	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
22.0 Transportation of Things	\$1,109	\$781	\$814	\$33

Transportation of things includes all costs of the care of such things while in process of being transported and other services incident to the transportation of things. Specifically, funding provides for shipment of goods, equipment, supplies and materials to support completion of AC&I projects. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.2 Rental Payments to Others	\$156	\$174	\$272	\$98

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Funding supports lease renewals for facilities (e.g., office space, waterfront/mooring facilities, equipment storage and maintenance facilities, etc.). Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.3 Communications, Utilities, and Misc. Charges	\$1,377	\$2,257	\$453	(\$1,804)

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Specifically, funding includes data connectivity costs for Coast Guard shore facilities and cutters, utility costs, including shore facility utilities, cutter and boat fuel requirements, and postal costs. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$135,965	\$69,085	\$44,884	(\$24,201)

Advisory and assistance services include services acquired by contract from non-Federal sources (private sector, foreign governments, State and local governments, tribes, etc.) and other agencies within the Federal Government. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$253,035	\$59,972	\$91,553	\$31,581

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs in support of GPRA and other performance measurement initiatives. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.8 Subsistence & Support of Persons	\$3,298	\$1,996	\$1,412	(\$584)

Contractual services with the public or another Federal Government account for the board, lodging, and care of persons. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
26.0 Supplies and Materials	\$59,732	\$88,353	\$22,623	(\$65,730)

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters and boats, supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
31.0 Equipment	\$668,557	\$576,637	\$294,264	(\$282,373)

This object class covers the purchase of capitalized and non-capitalized assets. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
32.0 Land and Structures	\$158,609	\$65,875	\$113,114	\$47,239

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease. Funding in FY 2016 reflects the anticipated need.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
21.0 Travel and Transportation of Persons	\$750	\$242	\$1,556	\$1,314

Travel includes all costs of transportation of persons, subsistence of travelers and incidental travel expenses in accordance with Federal travel regulations. Specifically, funds transport of personnel in support of training, project management and oversight of the Long Range Surveillance Aircraft (C-130H/J), Maritime Patrol Aircraft and HH-65 Conversion/sustainment project. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
22.0 Transportation of Things	\$210	\$68	\$350	\$282

Transportation of things includes all costs of the care of such things while in process of being transported and other services incident to the transportation of things. Specifically, funding provides for shipment of goods, equipment, supplies and materials to support completion of aviation projects. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.2 Rental Payments to Others	\$45	\$15	\$117	\$102

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Funding supports lease renewals for facilities (e.g., office space, hangar facilities, equipment storage and maintenance facilities, etc.). Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.3 Communications, Utilities, and Misc. Charges	\$485	\$197	\$195	(\$2)

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Specifically, funding includes data connectivity costs for facility utilities, fuel requirements, and postal costs. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$32,450	\$6,026	\$19,292	\$13,266

Advisory and assistance services include services acquired by contract from non-Federal sources (private sector, foreign governments, State and local governments, tribes, etc.) and other agencies within the Federal Government. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$23,507	\$5,231	\$39,300	\$34,069

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs in support of GPR and other performance measurement initiatives. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.8 Subsistence & Support of Persons	\$326	\$174	\$607	\$433

Contractual services with the public or another Federal Government account for the board, lodging, and care of persons. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
26.0 Supplies and Materials	\$28,151	\$7,706	\$9,724	\$2,018

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for aircraft, and supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies. Funding in FY 2016 reflects the anticipated need.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
21.0 Travel and Transportation of Persons	\$90	\$136	\$344	\$208

Travel funds cover the travel costs of Coast Guard employees, while in an authorized travel status, either directly or by reimbursing the traveler. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
22.0 Transportation of Things	\$13	\$38	\$77	\$39

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. Specifically, funding supports the shipment of military member's household goods in conjunction with Permanent Change of Station (PCS) moves. Funding in FY 2016 reflects travel funding requirements and the continued implementation of internal travel policies consistent with the Administration's Campaign to Cut Waste.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.2 Rental Payments to Others	\$4	\$9	\$26	\$17

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Funding supports lease renewals for facilities (e.g. office space, waterfront/mooring facilities, equipment storage and maintenance facilities, etc.). Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.3 Communications, Utilities, and Misc. Charges	\$45	\$111	\$43	(\$68)

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Specifically, funding includes data connectivity costs for Coast Guard shore facilities, cutters, and aircraft, utility costs including shore facility utilities and cutter, boat and aircraft fuel requirements, and postal costs. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$9,500	\$3,387	\$4,267	\$880

Advisory and assistance services include services acquired by contract from non-Federal sources (private sector, foreign governments, State and local governments, tribes, etc.) and other agencies within the Federal Government. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$2,565	\$2,940	\$8,692	\$5,752

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs in support of GPRA and other performance measurement initiatives. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.8 Subsistence & Support of Persons	\$49	\$98	\$134	\$36

Contractual services with the public or another Federal Government account for the board, lodging, and care of persons. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
26.0 Supplies and Materials	\$3,416	\$4,332	\$2,149	(\$2,183)

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters, boats, aircraft, and supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies. Funding in FY 2016 reflects the anticipated need.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$44,716	\$46,793	\$47,542	\$749
11.3 Other than Full-Time Permanent	\$157	\$164	\$167	\$3
11.5 Other Personnel Compensation	\$574	\$600	\$610	\$10
11.6 Military Personnel-Basic Allowance for Housing	\$10,139	\$10,553	\$10,565	\$12
11.7 Military Personnel	\$27,637	\$35,075	\$35,437	\$362
11.8 Special Personal Services Payments	\$90	\$115	\$116	\$1
12.1 Civilian Personnel Benefits	\$11,657	\$12,764	\$12,959	\$195
12.2 Military Personnel Benefits	\$2,428	\$3,079	\$3,111	\$32
13.0 Benefits for Former Personnel	\$98	\$123	\$124	\$1
Total, Salaries & Benefits	\$97,496	\$109,266	\$110,631	\$1,365

All funding for salaries, benefits, and support for the military and civilian personnel who administer AC&I contracts are provided by the AC&I appropriation. Funding in FY 2016 reflects the cost of pay (1.3 percent pay raise), medical benefits, and other mandatory personnel entitlements. The increase in civilian allowances is due to a rise in government normal cost contribution for various Federal Employee benefits to include Federal Government Life Insurance, Federal Employee Health Benefits, Federal Government Thrift Savings Plan contribution, and non-recurring funding for the compensable workday of Feb 29, 2016.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
21.0 Travel and Transportation of Persons	\$73	\$19	\$20	\$1

Travel funds cover the travel costs of Coast Guard employees, while in an authorized travel status, either directly or by reimbursing the traveler. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.3 Communications, Utilities, and Misc. Charges	\$13	\$16	\$17	\$1

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Specifically, funding includes data connectivity costs for Coast Guard shore facilities, cutters, and aircraft, utility costs including shore facility utilities and cutter, boat and aircraft fuel requirements, and postal costs. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$931	\$481	\$496	\$15

Advisory and assistance services include services acquired by contract from non-Federal sources (private sector, foreign governments, State and local governments, tribes, etc.) and other agencies within the Federal Government. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$1,925	\$418	\$432	\$14

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs in support of GPRA and other performance measurement initiatives. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
26.0 Supplies and Materials	\$477	\$616	\$635	\$19

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters, boats, aircraft, and supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
31.0 Equipment	\$5,329	\$4,018	\$4,145	\$127

This object class covers the purchase of capitalized and non-capitalized assets. Funding in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
32.0 Land and Structures	\$1,147	\$459	\$473	\$14

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease. Funding in FY 2016 reflects the anticipated need.

Appendix
(Fully Funded Projects with Unobligated Balances)

Response Boat - Medium (RB-M)

\$0

Project Description, Justification and Scope

The Response Boat - Medium (RB-M) project was established in October 2001 to replace the aging 41-foot Utility Boats (UTB) (and other large non-standard boats) with standardized assets more capable of meeting the Coast Guard’s multi-mission operational requirements. Funding received to date completes the project.

FY2014 Key Events

- Placed order for 4 RB-Ms, for a cumulative total of 174 RB-Ms ordered;
- Received 28 RB-Ms.

FY 2015 Key Events

- Receive final RB-Ms;
- Achieve Full Operational Capability.

FY 2016 Planned Key Events

- Project complete.

H-60 Conversion Projects

\$0

Project Description, Justification and Scope

Prior year funding continues to modernize the Coast Guard’s fleet of 42 H-60 Jayhawk, Medium Range Recovery (MRR) helicopters, as these helicopters rotate through Programmed Depot Maintenance at the CG Aviation Logistics Center (ALC). The H-60 Conversion Project is broken into discrete segments consisting of upgrades that modernize and standardize aging components and sub-systems to stabilize maintenance costs and operational reliability. Prior year appropriations will allow continued installation of Block 2 software for the Avionics Upgrade (DS1) and the Service Life Extension Project (SLEP) effort.

FY 2014 Key Events

- Delivered Avionics Upgrades (DS1), H-60T EO/IR Sensor System Upgrades (DS2), and Service Life Extension Project work items for aircraft 38-42;
- Continued Service Life Extension Project (SLEP) work items during regularly scheduled Programmed Depot Maintenance;
- Held Block 2 Upgrade (B2U) Phase 1 Critical Design Review (CDR) and Phase 2 Preliminary Design Review (PDR);
- Conducted ESS Sweep Width Testing (Round 2, Phase 4) conducted at Air Station Clearwater
- Completed Maintenance Workload Analysis / Follow-on Pilot Workload Analysis;
- Conducted B2U / RNP-RNAV Phase 1 Developmental Test & Evaluation (DT&E) / Operational Test and Evaluation (OT&E).

FY 2015 Planned Key Events

- Continue Service Life Extension Project (SLEP) work items during regularly scheduled Programmed Depot Maintenance;
- Conduct B2U / RNP-RNAV Phase 2 DT&E / OT&E;
- Continue Installation of the Block 2 Software Upgrade;
- Achieve Full Operational Capability in 3QFY15.

FY 2016 Planned Key Events

- Continue Service Life Extension Project (SLEP) work items during regularly scheduled Programmed Depot Maintenance;
- Complete Block 2 Software Upgrade and training.

Funding History¹

<i>FY</i>	<i>\$K</i>	<i>Major Activity Funded by Net Appropriation</i>
2002-2011	\$296,808	H-60T Avionics Upgrade; SLEP; Electro-Optical/Infrared Sensor Systems
2012	\$44,100	H-60T Avionics Upgrade; SLEP; Electro-Optical/Infrared Sensor Systems

No significant changes.

Nationwide Automatic Identification System (NAIS)

\$0

Project Description, Justification and Scope

NAIS is a data collection, processing, and distribution system being implemented in accordance with the Maritime Transportation Security Act. The project provides the necessary capability to ensure the effective exchange of information between AIS-equipped vessels, aircraft, aids to navigation, and shore stations within all major U.S. ports, waterways, and coastal zones. The data collected by NAIS will be shared with other pertinent stakeholders and decision makers in support of maritime security at critical ports. NAIS correlates Advanced Notice of Arrival data with Automatic Identification System (AIS) data to identify higher interest vessels.

NAIS is recapitalizing the existing interim capability in 58 ports with the permanent solution design and technology via the core system upgrade. To the extent feasible, NAIS equipment is being co-located with Rescue 21 (R21) infrastructure.

FY2014 Key Events

- Achieved IOC for the Permanent Transceive System and continued deployment out to total of 49 ports and eight waterways.

FY 2015 Planned Key Events

- Equipment acquisition, including procurement of NAIS base station equipment, antennas, networking equipment, annual software licensing, and other shelter and site equipment for the final seven Sectors.
- Install equipment at five Sectors (Sault Ste Marie, Lake Michigan, Upper Mississippi River, Lower Mississippi River, Ohio Valley) that will upgrade another 7 of the 58 ports with the permanent system.

FY 2016 Planned Key Events

- Install equipment at the final 2 Sectors (Anchorage and Juneau) that will upgrade the final 2 of the 58 ports with the permanent system;
- Enter sustainment – All equipment is installed.

Funding History¹

<i>FY</i>	<i>\$000</i>	<i>Major Activity Funded by Net Appropriation</i>
2004-10	\$96,011	Interim capability; permanent transceive design and development
2012	\$5,000	Permanent transceive site surveys, equipment purchase and installation
2013	\$5,508	Continue permanent transceive deployment
2014	\$13,000	Continue permanent transceive deployment
<i>Total</i>	<i>\$119,519</i>	<i>Funding received for FY 2004 through FY 2014</i>

¹ Table reflects net funding, appropriations received (+/-) reprogrammings and less rescissions. FY 2015 amounts reflect the FY 2015 Request

Significant Changes

No significant changes.

Rescue 21

\$0

Project Description, Justification and Scope

The unobligated prior year funds bring Coastal Rescue 21 Sectors to Final Acceptance, in addition to deployment in the two Alaska Sectors and the three Western Rivers Sectors.

The Rescue 21 project recapitalizes the U.S. Coast Guard's legacy National Distress and Response System (NDRS) equipment, which improves communications, command and control capabilities throughout the coastal continental United States (including the Great Lakes), as well as Hawaii, Guam, Puerto Rico, the Western Rivers and Alaska.

The basic NDRS components include radios, transceivers, towers for antennas, and an interconnecting network. It is the foundation for coastal Search and Rescue (SAR), and is a critical enabler of efficient and effective command and control for all missions in coastal zones.

FY 2014 Key Events:

- Delivered General Dynamics C4 Systems (GDC4S) Deployment – Achieved Final Acceptance of the Coastal Rescue 21 System in 5 Sectors and Conditional Acceptance of Remote Fixed Facility (RFF) Biscayne Bay (Sector Miami) and RFF Kalepa (Sector Honolulu). Deployed Commercial Off the Shelf (COTS)-based, Very High Frequency (VHF), voice-only Remote Radio Console System (RRCS) solution in Alaska at Sectors Juneau and Anchorage, including new operator consoles and network upgrades;
- Deployed Digital Selective Calling (DSC) at seven Rescue 21 sites in Alaska;
- Deployed new RFF sites in Alaska;
- Completed Preliminary Design Review, Critical Design Review, Functional Qualification Tests, Integration Readiness Review, and RFF site surveys for Western Rivers R21 system;
- Continued DHS OneNet circuit installations at Western Rivers remote Sites;
- Awarded non-recurring engineering development and testing work to GDC4S for Software Digital Interface Unit (SW/DIU) and Internet Protocol (IP)-based radio solutions.

FY 2015 Planned Key Events:

- Achieve Final Acceptance at Sectors San Francisco and North Carolina
- In Alaska, complete installation of DSC and construction of new RFFs and begin electronics upgrades at RFFs in Sectors Juneau and Anchorage. Conduct Western Rivers System Integration Tests, Production Readiness Review, Low Rate Initial Production, Operational Test Readiness Reviews, and begin Full Rate Production.
- Award Alaska legacy NDRS site upgrades contract and begin installation of new Rescue 21 equipment at select Alaska NDRS sites.

FY 2016 Planned Key Events:

- Continue installation of new Rescue 21 equipment at select Alaska NDRS sites.
- Achieve Final Acceptance of the 3 remaining Coastal Rescue 21 Sectors
- Achieve Final Acceptance of the Western Rivers Rescue 21 system.
- Transition Coastal and Western Rivers R21 deployments to full operations and sustainment.

Funding History¹

<i>Fiscal Year</i>	<i>\$K</i>	<i>Major Activity Funded by Net Appropriation</i>
1996-2010	\$743,899	Phases I and II; award prime contract; deploy IOC, LRIP, FRP
2011	\$35,928	Continue FRP (full rate production) deployment deliveries
2012	\$62,550	Continue deploy FRP; achieve CONUS Conditional Acceptances
<i>Total</i>	<i>\$842,377</i>	<i>Funding received for FY 1996 through FY 2012</i>

BUDGET REQUEST AND SUPPORTING INFORMATION

United States Coast Guard Research, Development, Test and Evaluation

I. Appropriation Overview

A. Mission Statement for Research, Development, Test and Evaluation (RDT&E):

Research, Development, Test and Evaluation (RDT&E) funding allows the Coast Guard to sustain critical mission capabilities through applied research and partnerships with the Department of Homeland Security (DHS), the Department of Defense (DoD), as well as other Federal and private research organizations. The purpose of the RDT&E Program is to help identify and examine existing or impending problems in the Coast Guard's operational, regulatory, and support programs and make improvements through solutions based on scientific and technological advances. RDT&E funding also supports risk-reduction expertise and services in the pre-acquisition process of major and non-major acquisition projects.

B. Budget Activities:

The RDT&E activities sustain program infrastructure and core capabilities, knowledge, skills, experience, and facilities to give the Coast Guard a strong evidence-based foundation for operational and capital investment decision-making. Activities include formulation and oversight of cooperative agreements with relevant professionals in the public and private sectors, such as University Affiliated Research Centers (UARC) and Federally Funded Research & Development Centers (FFRDC). These agreements promote collaboration and leverage expertise and the development of techniques, methods, hardware, and systems that directly contribute to increasing productivity and effectiveness of Coast Guard missions.

C. Budget Request Summary:

The FY 2016 President's Budget requests 96 positions, 96 FTE, and \$18.135 million for RDT&E. This request provides necessary resources to develop technologies and systems that improve operational presence and response, as well as perform technology assessments to inform the early stages of the acquisition process.

Total Change 2015 to 2016	-	-	\$188

The FY 2016 President's Budget requests 96 positions, 96 FTE and \$18.135 million for RDT&E.

CURRENT SERVICES PROGRAM DESCRIPTION:

Project Description, Justification and Scope

This request provides \$18.135 million for the Coast Guard to sustain mission capability through applied research and partnerships with the Department of Homeland Security (DHS), the Department of Defense (DoD), as well as other Federal and private research organizations including technology transfer Cooperative Research and Development Agreements (CRADAs). Partnerships, with organizations like the DHS university Centers-of-Excellence, that are working on maritime technologies and research, are critical to creating and sustaining cost effective Coast Guard R&D technology and leveraging opportunities. The purpose of the RDT&E Program is to identify and examine existing or impending challenges in the Coast Guard's operational, regulatory, and support programs and develop solutions based on scientific and technological advances. In addition to these efforts, RDT&E funding supports risk mitigation efforts and services in the pre-acquisition process of major and non-major acquisition projects. The FY 2016 request supports:

- Unmanned Systems/robotics (surface/sub-surface/air) technology demonstrations/concept of operations development, including regulatory/standards policy development for the maritime domain.
- Research involving long-range vessel tracking/maritime domain awareness, navigation safety, and communications.

- Oil detection/response research regarding optimization of organic Coast Guard surveillance assets to support spill response operations, oil sands products, in-situ burn technology, and use of mobile applications during a response scenario.
- Cyber-security in port environments.
- Coast Guard asset optimization in the counter-drug and migrant interdiction mission areas.
- Incorporation of mobile applications in support of mission efficiencies.

FY 2014 Completed RDT&E projects:

In FY 2014, the RDT&E program completed 15 projects and delivered 57 products. A summary of these projects is below:

Project Title	Project Results	Project Impact
Shipboard Small UAS (sUAS) Capability Demonstration	Completed final report and recommendations for sUAS capability aboard the National Security Cutter (NSC).	The research determined the requisite engineering, Concept of Operations, manning, and payload requirements for future acquisition and operations.
Evaluate Risk Associated with Port/Waterway Closures	Completed evaluation of environmental prediction and incorporation of economic models and risk analysis tools into current models.	Results improved Port of NY/NJ ability to assess risk of waterway closures.
Analysis in Support of Transition	Produced Transition Readiness Assessment.	Fielded standardized and repeatable process guide for RDC and DHS S&T to increase effectiveness of new technologies and products.
Optimizing Radar and Electro-Optical Sensors (OREOS)	Developed a Coast Guard-specific scalable and maintainable sensor performance modeling application. This application supports the development of search and rescue plans and new sensor acquisition decisions.	Model increases acquisition accuracies through analysis of submitted vendor claims on sensor performance. Model increases mission effectiveness by providing a means to optimize the employment of current Coast Guard sensing assets in support of surveillance, detection, classification, and identification capabilities. Reduces amount of field testing for new or upgraded sensors.
Advanced Communications Intelligence (COMINT) Technology	Provided the pre-acquisition technical information needed for Communications Intelligence/Sensitive Compartmented Information Network (COMINT/SCIN) systems for various Coast Guard vessels.	Identification and evaluation of new communications detection and intercept technology that increases the detection and monitoring of illicit activities and decreases time required to respond to mariners in distress.

Chicago Sanitary and Ship Canal (CSSC) Marine Safety Risk Analysis	Evaluated risks to marine safety for commercial and recreational mariners that transit the CSSC in the vicinity of the fish barrier to determine adequacy of present risk mitigation strategies and made recommendations for alternatives.	This effort provided the basis for appropriate regulatory guidance to ensure safety of life and property in concert with effective prevention of an Asian Carp invasion into the Great Lakes ecosystem.
CGMOES Next Generation – Hardware Recap	Produced a Business Case Analysis for the Coast Guard’s Next Generation Campaign Model by identifying alternatives for the hardware infrastructure as well as Courses of Action (COA) for the software.	This project facilitates the Coast Guard’s selection and implementation of the most cost effective campaign model. The model will be used to support decision-making on Coast Guard acquisition projects.
Cost Benefit Analysis of Boat Lifts	Evaluated boat maintenance and repair costs to determine if costs are reduced sufficiently by storing Coast Guard boats out of the water on a boat lift or similar system to offset the costs of installation, maintenance, operation and training of the storage system.	Analysis saved \$22 million in procurement costs of lifts for 746 Coast Guard boats.
Non-Lethal Impact Munitions (NLIM) Analysis	Identified Key Performance Parameters (KPP) and Key System Attributes (KSA) for non-lethal weapon systems for the Coast Guard fleet.	This technology will enable the Coast Guard to identify intent, quickly compel compliance, and allow the escalation of the use-of-force as required by policy.
Arctic Operations Support	Evaluated Commercial/Government-off-the-Shelf (COTS/GOTS) technology to recover spilled oil in Arctic. Provided Key Performance Parameters for future acquisition of Arctic environment technologies.	Evaluation of currently available technologies, positions the Coast Guard to be have proper capabilities to effectively respond in the harsh Arctic environment.
Joint Maritime Test Facility in-Situ Burn Capabilities	Completed assessment of new technologies/equipment and burn practices for in-situ burning.	Informed practices and equipment evaluation to reduce environmental impacts of oil spills.
Night Vision Used by Coast Guard Coxswains	Completed preliminary assessment of night vision technology improvements that could aid Coast Guard operations and offer the coxswain the ability to have improved low-light mission capabilities.	The evaluation of night vision technologies indicates significant improvements in key areas such as field of vision and depth perception beyond current Coast Guard fielded devices. The increased capabilities in nighttime visibility would increase safety.

<p>Boating Under the Influence of Drugs Detection Device</p>	<p>Completed technology assessment of available technologies to aid Coast Guard law enforcement units in determining intoxication levels from illegal substances such as marijuana, benzodiazepines, cocaine, opiates and amphetamines without submitting blood or urine samples to a laboratory.</p>	<p>The assessment of potential drug detection devices indicated that the current technology available is not yet mature enough for adequate testing, and with no national legal standards in place, procurement should not be pursued at this time. This assessment prevented a premature investment in technology.</p>
<p>Search and Rescue (SAR) Using Unmanned Aerial Vehicle (UAV) Swarm Search Capability</p>	<p>Provided a preliminary evaluation of employment of large teams (or swarms) of UASs to conduct multi-faceted, wide area SAR missions, with potential extensions to surveillance and patrol capabilities.</p>	<p>The completed analysis will be used in future UAV operational capability planning activities.</p>
<p>Counter Drug (CD)/Alien Migrant Interdiction Operations (AMIO) Game Theory Scoping Study</p>	<p>Completed a preliminary assessment of game theory application to CD/AMIO patrol scheduling in the Coast Guard Seventh District (D7).</p>	<p>The scoping study galvanized organizational support to begin research and implementation of a proof-of-capability game theoretic patrol optimization approach for Coast Guard Sector Miami.</p>

FY 2015-2016 Projects: The FY 2016 RDT&E request provides for continued research in the following program areas: Unmanned Systems, Arctic Operations, Pre-acquisition Exploration, Oil Spill Response, Modeling and Simulation, Sensors, Intelligence/Cyber, Strategic Analysis, and Other Research. Each program area will contain several research initiatives. A detailed summary of planned projects follows and may be adjusted as operational priorities develop and research results from previous year research projects conclude.

Unmanned Systems

Funding (\$ in 000s)	FY14 Revised Enacted	FY15 Request	FY16 Request
	\$525	\$695	\$450

Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Unmanned Maritime Vehicles (UMV)/7808	Acquisition Support & Analysis (ASA)	Office of C4 and Sensors Capability	Office of Maritime Law Enforcement, & DHS S&T

Project Description, Justification, and Scope

<p><u>A. Project Description</u> Assess and evaluate UMVs and associated sensors to provide economical, effective, persistent Maritime Domain Awareness (MDA) to support CG missions.</p> <p><u>B. Project Schedule</u> Initiate: FY14 Complete: FY16</p> <p><u>C. Project Objectives</u></p> <ul style="list-style-type: none"> - Research state-of-the-market autonomous sensors and platforms; - Evaluate effectiveness of sensors and platforms for CG mission support; - Model and evaluate full-scale application; - Prepare rough order of magnitude business case. <p><u>D. Project Accomplishments and Plans</u></p> <p><u>2014</u></p> <ul style="list-style-type: none"> - Completed Market Research Report; - Completed Applicability of Persistent Marine Sensors and Platforms to Coast Guard Missions Report. <p><u>2015</u></p> <ul style="list-style-type: none"> - Perform Technology Demonstrations. <p><u>2016</u></p> <ul style="list-style-type: none"> - Complete Persistent Marine Sensor Demonstration Test Report and Sensor Business Case Analysis. <p><u>E. Performance Metrics</u> Project performance is measured by number of UMVs evaluated, demonstrations completed, and provision of a specific recommendation for potential UMVs integration in future acquisition and operational plans.</p>

Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Robotic Aircraft for Maritime Public Safety (RAMPS)/7807	Aviation	DHS S&T & Office of Aviation Forces	Offices of Cutter Forces, Requirements and Analysis, & Aviation Acquisition
Project Description, Justification, and Scope			
<p><u>A. Project Description</u> Research and evaluate risks, benefits and limitations of operating existing Commercial Off The Shelf (COTS) Small Unmanned Aircraft System (sUAS) technology in a maritime environment.</p> <p><u>B. Project Schedule</u> Initiate: FY14 Complete: FY16</p> <p><u>C. Project Objectives</u></p> <ul style="list-style-type: none"> - Develop requirements, standards and CONOPS; - Leverage Department of Defense (DoD) and Original Equipment Manufacturer investments in sUAS technology; - Evaluate realistic maritime security and first responder scenarios; - Create a knowledge resource database; - Guide future platform and sensor development to meet maritime first responder requirements. <p><u>D. Project Accomplishments and Plans</u></p> <p><u>2014</u></p> <ul style="list-style-type: none"> - Released Request For Information (RFI); - Developed test plan. <p><u>2015</u></p> <ul style="list-style-type: none"> - Perform Technology Demonstrations. <p><u>2016</u></p> <ul style="list-style-type: none"> - Complete Technology Final Report. <p><u>E. Performance Metrics</u> Project performance is measured by number of UASs evaluated, demonstrations completed, and provision of a specific recommendation for potential tactical UASs' integration in future acquisition and operational plans.</p>			

Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Expand UAV Use/2015-7	Aviation	Offices of Aviation Capability and Aviation Acquisitions	Office of Cutter Forces, Office of Requirements and Analysis, & DHS S&T
Project Description, Justification, and Scope			
<p><u>A. Project Description</u> Identify risks, benefits and limitations of operating unmanned systems for Coast Guard operations beyond traditional surveillance operations.</p> <p><u>B. Project Schedule</u> Initiate: FY15 Complete: FY16</p> <p><u>C. Project Objectives</u></p> <ul style="list-style-type: none"> - Develop table of possible Coast Guard missions beyond intelligence gathering that unmanned platforms and payloads could perform; - Develop table of current and emerging unmanned system platforms and payload capabilities and limitations; - Analyze technical and environmental gaps between current unmanned system technology and Coast Guard mission needs; - Map out current and future industry/academia/other government agency unmanned system initiatives that might minimize risk identified in gap analysis; - Recommend potential CONOPS, requirements and field tests to validate research findings and reduce risk to any potential future acquisitions. <p><u>D. Project Accomplishments and Plans</u></p> <p><u>2015</u></p> <ul style="list-style-type: none"> - Complete Mission Matrix; - Release and analyze results of RFI. <p><u>2016</u></p> <ul style="list-style-type: none"> - Collaborate findings with OGA/Academia/Industry; - Release Final Report. <p><u>E. Performance Metrics</u> Project performance is measured by provision of specific recommendations for integration of unmanned systems into operations.</p>			

Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Intrinsically Safe ROV/Robot for Entering Unknown Atmospheres/2015-17	Environment and Waterway	Office of Incident Management and Preparedness	National Strike Force
Project Description, Justification, and Scope			
<p><u>A. Project Description</u> Identify alternative technologies that meet USCG needs for performing remote area assessments in unsafe environments.</p> <p><u>B. Project Schedule</u> Initiate: FY15 Complete: FY16</p> <p><u>C. Project Objectives</u></p> <ul style="list-style-type: none"> - Develop an operational description for robot/ROVs: Operating concept, employment modes, operating environment, interoperability requirements; - Identify and assess COTS technology alternatives. Summarize the alternatives; and develop functional requirement inputs to support the sponsor's decisions for acquisition or further R&D. <p><u>D. Project Accomplishments and Plans</u></p> <p><u>2015</u></p> <ul style="list-style-type: none"> - Identify capability requirements and CONOPs; - Complete Market Research. <p><u>2016</u></p> <ul style="list-style-type: none"> - Conduct field assessment and complete Final Report. <p><u>E. Performance Metrics</u> Project performance is measured by number of alternatives assessed and inputs to functional requirements for future R&D or acquisition.</p>			

Arctic Operations

Funding (\$ in 000s)	FY14 Revised Enacted	FY15 Request	FY16 Request
	\$1,350	\$1,170	\$1,000

Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Next Generation Arctic Navigation Safety Information System/6211	Environment and Waterways	Office of Navigation Systems	Office of C4 and Sensor Requirements & C3CEN

Project Description, Justification, and Scope

A. Project Description

Develop a system to disseminate reliable critical navigational safety information to allow mariners to identify, assess, and mitigate navigational risks in the Arctic region.

B. Project Schedule

Initiate: FY14

Complete: FY16

C. Project Objectives

- Define the prototype system;
- Develop the Arctic Navigation Safety Information System (ANSIS) prototype system for the technology demonstration;
- Install, test, and utilize ANSIS technology demonstration system;
- Monitor ANSIS technology demonstration system performance and mariner utilization.

D. Project Accomplishments and Plans

2014

- Completed Technology Demonstration system design;
- Completed Functional Design Report.

2015

- Build and develop Technology Demonstration system;
- Install and test system.

2016

- Monitor system performance and mariner utilization;
- Complete Technology Demonstration Final Report.

E. Performance Metrics

Project performance is measured by successful deployment of the technology demonstrator, test results, and percentage of usage by mariners.

Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Arctic Operations Support/6210	Surface	Office of Research, Development, Test and Evaluation	Offices of Cutter Forces, Aviation Forces, and Incident Management and Preparedness Policy
Project Description, Justification, and Scope			
<p><u>A. Project Description</u> Conduct analysis of effects of the Arctic environment on Coast Guard mission execution.</p> <p><u>B. Project Schedule</u> Initiate: FY15 Complete: FY17</p> <p><u>C. Project Objectives</u></p> <ul style="list-style-type: none"> - Based on the evaluations of the technology types employed for previous Arctic Operations, refine capabilities improvements to execution of Coast Guard missions in the Arctic; - Continue joint efforts and interagency cooperation between government sectors and civilian entities on the North Slope and abroad; - Integrate and assess potential of new technologies in enhancing Coast Guard Arctic operations; - Facilitate and provide support to other Arctic projects in accomplishing their testing objectives. <p><u>D. Project Accomplishments and Plans</u></p> <p><u>2015</u></p> <ul style="list-style-type: none"> - Conduct field work. <p><u>2016-2017</u></p> <ul style="list-style-type: none"> - Conduct field work; - Complete Technology Final Report. <p><u>E. Performance Metrics</u> Project performance is measured by number of recommendations for equipment, policy, procedure, and mission support activities for future operations in the Arctic environment.</p>			

Pre-Acquisition Exploration

Funding (\$ in 000s)	FY14 Revised Enacted	FY15 Request	FY16 Request
	\$575	\$750	\$895

Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Abandoned Object and Vessel Marker/5707	C4ISR	Office of C4 and Sensor Capability	Office of Boat Forces & Atlantic Area

Project Description, Justification, and Scope
<p><u>A. Project Description</u> Develop method to mark and track abandoned objects and vessels.</p> <p><u>B. Project Schedule</u> Initiate: FY11 Complete: FY17</p> <p><u>C. Project Objectives</u></p> <ul style="list-style-type: none"> - Evaluate range of marker systems to support Over The Horizon CG activities and boat marking systems for adrift and abandoned boats; - Collect quantitative data points that can be used to determine the range of technical performance for various systems; - Generate, support, and validate operational requirements and Key Performance Parameters for potential future acquisition. <p><u>D. Project Accomplishments and Plans</u></p> <p><u>2014</u></p> <ul style="list-style-type: none"> - Completed Phase I Final Report; - Scoped Phase II. <p><u>2015</u></p> <ul style="list-style-type: none"> - Technology research; - Conduct Technology Selection Brief. <p><u>2016-2017</u></p> <ul style="list-style-type: none"> - Phase II Development and Testing; - Complete Final Report. <p><u>E. Performance Metrics</u> Project performance is measured by number of tracking devices tested and recommendations for future utilization of abandoned vessel tracking devices.</p>

Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Define and Communicate Exclusion Zones/5921	Surface	Office of Specialized Capability	Office of Maritime Security Policy, Pacific Area & Atlantic Area
Project Description, Justification, and Scope			
<p><u>A. Project Description</u> Develop capability to physically mark and clearly communicate the boundaries of an area of exclusion, including both fixed and moving security zones.</p> <p><u>B. Project Schedule</u> Initiate: FY14 Complete: FY16</p> <p><u>C. Project Objectives</u></p> <ul style="list-style-type: none"> - Review user needs, consider short-term and longer-term solutions; - Investigate solutions on the market to determine the best possible solutions to evaluate; - Select and test solution(s) that will unambiguously mark fixed and moving security zones. <p><u>D. Project Accomplishments and Plans</u></p> <p><u>2014</u></p> <ul style="list-style-type: none"> - Completed operational observation of exclusion operations; - Completed and issue RFI. <p><u>2015</u></p> <ul style="list-style-type: none"> - Conduct field evaluations for short-term solution. <p><u>2016</u></p> <ul style="list-style-type: none"> - Conduct field evaluations for long-term solution; - Complete Final Report. <p><u>E. Performance Metrics</u> Project performance is measured by effectiveness of evaluated devices.</p>			

Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Non-Compliant Vessel Less than Lethal Technology/2015-6	Surface	Office of Specialized Capability	Atlantic Area & Pacific Area
Project Description, Justification, and Scope			
<p><u>A. Project Description</u> Research and develop capabilities to disable non-compliant vessels with less than lethal technology.</p> <p><u>B. Project Schedule</u> Initiate: FY15 Complete: FY17</p> <p><u>C. Project Objectives</u></p> <ul style="list-style-type: none"> - To provide Coast Guard decision makers additional information regarding emerging Less than Lethal (LTL) technologies and their real-time applications; - To provide Coast Guard operators additional tools for the Use of Force continuum's Step II (Warn), Step III (Disrupt), and Step IV (Disable) tactics; - To assist in the development of Less than Lethal Technologies for all applicable Coast Guard missions. <p><u>D. Project Accomplishments and Plans</u></p> <p><u>2015</u></p> <ul style="list-style-type: none"> - Complete market research. <p><u>2016</u></p> <ul style="list-style-type: none"> - Conduct technology demonstrations and assessments. <p><u>2017</u></p> <ul style="list-style-type: none"> - Final Report <p><u>E. Performance Metrics</u> Project performance is measured by number of effective technologies evaluated.</p>			
Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Boat Crew Helmets/2015-8	Surface	Office of Boat Forces	Office of Shore Force & Office of Cutter Forces
Project Description, Justification, and Scope			
<p><u>A. Project Description</u> Develop quantitative standards for boat crew helmet performance.</p> <p><u>B. Project Schedule</u> Initiate: FY15 Complete: FY16</p> <p><u>C. Project Objectives</u></p> <ul style="list-style-type: none"> - Determine appropriate quantitative level(s) of protection for helmets worn by Coast Guard members during Boat Operations including: Surf, Heavy Weather, Pursuit, Cutter Boat Launch and Recovery, etc. - Recommend mitigation strategies to achieve increased level(s) of protection for helmets worn by Coast Guard members if warranted. <p><u>D. Project Accomplishments and Plans</u></p> <p><u>2015</u></p> <ul style="list-style-type: none"> - Complete research on MISHAPs and requirements; - Complete field testing. <p><u>2016</u></p> <ul style="list-style-type: none"> - Define safe helmet levels of protection; - Complete Final Report. <p><u>E. Performance Metrics</u> Project performance is measured by establishment of revised helmet protection requirement.</p>			

Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
High Pulse Radio Frequency Vessel Stopping/2016-16	Surface	Office of Maritime Response Policy	Office of Specialized Capability
Project Description, Justification, and Scope			
<p><u>A. Project Description</u> Define the role of Radio Frequency vessel stopping within CG missions</p> <p><u>B. Project Schedule</u> Initiate: FY16 Complete: FY17</p> <p><u>C. Project Objectives</u></p> <ul style="list-style-type: none"> - Evaluate ability of select frequencies to disable vessels; - Determine target and operator risk of utilization; - Determine feasibility of implementation. <p><u>D. Project Accomplishments and Plans</u></p> <p><u>2016</u></p> <ul style="list-style-type: none"> - Conduct market research. <p><u>2017</u></p> <ul style="list-style-type: none"> - Conduct technology demonstration; - Evaluate human factors; - Complete Final Report. <p><u>E. Performance Metrics</u> Project performance is measured by the effectiveness of the tested devices and utilization of final report.</p>			

Oil Spill Response

Funding (\$ in 000s)	FY14 Revised Enacted	FY15 Request	FY16 Request
	\$555	\$585	\$400

Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Oil Sands Product Response/4705	Environment & Waterways	Office of Incident Management & Preparedness	US Environmental Protection Agency (USEPA), District 9 & 13

Project Description, Justification, and Scope
<p><u>A. Project Description</u> Develop enhanced decision tools and recovery/mitigation tools for responding to spilled oil sands products.</p> <p><u>B. Project Schedule</u> Initiate: FY14 Complete: FY18</p> <p><u>C. Project Objectives</u></p> <ul style="list-style-type: none"> - Develop decision making tools for Federal On-scene Coordinator (FOSC) to aid in response planning for spills of oil sand products in fresh and saltwater; - Analyze and assess behavior, response issues and strategies in fresh and salt waters; - Build on 2014 Report "Risk Assessment of Transporting Canadian Oil Sands". <p><u>D. Project Accomplishments and Plans</u></p> <p><u>2014</u></p> <ul style="list-style-type: none"> - Developed Oil Sands Products Response Analysis. <p><u>2015-2016</u></p> <ul style="list-style-type: none"> - Complete Broad Area Announcement; - Test response equipment. <p><u>2017-2018</u></p> <ul style="list-style-type: none"> - Complete Oil Sands Products Response Strategies Evaluation; - Complete FOOSC Job Aid. <p><u>E. Performance Metrics</u> Project performance is measured by effectiveness of response equipment tests and fielding of Job Aid.</p>

Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Response to Oil in Ice/4701	Environment & Waterways	Office of Incident Management & Preparedness	USEPA & Bureau of Safety and Environmental Enforcement (BSEE)
Project Description, Justification, and Scope			
<p data-bbox="201 428 444 453"><u>A. Project Description</u> A group of methodologies to minimize the damage to the environment caused by spilled oil in extreme cold environments.</p> <p data-bbox="201 518 415 543"><u>B. Project Schedule</u> Initiate: FY09 Complete: FY16</p> <p data-bbox="201 609 431 634"><u>C. Project Objectives</u></p> <ul data-bbox="250 640 1406 789" style="list-style-type: none"> - Develop equipment and techniques that can be used successfully to detect, track and recover oil in ice filled waters in all conditions; - Test operational deployments of equipment by conducting a series of demonstrations in the Great Lakes and the Arctic of increasing complexity; - Support National Academy of Science (NAS) Arctic Response Assessment. <p data-bbox="201 793 618 819"><u>D. Project Accomplishments and Plans</u></p> <p data-bbox="201 825 261 850"><u>2014</u></p> <ul data-bbox="250 856 797 911" style="list-style-type: none"> - Reviewed recommendations from NAS report; - Developed response technologies. <p data-bbox="201 917 261 942"><u>2015</u></p> <ul data-bbox="250 949 786 1003" style="list-style-type: none"> - Response technologies demonstration; - Complete Technology Demonstration Report. <p data-bbox="201 1010 261 1035"><u>2016</u></p> <ul data-bbox="250 1041 573 1066" style="list-style-type: none"> - Complete FOOSC Job Aid. <p data-bbox="201 1073 456 1098"><u>E. Performance Metrics</u> Project performance is measured by effectiveness of response equipment tests and fielding of Job Aid.</p>			

Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Equipment Surge Risk Assessment/2015-15	Acquisition Support and Analysis	Office of Incident Management & Preparedness	BSEE
Project Description, Justification, and Scope			
<p><u>A. Project Description</u> Develop consistent and repeatable methodology for determining the level of risk associated with moving oil spill response resources from donor areas to a spill of national significance.</p> <p><u>B. Project Schedule</u> Initiate: FY15 Complete: FY16</p> <p><u>C. Project Objectives</u></p> <ul style="list-style-type: none"> - Develop the concept of a risk-informed decision-support process and tool that can help Area Committees, Regional Response Teams, and Federal On-Scene Coordinators pre-plan what types and amounts of their spill response resources can temporarily be sent to a Spill Of National Significance (SONS) without putting their own locales in jeopardy; - Propose methods of using these processes and tools to communicate the risks to states, municipalities, and other stakeholders who may be supporting a SONS response. <p><u>D. Project Accomplishments and Plans</u></p> <p><u>2015</u></p> <ul style="list-style-type: none"> - Develop Risk Assessment Methodology; - Conduct Technical Interchange Meeting 1. <p><u>2016</u></p> <ul style="list-style-type: none"> - Conduct Technical Interchange Meeting 2; - Conduct Technical Interchange Meeting 3; - Publish Equipment Surge Risk Assessment Tool and Guide. <p><u>E. Performance Metrics</u> Project performance is measured by issuances and utilization of guide.</p>			

Modeling and Simulation

Funding (\$ in 000s)	FY14 Revised Enacted	FY15 Request	FY16 Request
	\$830	\$610	\$500

Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Ergonomics Analysis of Communication Centers/9364	Acquisition Support and Analysis	Office of Shore Forces	Office of C4 and Sensor Capability, DOT Volpe, Office of C4ISR Acquisitions

Project Description, Justification, and Scope

A. Project Description

Improve Communication Center (COMMCEN) performance through ergonomic design.

B. Project Schedule

Initiate: FY13

Complete: FY16

C. Project Objectives

- Conduct ergonomics analysis of COMMCENs to identify issues;
- Identify constraints on solution set;
- Develop recommendations to provide improved ergonomics and COMMCEN performance;
- Test and evaluate selected recommendations.

D. Project Accomplishments and Plans

2014

- Evaluated Spatial Analysis Link Tool (SALT) layout.

2015

- Deploy interventions and testing.

2016

- Complete final report on study, recommendation, and testing.

E. Performance Metrics

Project performance is measured by test results and adoption of recommendations.

Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
CGMOES Next Generation/7929	Modeling and Simulation Center of Excellence	Office of Requirements and Analysis	Atlantic Area, Pacific Area, & Modeling and Simulation Council

Project Description, Justification, and Scope

A. Project Description

Develop streamlined capability for routine Coast Guard-wide asset allocation and force structure decision support.

B. Project Schedule

Initiate: FY13

Complete: FY16

C. Project Objectives

- Develop an organic capability to support decision making regarding addition, siting, and elimination of asset classes, changes in mission priorities, etc;
- Reduce the time and costs involved with current modeling approaches;
- Improve the defensibility of model-based decision support system.

D. Project Accomplishments and Plans

2014

- Completed Business Case Analysis;
- Created production hardware/software infrastructure.

2015

- Complete model support.

2016

- Complete Validation, Verification, and Accreditation.

E. Performance Metrics

Project performance is measured by model completion and utilization in capability planning.

Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Crew Proficiency Analysis/2016-1	Modeling and Simulation Center of Excellence	Office of Requirements and Analysis	Deputy Commandant for Operations, Atlantic Area, & Pacific Area

Project Description, Justification, and Scope

A. Project Description

Identify minimum levels of operations to maintain personnel proficiency.

B. Project Schedule

Initiate: FY16

Complete: FY17

C. Project Objectives

- Develop a quantifiable standard for minimum task completion to remain proficiency at mission execution.

D. Project Accomplishments and Plans

2016

- Conduct field research;
- Complete assessment.

2017

- Issue final report.

E. Performance Metrics

Project performance is measured by adoption of model minimums.

Sensor Optimization, Automation, and Visualization

Funding (\$ in 000s)	FY14 Revised Enacted	FY15 Request	FY16 Request
	\$710	\$260	\$680

Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Mobile Asset Tracking and Reporting/8105	C4ISR	Office of C4 and Sensor Capability	DHS S&T, Office of Contingency Planning and Exercises

Project Description, Justification, and Scope

A. Project Description

Develop an interoperable communication/information system (based on Mobile Platform Technology) to enhance the Coast Guard’s ability to respond to Incidents of National Significance (IONS).

B. Project Schedule

Initiate: FY11

Complete: FY16

C. Project Objectives

- Prototype a flexible mobile technology based, interoperable communication/information system, processes, and procedures to enhance the CG’s ability to transfer information that will assist personnel responding to an IONS (e.g., oil spill);
- The system, processes, and procedures should make use of the equipment the responders are expected to bring to the incident such as smartphones, tablet computers, and laptops.

D. Project Accomplishments and Plans

2014

- Completed Technical Assessment brief;
- Completed Technology Demonstrations.

2015-2016

- System Integration with COTS Software Test Results and Recommendations.

E. Performance Metrics

Project performance is measured by test results and adoption of recommendations.

Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Night Vision Device Technology Refresh Investigation/2015-5	Surface	Office of Boat Forces	Office of Aviation Forces CG-711
Project Description, Justification, and Scope			
<p><u>A. Project Description</u> Evaluate state of the market for night vision devices and determine if technology has improved regarding field of vision, depth perception, and motion sickness.</p> <p><u>B. Project Schedule</u> Initiate: FY15 Complete: FY16</p> <p><u>C. Project Objectives</u></p> <ul style="list-style-type: none"> - Baseline current COTS and Military Off the Shelf (MOTS) night vision devices; - Evaluate for boat operations. <p><u>D. Project Accomplishments and Plans</u></p> <p><u>2015</u></p> <ul style="list-style-type: none"> - Complete Market Research; - Conduct technology demonstrations. <p><u>2016</u></p> <ul style="list-style-type: none"> - Complete testing; - Complete final report. <p><u>E. Performance Metrics</u> Project performance is measured by number of devices tested and recommendation made.</p>			
Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Physiological Monitoring/2015-16	Surface	Office of Incident Management and Preparedness	National Strike Force & Office of Safety and Environmental Health
Project Description, Justification, and Scope			
<p><u>A. Project Description</u> Evaluate safe physiological monitoring parameters for hazardous materials responders.</p> <p><u>B. Project Schedule</u> Initiate: FY15 Complete: FY16</p> <p><u>C. Project Objectives</u></p> <ul style="list-style-type: none"> - Identify other government agency (OGA) physiological monitoring practices and parameters; - Compile findings into final report to support standard development or if required, determine whether human subject testing is required to develop safe physiological monitoring parameters for Coast Guard internal use; - If required, develop and execute physiological monitoring assessment and based on data collected, make best recommendation for safe physiological monitoring parameters for hazardous materials responders. <p><u>D. Project Accomplishments and Plans</u></p> <p><u>2015</u></p> <ul style="list-style-type: none"> - Complete OGA research; - Complete physiological monitoring assessment. <p><u>2016</u></p> <ul style="list-style-type: none"> - Publish Final Report. <p><u>E. Performance Metrics</u> Project performance is measured by test results and recommendations.</p>			

Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Tactile Situational Awareness Systems (TSAS)/2015-11	Aviation	Office of Aviation Forces	U.S. Army Aeromedical Research Lab (USAARL)
Project Description, Justification, and Scope			
<p><u>A. Project Description</u> Leverage engineering advances in tactile system technology in an effort to reduce spatial disorientation as a cause of aviation mishaps.</p> <p><u>B. Project Schedule</u> Initiate: FY15 Complete: FY16</p> <p><u>C. Project Objectives</u></p> <ul style="list-style-type: none"> - Partner with the U.S. Army Aeromedical Research Lab (USAARL) to explore potential CG applications of the TSAS-lite belt; - Examine compatibility between the TSAS-lite belt and CG helicopters/ simulators; - Complete human factors study, to include TSAS-lite compatibility / integration with the CG SAR warrior vest, flight suit, dry suit, and Aviation Use of Force (AUF) body armor ensembles; - Complete feasibility study of future CG TSAS-lite operational test. <p><u>D. Project Accomplishments and Plans</u></p> <p><u>2015</u></p> <ul style="list-style-type: none"> - Complete compatibility study; - Complete Human Factors Study. <p><u>2016</u></p> <ul style="list-style-type: none"> - Complete feasibility study; - Complete report. <p><u>E. Performance Metrics</u> Project performance is measured by issuance of recommendations for future development.</p>

Cyber Security Tools for Critical Infrastructure/Key Resource (CI/KR) Protection /8111	C4ISR	Office of Port and Facilities Activities	Office of C4 and Sensor Capability & CG Cyber Command

Project Description, Justification, and Scope

A. Project Description

Effectively monitor and characterize external Cyber vulnerabilities (e.g., Wireless Access Points) and threats within maritime port facilities.

B. Project Schedule

Initiate: FY15

Complete: FY17

C. Project Objectives

- Investigate and document cyber-based vulnerabilities of, and threats to, WAP-enabled CI/KR within our maritime port facilities;
- Conduct market research to identify technologies that could provide a DHS/CG Sector-based WAP monitoring capability;
- Establish a re-configurable maritime WAP test bed;
- Demonstrate one or more prototype systems in the test bed and then at representative port facilities;
- Prepare technical report and briefing that summarizes project activities, data, and findings.

D. Project Accomplishments and Plans

2015

- Complete Maritime Port Vulnerability and Threat Analysis and Market Research Reports.

2016-2017

- Technology demonstrator testing;
- Complete WAP Vulnerability Assessment Report.

E. Performance Metrics

Project performance will be measured by technology demonstration test results.

Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Analysis of Cyber-based Risk Analysis Tools/2015-10	C4ISR	Office of Port and Facilities Activities	Chief Information Officer, DHS Cyber & CYBERCOMMAND
Project Description, Justification, and Scope			
<p><u>A. Project Description</u> Develop capability to assess overall cyber risk of maritime critical infrastructure and key resources.</p> <p><u>B. Project Schedule</u> Initiate: FY15 Complete: FY16</p> <p><u>C. Project Objectives</u></p> <ul style="list-style-type: none"> - Determine available cyber risk analysis tools to comply with section seven of Executive Order 13636; - Seek insights into the types of cyber systems that present unusual risks to the Maritime Transportation System (MTS), and elements of the National Institute of Standards and Technology (NIST) Framework or other tools that are suited to addressing those risks; - Provide the Captain of the Port and Area Maritime Security Committees the capability to assess the overall cyber-risk to the MTS within a port/Sector based on the port partners' use of various cyber-based risk management tools. <p><u>D. Project Accomplishments and Plans</u></p> <p><u>2015</u></p> <ul style="list-style-type: none"> - Complete inventory of Cyber Risk Analysis Tools; - Evaluate tools for application to the MTS. <p><u>2016</u></p> <ul style="list-style-type: none"> - Publish Cyber Security Analysis Tools for the MTS. <p><u>E. Performance Metrics</u> Project performance is measured by number of tools found applicable and publication of report.</p>			
Project Title/Number	Branch Area	Project Sponsor	Project Stakeholders
Assessment of Cyber Threats to Maritime IT systems/2016-7	C4ISR	Office of Port and Facilities Activities	Office of C4 and Sensor Capability, & CYBERCOMMAND
Project Description, Justification, and Scope			
<p><u>A. Project Description</u> Improve ability to assess risk and vulnerabilities to cyber threats to maritime Industrial Control Systems and Supervisory Control and Data Acquisition Systems.</p> <p><u>B. Project Schedule</u> Initiate: FY16 Complete: FY17</p> <p><u>C. Project Objectives</u></p> <ul style="list-style-type: none"> - Investigate and document cyber-based vulnerabilities of, and threats to, maritime systems; - Recommend monitoring systems and protocols to reduce risk. <p><u>D. Project Accomplishments and Plans</u></p> <p><u>2016</u></p> <ul style="list-style-type: none"> - Complete vulnerability assessment. <p><u>2017</u></p> <ul style="list-style-type: none"> - Complete Assessment Report. <p><u>E. DoD Technology Foraging Assessment for CG /2015-23	Acquisition Support and Analysis	Director of Acquisition Services	Assistant Commandant for Capability

Project Description, Justification, and Scope

A. Project Description

Develop assessment framework to include initial screening and subsequent screening criteria for DoD technology.

B. Project Schedule

Initiate: FY15

Complete: FY16

C. Project Objectives

- Establish a relationship with the Defense Logistics Agency Disposition Services. Develop a process to maintain a list of excess DoD personal property with potential USCG application and re-use;
- Develop initial screening factors to evaluate the technology. Factors will include costs, condition, current CG acquisitions and re-capitalizations and technology transition readiness;
- Research CG capability gaps. Include these in the initial screening factors and establish the mission criticality;
- Develop the assessment framework including the initial screening factors and subsequent screening criteria to create a manageable list;
- Test the assessment framework with several identified technologies.

D. Project Accomplishments and Plans

2015

- Build technology screening factors;
- Test framework.

2016

- Publish Assessment Framework Report.

E. Performance Metrics

Project performance is measured by integration of framework into acquisition processes.

IV. Program Justification Changes

N/A

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

Department of Homeland Security

U.S. Coast Guard

Justification of Proposed Changes in Research, Development, Test and Evaluation Appropriation Language

For necessary expenses for applied scientific research, development, test, and evaluation; and for maintenance, rehabilitation, lease, and operation of facilities and equipment; as authorized by law; [\$17,947,000,]\$18,135,000¹ to remain available until September 30, [2017]2018,² of which \$500,000 shall be derived from the Oil Spill Liability Trust Fund to carry out the purposes of section 1012(a)(5) of the Oil Pollution Act of 1990 (33 U.S.C. 2712(a)(5)): Provided, That there may be credited to and used for the purposes of this appropriation funds received from State and local governments, other public authorities, private sources, and foreign countries for expenses incurred for research, development, testing, and evaluation. (*Department of Homeland Security Appropriations Act, 2014.*)

Explanation for Proposed Change:

Language Provision	Explanation
¹ ...[\$17,947,000,] <u>\$18,135,000</u> ...	Dollar change only. No substantial change proposed.
² ...[2017] <u>2018</u> ...	Fiscal year change only. No substantial change proposed.

Research, Development, Test and Evaluation Mission Statement

Research, Development, Test and Evaluation (RDT&E) funding allows the Coast Guard to sustain critical mission capabilities through applied research and partnerships with the Department of Homeland Security (DHS), the Department of Defense (DoD), as well as other Federal and private research organizations. The purpose of the Research and Development (R&D) Program is to help identify and examine existing or impending problems in the Coast Guard's operational, regulatory, and support programs and make improvements through solutions based on scientific and technological advances. RDT&E funding also supports risk-reduction expertise and services in the pre-acquisition process of major and non-major acquisition projects.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$8,483	\$8,278	\$8,407	\$129
11.3 Other than Full-Time Permanent	\$143	\$139	\$141	\$2
11.5 Other Personnel Compensation	\$100	\$98	\$100	\$2
11.6 Military Personnel-Basic Allowance for Housing	\$436	\$436	\$437	\$1
11.7 Military Personnel	\$1,422	\$1,355	\$1,373	\$18
11.8 Special Personal Services Payments	\$4	\$4	\$4	-
12.1 Civilian Personnel Benefits	\$2,302	\$2,337	\$2,372	\$35
12.2 Military Personnel Benefits	\$118	\$112	\$113	\$1
13.0 Benefits for Former Personnel	\$5	\$5	\$5	-
Total, Salaries & Benefits	\$13,013	\$12,764	\$12,952	\$188

Salaries and Benefits provide compensation directly related to Coast Guard active duty military and civilian personnel duties. The FY 2016 request includes an increase for a 1.3 percent proposed pay raise for military and civilian personnel. The increase in civilian allowances is due to a rise in government normal cost contribution for various Federal Employee benefits to include Federal Government Life Insurance, Federal Employee Health Benefits, Federal Government Thrift Savings Plan contribution, and the requirement for non-recurring funding for the compensable workday of February 29, 2016.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
21.0 Travel and Transportation of Persons	\$504	\$243	\$162	(\$81)

Travel funds cover the travel costs of Coast Guard employees, while in an authorized travel status, either directly or by reimbursing the traveler. The FY 2016 request reflects travel funding requirements including implementation of new travel policies in support of the Administration's Campaign to Cut Waste.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
22.0 Transportation of Things	\$66	\$32	\$21	(\$11)

Transportation of things includes all costs of the care of such things while in the process of being transported, and other services incident to the transportation of things. The FY 2016 request reflects anticipated needs.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.1 Rental Payments to GSA	\$1,144	\$1,165	\$1,188	\$23

The FY 2016 request reflects anticipated needs for the planned projects described in Section III.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.2 Rental Payments to Others	\$51	\$25	\$16	(\$9)

Payments to a non-Federal source for rental space, land, and structures. The FY 2016 request anticipated need to non-Federal sources.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.3 Communications, Utilities, and Misc. Charges	\$302	\$145	\$97	(\$48)

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2016 request reflects the anticipated needs for R&D related projects.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$100	\$46	\$32	(\$14)

Advisory and assistance services include services acquired by contract from non-Federal sources (private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2016 request reflects anticipated needs and reflects the Department's strategic sourcing initiatives to leverage the purchasing power of the entire Department.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$35	\$17	\$11	(\$6)

Other services include contractual services with non-federal sources that are not otherwise classified under Object Class 25. The FY 2016 request reflects anticipated needs.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$4,755	\$2,290	\$1,531	(\$759)

The FY 2016 request reflects anticipated needs for the planned projects described in Section III.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.4 Operation and Maintenance of Facilities	\$25	\$12	\$8	(\$4)

The FY 2016 request reflects anticipated needs for the planned projects described in Section III.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.5 Research and Development Contracts	\$4,444	\$2,140	\$1,430	(\$710)

The FY 2016 request reflects anticipated needs for the planned projects described in Section III.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.6 Medical Care	\$157	\$76	\$51	(\$25)

The FY 2016 request reflects anticipated needs for the planned projects described in Section III.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
26.0 Supplies and Materials	\$1,765	\$850	\$568	(\$282)

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. The FY 2016 request reflects anticipated needs.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
31.0 Equipment	\$210	\$101	\$68	(\$33)

This object class covers the purchase of R&D materials for technology demonstrations, testing and evaluations and their progress. The FY 2016 request reflects anticipated needs.

BUDGET REQUEST AND SUPPORTING INFORMATION
--

**United States Coast Guard
Medicare-Eligible Retiree Health Care Fund Contribution**

I. Appropriation Overview

A. Mission Statement for Medicare-Eligible Retiree Health Care Fund Contribution:

The Medicare-Eligible Retiree Health Care Fund Contribution (MERHCF) funds accrual of the Coast Guard's military Medicare-eligible health benefit contribution to the Department of Defense (DoD) Medicare-Eligible Retiree Health Care Fund. Contributions are for future Medicare-eligible retirees, as well as retiree dependents and their potential survivors. The authority for the Coast Guard to make this payment on an annual basis was provided in P.L. 108-375, the 2005 Defense Appropriations Act. While this expenditure requires no annual action by Congress, it is scored as discretionary spending.

B. Budget Activities:

There are no budget activities directly related to providing this benefit to active duty personnel and their dependents.

C. Budget Request Summary:

The FY 2016 President's Budget estimates that the Coast Guard's contributions will be \$159.306 million for Medicare-Eligible Retiree Health Care Fund Contribution. The total adjustment-to-base is a decrease of \$17,664,000. In the FY 2016 Budget, DoD proposes a multi-year plan to replace the current three TRICARE plans with a consolidated TRICARE Health Plan. The 2016 proposals would increase co-pays for pharmaceuticals and implement an enrollment fee for new TRICARE-for-Life beneficiaries (similar to the reforms proposed in the FY 2015 Budget). This request will be paid to the DoD Medicare-Eligible Retiree Health Care Fund to support the benefits outlined above. The Coast Guard's annual budget estimate for MERHCF is calculated by multiplying the projected average for strength (FTE) by DoD actuary projected cost rates.

The FY 2016 President's Budget estimates that the Coast Guard's contributions will be \$159.306 million for Medicare-Eligible Retiree Health Care Fund.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Medicare-Eligible Retiree Health Care Fund Contribution will fund accrual of the Coast Guard's military Medicare-eligible health benefit contribution to the DoD Medicare-Eligible Retiree Health Care Fund. Contributions are for future Medicare-eligible retirees, retiree dependents, and survivors in the Coast Guard. Adjustments-to-Base include a decrease of \$17,664,000 comprised of \$9,541,000 in savings associated with 2016 TRICARE reform proposals and \$8,123,000 in savings from enacted 2015 Tricare reforms. In the FY 2016 Budget, DoD proposes a multi-year plan to replace the current three TRICARE plans with a consolidated TRICARE Health Plan. The 2016 proposals would increase co-pays for pharmaceuticals and implement an enrollment fee for new TRICARE-for-Life beneficiaries (similar to the reforms proposed in the FY 2015 Budget).

