preventing nuclear terrorism. The following tables align DNDO's PPAs with six strategic objectives:

- Coordinate USG efforts to develop and enhance the GNDA
- Develop, acquire, and support domestic nuclear detection and reporting capabilities
- Characterize detector system performance
- Facilitate situational awareness through information sharing and analysis
- Advance research and development for radiation and nuclear detection and technical nuclear forensics technologies and capabilities
- Provide centralized planning, integration, and advancement of U.S. Government (USG) nuclear forensics programs

PPAs	STRATEGIC OBJECTIVE
	Coordinate USG efforts to develop, evaluate, and enhance the GNDA
Systems Architecture	<p>At the core of all DNDO detection activities is the systems architecture function: determining gaps and vulnerabilities and then formulating recommendations and plans to mitigate them. DNDO organizes and facilitates collaborative activities with GNDA stakeholders to accomplish these analytical tasks. This is achieved through a structured collaborative assessment of current capabilities, followed by the application of systems engineering principles to evolve a balanced architecture. The Joint Annual Interagency Review (Annual Report) of the GNDA provides a means to evaluate and document the GNDA. DNDO Systems Architecture efforts are focused on developing an enhanced GNDA, including both domestic and international components. The global architecture is a worldwide network of sensors, telecommunications, and personnel, with the supporting information exchanges, programs, and protocols that serve to detect, analyze, and report on rad/nuc materials that are out of regulatory control.</p> <p>DNDO is implementing the vision and goals articulated in the 2010 GNDA Strategic Plan through capabilities-based planning efforts that describe immediate next steps to improve the GNDA's ability to meet stated performance requirements. These planning efforts include a series of capabilities-based assessments (CBA) that highlight and address mission areas presenting the greatest risk to national security, as well as investment options designed to mitigate that risk with the best capabilities at the lowest cost. DNDO Systems Architecture programs also support Department efforts to analyze rad/nuc risk through development of the biennial Rad/Nuc Terrorism Risk Assessment, required by HSPD-18, and support to risk assessment activities that impact interagency and international rad/nuc detection activities.</p>

PPAs	STRATEGIC OBJECTIVE
	Develop, acquire, and support domestic nuclear detection and reporting capabilities
Systems Development	<p>DNDO is responsible for ensuring that the Nation maintains a preeminent systems development program to translate user requirements into rad/nuc detection systems. Systems development activities are primarily focused on conducting systems engineering lifecycle activities to ensure the delivery of high-quality systems to DHS' operational components.</p> <p>DNDO Systems Development programs conduct engineering and program management activities necessary to mature and/or select systems for procurement. DNDO has implemented a Commercial First approach in that all DNDO programs will engage the private sector for solutions to address the gaps identified in the GNDA prior to moving into a government-sponsored and -managed development effort. In keeping with this Commercial First approach for all acquisitions, DNDO has been seeking to identify commercially available equipment to meet its requirements. DNDO continues to foster open communications with all industry partners to share key aspects of future requirements and projected quantities of planned procurements. Additionally, DNDO takes promising concepts for new detection systems identified through its transformational research efforts to a level of maturity sufficient for production and deployment. Under this approach, Systems Development activities support engineering development and developmental logistics.</p>
Operations Support	<p>Countering the nuclear threat is fundamentally based on the critical triad of intelligence, law enforcement, and technology. To maximize our ability to detect and interdict nuclear threats, it is imperative that we apply detection technologies in operations that are driven by intelligence indicators and place them in the hands of well-trained law enforcement and public safety personnel.</p>

	<p>DNDO provides advisory and assistance services to Federal, State, local, and tribal stakeholders who are developing or enhancing rad/nuc detection capabilities. This support includes assistance in developing and integrating local or regional programs into the GNDA, guiding the development of concepts of operations (CONOPS) and standard operating procedures, and developing training and exercise products to ingrain those procedures into day-to-day activities. DNDO also keeps stakeholders aware of relevant nuclear detection information or incidents. To accomplish this, operational support activities at DNDO are grouped into three basic functions: Training, Exercises, and Assistance (TE&A); the Joint Analysis Center (JAC), and Securing the Cities (STC). STC is funded under the Systems Acquisition PPA but is part of the Operations Support Division and receives some support from the TE&A Exercise Branch.</p>
--	--

PPAs	STRATEGIC OBJECTIVE
	Characterize detector system performance
Assessments	<p>The DNDO capability development process is anchored by critical assessments of technologies as they are developed, deployed, and operated, as well as by a continual assessment of the GNDA itself. Development and acquisition programs are supported by a rigorous and objective test and evaluation (T&E) program to characterize technologies and systems to understand technical performance, operational effectiveness, and system limitations. Red teaming deepens our understanding of deployed capabilities and presents adversarial-based scenarios to Federal, State, local, and tribal stakeholders in overt and covert operational assessments. Program assessments provide objective reviews to identify the effectiveness of planned and deployed programs and operations, which support the GNDA.</p> <p>In addition to the above activities, DNDO executes pilots and activities planned as operational assessments or trials— that serve as a tentative model for future development or deployment decisions. While DNDO test campaigns are intended to evaluate the technical performance of detection technologies in controlled environments, pilot programs allow DNDO to conduct limited deployments of new concepts of operation or emerging rad/nuc detection technologies in operational environments. Pilots provide an assessment of the processes, equipment, and/or systems to support nuclear detection mission objectives and stakeholder requirements. They also offer the opportunity for DNDO to identify and leverage lessons learned that will reduce the risk of full-scale deployments, enhance the impact of limited and competing resources, and expedite deployment of new programs and technology.</p>

PPAs	STRATEGIC OBJECTIVE
	Facilitate situational awareness through information sharing and analysis
Operations Support	<p>While DNDO has assisted stakeholders in developing rad/nuc detection capabilities including training and exercise functions, it is also responsible for developing the information sharing and analytical tools necessary to create an integrated and common operating picture. DNDO coordinates with stakeholders to establish protocols and procedures to ensure that the detection of unauthorized nuclear explosive devices, fissile material, or radiological material is promptly reported to the Secretaries of Homeland Security, Defense, and Energy, the Attorney General, and others as appropriate for action by law enforcement, military, emergency response, or other authorities.</p> <p>DNDO fuses radiation alarm information with intelligence assessments in a timely manner to provide information that enables broader situational awareness regarding threats and</p>

	strategic, operational, and tactical conditions. DNDO closely interacts with the intelligence community to develop information requirements and receive assessment products. DNDO also partners directly with the law enforcement community, which is the primary user of radiation detection equipment in the interior layer of the GNDA. This integrated approach to detection and information analysis provides a substantial improvement and efficiency in alarm resolution, threat assessments, data trend analysis, and, most important, overall probability of success in countering the threat of nuclear terrorism.
--	--

PPAs	STRATEGIC OBJECTIVE
	Advance research and development for radiation and nuclear detection and technical nuclear forensics technologies and capabilities
Systems Development	Systems Development research and development (R&D) funded within the Systems Development PPA is focused within a range of programs directed toward the production of useful materials, devices, and systems or methods, including design, development, and improvement of prototypes and new processes to meet specific requirements. Planned FY 2015 R&D funding includes Radiation Interdiction Technology Conveyances (RITC), Long-Range Radiation Detection, Algorithm Improvement, and Polyvinyl Toluene (PVT) Replacement Analysis.
Transformational Research and Development	Transformational R&D is carried out within the Exploratory Research (ER) Program and Academic Research Initiative (ARI), and Transformational Applied R&D is evaluated through Advanced Technology Demonstrations (ATD). Dramatic technological improvements may include improvements in system or component effectiveness and performance characteristics, reduction in cost of acquisition or maintenance, or reduction of operational burden by users in the field. R&D investments are made based on competitive awards, with investigators in all sectors – government laboratories, academia, and private industry – encouraged to participate. Transformational R&D takes advantage of the qualities and respective advantages of all three sectors to develop products and methods and to encourage teaming among them.
Nuclear Forensics	Applied R&D is carried out within the National Technical Nuclear Forensics Center (NTNFC) Technology Advancement program through New Methodology Development, New Signature Development, and Data Evaluation Tool development. If nuclear materials are interdicted, NTNFC must be able to determine what they are and how and where they were produced by linking the analytical results to comparison materials or predictive models, manufacturing processes, and facilities. NTNFC is working to advance the technology required for this mission. Due to the complexity of pre-detonation materials characteristics, NTNFC addresses Technology Advancement systematically across the nuclear fuel cycle and the pre-detonation forensics phases of materials collection, analysis, and evaluation. NTNFC works with domestic and international partners to design and build programs that define the use of standardized methods for lab analyses, articulation of confidence in results, and practice of demonstrated competencies in measurements and evaluations. This strategy increases knowledge of the characteristics of domestic and foreign material signatures produced in the nuclear fuel cycle and manufacturing processes – utilizing current and emerging techniques tied to rigorous standards for forensics investigations.

PPAs	STRATEGIC OBJECTIVE
	Provide centralized planning, integration, and advancement of USG nuclear forensics programs
Nuclear Forensics	<p>Nuclear forensics provides the technical foundation for the identification of those responsible for planned or executed attacks using nuclear weapons or materials, by combining NF conclusions with intelligence and law enforcement information. Through its contribution to attribution, NF strengthens U.S. defenses against nuclear threats by:</p> <ul style="list-style-type: none"> • Encouraging nations to ensure the security of their radiological and nuclear materials or weapons to help prevent their unwitting transfer through loss of control • Tracing the source of materials to help identify and close smuggling networks • Deterring nations from providing nuclear weapons or materials to terrorists • Informing decisions should a plot be uncovered or an attack occur and informing efforts to prevent follow-on attacks • Helping to bring terrorists and their facilitators to justice <p>NF, which serves as the USG focal point for National Technical Nuclear Forensics (NTNF), was established within DNDO through NSPD-17/HSPD-4 (Annex IV) of July 2007. This Presidential Directive assigned roles and responsibilities to six Federal departments and agencies for developing and maintaining a comprehensive NTNF capability. DNDO was given two core missions. The first is to provide national-level integration, centralized planning, assessment, and stewardship as the USG integrator for a nuclear forensics capability that must be ready, robust, and enduring. The second mission is to advance the capability to conduct forensics on rad/nuc materials prior to detonation, materials which may have been illicitly trafficked and/or extracted from an interdicted weapon. The <i>Nuclear Forensics and Attribution Act</i>, signed into law on February 16, 2010, further codified this two-tiered mission and mandated DNDO to lead the development and implementation of the NNFEDP and the National Strategic Five-Year Plan for Improving the Nuclear Forensics and Attribution Capabilities of the United States. DNDO is striving to advance NTNF capabilities in order to support the U.S.-declared commitment to hold fully accountable any State, terrorist group, or other non-State actor that enables terrorist efforts to obtain or use weapons of mass destruction.</p> <p>DNDO staffs the NF with DHS experts and detailees from partner departments, including the Department of Defense (DOD), Department of Energy (DOE), and Department of Justice/ Federal Bureau of Investigation (DOJ/FBI), which provides a Supervisory Special Agent from the FBI Laboratory as an NF Deputy Assistant Director. This team addresses the program integration, pre-detonation materials, and expertise development missions comprehensively by organizing NF's activities into three key work areas: 1) Operational Readiness, 2) Technology Advancement, and 3) Expertise Development.</p>

C. Budget Request Summary:

DNDO requests \$199.068 million in FY 2015 funding for RD&O.

II. Summary of FY 2015 Budget Estimates by Program/Project Activity (PPA)

2015 Total Request	-	-	17,924
Total Change 2014 to 2015	-	-	(3,076)

DNDO requests \$17.924 million for this activity in FY 2015.

Adjustments-to-Base include:

- Decrease of \$0.095 million for Working Capital Fund (WCF)

Program Changes includes:

- \$1.076 million decrease for capabilities-based assessments
- \$1.905 million decrease to the GNDA Solutions Management program

CURRENT SERVICES PROGRAM DESCRIPTION:

The DNDO Systems Architecture Program develops, implements, and supports a disciplined systems engineering approach throughout DNDO and coordinates the development of an enhanced GNDA and implementation of its domestic component.

QHSR Strategic Alignment - Systems Architecture

- Department of Homeland Security (DHS) Quadrennial Homeland Security Review (QHSR)
Mission 1: Prevent Terrorism and Enhance Security

- Goal 1.2: Prevent and Protect Against the Unauthorized Acquisition or Use of Chemical, Biological, Radiological, and Nuclear (CBRN) Materials and Capabilities

Systems Architecture - Program/Project Overview

Program	Project	Level of Effort	General Description
GND A Planning and Reporting	GND A Annual Report	Ongoing, Annual Event	The GND A Annual Report is a critical, programmatic snapshot of the GND A. Required by law, this document is provided to Congress each year.
	GND A Symposium Project	Ongoing, Annual Event	The GND A Symposium provides a forum for the communication and dissemination of partner perspectives on their planning, capabilities, needs, priorities, and interests within the context of the entire GND A mission.
GND A Analysis	GND A Enterprise Architecture Project	Ongoing	This effort will produce a model that will ensure a common analytical framework to support our ability to evaluate current GND A capabilities, identify vulnerabilities and gaps, and inform our planning to develop future capabilities for the GND A.
	GND A Threat and Adversary Project	Ongoing	The adversary and weapons models allow DNDO to account for the range of probable threat objects and to ensure that future detection system requirements are matched to adversary capabilities.
	Risk Project	Ongoing	Risk assessments that measure the combined effect of threat, vulnerability, and consequences and provide input to project, program, and portfolio decisions
	Capabilities-Based Planning Project	Ongoing	DNDO planning and analysis efforts for the GND A include a series of CBAs designed to highlight and analyze specific areas in the architecture at a level that breaks down the building blocks of each capability. This information will feed the project, program, and portfolio decisions and will be used to optimize risk buy-down.
GND A Solutions Management Program	Aviation Solutions Management Project	Ongoing	Aviation studies examine ways to reduce the risk of adversarial use of commercial and general aviation to conduct a rad/nuc attack against the United States.
	Interior Solutions Management Project	Ongoing	Current Interior studies are examining Federal, State, local, and tribal detection capabilities and program development. Efforts are focused on developing nuclear detection capabilities within the domestic interior that include ways to increase mobile detection assets across Federal, State, and local entities.
	Land Border Solutions Management Project	Ongoing	Land Border studies identify requirements and develop solution concepts to address operational deficiencies and vulnerabilities at and between land border ports of entry (POE).
	Maritime Studies	Ongoing	Maritime studies address ways to reduce the risk of adversarial use of sea, ocean, or other navigable waterways to conduct a rad/nuc attack against the United States.
	Crosscutting Studies	Ongoing	Crosscutting studies address operational gaps and vulnerabilities common to multiple mission areas and pathways.
International Cooperation	Analysis & Reporting of GND A Exterior Layer Capabilities	Ongoing	DNDO conducts international studies and analyses to characterize the gaps, identify options, evaluate the advantages and disadvantages of alternative solutions, and formulate time-phased plans to reduce risks to the exterior layers of the GND A.
	International	Ongoing	Through both bilateral and multilateral (e.g., Global Initiative to Combat

	Development & Outreach		Nuclear Terrorism and the International Atomic Energy Agency) discussions and engagement efforts, DNDO works with foreign counterparts to further develop the exterior layer of the GNDA.
--	------------------------	--	---

ARCHITECTURE

Architecture programs advance the ability to understand, anticipate, and reduce the threat of nuclear terrorism. Each program – Planning and Reporting, GNDA Analysis, GNDA Solutions Management Program, and International Cooperation– contributes to the development of strategies for building out the GNDA. Architecture analysis and planning contribute to the success of the GNDA by performing holistic pathway evaluation to identify opportunities to prevent the unauthorized importation, possession, storage, transportation, development, or use of a nuclear explosive device, fissile material, or radiological material in the United States, and to protect against attack using such devices or materials against the people, territory, or interests of the United States. DNDO conducts a quantitative analysis of the entire GNDA at the strategic and operational levels, which incorporates validated end-user and stakeholder needs. DNDO analyzes needs within and across mission areas and makes risk-informed recommendations for the whole GNDA. The outcome of this recurring process is cost-effective strategies and solutions that leverage the benefits of currently deployed systems and all of the legal, regulatory, and law enforcement activities that are employed by the USG and its partners.

PLANNING AND REPORTING PROGRAM

GNDA Annual Report

The GNDA Annual Report is a critical, periodic snapshot of the global nuclear detection architecture. Accomplished through intensive interagency collaboration, this document is provided to Congress each year. The Annual Report is unique in compiling all the USG programs, assets, and capabilities that contribute to the GNDA. The Annual Report serves as a linchpin in the development of the GNDA, summarizing the results and analyses of progress and constituting a reference for future activities. The Annual Report enables all agencies to assess their activities in relation to the GNDA while promoting stronger interagency reporting and program collaboration.

The Annual Report describes the combination of programs and activities – radiation detection technology, information connectivity, operations, global exercises and training, multilateral agreements, and law enforcement and intelligence sharing – that provides a layered defense in depth to prevent smuggling of nuclear materials. The six-months of activity to gather, write, coordinate, and publish the Annual Report serves as a key monitoring process for the implementation of GNDA programs.

GNDA Symposium Project

The GNDA Symposium provides a forum for the communication and dissemination of partner perspectives on their planning, capabilities, needs, priorities, and interests within the context of the entire GNDA mission. It is typically held in the spring; attendance is by invitation only for GNDA stakeholders throughout the interagency as well as for State and local officials. Issues relevant to the GNDA are covered in panel discussions and then potential solutions are discussed in detail in follow-

on breakout sessions dedicated to a specific issue. The symposium briefings and results/proposals generated in the breakout sessions are captured in a final report that is distributed to all attendees. As one example of the Symposium's impact, the FY 2012 GNDA Symposium led to the interagency development of the GNDA International Implementation Plan that outlined focus areas and planning objectives for the USG efforts to develop the exterior layer of the GNDA.

GNDA ANALYSIS PROGRAM

A critical component of the DNDO mission is to conduct periodic, in-depth analysis of the GNDA. Strategic planning and risk assessments provide both the status of current detection architecture capabilities as well as further assess and prioritize proposed enhancements across the architecture. An effective planning, modeling, and analysis function is an important part of the strategic basis that drives effective implementation of enhanced detection.

Architecture Development Project

The GNDA Enterprise Architecture Project will produce a model that will provide a common framework to support our ability to analyze current GNDA capabilities, identify vulnerabilities and gaps, and inform our planning to develop future capabilities for the GNDA. It will ensure the use of common terminology, capability sets, assumptions, and constraints to support risk assessments, CBAs, and cost-benefit analyses of proposed GNDA portfolios. In addition, the architecture model will assist the operational community in understanding how the GNDA system-of-systems functions at an operational and tactical level.

Adversary Threat Project

Planning for the GNDA requires an understanding of the adversary's capabilities and intent and the availability of materials that may be utilized in a rad/nuc attack. DNDO continually seeks to refine the basis for planning, through collaboration with acknowledged experts within the USG intelligence community and National Laboratories, into a suite of improved adversary and weapons models that can be used to produce risk assessments of the GNDA or evaluate proposed technologies or concept of operations (CONOPS).

Annually, DNDO elicits input from the intelligence community regarding a wide range of adversary characteristics to inform the risk analysis of the GNDA and develop an adversary model. In addition, DNDO facilitates discussions within the interagency about weapon type and yield characteristics for input into the DNDO weapons model. In FY 2015, DNDO will update the threat definition based upon the most current analysis of potential adversary capabilities and consensus building meetings between the U.S. weapon laboratories and DOE's National Nuclear Security Administration Office of Nuclear Threat Science. Using this information, DNDO will continue to apply the threat definition to DNDO programs within the solution development process (SDP), to support risk assessments, and to conduct cost trade studies for individual enhancements to the GNDA.

Risk Project

To analyze and optimize the effectiveness of the GNDA, DNDO uses risk assessments that measure the combined effect of threat, vulnerability, and consequences. This process allows us to evaluate the effectiveness of currently deployed systems and plan for future technology development using a cost-benefit methodology. DNDO produces a suite of modeling, simulation, and assessment tools to calculate the risk from particular pathways, particular transport modes, particular threat objects, or adversaries. In FY 2015, DNDO will perform a Rad/Nuc Terrorism Risk Assessment in support of the 2015 Integrated Terrorism Risk Assessment.

Capabilities-Based Planning Project

DNDO's GNDA planning and analysis efforts include a series of CBAs designed to highlight and address specific areas in the architecture that present the greatest risk to national security, as well as investment options to mitigate those risks. DNDO starts by performing a functional area analysis to define the effectiveness of currently deployed capabilities. DNDO then performs a functional needs analysis to determine the root cause(s) of the existing shortfalls in capability, capacity, and coverage and subsequently prioritizes those gaps. This analysis comes from a combination of literature review, subject matter expertise elicitation, exercises, and operational modeling of the GNDA. The end result is a characterization of current gaps in the GNDA to a level of specificity that informs resource allocation planning and the development of solutions. Building upon the three capabilities-based assessments completed in FY 2013, DNDO will continue the CBA series in FY 2014 and FY 2015 to examine additional areas of key concern within the GNDA. Analysis will provide direct support to preliminary stages of DNDO's SDP and the annual budgeting cycle.

GNDA SOLUTIONS MANAGEMENT PROGRAM

The GNDA Solutions Management Program utilizes the outputs of the CBAs and other analyses to facilitate engaging stakeholders, end-users, technology developers, and systems developers through the SDP to capture requirements and to develop actionable programmatic documents. These efforts focus on specific pathways, operating environments, modes of transportation, and/or specific threats and are the basis for both material and nonmaterial solutions to address vulnerabilities and gaps to reduce risk within the GNDA.

Aviation Solutions Management Project

The Aviation Solutions Management Project examines ways to reduce the risk from adversarial use of commercial and general aviation to conduct a rad/nuc attack against the United States. In FY 2014, with the results of the FY 2013 Domestic General Aviation (DGA) study, DNDO will conduct a series of DGA Surge Planning workshops with Federal partners to initiate requirements documents. In FY 2015, DNDO will continue the development of these requirements documents to determine material and nonmaterial solutions to address DGA surge-specific gaps in the GNDA.

In FY 2014, DNDO will continue the International Air Cargo Insider Threats study, investigating insider threats associated with air cargo at international last points of departure (LPOD). In FY 2015, DNDO will collaborate with Federal partners to document requirements for enhanced security in air

cargo operational environments overseas at LPODs to develop security solutions to reduce the risks of adversaries using the air cargo pathway to smuggle or transport rad/nuc materials and/or weapons.

In FY 2014, building on results of previous air cargo studies, DNDO will work with Federal partners to develop requirements for Airports of Entry (APOE) Surge Planning, focusing on air cargo. In FY 2015, DNDO will continue the development of air cargo-related APOE surge requirements documents. In FY 2014, DNDO will examine International General Aviation (IGA) operations in the Caribbean to investigate vulnerabilities relative to rad/nuc threats in order to develop requirements for more secure IGA operations. DNDO will complete the Caribbean IGA study in FY 2015 and will begin work with Federal partners to document requirements for enhanced IGA operations, with particular focus on operations during periods of heightened alert.

Interior Solutions Management Project

The Interior Solutions Management Project examines Federal, State, local, and tribal detection capabilities and program development. Overarching efforts focus on increasing nuclear detection within the domestic interior, as well as on investigating ways to increase mobile detection assets across Federal, State, and local entities.

In FY 2014, DNDO will enhance the Capabilities Development Framework (CDF) through the development of a geographic information system (GIS) mapping tool to identify desired and actual levels of capability at the county level. In FY 2015, DNDO will sustain and maintain the CDF GIS mapping as new technology and data sources improve.

Building on the FY 2014 CDF work and continuing in FY 2015, DNDO will modify the Domestic Strategic Development effort to close gaps within the domestic nuclear detection architecture.

In FY 2014 and continuing in FY 2015, DNDO will facilitate the Interior Focus Group (IFG), a Federal, State, and local working group that supports the Interior Mission Area by identifying interior rad/nuc detection stakeholder requirements and helping to develop DNDO analyses and products. IFG efforts include the collection of user needs to drive future capability development; identification of areas of interest for future DNDO studies; and roundtable discussions to review proposed ideas and identify future initiatives to address domestic rad/nuc detection gaps

In FY 2014 and FY 2015, DNDO will continue the development of national rad/nuc detection guidance for State, local, and tribal partners, encompassing a family of activities focused on developing national planning guidance for building and sustaining State, local, and tribal rad/nuc detection capabilities. The activities include: National Incident Management System resource typing to provide State, local, and tribal officials with the common description of rad/nuc detection capabilities to facilitate planning and operations (e.g., surge) and to enable access to Federal Emergency Management Agency (FEMA) grants; FEMA grants assistance to provide rad/nuc detection guidance for State, local, and tribal agencies seeking to build and sustain capabilities; Presidential Policy Directive 8: National Preparedness and Threat and Hazard Identification and Risk Assessment integration to align DNDO efforts and identify options to coordinate with National preparedness guidance to ensure most effective delivery of DNDO assistance; and Framework 2.0 to

update DNDO program assistance to more effectively provide standardized, scalable technical assistance to State, local, and tribal agencies.

In FY 2014, DNDO will work on the Improving Tribal Nations Engagement/Capability in order to improve their level of rad/nuc detection awareness and operations. In FY 2015, DNDO will develop methods to increase information sharing, communication, and coordination between Federal and tribal nation law enforcement authorities.

Land Border Solutions Management Project

The Land Border Solutions Management Project identifies requirements and develops solutions to address rad/nuc detection deficiencies and vulnerabilities at and between land border POEs. In FY 2014, DNDO will complete the Office of Border Patrol (OBP) Checkpoint Pilot to assess the operational utility of enhancing U.S. Customs and Border Protection (CBP) OBP rad/nuc detection capability while minimizing interruptions to ongoing law enforcement activities and commerce flow. The pilot evaluated several detection technologies to obtain operational and technical data in support of SDP efforts. In FY 2015, based on the findings of the OBP Checkpoint Pilot, a determination will be made on whether or not to enter the SDP. If the SDP option is deemed appropriate, requirements documents will be developed to capture OBP's needs.