BUDGET REQUEST AND SUPPORTING INFORMATION
--

**United States Coast Guard
Retired Pay**

I. Appropriation Overview

A. Mission Statement for Retired Pay:

The Retired Pay (RP) appropriation provides payments as identified under the Retired Serviceman's Family Protection and Survivor Benefits Plans, and other retired personnel entitlements identified under prior-year National Defense Authorization Acts. This appropriation includes payment for medical care of retired personnel and their dependents.

B. Budget Activities:

There are no budget activities directly related to providing this benefit to retired military personnel and their dependents.

C. Budget Request Summary:

The FY 2016 President's Budget estimates that the Coast Guard's contributions will be \$1.605 billion for Retired Pay. The total adjustment-to-base is an increase of \$161,526,000 for FY 2016 Actuarial Adjustments. In the FY 2016 Budget, DoD proposes a multi-year plan to replace the current three TRICARE plans with a consolidated TRICARE Health Plan. The 2016 proposals would increase co-pays for pharmaceuticals and implement an enrollment fee for new TRICARE-for-Life beneficiaries (similar to the reforms proposed in the FY 2015 Budget). This request supports the benefits outlined above and remains available until expended. The Retired Pay appropriation is scored as a mandatory appropriation.

PPA: Retired Pay

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	-		- \$1,460,000
FY 2015 President's Budget	-		- \$1,443,896
2016 Adjustments-to-Base	-		- \$161,526
FY 2016 Current Services	-		- \$1,605,422
FY 2016 Program Change	-		-
FY 2016 Total Request	-		- \$1,605,422
Total Change 2015 to 2016	-		- \$161,526

The FY 2016 President's Budget estimates that the Coast Guard's contributions will be \$1.605 billion for Retired Pay.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Retired Pay (RP) appropriation provides payments as identified under the Retired Serviceman's Family Protection and Survivor Benefits Plans and other retired personnel entitlements identified under the National Defense Authorization Act. It also provides payment for medical care of retired personnel and their dependents. Adjustments-to-Base include \$822,000 in net first-year costs associated with TRICARE reform. In the FY 2016 Budget, DoD proposes a multi-year plan to replace the current three TRICARE plans with a consolidated TRICARE Health Plan. The 2016 proposals would increase co-pays for pharmaceuticals and implement an enrollment fee for new TRICARE-for-Life beneficiaries (similar to the reforms proposed in the FY 2015 Budget).

Retired Pay Mission Statement

Retired Pay will provide payments as identified under the Retired Serviceman's Family Protection and Survivor Benefits Plans, payments for career status bonuses, concurrent receipts and combat related special compensation identified under prior-year National Defense Authorization Acts.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
13.0 Benefits for Former Personnel	\$1,273,663	\$1,215,996	\$1,386,500	\$170,504
Total, Salaries & Benefits	\$1,273,663	\$1,215,996	\$1,386,500	\$170,504

Accounts for cost-of-living adjustments for all retirement and most survivor annuities, including benefits authorized by prior-year National Defense Authorization Acts. The FY 2016 Request increase reflects actuarial cost projections.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.6 Medical Care	\$233,707	\$384,154	\$218,922	(\$165,232)

Change is based on the projections for retiree medical benefits. Once a member becomes eligible for Medicare, the Medicare-Eligible Retiree Health Care Fund (MERHCF) is responsible for these benefits.

BUDGET REQUEST AND SUPPORTING INFORMATION

United States Coast Guard Boat Safety

I. Appropriation Overview

A. Mission Statement for Boat Safety:

The Boat Safety (BS) program applies preventive means and strategies to minimize loss of life, personal injury, property damage, and environmental impact associated with the use of recreational boats. The program directly supports the Coast Guard's Maritime Prevention Program by promoting safe and enjoyable use of public U.S. waterways.

B. Budget Activities:

Boat Safety activities include: overseeing manufacturer compliance with Coast Guard regulations; grant making to States and national non-profit boating safety organizations; conducting surveys to measure recreational boating activity; continuing the Boat Responsibly national outreach and awareness initiative; promulgating safety regulations; and measuring life jacket wear rates, including the effectiveness of voluntary and mandatory efforts to increase life jacket usage.

C. Budget Request Summary:

The FY 2016 President's Budget requests 14 positions, 14 FTE and \$115.776 million for Boat Safety. The total adjustments-to-base include a 1.3 percent pay raise for civilians and an increase in civilian allowances due to an increase in government contributions for various Federal Employee benefits.

In its role as the designated National Recreational Boating Safety (RBS) Program Coordinator, the Coast Guard is charged with managing dedicated user fee funding to support the National Recreational Boating Safety Program provided from the Sport Fish Restoration and Boating Trust Fund. Under the provisions of the Sportfishing and Recreational Boating Safety Act of 2005 (Subtitle A, Title X, P.L. 109-59), the Coast Guard receives a percentage distribution of total trust fund receipts from the preceding fiscal year (i.e., FY 2016 funding will be a percentage of FY 2015 trust fund receipts). Funds are available until expended, but are limited in purpose and amount in accordance with existing statute.

III. Current Services Program Description by PPA

**Department of Homeland Security
U.S. Coast Guard
Boat Safety
Program Performance Justification**
(Dollars in Thousands)

PPA: Boat Safety

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	14	11	\$105,874
FY 2015 President's Budget	14	14	\$112,830
2016 Adjustments-to-Base	-	-	\$2,946
FY 2016 Current Services	14	14	\$115,776
FY 2016 Program Change	-	-	-
FY 2016 Total Request	14	14	\$115,776
Total Change 2015 to 2016	-	-	\$2,946

The FY 2016 President's Budget requests 14 positions, 14 FTE, and \$115.776 million for Boat Safety.

CURRENT SERVICES PROGRAM DESCRIPTION:

This account provides grants for the development and implementation of a coordinated national recreational boating safety program. Boating safety statistics reflect the success in meeting the program's objectives. Pursuant to the Safe, Accountable, Flexible, Efficient Transportation Equity Act-A Legacy for Users (SAFETEA-LU, P.L. 109-59), the Boat Safety program receives 18.5 percent of the funds collected in the Sport Fish Restoration and Boating Trust Fund.

The FY 2016 budget reflects the anticipated level of funding that would be available from the trust fund for boating safety. This funding level is based on current estimates of trust fund receipts from the Office of Tax Analysis at the Department of the Treasury (adjusted to reflect amendments of current law enacted in P.L. 109-59). The total request includes \$107.612 million of estimated distribution from the trust fund for boating safety and \$8.164 million of previously sequestered funds that become available for obligation in 2016. Of that amount, \$5.500 million is available for use by the Coast Guard to coordinate and execute new and enhanced National RBS Program activities. The balance is authorized for the State RBS Federal Financial Assistance Program established by 46 U.S.C. 13101, et seq., minus not more than five percent for national boating safety activities of national non-profit public service organizations, and not more than two percent for Coast Guard expenses to administer State RBS programs.

Full Time Equivalents	11	14	14	-

Boat Safety Mission Statement

The Boat Safety (BS) program is designed, through preventive means, to minimize loss of life, personal injury, property damage and environmental impact associated with the use of recreational boats. The program directly supports the Coast Guard's Marine Safety mission by promoting safe and enjoyable use of public U.S. waterways. In its role as the designated National Recreational Boating Safety (RBS) Program Coordinator, the Coast Guard is charged with managing dedicated user fee funding to support the National RBS Program provided from the Sport Fish Restoration and Boating Trust Fund (formerly Aquatic Resources Trust Fund). Under the provisions of the Sportfishing and Recreational Boating Safety Act of 2005 (Subtitle A, Title X, P.L. 109-59), the Coast Guard receives a percentage distribution of total trust fund receipts from the preceding fiscal year (i.e., FY 2016 funding will be a percentage of FY 2015 trust fund receipts).

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$1,573	\$1,500	\$1,522	\$22
11.5 Other Personnel Compensation	\$5	\$1	\$1	-
12.1 Civilian Personnel Benefits	\$330	\$404	\$409	\$5
Total, Salaries & Benefits	\$1,908	\$1,905	\$1,932	\$27

Salaries and Benefits provide compensation directly related to Coast Guard civilian personnel duties. The FY 2016 request includes costs for a 1.3 percent proposed pay raise for civilians. The increase in civilian allowances is due to a rise in government cost contribution for various Federal Employee benefits to include Federal Government Life Insurance, Federal Employee Health Benefits, Federal Government Thrift Savings Plan contribution, and the requirement for non-recurring funding for the compensable workday of Feb 29, 2016.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
21.0 Travel and Transportation of Persons	\$38	\$42	\$41	(\$1)

The FY 2016 request reflects anticipated needs.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$2,679	\$2,987	\$2,910	(\$77)

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2016 request reflects anticipated changes to the revenues from trust fund receipts. Non-Federal services for boating safety activities will be decreased across all States.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
41.0 Grants, Subsidies, and Contributions	\$101,837	\$114,498	\$102,726	(\$11,772)

Under the provisions of the Sportfishing and Recreational Boating Safety Act of 2005 (Subtitle A, Title X, P.L. 109-59), the Coast Guard receives a percentage distribution of total trust fund receipts. The FY 2016 request reflects anticipated needs to non-federal sources.

BUDGET REQUEST AND SUPPORTING INFORMATION

United States Coast Guard Maritime Oil Spill Program

I. Appropriation Overview

A. Mission Statement for Maritime Oil Spill Program:

The Maritime Oil Spill Program operates under the authority of Title I of the Oil Pollution Act of 1990 (OPA), as amended, which provides for the use of the Oil Spill Liability Trust Fund (OSLTF) to pay for federal response to oil spills and claims for uncompensated removal costs and damages resulting from such spills. The Maritime Oil Spill Program directly supports the Coast Guard's Marine Environment Protection mission and Maritime Response Program.

B. Budget Environmental Activities:

In Section Seven of Executive Order 12777, the President delegated management responsibility of the OSLTF to the Secretary of the Department in which the Coast Guard is operating. Upon re-delegation by the Secretary, the Commandant of the Coast Guard delegated responsibility to the National Pollution Funds Center (NPFC), which oversees the OSLTF.

The NPFC:

- Provides funding for federal removal actions in response to a discharge or a substantial threat of discharge of oil to navigable waters of the United States;
- Compensates claimants for OPA removal costs or damages;
- Provides funding to natural resource trustees for Natural Resource Damage Assessments (NRDA);
- Administers the OSLTF.

C. Budget Request Summary:

The FY 2016 President's Budget estimates that expenditures from this account will total \$101.000 million for the Maritime Oil Spill Program. These estimated expenditures consist of a \$50,000,000 transfer for immediate federal oil spill response, an estimated \$1,000,000 payment to the Prince William Sound Oil Spill Recovery Institute, and an estimated \$50,000,000 to compensate claimants for uncompensated OPA removal costs and damages, including natural resource damages.

Total Change 2015 to 2016	-	-	-

The FY 2016 President's Budget includes \$101.000 million for the Maritime Oil Spill Program.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Maritime Oil Spill Program uses the OSLTF to pay response costs incurred by the Coast Guard and other Federal agencies, adjudicate claims, and provide funding to support the Oil Spill Recovery Institute located in Prince William Sound, Alaska. NPFC's administrative costs are funded within the Coast Guard's Operating Expenses appropriation.

OPA section 5006(b) directs the NPFC to make annual payments to the Prince William Sound Oil Spill Recovery Institute for the interest on a portion of the OSLTF balance.

Maritime Oil Spill Program Mission Statement

The Maritime Oil Spill Program fund will provide a source of funds for removal costs and damages resulting from oil spills, or the substantial threat of a spill, into navigable waters of the U.S. In accordance with the provisions of the Oil Pollution Act of 1990, the President may make available up to \$50 million annually from the Fund for oil spill removal activities. The Fund also pays all eligible claims for removal costs and damages resulting from oil spills.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$195,910	\$150,105	\$101,000	(\$49,105)

The FY 2016 Maritime Oil Spill Program includes a \$50 million transfer for immediate Federal oil spill response activities, an estimated \$1 million payment to the Prince William Sound Oil Spill Recovery Institute, and an estimated \$50 million to compensate claimants for uncompensated OPA removal costs and damages including natural resources damages. This decrease is due to planned FY15 carryover.

**United States Coast Guard
General Gift Funds**

I. Appropriation Overview

A. Mission Statement for General Gift Funds:

The Coast Guard General Gift Fund is authorized under 10 U.S.C. § 2601, which provisions for such funds within the Department of Defense and the Coast Guard. The General Gift Fund is a vehicle that authorizes the Commandant of the Coast Guard to accept gifts and donations for the benefit of museums, chapels, and other organizations under the jurisdiction of the Coast Guard. The Coast Guard is also authorized to accept gifts to be used for the benefit of service members who are wounded, injured or taken ill while in the line of duty, as well as for those members' dependents and survivors.

B. Budget Activities:

The General Gift Fund indirectly supports Coast Guard activities.

C. Budget Request Summary:

The FY 2016 President's Budget estimates \$1.621 million in bequests from various sources to the General Gift Fund.

General Gift Funds Mission Statement

This fund, maintained from gifts, devises or bequests, is used for purposes as specified by the donor in connection with or benefit to the Coast Guard training program, as well as all other programs and activities permitted by law (10 U.S.C. 2601).

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$924	\$998	\$861	(\$137)

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. This request reflects consideration of prior-year unobligated balances.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
26.0 Supplies and Materials	\$1,125	\$995	\$760	(\$235)

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. The FY 2016 request reflects the anticipated need for supplies and material cost.

BUDGET REQUEST AND SUPPORTING INFORMATION
--

**United States Coast Guard
Yard Fund**

I. Appropriation Overview

A. Mission Statement for Yard Fund:

The Coast Guard Yard, which is located in Curtis Bay, MD, provides mission-essential logistics and engineering support, e.g., cutter drydocking, maintenance and repair. The Yard Fund is a revolving account supported by the Coast Guard's Operating Expenses and Acquisition, Construction & Improvements appropriations to pay for personnel and materials required for Coast Guard projects and work orders completed by the Coast Guard Yard.

B. Budget Activities:

Yard Fund activities include logistics and engineering support for Coast Guard vessels. These activities indirectly support Coast Guard missions.

C. Budget Request Summary:

Not Applicable.

Yard Fund Mission Statement

This fund finances the industrial operation of the Coast Guard Yard, Curtis Bay, MD (14 U.S.C. 648). The Coast Guard Yard finances all direct and indirect costs for its operations out of advances from Coast Guard and other agency appropriations that are placed in the fund.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.3 Communications, Utilities, and Misc. Charges	\$3,555	\$19,920	\$6,184	(\$13,736)

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Specifically, funding includes data connectivity costs for Coast Guard shore facilities and cutters, utility costs, including shore facility utilities, cutter and boat fuel requirements, and postal costs. The estimate of reimbursables in FY 2016 reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
24.0 Printing and Reproduction	\$4	\$28	\$26	(\$2)

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. Funding includes charges associated with publication of Coast Guard training manuals, operational instructions, reports, and other Coast Guard directives. The FY 2016 estimate of reimbursables reflects the anticipated need.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$33,597	\$48,926	\$35,190	(\$13,736)

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2016 estimate of reimbursables reflects consideration of prior-year unobligated balances.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
26.0 Supplies and Materials	\$230	\$72,134	\$58,398	(\$13,736)

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. The FY 2016 estimate of reimbursables reflects the anticipated need for supplies and material cost.

BUDGET REQUEST AND SUPPORTING INFORMATION
--

**United States Coast Guard
Supply Fund**

I. Appropriation Overview

A. Mission Statement for Supply Funds:

The Supply Fund, in accordance with 14 U.S.C. § 650, finances the procurement of uniform clothing, commissary provisions, general stores, technical material, and fuel for vessels over 180 feet in length. The fund is normally financed by reimbursements from the sale of goods.

B. Budget Activities:

Supply Fund activities include funding the procurement of uniforms, commissioning provisions, stores, materials, and fuel. These activities indirectly support Coast Guard missions.

C. Budget Request Summary:

Not Applicable.

Supply Fund Mission Statement

The Coast Guard supply fund, in accordance with 14 U.S.C. 650, finances the procurement of uniform clothing, commissary provisions, general stores, technical material, and fuel for vessels over 180 feet in length. The fund is normally financed by reimbursements from sale of goods.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
26.0 Supplies and Materials	\$131,541	\$189,788	\$175,692	(\$14,096)

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. The FY 2016 estimate of reimbursables reflects the anticipated need for supplies and material cost.

A. Component Overview

The United States Coast Guard (USCG) is comprised of the following mission-oriented programs that support achievement of the DHS strategic missions, goals, and objectives.

Maritime Security Operations: The Maritime Security Operations program encompasses activities required by legislative, executive, and policy mandates to detect, deter, prevent, disrupt, and recover from terrorist attacks and other criminal acts in the maritime domain. It includes the execution of antiterrorism, response, and select recovery operations. This program conducts the operational element of the Coast Guard's Ports, Waterways, and Coastal Security mission and complements the other two elements: the establishment and oversight of maritime security regimes, and maritime domain awareness.

Maritime Law Enforcement: The Maritime Law Enforcement program preserves America's jurisdictional rights within our maritime borders and suppresses violations of U.S. Federal law on, under, and over the seas. The Coast Guard is the lead Federal maritime law enforcement agency for enforcing national and international law on the high seas, outer continental shelf, and inward from the U.S. Exclusive Economic Zone (EEZ) to inland navigable waters, including the Great Lakes. The following statutory missions contribute to the Coast Guard's Maritime Law Enforcement program: Drug Interdiction; Migrant Interdiction; Living Marine Resources; and Other Law Enforcement.

Maritime Prevention: The Maritime Prevention program mitigates the risk of human casualties and property losses, minimizes security risks, and protects the marine environment. The following statutory missions contribute to the Coast Guard's Maritime Prevention program: Ports, Waterways, and Coastal Security (PWCS); Marine Safety; and Marine Environmental Protection.

Maritime Response: The Maritime Response program mitigates the consequences of marine casualties and disastrous events. The Coast Guard minimizes loss of life, injury, and property loss by searching for and rescuing persons in distress in the maritime environment. Coast Guard preparedness efforts ensure incident response and recovery resources are fully ready and capable to minimize impact of disasters to people, the environment, and the economy. The following statutory missions contribute to the Coast Guard's Maritime Response program: Search and Rescue and Marine Environmental Protection.

Defense Operations: The Defense Operations program provides unique authorities and capabilities to support the National Military Strategy. The program portfolio comprises eight activities including: Maritime Interdiction Operations; Combating Maritime Terrorism; Port Operations Security and Defense (to include maintaining a Title 10 Reserve force and providing Aids to Navigation support for battle-space preparation); Military Environmental Response Operations; Coastal Sea Control Operations (including providing the Department of Defense assured surface access in ice-covered and ice-diminished waters); Maritime Operational Threat Response (MOTR); Rotary Wing Air Intercept Operations; and Support for Theater Security Cooperation Initiatives. The statutory mission Defense Readiness contributes to the Coast Guard's Defense Operations program.

Marine Transportation System Management: The Marine Transportation System Management program ensures a safe, secure, efficient and environmentally sound waterways system. The US Coast Guard minimizes disruptions to maritime commerce by assessing and mitigating risks to safe navigation and by providing waterways restoration capabilities after extreme weather events, marine accidents, or terrorist incidents. The Coast Guard works in concert with other Federal agencies, state and local governments, marine industries, maritime associations, and the international community to optimize balanced use of the Nation's marine transportation system. The following statutory missions contribute to the Coast Guard's Marine Transportation System Management program: Aids to Navigation and Ice Operations.

Cross-Cutting Capital Investments and Maintenance: The Cross-Cutting Capital Investments and Maintenance program is derived from the Acquisition Construction and Improvements (AC&I) and Operating Expenses (OE) sections of the CJ. AC&I funds the acquisition of new capital assets, construction of required facilities, and physical improvements to existing facilities and assets. This program is intended to align with the resource levels contained in the DHS Future Years Homeland Security Program (FYHSP) which capture total AC&I budget authority and the portion of O&M for investments not captured as Mission Support.

Mission Support: The Mission Support program is a portfolio of output-oriented mission support programs. These programs support the needs of the operational forces of the Coast Guard and the maritime community and address crosscutting areas such as research and development, policy and regulatory guidance, asset management, and capabilities. This program includes several information technology (IT) transformational initiatives (excluding acquisition projects) that are designed to improve information sharing within the Coast Guard, strengthen information availability, improve vessel tracking, provide a fully secure IT environment, and enhance financial management and audit practices.

Management and Administration: This program captures activities that provide enterprise leadership, management and/or business administration services and describes the capabilities and activities that support the day-to-day management and back office functions enabling the Department to operate efficiently and effectively. Key capabilities include conducting agency planning and performance management, managing finances, managing agency workforce, providing physical and personnel security, acquiring goods and services, managing information technology, managing agency property and assets, managing agency communications, managing legal affairs, and providing general management and administration.

FY 2016 Budget Request

The table below shows USCG's FY 2016 Budget request by its mission-oriented programs.

Program	FY 2016 Request	
	FTE	Dollars (in thousands)
Maritime Security Operations	5,153	516,821
Maritime Law Enforcement	12,241	1,120,601

*Totals account for rounding.

Performance Measures

For *Prevent Terrorism and Enhance Security*, two types of performance measures are presented. Strategic Measures represent USCG’s measures that gauge achievement for this mission area, and are considered to be our Government Performance and Results Act Modernization Act (GPRAMA) performance measures. Additional Management Measures are displayed, as appropriate, to provide a more thorough context of expected performance results.

Strategic Measures

Measure: Security compliance rate for high risk maritime facilities						
Description: This measure is a leading indicator of maritime facility security and resiliency in our nation’s ports. Compliance of high risk (Maritime Transportation Security Act (MTSA)) facilities is determined based upon finding a major problem during an inspection, requiring a notice of violation or civil penalty. MTSA facilities are a high risk subset of the national waterfront facility population given the nature of their activities and/or the products they handle; which pose a greater risk for significant loss of life, environmental damage, or economic disruption if attacked. This subset is approximately 3,100 facilities. The Coast Guard completes one scheduled and one unscheduled inspection on each facility annually. This measure provides insight into resiliency by verifying MTSA facilities maintain proper access safeguards and exercise approved plans/procedures to prevent and react to security emergencies; making them better suited to resist, adapt, and recover to adversity or disruption.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	100%	100%	100%	100%	100%	100%
Result:	99.9%	98.7%	99.3%	99.3%	N/A	N/A

Management Measures

Measure: Percent reduction of all maritime security risk subject to U.S. Coast Guard influence						
Description: This is a risk-based outcome measure that begins with an assessment (by maritime security subject matter experts) of sixteen high-consequence maritime terrorist attack scenarios. Threat, vulnerability, and consequence levels are estimated for each scenario, which generates a proxy (index) value of "raw risk" that exists in the maritime domain. Next, U.S. Coast Guard interventions (security and response operations, regime and awareness activities) for the fiscal year are scored against the scenarios with regard to the decreases in threat, vulnerability and consequence that each has been estimated to have afforded. (The analysis then focuses on those areas within the U.S. Coast Guard's roles and strategic mandates.) The resulting measure is a proxy measure of performance. Targets for FY 2011-FY 2016 have increased relative to FY 2010 due to a revised methodology that took effect in FY 2011.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	44%	44%	36%	37%	37%	37%
Result:	44%	36%	36%	55%	N/A	N/A

Measure: Percent reduction of maritime security risk resulting from U.S. Coast Guard consequence management						
Description: This measure indicates the estimated percent of terrorist-related maritime risk reduction due to consequence management as a percent of the risk that USCG has the ability to impact. This is a risk-based measure that involves the scoring (by maritime security subject matter experts) of sixteen high-consequence maritime terrorist attack scenarios with respect to threat, vulnerability, and consequence. Aggregation of maritime security risk scenarios generates an index of "raw risk" that exists in the maritime domain. USCG layered interventions (both operational and regulatory-based) employed throughout the fiscal year are scored against the attack scenarios with regard to the percent consequence after a modeled attack has occurred. The resultant measure shows the reduction in "raw risk" from USCG consequence mitigation efforts alone. Targets for FY 2011-2016 have increased relative to FY 2010 due to a revised methodology that took effect in FY 2011.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	3%	3%	4%	4%	5%	4%
Result:	4%	2%	4%	3%	N/A	N/A

Measure: Percent reduction of maritime security risk resulting from U.S. Coast Guard efforts to prevent a terrorist entering the U.S. via maritime means

Description: This measure is an estimate of the percent of terrorist-related maritime risk reduction of the illegal entry of a terrorist(s) through the maritime domain (as a percent of the risk that the USCG has the ability to impact). This is a risk-based measure that involves the scoring (by maritime security subject matter experts) with respect to threat, vulnerability and consequence of the illegal entry of a terrorist(s) into the U.S. with intent and capability to carry out terror attacks within the United States where vessels en route from foreign countries are used as a means of conveyance. Such scoring generates an index of "raw risk" that exists in the maritime domain. Next, USCG incremental interventions (awareness, operational and regulatory-based) that have taken place throughout the fiscal year are scored with regard to the effectiveness each has been estimated to have afforded. Targets for FY 2011-2016 have increased due to a revised methodology that takes effect in FY2011.

Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	52%	52%	34%	35%	35%	36%
Result:	43%	34%	34%	42%	N/A	N/A

Measure: Percent reduction of maritime security risk resulting from U.S. Coast Guard efforts to prevent a weapon of mass destruction from entering the United States via maritime means

Description: This measure is an estimate of the percent of terrorist-related maritime risk reduction of the illegal entry of a Weapon of Mass Destruction (WMD)/materials into the U.S. through the maritime domain (as a percent of the risk that the USCG has the ability to impact). This is a risk-based measure that involves the scoring (by maritime security subject matter experts) with respect to threat, vulnerability and consequence of the illegal entry of a WMD/materials into the United States to support ongoing terrorist operations where vessels enroute from foreign countries are used as a means of conveyance. Scoring generates an index of "raw risk" that exists in the maritime domain. USCG incremental interventions (awareness, operational and regulatory-based) that have taken place throughout the fiscal year are scored with regard to the effectiveness that each has been estimated to have afforded. Targets for FY 2011-2016 have increased relative to FY 2010 due to a revised methodology.

Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	29%	29%	24%	25%	25%	23%
Result:	28%	24%	24%	56%	N/A	N/A

Mission 2: Secure and Manage Our Borders

Resources Requested

USCG resources supporting *Secure and Manage Our Borders* are provided in the table below.

\$ in thousands

Program	FY 2014		FY 2015		FY 2016	
	\$	FTE	\$	FTE	\$	FTE
Maritime Law Enforcement	816,546	11,434	880,299	12,369	1,074,073	11,776

*Totals account for rounding.

Performance Measures

For *Secure and Manage Our Borders*, two types of performance measures are presented. Strategic Measures represent USCG’s measures that gauge achievement for this mission area, and are considered to be our Government Performance and Results Act Modernization Act (GPRAMA) performance measures. Additional Management Measures are displayed, as appropriate, to provide a more thorough context of expected performance results.

Strategic Measures

Measure: Availability of maritime navigation aids						
Description: This measure indicates the hours that short-range federal Aids to Navigation are available. The aid availability rate is based on an international measurement standard established by the International Association of Marine Aids to Navigation and Lighthouse Authorities (IALA) (Recommendation O-130) in December 2004. A short-range Aid to Navigation is counted as not being available from the initial time a discrepancy is reported until the time the discrepancy is corrected.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	97.5%	97.5%	97.5%	97.5%	97.5%	97.5%
Result:	98.48%	98.3%	98.2%	98.2%	N/A	N/A

Measure: Fishing regulation compliance rate						
Description: The U.S. Coast Guard uses the percentage of fishing vessels observed at sea complying with domestic regulations as a measure of the Coast Guard's activities and their impact on the health and well-being of U.S. fisheries and marine protected species. This specific measure reflects the percent of boardings at sea by the U.S. Coast Guard during which no significant violations of domestic fisheries regulations are detected.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	96%	96%	96%	96.5%	96.5%	96.5%
Result:	97.4%	98.3%	98.1%	97.5%	N/A	N/A

Measure: Migrant Interdiction Effectiveness in the Maritime Environment						
Description: This measure reports the percent of detected undocumented migrants of all nationalities who were interdicted by the U.S. Coast Guard and partners via maritime routes.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	N/A	N/A	73%	74%
Result:	N/A	N/A	N/A	N/A	N/A	N/A

Measure: Number of detected incursions of foreign fishing vessels violating U.S. waters						
Description: This measure is the number of detected illegal fishing incursions into the U.S. Exclusive Economic Zone (EEZ). Incursions detected by both the U.S. Coast Guard and other sources are included when the reports are judged by operational commanders as being of sufficient validity to order resources to respond.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	<180	<140	<140	<148	<215	<220
Result:	122	160	189	198	N/A	N/A

Management Measures

Measure: Annual Maritime Transportation Security Act (MTSA) Facility compliance rate with Transportation Worker Identification Credential (TWIC) regulations						
Description: This measure reports the percent of Maritime Transportation Security Act (MTSA) regulated facilities that are found to be in compliance with the Transportation Worker Identification Card (TWIC) regulations during CG inspections. The Security and Accountability for Every (SAFE) Port Act of 2006 requires the Coast Guard to conduct at least two MTSA security inspections on regulated facilities each year; one announced and one unannounced. CG Inspectors randomly sample different areas of a facility (admin staff, security staff, dock workers, etc.) to check for TWIC compliance by ensuring workers have a valid and current TWIC card. Some infractions can be corrected on the spot, e.g., a trucker forgot his TWIC in his truck cab. Depending on the number and severity of TWIC infractions, the inspector/Captain of the Port may find the facility not in compliance. Statistical guidelines have been developed based on the size of the facility to aid inspectors, and to ensure random sampling.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	85%	99%	99%	99%	99%	99%
Result:	99%	99%	99%	99%	N/A	N/A

Measure: Average number of navigational accidents						
Description: This measure evaluates the long-term trend of U.S. Coast Guard Waterways Management Program in preventing collisions, allisions (vessels striking fixed objects), and groundings.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	<=1,963	<=1,939	<=2,012	<=2,043	<=2,038	<=2,014
Result:	1,944.6	1,932	1,869	1,846	N/A	N/A

Measure: Number of undocumented migrants who attempt to enter the U.S. via maritime routes that are interdicted						
Description: This measure is the total number of all undocumented migrants who are attempting to enter the U.S. by maritime means and who are interdicted by the U.S. Coast Guard and other law enforcement agencies. The other agencies include Customs and Border Protection, and foreign entities partnering with the U.S. Coast Guard for migrant interdiction operations.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	<8,351	<8,609	<6,100	<6,300	<6,300	<6,300
Result:	3,477	4,086	5,262	7,747	N/A	N/A

Measure: Percent of time high priority waterways in the Great Lakes and along the eastern seaboard are open during ice season						
Description: This measure is the percent of time Tier One Waterways, in the Great Lakes and along the eastern seaboard, are open to vessel transits during the icebreaking season as a percentage of the total. Tier One waterways are those connecting waterways of the Marine Transportation System that waterways managers at Coast Guard District commands determine are highest-priority due to geographical location or importance of cargo to public health and safety.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	N/A	95%	95%	95%
Result:	N/A	N/A	N/A	85.5%	N/A	N/A

Measure: Removal rate for cocaine from non-commercial vessels in maritime transit zone						
Description: Percent of Cocaine removed (seized by the U.S. Coast Guard or disrupted (jettisoned, scuttled or destroyed) as a result of U.S. Coast Guard law enforcement action) in relationship to the estimated Non-Commercial Maritime Movement of cocaine.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	15.5%	16.5%	14.1%	13.9%	13.8%	13.7%
Result:	11.6%	13.4%	15.3%	9.5%	N/A	N/A

Mission 3: Enforce and Administer Our Immigration Laws

Resources Requested

USCG resources supporting *Enforce and Administer Our Immigration Laws* are provided in the table below.

Program	FY 2014		FY 2015		FY 2016

Total	1,700,899*	10,207	1,619,954	10,297	1,657,738	10,400

*Totals account for rounding.

Performance Measures

For *Strengthen National Preparedness and Resilience*, two types of performance measures are presented. Strategic Measures represent USCG’s measures that gauge achievement for this mission area, and are considered to be our Government Performance and Results Act Modernization Act (GPRAMA) performance measures. Additional Management Measures are displayed, as appropriate, to provide a more thorough context of expected performance results.

Strategic Measures

Measure: Percent of people in imminent danger saved in the maritime environment						
Description: This is a measure of the percent of people who were in imminent danger on the oceans and other waterways and whose lives were saved by U.S Coast Guard. The number of lives lost before and after the U.S Coast Guard is notified and the number of persons missing at the end of search operations are factored into this percentage. Several factors hinder successful response including untimely distress notification to the U.S Coast Guard, incorrect distress site location reporting, severe weather conditions at the distress site, and distance to the scene.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	100%	100%	100%	100%	100%	100%
Result:	77.27%	77.3%	79.0%	79.0%	N/A	N/A

Measure: Three-year Average Number of Serious Marine Incidents						
Description: This measure reports the three-year average number of Serious Marine Incidents as defined by 46 CFR 4.03-2, which include: death or injury requiring professional treatment beyond first aid, reportable property damage greater than \$100,000, actual or constructive loss of certain vessels, discharge of oil of 10,000 gallons or more; or a discharge of a reportable quantity of a hazardous substance.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	N/A	N/A	<=693	<=701
Result:	N/A	N/A	N/A	N/A	N/A	N/A

Management Measures

Measure: Average number of chemical discharge incidents in the maritime environment						
Description: This measure is an indicator of the U.S. Coast Guard Program's impact on the long-term trend of chemical discharge incidents. It is a moving average of U.S. Coast Guard investigated chemical discharge incidents into navigable waters of the United States for the past 60 months, divided by the 5-year average annual foreign and domestic short tons (100 million) of Chemical and Chemical Products shipped in U.S. waters.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	<=22	<=18.4	<=16	<=15.9	<=15.8	<=15.8
Result:	15	14.2	14.6	15.4	N/A	N/A

Measure: Average number of oil spills in the maritime environment						
Description: This measure is an indicator of the U.S. Coast Guard Prevention Program's impact on the long-term trend of significant oil spills. It is a moving average of U.S. Coast Guard investigated oil spills greater than 100 gallons discharged into navigable waters of the United States for the past 60 months, divided by the 5-year average annual foreign and domestic short tons (100 million) of Oil and Oil Products shipped in U.S. waters.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	<=11.6	<=11.4	<=11.4	<=11.3	<=11.1	<=11
Result:	10.2	10.5	10.0	10.3	N/A	N/A

Measure: Five-year average number of recreational boating deaths and injuries						
Description: This measure reports the number of recreational boating fatalities and injuries for the past 60 months and is an indicator of the long-term performance trend of the Coast Guard's Prevention Program impact on recreational boating fatalities and injuries.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	<=4,115	<=3,972	<=3,880	<=3,797	<=3,716	<=3,656
Result:	3,904	3,791	3,541	3,462	N/A	N/A

Measure: Percent of time rescue assets are on-scene within 2 hours						
Description: Time on scene is calculated from the earliest time a Search and Rescue Unit (SRU) is requested to proceed until the earliest time of arrival on scene of an SRU. This includes readiness time, the 30 minutes of preparation time, that provides for underway preps (i.e. engine warm-ups, underway checklist, risk management evaluation, and mission planning) and the transit time, the 90 minutes from underway to on scene based on moderate environmental conditions which allow for operation of the SRUs at their top cruise speeds. To calculate the response times used in the measure, the Coast Guard uses the following equation: Time On Scene = First Sortie On Scene Time minus First Resource Requested Time. The Coast Guard established the 2-hour On Scene Standard in the 1970's and conducted a full review of the standard in 1992. The standard is based on survival expectations in the average weighted water temperatures. The weighting factors into the varying number of incidents occurring regionally.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	100%	100%	100%	100%	100%	100%
Result:	93.05%	93.5%	92.0%	95.0%	N/A	N/A

Measure: Three-year average number of commercial mariner deaths and significant injuries						
Description: This is a measure of the average annual number of reportable commercial mariner deaths and significant injuries over the past 12 quarters. It is an indicator of the long-term performance impact of the Coast Guard's Maritime Prevention Program on commercial mariner fatalities and injuries.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	N/A	N/A	<=153	<=148
Result:	N/A	N/A	N/A	N/A	N/A	N/A

Measure: Three-year average number of commercial passenger deaths and significant injuries						
Description: This is a measure of the average annual number of reportable commercial passenger deaths and significant injuries over the past 12 quarters. It is an indicator of the long-term performance impact of the Coast Guard's Maritime Prevention Program on commercial passenger fatalities and injuries.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	N/A	N/A	<=173	<=173
Result:	N/A	N/A	N/A	N/A	N/A	N/A

BUDGET REQUEST AND SUPPORTING INFORMATION

**United States Secret Service
Salaries and Expenses**

I. Appropriation Overview

A. Mission Statement for Salaries and Expenses:

The United States Secret Service ensures the security of the President, the Vice President, their families, the White House Complex (WHC), the Vice President’s Residence, national and visiting world leaders, former Presidents, and events of national significance. The Secret Service also protects the integrity of the currency and investigates crimes against the national financial system committed by criminals around the world and in cyberspace. The Service accomplishes these missions through the following operational programs:

- Protection
- Protective Intelligence
- Criminal Investigations

The Secret Service achieves excellence in these program areas by deploying leading-edge technologies to mitigate emerging threats and contributes to the success of the goals the Department of Homeland Security (DHS) Quadrennial Homeland Security Review (QHSR). The Fiscal Year (FY) 2016 Budget will support enhancements to the protective mission recommended by the United States Secret Service Protective Mission Panel to enhance training, technology, perimeter security, and operations.

B. Budget Activities:

The Secret Service’s Salaries and Expenses appropriation provides for the annualization of prior-year funding, fiscal adjustments, and budget activity related to Secret Service programs, projects, and activities.

The FY 2014 Revised Enacted figures stated throughout this budget request depict funded positions and FTE versus actual staffing levels achieved. The chart provided below depicts the end of FY 2014 actual on-board positions and FTE achieved.

FY 2014 Staffing - Actuals

Job Category	Pos	FTE
Special Agent	3,277	3,290
Uniformed Division	1,345	1,315
Administrative, Professional, Technical	1,745	1,771
Total	6,367	6,376

The FY 2016 Budget request covers the costs associated with the staffing levels referenced throughout this request (6,694 positions/6,647 FTE) to ensure successful implementation of the workforce increases recommended by the Protective Mission Panel.

C. Budget Request Summary:

The FY 2016 Budget requests \$1,867,453,000, and funds 6,694 positions (6,647 FTE) for the Secret Service and \$214,938,000 in program increases.

This level of funding includes the following program changes:

- 2016 Presidential Campaign - \$123,487,000
- Former Obama Protective Detail - \$25,706,000 (29 FTE)
- Protective Mission Enhancements (Protective Mission Panel) - \$65,745,000

Increases to base total \$139,215,000 and include:

- FY 2016 Pay Raise, Health Insurance, and Retirement Benefits - \$19,068,000
- Presidential Candidate Nominee Protection - Campaign Labor Shift - \$54,700,000 (290 FTE)
- Mission Support Sustainment - \$32,732,000
- Former President Obama Protective Detail - 2nd year Position Annualization - \$14,085,000 (61 FTE)
- Annualization of FY 2015 Pay Increase - \$2,861,000
- Working Capital Fund - \$4,340,000
- Cyber Remediation - \$5,000
- OMS Next Generation Limo - Full Funding - \$8,500,000
- Cybersecurity Personnel Pay Reform - \$2,924,000
 - Funds will support departmental efforts to plan for and execute new human capital statutory authority for cybersecurity positions provided in P.L. 113-277. Specific preparatory activities will include the collection of additional information about existing cybersecurity employees and staffing gaps as well as the creation of human capital guidance, policies, and operating procedures. Funds will cover implementation personnel, including human capital and legal support, and will also be distributed to cybersecurity employees performing mission critical work through changes to compensation, including base pay and incentives.

Decreases to base total \$72,670,000 and include:

- Domestic Field Operations-Campaign Labor Shift - (\$54,700,000) (-290 FTE)
- Administrative, Professional, and Technical Staffing Reduction - (\$1,855,000) (-15 FTE)
- Manual Continuous Monitoring - (\$583,000)
- Cellular Wireless Savings - (\$1,000)
- White House Mail Screening - (\$1,431,000)
- Vehicle Replacement - (\$4,000,000)
- Parade Limo - Re-alignment to Next Generation Limo - (\$6,100,000)
- Reduction to Administrative Travel - (\$4,000,000)

D. Congressionally-Mandated Requirements:

Information Integration and Technology Transformation – Multi-Year Investment and Management Plan

House Report 113-481 and Senate Report 113-198 direct the Secret Service to submit a multi-year Information Integration and Technology Transformation (IITT) investment and management plan for FYs 2015-2018. Section 542 of the House FY 2015 DHS Appropriations Bill (H.R. 4903) and Section 545 of the Senate FY 2015 DHS Appropriations Bill (S. 2534) both include statutory language requiring the Director of the Secret Service to submit as part of the FY 2016 Budget a multi-year investment and management plan for its IITT program.

Domestic Field Operations, Electronic Crimes Investigations, and State and Local Cyber Crime Training

House Report 113-481 states that while Electronic Crimes Special Agent Program (ECSAP) and Electronic Crimes Task Forces (ECTFs) activities no longer have separate reporting and reprogramming lines, the Committee expects the associated funding and personnel associated with these activities to continue to be identified in future budgets.

FY 2016 Program Change	57	29	\$83,467
FY 2016 Total Request	3,655	3,608	\$1,009,246
Total Change 2015 to 2016	27	75	\$134,361

The FY 2016 Budget includes \$1,009,246,000, 3,655 positions, and 3,608 FTE for the Protection of Persons and Facilities Program, Project, or Activity (PPA).

Adjustments to Base:

- Increase of \$1.6 million to annualize the 2015 pay raise.
- Increase of \$10.7 million for 2016 pay raise, health insurance, and retirement benefits.
- Increase of \$22.9 million for Mission Support Sustainment.
- Increase of \$14.1 million for the Former Obama Protective Detail - 2nd year Position Annualization (61 FTE).
- Increase of \$8.5 million for the OMS Next Generation Limo (Full Funding).
- Increase of \$2.4 million for the Working Capital Fund.
- Decrease of \$1.9 million for the Administrative, Professional, and Technical Staffing (-15 FTE).
- Decrease of \$1.4 million for White House Mail Screening.
- Decrease of \$6.1 million for the Parade Limo - Re-alignment to Next Generation Limousine.

Program Change:

- Increase of \$25.7 million for the Former Obama Protective Detail - Full Funding (29 FTE).
- Increase of \$ 57.8 million for the Protective Mission Enhancements (Protective Mission Panel).

CURRENT SERVICES PROGRAM DESCRIPTION:

As authorized by Title 18 U.S.C. § 3056, the Protection of Persons and Facilities program requires the Secret Service to provide physical safety and security to certain persons, designated facilities, and certain major events. This program is comprised of three distinct activity areas: (1) protection of persons, (2) protection of facilities, and (3) protection of events.

Protection of Persons

The Secret Service is world-renowned for the physical protection it provides to the Nation's highest elected leaders, other government officials, and visiting foreign dignitaries. The Service is authorized by Title 18 U.S.C. 3056, to protect the following individuals:

- the President, the Vice President (or other individuals next in order of succession to the Office of the President), the President-elect, and Vice President-elect;
- the immediate families of the above individuals;
- former Presidents and their spouses (for life);
- former Vice Presidents, their spouses and their children who are under 16 years of age, for a period of not more than six months after the date the former Vice President leaves office;
- visiting foreign heads of state or government and their accompanying spouses; and other distinguished foreign visitors to the United States;
- official U.S. representatives performing special missions abroad; and
- certain other domestic government officials, as directed by the President.

Permanent protectees, such as the President and Vice President, are assigned details of special agents. The Former Presidents Protection Act of 2012 (P.L. 112-257) authorizes the Secret Service to protect: (1) former Presidents and their spouses for their lifetimes, except that protection of a spouse shall terminate in the event of remarriage, and (2) children of a former President who are under age 16. Protective details for other protectees, such as visiting heads of state or governments and their accompanying spouses, are staffed with special agents on temporary assignment from Secret Service investigative field offices or headquarters.

For protective visits of the President and Vice President, teams of Secret Service personnel travel in advance to conduct site security surveys to assess the venue to be visited, personnel, and equipment requirements, as well as to determine the location of hospitals and primary motorcade and evacuation routes in the event of an emergency. Before a protectee arrives in any venue, the lead advance special agent and his/her team, in conjunction with the local Secret Service field office, develops and coordinates the overall security plan with local, state, and Federal law enforcement and public safety representatives participating with the visit. Intelligence information is shared, and emergency contingency plans are established. Prior to the arrival of the protectee, all aspects of the security plan are implemented to ensure a safe and secure environment.

The assistance of partners in the military, as well as Federal, state, and local law enforcement, and public safety organizations is a vital part of the entire security operation. During protective visits, Secret Service and local law enforcement personnel primarily focus their security efforts on the middle and outer perimeter of the secure site. Special agents assigned to a permanent protective detail focus on the inner security perimeter. A Secret Service command post is the primary communication center for protective activities from which emergencies are monitored and critical information is shared with law enforcement agencies participating with the protective visit. Additionally, communication security rooms are established at each protective venue.

In FY 2014, Secret Service protective details, investigative field office personnel, and headquarters personnel achieved 100 percent incident-free protection during domestic and international travel stops.¹

Number of Travel Stops of Selected Protectees*

	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	FY 2014
President	352	364	336	466	318	281
First Lady	176	195	240	324	194	187
POTUS Family	161	141	147	126	146	110
Vice President	405	395	336	442	453	442
Second Lady	192	201	201	232	248	223
VPOTUS Family	117	226	269	282	428	248
Formers**	1,547	1,673	1,469	1,301	1,304	1,450
TOTAL	2,950	3,195	2,998	3,173	3,091	2,941

*Does not include foreign dignitaries, off the record trips, or in-towns, not requiring a 7-day advance.

** Formers includes Presidents, Vice Presidents, First and Second Lady

In today’s threat environment, the Service is committed to using its resources to provide the most effective protection possible and integrates cutting-edge technology and personnel within its protective mission.

Using advanced protective countermeasures, the Secret Service executes security operations that prevent, deter, minimize, and respond to threats. The protective environment is enhanced by specialized resources within the Secret Service including the Airspace Security Branch, Counter Sniper Team, Counter Assault Team, Emergency Response Team, Counter Surveillance Division, Hazardous Agent Mitigation and Medical Emergency Response Team, Explosive Detection Unit, Magnetometer Operations Unit, and the Critical Systems Protection (CSP) program.

Critical Systems Protection

The CSP methodology recognizes the interaction between the physical and cyber environments. When applied to real-world situations, it provides a clear picture of potential impacts on physical security resulting from cyber activity. The Secret Service’s Office of Investigations coordinates the agency’s CSP initiatives.

The CSP program oversees a systematic audit and technical assessment of critical infrastructure and/or utilities which support a protective visit, event or venue. CSP assessments seek to identify and assess computer networks, process-control systems or remotely controlled devices which potentially impact an operational security plan if compromised. The result is situational awareness of the overall cyber-security environment.

¹ Includes U.S. and U.S. Territories

In FY 2014, the CSP program continued a collaborative effort in working with other government entities and private sector critical infrastructure owners at multiple security events, including:

- State of the Union Address in Washington, DC - January 2014
- U.S.-Africa Leaders Summit in Washington, DC - August 2014
- 69th United Nations General Assembly in New York City – September 2014
- Super Bowl XLVIII - January 2014 (advance only)

Partnerships with other Federal agencies and the CSP program is critical to the overall effectiveness of the DHS cyber mission and supports the Department's mission to create a safe, secure, and resilient cyber environment. In FY 2014, CSP-trained agents conducted more than 213 advances in support of protective visits, which included 14 foreign advances in support of the Presidential Protective Division as well as DHS-designated major events [two National Special Security Events [NSSE], one Special Security Event, and one Special Event Assessment Rating [SEAR]).

Operational Mission Support

The Operational Mission Support (OMS) initiative supports the protection of the President and Vice President at the White House Complex, the Vice President's Residence, and temporary sites from emerging explosive, chemical, biological, radiological, and cyber threats. The advanced protective countermeasures that are part of OMS have been designed to address both established and evolving threats.

One example of this program's success to address emerging threats is the establishment of a Temporary Visitor Entrance Building (TVEB) at the White House, which opened in January 2012. The Secret Service worked closely with the White House Military Office, the National Park Service, the National Capital Planning Commission, and other stakeholders on the design and construction of this facility. The TVEB provides the Secret Service with enhanced explosive detection screening capabilities for the nearly 500,000 people who visit the White House for public tours and other events each year. OMS funds have also been used to study the feasibility of developing a permanent facility to replace the TVEB which is consistent with the master plan for the White House Complex.

Additionally, the Secret Service, working with the General Services Administration, developed the D-11 screening facility in FY 2013 to screen visitors and others entering the Eisenhower Executive Office Building on the west side of the White House Complex. OMS funds were used to purchase the security screening equipment (trace explosive detectors, metal detectors, cabinet x-ray devices, radiation detection, etc.) used in this facility and annual OMS funds provide for the staffing needs required to operate this facility (Uniformed Division officers and canines).

To address emerging threats, OMS provides the Secret Service with the resources needed, to:

- purchase new technology designed to detect these evolving threats;
- maintain and enhance the investments made in OMS during previous years; and
- sustain the additional Uniformed Division canine handlers, engineers, and scientists who were hired as a result of OMS and are assigned to these programs.

The implementation of OMS is a multi-year effort to address these threats. It is critical that the Secret Service have these resources to continually refresh and update/upgrade technical countermeasures in

order to ensure a safe environment for the President, Vice President, and other Secret Service protectees.

White House Mail Screening Facility

The Secret Service provides management and oversight of the mail screening security program responsible for screening all incoming mail, parcels, and gifts destined for the White House Complex (WHC). The goal of the program is to detect any chemical, biological, radiological, nuclear and explosive (CBRNE) hazards at a remote location in order to contain, mitigate, and investigate any vulnerability posed by these threats. All items going to the WHC are screened at a high threat level.

The Secret Service's White House Mail Screening Facility (WHMSF) receives all delivered mail and other items destined for the WHC for screening. Upon receipt, security personnel and technical specialists utilize strict protocols to sample the mail for contamination by targeted threat agents and monitor the environment for potentially hazardous substances. Any items determined to contain possible contaminants are quarantined and subjected to further analysis, and appropriate mitigation procedures are implemented. Once screened items are identified as negative for hazards, they are released back to the WHC for administrative mail processing and distribution.

The WHMSF allows the Secret Service to consolidate operational elements under one roof and within an existing Secret Service secured perimeter. The WHMSF houses a processing area containing fume hoods, a chemical and biological laboratory, a forensics laboratory, laundry room, warehouse, and management offices, each of which were located in separate buildings prior to construction. The WHMSF also allows the Secret Service to assume effective and full control of the critical aspects of the mail screening process.

CBRNE protection features of the WHMSF include biological sample collectors, chemical agent air monitors, reinforced walls, and relief panels for explosive blast mitigation, and radiation detectors. Epoxy painted walls and sealed openings are countermeasures to prevent contamination migration and assist with decontamination while an in-house laboratory provides the Secret Service with an enhanced level of daily oversight for analytical functions. Redundant instrumentation and equipment is maintained to ensure continuity of operation and valuable experiments; standards and samples are stored under secure temperature-monitored conditions. The in-house laboratory allows the Secret Service to be fully responsible for quality assurance.

Counter-Surveillance Division

The Counter-Surveillance Division (CSD) is comprised of special agents and Uniformed Division officers who detect and report unusual, suspicious, and pre-incident behaviors around Secret Service protected venues. CSD personnel also conduct vulnerability assessments around fixed and temporary Secret Service protected venues in order to identify likely surveillance points, attack staging and rally area, and other areas of concern, as well as mitigation recommendations and solutions.

To support Secret Service counter-surveillance operations in the National Capitol Region (NCR), CSD conducts the following activities:

- Maintains a 24-hour presence in and around fixed venues in the NCR and in the Joint Operations Center (JOC).
- CSD agents conduct vulnerability assessments on venues attended by POTUS, VPOTUS, and other high-level protectees, as well as venues hosting major events with a Secret Service nexus.

The Counter-Surveillance Division was established in March 2014 and has prepared over 123 vulnerability assessments, provided counter-surveillance support to over 1,210 protectee visits within the NCR, and supported two NSSE/SEAR events within the NCR and New York.

Protection of Facilities

Pursuant to Title 18 U.S.C. § 3056A, the Secret Service is authorized to protect, in part, the following facilities:

- the WHC;
- any building in which Presidential offices are located (Treasury Building, New Executive Office Building, Old Executive Office Building);
- the Treasury Building and grounds;
- the Vice President’s Residence and grounds; and
- 548 foreign diplomatic missions located in the Washington, D.C. metropolitan area.

Protection of these facilities is carried out by the Secret Service’s Uniformed Division (UD) officers. Utilizing magnetometer screening operations, these officers process thousands of staff members, other workers, tourists, members of the press and appointments into the WHC on a daily basis. Officers assigned to the WHC and Vice President’s Residence provide protection through the effective use of fixed posts, foot beats, bicycle patrols, roving vehicular patrols, and cameras.

Number of Processings by Uniformed Division Officers in FY 2014

Public Members Screened	Protective Venues
1,410,061	505

Technicians assigned to the Counter Sniper Units, Explosive Detection Units, and the Emergency Response Teams provide specialized security in and around the WHC. The White House Vehicle Inspection Teams and the Counter Surveillance Division augment the Uniformed Division's work in securing the WHC and other protected sites. The UD Special Operations Section is an additional unit responsible for providing security operations, oversight, and coordination of tours of the White House Mansion and special events.

Uniformed Division Special Operations Section Events in FY 2014

Tours	Total Participants
Public Tours	284,134
Special Tours	66,360
Special Events	78,352
Special Event ²	Total Participants
Easter Egg Roll	30,000
Fall Garden Tours	23,373
Holiday Receptions and Open Houses	28,051
Independence Day Events	4,449
Championship Team Events	1,379
State Arrival – President of France	3,190
Trick-or-Treat Halloween Event	1,697
St. Patrick's Day Reception	464
Congressional Medal of Honor Events	1,125

UD officers assigned to protect foreign diplomatic missions in the Washington, D.C. metropolitan area perform their duties by patrolling the embassy district in marked police vehicles, motorcycles, bicycles, and on foot. These officers also handle demonstrations at diplomatic locations, assist in motorcade movements, operate fixed protective posts, investigate and process crime scenes, and consult with diplomatic officials regarding security matters related to their embassies, chanceries, and personnel.

Protection of Events

When developing the overall security plan for events, the Secret Service consistently implements three layers of security: an outer perimeter, a middle perimeter and an inner perimeter. A critical element of the outer and middle perimeters is the use of magnetometer and portable x-rays. Whether it is a permanent protective site, such as the WHC, the Vice President's Residence, or a temporary protective site, the UD is responsible for the prevention, deterrence, and detection of all items that may be deemed a threat by employing walk-through metal detectors, handheld metal detectors, portable x-ray machines, physical searches of hand-carried items, and deployment of Explosive Detection Units. From FY 2008-2014, UD officers screened approximately 20.3 million people in support of the Secret Service protection mission.

Number of Uniformed Division Magnetometer Unit Screenings

	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	FY 2014	Total
White House Complex	1,027,012	867,061	1,109,691	936,530	963,306	653,439	824,783	6,381,822
Other Temporary	3,321,375	3,963,327	931,939	854,382	1,431,749	2,468,889	981,215	13,952,876

² These events are only a small representation of the yearly total tours. Numbers represent total visitors processed by the UD for each special event.

Protective Sites								
------------------	--	--	--	--	--	--	--	--

In addition to the protecting persons and facilities, this Protection of Persons and Facilities program provides funding for major protective events that do not receive an NSSE designation. In years past, these events included meetings of the International Monetary Fund and World Bank in Washington, D.C., and meetings of the United Nations General Assembly (UNGA) in New York City. The UNGA is one of the most significant annual protective events, requiring the agency to provide simultaneous protection of heads of state or government, as well as the President, Vice President, and other Secret Service protectees that may be in attendance.

Number of United Nations General Assembly Protectees per Fiscal Year

Fiscal Year	Event	Head-of-Government or Head of State	Spouses	TOTAL
2014	UNGA 69	142	76	218
2013	UNGA 68	124	80	204
2012	UNGA 67	160	50	210
2011	UNGA 66	132	55	187
2010	UNGA 65	125	52	177
2009	UNGA 64	191	62	253
2008	UNGA 63	116	61	177

End Item: Presidential Primary Limousine (Current Generation)

Estimated Cost per Item: \$6,047,000

Total Estimated Cost: \$6,047,000

Contract Information and Status: Contract No. HSS01-10-C-0057 awarded to General Motors Company will expire in FY 2015. It is anticipated that a new contract will be negotiated to meet any requirements which would arise following the expiration of the current contract.

Budget and Funding (dollar values in \$K)			
	FY 2014	FY 2015 President's Budget	FY 2016 President's Budget
Request (\$M)	6,047	6,047	-
Appropriations (\$M)	6,047	6,047	-
Obligations (\$M)	6,047	6,047	-
Unobligated Balance (\$M)	-	-	
Expenditures (\$M)	6,047	6,047	-
Number of Items Procured (or Planned to be Procured)	1	1	-

Scope and Justification: These vehicles are used as the primary mode of safe and secure ground transportation for the President of the United States for local, domestic, and foreign visits. This vehicle design provides the most secure and best protection currently available in a civilian platform. These units are required to meet ongoing operational requirements.

These vehicles are the primary means of secure transportation for the President, both domestically and abroad. This funding enables the Secret Service to continue to address emerging protective threats, insure proper lifecycle replacement, and capture the advances made in automotive and protective systems to ensure the safest and most secure mode of ground transportation for the President of the United States. The Secret Service will award a contract in 2016 for the Next Generation Presidential Primary Limousine.

Summary

The above requested amount provides funding for operational security, which directly supports the 2014 DHS QHSR as follows:

- Mission 1: Prevent Terrorism and Enhance Security;
 - Goal 1.3: Reduce Risk to the Nation’s Most Critical Infrastructure, Key Leadership, and Events; and
 - Sub-goal 1.3.2: Protect key leaders, facilities, and National Special Security Events.

The funding specifically permits the Secret Service to provide or acquire the security assets needed to successfully execute the protection mission.

Funding this activity supports the accomplishment of the following Secret Service strategic and management performance measures:

- Percent of instances protectees arrive and depart safely (target: 100 percent).
- Percent of total protection activities that are incident free at the White House Complex, Vice President’s Residence, and other protected facilities (target: 100 percent).
- Percent of instances protectees arrive and depart safely (campaign protectees) (target: 100 percent).
- Percent of instances protectees arrive and depart safely (domestic protectees) (target: 100 percent).
- Percent of instances protectees arrive and depart safely (foreign protectees) (target: 100 percent).
- Percent of protective travel instances that fall within estimated resource requirements (target: 100 percent).

FY 2016 Program Change	-	-	-
FY 2016 Total Request	-	-	\$4,500
Total Change 2015 to 2016	-	-	-

The FY 2016 Budget includes 0 positions, 0 FTE, and \$4,500,000 for the NSSE Fund PPA.

Justification for No-Year funding

The DHS Secretary is responsible for designating all NSSEs. The designation of NSSEs is somewhat unpredictable; some NSSEs are known years in advance while others are designated with only weeks or even in a couple of days of notice. To support responsibilities associated with these events, the FY 2016 Budget includes no-year funding for NSSEs to establish a base level of funding for unanticipated events. These events are unpredictable, and limiting availability of funding will require the Service to either lapse or reprogram funds intended for other programs, in order to address an event designated as an NSSE outside of the normal budgetary cycle.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Secret Service is the lead agency for planning, coordinating, and implementing security operations at designated NSSEs³. These events represent some of the most complex and logistically complicated protective operations undertaken by the Secret Service, often requiring anywhere from 3 to 18 months of planning. The Secret Service deploys personnel and resources from across the country to support NSSE security operations. The support and coordination of multiple Federal departments, numerous state and local law enforcement, and public safety jurisdictions is essential to the success of these events.

³ The following provides authorization to the Secret Service to be the lead agency for planning, coordinating, and implementing security operations at designated NSSE: Presidential Decision Directive 62 (1998); the Homeland Security Act (2002); Homeland Security Presidential Directives 5, 7 (2003) and 15 (2007); 18 U.S.C. § 3056 (amended 2005); National Security Presidential Directive 46/Homeland Security Presidential Directive 15 (2007); and Presidential Policy Directive 22 (2013).

Once an event is designated an NSSE, the Secret Service begins the collaborative process of developing a security plan that will create a safe and secure environment for Secret Service protectees, other dignitaries, event participants, and the general public, while safeguarding people's lawful freedoms of speech, assembly, and petition of the government. A central component of this collaboration is the establishment of an Executive Steering Committee (ESC) and as many as 24 subcommittees comprised of command level representatives from the Secret Service, the Federal Bureau of Investigation, the Federal Emergency Management Agency, other Federal law enforcement agencies, state and local law enforcement, and public safety counterparts representing the areas impacted by the events.

The ESC oversees the development, coordination, and implementation of the security plan and resolves any concerns raised by the various subcommittees. Interagency subject matter experts staff the subcommittees and are charged with developing specific aspects of the security plan including tactical training and field exercises, credentialing, airspace security, and venue security. To further enhance interagency collaboration, the Secret Service establishes a Multi-Agency Communications Center (MACC) staffed by senior level command officials at all NSSEs to give participating law enforcement and public safety agencies the ability to monitor, coordinate, and immediately share critical and security information from a central location.

The identification of vulnerabilities associated with a cyber attack during an NSSE is a critical part of the operational security plan. The Secret Service's CSP program, which monitors the interaction between physical and cyber environments, provides a real-time picture of potential cyber threats on physical security as the result of a cyber intrusion. This program includes the systematic audit and technical assessment of various critical infrastructures that support protective sites, events, and venues. These assessments identify and monitor computer networks, control systems and remotely controlled devices, that if compromised could negatively impact an operational security plan. The CSP program has improved the Secret Service's ability to better secure protective venues to include those associated with designated NSSEs.

Excluding quadrennial campaign-related NSSEs, such as the party nominating conventions, Presidential Inaugurations, and annual State of the Union Addresses, the Secret Service has planned, coordinated, and implemented operational security plans for 18 NSSEs over the past 16 years, an average of 1.2 NSSEs per year since 1998. Based on the average cost of an NSSE, the \$4.5 million included in the budget request for NSSEs is intended to support the operational security costs associated with one unanticipated event or the start-up costs required to support multiple events.

Summary

The requested amount provides funding for operational security, which directly supports the 2014 DHS QHSR as follows:

- Mission 1: Prevent Terrorism and Enhance Security;
 - Goal 1.3: Reduce Risk to the Nation's Most Critical Infrastructure, Key Leadership, and Events; and
 - Sub-goal 1.3.2: Protect key leaders, facilities, and National Special Security Events.

Funding this activity supports the accomplishment of the following Secret Service strategic and management performance measures:

- Percent of instances protectees arrive and depart safely (target: 100 percent).
- Percent of NSSEs that were successfully completed (target: 100 percent).

FY 2016 Total Request	514	514	\$72,806
Total Change 2015 to 2016	-	-	\$4,572

The FY 2016 Budget includes 514 positions; 514 FTE; and \$72,806,000 for the Protective Intelligence Activities PPA.

Adjustments to Base:

- Increase of \$162 thousand to annualize the 2015 pay raise.
- Increase of \$1.1 million for the 2016 pay raise, health insurance, and retirement benefits .
- Increase of \$146 thousand for the Working Capital Fund.

Program Change:

- Increase of \$3.2 million for the Protective Mission Enhancements (Protective Mission Panel).

CURRENT SERVICES PROGRAM DESCRIPTION:

Pursuant to Title 18 U.S.C. § 3056, the Secret Service maintains protective intelligence activities to ensure the safety of Secret Service protectees, protected facilities, and protected events.

The Service's protective intelligence program is conducted in collaboration with the intelligence community including Federal, state, and local law enforcement; the Department of Defense; and concerned citizens. The ultimate goal of the protective intelligence program is the identification, prevention, and mitigation of threats toward Secret Service protectees, protected facilities, or protected events.

The Office of Strategic Intelligence and Information oversees the protective intelligence activities and are charged with conducting, guiding, and providing oversight for all protective intelligence activities.

Protective Intelligence and Assessment Division

The Protective Intelligence and Assessment Division (PID) designates special agents and intelligence research specialists who analyze, evaluate, disseminate, and manage information about individuals, groups, and activities that pose potential risks to Secret Service interests. PID personnel provide threat assessments, briefings, and other information pertinent to protective intelligence activities. Responsibilities also include training, and behavioral research to internal and external components on the prevention of targeted violence and identification of pre attack-related behaviors.

To support protective intelligence operations of the Secret Service, PID conducts the following activities:

- Maintains a 24-hour operations center that was opened in FY 2013 to process, evaluate, and refer for investigation/resolution (to Secret Service field offices) threat information relating to Secret Service protectees, protected facilities, or protected events received from all sources. All relevant classified and unclassified information is then disseminated to appropriate Secret Service internal operational components through human and electronic communication.
- Operates a cyber awareness program to identify potential behaviors of interest occurring online. In particular, PID personnel identify and assess potentially serious or concerning social media or online behaviors associated with the locations and schedules of the President, Vice President, former Presidents, and major events.
- Conducts threat assessments regarding the potential exposure to danger for protected individuals, venues, and infrastructures protected by the Secret Service. These assessments offer a description of the current threat environment. Threat assessments review elements intrinsic and extrinsic to the protected individual, recent intelligence, and situational developments. The PID has established assessment methodology on both the pre-attack behaviors and target side of the protective equation.
- Reviews hundreds of thousands of cables received daily from the intelligence community for information that may potentially affect Secret Service protectees, protected facilities, or protected events, while maintaining an elaborate detailee program of Secret Service special agents with law enforcement and the intelligence community, to gain direct background information and when necessary, operational assistance in resolving threats. During protective advances, a PID special agent is assigned to the advance team and works directly with the local law enforcement community to identify and share intelligence information. Additionally, PID supports all protectee trips with a headquarters element.
- Provides consultation, training, and behavioral research to internal and external components on the prevention of targeted violence and identification of attack-related behaviors through the National Threat Assessment Center. Assists special agents in evaluating the risk an individual may pose to Secret Service protectees, protected facilities, or protected events.

- Provides training on the evaluation of terrorist groups, techniques, and practices to internal and external public and private entities through the Critical Protective Analysis Group.

From 2009-2014, the Secret Service provided protective intelligence functions for 37,621 domestic and international travel stops, an average of over 7,524 per year. During this same period, PID prepared 5,968 threat assessments and opened 33,402 protective intelligence investigations an average of 6,680 per year.

Summary

The requested amount provides funding for operational security, which directly supports the 2014 DHS QHSR as follows:

- Mission 1: Prevent Terrorism and Enhance Security;
 - Goal 1.3: Reduce Risk to the Nation’s Most Critical Infrastructure, Key Leadership, and Events; and
 - Sub-goal 1.3.2: Protect key leaders, facilities, and National Special Security Events.

Funding this activity supports the accomplishment of the following Secret Service strategic and management performance measures:

- Percent of total Secret Service protection activities that are incident-free for protection of national leaders, foreign dignitaries, designated protectees, and others during travel or at protected facilities (target: 100 percent).
- Number of information sharing events with the law enforcement and intelligence community (target: 1,000).
- Percent of instances protectees arrive and depart safely (campaign protectees) (target: 100 percent).
- Percent of instances protectees arrive and depart safely (domestic protectees) (target: 100 percent).
- Percent of instances protectees arrive and depart safely (foreign protectees) (target: 100 percent).

PPA: Presidential candidate nominee protection

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	-	-	-
FY 2015 President's Budget	30	30	\$25,500
2016 Adjustments-to-Base	290	290	\$54,700
FY 2016 Current Services	320	320	\$80,200
FY 2016 Program Change	-	-	\$123,487
FY 2016 Total Request	320	320	\$203,687
Total Change 2015 to 2016	290	290	\$178,187

The FY 2016 Budget includes \$203,687,000, 320 positions, and 320 FTE for the Presidential Candidate Nominee Protection PPA.

Adjustments to Base:

- Increase of \$54.7 million (290 FTE) to shift existing base labor resources from the Domestic Field Operations PPA to support staffing requirements for the 2016 Presidential Campaign.

Program Change:

- Increase of \$123.5 million for the 2016 Presidential Campaign.

CURRENT SERVICES PROGRAM DESCRIPTION:

As authorized in Title 18 U.S.C. § 3056, the Secret Service protects major Presidential and Vice Presidential candidates, and spouses of eligible candidates within 120 days of general presidential elections.

Additionally, the DHS Secretary, in consultation with a bipartisan congressional advisory committee, authorizes the activation of a Secret Service protective detail for a Presidential candidate prior to the nominating conventions. The congressional advisory committee, which is comprised of the Speaker of the House of Representatives, the Minority Leader of the House of Representatives, the Majority and Minority Leaders of the Senate, and one additional member selected by the other members of the committee, establishes objective criteria for major candidate status. A Secret Service protective detail is formally activated when protection for a particular candidate is authorized by the DHS Secretary, which typically occurs once a candidate requests protection, and meets the criteria for major candidate status, as set forth by the advisory committee. The DHS Secretary also may authorize protection for one or more candidates at any time, in consultation with the congressional advisory committee, based upon the threat environment.

Throughout the Presidential Campaign season, the Secret Service experiences a marked increase in protective stops related to Presidential candidate activities. In support of the active campaign cycle, Secret Service field office personnel are a critical and integral source of the required staffing necessary to conduct protective advances, undertake protective liaison activities with Federal, state, and local partners, as well as provide personnel to staff the candidate protective details. The Presidential campaign is an extremely manpower-intensive endeavor for the Secret Service. Accompanying each candidate are:

- detail/shift agents who provide 24/7 protection;
- advance teams and post standers, who provide site security;
- Explosive Ordnance Disposal and other technical support personnel (e.g., counter-surveillance and counter sniper personnel);
- magnetometer screening capabilities;
- protective intelligence personnel; and
- residence security personnel.

During the 2012 Presidential Campaign, the Secret Service provided candidate protection for four major Presidential candidates: Governor Mitt Romney, Speaker Newt Gingrich, Senator Rick Santorum, and Mr. Herman Cain. The Secret Service also provided protection for Mrs. Romney, Republican Vice Presidential candidate Paul Ryan and Mrs. Ryan, as well as the Ryan children. Also, the Secret Service provided candidate protection during both domestic and international travel, including the visit of Governor Romney to the United Kingdom, Israel, and Poland during July 2012. In addition, there was 100 percent magnetometer screening at all venues during the 2012 Presidential Campaign.

Candidates often visit multiple cities per day and multiple states per week, and the necessary protective assets must always arrive and deploy before each visit. As a result, the Secret Service incurs significant costs for the transportation of persons and things to match the fast-paced operational tempo. The requested funding will allow the Secret Service to ensure that the right people and assets are at the right place, at the right time.

Candidates and nominees are different than permanent Secret Service protectees. Their travel is often spontaneous, reactive to the current political climate, and sustained for a longer period. The requested funding will allow the Secret Service to allocate the appropriate level of resources for each candidate in order to ensure his or her safety.

Securing the two nominating conventions is one of the most expensive and challenging aspects of campaign protection. These very high-profile NSSes will typically have 50,000 or more attendees and last for three to four days. Because the locations and dates are widely publicized in advance of the events, these conventions are targets for a variety of threats. The requested funding will allow the Secret Service to implement appropriate security plans at these facilities to prevent and mitigate threats.

Summary

Funding associated with this PPA directly supports the 2014 DHS QHSR as follows:

- Mission 1: Prevent Terrorism and Enhance Security;
 - Goal 1.3: Reduce Risk to the Nation’s Most Critical Infrastructure, Key Leadership, and Events; and
 - Sub-goal 1.3.2: Protect key leaders, facilities, and National Special Security Events.

The funding specifically permits the Secret Service to provide or acquire the security measures needed to protect designated campaign sites, candidates, and their families.

Funding this activity supports the accomplishment of the following Secret Service strategic and management performance measures:

- Percent of total Secret Service protection activities that are incident-free for protection of national leaders, foreign dignitaries, designated protectees, and others during travel or at protected facilities (target: 100 percent).
- Percent of instances protectees arrive and depart safely (campaign protectees) (target: 100 percent).

Total Change 2015 to 2016	(290)	(290)	(\$44,180)

The FY 2016 Budget includes \$288,215,000, 1,468 positions, and 1,468 FTE for the Domestic Field Operations PPA.

Adjustments to Base:

- Increase of \$694 thousand to annualize the 2015 pay raise.
- Increase of \$4.6 million for 2016 pay raise, health insurance, and retirement benefits.
- Increase of \$8.2 million for Mission Support Sustainment.
- Increase of \$573 thousand for the Working Capital Fund.
- Decrease of \$54.7 million (290 FTE) to shift existing base resources to the Presidential Candidate Nominee Protection PPA to support staffing requirements for the 2016 Presidential Campaign.
- Decrease of \$2.5 million for Vehicle Replacement.
- Decrease of \$1 million to Administrative Travel.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Secret Service was established in 1865 to investigate and prevent counterfeiting. Today the agency's investigative mission has evolved from enforcing counterfeiting laws to safeguarding the payment and financial systems of the United States from a wide range of financial and computer-based crimes.

To combat these crimes, the Secret Service has adopted a proactive approach, using advanced technologies and capitalizing on the power of task force partnerships. Today, computer experts, forensic specialists, investigative experts, and intelligence analysts provide rapid response and critical information in support of financial analysis, infrastructure protection and criminal investigations. Specifically, the Secret Service is charged with investigating access device fraud (18 U.S.C. 1029), identify theft (18 U.S.C. § 1028), computer fraud (18 U.S.C. § 1030), and bank fraud /mortgage fraud

(18 U.S.C. § 1344) and violations of any of U.S. laws of the United States relating to coins, obligations, and securities of the United States and of foreign governments.

The Service currently operates 42 domestic field offices, 60 resident offices, 13 resident agencies, and 26 domiciles, strategically positioned to support the protective and execute the investigative missions. FY 2016 funding for the Secret Service Domestic field offices reflects the resources needed to support both protective operations and the investigative mission. The field offices are an integral part of protecting the President, Vice President, other protectees, critical infrastructure, and events of national significance. At the same time, field offices conduct investigations to identify, locate, and apprehend criminal organizations and individuals targeting the Nation's critical financial infrastructure and payment systems involved in counterfeiting of U.S. currency; access device fraud (including credit and debit fraud); cyber intrusion; identity crimes; bank fraud; and illicit financing operations.

The Secret Service is committed to using its resources to provide the most effective protection possible and, in doing so, seeks to integrate technology and highly trained personnel within its protective mission. By design, special agents are assigned to field offices to conduct criminal investigations and provide manpower, on a temporary basis, to fulfill the Service's mission of protecting our Nation's leaders. Special agents assigned to field offices provide a "surge capacity" of protective manpower, without which the Secret Service could not accomplish its protective mandate in a cost-effective manner.

Investigative Mission

The Secret Service is recognized worldwide for its investigative expertise and for its aggressive and innovative approach to the detection, investigation, and prevention of financial crimes. As payment methods have changed over the years – from coin and paper currency, to checks, credit cards, and now, online transactions – the scope of the Secret Service's investigations have expanded. Today, criminal trends show an increased use of cyber attacks targeting diverse organizations to include government agencies, corporations, universities, and medical institutions resulting in significant data breaches and the theft of credit and debit card account numbers and Personal Identifying Information and to destroy, disrupt or threaten the delivery of services.

To protect the Nation's financial infrastructure from cyber and financial criminals, Secret Service field offices have adopted a multi-pronged approach that includes:

- collaborating through an established network of 46 Financial Crimes Task Forces and 38 Electronic Crimes Task Forces (ECTF);
- providing computer-based training to enhance the investigative skills of special agents through the Electronic Crimes Special Agent Program (ECSAP);
- providing computer-based training to state and local law enforcement partners with the necessary computer-based training, tools, and equipment to enhance their investigative skills through the National Computer Forensics Institute (NCFI);
- formalizing the ECSAP program with the Computer Emergency Response Team in coordination with Carnegie Mellon University; and
- maximizing partnerships with international law enforcement counterparts through overseas field offices.

A key component of the Secret Service investigative mission is to raise awareness of issues related to counterfeit, financial fraud, and electronic crimes, both in the law enforcement community and among the public. The Service works to educate consumers, providing training to law enforcement personnel through a variety of programs and initiatives. Local field offices routinely provide community outreach seminars and public awareness training on the subjects of counterfeit currency, financial fraud, identity crimes, and cyber crime when speaking to school groups, civic organizations, and private industry. In addition, the Secret Service provides training to state and local law enforcement. This training includes formal and informal classes, which occur at field office sponsored seminars, police academies, and at the Secret Service-led NCFI in Hoover, Alabama, as well as other various settings.

The Secret Service, in concert with its established partners – public and private, domestic and international, law enforcement and civilian – continues to play a critical role in preventing, detecting, investigating, and mitigating the effects of increasingly complex financial and electronic crimes, perpetrated by domestic and international criminals. The Secret Service investigates these crimes, develops cases for prosecution, and brings offenders to justice to safeguard our nation’s financial infrastructure and payment systems.

Number of Arrests Made by Domestic Field Offices

Category	FY 2010	FY 2011	FY 2012	FY 2013	FY 2014	TOTAL
Counterfeit	2,693	2,531	2,421	2,421	1,957	12,023

Cyber Crime Investigations

Today, the Nation’s modern financial system depends heavily on information technology for convenience and efficiency. Accordingly, criminals have adapted their methods and are increasingly using cyberspace to exploit our Nation’s financial payment system by engaging in fraud and other illicit activities. This is not a new trend; criminals have been committing cyber financial crimes since at least 1970.⁴ Criminal trends show an increased use of phishing emails, account takeovers, malicious software, hacking attacks and network intrusions resulting in significant data breaches.

Additionally, the Executive Branch has identified cyber security as one of the most serious economic and national security challenges facing the Nation. The Secret Service is committed to identifying and dismantling cyber criminals as mentioned in the White House Transnational Organized Crime Strategy in 2011. The Secret Service widely shares relevant cybersecurity information it discovers through its criminal investigations with the National Cybersecurity & Communications Integration Center (NCCIC), Information Sharing and Analysis Organizations, and other relevant cybersecurity entities in order to strengthen the security of cyberspace.

Secret Service investigations have resulted in the arrest and successful prosecution of cyber criminals involved in the largest known data breaches, including those of TJ Maxx, Dave & Buster’s, Heartland Payment Systems, and others. Over the past five years, Secret Service cyber-crime investigations have resulted in over 4,500 arrests and prevented over \$10.4 billion in potential fraud losses. Through work with Secret Service partners at the Department of Justice, in particular the local U.S. Attorney Offices, the Computer Crimes and Intellectual Property section, the International Organized Crime Intelligence and Operations Center, and others, the Secret Service will continue to bring the cyber criminals that perpetrate major data breaches to justice. .

The Secret Service is committed to safeguarding the Nation’s financial payments systems. Responding to the increase in cyber crime and growing levels of sophistication criminals employ, requires significant resources and greater collaboration among law enforcement and its public and private sector partners. Accordingly, the Secret Service continues to dedicate significant resources

⁴ Beginning in 1970, and over the course of three years, the chief teller at the Park Avenue branch of New York’s Union Dime Savings Bank manipulated the account information on the bank’s computer system to embezzle over \$1.5 million from hundreds of customer accounts. This early example of cyber crime not only illustrates the long history of cyber crime, but the difficulty companies have in identifying and stopping cyber criminals in a timely manner – a trend that continues today.

to improving investigative techniques, remaining innovative in its approach, and providing training for its law enforcement partners.

Electronic Crimes Special Agent Program

A central component of the Secret Service's cyber crime investigative efforts is the ECSAP. This program is comprised of Computer Forensic Examiners and Network Intrusion Investigators located in field office districts across the country. ECSAP agents are computer investigative specialists and among the most highly-trained experts in law enforcement, qualified to conduct examinations on all types of electronic evidence. They not only serve in an investigative capacity, they also help protect components of U.S. critical infrastructure by providing substantive insight regarding vulnerabilities that may be exploited by criminal elements.

ECSAP training is divided into three levels. The basic level provides special agents with hands-on experience with computer hardware, operating systems, cell phones, tablets, Global Positioning Systems, networking fundamentals, email investigations, legal issues, and search and seizure. Since 2008, this level of training has been part of the Secret Service's core curriculum for all newly hired special agents. The next level provides special agents with the necessary skills and equipment that will allow them to respond to and investigate network intrusions. At this level, special agents receive hands-on experience with computer hardware, device imaging solutions, forensic analysis tools, legal issues and report generation for law enforcement officers performing as cyber incident responders and digital evidence examiners. At the third level of training, special agents are able to investigate and forensically obtain legally-admissible digital evidence utilized in the prosecution of electronic crimes cases, as well as criminally-focused protective intelligence cases.

In FY 2014, ECSAP-trained special agents processed over 1,189 terabytes of digital evidence. Whereas the Secret Service has established itself as a leader in cyber crime investigations, the nationwide demand among local law enforcement and private sector partners for investigative or prevention-based assistance from Secret Service's ECSAP-trained special agents has grown significantly.

Electronic Crimes Task Forces

Secret Service Field Offices currently host 38 ECTFs, including two international task forces in Rome, Italy and London, England. The ECTF model is unique in that it brings together Federal, State, and local law enforcement, and also prosecutors, private industry, and academia. Information about vulnerabilities, emerging technologies, and preventative measures is openly shared within a trusted environment. The common purpose is the prevention, detection, mitigation, and aggressive investigation of cyber attacks on the Nation's financial and critical infrastructures.

Today, membership in our ECTFs includes over 3,000 private sector partners; 2,700 international, Federal, state, and local law enforcement partners; and 200 academic partners. All ECTF partners benefit from the resources, information, expertise and advanced research provided by an international network of members while focusing on issues with significant regional impact.

Cell Phone Forensic Facility

The Secret Service has an established partnership with the Tulsa Digital Forensic Laboratory Center of Information Security, located at the University of Tulsa, to utilize their cell phone forensic facility. The facility enables training, forensic examinations, and research on mobile devices. The ongoing research into these new devices, operating systems, and mobile device technologies provides valuable tools in the Secret Service's fights against cyber crime. Furthermore, the facility expands the capabilities of law enforcement to pursue a broader range of digital forensics. Since 2008, approximately 6,500 mobile device forensic examinations have been conducted. In FY 2014, over 1,090 mobile device forensic examinations were conducted.

Counterfeit Investigations

In FY 2014, approximately \$87 million in counterfeit U.S. currency was passed and \$58 million was seized prior to entering circulation. In addition, the Secret Service arrested more than 2,190 criminals as a result of counterfeit investigations and suppressed over 185 counterfeit manufacturing plants domestically.

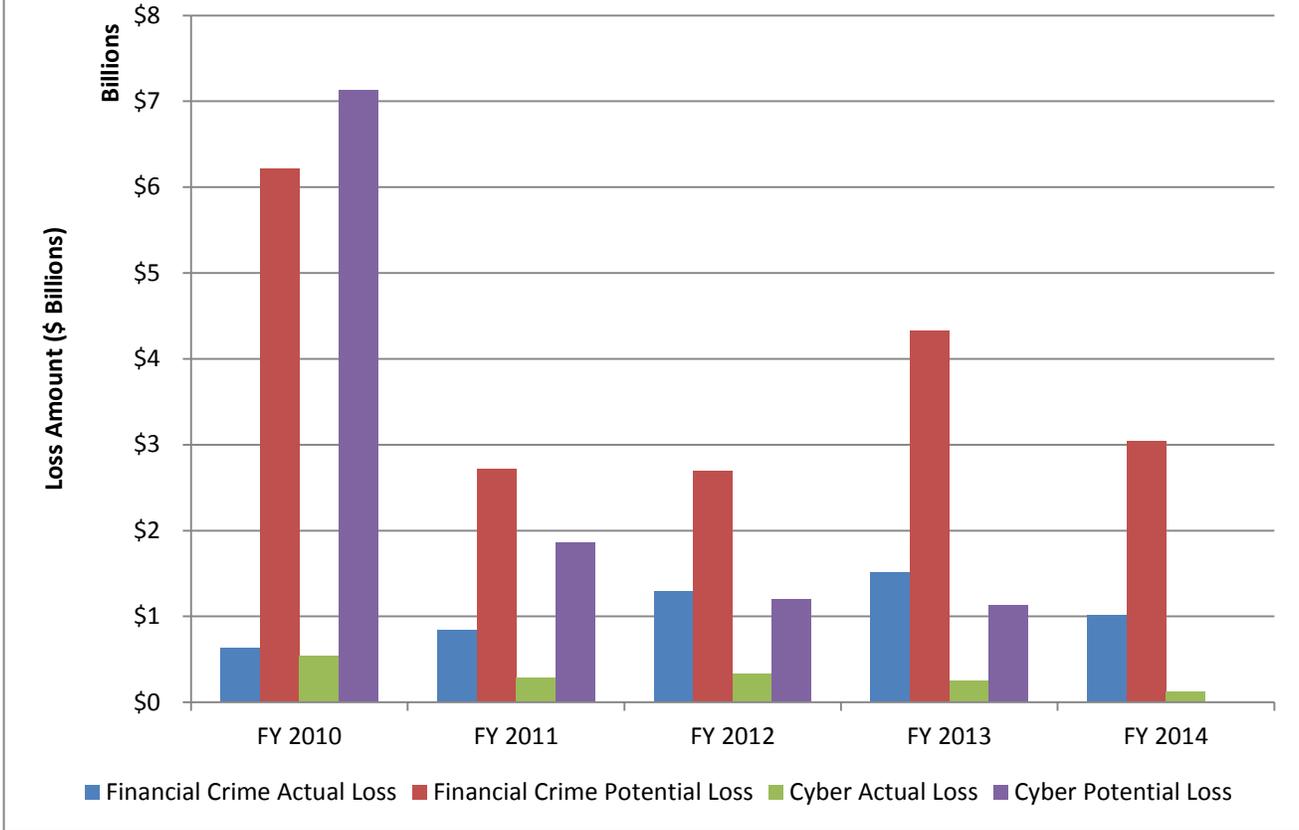

The Secret Service continues to adapt to the trends in counterfeiting, currently influenced by computer-based technologies. The widespread availability of high quality scanning and printing devices for home use has provided more individuals the opportunity to manufacture a passable counterfeit note with relative ease. In FY 2014, digitally processed counterfeit notes accounted for 60.5 percent of the total domestic passing activity of counterfeit currency.

Financial Crimes Task Forces

The Secret Service has established unique and vital partnerships with state, local, and other Federal law enforcement agencies through years of collaboration on Secret Service investigative and protective endeavors. These partnerships enabled Secret Service Field Offices to host a national network of Financial Crimes Task Forces (FCTFs) that combine the resources of the private sector and other law enforcement agencies in an organized effort to combat threats to financial payment systems and critical infrastructures. In FY 2014, the Secret Service established three additional FCTFs: Richmond, Virginia; Salt Lake City, Utah; and Tucson, Arizona, bringing the total number to 46 FCTFs located across the country. FCTFs often operate in conjunction with Secret Service Electronic Crimes Task Forces and are frequently co-located and managed to leverage the overall expertise and experience of the membership of both task forces.

Criminal groups involved in financial crimes routinely operate outside traditional jurisdictional boundaries. By working closely with other Federal, state, and local law enforcement representatives, as well as foreign law enforcement facilitated through the Secret Service's foreign field offices, the Secret Service is able to provide a comprehensive network of information sharing, resource sharing, and technical expertise that bridges jurisdictional boundaries.

Summary of Financial Crime Loss Amounts

For more than 16 years, the Secret Service has been investigating mortgage fraud. The violations involved in conducting mortgage fraud schemes include bank fraud, wire fraud and identity theft. Secret Service field offices participate in 33 mortgage fraud task forces around the country.

The following chart provides data regarding Secret Service investigations and the subsequent potential and actual loss to the American public:

Mortgage Fraud Cases and Arrests

FY	Cases Closed	Actual Loss	Potential Loss	Federal Arrests	State Arrests	Foreign Arrests	Total Arrests
FY 2014	50	\$80,571,749	\$209,846,037	70	9	3	82

Federal income tax refund fraud schemes involving identity theft have been on the increase across the country, particularly in the southeast United States. Secret Service field offices investigating these identity theft schemes have revealed they involve organized operations using another person's identifying information stolen from various locations, to include recent death notices found on internet sites, to submit large numbers of fraudulent Federal tax refund applications. In many instances, these crimes not only defraud the Federal Government, they also victimize innocent taxpayers by impeding their ability to get a legitimate refund from the government. Fraudulent filings may also cause the Federal Government to initiate an adverse enforcement action against the innocent taxpayer.

These organized schemes generally involve criminals purchasing a debit card to facilitate the Internal Revenue Service issuance of the refund to that card. However, the traditional acceptance of an actual Treasury check still occurs. The Secret Service knows tax refund fraud has been around for decades, but due to the use of online tax preparation, the subsequent anonymity of the process, and the option of having a refund issued on a debit card, it is exponentially easier for criminals to accomplish this type of fraud. During the course of one case in central Florida, a joint investigation involving Federal, State, and local law enforcement partners revealed a tax refund scheme involving over \$928 million in fraud loss to the U.S. Department of Treasury.

Congressionally-Mandated Requirements

As requested in the House Report 113-481, below is a chart showing the funding and personnel associated with these the ECSAP/ECTF (cyber investigation) activities.

ECSAP/ECTF Funding and FTE FY 2014-2016

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request
Cyber Investigation	\$75,587,000	\$75,517,000	\$79,104,000
FTE	268	276	277

Support of the Protective Mission

In today’s threat environment, Secret Service employees are challenged more than ever before. The Secret Service is committed to using its resources to provide the most effective protection possible and, in doing so, seeks to integrate technology and highly trained personnel within its protective mission.

By design, special agents are assigned to field offices to conduct criminal investigations and provide manpower, on a temporary basis, to fulfill the Secret Service’s mission of protecting the President, Vice-President, visiting heads of state and government and former Presidents. Special agents assigned to field offices provide a “surge capacity” of protective staffing, without which the Secret Service could not accomplish its protective mandate in a cost-effective manner. Secret Service Field Offices have long standing and established relationships with the local, State and Federal law enforcement agencies in their district and play a critical role in protective advances. Field offices facilitate the advance work done prior to the visit of any Secret Service protectee and provide the staffing to secure each protected site. In FY 2014, Secret Service field offices facilitated over 6,000 domestic protective visits, over 52 visits to U.S. territories and over 390 foreign visits by Secret Service protectees.

Summary

The FY 2016 Budget is strategically aligned with the goals and objectives set forth in the 2014 DHS QHSR, with funding specifically targeted to preventing terrorism and enhancing security; protecting critical infrastructure; protecting government leaders, facilities, and special events; safeguarding and securing cyber space; and preventing cyber crime and other malicious uses of cyber space.

FY 2016 funding is provided for Secret Service domestic field operations in a strategic context specifically aligned with the missions, goals, and sub-goals set forth by the 2014 DHS QHSR as follows:

- Mission 1: Prevent Terrorism and Enhance Security;
 - Goal 1.3: Reduce Risk to the Nation’s Most Critical Infrastructure, Key Leadership, and Events; and
 - Sub-goal 1.3.1: Enhance Security for the Nation’s critical infrastructure from terrorism and criminal activity, and
 - Sub-goal 1.3.2: Protect key leaders, facilities, and NSSEs.
- Mission 4: Safeguarding and Secure Cyber Space;
 - Goal 4.3: Advance cyber law enforcement, incident response, and reporting; and
 - Sub-goal 4.3.2: Deter, disrupt, and investigate cyber crime.
- Mission 6: Mature and Strengthen the Homeland Security Enterprise.

Funding this activity supports the accomplishment of the following Secret Service strategic and management performance measures:

- Percent of total Secret Service protection activities that are incident-free for protection of national leaders, foreign dignitaries, designated protectees, and others during travel or at protected facilities (target: 100 percent).
- Percent of instances protectees arrive and depart safely (campaign protectees) (target: 100 percent).
- Percent of instances protectees arrive and depart safely (domestic protectees) (target: 100 percent).
- Percent of instances protectees arrive and depart safely (foreign protectees) (target: 100 percent).
- Percent of National Special Security Events that were successfully completed (target: 100 percent).
- Percent of protective travel instances that fall within estimated resource requirements (target: 85 percent).
- Number of information sharing events with the law enforcement and intelligence community (target: 1,000).
- Financial crimes loss prevented through a criminal investigation (target: 1.9 billion).
- Amount of dollar loss prevented by Secret Service cyber investigations (target: \$900 million).
- Number of financial accounts recovered (target: 2.1 million).
- Percent of currency identified as counterfeit (target < 0.0088 percent).
- Number of law enforcement individuals trained in cyber crime and cyber forensics both domestically and overseas (target: 1,000).
- Terabytes of data forensically analyzed for criminal investigations (target: 2,900).
- Percent of National Center for Missing and Exploited Children (NCMEC) examinations requested that are conducted (target: 100 percent).
- Number of hours of cyber crime training provided to law enforcement both domestically and overseas (target: 45,000).

Total Change 2015 to 2016	-	-	(\$193)

The FY 2016 Budget includes \$34,168,000, 65 positions, and 65 FTE for the International Field Office Administration and Operations PPA.

Adjustments to Base:

- Increase of \$35 thousand to annualize the 2015 pay raise.
- Increase of \$235 thousand for the 2016 pay raise, health insurance, and retirement benefits.
- Increase of \$87 thousand for the Working Capital Fund.
- Decrease of \$550 thousand from Administrative Travel.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Secret Service operates field offices and resident offices outside the continental United States, and internationally with a physical presence in 18 foreign countries in support of both the protective and investigative missions. The effective relationship that the Secret Service has developed with international partners is attributed to its long-standing commitment to work with the host nation in a cooperative environment both during a protective visit in their country and over the course of an investigative case. This environment fosters relationships built on trust and mutual respect, and results in the sharing of information and best practices.

In support of the Secret Service's protective mission, the agency's international offices conducted over 300 protective security advances to numerous countries visited by Secret Service protectees in FY 2014. Special agents assigned to these offices orchestrate the visits of the President, Vice President, former Presidents and other assigned non-18 USC 3056 protectees on overseas travel. This involves collaboration between respective U.S. embassies, Regional Security Officers, and various foreign national entities. The entire security plan is facilitated through the partnerships that are developed between Secret Service international offices and host government. The success of the

Secret Service’s protective mission is enhanced by the strategic placement of international offices throughout the world.

International Law Enforcement Academies and Personnel Recovery

The Secret Service maintains a relationship with the International Law Enforcement Academies (ILEAs), with locations in Budapest, Hungary; Bangkok, Thailand; San Salvador, El Salvador; Gaborone, Botswana; and a Regional Training Center in Lima, Peru. The Service works with ILEAs to provide a critical opportunity to forge new relationships with international law enforcement partners and to share expertise in areas of protection, and criminal investigations in counterfeit currency, credit card fraud, and cyber crimes.

Prior to placement in international offices, the Secret Service trains agents on the risks associated with the environment they are entering. This specialized training is primarily conducted through the Secret Service’s Personnel Recovery Program. Additionally, Secret Service personnel have attended the Drug Enforcement Administration’s Personnel Recovery Program. As of August 2014, a total of 158 agents and support personnel have been trained in Personnel Recovery since 2010. The course is for special agents and supervisors who are either assigned to international or domestic offices with foreign countries under their jurisdiction. The training prepares them for most isolating incidents, including kidnappings, terrorist attacks, natural disasters, or aircraft or motor vehicle accident, either with or without a protectee.

In FY 2014, Secret Service international offices assisted their law enforcement counterparts in securing the arrest of 962 criminal suspects implicated in counterfeiting, financial crimes, and cyber crime cases, including the seizure of over \$36.1 million in counterfeit U.S. currency, preventing its introduction into worldwide circulation; and providing assistance in financial crime investigations that identified approximately \$61.1 million in actual loss.

Number and Type of International Arrests (FYs 2011-2014)

Fiscal Year	Counterfeit	Cyber	Financial	Other	Total
FY 2011	383	306	366	1	1,063
FY 2012	377	452	273	9	1,056
FY 2013	325	353	385	2	1,111
FY 2014	317	284	359	2	962

* “Other” reflects subjects tried for violations outside of the Secret Service core mandate.

Cyber Crime Investigations

Advances in computer technology and greater access to personally identifiable information via the Internet have created a virtual marketplace for transnational cyber criminals to share stolen information and criminal methodologies. As a result, the Secret Service has observed a marked increase in the quality, quantity, and complexity of cyber crimes targeting private industry and critical infrastructure. These crimes include network intrusions, hacking attacks, malicious software, and account takeovers leading to significant data breaches affecting every sector of the world economy.

Through its international offices, the Secret Service continues to enhance national security through multi-lateral investigations that mitigate and prevent the damages inflicted by cyber criminals on our Nation's financial institutions. Currently, Secret Service personnel assigned in Europe participate in three Cyber Crime Working Groups (the Baltics, The Netherlands, and Germany), two ECTFs (London, England and Rome, Italy), and the European Commission on Cyber Crime, located in The Hague. These groups serve as partners in the international law enforcement community to exchange criminal intelligence regarding organized criminal groups targeting the American Public, private entities, or financial infrastructure.

As part of the Secret Service's international ECTF program, the Secret Service partnered with law enforcement representatives from other countries to identify areas of mutual investigative interests to combat cyber crime targeting the interconnected financial systems. For example, a Russian national was arrested in July 2014 as part of a multi-year Secret Service investigation. Agents worked with the government of Maldives to expel the suspect where upon he was arrested in the U.S. Territory of Guam. The alleged total fraud loss of the suspect's cyber crimes exceeds \$84 million. Secret Service international activities such as these have ensured that criminal organizations engaged in sophisticated and complex cyber crime are investigated and disrupted, and their leaders arrested, indicted, and prosecuted.

Counterfeit Investigations

The Secret Service remains committed to suppressing the counterfeiting of U.S. currency around the world. The threat of counterfeit currency to the financial system of the United States from criminal groups abroad has grown over recent years. Advances in technology, as well as "Official Dollarization," or the adoption of the U.S. dollar by a country as its legal tender, have intensified the threat. There are currently 15 dollarized countries and six countries which operate semi-official dollarized economies. In these countries, the U.S. dollar is legal tender and is preferred to the domestic currency for paying wages, taxes, and everyday expenses. In response to the threat, the Secret Service has focused on strategic international investigations targeting counterfeiters and their distribution networks.

A three-pronged approach must be taken to combat currency counterfeiting:

- continual currency design enhancements;
- strong law enforcement efforts; and
- public education.

The new security features of the redesigned currency have not reached their full effectiveness. Working with the imaging industry, the Federal Government has incorporated features that should make the production of counterfeit currency more difficult. As the new imaging technology saturates the market, a greater level of protection will be achieved with a reduction in the overall level of digital counterfeit production.

Counterfeiting is a global issue. In FY 2014, approximately \$87 million in counterfeit U.S. currency was passed on the public and \$58 million was seized prior to entering circulation (both foreign and domestically); however, less than 1/100th of one percent of the value of all U.S. currency in

circulation is reported as counterfeit. The \$100 note is the most widely-circulated and most often counterfeited denomination outside the United States; the \$20 Federal Reserve Note (FRN) remains the most commonly counterfeited note in the U.S. Since 1996, every denomination of U.S. currency, except the \$1 and \$2 FRN, has been redesigned and enhanced with security features to help combat counterfeiting.

Digitally produced counterfeit FRNs accounted for 57 percent of the \$81.3 million passed domestically in FY 2013, and increased to over 60 percent of the \$85.5 million passed domestically in FY 2014. Easy access to inexpensive, advanced digital printing technology, particularly in the U.S. consumer market, has enabled otherwise unskilled counterfeiters to generate good quality counterfeits resulting in an overall increase in digitally produced notes; however, digital printing technologies present difficulties when attempting to simulate authentic security features, such as color-shifting ink, watermarks and security threads.

The worldwide release of the redesigned \$100 FRN on October 8, 2013 was the last note to be changed and incorporates some unique security features including a 3-D security ribbon, the color shifting bell in the inkwell, and enhanced intaglio printing.

The Federal Reserve estimates that approximately \$1.28 trillion in genuine U.S. currency is in circulation worldwide. Counterfeiting undermines the integrity of a Nation's currency and can have long-lasting economic ramifications. The counterfeiting of the U.S. dollar is a global problem due to the widespread use of U.S. currency.

The extent of unofficially dollarized countries is difficult to measure. Unofficially dollarized refers to countries in which citizens hold a great deal of their monetary assets in U.S. dollars, even though it is not of legal tender. Approximately 17 countries (Angola, Argentina, Azerbaijan, Bolivia, Costa Rica, Honduras, Jamaica, Kazakhstan, Mexico, Nigeria, the Philippines, Peru, Russia, Turkey, Ukraine, Vietnam, and Zimbabwe) may fall into this category. In response to the threat, the Secret Service has focused on strategic international investigations targeting counterfeiters and their distribution networks.

Project South America is the combined oversight of Secret Service-vetted, anti-counterfeit efforts in both Colombia and Peru. The specific goal of Project South America is to continue to provide the necessary training, strategic development, and infrastructure improvement to our foreign law enforcement partners to reduce the production, sale, and distribution of counterfeit U.S. currency within Colombia and Peru and to other countries. Since 1986, the Secret Service has recovered over \$720 million in South American-produced counterfeit.

Since its inception as Project Colombia in May 2001, through the end of FY 2014, law enforcement agencies have made 924 arrests in Colombia, conducted 134 plant suppressions, and seized approximately \$357 million of counterfeit notes in Colombia, resulting in a 95 percent reduction in Colombian counterfeit currency passed in the United States. In FY 2014, Project Colombia partners seized approximately \$12.2 million in counterfeit U.S. currency, arrested 44 suspects, and suppressed four counterfeit printing plants.

With the success of the Secret Service anti-counterfeiting enforcement in Colombia, counterfeiters and international organized crime began moving their operations to Peru. The Peruvian note family has expanded dramatically with a total recorded activity reaching over \$23 million in FY 2012 and more than \$36 million in FY 2013 and more than \$41 million in FY 2014 (worldwide). Since 2003, the Service has tracked more than \$215 million in Peruvian-produced counterfeit. In response, the Secret Service formed the Peruvian Counterfeit Task Force (PCTF), a collaborative effort between the Secret Service and Peruvian law enforcement. Since its inception in Lima, Peru on March 15, 2009, the PCTF has yielded 154 arrests, 23 counterfeit plant suppressions, and the seizure of more than \$58.7 million in counterfeit United States currency. In July 2012, the Secret Service opened the Lima, Peru Resident Office (RO). In FY 2014, the Lima RO, in conjunction with PCTF, successfully seized over \$17 million in counterfeit U.S. currency, assisted with the arrests of 31 Peruvian nationals, and suppressed 8 significant counterfeit plant operations.

Summary

The requested funding supports Secret Service International field operations in a strategic context specifically aligned with the missions, goals, and sub-goals set forth by the 2014 DHS QHSR as follows:

- Mission 1: Prevent Terrorism and Enhance Security;
 - Goal 1.3: Reduce Risk to the Nation’s Most Critical Infrastructure, Key Leadership, and Events;
 - Sub-goal 1.3.1: Enhance security for the Nation’s critical infrastructure from terrorism and criminal activity; and
 - Sub-goal 1.3.2: Protect key leaders, facilities, and national special security events.
- Mission 4: Safeguard and Secure Cyber Space;
 - Goal 4.3: Advance cyber law enforcement, incident response, and reporting; and
 - Sub-goal 4.3.2: Deter, disrupt, and investigate cyber crime.
- Mission 6: Mature and Strengthen the Homeland Security Enterprise.

Funding this activity supports the accomplishment of the following Secret Service strategic and management performance measures:

- Percent of total Secret Service protection activities that are incident-free for protection of national leaders, foreign dignitaries, designated protectees, and others during travel or at protected facilities (target: 100 percent).
- Percent of instances protectees arrive and depart safely (domestic protectees) (target: 100 percent).
- Percent of instances protectees arrive and depart safely (foreign protectees) (target: 100 percent).
- Percent of protective travel instances that fall within estimated resource requirements (target: 85 percent).
- Number of information sharing events with the law enforcement and intelligence community (target: 1,000).
- Financial crimes loss prevented through a criminal investigation (target: 1.9 billion).
- Amount of dollar loss prevented by Secret Service cyber investigations (target: \$900 million).
- Number of financial accounts recovered (target: 2.1 million).

- Percent of currency identified as counterfeit (target <0 .0088 percent).
- Number of law enforcement individuals trained in cyber crime and cyber forensics both domestically and overseas (target: 1,000).
- Terabytes of data forensically analyzed for criminal investigations (target: 2,900).
- Number of hours of cyber crime training provided to law enforcement both domestically and overseas (target: 45,000).

Total Change 2015 to 2016	-	-	-

The FY 2016 Budget requests no funding in FY 2016 for the Forensic Support and Grants to Missing and Exploited Children PPA.

CURRENT SERVICES PROGRAM DESCRIPTION:

Under the provisions of the Violent Crime Control Act of 1994, the Secret Service was directed to provide forensic support through a Task Force to the National Center for Missing and Exploited Children (NCMEC). Subsequently, the PROTECT Act of 2003 amended 18 U.S.C. § 3056 to authorize the Secret Service “to provide forensic and investigative assistance in support of any investigation involving missing or exploited children.”

The Secret Service currently provides investigative assistance and liaison to NCMEC headquarters staff by facilitating services available through the Secret Service Forensic Services Division (FSD). FSD capabilities include: polygraph examinations, handwriting examinations, voiceprint comparisons, audio and video enhancements, age progressions, and fingerprint identification.

Summary

The FY 2016 Budget is strategically aligned with the goals and objectives set forth in the DHS QHSR and aligns with its missions, goals, and sub-goals as follows:

- Mission 6: Mature and Strengthen the Homeland Security Enterprise.

Funding this activity supports the accomplishment of the following Secret Service strategic performance measure:

- Percent of NCMEC examinations requested that are conducted (target: 100 percent).

Department of Homeland Security

The FY 2016 Budget includes \$197,604,000, 391 positions, and 391 FTE for the Headquarters, Management, and Administration PPA.

Adjustments to Base:

- Increase of \$222 thousand to annualize the 2015 pay raise.
- Increase of \$1.5 million for the 2016 pay raise, health insurance, and retirement benefits.
- Increase of \$1.6 million for Mission Support Sustainment.
- Increase of \$5 thousand for Cyber Remediation.
- Increase of \$862 thousand for the Working Capital Fund.
- Increase of \$2.9 million for Cybersecurity Personnel Pay Reform.
- Decrease of \$583 thousand for Manual Continuous Monitoring.
- Decrease of \$1 thousand for Cellular Wireless Savings.
- Decrease of \$1.5 million for Vehicle Replacement.
- Decrease of \$1.4 million to Administrative Travel.

Program Change:

- Increase of \$4.8 million for the Protective Mission Enhancements (Protective Mission Panel)

CURRENT SERVICES PROGRAM DESCRIPTION:

This program develops and administers Secret Service-wide policies, plans, and procedures in budget, finance, accounting, financial systems, statements, relocation and travel services, acquisition and contracting, human capital, and workforce planning. This program also provides management and program analysis support to all operational and administrative programs, manages the strategic planning process, ensures that Secret Service offices and programs comply with policies and regulations while operational mission areas continue to function efficiently and

effectively; provides information technology governance, investment planning and strategy, legal advice and counsel, and manages government and public affairs. These functions assist the Secret Service's leadership in formulating the strategic vision and direction.

The **Office of the Director** leads roughly 6,400 employees in the mission of the Secret Service, safeguarding the Nation's financial infrastructure and payment systems to preserve the integrity of the economy, and to protect national leaders, visiting heads of state and government, designated sites, and NSSEs.

Attorneys within the **Office of the Chief Counsel** answer questions regarding Secret Service criminal investigations, handle Federal Tort Claims Act and other administrative claims, and provide advice on ethics, Freedom of Information Act and Privacy Act matters, adverse actions, security clearance determinations, asset forfeiture, garnishments, appropriations, procurement, legislation, and policy matters.

The **Office of Government and Public Affairs** composed of the Liaison Division, the Congressional Affairs Program, the Public Affairs Program, and the Homeland Security Program provides legislative advice; executes liaison with external partners, and serves as the official spokesperson for the Secret Service.

The **Office of Professional Responsibility** ensures that Secret Service offices and programs comply with Secret Service policies and Federal regulations, and helps operational mission areas continue to function efficiently and effectively.

Through sound management practices, the **Office of Human Resources and Training** recruits, develops, and retains a diverse and well-qualified workforce necessary for meeting the challenges of the 21st century.

The **Office of Technical Development and Mission Support**, through its **Chief Information Officer staff**, plays a critical leadership role in driving reforms to control IT system development risks and ensure positive mission outcomes, best manage technology strategy, investment planning and spending, and succeed in achieving measurable outcomes in agency performance.

The **Office of Administration** creates an environment in which the Secret Service leadership has financial information to make and implement sound programmatic decisions in support of the agency's protective and investigative responsibilities. Additionally, the Office of Administration's **Chief Financial Officer** staff and associated divisions provides budgeting, financial statement preparation and automated financial information to all internal and external stakeholders.

The Office of Administration's **Acquisition Management** and **Procurement Division** staff oversee non-major and major acquisition and investment governance, establishment of acquisition and procurement policies, and an acquisition professional training and certification processes.

The Office of Administration's **Administrative Operations Division** plans, develops, and administers policies and procedures related to facility and property management, and performs

associated activities for a variety of real and personal property management areas to support Secret Service headquarters, domestic, and international field offices.

The Office of Administration’s **Management and Organization Division** supports the accomplishment of Secret Service core missions through analysis, consultation, and decision support. Using performance data and statistical systems, this activity analyzes and reports on data from twelve databases to inform organizational change and inform decision making.

PROCUREMENT ACTIVITIES:

Information Technology Infrastructure Program

IT infrastructure is the information and communication backbone of the Secret Service. IT provides the foundation for all mission-critical IT-related systems, supports secure sharing of information within the Secret Service, and provides direct access to law enforcement, Department of Defense, and other government agencies. This investment covers the operations and maintenance support of the IT infrastructure, ensuring that it is constantly available to support Secret Service protective and investigative missions and operations. The Secret Service IT infrastructure provides critical operations and maintenance support to maintain the status quo while Secret Service modernizes the IT infrastructure under IITT.

Activity Funding

Enterprise Financial Management System

The Enterprise Financial Management System (TOPS) is in steady state operation and supports the DHS goal of improving financial management and enables the mission of preventing terrorism and

⁵ This table does not include FTE costs.

enhancing security. TOPS meets the requirements of OMB Circular A-123, Management’s Responsibility for Internal Control; Appendix A Internal Control over Financial Reporting and OMB Circular A-127 Financial Management Systems. TOPS is a comprehensive, integrated financial system that meets critical operational and reporting requirements of the Secret Service and DHS. TOPS has been designated a center of excellence within DHS and supports closure of a DHS gap for improving financial performance. Stakeholders benefit from the integrated financial systems ability to automate and streamline business processes enabling managers to plan and execute core mission activities. Based upon the DHS designation and an operational analysis, the system is meeting or exceeding expectations.

The FY 2016 Budget includes \$56,170,000, 271 positions, and 271 FTE for the Rowley Training Center PPA.

Adjustments to Base:

- Increase of \$135 thousand to annualize the 2015 pay raise.
- Increase of \$902 thousand for the 2016 pay raise, health insurance, and retirement benefits.
- Increase of \$236 thousand for the Working Capital Fund.
- Decrease of \$971 thousand to Administrative Travel.

CURRENT SERVICES PROGRAM DESCRIPTION:

The James J. Rowley Training Center (JJRTC) serves as the primary training academy for the Secret Service. JJRTC is a federally-accredited academic institution, meeting the standards established by the Federal Law Enforcement Training Accreditation (FLETA) Board. The Instructional Development Program, Special Agent Basic Training Course, UD Officer Basic Training Course, and Firearms Instructor Training Course are also fully accredited by FLETA. The academy meets reaccreditation standards.

The curriculum provided by JJRTC instructors is for newly hired special agents, UD officers, special officers, and physical security specialists. Training includes investigative and protective methodologies, firearms marksmanship, control tactics, emergency vehicle operation, emergency medicine, physical fitness techniques, financial and cyber crime detection, investigation, physical/site/event protection, and water survival training.

As Secret Service personnel progress through their career, JJRTC provides specialized and advanced training for continuing education to meet the emerging needs of the agency as it relates to the protective and investigative missions (e.g., financial crimes, cyber crimes, protective intelligence,

etc.). This in-service curriculum consists of comprehensive training in specialized operational and protective tactics, financial crime, cyber-based investigations, and employee and managerial development.

From FY 2009-2014, JJRTC personnel conducted 2,436 specialized skills courses, totaling 79,794 training instances. Also during this period, JJRTC conducted 26 Special Agent Training classes totaling 596 special agents' trainees and 36 UD classes totaling 662 officer trainees. Additionally, RTC conducted seven Mixed Basic Training Courses totaling 46 special officer trainees.

Below is a breakout of the number of special agent and UD classes and trainees per year (from 2009 to 2014):

Number of Basic Class Totals from 2009-2014

Fiscal Year	Special Agent Basic Classes	Special Agent Trainees	Uniformed Division Basic Classes	Uniformed Division Trainees
2009	8	185	11	168
2010	8	176	11	181
2011	5	117	6	130
2012	0	0	1	23
2013	1	24	1	23
2014	4	94	6	137
TOTALS	26	596	36	662

In FY 2014, the JJRTC conducted 392 specialized/in-service training courses totaling 14,354 training instances and trained over 1,441 inter and intra-agency and international law enforcement counterparts as a means of enhancing and improving Secret Service partnerships.

Additionally in FY 2014, the JJRTC achieved 11,921 employee weapon re-qualifications. To support the diverse training needs in a difficult budget environment, the Secret Service RTC delivered online training courses to employees across the globe totaling 80,641 online course completions for the FY 2014.

Summary

This program is aligned with the Secret Service missions. Alignment with the missions, goals, and sub-goals set forth by the 2014 DHS QHSR is as follows:

- Mission 1: Prevent Terrorism and Enhance Security;
 - Goal 1.3: Reduce Risk to the Nation’s Most Critical Infrastructure, Key Leadership, and Events;
 - Sub-goal 1.3.1: Enhance security for the Nation’s critical infrastructure from terrorism and criminal activity; and
 - Sub-goal 1.3.2: Protect key leaders, facilities, and national special security events.
- Mission 4: Safeguard and Secure Cyber Space;
 - Goal 4.3: Advance cyber law enforcement, incident response, and reporting; and
 - Sub-goal 4.3.2: Deter, disrupt, and investigate cyber crime.

- Mission 6: Mature and Strengthen the Homeland Security Enterprise.

Funding for this activity supports the accomplishment associated with all Secret Service strategic and management performance measures.

Department of Homeland Security
U.S. Secret Service
Information Integration & Technology Transformation
Program Performance Justification
(Dollars in Thousands)

PPA: Information Integration & Technology Transformation

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	10	10	\$1,019

2016 Adjustments-to-Base	-	-	\$21
FY 2016 Current Services	10	10	\$1,057
FY 2016 Program Change	-	-	-
FY 2016 Total Request	10	10	\$1,057
Total Change 2015 to 2016	-	-	\$21

The FY 2016 Budget includes \$1,057,000, 10 positions, and 10 FTE in FY 2016 for the Information Integration and Technology Transformation PPA.

Adjustments to Base:

- Increase of \$19 thousand for the 2016 pay raise, health insurance, and retirement benefits.
- Increase of \$2 thousand to annualize the 2015 pay raise.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Secret Service's IITT program was initiated to modernize its enterprise-wide IT environment focusing on four capability areas:

- enabling (e.g., infrastructure, architecture);
- communications (e.g., WHCA Interoperability, worldwide tactical communications, classified messaging);
- control (e.g., security); and
- mission support (applications supporting mission operations).

Requested funding supports the positions hired for IITT that cover the core staff responsible for the management of the program, with a special emphasis on managing the IT Infrastructure Modernization, Database Architecture, Cyber Security, and Information Assurance projects. IITT program management activities require permanent personnel resources to:

- deliver improved IT and communications capabilities to Secret Service field offices, special agents, and Uniformed Division officers in direct support of the dual mission;
- deliver the design and implementation of the Secret Service's modernized network architecture;
- conduct technical reviews on requirements, design, test, and production readiness for emerging IITT projects;

- prepare acquisition documentation required by the Office of Management and Budget and DHS Management Directives;
- conduct Risk Working Group meetings to analyze, control and manage program risk information and mitigate impacts to cost, schedule and performance;
- achieve planned Acquisition Decision Events critical to program success;
- conduct Executive Steering Group meetings between DHS leadership and the Secret Service's Component Acquisition Executive and Chief Information Officer;
- complete Program or Project Management Reviews with DHS and Secret Service leadership;
- prepare procurement documents for required software, hardware, IT licenses, and IT services.

Due to the sensitivity of the information exchanged on Secret Service IT systems, the management of the IITT program, as well as day-to-day IT infrastructure support of the protection and investigative missions must be performed by Secret Service personnel. Ensuring success requires a core program staff with experience in implementing acquisition policies and procedures directed by DHS in Management Directive 102-01, which establishes consolidated acquisition management policy and standards and practices across all DHS components and offices. These resources are essential to comply with DHS Acquisition Policy, Federal Acquisition Regulations, and congressional mandates, such as the Clinger-Cohen Act, concerning the development and acquisition of IT systems. This funding specifically enables the Secret Service to provide essential information technology.

Summary

This program is aligned with the Secret Service missions. Alignment with the missions, goals, and sub-goals set forth by the 2014 DHS QHSR is as follows:

- Mission 1: Prevent Terrorism and Enhance Security;
 - Goal 1.3: Reduce Risk to the Nation's Most Critical Infrastructure, Key Leadership, and Events;
 - Sub-goal 1.3.1: Enhance security for the Nation's critical infrastructure from terrorism and criminal activity; and
 - Sub-goal 1.3.2: Protect key leaders, facilities, and national special security events.
- Mission 4: Safeguard and Secure Cyber Space;
 - Goal 4.3: Advance cyber law enforcement, incident response, and reporting; and
 - Sub-goal 4.3.2: Deter, disrupt, and investigate cyber crime.
- Mature and Strengthen the Homeland Security Enterprise.

Funding for this activity supports the accomplishment associated with all full range of Secret Service strategic and management performance measures.

IV. Program Justification Changes

**Department of Homeland Security
U.S. Secret Service

Description of Item

Title 18 of the United States Code, Part II, Chapter 203, §3056, authorizes the Secret Service to protect "major Presidential and Vice Presidential candidates and, within 120 days of the general election, the spouses of such candidates." Further authority is derived from various Presidential directives (in addition to §3056), including Presidential Decision Directive 62 (PDD-62), National Security Presidential Directive 15/Homeland Security Presidential Directive 46 (NSPD-15/HSPD-46), and Presidential Policy Directive 22 (PPD-22), which authorize the Secret Service to act as the lead Federal agency for the development and implementation of operational security plans for NSSEs. During the 2016 Presidential campaign, these NSSEs will include the Republican National Convention (RNC) and the Democratic National Convention (DNC) and Presidential Inauguration ceremonies and related official events (these later events occurring in FY 2017).

Qualification for Protection

P.L. 98-587, as amended, places upon the Secretary of DHS the responsibility for determining, after consultation with an advisory committee, which persons qualify as major presidential or vice presidential candidates and, as such, should be furnished with Secret Service protection, unless declined. The committee consists of the majority and minority leaders of the Senate, the Speaker of the House of Representatives, the minority leader of the House of Representatives, and one additional member selected by the other members of the committee.

The following guidelines assist the committee in advising, and the Secretary in determining, who the major presidential or vice presidential candidates are, and thus who should receive protection.

1. The candidate has publicly announced his or her candidacy.
2. The candidate is entered in at least 10 primaries.
3. The candidate is seeking the nomination of a party who received at least 10 percent of the popular vote in the previous election.
4. The candidate qualifies for matching funds of at least \$100,000 under 26 U.S.C. 9031-9042.
5. The candidate registers at least 5 percent in polls conducted by ABC, CBS, NBC and CNN, or receives 10 percent of the votes in two consecutive primaries or caucuses.
6. After April 1 of the election year, the candidate has received 10 percent of the committed delegates.

Protection will not be withdrawn as long as the candidate continues to have the commitment of 10 percent of the delegates. The DHS Secretary has the discretion to provide protection even if the above guidelines are not met. The advisory committee may authorize protection, based upon the threat environment, to all candidates once they officially announce their candidacy.

Providing protection during the quadrennial Presidential campaign involves a continuous deployment of resources and assets throughout the country in response to candidates' travel schedules. During Presidential campaigns, the Secret Service is directed to provide physical protection to qualified candidates. Requests for candidate protection must be approved by the DHS Secretary, after consultation with the congressional advisory committee. During a campaign, the Secret Service is mandated to protect the Presidential and Vice Presidential nominees chosen by their respective party at their convention and, within 120 days of the general Presidential election, the spouses of such candidates. Further, Executive Orders have been issued directing the Secret Service to provide protection to the children of the candidates.

Justification

The FY 2015 President's Budget includes \$21.5 million to cover the start-up costs of the 2016 Presidential Campaign. This funding will be used to provide campaign procedures training to Secret Service and other law enforcement personnel and to purchase the equipment and supplies required to prepare for the start of the campaign.

After recurring \$21.5 million in the base budget for FY 2015, an additional program increase of \$123.5 million is required in FY 2016 to cover the costs associated with providing protection of the qualified candidates, nominating conventions, Presidential and Vice Presidential nominees, and debates during the 2016 Presidential campaign. The Secret Service considers both "fixed" and "variable" costs when estimating campaign costs.

Fixed Costs

The estimated fixed costs are approximately \$46.9 million. Of this amount, \$31.6 million is for the cost of securing the multi-day DNC and RNC, which are traditionally designated as NSSEs. The host city for the RNC will be Cleveland, Ohio, and the venues have yet to be determined. The host city and venues for the DNC remain unknown at this time. The Secret Service utilized past expenditure data to estimate the costs for each of these NSSEs.

Historically, the State primaries and caucuses occur between January and June, with party nominating conventions occurring during the last week of August or the first week of September. This means that the candidate phase ran from approximately January 3rd to approximately September 4th each election year.

The RNC has officially announced that it is moving its nominating convention for 2016 to late June or early July, rather than the normal late August or early September timeframe. They have also restricted the range of dates during which states can hold primaries, from February 1st to mid-May. This shift will significantly increase the number of campaign protection days (and ultimately the cost of the campaign), and impact how the Secret Service plans, prepares, and budgets for the 2016 campaign.

The DNC has not announced the dates of its nominating convention or state primaries/caucuses. However, the DNC has stated that it wants to complete its nominating convention prior to the start of the 2016 Summer Olympics, scheduled to occur August 5-21, 2016, in Rio de Janeiro, Brazil.

The remaining \$15.2 million is for other costs associated with contractual services, rents for temporary offices; parking; construction and space modifications; utilities and communications services; rental vehicles; and commercial transportation of equipment.

Variable Costs

The remaining \$98.1 million will fund the variable costs, which includes travel (hotel, per diem, commercial and charter airfare, etc.), overtime, and contractual services. These costs vary based upon the number of protectees and the number of protection days. The Secret Service's security plan for the 2016 Presidential campaign is more technologically complex than the 2012 campaign. In order to address cyber vulnerabilities and threats to protected persons and venues, the Secret Service is planning to utilize advanced technology and protective measures.