In FY 2014, DNDO will begin working with OBP Special Operations Group (SOG) to jointly develop requirements documents to provide OBP SOG with a rad/nuc detection capability. In FY 2015, DNDO will continue engagement with OBP SOG to finalize requirements documents.

Maritime Solutions Management Project

The Maritime Solutions Development Project addresses ways to reduce the risk of an adversary using the sea, ocean, or other navigable waterways to conduct a rad/nuc attack against the United States with emphasis on small vessels under 300 gross tons. It also provides information to facilitate and support opportunities to advocate enhancing Maritime Domain Awareness (MDA) with Federal, State, and local stakeholders and partners.

In FY 2014, DNDO will complete the "Enhancement of U.S. Coast Guard (USCG) Rad/Nuc Surge Capability Study" to support the development of enhanced steady state contingency planning templates for the USCG Area, District, and Sector Captain of the Port levels. The study was designed to yield quantifiable results and recommendations for continual refinement and implementation of a USCG rad/nuc capability. In FY 2015, using the results of this study, DNDO will assist the USCG in developing policy and guidance documents for rad/nuc surge capabilities across the USCG.

In FY 2014, DNDO will be performing step 1a.1 of the SDP to develop, analyze, and recommend options for addressing the need for Increasing Probability of Encounter of Small Vessels in order to determine the best methods (materiel and/or nonmateriel) for increasing the chances of maritime law enforcement or partner assets encountering small vessels, with the goal of interdicting those small vessels carrying illicit rad/nuc material. This effort will explore small vessel traffic patterns, current and potential assets for encounter, best practices, potential models, and planning tools that could be used by maritime law enforcement, data sharing methods between MDA information users, limiting factors and obstructions to encounter, and conducting operations while being sensitive to individual

privacy concerns. In FY 2015, DNDO will develop a strategy document that captures the steps needed to improve and increase encounters of small vessels.

In FY 2015, building on previous works that evaluated existing plans for rad/nuc scanning of roll on/roll off (RO/RO) and break bulk (BB) noncontainerized cargo, DNDO will conduct the “RO/RO and BB Cargo Rad/Nuc Detection Study” to further define gaps in current scanning operations and determine whether necessary material and nonmaterial options are required to address those gaps.

Crosscutting Project

Crosscutting studies address operational gaps and vulnerabilities common to multiple mission areas and pathways. In FY 2014, DNDO will complete the GNDA-Wide Information Sharing study, a systematic analysis of information sharing in the GNDA to determine who needs what information, when, and why. In FY 2015, based on the outcome of the GNDA information sharing analysis, the needs and gaps that are identified, and their relative prioritization, DNDO may initiate the development of requirements documents to capture GNDA information sharing needs.

INTERNATIONAL PROGRAM

Development of the GNDA requires a comprehensive understanding of existing rad/nuc detection capabilities in the exterior layer in order to better inform capacity-building efforts to fill gaps in the architecture. As such, DNDO’s coordination of the exterior layer of the GNDA centers on both characterization and prioritization of rad/nuc detection capabilities worldwide. These efforts include targeted bilateral and multilateral outreach to foreign counterparts to raise situational awareness and enhance broader rad/nuc detection efforts.

Analysis & Reporting of GNDA Exterior Layer Capabilities Project

DNDO conducts international studies and analyses to characterize the gaps, identify options, evaluate the advantages and disadvantages of alternative solutions, and formulate time-phased plans to reduce risks to the exterior layers of the GNDA. As a crosscutting function, ongoing development of the GNDA must involve analyses of all potential pathways, suggest technologies or programs to address any identified vulnerabilities, and strive for stronger partner connectivity at every point in the architecture. This effort includes performing international geographical architectural analyses and investigation of key relationships with international partners to enhance national-level detection capacity in their respective countries.

International Development & Outreach Project

A significant portion of the development of the external layer of the GNDA is dependent on the sovereign decisions of foreign partners to enhance their own national and regional-level detection architectures and capabilities. Through both bilateral and multilateral (e.g., Global Initiative to Combat Nuclear Terrorism and the International Atomic Energy Agency) discussions and engagement efforts, DNDO works with foreign counterparts to further develop the exterior layer of the GNDA.

DNDO conducts annual workshops to facilitate the continued development of the best practices guides for Planning and Organization related to nuclear detection architecture development within bilateral or multilateral constructs and ongoing engagements with key foreign partners on nuclear detection architectures. In FY 2015, DNDO will continue to work with international counterparts on detection strategies and guidelines, focusing on promoting national-level implementing frameworks and leveraging lessons learned and best practices from domestic application.

2015 Program Change	-	-	1,058
2015 Total Request	-	-	22,000
Total Change 2014 to 2015	-	-	1,000

DNDO requests \$22.0 million for this activity in FY 2015.

Adjustments-to-Base include:

- Decrease of \$0.058 million for WCF

Program Changes include:

- Increase of \$1.058 million to On Dock Rail program

CURRENT SERVICES PROGRAM DESCRIPTION:

DNDO is responsible for ensuring that the Nation maintains a preeminent systems development program to translate user requirements into rad/nuc detection systems. Systems development activities are primarily focused on conducting systems engineering lifecycle activities to ensure the delivery of high-quality systems to DHS' operational components. In addition, systems development activities include providing management and task execution of DNDO's SDP as well as support to DNDO's governance structure, DNDO's Governance Review Board.

Recognizing the rapid advancement of technology and innovation, constrained budgets, and market forces, DNDO has shifted focus from Government-sponsored development of materiel solutions to a Commercial First approach. Using this approach, DNDO can leverage important industry-led

innovations and developments, and only resort to a government-sponsored and -managed development and acquisition process when no commercial solution is feasible.

The Commercial First approach is based on the principle that all DNDO programs will first engage the private sector for solutions to address the gaps identified in the GNDA prior to moving into a Government-sponsored and -managed development effort. There are several Commercial First pathways that a program can follow depending on the defined gap, the technical maturity, and commercial availability of potential materiel solutions that may be able to address that gap. These pathways include:

- Commercial-off-the-Shelf (COTS)
- Customized COTS – COTS modified by the government or industry partner
- Commercialization (e.g., commercial development) - Industry-developed solutions using industry internal R&D funding.
- Government-sponsored development

Regardless of the pathway selected, DNDO, in concert with the end-user community, will still be required to execute systems development activities throughout the systems engineering lifecycle, but will primarily be focused on activities at the front end (e.g., requirements analysis and development, program planning, and test planning) and the back end (e.g., verification and validation activities, technical performance, and user assessments) of the lifecycle. The specific approach for developing or procuring new technologies will be based on the unique requirements and characteristics of each program.

QHSR Strategic Alignment - Systems Development

- DHS QHSR Mission 1: Prevent Terrorism and Enhance Security
 - Goal 1.2: Prevent and Protect Against the Unauthorized Acquisition or Use of Chemical, Biological, Radiological, and Nuclear (CBRN) Materials and Capabilities.

Systems Development - Program/Project Overview

Program	Project	Level of Effort	General Description
Human Portable Tripwire (HPT) Program	HPT	Complete in FY 2015	The HPT Program, under DNDO's Commercial First approach, will acquire and field COTS small/wearable systems that provide next generation capabilities to detect, identify, communicate, and adjudicate rad/nuc threats. HPTs will also function as personal protective equipment (PPE) and warn operators of potential exposure to harmful levels of radiation. HPT addresses the Human Portable Radiation Detection System (HPRDS) Mission Needs Statement Gap of a "tripwire" capability needed to increase the probability of encountering and detecting illicit rad/nuc materials. DNDO is executing the HPT Program with CBP, USCG, and the Transportation Security Administration (TSA) as major stakeholders.
Human Portable Radiation Detection Systems Helium-3 (³He) Alternative Implementation Program	³ He Alternative – Backpack and ³ He Alternative – Basic	Complete in FY 2015	The HPRDS ³ He Alternative Implementation Program utilizes the results of test and evaluation performed under the ³ He Shortage Mitigation Program to work with industry to integrate alternative technologies into detection systems and to evaluate these systems for future deployment. The projects will address form, fit, and function of alternative technologies into backpack detectors and

Program	Project	Level of Effort	General Description
	Handheld		handheld radiation isotope identification devices (RIID) for CBP, TSA, and USCG.
Radiation Interdiction Technology For Conveyances Program	RITC	Ongoing	<p>The RITC Program aims to protect against the introduction of unauthorized nuclear explosive devices, fissile material, or radiological material into the United States. The detection and identification of such material may involve a combined approach using passive detection methods such as gamma and neutron detectors, as well as active methods such as those employing high-energy x-rays.</p> <p>Advances in computing technology suggest that near-real-time identification of radioactive isotopes and detection of heavily shielded radioactive material is now possible. The RITC Program plans to use a Commercial First approach to take advantage of these advances as part of the solution. Additionally, the RITC program will take a solution-independent approach to meet mission needs as outlined in a comprehensive mission need statement for rad/nuc scanning initiated by the end-user in starting in FY 2013. Results from engineering and operational analysis in previous systems development efforts and planned characterization of COTS technology will form the basis for an analysis of alternatives to determine the most effective solution.</p>
	Radiation Portal Monitor (RPM) Replacement Project	Ongoing	The RPM Replacement Project focuses on evaluating replacement solutions for deployed RPM systems.
	On Dock Rail (ODR)	Ongoing	The ODR program's objective is to develop a system that can efficiently and effectively scan Intermodal Cargo Containers conveyed by Straddle Carriers from ship-to-rail. The system may be deployed at up to five seaport terminals in the U.S. that have this need.
Algorithm Improvement Program (AIP)	Algorithm Improvement	Complete in FY 2015	AIP will develop a set of benchmarks for improving the performance of rad/nuc detection algorithms and increasing detection and identification speed and accuracy. Additionally, the program will develop the infrastructure needed for scoring algorithms and maintain the DHS Isotope ID algorithm analysis tool to support secondary reachback analysts.
Radiation Portal Monitor Program	RPM Improvement	Complete in FY 2015	The RPM Improvement Project focuses on development and testing of prototype improvement candidates for deployed RPM systems and deploying any improvements developed to the field. The program is researching potential improvements to operations and capabilities of currently deployed PVT RPMs.
Small Vessel Standoff Detection (SVSD) Program	Boat-to-Boat Scanning	Ongoing	The SVSD Program's objective is to develop and field a capability to provide rad/nuc detection systems in U.S. port areas and maritime regions, and to address the need of Federal, State, and local maritime officers to conduct rad/nuc screening missions against the small vessel threat without the need to board each encountered vessel.

Program	Project	Level of Effort	General Description
			The project will initially develop a capability for scanning small vessels from maritime law enforcement vessels. Follow-on projects may address aerial and land-based deployment of sensors to complement the Boat-to-Boat system.
Long-Range Radiation Detection (LRRD) Program	Long-Range Radiation Detection	Ongoing	The LRRD Program's objective is to provide agencies/organizations engaged in preventive rad/nuc detection activities within the interior of the United States with an enhanced standoff rad/nuc detection capability.

HUMAN PORTABLE TRIPWIRE PROGRAM

The HPT Program will field a rad/nuc detection and identification capability in approximately the same form as existing personal radiation detectors (PRD). HPT systems will provide operators with next generation detection, identification, communications, and personal protection capabilities and be small and light enough to be worn at all times. HPTs will detect rad/nuc material through constant, nondeliberate rad/nuc scans at an equal or greater distance than the current PRDs. HPT systems will be easy to use and of sufficiently low cost so that they can be deployed to a large number of operators. Additionally, the HPT will enable significantly faster adjudication of alarms for many conveyances (personnel, baggage, passenger vehicles, etc.) where it has the potential eliminate the need for obtaining a RIID to identify the threat. Because these systems will be worn at all times, they will also function as PPE, providing personnel with warnings when exposed to potentially harmful levels of radiation.

The HPT Program was initiated in FY 2012 as a Commercial First program. An Industry Day conducted in FY 2012 and subsequent market research indicated that the required capabilities (detection, identification, communications, and PPE in a small form factor) were not commercially available at that time. However, several vendors stated their willingness to invest in the development of solutions to meet HPT requirements based on the potential market for this type of device.

Working with CBP, USCG, and TSA as the major DHS HPT stakeholders, DNDO is executing a partnership with industry to characterize and assess industry's ability to meet HPT technical and suitability requirements using COTS products. In December 2012, HPT conducted Limited Characterization 1 (LC 1), which determined that the performance of representative HPT COTS systems (commercially known as Spectroscopic PRDs), could meet the user's key detection, identification, and suitability requirements. The results of LC1 led to the selection of a "Customized COTS" Pathway for the HPT Program. Additional characterization is being performed in 2013 to ensure that candidate HPT COTS systems can meet all HPT requirements defined in the HPT operational requirements document. In FY 2015, the HPT program will complete performance and operational test and evaluation activities, in support of an acquisition decision event 3 to award full rate production and initial fielding of HPT COTS systems.

HPRDS HELIUM-3 ALTERNATIVE IMPLEMENTATION PROGRAM

The HPRDS ^3He Alternative Implementation Program utilizes the results of test and evaluation performed under the ^3He Shortage Mitigation Program to develop implementation plans for the equipment in the HPRDS Portfolio.

^3He Alternative - Backpack

The program will identify and field backpack detectors with ^3He alternative technology, transitioning TSA and USCG away from ^3He dependent systems. In FY 2015, the program will release a request for proposal and perform test and evaluation for new systems for TSA and USCG. Backpacks will be evaluated against a variety of use scenarios including small vessel standoff detection and wide-area search.

^3He Alternative – Basic Handheld

The program will identify and field basic handheld RIIDs with ^3He alternative technology, transitioning CBP, TSA, and USCG from ^3He - dependent systems.

In FY 2015, the program will release modify existing basic handheld RIID contracts to provide alternative neutron detection components with the same form, fit, and function or release a request for proposal and perform test and evaluation for new systems for CBP, TSA, and USCG.

RADIATION INTERDICTION TECHNOLOGY FOR CONVEYANCES PROGRAM

Under the RITC program, DNDO will work closely with CBP to protect against the introduction of unauthorized nuclear explosive devices, fissile material, or radiological material into the United States. The detection and identification of such material include passive methods such as gamma spectroscopy and neutron detection and active methods such as radiography.

Radiation Interdiction Technology for Conveyances Project

One of the radiation interdiction challenges that CBP faces is maintaining security with minimal impact on the flow of commerce. Advances in computing technology suggest that near-real-time identification of radionuclides and detection of heavily shielded radioactive material is now possible. The RITC program plans to use a Commercial First approach to take advantage of these advances as part of the solution. Prior approaches focused on either passive or active scanning technologies. In FY 2015, the project will complete the analysis of alternatives and consider COTS options available for any new alternative solutions.

Radiation Portal Monitor Replacement Project

RPM systems have been successfully deployed in the field at various times over the last decade. Using market research and analytical studies, this program is developing a strategy for system replacement that is consistent with objectives of the GNDA and SAFE Port Act of 2006. This strategy will provide

an effective path to sustain the rad/nuc detection capability provided by the deployed RPM systems. In FY 2015, the program will consider COTS options available for any new alternative solutions based on the RITC analysis of alternatives.

On Dock Rail Project

The ODR Project was targeted at deploying solutions for ship-to-rail scanning to address efficiency concerns with the current mobile RPM-based solution. In FY 2009, funds were appropriated to begin work specifically on an ODR solution. Work continued through FY 2012 when an Alternatives Analysis (AA) was completed that examined potential solutions for ship-to-rail scanning leveraging modeling, testing, and user surveys. Multiple technology solutions were evaluated including Radiation Detection Straddle Carrier (RDSC) Gen 2, Straddle Carrier Portal Prototype – PVT (SPP-PVT), Straddle Carrier Portal Prototype – NaI (SPP-NaI), Crane Mounted Systems (spreader bar), and Mobile Radiation Portal Monitor (mRPM) (baseline).

The AA evaluated these technology alternatives for five ODR terminals. Findings included:

- No single solution was identified as best for the seaports evaluated.
- SPP systems will provide improved throughput with no loss in detection effectiveness and are the only alternatives with no intolerable suitability concerns.
- All evaluated systems, with the exception of the spreader bar, were seen as providing detection effectiveness at least equal to the existing baseline.

Testing activities were performed in support of system development. Performance Testing and Stream of Commerce Testing using the SPP-PVT and SPP-NaI systems were completed in 2011 at Savannah River National Laboratory and Port of Virginia (Norfolk). Operational Assessment of the RDSC was completed at the Port of Tacoma in 2011.

The project was put on hold in FY 2013 due to funding requirements for higher priority programs within the GNDA and is being reinitiated in FY 2015.

In FY 2015, the project will review the prior AA results and consider COTS options available for any new alternative solutions. Based on the results from these reviews, the AA will be refined appropriately.

ALGORITHM IMPROVEMENT PROGRAM

The AIP's goal is to develop a set of benchmarks for improving and verifying the performance of radiation detection algorithms. The AIP seeks to increase detection and identification speed and accuracy in the field for spectroscopic (e.g., sodium iodide systems). In addition to the benchmark datasets [high purity germanium (HPGe), sodium iodide (NaI), cadmium zinc telluride (CZT), CYLC and lanthanum bromide], the AIP will also develop algorithm performance metrics. DNDO will perform a phased collection of benchmark datasets from a variety of sensor types. The program will also develop the infrastructure needed for scoring algorithms and maintain the DHS Isotope ID algorithm analysis tool, which is crucial for secondary reachback analysis.

Benchmark datasets will be made available to commercial algorithm developers, which will facilitate a better outcome for DNDO's Commercial First strategy. The benchmarks will facilitate a common environment in which the commercial sector, academia, and government can engage in algorithm development and advancement. Ultimately, the benchmarks will be archived within the algorithm testbed where replay tools can be used to evaluate and score the performance of any submitted algorithm.

In FY 2015, DNDO will complete the comparison of CYLC and CZT to HPGe benchmark data collections and create open and closed gamma spectrum benchmarks. In addition, DNDO will complete cooperative agreements and release the algorithm tool.

RADIATION PORTAL MONITOR PROGRAM

RPM Improvements Project

RPM systems have been successfully deployed in the field at various times over the last decade. Many of the RPMs are currently at their service life or will exceed their service life in the next few years. While the design operating life is a minimum of 10 years, a DNDO study has indicated that the lifespan of the systems may be upwards of 13 years. Using market research and analytical studies, this program is developing a strategy for system replacement, renewal, and/or service life extension that is consistent with objectives of the GNDA and SAFE Port Act of 2006. Among the options to be evaluated in the analytical studies is the technology refresh of system components to extend the RPM service life time. This strategy will provide an effective path to sustain the rad/nuc detection capability provided by the deployed RPM systems.

In FY 2015, the program will complete Commercial First activities, including operational requirements/capabilities documentation, CONOPS, logistical support and lifecycle cost documents, test planning, and an acquisition plan. Based on lessons learned from field deployments of improvements, the program will refine analytical tools and methodologies for predicting improvement candidate performance.

SMALL VESSEL STANDOFF DETECTION PROGRAM

The SVSD Program functional mission is to protect major population centers and critical infrastructure from the direct-to-target threat, defined as rad/nuc weapons transported by way of small vessels to a "high-impact target." The program will initially develop a capability for scanning small vessels from maritime law enforcement vessels on the water. These systems will be deployed onboard USCG and CBP Office of Air and Marine (OAM) patrol vessels for employment during routine day-to-day maritime operations as well as during periods of heightened maritime security force posture. Follow-on projects to reduce the risk will address aerial (Phase II) and land-based (Phase III) deployment of sensors to complement the Boat-to-Boat system.

Boat-to-Boat Scanning (Phase I) Project

Current and future force levels for USCG, CBP, and other Federal, State, and local partners are only capable of boarding a small fraction of the daily U.S. small vessel traffic. The SVSD Boat-to-Boat

(B2B) Project will increase the probability of successfully encountering and detecting direct-to-target threats on small maritime vessels by providing portable standoff detection capability on USCG and CBP OAM law enforcement small boats. This capability will be deployed during steady state and enhanced steady state operations using routine patrols, chokepoint, and crowded harbor tactics.

The SVSD B2B Project will conduct test and evaluation of the USCG's currently deployed backpack detector to determine if it is effective and suitable for deployment in the SVSD B2B mission. This effort will also evaluate larger COTS systems to determine the range of potential effectiveness available on the market and will be used to support an FY 2014 fielding decision.

In FY 2015, if evaluation of the USCG's backpack indicates it is not sufficiently effective and/or suitable for deployment in the SVSD B2B mission for USCG or CBP OAM, the Project will pursue an Increment 2 solution. Activities in FY 2015 in support of Increment 2 will include release of a request for proposal, procurement of test articles, and conducting test and evaluation.

LONG-RANGE RADIATION DETECTION PROGRAM

The goal of the LRRD program is to provide agencies engaged in preventive rad/nuc detection activities within the interior of the United States with an enhanced standoff rad/nuc detection capability. The LRRD capability would support search, survey/sweep, and monitor missions as part of the following efforts:

- Detect and deter rad/nuc attacks on population centers
- Detect and deter rad/nuc attacks on critical infrastructure and key resources
- Detect and deter rad/nuc attacks on special events
- Detect and deter the use of domestic transportation systems (interior pathways) for transport of illicit rad/nuc material or for delivering rad/nuc attacks

In FY 2015, if it is determined that the operational utility and technology readiness exist, the program will continue to conduct planning activities for solution design, development, and testing.

Domestic Nuclear Detection Office
Research, Development, and Operations
Transformational Research and Development
Program Performance Justification**
(Dollars in Thousands)

PPA: Transformational Research and Development

	Perm. Pos	FTE	Amount
2013 Revised Enacted	-	-	71,102
2014 Enacted	-	-	71,102
2015 Adjustments-to-Base	-	-	(241)
2015 Current Services	-	-	70,861
2015 Program Change	-	-	(1,361)
2015 Total Request	-	-	69,500
Total Change 2014 to 2015	-	-	(1,602)

DNDO requests \$69.5 million for this activity in FY 2015.

Adjustments-to-base include:

- Decrease of \$0.241 million for WCF

Program Changes include:

- Decrease of \$1.361 million to Mobile Radiation Imaging and Tracking Systems Project

CURRENT SERVICES PROGRAM DESCRIPTION:

DNDO's Transformational R&D program seeks to identify, explore, develop, and demonstrate scientific and technological approaches that address gaps in the GNDA, dramatically improve the performance of rad/nuc detection and technical nuclear forensics (TNF) methods, components, and systems, and/or significantly reduce the operational burden of these technologies. Although significant progress has been made, several challenges remain that require additional investment. These challenges include:

- Cost-effective equipment with sufficient technical performance to ensure widespread deployment
- Detection of special nuclear material even when heavily shielded

- Enhanced wide-area search in a variety of scenarios to include urban and highly cluttered environments
- Monitoring along challenging GNDA pathways, to include scanning of general aviation and small maritime vessels, and in between POEs
- Forensics determination of origin and/or route of interdicted material

R&D investments are made based on competitive awards open to investigators from all sectors – government laboratories, academia, and private industry. The transformational research efforts take advantage of the qualities and advantages of all three sectors to develop products. Teaming is encouraged across the sectors. Transformational R&D is carried out within three major programs: Advanced Technology Demonstration, Exploratory Research, and the Academic Research Initiative. Each program is described in detail below.

QHSR Strategic Alignment - Transformational and Applied Research

- DHS QHSR Mission 1: Prevent Terrorism and Enhance Security
 - Goal 1.2: Prevent and Protect Against the Unauthorized Acquisition or Use of Chemical, Biological, Radiological, and Nuclear (CBRN) Materials and Capabilities

The Transformational R&D programs and activities that address TNF gaps and improvements are also aligned with the goals and investment priorities delineated in the *Nuclear Defense Research and Development Roadmap, Fiscal Years 2013 – 2017* and the *National Strategic Five-Year Plan for Improving the Nuclear Forensics and Attribution Capabilities of the United States*.