The Secret Service anticipates commencing protection activities for Vice Presidential nominees, along with their spouses and children on or near the date of the convention. As a result of moving of the conventions earlier on the calendar, there will be two VP nominees (one from each party), plus four spouses and an unknown number of children each receiving approximately *60 additional calendar days of protection*, that would not otherwise be required.

Staffing Requirements: Protection Personnel: The Presidential campaign is an extremely manpower-intensive endeavor for the Secret Service. Accompanying each candidate is:

- detail/shift agents who provide 24/7 protection;
- advance teams and post standers, who provide site security;
- Explosive Ordnance Disposal (EOD) and other technical support personnel (e.g., Counter-surveillance and Counter Sniper personnel);
- magnetometer screening capabilities;
- protective intelligence personnel; and
- residence security personnel.

To staff the campaign, agents and support personnel are reassigned temporarily from investigative field offices and headquarters. At the conclusion of the campaign rotation, these personnel return to fulfill their responsibilities at their respective Secret Service offices, which include investigative, protective, or other headquarters duties.

The Secret Service's overall domestic field special agent staffing level has been reduced by approximately 217 positions since the 2012 campaign. Fewer personnel in the field offices equates to fewer personnel available for campaign-related protective events, including advance team work and post stander duties. Because a field special agent works approximately 3,000 total hours on average during a campaign year, the lost hours are significantly greater than the loss of positions. As a result, personnel will have to travel more frequently to support campaign activities, incurring additional transportation and housing costs, and increased overtime.

As in past campaigns, the Secret Service will request assistance from other Federal, State, and local law enforcement agencies in the areas of crowd control, motorcades, EOD/K-9, tactical assets, and protective intelligence, when operationally appropriate.

Critical Systems Protection Program: The Secret Service is cognizant of the challenging cyber threat environment in which it operates, and will secure venues that are increasingly automated and interconnected, with major building systems and critical infrastructures that can be operated (or manipulated) remotely. For the RNC and DNC and other major campaign and debate sites, the Service will protect critical systems that increasingly are vulnerable to cyber intrusions, surveillance, and manipulation. The FY 2016 Budget includes funding to enable the Secret Service to monitor and protect such critical systems.

Social Media Awareness Program: Social media awareness will be a critical factor when developing appropriate security plans because individuals and groups who may oppose a candidates' viewpoint are increasingly using social media to plan, publicize and quickly organize, protest activities, such as road blockages and flash mobs. The Secret Service plans to use open source social media to maintain greater awareness of potential threats to protectees. The FY 2016 Budget includes funding for additional services and equipment to utilize the open source Social Media Awareness program during the 2016 campaign.

Uniformed Division Magnetometer Screening: The Secret Service will initiate magnetometer screening at the outset of the Campaign Approximately \$5.5 million is required to cover the costs associated with securing the Presidential (3) and Vice Presidential (2) debate sites, and includes use of magnetometer screenings at these venues.

Campaign Protection Days: In order to estimate the number of protection days for 2016, the Secret Service considered multiple scenarios. These scenarios varied the number of potential candidates, family sizes, the length of time candidates receive protection, the potential impact of a possible third party candidate, and the possibility of current Secret Service protectees being candidates and/or nominees.

As previously mentioned, the major factor in estimating the number of campaign protection days is the anticipated change in the nominating convention schedule from late August/early September to late

June/early July. Moving of the convention schedule represents an estimated increase of 417 additional protection days. The FY 2016 Budget includes funding for the increased costs associated with this change and covers the costs associated with 1,417 protection days.

Cost Per Protection Day: The estimated cost per protection day is \$65,335 and includes the costs associated with travel, overtime, and other services. Due to political trends of the campaign, candidates and nominees travel is often spontaneous and unpredictable. While the costs associated with protecting a candidate are typically less than the costs associated with protecting the nominees, the actual cost per protection day varies throughout the campaign season. The estimated cost per protection day was formulated using actual costs from the FY 2012 Presidential Campaign as a basis (\$51,604/day). The Secret Service identified the need for additional requirements and financial resources for candidate/nominee protection in FY 2016. This includes adding one additional shift to the FY 2012 level of effort (3 shifts). The cost requirement to add an additional shift is \$9,155/day, and includes the following: 1 Shift Leader, 4 Shift Agents, and 1-Press Agent.

It is further anticipated that additional personnel are required for the open source Social Media Awareness Program (1 additional personnel), CSP Program (1 additional personnel), and UD Magnetometer Screening (1 additional personnel). The cost to add these additional personnel to the enhanced shift schedule is \$4,576/day. Combined, the personnel enhancements of the additional shift and the additional personnel total is \$13,731/day. The estimated cost per day for FY 2016 was calculated by adding FY 2012 Actuals plus the new protection personnel requirements (\$51,604 + \$13,731= \$65,335).

Realignment of Existing Secret Service Base Resources (FTE)

Aside from a small nucleus of personnel assigned to plan for the campaign, there is no separate workforce on stand-by to staff candidate/nominee protective details or other campaign events. As with all protective events, the majority of the staffing will come from Secret Service offices throughout the country. To staff the campaign, agents and support personnel are temporarily reassigned from investigative duties at field offices or administrative duties at Secret Service headquarters, on a rotational basis, to protective and support duties on the protective details and at the campaign events. At the conclusion of the campaign, these personnel return to meet their responsibilities at Secret Service offices. Additionally, on an as needed and reimbursable basis, the Secret Service will utilize other law enforcement and military explosive ordinance disposal personnel from other governmental entities.

In FY 2015, 30 FTE and \$4.0 million were requested to be realigned from the Service's existing investigative activities to support Presidential Campaign activities. In FY 2016, an additional 290 FTE and \$54.7 million are budgeted for realignment for a total of 320 FTE and \$58.7 million realigned in FY 2016 from the Service's investigative activities to staff 2016 Presidential Campaign activities.

The chart that follows outlines the major object class budget estimated for full funding of the 2016 Presidential Campaign.

Major Object Class	POS	FTE	Amount (\$ in Thousands)
Personnel Compensation and Benefits			\$23,675
Travel and Transportation of Persons			\$81,299
Transportation of Things			\$1,721
Rent, Communications, & Utilities			\$15,202
Printing & Reproduction			\$12
Other Contractual Services			\$14,584
Supplies			\$457
Equipment			\$6,942
Land and Structures			\$1,095
Campaign Labor Shift	320	320	\$58,700
TOTAL	320	320	\$203,687

Impact on Performance (Relationship of Increase to Strategic Goals)

The funding provided by this request will enable the Secret Service to deploy the resources necessary to provide appropriate protective measures for major candidates and nominees for the President and Vice President, their families, and all campaign-related events occurring during FY 2016. Without this funding, the Secret Service will not have the necessary staffing needed or the ability to deploy various technologies, to ensure the safety of the candidates/nominees and their families.

Providing the appropriate level of protection during a campaign requires a sustained and responsive logistics operation. Candidates often visit multiple cities per day and multiple states per week, and the necessary protective assets must always arrive and deploy before each visit. As a result, the Secret Service incurs significant costs for the transportation of persons and things to match the fast-paced operational tempo. This funding will allow the Secret Service to ensure that the right people and assets are at the right place, at the right time.

Securing the two nominating conventions is one of the most expensive and challenging aspects of campaign protection. These very high-profile NSSEs will typically have 50,000 or more attendees and last for three to four days. Because the locations and dates are widely publicized in advance of the events, these conventions are targets for a variety of threats. FY 2016 funding will allow the Secret Service to implement appropriate security plans at these facilities to prevent and mitigate threats.

The Secret Service has no control over the number of campaign protectees or the number of days of protection. Without additional funding to address these new requirements, the Secret Service will be required to make changes to reduce the cost per day, which is the only variable that the agency can control. This will require reducing the number of agents assigned to protect each candidate or nominee. The number of post standers and screening equipment (e.g., magnetometers) available for each site visited will also have to be reduced in order to limit travel costs, shipping costs, overtime, etc. Ultimately, without this funding, the Secret Service will not have the necessary staffing needed or the ability to deploy various technologies to ensure the safety of the candidates/nominees or their families. Since the campaign crosses multiple fiscal years, other campaign costs, including the protection of the President-elect and Vice President-elect and the Inauguration will be funded in FY 2017.

Description of Item

As specified in 18 U.S.C. §3056, the Secret Service provides protection for former Presidents, their spouses, and children who are under 16 years of age. On January 10, 2013, the President signed the Former Presidents Protection Act of 2012 (P.L. 112-257), which amended the Federal criminal code to eliminate certain limitations on the length of Secret Service protection of former Presidents, their spouses and children. The law authorizes the Secret service to protect: (1) former Presidents and their spouses for their lifetimes, except that protection of a spouse shall terminate in the event of remarriage; and (2) children of a former President who are under 16 years old.

On January 20, 2017, the Secret Service will be required to provide the former President, former First Lady, and at least one minor child with protection. The Secret Service will establish a new protective division dedicated to the protection of the former President and his family. This division will be established based upon staffing and resource allocation that is commensurate with the expected assessed risks and identified vulnerabilities anticipated once the President leaves office. The division will be staffed with senior, experienced Secret Service personnel from investigative field offices who will be replaced by new special agent and administrative, professional, and technical personnel hired during FY 2015 and FY 2016.

To fully staff the Former President Obama Protective Division (OPD), new agents must be recruited, undergo a lengthy application/background process, complete the required training at the Federal Law Enforcement Training Center and subsequent training at the JJRTC, and report to specific field offices where they will replace senior agents that will ultimately make up the OPD. To meet this timeline, the Secret Service will begin training these new agents in the fourth quarter of FY 2015.

Justification

OPD requires 138 personnel to staff the permanent detail, conduct advances, coordinate security plans with counterparts, provide other protective support, provide residence security, as well as administrative and threat analysis support to the protective division. Funding requested in FY 2015 enables the Secret Service to initiate staffing of OPD in the fourth quarter of FY 2015 with approximately 81 special agents. These individuals will be trained and deployed by the fourth quarter of FY 2016, which is the beginning of the high operational tempo associated with the nominating conventions and the final months of the 2016 Presidential Campaign. The funding requested in FY 2015 only covers the costs of the pay and benefits of these personnel, not the required funding for travel, equipment, etc. The Service deferred these remaining costs until FY 2016.

A program increase of \$25.706 million is budgeted in FY 2016 to cover the full costs associated with hiring the remaining 57 positions required to complete the formation of the OPO and will comprise 27 special agents and 30 administrative, professional, and technical personnel; rent; communication systems and utilities, other contractual services, and equipment.

The FY 2016 funding will ensure that new personnel are hired, trained, and stationed in the investigative field offices; to backfill senior, experienced special agent personnel who will staff the new protective detail. The Secret Service has limited discretion in the timeframe for establishing the division, given the amount of time needed to recruit, hire, train, and station special agent personnel.

Additionally, funding is necessary to facilitate the transfers of personnel to the new post of duty, and conduct protective detail training for personnel assigned to the new OPD. The transfers and training must be accomplished prior to the 2017 Presidential Inauguration to meet the operational requirement of having the division fully established by the time the President leaves office on January 20, 2017.

It should also be noted that the initial cost estimates for OPD are based upon assumptions which may not remain valid once the President actually leaves office. Among these assumptions are:

- The President and First Lady will return to Chicago, Illinois; this will be their only residence.
- The President and First Lady will travel at a rate similar to other active former Presidents/former First Ladies.
- The President's daughters will no longer receive protection once they turn 16 years old.
- Protection for the President will require deploying protective resources similar to the resources deployed for other former Presidents, including George W. Bush, upon leaving office.

Any changes in these assumptions may result in changes to budget estimates/requirements for the Secret Service. . Similarly, if the Secret Service continues to protect one or both children when they are older than 16 after President Obama has left office, the cost would again increase. The chart that follows outlines the major object class budget estimated for full funding of the Former President Obama Protective Detail.

Major Object Class	POS	FTE	Amount (\$ in Thousands)
Personnel Compensation and Benefits	138	110	\$23,429
Travel and Transportation of Persons			\$3,495
Transportation of Things			\$1,793
Rent, Communications, & Utilities			\$1,294
Printing & Reproduction			\$238
Other Contractual Services			\$2,858
Supplies			\$524
Equipment			\$8,590
Land & Structures			\$1,570
TOTAL	138	110	\$43,791

Impact on Performance (Relationship to Strategic Goals)

The FY 2016 Budget will allow the Secret Service to create a post-Presidency detail to secure the safety of former President Obama and his family. The Secret Service anticipates that the current President will be active and maintain a high profile after he leaves office.

FY 2016 funding directly supports the Secret Service Strategic Plan (FY 2014 - FY 2018) Objective 1.1 “Ensure the protection of designated protectees, places, and events.”

Also, the FY 2016 Budget supports the 2014 DHS QHSR, Mission 1: Sub-Goal 1.3.4 “protect government leaders, facilities, and special events” and directly impacts the performance measure *Percent total protection activities that are incident-free for protection of our national leaders, foreign dignitaries, designated protectees and others during travel or at protected facilities.*

This funding will provide initial support for hiring special agents to backfill the establishment of the new protective detail for the Obama Family after the President leaves office. Without this funding, these special agents will have to be reassigned from Secret Service domestic field offices.

The Secret Service is mandated by law (Title 18 U.S.C § 3056) to provide protection to all former Presidents and their spouses for life. This funding supports enhancements to the protective mission recommended by the United States Secret Service Protective Mission Panel.

Perimeter Security and Operations \$16,064

Description of Item

The Secret Service will address physical security and protective operational requirements of the White House by investing in perimeter fence, line-of-sight risk mitigation and facility hardening measures.

Justification

Funding enables the Secret Service to ensure that protective technology systems used on the White House Complex remain cutting edge. These initiatives include issuing Secret Service Uniformed Division personnel non-lethal weaponry to safely subdue resistive subjects. Other initiatives will ameliorate line-of-sight direct fire risk by replacing or modernizing aging doors and windows. This funding also enables the Secret Service to address threats of fence jumpers around the entire perimeter.

Impact on Performance (Relationship of Increase to Strategic Goals)

FY 2016 funding directly supports the Secret Service Strategic Plan (FY 2014 – FY 2018) Objective 1.1 “Ensure the protection of designated protectees, places, and events.

Also, the FY 2016 Budget supports the 2014 DHS QHSR, Mission 1: Sub-Goal 1.3.4 “protect government leaders, facilities, and special events” and directly impacts the performance measures:

- 1. Percent of instances protectees arrive and depart safely.*
- 2. Percent of total protection activities that are incident-free at the White House Complex, Vice Presidents Residence, and other protected facilities.*

Technology

\$41,481

Description of Item

The Secret Service will invest in new and upgraded technology enhancements that support system redundancy and replace outdated or unserviceable communications equipment. These investments enable the Secret Service to ensure uninterrupted communication between the Secret Service Joint Operations Center, White House Security Complex and White House Communications Agency. These upgrades include enhanced sharing of classified information and situational awareness around the White House Complex through better command and control capabilities along with providing analog to digital radio upgrades.

Justification

These initiatives enable the Secret Service to achieve better interoperability through enhanced security of network data, voice, radio and video convergence capabilities. They also facilitate Continuity of Operations for many of the Secret Service’s security systems in the event of a catastrophic failure. These capabilities also ensure better real time data access through wireless mesh and other technologies designed to facilitate immediate collaboration to address suspicious activity around the White House.

Impact on Performance (Relationship of Increase to Strategic Goals)

FY 2016 funding directly supports the Secret Service Strategic Plan (FY 2014 – FY 2018) Objective 1.1 “Ensure the protection of designated protectees, places, and events.

Also, the FY 2016 Budget supports the 2014 DHS QHSR, Mission 1: Sub-Goal 1.3.4 “protect government leaders, facilities, and special events” and directly impacts the performance measures:

- 1. Percent of instances protectees arrive and depart safely.*
- 2. Percent of total protection activities that are incident-free at the White House Complex, Vice Presidents Residence, and other protected facilities.*

Training and Personnel

\$8,200

Description of Item

The Secret Service will enhance its personnel accession capability by augmenting its Human Resources staff with contractors proficient in Federal staffing, classification, application tracking and background processing. This funding also supports recruiting outreach initiatives in select locations to

target highly qualified applicants. The Secret Service will also pursue retention initiatives to Uniformed Division personnel in order lower annual attrition rates.

Justification

By augmenting its Human Resources staff with expert contract personnel, the Secret Service will achieve its hiring goals by reducing background investigation processing time and better application tracking. By pursuing retention initiatives, the Secret Service will reduce its annual attrition and ensure optimal Uniformed Division staffing is achieved at the White House Complex. Along with an aggressive hiring and training plan, reducing attrition ensures the Secret Service achieves its Human Capital strategy goal to fully staff the White House Complex.

Impact on Performance (Relationship of Increase to Strategic Goals)

FY 2016 funding directly supports the Secret Service Strategic Plan (FY 2014 – FY 2018) Objective 1.1 “Ensure the protection of designated protectees, places, and events.

Also, the FY 2016 Budget supports the 2014 DHS QHSR, Mission 1: Sub-Goal 1.3.4 “protect government leaders, facilities, and special events” and directly impacts the performance measures:

- 1. Percent of instances protectees arrive and depart safely.*
- 2. Percent of total protection activities that are incident-free at the White House Complex, Vice Presidents Residence, and other protected facilities.*

Salaries and Expenses

For necessary expenses of the United States Secret Service, including purchase of not to exceed 652 vehicles for police-type use for replacement only; hire of passenger motor vehicles; purchase of motorcycles made in the United States; hire of aircraft; services of expert witnesses at such rates as may be determined by the Director of the United States Secret Service; rental of buildings in the District of Columbia, and fencing, lighting, guard booths, and other facilities on private or other property not in Government ownership or control, as may be necessary to perform protective functions; payment of per diem or subsistence allowances to employees in cases in which a protective assignment on the actual day or days of the visit of a protectee requires an employee *to be scheduled* to work 16 hours per day or to remain overnight at a post of duty; conduct of and participation in firearms matches; presentation of awards; travel of United States Secret Service employees on protective missions without regard to the limitations on such expenditures in this or any other Act if approval is obtained in advance from the Committees on Appropriations of the Senate and the House of Representatives; research and development; rants to conduct behavioral research in support of protective research and operations; and payment in advance for commercial accommodations as may be necessary to perform protective functions; [~~\$1,585,970,000~~] ***\$1,867,453,000***; of which not to exceed \$19,125 shall be for official reception and representation expenses; of which not to exceed \$100,000 shall be to provide technical assistance and equipment to foreign law enforcement organizations in counterfeit investigations;: *Provided*, That \$18,000,000 for protective travel shall remain available until September 30, [2016] ***2017: Provided further, That of the amounts available for security improvement at the White House Complex, \$8,200,000 shall remain available until September 30, 2017: Provided further***, That \$4,500,000 for National Special Security Events shall remain available until expended: *Provided further*, That the United States Secret Service is authorized to obligate funds in anticipation of reimbursements from Federal agencies and entities as defined in section 105 of title 5, United States Code, for personnel receiving training sponsored by the James J. Rowley Training Center, except that total obligations at the end of the fiscal year shall not exceed total budgetary resources available under this heading at the end of the fiscal year: *Provided further* , That none of the funds made available under this heading shall be available to compensate any employee for overtime in an annual amount in excess of \$35,000, except that the Secretary of Homeland Security, or the designee of the Secretary, may waive that amount as necessary for national security purposes: *Provided further* , That none of the funds made available to the United States Secret Service by this Act or by previous appropriations Acts may be made available for the protection of the head of a Federal agency other than the Secretary of Homeland Security: *Provided further* , That the Director of the United States Secret Service may enter into an agreement to provide such protection on a fully reimbursable basis: *Provided further* , That none of the funds made available to the United States Secret Service by this Act or by previous appropriations Acts may be obligated for the purpose of opening a new permanent domestic or overseas office or location unless the Committees on Appropriations of the Senate and the House of Representatives are notified 15 days in advance of such obligation: *Provided further*, That for purposes of section 503(b) of this Act, \$15,000,000 or 10

percent, whichever is less, may be transferred between "Protection of Persons and Facilities" and "Domestic Field Operations". (DHS Appropriations Act, 2014.)

Explanation of Changes

Language Provision	Explanation
<i>... to be scheduled...</i>	To support better of overtime requirements, the Secret Service will require deliberate scheduling in advance of protective assignments that meet or exceed 16 hours per day.
<i>... [\$1,585,970,000] \$1,867,453,000...</i>	Dollar change only. No substantial change proposed.
<i>... [2016] 2017...</i>	Date change only. No substantial change proposed.
<u>... <i>Provided further, That of the amounts available for security improvement at the White House Complex, \$8,200,000 shall remain available until September 30, 2017</i></u>	To support modifications to the White House fence to address fence jumpers. The modifications that will be made to the fence will increase the time it takes for an individual to jump the fence, providing increased time to detect the intrusion and additional time for Secret Service response personnel to address the threat.

Authorization Cites:

The Secret Service has two authorizing statutes: 18 U.S.C.3056 (Powers, authorities, and duties of United States Secret Service) and 18 U.S.C. § 3056A (Powers, authorities, and duties of United States Secret Service Uniformed Division). Additional investigative authorities are found in 18 U.S.C. § 1029 (Fraud and related activity in connection with access devices) and 18 U.S.C. § 1030 (fraud and related activity in connection with computers).

Information Integration & Technology Transformation Mission Statement

Information Integration and Technology Transformation (IITT) - The Secret Service relies heavily on Information Technology (IT) infrastructure and communications systems to achieve its protective and investigative missions. The Secret Service generated a classified mission needs statement for Information Integration and Transformation that identified existing deficiencies and disparities in the Secret Service IT infrastructure, database architecture, cyber security, communications, cross domain application multi-level security, access control, investigative technologies, information assurance, and resource management capabilities.

Protection of persons and facilities Mission Statement

Protection of Persons and Facilities - Ensure the safety and security of national leaders, visiting heads of state and government and other designated protectees. Safeguard the White House Complex, the Vice President's residence, foreign missions in the Washington, DC area and other high profile sites. Protection resources directly support the DHS strategic goal to protect critical infrastructure, which includes our Nation's leaders, other high profile persons and designated sites. The Service ensures protectees' physical protection at all times. Protection includes all activities related to identifying threats, mitigating vulnerabilities and creating secure environments wherever protectees work, reside, and travel. The requested amount addresses strategic challenges that include terrorists' sustained motivation to attack U.S. interests (including its leaders), and the increasing complexity and technological sophistication of the threat environment.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change

National Special Security Event Fund Mission Statement

National Special Security Events Fund (NSSE) - Effectively lead and manage the planning, coordination, and implementation of operational security plans at designated NSSEs. Ensure the physical protection of the President, the public, and other Secret Service protectees who participate in NSSEs. NSSE resources directly support the DHS strategic goal to protect critical infrastructure, which includes events of symbolic importance to American citizens. Protection includes all activities related to identifying threats, mitigating vulnerabilities, and creating secure environments wherever these specially designated events take place. The requested amount ensures NSSE security measures continue to evolve at an appropriate pace to meet the challenges of an increasingly complex threat environment.

Protective intelligence activities Mission Statement

Protective Intelligence Activities - Ensure protective intelligence processes, policies, and systems provide quality information and services to securely and efficiently support the protective mission by investigating subjects (individuals or groups) and activities that pose threats to protectees and protected events. Protective intelligence activities resources directly support the DHS strategic goal to protect critical infrastructure, which includes proactively leveraging advances in the behavioral and technological sciences in order to minimize the risk of harm to persons, property and events under Secret Service protection. The requested amount funds these activities in a strategic environment characterized by terrorists' sustained motivation to attack these targets, and by the increasing complexity and technological sophistication of the threat environment.

Presidential candidate nominee protection Mission Statement

Presidential Candidate Nominee Protection - Ensure the safety and security of Presidential and Vice Presidential candidates, nominees and spouses. Protection resources directly support the DHS strategic goal to protect critical infrastructure, which includes candidates seeking our nation's highest offices. The Service ensures protectees' physical protection at all times. Protection includes all activities related to identifying threats, mitigating vulnerabilities and creating secure environments wherever protectees work, reside and travel. The requested amount addresses strategic challenges which include terrorists' sustained motivation to attack U.S. interests (including its leaders), and the increasing technological sophistication of the threat environment.

Summary Justification and Explanation of Changes

Domestic field operations Mission Statement

Domestic Field Operations - Investigate violations of laws relating to counterfeiting of obligations and securities of the United States; investigate financial crimes that include, but are not limited to, financial institution fraud, identity theft, access device fraud, and money laundering. Domestic field office resources directly support the DHS strategic goal to protect critical infrastructure, which includes protecting our nation's currency and financial systems within our borders. The requested amount funds field offices nationwide in a strategic context that includes advances in photographic and printing device technologies and the spread of the internet and other consumer-friendly technologies. These developments both facilitate electronic commerce and increase the scope and complexity of financial crimes. As criminal exploitation of available technologies increases, field resources must continue to demonstrate agility in combating criminal efforts.

International field office administration and operations Mission Statement

International Field Office Administration and Operations - Provide a comprehensive, internationally coordinated response to threats to the integrity of U.S. currency and other transnational financial crimes. International field office administration and operations resources directly support the DHS strategic goal to protect critical infrastructure, which includes protecting our nation's currency and financial systems from threats originating abroad. The requested amount funds field offices in a strategic context that includes advances in photographic and printing device technologies and the worldwide spread of the internet, other consumer-friendly technologies, and dollarization (when a developing county replaces its national currency with the U.S. dollar). These developments both facilitate electronic commerce and increase the scope and complexity of financial crimes. As criminal exploitation of available technologies and practices increases, field resources must continue to demonstrate agility in combating criminal efforts.

Headquarters, management and administration Mission Statement

Headquarters, Management, and Administration - Support and sustain operational success through progressive planning and performance in the areas of science and technology, organizational effectiveness, professional responsibility, stewardship of resources, and communication. Headquarters, management, and administration resources support the DHS strategic goal to protect critical infrastructure by enhancing the Service's administrative, professional, and technical infrastructure as well as the management systems and processes. In a strategic context of heightened threat, the Service must ensure that its business processes promote and strengthen the investigative and protective missions.

Rowley training center Mission Statement

Rowley Training Center - Strengthen the agency's ability to develop and retain a highly specialized and dedicated workforce to fulfill mission-critical requirements. Rowley Training Center resources support the DHS strategic goal to protect critical infrastructure by ensuring the Secret Service workforce is continuously prepared to meet the challenges of the investigative and protective missions. The requested amount will ensure that the Service's most important resource - its employees - have the knowledge and skills and abilities to execute the investigative and protective missions. In a strategic context of threat, the Service must ensure that its workforce planning and development practices outpace the threat environment.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$23,021	\$23,266	\$23,827	\$561
11.3 Other than Full-Time Permanent	\$177	\$178	\$187	\$9

BUDGET REQUEST AND SUPPORTING INFORMATION

United States Secret Service Acquisition, Construction, and Improvements

I. Appropriation Overview

A. Mission Statement for Acquisition, Construction, and Improvements:

The Acquisition, Construction, and Improvements (ACI) account contains funding for the support and maintenance of the James J. Rowley Training Center (JJRTC), Information Integration and Technology Transformation (IITT) project execution, and funding to support enhancements to the protective mission recommended by the United States Secret Service Protective Mission Panel.

The JJRTC is the primary training center for the United States Secret Service. The overall support and maintenance provided through ACI funding is critical to the agency's missions – protection and criminal investigations. ACI funding provides critical support for JJRTC infrastructure, life cycle maintenance of structures and systems; as well as sustainment of existing facilities and program support assets. The JJRTC is utilized by special agents, uniformed officers, and support personnel.

JJRTC is comprised of 493 square acres of land, six miles of roadways, and 36 buildings featuring multiple classrooms, firearms ranges, physical fitness facilities, tactical villages, and a protective operations driving pad. This infrastructure fosters a quality training environment for new recruits and current employees. Additionally, JJRTC facilities are utilized to provide our Federal, State, and local law enforcement partners with collaborative training related to the Secret Service missions.

The IITT program resulted from the recognition that the previously existing Secret Service information technology infrastructure did not adequately address the requirements of the protective and investigative missions.

The IITT program was initiated to modernize the Secret Service enterprise-wide information technology (IT) environment focusing on four capability areas: enabling (e.g., infrastructure, architecture); communications (e.g., White House Communications Agency Interoperability, worldwide tactical communications, classified messaging); control (e.g., security); and mission support (applications supporting mission operations).

The IITT program is being implemented in compliance with Department of Homeland Security (DHS) Management Directive 102-01 which establishes consolidated acquisition management policy, standards and practices across all DHS Components. Initial funding appropriated for IITT was used for the stabilization program in Fiscal Years (FY) 2010-11; installation of the stabilizing equipment was completed during the 4th quarter of FY 2013. During FY 2014, both

the Cross Domain (CD) and Multi-Level Security (MLS) control capabilities achieved their Initial Operating Capability (IOC).

FY 2016 funding will be used to sustain the improvements made through the stabilization phase, modernize the networks, database, and security architecture, refactor (rewrite) applications currently resident on the legacy mainframe for migration to the upgraded network, and develop/upgrade projects such as Database Architecture, Cyber Security, Cross Domain and Multi-Level Security, Threat Management, and Combined Operations Logistics Database 2 (COLD2).

B. Budget Activities:

James J. Rowley Training Center

The protection and criminal investigation training required to meet the needs of the Service's dual mission is provided at the JJRTC in Beltsville, Maryland.

Information Integration and Technology Transformation

The Secret Service relies heavily on IT infrastructure and communications systems to achieve its protective and investigative missions. The Service generated a classified Mission Needs Statement for IITT that identifies existing deficiencies and disparities in IT infrastructure, database architecture, cyber security, communications, cross domain application multi-level security, access control, investigative technologies, information assurance, and resource management capabilities.

C. Budget Request Summary:

The FY 2016 Budget includes \$71,669,000 for the Secret Service.

This level of funding includes the following program changes:

- Protective Mission Enhancements (Protective Mission Panel) - \$20,950,000

Adjustment to the base increases, totaling \$784,000, include the following:

- \$102,000 for JJRTC Maintenance
- \$682,000 for IITT

III. Current Services Program Description by PPA

**Department of Homeland Security
U.S. Secret Service
James J. Rowley Training Center
Program Performance Justification
(Dollars in Thousands)**

PPA: James J. Rowley Training Center

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	-	-	\$5,380
FY 2015 President's Budget	-	-	\$5,380
2016 Adjustments-to-Base	-	-	\$102
FY 2016 Current Services	-	-	\$5,482
FY 2016 Program Change	-	-	\$20,950
FY 2016 Total Request	-	-	\$26,432
Total Change 2015 to 2016	-	-	\$21,052

The FY 2016 Budget includes \$26,432,000 for the JJRTC.

Adjustment to Base:

- Increase of \$102 thousand for maintenance at the JJRTC.

Program change:

- Increase of \$21 million for Protective Mission Enhancements (Protective Mission Panel).

CURRENT SERVICES PROGRAM DESCRIPTION:

Funding covers the cost of maintenance and improvement contracts for the James J. Rowley Training Center (JJRTC) in Beltsville, Maryland. This facility provides the protection and criminal investigation training required to meet the needs of the Secret Service's dual mission.

The employees of the United States Secret Service are the most important resource as they are the key to accomplishing our protective and investigative mission. The Service will ensure that they possess the skills and knowledge to maximize their potential and meet the challenges of the 21st Century.

The JJRTC develops, administers, and coordinates basic training, in-service, leadership and continuing specialized skills development for all Secret Service personnel to include special agents, uniformed officers, special officers, and other professional and administrative personnel. JJRTC consistently maintains liaison with all operational components of the Service, as well as numerous public and private sector organizations and manufacturers to remain current with developments in the law enforcement community, current technological trends, and economies of scale. The Secret Service

conducts continuing needs assessments to identify critical job competencies for training development and implementation.

The Service also conducts research and testing of firearms, ammunition, and firearms related equipment to remain at the forefront of technological changes and potential impacts to Service's protective and investigative missions. In addition, JJRTC administers and controls agency wide acquisition, storage, maintenance, and issuance of firearms and ammunition to all Secret Service offices and gun-carrying personnel.

Summary

The requested amount provides funding for Secret Service operations in a strategic context specifically aligned with the missions, goals, and sub-goals set forth by the 2014 DHS Quadrennial Homeland Security Review (QHSR) as follows:

- Mission 1: Prevent Terrorism and Enhance Security
 - Goal 1.3: Reduce Risk to the Nation's Most Critical Infrastructure, Key Leadership, and Events; and
 - Sub-goal 1.3.2: Protect key leaders, facilities, and National Special Security Events.
- Mission 4: Safeguard and Secure Cyber Space;
 - Goal 4.3: Advance cyber law enforcement, incident response, and reporting; and
 - Sub-goal 4.3.2: Deter, disrupt, and investigate cyber crime.
- Mission 6: Mature and Strengthen the Homeland Security Enterprise.

Funding for this activity supports the accomplishment of all Secret Service strategic and management Government Performance and Results Act (GPRA) measures.

Department of Homeland Security
U.S. Secret Service
Information Integration & Technology Transformation
Program Performance Justification
(Dollars in Thousands)

PPA: Information Integration & Technology Transformation

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	-	-	\$46,395
FY 2015 President's Budget	-	-	\$44,555
2016 Adjustments-to-Base	-	-	\$682
FY 2016 Current Services	-	-	\$45,237
FY 2016 Program Change	-	-	-
FY 2016 Total Request	-	-	\$45,237
Total Change 2015 to 2016	-	-	\$682

The FY 2016 Budget includes \$45,237,000 for IITT.

Adjustment to Base:

- Increase of \$682 thousand for IITT.

CURRENT SERVICES PROGRAM DESCRIPTION:

The IITT program was established because the Secret Service’s IT infrastructure did not adequately serve the requirements of the protective and investigative missions. Additionally, the National Security Agency (NSA) identified critical IT infrastructure, architecture and application vulnerabilities that required mitigation.

In response to NSA’s findings, the Service’s IITT program was initiated in order to modernize the enterprise-wide IT environment focusing on four capability areas:

- enabling (e.g., infrastructure, architecture);
- mission support (applications supporting mission operations);
- control (e.g., Security);
- communications (e.g., White House Communications Agency interoperability (WHCA), and communications upgrades including worldwide tactical communications, classified messaging).

The IITT program is being developed in full compliance with DHS Management Directive 102-01 that establishes a consolidated DHS acquisition management policy, standards, and practices across all Components and Department of Homeland Security (DHS) Department Offices.

Initial funding appropriated for IITT was used for the stabilization program in FYs 2010-11. Installation of the stabilizing equipment was completed in the 4th quarter of FY 2013. The

modernization effort commenced in FY 2012 with the award of two contracts, one for the major IT Modernization effort and the other for development of Combined Operations Logistics Database 2 (COLD2); however, execution delays have occurred as a result of a contract protest. As a result, the Service was able to accelerate the mainframe refactoring portion of the IITT modernization effort in FY 2013-14 and plans to complete the refactoring in 2015 in order to stay on pace to reach Full Operating Capability (FOC) of the modernized system by the end of FY 2017. The Secret Service anticipate completing the refactoring (re-coding) of all 21 mainframe applications by 1st quarter FY 2015.

Requested funding in FY 2016 will enable the Secret Service's IT networks, data systems, applications, and system security to fully support present operational requirements. Modernization will be accomplished by means of an extensive redesign of the current infrastructure and the careful selection and integration of interoperable capabilities to support critical mission needs. Specifically the following activities are planned in each of the four capabilities areas:

Enabling Capabilities

In July 2014, the Secret Service selected the prime contractor for the Enabling Contracts (EC) development contract. The selected EC contractor will design, develop and deploy an IT system focusing on the following elements:

- modernization of the IT infrastructure through a major overhaul of the database, infrastructure and information assurance components, leveraging stabilization and enterprise services, and eliminating application hosting on an aging mainframe;
- improvement of network monitoring, security, and communication channels that allow sharing of resources and information;
- standardization of the Enterprise Application Framework and Database used throughout the Secret Service which includes a structured collection of records stored on the network; and
- completion of Preliminary and Critical Design Review and other key systems engineering development milestones.

With the award of the EC modernization contract in the 4th quarter FY 2014, we were able to commence an assessment of the existing USSS network environment in order to lay the groundwork in FY 2015 to build a system test environment, procure hardware not included in the stabilization equipment, conduct development testing, prepare integrated logistics management plan, finalize operational test plans, conclude plans for database architecture requirements, establish operational readiness and conduct training of technical and operational personnel.

FY 2016 EC activities include:

- Commence deployment of modernized network
 - Achieve IOC
 - Commence organic operational maintenance
 - Perform configuration management, quality assurance, security management, and help desk operations
- Implement plans based on database architecture decisions

Control Capabilities

The Cross Domain initiative (CD) provides advance security measures to electronically control, send, receive, and track access to Secret Service intelligence data across disparate systems and security classifications domains. Efforts will continue through FY2016 to integrate across the USSS and take full advantage of all the DHS Intelligence Enterprise Cross Domain Service (IE-CDS) capabilities.

The Multi-Level Security (MLS) enables the secure access of information securely across Sensitive but Unclassified (SBU), Secret (S), and Top Secret/Sensitive Compartmented Information (TS/SCI) security classification domains. The incremental deployment of the MLS capability will continue in FY 2015 and FY 2016 with Full Operating Capability (FOC) anticipated in FY 2017.

Mission Support Capabilities

The Protective Threat Management System (PTMS) was deployed in 2012 and provides capabilities to conduct advanced search, reporting, notification, routing, and improved workflow with greater ease of use. PTMS consolidated five stovepipe systems into a single system and provides a true enterprise protective intelligence tool. PTMS completed deployment in FY 2013 and transitioned to sustainment in FY 2014. As threats continue to grow and change, PTMS will continue to evolve such as deploying a portable version to support the mobile workforce.

The Combined Operations Logistics Database 2 (COLD2) includes the software applications and systems related to event planning, human and technical resource deployment allocations, notification processes, reporting and tracking. It will provide a unifying enterprise-wide scheduling system and an integrated event logistics planning system. When fielded, COLD2 will provide the USSS advanced business analytics which will allow greater visibility and efficiencies in our day to day operations. The COLD2 firm-fixed price development contract was initiated in FY2012 and continues until FY2016. In FY2013, the Unit Acceptance Testing of initial deployment of the scheduling function for the Uniform Division was unsuccessful resulting in re-structure of the architecture in FY2014 to correct these deficiencies. FY 2015 funding will be used to complete the last year of development. The next round of unit acceptance testing will begin in the first quarter of FY2016. FY 2016 funding will enable COLD2 to complete deployment and transition to sustainment.

Communications Capabilities

The White House Communications Agency (WHCA) Interoperability project brought parity between Secret Service and WHCA by providing Internet Protocol (IP) based systems and devices directly to the users supporting USSS missions. The result has reduced the interoperability gaps between the USSS and WHCA, increasing communications capability and providing improved, secure systems and reliability. The upgrades and sustainment phase which began in FY 2014 will continue in FY 2016 and beyond. Communications funding will allow the Service to provide operational and maintenance support for bandwidth improvements to support convergence efforts with Radio-over-IP (RoIP), Over the Air Rekey (OTAR) for encryption, Voice-over-IP (VoIP) systems, and Video Teleconferencing (VTC) systems. This project also includes classified messaging systems (Secret and Top Secret), enhanced Communications Security (COMSEC) support, wireless technology to expand international voice, data and remote access capability to include satellite services, mobile device management (MDM) for smartphone enterprise services, Tri-Band and Classified radios for Special Operations teams, and engineering support to maintain systems. Sustainment funding in FY 2016 will continue the refresh of equipment purchased previously under this project.

The table that follows provides a detailed breakdown of FY 2016 IITT funding by project and capability area.

FY 2014-2016 IITT Funding

(Actual \$)

	FY 2014	FY 2015	FY 2016	FY 2015-16 Change
Enabling Capabilities	\$34,873,400	\$29,653,100	\$30,024,900	\$371,800
<i>Development thru Full Operating Capability</i>				
IT Modernization - EC Development	\$14,671,000	\$9,138,900	\$10,750,100	\$1,611,200
Mainframe Migration & Refactoring	\$4,083,600		\$0	
IT Network Infrastructure - Development	\$4,073,000	\$6,171,000	\$4,015,800	(\$2,155,200)
Database Architecture - Development	\$4,462,000	\$4,592,000	\$4,802,000	\$210,000
Cyber Security - Development	\$3,729,000	\$3,896,400	\$5,693,400	\$1,797,000
<i>Sustainment Post-FOC</i>				
Support post-Mainframe Migration & Refactoring		\$2,000,000	\$2,000,000	\$0
Information Assurance - Support & Equipment Refresh	\$3,854,800	\$3,854,800	\$2,763,600	(\$1,091,200)
Control Capabilities	\$1,834,700	\$4,812,200	\$4,571,300	(\$240,900)
<i>Development to FOC</i>				
Multi-Level Security Development	\$1,434,700	\$4,387,200	\$4,170,900	(\$216,300)
<i>Sustainment Post-FOC</i>				
Cross Domain Support & Licensing	\$400,000	\$425,000	\$400,400	(\$24,600)
Mission Support Capabilities	\$5,487,500	\$4,326,100	\$5,650,000	\$1,323,900
<i>Development to FOC</i>				
COLD2 Development	\$4,200,000		\$1,500,000	\$1,500,000
<i>Sustainment Post-FOC</i>				
PTMS Support	\$1,287,500	\$1,326,100	\$1,250,000	(\$76,100)
COLD2 Support & Licensing		\$3,000,000	\$2,900,000	(\$100,000)
Communications Capabilities	\$4,199,400	\$5,763,600	\$4,990,800	(\$772,800)
<i>Sustainment Post-FOC</i>				
Communications Equipment Refresh & Upgrades	\$4,199,400	\$5,763,600	\$4,990,800	(\$772,800)
TOTAL	\$46,395,000	\$44,555,000	\$45,237,000	\$682,000

Upon completion, the IITT program and related projects will provide a significantly more effective and secure IT infrastructure. It will provide new and upgraded services with benefits that include major improvements in network security, continuity of operations, interoperability with other government

and private systems and networks, greatly enhanced analytics in support of Secret Service business operations, and scalability to support growth.

The Secret Service's IITT program is making significant strides in providing a modern IT infrastructure, which will meet mission requirements well into the future and close identified gaps in areas of network security, information sharing, situational awareness, and operational communications. The Service is committed to delivering the IT and communications tools which provide every advantage to ensure mission success. With continued support of this multi-year plan, the Secret Service will achieve its goals in the most fiscally responsible and efficient manner possible.

Summary

The requested amount for IITT will provide funding for Secret Service operations in a strategic context specifically aligned with the missions, goals, and sub-goals set forth by the 2014 DHS QHSR as follows:

- Mission 1: Prevent Terrorism and Enhance Security;
 - Goal 1.3: Reduce Risk to the Nation's Most Critical Infrastructure, Key Leadership, and Events; and
 - Sub-goal 1.3.2: Protect key leaders, facilities, and National Special Security Events.
- Mission 4: Safeguard and Secure Cyber Space;
 - Goal 4.3: Advance cyber law enforcement, incident response, and reporting; and
 - Sub-goal 4.3.2: Deter, disrupt, and investigate cyber crime.
- Mission 6: Mature and Strengthen the Homeland Security Enterprise.

Funding for this activity supports the accomplishment of all Secret Service strategic and management performance measures.

IV. Program Justification Changes

**Department of Homeland Security
U.S. Secret Service
Acquisition, Construction, and Improvements
Justification of Program Changes
(Dollars in Thousands)**

Program Increase 1: Protective Mission Enhancements (Protective Mission Panel)
PPA: James J. Rowley Training Center
Program Increase: Positions 0, FTE 0, Dollars \$20,950

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$5,482
Program Increase							0	0	\$20,950
Total Request	0	0	\$5,380	0	0	\$5,380	0	0	\$26,432

The Secret Service is mandated by law (Title 18 U.S.C § 3056) to provide protection to all former Presidents and their spouses for life. This funding will support enhancements to the protective mission recommended by the United States Secret Service Protective Mission Panel.

White House Mock-Up

\$8,000

Description of item

The Service requests funding to build an actual-scale training mock-up of the White House north and south grounds, and the supporting security infrastructure, at the James J. Rowley Training Center (JJRTC). This is a multi-year construction project that would require an amendment of the existing James J. Rowley Training Center Master Plan (Approved 2012). The funding requested is for site design, site preparation work, and construction.

The project will use existing acreage at JJRTC to simulate the north and south grounds and roadways, and will include a rudimentary structure and perimeter security posts. The venue would provide true scale and terrain mapping of the White House compound and vehicle gates. Some infrastructure (electrical and water services) will be required for security posts, vehicle gates, perimeter lights and restroom facilities.

The Service is currently using an area at JJRTC to conduct in-service training for Uniformed Division personnel that provides a rough approximation of the actual distances between posts at the White House complex, but does not replicate actual terrain and landscaping features, lines-of-sight, fences, or

building locations. The area was not designed for this type of training, and hampers our ability to provide the dynamic and realistic training required for this critical in-service training.

Justification

The Service requests funds to replicate the White House north and south grounds as an operational training venue for Secret Service law enforcement personnel. Re-creating the grounds of the area surrounding the Executive Mansion provides necessary realism for site specific security and tactical response training.

Secret Service personnel, along with other military, federal, and Washington, D.C. counterparts will conduct integrated training in a to-scale, simulated work environment. Such integrated training is critical to ensure the Secret Service is prepared for incidents that may arise at the White House complex. The proper and consistent training environment will enable Secret Service staff to perform all coordinated actions required to respond to evolving threats.

Impact on Performance (Relationship of Increase to Strategic Goals)

FY 2016 funding directly supports the Secret Service Strategic Plan (FY 2014 – FY 2018) Objective 1.1 “Ensure the protection of designated protectees, places, and events.”

Also, the FY 2016 Budget supports the 2014 DHS QHSR, Mission 1: Sub-Goal 1.3.4 “protect government leaders, facilities, and special events” and directly impacts the performance measures:

- 1. Percent of instances protectees arrive and depart safely.*
- 2. Percent of total protection activities that are incident-free at the White House Complex, Vice President’s Residence, and other protected facilities.*

Canine Training Facility

\$8,000

Description of item

The Secret Service requests funding to construct a new Canine Training Facility at JJRTC, or alternatively, to renovate the existing Moran Canine Building at JJRTC. The new Canine Training Facility will be built at JJRTC at the location identified for it in the approved James J. Rowley Training Center Master Plan (September 2012).

The existing Moran Canine Building is outdated and sub-standard, and is no longer able to safely and adequately house the number of canines the program requires in order to support the requirements of the protective mission. Upgrading these facilities enables the Service to achieve re-certification requirements to support the Personnel Screening Canine Open Area (PSC-O) program. This is a multi-year construction project. Depending on the alternative selected from above, funding requested would be utilized for site design, site preparation work, and construction or for equipment and supplies to provide program support.

Justification

New or renovated kennel space will enable the Secret Service to meet the projected training requirements associated with all canine programs that support the protective mission. The proper training environment is critical to enable Secret Service staff to perform the coordinated actions required to respond to evolving threats.

Impact on Performance (Relationship of Increase to Strategic Goals)

FY 2016 funding directly supports the Secret Service Strategic Plan (FY 2014 – FY 2018) Objective 1.1 “Ensure the protection of designated protectees, places, and events.”

Also, the FY 2016 Budget supports the 2014 DHS QHSR, Mission 1: Sub-Goal 1.3.4 “protect government leaders, facilities, and special events” and directly impacts the performance measures:

1. *Percent of instances protectees arrive and depart safely.*
2. *Percent of total protection activities that are incident-free at the White House Complex, Vice President’s Residence, and other protected facilities.*

Renovation to ranges and tactical training areas **\$4,950**

Description of item

Funding is requested for the renovation of the Magaw Shoot House (\$3.1 million), renovation of other tactical training areas (\$0.850 million), and for renovation and refurbishment of existing ranges (\$1 million).

The Service requests funding to renovate and modernize the Magaw Shoot House, tactical training areas, and the existing indoor and outdoor ranges at JJRTC. The existing tactical training areas at JJRTC are used extensively in support of basic and in-service training for Special Operations Division personnel. The Magaw Shoot House has not been renovated or refurbished since its construction in 2000. Additionally, other JJRTC tactical training facilities have not received necessary maintenance as a result of fiscal constraints, and have developed some structural deficiencies. In addition, the target, bullet trap, and mechanical systems at the existing firearms ranges require refurbishment and/or replacement, without which there is a risk of losing one or more ranges to unscheduled maintenance, resulting in cancellation or delays in required basic and in-service training.

Justification

The proposed renovations and refurbishment of the existing tactical training facilities and firearms ranges will better position the Service to meet the projected basic and in-service training requirements for Special Operations Division personnel, and meet the projected basic training requirements for Uniformed Division and Special Agent classes. The current capacity of our existing ranges is insufficient for projected in-service training requirements. The proper training environment and constant training will enable Secret Service staff to perform the coordinated actions required to respond to evolving threats.

Impact on Performance (Relationship of Increase to Strategic Goals)

FY 2016 funding directly supports the Secret Service Strategic Plan (FY 2014 – FY 2018) Objective 1.1 “Ensure the protection of designated protectees, places, and events.”

Also, the FY 2016 Budget supports the 2014 DHS QHSR, Mission 1: Sub-Goal 1.3.4 “protect government leaders, facilities, and special events” and directly impacts the performance measures:

- 1. Percent of instances protectees arrive and depart safely.*
- 2. Percent of total protection activities that are incident-free at the White House Complex, Vice President’s Residence, and other protected facilities.*

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For necessary expenses for acquisition, construction, and improvement of physical and technological infrastructure, [\$49,935,000] \$71,669,000, of which [\$5,380,000] \$26,432,000, to remain available until September 30, [2019] **2020**, shall be for acquisition, construction, improvement, and maintenance of the James J. Rowley Training Center [facilities,] and of which [\$44,555,000] \$45,237,000, to remain available until September 30, [2017] **2018**, shall be for Information Integration and Technology Transformation program execution.

Explanation of Changes

Language Provisions	Explanation
\$71,669,000 [\$49,935,000]...	Dollar change only. No substantial change proposed.
... \$26,432,000 [\$5,380,000]...	Provides for enhancement to protective mission recommended by the United State Secret Service Protective Mission Panel.
...September 30, 2020 [2019]...	Fiscal year change only. No substantial change proposed.
...\$45,237,000 [\$44,555,000]...	Dollar change only. No substantial change proposed.
...until September 30, 2018 [2019]...	Fiscal year change only. No substantial change proposed.

James J. Rowley Training Center Mission Statement

Funding covers the cost of maintenance and improvement contracts for the James J. Rowley Training Center (JJRTC) in Beltsville, Maryland. This facility provides the protection and criminal investigation training required to meet the needs of the Secret Service's dual mission.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services	\$3,983	\$3,983	\$17,960	\$13,977

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
26.0 Supplies and Materials	\$38	\$38	\$63	\$25

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
31.0 Equipment	\$35	\$35	\$85	\$50

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
32.0 Land and Structures	\$1,324	\$1,324	\$8,324	\$7,000

Land and structures includes the costs of land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural (or resource) improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract.

Information Integration & Technology Transformation Mission Statement

The Secret Service relies heavily on Information Technology (IT) infrastructure and communications systems to achieve its protective and investigative missions. Secret Service generated a classified Mission Needs Statement for Information Integration and Transformation (IIT) that identifies existing deficiencies and disparities in the Secret Service IT infrastructure, database architecture, cyber security, communications, cross domain application multi-level security, access control, investigative technologies, information assurance, and resource management capabilities. At present, the Secret Service IT networks, data systems, applications, and system security do not fully meet basic operational requirements. Investments in the Service's IT networks, data systems, applications, and system security will enable it to better meet basic operational requirements.

A. Component Overview

The United States Secret Service (USSS) is comprised of the following mission-oriented programs that support achievement of the DHS strategic missions, goals, and objectives.

Protection: The Protection program protects the President and Vice President and their families, former Presidents and their spouses, and other designated individuals; secures the White House Complex, Vice President's Residence, and other designated places; and designs, coordinates, and implements operational security plans for designated National Special Security Events (NSSEs). The program is staffed by special agents, uniformed officers, and administrative, professional, and technical personnel and works closely with the military and federal, state, county, local, and international law enforcement organizations to ensure the success of security operations.

Protective Intelligence: The Protective Intelligence program is critical in securing the safety of the President, Vice President, other designated Protectees, visiting world leaders, foreign missions, presidential candidates, and NSSEs. The program investigates, evaluates, disseminates, and maintains information concerning known, potential, or perceived threats to protectees and NSSEs. The program pursues investigative leads and conducts intelligence activities in advance of protectee travel and NSSEs. The program is staffed by special agents, protective intelligence research specialists, threat assessment specialists, and support personnel. Special agents in Secret Service field offices in the U.S. and abroad conduct protective intelligence investigations. Personnel liaise with the intelligence community and other law enforcement organizations to ensure the success of the protective mission.

Criminal Investigations: The Criminal Investigations program exists to safeguard the payment and financial systems of the United States and has evolved to enforce not only counterfeiting laws that preserve the integrity of U.S. currency, but a wide range of financial and computer-based crimes that threaten the nation's economy. To combat these crimes, the Secret Service adopted a proactive approach utilizing advanced technologies and specialized skills to provide rapid responses and critical information in support of financial analysis, infrastructure protection, and criminal investigations. Through its domestic and international offices, the Secret Service conducts investigations to identify, locate, and apprehend criminal organizations and individuals involved in counterfeiting; access device fraud; cyber intrusion; identity crimes; bank fraud; and illicit financing operations.

Rowley Training Center: This program encompasses personnel at the Secret Service's James J. Rowley Training Center, including instructors, tactical and weapons systems specialists, curricula design staff, computer and web-based faculty/technicians, executive training advisors, administrative support, and maintenance staff. The Service has a separate appropriation, the Acquisition, Construction, & Improvements account, that is used to maintain the facility.

Information Integration and Technology Transformation (IITT): The Secret Service relies heavily on information technology (IT) infrastructure and communications systems to achieve its mission. The Service has identified existing deficiencies and disparities in the Secret Service IT infrastructure, database architecture, cyber security, communications, cross domain application multi-level security, access control, investigative technologies, information assurance, and resource management capabilities. The IITT Mission Need Statement indicates the need for a comprehensive

modernization of the Secret Service IT infrastructure and communications systems to close the identified technology gaps. The scope of the IITT program consists of Enabling, Communications, and Control capabilities, as well as cross-cutting Mission Support capabilities.

Management and Administration: This program captures activities that provide enterprise leadership, management and/or business administration services and describes the capabilities and activities that support the day-to-day management and back office functions enabling the Department to operate efficiently and effectively. Key capabilities include conducting agency planning and performance management, managing finances, managing agency workforce, providing physical and personnel security, acquiring goods and services, managing information technology, managing agency property and assets, managing agency communications, managing legal affairs, and providing general management and administration.

FY 2016 Budget Request

The table below shows USSS’ FY 2016 Budget request by its mission-oriented programs.

Performance Measures

For *Prevent Terrorism and Enhance Security*, two types of performance measures are presented. Strategic Measures represent USSS measures that gauge achievement for this mission area, and are considered to be our Government Performance and Results Act Modernization Act (GPRAMA) performance measures. Additional Management Measures are displayed, as appropriate, to provide a more thorough context of expected performance results.

Strategic Measures

Measure: Financial crimes loss prevented through a criminal investigation (in billions)
Description: An estimate of the direct dollar loss to the public that was prevented due to Secret

Service intervention or interruption of a criminal venture through a criminal investigation. This estimate is based on the likely amount of financial crime that would have occurred had the offender not been identified nor the criminal enterprise disrupted, and reflects the Secret Service's efforts to reduce financial losses to the public attributable to financial crimes.

Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	\$1.9	\$1.40	\$1.80	\$1.90	\$2.70	\$2.50
Result:	\$4.846	\$2.75	\$4.20	\$3.04	N/A	N/A

Measure: Percent of currency identified as counterfeit

Description: The dollar value of counterfeit notes passed on the public reported as a percent of dollars of genuine currency. This measure is calculated by dividing the dollar value of counterfeit notes passed by the dollar value of genuine currency in circulation. This measure is an indicator of the proportion of counterfeit currency relative to the amount of genuine U.S. Currency in circulation, and reflects our efforts to reduce financial losses to the public attributable to counterfeit currency.

Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	<0.0099%	<0.0098%	<0.009%	<0.0088%	<0.0088%	<0.009%
Result:	0.0078%	0.0085%	0.0072%	0.0068%	N/A	N/A

Measure: Percent of National Special Security Events that were successfully completed

Description: This measure is a percentage of the total number of National Special Security Events (NSSEs) completed in a Fiscal Year that were successful. A successfully completed NSSE is one where once the event has commenced, a security incident(s) inside the Secret Service protected venue did not preclude the event's agenda from proceeding to its scheduled conclusion.

Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	100%	100%	100%	100%	100%	100%
Result:	100%	100%	100%	100%	N/A	N/A

Measure: Percent of protectees that arrive and depart safely

Description: This measure gauges the percent of travel stops where Secret Service protectees arrive and depart safely. The performance target is always 100%.

Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	N/A	N/A	100%	100%
Result:	N/A	N/A	N/A	N/A	N/A	N/A

Measure: Percent of total protection activities that are incident-free at the White House Complex, Vice President's Residence, and other protected facilities

Description: This measure gauges the percent of instances where the Secret Service provides incident free protection to the White House Complex, Vice President's Residence, and other protected facilities. An incident is defined as someone who is assaulted or receives an injury from an attack while inside the White House Complex, Vice President's Residence, or other protected facility.

United States Secret Service - Strategic Context

Result:	N/A	N/A	N/A	N/A	N/A	N/A

Management Measures

Measure: Number of information sharing events with the law enforcement and intelligence community						
Description: This measure gauges the number of information sharing events with both internal entities and external partner agencies as an assessment of the effectiveness of information dissemination. Information sharing events include: National Threat Assessment Center briefings, Targeted Violence Information Sharing System briefings, agency alerts, specialty desk briefings and other training, spot reports, suspicious activity reporting, advisories, permanent protectee threat assessments, major events assessments, and certain other assessment products. Sharing information about threats, hazards, and protective actions will allow for the internal and external coordination needed to prevent successful attacks.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	1,000	1,000	1,000	1,120
Result:	N/A	N/A	1,410	1,152	N/A	N/A

Measure: Percent of instances protectees arrive and depart safely (campaign protectees)						
Description: This measure represents the percent of travel stops where the protectee safely arrives and departs. The security of protectees is the ultimate priority of the Secret Service; therefore, all necessary resources are utilized before and during a protective assignment in order to provide the highest-quality protection the Secret Service demands for all protectees.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	100%	100%	N/A	N/A	100%
Result:	N/A	100%	100%	N/A	N/A	N/A

Measure: Percent of instances protectees arrive and depart safely (domestic protectees)						
Description: The percent of travel stops where our Nation's leaders and other protectees arrive and depart safely. The security of protectees is the ultimate priority of the Secret Service; therefore, all necessary resources are utilized before and during a protective assignment in order to provide the highest-quality protection the Secret Service demands for all protectees.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	100%	100%	100%	100%	100%	100%
Result:	100%	100%	100%	100%	N/A	N/A

Measure: Percent of instances protectees arrive and depart safely (Foreign Dignitaries)						
Description: The percent of travel stops where visiting world leader protectees safely arrive and depart. The security of protectees is the ultimate priority of the Secret Service; therefore, all necessary resources are utilized before and during a protective assignment in order to provide the						

highest-quality protection the Secret Service demands for all protectees.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	100%	100%	100%	100%	100%	100%
Result:	100%	100%	100%	100%	N/A	N/A

Measure: Percent of protective travel instances that fall within estimated resource requirements						
Description: The measure identifies the variance between the initial request for protective resources and the final approved resources. Program managers perform an internal quality assurance assessment on the initial resource request received from the Secret Service advance team. During this assessment, quality assurance decisions are made on how to best deploy protective resources without compromising safety and security. Resource allocation decisions are then determined and approved. Through the quality assurance process the Secret Service is proactive in the stewardship of resources (cost savings) provided through taxpayer dollars.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	90%	85%	85%	85%
Result:	N/A	N/A	85%	86%	N/A	N/A

Mission 4: Safeguard and Secure Cyberspace

Resources Requested

USSS resources supporting *Safeguard and Secure Cyberspace* are provided in the table below.

\$ in thousands

Program	FY 2014		FY 2015		FY 2016	
	\$	FTE	\$	FTE	\$	FTE
Criminal Investigations	70,556	285	71,416	285	86,743	290
Rowley Training Center	3,025	14	3,062	14	4,130	14
Information Integration and Technology Transformation	2,371	1	2,280	1	2,315	1
Management and Administration	2,291	3	2,301	3	2,307	3
Total	78,253	302	79,059	302	95,495	307

Performance Measures

For *Safeguard and Secure Cyberspace*, two types of performance measures are presented. Strategic Measures represent USSS measures that gauge achievement for this mission area, and are considered to be our Government Performance and Results Act Modernization Act (GPRAMA) performance measures. Additional Management Measures are displayed, as appropriate, to provide a more thorough context of expected performance results.

Strategic Measures

Measure: Amount of dollar loss prevented by Secret Service cyber investigations (in millions)						
Description: This measure is an estimate of the direct dollar loss to the public prevented due to cyber investigations by Secret Service. The dollar loss prevented is based on the estimated amount of cyber losses that would have occurred had the offender not been identified nor the criminal enterprise interrupted. The measure reflects the Secret Service's efforts to reduce cyber related financial losses to the public.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	\$800	\$900	\$727	\$727
Result:	N/A	N/A	\$1,119	\$384	N/A	N/A

Measure: Number of financial accounts recovered (in millions)						
Description: This measure represents the number of financial accounts recovered during cyber investigations. Financial accounts include bank accounts, credit card accounts, PayPal and other online money transfer accounts.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	2.0	2.1	0.40	0.40
Result:	N/A	N/A	3.9	0.29*	N/A	N/A

*The result missed the target for this year primarily due to the size of cases closed and the time it takes to close these complex cases involving transnational criminals.