Transformational Research and Development – Program/Project Overview

Program	Project	Level of Effort	General Description
Advanced Technology Demonstration (ATD)	Shielded Nuclear Alarm Resolution (SNAR) Project	Multi-year; completion in FY 2015	The SNAR Project develops and characterizes advanced technologies required to resolve alarms and to detect special nuclear material (SNM), even when heavily shielded or masked
	Intelligent Radiation Sensing System (IRSS) Project	Multi-year; completion in FY 2014	The IRSS Project utilizes advanced data fusion algorithms to maximize performance of multiple independent radiation sensors communicating through a flexible wireless network.
	Advanced Radiation Monitoring Device (ARMD) Project	Multi-year; completion in FY 2014	The ARMD Project builds upon advances in new detection materials discovered under previous ER projects utilizing advanced scintillator materials and neutron detection techniques.
	Airborne Radiological Enhanced-sensor System (ARES) Project	Multi-year; completion in FY 2015	The ARES Project develops and characterizes standoff radiation measurement technology for the detection of rad/nuc material from an airborne platform.
	Long-Range Radiation Detection (LRRD)	Multi-year; completion in FY 2014	The LRRD Project continues DNDO efforts to assess and enhance the performance of long-range radiation detection technologies developed during the Road Side Tracker (RST), Target Linked Radiation Imaging (TLRI) and Standoff Radiation Detection

Program	Project	Level of Effort	General Description
	Project		System (SORDS) transformational R&D projects.
	Nuclear and Radiological Imaging Platform (NRIP) Project	Multi-year; completion in FY 2015	The NRIP Project leverages recent advancements in the commercial sector as well as results from prior Transformational R&D work. By combining the merits of passive and active technologies, new systems are being developed so that a single system is able to detect radiological and nuclear threats, regardless of the amount of shielding or the complexity of cargo, in primary mode with minimal impact to the flow of commerce.
	Radiation Awareness and Interdiction Network (RAIN) Project	Multi-year; completion in FY 2017	The RAIN Project represents a re-branding of the former Vast Array of Mobile Tracked Sensors (VARMTS) project, originally intended to examine the technology space of large sensor networks for detection and localization of nuclear and radiological threats. Instead, RAIN will still encompass networked radiation sensors but expand upon this concept to include optical and infrared monitoring of the sensor network.
	Mobile Radiation Imaging and Tracking System (MRITS) Project	Multi-year; completion in FY 2019	The planned MRITS Project will develop and characterize versatile radiation detection systems that provide an enhanced search capability by integrating high-sensitivity, passive radiation imaging systems together with other non-radiological sensing and imaging technologies.
Exploratory Research	Materials Development and Supporting Technology (Materials) Project	Multi-year	The Materials project has the technical objective of discovering new gamma-ray sensing materials. These materials could then enable the next generation of passive or active threat-sensing technologies used in the GNDA, to include RPMs, hand-held RIID systems, and a range of other detection technologies.
	Neutron Detection Including ^3He Alternatives (Neutron) Project	Multi-year	The Neutron Project explores near-term and longer-term alternatives to ^3He neutron detectors currently used in various portal monitor applications, as well as backpack, handheld, and personal radiation detection instruments.
	Advanced Radiation Detection (Radiation) Project	Multi-year	The Radiation Project emphasizes investigating novel approaches to greatly improve the ability to detect, identify, and locate threat materials based on their intrinsic radiological signatures.
	Shielded SNM Detection Project	Multi-year	The Shielded SNM Project addresses the critical challenge of being able to detect SNM even when shielded.
	Algorithms and Modeling Project	Multi-year	The Algorithms and Modeling Project utilizes advanced signal processing and cutting-edge analyses to greatly enhance the ability to detect, locate, track, and identify potential threat materials and devices across a broad range of environments.
	Forensics Data Collection and Analyses (Forensics) Project	Multi-year	The Forensics Project coordinates with DNDO's NTNFC mission to execute transformational research and development to discover new forensics signatures or develop the tools to enable comprehensive and timely analytical results.
	New Exploratory	Annual	New Exploratory Research Activities are initiated through an annual Broad Agency Announcement for industry and academia

Program	Project	Level of Effort	General Description
	Research Activities-Solicitation		and a Call for Proposals for National and Government Laboratories.
Academic Research Initiative (ARI)	Science and Engineering of Radiation Detector Materials	Multi-year	Research in this area focuses on high-risk, long-term research aimed at developing greatly improved radiation detector materials that are highly sensitive, selective, low-cost, and rugged. This research encompasses a family of investigations to understand the fundamental properties of radiation sensing materials, to include the mechanisms of light production in scintillator materials and charge mobility and lifetimes in semiconductor materials.
	Science and Engineering of Alternative Neutron Detection Technologies	Multi-year	Alternative Neutron Detection Technologies research investigates alternatives for neutron detection due to the scarcity of ^3He . It also seeks to greatly improve neutron detection capabilities in general, with performance that would provide substantial improvements over existing ^3He technologies.
	Science and Engineering of Radiation Detection System Concepts, Approaches, and Architectures	Multi-year	Explores radically new approaches to threat detection, eventually leading to sensor or detection system concepts that are highly sensitive to radiological/nuclear signatures and selective in their ability to distinguish and locate these materials from naturally occurring background radiation.
	Science and Engineering of Shielded SNM Detection Technologies, Signatures, and Sources	Multi-year	This research area includes investigations to overcome the challenge of detecting shielded SNM, principally through advanced or enhanced nonintrusive inspection or active interrogation approaches for cargo scanning; vehicle scanning; and human portable scanning applications.
	Expert Systems, Models, Algorithms, and Data Processing for Nuclear Detection Research	Multi-year	This portfolio investigates innovative data processing and analysis techniques that will lead to significant performance improvements.
	Science and Engineering of Nuclear Forensics Technologies	Multi-year	This investigates advanced analytical techniques used to determine the processing history and transit route of pre-detonation nuclear materials.
	New ARI Activities Solicitation	Annual	The ARI program refreshes its research portfolio every year through an annual solicitation. Research topics must address gaps in the GNDA or TNF while developing students and academic programs.

ADVANCED TECHNOLOGY DEMONSTRATION PROGRAM

The ATD Program performs accelerated development, characterization, and demonstration of leading-edge technologies that address critical gaps in nuclear detection capabilities. It builds on technology concepts previously demonstrated under the Exploratory Research (ER) program, research conducted by our interagency partners, or privately funded research. Through the ATD Program, technology concepts are developed into prototype systems called Performance Test Units (PTU), which provide reliable and scalable performance measurements in a challenging and realistic simulated or controlled operational environment. Through this technology characterization process, sufficient understanding of the technology is obtained to recommend a technology transition path for the PTU technology to a government acquisition program, commercial system development, or additional basic and applied research.

New ATD projects will be initiated yearly based on: 1) prioritized gaps in the GNDA and; 2) technological successes from the ER program, the ARI, or other private or public research programs that support Item 1. Multiple research projects are being monitored for potential transition to an ATD. The ongoing and planned ATD projects are summarized in the table below followed by a brief description of each project:

ATD Project Name	Abbreviation	Initiation Year	Completion Year	Technologies Characterized
Shielded Nuclear Alarm Resolution	SNAR	2008	2015	3
Intelligent Radiation Sensing System	IRSS	2009	2014	3
Advanced Radiation Monitoring Device	ARMD	2010	2014	2
Airborne Radiological Enhanced-sensor System	ARES	2011	2015	2
Long-Range Radiation Detection	LRRD	2011	2014	3
Nuclear and Radiological Imaging Platform	NRIP	2012	2015	3
Radiation Awareness and Interdiction Network	RAIN	2013	2017	TBD
Mobile Radiation Imaging and Tracking System	MRITS	2015	2019	TBD

Shielded Nuclear Alarm Resolution (SNAR) Project

The SNAR Project develops and characterizes advanced technologies required to resolve alarms and to detect SNM, even when heavily shielded or masked. The project has two principal applications: 1) Dramatic performance enhancement to commercially or near-commercially available x-ray nonintrusive inspection screening systems by integrating solutions directly into hardware and software to substantially reduce the number of manual inspections while increasing probability of SNM detection; and 2) targeted and chokepoint screening in multiple venues, including vehicle border crossings, checkpoints, rail, air cargo, and general aviation with rapidly relocatable inspection systems. Technologies of interest include induced fission, high energy backscatter, advanced radiography, and nuclear resonance fluorescence. By the end of the program, three separate PTUs will be built and characterized. The final report for the first PTU was completed in 2013 and the technology has transitioned to the NRIP project (see below). The final report for the second PTU will be completed in 2014. In collaboration with the United Kingdom Home Office, the final report for the third PTU will be completed in 2015.

Intelligent Radiation Sensor Systems Project

The IRSS Project utilizes advanced data fusion algorithms to maximize performance of multiple independent radiation sensors communicating through a flexible wireless network. This system technology is expected to increase detection sensitivity, reduce false alarm within the total system, improve threat localization, and identify radiation sources more accurately than individual or multiple detached (nonnetworked) detectors. IRSS accomplishes these improvements by combining recent breakthroughs in small portable radiation detectors and robust computational networking frameworks with information synthesis methods developed under various ER programs. USCG boarding parties, TSA Visible Intermodal Prevention and Response teams, and security teams at National Special Security Events could benefit from this highly portable networked system, which may include many different types of radiation detectors. This project will conclude in 2014 with a final report. The IRSS technology will likely transition to the System Development HPT Program and knowledge gained will inform the RAIN Project (see below) for further transformational development.

Advanced Radiation Monitoring Device Project

The ARMD Project builds upon advances in new detection materials discovered under previous ER projects utilizing advanced scintillator materials and neutron detection techniques. Two materials of particular interest are SrI_2 and cesium lithium yttrium chloride (CLYC). SrI_2 has demonstrated exceptional performance as a gamma-ray detector with excellent energy resolution and a potentially lower cost due to outstanding growth characteristics. CLYC has demonstrated excellent performance for detecting both gamma rays and neutrons. In addition, CLYC material provides a cost-effective alternative to ^3He neutron detectors. The photomultiplier tube replacements evaluated for this project are much more compact and rugged, and have lower power requirements and cost compared to a traditional photomultiplier tube. This project combines these breakthroughs in new detection materials with both gamma and combined gamma/neutron detection capabilities to develop lower cost and greater efficiency handheld detection systems to ensure wider deployment of high performance equipment. This project will conclude in FY 2014 with a final report and the complete characterization of two PTUs. The technology path for these technologies is still being determined. However, the crystal materials are now commercially available and being integrated into detector systems by commercial entities.

Airborne Radiological Enhanced Sensor System Project

The ARES Project develops and characterizes standoff radiation measurement technology for the detection of rad/nuc material from an airborne platform. The demonstration system will be able to detect and locate point-like sources in a complex and dynamic background. This technology could be used in urban, maritime, and costal environments with a CONOPS more in line with law enforcement practices rather than past radiological mapping operations. The proposed system will be deployable on rotary winged aircraft. The system will provide real-time data on the presence, location, and isotope identification enabled by the fusing of radiation detection with other sensing modalities (e.g., multispectral imaging, GPS, altimetry, etc.). Utilizing scintillating materials, innovative packaging, and algorithm improvements, these systems will offer greater detection sensitivity, lower false alarms,

and simultaneously provide a greater range of operation. A technology demonstration and characterization will be completed in 2015 to assess technology transition potential.

Long-Range Radiation Detection Project

The LRRD Project continues DNDO efforts to assess and enhance the performance of long-range radiation detection technologies developed during the Road Side Tracker (RST), Target Linked Radiation Imaging (TLRI) and Standoff Radiation Detection System (SORDS) transformational R&D projects. Based upon observations from the LRRD Limited Use Experiment and SORDS characterization events, it was decided to mature these detection technologies prior to technology transition. Specifically, detailed characterizations of the RST and TLRI technologies were conducted to better understand their capabilities in realistic environments. Efforts involving the SORDS units focused on algorithm development designed to improve system performance in realistic operational environments. RST and TLRI will enable advanced vehicle monitoring without impacting the flow of traffic, providing a significant new capability to the GNDA. The SORDS units can support intelligence-directed surge operations where surveillance or search of wide areas is required. This multifaceted ATD will conclude in 2014 with a final report for each technology. Further development will transition to the LRRD program under the Systems Development PPA. The knowledge gained from the RST and TLRI efforts will also inform the RAIN Project (see below) for further transformational development.

Nuclear and Radiological Imaging Platform Project

The NRIP Project leverages recent advancements in the commercial sector as well as results from prior Transformational R&D work. By combining the merits of passive and active technologies, new systems are being developed so that a single system is able to detect radiological and nuclear threats, regardless of the amount of shielding or the complexity of cargo, in primary mode with minimal impact to the flow of commerce. The technologies being investigated include muon tomography, which offers a solution to cargo imaging without requiring a radiation source; integrated radiation detectors into commercially available radiographic imaging system; and radiation detectors integrated into an embellished SNAR PTU that utilizes high energy backscatter and photofission. By looking at unique data signatures and methodologies for fusing active interrogation signatures with the passive detection capabilities, the holistic system has advanced detection capabilities that have the potential to solve the shielded SNM problem at chokepoints. In addition to the regular ATD characterization in a simulated operation environment, these systems will also undergo testing in a controlled, but real, operational environment. This will provide a unique data set of real commerce to better estimate false alarm rates, and additionally will provide data on operational utility. The demonstration and characterization of the commercial PTU and the muon tomography-based PTU will be completed in 2014. The characterization of the SNAR-inspired PTU will be completed in 2015.

Radiation Awareness and Interdiction Network Project, formerly the VARMTS Project

The RAIN Project represents a re-branding of the former VARMTS project, originally intended to examine the technology space of large sensor networks for detection and localization of nuclear and radiological threats. Instead, RAIN will still encompass networked radiation sensors but expand upon this concept to include optical and infrared monitoring of the sensor network. It is envisioned that two

technical approaches will be explored during the effort. The first is an extension of two exploratory research efforts, the RST project and the TLRI project. Both efforts employed a combination of gamma-ray and visible-light imaging to localize gamma-ray radiation sources to individual vehicles, objects, or vessels that traverse within the range of the systems. The second is a new investigation into whether non-imaging networked radiation sensors can be informed by machine vision and automated target tracking to still attribute highly specific radiological signatures to a given vehicle or object, even in free-flowing traffic. The RAIN project will establish a new paradigm for ATDs, where a national laboratory test team and a stakeholder/user group are being identified to help define ATD goals and objectives, and actively participate in each of the ATD phases. In 2013, the test team and user group, specifically the New York Police Department (NYPD), will work together to understand operational conditions and constraints in monitoring traffic and vessels approaching New York City via bridges, tunnels, and waterways. These vignettes will then be modeled, and analyses conducted to define the required performance and establish technology envelope for the technical approaches discussed above. Early in 2014, a solicitation would be issued for proposed research and development of these technologies. Dependent on the response to this solicitation, selected proposals would execute a 30- to 36-month ATD, culminating in 2016 with a test, demonstration, and characterization event at a location(s) as determined by the NYPD.

Mobile Radiation Imaging and Tracking System Project

The planned MRITS Project will develop and characterize versatile radiation detection systems that provide an enhanced search capability by integrating high-sensitivity, passive radiation imaging systems together with other nonradiological sensing and imaging technologies. The system will leverage emerging concepts from the LRRD Project, as well as pertinent ARI and ER efforts, enabling the fusion of object tracking and other contextual information to inform the detection, imaging, tracking, and interdiction of radiological threats from a mobile vehicular platform. The project will focus toward agile solutions that can dynamically handle complex radiation backgrounds and environmental clutter found in urban environments. This project will be initiated in 2015.

EXPLORATORY RESEARCH PROGRAM

The ER program explores innovative, high-risk, early-stage technologies, concepts, and ideas that can make transformational contributions to support the GNDA and reduce the risk of nuclear terrorism. Specifically, the ER program researches technology and techniques that:

- Address capability gaps and weaknesses in the GNDA, with emphasis on rad/nuc detection
- Provide substantial performance improvement or cost reduction of rad/nuc detection capabilities
- Improve nuclear forensics capabilities

Efforts under the ER program are intended to transform the basic building blocks of rad/nuc detection technology and supporting fields, with the research generally culminating in a proof-of-feasibility or proof-of-concept demonstration in a laboratory setting. Successful ER technologies and concepts may then transition to support subsequent ATD projects or directly spur commercial development. ER projects also provide performance modeling, improved algorithm development, and other support capabilities for the broader DNDO mission. The ER program is divided into the six project areas described below. At the beginning of fiscal year 2014, the ER program will support 58 projects

spanning 12 States (33 projects company-led, 4 university-led, 21 laboratory-led – many collaborative).

Materials Research and Support Technology Project

The Materials Project has the technical objective of discovering new gamma-ray sensing materials. These materials could then enable the next generation of passive or active threat-sensing technologies used in the GNDA, to include RPMs, hand-held RIIDS, and a range of other detection technologies. Currently deployed radiation sensors are limited in sensitivity and selectivity for detecting, identifying, and locating nuclear and radiological threats, and have other operational limitations to include high cost, inadequate reliability, or complex operation. These limitations often are related directly to the material used to sense gamma and neutron radiation. Desired materials must be low-cost and available in large sizes and volumes to enable sensitive, widely deployable sensors. They must also provide good gamma-ray energy resolution to differentiate threat from benign radiological materials, and be rugged, stable, nonhazardous, and operate at room temperature.

Two types of material are generally used for radiation sensing: scintillators and semiconductors. In scintillators, a small burst of light is generated when a gamma-ray interacts with it. This light is subsequently measured and correlated with the incident gamma-ray energy. In semiconductors, a gamma-ray produces a small track of charged particles that are collected when an electric field is applied across the material. This charge is subsequently measured and correlated to the incident gamma-ray energy. Materials development has historically been slow-paced, with new scintillators or semiconductors being developed at a rate of only a few every decade. One goal of this project is to greatly accelerate discovery and development of new materials that surpass traditional materials on a cost/performance-benefit basis.

Currently deployed systems that support the GNDA use materials that have been effectively unchanged in 40 years, and have a number of limitations as described above. Both scintillators and semiconductors require specialized front-end electronics that optimally extract and process the signals generated in these materials. For scintillating materials, light collection is conventionally accomplished by photomultiplier tubes that are bulky, fragile, sensitive to magnetic fields and microphonics, high-voltage, and expensive. One of the additional goals of this project is to find and develop superior alternatives on a cost/performance benefit basis to traditional photomultiplier tubes and other front-end detector electronics for both scintillators and semiconductors.

A new area of emphasis in 2015 will be to initiate research in advanced materials that can support advanced active detection concepts for shielded SNM (see the Shielded SNM Detection Project description below). Active detection poses unique challenges in radiation sensing to include the requirement for these materials to discriminate between the interrogating radiation(s) and the unique signal or signature from SNM or the shielding surrounding it. These materials must also be effective in the high radiation fields associated with these systems, and sometimes support the dual role of detecting the passive radiological signatures of threat materials as well as the actively invoked signatures. A precursor to this active interrogation materials area of research will be workshops to bring together the expert materials developer community with the active interrogation systems community.

The table below lists the current ongoing Materials activities at the beginning of FY 2014.

ER: Materials Activity	Sector	State	Initiation Year	Completion Year
High-Throughput Discovery of Scintillation Materials Using Automated Processing	Laboratory	CA	2006	2018
Discovery of Single Crystal and Ceramic Forms of Large Scintillators and Integration into Detectors	Laboratory	CA	2006	2018
Informatics Driven Approach for Semiconductor Materials Discovery	Laboratory	WA	2008	2015
Kypopoulos Growth of Halide Scintillators	Industry	MA	2011	2015
High-Speed Growth of Halide Scintillators using Edge-Defined Film Growth Method	Academia	CA	2011	2015
Large Microstructure Photomultiplier Assembly for Photomultiplier Tube Alternatives	Industry	AL	2011	2015
Europium-Doped Barium-Halides Scintillators	Industry	MA	2011	2014
Cooled Modules for Long-Term Operation of Thallium Bromide (TlBr) Semiconductor Detectors	Industry	MA	2012	2015
Room-Temperature TlBr Semiconductor Materials	Industry	MA	2012	2015
High Purification of Precursor Materials for Crystal Growth	Industry	MA	2012	2015
Defect Engineering of TlBr at Room Temperature	Industry	MA	2012	2015
Development of Near-Room Temperature Modules of (TlBr Semiconductor	Laboratory	CA	2013	2016
Improvement of Energy Resolution in Alkali Halide Scintillators with Co-Doping Technique	Industry	MA	2013	2016
Development of Thallium Chalcogenide Semiconductor Materials	Industry	MA	2013	2016
Zinc-Telluride Doped Scintillator Development	Industry	UK	2013	2016
Ternary Chalcogenide Semiconductor Development	Industry	PA	2013	2017
Photonic Crystal Structures for Improvement in Scintillator Performance	Industry	MA	2013	2016
Aluminum Arsenide Solid-State Photomultiplier	Industry	MA	2013	2016

Neutron Detection Including ^3He Alternatives (Neutron) Project

The Neutron Project explores near-term and longer-term alternatives to ^3He neutron detectors currently used in various portal monitor applications, as well as backpack, handheld, and personal radiation detection instruments. ^3He has been a vital isotope in neutron detectors because of its high absorption cross-section for thermal neutrons, excellent gamma rejection properties, and until recently, historically low cost. However, there is now clear recognition of a worldwide critical shortage of ^3He due to: 1) increased demand by industries such as oil, medicine, basic science, defense, and security; and 2) decreased supply of ^3He being generated from current national tritium reserves associated with nuclear weapons programs. These simultaneous issues have driven the need for detection schemes that do not use ^3He while also pursuing approaches that provide superior performance to ^3He -based detectors.

Starting in 2009, this project initially focused on portal applications because portals require the most ^3He . The results of this research led to a number of commercially available alternatives for portal monitors. Some of these alternative technologies not only met the requirements set by ^3He , but exceeded the performance of ^3He detectors in a number of ways. Following the successes with portals,

increased attention was given to applications that are the next largest users of ^3He – backpacks and handhelds. This work has paved the way for the development of new handheld detectors and backpack systems that do not rely on ^3He . Beginning in 2010, independent government test campaigns executed by DNDO also played a role in driving the development of technologies under this project. These prototype units encompassed a wide variety of technologies and form factors designed for varying application spaces, to include portals, backpacks, and handhelds. A total of 40 unique prototype units developed under this project participated in these campaigns, with 10 in 2010 (9 through ER and 1 through Small Business Innovation Research [SBIR]), two in 2011 under ER, 15 in 2012 (7 under ER and 8 under SBIR), and 13 in 2013 (7 through ER and 6 through SBIR). These are summarized in the table below.

Test Campaign Name	Year	Total No. of Prototype Units	Prototype Units from ER	Prototype Units from SBIR
Government Developed Neutron Detector (GDND) Test Campaign	2010	10	9	1
Neutron Detector Replacement Program (NDRP) Test Campaign	2011	2	2	-
Backpack, Handheld, Vehicle-Mounted, and Portal Test Campaign	2012	15	7	8
Government-Sponsored Backpack, Handheld, and Vehicle-Mounted Neutron Detection Replacement Program Test Campaign	2013	13	7	6
	Total	40	25	15

Emphasis of the Neutron Project is now placed on compact, low-power, rugged neutron detection technologies for personal radiation detection instruments. This project investigates a range of materials, technologies, and sensor systems, many of which are based on either boron-10 or lithium-6 as neutron capture isotopes. This project also explores novel materials and techniques for fast neutron detection that can enable shielded SNM detection approaches (see below). Materials capable of gamma and neutron detection in a single material have also been investigated under this project, leading to the availability of a combined gamma-neutron detection scintillator material as a commercial product. The table below lists the current ongoing neutron activities at the beginning of FY 2014.

ER: Neutron Activity	Sector	State	Initiation Year	Completion Year
Solid-state neutron detectors based on 3-D silicon pillar arrays filled with boron	Laboratory	CA	2008	2015
Gas Avalanche Neutron Detector for portal monitors based on Gas Electron Multipliers	Company	AL	2009	2014
Commercial scale production of stilbene for fast neutron detection	Company	NJ	2011	2014
Development of handheld and backpack neutron detectors based on CLYC	Company	MA	2011	2015
Low-cost and high-efficiency LiInSe_2 semiconductor for neutron detectors	University	TN	2013	2015
High-efficiency boron nitride silicon solid-state thermal neutron detector	University	NY	2013	2016

Advanced Radiation Detection (Radiation) Project

The Radiation Project emphasizes investigating novel approaches to greatly improve the ability to detect, identify, and locate threat materials based on their intrinsic radiological signatures. The primary emphasis is in next-generation gamma-ray and neutron detection systems that support agile, mobile, and multi-modal detection of threats. Currently deployed portal monitors use large PVT panels. The majority of current handheld radionuclide identification systems use sodium iodide or cesium iodide scintillators, or high-purity germanium or cadmium zinc telluride semiconductor materials. Research in this project leverages new materials developed under the Materials or Neutron Projects integrated with advanced electronics, new detector configurations, and specialized algorithms to greatly improve detection sensitivity and selectivity, while also minimizing operational burdens and costs associated with deployment of these systems. Specific technical approaches in this project area include advanced concepts in radiation imaging (Compton imaging, coded-aperture imaging, proximity imaging, dual scatter imaging (for neutrons)), as well as radiation imaging combined with additional sensing modalities to include machine vision and hyperspectral imaging to further enhance performance. Performance benefits to be derived from this research include longer-range standoff detection of threat materials, improved differentiation of threat materials from environmental background and benign sources of radioactivity, decreased false alarms, and enhanced ability to locate and track radiation sources. The table below lists the current ongoing Radiation Detection activities at the beginning of FY 2014.

ER: Radiation Activities	Sector	State	Year Started	Year Completed
Detector-mask Investigation for Dual Gamma-ray and Fast Neutron, Imaging and Spectroscopy	Laboratory	TN	2010	2014
Development of Volumetric Gamma-Ray Imaging Methods for Standoff Detection	Laboratory	CA	2010	2014
RST augmentation with Long-wave Infrared Target Tracking	Laboratory	TN	2011	2014
Enhanced Identification Sensitivity Against Radiological Threats Through Fusion of Orthogonal SWIR Technology for Environment Characterization	Industry	MA	2013	2016
Data Fusion of Radiation Detectors & Auxiliary Sensor for Improved Vehicular Monitoring and Interdiction	Industry	MA	2013	2016
Accurate Radiological Background Estimation Through Semantic Mapping and Classification of Environments Using Geo-Referenced Imagery	Laboratory	CA	2013	2016
	Industry	MA		

Shielded Special Nuclear Material Project

The Shielded SNM Project addresses the critical challenge of being able to detect SNM even when shielded. SNM produces a relatively weak passive radiation signature that can be easily shielded, making passive detection difficult, if not impossible in some scenarios. This project strongly focuses on active interrogation (AI) techniques, including advanced radiography and particle interrogation, to produce unique signatures from SNM to greatly improve detection performance. AI detection methods typically employ x-rays, gamma-rays, or neutrons to penetrate shielding and the normal cargo found in containers, trucks, rail, airplanes, or vehicles. Specific research includes advanced x-ray systems that employ sophisticated algorithms to detect high mass and atomic number objects within radiographic

images. These objects can be an indicator of SNM or the shielding used to conceal SNM or other radiological sources. Research also includes neutron and photon interrogation approaches that detect SNM by inducing fission or nuclear resonance fluorescence. Other techniques of interest use natural fields such as cosmic ray-generated muons and gravity fields without any man-made radiation to sense within large cargo volumes and detect the presence of objects with high mass density. Finally, this project focuses on advanced source technologies that can be used to minimize dose to the environment, and to be deployed in human-portable, mobile, and relocatable applications. These advanced source technologies include nearly mono-energetic x-ray sources, compact neutron sources, and sources for protons and muons. The table below lists the current ongoing Shielded SNM activities at the beginning of FY 2014.