Measure: Number of law enforcement individuals trained in cyber crime and cyber forensics both domestically and overseas						
Description: This measure represents the number of individuals trained in cyber crime and cyber forensics by the Secret Service. This specialized technical training occurs both domestically and overseas in an effort to strengthen our ability to fight cyber crime.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	1,000	1,000	1,300	1,300
Result:	N/A	N/A	1,517	1,533	N/A	N/A

Measure: Terabytes of data forensically analyzed for criminal investigations						
Description: This measure represents the amount of data, in terabytes, forensically analyzed through Secret Service investigations. This data is now protected by the Secret Service from future malicious use.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	1,600	2,900	3,500	3,800
Result:	N/A	N/A	4,002	4,902	N/A	N/A

Management Measures

Measure: Number of hours of cyber crime training provided to law enforcement both						
--	--	--	--	--	--	--

domestically and overseas						
Description: This measure represents the number of cyber crime training hours provided by the Secret Service. This specialized technical training occurs both domestically and overseas in an effort to strengthen our ability to fight cyber crime.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	38,000	45,000	80,000	80,000
Result:	N/A	N/A	77,028	84,800	N/A	N/A

Mature and Strengthen Homeland Security

Resources Requested

USSS resources supporting *Mature and Strengthen Homeland Security* are provided in the table below.

\$ in thousands

Program	FY 2014		FY 2015		FY 2016	
	\$	FTE	\$	FTE	\$	FTE
Criminal Investigations	8,366	20	0	0	0	0

BUDGET REQUEST AND SUPPORTING INFORMATION

National Protection & Programs Directorate Management and Administration

I. Appropriation Overview

A. Mission Statement for Directorate Management and Administration:

The Department of Homeland Security (DHS) National Protection and Programs Directorate (NPPD) leads national efforts to strengthen the security and resilience of the Nation's critical infrastructure against terrorist attacks, cyber events, natural disasters, other large-scale incidents, and during national security special events. Secure and resilient infrastructure is essential for national security, economic vitality, and public health and safety. NPPD collaborates with the owners and operators of infrastructure to maintain near real-time situational awareness of both physical and cyber events and share information that may impact critical infrastructure. Through partnerships with Federal, State, local, tribal, territorial, international, and private-sector entities, NPPD identifies and enables mitigation and risk reduction to infrastructure and builds capacity to secure the Nation.

The NPPD Management and Administration (M&A) appropriation facilitates Directorate leadership and management, coordination of Directorate activities with DHS Headquarters and Components, and program oversight and mission support services. NPPD M&A provides funding to lead and coordinate Directorate activities as part of protecting the Nation's critical infrastructure, reducing physical and cyber risks to infrastructure, and providing enterprise biometric services and identity verification.

B. Budget Activities:

Management and Administration supports the management and oversight of NPPD's programs. This includes leadership positions such as the Under Secretary, the Deputy Under Secretaries, the Assistant Secretary for Cybersecurity and Communications, the Assistant Secretary for Infrastructure Protection, and the Director of the Office of Biometric Identity Management as well as their supporting staff. In addition, the Management and Administration appropriation funds business support services necessary to ensure that programs operate effectively by maintaining necessary oversight responsibility to direct program policy and strategy, prioritizing and determining resource allocation across programs, and overseeing effective program execution.

In FY 2016, NPPD remains focused on the continued enhancement of Directorate-wide business and mission support capabilities with the additional staffing resources provided in the FY 2014 budget. These resources were allocated to support the delivery of business support functions to NPPD's programs, including services like accounting and finance, acquisition, procurement, human resources, security, information technology systems, facilities, and property. In FY 2015, NPPD established a Management function to integrate the major lines of business support provided to NPPD programs, including human resources, budget and finance, information technology, and administrative services. Additionally, NPPD initiated studies to identify and

consider potential business model alternatives to ensure the most effective and efficient delivery of mission and business support functions required to successfully support NPPD operations. NPPD is also continuing initiatives started in FY 2014 to increase mission integration across programs. Recognizing that the threat and risk landscape has evolved significantly since the creation of the Department, critical infrastructure security and resilience efforts must address all hazards—from terrorism and other criminal activities to natural disasters and cybersecurity threats. In order to ensure the organization has the capability to respond quickly to ongoing incidents while maintaining steady state operations and providing critical services to stakeholders, NPPD is focusing on further integrating key areas in accordance with the Secretary’s direction to enhance unity of effort. In FY 2014, NPPD enhanced unity of effort across the Directorate by standing up a task force focused on identifying and implementing opportunities for mission integration; initiated a joint requirements council to prioritize and integrate cross-Directorate investments; and improved the integration of strategic planning efforts for NPPD programs with the DHS Office of Policy. Key focus areas for NPPD to further integrate in FY 2015-2016 include stakeholder engagement, operational activities, field operations, and innovative data analysis and management. As NPPD continues to better align activities in these areas, NPPD’s mission execution will be enhanced and services provided by the NPPD program offices to stakeholders and customers will be improved.

C. Budget Request Summary:

NPPD requests \$64.191 million and 386 FTP/367 FTE for FY 2016. The total adjustments-to-base amount to a decrease of 8 FTP and \$1.719 million and an increase of 9 FTE from the FY 2015 President’s Budget.

To address legacy financial management system inadequacies, DHS launched the Financial Systems Modernization (FSM) initiative in 2011 to modernize financial management systems at Components. DHS must invest in modernizing financial management systems in order to improve financial accountability and financial reporting, and enable business process standardization. The FSM initiative follows DHS Directives, OMB guidance, and processes developed by Treasury’s Office of Financial Innovation and Transformation.

Requested funds are to migrate NPPD to a shared service provider for financial, acquisition and asset management solution services. In FY 2016, NPPD requires \$18.4 million in funding, of which \$15.8 million is funded from headquarters and \$2.6 million is funded from NPPD, for their FSM initiative, with migration scheduled to be completed in FY 2018. The DHS Office of the Chief Financial Officer provides guidance and oversight to Component FSM initiatives.

II. Summary of FY 2016 Budget Estimates by Program/Project Activity (PPA)

Department of Homeland Security National Protection & Programs Directorate Management and Administration

III. Current Services Program Description by PPA

**Department of Homeland Security
National Protection & Programs Directorate
Directorate Administration
Program Performance Justification**
(Dollars in Thousands)

PPA: Directorate Administration

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	379	305	\$56,069
FY 2015 President's Budget	394	358	\$65,910
2016 Adjustments-to-Base	(8)	9	(\$1,719)
FY 2016 Current Services	386	367	\$64,191
FY 2016 Program Change	-	-	-
FY 2016 Total Request	386	367	\$64,191
Total Change 2015 to 2016	(8)	9	(\$1,719)

NPPD requests \$64.191 million for Directorate Administration, including 386 FTP/367 FTE. This is a decrease of \$1.719 million and 8 FTP and an increase of 9 FTE from the FY 2015 President's Budget. It includes the following adjustments-to-base:

- A realignment of 1 FTP /1 FTE and \$0.094 million for the realignment of the Facility Security Officer (from OBIM)
- A transfer out of \$0.298 million to DHS Office of the Chief Information Officer for Data Center Support.
- A total increase of 36 FTE and \$6.600 million for the annualization of prior year positions (36 FTE, \$5.940 million), the annualization of the 2015 pay raise (\$0.115 million), and the increase for the 2016 pay raise (\$0.545 million)
- An increase of \$0.024 million for an increase in Retirement Contributions.
- An increase of 9 FTP/9 FTE and \$1.176 million in salaries and benefits offset by \$1.176 million in program funding for DHS Balanced Workforce Initiative.
- A decrease of 19 FTE and \$3.740 million to account for the workforce lapse and attrition rate and salaries and benefits right-sizing
- A total decrease \$4.399 million for business and program support efficiencies (18 FTP/18 FTE, \$4.337 million) and HQ Efficiencies from cellular wireless and parking (\$0.062 million)

CURRENT SERVICES PROGRAM DESCRIPTION:

§K	FY 2014 RE			FY 2015 PB			FY 2016 PB		
	FTP	FTE	Total	FTP	FTE	Total	FTP	FTE	Total
Directorate Administration	379	305	56,069	394	358	65,910	386	367	64,191
Office of the Under Secretary	300	226	40,865	301	265	48,067	283	268	48,273
Assistant Secretary for Infrastructure Protection	53	53	10,168	49	49	9,890	58	56	9,221
Assistant Secretary for Cybersecurity & Communications	26	26	5,036	26	26	5,039	26	25	4,174
Office of Biometric Identity Management	0	0	0	18	18	2,914	19	18	2,523

The Directorate Administration PPA provides funding for Directorate leadership and the management and oversight of NPPD’s programs. The FY 2015 President’s Budget requested that 18 positions be transferred from the OBIM appropriation to the Management and Administration appropriation. These positions will perform the following functions and will support all of NPPD: Records Management, Freedom of Information Act request processing, Knowledge Management, Human Resources, Facilities Management, Environmental Management, Congressional Liaison, and Public Affairs.

The FY 2014 Consolidated Appropriations Act provided additional resources targeted at increasing NPPD’s ability to “ensure the wise management of resources and protection against misuse of Federal funds.” NPPD allocated these additional resources in order to mitigate known Internal Controls weaknesses, OIG/GAO findings, and input from NPPD offices and employees. NPPD is conducting a baseline study to systematically review and validate the allocation of resources across the lines of business. The current distribution of personnel, including the allocation of the positions funded in FY 2014, is displayed in the table below:

Function	FY14 FTP

Unallocated Positions*				18
Total FTP	185	79	265	283

*Annualization of the 18 unallocated positions will be allocated once NPPD completes a systematic review and validation of the allocation of resources across the lines of business.

Through Directorate Administration funding, NPPD leadership provides oversight while coordinating with external organizations – both national and international – to address the implications of the critical infrastructure global risk environment in order to develop and implement specific strategic guidance and policies for U.S. and international critical infrastructure protection and resilience.

Chief of Staff

The Chief of Staff function provides strategic vision to Directorate leadership, as well as guidance and direction to senior personnel across the Directorate in order to ensure that NPPD is prepared to respond to threats to the homeland.

Information Management and Disclosure

Information Management and Disclosure activities include the following functions:

- *Executive Secretariat* – Manages external communications for NPPD. It provides NPPD and DHS with an efficient and collegial process for document management including tracking, monitoring, and editing of all formal documents and tasks sent to/from NPPD.
- *Freedom of Information Act (FOIA)* – Works in concert with the Departmental FOIA office, providing requestors with timely, comprehensive access to NPPD documents while safeguarding sensitive information in accordance with Federal laws and regulations.
- *Records Management* – Provides leadership and direction for the NPPD records management program. This function develops an overall records management strategy producing the policy, procedures, and guidance necessary to implement the program, develops policies and guidance on the application of technology to records management, and coordinates the program within and outside NPPD overall.
- *Audit Liaison* – Serves as a liaison to external Departmental offices, the Government Accountability Office (GAO), and DHS Office of the Inspector General (OIG) for all audit activities undertaken by either GAO or OIG. Activities include working with NPPD program offices and GAO or OIG to facilitate entrance/exit conferences, fieldwork, release of draft and final reports, and recommendation follow-up and closure.

External Affairs

External Affairs promotes the coordination and unification of messaging to increase visibility and awareness of NPPD missions through public affairs, legislative affairs, and intergovernmental affairs.

- *Public Affairs* – The Public Affairs function serves as the nexus for all NPPD communications, outreach, and awareness. This function ensures coordination among Directorate programs on outreach and public affairs strategies. The function also provides communications support to leaders to ensure that all of the key efforts in infrastructure protection are included in proper context in the DHS narrative on resilience and preparedness. Additionally, the Public Affairs function manages external communications – specifically media relations and web content. It also provides Directorate news, program updates, and Department initiatives for all employees through the Vision weekly newsletter and Intranet.
- *Legislative Affairs* – The Legislative Affairs function serves as the principal coordinator for all legislative and congressional engagements for NPPD. This function actively engages the Congress on the Directorate’s legislative priorities and promotes the full breadth of activities underway within the NPPD mission area. Legislative Affairs responds to requests and inquiries from congressional committees, individual Members of Congress, and their staffs.

- *Intergovernmental Affairs* – The Intergovernmental Affairs function promotes an integrated approach to homeland security by coordinating and advancing Directorate interaction with state, local, tribal, and territorial governments.

Budget and Financial Administration (BFA)

BFA supports the NPPD mission by conducting financial management, providing oversight, and developing and enforcing fiscal services. BFA consists of the following activities and elements:

- *Requirements and Capabilities Planning* – Translates NPPD leadership goals and objectives into program capabilities and requirements and objectively evaluates the effectiveness of NPPD programs in meeting those goals and objectives to ensure that the Directorate is pursuing the most critical capabilities to achieve its mission in the most effective and efficient manner. Also provides an understanding of the system of NPPD programs and how they interrelate to achieve NPPD’s missions in order to clearly define resource tradeoffs.
- *Budget Formulation and Execution* – Guides programs in the development of resource requests, develops program funding levels based on NPPD Leadership direction (the output of Requirements and Capabilities Planning) and cost analysis, and builds and justifies funding requests to resource mission needs. In addition, this activity is responsible for the workflow and funds control process to ensure that resources are available when needed, do not exceed authorized levels, and are used in accordance with law and congressional intent.
- *Performance Management* – Constitutes the Performance Improvement Officer function and includes managing internal and external performance management requirements. These requirements include the collection, analysis, monitoring, and reporting of performance data.
- *Financial Operations* – Manages the overall accounting operations of NPPD and ensures that the Directorate meets financial execution and accounting requirements in support of DHS’s centralized financial management program. Functions include commitment/obligations input and tracking, travel and purchase card processing, status of funds monitoring, and payroll reconciliation.
- *Financial Reporting* – Prepares and submits financial reports to DHS and to the Immigration and Customs Enforcement (ICE) Chief Financial Officer (CFO). Works closely with the ICE CFO to monitor and reconcile Treasury Information Executive Repository reports and to provide analysis to validate accuracy of data. Responsible for the development and monitoring of NPPD internal control programs. This function also supports financial systems modernization efforts.
- *Internal Controls* – Develops and implements NPPD’s internal controls program. The internal controls office conducts the review of internal controls as required by OMB Circular A-123, manages the annual financial statement audit, conducts verification and validation procedures over business processes and implemented corrective actions, and performs improper payments risk assessments and testing.

- *Economics* – Provides leadership with economic impact analysis related to NPPD programs and activities. Ensures that economic regulatory impact analyses are completed following the requirements of statute, executive order, and Office of Management and Budget (OMB) policy. Coordinate NPPD’s requirements for economic analysis in conjunction with the NPPD Integrated Analysis Coordination Board (IACB). Participate in the design of, and in-progress reviews for, NPPD economic analyses to ensure that such analysis is consistent with appropriate technical standards and NPPD guidance. Collect, organize, and share economic data to facilitate access across NPPD.

Acquisitions

Acquisitions is responsible for the oversight of NPPD’s large acquisition programs as well as overall procurement operations. The Acquisitions function:

- Reviews and monitors NPPD’s acquisition programs, ensures compliance with Federal and DHS acquisition regulations, and ensures effective and efficient acquisition of material solutions.
- Reviews and tracks NPPD contracts and other purchases and establishes and manages procurement procedures across NPPD. This office also represents NPPD procurement interests to the DHS Office of the Chief Procurement Officer.

Human Resources Management (HRM)

HRM is responsible for classifying positions, recruiting, determining pay and compensation, and hiring and onboarding new personnel. In addition, the office provides guidance to and processes actions for all NPPD managers and employees in the areas of performance management, awards, payroll, benefits, and employee and labor relations. HRM includes:

- *Professional Development and Training* – Assesses, designs, develops, implements, and evaluates training designed to address workforce skills, competencies, and certifications, so that NPPD employees are provided with training and professional development/educational programs that enhance and support their positions and the NPPD mission.
- *Employee and Labor Relations* – Leads, assists, and represents management in its efforts to address employee conduct, performance, and labor-management relations in a manner that promotes the development and retention of a high-performing workforce.
- *Human Capital Operations* – Provides staffing, recruitment, payroll and personnel processing advisory and transactional services.
- *Workforce Analysis and Reporting* – Provides and analyzes workforce data to identify and report on short and long term workforce trends for strategic planning purposes and enhanced reporting capabilities.

- *Human Capital Support Team* – Provides position classification and position management services, work life balance program management services (e.g., employee assistance, health and wellness, family resources, dependent care), and leave and workplace flexibilities.

Administrative Services

Administrative Services provides operational services for facilities maintenance and leasing, personal property management, fleet management, environmental planning and execution, logistics management, and management for various NPPD-wide administrative functions. Responsibilities include the following activities and elements:

- *Facilities* – Ensures that existing facilities are available and ready for NPPD personnel and missions by providing operations and maintenance support. Support ranges from providing heating/ventilation/air conditioning preventative and emergency maintenance to working with the General Services Administration (GSA) to ensure that NPPD properties are safe, secure, and operational. Other responsibilities include furniture procurement and maintenance.
- *Real Property Management* – Ensures that the Directorate’s future facility needs are planned, developed, and executed to provide support for NPPD personnel and missions. Support is provided in the form of leasing, planning, fit-out construction, and space alterations to support higher security levels. Manages, tracks, and disposes of more than 600 leases.
- *Environmental Management* – Ensures that NPPD facilities and missions operate in the most sustainable manner practical by establishing environmental and sustainability plans, energy management systems, and historic preservation plans. Ensures that all NPPD activities are executed in compliance with environmental laws and statutes.
- *Personal Property* – Manages and records Directorate property, ensures that accountable and sensitive assets are accounted for, tracked, and disposed of in accordance with Federal rules and DHS directives.
- *Fleet* – Ensures that the Directorate has access to vehicles appropriate with mission requirements and that those vehicles are adequately outfitted to execute missions. Responsible for reporting, ordering, and disposing of vehicles and developing related policies and procedures.
- *Administrative Support* – Ensures that administrative support needs for the Directorate are obtained and managed in the most efficient manner to support NPPD personnel and missions. Services include mail management, sedan services, parking, and transit benefits disbursement and tracking.

Information Technology

Information Technology (IT) actively participates in strategic planning by ensuring that systems and processes are integrated and consistent with the DHS Chief Information Officer Strategic Plan and overarching Departmental goals and objectives. In addition, IT evaluates new technology and advises NPPD leadership how IT solutions might offer opportunities and options to support the successful implementation of policy decisions and organizational goals and objectives. IT approves, oversees,

and monitors IT investment requests for NPPD programs. IT provides governance and oversight over DHS enterprise architecture processes and objectives and IT security policies. Finally, IT staff serves as the NPPD representatives on various Departmental planning, oversight, leadership, and council committees sponsored by the DHS Chief Information Officer.

Business Continuity and Emergency Preparedness

Business Continuity and Emergency Preparedness manages and executes Continuity of Operations requirements directed in Federal Continuity Directives 1 and 2 for all hazards planning. This function also plans and maintains NPPD's business continuity programs and mobility programs across the directorate to ensure the continuous execution of the NPPD mission and identified mission essential functions. It develops the full spectrum of continuity, emergency preparedness, and mobility work plans that enable and exercise NPPD's overall readiness capabilities for a disaster-resilient workforce.

Strategy and Policy

The Strategy and Policy function includes policy, strategy, and NPPD-wide planning development and coordination within NPPD. As the principal catalyst for NPPD strategy and policy development, the function ensures strategic coherence, promotes independent thinking and innovation, provides objective analysis and net assessment, and integrates program planning, performance, and accountability to address cyber and physical risks to infrastructure. In FY 2016, NPPD integration activities will continue focusing across NPPD to achieve a unity of effort across the organization, ensure effective operations and management of NPPD's programs, leverage partnerships and drive innovation to enhance security and resilience of critical infrastructure, and ensure NPPD has the ability to anticipate and react to evolving threats and hazards. The function represents NPPD on interagency and Departmental working groups that address crosscutting and integrated strategic objectives, policies, plans, and procedures that convey a consistent and coherent vision, strategy, and perspective. It also conducts analyses to identify gaps in policy and initiates policy planning and formulation to fill these gaps.

International Affairs

The International Affairs function develops and executes a Directorate-wide international affairs prioritization and strategic planning process. The function ensures cross-component coordination and alignment with international priorities and objectives. It also ensures coordination of international meetings and activities for NPPD leadership and manages international engagements that require representation across NPPD.

Privacy

The Privacy function develops internal policies to protect personal privacy, promotes awareness of and compliance with privacy requirements, and ensures that NPPD technology systems have appropriate privacy protections in place. The function promotes awareness through training and communications, ensures compliance with DHS privacy policies and incident handling guidelines, and provides subject matter expertise and advice to NPPD leadership on emerging privacy issues that may impact NPPD activities. The function also integrates full individual privacy protections into the management of a safe, secure, and resilient infrastructure.

Compliance and Security

The Compliance and Security function provides a safe and secure work environment and promotes organizational excellence, integrity, and accountability to NPPD stakeholders through the following program areas:

- *Internal Affairs* – Investigates and coordinates allegations of employee misconduct in conjunction with the DHS Office of Inspector General, NPPD Employee and Labor Relations, Office of General Counsel, and Directorate management.
- *Program Review and Evaluation* – Supports headquarters-level oversight of program evaluations to measure operations against best practices and objective criteria to determine if the programs and operations are effective and efficient, achieve the desired results, and/or operate in accordance with laws and regulations. This program area also manages the NPPD Self-Inspection Program.
- *Security Management* – Oversees physical security projects for NPPD facilities in the National Capital Region, Administrative Security, Policy Integration, Education and Awareness, and Special Security Programs (e.g., Sensitive Compartmented Information Facilities, Special Security Offices, and Electronic Countermeasures). This program area also facilitates processing of background investigations and national security clearance matters with the DHS Office of the Chief Security Officer.

Directorate Administration Mission Statement

The Department of Homeland Security (DHS) National Protection and Programs Directorate (NPPD) Management and Administration (M&A) appropriation provides Directorate leadership and management, coordination of Directorate activities with DHS Headquarters and Components, and program oversight and mission support services. NPPD M&A leads and coordinates Directorate activities to reduce the risk to the Nation's critical physical and cyber infrastructure as well as provide biometric services and identity verification.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$34,443	\$41,853	\$39,422	\$(2,431)
11.3 Other than Full-Time Permanent	\$691	\$837	\$788	\$(49)
11.5 Other Personnel Compensation	\$1,150	\$1,395	\$1,314	\$(81)
12.1 Civilian Personnel Benefits	\$9,659	\$11,719	\$11,038	\$(681)
Total, Salaries & Benefits	\$45,943	\$55,804	\$52,562	\$(3,242)

The FY 2016 request includes \$52,562k for salaries and benefits for 367 FTE. The change includes transfers in of 1 FTP/1 FTE and \$94k from the OBIM appropriation for the realignment of a Facility Security Officer, an increase of 36 FTE and \$5,940k for the annualization of prior year positions, an increase of \$115k for the annulization of prior year pay inflation, an increase of \$545k for pay inflation, an increase of 9 FTP/9 FTE and \$1,176k for the DHS Balanced Workforce Initiative, a decrease of 19 FTE and \$2,375k for the lapse and attrition rate in FTEs, a decrease of \$1,365k for salaries and benefits right-sizing, and a decrease of 18 FTP/18 FTE and \$2,250k for a reduction to cross-directorate business support, and an increase of \$24k for retirement contributions.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.1 Rental Payments to GSA	\$2,675	\$2,675	\$4,675	\$2,000

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent-related services. The FY 2016 request includes an increase of \$2,000k for GSA rent payments.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$2,114	\$1,927	\$1,810	\$(117)

Advisory and assistance services includes services acquired by contract from non-Federal sources as well as from other units within the Federal Government. The FY 2016 request includes an increase of \$1,059k for advisory and assistance services and a decrease of \$1,176k to offset DHS Balanced Workforce Initiative,

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$3,802	\$3,969	\$3,609	\$(360)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2016 request includes a decrease of \$62k for cellular wireless efficiencies and a decrease of \$298k for the transfer of data center capabilities to DHS OCIO..

Directorate Administration	\$7,864	\$6,900	\$8,569	\$1,669
Total Working Capital Fund	\$7,864	\$6,900	\$8,569	\$1,669

K. DHS Balanced Workforce Strategy

In order to establish a high-performing workforce comprised of a strong internal core of Federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience, and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment, the Department will realign contractor and/or Federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with Federal employees to better realize the full potential of our total workforce – both contracted and Federal. A strong internal core of Federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for Federal employees. As the Department has a large magnitude of contracts, all contracts have been prioritized based on risk into tiered ranking.

NPPD requests \$1.176 million in M&A salaries and benefits dollars and an offset of \$1.176 million in program/contract dollars for 9 FTP/9 FTE as part of the FY 2016 DHS Balanced Workforce Strategy.

Position Type	FY 2014 Revised Enacted		FY 2015 President's Budget		FY 2015 Annualization		FY 2015 Follow On		FY 2016 Increase		Total FY 2014 - FY 2016 DHS BWF Strategy	
	Pos.	FTE	Pos.	FTE	Pos.	FTE	Pos.	FTE	Pos.	FTE	Pos.	FTE
OUS - Facility Security Officer			1	1							1	1
AS IP - Program Analyst	16	16									16	16
AS IP - Executive Secretariat									4	4	4	4
AS IP - External Communications Specialist									2	2	2	2
AS IP - Executive Assistant									3	3	3	3
Total	16	16	1	1	0	0	0	0	9	9	26	26

FY 2016 DHS Balanced Workforce Strategy

- Amount of salaries and benefits funding needed to hire Federal employees:
 - o \$1.176 million for 9 FTP/9 FTE.
- Amount of program/contract funding that will be terminated:
 - o \$1.176 million program/contract cost. There is no projected cost savings by hiring Federal employees and converting contractors to FTPs/FTEs.
- Implementation timeline:
 - o NPPD's FY 2016 Balanced Workforce Strategy will be implemented in FY 2016.
 - o Contractor functions will be reduced and positions will be converted in accordance with the Department's Balanced Workforce Initiative with a particular focus on contractors who are performing "nearly government inherent" responsibilities.

FY 2015 DHS Balanced Workforce Strategy

- Amount of salaries and benefits funding needed to hire Federal employees:
 - o \$0.210 million for 1 FTP/1 FTE.
- Amount of program/contract funding that will be terminated:
 - o \$0.210 million program/contract cost. There is no projected cost savings by hiring Federal employees and converting contractors to FTPs/FTEs.
- Implementation timeline:

- NPPD's FY 2015 Balanced Workforce Strategy will be implemented in FY 2015.
- Contractor functions will be reduced and positions will be converted in accordance with the Department's Balanced Workforce Initiative with a particular focus on contractors who are performing "nearly government inherent responsibilities.
- Contractor reductions will be absorbed by the existing Federal Government employees and new FTE converted positions.

FY 2014 DHS Balanced Workforce Strategy

- Amount of salaries and benefits funding needed to hire Federal employees:
 - \$2.396 million for 16 FTP/16 FTE.
- Amount of program/contract funding that will be terminated:
 - \$3.466 million program/contract cost. There is a projected \$1.070 million cost savings by hiring Federal employees and converting contractors to FTPs/FTEs.
- Implementation timeline:
 - NPPD's FY 2014 Balanced Workforce Strategy will be implemented in FY 2014 and FY 2015.
 - Contractor functions will be reduced and positions will be converted in accordance with the Department's Balanced Workforce Initiative with a particular focus on contractors who are performing "nearly government inherent" responsibilities.
 - Contractor reductions will be absorbed by the existing Federal Government employees and new FTE converted positions.

BUDGET REQUEST AND SUPPORTING INFORMATION

National Protection & Programs Directorate Infrastructure Protection and Information Security

I. Appropriation Overview

A. Mission Statement for Infrastructure Protection and Information Security:

The National Protection and Programs Directorate (NPPD) leads national efforts to strengthen the security and resilience of the Nation's critical infrastructure against terrorist attacks, cyber events, natural disasters, other large-scale incidents, and during national security special events. Secure and resilient infrastructure is essential for national security, economic vitality, and public health and safety. The Infrastructure Protection and Information Security (IPIS) appropriation funds NPPD efforts to understand and manage risk from natural disasters, terrorist attacks, or other disasters to the Nation's critical infrastructure, systems, and assets. Critical infrastructure security and resilience efforts must address all hazards—from terrorism and other criminal activities to natural disasters to cybersecurity threats.

Programs funded by the IPIS appropriation ensure the security and resilience of critical infrastructure by assisting security partners with identifying and mitigating vulnerabilities; increasing preparedness for facilities, systems, and surrounding communities; and assessing the impact of risk management efforts. IPIS-funded programs ensure decision-makers have a full understanding of potential impacts from all hazards through comprehensive consequence analysis during both steady-state and crisis action.

Programs funded by the IPIS appropriation also seek to create a safe and secure cyber environment and to promote cybersecurity knowledge and innovation by: enabling Federal Departments and agencies to address cybersecurity challenges; partnering with the private sector, military, and intelligence communities to mitigate vulnerabilities and threats to information technology assets; and facilitating collaboration and partnerships on cyber issues with public and private sector partners.

Finally, IPIS-funded programs are responsible for maintaining effective telecommunications for government users in national emergencies and for establishing policies and promoting solutions for interoperable communications at the Federal, State, and local levels.

B. Budget Activities:

NPPD is developing a more integrated, organization-wide approach for accomplishing NPPD's multi-faceted mission funded by IPIS appropriations. Recent examples demonstrate that integration across NPPD programs is an effective way of achieving results and meeting the needs of our stakeholders.

IPIS funding provides NPPD with situational awareness and operational coordination to provide a common picture of cyber, physical, and human risks and ensure efforts to respond to incidents are effective. Two key components of NPPD's mission are the capability to maintain near real-time situational awareness of both physical and cyber events and threats that may impact critical infrastructure across the 16 sectors and to enable the appropriate response and mitigation. NPPD has enhanced situational awareness efforts, including co-location of the National Infrastructure Coordinating Center (NICC) and the National Cyber and Communications Integration Center (NCCIC) and the establishment of the Office of Cyber and Infrastructure Analysis Integrated Analysis Cell. In FY 2016, NPPD will continue to integrate these efforts by establishing a joint operations system in order to provide a single common operating picture and to improve the nation's ability to understand the impact of incidents and mitigate consequence.

The IPIS funds also provide for one of NPPD's most critical functions: guiding the national unity of effort for critical infrastructure security and resilience. NPPD conducts extensive stakeholder engagement throughout the organization for the purpose of building relationships, sharing information, and assisting in capacity building. This engagement with domestic and international partners at all levels of government and the private sector increases preparedness to all-hazards and enhances the security and resilience of infrastructure to cyber and physical risks.

In FY 2016, NPPD will continue to seek to improve the delivery of services funded by IPIS appropriations to public and private sector customers in the field and ensure NPPD is addressing regional priorities. NPPD will develop an integrated approach for field operations, including day-to-day engagement of the various program offices operating in the field as well as incident response. NPPD will also develop risk-based strategies for engagement that allow for regional customization across the nation given that the critical infrastructure and cyber security risk, partnership, and operating environments are different in different regions in this country.

Activities within the IPIS appropriation are funded through the following PPAs:

Infrastructure Analysis and Planning (IA&P)– IA&P funds strategic, operational, and tactical products and services to DHS and its partners. This funding facilitates the identification, prioritization, protection, and resilience of the Nation's critical infrastructure, as well as the assessment of risks to critical infrastructure. Infrastructure Analysis and Planning funds a comprehensive inventory of the Nation's critical infrastructure assets and collects vulnerability assessments and consequence information required to produce comprehensive asset and system risk assessments. These critical infrastructure protection assessments enable the analysis of interdependencies and cascading effects and increase partners' understanding of risks, potential protective measures, and best practices.

Sector Management and Governance (SM&G)– SM&G funds the increased ability of all levels of government and private sector critical infrastructure partners to assess risks, coordinate programs and processes, and execute risk management programs and activities. This funding supports the framework that governs the Nation's approach to critical infrastructure security and resilience, providing cross-sector preparedness, public education, and academic engagement to support National Infrastructure Protection Plan 2013 implementation. Programs funded through Sector Management and Governance also provide a strategic and coordinated approach for

enterprise critical infrastructure data management and information technology (IT) development and employ a governance structure that enables the secure sharing of critical infrastructure data and analysis with NPPD partners.

Regional Field Operations (RFO) – Programs funded within RFO build a regional capacity across the sectors to secure critical infrastructure by deploying products and services for State, local, tribal, and territorial (SLTT) government and private sector partners. Regional Field Operations funds the regional implementation of programs funded by the Infrastructure Analysis and Planning and Sector Management and Governance PPAs, fosters a unified information-sharing environment, and assesses vulnerabilities and protective measures for the critical infrastructure community from the national to the local level.

Infrastructure Security Compliance (ISC) – ISC funds regulatory activities that coordinate and manage the Department’s regulatory authority over high-risk chemical facilities and ammonium nitrate.

Cybersecurity Coordination – The Cybersecurity Coordination program integrates information from the six Federal cybersecurity centers to provide a fused view of cyber activity across the intelligence, defense, civil, and law enforcement/counterintelligence domains. The program supports operational activities to facilitate integration and activities at the Federal centers, an information system for online collaboration, and information technology (IT) support and enterprise capability for the centers. Cybersecurity Coordination also supports an increased number of private sector partners present in the National Cybersecurity and Communications Integration Center (NCCIC) environment.

United States Computer Emergency Readiness Team (US-CERT) Operations – As the cybersecurity operational arm of NPPD, US-CERT leads and coordinates efforts to improve the Nation’s cybersecurity posture, promotes cyber information sharing, and manages cyber risks to the Nation. As part of that mission, US-CERT analyzes and mitigates cyber threats and vulnerabilities; disseminates cyber threat warning information; coordinates with partners and customers to achieve shared cyber situational awareness of the Nation’s cyber critical infrastructure; provides response and recovery support for national assets; and advises on national-level cybersecurity policy and guidance. US-CERT encompasses the activities that provide immediate customer support and incident response, including 24-hour support in the NCCIC.

Federal Network Security (FNS) – FNS manages activities designed to enable Departments and agencies to secure their systems and networks, including the Continuous Diagnostics and Mitigation (CDM) program. It provides a single, accountable focal point for achieving cyber infrastructure security and compliance throughout the Federal enterprise.

Network Security Deployment (NSD) – NSD manages the National Cybersecurity Protection System (NCPS), operationally known as EINSTEIN. NCPS is an integrated intrusion detection, analytics, information sharing, and intrusion prevention system utilizing hardware, software, and other components to support DHS responsibilities within the Comprehensive National Cybersecurity Initiative (CNCI) mission.

Global Cybersecurity Management (GCSM) – GCSM provides and facilitates access to training and education for cybersecurity professionals. This includes developing a common approach for Federal cyber education and development and ensuring that education and training keeps pace with technological changes. Global Cybersecurity Management also supports academic centers to invigorate the pipeline of talented cybersecurity professionals available for current and future employment. Finally, the program works to manage risks from the global information and communications technology supply chain through awareness, policies, standards, and practices.

Critical Infrastructure Cyber Protection & Awareness (CICPA) – CICPA collaborates with the public and private sectors to assess and mitigate risk to the Nation’s cyber critical infrastructure and promotes cybersecurity awareness across the general public and key communities. This program also maintains relationships with governmental cybersecurity professionals to share information about cybersecurity initiatives and develops partnerships to promote collaboration on cybersecurity issues.

Business Operations – Business Operations ensures access to the appropriate resources to fulfill NPPD’s broad cybersecurity and communications mission. The program does so by resource and financial management, acquisition management, human capital activities, facilities management, performance management, policy development and implementation, information and personnel security, and strategic planning. The Business Operations program works to ensure these activities are integrated to sustain overall cybersecurity strategies, mission operational support, and short/long-term planning.

Office of Emergency Communications (OEC) – OEC drives the development of emergency communications capabilities (operability, interoperability, and continuous communications) at all levels of government and across all public safety disciplines. OEC identifies and assesses interoperable emergency communications capabilities and drives Federal grants to meet emergency responder requirements. OEC also engages with State, local, and tribal stakeholders to deliver targeted technical assistance and gather stakeholder input on policies, guidance, and initiatives. Additionally, OEC drives Federal emergency communications efficiencies through strategic planning, aligning grants, developing common investment and infrastructure planning approaches, representing Federal users on national-level policy and standards issues, and coordinating between domestic and international stakeholders along the borders.

Priority Telecommunications Services (PTS) – PTS leverages the Nation’s public telephone networks to enable voice communications for response and recovery coordination efforts, ensuring that essential government functions and operations are maintained during a disaster. PTS maintains services that provide NS/EP voice telecommunications for the government and its industry organizations during times when networks are congested or degraded. These services are the Government Emergency Telecommunications Service (GETS), the Wireless Priority Service (WPS), and the Special Routing Arrangement Service (SRAS).

Next Generation Network (NGN) – NGN will leverage Internet Protocol infrastructures to provide government and its industry organizations with NS/EP telecommunications during an emergency. It will supplement PTS services as commercial telecommunications carriers

transition from circuit-switched infrastructures to Internet Protocol infrastructures. The NGN-Priority Services (PS) Program Office works with major carriers as they make the transition to deploy features enabling NS/EP priority service. Over the long term, the NGN-PS will deliver priority voice, video, and data communication services.

Programs to Study & Enhance Telecommunications (PSET) – PSET conducts technical studies and analyses for identifying and improving approaches to assist Federal entities in fulfilling NS/EP telecommunications objectives. PSET models and analyzes priority communications capabilities, assists the State Department in recommending national and international telecommunications standards for networks supporting NS/EP goals, and maintains and supports the implementation of policy to address minimum communication capabilities requirements for Departments and agencies to continue operations during emergency situations.

Critical Infrastructure Protection Programs (CIPP) – CIPP supports operations to assist in the initiation, coordination, restoration, and reconstitution of NS/EP telecommunications. This includes the operation, maintenance, and supporting activities of the National Coordinating Center for Telecommunications, a joint industry-government body that coordinates the response to NS/EP telecommunications incidents. Additionally, the program conducts analyses of telecommunications capabilities in the aftermath of a disaster, training and exercises to prepare to respond to disasters and other crises, and a regulatory, administrative, and operational system to authorize and provide priority treatment of NS/EP services after a disaster.

C. Budget Request Summary:

NPPD requests \$1,311.689 million and 1,733 FTP/1,606 FTE for FY 2016.

Adjustments-to-base in this request include annualizations, pay raise, retirement contributions, cybersecurity pay reform, balanced workforce, efficiencies, attrition rate corrections, acquisition non-recurs, and contract escalations for a net increase of 68 positions, 13 FTE and a decrease of \$196.297 million.

This request also includes the following program changes:

Increases (94 positions / 49 FTE \$323.236 million)

- Develop Situational Awareness & Infrastructure Analysis – \$10.412M (35 FTP/17 FTE)
- Strengthen Partnerships & Foster Capacity Building – \$36.169M (18 FTP/9 FTE)
- Improve the Protection of Infrastructure – \$15.710M (23 FTP/12 FTE)
- NCPS Information Sharing & Analytics – \$67.814M
- NCPS Intrusion Prevention – \$28.072M (18 FTP/9 FTE)
- CDM Increments 1 & 2 – \$86.509M

- Next Generation Networks Increment 2 – \$78.550M

Decreases (\$12.816 million)

- Consolidate Software Assurance – (\$1.679M)
- Multi-State Information Sharing and Analysis Center Managed Security Services Cost-Sharing – (\$3.956M)
- Stop. Think. Connect. Campaign – (\$0.500M)
- Cybersecurity Assessments – (\$2.000M)
- US-CERT Analysis – (\$1.562M)
- Chemical Security Assessment Tool – (\$3.119M)

III. Current Services Program Description by PPA

**Department of Homeland Security
National Protection & Programs Directorate
Infrastructure Analysis and Planning
Program Performance Justification**
(Dollars in Thousands)

PPA: Infrastructure Analysis and Planning

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	89	85	\$63,134
FY 2015 President's Budget	121	120	\$63,999
2016 Adjustments-to-Base	25	20	\$3,210
FY 2016 Current Services	146	140	\$67,209
FY 2016 Program Change	5	3	\$8,760
FY 2016 Total Request	151	143	\$75,969
Total Change 2015 to 2016	30	23	\$11,970

NPPD requests \$75.969 million for Infrastructure Analysis & Planning, including 151 FTP/143 FTE. This is an increase of \$11.970 million and 23 FTE from the 2015 President's Budget. It includes the following adjustments-to-base:

- Increase of \$0.165 million and 1 FTE for annualization of prior year positions
- Increase of \$0.028 million for annualization of the 2015 pay raise
- Increase of \$0.170 million for the 2016 pay raise
- Increase of \$0.007 million for retirement contributions
- Increase of \$1.242 million for cybersecurity pay reform
- Increase of \$2.833 million and 26 FTP/26 FTE for the DHS FY 2016 Balanced Workforce Strategy
- Decrease of \$1.881 million and 6 FTE for salaries and benefits right-sizing
- Decrease of \$0.236 million and 1 FTP/1 FTE for business and program support efficiencies
- Decrease of \$0.027 million for headquarters efficiency for cellular wireless and parking

Resources are realigned for the following purpose:

- TRIPwire (increase of \$0.909 million from SM&G): Realigns TRIPwire funding to the Bombing Prevention project. TRIPwire, DHS's secure but unclassified online counter-improvised explosive device (C-IED) information sharing platform, was previously funded through the Critical Infrastructure Technology & Architecture project in SM&G.

CURRENT SERVICES PROGRAM DESCRIPTION:

§K	FY 2014 RE			FY 2015 PB			FY 2016 PB		
	FTP	FTE	Total	FTP	FTE	Total	FTP	FTE	Total
Infrastructure Analysis & Planning	89	85	63,134	121	120	63,999	151	143	75,969

Programs within the IA&P PPA provide a comprehensive inventory of the Nation’s critical infrastructure assets and collect vulnerability assessments and consequence information required to produce comprehensive asset and system risk assessments. These critical assessments enable the analysis of interdependencies and cascading effects and increase partners’ understanding of risks, potential protective measures, and best practices.

The IA&P PPA supports the following activities:

Infrastructure Sector Analysis

The ISA project provides funding for integrated Cyber and Infrastructure Analysis, an essential element for implementation of Presidential Policy Directive (PPD) 21, *Critical Infrastructure Security and Resilience*, and Executive Order (EO) 13636, *Improving Critical Infrastructure Cybersecurity*.

The integrated analysis function supports all of NPPD by analyzing dependencies, interdependencies, and cascading effects of all hazards to critical infrastructure, including both physical and cyber incidents. Successful execution supports NPPD and other decision-makers in better understanding potential impacts and informing risk decisions to improve security and resilience of the Nation’s critical infrastructure.

Integrated cyber and infrastructure analysis supports NPPD operational centers – the National Infrastructure Coordinating Center (NICC) and the National Cybersecurity and Communications Integration Center (NCCIC) – with real-time operational consequence analysis that includes actionable information about imminent threats, significant trends, and awareness of incidents that may affect critical infrastructure.

NPPD produces infrastructure analytic products that leverage four capability areas affording DHS stakeholders the support necessary to make meaningful risk investment and resource allocation decisions in both crisis action and steady state environments. The four primary capability areas are: Prioritization, Operational Analysis, Modeling and Simulation, and Strategic Analysis. These capabilities are derived from mission needs and operational requirements and work in concert to provide models, products, and decision support analysis for a variety of NPPD, DHS, and external partners.

- Prioritization enables cross-functional national understanding of what systems and assets constitute critical infrastructure across 16 sectors. The three programs which support prioritization of infrastructure include the National Critical Infrastructure Prioritization Program, the Cyber-Dependent Infrastructure for domestic assets, and the Critical Foreign Dependencies Initiative for international assets. In FY 2016, NPPD will complete its annual refresh of these three steady-state lists.
- Operational Analysis identifies and characterizes potential impacts to specific critical infrastructure sectors as well as cross-sector consequences within an affected region or as impacted by a particular threat. Operational Analysis responds during a threat or incident, identifying appropriate staffing, planning for shifts and rotations, managing Requests for Information and Assistance, and training and deploying liaisons to the Federal Emergency Management Agency and other organizations as the situation warrants. The Operational Analysis function includes the Integrated Analysis Cell, which implements PPD-21 by assessing and integrating vulnerability and consequence information with threat streams and hazard information. This data assessment and integration effort aids the NICC and NCCIC in prioritizing assets and managing risks to critical infrastructure, anticipating interdependencies and cascading impacts, recommending security and resilience measures for critical infrastructure prior to, during, and after an event or incident, and supporting incident management and restoration efforts related to critical infrastructure. NPPD plans to produce 1,300 operational analytic products in FY 2016, compared to 1,259 in FY 2015 and 1,059 in FY 2014.
- Modeling and Simulation builds and leverages unique capabilities of critical infrastructure modeling, simulation, and analysis resources, and capabilities of the National Infrastructure Simulation and Analysis Center (NISAC) to understand the impact and cascading effects of infrastructure failures and disruptions. In FY16, NPPD will realign a portion of funding previously provided to the NISAC to build in-house low and mid-level analytic capabilities. These capabilities will foster a more streamlined reporting process for NPPD to produce quick-turn analysis.

NPPD conducts modeling, simulation, and analysis for steady-state products, including studies on critical infrastructure interdependencies, and provides crisis action analytic support. This includes delivering products for planned events, including National Special Security Events and Special Event Assessment Rating-level events. NPPD plans to produce 24 modeling and simulation capability development products in FY 2016, compared to 24 in FY 2015 and 26 in FY 2014.

- Strategic Analysis assesses the likelihood and consequence of emerging and future risks to depict a holistic risk horizon for critical infrastructure across sectors and regions. This analysis identifies and provides risk management and mitigation options regarding vulnerabilities, consequences, and threats to critical infrastructure. For example, a National Risk Estimate would provide focused analysis of current and emerging critical infrastructure risks from a specific threat or event across a three- to five-year timeframe. NPPD plans to provide one National Risk Estimate in FY 2016, compared to one in FY 2015 and two in FY 2014.

In addition, ISA funding provides for enhancing NPPD's capability to better perform analysis of both the impacts to cyber infrastructure and of potential consequences from cyber incidents to systems and assets across the critical infrastructure sectors. This funding ensures DHS can provide integrated cyber and physical infrastructure analytic products to its public and private sector partners on emerging issues related to cybersecurity. NPPD plans to produce eight strategic analytic products in FY 2016, compared to eight in FY 2015 and nine in FY 2014.

Vulnerability Assessments

The Vulnerability Assessments (VA) project provides funding to equip national leadership with the capability to identify infrastructure vulnerabilities and enhance security and resilience by developing and deploying a scalable assessment methodology, and tracking protective and resilience measures of other Federal, SLTT, and private sector security partners. The VA project provides funding to support voluntary programs that identify vulnerabilities, support collaborative security planning, and recommend protective measures and risk mitigation strategies. These vulnerability assessments provide the foundation for DHS and critical infrastructure stakeholders' risk-informed implementation of protective programs designed to prevent, deter, and mitigate risk to infrastructure while enabling timely, efficient response and restoration in an all-hazards post-event situations. NPPD executes the following efforts, funded by the VA project:

- Assess Critical Infrastructure Resilience and Vulnerabilities: The RRAP provides a regional analysis of the Nation's critical infrastructure within a geographical area. The RRAP is a cooperative assessment of specific critical assets and a regional analysis of the surrounding infrastructure. The RRAP evaluates critical infrastructure on a regional level to examine vulnerabilities, threats, and potential consequences from an all-hazards perspective to identify interdependencies, cascading effects, resilience characteristics, and gaps. PPD-21 directs DHS to expand activities to enhance critical infrastructure resilience by developing, implementing, and promoting innovative best practices.

To meet requirements laid out in PPD-21, NPPD continues to conduct RRAP projects to better understand the cascading impacts of disruptions to lifeline functions, to include information and communication technology (ICT) and related dependencies. The findings from the increased regional assessment capabilities will provide the Department with a wealth of data about these sectors along with their reliance on cyber and communications infrastructure. NPPD plans to execute 15 RRAP projects in FY 2016, compared to 15 in FY 2015 and 10 in FY 2014.

Each RRAP project involves one year of intensive data collection, analysis, and product development, and several years of close coordination and participation of Federal, SLTT, and

private sector partners and implementation of resilience enhancement options. While the Protective Security Advisors (PSA) project funds the outreach and field activities of the RRAP, the VA project funds the majority of the support and analysis. The VA project also funds development and oversight of the production of the Resiliency Assessment and the delivery of support for implementation of resilience enhancement options, which are the primary RRAP deliverables.

- Assess Critical Infrastructure Supporting Special Events: NPPD assesses critical infrastructure that supports National Special Security Events and Special Event Assessment Rating events using Computer-based Assessment Tool (CBAT) imagery captures. The CBAT system captures 360-degree spherical color video of facilities, routes, and other specific areas of interest and combines it with technical site-assessment data, structural schematics, and other relevant site data to create an interactive visual guide of any location. NPPD jointly conducts the CBAT with Federal and SLTT officials, along with critical infrastructure owners and operators, in support of vulnerability assessments, special events, and contingency operations.

Bombing Prevention

The Bombing Prevention (BP) project, executed by the Office for Bombing Prevention (OBP), leads and coordinates DHS efforts to protect life and critical infrastructure by building capabilities across the private and public sectors to prevent, protect against, respond to, and mitigate bombing incidents. OBP leads the Department's efforts to implement Presidential Policy Directive 17, *Countering Improvised Explosive Devices*, and coordinate national counter-improvised explosive device (C-IED) efforts.

OBP accomplishes its mission through four focus areas:

- Coordination of National and Intergovernmental Bombing Prevention Efforts: OBP aligns DHS and national efforts through centralized and effective coordination of ongoing programs with national policy goals and recommends strategic adjustments based on understanding of global IED threats. Coordination and integration of national bombing prevention capabilities and programs is critical to effectively and efficiently prevent, protect against, respond to, and mitigate explosive attacks to the Nation's citizens and critical infrastructure. OBP has a leading role in national C-IED policy implementation, serving as the Deputy Administrator for the interagency Joint Program Office (JPO) for Countering IEDs. The JPO coordinates and tracks Federal Government progress in building the C-IED capabilities enumerated in PPD-17. At the Department level, OBP chairs the DHS IED Working Group to lead DHS implementation of the national C-IED policy and to optimize the complementary C-IED equities across DHS Components.

C-IED Capabilities Analysis and Planning Support: OBP systematically identifies and assesses the Nation's capabilities to C-IED threats and drives capability improvement through enhanced strategy, investment, and planning-based resource optimization. The Multi-Jurisdiction IED Security Planning Program (MJIEDSP) is a systematic process that fuses C-IED capability analysis, training, and planning to enhance urban IED prevention, protection, mitigation, and response capabilities. OBP works closely with stakeholders to provide planning and operational expertise that results in jurisdiction-specific guidance and

a roadmap to enhance multi-agency, multi-jurisdiction IED prevention, protection, and response capabilities. OBP plans to execute eight MJIEDSP events in FY 2016.

- Information Sharing and Decision Support: OBP increases stakeholder knowledge of IED threats, incidents, and their implications, along with C-IED principles, policies, and programs that increase capability and capacity to conduct critical functions of the C-IED strategy.
 - TRIP*wire* is DHS's secure and unclassified online C-IED information sharing platform for Federal, SLTT, and private sector officials, such as bomb technicians, first responders, military personnel, intelligence analysts, and security professionals. The information provided through TRIP*wire* increases awareness of evolving IED tactics, techniques, and procedures, as well as incident lessons learned and C-IED preparedness information. TRIP*wire* combines expert analyses and reports with relevant documents, images, and videos gathered directly from terrorist source materials to help users understand risks to their communities and to prepare for and prevent IED incidents.
 - TRIP*wire* Community Gateway (TWCG) provides bombing prevention guidance specifically tailored for the broader audience of private sector critical infrastructure owners, operators, and security personnel. TWCG includes IED-related information tailored to each of the 16 critical infrastructure sectors, as well as certain educational institutions, in accordance with the National Infrastructure Protection Plan 2013.
 - OBP serves as a key partner in the National Explosives Task Force, a Federal Bureau of Investigation (FBI)-led interagency entity that fuses technical IED and explosives expertise from multiple Federal agencies to assist in effective management of IED-related incidents and provide focused preparedness and protective security measure guidance and products.
- C-IED Training and Awareness: OBP develops and delivers a diverse curriculum of training to reduce the risk to the Nation's critical infrastructure by building nationwide C-IED core capabilities and enhancing awareness of terrorist threats. OBP C-IED training and awareness courses and products educate Federal and SLTT participants such as municipal officials and emergency managers, State and local law enforcement, and other emergency services, critical infrastructure owners and operators, and security staff on strategies to prevent, protect against, respond to, and mitigate bombing incidents.
 - Specialized, subject matter expert-led courses such as Surveillance Detection, Protective Measures, Bomb Threat Management, IED Search Procedures, IED Counterterrorism, and Vehicle-borne IED Detection enhance participants' knowledge and skills to effectively reduce the risks of explosive attacks to the Nation's citizens and critical infrastructure. OBP plans to execute 275 Counter-IED Risk Mitigation Training courses in FY 2016, compared to 200 in FY 2015 and 263 in FY 2014.
 - The Bomb-making Materials Awareness Program (BMAP) is a collaborative effort between OBP and the FBI to increase public and private sector awareness of homemade explosives by promoting private sector point-of-sale awareness and suspicious activity reporting to prevent diversion and misuse of explosive precursor chemicals and components commonly used in IEDs. The course provides guidance and materials to help first responders conduct

outreach to industries and businesses within their jurisdiction in order to increase prevention opportunities by building a network of vigilant and informed private sector partners who serve as the Nation's C-IED "eyes-and-ears." OBP plans to execute 24 BMAP events in FY 2016, the same output as in FY 2014 and FY 2015.

**Department of Homeland Security
National Protection & Programs Directorate
Sector Management and Governance
Program Performance Justification**
(Dollars in Thousands)

PPA: Sector Management and Governance

	Perm. Pos.	FTE	Amount
FY 2014 Revised Enacted	201	174	\$62,562
FY 2015 President's Budget	218	208	\$63,136
2016 Adjustments-to-Base	(10)	(11)	\$3,105
FY 2016 Current Services	208	197	\$66,241
FY 2016 Program Change	2	1	\$5,070
FY 2016 Total Request	210	198	\$71,311
Total Change 2015 to 2016	(8)	(10)	\$8,175

NPPD requests \$71.311 million for Sector Management & Governance, including 210 FTP/198 FTE. This is an increase of \$8.175 million and a decrease of 8 FTP/10 FTE from the 2015 President's Budget. It includes the following adjustments-to-base:

- Increase of \$1.650 million and 10 FTE for the annualization of prior year positions
- Increase of \$0.058 million for the annualization of the 2015 pay raise
- Increase of \$0.253 million for the 2016 pay raise
- Increase of \$0.013 million for retirement contributions
- Increase of \$0.497 million for cybersecurity pay reform
- Increase of 1 FTP/1 FTE for the DHS FY 2016 Balanced Workforce Strategy
- Increase of \$0.264 million and a decrease of 11 FTE for salaries and benefits right-sizing
- Decrease of \$2.364 million and 10 FTP/10 FTE for business and program support efficiencies
- Decrease of \$0.086 million and 1 FTP/1 FTE for Headquarters Voluntary Early Retirement Authority (VERA) and Voluntary Separation Incentive Payment (VSIP)
- Decrease of \$0.035 million for headquarters efficiency for cellular wireless and parking

Resources are realigned to the National Infrastructure Protection Plan (NIPP) Management and from the Critical Infrastructure Technology & Architecture (CITA) project for the following purposes:

- ISC Compliance and Data Management Tool (increase of \$3.764 million from RFO): Realigns ISC Compliance and Data Management Tool funding to the NIPP Management project within SM&G. The ISC Compliance and Data Management Tool, intended to fulfill direction laid out in Executive Order 12977, *Interagency Security Committee*, was previously funded through the Protective Security Advisors project in RFO.

- TRIPwire (decrease of \$0.909 million to IA&P): Realigns TRIPwire funding to the Bombing Prevention project within IA&P. TRIPwire, DHS’s secure but unclassified online counter-improvised explosive device (C-IED) information sharing platform, was previously funded through the CITA project in SM&G.

Sector Management and Governance funds the ability of all levels of government and private sector critical infrastructure partners to assess risk, coordinate programs and processes, and execute risk management programs and activities. This funding supports the framework that governs the Nation’s approach to critical infrastructure security and resilience providing cross-sector preparedness, public education, and academic engagement to support National Infrastructure Protection Plan (NIPP) 2013 implementation. Programs funded through Sector Management and Governance also develop and deliver cutting-edge, innovative information technology (IT) and data management solutions that enable the secure sharing and protection of critical infrastructure data and analysis among all members of the infrastructure protection community.

Facilities

The Facilities project provides funding for office spaces, such as General Services Administration (GSA) rent and non-GSA facility items such as heating, ventilation, and air condition services, Federal Protective Service guard services, building escort services, furniture, building renovations, Continuity of Operations facility costs, utilities, building overtime engineering services, parking, and miscellaneous repairs. This project funds the development and maintenance of facilities policies and processes that ensure an appropriate and equitable work environment in order to effectively and efficiently execute the mission. The Facilities project also funds the coordination of office moves, facilities planning, space management, and fleet oversight.

NIPP Management

The NIPP Management project funds NPPD efforts to establish and support the framework that governs the Nation’s approach to critical infrastructure security and resilience. NPPD oversees any updates to the NIPP and leads NIPP implementation processes, working to ensure the NIPP is implemented in alignment with direction contained in Presidential Policy Directive 21, *Critical Infrastructure Security and Resilience*, and Executive Order 13636, *Improving Critical Infrastructure Cybersecurity*.

NPPD executes the following efforts, funded through the NIPP Management project:

- **Strategic Planning**: Sets Joint National Priorities for critical infrastructure working with private sector, State and local governments, and regional partners. Monitors emerging risks and

critical infrastructure vulnerabilities and strategic trends to identify areas where NIPP coordinating structures can increase the overall security and resilience of the Nation by focusing efforts on the strategic environment. Contributes to national planning efforts for infrastructure resilience, climate change adaptation, and information sharing with private sector as part of a White House coordinated policy process. Captures analytic and research and development requirements for partnership with NPPD and the DHS Science & Technology Directorate.

- Strategic Initiatives: Coordinates NPPD and stakeholder resources to ensure that analysis, coordination mechanisms, and other supporting structures are in place to support national progress toward increased security and resilience. NIPP resources here are focused on developing new strategic approaches to information sharing and risk management and identifying and filling gaps with the goal of institutionalizing successful structures.
- Critical Infrastructure Risk Management Reporting and Metrics: Provides critical infrastructure measurement and analysis support to DHS and NPPD as well as national reporting requirements support to partners. Develops the Critical Infrastructure National Annual Report.
- Interagency Security Committee (ISC): Established per Executive Order 12977, *Interagency Security Committee*, works to enhance the quality and effectiveness of security in and protection of building and facilities in the United States occupied by Federal employees for nonmilitary activities. The ISC uses a standardized product development process to address risk management and best practice needs.

Together, efforts funded through the NIPP Management project ensure that NPPD and the critical infrastructure community are focused on high-impact areas, have the resourcing and support required to achieve the goals of the NIPP, and can demonstrate progress over time.

Critical Infrastructure Technology and Architecture (CITA)

The purpose of the CITA project is to fund development and delivery of innovative IT solutions for the critical infrastructure community. The IT solutions allow the critical infrastructure community to efficiently gather, manage, share, and protect near-real time physical and cyber critical infrastructure information. To ensure that the critical infrastructure information is useful and usable to the infrastructure protection community, data is continually validated to ensure adherence to strict data standards.

One such IT solution, the Infrastructure Protection (IP) Gateway, is NPPD's signature voluntary IT system, providing capabilities across NPPD subcomponents to ensure there is a single, centrally-managed system which enables the collection, visualization, storage, retrieval, search, and manipulation of critical infrastructure, cybersecurity, and Federal facility information. In further support of the larger NPPD community, the IP Gateway has the Cybersecurity-Infrastructure Survey Tool (C-IST) that enables Cybersecurity Advisors to conduct Cyber Resilience Reviews. The IP Gateway also supports Protective Security Advisors' physical assessments and provides capabilities to inform risk-based interdependency analysis conducted by the National Critical Infrastructure Protection Program to identify the Nation's most critical assets, systems, and networks.

CITA allows the critical infrastructure community to take proactive and coordinated efforts necessary to: strengthen and maintain secure, functioning, and resilient physical and cyber critical infrastructure; reduce vulnerabilities; minimize consequences; identify and disrupt threats; and hasten response and recovery efforts related to critical infrastructure.

The CITA program includes the following activities:

- Critical Infrastructure Technology Development: The development of critical infrastructure technology systems and capabilities is necessary to ensure efficient and effective collecting and reporting of critical infrastructure data. Critical infrastructure data is collected via multiple methods (e.g., Federal assessments, self-reporting by private critical infrastructure owners) and reported to varying audiences (e.g., Federal analysts, local first-responders). As a result, the development of various tools and reporting capabilities are necessary to ensure all critical infrastructure stakeholders have the right tools and the right information at the right time. Further, as technology evolves, the expectations of critical infrastructure stakeholders to have near-real time information in the format they need to make quick decisions increases.
- Critical Infrastructure Technology Operation, and Maintenance: The maintenance of complex critical infrastructure technology systems requires continued operation and maintenance (O&M) of the system, from its introduction to the production environment, through to disposal of the system. O&M includes hosting, updates, and upgrades of basic security and software patches, improvements to applications and capabilities, and technical refresh of hardware components as needed to ensure reliability and security of the systems.
- Critical Infrastructure Data Management: CITA spearheads the focused effort to ensure that infrastructure data is authoritative and adheres to common Federal standards and industry best practices. The implementation of infrastructure data standards provides a common language for describing critical infrastructure. Due to the complex nature of the critical infrastructure data collected, and the many different sources from which the data is received, it is imperative that a robust data management capability be maintained in order to ensure quality data is available to support our collective Federal and local steady-state and incident support mission efforts. To maintain a robust data management capability, the data must be thoughtfully collected and presented. The critical infrastructure data management activity addresses three questions to ensure the value and usability of the data: what type of data needs to be collected and protected; how should the data be collected; and how should the data be presented and shared? As an example, collecting and presenting interdependency information or how an incident affecting one critical infrastructure asset (e.g., cyber attack on the electrical grid) affects another critical infrastructure asset (e.g., operation of water treatment facilities due to loss of electricity) provides invaluable information to critical infrastructure stakeholders. The robust and structured data collected through applications such as the IST and C-IST enable risk analytics and dependency analysis by NPPD's infrastructure analysts and others to have a high level of accuracy and confidence.

Sector-Specific Agency Management

Sector-Specific Agency Management provides funding for staff and related activities for six critical infrastructure sectors: Chemical; Commercial Facilities; Critical Manufacturing; Dams; Emergency Services; and Nuclear Reactors, Materials, and Waste. The Sector-Specific Agency (SSA) Management project funds the unified public-private sector effort to coordinate, develop, and implement comprehensive plans, programs, and strategies to enhance the security and resilience of the aforementioned sectors. This project also strengthens collaboration and coordination across all 16 critical infrastructure sectors by serving as a cross-sector coordination hub through the Cross-Sector Integration and Innovation Center. NPPD supports strong partnerships with owners, operators, industry associations, academia, and all levels of government. As such, NPPD brings together cross-sector knowledge and expertise to support effective, practical, and relevant risk-mitigation and resilience-enhancing solutions. NPPD measures success by consolidating and tracking stakeholder feedback related to products and services during informal and formal stakeholder engagements.

The SSA Management project funds the following efforts:

- **Strategic Planning, Coordination, and Reporting**: Establishes and implements adaptable planning and project integration activities to develop and communicate common objectives, responsibilities, and initiatives across the six sectors. Supports effective integration of physical and cybersecurity elements into comprehensive risk management programs. Identifies and prioritizes the security and resilience needs and requirements of sector partners. Through the six sectors and the Cross-Sector Integration and Innovation Center, develops guidelines, recommendations, implementation roadmaps, and planning resources supporting integrated all-hazards risk management strategies considering the physical and cyber domains.
- **Education, Training, and Exercises**: Provides sector-specific and cross-sector subject matter expertise to support development and implementation of education, training, and exercise capabilities across the six sectors. Identifies requirements from critical infrastructure stakeholders and develops sector-specific, cross-sector and/or regionally-focused exercises addressing physical and cyber aspects and enhancing stakeholder capabilities to manage risks ranging from man-made and natural hazards to environmental factors.
- **Information Sharing**: Establishes and sustains robust information sharing and communication mechanisms with public and private sector partners within and across the six sectors with particular focus on the corresponding government and sector coordinating councils. These mechanisms provide the public and private sector partners with useful and actionable information to inform risk management decisions, ensure the development of holistic critical infrastructure security and resilience strategies that reflect approaches and measurements of progress made toward their sector and national priorities.
- **Incident Management**: Provides subject matter expertise and supports reporting activities and analytical efforts aimed at developing situational awareness during incidents and events. Coordinates and collaborates with critical infrastructure stakeholders to support the development and dissemination of timely and actionable information to inform decisions that minimize disruption, damage, and cascading consequences.

- Technical Assistance and Best Practices: Identifies, consolidates, and evaluates best practices and standards, develops technical products and resources, consolidates post-event lessons to identify gaps, identifies requirements for new risk mitigation capabilities requiring research and development, generates risk management recommendations, and provides technical assistance to critical infrastructure stakeholders through the six sectors and the Cross-Sector Integration and Innovation Center. Coordinates and collaborates with critical infrastructure owners and operators to develop recommendations promoting the adoption of cybersecurity best practices and supporting the holistic integration of cybersecurity elements into operational processes. Supports the Infrastructure Design and Recovery function to enhance critical infrastructure resilience at all stages of the infrastructure’s lifecycle. Promotes infrastructure resilience principles and collaborates with critical infrastructure stakeholders to pilot and evaluate innovative approaches that foster adoption of resilience enhancements.
- Stakeholder Engagement and Collaboration Mechanisms: Serves as a sector-specific and cross-sector integration hub to sustain and expand partnerships both internal and external to DHS and to positively influence risk management decision-making processes of critical infrastructure stakeholders. Serves as coordination mechanism for activities and programs focused on critical infrastructure security and resilience and collaborates with industry partners to facilitate the integration of cybersecurity into risk management strategies across all critical infrastructure sectors. Supports expanded cross-sector collaboration by promoting effective knowledge transfer, fostering innovation, and facilitating access to risk mitigation solutions that increase security and resilience.

MAJOR ACQUISITIONS:

IP Gateway

The IP Gateway is NPPD’s signature voluntary IT system, providing capabilities across NPPD subcomponents to ensure there is a centrally managed system which enables the collection, visualization, storage, retrieval, search, and manipulation of critical infrastructure, cybersecurity, and Federal facility information and data.

FY 2016 Total Request	162	154	\$52,755
Total Change 2015 to 2016	(1)	(7)	(\$4,279)

NPPD requests \$52.755 million for Regional Field Operations, including 162 FTP/154 FTE. This is a decrease of \$4.279 million and 1 FTP/7 FTE from the 2015 President's Budget. It includes the following adjustments-to-base:

- Increase of \$0.330 million and 2 FTE for the annualization of prior year positions
- Increase of \$0.049 million for annualization of the 2015 pay raise
- Increase of \$0.249 million for the 2016 pay raise
- Increase of \$0.010 million for retirement contributions
- Increase of \$0.062 million for cybersecurity pay reform
- Decrease of \$0.132 million and 8 FTE for salaries and benefits right-sizing
- Decrease of \$0.486 million for non-recurring adjustment for facilities buildout
- Decrease of \$0.571 million and 1 FTP/1 FTE for business and program support efficiencies
- Decrease of \$0.026 million for headquarters efficiency for cellular wireless and parking

Resources are realigned for the following purpose:

- ISC Compliance and Data Management Tool (decrease of \$3.764 million from RFO): Realigns ISC Compliance and Data Management Tool funding to the NIPP Management project.

Programs funded by Regional Field Operations build a regional capacity across the sectors to secure critical infrastructure through the deployment of products and services for SLTT government and private sector partners. Regional Field Operations funds the regional implementation of programs funded by the Infrastructure Analysis and Planning and Sector Management and Governance PPAs, fosters a unifying information sharing environment, and assesses vulnerabilities and protective measures for the critical infrastructure community from the national to the local level.

Partnerships and Information Sharing

NPPD enhances critical infrastructure protection and resilience by building and sustaining a comprehensive network of stakeholder engagement structures and engagement processes through which critical infrastructure stakeholders coordinate and communicate within their communities and across sectors and geographic jurisdictions. NPPD provides effective legal and policy compliant structure and procedures through the Critical Infrastructure Partnership Advisory Council (CIPAC) and other mechanisms for engagement within and among critical infrastructure public-private partnerships and a unifying information-sharing environment for the stakeholder community. The Partnerships and Information Sharing project also funds the Private Sector Clearance Program for Critical Infrastructure administration, coordination, and executive order compliance activities with the national Information Sharing framework. Through the Private Sector Clearance Program, this project promotes information sharing mechanisms by vetting and nominating private sector applicants.

The Partnerships and Information Sharing project funds the following initiatives:

- Stakeholder Engagement and Collaboration Mechanisms: Provides partnership council and regional forum administrative operational support, including logistical coordination and communication and oversight of the policy compliance framework under which these mechanisms must operate. Provides an effective mechanism to consolidate meaningful feedback to the Federal government on the efficacy of the partnership and progress in its role in achieving the critical infrastructure protection and resilience mission. Such support is particularly essential for the effective functioning of the Federal Senior Leadership Council (FSLC), State, Local, Tribal, and Territorial Government Coordinating Council (SLTTGCC), Regional Consortium Coordinating Council (RC3), Critical Infrastructure Cross-Sector Coordinating Council, and the National Infrastructure Advisory Council (NIAC).
- Information Sharing: Supports the implementation and reliable operation of critical infrastructure information sharing mechanisms in collaboration with critical infrastructure stakeholders, the Department, other Federal agencies, and State and local governments. The primary collaboration tool for critical infrastructure information sharing is the Homeland Security Information Network for Critical Infrastructure (HSIN-CI). HSIN-CI is a secure, unclassified,

web-based communications system that serves as the primary, nationwide DHS collaboration system for sharing sensitive, but unclassified information. HSIN-CI supports information sharing by serving as a common platform to provide critical infrastructure stakeholders with advanced tactical and planning communication functionalities.

- Education, Training and Exercises: Develops, implements, and maintains critical infrastructure training and education programs that enhance critical infrastructure security and resilience competencies and build capabilities among the full range of partners and stakeholders. Promotes critical infrastructure as a profession by developing curricula and supporting resources that are made available to colleges and universities across the country to implement graduate and certificate-level courses of study. Collaborates with the SSAs through the SSA Management project, and coordinates with other SSAs, Federal agencies, and key stakeholders to identify exercise-related needs and priorities and to develop cross-sector and regionally focused exercises to address those requirements. The exercise products enhance stakeholder capabilities to effectively manage the physical and cyber risks affecting critical infrastructure.

National Infrastructure Coordinating Center (NICC)

The NICC is the information and coordination hub of a national network dedicated to protecting critical infrastructure essential to the Nation's security, health and safety, and economic vitality. The NICC, from a national perspective, consolidates reports regarding significant primary, secondary, and cascading impacts caused by operational degradation at critical infrastructure by maintaining a constant level of operational awareness of the Nation's critical infrastructure through ongoing contact with SSAs, other infrastructure protection entities, and critical infrastructure private sector partners, to include: Sector Coordinating Councils, Government Coordinating Councils, and private sector Information Sharing and Analysis Centers (ISACs).

The NICC also provides the structures necessary to maintain effective steady-state monitoring and incident management information sharing for conditions and events that threaten the Nation's critical infrastructure. As a 24/7/365 operational component and critical infrastructure functional element of the DHS National Operations Center (NOC), the NICC provides situational awareness and monitoring of incidents affecting critical infrastructure nationwide. This steady-state monitoring, alerting, and response planning enables a rapid transition to incident management in a crisis. The NICC is responsible for vetting, creating, disseminating, and tracking requests for information and requests for action from internal and external critical infrastructure partners, enabling partners to address the most demanding restoration priorities and make the most informed decisions throughout a crisis.

The operational elements of the NICC include:

- Operational Partnerships Development and Coordination: This initiative supports all NICC activities related to maintaining close communication, coordination, and collaboration with Federal, State, and local operational entities and critical infrastructure private sector partners. The NICC leverages existing partnerships and programs to inform owners and operators in the event of an incident affecting the Nation's critical infrastructure. In FY 2016, the NICC plans to facilitate eight to 10 operational engagement and information exchange activities, compared to six in FY 2014 and six in FY 2015. These activities help NPPD identify operational best practices and maintain open levels of 24/7 communications with critical infrastructure partners

at the operational level through operations centers or similar capacities; thus supporting more timely and actionable exchanges of information.

- **Readiness to Support Information Sharing and Incident Response:** This initiative supports NICC activities to maintain and enhance the readiness and preparedness posture of the NICC and DHS's incident response capabilities, NPPD's Critical Infrastructure Crisis Action Team (CI CAT), In FY 2016, the NICC plans to develop and facilitate 12 training sessions for CI CAT staff to ensure readiness, communications, and mission-focus during incident response activations. The NICC will continue to provide uninterrupted situational awareness and incident response and recovery support to DHS leadership, NPPD leadership, and its critical infrastructure partners. The NICC maintains and strives to exceed a 95% readiness target, regarding its facilities (both steady-state and continuity of operations centers), IT operations, and trained personnel.

As the critical infrastructure-focused element of the NOC, the NICC plays an integral role in the restoration of critical infrastructure after a catastrophic event, acting as the primary information hub for partners at the Federal and SLTT levels of government. The NICC also acts as a crucial information resource for critical infrastructure owners and operators. During steady state, the NICC's key value to partners is its ability to rapidly assess an incident and quickly determine if a particular occurrence warrants further action by the critical infrastructure community.

Protective Security Advisors (PSA)

The overarching PSA mission is to proactively engage with SLTT government mission partners and members of the private sector stakeholder community to protect the Nation's critical infrastructure. PSAs are strategically deployed across the United States and provide SLTT and private sector stakeholders with steady-state DHS risk mitigation efforts and support response to all-hazard incidents through field-level coordination and information sharing as well as expertise on reconstituting critical infrastructure and surge capabilities to more effectively support threat-driven actions. They serve as onsite DHS critical infrastructure and vulnerability assessment specialists, while providing a local perspective to the national risk picture by identifying, assessing, monitoring, and minimizing the risk to critical infrastructure at the State, local, and regional levels.

In FY 2016, 101 PSAs will be onboard, with 94 in the field and 7 at headquarters.

NPPD's PSAs execute the following activities:

- **Security Surveys and Assessments:** PSAs plan, coordinate, and lead critical infrastructure security survey and assessment activities in their respective districts. PSAs conduct Enhanced Critical Infrastructure Protection (ECIP) security surveys that NPPD stakeholders can use to compare and contrast security preparedness and resilience aspects of similar facilities. ECIP survey data also enables NPPD to conduct sector-by-sector and cross-sector vulnerability comparisons. PSAs plan to execute 600 ECIP security surveys in FY 2016, compared to 600 in FY 2015 and 450 in FY 2014.

Additionally, PSAs lead the outreach and field activities of the RRAP, while the VA project funds the majority of the support and analysis. To meet requirements laid out in Presidential

Policy Directive 21, *Critical Infrastructure Security and Resilience*, NPPD is conducting five RRAP projects that address cyber threats and information and communication technology (ICT) dependencies to better understand the consequences and cascading impacts of disruptions to lifeline functions

- Contingency and Incident-specific Outreach Activities: In support of execution of NIPP 2013, PSAs forge strong relationships with Federal and SLTT government mission partners and private sector stakeholders to enhance public/private collaborative efforts to protect critical infrastructure through conducting Threat-Based Outreach. The PSA project also provides support to projects and programs across DHS, such as cyber assessments, self-assessments from the SSA Executive Management Office, Private Sector Clearance Program, and HSIN-CI through the delivery to critical infrastructure owners/operators, and many other tools and capabilities provided to critical infrastructure owners/operators and SLTT mission partners.
- Support to NSSEs and SEAR Events: PSAs provide support to officials responsible for planning and leading National Special Security Events and Special Event Assessment Rating events. This includes providing expert knowledge of local critical infrastructure, participating in planning committees and exercises, conducting security surveys and assessments of event venues and supporting infrastructure, and coordinating the development and delivery of geospatial products.
- Incident Response: PSAs deploy to State and local Emergency Operations Centers and FEMA Regional Response Coordination Centers in response to natural or man-made incidents. PSAs provide situational awareness and facilitate information exchange to and from the field. During major incidents, and when designated by the Assistant Secretary, PSAs perform duties as Infrastructure Liaisons at Joint Field Offices or Unified Area Coordination Groups.
- Coordinate and Support Improvised Explosive Device (IED) Awareness and Risk Mitigation Training: PSAs work in conjunction with the Office for Bombing Prevention (OBP) to deliver IED preparedness strategies. PSAs collaborate with OBP to provide training products and services to SLTT partners to deter, detect, prevent, protect against, and respond to IED threats.

(Dollars in Thousands)

PPA: Infrastructure Security Compliance

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	253	242	\$81,000
FY 2015 President's Budget	263	263	\$86,976
2016 Adjustments-to-Base	30	17	(\$4,690)
FY 2016 Current Services	293	280	\$82,286
FY 2016 Program Change	23	12	\$12,591
FY 2016 Total Request	316	292	\$94,877
Total Change 2015 to 2016	53	29	\$7,901

NPPD requests \$94.877 million for Infrastructure Security Compliance, including 316 FTP/292 FTE. This is an increase of \$7.901 million and 53 FTP/29 FTE from the 2015 President's Budget. It includes the following adjustments-to-base:

- Increase of \$0.083 million for annualization of the FY 2015 pay raise
- Increase of \$0.351 million for the 2016 pay raise
- Increase of \$0.017 million for retirement contributions
- Increase of \$0.290 million for cybersecurity pay reform
- Increase of 30 FTP/30 FTE for the DHS FY 2016 Balanced Workforce Strategy
- Decrease of \$1.236 million and 13 FTE for salaries and benefits right-sizing
- Decrease of \$3.907 million to non-recur 2015 funding for CFATS
- Decrease of \$0.246 million for business and program support efficiencies
- Decrease of \$0.042 million for headquarters efficiency for cellular wireless and parking

CURRENT SERVICES PROGRAM DESCRIPTION:

§K	FY 2014 RE			FY 2015 PB			FY 2016 PB		
	FTP	FTE	Total	FTP	FTE	Total	FTP	FTE	Total
Infrastructure Security Compliance	253	242	81,000	263	263	86,976	316	292	94,877
ISC Salaries & Benefits	253	242	33,213	263	263	35,999	316	292	42,486
Infrastructure Security Compliance	0	0	47,787	0	0	50,977	0	0	52,391

Funded by the Infrastructure Security Compliance (ISC) PPA, the Infrastructure Security Compliance Division (ISCD) secures America's high-risk chemical facilities through the systematic regulation, inspection, and enforcement under the authority of the Chemical Facility Anti-Terrorism Standards (CFATS). In addition, NPPD will manage the proposed Ammonium Nitrate Security Program, which

creates a proposed framework that would regulate the sale and transfer of ammonium nitrate by an ammonium nitrate facility to prevent the misappropriation or use of ammonium nitrate in an act of terrorism. ISCD completes Security Vulnerability Assessments (SVAs), develops Site Security Plans (SSPs), and implements protective measures necessary to meet risk-based performance standards (RBPS) established by the Department.

The CFATS rule establishes enforceable RBPS for the security of our Nation's chemical facilities. High-risk facilities have the flexibility to develop appropriate site-specific security measures that will effectively address risk by meeting these standards through SSPs or, if the facility so chooses, through Alternative Security Programs (ASPs). ISCD reviews and assesses all final high-risk facility SSPs and ASPs to ensure they meet the applicable RBPS and approves those that do. If necessary, ISCD works with the facility to revise and resubmit an acceptable plan and can disapprove security plans if an acceptable plan is not submitted.

ISCD executes the following activities, funded by the ISC project:

- Regulatory Mission Support: Provides support for CFATS implementation, communications, new policy development, and the proposed Ammonium Nitrate Security Program. Ensures that the public, Federal and SLTT governments, private sector, and the regulated community are aware of the responsibilities of high-risk chemical facilities and sellers and purchasers of ammonium nitrate in helping to mitigate security risks related to high-risk chemical facilities and ammonium nitrate, of CFATS regulatory requirements, and of proposed Ammonium Nitrate Security Program regulatory requirements. This initiative also provides support to complete the regulatory process prescribed by the Administrative Procedures Act, and establish the business operations upon which the sale and transfer of ammonium nitrate will rely once the Ammonium Nitrate Security Program is implemented.
- Regulation Compliance Determination: Reviews and Analyzes data from facilities in order to determine if they are high-risk and assigns them to tiers, as well as the review and assessment of SSPs or ASPs of high-risk chemical facilities and all inspections. Improves the methodology, analysis and data used in preliminary and final tiering. In addition, it includes compliance assistance visits, authorization inspections, and enforcement proceedings; and reporting on compliance, inspection, and enforcement progress.
- Field Operations Support: Manages equipment – including vehicles, uniforms, and information technology requirements – and facilities needed to support inspectors in the field.
- Technical Engineering: Includes development, maintenance, operations, and support for the tools used to collect data from facilities, analyze that data, and manage information for the implementation of CFATS. This initiative also utilizes an internal content management system (CHEMSEC) to manage the activities integral to the review, inspection, and approval or disapproval of SSPs and ASPs.

MAJOR ACQUISITIONS:

Chemical Security Assessment Tool

This investment includes the development of the Chemical Security Assessment Tool and the Chemical Security Management System collectively tagged “CSAT suite” (CSATs). CSAT identifies potentially high-risk facilities and provides capabilities to conduct SVAs and to develop SSPs. It will include future development efforts addressing requirements resulting from: future CFATS legislative changes, processes reengineering initiatives, and system migration to a DHS Data Center. This investment fills the gap of non-existing capabilities by providing for: the electronic submission of extensive facility data, controlled use of such data, inspection related and correspondence materials, and workflow processes.

FY 2014 Revised Enacted (\$\$\$ thousands)	FY 2015 President’s Budget (\$\$\$ thousands)	FY 2016 Request (\$\$\$ thousands)

Cybersecurity Coordination	0	0	1,842	0	0	1,839	0	0	1,838

The Cybersecurity Coordination program integrates information from the six Federal cybersecurity centers to provide a fused view of cyber activity across the intelligence, defense, civil, and law enforcement/counterintelligence domains. The program supports operational activities facilitating integration and other actions at the Federal centers, an information system for online collaboration, and Information Technology (IT) support and enterprise capability for the centers. Cybersecurity Coordination also supports an increased number of private sector partners present in the National Cybersecurity and Communications Integration Center (NCCIC).

The NCCIC serves as a centralized location to coordinate and integrate operational elements involved in cybersecurity and communications resilience. NCCIC partners include: all Federal Departments and agencies; SLTT governments; the private sector; and international entities. NCCIC leads the protection of Federal civilian agencies in cyberspace, collaborating with critical infrastructure owners and operators to share information and respond to incidents. NCCIC also disseminates cyber threat and vulnerability analysis information and assists initiating, coordinating, restoring, and reconstituting National Security and Emergency Preparedness (NS/EP) telecommunications services and facilities under all conditions, crises, or emergencies, including executing Emergency Support Function 2-Communications (ESF #2) responsibilities under the National Response Framework (NRF).

The NCCIC also provides strategic cyber threat analysis, in conjunction with US-CERT and the National Infrastructure Coordinating Center, to reduce the risk of malicious actors exploiting vulnerabilities.

FY 2016 Total Request	269	245	\$98,642
Total Change 2015 to 2016	29	6	(\$152)

NPPD requests \$98.249 million for US-CERT Operations, including 269 FTP/245 FTE. This is a decrease of \$0.152 million and an increase of 29 FTP/6 FTE from the 2015 President’s Budget. It includes the following adjustments-to-base:

- Increase of \$0.165 million and 1 FTE for the annualization of prior year positions
- Increase of \$0.073 million for annualization of the 2015 pay raise
- Increase of \$0.322 million for the 2016 pay raise
- Increase of \$0.015 million for retirement contributions
- Increase of \$4.866 million for cybersecurity pay reform
- Decrease of \$2.833 million and an increase of 3 FTP/3 FTE for the DHS FY 2016 Balanced Workforce Strategy
- Decrease of \$3.306 million and 12 FTE for salaries and benefits right-sizing
- Decrease of \$0.536 million for non-recurring adjustment for facilities buildout
- Decrease of \$0.638 million for business and program support efficiencies
- Decrease of \$0.028 million for headquarters efficiency for cellular wireless and parking

Resources are realigned for the following purposes:

- Multi-State Information Sharing and Analysis Center (MS-ISAC) (decrease of \$3.200 million from US-CERT PPA to CICPA PPA): Realigns funding for MS-ISAC from US-CERT to related critical infrastructure information sharing projects funded by CICPA.

CURRENT SERVICES PROGRAM DESCRIPTION:

Technology & Readiness Planning	0	0	9,948	0	0	5,884	0	0	5,856

US Computer Emergency Readiness Team (US-CERT) is an operational program within NPPD. Its primary functions include analyzing and reducing cyber threats and vulnerabilities, disseminating cyber threat warning information to public and private sector partners, coordinating with government and industry partners to achieve shared cyber situational awareness of the Nation’s cyber critical infrastructure, providing response and recovery support for national assets, and advising senior leadership on national-level cybersecurity policy and guidance.

US-CERT leads cross-sector efforts to improve the Nation’s cybersecurity posture, coordinates cyber information sharing, and manages cyber risks to the Nation while protecting constitutional liberties. US-CERT stakeholders include: Federal civilian agencies; the intelligence community; state, local and tribal governments; private sector partners; critical infrastructure owners and operators; international partners, as well as the public.

US-CERT activities provide immediate customer support and incident response, including 24/7/365 support to the NCCIC, which has connectivity to all major Federal cyber operations centers, industry, international, and communications partners. Its analysts examine raw and summarized data from a wide variety of information sources to make determinations about potential attacks detected by the National Cybersecurity Protection System (NCPS).

US-CERT Operations is comprised of the following three activities:

- Operations: Identifies, triages, and analyzes cyber activity to rapidly develop and disseminate mitigation and risk management strategies. It also ensures DHS representation during operational planning and the planning and implementation of technology development programs.
- Coordination and Integration: Builds and manages trusted relationships to share information and coordinate with constituents to facilitate shared situational awareness and better protect assets against cyber threats.
- Technology and Readiness Planning: Develops plans, processes, and technology requirements to advance US-CERT Operations towards its strategic vision and ensure US-CERT matures in a coordinated and strategic fashion in response to a dynamic operational environment. It also manages and coordinates organizational resources critical to mission responsibilities.

In FY 2016, US-CERT will leverage automated information delivery of feedback information (i.e., EINSTEIN 3 Accelerated data (E³A)). This data, when used in conjunction with current EINSTEIN 1,

and EINSTEIN 2 data, will enable US-CERT to identify, triage, and analyze cyber activity, and rapidly develop and disseminate mitigation and risk management strategies.

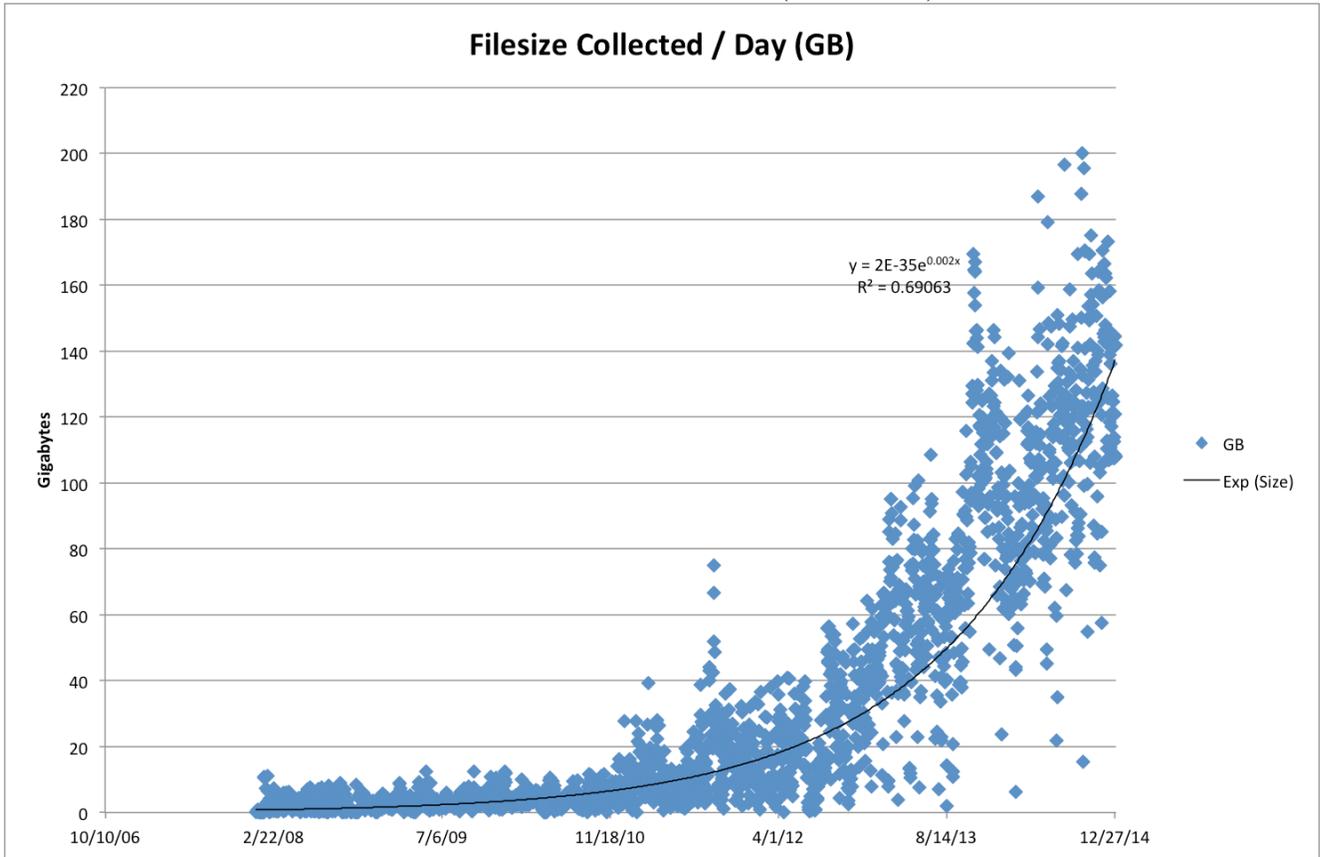

US-CERT will continue supporting the Enhanced Cybersecurity Services (ECS) program in FY 2016. Responsible for ECS's operational and analytical capabilities, US-CERT provides the operational communication with government furnished information (GFI) providers and Commercial Service Providers/Operational Implementers (CSPs/OIs). As program participation increases in FY 2016, US-CERT will ensure the proper production and sharing of ECS data with its stakeholders.

In FY 2016, US-CERT priorities will be:

- Add new/unique Government protection capabilities to augment managed security services for all Departments and agencies.
- Maintain current protection measures.
- Leverage automated delivery of E³A data.
- Leverage classified Intrusion Detection System (IDS) signatures/indicators to detect malicious network activity.
- Support additional operational requirements, data, and volume sources from the Continuous Diagnostics and Mitigation (CDM), ECS, and Cybersecurity Information Sharing and Collaboration programs.

The chart below highlights the ever-increasing cyber threat levels and exponential growth of malware collections over the past eight years. Currently, over 100 million unique samples have been collected, with up to 150,000 added per day. In addition, over 500 terabytes of derivative data from manual and automated analysis processes is stored.

Federal Network Security (FNS) serves as the single, accountable focal point for achieving cyber infrastructure security and compliance throughout the Federal enterprise. On-site agency compliance assessments improve FNS's analytical and reporting capabilities, allowing FNS to address the increased implementation of Continuous Diagnostics and Mitigation (CDM) capabilities within Departments and agencies. FNS also obtains the data necessary to definitively understand agency critical needs for CDM, and address organizational threats, vulnerabilities, and risks, thereby allowing DHS and its partner agencies to make deliberative and measurable improvements in securing agency networks and the Federal enterprise.

FNS is comprised of the following five activities:

Cybersecurity Assurance Program (CAP): Addresses DHS's responsibilities to certify and enforce Federal and civilian agency implementation of network and security operational standards and best practices; ensure agencies comply with Federal standards and policies; and assess the state of operational readiness and cybersecurity risk for unclassified networks and systems across Federal Executive Branch civilian agencies.

CAP engages Departments and agencies in three crucial activities providing access to specialized skills and services: promoting a healthy, secure and resilient IT infrastructure across the Federal Government; measuring mandatory cybersecurity capabilities implementation; and providing an enterprise view of the Federal Government's cybersecurity posture.

- *Cybersecurity Capability Validation (CCV)* assessments are conducted to assess and validate each agencies' implementation of technical (tools and technologies) and operational (people, processes, security program maturity) cybersecurity capabilities required by Federal laws, policies, and initiatives. CCV assessments incorporate document reviews, staff interviews, operational observations, and direct testing (when possible) to provide an objective, repeatable, and consistent methodology ensuring fairness, and facilitating government-wide trending and analysis.
- *Risk and Vulnerability Assessments (RVA)* combine national threat and vulnerability information with data collected through on-site assessment activities to provide agency specific risk analysis reports with actionable remediation recommendations prioritized by risk.
- *Cyber Hygiene* activities assess Internet accessible Federal unclassified civilian systems for known vulnerabilities and configuration errors on a recurring basis. CAP works with impacted agencies to mitigate risks prior to their exploitation as potential issues are identified.

CAP is the only centralized Federal civilian program proactively engaging with agencies to provide information and services helping them prepare and prevent cyber incidents, mitigate risks, and continuously improve their cybersecurity capabilities. CAP's services and activities improve the cybersecurity posture of the Federal Government, reduce risk, and achieve significant government-wide cost avoidance through enhanced prevention and decreased incident recovery expenditures. Analysis of the data collected through CAP activities aids policymakers and Federal Departments and agencies in developing sound security and risk mitigation strategies.

CAP will utilize the requested FY 2016 funding to conduct between 18-22 CCV assessments, and 40 RVAs of selected civilian Departments and agencies. Additionally, CAP will provide stakeholders with prioritized access to agency assessments from the CFO Act, and Trusted Internet Connection Access Provider (TICAP) agencies impacted by cyber incidents requiring post-incident strategic remediation support. Stakeholders include individual agencies and Departments receiving a distinct report detailing their findings and recommendations, as well as policy makers and the cyber community having access to aggregated reports not attributable to any agency.

Network and Infrastructure Security (N&IS): Leads the Trusted Internet Connections (TIC) Initiative with OMB. N&IS will optimize network security capabilities into a common solution for the federal information enterprise and facilitate reducing and consolidating external connections, including Internet points of presence, through approved access points.

NI&S will utilize the requested FY 2016 funding to further advance the following key initiatives:

- Providing agencies with practical, implementable, schematic designs for common information security functions. By sharing best agency designs and lessons learned across the Federal Executive Branch, agencies can reduce costs and improve their cybersecurity by not re-inventing technical reference architectures.
- Identifying common cybersecurity requirements across agencies, enabling DHS to help save agencies money conducting and sharing market research in areas identified as critical by agency CISOs. N&IS will also produce cybersecurity market research white papers (i.e., data protection, data loss prevention).
- Providing a small cadre of cybersecurity specialists dedicated to assisting small and micro-agencies, allowing DHS to accomplish its mission by helping small and micro-agencies respond to government-wide cybersecurity policies and directives. N&IS will also develop small and micro-agency specific cybersecurity strategies and implementation guidance.

Cybersecurity Performance Management (CPM): Provides operational support to Federal Departments and agencies in securing Federal information systems, consistent with the implementation of OMB M-10-15, M-10-28, and subsequent memoranda and directives relative to evolving Federal cybersecurity requirements.

CPM will utilize the requested FY 2016 funding to further the following key initiatives:

- Compile input for the annual FISMA report to Congress to serve as the initial drafts of agencies' OMB congressional reports. The FISMA report captures the current state of the cybersecurity posture of the Federal civilian agencies, as well as cybersecurity progress made during the previous fiscal year.
- Conduct recurring, quarterly, and annual department and agency analysis and compare year-over-year performance results to the baseline. This analysis shows authorizing officials are providing more complete, reliable and trustworthy information; thus facilitating more informed security authorization decisions.
- Continue developing and enhancing the Federal Cybersecurity Maturity Roadmap for Departments and agencies, based on existing regulations, standards, and best security practices. This further enhances FISMA implementation through a risk-based approach

coupled with a means of measuring the integrity of department and agencies' information security programs.

- Conduct and coordinate annual CyberStat reviews and agency CIO/CISO interviews to assist Federal civilian agencies in implementing key strategic enterprise cybersecurity capabilities.
- Continue to refine and develop CyberScope FISMA metrics collected from each agency's CIO and OIG to measure performance and identify cyber risks across the Federal enterprise.

Requirements and Acquisition Support (RAS): Supervises the long-term strategic prevention of attacks against Federal Government networks by addressing common challenges faced by all agencies. RAS works to assess and prioritize common cybersecurity needs and solutions; promote actionable cybersecurity policies, initiatives, standards, and guidelines; enable implementing cybersecurity risk mitigation strategies; and measure agency strategies and compliance implementation.

More specifically, RAS delivers strategic sourcing solutions enabling government-wide cost savings for IT security products and services. It also oversees and monitors the Information Systems Security Line of Business (ISSLoB) Shared Service Center (SSC) performance; manages the daily operations of the ISSLoB Program Management Office (PMO); and collaborates with other national cybersecurity and FNS programs to assess and maintain the Federal Government's strategic cybersecurity plan. As the PMO for ISSLoB, RAS identifies information systems security solutions that reduce costs through shared services; eliminate duplication; and increase specialized expertise, freeing up resources for mission-specific requirements and other tailored security requirements. RAS initiates strategic sourcing efforts for investments in security solutions, commoditized technologies, and processes, through cross-agency collaboration. RAS additionally sponsors strategic sourcing and requirement development activities to identify and pursue strategic information security product and service acquisitions.

RAS will utilize the requested FY 2016 funds to achieve \$15 million in annual cost savings government-wide by using ISSLoB Blanket Purchase Agreements (BPAs) or SSCs. The ISSLoB BPAs are an efficient way of providing security solutions using specific tools and services. The main beneficiaries of such savings are Federal, State, local, and tribal entities. These cost savings are achieved through the reduced acquisition cycle and ability to further negotiate pre-existing GSA schedule prices. The solutions are then vetted based on requirements gathered across the Government to meet the needs of end-users, who facilitate two ISSLoB BPAs or SSCs within FY 2016.

Continuous Diagnostics and Mitigation (CDM): The CDM program enables Federal agencies to more readily identify network security issues and enhance the overall security posture of their networks. The CDM program assists in protecting agencies against exploitation by malicious hackers of unauthorized and unmanaged hardware and software; known vulnerabilities; weak configuration settings (port, protocols, and services); insider attacks; and loss of confidentiality, integrity, or availability due to unanticipated events and attacks requiring recovery or special responses.

The CDM program provides hardware, software, and services enabling continuous diagnostics and mitigation in support of activities to strengthen the operational security posture of Federal civilian networks. Available to all Federal civilian agencies, the CDM program involves the procurement,

operations, and maintenance of diagnostic sensors and tools, and dashboards to provide situational awareness on agency and Federal levels. CDM enables agencies to identify which network security issues to address first and empowers technical managers to prioritize and mitigate risks. DHS receives aggregate information from each agency to provide network security situational awareness at the Federal level on network security.

FY 2014 and FY 2015 funding supports a phased-in implementation of Increment 1 and 2 of the CDM program, executing current resources to procure tools, sensors, and integration services using Blanket Purchase Agreements under the GSA IT Schedule 70 and other contract vehicles, managed by GSA FEDSIM. This approach provides the most efficient way to procure sensors and Continuous Monitoring as a Service (CMaaS) integrator services for Federal Departments and agencies, as well as smaller agencies. The Departments and agencies acquire, install and integrate CDM tools and sensors into their network sensors/agents for diagnostic review using the CDM-provided dashboard.

FY 2016 funding permits the deployment of Increment 2 to the Departments and agencies in the CDM program. Increment 2 provides the necessary software and services that will allow DHS and Federal agencies to continuously monitor users and their privileges on Federal networks. With the deployment of Increment 2, Departments and agencies will be able to assign appropriate privileges to users to allow them to complete their work while minimizing vulnerabilities driven by users. DHS assumes a commitment to fund CDM tools and sensors operations/maintenance costs at Federal Departments and agencies for two full years following contract award.

The FY 2016 funding request will allow CDM to continue the following key initiatives:

- Procuring sensors and dashboards, developed by industry, through appropriate channels.
- Developing the tools for analyzing industry, software source code to find and identify vulnerabilities during the development process.
- Deploying sensors reporting directly into agency-level dashboards.
- Interfacing sensor data with the Federal-level dashboard, assuring diagnostic results compare with patterns of how the government network is attacked, and who on the network is attacked.
- Continuing configuration management, at both Federal and agency levels, and promoting logistics management over agency deployment.
- Validating and verifying sensors and dashboards to ensure data accuracy while maintaining facilities and infrastructure availability.
- Obtaining state-of-the art dashboard graphics providing summaries to empower executives and details to empower technical managers for targeted, daily attention to remediation.
- Ensuring interfaces are fully functional between the sensors and local-level (technical manager) dashboard; as data is aggregated for targeted analysis, dashboards are capable of addressing large volumes of data between sensors and higher-level dashboards.
- Supporting a governance model that considers standing guidance and policy; considering individual department and agency operational requirements and risk acceptance posture; identifying a process for establishing acceptable thresholds for continuous authorization; and determining an approach for addressing Departments and agencies falling outside of acceptable thresholds.

MAJOR ACQUISITIONS:

Continuous Diagnostics & Mitigation

Continuous Diagnostics & Mitigation (CDM) is designed to enable agencies to readily identify which network security issues to address first, thus enhancing the overall security posture of agency networks. CDM is expected to influence the way network Certification and Accreditation activities are undertaken. DHS anticipates that CDM will remove the need for episodic certifications by providing ongoing authorization via a continuous solution. CDM also provides hardware, software, and services to enable continuous diagnostics and mitigation in support of mitigation activities designed to strengthen the operational security posture of the federal civilian networks. Available to all federal civilian agencies, the CDM program involves the procurement, operations, and maintenance of monitoring equipment, diagnostic sensors and tools, and dashboards to provide situational awareness on agency and federal levels.

This investment is proposed to be funded out of the Federal Network Security (FNS) PPA in FY 2016, as follows: \$102.659 million, 28 FTE

Information Systems Security Line of Business

The Information Systems Security Line of Business (ISSLoB) improves the level of information systems security across government by eliminating duplication of effort, increasing aggregate expertise and enhancing the overall security posture of the federal government. This value proposition is supported through the use of Shared Service Centers (SSCs), consolidated acquisitions, agency standard practices and lessons learned across agencies. The ISSLoB aims to improve information systems security across the federal government by:

- Identifying problems and proposing solutions to strengthen the ability of all agencies to identify and manage information security risks
- Providing improved, consistent and measurable information security processes and controls government-wide
- Achieving savings or cost-avoidance through reduced duplication and economies of scale

This investment is proposed to be funded out of the Federal Network Security (FNS) PPA in FY 2016, as follows: \$3.040 million, 3 FTE

Total Change 2015 to 2016	24	13	\$102,070

NPPD requests \$479.760 million for Network Security Deployment, including 169 FTP/150 FTE. This is an increase of \$102.070 million and an increase of 24 FTP/13 FTE from the 2015 President's Budget. It includes the following adjustments-to-base:

- Increase of \$1.320 million and 8 FTE for annualization of prior year positions
- Increase of \$0.041 million for annualization of the 2015 pay raise
- Increase of \$0.189 million for the 2016 pay raise
- Increase of \$0.010 million for 2016 retirement contributions
- Increase of \$3.043 million for 2016 cybersecurity pay reform
- Increase of 2 FTP/2 FTE for the DHS FY 2016 Balanced Workforce Strategy
- Increase of \$112.591 million for operations and maintenance for the National Cybersecurity Protection System
- Decrease of \$3.679 million and 8 FTE for salaries and benefits right-sizing
- Decrease of \$1.686 million for non-recurring adjustment for facilities buildout
- Decrease of \$1.644 million for business and program support efficiencies
- Decrease of \$0.152 million for headquarters efficiency for cellular wireless and parking
- Decrease of \$119.753 million for non-recurring costs for the National Cybersecurity Protection System

NPPD is responsible for enhancing the protection of Federal civilian Departments’ and agencies’ IT infrastructure from cyber threats. To achieve this mission, Network Security Deployment (NSD) develops, deploys, and sustains the National Cybersecurity Protection System (NCPS), operationally known as EINSTEIN. NCPS is an integrated system delivering intrusion detection, analytics, intrusion prevention, and information sharing capabilities to public and private stakeholder groups across the Homeland Security Enterprise.

In FY 2009, NSD began deploying EINSTEIN 2, which passively collects network flow traffic to and from participating Federal executive agencies’ networks, and provides an intrusion detection capability that alerts when a pre-defined specific cyber threat is detected. In FY 2014, NSD deployed EINSTEIN 3 Accelerated (E³A), which acts on suspected malicious E-mail and DNS traffic preventing harm to protected agencies’ networks. EINSTEIN 2 and E³A’s network intrusion detection capability uses a set of custom signatures¹ derived from numerous sources such as commercial and public computer security information, incidents reported to US-CERT, information from Federal partners, and independent US-CERT in-depth analysis.

NCPS’s analytic capabilities capture, organize, and analyze data collected from EINSTEIN sensors and other data feeds. These capabilities enable US-CERT to fuse information and correlate malicious

¹Signatures are specific machine readable patterns of network traffic that affect the integrity, confidentiality, or availability of computer networks, systems, and information. For example, a specific signature might identify a known computer virus that is designed to delete files from a computer without authorization.

network activities across participating Federal Executive Branch agencies to achieve situational awareness of high profile cyber threats.

Information sharing capabilities provide situational awareness about current and potential cybersecurity threats and vulnerabilities with Federal, State, and local governments and agencies; private sector partners and infrastructure owners and operators; and the public.

The FY 2016 NSD funding request reflects this strategy by focusing on four key program elements:

Sustaining Deployed Capabilities

In FY 2016, NSD will sustain the operational elements of NCPS, including detection, analytics, and significant core infrastructure. NSD delivers EINSTEIN 2 services directly to Federal Departments and agencies (D/As) through Trusted Internet Connection Access Providers (TICAPs) or through ISPs at Managed Trusted Internet Protocol Service (MTIPS) locations. As of December 2014, NSD has deployed 227 EINSTEIN 1, 76 EINSTEIN 2 sensors distributed among 20 departments and agencies (62 sensors) and 4 MTIPS providers (14 sensors), monitoring 68 D/As traffic.

EINSTEIN sensors are supported by extensive IT and capital infrastructure. The Mission Operating Environment (MOE) is a dedicated IT network environment that hosts NCPS intrusion detection, intrusion prevention, analysis, and information sharing capabilities. The MOE serves as the foundational infrastructure for NCPS, including the exclusive communications tools and operating system used by US-CERT to conduct its daily operations.²

All data collected from EINSTEIN sensors is stored and accessed on this dedicated network, which does not directly connect to any DHS networks; this protects the Department from harm resulting from potentially malicious data. The MOE allows analysts to securely access, share, and analyze NCPS data. EINSTEIN sensors and the MOE are administered at the 50,000 square foot NCPS Operations and Service Center facility, which houses the majority of NCPS's operations support. NSD also maintains a significant communications infrastructure that connects the NCPS Operations Center with DHS Data Centers and headquarters facilities in the Washington, D.C. area.

NSD maintains NCPS to meet an operational system availability of 99.5-percent. Achieving this standard requires significant operations support; maintenance of hardware and software; and continual technical refresh of both primary and redundant system locations.

- *Operations:* The mission-critical nature of NCPS requires system and network administrators to be available 24/7/365. Help Desk professionals are located on-site at the NCPS Operations and Service Center performing hourly physical system checks and visual inspections; taking users' calls; isolating problems using standard troubleshooting procedures; opening trouble tickets; and forwarding trouble tickets to system administrators that administer fielded equipment on-site and remotely.
- *Hardware and Software Maintenance:* In accordance with the program Integrated Logistics Support Plan, as NCPS hardware reaches end-of-life or degrades to the point of requiring

² As the system developer and operator, NSD also uses the MOE to provide user support to US-CERT.

replacement, it is replaced with spares on hand or with new equipment processed via vendor warranty agreements. Replacement components are shipped as soon as possible to reduce potential system downtime.³ Some software for deployed systems, such as antivirus products, is purchased on the software support model with an annual renewal.

- *Technology Refresh:* Current network hardware is on a three-year refresh cycle, based on industry best practices. System overhaul, upgrade, or migration is considered to address the pace of innovation, technology advancement, and IT obsolescence.
- *Redundancy:* NSD utilizes the two DHS Data Centers to provide redundancy for NCPS's critical systems. Deployment to both Data Centers provides complete failover capability, allowing continued operations in the event of a system or catastrophic failure at one data center, or while a data center site is undergoing a technology refresh.

Expanding Active Defense

Currently deployed EINSTEIN 2 technology is passive – it monitors Federal network traffic and allows DHS to analyze Federal Executive Branch traffic and detect malicious traffic. In FY 2014 and FY 2015, NSD continued efforts supporting deployment of an initial operational capability known as E³A; the FY 2016 request further expands this capability. With the adoptions of E³A, DHS will assume an active role in defending .gov network traffic and significantly reduce the threat vectors available to malicious actors seeking to harm Federal networks. In FY 2016, NSD will continue to deploy an intrusion prevention capability to the Tier 1 ISPs, allowing DHS to provide active defense for a variety of Federal network traffic protocols.

E³A intrusion prevention capability will leverage the latest available information from commercial and government sources to apply protection measures to a wide set of Federal network traffic protocols. When a signature alerts on a known or suspected cyber threat, E³A will act on that threat to stop malicious traffic and prevent harm to the intended targets.

Providing Enterprise Services

DHS is in a unique position to coordinate an aggregated, national-level cyber situational awareness view to a broad set of cybersecurity stakeholders. Currently, NCPS capacity to share analysis with decision makers and stakeholders is limited and manpower intensive. Going forward, NSD will focus on working with Federal partners to enhance and expand cybersecurity enterprise services, access to information, and analytic capabilities to a broader set of stakeholders, including constituencies within the Federal Government, State and local authorities, and the private sector. The system's goal is to "connect the dots" in identifying cybersecurity threats by making relevant pieces of information easily accessible to those who need it, regardless of where they are in the Government: within the constraints of policy and law.

Tactical Engineering and Acquisition Approaches

NSD employs technical and acquisition approaches to improve NCPS efficiency and effectiveness including:

³ The NCPS Program Office provides maintenance and supply chain services directly to the Data Centers.

- *Enterprise Architecture Principals:* NSD's IT enterprise architecture principles establish a common vision for the NCPS enterprise architecture while ensuring tactical decisions are made without compromising overall program objectives. These principals focus on designing a more service-oriented architecture allowing greater flexibility in developing and integrating new components while improving system security.
- *Managed Services:* In FY 2011, NSD began evaluating whether acquiring managed security services could reduce the costs of developing and delivering cybersecurity services. This analysis concluded that managed security services offer an efficient and effective approach for delivering certain intrusion prevention services by leveraging services ISPs already provide to private sector customers. The 2016 President's Budget reflects a continued expansion of the managed service acquisition approach for delivering intrusion prevention security.

Sustained Current Services funding in FY 2016 will have the following effects across the complete suite of NSD activities:

Intrusion Prevention: FY 2016 funding will sustain the ISP-managed service prevention capability with the capacity to service all Tier 1 ISP .gov users, traffic aggregation facilities, and the operations and maintenance of the classified MOE. Additionally, NCPS will begin deploying additional prevention services utilizing threat, source, destination and target profiling against threats evading typical technologies.

Information Sharing: The FY 2016 funding request will facilitate building on the capabilities deployed in FY 2014 and FY 2015, supporting deployment of advanced tools and technologies expanding the cybersecurity community's access to DHS threat information and analysis. NSD will update the NCPS portal with a near-real time situational awareness dashboard providing an entity-specific view of its cyber posture based on a correlation of information provided to DHS, including CDM and other cyber program data. Portal upgrades will also include an environment in which NCPS users can collaborate to conduct analysis in near-real time through sharing of analytics and data sets, wiki capabilities, and a shared analytic workspace. FY 2016 resources will also enable continued expansion of the ECS Program, supporting additional critical infrastructure entities across all 16 sectors.

Analytics: FY 2016 funding will focus on deploying new analytic capabilities that began development in FY 2015. NSD will deploy streaming analytics to discover patterns in live data that includes the processes and tools associated with near real-time analysis of data streams. Analysis conducted on live data from traffic aggregation points will aid in the near real-time or rapid identification of cyber threats, unusual traffic patterns, or deviations from normalized baselines. FY 2016 funds will allow analytic functions application against datasets collected from multiple sources in a coordinated, automated fashion to identify relationships hidden within large amounts of data otherwise remaining separate and unrecognized. Capabilities developed in FY 2016 will build the infrastructure to deploy advanced analytics to our information sharing partners, for subsequent deployment within their own networks to identify suspicious activities and potential cyber-attacks.

Intrusion Detection: FY 2016 funding sustains EINSTEIN 1 and 2 technologies and provides for EINSTEIN 2 expansion supporting departments and agencies having signed Memoranda of Agreement (MOAs) for detection services. Based on FY 2014 comparison and analysis, EINSTEIN 2 expansion

will focus on deploying and maintaining sensors at Nest (traffic aggregation) locations versus continued deployment at TIC/MTIPS locations. NSD will use FY 2016 funding to begin implementing new detection capabilities and methods within the existing sensor suite or via deployed near-real time analytics, allowing NSD to detect new threats or attempted malicious actions against .gov traffic. Detection capabilities will expand to include identifying malware present on D/As internal networks, cyber-attacks embedded in web traffic, and malicious traffic entering and exiting cloud-based service provider services.

Core Infrastructure: The NCPS Core Infrastructure capability area offers a common operational and development platform to promote interoperability and efficiency across projects. Core Infrastructure consists of the common equipment, systems, software, and services used across NCPS, regardless of the particular project. Core Infrastructure also serves as the foundation upon which project-specific systems and capabilities are built.

FY 2016 funding increases the MOE (Top Secret, Secret, and Unclassified) capacity to support the expanded user base predicted with delivery of NCPS Information Sharing capabilities.

Program Planning and Operations: Program Planning and Operations consists of mission support services and common operating costs. This includes funding for NCPS-level strategic and technical planning and assessments; system-level planning, architecture, and engineering; procurement support and contracts oversight; cost estimating and financial management; front office support for information management, executive secretariat, and personnel management; federal travel; and training.

MAJOR ACQUISITIONS:

National Cybersecurity & Protection System

Pursuant to Homeland Security Presidential Directive 7, NPPD works collaboratively with Federal, State and local governments, the private sector, academia, and international partners to secure the Nation’s critical cyberspace and information technology infrastructures by employing risk management and cyber incident preparedness, prevention, and response activities. To meet the cybersecurity mission, the National Cybersecurity Protection System (NCPS), operationally known as EINSTEIN, was developed and implemented to protect the Nation's cyber infrastructure by serving as a focal point for cyber activity and response across the Federal Government. NCPS is a fully integrated, end - to - end system comprising the hardware, software, and other components being procured to support the mission.

This investment is proposed to be funded out of the Network Security Deployment (NSD) PPA in FY 2016, as follows: \$463,856 million, 148 FTE

FY 2014 Activity Funding (\$\$\$ thousands)	FY 2015 Activity Funding (\$\$\$ thousands)	FY 2016 Activity Request (\$\$\$ thousands)

FY 2016 Total Request	29	25	\$20,321
Total Change 2015 to 2016	6	2	\$2,708

NPPD requests \$20.321 million for Global Cybersecurity Management, including 29 FTP/25 FTE. This is an increase of \$2.708 million and 6 FTP/2 FTE from the 2015 President's Budget. It includes the following adjustments-to-base:

- Increase of \$0.007 million for annualization of the 2015 pay raise
- Increase of \$0.027 million for the 2016 pay raise
- Increase of \$0.001 million for 2016 retirement contributions
- Increase of \$0.518 million for 2016 cybersecurity pay reform
- Increase of \$0.198 million and decrease of 1 FTE for salaries and benefits right-sizing
- Decrease of \$0.006 million for headquarters efficiency for cellular wireless and parking

CURRENT SERVICES PROGRAM DESCRIPTION:

Research & Standards Integration	0	0	1,530	0	0	1,530	0	0	4,545
Supply Chain Risk Management	0	0	4,141	0	0	4,118	0	0	4,112

Global Cybersecurity Management facilitates development and promulgation of sound cybersecurity practices and strategies for protecting the Nation's critical infrastructure and key resources. This includes further development and implementation of the initiative to provide cybersecurity education to the Nation; vulnerability analysis, software threat and risk assessments for the Information and Communications Technology (ICT) supply chain; and engagement and collaboration with stakeholders to ensure alignment with NPPD's cybersecurity interests.

GCSM is comprised of the following four activities:

Cybersecurity Education Office: Cybersecurity Education leads the national effort for cybersecurity formal education, workforce planning, training, and professional development, enabling our Nation to protect against and respond to threats to the Homeland. It assists in implementing the National Initiative for Cybersecurity Education (NICE) by supporting efforts to improve the Nation's cybersecurity education posture and ensure a robust, competent cybersecurity workforce.

The program will continue its support of the National Cybersecurity Workforce Framework, Federal and non-Federal cybersecurity workforces, and promoting cyber competitions and professionalization. Cybersecurity Education will continue the National Centers of Academic Excellence and Scholarship for Service programs, enhancing the pipeline of well-trained information security professionals. It will also continue the Integrated Cybersecurity Education Communities (ICEC) project; strengthen cybersecurity education, awareness, and digital literacy at the high school level; and foster a dynamic workforce at the national level.

The program will also provide the Federal Virtual Training Environment and the Federal Cybersecurity Training Events program, delivering role based training to government personnel. In addition, Cybersecurity Education will continue developing and implementing the National Initiative for Cybersecurity Careers and Studies (NICCS) Portal. The NICCS Portal provides nationwide access to cybersecurity education, training, and professional development resources. NICCS provides an online resource to enhance the Nation's ability to secure cyberspace and is critical to the success of related efforts.

Software Assurance (SwA): SwA improves software security by collaboratively advancing standards-based technologies, tools, processes, and practices in both the public and private sectors. SwA works to reduce software vulnerabilities, minimize exploitation, automate sharing, and address improving capabilities to routinely develop and deploy resilient and trustworthy software products. No funds are requested for this program in FY 2016.

Research and Standards Integration (RSI): RSI advances the future state of cybersecurity through efforts in standards development activities and the insertion of research and development (R&D) products into NPPD operations and programs. RSI serves as a technology transition facilitator, accelerating the integration of technologies into systems and programs. This encompasses promoting the development of needed new technologies and transitioning them to operational programs. RSI also promotes the advancement of cybersecurity standards and advocates the adoption of relevant standards into operational systems and programs. On national and international levels, RSI influences cybersecurity standards and frameworks promoting interoperability and automation supporting NPPD's mission.

The FY 2016 funding will continue efforts in NPPD's identification, collaboration and integration of new, innovative technologies into NPPD operational systems and programs. RSI will identify and propose emerging technologies for transition into the operating environment.

The FY 2016 funding request will advance RSI's ability to promote the advancement and adoption of national and international ICT and cybersecurity standards, both within and external to DHS. Externally, RSI will emphasize cooperative partnerships and information sharing between Departments and agencies, the private sector, and standards organizations on national and international levels. Further, RSI will identify and communicate emergent needs for enhancements to existing standards or the development of additional standards, based on identified gaps with respect to DHS and NPPD interests.

FY 2016 funding enables continued leadership in standards committees within national and international standards development organizations; for example, NPPD can continue to exert influence in developing standards critical to the NPPD mission in the areas of incident information sharing/exchange, security automation, continuous diagnostics and monitoring, cyber threat intelligence, identity and access management, privacy, and mobile computing security.

Supply Chain Risk Management (SCRM): SCRM helps protect the civilian Federal Government ICT supply chain. In FY 2016, SCRM efforts will transition from a focus on awareness campaigns to a capability-based program. The Supply Chain Review Service will address increasingly advanced supply chain threats by developing and implementing a series of tools, capabilities, and processes for utilization by the DHS stakeholder community:

- A “*Supply Chain Inquiries*” function will use a Help Desk to provide timely and actionable responses to supply chain inquiries. This Help Desk will be staffed by SCRM subject matter experts and will target mature organizations with well-developed SCRM procedures.
- The “*Supply Chain Guidance*” function will use SCRM’s Supply Chain Advisors (SCAs) to provide organizations with assistance on complex supply chain issues. This capability will target organizations that require more comprehensive, longer-term supply chain assistance.
- The “*Supply Chain Risk Evaluations*” function, currently in the pilot stage, will administer and conduct risk evaluations of ICT products through a suite of Supply Chain Acquisition Risk Assessment (SARA) tools.

SCRM will continue collaboration with program management and systems engineering organizations to improve supply chain risk awareness and provide possible mitigations. SCRM will also continue providing subject matter expertise, supporting the National Institute of Standards and Technology (NIST) standards, policy recommendations, and remaining EO 13636 and PPD-21 transitions to steady-state activities.

Program Performance Justification
(Dollars in Thousands)

PPA: Critical Infrastructure Cyber Protection and Awareness

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	51	49	\$73,013
FY 2015 President's Budget	67	63	\$70,963
2016 Adjustments-to-Base	1	-	\$4,382
FY 2016 Current Services	68	63	\$75,345
FY 2016 Program Change	10	5	\$2,239
FY 2016 Total Request	78	68	\$77,584
Total Change 2015 to 2016	11	5	\$6,621

NPPD requests \$77.584 million for Critical Infrastructure Cyber Protection & Awareness, including 78 FTP/68 FTE. This is an increase of \$6.621 million and an increase of 11 FTP/5 FTE from the 2015 President's Budget. It includes the following adjustments-to-base:

- Increase of \$0.660 million and 4 FTE for annualization of prior year positions
- Increase of \$0.014 million for annualization of the 2015 pay raise
- Increase of \$0.079 million for the 2016 pay raise
- Increase of \$0.005 million for 2016 retirement contributions
- Increase of \$1.076 million for 2016 cybersecurity pay reform
- Increase of \$1.120 million and a decrease of 3 FTE for salaries and benefits right-sizing
- Decrease of \$0.153 million for non-recurring adjustment for facilities buildout
- Decrease of \$1.597 million and 4 FTP/4 FTE for business and program support efficiencies
- Decrease of \$0.022 million for headquarters efficiency for cellular wireless and parking
- Increase of 5 FTP/3 FTE for the DHS FY 2016 Balanced Workforce Strategy

Resources are realigned for the following purposes:

- Multi-State Information Sharing and Analysis Center (MS-ISAC) (increase of \$3.200 million from US-CERT PPA to CICPA PPA): Realigns funding for MS-ISAC from US-CERT to related critical infrastructure information sharing projects funded by CICPA.