ER: Shielded SNM Activities	Sector	State	Year Started	Year Completed
Human-Portable SNM Detection System	Company	CA	2010	2014
Aircraft Inspection System	Company	CA	2010	2015
Detectors and Algorithms for X-Ray Noise Spectroscopy	Company	CA	2010	2014
Portable Neutron Generator	Company	IL	2010	2014
SNM Detection for Human-Occupied Vehicles	Company	CA	2011	2016
Detection of SNM Using Time-Correlation	Laboratory	CA	2011	2014
Gravity Imaging for Passive Detection of Shielding	Laboratory	CA	2011	2015
High Voltage Power Supply for Neutron Generators	Laboratory	TN	2013	2014
Muon Source for Rail Scanning	Company	TX	2013	2017
Multi-Source Rail Cargo Inspection System	Company	CA	2013	2017
Low-Dose Radiation Source Development for Rail Scanning	Company	CA	2013	2016
Low-Dose Radiography from Laser Driven X-Rays	University	NE	2013	2016
Radiographic Imaging Components for Dose Reduction	Company	MA	2013	2016
Low-Dose Mobile Radiography System	Company	CA	2013	2016

Algorithms and Modeling Project

The Algorithms and Modeling Project utilizes advanced signal processing and cutting-edge analyses to greatly enhance the ability to detect, locate, track, and identify potential threat materials and devices across a broad range of environments. The challenge to current detection systems is that background radiation and other commonly occurring non-threat sources may result in false alarms that otherwise limit their detection sensitivity to true threats. To address this challenge, this project strives to expand our understanding of the background and the observed threat signatures and then exploit them with machine learning, novel signal filtering, Bayesian statistics, and principal component analysis to both improve threat detection performance and enable broader operational agility. The project area leverages the rapidly growing computational capabilities that can be either embedded within instruments, or attached to instruments through smart phones and pads. The desired goal of current algorithm projects is to utilize a greater portion of detection system data and then translate that data into actionable information for the end user.

This project area also emphasizes development of predictive modeling and simulation capabilities for current and future detection concepts. These models help guide research efforts, support capability-based design of advanced detection concepts, enable understanding of how new or existing detection

assets may be best employed, and support trade analyses in detection approaches for new missions. Advancements in modeling and simulation align with the objective for enhanced GNDA planning capabilities, capabilities to cost-effectively assess challenging detection pathways, and improve threat awareness through virtual simulations of operational environments. The algorithms and modeling project also develops tools such as physics-based first-person and web-based gaming simulations to support cost-effective training of deployed detection systems, and “apps” development that can support law enforcement threat detection and adjudication. The desired goal of the model and simulation projects is to develop effective and accurate software tools to support the spectrum from GNDA planning down to end-user operations.

The table below lists the current on-going Algorithms and Modeling activities at the beginning of fiscal year 2014.

ER: Algorithm and Modeling Activities	Sector	State	Year Started	Year Completed
Realistic Adaptive, Interactive Learning Systems (RAILS)	Industry	CA	2009	2014
of Innovative Training Technology for Preventative Rad/Nuc Training	Industry	OR	2009	2014
Enhanced Radiological Nuclear Inspection and Evaluation (ERNIE)	Laboratory	CA	2012	2015
	University	PA		
MCNP Physical Model Interoperability & Validation	Laboratory	NM	2012	2018
Integration of Inertial Measurement Data for Improved Localization and Tracking of Radiation Sources	Industry	MA	2012	2015

	University	TN		

Forensics Data Collection and Analyses (Forensics) Project

The Forensics Project coordinates with DNDO’s NTNFC mission to execute transformational research and development to discover new forensics signatures or develop the tools to enable comprehensive and timely analytical results. As with conventional forensics, the goal is to use quantifiable, actionable, and defensible technical information to help link places, people, objects, and events. Specifically, analytical methodologies are required to characterize materials, samples, devices, constituent parts, output signals, and other related items resulting from the illicit use or intended use (e.g., in trafficking) of radiological/nuclear material. This project area seeks to develop laboratory analytical techniques that improve on existing methods to determine physical, chemical, radiological, or morphological properties of sample material. Analytical results help determine specific processing the material underwent, geographic origins, transport pathways, and intended use of the materials to support effective attribution and deterrence. Other investigations in this project area include techniques to effectively catalogue, track, and benchmark data generated through a range of State-of-the-art

analytical techniques to help bolster a large reference library against which interdicted material can be compared. The desired goal of Forensics projects is to improve or replace current analytic measurement methodologies and tools with ones that achieve greater accuracy and precision for the interagency technical nuclear forensics mission. The table below lists the current on-going Forensics activities at the beginning of FY 2014.

ER: Forensics Activity	Sector	State	Year Started	Year Completed
Analysis of Trace Elements from Uranium Metal Reduction	Laboratory	TN	2013	2014
Uranium Aging and Morphological Analysis	Laboratory	NM	2013	2016
Quantitative Image Analysis Software	Laboratory	NM	2013	2016
Focused Ion Beam Optimization for 3D Imaging	Laboratory	CA	2013	2016

Solicitation Project

New ER activities are initiated through an annual Broad Agency Announcement for industry and academia and a Call for Proposals for National and Government Laboratories. Topic areas for this research are defined from prioritized gaps in the GNDA and the NTNF Strategic Plan. These topic areas may be refined or influenced from technology needs as defined by DNDO, other DHS Components, other Federal departments and agencies, or State and local law enforcement. Topics may also originate from remaining technology hurdles discovered or not fully addressed in prior research. These research topic areas generally address one or more of the projects discussed above. Historically, four to seven topics areas are included in the annual solicitations, and can result in as many 20 new research activities being initiated. For example, the 2013 solicitation resulted in approximately 200 white papers and 50 full proposals resulting in 22 new ER activities across the six topic areas described above. A similar solicitation is expected in 2015.

ACADEMIC RESEARCH INITIATIVE (ARI) PROGRAM

The ARI Program has two primary objectives: 1) Engage the academic community to advance fundamental knowledge for radiological/nuclear threat detection and related sciences with emphasis on fundamental research to solve long-term, high-risk challenges, and 2) Develop human capital in the nuclear science and engineering professions, and related fields. Further, the program works to sustain a long-term commitment to basic research in these fields and coordinates these research efforts with other federally sponsored research in industry and at the National Laboratories. Since inception, 57 grants have been awarded to more than 42 academic institutions across the country. In 2013, the ARI program sponsored 40 grants (six of which are collaborative), supported 154 students and involved 94 students, and resulted in 51 papers. In addition to its focus on basic and fundamental radiation detection science, the ARI funds academic disciplines traditionally not associated with radiological/nuclear detection, such as social sciences, deterrence theory and applied mathematics. The ARI Program portfolio encompasses a number of research categories as described below.

Science and Engineering of Radiation Detector Materials

Research in this area focuses on high-risk long-term research aimed at developing greatly improved radiation detector materials that are highly sensitive, selective, low-cost, and rugged. This research

encompasses a family of investigations to understand the fundamental properties of radiation sensing materials, to include the mechanisms of light production in scintillator materials and charge mobility and lifetimes in semiconductor materials. Research also includes efforts to conduct predictive modeling of materials properties, novel synthesis and growth techniques for materials, and advanced material analysis and characterization techniques. The goals of this research include discovery and development of scintillator materials that have faster response, higher light output, better linearity, and improved yields during growth, and semiconductor materials that have optimized charge transport and collection properties, and room-temperature operation, and excellent sensitivity and energy resolution. Research in this area has encompassed a wide range of investigations, with many focusing on the emerging field on nanomaterial science. The table below lists the current on-going activities at the beginning of fiscal year 2014. Items labeled with a “+” means the research was completed in 2013 but the final report is due in 2014.

ARI: Radiation Detector Materials	Sector	State	Initiation Year	Completion Year
High-Z Materials for Nuclear Detection: Synergy of Growth, Characterization, and Device Physics for Room Temperature Devices	University	CA	2008	2013+
Informatics Aided Design of Inorganic Scintillator Materials	University	IA	2009	2014
Systematic Approach to CdZnTe Material and Detector Development	University	TN	2009	2014
Design and growth of high density, wide band-gap semiconductor materials	University	IL	2009	2014
Investigation of Energy Transfer Based Nanocomposites For Radiation Detection	University	TX	2010	2015
Development of Improved CMT and CZT Nuclear Detectors for Homeland Security (collaborative)	University	AL MN	2011	2016
Pioneering Crystal Growth of Large High Resolution Scintillators	University	TN	2011	2016

Science and Engineering of Alternative Neutron Detection Technologies

Alternative Neutron Detection Technologies research investigates alternatives for neutron detection due to the scarcity of ^3He . It also seeks to greatly improve neutron detection capabilities in general, with performance that would provide substantial improvements over existing ^3He technologies. This includes development and improvement of neutron sensitive scintillator materials as well as semiconductor materials with the goals of excellent efficiency and excellent ability to discriminate neutrons from gamma rays. Additionally, neutron detection systems that improve the ability to localize, and/or image neutron emitting materials also are being investigated. The table below lists the current on-going activities at the beginning of fiscal year 2014.

ARI: Alternative Neutron Detection Technologies	Sector	State	Initiation Year	Completion Year
Transformational Scintillation Materials for Neutron and Gamma Detectors and Educational Integration	University	TN	2008	2013+
New Detectors for Fast Neutron Spectroscopy	University	MI	2009	2014
Development of Li-6 Foil Multi-Wire-Proportional-Chamber	University	MA	2010	2013+

ARI: Alternative Neutron Detection Technologies	Sector	State	Initiation Year	Completion Year
Improved Detection of Fast Neutrons and Special Nuclear Material (SNM)	University	HA	2010	2013+
Superheated emulsions for nuclear material detection	University	CT	2010	2015
Hexagonal Boron Nitride Based Neutron Detectors (collaborative)	University	TX KS	2010	2015
Very Large Area, High Sensitivity Neutron Detection System (collaborative)	University	TX AZ	2011	2016

Science and Engineering of Radiation Detection System Concepts, Approaches, and Architectures

Explores radically new approaches to threat detection, eventually leading to sensor or detection system concepts that are highly sensitive to radiological/nuclear signatures and selective in their ability to distinguish and locate these materials from naturally occurring background radiation. This includes fundamental research into new detection system concepts that provide new insights in how threat materials can be detected even in challenging pathways. Research encompasses the methods and techniques to measure, predict, and compensate for environmental background radiation to improve threat detection, as well as research in advanced radiation imaging modalities. It also encompasses approaches that use non-traditional, alternative, or orthogonal signatures of threat materials and their movement that could be used to augment traditional radiological sensing. The table below lists the current on-going activities at the beginning of fiscal year 2014.

ARI: Radiation Detection System Concepts, Approaches, and Architectures	Sector	State	Initiation Year	Completion Year
Graphene-based Sensors for Detecting Special Nuclear Materials	University	IN	2008	2013+
Gamma Ray Imaging of Special Nuclear Materials with a Liquid Xenon Time Projection Chamber	University	CT	2010	2015
Advanced Concepts in Gamma-Ray Imaging for Homeland Security	University	CA	2010	2015
Electron Tracking for Advanced Gamma-Ray Imaging Applications in Homeland Security	University	CA	2011	2016

Science and Engineering of Shielded SNM Detection Technologies, Signatures, and Sources

This research area includes investigations to overcome the challenge of detecting shielded SNM, principally through advanced or enhanced nonintrusive inspection or active interrogation approaches for cargo scanning; vehicle scanning; and human portable scanning applications. Existing nonintrusive inspection systems use radiography, computed tomography, spectral analysis, and neutron-based assays. Fundamental research in this area addresses a range of studies to augment conventional nonintrusive inspection approaches including: 1) transformational low-power, low-weight, high-yield neutron and gamma-ray producing sources; 2) high-efficiency, fast-recovery, low-cost detectors for active detection; 3) novel active interrogation inspection concepts; and 4) investigations into unique signatures and fundamental data associated with active detection methods such as nuclear resonance fluorescence. The table below lists the current ongoing activities at the beginning of fiscal year 2014.

ARI: Shielded SNM Detection Technologies, Signatures, and Source	Sector	State	Initiation Year	Completion Year
Active Interrogation Using Radiation Generated from Intense Laser-Produced Electron Beams	University	MI	2008	2013+
Nuclear Materials Detection via Time-Encoded Differential Absorption and/or Differential Fluorescence	University	HI	2009	2014
Development of a New Method for Interrogating Special Nuclear Materials Based Upon Polarized (gamma, n) Asymmetries	University	NC	2009	2014
Research Program in Exploiting Time-Correlated Signatures and Directionality of Integration to Detect Shielded HEU	University	TN	2009	2014
Use of Laser Cooling to Extend the Peak Current and Duty Cycle of Microwave Thermionic Guns.	University	HI	2010	2014
Nuclear Data Measurements Using Gamma rays and Radiation Detector Development	University	NC	2011	2016

Expert Systems, Models, Algorithms, and Data Processing for Nuclear Detection Research

This portfolio investigates innovative data processing and analysis techniques that will lead to significant performance improvements. Current and prior research in this area has included algorithm development for simultaneous real-time gamma-ray imaging and isotope identification and application of machine learning (supervised detection, supervised classification, and anomaly detection) to facilitate mobile search/detection performance. The research also includes advances in simulation and modeling techniques to provide early understanding of the operational benefits of new threat detection approaches. Specific research has included the development of an integrated modeling framework to include radiation transport codes with transportation network analysis and container risk classification, and operations research modeling to determine optimal detector deployment strategies. The table below lists the current ongoing activities at the beginning of FY 2014.

ARI: Expert Systems, Models, Algorithms, and Data Processing	Sector	State	Initiation Year	Completion Year
Machine Learning for Effective Nuclear Search and Broad-Area Monitoring	University	PA	2009	2014

Science and Engineering of Nuclear Forensics Technologies

This portfolio investigates advanced analytical techniques used to determine the processing history and transit route of pre-detonation nuclear materials. Research emphasis includes identifying ways to improve analytical techniques and methodologies (i.e., speed, accuracy, and precision) for determining the physical, chemical, radiological, or morphological properties of nuclear or radioactive materials. Objectives include determining the specific processing the material underwent, geographic origins, transport pathways, and intended use. It also includes improving the separation or analysis of nuclear and nonnuclear material constituents of forensics materials. Finally, it includes both discovery and characterization of new signatures associated with the processing history of materials as they progress through the nuclear fuel cycle. The table below lists the current ongoing activities at the beginning of FY 2014.

ARI: Nuclear Forensics Technologies	Sector	State	Initiation Year	Completion Year
Improved Radiochemical Separations for Actinide Forensic Signatures	University	WA	2008	2013+
An Experimental and Computational Study of Actinide Detection and Identification by Engineered Mesoporous Sensor Materials for Actinide Forensics	University	CA	2008	2013+
Cavity Resonance Kinetic Inductance Detectors	University	CO	2010	2013+
Experimental and Computational Assessment of Unique Trace Elements and Isotope Ratios in Plutonium from Depleted Uranium Irradiated in Fast Reactor Blankets	University	TX	2011	2014
Recasting Nuclear Forensics Discovery as a Digital Library Search Problem	University	CA	2011	2014

New Academic Research Initiative Activities

The ARI program refreshes its research portfolio every year through an annual solicitation. Topic areas for this research solicitation must address gaps in the GNDA or TNF while developing students and academic programs. For example, the 2013 solicitation resulted in approximately 80 proposals resulting in nine new ARI activities across the below five topic areas.

- Scientific and Engineering Approaches for Extremely Low-cost Monitoring for Radiological and Nuclear Threats
- Deterrence Theory and Analytics Applied to the GNDA
- Science and Engineering of Threat Detection through Data Fusion, Informatics and/or Nonradiological Signal/Signature Exploitation
- Science and Engineering of Nuclear Forensics
- Integrated Multi-disciplinary Approaches to Clear Objects from Nuclear Threats

A solicitation with revised topic areas is expected to be published in 2015.

DNDO requests \$38.079 million for this activity.

Adjustments-to-Base include:

- Decrease of \$0.136 million for WCF

Program Changes include:

- Decrease of \$1.085 million to test and evaluation operations

CURRENT SERVICES PROGRAM DESCRIPTION:

The DNDO development and acquisition process is anchored by the assessment of DNDO mission-related technologies as they are developed, deployed, and implemented. DNDO continually assesses the GNDA through a variety of means, including:

- Test and evaluation campaigns to characterize and collect performance data on commercially available and emerging technologies and systems
- Execution of pilots with operational agencies to evaluate CONOPS
- Red team operations to deepen the understanding of adversary capabilities
- Program assessments to identify the effectiveness of planned and deployed programs and operations
- Development of national consensus standards and interagency technical capability standards (TCS) for rad/nuc detection systems

QHSR Strategic Alignment – Assessments

- DHS QHSR Mission 1: Prevent Terrorism and Enhance Security
 - Goal 1.2: Prevent and Protect Against the Unauthorized Acquisition or Use of Chemical, Biological, Radiological, and Nuclear (CBRN) Materials and Capabilities

Assessments – Program/Project Overview

Program	Project	Level of Effort	General Description
Test And Evaluation Program	T&E Operations Project	Ongoing	The T&E Operations project funds the staff resources necessary to independently plan test activities, ensure scientific defensibility and rigor, oversee test execution, and report results. These staff resources include test engineers, subject matter experts, and nuclear scientists from the National Institute of Standards and Technology (NIST), National Laboratories, and support service contractors. This project also includes travel necessary to provide oversight of field activities.
	T&E Facilities And Infrastructure Project	Ongoing	The T&E Facilities and Infrastructure project provides the necessary facilities, test instrumentation, SNM and radiological sources, and data collection systems required to support the testing activities described in the T&E Operation project above.
	Operational Analysis And Technical Assessments (OATA)	Ongoing	This project consolidates and integrates three previous projects within the Assessments PPA, specifically Test Data Management, Algorithm Testbed, and Test Modeling and Simulation. The activities and products produced from this effort will transform data collected during testing, modeling & simulation, and replay/injection studies, into actionable knowledge that will enable informed decisions regarding the effectiveness and suitability of rad/nuc detectors under acquisition consideration or that are being considered for COTS procurement.
	Directed Testing	Ongoing	DNDO conducts test campaigns using mature, commercially available rad/nuc detection systems in operational scenarios faced by State, local, and tribal end-users. Such tests provide for the independent assessment of equipment to confirm vendor performance claims.
	Rad/Nuc Detection Standards and Conformity Assessments	Ongoing	The Rad/Nuc Detection Standards and Conformity Assessment Program helps to ensure that detection equipment obtained by Federal, State, local, and tribal end-users is effective, safe, reliable, and affordable, and influences the development of more capable technologies by establishing threshold and objective performance requirements, associated test methods, and testing processes.
Red Team And Net Assessments (RTNA)	Red Team (RT) Project	Ongoing	The RT presents adversary tactics and radiological signature training devices to Federal, State, local, and tribal rad/nuc detection and interdiction operations. These presentations can either be covert or overt in nature.
	Net Assessments (NA)	Ongoing	NA performs objective reviews of the effectiveness of GNDA programs and their associated activities by examining DNDO programs, CONOPS, protocols, policies, procedures, and training.

TEST AND EVALUATION PROGRAM

The DNDO research, development, and acquisition process is anchored by rigorous assessments of mission-related technologies as they are developed, deployed, and implemented. These programs are supported by T&E campaigns to characterize technical performance and assess the operational effectiveness of technologies under development, as well as that of commercially available systems. The testing of detection systems against SNM in significant quantities and in realistic configurations is a key to assessment of rad/nuc systems. This type of testing requires highly specialized and secure testing facilities, such as the Radiological & Nuclear Countermeasures Test and Evaluation Complex (RNCTEC), which are resourced with appropriate test instrumentation, equipment, SNMs and other radioactive sources, measurement devices/sensors, and test data collection, analysis, and archiving systems. Equally important, rigorous and scientifically defensible testing requires a team of trained and experienced nuclear physicists, subject matter experts, statisticians, analysts, and testers. The T&E program is comprised of the following projects: T&E Operations, T&E Facility Infrastructure, Operational Analysis and Technical Assessments, and Directed Testing in Support of State and Local Partners.

T&E Operations Project

T&E capabilities support multiple DNDO programs, generating and providing critical data to support design and development and providing decision-makers with analytical results necessary to make informed judgments. The credibility and timeliness of test products are paramount to advancing technology development programs at key milestones. As such, the need for a repeatable, controlled process in the planning and conduct of testing is required to manage all testing complexities. This process is described and formalized in DNDO Operating Instruction-1 for Test Event Planning, and is used for all testing conducted by DNDO. The rigor of DNDO's test planning and test execution and the quality of the results are widely recognized in the interagency and international rad/nuc detection community.

T&E campaigns are complex endeavors that involve the integrated efforts of test scientists, test directors, test engineers, operational users, development program managers, and test executors in the field. The T&E Operations project funds the staff resources necessary to independently plan test activities, ensure scientific defensibility and rigor, oversee test execution, and report results. These staff resources include test engineers, subject matter experts, and nuclear scientists from the NIST, National Laboratories, and support service contractors. This project also includes travel necessary to provide oversight of field activities. It should be noted that funding for actual execution of test activities at test facilities in the field is typically funded under the development programs for each project, for example, the Systems Development PPA. The table below lists major test activities accomplished in FY 2012 and FY 2013 and reconciles the PPAs that funded the different categories of work.

Test Campaign	Funding PPA for Test Activity

T&E Facilities and Infrastructure Project

The T&E Facilities and Infrastructure project provides the necessary facilities, test instrumentation, SNM and radiological sources, and data collection systems required to support the testing activities described in the T&E Operation project above.

Rad/nuc detection systems testing has been accomplished at several locations including RNC TEC, the primary DNDO test center located at the Nevada National Security Site, as well as various national laboratory facilities such as Pacific Northwest, Los Alamos, Oak Ridge, and Savannah River National Laboratories. This project funds the baseline operations and maintenance of the RNC TEC facility to support DNDO's testing needs. DNDO has also developed and maintains a mobile test center that supports testing activities and data collections at POEs and other operational venues.

Rad/nuc systems require specialized equipment to measure results and collect the necessary data to conduct credible testing with repeatable results. The Data Collection System (DCS), which uses a client-server software architecture model, is a highly configurable test data management system that is customizable for each specific test event. The baseline DCS software will require continued development to keep pace with the new technologies and operational environments being considered by DNDO programs. An effort is underway to redesign database schema, create user-friendly interfaces, and provide offsite access.

This project coordinates with DOE and the National Laboratories to fabricate new SNM sources, manage their deployment and handling at test sites, their packaging and shipment, and ultimately their disposal. The use of SNM sources in testing is necessary to ensure robust and high-fidelity evaluations, and helps DNDO to meet the goal of performing comprehensive technology and operational evaluations of developmental and commercially available rad/nuc detection systems and processes.

Due to their potential high costs and challenges associated with their safety and transportation, DNDO must carefully consider and balance the design, fabrication, handling, and transportation costs of SNM sources. As a result, this project has established overarching functional and operational requirements for all SNM sources. Each source will have its own individual technical requirements.

Sources are being manufactured in four source areas and include new shipment containers:

- Design and fabricate highly enriched uranium (HEU) sources
- Design and fabricate weapons-grade plutonium sources
- Design and fabricate U-233 sources
- Design and fabricate reactor-grade plutonium sources
- Fabricate fissile material shipping containers to allow more cost-effective movement of sources to support testing

In FY 2014 this project will design, fabricate, test and certify a set of HEU sources to support the DNDO Standards Program. The program shall also task a National Laboratory to design a set of U-233 sealed sources to support standards testing, and shall seek to expand the capability to design and fabricate reactor-grade plutonium sealed sources to support T&E activities and standards testing.

Finally, the program will look to deploy new fissile material shipping containers to reduce the cost and increase the efficiency of packaging and shipping sources to support T&E activities and standards testing. The program will also task the National Laboratories to become qualified to open, close, and otherwise operate these containers.

Operational Analysis and Technical Assessments Project

OATAs are core functions of DNDO's T&E capability. This project consolidates and integrates three previous projects within the Assessments PPA, specifically Test Data Management, Algorithm Testbed, and Test Modeling and Simulation. The activities and products produced from this effort will transform data collected during testing, modeling & simulation, and replay/injection studies, into actionable knowledge that will enable informed decisions regarding the effectiveness and suitability of rad/nuc detectors under acquisition consideration or that are being considered for COTS procurement. In-depth analysis conducted using operations research methods will identify the capabilities and limitations of fielded systems and the resulting vulnerabilities within the GNDA, based upon the technical assessment of rad/nuc detectors currently fielded in the GNDA. The operations research activities will utilize existing data stored in archives such as the Archive and Retrieval Management System (ARMS) and Report Analysis Archive System (RAAS), along with newly collected test and/or modeling and simulation data to address operational questions, issues, and unknowns that often arise while developing and deploying new capability. The OATA project has four main elements, Tools for Test Data Management, Spectral Data and Algorithm Analysis Tools, Test Modeling and Simulation, and Technical Assessment.

Tools for Test Data Management

This project element focuses on the collection, verification and validation, analysis, reporting, and archiving of test data collected during DNDO test campaigns as well as the collection of similar test reports by other agencies. Currently two test data management systems have been developed and maintained by DNDO: ARMS and RAAS.

The ARMS is a repository that stores and retrieves all T&E data collected by DNDO. This includes spectra, scenarios, sources, test plans, and reports. The fundamental need is for a centrally controlled repository of validated data sets, with traceable and documented ground truth, and retrievable test data for independent audit report recommendations. Due to the massive amount of data that has been collected and the increasing demand for existing data to support modeling and simulation activities, requirements development, and studies and analysis, a more user-friendly, highly flexible, searchable repository is not only required but is the foundation for the full implementation of DNDO's Model-Test-Model efforts. To meet the increasing requirements for ARMS, DNDO is utilizing the SBIR process in an effort to improve the system. The T&E Data Archival Repository (TEDAR) will replace ARMS. TEDAR will provide each data collection and analysis organization a standard interface for sharing T&E data and lessons learned.