America’s national security and economic prosperity are increasingly dependent upon the cybersecurity of critical infrastructure. As physical and cyber infrastructure grow increasingly interconnected, critical infrastructure and emergency response functions are inseparable from their supporting information technology systems. A successful cyber-attack on a control system could potentially result in physical damage, loss of life, and cascading effects that could disrupt services. The Federal Government’s role in this effort is to share information and encourage enhanced security and resilience, while identifying and addressing gaps not filled by the marketplace. Critical Infrastructure Cyber Protection and Awareness (CICPA) collaborates with public and private sectors to assess and mitigate risk to the Nation’s cyber critical infrastructure, promote cybersecurity awareness, maintain relationships with Governmental cybersecurity professionals to share information regarding cybersecurity initiatives, and develop partnerships promoting cybersecurity collaboration.

One of CICPA’s leading initiatives, the Industrial Control Systems Cyber Emergency Response Team (ICS-CERT), works to protect and secure control systems essential to the Nation’s overarching security and economy. ICS-CERT’s relationships, risk mitigation and analysis techniques, and ability to keep pace with the compounding number of exploited vulnerabilities enable our Nation’s industrial control systems and stakeholders to operate under reduce cyber risk and prepare for future vulnerabilities.

CICPA’s enhanced information sharing programs support EO 13636 and PPD-21 and help secure critical infrastructure and increase its resilience against cyber and physical attacks, as well as natural disasters and terrorist attacks. EO 13636 expands the voluntary DHS Enhanced Cybersecurity Services program, promoting cyber threat information sharing between government and the private sector. This engagement helps critical infrastructure entities protect themselves against cyber threats to the systems upon which so many Americans rely. CICPA manages the Program Management Office (PMO) for the ECS program, including engagement and validation with Commercial Service Providers (CSPs) and critical infrastructure partners, coordination with interagency data providers, and research into development of new countermeasures. CICPA coordinates closely with the NCCIC technical staff who develop, vet, and transmit the indicators to the providers and with the Network Security Deployment team that reviews and accredits the CSPs.

Additionally, in FY 2016 CICPA will continue supporting implementation of the DHS Critical Infrastructure Cyber Community (C³) Voluntary Program, an innovative public-private partnership designed to help align CI owners and operators with existing resources that will assist their efforts to adopt the National Institute of Standards and Technology (NIST) Cybersecurity Framework and manage their cyber risks. The C³ Voluntary Program encourages use of the NIST Cybersecurity

Framework for long-term cybersecurity risk management awareness, promotes national-level engagement, and coordinates cross-sector critical infrastructure risk planning.

CICPA is comprised of the following six activities:

Control Systems Security Program (CSSP): The CSSP will utilize FY 2016 funding to reduce cyber risk to industrial control systems integrated in the Nation's critical infrastructure. Specifically, CSSP will dedicate the majority of its funding to the operations of Industrial Control Systems Cyber Emergency Response Team (ICS-CERT), including malware analysis; vulnerability handling; vulnerability mitigation; incident response; a projected 75 voluntary cybersecurity assessments, production of alerts; advisories; and other informational products and operational duties. These activities will ensure CSSP continues to be the premier government organization and clearinghouse dedicated to the cybersecurity of industrial control systems in our Nation's critical infrastructure. CSSP will also dedicate funding to cybersecurity training courses for industrial control systems incident prevention and response, as well as revise and update the Cybersecurity Evaluation Tool, a self-assessment tool provided freely to critical infrastructure partners and support ICS cybersecurity standards development. CSSP will continue to work actively with law enforcement and the intelligence community to provide timely and actionable information for all stakeholders. Additionally, CSSP will continue to grow and use the Industrial Control Systems Joint Working Group in its ongoing effort to maintain effective trust-based relations with private sector asset owners and control systems vendors while jointly addressing emerging cybersecurity issues.

Critical Infrastructure Protection – Cybersecurity (CIP-CS): The FY 2016 request includes funding for CIP-CS to continue leading national planning efforts to prioritize and protect cyber elements of U.S. critical infrastructure sectors, and address requirements driven by PPD-21, EO 13636, and NIPP 2013 by supporting, promoting and developing sector-wide cybersecurity risk management strategies. CIP-CS will use the funding to manage and strengthen cyber CI partnerships with public and private entities, mature national cyber resiliency efforts, and implement cybersecurity strategies that build assurance and resilience across the cyber sector community. In FY 2016, CIP-CS will continue its efforts in the C³ Voluntary Program, supporting a national awareness campaign strategy and reinforcing existing partnerships and programs that advocate cybersecurity risk awareness. This funding also will enable CIP-CS to integrate information from internal and external cyber capabilities and address national risk. Further, CIP-CS will collaborate and provide assistance to internal and external partners, including the Nationwide Public Safety Broadband Network cyber risk assessment planning efforts, and SLTT entities, to develop, communicate, and utilize planning frameworks and supporting capabilities to implement functions-based risk management approaches.

Cyber Exercises Program (CEP): CEP plans, coordinates, and conducts cyber exercises that prepare and enhance incident operational capabilities for DHS, Federal, State, local, regional, international, and private sector partners. The FY 2016 request includes funding to further support two premiere cyber exercises, the Cyber Storm Exercise Series and the National Level Exercise (NLE) effort. Cyber Storm and NLE both enable CEP to bring together its broad spectrum of partners and resources to bolster the Nation's readiness and preparation for a significant cyber incident. Other CEP activities, such as exercises with other Federal, State, local, regional, international, and private sector partners, will be planned and executed as a way to further develop and grow CEP's ability to positively impact its diverse partnerships.

Cybersecurity Evaluations Program (CSEP): CSEP conducts voluntary cybersecurity assessments across all 16 critical infrastructure sectors and SLTT Governments and provides regional support through its Cybersecurity Advisor initiative. Cybersecurity Advisors provide a Federal resource to regions, communities, and businesses. Their primary goal is to assist in protecting cyber components within the Nation's critical infrastructure by acting as individual representatives of the Department, forming personal, on-the-ground connections with critical infrastructure owners and operators. In support of the C³ Voluntary Program, the FY 2016 request will facilitate 100 voluntary Cyber Resilience Reviews and metric collection on the adoption or implementation of the Cybersecurity Framework via Cyber Resilience Review data analysis. Additionally, CSEP will deploy five additional regional Cybersecurity Advisors and provide cyber expertise to the cyber-centric RRAPs and other joint operational activities within NPPD.

Multi-State Information Sharing and Analysis Center (MS-ISAC): MS-ISAC is a collaborative SLTT government-focused cybersecurity organization, bolstering SLTT capacity and network defense capabilities against cyber threats. MS-ISAC provides a centralized forum for information sharing between the Federal Government and SLTT governments through a number of crucial services, while providing opportunities to analyze information and correlation across its SLTT members. MS-ISAC uses a consolidation of services, including hosting a 24/7 cybersecurity operations center, distributing cybersecurity advisories and bulletins, and directly responding to and assisting MS-ISAC members with response to cyber incidents. In FY 2016, MS-ISAC will continue providing base services to all MS-ISAC members as well as supporting the Managed Security Services program, providing firewall monitoring and netflow analysis services to participating SLTTs. This will enhance cyber situational awareness of our Nation's SLTT government network environments and provide DHS with real-time risk information that supports national cybersecurity situational awareness.

Additionally in FY 2016, the Center for Internet Security will begin supporting state and local fusion centers and Homeland Security Advisors. Through this initiative, fusion centers will receive cyber-related products and information from many sources including the NCCIC, US-CERT, ICS-CERT, and MS-ISAC. This initiative will ensure any actionable threat and vulnerability information collected and analyzed by both DHS and MS-ISAC is shared with fusion centers and Homeland Security Advisors in a timely manner.

Outreach and Awareness: The FY 2016 request includes funding to support Outreach and Awareness, which coordinates domestic and international engagement and outreach by promoting cybersecurity awareness among and within the general public and key stakeholder communities. Outreach and Awareness will support key outreach events as well as ongoing NPPD speaking and media engagements. Funding will also support the planning, coordination, and execution of various Outreach and Awareness activities, including National Cybersecurity Awareness Programs (such as National Cybersecurity Awareness Month and the Stop.Think.Connect.TM Campaign); research and participation in large scale outreach opportunities; material development; digital outreach; and new partner engagement. FY 2016 funding will allow Outreach and Awareness to continue building international partnerships through various international forums including bilateral and multilateral venues, representing DHS programs and advancing U.S. cybersecurity objectives. Finally, Outreach and Awareness will utilize FY 2016 funding to further advance the ECS program, a voluntary information sharing program aimed at protecting Federal and private sector critical infrastructure. Outreach and Awareness' engagement and coordination with CSPs and Sector Specific Agencies

(SSAs), information management and accreditation activities enable streamlined public-private partnerships, thus providing valued cybersecurity service to the private sector and Federal entities.

Business Operations	0	0	415	0	0	411	0	0	411
Facilities	0	0	652	0	0	286	0	0	285

In FY 2016, Business Operations will establish policies and direction to sustain overall cybersecurity and communications strategy and planning through effective integration of resource and financial management, human capital, facilities, performance management, policy development and implementation, information and personnel security, and strategic planning. Business Operations also oversees the implementation of national cybersecurity and communications policies and ensures that

appropriate resources are available to support its mission and specialized information technology systems.

Business Operations is comprised of the following two activities:

Business Operations: Provides oversight to financial and acquisition management, human capital, information and personnel security, performance management, policy development, and strategic planning capabilities:

- Financial Management provides accounting and reporting activities and oversees the management of appropriated funding and expenditures, and prepares budgetary reports required by OMB and Congress.
- Acquisition Management provides guidance and oversight for procurement actions and planning strategies.
- Human Capital manages staffing plans and processes, develops and institutes training and mentoring programs for current employees, provides personal development incentives to improve employee morale, and refines and supplements the existing workforce training programs. Human Capital also manages full-scale accelerated, promotional cybersecurity fellowship and internship programs.
- Information and Personnel Security establishes IT architecture enhancements, integrates system modifications to provide redundant capabilities, and provides collective resources necessary to support contingency of operations planning and sustainment.
- Performance Management manages process improvements to reduce response timelines for internal business processes and external informational inquiries.
- Policy Development and Implementation manages information and system security controls, oversight, and accreditation programs and processes.
- Strategic Planning supports standard budgeting, acquisition collaboration tools, operating policies and procedures to streamline budgeting, execution activities, and strategies throughout the Division.

Facilities: Coordinates the development of comprehensive facility plans addressing real estate requirements, security, and critical infrastructure issues. Facilities also manages real estate, IT, and supporting resources.

The Office of Emergency Communications (OEC) supports and promotes continuing communications for emergency responders and government officials in the event of natural disasters, acts of terrorism,

or other man-made disasters, and works to ensure, accelerate, and attain interoperable emergency communications nationwide. OEC serves as the coordination point for interoperable communications policies and holds key responsibilities, such as its leadership role in developing and implementing the National Emergency Communications Plan (NECP).

Emergency communications encompasses operability, interoperability, and continuity of communications across a full range of current and future voice, data, and video information exchange capabilities. OEC is committed to ensuring emergency response personnel government-wide and across all disciplines can communicate as needed, on demand, and as authorized. To achieve this vision, OEC has six key strategic goals to improve emergency communications and support DHS.

Goal 1: Fostering coordination between Federal, State, local, tribal, and private sector emergency communications stakeholders.

Goal 2: Improving emergency communications capabilities through targeted interaction with Federal, State, local, and tribal agencies.

Goal 3: Targeting Federal grants to States and localities with the most critical emergency communications needs in alignment with the NECP.

Goal 4: Developing policies and plans guiding, promoting, and enhancing efforts to improve emergency communications nationwide.

Goal 5: Developing innovative methods to address emergency communications gaps.

Goal 6: Creating a unified OEC headquarters and regional staff committed to ensuring programmatic success.

OEC is comprised of the following five activities:

Interoperability Support: OEC supports Critical Infrastructure Outreach, NECP; Federal grants and emergency responder training programs. Title XVIII of the Homeland Security Act of 2002 directs OEC to coordinate with Federal and SLTT representatives in developing national policy and planning priorities targeting emergency communications gaps and vulnerabilities, and assesses progress regularly in strategically targeting resources and ensuring program effectiveness.

FY 2016 funding supports increasing stakeholder input through various outreach mechanisms (e.g., SAFECOM, Emergency Communications Preparedness Center) to shape and inform policy and planning activities. OEC collects data from these stakeholders toward measuring progress and identifying areas for follow-up improvement support. OEC provides inter-governmental (Emergency Communications Preparedness Center) coordination efforts and intra-Departmental (OneDHS Emergency Communications Committee) activities, to improve emergency communications capabilities and coordination government-wide.

OEC provides approximately 114 requested technical assistance engagements to SLTTs in supporting the implementation of Statewide Communication Interoperability Plans (Statewide Plans), including planning for deploying the Nationwide Public Safety Broadband Network (NPSBN), targeting those jurisdictions with the lowest capability and highest risk. Of the 114 technical assistance engagements, OEC executes approximately 20 technical assistance engagements for tribal governments based upon tribal NECP Goal 2 capabilities data submitted to DHS in 2013. Through the collection of this data and related engagements, OEC will implement recommendations and initiatives to the NECP.

Outreach and Coordination: OEC supports stakeholders at all levels – Federal, SLTT, and the private sector – to address and improve interoperable emergency communications. Through this program, OEC informs stakeholders of DHS policies and activities, and provides the venue for receiving feedback and guidance on improving emergency communications capabilities. This includes policy development, investment planning, and direct assistance, such as facilitating collaborating, information sharing, identifying interoperability gaps, and standardization.

FY 2016 funding enables OEC to continue supporting workshops and webinars to approximately 25 – 30 States and territories. The goal of these workshops and webinars is to update Statewide Plans, which set strategic priorities within each State and focus on improving public safety emergency communications, especially during a period of new technology adoption and implementation with deployment of FirstNet digital communications. These updated Statewide Plans will address activities across all lanes of the Interoperability Continuum plus various technologies, such as land mobile radio, wireless broadband, satellite, amateur radio, etc.

FY 2016 funding also provides for border region efforts supporting the Southwest Border Communications Working Group, Canada-United States Communications Interoperability Working Group as part of the Beyond-the-Border initiative, as well as participation in the High-Level-Consultative-Commission as a member of the United States delegation in discussions with Mexico on border region communications issues.

FY 2016 funding also continues support for the 15 OEC Coordinators assigned across the Nation who work with stakeholders at all levels building and improving emergency communications capabilities. OEC Coordinators conduct face-to-face meetings with stakeholders in their assigned sectors to build trusted relationships, identify communications capability gaps, assist with correction communications interoperability issues, support communications restoration and planning, promote stakeholder awareness of emerging technologies, and support future capabilities development.

Furthermore, OEC is assisting the Executive Office of the President (EOP) Office of Science and Technology Policy in meeting the requirements as outlined in EO 13616, *Accelerating Broadband Infrastructure Deployment*. This EO charges the Broadband Deployment of Federal Property Working Group with ensuring a coordinated and consistent approach in implementing streamlined agency procedures, requirements, and policies related to wired and wireless broadband infrastructure deployment on Federal lands, buildings, rights of way, federally assisted highways, and tribal lands.

Technical Assistance (TA) and Grants: Consists of activities providing support to State, local, and tribal governments to mitigate emergency communications gaps identified by national or statewide strategic planning through on-site and virtual technical assistance and NECP Goal 2 efforts. OEC serves as a subject matter expert on programmatic grant development, implementation, and evaluation. FY 2016 funding enables OEC to continue ongoing efforts to identify, assess, and advise appropriate parties about both existing and recommended regulations, policies, and standards that influence the management and operations of financial assistance programs.

In preparation for NPSBN, this funding provides 56 consultation workshops through OEC TA for states and territories developing the wireless coverage requirements for SCIPs and FirstNet plans. The

requested FY 2016 funding also develops and implements a process to educate and collect data from Federal agencies, as well as execute 14 coverage workshops for developing a nationwide perspective of the Federal coverage requirements for FirstNet.

The requested FY 2016 funding also provides 20 TA engagements for Federal responders – targeting responders that have a high need for interoperability or mutual aid with state and local public safety.

SAFECOM: SAFECOM activities engage stakeholders at SLTT governments, across all disciplines, in addressing and improving interoperable emergency communications by sharing lessons, best practices, and priorities with DHS and among themselves. Through SAFECOM, products are developed to educate policymakers and the emergency communications community across all disciplines, and provide recommendations on OEC services.

FY 2016 funding allows OEC to continue in-depth stakeholder engagements with the National Council of Statewide Interoperability Coordinators (NCSWIC) through recurring in-person and virtual meetings. In coordination with the NCSWIC and SAFECOM communities, FY 2016 funding supports developing quality products to educate policy makers and the emergency response community on stakeholder-identified lessons learned and best practices, plus other key priorities, such as revising current documents to be 508c compliant.

Business Support: Consists of mission support functions including executive secretariat, human capital, training and development, and other administrative functions for OEC. In addition, Business Support includes OEC's outreach functions.

OEC will develop and roll out a competency model, targeting employee training to enhance staff ability to achieve the OEC mission, as well as improve mission alignment by defining workforce competencies and aligning resources to workforce needs.

Total Change 2015 to 2016	-	(3)	\$10,268

NPPD requests \$63.649 million for Priority Telecommunications Services, including 60 FTP/57 FTE. This is an increase of \$10.268 million and a decrease of 3 FTE from the 2015 President's Budget. It includes the following adjustments-to-base:

- Increase of \$0.019 million for annualization of the 2015 pay raise
- Increase of \$0.076 million for the 2016 pay raise
- Increase of \$0.004 million for 2016 retirement contributions
- Increase of \$0.248 million for 2016 cybersecurity pay reform
- Increase of \$10.000 million for contract escalation for National Security and Emergency Preparedness (NS/EP) Priority Telecommunications Services
- Decrease of \$0.059 million and 3 FTE for salaries and benefits right-sizing
- Decrease of \$0.020 million for headquarters efficiency for cellular wireless and parking

National Security Presidential Directive 51 / Homeland Security Presidential Directive 20 assigns DHS the responsibility for providing NS/EP communications, including communications that support

Continuity of Operations & Continuity of Government (COOP/COG); Federal and SLTT emergency preparedness and response communications under all circumstances, including conditions of crisis or emergency.

Priority Telecommunications Services (PTS) leverages the Nation's public telephone networks, including cellular systems, enabling voice communications for response and recovery coordination efforts and maintaining essential government functions and operations during a disaster. PTS accomplishes this by maintaining priority services that provide NS/EP voice telecommunications for all levels of the Government and industry organizations during times when networks are congested or degraded. PTS significantly enhances call completion capabilities for national leadership, other NS/EP users, and first responders.

PTS is comprised of the following four activities:

Government Emergency Telecommunications Service (GETS): Provides priority communications on commercial landline communications networks, supporting the President, Federal, State, local, tribal, and other authorized users during times of commercial telephone network congestion caused during natural or man-made disasters. GETS will continue providing priority services covering the United States and its territories, and traverse three major long distance communications carriers and many local exchange carriers. GETS will continue to interoperate with the Defense Switched Network, GSA's Networx, and the Diplomatic Telecommunications Service. This architecture provides a greater than 90 percent call completion rate for GETS.

Wireless Priority Service (WPS): Enhances NS/EP ability to complete wireless calls (originating and/or terminating) during a crisis. WPS provides nationwide wireless subscriber coverage for the President, Federal, State, local and tribal users during commercial cellular telephone network congestion, which may be caused during times of natural or man-made disasters. These services coordinate response and recovery efforts while also facilitating COOPs and COG.

WPS will continue to provide service, ensuring maximum coverage of the U.S. and some of its territories, through nationwide and regional wireless providers. WPS Enhanced Overload Performance priority signaling capability enhances call completion in the Radio Access Network and receives priority access during times of congestion. This architecture provides a greater than 80 percent call completion rate for WPS.

Special Routing Arrangement Service (SRAS): This program provides non-traceable, priority communication service over commercial wireless and wireline telecommunications networks for a special user community. SRAS operates under all conditions, including natural and man-made disasters, cyber attacks, threatened and actual terrorist attacks, major disasters, and other emergencies, even when conventional communications services are congested or degraded.

Government Industry Planning & Management (GIP&M): Executes the following priorities:

- Managing the President's National Security Telecommunications Advisory Committee (NSTAC) under E.O. 12382, *President's National Security Telecommunications Advisory Committee*.
- Directing the NS/EP Communications Executive Committee (EXCOM) under EO 13618.

- Leading the Communications sector and its activities under Homeland Security Presidential Directive-7, *Critical Infrastructure Identification, Prioritization, and Protection*.

GIP&M manages relationships with key government and industry representatives across the Communications sector and other critical infrastructure sectors, assuring information sharing among stakeholders and planning for all hazards responses to disruptions of communications infrastructure and services.

The President's NSTAC was established under EO 12382 to advise the President on NS/EP telecommunications policy. GIP&M provides the EOP with analysis for NSTAC membership, updates NSTAC authorities such as its charter and bylaws, and ensures that the NSTAC remains compliant with the Federal Advisory Committee Act. GIP&M will support up to two subcommittees' efforts for the NSTAC, resulting in final reports to the President, as well as supporting four committee level meetings.

The NS/EP EXCOM, created in 2012 by EO 13618 and co-chaired by DHS and Department of Defense, serves as a government forum to address all NS/EP communications matters. The Joint Program Office (JPO), housed within GIP&M, is responsible for providing full-time, expert, and administrative support for the Executive Committee.

The EXCOM JPO will continue coordinating programs supporting NS/EP missions, priorities, goals, and policy; and, when directed by the EXCOM, convene governmental and non-governmental groups, coordinate activities, and development of policies for senior official review and approval.

DHS serves as the Sector-Specific Agency for the Communications sector in accordance with PPD-21. GIP&M supports the Communications Government Coordinating Council (GCC) and the Communications Sector Coordinating Council (SCC). GIP&M is also responsible for the Communications Sector Specific Plan (CSSP) detailing the application of the National Infrastructure Protection Plan risk management framework to the unique characteristics and risk landscape of the Communications sector.

GIP&M supports multiple joint GCC/SCC meetings and one annual quad meeting with IT and Communications sectors' stakeholders. GIP&M also helps develop joint sector priorities, draft the 2014 CSSP, develop a work plan for sector activities and measure success, and continue to assess sector-wide risk through the National Sector Risk Assessment for the Communications sector and in support of EO 13636.

MAJOR ACQUISITIONS:

National Security and Emergency Preparedness – Priority Telecommunications Service

Priority Telecommunications Service (PTS) is a White House directed National-Level National Security and Emergency Preparedness (NS/EP) Telecommunications Program (NLP) that leverages the commercially owned Public Switched Network (PSN) to provide specially designed telecommunications services for the NS/EP user community during natural or man-made disasters when conventional communications services are ineffective. Specifically, PTS enhances the ability of NS/EP users to complete calls during a crisis or emergency through a degraded Public Switched

Network (PSN) using any of the following three PTS components: Government Emergency Telecommunications Service (GETS); Wireless Priority Service (WPS); Special Routing and Arrangement Service (SRAS), a classified service for special users.

This investment is proposed to be funded out of the Priority Telecommunications Services (PTS) PPA in FY 2016, as follows: \$54.709 million, 18 FTE

FY 2014 Activity Funding (\$\$\$ thousands)	FY 2015 Activity Funding (\$\$\$ thousands)	FY 2016 Activity Request (\$\$\$ thousands)

E.O. 13618 assigns DHS the responsibility for satisfying priority communications requirements using commercial, government, and privately-owned communications resources.

Next Generation Networks (NGN) is comprised of the following activity:

Next Generation Networks Priority Services (NGN-PS): Ensures NS/EP telecommunications during an emergency. NGN-PS facilitates the continuation of NS/EP priority services currently provided by PTS via commercial networks, as major commercial telecommunications carriers replace their current circuit-

switched infrastructure with Internet Protocol (IP)-based infrastructure. To continue providing more than 400,000 authorized users with the ability to communicate during crises, DHS must ensure the new network infrastructures are also capable of satisfying priority telecommunications requirements as the commercial carriers evolve to their next-generation networks.

NGN-PS is a multi-phase, multi-increment tech insertion that will ultimately deliver priority voice, video, and data communication services. The first NGN-PS program objective (Phase 1, Increment 1) addresses the transition of legacy, priority voice capabilities in the commercial carriers' long distance core networks. The acquisition strategy achieves cost-effective priority services by continuing to leverage the highly survivable, commercially-owned, public telecommunications network assets, as they are more cost effective than private networks and provide ubiquity of service. When deployed, NGN technologies will provide all levels of Government with priority communications capabilities over robust and diverse nationwide communications networks at a fraction of the cost required to build and maintain a government-owned system.

The NGN-PS program must work diligently with service providers to stay ahead of the emerging priority-service capability gap on wireless networks. The second NGN-PS program objective (Phase 1, Increment 2) works with major commercial telecommunications carriers as they transition to IP-based infrastructures to ensure the continuity of NS/EP priority service. This acquisition strategy continues evolving outdated PTS program circuit-based priority features and functions, and phasing in IP-based packet switching priority features over wireless cellular networks while completely transparent to authorized users. When deployed, NGN technologies will maintain the number of carriers deploying PTS, so the solution will maintain the same degree of coverage across the United States regardless of the underlying technology.

The third NGN-PS program objective (Phase 1, Increment 3) is required for the Government Emergency Telecommunications Service (GETS) and Special Routing Arrangement Service (SRAS) portion of the network that supports priority at the local exchange carrier (LEC). The Federal Communications Commission (FCC) authorized an experiment for LECs to offer IP services beginning in 2014 and ending one year later. Once the FCC approves IP deployments, most LECs are poised to offer IP services without priority services quickly. AT&T has already proposed an IP network replacement for traditional LEC services in communities in Florida and Alabama. These communities currently have GETS priority service, but will not under the IP proposal. NGN must contract these priorities to ensure 90 percent call completion for GETS and SRAS customers. These services (GETS via the LECs) will not be available until FY 2018-2019, as a 1-2 year development effort including a contractual relationship with major LECs is required.

In FY 2015, NGN-PS will start the Phase 1, Increment 2. The Increment 2 effort will expand the NGN-PS efforts into wireless Voice-over Internet Protocol (VoIP) networks, in addition to current work on core backbone, with contracted telecommunications providers. Increment 2 development will continue in FY 2016 with initial operational test and evaluation (OT&E) beginning mid-year.

In FY 2016, NGN-PS will also complete Phase 1, Increment 1 (core) second long distance carrier deployment and acceptance testing; transition the operational portion of Increment 1 to operations and maintenance under PTS; and initiate planning and development for Phase 1, Increment 3 (wireline).

MAJOR ACQUISITIONS:

Next Generation Networks Priority Services

Next Generation Network Priority Services (NGN-PS) Program responds to Executive Order 13618, which directs the Secretary of DHS to oversee the development, testing, implementation, and sustainment of NS/EP communications, including: communications that support Continuity of Government; Federal, State, local, territorial, and tribal emergency preparedness and response communications. Legacy PTS provides priority over commercial service provider (CSP) networks. CSPs are replacing their aging circuit-switched networks with packet-switched networks creating the operational gap met by NGN. NGN addresses a capability gap by providing highly survivable, commercial telecomm assets to provide the Government with priority communications capabilities over robust and diverse nationwide networks at a fraction of the cost required to build a Government-owned system. NGN is a multi-phase/multi-increment tech insertion.

This investment is proposed to be funded out of the Next Generation Networks (NGN) PPA in FY 2016, as follows: \$80.102 million, 11 FTE.

NS/EP Standards	0	0	2,102	0	0	2,102	0	0	2,102

The Programs to Study & Enhance Telecommunications (PSET) PPA has a large role in supporting the development of studies, standards, and assessments of communications infrastructures in support of National Security Emergency Communications. The PSET PPA encompasses programs supporting each of the other PPAs, developing tools used by Critical Infrastructure Protection (CIP), and ensuring cost effective modeling and analysis of advanced telecommunications network technology for PTS and NGN.

The PSET PPA also supports the Architecture and Advanced Technology (AAT) program and it leads much of DHS's NS/EP communications efforts. This includes supporting the NS/EP EXCOM, a consortium of interagency partners with NS/EP communications responsibilities; conducting vulnerability assessments of new communications technologies; evaluating the impacts on commercially-owned and government-owned infrastructures; and coordinating with the Public Safety Communications Research program to reconcile NS/EP communications standards with FirstNet. Additionally, the program supports national-level exercises and NSSEs to support broader DHS efforts to prevent, protect, respond to, and recover from acts of terrorism and natural disasters. PSET is comprised of the following three activities:

Classified Program: The justification for this program will be made available under a separate cover.

Modeling, Analysis, and Technical Assessment (MATA): Predicts and mitigates the effect of communications failures on national leadership's ability to communicate during times of crisis. MATA provides specialized modeling and analyses of current and future protocols, algorithms, network designs, and capabilities affecting priority service communications in legacy and NGNs. DHS uses the modeling team's analysis tools to provide critical infrastructure and key resource risk assessments for the Communications sector during the response to a man-made or natural disaster, as well as assisting in restoration and recovery efforts.

In FY 2016, MATA will develop end-to-end integrated data priority services testing and prototyping capabilities, using a mixture of modeling, simulation and actual test beds for various NGN technologies. The requested FY 2016 funding will allow MATA to complete 75 percent of AT&T, 65 percent of Sprint, and 45 percent of Verizon core networks models to support NGN Voice Priority Services.

NS/EP Standards: Provides leadership and representation in international and national standards bodies to advance U.S. interests. The program authors, defends, and advances contributions to technical standards in support of National Communications System (NCS) and national goals. NS/EP focuses on a suite of standards regarding IP-based networks, the latest technology. These standards are critical to the success of the NGN-PS program's ability to ensure the continuity of priority communication for national, state, and local leadership during times of National Special Security Events (NSSEs).

The standards team will attend over 40 standards engagements within nine national and international standards bodies worldwide where they will track over two hundred contributions traversing the approval processes of the different bodies. They will also work with the commercial industry and collaborate on new communications standards in the wireless, satellite, and IP arenas.

Critical Infrastructure Protection (CIP) addresses EO 13618 by receiving, integrating, and disseminating NS/EP communications information to the Federal Government and SLTT governments,

as appropriate, to establish situational awareness, priority setting recommendations, and a common operating picture for NS/EP communications information as required by Sec 5.2.(d) of the EO

CIP also facilitates leveraging this situational awareness and common operational picture through each of the other PPAs. CIP ensures the continued availability of NS/EP telecommunications services under all circumstances, including crisis or emergency, attack, recovery, and reconstitution. CIP performs analyses on the communication infrastructure; ensures continuity planning and operational support are in place; conducts Title Globe continuity communications testing and certification training for communications emergency response personnel; and produces operational procedures, policies, and support tools.

CIP is comprised of the following five activities:

CIP Operations, Plans, and Policy: Provides telecommunication analyses during both emergency preparation and actual disaster response operations, and is responsible for assessing the national continuity communications system.

Operations, Plans, and Policy will co-lead and enhance ESF #2 response and restoration efforts when activated, supporting regional and state communications events. The three Communication Liaisons (Eastern, Central, and Western) will work on building emergency capabilities at the Federal, regional agency, state, and local levels, and in coordination of such initiatives and programs, with the communications industry. The Communication Liaisons will work closely with the Office of Emergency Communications 10 Regional Coordinators, each one located in the 10 Federal Regions, in continuing improvement of emergency communications operability and interoperability.

National Coordinating Center (NCC) Operations: The NCC is a joint government-industry body providing a response mechanism to NS/EP telecommunications incidents. The NCC, collocated with the NCCIC, provides 24/7, real-time situational awareness and response readiness for events potentially affecting the nation's communications infrastructure. The NCC fulfills EO 13618 requirements for a government-industry center capable of assisting in the initiation, coordination, restoration, and reconstitution of NS/EP telecommunications services or facilities under all conditions of emerging threats, crisis, or emergency.

FY 2016 funding will allow the NCC to continue 24/7 watch operations, improve real-time situational awareness reporting for NS/EP communications for Federal Departments and agencies, and maintain baseline operational readiness to respond to events. Per DHS's responsibilities under National Security Presidential Directive 39, the NCC will continue to support coordination between operations centers responsible for radiated frequency interference events affecting government and private sector communications systems. Further, FY 2016 funding will facilitate NCC IT system readiness (NCC LAN, station logs, tools) at 99-percent – available to support 24/7 operations. Additionally, it will support information sharing such as the weekly NCC government and industry meetings to ensure coordination and understanding of emergency communications. This funding will also support weekly SHARES Federal-State-local-volunteer operable/interoperable HF communications capability testing to ensure readiness.

National Security Information Exchanges (NSIE): Established in 1991, the Government and National Security Telecommunications Advisory Committee (NSTAC) NSIE, through separate charters, provide a working forum to identify issues involving unauthorized penetration or manipulation of public network (PN) affecting NS/EP telecommunications. As one of the oldest trust-based, face-to-face information exchange forum between the Government and industry, the NSIE has the responsibility related to the public network, and Departments that are major telecommunication users. Through the NSIE, government and industry stakeholders are provided a trusted environment where threat and vulnerability information about the public network is exchanged.

In FY 2016, NSIE will increase industry information sharing partner membership by 10-percent through other NS/EP communications such as the NSTAC; the Communications sector's GCC and SCC; the Communications Information Sharing Analysis Center; and the NS/EP Communications Executive Committee. Additionally, the NSIE will start preparing for the update their risk assessment report, *An Assessment of the Risk to the Cybersecurity of the Public Network*, as a deliverable to the NSTAC. Lastly, support will be provided for six NSIE meetings to include administrative and technical analysis (e.g., white papers for topics of study) that will better secure the public network, thus positively impacting national security and emergency preparedness telecommunications.

Training and Exercises (T&E): Maintains a cadre of more than 100 emergency response personnel prepared to respond across the spectrum of crises and emergencies. In response to the recommendations of the *Hurricane Katrina After Action Report*, DHS is enhancing its readiness for emergency response operations with an increased tempo of training and exercises for multiagency personnel with ESF #2 collateral duties.

In FY 2016, T&E will host 10 training webinars, an annual training event in which the focus will remain on training personnel in post-disaster infrastructure restoration, and two regional training events. T&E will also conduct one major ESF #2 exercise involving the entire ESF #2 community (FEMA, FCC, NTIA, Industry, and State Emergency Managers) and at least two National Team exercises involving the NCCIC/NCC and the FEMA National Response Coordination Center teams. T&E will also participate in the planning, control and execution of NCCIC's participation in the annual Eagle Horizon Continuity of Operations National Exercise and DHS National Level Exercise events, as well as at least five internal NCCIC cyber exercises, and at least two interagency or national level cyber exercises. Finally, T&E will enhance its collaborative efforts with various Departments and agencies; supporting travel to ESF #2 training events to further NPPD's mission of conducting state and local officials training and exercises and helping the Nation meet the overarching priorities of the National Preparedness Goals.

Telecommunications Service Priority (TSP): Established by a FCC Report and Order 88-341 in 1988, TSP is the regulatory, administrative, and operational system authorizing and providing priority treatment of NS/EP telecommunications services. The TSP program provides NS/EP users with priority restoration and provisioning of telecommunications services vital to maintaining readiness or response to an incident. Telecommunications service vendors may become overwhelmed with requests for new telecommunications services and requirements to restore existing telecommunications services due to any number of natural or man-made disasters. The TSP program provides service vendors with an FCC mandate for prioritizing service requests by identifying those services critical to NS/EP.

TSP will maintain the database of critical circuits requiring priority treatment, monitoring over 276,000 TSP assignments and over 1,900 organizations (Federal, State, local governments; and private industry) that participate in the program. To ensure restoration activities remain mission critical, TSP will revalidate a third of user organizations to ensure restoration priorities and the NS/EP mission remain valid. Additionally, TSP will reconcile 75-percent of the previous year's vendor-supplied confirmation data to maintain accuracy of restoration data and priorities.

IV. Program Justification Changes

**Department of Homeland Security
National Protection & Programs Directorate
Infrastructure Protection and Information Security
Justification of Program Changes**
(Dollars in Thousands)

Program Increase 1: Develop Situational Awareness & Infrastructure Analysis

PPA: Infrastructure Analysis and Planning, Global Cybersecurity Management, US Computer Emergency Readiness Team

Program Increase: Positions 35, FTE 19, Dollars \$10,412

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							266	254	\$100,514
Program Increase							35	19	\$10,412
Total Request	242	230	\$106,686	257	256	\$104,648	301	273	\$110,926

Description of Item:

NPPD requests an increase of \$10.412 million and 35 FTP/19 FTE to develop situational awareness and infrastructure analysis.

Justification:

Integrated Analysis Cell – \$0.470 million, 5 FTP/3 FTE

An increase of five personnel for the Integrated Analysis Cell (IAC) is requested to provide improved situational awareness and integration of analytic products with the National Infrastructure Coordinating Center (NICC), the NCCIC, and the Federal Protective Service Incident Management Center (FPS-IMC). Currently, the IAC is only capable of supporting the NCCIC and NICC during core business hours (no more than 12 hours per weekday, including two shifts). This increase would allow for enhanced operational customer support to meet the ever-increasing and dynamic threat to cyber and physical infrastructure. Specifically, the increased funds would support a third shift of additional personnel and sustained 24/7 operations at the IAC. The increasing need for more consequence analysis and situational context requires an IAC capability to support a higher operational tempo than presently resourced.

Media and Collective Analysis – \$4.277 million, 3 FTP/2 FTE

The NCCIC requires the capacity and capability to meet current and projected increases in forensics analysis functions. Forensic analysis includes collection of affected hardware, legal chain of custody, analysis, and reporting. Current capabilities are not able to complete investigations in a timely fashion. The requested increase will fill the gap in capability and is associated with a lack of personnel, training, and analysis tools, including software and supporting equipment to allow more than one analyst to work simultaneously on the same incident.

Structured Threat Information Expression (STIX)/Trusted Automated Exchange of Indicator Information (TAXII) – \$1.146 million, 7 FTP/4 FTE

The National Cybersecurity and Communications Integration Center (NCCIC) requires the capability to exchange cyber threat data and analytic products rapidly and securely with critical infrastructure owners and operators, Federal cyber centers, international partners, and other government partners. Automated exchange of cyber threat data in the STIX format will decrease the time required to provide indicator information to identify and mitigate cyber threats. In order to build in STIX support to all NCCIC tools and processes, resources are required for hiring additional software developers and Federal staff to build and maintain tools; operating an externally facing TAXII server for automated data sharing; and continually supporting the maturation STIX and TAXII specifications. The intent of this increase is to ensure that information is properly formatted and made available to partners using the STIX/TAXII media. NPPD requests five personnel in US-CERT Operations to support this work, as well as two personnel to expand the adoption of STIX/TAXII standards by its partners.

National Cybersecurity Assessment and Technical Services (NCATS) – \$1.562 million, 16 FTP/8 FTE

In FY 2014, NPPD began using the NCATS team, which had historically focused on working with partners to improve cybersecurity posture and resilience in advance of cyber emergencies, to augment onsite incident response engagements. Incident response activities can inform the larger community of current threats and the vulnerabilities they are exploiting. In addition to response capabilities, NPPD requires increased capability and capacity to perform cyber security risk and vulnerability assessments for other government agencies and critical infrastructure in order to manage risk and incidents before consequences become severe. These assessments reduce the attack surface through proactive identification of known vulnerabilities and potential configuration issues of Internet connected systems and consist of Risk & Vulnerability Assessments, Cyber Hygiene Assessments, Applications Reviews, and Strategic Remediation. Current demands from government and private sector exceed capacity. Without additional resources, the capacity gap will increase based on projections for future demand increases.

An example of a cyber-emergency requiring a NCATS response was the cyberattack on USIS and Healthcare.gov. Capabilities that would be bolstered with the requested funds include on-site incident response “fly-away” teams and risk and vulnerability assessment teams.

Data Management and Architecture – \$2.957 million, 4 FTP/2 FTE

The data management resource request provides NPPD and its stakeholders with systems to obtain, translate, and deliver a standardized, real-time flow of advanced threat reporting. Requested resources will also provide a framework to increase the inflow and outflow of data to and from NPPD to strengthen the cyber ecosystem, promoting interoperability across current and future NPPD capabilities as well as those of NPPD’s stakeholders. The architecture will drive innovative and cost effective

security products, services, and solutions throughout the cyber ecosystem – enabling a trustworthy cyber infrastructure.

Impact on Performance:

Integrated Analysis Cell

Additional resources will provide increased IAC surge capacity and personnel to support NCCIC, NICC, and FPS-IMC given the severity and magnitude of threats or incidents, and any other operational NCCIC and NICC requirements. Resources will also provide reach-back capability to NPPD's advanced risk analysis models, products, and decision support tools to address the implications and consequences of cyber and/or physical incidents, including an understanding of dependencies, interdependencies, and cascading effects to other critical infrastructure sectors.

This request supports extended operational support and as needed, the capability to surge, as required for 24-hour operations to support enhanced mission requirements. This request would increase the number of analytic products provided by NPPD by 25%, including Cyber-Dependency papers and company profiles.

Media and Collective Analysis

The requested resources will provide a collaborative analytic platform that would knit together multiple databases, data streams, and public and private sector user communities. This platform would also allow for both machine and human analytical capability allowing users to utilize large amounts of data for differing mission needs, including emerging trends that would support informed actions prior to incidents.

STIX/TAXII

This will allow machine-speed information sharing between NPPD and its partners. Specifically, this program increase will produce the following performance outputs:

- Expand the ability to share timely and actionable information and coordinate incident response efforts with international partners.
- Maintain an externally facing TAXII server for automated data sharing; continued maintenance and mature STIX and TAXII specifications.
- Automate exchange of cyber threat data in the STIX format to decrease the time required to provide indicator information to identify and mitigate cyber threats.
- Automate sharing via the TAXII protocol and ingestion of structured cyber threat data in STIX format.

NCATS

This increase will enable the NCATS team to support two simultaneous incident response engagements, an increase from its current capability to support one. NPPD will also conduct 20 additional risk and vulnerability assessments for a total of 60; and 800 additional cyber hygiene analyses, for a total of 1,800.

Data Management and Architecture

The requested resources will ensure that standards are integrated into the architecture for data that NPPD collects. A standard data architecture across NPPD will enable NPPD to better integrate cyber and physical data through the following implementation phases:

- Phase One: Design, Build, Pilot; estimated to take approximately 18-24 months.
- Phase Two: Upgrade and Multi-Stakeholder Pilot; focus aimed at 1) determining how to operate, protect, store, and manage the data collection, and 2) determining the most productive options for analytics on the data.
- Phase Three: Early operational phase, with the gradual addition of new enclaves, the improvement of analytics, and the development and testing of rapid outputs for the stakeholder communities.

Department of Homeland Security
National Protection & Programs Directorate
Infrastructure Protection and Information Security
Justification of Program Changes
(Dollars in Thousands)

Program Strengthen Partnerships & Foster Capacity Building

Increase 2: Infrastructure Analysis and Planning, Sector Management and Governance, Critical Infrastructure Cyber Protection and Awareness, Network Security Deployment, US Computer Emergency Readiness Team

PPA:
Program
Increase: Positions 18, FTE 9, Dollars \$36.169

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							292	281	\$111,821
Program Increase							18	9	\$36,169
Total Request	236	208	\$79,155	292	279	\$91,022	310	290	\$147,990

Description of Item:

NPPD requests an increase of \$36.169 million and 18 FTP/9 FTE to strengthen partnerships and foster capacity building.

Justification:

Office for Bombing Prevention (OBP) – \$2.290 million

The whole-of-government and “all-of-Nation” approach to countering IEDs outlined in Presidential Policy Directive 17 (PPD-17), *Countering Improvised Explosive Devices (IEDs)*, calls for increasing capabilities of SLTT and private sector partners. OBP is the only Federal entity that focuses on building the counter-IED capabilities of the broader SLTT and private sector communities. This program change will fund the following in OBP:

- National Counter-IED Capabilities Assessment Database (NCCAD) Assessments – NPPD will resume NCCAD assessments, which are not funded under the FY 2015 President’s Budget. NPPD will conduct 340 NCCAD capability assessments in FY 2016.

- Multi-Jurisdiction Improvised Explosive Device Security Planning (MJIEDSP) Assessments – NPPD will expand the number of MJIEDSP programs offered to SLTT partners by five (to 13 workshops total). The additional workshops will allow NPPD to better satisfy customer demand and PPD-17 requirements.
- Enhance OBP Virtual Training Capabilities – NPPD is transitioning its counter-IED training from a strictly classroom-oriented, instructor-led training program to a “blended approach” to training, whereby basic skills and knowledge are provided through cost-effective mechanisms NPPD plans to produce two one-hour Computer-Based Training courses and transition its current counter-IED training curriculum to Virtual Instructor-Led Training.
- OBP Center for Domestic Preparedness (CDP) Training – NPPD will provide additional IED awareness instruction from Federal and SLTT government students attending the CDP in FY 2016. This funding will enable NPPD to provide essential IED awareness training to approximately 12,000-14,000 emergency management, emergency medical services, fire service, governmental administrative, hazardous materials, healthcare, law enforcement, public health, public safety communications, and public works personnel per year.

Position, Navigation, and Timing (PNT) Program Management Office (PMO) – \$1.070 million, 2 FTP/1 FTE

Currently, there is no single point of coordination for PNT issues in NPPD. Some of the functions requested are currently assigned within the DHS Directorate for Management (MGMT), but MGMT has begun efforts to formally transfer ownership of their PNT portfolio to NPPD; this request assumes this transfer will be approved and completed by FY 2016. As such, this request includes funding to provide necessary staffing along with associated program and travel costs to establish a PNT PMO within the NPPD Office of Infrastructure Protection. The PNT PMO will work to address specific requirements set out in National Security Presidential Directive (NSPD) 39, U.S. Space-Based Position, Navigation, and Timing Policy.

Critical Infrastructure Assessments – \$10.000 million

NPPD requests funding to address the requirements called out in the President’s Climate Action and subsequent Executive Order on Preparing the United States for Climate Change (E.O 13653), and the 2013 DHS Climate Action Plan. This integrated approach will also support the State, Local, Tribal Task force (established under E.O. 13653) recommendations to the President that have a clear alignment to NPPD’s efforts.

Climate change poses a significant threat to the safety and reliability of critical infrastructure systems. Whether related to energy, transportation, freshwater management, coastal protection, or ecosystems. Federal action can improve the way climate impacts and greenhouse gas emissions are incorporated into public and private infrastructure investments, policies, and practices. To successfully prepare for climate change, communities must have the capacity to recognize, understand, and assess relevant climate-related hazards, risks, and impacts. The Federal Government can help communities build this capacity by continuing to shape or reshape programs, policies, information sources, and other forms of assistance that enable SLTT jurisdictions to prepare for climate change.

Enhanced Cybersecurity Services – \$16.901 million, 8 FTP/4 FTE

In FY 2013-2015, the majority of costs related to ECS are being covered using National Cybersecurity Protection System (NCPS) funding that cannot be executed due to program delays, and which will no longer be available in FY 2016. NPPD projects an increase in Commercial Service Providers (CSPs)/Operational Implementers (OI), and Government Furnished Information (GFI) providers by FY 2020. The ECS Program Management Office (PMO) requires additional resources to support the increasing number of CSPs/OIs through Sensitive Compartmented Information Facility (SCIF) buildout, SCIF accreditation, and personnel security oversight and engagement with CSPs/OIs, sector-specific agencies, and GFI providers. Further, additional cybersecurity analysts will provide new threat and network analysis as more GFI providers begin sharing indicators and answering requests for information from CSPs/OIs relating to deployed indicators and observed threat activity targeting protected entities.

The requested resources will support SCIF security assessments, accreditation, personnel security oversight, and engagement with CSPs/OIs, sector-specific agencies and GFI providers, and support additional countermeasures through the program.

C³ Voluntary Program – \$5.908 million, 8 FTP/4 FTE

This funding will provide additional Cybersecurity Advisors, double the number of cybersecurity assessments NPPD conducts to enable stakeholders to improve their cybersecurity practices, and align the primary cybersecurity assessment tool with changes or updates to the Critical Infrastructure Cyber Community (C³) Voluntary Program. This will extend the reach of the C³ Voluntary Program, promote adoption of the Cybersecurity Framework, and build the security and resilience of the nation's critical infrastructure.

Impact on Performance:

Office for Bombing Prevention (OBP)

- NCCAD Assessments – NPPD will resume NCCAD assessments
- MJIEDSP Assessments – NPPD will increase the number of MJIEDSP workshops (First Responders, Tactical Interoperability, or Executive Level) offered by five. This will allow NPPD to have a stronger assessment of the current state of multi-jurisdictional capability and planning readiness of the urban area.
- Enhance OBP Virtual Training Capabilities – NPPD will produce two one-hour CBT courses that will be listed in the FEMA Training Catalogue, and posted to the Emergency Management Institute website and either the Naval Post-Graduate School's or CDP's Learning Management System.
- OBP CDP Training – NPPD will provide essential IED awareness training to approximately 12,000-14,000 emergency management, emergency medical services, fire service, governmental administrative, hazardous materials, healthcare, law enforcement, public health, public safety communications, and public works personnel per year.

Position, Navigation, and Timing (PNT) Program Management Office (PMO)

The level of funding requested will allow for concurrent engagement on PNT issues, provide sufficient staffing to provide senior leadership guidance, represent DHS in interagency efforts, and provide resources to coordinate within NPPD and other areas of DHS including the United States Coast Guard, the Directorate for Management, and the Office for Intelligence and Analysis. In particular, this funding will be used by NPPD to support the following mission-related capabilities:

- Coordinate a broader portfolio of Radionavigation issues, including DHS equities related to the Federal Radionavigation Plan;
- Develop mitigation strategies for critical infrastructure stakeholders and assess the implementation of guidance;
- Work with the critical infrastructure community and the PNT industry to address existing and emergent vulnerabilities;
- Leverage the existing partnership structure to develop paths forward for technological and policy changes to increase resilience and decrease vulnerability;
- Manage relationships through memorandums of understanding/agreement with interagency partners, including the Department of Transportation and the Department of Defense;
- Coordinate with DHS Science and Technology, pursue continued research on GPS vulnerabilities, develop new technologies to reduce those vulnerabilities, and develop new capabilities to augment GPS; and
- Maintain and, as needed, adapt metrics to track critical infrastructure vulnerabilities related to PNT.

Critical Infrastructure Assessments

NPPD will use the funding to support mission related capabilities through the following initiatives:

- Based on successes of the Maine RRAP and Charleston exercise:
 - Augment the RRAP to fund additional modeling and analysis associated with climate adaptation work above and beyond the cost of an average RRAP. Likely focus on climate change exclusively in no more than two of the assigned RRAPs per year.
 - Support place-based approach for addressing infrastructure resilience; conducting three table top exercises and three hazard impact workshops around the country followed by ongoing technical assistance to support local long term community and resilience implementation planning
 - Catalog available infrastructure resilience services, activities, initiatives addressing climate adaptation; this includes smart practices, practical plans, and organizational networks of subject matter experts. Ensure there is a public repository for the critical infrastructure community.
- Conduct a two-stage study on the economics of critical infrastructure investment in climate adaptation and resilience
- Fund development of technical approach, in collaboration with the Science and Technology Directorate, that integrates and applies modeling and analysis capabilities into an overall framework that enables holistic risk-informed decision-making and adaptation planning at local levels
- Develop a field-based educational and outreach program that increases the knowledge and awareness of NPPD's field force to climate-related hazards (droughts, wild fires, changes in

temperature, changes in precipitation, extreme weather events, etc) and associated infrastructure impacts

- Engage in agreements with at least one University per Federal Region engaging in climate science. Maintain funds for two to three to devote to locally-focused work that cross the core capabilities of Assessments, Information and Data Sharing, Situational Awareness, and Partnerships and Capacity Building.
- Conduct four to five regional risk studies focused on climate-related hazards (droughts, wild fires, extreme weather events, flooding, etc) and the associated impacts to infrastructure. Results feed the catalog of services, initiatives, and activities that support long-term planning and adaptation.

Enhanced Cybersecurity Services

The requested resources will allow the ECS program to increase services as demand for the program grows.

C³ Voluntary Program

The requested funding will enable NPPD to increase the number of CSAs by eight and double the number of CRRs conducted from 75 to 150. In addition, NPPD will update and field the CRR and Cyber Infrastructure Survey Tool (C-IST) toolset, aligning with changes and/or updates in the NIST Cybersecurity Framework and incorporating C³ Voluntary Program out-year lessons learned and feedback. The CRR, currently available as part of the C³ Voluntary Program self-assessment toolkit, and the C-IST provide one of the few DHS available-to-industry measures for reporting voluntary alignment and implementation of the NIST Cybersecurity Framework and, as such, are critical success factors for DHS measurement (through the C³ Voluntary Program) of cyber preparedness, risk mitigation, and incident management.

Department of Homeland Security
National Protection & Programs Directorate
Infrastructure Protection and Information Security
Justification of Program Changes
(Dollars in Thousands)

Program Increase 3: Improve the Protection of Infrastructure
PPA: Infrastructure Security Compliance
Program Increase: Positions 23, FTE 12, Dollars \$15,710

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$0
Program Increase							23	12	\$15,710
Total Request	0	0	\$0	0	0	\$0	23	12	\$15,710

Description of Item:

NPPD requests \$15.710 million and 23 FTP/12 FTE for implementing the Ammonium Nitrate Final Rule. These funds will help DHS implement a regulatory program to protect the public from future misuse of ammonium nitrate (AN) in an act of terrorism. Since the final rule will likely be published by the summer of 2015, funding is required to begin implementation in FY 2016.

Justification:

In April 1995, AN was used in a bomb attack at the Alfred P. Murrah Federal Building in Oklahoma City, Oklahoma, killing 168 people and injuring nearly 600 more. Congress has directed the Department of Homeland Security (DHS or the 'Department') to implement a regulatory program to protect the public from future misuse of AN in an act of terrorism.

DHS is promulgating a draft rule creating a registration program for purchasers and sellers of AN. Each purchaser and seller will be required to apply for an AN Registered User Number with the Department. Suitability for registration will be based on a comparison of each applicant's biographic data against the Terrorist Screening Database (TSDB), maintained by the Transportation Security Administration (TSA). AN Sellers will be required to deny sale or transfer of AN to individuals not possessing a valid AN Registered User Number and whose identity cannot be verified. Businesses will be required to keep records of all regulated AN transactions for two years and to report any theft or loss of AN.

The benefits of the regulatory program will include:

- Standardizing and expanding on successful industry “know-your-customer” initiatives and State regulations to prevent the misappropriation or use of AN in a terrorist attack.
- Providing timely, accurate vetting of persons wishing to possess or transfer AN and denying transactions involving known and suspected terrorists, at both the registration and point-of-sale steps.
- Eliminating gaps in Federal oversight of AN.

The AN Security Program will be run out of the Infrastructure Security Compliance Division within NPPD’s Office of Infrastructure Protection. Federal costs that will be incurred by IP to implement and administer the regulatory program include:

- Designing, developing, implementing, and operating the registration and verification web portal and the electronic records database.
- Conducting outreach to educate AN sellers and purchasers about their regulatory obligations.
- Training newly-hired and existing inspectors.
- Vetting AN seller and purchaser applicant data against the TSDB.
- Enabling AN sellers to report theft or loss of ammonium nitrate.
- Performing records reviews of AN facilities.
- Implementing and operating the AN Call Center to receive three basic types of calls:
 - Calls from applicants seeking to register with the Department for an AN Registered User Number, but who are lacking a computer with Internet access.
 - Calls from AN sellers seeking to perform a verification (usually of an AN Registered User Number) of a prospective AN purchaser.
 - General inquiries about or relating to the Ammonium Nitrate Security Program.

Impact on Performance:

The AN Security Program will standardize and expand on successful industry “know-your-customer” initiatives and State regulations to prevent the misappropriation or use of ammonium nitrate in a terrorist attack. The regulations will provide timely, accurate vetting of persons wishing to possess or transfer ammonium nitrate and deny transactions involving known and suspected terrorists, at both the registration and point-of-sale steps.

(Dollars in Thousands)

Program Increase 4: National Cybersecurity Protection System Information Sharing & Analytics
PPA: Network Security Deployment
Program Increase: Positions 0, FTE 0, Dollars \$67,814

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$62,805
Program Increase							0	0	\$67,814
Total Request	126	119	\$381,393	145	137	\$377,690	0	0	\$130,619

*The table above includes funding for the Network Security Deployment PPA projects affected by this program change – Information Sharing and Analytics. The Network Security Deployment PPA also includes funding for other projects not affected by this program change.

Description of Item:

NPPD requests an increase of \$67.814 million for NCPS information sharing and analytics.

Justification:

Keeping pace with the ever-changing nature of cyber threats poses technological as well as financial challenges. To address these challenges, NSD seeks to ensure currently deployed NCPS technology remains relevant and reliable, while developing valuable new services for a broad cybersecurity community. Information sharing capabilities provide situational awareness about current and potential cybersecurity threats and vulnerabilities with Federal, State, and local governments and agencies; private sector partners and infrastructure owners and operators; and the public. The information shared is created via advanced, automated, modular analytics that can be applied to NCPS inputs (threat feeds, E1/E2 data, E3A data, CDM data, etc.) and shared to our stakeholders via the information sharing environment.

\$52.5 million of this program change request is required to complete deployments of foundational infrastructure capabilities for information sharing, and complete development of information sharing applications. Requested resources will enable information sharing across communities of interest at different levels of granularity, creating a comprehensive cyber-picture supporting the various cyber missions across NPPD. In addition, the full FY16 request including this program change, will fund planned design, development, and deployment of a COOP Information Sharing Collaboration

Environment (ISCE), the Top Secret environment of the ISCE, and the Cross Domain Solution (CDS) between the Secret and Top Secret environments.

An additional \$15.3 million of the program change is tied to analytic capabilities supporting information sharing capabilities. Shared threat and warning information is created through the use of advanced tools and technologies that support the identification, correlation, and analysis of cyber threat data.

Impact on Performance:

With a COOP ISCE, mission assurance of DHS cyber operations via the ISCE will occur. NSD will be able to meet system key performance parameters tied to reliability, availability, and maintainability. With the Top Secret ICSE and CDS capability, NCCIC will continue with the automated information sharing exchanges with the Intelligence Community and other stakeholders relying on Top Secret cyber threat information. The Top Secret ICSE and CDS capability will enable the transmission of cyber threat indicators needed to rapidly respond to cyber threats and efficiently manage cyber threat indicators pushed to our EINSTEIN intrusion detection and prevention capabilities.

Information Sharing capabilities will enable the delivery of a near-real time situational awareness dashboard that provides an entity-specific view of its cyber posture based on a correlation of information provided to NPPD, to include CDM and other cyber program data. The funding request will enable upgrades to the portal, and allow NCPS users to collaborate and conduct analysis in near-real time through sharing of analytics and data sets, wiki capabilities, and a shared analytic workspace interchangeably between unclassified and classified systems.

NCPS information sharing and related analytic capabilities provide technology and selected standards to form a system across a distributed network environment to increase information sharing, thereby enhancing network protection and data residing within those networks from cyber attacks in a manner that protects privacy and civil liberties.

Total Request	126	119	\$381,393	145	137	\$377,690	163	146	\$278,603

*The table above includes funding for the Network Security Deployment PPA projects affected by this program change – NSD Salaries & Benefits, Intrusion Prevention, and Program Planning & Operations. The Network Security Deployment PPA also includes funding for other projects not affected by this program change.

Description of Item:

NPPD requests an increase of \$28.072 million and 18 FTP/9 FTE to provide NCPS E³A countermeasures beyond email and DNS at four Internet Service Providers.

Justification:

In FY 2016, in addition to maintaining the E³A signature-based IPSS capabilities, NSD will deploy new capabilities to identify suspicious activities and potential cyber-attacks beyond the techniques used today to support the discovery of new patterns of malicious activity. These new capabilities will leverage machine learning processing output through various pre-defined business rules and correlation mechanisms with enough certainty to automatically task intrusion prevention systems to block the suspicious activity, changing the time between attack occurrence, detection, and prevention from months to minutes. Analysis conducted on live data from traffic aggregation points will aid in the near real-time, rapid identification of cyber threats, unusual traffic patterns, or deviations from normalized baselines. Such advanced prevention services may be deployed at the perimeter (within Nests) and/or shared with CDM for internal department and agency network deployment.

A small portion of the request (\$4.100 million) is tied to an increased volume of work in threat analysis required to define and expand countermeasures for multiple CS&C programs (IPSS and ECS). This includes defining desired effects on the threat actor, engineering alternatives for applying countermeasures, and security requirements necessary for protecting government indicators and resulting actions.

Impact on Performance:

Deploying additional prevention services that utilize threat, source, and destination and target profiling are required to discover and stop threats that evade typical Intrusion Detection System/Intrusion Prevention System (IDS/IPS) technologies. With the requested funds, NCPS will expand its existing capabilities and shift from a passive to an active role in cyber defense and the delivery of enterprise cybersecurity services. Continuing to advance intrusion prevention capabilities will allow NPPD to keep pace with cyber attackers and minimize the time between attack occurrence, detection, and prevention for their attacks.

Total Request	15	15	\$168,061	15	15	\$142,633	28	28	\$102,659

Description of Item:

NPPD requests an increase of \$86.509 million to the Continuous Diagnostics and Mitigation (CDM) program in FY 2016 for planning and acquisition funding.

Justification:

The requested increase will allow the CDM program to deploy Increment 1 CDM capabilities by FY 2017 and Increment 2 CDM capabilities by FY 2018 to the 23 CFO Act agencies and numerous small and micro agencies.

Impact on Performance:

The requested resources will allow DHS and Federal agencies to continuously monitor users and their privileges on Federal networks, addressing network vulnerabilities quickly.

Department of Homeland Security
National Protection & Programs Directorate
Infrastructure Protection and Information Security
Justification of Program Changes
(Dollars in Thousands)

Program Increase 7: Next Generation Networks Increment 2
PPA: Next Generation Networks
Program Increase: Positions 0, FTE 0, Dollars \$78,550

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							12	11	\$1,759
Program Increase							0	0	\$78,550
Total Request	12	12	\$21,158	12	12	\$69,571	12	11	\$80,309

Description of Item:

NPPD requests an increase of \$78.550 million to transition the WPS infrastructure to internet-based technologies through implementation of Phase 1, Increment 2 of the NGN-PS program. This will enable IP-based packet switching capabilities over wireless cellular networks and NGN-PS Phase 1, Increment 2 to meet initial operating capability in FY 2018.