RAAS was developed to store and retrieve test reports containing evaluations of radiation detection and radiography systems from various agencies such as DHS, Defense Threat Reduction Agency, DOE National Laboratories, and others. These agencies have sponsored

and/or conducted studies, evaluations, and tests on equipment that detects, localizes, and identifies SNM and other radioactive materials. This repository of test reports is made available to all appropriate organizations with an interest in rad/nuc detection and radiography equipment performance, including Federal, State, local, and tribal end-users. There are approximately 100 active users of this system that can access approximately 870 reports in 14 classes of technologies. RAAS also includes the DNDO Test Event Database, which contains additional documents related to each DNDO-conducted test, e.g., test and analysis plans, test report, fact sheets, and other information regarding the test event.

TEDAR and RAAS will be linked efforts. As TEDAR is developed, links will be created to RAAS to allow the user to access all supporting documents. Additionally, links to TEDAR will be created in RAAS to access all the structured data for that test event. This type of information access will allow for a more cost-effective approach to future testing.

Spectral Data and Algorithm Analysis Tools

DNDO test campaigns of commercial detection systems have frequently demonstrated opportunities for significant improvement in the embedded vendor-supplied software intended for automated threat determination. Ideally, these software-based algorithms minimize the need for human operator interpretation of data. Building upon DNDO-required standardized data formats, DNDO has established and maintains a capability to evaluate proposed or modified algorithms using existing data from ARMS, a process referred to as “replay.” To balance the tradeoff between improved detection/identification and increased false alarm rate, one typically runs thousands of data files through the replay process. DNDO maintains this capability and continues to utilize replay to improve algorithmic performance while minimizing the need for expensive field testing.

Another promising tool being utilized by DNDO for algorithm improvement is the Replicative Assessment of Spectrometric Equipment (RASE) program, a program initiated by the International Atomic Energy Agency. Improving the effectiveness of the detection and identification algorithms of deployed or proposed rad/nuc instruments requires unbiased assessment of their performance. While the instrumentation may perform well in one situation, it might fail completely in others. The actual physical testing of all possible sources and scenarios, especially the masking of nuclides, is impossible. Modeling, using numerical methods with RASE and other tools like injection studies, will help identify equipment performance in multiple scenarios. The capability of RASE to be used as a tool for regression testing, as the vendors improve software without modifying hardware, is also evident and attractive. DNDO is collaborating with the International Atomic Energy Agency to further develop this tool, including adding additional classes of detection systems (Portable Radiation Scanners, Spectrometric and Nonspectrometric Radiation Portal Monitors in multiple modes of operation, SPRDs, and High-Resolution Gamma Spectrometers) and dynamic (moving source) spectra.

Test Modeling and Simulation

A recent National Academies' evaluation of DNDO efforts recommended increased focus on modeling and simulation as part of the overall system evaluation. In response, DNDO has established a Model-Test-Model strategy to guide various testing efforts supporting DNDO programs. The purpose of the effort is to leverage the substantial radiation detector test, evaluation, and analysis work that has been done, and to continuously improve the efficacy and cost-effectiveness of testing. The use of modeling enhances test design, improves DNDO confidence in the use of science-based models for describing observed behavior, and extends DNDO's understanding of system performance beyond conditions that are empirically tested.

Historically, modeling has been used to design test sources and configurations and predict performance regimes. Such modeling has been used to support the International Rail and ODR testing in FY 2012. Starting in FY 2013, test campaigns will incorporate specific measurements to ensure that model validation is one of the test objectives including, for example, the HPT and SVSD tests during FY 2013. Implementation of the Model-Test-Model paradigm will be piloted by comparing test measurements to model predictions followed by improvements in the model starting in FY 2013 and fully implemented during FY 2014.

Technical Assessment

To date, DNDO T&E efforts have been focused narrowly on the class of system under test. This activity will conduct technical assessments broadly across all T&E activities to draw conclusions and lessons learned that can be applied more generally to other classes of systems or operational environments. These types of crosscutting analyses can streamline future T&E efforts and increase overall efficiencies. The project will produce supplemental reports and studies based on recommendations from previous tests and an annual technical assessment of rad/nuc detection equipment based upon DNDO tests and analysis conducted during the year.

Directed Test Project

State, local, and tribal law enforcement partners have repeatedly stated that in order to develop effective nuclear detection programs, they need reliable information on the technical performance and operational effectiveness of currently available rad/nuc detection equipment. Through this program, DNDO conducts test campaigns using mature, commercially available rad/nuc detection systems in operational scenarios faced by State, local, and tribal end-users. Such tests provide for the independent assessment of equipment to confirm vendor performance claims.

The following classes of detectors have been evaluated in the past: PRDs, handheld, backpack and mobile detection systems, and radiation detection systems suitable for maritime environments and aerial platforms. In FY 2012 and FY 2013, this project supported two major endeavors: 1) Gryphon Test Campaign of aerial-mounted radiation detection systems, and 2) a collaborative test with the European Union, known as the Illicit Trafficking Radiation Assessment Program, on nine classes of rad/nuc technologies, used in the United States as well as worldwide. For FY 2014, DNDO is considering evaluating backpack and wearable radiation detectors. These detectors are widely employed by Federal, State, local, and tribal entities for preventative rad/nuc detection. Recently,

there have been considerable advances in detection materials commercially available for both gamma and neutron detection within this class of equipment in addition to algorithm improvements. Previous DNDO testing that has included these devices has not investigated concepts of operation designed to fully exploit the capability of this class of equipment.

Rad/Nuc Detection Standards and Conformity Assessments Project

The Rad/Nuc Detection Standards and Conformity Assessment Program helps to ensure that detection equipment obtained by Federal, State, local, and tribal end-users is effective, safe, reliable, and affordable, and influences the development of more capable technologies by establishing threshold and objective performance requirements, associated test methods, and testing processes.

The Program includes five projects: National and International Consensus Standards, Technical Capability Standards, Standards Validation, Graduated Rad/Nuc Detector Evaluation and Reporting (GRaDER[®]), and Interagency Characterization and Assessment. This integration of projects into the more holistic Rad/Nuc Detection Standards and Conformity Assessments Program establishes a more direct feedback loop between the testing community and standards developers. Consequently, lessons learned during testing are more readily incorporated into standards helping to ensure standards are more relevant to the needs of the end-users, more testable, and more affordable.

National and International Consensus Standards

The National Technology Transfer and Advancement Act (P.L. 104-113) and the OMB Circular A-119, "Federal Participation in the Development and Use of Voluntary Consensus Standards and in Conformity Assessment Activities (1998), direct Federal agencies to use voluntary standards in lieu of governmental standards whenever feasible. The directives ask Government agencies to promote U.S. participation to ensure that standards created are usable by both Federal agencies and the private sector. DNDO facilitates the maintenance of these standards by providing resources to ensure that they are periodically reviewed and then revised as necessary. This revision is normally done every three years to ensure the standards reflect the latest in rad/nuc detection equipment and procedures. In addition, DNDO continues to support the development of new consensus standards as innovative equipment categories are established and enter into widespread use.

U.S. National standards are developed and maintained through the American National Standards Institute (ANSI). DNDO sponsors the development and maintenance of the ANSI N42 series of standards that address performance requirements for multiple types of preventative rad/nuc detection equipment.

For international consensus standards, the International Electrotechnical Commission's (IEC) Subcommittee 45B is the multinational body that has the responsibility to develop consensus standards for rad/nuc detection equipment. The IEC works with its international members and liaisons, including the International Standards Organization to develop and publish international standards. DNDO's participation and support for these activities allows U.S. interests to be represented leading to the harmonization of international and U.S. standards, promotes U.S. access to the international rad/nuc detection community, and helps to ensure that

non-U.S. products are produced in accordance with approved international standards and are, therefore, more likely to be acceptable to the USG.

Technical Capability Standards

The SAFE Port Act of 2006 (P.L. 109-347) requires that the Secretary of Homeland Security, acting through the Director of DNDO, and in collaboration with NIST, publish TCS for the use of nonintrusive imaging and radiation detection equipment in the United States. A TCS is a Government-unique standard, as opposed to a private sector voluntary consensus standard, that establishes targeted performance requirements for radiation detection and nonintrusive imaging systems used in support of the rad/nuc detection mission of DHS. TCSs are threat-informed standards. Threat-informed is defined as based on a realistic threat interpretation as agreed to by the interagency TCS Working Group. Development of threat-informed standards involves the discussion of classified information that cannot be addressed in the unclassified voluntary consensus arena. The purpose of a TCS is to have, where practical, threat-informed unclassified test objects with associated test protocols for use by test organizations. In support of this effort, unclassified detection capability benchmarks are established that do not compromise nuclear weapon design information.

Standards Validation (Testing the Standard)

Rad/nuc detection standards are written by committees of subject matter experts who are attempting to balance requirements for detection capability against capability of existing technology. When a newly adopted standard is used as the basis of a conformity assessment for the first time, unforeseen deficiencies often become apparent. Such a situation calls for a timely revision of the standard before valuable testing effort is wasted on misunderstood test configurations, procedures, or requirements that will produce inappropriate or unexpected results. For this reason, DNDO initiated the standards validation process. Each standard is validated after the drafting phase. Any deficiencies discovered are then corrected before the standard is used as a basis for testing or adopted by the preventative rad/nuc detection community.

Graduated Rad/Nuc Detector Evaluation and Reporting

Conformity assessments are a systematic examination of the extent to which a rad/nuc detection system conforms to specified standards. Such conformity assessments require testing laboratories that can reliably test equipment against the standards. The GRaDER[®] Program provides for the establishment of independent laboratories and test facilities accredited under the NIST National Voluntary Laboratory Accreditation Program. Accredited GRaDER[®] Program laboratories can evaluate COTS rad/nuc detection equipment against national consensus standards adopted by DHS and Federal Government TCSs, but the cost of such testing should be provided by commercial vendors, other Government agencies, or a conformity assessment program requesting the testing services.

Interagency Characterization and Assessment (Testing Equipment against Standards)

Goal 6 of the *National Strategy for Chemical, Biological, Radiological, Nuclear, and Explosives (CBRNE) Standards* states, “Establish a CBRNE equipment test and evaluation infrastructure and capability to support conformity assessments [across government agencies].” The National Technology Transfer and Advancement Act (P.L. 104-113) includes provisions that encourage Federal agencies to coordinate conformity assessment activities, with the goal of eliminating unnecessary duplication of effort. In addition, DHS is required under the SAFE Port Act of 2006 to implement a test and evaluation program to provide effectiveness information and metrics for evaluating rad/nuc detection technology. DNDO will collaborate with its interagency partners to establish a joint Interagency Rad/Nuc Detection Conformity Assessment and Reporting Program; execute joint conformity assessment based testing; coordinate the integration of agency unique requirements into the program and testing; and develop a systematic approach for sharing existing assessment data.

Formalized relations between DHS, DOD, DOE, and NIST in areas of cooperation in rad/nuc detection will achieve the following goals:

- Reduce duplication of effort
- Enhance collaboration exchanges
- Provide a forum for interagency communication
- Promote leveraging of mutual interests, including development of shared rad/nuc detection technology and testing protocols
- Promote standardization of test methods, procedures, data formats, reporting, and archiving
- Establish a joint road map for testing activities
- Facilitate sharing of conformity assessment data
- Establish an operational framework for future sharing of conformity assessment process and data between DHS and other Federal organizations

RED TEAM AND NET ASSESSMENTS PROGRAM

RTNA is DNDO’s primary means to objectively assess the operational effectiveness and performance of DNDO programs and deployed rad/nuc detection capabilities at the Federal, State, local, and tribal levels in support of the GNDA.

Red Team Project

RT operations fulfill a mission need to evaluate deployed systems and operations, and their associated tactics, techniques and procedures, in as-close-to-realistic-environments as possible. The RT presents adversary tactics and radiological signature training devices to Federal, State, local, and tribal rad/nuc detection and interdiction operations. These presentations can either be covert or overt in nature. Covert assessments provide the radiation detection system operators experience with detecting adversary tactics in day-to-day operations without any forewarning. The operators believe they may be experiencing an actual threat situation. These operations provide valuable feedback to front-line operations on the performance of their tactics, techniques, and procedures from detection through reporting and adjudication to response. This feedback enables operators to modify their CONOPS and

training requirements. Covert and overt assessments are generally the only opportunity for operators of radiation detection systems to have experience detecting uncommon radiation sources to include actual threat signatures. In addition, the RT conducts adversarial-based assessments without using any “inside” information of current or planned capabilities. These assessments give planners an understanding of what adversaries may know about current and planned capabilities. The RT identifies and shares best practices across the GNDA to help improve it over time. Depending on the complexity of the chosen venues, the RT plans to conduct more than 20 operations in FY 2015.

DNDO also builds models that integrate validated lessons learned from overt and covert operations and assessments, intelligence estimates, expert elicitation, and workshops into probabilistic measures of the effect that implemented capabilities have on adversary decision-making. This allows cost-effective computer modeling of how implementing different GNDA capabilities may change adversary behavior. The resultant analysis can help inform decision-makers on the relative benefit of allocating scarce resources across various development and architecture efforts.

Net Assessments Project

NA performs objective reviews of the effectiveness of GNDA programs and their associated activities by examining DNDO programs, CONOPS, protocols, policies, procedures, and training. NA produces reports that provide valuable insights on what is successfully being accomplished and identifies areas for improvement. These assessments are conducted to provide unbiased, objective lessons learned and establish a documented baseline to provide a historic perspective for future endeavors. One of NA’s primary goals is to continue assessing the STC activities and providing lessons learned for incorporation into future STC activities.

2015 Program Change	-	-	1,449
2015 Total Request	-	-	31,565
Total Change 2014 to 2015	-	-	1,365

DNDO requests \$31.565 million for Operations Support. This funding will be used to continue efforts in monitoring the GNDA and providing the data and analyses required to make effective operational decisions. It will also fund efforts to coordinate the implementation of the domestic component of the GNDA and its operational relationships and detection capabilities among GNDA partners.

Adjustments-to-Base include:

- Decrease of \$0.084 million for WCF

Program Changes include:

- Increase of \$1.449 million for the Assistance Project

CURRENT SERVICES PROGRAM DESCRIPTION:

Operations Support plays a pivotal role in implementing the domestic component of the GNDA by ensuring that the training, exercise, and cross-jurisdictional protocols integral to these elements are adopted and sustained. In addition, Operations Support includes integration and outreach efforts necessary to ensure that GNDA partners know how to access available resources to support the rad/nuc detection mission. The activities of this PPA are tightly integrated with those of the STC Program,

described in the DNDO Systems Acquisition PPA. Also included in the Operations Support PPA is a description of Information Sharing which is critical to the Operations Support effort.

Our ability to counter the nuclear threat is fundamentally based on the critical triad of intelligence, law enforcement, and technology. To maximize our ability to detect and interdict nuclear threats, it is imperative that we apply detection technologies in operations that are driven by intelligence indicators and place them in the hands of well-trained law enforcement and public safety personnel.

Accordingly, while DNDO has assisted stakeholders in developing rad/nuc detection capabilities including training and exercise functions, it is also responsible for developing the information sharing and analytical tools necessary to create an integrated and common operating picture. Furthermore, DNDO coordinates with GNDA partners and stakeholders to establish protocols and procedures to ensure that the detection of unauthorized nuclear explosive devices, fissile material, or radiological material is promptly reported to the Secretaries of Homeland Security, Defense, and Energy, the Attorney General, and others as appropriate for action by law enforcement, military, emergency response, or other authorities.

DNDO provides the capability to fuse radiation alarm information with intelligence assessments in a timely manner to provide information that enables broader situational awareness regarding threats and strategic, operational, and tactical conditions. DNDO closely interacts with the intelligence community to develop information requirements and receive assessment products. Conversely, DNDO partners directly with the law enforcement community, which is the primary user of radiation detection equipment in the interior layer of the GNDA. This integrated approach to detection and information analysis provides a substantial improvement and efficiency in alarm resolution, threat assessments, data trend analysis, and, most important, overall probability of success in countering the threat of nuclear terrorism.

QHSR Strategic Alignment – Operations Support

- DHS QHSR Mission 1: Prevent Terrorism and Enhance Security
 - Goal 1.2: Prevent and Protect Against the Unauthorized Acquisition or Use of Chemical, Biological, Radiological, and Nuclear (CBRN) Materials and Capabilities

Operations Support – Program/Project Overview

Program	Project	Level of Effort	General Description
GNDA Operations	Joint Analysis Center (JAC)	Ongoing	The JAC serves as an interagency coordination mechanism and central monitoring point for the GNDA, maintaining situational awareness of the GNDA, to include status of rad/nuc detection operations, visibility into the status of rad/nuc alarms, and awareness of rad/nuc-related incidents and events.
Capability Development	Federal, State, and Local Outreach	Annual, ongoing	Major elements include (1) State and Local Stakeholder Working Group (SLSWG), (2) Executive Steering Council (ESC), (3) Rad/Nuc Challenge, and (4) Capability Integration. The SLSWG and ESC are DNDO-sponsored strategic engagements intended to promote capability development and sustainment, and foster strong relationships with and among our State, local, and tribal agency mission stakeholders. The Rad/Nuc Challenge is an outreach activity intended to share best practices within the operational community, to stimulate interest, and to facilitate improvements in rad/nuc detection equipment to strengthen National rad/nuc detection capability.

Program	Project	Level of Effort	General Description
			Capability Integration ensures that systems, organizations, and/or procedural changes introduced to the GNDA are properly coordinated with interagency partners and address the full range of operational and technical challenges and opportunities that accompany them.
	Training and Exercises	Ongoing	The Training and Exercise Project provides support to Federal, State, local, and tribal GNDA stakeholders to develop and/or enhance rad/nuc detection plans, policies, procedures, communications, tactics, operations, and collaboration with other relevant stakeholders. The training element of this project establishes qualification standards for rad/nuc detection operations, builds curricula to support the standards, enables agencies and their instructors to teach the material, and captures feedback used for process and product improvement. The exercise element of this project supports the development, validation, and dissemination of rad/nuc detection specific exercise templates, guidance, and standards. Collectively, Training and Exercises builds and tests rad/nuc detection capability and provide data used to assess operational effectiveness.
	Assistance	Ongoing	The GNDA Assistance Project provides standardized processes and products to assist GNDA stakeholder with how to plan, develop, manage, evaluate, and sustain a rad/nuc detection program. GNDA assistance efforts support multi-jurisdictional, multi-disciplinary policy makers, program managers, and operational administrators to work together to design and implement land-based and maritime rad/nuc detection programs that will build and enhance detection capabilities in support of the GNDA.
Information Sharing	Governance and Process Project	Ongoing	<p>The DNDO Information Sharing Program establishes and maintains the necessary enterprise and data architectures that enable programs in DNDO, DHS, as well as our Federal, State, local and tribal partners to effectively share rad/nuc information.</p> <p>The associated projects under the Information Sharing program address specific information sharing activities with the Department and interagency related to rad/nuc detection.</p> <ul style="list-style-type: none"> • Development of GNDA Repository which will facilitate the development of the GNDA Enterprise Architecture. • Development and review of interoperability policies and interoperability standards for rad/nuc detection programs. • Review and update of National Information Exchange Model (NIEM) Chemical, Biological, Radiological, and Nuclear (CBRN) Domain for compliance with American National Standards Institute (ANSI) N42.42-2012, American National Standard Data Format for Radiation Detectors Used for Homeland Security and conformance with NIEM 3.0.
	Enterprise Architecture Project	Ongoing	
	Data Architecture Project	Ongoing	
	Solution Architecture – Information Sharing Support Project	Ongoing	
	Analysis and Verification Project	Ongoing	

GNDA OPERATIONS

GNDA Operations was established as an element of DNDO to provide a timely information sharing and analysis capability that monitors the status of and facilitates the analysis and distribution of information from both overseas and domestic components of the GNDA. The JAC serves as an interagency coordination mechanism and central monitoring point for the GNDA, maintaining situational awareness of the GNDA, to include status of rad/nuc detection operations, visibility into the

status of rad/nuc alarms, and awareness of rad/nuc-related incidents and events. The JAC participates in adjudication of nuclear detection events and drafts technical requests for information; analyzes intelligence and sensor information; provides technical support to State, local, and tribal authorities; and assists in the USG technical response to rad/nuc detection incidents. GNDA Operations functions are aligned to two operational elements:

- JAC Operations maintains a common operating picture for stakeholders throughout the GNDA and provides technical assistance, data mining relating to the current status and disposition of GNDA resources, and vulnerability and threat trend analyses to GNDA decision makers.
- The JAC Collaborative Information System (JACCIS) is the IT system infrastructure, including hardware and software that enables JAC Operations.

JAC Operations

JAC Information Sharing is a key function of JAC Operations that supports collaboration among GNDA partners and provides timely data and analyses regarding the current status and disposition of GNDA resources, vulnerabilities, and threat trends, which enable sound and timely leadership decisions. This function offers mechanisms by which partners submit and receive information pertinent to rad/nuc terrorism prevention. DNDO seeks to minimize impacts to GNDA partners by using existing processes and policies as much as possible, sharing visibility of existing information with appropriate stakeholders. The three primary activities under this project are Information Product Development and Deployment, Operational Planning Support, and Cross-jurisdictional Collaboration Support.

- Information Product Development and Deployment generates packaged information on both a routine and on-demand basis and delivers products directly to stakeholders or publishes information on appropriate Community of Interest sites.
- Operational Planning provides information to DNDO Assistance projects and stakeholders to support and promote the planning and execution of rad/nuc detection operations.
- Cross-jurisdictional collaboration facilitates the timely delivery of operational information to appropriate stakeholders to enhance situational awareness of ongoing operations.

JAC Information Analysis, a second key function of JAC Operations, consists of Adjudication Support, and Data Fusion and Trend Analysis in coordination with DOE's National Nuclear Security Administration.

- The JAC provides 24/7 capability to facilitate radiation detection alarm resolution and share GNDA information to effectively transition to response operations if required.
- To accomplish the Data Fusion and Trend Analysis, the JAC maintains a qualified and trained expert workforce, ensures that the reachback community has access and training on the best analytic tools, conducts data fusion of multiple data sources to provide a complete view of the operational environment, and develops awareness within the nuclear detection community to enable alarm resolution at the lowest level possible. Data Fusion and Trend Analysis ensures that stakeholders are provided with complete and relevant information to include spectral analysis support to ensure timely adjudication of detection events. Data Fusion and Trend Analysis integrates broader knowledge of the operational situation with data derived from a detection event to help set adjudication and post-adjudication action priorities.

Joint Analysis Center Collaborative Information System

The JACCIS supports the JAC in both its Information Sharing and Information Analysis roles. It is the information technology system developed to receive, manage, analyze, transfer, and report on data relevant to the GNDA. The JACCIS provides infrastructure to integrate the JAC operational construct and its processes by means of a focused fusion of raw data from multiple sources (alarm adjudication, intelligence sources, etc.). This system also facilitates the sharing of radiation detection data among Federal, State, local, and tribal users and empowers the lowest level of authority to evaluate detection events as either threat or nonthreat, rapidly determining the appropriate response while reducing the impact on commerce and personal movement. This system is also the backbone for moving technical data from the field to the Nation's technical experts for cases when the operators need assistance to resolve alarms. This integration was previously done via phone and e-mail and was manpower-intensive. JACCIS achieved initial operating capability in October 2011.

CAPABILITY DEVELOPMENT PROGRAM

The Capability Development program consists of three major projects: Federal, State and Local Outreach; Training and Exercises; and Assistance, all of which are managed together to ensure a fully integrated environment for the development of efficient and effective operational rad/nuc detection capabilities throughout the GNDA.

DNDO's Capability Development program supports the GNDA by assisting Federal, State, local, and tribal agencies to efficiently develop and maintain rad/nuc detection capabilities that conform to and support National policy. The cooperation and participation of all agencies across the GNDA are central to its success, as the USG relies heavily upon State, local, tribal, and private sector agencies and stakeholders for the domestic component of the GNDA. However, in this era of shrinking State and local budgets and Federal grant funding, it has become much more difficult for stakeholders to build and maintain rad/nuc detection capabilities.

DNDO's Capability Development program activities are designed to reduce the burden on State, local, and tribal agencies by offering support through assistance, training, and exercise support. DNDO provides the expertise and standardized rad/nuc detection program and exercise templates to support rad/nuc detection capability development, planning, and conduct of exercises. DNDO also provides training support through subject matter experts and standardized course materials that can be self-delivered on an as-needed basis, as well as computer and web-based training to assist in maintaining proficiency in the rad/nuc detection mission. By organizing and coordinating the expertise and resources necessary for rad/nuc detection capability development, DNDO is able to deliver scalable, cost-effective, standardized capability development assistance that meets the stakeholders' needs, and supports the GNDA. These efforts, in combination with others, support developing the Interior and Land Border layers of the GNDA and help to fulfill DNDO's responsibility for enhancing and coordinating rad/nuc detection efforts across Federal, State, and local agencies.

Capabilities Integration looks beyond the status and disposition of current GNDA resources to identify opportunities for improvement through the full range of considerations impacting performance, including doctrine, organization, training, material, leadership, personnel, facilities (and infrastructure), and policy (DOTMLPF-P).

Federal, State, and Local Outreach Project

Central to the success of an integrated, layered national defense from the rad/nuc threat is a strong partnership with Federal, State, local, and tribal agencies responsible for the rad/nuc detection mission within their areas of responsibility. The Federal, State, and Local Outreach Project increases awareness by executing broad outreach efforts that include:

- Conducting stakeholder events
- Establishing communication mechanisms that will facilitate interactions with DNDO's State and local stakeholders
- Increasing the visibility of DNDO

These ongoing outreach and collaboration efforts with State, local, and tribal agencies involved in the rad/nuc detection mission are specifically designed to obtain feedback on DNDO's initiatives, learn about advances in State, local, and tribal programs, and facilitate communication and coordination among the rad/nuc detection community. These engagement activities enable DNDO to remain connected with State and local stakeholders to monitor and periodically update their capabilities in the GNDA.

The major elements of this project include the SLSWG, ESC, Rad/Nuc Challenge and Capabilities Integration. These activities support the development of a sustainable partnership between DNDO and the State and local community to strengthen rad/nuc detection capabilities across the Nation, in support of the GNDA.

The SLSWG provides a forum for State and local stakeholders to meet on a semiannual basis with their Federal counterparts at DNDO, FEMA, and other agencies and to present and discuss information about their current activities, lessons learned, and planned rad/nuc detection initiatives. The SLSWG meeting is a critical part of DNDO's outreach efforts to its rad/nuc detection mission stakeholders. The SLSWG provides the State and local communities an opportunity to convey their perspective on rad/nuc detection requirements, intentions, and mission gaps so that DNDO can develop the products and services necessary to meet their needs. DNDO conducts the SLSWG as an opportunity for a large and diverse group of law enforcement and public safety personnel to work together as a community to facilitate building capabilities across the U.S. DNDO consolidated other smaller working group meetings, such as the Interior Focus Group, Training Advisory Forum, and Maritime Working Group into the SLSWG in order to make better use of resources and to better serve its stakeholders. Through SLSWG breakout sessions, DNDO captures user needs and lessons learned specific to the interior layer of the GNDA.

The ESC provides policy coordination and implementation between DNDO and senior-level State and local leaders regarding rad/nuc detection programs. This forum meets annually and is a mechanism to solicit input on and support for future DNDO initiatives. The State and local stakeholders that participate in this forum represent many states and agencies on the forefront of building rad/nuc detection capability to support the GNDA. This meeting ensures that executive leadership is apprised of ongoing efforts in support of their jurisdictions rad/nuc detection programs. The ESC has been a great success and continues to reinforce the relationship between DNDO and key stakeholders.

The Rad/Nuc Challenge is an outreach activity intended to share best practices within the operational community, to stimulate interest, and to facilitate improvements in rad/nuc detection equipment to strengthen National rad/nuc detection capability.

Capability Integration provides a broader vision to Operations Support, ensuring attention to the full spectrum of DOTMLPF-P considerations required to ensure a fully effective and enduring GNDA. Capability Integration looks at the current capabilities of the GNDA and engages stakeholders in finding solutions to challenges and shortcomings that could inhibit full effectiveness. Capability Integration also works with architecture, plans, policy, and systems developers throughout DHS and in conjunction with interagency partners examining DOTMLPF-P implications of emerging rad/nuc detection capabilities and operational concepts to ensure that their integration provides desired improvements and does not adversely impact current capability. This function promotes operational GNDA partner engagement on an ongoing basis for ideas regarding improving performance, lowering costs, and ensuring that operational best practices are actively and deliberately promulgated throughout the GNDA.

Training and Exercises Project

The Training and Exercise Project provides support for Federal, State, local, and tribal GNDA stakeholders to develop or enhance rad/nuc detection plans, policies, procedures, communications, tactics, operations, and collaboration with other GNDA stakeholders. Training and Exercises evaluates GNDA Stakeholder rad/nuc detection capability and provides data used to assess rad/nuc detection operational effectiveness.

The Training Project is responsible for the development, oversight, and administration of the design, delivery, evaluation, and continual improvement of rad/nuc detection training. The project's main objectives are to: increase operational capabilities at the Federal, State, local, and tribal levels; develop training standards for effective use of rad/nuc detection equipment, alarm resolution, and reporting processes; develop standardized training curricula in support of emerging rad/nuc detection technologies; and, foster organic capabilities by assisting Federal, State, local, and tribal agencies with institutionalizing training within their agencies.

Specifically, the Training Project is working on training requirements that include:

- Awareness courses for field operators, program managers, executive leadership, and elected officials
- Basic radiation safety, equipment operations, tactical deployment of equipment and teams, and technical *Reachback* courses
- Specialty courses for maritime detection, aerial detection, spectroscopy analysis, and special event planning
- Program management information and team drills to support refresher training and proficiency

These training requirements will significantly increase the number, awareness, and capabilities of GNDA participants involved in the rad/nuc detection mission. The Exercise Project seeks to validate and enhance emerging and existing capabilities and architectures in an effort to coordinate and integrate detection and interdiction of rad/nuc materials that are out of regulatory control and may be

used as a weapon against the United States. This is accomplished by developing, validating, and implementing standards and proven exercise practices that comply with the Homeland Security Exercise and Evaluation Program (HSEEP) methodology. This project promotes the advancement of best practices and supports self-sustainment of exercise efforts to enhance and coordinate the rad/nuc detection efforts of State, local, and tribal governments.

In addition to developing, validating, and disseminating rad/nuc detection-specific exercise templates, guidance, and standards, the Exercise Project provides support to Federal, State, local, and tribal GNDA stakeholders. The level of exercise support provided in the planning, design, execution, and evaluation of exercises is dependent upon the stakeholders' level of knowledge and experience in conducting the rad/nuc detection mission. In some cases, the Exercise Project takes a lead role in the planning, design, conduct, and evaluation of the exercise. Conversely, a less direct level of support may be provided where the stakeholders are more experienced. In all cases, the Exercise Project aids adherence to published guidance and standards and tracks the correction of improvement areas identified during the exercises.

The Exercise Project also employs standardized Homeland Security Exercise Evaluation Guidelines, which generate exercise feedback, enabling DNDO to assess the maturity of rad/nuc detection capability within a jurisdiction. Following the official updates to Presidential Policy Directive-8, and HSEEP revisions released in FY 2013, the Exercise Project team works diligently to make all necessary process and product changes, while continuing to support exercise requests from stakeholders.

Assistance Project

Assistance provides standardized processes and products to assist Federal, State, local, tribal, and territorial GNDA stakeholders with how to plan, develop, manage, evaluate, and sustain a rad/nuc detection program. The assistance is designed to help multi-jurisdictional, multi-disciplinary, policy makers, program managers, and operational administrators work together to design and implement land-based and maritime rad/nuc detection programs that build and enhance detection capabilities in support of the GNDA. A focused activity within Assistance is maritime capability development, which works with regional Area Maritime Security Committees to develop operational procedures, training, and exercises that support the region's Area Maritime Security Plans and address the small vessel threat.

These assistance efforts are accomplished using a system of standardized processes and products that guide GNDA stakeholders through a series of development phases. This phased approach includes providing comprehensive guidance for Planning, Organizing, Equipping, Training and Exercising (POETE) through the entire rad/nuc detection program lifecycle, thus creating a sustainable framework for the administration of a domestic preventive rad/nuc detection program at both the senior policymaking and operational levels. Other tools available include Commercial Vehicle Inspection, Small Vessel Operations, and Special Events Planning and Execution Guides. DNDO also maintains a Community of Interest web portal on the Homeland Security Information Network to ensure consistent information is available to Federal, State, local, tribal, and tribal programs, as they establish rad/nuc detection capability. Products on the Community of Interest include: strategic planning documents,

sample CONOPS/standard operating procedures, rad/nuc detection program best practices, National Incident Management System typing, fact sheets, and job aids.

Considered a key element of the GNDA, Assistance also manages the Mobile Detection Deployment Program (MDDP). The MDDP provides detection equipment packages for Federal, State, local, tribal, and territorial authorities to augment their incident response teams and to support special events and enhanced steady-state operations by functioning as a force multiplier to the rad/nuc detection mission. The detection package and support personnel are available to support planned activities such as National Special Security Events, Special Event Assessment Rating activities, and intelligence-driven detection operations. The program includes five Mobile Detection Deployment Units (MDDU) pre-staged at DOE Radiological Assistance Program team locations around the United States. Each MDDU is outfitted with rad/nuc detection equipment for use by Federal, State, and local first responders when needed.

INFORMATION SHARING PROGRAM

The DNDO Information Sharing program establishes and maintains the necessary enterprise and data architectures that enable programs in DHS, as well as in its Federal, State, local, tribal, territorial, and commercial partners to effectively share rad/nuc information for the purpose of preventing terrorism and enhancing National security. The DNDO Information Sharing program provides subject matter expert support for governance, enterprise architecture, and data architecture (to include data management planning and support) to aid the evolution of standardized systems for robust rad/nuc information exchange. The DNDO Information Sharing program conducts activities to aid DNDO programs and projects in collection, documentation, analysis and validation of GNDA-related information. Integrated information sharing and exchange policies, operational concepts, tactics, techniques, and procedures will be incorporated to improve the quality supporting and the timeliness of rad/nuc detection, incident, and information correlation to “connect the dots.”

Governance and Process Project

The Governance and Process project provides support to all aspects of integrated governance and capital planning: including Capital Planning and Investment Control required under the Clinger Cohen Act, IT Acquisition Review required under DHS Management Directive (MD) 0007.1, and Acquisition Review Process under DHS Acquisition Management Directive 102-01. This project provides support for DNDO’s fulfillment of required enterprise architecture and data architecture governance functions, including DNDO participation in the DHS Headquarters governance bodies such as the Data Management and Enterprise Architecture working groups, as well as the Enterprise Architecture Center of Excellence.

Enterprise Architecture Project

The Enterprise Architecture project reviews alignment of DNDO programs/and projects with DHS and GNDA architectures. The project assists program and project managers in the tailoring of documentation to meet architecture and investment management requirements. The project maintains the DNDO repository of enterprise architecture artifacts and updates the DHS enterprise architecture repositories. The project develops and maintains architecture models and provides associated tools to

permit visualization of the GNDA to aid in acquisition decision-making. The project provides support to the program and project preparation of insertions into the DHS technology reference model. The project also provides subject matter experts to support technical and governance reviews of DNDO programs and projects at Component and DHS levels.

Data Architecture Project

The Data Architecture project provides and sustains validated methods and means for GNDA information exchanges and includes GNDA standard message protocols for information sharing as well as tools and components for implementing interfaces required to exchange data. The project sustains stewardship of the National Information Exchange Model (NIEM) CBRN domain and maintains the NIEM-conformant N.25 information exchange protocol as well as technical tools for producing and validating NIEM artifacts. Subject matter experts under the project also support DNDO participation in creating and updating voluntary consensus standards supporting and promoting interoperability and compatibility of radiation detection systems for homeland security, and validating conformant messaging.

Solution Architecture - Information Sharing Support Project

The Information Sharing Support project provides assistance to DNDO programs to ensure that information sharing and interoperability requirements are addressed. The project defines information exchange requirements, strategies, CONOPS, and develops program and project artifacts such as conceptual and logical data models, and maps to the DHS, DNDO, and GNDA reference models. The project also provides support to program and project reviews of artifacts for architecture validation, as well as implementation, maintenance, and administration of the GNDA Enterprise Architecture Repository tool to be used by various DNDO Directorates.

Analysis and Verification Project

The Analysis and Verification project provides expertise and environments for independent analysis and verification of DNDO's information sharing architecture and capability. The project provides analysis of DNDO's standards and architecture and support for legacy interfaces and, in conjunction with exchanges among existing and emerging GNDA partners, provides verification of information exchange architecture, standards, and technologies. This project supports DNDO programs and projects, to include STC, JACCIS, HPRDS, and SVSD. The project includes a testbed to aid in evaluating compliance with GNDA protocols and standards for information.

**Department of Homeland Security
Domestic Nuclear Detection Office
Research, Development, and Operations
Nuclear Forensics
Program Performance Justification
(Dollars in Thousands)**

PPA: Nuclear Forensics

	Perm. Pos	FTE	Amount
2013 Revised Enacted	-	-	24,311
2014 Enacted	-	-	22,700
2015 Adjustments-to-Base	-	-	(200)
2015 Current Services	-	-	22,500
2015 Program Change	-	-	(2,500)
2015 Total Request	-	-	20,000
Total Change 2014 to 2015	-	-	(2,700)

DNDO requests \$20.0 million for this activity.

Adjustments-to-Base include:

- Decrease of \$0.097 million for WCF
- Decrease of \$0.103 million for Operational Readiness

Program Changes include:

- Decrease of \$ 1.1 million to National Nuclear Forensics Education Program (NNFEP)
- Decrease of \$ 1.4 million to Nuclear Forensics Technology Advancement program

CURRENT SERVICES PROGRAM DESCRIPTION:

After the detection and interdiction of nuclear materials, or after a detonation, there will be intense pressure from senior leaders to provide accurate, timely technical forensic information in support of attribution conclusions. Hence, the importance of accelerating efforts to advance technical nuclear forensics capabilities was highlighted in recent high-level USG policy and planning documents, a study by the National Academy of Sciences, and international forums.

To fulfill DNDO's responsibilities, the NF PPA is organized into three key mission areas within NTNFC. The first assures Operational Readiness of the entire USG NTNFC enterprise. The integration

and readiness of TNF activities is critical to the success of the forensics mission - *ad hoc* actions in the aftermath of an event will fail to meet intense demands for rapid and effective response. DNDO is leading requirements development across the interagency and coordinating increasingly rigorous exercises and assessments of TNF activities to assure readiness at all times and without warning.

Second, the Technology Advancement program supports the DNDO mission to serve as the national capability developer for the forensics of nuclear materials interdicted before a detonation. These efforts focus on advancing the speed, accuracy, and confidence of TNF analyses, including the development of reference materials necessary for the validation of methods used for characterizing materials; developing new signatures to help identify the origin and pathway of materials; and creating and improving data evaluation and simulation tools to enable the linking of measurement results to both comparison samples and characteristics predicted through modeling and simulation.

Finally, DNDO leads the NNFEDP to restore and sustain an enduring NF expertise pipeline – one of the most significant challenges facing the national capability. DNDO is increasing the emphasis it has placed on the development and retention of TNF expertise, across the spectrum from the most junior (e.g., undergraduate scholars and summer school students, graduate fellows, and junior faculty) to the most senior (e.g., through stable and sufficient R&D programs and forensic scientists’ mentoring of students). The activities in this mission area are well-aligned with the goals for the NNFEDP as outlined in the Nuclear Forensics and Attribution Act of 2010.

QHSR Strategic Alignment –Nuclear Forensics

- DHS QHSR Mission 1: Prevent Terrorism and Enhance Security
 - Goal 1.1: Prevent Terrorist Attacks
 - Goal 1.2: Prevent and Protect Against the Unauthorized Acquisition or Use of Chemical, Biological, Radiological, and Nuclear (CBRN) Materials and Capabilities

The programs and activities of NF are also aligned with the goals and investment priorities delineated in the *National Strategic Five-Year Plan for Improving the Nuclear Forensics and Attribution Capabilities of the United States*.

Nuclear Forensics – Program/Project Overview

Program	Project	Level of Effort	General Description
Operational Readiness	Assessments and Analysis	Ongoing	Strengthen TNF capability through regular evaluations.
	Centralized Planning	Ongoing	Conduct efficient interagency program planning and integration of respective agency TNF capabilities and resources.
	Exercises	Ongoing	Strengthen TNF capability and readiness through multi-agency exercises.
	International Engagements	Ongoing	Facilitate multilateral and bilateral collaborations to advance international TNF core capabilities, build partnerships, and establish an international framework to facilitate cooperation.
Technology Advancement	Data Evaluation Tools	Ongoing	Develop and demonstrate the next generation of tools for pattern analysis and methods to articulate whether or not measurements from questioned samples can be linked and included or excluded from specific families of signatures.
	Material Characterization	Ongoing	Allows for operational use of validated analytical methods, to inform and support signature development.
	Methodology Benchmarking	Ongoing	Evaluate and benchmark laboratory capability to perform specific analyses and methods.
	New Methodology Development	Ongoing	Advance the speed, accuracy, and precision of measurement techniques.
	New Signature Development	Ongoing	Perform studies to determine material and statistical population characteristics that can uniquely identify linkages with known or predicted material characteristics.
	Plutonium Processing Signatures	Ongoing	Develop a capability to simulate industrial-scale plutonium materials processing on a much smaller, laboratory scale.
	Reference Material Development	Ongoing	Prepare reference materials and standard tracers to support the schedule of the Methodology Benchmarking project, exercises, and operational quality assurance activities.
	Uranium Processing Signatures	Ongoing	Develop a capability to simulate industrial-scale uranium materials processing on a much smaller, laboratory scale.
	Academics	Ongoing	Implement academic and workforce initiatives designed to fill gaps in the expertise pipeline and to ensure a robust and enduring TNF workforce.
Expertise Development	Assessments	Ongoing	Maintain a current assessment of the needs and status of the TNF workforce and pipeline.
	Laboratories	Ongoing	Support post-doctorate fellowships, mentorship, and nuclear forensics training for the Federal workforce.

OPERATIONAL READINESS PROGRAM

As the program integrator, DNDO provides centralized planning, evaluation, and stewardship of USG TNF capabilities through interagency coordination and integration, international collaboration, and leading joint exercises, assessments, and corrective actions. DNDO leads the development of foundational planning documents that establish interagency strategic goals, objectives, requirements, processes, plans, and operational procedures for the USG NTNF mission. DNDO sponsors and leads assessments to evaluate these efforts and improve the TNF capability across the mission spectrum from pre- to post-detonation, both within the U.S. and abroad. DNDO also coordinates partner agency budgets to facilitate program alignment. Improved integration yields better results by eliminating duplication of effort and examining unfunded gaps. In FY 2015, DNDO will continue to advance interagency coordination and integration by leading development of the next NTNF Strategic Plan and furthering efforts of the NTNF Requirements Center. The Requirements Center is the USG mechanism for identifying, clarifying, codifying, and documenting TNF requirements to assist with operational and program planning.

Concurrent with interagency integration, another key component of ensuring operational readiness emphasized by the National Academy of Sciences is the conduct of regular, rigorous NF exercises. Such exercises assess multiagency integration, readiness, field sampling techniques, laboratory analysis, data evaluation and reporting, and communication flow. The major exercises alternate between pre- and post-detonation scenarios involving nuclear materials. These exercises focus on the continuous improvement of interactions across the NF community. Exploring the technical and operational shortcomings and gaps enable DNDO and its partners to identify corrective actions based on after-action reports and lessons learned. In FY 2015, DNDO will coordinate, plan, and assess a domestic pre-detonation materials forensics exercise that assesses the nuclear forensics portion of the USG response to an interdicted nuclear device as well as a post-detonation material and debris forensics exercise that may involve an international/foreign scenario and venue.

Assessments and Analysis Project

The Assessments and Analysis project strengthens TNF capability through regular evaluations and assesses TNF processes and capabilities to ensure operational readiness and to identify lessons learned, best practices, capability strengths, and areas of improvement.

Centralized Planning Project

The Centralized Planning project conducts efficient interagency program planning and integration of respective agency TNF capabilities and resources. This includes centrally planning, coordinating, and aligning USG technical capabilities and operational activities while leveraging interagency investment in R&D to address priority needs and ensure unity of effort.

Exercises Project

The Exercises project strengthens TNF capability through jointly planned and executed exercises across the entire TNF mission space and inclusive of all partner agencies. Of most importance are well-documented lessons learned and a robust corrective actions program to improve the collective

TNF capabilities and future exercise planning and execution. This includes the conduct of rigorous full-scale interagency exercises regularly to rehearse, evaluate, and improve the TNF capabilities.

International Engagements Project

The International Engagements project facilitates multilateral and bilateral collaborations in a strategic, cost-effective manner that supports the USG strategic objectives to: advance international NF core capabilities, build foreign partner capacity, and establish an international framework to facilitate cooperation. This includes work through international forums such as the Nuclear Security Summits, Global Initiative to Combat Nuclear Terrorism, International Atomic Energy Agency, and the Nuclear Forensics International Technical Working Group (ITWG) to develop key technical and policy-oriented guidance documents, focused training courses, table-top exercises, practical development and implementation of national NF libraries, and frameworks for sharing NF information as part of an ever-evolving and maturing international NF community.

TECHNOLOGY ADVANCEMENT PROGRAM

DNDO leads activities that advance the USG capability to rapidly, accurately, and credibly characterize and identify the nature, origin, and history of nuclear materials intercepted before a detonation. These techniques enable the forensic association of a sample with existing signature families, predictive results from process modeling, or comparative samples (if available) to formulate technical conclusions. Efforts in this technology area strive to close capability gaps in operational nuclear forensics while increasing performance capabilities for speed, quality, and confidence in collection, analysis, and evaluation techniques. The Technology Advancement program is working to benchmark and advance methodologies that will provide quality results with well-understood uncertainties in the exploitation of signatures for TNF purposes. DNDO is developing signatures and data evaluation tools that incorporate all relevant TNF information into technical conclusions that support attribution assessments. Developed methods and signatures are provided to the operators in the FBI, DOD, DOE, and intelligence community. In FY 2015, the program will demonstrate an advanced operational capability to characterize trace elements in uranium, and continue efforts to be able to process uranium and plutonium on a laboratory scale to develop new signatures to link materials to nuclear fuel cycle processes.

Data Evaluation Tools Project

The Data Evaluation Tools project will develop and demonstrate the next generation of tools for pattern analysis and methods to assess whether or not measurements from questioned samples can be linked and included or excluded from specific families of signatures.

Material Characterization Project

The Material Characterization project allows for operational use of validated analytical methods, to inform and support signature development, and to provide information to the Nuclear Materials Information Program. As new signatures are developed, materials will be characterized to support development and validation of those signatures. This is a continuing effort, coordinated with DOE, New Methodology Development, New Signature Development, and Data Evaluation Tools projects.

Methodology Benchmarking Project

The Methodology Benchmarking project will evaluate and benchmark laboratory capabilities to perform specific analytical methods. This project will identify the most accurate, precise, and timely methods available and appropriate for operational use and identify gaps where improved methods are needed. Method improvements are then transitioned to the operational labs through a technology transfer workshop to ensure that they are effectively utilized for nuclear forensic analyses.

New Methodology Development Project

The New Methodology Development project is advancing the accuracy, precision, and timeliness of measurement techniques. Methodologies developed under this project will advance to the Methodology Benchmarking schedule.

New Signature Development Project

The New Signature Development project performs studies to determine material and statistical population characteristics that can uniquely identify linkages with known or predicted material characteristics.

Plutonium Processing Signatures Project

The Plutonium Processing Signatures project is developing a capability to simulate industrial production-scale plutonium materials processing on a much smaller, laboratory scale. The produced materials are analyzed for discriminating signatures and used for creating well-pedigreed reference materials for methodology validation.

Reference Material Development Project

Reference materials serve as the “gold standard” for assessing forensic analysis methods. The Reference Material Development project prepares certified reference materials and other well-characterized materials to support the Methodology Benchmarking project, exercises, and operational Quality Assurance activities, such as validation of measurement methods and operational laboratory proficiency testing, performed by the interagency Bulk Special Nuclear Materials Analysis Program.

Uranium Processing Signatures Project

The Uranium Processing Signatures project is developing a capability to simulate industrial production-scale uranium materials processing on a much smaller, laboratory scale. The materials are analyzed for discriminating signatures and used for creating well-pedigreed reference materials for methodology validation.

NATIONAL NUCLEAR FORENSICS EXPERTISE DEVELOPMENT PROGRAM

The NNFEDP is the comprehensive USG effort to grow and sustain the uniquely qualified technical expertise required to execute the Nation’s TNF mission. NNFEDP initiatives aim to create a vibrant

academic pathway from undergraduate to post-doctorate study in nuclear and geochemical science specialties directly relevant to NF, with the end goal of filling specific expertise gaps. The NNFEDP promotes a unique interdisciplinary approach that emphasizes collaboration among students, academic departments, universities, and DOE/DOD laboratories. Initiatives include graduate and undergraduate scholarships, fellowships, internships, and mentoring; post-doctoral fellowships; and university and junior faculty awards for studies and research in NF-related disciplines.

The NNFEDP is unique from broader science and technology Federal education programs in its deliberately narrow focus on filling specific, identified gaps within the TNF field. All NNFEDP efforts are integrated, aligned, and inextricably linked at every point – through mentoring, internships, and focused collaborative applied research – to DNDO’s end-to-end TNF priorities, projects, and cadre of scientists who specialize in nuclear weapons and materials activities at the national security laboratories. These experiences are a key component of this holistic program that aims to create a seamless pipeline from academia into a career in TNF at the national level. This program was recently lauded by the Executive Office of the President (OSTP, National Security Staff, and OMB) as a model expertise development program, interconnected with the national labs and DNDO’s forensics and research programs; thus, the NNFEDP was excluded from the Executive Branch initiative to consolidate most STEM-related programs under the National Science Foundation.

DNDO continuously evaluates the state of the workforce within the national laboratory system relative to USG NTNF mission requirements in order to appropriately scale and scope the NNFEDP into the outyears. In addition, DNDO chairs the NTNF Expertise Development Committee in order to ensure cross-agency integration and participation in the NNFEDP. The committee provides a forum to plan, coordinate, and execute joint initiatives within the NNFEDP, facilitating collaborative efforts among NF interagency partners, avoiding duplication, leveraging funding, and ensuring robust Federal support and unity of effort. Active participants include DHS, DOE/National Nuclear Security Administration, DOD/ Defense Threat Reduction Agency, and the FBI.

Academics Project

The Academics project supports a current DHS management performance measure for DNDO. National Strategic Five-Year Plan activities and investment areas under this goal include the implementation of academic and workforce programs designed to fill gaps in the expertise pipeline and ensure a robust and enduring TNF workforce. Initiatives included in this project are graduate and undergraduate scholarships, fellowships, and internships as well as university and junior faculty awards for studies and research in specialties relevant to TNF.

Assessments Project

The Assessments project maintains a current assessment of the needs and status of the TNF workforce and pipeline.

Laboratories Project

The Laboratories project supports post-doctorate fellowships at the national laboratories and funds these laboratories to provide one-on-one mentoring to graduate students in NF-related research areas. This project area also supports development and presentation of curricula related to TNF training for the Federal workforce.

Program Decrease							-	-	(2,981)
Total Request	-	-	28,530	-	-	21,000	-	-	17,924

Total Program Change (\$2.981M)

Capabilities-Based Assessments (\$1.076M)

DNDO conducts a series of CBAs to satisfy requirements of Presidential Policy Directive 8 (National Preparedness Goal) and the DHS Integrated Planning Guidance for FY 2013-2017. A CBA is the mechanism that formally links various tools, techniques, and products to deliver rigorous, objective analysis of the GNDA enterprise, including:

- Rad/nuc detection operating concept development
- GNDA ontology development
- Operational modeling & simulation
- Risk modeling & analysis
- Architecture views
- Data repository development

The CBAs have become the foundation for much of the GNDA analysis resulting in the initiation of programs to address deficiencies in the GNDA. The results of CBAs support effective investment decisions and provide objective justification by identifying GNDA shortfalls and gaps that reduce risk. DNDO conducts CBAs in a coordinated manner, ensuring that identified gaps and shortfalls are evaluated and prioritized by multiple stakeholders from across the interagency. This allows the CBAs to serve as an effective mechanism for developing and maintaining interagency partnerships by developing coordinated common analytic products that can be used to support each Agency's budget prioritization and justification. As the GNDA spans multiple agencies' mission areas and authorities,

joint prioritization of gaps and shortfalls supports has the potential to reduce duplication and inform smart budget allocation.

Justification

A reduction from three to two CBAs will preserve analysis critical to support decisions on where to focus efforts, while enabling funding for other priority programs in DNDO to address the vulnerabilities identified by CBAs and in other analysis.

Impact on Performance

In order to prioritize program activities, it was determined that CBAs on certain parts of the GNDA would be delayed. The cycle to complete assessments of all areas of the GNDA will move from an estimated five-year cycle to an eight-year cycle. The first area impacted would be official POEs, either land, maritime, or both.

GNDA Solutions Management (\$1.905M)

The GNDA Solutions Management program utilizes the outputs of the CBAs and other analyses to facilitate engaging stakeholders, end-users, technology developers, and systems developers through the SDP to capture requirements and develop actionable programmatic documents like mission needs statements, CONOPS, and operational requirements documents. These efforts focus on specific pathways, operating environments, modes of transportation, and/or specific threats and are the basis for both materiel and non-materiel solutions to address vulnerabilities and gaps to reduce risk within the GNDA.

Justification

A reduction of the GNDA Solution Management program will focus program efforts toward the most critical vulnerabilities, while enabling funding for other priority programs.

Impact on Performance

In the same manner DNDO utilizes a risk informed approach to determine which vulnerabilities in the GNDA to be addressed, the same principal will be utilized when determining the CBAs that can be initiated in FY 2015. The focus on the evolution and improvement of the GNDA will be limited to the most immediate and pressing concerns, as determined by risk, program prioritization and other analyses. Architectural studies that are needed to fully characterize gaps across the GNDA through development of Mission Needs Statements, capability development plans, and other requirements documents needed for programs development may be delayed or cancelled. Initiation of acquisition programs to determine solutions to replace capabilities that reach the end of their lifecycle will also be deferred.

Total Program Change (\$1.361M)

Program Description

DNDO Transformational R&D identifies, explores, develops, and demonstrates scientific and technological approaches that address gaps in the GNDA, dramatically improve the performance of rad/nuc detection and TNF technology, and/or significantly reduce the operational burden of rad/nuc detection and TNF. Dramatic technological improvements may include improvements in system or component effectiveness and performance characteristics, reduction in cost of acquisition or maintenance, or reduction of operational burden by users in the field. R&D investments are made based on competitive awards, with investigators in all sectors – government laboratories, academia, and private industry – encouraged to participate. This program takes advantage of the qualities and respective advantages of all three sectors to develop products and methods and to encourage teaming among them. Transformational R&D is carried out within three major programs: Advanced Technology Demonstrations (ATD), the Exploratory Research Program, and the Academic Research Initiative.

Justification

Mobile Radiation Imaging and Tracking Systems (MRITS) Project

The MRITS Project ATD will develop and characterize versatile radiation detection systems that provide an enhanced search capability by integrating high-sensitivity, passive radiation imaging systems together with other non-radiological sensing and imaging technologies. The system will leverage emerging concepts from the Long Range Radiation Detection (LRRD) Project, as well as

pertinent ARI and ERP efforts, enabling the fusion of object tracking and other contextual information to inform the detection, imaging, tracking, and interdiction of radiological threats from a mobile vehicular platform. The project will focus toward agile solutions that can dynamically handle complex radiation backgrounds and environmental clutter found in urban environments.

Impact on Performance

The project completion will be extended by two additional years, completing in FY 2019 with the preliminary design reviewing potentially extending beyond the first year of the project.

Total Request	-	-	31,383	-	-	39,300	-	-	38,079

Total Program Change (\$1.085M)

Test and Evaluation Operations

DNDO is required by the Safe Port Act of 2006 to “carry out a program to test and evaluate technology for detecting a nuclear explosive device and fissile or radiological Material.” DNDO has responded to this need by establishing a dedicated T&E organization that integrates the talents of experienced testers with world-class nuclear scientists. Complementing this expertise is a rigorous, systems engineering-based, test planning process that focuses on establishing testable objectives that meet the users’ requirements, statistically based experimental designs, and is anchored by test milestone reviews by senior leaders from both DNDO and the operation users. Armed with reliable information, Federal, State, local, and tribal operational users of rad/nuc detection systems can make informed decisions regarding which systems to deploy and develop effective CONOPs that leverage the equipment’s proven capabilities and mitigate its inherent limitations.

Justification

DNDO will reduce its testing infrastructure and the number of test engineers, analysts, and independent subject matter experts that support the independent planning, analysis, and data validation of DNDO’s testing programs. The test support personnel reduction will be a decrease from about 30 to 24. This reduction in testing capacity is necessitated by higher priorities within DNDO to address gaps in the Global Nuclear Detection Architecture (GNDA).

Impact on Performance

DNDO will reduce testing capacity by approximately 25 percent, from 12 test campaigns per year down to nine test campaigns per year. A decrease in testing capacity will delay DNDO system development programs and subsequent acquisition and deployment of rad/nuc detection systems to support our Federal, State, tribal, and local partners. This will reduce DNDO's ability to support fee-for-service testing to facilitate private/government partnerships on developing and deploying systems. This will result in delaying potential privately funded rad/nuc detection projects, reducing coverage and capability of the GNDA, and increasing the overall costs to the Government for attaining rad/nuc detection capability required to protect the Nation from illicit nuclear threats. Lastly, DNDO's ability to support its Commercial First framework for future system acquisitions will be reduced since the limitation of test resources directly impacts our ability to concurrently execute test and evaluation events for multiple programs as well as the ability to provide feedback to our Industry partners to improve their COTS devices. The Commercial First approach has been noted as a "best practice" within the Department as it seeks to leverage independent R&D conducted by industry to further DHS's mission readiness.

**Department of Homeland Security
Domestic Nuclear Detection Office
Research, Development, and Operations
Justification of Program Changes**
(Dollars in Thousands)

Program Decrease 4: Nuclear Forensics
PPA: Nuclear Forensics
Program Decrease: Positions 0, FTE 0, Dollars \$(2,500)

Funding Profile

	FY 2013 Revised Enacted			FY 2014 Enacted			FY 2015 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	22,500
Program Decrease							-	-	(2,500)
Total Request	-	-	24,311	-	-	22,700	-	-	20,000

Total Program Change (\$2.5M)

National Nuclear Forensics Education Program (\$1.1M)

The NNFED Program serves as the single comprehensive USG effort to grow and sustain the uniquely qualified technical expertise that is required to execute the Nation's TNF mission. The number of Ph.D. students graduating with a nuclear chemistry degree had decreased to a total of four across the U.S. before this program began—hence, the characterization by the National Academy of Sciences that “personnel skilled in nuclear forensics are too few and are spread too thinly.” At the same time, the average age of the scientists who worked on TNF was around 50, and retirements were on the increase.

Justification

DNDO will revise long-term objectives and rebaseline the number of students that can be supported.

Impact on Performance

Two new Nuclear Forensics Education Awards, two new Nuclear Forensics Junior Faculty Awards, two new Nuclear Forensics Graduate Fellowships, three new post-doctoral fellowships, and 17 percent of the budget for specialized graduate internships at national laboratories (for two internships) would be cut each year. The selected areas of reduction were the result of program reviews and prioritization processes.

The number of undergraduate, graduate, post-doctorate fellowships, internships, and university and junior faculty awards in nuclear forensics -related specialties will be reduced by 20 percent and reduce the expected performance to be 45 awards annually.

NOTE: The GPRA Measure is 63 total awards at the current level. Of that, 56 awards are NTNFCs and 7 are TARs. This decrease will reduce NTNFC NNFEDP awards by 11 (from 56 to 45).

Nuclear Forensics Technology Advancement (\$1.4M)

The Nuclear Forensics Technology Advancement program addresses the pre-detonation materials forensics capability development mission. This program improves our national ability to analyze, characterize, and ultimately trace nuclear materials back to their source.

Justification

DNDO will defer the development of material signatures being developed by the Nuclear Forensics Technology Advancement Program and reduce the number of materials that would have been characterized to enable funding for other priority programs in DNDO.

Impact on Performance

In FY 2015, DNDO will prioritize programs and dedicate resources accordingly. There will be a 20 percent reduction of the number of laboratories participating in methodology benchmarking studies, which are used to determine the best available forensic method on a given material. In addition, the characterization of nuclear materials in the U.S. inventory will be reduced by 50 percent over the FYHSP. This will slow the content development of U.S. databases that provides meaningful linkages during the investigation of seized smuggled nuclear materials.

A reduction in technology projects and participating labs means limiting opportunities for partnering with universities and students who are targeted at those labs—the technology projects not only serve to advance the national capability, but also serve as the “pull” for the students who will repopulate this field.

The Technology Advancement Program, in addressing the pre-detonation materials forensics capability development mission, provides advanced operational capability to the Bulk SNM Analysis Program (BSAP). BSAP is an interagency program coordinated by the National Nuclear Security Administration Office of Technical Nuclear Forensics (DOE NA-45). It is the program that operates the NF analytical capability for interdicted nuclear materials. The FBI, the DOE Office of Intelligence and Counterintelligence (DOE-IN), and DHS (through DNDO NTNFC) are participants in the program. A reduction in national laboratories participating in analytical benchmarking studies will limit the number of specific methods evaluated for potential operational use in BSAP. This will result in limiting operational analytical capability in terms of precision, speed, and accuracy. In addition this will slow the number of nuclear material characterizations provided to DOE-IN for incorporation into the national nuclear library for use in operational case work and signature development.

Total Program Change \$1.058M

Systems Development – On Dock Rail

DNDO Systems Development programs conduct engineering and program management activities necessary to mature and/or select systems for procurement. Through its DNDO Acquisition and Commercial Engagement Strategy, DNDO implemented a Commercial First approach to ensure that all DNDO programs engage the private sector for solutions to address GNDA gaps prior to moving into a government-sponsored and -managed development effort.

The ODR program identifies solutions for ship-to-rail scanning to address efficiency concerns with the current mobile RPM-based solution. The program was initiated in FY 2009 and work continued through FY 2012 when an Alternatives Analysis (AA) was completed that examined potential solutions for ship-to-rail scanning. The AA findings concluded that several systems would provide detection effectiveness at least equal to the existing baseline, but no single solution was identified as best for all seaport terminals evaluated. The project was put on hold in FY 2013 due to funding requirements for higher priority programs within the GNDA and is being reinitiated in FY 2015. In FY 2015, the project will review the prior AA results and consider COTS options available for any new alternative solutions. Based on the results from these reviews, the AA will be refined appropriately.

Justification

The increase will supplement the funds already planned to restart the ODR program. The restart of the program is planned due to a prioritization of resources to address system effectiveness and efficiency

challenges. Funds will accomplish the revalidation of requirements and conduct of market research to ascertain changes in commercially available products that could benefit the program.

Impact on Performance

Increased funding for this project will develop capabilities and address a high-priority GNDA gap, further enabling DNDO to focus on high value programs and support necessary transformational research.

On Dock Rail. The ODR project's objective is to efficiently and effectively scan intermodal cargo containers that are conveyed via straddle carriers from ship to rail. The system may be implemented at up to five seaport terminals in the U.S. that have this need.

Total Program Change \$1.449M

Operations Support

DNDO provides advisory and assistance services to Federal, State, local, and tribal stakeholders who are developing or enhancing rad/nuc detection capabilities, especially as they relate to the GNDA. This support includes assistance in developing and integrating local or regional programs into the GNDA, guiding the development of CONOPS and standard operating procedures, and developing training and exercise products to ingrain those procedures into day-to-day activities. DNDO also keeps stakeholders aware of relevant nuclear detection information or incidents. To accomplish this, operational support activities at DNDO are grouped into three basic functions: Training, Exercises, and Assistance (TE&A); JAC, and STC.

Justification

Increased funding for this project will provide additional interaction with Federal, State, local, and tribal stakeholders in rad/nuc capabilities in supporting GNDA goals, further enabling DNDO to focus on high-value programs.

Impact on Performance

Assistance facilitated statewide outreach efforts beginning in FY 2015 will be increased by three as compared with the FY 2014 plan. The funding will be used to initiate engagement planning and on-site meeting with State and local stakeholders planning for efforts to be executed in the following year.

Systems Architecture Mission Statement

Programs are developing an enhanced global nuclear detection architecture, including both domestic and international components. The GNDA incorporates detector systems, telecommunications, and personnel, with the supporting information exchanges, programs, and protocols that serve to detect, analyze, communicate, and coordinate on rad/nuc materials that are out of regulatory control.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
21.0 Travel and Transportation of Persons	\$186	\$515	\$348	(\$167)

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2015 request is \$348,000.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
24.0 Printing and Reproduction	\$0	\$0	\$8	\$8

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2015 request is \$8,000.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.1 Advisory and Assistance Services	\$7,164	\$7,855	\$8,266	\$411

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc) as well as from other units within the Federal Government. The FY 2015 request is \$8,266,000.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.2 Other Services from Non-Federal Sources	\$5,630	\$0	\$1,346	\$1,346

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25 including training development and delivery. The FY 2015 request is \$1,346,000.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.3 Other Goods and Services from Federal Sources	\$15,550	\$12,630	\$7,956	(\$4,674)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2015 request is \$7,956,000.

Systems Development Mission Statement

DNDO Systems Development is responsible for the engineering development, production, and all developmental logistics products associated with the current and next generation of nuclear detection systems. Product lines include radiation portal monitors (and associated materials development and facilitation), radiography, human-portable systems, and integration programs to address the needs of our operational customers (Federal, state, local, and tribal authorities).

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
21.0 Travel and Transportation of Persons	\$87	\$375	\$128	(\$247)

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2015 request is \$128,000.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change

Transformational Research and Development Mission Statement

DNDO's Transformational and Applied R&D program, seeks to identify, explore, develop, and demonstrate scientific and technological approaches that meet one or more of the following criteria: address gaps in the GNDA, dramatically improve the performance of nuclear detection components and systems, or significantly reduce the operational burden of rad/nuc detection. Dramatic technological improvements may include improvements in system or component effectiveness and performance characteristics; reduction in cost of acquisition or maintenance; or reduction of operational burden by users in the field. R&D investments are made based on competitive awards, with investigators in all sectors government laboratories, academia, and private industry encouraged to participate. This program takes advantage of the qualities and respective advantages of all three sectors to develop products, and teaming among them is encouraged. Transformational and applied R&D is carried out within three major programs: Exploratory Research (ER), Academic Research Initiative (ARI), and Advanced Technology Demonstrations (ATD).

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
21.0 Travel and Transportation of Persons	\$180	\$560	\$180	(\$380)

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2015 request is \$180,000.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.1 Advisory and Assistance Services	\$2,404	\$3,438	\$3,268	(\$170)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc) as well as from other units within the Federal Government. The FY 2015 request is \$3,268,000.

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change
25.3 Other Goods and Services from Federal Sources	\$3,864	\$0	\$1,905	\$1,905

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2015 request is \$1,905,000.

Assessments Mission Statement

The DNDO research, development, and acquisition process is anchored by an independent assessment of DNDO-mission related programs as they are developed, deployed, and implemented, as well as a continual assessment of the global nuclear detection and reporting architecture, through a variety of means. Assessments programs include test and evaluation (T&E) campaigns to characterize technologies and systems, execution of pilots with operational agencies to evaluate concepts of operation, red teaming assessments to deepen our understanding of adversary capabilities, and net assessments to identify the effectiveness of the planned and deployed global nuclear detection and reporting architecture.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change

Operations Support Mission Statement

DNDO Operations Support is responsible for supporting the situational awareness of the nuclear and radiological landscape and the global nuclear detection architecture, while directly facilitating the technical adjudication of rad/nuc incidents. The capability of the JAC is the 24/7 DNDO information hub, and the essence of DNDO's rapid information reporting. Additionally, Operations Support develops training, exercises, information sharing capabilities, and analytical tools necessary to create a fully integrated operating environment to be used by Federal, State, tribal, and local law enforcement agencies, as well as the larger intelligence and counterterrorism communities.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change

Nuclear Forensics Mission Statement

DNDO's National Technical Nuclear Forensics (NTNF) capability serves as an integral component and layer of the United States Government (USG) effort to combat nuclear terrorism. This capability provides means for the collection, analysis, and evaluation of rad/nuc materials and associated evidence for the purpose of comprehensive and timely forensic analysis to contribute to attribution conclusions. An effective forensics and attribution capability will inform national response deliberations and can also help to prevent a follow-on attack. At the strategic level, nuclear forensics can contribute to deterrence and prevention by promoting the concept of nuclear accountability for nations that may wittingly or unwittingly enable a terrorist to obtain nuclear devices or materials.

Summary Justification and Explanation of Changes

	FY 2013 Revised Enacted	FY 2014 Enacted	FY 2015 Request	FY 2014 to FY 2015 Change

BUDGET REQUEST AND SUPPORTING INFORMATION

Domestic Nuclear Detection Office Systems Acquisition

I. Appropriation Overview

A. Mission Statement for Systems Acquisition:

The Domestic Nuclear Detection Office (DNDO) was established by National Security Presidential Directive (NSPD)-43/Homeland Security Presidential Directive (HSPD)-14 to protect against radiological and nuclear (rad/nuc) threats directed against the United States or its interests. Title V of the Security and Accountability for Every Port Act of 2006 (SAFE Port Act, P.L. 109-347) directs DNDO to “serve as the primary entity of the United States Government (USG) to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop, or use an unauthorized nuclear explosive device, fissile material, or radiological material in the United States, and improve that system over time.”

To fulfill the mandates of the authorizing legislation, DNDO’s activities are focused on developing a Global Nuclear Detection Architecture (GNDA) and implementing the domestic component. The GNDA strengthens prevention and deterrence by detecting rad/nuc materials that are out of regulatory control.¹ DNDO has been charged with coordinating the development of the GNDA among the USG partners. The GNDA incorporates detector systems, telecommunications, and personnel with the supporting information exchanges, programs, and protocols that serve to detect, analyze, communicate, and coordinate on rad/nuc materials that are out of regulatory control. We seek to make nuclear terrorism prohibitively difficult for our adversaries through the acquisition of an adaptable and agile detection architecture that can readily surge in response to intelligence cues.

DNDO acquires rad/nuc detection equipment for other Department of Homeland Security (DHS) Components, including the U.S. Coast Guard (USCG), U.S. Customs and Border Protection (CBP), and the Transportation Security Administration (TSA). DNDO also issues cooperative agreements under the Securing the Cities (STC) Program², supporting State, local, and tribal authorities in the development of nuclear detection capabilities for high-threat, high-density urban areas. All deployed technologies for Federal, State, local, and tribal partners are accompanied by the appropriate concepts of operations (CONOPS), training, exercises, and alarm response protocols.

Recognizing the rapid advancement of technology and innovation, constrained budgets, and market forces, DNDO has shifted focus from government-sponsored development of materiel solutions to a Commercial First approach. To address gaps identified in the GNDA and by using a Commercial First approach, DNDO can leverage important industry-led innovations and technologies.

¹ The term “out of regulatory control” refers to materials that are being imported, possessed, stored, transported, developed, or used without authorization of the appropriate regulatory authority, either inadvertently or deliberately.

² In previous year’s congressional justifications and in documents such as the Catalog of Federal Domestic Assistance, STC is referred to as a program. In DNDO’s financial hierarchy, STC is a project under the Capability Development Program.

The Commercial First approach is based on the principle that all DNDO programs will first engage the private sector for solutions to address the gaps identified in the GNDA. There are several Commercial First pathways that a program can follow depending on the defined gap and the technical maturity and commercial availability of potential materiel solutions that may be able to address that gap. These pathways include:

- Commercial-off-the-Shelf (COTS)
- Customized COTS – COTS modified by the government or industry partner
- Commercialization (e.g., Commercial Development) — Industry-developed solutions using industry internal research and development (R&D) funding
- Government-sponsored development

In concert with the end-user community and in keeping with this Commercial First approach for acquisitions, DNDO first attempts to identify commercially available equipment to meet its requirements. DNDO continues to foster open communications with industry partners to share key aspects of future requirements and projected quantities of planned procurements.

The DNDO Systems Acquisition (SA) request includes resources to procure and deploy fixed site radiation detections systems at ports of entry (POE), to support state and local nuclear detection operations through the STC Program, and to provide Federal, state, and local law enforcement and emergency response communities with human portable radiation detection capabilities.

B. Budget Activities:

PPAs	STRATEGIC OBJECTIVE
	Develop, acquire, and support domestic nuclear detection and reporting capabilities
Radiation Portal Monitor Program (RPMP)	<p>The RPMP was established in January 2002 with the objective of deploying RPM systems at U.S. POEs and providing the scientific and technical expertise needed to design, acquire, deploy, and effectively maintain and operate RPM systems. This effort is part of the DHS multilayered strategy to keep U.S. ports of entry safe and secure by interdicting illicit rad/nuc materials.</p> <p>The FY 2015 Budget supports operational rad/nuc detection capability needs for CBP as follows:</p> <ul style="list-style-type: none"> • Continue to work with CBP to prioritize fixed rad/nuc detection equipment deployment and effectively manage inventory • Provide support for site reconfigurations with deployment of portal monitors consistent with the program execution plan • Continue deployments of improvements, including the outcomes of the service life extension project, to fielded systems as warranted by projected benefits

Securing the Cities Program	<p>The STC Program is the cornerstone of rad/nuc detection capability development within the domestic layer of the GNDA. The program seeks to assist State, local, and tribal stakeholders to design and implement or enhance existing architectures for coordinated and integrated detection and interdiction of nuclear materials out of regulatory control within high-threat, high-density urban areas. The New York City (NYC) region includes two major metropolitan areas (NYC and Jersey City/Newark) and was the first to participate in this initiative. The FY 2015 Budget supports State and local rad/nuc detection operations through a three-phased STC Program. This three-phase approach will provide for the implementation of rad/nuc detection capabilities in select high-threat, high-density urban areas.</p> <p>STC aims to produce information linkages between implementation sites in support of a comprehensive national security layer. A multi-year engagement is needed for each high-threat, high-density Urban Area Security Initiative region to implement all phases, depending on the complexity and individual needs of the area.</p> <p>STC efforts in the NYC area have resulted in the development of a robust detection architecture, allowing DNDO to realize significant efficiencies as it supports future metropolitan areas. The FY15 Budget supports a continued engagement with the Los Angeles/Long Beach region as they progress into Phase II, Integration with Federal Capabilities. This level will also support a new region, to be selected in FY14, to continue development of initial operating capabilities under Phase I.</p> <p>DNDO SA funds are disbursed under the STC program through competitively awarded cooperative agreements to the State and local agencies participating in the STC program.</p>
Human Portable Radiation Detection Systems (HPRDS)	<p>Federal, State, and local law enforcement entities that conduct routine and contingency rad/nuc detection missions require human portable radiation detection capability. DNDO procures rad/nuc detection and identification equipment on behalf of DHS Components and for the Mobile Detection Deployment Program (MDDP), which supports specific events by supplementing state and local law enforcement agency capabilities. The HPRDS program consists of several projects supporting multiple users whose primary mission is to detect and identify rad/nuc threats. The objectives of the HPRDS program are to provide more capable systems, expand the range of activities, and address different types of conveyances and cargo to be scanned for rad/nuc material.</p> <p>The FY 2015 Budget will provide funding support for front-line operational rad/nuc detection capability needs for the USCG, CBP, TSA, and DNDO (MDDP) by procuring commercial technologies such as advanced and basic handheld radioisotope identification devices (RIID), personal radiation detectors (PRD), radiation detection backpack systems, and human portable tripwire (HPT) solutions.</p>

C. Budget Request Summary:

DNDO requests \$67.861 million in FY 2015 funding for the SA appropriation. The increase of \$22M over FY 2014 funding will enable DNDO to begin to address the requirement for recapitalization of human portable rad/nuc detection equipment at CBP while continuing to support USCG and TSA detection requirements. DHS will be able to deploy a next generation system that has a detection and identification capability that is nearly double that of the legacy handheld system, is easier to use, and is less expensive to maintain.

2015 Current Services	-	-	7,000
2015 Program Change	-	-	(2,000)
2015 Total Request	-	-	5,000
Total Change 2014 to 2015	-	-	(2,000)

DNDO requests \$5.0 million in FY 2015 for this activity.

Adjustments-to-Base include:

- Increase of \$0.040 million for Radiation Portal Monitor Program
- Decrease of \$0.040 for Working Capital Fund

Program Changes include:

- Decrease of \$2.0 million to Radiation Portal Monitor Program

CURRENT SERVICES PROGRAM DESCRIPTION:

At the U.S. border, the USG has full control over detection and interdiction operations, presenting unique opportunities for interdicting rad/nuc materials and threats. After 9/11, concern was raised about the possibility that terrorists could use the enormous volume of cargo flowing into the U.S. as a pathway for bringing in nuclear material or a nuclear weapon. Since 2002, significant effort and resources have been placed at U.S. land and sea POEs operated by CBP. In 2006, the RPMP acquisition responsibilities were subsequently transferred to DNDO while operations and maintenance functions were retained by CBP. DNDO's mission, in part, was to deploy monitoring equipment at U.S. POEs and to provide the scientific and technical expertise to design, acquire, and deploy these systems. Additionally, in the SAFE Port Act of 2006, Congress mandated that all containers coming into the U.S. through the 22 highest volume seaports be scanned for radiation. To address this

mandate, DNDO has acquired and, in accordance with CBP priorities, deployed commercially available polyvinyl toluene (PVT) RPMs as defined in a joint DNDO/CBP deployment strategy.

Program funds are used to support CBP's efforts to maintain scanning coverage at previously completed POEs (e.g. sustainment of existing POEs). As POEs are reconfigured, RPMs must be relocated, decommissioned, and/or additional RPM systems must be deployed to maintain current scanning capabilities.

In addition, improvements aimed at extending service life, as well as detection efficacy and operational performance, will be deployed to fielded systems pending availability of funding.

Radiation Portal Monitor Program

Program	Project	Level of Effort	General Description
Radiation Portal Monitor Program	Radiation Portal Monitor	Ongoing	Support CBP's efforts to maintain scanning coverage at previously completed POEs. Decommission low-use RPMs and reconfigure sites as required. Deploy new RPMs and redeploy previously decommissioned RPMs as necessary to maintain required level of scanning capabilities. Deploy improvements to fielded systems.

RADIATION PORTAL MONITOR PROGRAM

Historically, the RPMP has been the source of funding for the acquisition and deployment of RPMs at U.S. land and sea POEs. DNDO will continue to manage the deployment of the remaining PVT-based systems in its inventory and will deploy selected improvements that have been projected to enhance operational or threat detection performance to fielded systems in FY 2015.

DNDO requests \$12.0 million in FY 2015 for this activity.

Adjustments-to-Base include:

- Decrease of \$0.161 million for Working Capital Fund
- Increase of \$0.161 million for Capability Development

Program Changes include:

- Decrease of \$10.0 million to Securing the Cities program

CURRENT SERVICES PROGRAM DESCRIPTION:

The STC Program assists State, local, and tribal stakeholders to design and implement or enhance existing architectures for coordinated and integrated detection and interdiction of rad/nuc materials out of regulatory control within high-threat, high-density urban areas.

SECURING THE CITIES PROGRAM

Program	Project	Level of Effort	General Description
Capability Development	Securing the Cities	Annual, ongoing	The project assists State, local, and tribal stakeholders to design and implement or enhance existing architectures for coordinated and integrated detection and interdiction of nuclear materials out of regulatory control within high-threat, high-density urban areas.

STC is a multi-year rad/nuc detection capability development project.

The first year activities include planning and evaluation to determine the most critical detection needs within the area. The second and third years focus on phased capability development and implementation, executed through financial support for equipment, training, exercises, and program management. The fourth and fifth years continue with training and exercises emphasizing the area's ability to surge and integrate with Federal rad/nuc detection capabilities. The phased strategy enables DNDO to provide financial assistance to multiple areas simultaneously while expanding capabilities to further implement the domestic component of the GNDA. The three program phases are described below.

Phase I – Initial Operating Capability

DNDO provides a mechanism for cities to develop an initial operating capability to detect and report the presence of nuclear materials that are out of regulatory control. This capability utilizes detection equipment, protocols, and personnel and is integrated into and supports the GNDA. During Phase I, efforts will focus on satisfying the immediate needs of State and local agencies in developing baseline detection and reporting capabilities. DNDO will provide resources allowing partners an increased understanding and awareness of the nuclear threat, enhanced regional capabilities to detect and interdict nuclear threats, and increased cooperation and coordination among regional jurisdictions and agencies. Initial capabilities include development of Operations Plans including alarm adjudication protocols, deployment of equipment, training and exercise support, and technical program assistance. Phase I concludes when the region establishes a nuclear detection program encompassing coordinated operations, self-delivered nuclear detection training and exercise capabilities, and a plan in place to sustain the program over time in support of the GNDA. This phase of the implementation is expected to take the first 2-3 years of the engagement.

Phase II – Integration

DNDO provides additional resources to allow development of enhanced detection, analysis, communication, and coordination functionality and builds on the integration of State and local capabilities with USG activities and the GNDA that previously existed or were established during Phase I. In this phase, the USG will leverage capabilities established locally in Phase I to partner with State and local jurisdictions to ensure a National coordinated response in support of the GNDA. In addition, DNDO will work with the STC partners to define end states for DNDO direct support to State and local activities. Phase II concludes when a region successfully demonstrates its ability to integrate into a national nuclear detection framework in support of the GNDA. Cities may also use DHS homeland security grant funds in support of the activities under Phase II. This phase of the implementation is expected to take about 2 years of the engagement.

Phase III – Sustainment

DNDO provides indirect support to sustain the program. DNDO will maintain connectivity with the established local architecture through alarm adjudication and subject matter expertise to provide advice on training, exercise, and other program support. This support includes:

- DNDO's systems engineering and evaluation programs provide detection equipment testing to aid partners in making equipment decisions.

- Product acquisition and deployment support includes guidance to help interpret equipment specifications so operators clearly understand equipment capabilities.
 - Transformational and applied research offerings explore up-and-coming radiation detection technology.
 - The DNDO Red Team operates in overt or covert modes to assist stakeholders to understand potential vulnerabilities.
 - Training and exercise programs provide training materials and exercise assistance.
- State and local participants will maintain and continue to improve their developed capabilities to support the GNDA using local funds or other Federal Government grant funds.

Throughout STC's implementation in the NYC and Jersey City/Newark areas, assessments of the program's effectiveness in building capabilities were conducted. An interim report published in September 2008 described the business model. A second interim report was completed in January 2011 and focused on evaluating the program as implemented in the NYC area. Two other assessments were completed: an independent assessment of STC completed in April 2011 and an assessment of the April 2011 full-scale exercise completed in October 2011. These reports assessed Phase I and II activities and indicated that the STC program has succeeded in developing a robust area-wide detection program focused on preventing a rad/nuc attack on the NYC and Jersey City/Newark Regions. The recommendations from these assessments, as well as the extensive knowledge gained by the STC management team in implementing the project in the NYC area, led to the development of a repeatable program model for subsequent implementations.

DNDO has obligated \$115.175 million of acquisition funding directly to the NYC and Jersey City/Newark areas from 2007 through 2013. DNDO will continue to provide technical support and alarm adjudication support through the Joint Analysis Center, training and exercise assistance, and subject matter expert support.

DNDO has obligated \$9.9 million of acquisition funding directly to the Los Angeles/Long Beach (LA/LB) area from 2012 through 2013. Another \$1.5 million in nonmonetary assistance has been provided over that same time period. In FY 2014, the LA/LB area is projected to receive additional funds that will continue Phase I activities in FY 2014 by demonstrating that it has established a nuclear detection program encompassing coordinated operations and self-delivered nuclear detection training and exercise capabilities, and has a plan in place to sustain the program over time in support of the GNDA. In FY 2015, LA/LB area funding will assist the region's entry into Phase II.

DNDO will begin implementation in a third STC locale in FY 2014 based on a full and open competition of eligible cities. In FY 2015, STC financial support will allow this third city phased capability development focusing on equipment, training, exercises, and program management.

Implementations in both the NYC, Jersey City/Newark, and LA/LB areas have resulted in the development of a robust, repeatable development model allowing DNDO to realize significant efficiencies as it supports future metropolitan areas. Funding for this program will continue to be used to procure, integrate, deploy, test, evaluate, train, and exercise multi-layer, multi-pathway, multi-jurisdiction rad/nuc detection and reporting architectures for all implementations. Funds will be allocated to ensure that detection capabilities are integrated with Federal, State, and local command, control, and communication systems. State and local partners will provide in-kind resources by bearing operational costs. Funds will also be used for logistics, maintenance, and calibration costs as

well as personnel costs to support the training necessary to operate detection equipment and conduct exercises. DNDO will work with State and local partners to budget appropriately for the long-term sustainability of capabilities implemented under this project.

DNDO SA funds are disbursed under the STC project through competitively awarded cooperative agreements to a lead State or local agency. The lead agency establishes a regional governance structure among the major law enforcement, first responder, and public health agencies to implement a regional rad/nuc detection program.

2015 Program Change	-	-	37,000
2015 Total Request	-	-	50,861
Total Change 2014 to 2015	-	-	37,261

DNDO requests \$50.861 million in FY 2015 for this activity.

Adjustments-to-Base include:

- Decrease of \$0.036 million for Human Portable Rad/Nuc Systems
- Increase of \$0.297 million for Working Capital Fund

Program Changes include:

- Increase of \$37.0 million to Human Portable Radiation Detection Systems (HPRDS) program

CURRENT SERVICES PROGRAM DESCRIPTION:

Under the HPRDS PPA, DNDO procures multiple types of rad/nuc detection and identification equipment on behalf of DHS Components and for specific events supplementing State and local law enforcement agency capabilities. The HPRDS program consists of several projects supporting multiple users whose mission is to detect and identify rad/nuc threats. The objectives of the HPRDS program are to provide more capable systems, expand the range of activities, and address different types of conveyances and cargo to be scanned for rad/nuc material. These systems are relatively light, easy to use, and of sufficiently low cost to support widespread deployment. Projects include all HPRD devices that can be worn, carried, or moved by a person. The devices procured under the HPRDS program are fully developed and most are commercially available.

Human Portable Rad/Nuc Systems

Program	Project	Level of Effort	General Description
HPRDS	CBP- Joint Acquisition Strategy (JAS)	Ongoing	Per the cooperatively developed JAS, DNDO coordinates with CBP for the deployment of human portable systems for CBP officers and agents to scan people, cargo, and privately owned vehicles at and between POEs. CBP requirements include PRDs, advanced handheld RIIDs, and basic handheld RIIDs. DNDO may also purchase equipment for the HPT and/or Small Vessel Standoff Detection (SVSD) missions in FY 2015 (pending the results of these systems' development efforts and funding availability).
	USCG-JAS	Ongoing	Per the cooperatively developed JAS, DNDO procures rad/nuc detection systems to satisfy USCG requirements. Required equipment includes PRDs, advanced and basic handheld RIIDs, linear and handheld radiation monitors, and backpack systems. In addition to these requirements, DNDO may also purchase equipment for the HPT and/or boat-to-boat detection missions in FY 2015 (pending the results of these systems' development efforts and funding availability).
	Visible Intermodal Prevention and Response (VIPR) Sustainment	Ongoing	DNDO supports the needs of TSA VIPR teams for rad/nuc detection equipment by providing teams with PRDs, basic handheld RIIDs, and radiation detection backpacks. HPRDS FY 2015 funding will be used to sustain the equipment of the existing VIPR teams.
	Helium-3 (³ He) Procurement	Ongoing	DNDO plans to acquire approximately 50 liters of ³ He in FY 2015 to ensure that DHS has the gas required to execute its mission during the transition to alternative technologies. The ³ He Mitigation Program is currently identifying technologies that may replace legacy neutron detectors acquired by CBP, TSA, and USCG. Continuing in FY 2015, ³ He will be procured for systems that have not transitioned away from ³ He.
	DNDO MDDP	Ongoing	DNDO acquires rad/nuc detection systems to meet the needs of DNDO's MDDP. Mobile Detection Deployment Units (MDDU) are deployable, mobile trailer packages, containing rad/nuc detection equipment for up to 40 public safety professionals. The equipment includes portable backpack rad/nuc detection units, basic and advanced RIIDs, and PRDs. HPRDS FY 2015 funding will be used to sustain the equipment of the existing MDDUs.

HPRDS ACQUISITION PROGRAM

The HPRDS PPA supports the procurement of multiple types of equipment for CBP, USCG, TSA's VIPR teams, and the MDDP:

- Personal Radiation Detector
 - Pager-size pocket devices for the search for the rad/nuc materials. The PRDs are typically clipped to a uniform or belt. They automatically monitor the environment and alert the user if rad/nuc material is detected. PRDs are continuously worn by operators for rad/nuc detection and personal protection.
- Human Portable Tripwire
 - Small/wearable systems that provide next-generation capabilities to detect, identify, communicate, and adjudicate rad/nuc threats. HPTs will also function as personal protective equipment and warn operators of potential exposure to harmful levels of radiation.

- Basic RIIDs
 - Designed for search, detection, localization, and identification of radionuclide composition of radioactive and nuclear materials and for quick and accurate measurement of dose rate and count rate. Used to support secondary screening and small-area searches.
- Advanced Handheld RIIDs
 - Often used as the final arbiter in situations where illicit trafficking is suspected. due to their rad/nuc detection and identification superiority. They are also used in laboratory settings as reference detectors.
- Radiation Detection Backpack
 - Used in situations where a wide-area rad/nuc detection capability is necessary, potentially in covert operations. They are used to quickly detect and locate a radiation threat in public, wide-area search, or maritime (e.g., small vessel standoff) environments.
- Linear Radiation Monitor (LRM)
 - Specifically designed to aid in the search of container ships and large stacks of intermodal shipping containers.
- Handheld Radiation Monitor (HRM)
 - Used to quickly and discreetly detect and locate a radiation threat. The HRM can also be used to detect rad/nuc sources underwater, such as underneath a boat or large ship.
- Helium-3 Gas Procurement for Legacy Neutron Detectors Project
 - Procured for handheld rad/nuc detection equipment while alternative neutron detection technologies are being identified.

Today, legacy handheld radiation detection equipment (RDE), particularly handheld RIIDs used by CBP, USCG, and TSA, has reached or exceeded its expected service life and is in need of immediate replacement. Presently-deployed handheld RDE is at or beyond its service life, becoming irreparable and being taken out of service.

DNDO procures multiple types of human portable equipment for DHS Operational Components (CBP, USCG, and TSA). This equipment includes handheld RIIDs, PRDs, rad/nuc detection backpacks, and other equipment such as SVSD Boat-to-Boat project's detection equipment pending results of SVSD analysis.

U.S. Customs and Border Protection JAS

CBP Office of Field Operations supports the CBP rad/nuc mission at land, sea, and air POEs. POEs have the highest utilization of RDE and are subject to legislative mandates. The SAFE Port Act of 2006³ requires that “all containers entering the United States through the 22 ports through which the greatest volume of containers enter the United States by vessel shall be scanned for radiation.” A risk-informed approach to scanning for rad/nuc material is applied to other POEs. Unit obsolescence and failure due to age of currently deployed handheld RIIDs will further reduce CBP's operating capability to 35 percent below full operational capability (FOC) by FY 2019. This will increase overall risk and severely impact CBP's ability to adjudicate radiation alerts in a timely manner without impacting trade and travel, perform small-area searches, and scan targeted cargo where no RPMs are available.

³ Pub.L. 109–347 Section 121

Without handheld RIIDs, DHS's capability for rad/nuc scanning at all POEs will decrease, and CBP will not have a method to adjudicate RPM alerts.

Border Patrol Agents currently use PRDs and handheld RIIDs for rad/nuc interdiction, surge scanning operations, and safety where contact is anticipated with cargo and conveyances. CBP Office of Border Protection (OBP) RDE capability is focused on station and checkpoint operations; no RDE capability for line watch operations is currently planned. OBP is currently at FOC for PRDs and basic handheld RIIDs; however, basic handheld RIIDs employed by OBP are near or past their expected service life and require replacement. In addition, the current suite of RDE deployed at OBP checkpoints does not support expeditious examination of travelers and requires significant secondary inspection for resolution.

Per the cooperatively developed JAS, DNDO coordinates with CBP for the deployment of human portable systems for CBP officers and agents to scan people, cargo, and privately owned vehicles at and between POEs. CBP requirements include PRDs, advanced handheld RIIDs, and basic handheld RIIDs. DNDO will continue to deploy next-generation basic handheld RIIDs after the successful completion of a competitive procurement that will result in an award in early FY 2014 for a five-year indefinite delivery/indefinite quantity contract. DNDO may also purchase equipment for the HPT and/or SVSD missions in FY 2015 (pending the results of these systems' development efforts and funding availability).

U.S. Coast Guard JAS

USCG has been equipped with RDE to conduct its rad/nuc detection mission in the maritime domain. DNDO has provided RDE to USCG law enforcement personnel, inspectors, and marine investigators to increase the probability of rad/nuc detection across the USCG mission space. There are more than 13 million recreational vessels, 82 thousand fishing vessels, and 100 thousand other commercial small vessels registered or operating in U.S. waters. Seven hundred large commercial vessels (both U.S. and foreign flagged) arrive at U.S. ports daily, and eight thousand foreign flagged vessels enter U.S. ports annually with an average of 10 port calls per vessel. Currently, 100 percent of all boardings of vessels (small and large) are conducted by USCG personnel with RDE. Additionally, USCG Deployable Specialized Forces have been equipped with RDE to conduct advanced rad/nuc operations. However, this boarding percentage is misleading since only a small fraction of the vessels entering or transiting U.S. waters are actually boarded on an annual basis.

Per the cooperatively developed JAS, DNDO procures rad/nuc detection systems to satisfy USCG requirements. Required equipment includes PRDs, advanced and basic handheld RIIDs, LRMs, HRMs, and backpack systems. In addition to these requirements, DNDO may also purchase equipment for the HPT and/or SVSD Boat-to-Boat detection missions in FY 2015 (pending the results of these systems development efforts and funding availability).

VIPR Sustainment

TSA VIPR teams have been equipped with RDE to conduct rad/nuc mission for the interior layer. VIPR teams deploy for steady state and enhanced steady state operations. VIPR teams are uniquely equipped to support the rad/nuc detection mission, because they can deploy to key

transportation facilities around the country and have law enforcement authority within their jurisdiction.

DNDO supports the needs of TSA VIPR teams for rad/nuc detection equipment by providing teams with PRDs, basic handheld RIIDs, and radiation detection backpacks. HPRDS FY 2015 funding will be used to sustain - in terms of lifecycle replenishment - the equipment of the existing VIPR teams that is nearing the end of its useful life.

³He Gas Procurement for Legacy Neutron Detectors

DNDO plans to acquire approximately 50 liters of ³He used for neutron detection in FY 2015 to ensure that DHS has the gas required to execute its mission during the transition to alternative technologies. ³He is released for use when authorized by the ³He Sub-Interagency Policy Committee.

The ³He Mitigation Program (in the Research, Development, and Operations Appropriation) is currently identifying technologies that may replace legacy neutron detectors acquired by CBP, TSA, and USCG. Continuing in FY 2015, ³He will be procured for systems that have not transitioned away from ³He. This requirement is expected to decline when alternative technologies become available for HPRDS.

Mobile Detection Deployment Program (MDDP)

DNDO's MDDUs are equipped with RDE that supplements existing rad/nuc detection resources in support of special events and intelligence-driven operations. MDDUs are housed regionally across the United States and maintained by Department of Energy Radiological Assistance Program (RAP) Teams through an interagency agreement with DNDO. There are two large-capacity MDDUs and three small-capacity MDDUs currently operational. A fourth small-capacity MDDU will become operational in FY 2014. Each large capacity MDDU is configured to support up to 40 personnel and each small-capacity MDDU is configured to support up to 20 personnel.

Total Program Change (\$2.0M)

Radiation Portal Monitor

RPM Equipment Acquisition/Deployment includes the procurement and deployment of monitoring equipment at U.S. POEs and provides the scientific and technical expertise to design, acquire, and deploy these systems. RPMs are deployed at our ports of entry enabling scanning of almost 100 percent of containerized cargo.

Justification

This program decrease will allow support for limited deployment of fixed or portable detectors at POEs to move forward while enabling funding for other priority programs in DNDO.

Impact on Performance

DNDO will reduce plans for acquisition and deployment by approximately 30 percent or nine new deployments and six decommissions, as compared to FY 2014 plans.

Total Program Change (\$10.0M)

Securing the Cities

The STC Program seeks to assist State, local, and tribal stakeholders to design and implement or enhance existing architectures for coordinated and integrated detection and interdiction of nuclear materials out of regulatory control within high-threat, high-density urban areas. The FY 2015 Budget continues an emphasis on supporting State and local rad/nuc detection operations through a three-phased approach. This approach provides for the implementation of rad/nuc detection capabilities in select high-threat, high-density urban areas.

Justification

Although STC is the cornerstone of rad/nuc detection capability development within the domestic layer of the GNDA, funding was prioritized to maintain current operations and GPRA Measures in other programs within DNDO's portfolio.

Impact on Performance

The funding will enable DNDO to continue to work with State and local regions to work towards initiating or completing the initial operating capability or integration with federal capabilities, as appropriate to the status of the current implementations. The change in plan will result in deferring the

start of an implementation in a new region until after FY 2015 while continuing to support the implementation in the Los Angeles/Long Beach area and the new region to be selected in FY 2014.

Total Program Change \$37.0M

Human Portable Radiation Detection Systems

DNDO procures multiple types of rad/nuc detection and identification equipment on behalf of DHS Components and for specific events supplementing State and local law enforcement agency capabilities. The Human Portable Radiation Detection Systems (HPRDS) program consists of several projects supporting multiple users whose mission is to detect and identify rad/nuc threats. The objectives of the HPRDS program are to provide more capable systems, expand the range of activities, and address different types of conveyances and cargo to be scanned for rad/nuc material. These systems are relatively light, easy to use, and of sufficiently low cost to support widespread deployment. Projects include all HPRDS devices that can be worn, carried, or moved by a person. The devices procured under the HPRDS program are fully developed and most are commercially available.

Justification

The Current Services level of funding will support CBP, USCG, TSA and Mobile Detection Deployment Units (MDDU) requirements for basic and advanced handheld Radioisotope Identification Devices (RIID), Personal Radiation Detectors (PRD), Human Portable Tripwire (HPT) detectors, and Backpacks.

The program increase will support the procurement of basic and advanced handheld RIIDs for CBP. Since 2009, reductions in the HPRDS PPA have significantly slowed the replacement schedule to meet DHS Components' Full Operational Capability (FOC) requirements. Furthermore, antiquated equipment in the field is failing at an alarming rate and is costing the Department more in operations

and maintenance than acquisition of replacement systems with greater capability and dramatically reduced lifecycle costs. With this funding, DHS will be able to deploy the next generation system that has a detection and identification capability that is nearly double that of the legacy handheld system, is easier to use, and is less expensive to maintain.

Impact on Performance

Current Service Level: Basic and advanced handheld RIIDs, PRDs, HPTs, and Backpacks procured will reduce the rate of degradation of scanning capability in the field.

Program Increase: Handheld rad/nuc detectors presently used by CBP at our ports of entry (POEs) have reached the end of their service life and are failing at a rate of 600 units per year. The failure rate greatly outpaces our recapitalization ability under the present budget profile. This jeopardizes DHS' ability to meet legislatively mandated obligations to scan high-risk cargo at the POEs. The \$37.0M for CBP will allow recapitalization efforts to keep pace with handheld failure rates while also meeting 86% of CBP's Handheld RIID FOC requirement.

Additional impacts that will be avoided due to the program increase are as follows:

- Reduction in RPM alarm adjudication capability at seaports by approximately 30 percent, which would have delayed the processing of legitimate commerce.
- Reduction in radiation scanning operations by half, except for personnel safety, at U.S. international airports and pre-clearance passenger operations located in overseas airports, including inbound general aviation aircraft, air cargo, passengers, and baggage, which would have limited small-area search and delayed radiation alert adjudication.
- Elimination of surge/enhanced steady-state capability due to reduction in handheld RIIDs available for immediate use by CBP for mobile operations in response to natural disasters, National Special Security Events (NSSE), and requests from POEs to support temporary scanning operations, pilots, or expansions resulting in less R/N detection capability during disasters and at NSSEs.
- Elimination of the ability to replace handheld RIIDs out for scheduled (calibration) and unscheduled maintenance, which would have rendered many smaller POEs without identification and small area search capability (e.g., no fleetwide spare handheld RIIDs).

Radiation Portal Monitor Program Mission Statement

The Radiation Portal Monitor (RPM) Program was established at CBP in January 2002 with the objective of deploying RPMs at ports of entry (POEs) and providing the scientific and technical expertise to design, acquire, deploy, operate and maintain these systems. In 2005, DNDO assumed the responsibility of designing, acquiring and deploying the systems, and it has established a Ports of Entry program to work with CBP to bring the latest technology to bear on the threat of illicit nuclear materials crossing our borders. This program procures equipment to meet the needs of end-users, in accordance with the Global Nuclear Detection Architecture (GNDA). The RPMP was established with the objectives of deploying RPMs at United States ports of entry (POEs), and providing the scientific and technical expertise to design, acquire, and deploy these systems. As the Department of Homeland Security (DHS) works to keep the major seaports and northern and southwest land borders safe using radiological/nuclear (rad/nuc) detection capabilities, the Domestic Nuclear Detection Office (DNDO) continues to address the vulnerabilities in other locations and pathways.

Securing the Cities Mission Statement

The objective of the Securing the Cities (STC) initiative is to reduce the risk of a radiological or nuclear attack in high-risk metropolitan areas by enhancing regional capabilities to detect and interdict radiological material out of regulatory control. This initiative was initiated in the New York City (NYC region). Acquisition funds were utilized to procure, integrate, deploy, test, evaluate, train, and exercise a multi-layer, multi-pathway, multi-jurisdiction nuclear detection and reporting architecture for the region. Funds were also allocated to ensure that detection capabilities are integrated with Federal, State, and local command, control, and communication systems. State and local partners provided in-kind resources by bearing operational costs. Funds were also used for logistics, maintenance, and calibration costs as well as personnel costs to support the training necessary to operate detection equipment and conduct operational exercises. DNDO Systems Acquisition funds are dispersed under the STC program through competitively awarded Cooperative Agreements to the state and local agencies participating in the STC program.