Capability
<p>Implement priority VoIP capability Increment 1: Implement priority VoIP capability in the major core networks (AT&T, Verizon, and Sprint) Increment 2: Implement priority wireless access VoIP communication capability Increment 3: Implement priority wireline (Cable, FiOS, DSL, etc...) access VoIP communications capability</p>

Justification:

NGN-PS ensures NS/EP telecommunications during an emergency. PTS currently provides NS/EP communications via commercial networks; however, commercial telecommunications networks are modernizing from the circuit-switched infrastructure upon which PTS is based no later than FY 2019. NGN-PS works with major commercial telecommunications carriers as they make the transition to IP-based infrastructures to ensure the continuity of NS/EP priority service.

The NGN-PS program must work diligently with service providers to stay ahead of the emerging priority-service capability gap on wireless networks.

Impact on Performance:

Increased funds will provide support to maintain the number of wireless carriers deploying PTS, so the solution will maintain the same degree of coverage across the United States regardless of the underlying technology. The increase will enable Phase 1, Increment 2 of the NGN-PS program to meet IOC in FY 2018. Without this funding, the Federal Government will risk losing voice priority-service capabilities in wireless networks as the legacy WPS becomes phased out and obsolete, currently estimated to occur in some markets as early as FY 2015, but no later than FY 2019.

Department of Homeland Security
National Protection & Programs Directorate
Infrastructure Protection and Information Security
Justification of Program Changes
(Dollars in Thousands)

Program Decrease 1: Consolidate Software Assurance
PPA: Global Cybersecurity Management
Program Decrease: Positions 0, FTE 0, Dollars \$(1,679)

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$1,679
Program Decrease							0	0	(\$1,679)
Total Request	3	3	\$2,035	3	3	\$2,037	0	0	\$0

Description of Item:

NPPD requests a decrease of \$1.679 million for eliminating redundancies in cyber programs.

Justification:

NPPD proposes merging the Software Assurance and Research and Standards Integration programs, which are both focused on working with partners to develop cybersecurity standards for government and industry. The two programs will work to prioritize their requirements jointly, resulting in contract funding savings.

Impact on Performance:

Integrating Software Assurance (SwA) with the Research and Standards integration program will enable NPPD to prioritize stakeholder engagement efforts.

Department of Homeland Security
National Protection & Programs Directorate
Infrastructure Protection and Information Security
Justification of Program Changes
(Dollars in Thousands)

Program Decrease 2: MS-ISAC Managed Security Services Cost-Sharing
PPA: Critical Infrastructure Cyber Protection and Awareness
Program Decrease: Positions 0, FTE 0, Dollars \$(3,956)

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$12,956
Program Decrease							0	0	(\$3,956)
Total Request	0	0	\$12,891	0	0	\$9,756	0	0	\$9,000

Description of Item:

NPPD requests a decrease of \$3.956 million in the amount of grant funding for the Multi-State Information Sharing and Analysis Center (MS-ISAC).

Justification:

NPPD will reduce the amount of grant funding for MS-ISAC. NPPD will assume greater cost sharing with the States, up to 25 percent. By transferring additional resource responsibilities to MS-ISAC stakeholders, NPPD will establish consistency with other DHS programs that have established cost sharing with state and local governments.

Impact on Performance:

In FY 2016, States will have to provide increased funding to offset NPPD's proposed reduction of grant funding for the MS-ISAC to protect their own networks. MS-ISAC will continue providing base services to all MS-ISAC members as well as supporting the Managed Security Services program, providing firewall monitoring, and netflow analysis services to participating SLTTs.

Department of Homeland Security
National Protection & Programs Directorate
Infrastructure Protection and Information Security
Justification of Program Changes
(Dollars in Thousands)

Program Decrease 3: Stop. Think. Connect Campaign
PPA: Critical Infrastructure Cyber Protection and Awareness
Program Decrease: Positions 0, FTE 0, Dollars \$(500)

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							20	20	\$5,788
Program Decrease							0	0	(\$500)
Total Request	12	12	\$6,543	20	19	\$6,617	20	20	\$5,288

Description of Item:

NPPD requests a decrease of \$0.500 million for the Stop.Think.Connect. cybersecurity awareness campaign.

Justification:

NPPD will reduce funding for the Stop.Think.Connect. cybersecurity awareness campaign. NPPD will pursue greater private sector support for this initiative.

Impact on Performance:

Private sector entities will have to provide increased funding to offset this proposed reduction. The remaining funding will still support the planning, coordination, and execution of various Outreach and Awareness activities, including National Cybersecurity Awareness Programs.

Department of Homeland Security
National Protection & Programs Directorate
Infrastructure Protection and Information Security
Justification of Program Changes
(Dollars in Thousands)

Program Decrease 4: Cybersecurity Assessments
PPA: Federal Network Security
Program Decrease: Positions 0, FTE 0, Dollars \$(2,000)

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							44	44	\$16,117
Program Decrease							0	0	(\$2,000)
Total Request	44	44	\$17,756	44	44	\$15,301	44	44	\$14,117

Description of Item:

NPPD requests a decrease of \$2.000 million for cybersecurity assessments.

Justification:

Cybersecurity Assurance – (\$2.000 million)

Program funding for the Cybersecurity Assurance program that conducts Cybersecurity Capability Validation (CCV) assessments will be reduced. These are paper-based assessments that support Federal Information Security Management Act reporting. This funding will be reinvested to support automated cybersecurity processes.

Impact on Performance:

A reduction to cybersecurity assurance will result in 12 fewer Federal agencies receiving Cybersecurity Capability Validation (CCV) in FY 2016. The CCVs that are conducted will assess and validate each agency’s implementation of technical and operational cybersecurity capabilities required by Federal laws, policies, and initiatives. The impact will be mitigated by continued deployment of CDM capabilities across the federal enterprise.

Program Decrease 5: US-CERT Analysis
PPA: US Computer Emergency Readiness Team
Program Decrease: Positions 0, FTE 0, Dollars \$(1,562)

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							240	228	\$91,572
Program Decrease							0	0	(\$1,562)
Total Request	225	213	\$101,038	240	239	\$98,794	240	228	\$90,010

Description of Item:

NPPD requests a decrease of \$1.562 million to US-CERT travel and contract support. This money will be reinvested within US-CERT to deploy additional NCATS teams to respond to cybersecurity incidents.

US-CERT Coordination & Integration – (\$1.151 million)

This is a reduction to the contract and travel funding supporting international in-person engagements with other countries' CERTS.

US-CERT Detection & Response – (\$0.411 million)

Although US-CERT's detection and response incident processing activities are essential to manage cyber risks to the Nation, program funding supporting these activities will be reduced in order to fund additional personnel to respond to cybersecurity incidents.

Justification:

NPPD will reduce US-CERT's contract support, international travel, and incident processing operations to fund additional NCATS teams to respond to cybersecurity incidents.

Impact on Performance:

NPPD will reduce travel and support for international engagements and process fewer cyber incidents per month. NPPD will continue to process the highest priority incidents.

Department of Homeland Security
National Protection & Programs Directorate
Infrastructure Protection and Information Security
Justification of Program Changes
(Dollars in Thousands)

Program Decrease 6: Chemical Security Assessment Tool
PPA: Infrastructure Security Compliance
Program Decrease: Positions 0, FTE 0, Dollars \$(3,119)

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							12	12	\$18,105
Program Decrease							0	0	(\$3,119)
Total Request	8	8	\$21,232	12	12	\$14,730	12	12	\$14,986

Description of Item:

NPPD requests a reduction of \$3.119 million to the Chemical Security Assessment Tool (CSAT) investment. Both the CSAT investment and the ISC Program reside within the Infrastructure Security Compliance PPA which funds the regulation of the nation’s high-risk chemical facilities under Sec. 550 of the FY 2007 Department of Homeland Security Appropriations Act (Pub. L. No. 109-295).

Justification:

NPPD reviewed information technology (IT) investments with the goal of eliminating redundant systems/services, leveraging enterprise services, consolidating capabilities, and identifying on-budget savings. This \$3.119 million reduction does not reduce critical mission activities, and is a result of continued review of operations and support activities to look for more efficient ways of doing business. In support of this effort, NPPD proposes an IT reduction of \$3.119 million, to include:

- Eliminating Chemical Facility Anti-Terrorism Standards (CFATS) enterprise architecture (EA) support (\$1.400 million)
- Postponing CSAT Migration to DHS Data Center 2 (\$1.241 million) to FY17 Q3.
- Reducing CSAT software maintenance and operations (\$0.478 million)

Impact on Performance:

- Eliminating Chemical Facility Anti-Terrorism Standards (CFATS) enterprise architecture (EA) support (\$1.400 million): Upon elimination of CFATS EA support, the CFATS Program will

begin to utilize EA support elsewhere in NPPD through a shared service approach, eliminating functional redundancies. Significant impacts are not anticipated.

- Postponing CSAT Migration to DHS Data Center 2 (\$1.241 million): This reduction would eliminate funding for the CSAT migration to DC2, postponing the migration until Q1 FY 2017. Due to the complexity of and risk to ongoing Development, Modernization, and Enhancement (DME) projects, NPPD could increase efficiency by migrating the entire, stable production environment after all DME projects are completed. The postponement would also simplify the transition to long-term operations and maintenance (O&M) support.
- Reducing CSAT software maintenance and operations (\$0.478 million): This \$0.478 million decrement reduces maintenance resources, resulting in reduced level of effort in requirements analysis, software development, testing, and user and system documentation. Risk posed by this reduction may have a minimal impact on system reliability, availability, and integrity.

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For necessary expenses for infrastructure protection and information security programs and activities, as authorized by title II of the Homeland Security Act of 2002 (6 U.S.C. 121 et seq.), [\$1,197,566,000] **\$1,311,689,000**¹, of which [\$225,000,000] **\$271,363,000**² shall remain available until September 30, [2016] **2017**³: Provided, That [\$142,633,000] **\$102,659,000**⁴ shall be used to deploy on Federal systems technology for improvement of the agency information security policies, practices, and systems covered by 44 U.S.C. 3543(a): Provided further, That funds provided under this heading shall be used to assist and support Government-wide and agency-specific efforts to provide adequate, risk-based, and cost-effective cybersecurity measures that address escalating and rapidly evolving threats to information security, including the acquisition and operation of a continuous monitoring and diagnostics program that includes equipment, software, and services supplied by the Department of Homeland Security. *Note.—A full-year 2015 appropriation for this account was not enacted at the time the Budget was prepared; therefore, the Budget assumes this account is operating under the Further Continuing Appropriations Act, 2015 (P.L. 113–235, Division L). The amounts included for 2015 reflect the annualized level provided by the continuing resolution.*

Infrastructure Analysis and Planning Mission Statement

Infrastructure Analysis and Planning funds strategic, operational, and tactical products and services to DHS and its partners. This funding facilitates the identification, prioritization, protection, and resilience of the Nation's critical infrastructure, as well as the assessment of risks to critical infrastructure. Infrastructure Analysis and Planning funds a comprehensive inventory of the Nation's critical infrastructure assets and collects vulnerability assessments and consequence information required to produce comprehensive asset and system risk assessments. These critical infrastructure protection assessments enable the analysis of interdependencies and cascading effects and increase partners' understanding of risks, potential protective measures, and best practices.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$9,224	\$13,043	\$16,179	\$3,136
11.3 Other than Full-Time Permanent	\$185	\$261	\$324	\$63
11.5 Other Personnel Compensation	\$308	\$435	\$539	\$104
12.1 Civilian Personnel Benefits	\$2,583	\$3,652	\$4,530	\$878
Total, Salaries & Benefits	\$12,300	\$17,391	\$21,572	\$4,181

The FY 2016 request includes \$21,572k in salaries and benefits for 143 FTE. This includes an increase of \$198k for pay inflation, an increase of 1 FTE and \$165k for annualization of prior year positions, a decrease of \$1,131k for salaries and benefits right-sizing, a decrease of 6 FTE and \$750k for lapse rate and attrition, a decrease of 1 FTP/1 FTE and \$180k for business and program support efficiencies, an increase of \$7k for retirement contributions, an increase of \$1,242k for cyber pay reform, an increase of \$4,200k and 26 FTP/26 FTE for DHS Balanced Workforce Initiative, and an increase of 5 FTE/3 FTP and \$470k for the Intergrated Analysis Cell.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$14,730	\$14,403	\$20,367	\$5,964

Advisory and assistance services includes services acquired by contract from non-Federal sources as well as from other units within the Federal government. The FY 2016 request includes an increase of \$909k for the realignment of TRIPwire, a decrease of \$38k for business support and program efficiencies, a decrease of \$2,407k to offset DHS Balanced Workforce Initiative positions, an increase of \$6,000k for critical infrastructure assessments, and an increase of \$1,500k for bombing prevention activities.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$105	\$169	\$1,816	\$1,647

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2016 request includes an increase of \$1,647k for the movement of national lab capabilities in-house.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$34,847	\$30,011	\$29,673	(\$338)

Purchases from Government Accounts include costs for purchases from other Federal government agencies or accounts that are not otherwise classified. The FY 2016 request includes a decrease of \$1,647k for the movement of national lab capabilities in-house, a decrease of \$21k for cellular wireless efficiencies, an increase of \$1,040k for WCF increases related to the DHS Balanced Workforce Initiative, and an increase of \$290k for bombing prevention activities.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.7 Operation and Maintenance of Equipment	\$90	\$50	\$566	\$516

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal government account. The FY 2016 request includes an increase of \$16k for equipment maintenance requirements and an increase of \$500k for bombing prevention activities.

Regional Field Operations Mission Statement

Regional Field Operations builds a regional capacity across the sectors to secure critical infrastructure by deploying products and services for State, local, tribal, and territorial (SLTT) government and private sector partners. Regional Field Operations funds the regional implementation of programs funded by the Infrastructure Analysis and Planning and Sector Management and Governance PPAs, fosters a unified information-sharing environment, and assesses vulnerabilities and protective measures for the critical infrastructure community from the national to the local level.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$17,108	\$19,162	\$19,426	\$264

Sector Management and Governance Mission Statement

Sector Management and Governance funds the increased ability of all levels of government and private sector critical infrastructure partners to assess risks, coordinate programs and processes, and execute risk management programs and activities. This funding supports the framework that governs the Nation's approach to critical infrastructure security and resilience, providing cross-sector preparedness, public education, and academic engagement to support National Infrastructure Protection Plan 2013 implementation. Programs funded through Sector Management and Governance also provide a strategic and coordinated approach for enterprise critical infrastructure data management and information technology (IT) development and employ a governance structure that enables the secure sharing of critical infrastructure data and analysis with NPPD partners.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$15,124	\$19,479	\$20,427	\$948
11.3 Other than Full-Time Permanent	\$302	\$388	\$409	\$21
11.5 Other Personnel Compensation	\$504	\$648	\$681	\$33
12.1 Civilian Personnel Benefits	\$4,234	\$5,455	\$5,720	\$265
Total, Salaries & Benefits	\$20,164	\$25,970	\$27,237	\$1,267

The FY 2016 request includes \$27,237 for 198 FTE. This includes an increase of \$311k for pay inflation, an increase of 10 FTE and \$1,250k for annualization of prior year positions, an increase of \$1,639k for salaries and benefits right-sizing, a decrease of 11 FTE and \$1,375k for lapse rate and attrition, a reduction of 10 FTP/10 FTE and \$1,392k for business and program support efficiencies, a decrease of 1 FTE and \$86k for VERA and VSIP, an increase of 1 FTP/1 FTE and \$205k for DHS Balanced Workforce Initiative, an increase of \$13k for retirement contributions, an increase of \$497k for cyber pay reform, and an increase of 2 FTP/1 FTE and \$205k for the PNT program..

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$14,499	\$14,777	\$21,925	\$7,148

Advisory and assistance services includes services acquired by contract from non-Federal sources as well as from other units within the Federal government. The FY 2016 request includes an increase of \$3,764k for the realignment of the ICS building assessment tool, a decrease of \$909k for the realignment of TRIPwire, a decrease of \$1,178k for business and program support efficiencies, and an increase of \$856k for the PNT program.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$18,686	\$13,009	\$12,769	(\$240)

Purchases from Government Accounts include costs for purchases from other Federal government agencies or accounts that are not otherwise classified. The FY 2016 request includes a decrease of \$240k for WCF efficiencies.

Business Operations Mission Statement

Business Operations ensures access to the appropriate resources to fulfill NPPD's broad cybersecurity and communications mission. The program does so by resource and financial management, acquisition management, human capital activities, facilities management, performance management, policy development and implementation, information and personnel security, and strategic planning. The Business Operations program works to ensure these activities are integrated to sustain overall cybersecurity strategies, mission operational support, and short/long-term planning.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change

Critical Infrastructure Cyber Protection and Awareness Mission Statement

Critical Infrastructure Cyber Protection and Awareness collaborates with the public and private sectors to assess and mitigate risk to the Nation's cyber critical infrastructure and promotes cybersecurity awareness across the general public and key communities. This program also maintains relationships with governmental cybersecurity professionals to share information about cybersecurity initiatives and develops partnerships to promote collaboration on cybersecurity issues.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$4,385	\$6,076	\$8,851	\$2,775
11.3 Other than Full-Time Permanent	\$88	\$122	\$177	\$55

Total, Salaries & Benefits	\$5,847	\$8,102	\$11,801	\$3,699

The FY 2016 request includes \$11,801k for salaries and benefits for 68 FTE. The change includes an increase of \$93k for pay inflation, an increase of 4 FTE and \$660k for annualization of prior year positions, an increase of \$466k and 5 FTP/3 FTE for the DHS Balanced Workforce Initiative, an increase of \$1,495k for salaries and benefits right-sizing, a decrease of 3 FTE and \$375k for

lapse rate and attrition, a decrease of 4 FTP/4 FTE and \$612k for the elimination of 4 positions, an increase of \$5k for retirement contributions, an increase of \$1,076k for cyber pay reform, an increase of \$185k and 2 FTP/1 FTE for the Enhanced Cybersecurity Services program, and an increase of \$866k and 8 FTP/4 FTE for the C3 Voluntary Program.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$18,387	\$13,217	\$17,417	\$4,200

Advisory and assistance services includes services acquired by contract from non-Federal sources as well as from other units within the Federal Government. The FY 2016 request includes a decrease of \$825k for business and program support efficiencies, a decrease of \$153k for non-recurring facility buildouts, a decrease of \$466k to offset DHS Balanced Workforce Initiative, an increase of \$602k for the Enhanced Cybersecurity Services program, and an increase of \$5,042k for the C3 Voluntary Program.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$3,061	\$7,061	\$9,061	\$2,000

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2016 request includes an increase of \$2,000k for moving national lab capabilities in-house.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$30,280	\$30,280	\$27,758	(\$2,522)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2016 request includes a decrease of \$2,000k for moving national lab capabilities in-house, a decrease of \$500k for outreach and awareness activities, and a decrease of \$22k for cellular wireless efficiencies.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
41.0 Grants, Subsidies, and Contributions	\$13,920	\$10,785	\$10,029	(\$756)

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, and individuals. The FY 2016 request includes an increase of \$3,200k for the realignment of MS-ISAC grant funding from US-CERT and a decrease of \$3,956k as a result of the implementation of cost-sharing for the MS-ISAC.

Cybersecurity Coordination Mission Statement

Cybersecurity Coordination integrates information from the six Federal cybersecurity centers to provide a fused view of cyber activity across the intelligence, defense, civil, and law enforcement/counterintelligence domains. The program supports operational activities to facilitate integration and activities at the Federal centers, an information system for online collaboration, and information technology (IT) support and enterprise capability for the centers. Cybersecurity Coordination also supports an increased number of private sector partners present in the National Cybersecurity and Communications Integration Center (NCCIC) environment.

Global Cybersecurity Management Mission Statement

Global Cyber Security Management provides and facilitates access to training and education for cybersecurity professionals. This includes developing a common approach for Federal cyber education and development and ensuring that education and training keeps pace with technological changes. Global Cybersecurity Management also supports academic centers to invigorate the pipeline of talented cybersecurity professionals available for current and future employment. Finally, the program works to manage risks from the global information and communications technology supply chain through awareness, policies, and standards and practices.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$2,049	\$2,059	\$3,093	\$1,034
11.3 Other than Full-Time Permanent	\$41	\$41	\$62	\$21
11.5 Other Personnel Compensation	\$68	\$69	\$103	\$34
12.1 Civilian Personnel Benefits	\$574	\$577	\$866	\$289
Total, Salaries & Benefits	\$2,732	\$2,746	\$4,124	\$1,378

The FY 2016 request includes \$4,124k for salaries and benefits for 25 FTE. The change includes an increase of \$34k for pay inflation, an increase of \$323k for salaries and benefits right-sizing, a decrease of 1 FTE and \$125k for lapse rate & attrition, an increase of \$1k for retirement contributions, an increase of \$518k for cyber pay reform, an increase of 2 FTP/1 FTE and \$185k for STIX/TAXII, and an increase of 4 FTP/2 FTE and \$442k for data management and architecture capabilities.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$10,162	\$8,382	\$9,218	\$836

Advisory and assistance services includes services acquired by contract from non-Federal sources as well as from other units within the Federal Government. The FY 2016 request includes an increase of \$2,515k for data and architecture management capabilities and a decrease of \$1,679k for the consolidation of software assurance capabilities.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$4,077	\$2,905	\$2,899	(\$6)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2016 request includes a decrease of \$6k for cellular wireless efficiencies.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.7 Operation and Maintenance of Equipment	\$0	\$0	\$500	\$500

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2016 request includes an increase of \$500k for STIX/TAXII.

Network Security Deployment Mission Statement

Network Security Deployment manages the National Cybersecurity Protection System (NCPS), operationally known as EINSTEIN. NCPS is an integrated intrusion detection, analytics, information sharing, and intrusion prevention system utilizing hardware, software, and other components to support DHS responsibilities within the Comprehensive National Cybersecurity Initiative (CNCI) mission.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$11,646	\$14,589	\$18,742	\$4,153
11.3 Other than Full-Time Permanent	\$233	\$292	\$375	\$83

Total, Salaries & Benefits	\$15,528	\$19,452	\$24,990	\$5,538

The FY 2015 Request includes \$24,990k for salaries and benefits for 150 FTE. The change includes an increase of \$230k for pay inflation, an increase of 8 FTE and \$1,000k for annualization of prior year positions, a decrease of \$2,679k for salaries and benefits right-sizing, a decrease of 8 FTE and \$1,000k for lapse rate and attrition, an increase of 2 FTP/2 FTE and \$366k for the DHS Balanced Workforce Initiative, an increase of \$10k for retirement contributions, an increase of \$3,043k for cyber pay reform, an increase of 4 FTP/2 FTE and \$420k for the Enhanced Cybersecurity Services program, and an increase of \$4,148k for 18 FTP/9 FTE for NCPS intrusion prevention.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
21.0 Travel and Transportation of Persons	\$221	\$191	\$242	\$51

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2016 request includes an increase of \$51k for increased travel requirements.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.3 Communications, Utilities, and Misc. Charges	\$311	\$910	\$1,156	\$246

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2016 request includes an increase of \$246k to match the funding requirements of the National Cybersecurity Protection System program.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$42,178	\$20,765	\$26,361	\$5,596

Advisory and assistance services includes services acquired by contract from non-Federal sources as well as from other units within the Federal Government. The FY 2016 request includes an increase of \$5,596k to match the funding requirements of the National Cybersecurity Protection System program.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$52,404	\$58,086	\$74,374	\$16,288

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2016 request includes a decrease of \$152k for cellular wireless efficiencies and an increase of \$

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.4 Operation and Maintenance of Facilities	\$3,606	\$203	\$258	\$55

Operation and maintenance of facilities includes all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal account. The FY 2016 request includes an increase of \$55k to match the funding requirements of the National Cybersecurity Protection System program.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.7 Operation and Maintenance of Equipment	\$112,668	\$158,787	\$201,574	\$42,787

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2016 request includes an increase of \$42,787k to match the funding requirements of the National Cybersecurity Protection System program.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
26.0 Supplies and Materials	\$100	\$35	\$44	\$9

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2016 request includes an increase of \$9k to match the funding requirements of the National Cybersecurity Protection System program.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
31.0 Equipment	\$26,721	\$116,902	\$148,402	\$31,500

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2016 request includes an increase of \$31,500k to match the funding requirements of the National Cybersecurity Protection System program.

US Computer Emergency Readiness Team Mission Statement

As the cybersecurity operational arm of Cybersecurity and Communications, US-CERT leads and coordinates efforts to improve the Nation's cybersecurity posture, to promote cyber information sharing, and to manage cyber risks to the Nation. As part of that mission, US-CERT analyzes and mitigates cyber threats and vulnerabilities; disseminates cyber threat warning information; coordinates with partners and customers to achieve shared cyber situational awareness of the Nation's cyber critical infrastructure; provides response and recovery support for national assets; and advises on national-level cybersecurity policy and guidance. US-CERT encompasses the activities that provide immediate customer support and incident response, including 24-hour support in the NCCIC.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$21,388	\$24,830	\$28,674	\$3,844

Priority Telecommunications Services Mission Statement

Priority Telecommunications Services leverages the Nation's public telephone networks to enable voice communications for response and recovery coordination efforts, ensuring that essential government functions and operations are maintained during a disaster. PTS maintains services that provide NS/EP voice telecommunications for the government and its industry organizations during times when networks are congested or degraded. These services are the Government Emergency Telecommunications Service (GETS), the Wireless Priority Service (WPS), and the Special Routing Arrangement Service (SRAS).

Next Generation Networks Mission Statement

Next Generation Networks leverages Internet Protocol infrastructures to provide government and its industry organizations with NS/EP telecommunications during an emergency. It will supplement PTS services as commercial telecommunications carriers transition from circuit-switched infrastructures to Internet Protocol infrastructures. The NGN-Priority Services (PS) Program Office works with major carriers as they make the transition to deploy features enabling NS/EP priority service. Over the long term, the NGN-PS will deliver priority voice, video, and data communication services.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$1,184	\$1,187	\$1,164	(\$23)
11.3 Other than Full-Time Permanent	\$24	\$24	\$23	(\$1)
11.5 Other Personnel Compensation	\$39	\$40	\$39	(\$1)
12.1 Civilian Personnel Benefits	\$331	\$333	\$326	(\$7)
Total, Salaries & Benefits	\$1,578	\$1,584	\$1,552	(\$32)

The FY 2016 request includes \$1,759k for salaries and benefits for 11 FTE. The change includes an increase of \$19k for pay inflation, an increase of \$73k for salaries and benefits right-sizing, a decrease of 1 FTE and \$125k for lapse rate and attrition, an increase of \$1k for retirement contributions, and an increase of \$207k for cyber pay reform.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$2,153	\$2,153	\$2,128	(\$25)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2016 request includes a decrease of \$25k for cellular wireless efficiencies.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
31.0 Equipment	\$15,302	\$15,302	\$25,890	\$10,588

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2016 request includes an increase of \$10,588 for the NGN Increment 2 program.

Programs to Study & Enhance Telecommunications Mission Statement

Programs to Study and Enhance Telecommunications conducts technical studies and analyses for identifying and improving approaches to assist Federal entities in fulfilling NS/EP telecommunications objectives. PSET models and analyzes priority communications capabilities, assists the State Department in recommending national and international telecommunications standards for networks supporting NS/EP goals, and maintains and supports the implementation of policy to address minimum communication capabilities requirements for Departments and agencies to continue operations during emergency situations.

K. DHS Balanced Workforce Strategy

In order to establish a high-performing workforce comprised of a strong internal core of Federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience, and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment, the Department will realign contractor and/or Federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with Federal employees to better realize the full potential of our total workforce – both contracted and Federal. A strong internal core of Federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for Federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into tiered ranking.

NPPD requests \$14.331 million in IPIS salaries and benefits dollars and an offset of \$14.331 million in program/contract dollars for 90 FTP/88 FTE as part of the FY 2016 DHS Balanced Workforce Strategy

FY 2016 DHS Balanced Workforce Strategy

- Amount of salaries and benefits funding needed to hire Federal employees:
 - \$14.331 million for 90 FTP/88 FTE.
- Amount of program/contract funding that will be terminated:
 - \$14.331 million program/contract cost. There is no projected cost savings by hiring Federal employees and converting contractors to FTPs/FTEs.
- Implementation timeline:
 - NPPD's FY 2016 Balanced Workforce Strategy will be implemented in FY 2016.
 - Contractor functions will be reduced and positions will be converted in accordance with the Department's Balanced Workforce Initiative with a particular focus on contractors who are performing "nearly government inherent" responsibilities.
 - Contractor reductions will be absorbed by the existing Federal Government employees and new FTE converted positions.

FY 2015 DHS Balanced Workforce Strategy

- Amount of salaries and benefits funding needed to hire Federal employees:
 - \$8.532 million for 65 FTP/65 FTE.
- Amount of program/contract funding that will be terminated:
 - \$8.798 million program/contract cost. There is a projected \$0.266 million cost savings by hiring Federal employees and converting contractors to FTPs/FTEs.
- Implementation timeline:
 - NPPD's FY 2015 Balanced Workforce Strategy will be implemented in FY 2015.
 - Contractor functions will be reduced and positions will be converted in accordance with the Department's Balanced Workforce Initiative with a particular focus on contractors who are performing "nearly government inherent" responsibilities.
 - Contractor reductions will be absorbed by the existing Federal Government employees and new FTE converted positions.

FY 2014 DHS Balanced Workforce Strategy

- Amount of salaries and benefits funding needed to hire Federal employees:
 - \$10.434 million for 74 FTP/74 FTE.
- Amount of program/contract funding that will be terminated:
 - \$15.535 million program/contract cost. There is a projected \$5.101 million cost savings by hiring Federal employees and converting contractors to FTPs/FTEs.
- Implementation timeline:
 - NPPD's FY 2014 Balanced Workforce Strategy will be implemented in FY 2014 and FY 2015.
 - Contractor functions will be reduced and positions will be converted in accordance with the Department's Balanced Workforce Initiative with a particular focus on contractors who are performing "nearly government inherent" responsibilities.
 - Contractor reductions will be absorbed by the existing Federal Government employees and new FTE converted positions.

BUDGET REQUEST AND SUPPORTING INFORMATION

National Protection & Programs Directorate Office of Biometric Identity Management

I. Appropriation Overview

A. Mission Statement for Office of Biometric Identity Management:

The Office of Biometric Identity Management (OBIM) mission is to provide enduring, enterprise-level identity services to the Department of Homeland Security (DHS) and its mission partners that advance informed decision making by producing accurate, timely, and high assurance biometric identity information and analysis with associated biographic data. OBIM identifies individuals with certainty, in a timely and secure manner and broadens the scope of information available to customers and stakeholders. OBIM's mission activities identify tens of thousands of known or suspected terrorist (KST) and watchlist matches each year and support efforts to protect critical infrastructure and other DHS operations. Under NPPD's guidance, OBIM will sustain operations of core biometric identity management services, while planning for additional biometrics-based identity management capabilities and new customers.

OBIM has four goals: (1) enable homeland security missions, (2) accelerate the transformation of OBIM into an enterprise-wide biometrically based Identity Services Provider for DHS, (3) institutionalize biometrics within the Department, and (4) provide integrated identity services management.

B. Budget Activities:

In FY 2016, OBIM funding supports: Salaries and Benefits, Program Operations, Identity and Screening Services, IDENT System Operations, and Increment 1 of the Replacement Biometric System.

- Salaries and Benefits consist of Federal staff compensation and benefits.
- Program Operations consists of Mission Support Services, Corporate Information Technology, and Systems Engineering.
- Identity and Screening Services consists of the Biometric Support Center, Identity Information Sharing and Reporting, and Biometric Standards.
- IDENT System Operations includes funding for Data Center Operations (Level 1 and 2 Services), Application Management (Level 3 Services), Application Software, Lifecycle Replacement, and Quality Assurance/Independent Verification and Validation (IV&V) and Testing.

- The Replacement Biometric System includes funding for the planning, acquisition, and maintenance for Increment 1.

Detailed descriptions of each activity are included in the Current Services section of this budget submission.

In FY 2016, NPPD will continue to seek to improve the services provided by OBIM through the development of a more integrated, organization-wide approach for accomplishing NPPD's multi-faceted mission, including biometric identify management. An integrated approach to stakeholder engagement, operational activities, innovative data analysis and management, and business operations will enhance the OBIM mission and ensure efficient and effective operations across NPPD.

C. Budget Request Summary:

NPPD requests \$283.533 million for the Office of Biometric Identity Management, including 177 FTP/168 FTE. This represents an increase of \$31.949 million and a decrease of 13 FTP/22 FTE from the FY 2015 President's Budget. The program change includes:

- Increase of \$65.800 million for Increment 1 of the Replacement Biometric System.

II. Summary of FY 2016 Budget Estimates by Program/Project Activity (PPA)

PPA: Office of Biometric Identity Management

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	207	207	\$226,988
FY 2015 President's Budget	190	190	\$251,584
2016 Adjustments-to-Base	(13)	(22)	(\$33,851)
FY 2016 Current Services	177	168	\$217,733
FY 2016 Program Change	-	-	\$65,800
FY 2016 Total Request	177	168	\$283,533
Total Change 2015 to 2016	(13)	(22)	\$31,949

NPPD requests \$283.533 million for the Office of Biometric Identity Management, including 177 FTP/168 FTE. This represents an increase of \$31.949 million and a decrease of 13 FTP/22 FTE from the FY 2015 President’s Budget. It includes the following adjustments-to-base:

- Increase of \$0.075 million for annualization of 2015 pay raise
- Increase of \$0.268 million for 2016 pay raise
- Increase of \$0.011 million for increased retirement contributions
- Decrease of \$0.094 million and 1 FTP/1 FTE for the realignment of the OBIM Facility Security Officer to NPPD M&A
- Decrease of \$2.525 million for the transfer of funding to DHS Office of the Chief Information Officer for the enterprise data center costs
- Decrease of \$1.125 million and 9 FTE in Federal salaries and benefits to account for the lapse and attrition rate in the workforce
- Decrease of \$1.404 million for salaries and benefits right-sizing
- Decrease of \$22.589 million as a non-recur adjustment for IDENT
- Decrease of \$6.244 million and 11 FTP/11 FTE for OBIM Business & Program Support Efficiencies
- Decrease of \$0.086 million and 1 FTP/1 FTE for HQ Efficiency Voluntary Early Retirement Authority and Voluntary Separation Incentive Payment
- Decrease of \$0.138 million for HQ Efficiency Cellular Wireless

The FY 2016 program change includes:

- Increase of \$65.800 million for Increment 1 of the Replacement Biometric System.

CURRENT SERVICES PROGRAM DESCRIPTION:

OBIM operates and maintains the Automated Biometric Identification System (IDENT) and provides expert identity services by matching, storing, comparing, analyzing, and sharing biometric data. OBIM provides rapid, accurate, and secure identification information to Federal Emergency Management Agency (FEMA), Transportation Security Administration (TSA), U.S. Citizenship and Immigration Services (USCIS), U.S. Coast Guard (USCG), U.S. Customs and Border Protection (CBP), U.S. Immigration and Customs Enforcement (ICE), U.S. Office of Personnel Management, U.S. Secret Service, Department of Defense (DoD), Department of Justice (DOJ), Department of State (DOS), the Intelligence Community (IC), State, local, tribal, and territorial law enforcement, and foreign partners. These services provide accurate and actionable information to customers who determine visa issuance and admissibility into the United States, establish eligibility for immigration benefits, conduct background checks, issue credentials, take law enforcement actions with potential homeland security implications, verify identity of persons associated with matters of national security, conduct intelligence and trend analysis, and grant access to sensitive facilities.

As an enterprise-level biometric identity service provider, OBIM has cross-cutting responsibility to serve and coordinate with DHS components and other Federal agencies. To ensure an enduring working relationship with its customers, OBIM utilizes the Executive Stakeholder Board to coordinate and collaborate with customers.

OBIM also supports interoperability by collaborating with customers and stakeholders on the delivery and uses of biometrics. In FY 2014, OBIM was involved with several efforts to broaden the use of biometric capabilities and services. For example, OBIM supported interoperability by participating in the expanded roll out of Rapid Response, which allows CBP Officers to send a single request to simultaneously search the IDENT watchlist and Federal Bureau of Investigation (FBI)/Criminal Justice Information Services (CJIS) Division's Next Generation Identification (NGI) system. In September 2014, the FBI Terrorist Screening Center (TSC) developed a mechanism to directly interface IDENT to the TSC's Terrorist Screening Database (TSBD). Prior to establishing the direct interface, indirect sharing of biometric information with the TSC occurred through FBI CJIS. This was accomplished by a CJIS manual review of every file followed by semi-automation. TSC on-boarding to use IDENT services marked the culmination of a nearly four year effort to streamline the sharing of KST information. There is now a direct interface between the TSC and IDENT, which means valuable KST biometric data is sent to OBIM in real time and is available to our IDENT customers and stakeholders in real time. Any corrections to the data are sent to IDENT in real time as well, thus improving the integrity of this data in IDENT.

In FY 2014, OBIM also worked with TSA to provide access to IDENT services. Connectivity to IDENT allows TSA to vet and adjudicate the Transportation Worker Identification Credential (TWIC) population. In April 2014, TSA's Technology Infrastructure Modernization (TIM) system was deployed, and in May 2014 the TWIC population began sending transactions to IDENT. The second phase of deployment is targeted for March 2015. Using OBIM services, TSA will have the ability to vet and adjudicate hazmat workers with information from both DHS and DOJ. In FY 2016, OBIM will on-board the remaining TSA TIM populations into IDENT.

In addition, OBIM worked with DHS Office of the Chief Security Officer (OCSO) and developed a schedule to process populations to meet Homeland Security Presidential Directive (HSPD)-12, which requires the Federal Government use common, secure, and reliable forms of identification. OCSO will enroll fingerprints into IDENT and vet against match results provided by both IDENT and FBI NGI's biometric holdings. Enrollment into IDENT is necessary for OCSO to utilize IDENT Notification Services, which provides OCSO with automated recurrent and perpetual vetting, should an OCSO vetted individual fail to self-report new derogatory information. In FY 2016, OBIM will support HSPD-12 through biometric processing and vetting of additional DHS employee and contractor populations.

In June 2014, OBIM implemented system changes to IDENT, allowing FEMA to connect and search fingerprints of employees, local volunteers, contractors, and first responders assisting in disaster recovery operations. This collaborative effort was initiated to prevent individuals with malicious intent or criminal history from gaining access to personally identifiable information and Government property during times of disaster. Due to OBIM's interoperability with FBI NGI, FEMA is now provided with both IDENT and NGI biometric identification responses, and no longer has to process criminal information checks manually.

OBIM proposes a new activity account structure to more accurately portray how funding streams support mission capabilities. The tables below outline OBIM funding for FY 2014 – FY 2016 and crosswalk the current account structure to the new structure.

	FY 2014 Revised Enacted					FY 2015 President's Budget					FY 2016 Request

Salaries and Benefits

Salaries and Benefits consist of Federal staff compensation and benefits. Federal staff manages IDENT operations and provide supplemental biometric identity management services. Federal staff also manage business activities including strategic and operational planning, acquisition, and other mission related activities. In FY 2016, OBIM will operationalize a program management cell dedicated to the day-to-day efforts of the Replacement Biometric System. The group will consist of Federal staff who manage the acquisition, risk, deployment, and execution of the Replacement Biometric System.

Program Operations

Program Operations consists of Mission Support Services, Corporate Information Technology, and Systems Engineering. Mission Support Services include activities such as the Working Capital Fund (including General Services Administration rent), Federal employee training, travel expenses, Biometric Support Center-West (BSC) rent, and logistical support. Corporate Information Technology consists of hardware, software (maintenance and licensing agreements), data circuit maintenance costs, information backup and storage, Tier 1/2/3 help desk and application support, and network and telecommunication services for employee desktop support. OBIM utilizes Systems Engineering to plan for and sustain information technology services. Systems Engineering activities include capacity planning, system availability, performance and service quality analysis, system and workload modeling and simulation, and statistical analysis. System Engineering also offers technical recommendations to promote consistent and efficient information technology planning, design, development, testing, and deployment. System Engineering monitors system capacity and end-to-end performance to mitigate system failures and sustain IDENT operations to meet customer requirements.

Identity and Screening Services

Identity and Screening Services consists of three components: the BSC, Identity Information Sharing and Reporting, and Biometric Standards.

The tables below illustrate the historic workload of the BSC for each of the biometric verification services since FY 2008:

History of Biometric Verifications

	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	FY 2014*
10-Print Verifications Completed	631,574	643,091	637,366	599,837	625,636	693,308	631,348
Urgent Verification Requests	230,354	180,123	185,866	183,007	191,852	181,175	239,154

*Data as of September 30, 2014.

History of Latent Comparisons and Identifications

	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	FY 2014*
Latent Comparisons Completed	2,502,934	4,616,604	5,169,509	4,194,714	4,483,604	4,624,869	4,422,948
Latent Identifications	114	139	139	343	1,041	1,207	2,318

*Data as of September 30, 2014.

History of Biometric Watchlist Enrollments, Biometric Searches, Unknown/Deceased Identifications, and Biometric Record Requests

	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	FY 2014*
Watchlist Enrollments	28,694	22,281	6,327	8,163	3,576	2,586	1,995
Biometric Searches	9,737	7,507	6,107	5,241	4,186	4,326	3,793
Unknown Deceased Identifications	339	397	242	173	132	100	218
Biometric Record Requests						454	322

*Data as of September 30, 2014.

Biometric Support Center

BSC provides expert fingerprint identification services. Approximately 99.5 percent of all transactions are matched through a search of IDENT; BSC fingerprint examiners manually verify the remaining 0.5 percent. BSC is a 24x7x365 operation providing manual 10-print verification, latent print services, and supplemental biometric services. Manual fingerprint verification is necessary to analyze poor quality fingerprints and ensure derogatory data is not erroneously associated with an individual. Latent print examiners compare and verify known fingerprints with previously unidentified latent fingerprints collected by agencies at crime scenes and terrorist incidents. Supplemental biometric services include IDENT biometric watchlist enrollments and IDENT biometric searches. BSC strives to complete urgent fingerprint verifications in less than 10 minutes, non-urgent verifications within 24 hours, and enrollment and verification of terrorism- related prints in 2 hours or less.

In FY 2016, BSC will continue to provide biometric verification capabilities and adhere to service-level targets for urgent and non-urgent fingerprint verification requests while responding to increased customer demands from on-boarding efforts. In addition, OBIM will continue to update biometric records the system did not capture correctly, ensuring IDENT has the best set of biometric data on file to facilitate future matching.

Identity Information Sharing and Reporting

Identity Information Sharing and Reporting, provides person-centric identity management services focusing on biometrics that respond to analytical, investigative, and operational requests from law enforcement, intelligence agencies, external agencies, and foreign partners. OBIM Identity Analysts:

- Coordinate with the FBI TSC to enroll KSTs information into IDENT;
- Support identity fraud detection activities; and
- Provide notification to customers of recently established derogatory information.

During FY 2014, Identity Analysts researched, processed, and coordinated on 69,886 biometric matches to OBIM domestic and international partners. Identity Analysts produced 33 Information Bulletins during this reporting period. Identity Analysts supported the promotion of 19, 955 KSTs to the biometric watchlist and contributed to the operational framework and business processes for several international and domestic projects.

In FY 2016, Identity Analysts will continue to concentrate on researching, processing, and coordinating biometric matches with OBIM domestic and international partners. Identity Analysts will also continue to produce Information Bulletins and support the operational framework and business

processes for international and domestic partners. Identity Analysts will enhance their skills through training in intelligence and threat analysis, immigration law, and the DHS Watchlisting Framework.

Biometric Standards

Biometric Standards allow OBIM to continue domain and steering committee leadership for the DHS/DOJ National Information Exchange Model, membership to both the National Institute of Standards and Technology, and Center for Identification Technology Research. Membership to these three organizations enables OBIM to engage with DHS partners to disseminate DHS biometric standards and mature the DHS biometric enterprise architecture. Biometric Standards resources are utilized to comply with Executive Order 13356 (2004), which strives to develop common standards for sharing of terrorism information by agencies within the IC.

IDENT System Operations

IDENT System Operations consists of Data Center Operations (Level 1 and 2 Services), Application Management (Level 3 Services), Application Software, Lifecycle Replacement, and Quality Assurance/Independent Verification and Validation (IV&V) and Testing.

Data Center Operations

Data Center Operations includes IT security, hardware maintenance, network services, and system maintenance agreements. It also provides for facility services, including physical security, environmental services (power, air conditioning, and fire protection), shipping and receiving services, and custodial services.

In addition to facilities services, Data Center Operations contains Level 1 and 2 Services, which provide:

- Level 1 – Basic hardware hosting services include, but are not limited to: equipment installation including site preparation, scheduling, and readiness reviews; rack and cable management; management of hardware and software maintenance; software license agreements; inventory management and disposal.
- Level 2 – Services for operation system level support include, but are not limited to: operating system installation and configuration; patch and operating system management; installation and maintenance of system-level software, critical security patches, and management of shared file systems; systemic and periodic backups of server data to tape or other media and the monitoring of backups; restoration of server volumes or reinstatement of data files; management of Level 2 service desk and communication and coordination with other help desks across DHS Components; receiving, recording, processing, and resolving incidents within an IT system management system.

Application Management

Application Management (Level 3 Services) provides application-level support of internal system code and configurations for adaptive, preventive, and perfective maintenance, release and configuration management, interface support, and troubleshooting. Technical support for problem resolution is provided 24x7x365.

Application Software

Application Software is software required for IDENT-specific tasks and improves the productivity and efficiency of the IDENT system. Software is utilized to perform system functions. Software licensing includes, but is not limited to database, security, and load balancing software. Enterprise licensing agreements are utilized for economies of scale and cost savings.

Lifecycle Replacement

Lifecycle Replacement includes industry standard technical refreshes of outdated hardware and software. Hardware and software matures over time and is no longer supported by the manufacturer. Manufacturer support varies by product and is replaced by new technology resulting in enhanced performance and operational efficiencies.

Quality Assurance/Independent Verification & Validation and Testing

Quality Assurance/IV&V and Testing include activities associated with deployed IDENT applications and affiliated system change requests. IV&V tests products or system changes in an operational environment, by assessing operational effectiveness and suitability of OBIM products to support the accomplishment of the mission.

The following table illustrates IDENT size through FY 2020 based on current customers and their requirements. As of September 2014, IDENT contained over 176 million unique identities including approximately 8 million persons on the IDENT watchlist. In FY 2015, transaction volumes are expected to increase due to the on-boarding of new populations. By the end of FY 2016, IDENT is projected to contain the fingerprints of approximately 222 million unique identities.

Projected Growth for IDENT*

(in millions)	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016	FY 2017	FY 2018	FY 2019	FY 2020
Annual Transaction Volumes	47	51	60	69	74	81	88	102	120	129	137	144	152
Gallery Size (records)	95	106	120	132	146	161	176	197	222	238	252	266	280

*Data as of September 30, 2014.

Currently, projected growth for IDENT is organic and results from increased enrollments of current customers, which affects capacity requirements and real-time data access through the increase of transactions. New stakeholder demands and requirements continue to stretch the system’s ability to provide matching services while still meeting existing customer Service Level Agreements.

The table below illustrates the transaction workload performed during FY 2014 by OBIM:

FY 2014 OBIM Transactions by Customer

Customers	Organizations Supported	Subjects Processed	Percentage of Transactions Processed	KST Matches Identified	Percentage of KST Matches	Watchlist Matches Identified	Percentage of Watchlist Matches
	CBP Ports of Entry	56,559,931	63.7%	294	0.1%	452,014	16.7%
	DOJ	13,354,080	15.1%	26,284	7.5%	1,293,894	47.7%
	DOS	11,333,706	12.8%	525	0.1%	153,073	5.6%
	USCIS	3,401,412	3.8%	331	0.1%	248,750	9.2%
	DHS Enforcement	1,848,515	2.1%	157	0.0%	126,319	4.7%
	OPM	1,458,933	1.6%	-	0.0%	8,682	0.3%
	DoD	486,898	0.5%	323,162	92.1%	425,257	15.7%
	USCG	892	0.0%	-	0.0%	34	0.0%
	TSA	110,917	0.1%	1	0.0%	3,024	0.1%
	International	175,618	0.2%	-	0.0%	2,475	0.1%
	FEMA	2	0.0%	-	0.0%	-	0.0%
	Ad Hoc	-	0.0%	-	0.0%	-	0.0%
TOTAL*	88,730,904	100.0%	350,754	100.0%	2,713,522	100.0%	

*Data as of September 30, 2014.

Note: IDENT receives DoD's Biometrically Enabled Watchlist (BEWL)—many of which encounters results in nominations to the TSC. These numbers do not necessarily indicate DoD's first match to a KST, but a rather a positive affirmation that a derogatory DoD encounter resulted in an enrollment to the TSC's TSDB.

Since inception, the IDENT system has grown significantly in daily transaction volume and number of stored biometrics and has added or expanded existing capabilities which greatly exceed the original design. In FY 2014 and FY 2015, OBIM initiated IDENT system improvements to address system constraints, including organic growth, as well as new customer requirements. These system improvements will sustain IDENT through the FY 2016 to FY 2019 timeframe. However, layering on additional hardware will not solve IDENT's architectural limitations. Therefore, to address these inherent scalability and stability limitations, OBIM will implement Increment 1 of the Replacement Biometric System in FY 2016. The program change section of this request describes the initial phase in further detail.

IV. Program Justification Changes

**Department of Homeland Security

Program Increase							-	-	\$65,800
Total Request	-	-	-	-	-	-	-	-	\$65,800

Description of Item:

OBIM requests an increase of \$65.800 million in FY 2016 for Increment 1—consisting of investment planning, acquisition, and operations and maintenance (O&M)—of the Replacement Biometric System. OBIM designed a four increment phased approach to execute the transformation from the legacy IDENT system to a Replacement Biometric System that will serve the mid- and long-term needs of the Department for biometric services. The FY 2016 request establishes the first of four 18 month planned increments.

The initial phase, Increment 1, includes implementation of an Online Transaction Processing database and replacement of the Transaction Manager with business workflow and business rules management system software components as well as middleware for biometric matching services. The first increment will include an initial performance test environment, designated Authentication and Authorization Service for IT security, high availability, as well as initial tiered storage and server consolidation/virtualization; and data migration. These capabilities will serve as foundational elements for the remainder of the initiative.

Justification:

IDENT is an aged system originally developed in the 1990s by the Immigration and Naturalization Service as a pilot project and continues to use the underlying legacy code. The Department’s mission needs for biometric services have drastically increased; IDENT has grown significantly in daily transaction volume and number of stored biometrics, and has added or expanded existing capabilities which greatly exceed the original design. The legacy IDENT system has inherent scalability and stability limitations that cannot be addressed without fundamentally re-architecting (i.e. replacing) the

system. Resources are being dedicated to IDENT system improvements that will be undertaken in FY 2014 and FY 2015 to extend the life of the legacy system; these legacy IDENT system improvements will also be leveraged and re-used in the Replacement Biometric System.

The purpose for this multi-phased investment is to replace the legacy IDENT system with improved, efficient and more cost effective biometric identity services capabilities. The Replacement Biometric System is needed to continue to provide biometric identity services to support DHS missions, and will resolve critical system issues with the current IDENT system. It will provide the benefits of O&M cost avoidance, improved detection capabilities, multi-modal capabilities, more efficient processing, and improved ability to scale the system to meet DHS and other partners' requirements. The value to the Department of having a single authoritative biometric system, used across DHS components and missions and partner agencies, is proven in both the effectiveness of the identifications that result from data sharing, and in the efficiency of having one system instead of many.

Impact on Performance (Relationship of Increase to Strategic Goals):

The Replacement Biometric System will, at Full Operational Capability (FOC), support 450 million unique identities and 720 thousand daily fingerprint transactions while offering greater efficiency than is currently available with the legacy IDENT system. In the next series of increments, the Replacement Biometric System will provide multi-modal capabilities (e.g., iris-scanning and facial recognition modalities in addition to fingerprints), as well as operational flexibility and increased accuracy. Beyond FOC, the Replacement Biometric System will be scalable in capacity and performance. Without a Replacement Biometric System, the legacy IDENT system will begin to experience system degradation FY 2016. Resulting operational impacts include:

- Individuals who would have been deemed inadmissible if biometric checks were performed will be admitted into the U.S.
- Wait times at the border will exceed performance standards.
- Immigration benefits will be granted to individuals who are national security threats or otherwise ineligible.
- Immigration detainees will be released, removed, and improperly charged due to lack of identity information.
- DHS Officers and Agents will lack the identification support they need to properly identify known or suspected terrorists, wanted or dangerous subjects, identify suspected smugglers, wanted felons, and recidivists.
- DHS Officers and Agents will be unable to rapidly determine if encountered individuals have derogatory information, presenting an officer safety concern.
- The operational availability of the legacy IDENT system will fall from 99.7 percent to approximately 87.5 percent by FY 2016 and less than 55-percent by FY 2020.

As a result, the Department would need to make difficult choices in regards to IDENT operations, including the cessation of service to some DHS customers, potentially dropping populations from IDENT storage, and/or accepting system degradation.

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For necessary expenses for the Office of Biometric Identity Management, as authorized by section 7208 of the Intelligence Reform and Terrorism Prevention Act of 2004 (8 U.S.C. 1365b), [\$251,584,000] \$283,533,000¹: *Provided*, That of the total amount made available under this heading, [\$124,367,000] \$159,054,000² shall remain available until September 30, [2017] 2018³. *Note.—A full-year 2015 appropriation for this account was not enacted at the time the budget was prepared; therefore, the budget assumes this account is operating under the Further Continuing Appropriations Act, 2015 (P.L. 113–235, Division L). The amounts included for 2015 reflect the annualized level provided by the continuing resolution.*

Change	Explanation
¹ ... [\$251,584,000] <u>\$283,533,000</u>	Dollar change only. No substantial change proposed.
² ... [\$124,367,000] <u>\$159,054,000</u>	Dollar change only. No substantial change proposed.
³ ... [2017] <u>2018</u>	Year change only. No substantial change proposed.

Office of Biometric Identity Management Mission Statement

The Office of Biometric Identity Management provides enduring, enterprise-level identity services to the Department of Homeland Security and its mission partners that advance informed decision making by producing accurate, timely, and high assurance biometric identity information and analysis with associated biographic data.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$22,010	\$20,264	\$17,318	\$(2,946)
11.3 Other than Full-Time Permanent	\$260	\$264	\$227	\$(37)
11.5 Other Personnel Compensation	\$122	\$125	\$108	\$(17)
12.1 Civilian Personnel Benefits	\$7,428	\$6,846	\$5,858	\$(988)
Total, Salaries & Benefits	\$29,820	\$27,499	\$23,511	\$(3,988)

The FY 2016 request includes \$23,511k for salaries and benefits for 168 FTE. This includes a transfer of \$94k and 1 FTP/1 FTE for the transfer of the OBIM facility security officer position to NPPD M&A, an increase of \$343k for pay inflation, a decrease of \$1,125k and 9 FTE for lapse and attrition rate, a decrease of \$1,404k for salaries and benefits right-sizing, a decrease of \$1,633k and 11 FTP/FTE for business and program support efficiencies, a decrease of \$86k and 1 FTP/ 1 FTE for VERA/VISP, and an increase of \$11k for retirement contributions.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
21.0 Travel and Transportation of Persons	\$170	\$156	\$140	(\$16)

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2016 request includes a reduction of \$16k.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
22.0 Transportation of Things	\$252	\$0	\$79	\$79

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. The FY 2016 request includes an increase of \$79k.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.1 Rental Payments to GSA	\$3,983	\$3,681	\$469	(\$3,212)

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent-related services. The FY 2016 request includes a decrease of \$2,843k for the reclassification of rental payments to GSA to DHS WCF and a decrease of \$369k for facility efficiencies.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.3 Communications, Utilities, and Misc. Charges	\$1,108	\$1,140	\$9,717	\$8,577

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2016 request includes a decrease of \$138k for cellular wireless efficiencies and an increase of \$8,715k for the replacement biometric system.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$0	\$0	\$826	\$826

Advisory and assistance services includes specialized technical training for new capability. The FY 2016 request includes an increase of \$826k for the replacement biometric system.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$23,617	\$26,624	\$27,423	\$799

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2016 request includes an increase of \$799k for Biometric Support Center fingerprint examiner activities.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$14,421	\$14,854	\$14,668	(\$186)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts. The FY 2016 request includes an increase of \$2,843k for the reclassification of rental payments to GSA to DHS WCF, a decrease of \$2,525k for the transfer of data center support to DHS OCIO, and a decrease of \$504k for business and program support efficiencies,

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.7 Operation and Maintenance of Equipment	\$121,403	\$117,798	\$117,520	(\$278)

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2016 request includes a decrease of \$133k for business and program support efficiencies, a decrease of \$945k for non-recurring IDENT system improvements, and an increase of \$800k for the replacement biometric system.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
26.0 Supplies and Materials	\$141	\$130	\$116	(\$14)

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2016 request includes a decrease of \$14k due to Federal staffing reductions.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
31.0 Equipment	\$32,073	\$59,702	\$89,064	\$29,362

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2016 request includes a decrease of \$4,478k for business and program support efficiencies, a decrease of \$21,647k for non-recurring IDENT system improvements, and an increase of \$55,487k for the replacement biometric system.

K. DHS Balanced Workforce Strategy

In order to establish a high-performing workforce comprised of a strong internal core of Federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience, and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment, the Department will realign contractor and/or Federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with Federal employees to better realize the full potential of our total workforce – both contracted and Federal. A strong internal core of Federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for Federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into tiered ranking.

NPPD does not request any funding or FTP/FTE for OBIM as part of the FY 2016 DHS Balanced Workforce Strategy.

 - \$0.183 million for 1 FTP/1 FTE.
- Amount of program/contract funding that will be terminated:
 - \$0.183 million program/contract cost. There is no projected cost savings by hiring Federal employees and converting contractors to FTP/FTE.
- Implementation timeline:
 - NPPD’s FY 2015 Balanced Workforce Strategy will be implemented in FY 2015.
 - Contractor functions will be reduced and positions will be converted in accordance with the Department’s Balanced Workforce Initiative with a particular focus on contractors who are performing “nearly government inherent” responsibilities.
 - Contractor reductions will be absorbed by the existing Federal Government employees and new FTE converted positions.

FY 2014 DHS Balanced Workforce Strategy

- None.

BUDGET REQUEST AND SUPPORTING INFORMATION

National Protection & Programs Directorate Federal Protective Service

I. Appropriation Overview

A. Mission Statement:

The National Protection and Programs Directorate (NPPD) leads national efforts to strengthen the security and resilience of the Nation's critical infrastructure against terrorist attacks, cyber events, natural disasters, other large-scale incidents, and during national security special events. Secure and resilient infrastructure is essential for national security, economic vitality, and public health and safety. Within NPPD, the Federal Protective Service (FPS) protects Federal facilities and those who occupy them by conducting law enforcement and protective security services, and leveraging access to the intelligence and information resources of our network of Federal, State, local, tribal, territorial, and private sector partners. From our protective security and law enforcement personnel to those who support the operations of the Service, we approach our mission as one team. Every day we protect the homeland by managing risk and ensuring continuity for one of the most crucial elements of our national critical infrastructure – our Nation's Federal facilities.

FPS has four strategic goals:

- Protect Federal facilities, their occupants, and visitors while facilitating the conduct of government business.
- Inform and enhance operations through engagement with stakeholders and the interagency community.
- Sustain a valued, highly skilled, and agile law enforcement, security, and mission support workforce.
- Support operations with risk-based and accountability-focused management and oversight.

FPS's Strategic Goals and Objectives are aligned with the goals specified in the National Security Strategy of 2010, the Quadrennial Homeland Security Review (QHSR) of 2014, the DHS Strategic Plan 2014-2018, and NPPD's Fiscal Year 2014-2018 Strategic Plan. The FPS relationship within the broader law enforcement community is a critical aspect of day-to-day operations. FPS's mission and goals align to the mission and goals of NPPD, to lead the national effort to protect and enhance the resilience of the Nation's physical and cyber infrastructure.

In FY 2016, FPS will employ a base workforce of 1,386 full-time equivalents (FTEs) to accomplish its protective mission of providing law enforcement and security management services. FPS delivers security services through approximately 13,000 contracted Protective Security Officers (PSO), depending on customer requirements, along with technical countermeasure equipment and services, to more than 9,000 General Services Administration (GSA) owned, leased, or operated facilities located in 11 regions across the country. These services provide a comprehensive risk-based approach to facility protection that allows FPS to prioritize its operations to prevent, detect, assess, respond to, and disrupt criminal and other incidents that endanger the Federal community. Consequently, the

protection that FPS provides is not ‘one-size-fits-all.’ For each customer and/or facility, FPS configures the appropriate measure of protection that works in concert with, but does not impede, the facilitation of the conduct of government services and business of FPS customers in a secured environment.

In FY 2016, NPPD will continue to seek to improve the services provided by FPS through the development of a more integrated, organization-wide approach for accomplishing NPPD’s multi-faceted mission, including protecting Federal facilities. An integrated approach to stakeholder engagement, operational activities, field operations, innovative data analysis and management, and business operations will enhance the FPS mission and ensure efficient and effective operations across NPPD.

B. Revenue Sources:

FPS is a full-cost recovery operation, which means that all expenses incurred must be funded by offsetting collections. For FPS, the revenues to fund its operations come from a basic security charge and an oversight fee associated with providing building-specific and reimbursable agency-specific security services. In FY 2016, revenues collected from the basic security charge and the oversight fees fund the salaries and expenses for the Federal workforce (1,386 FTE), as well as the operating costs of FPS.

The following is a brief description of the five revenue sources that fund all expenses associated with law enforcement, security management, and support activities incurred by FPS and its customers for whom security services are provided:

Basic Security Charge: A 74-cent-per-rentable-square-foot charge is assessed by FPS for all GSA-controlled space. The revenue collected provides funding for statutory and regulatory service requirements resulting from activities associated with law enforcement, threat management and information sharing, protective and criminal investigations, risk management, oversight and administration of the contracted PSOs and technical countermeasures security programs, as well as MegaCenter alarm monitoring and dispatch operations, training, and equipment.

Building-Specific Security Revenue: Building-specific security revenue is used to implement and maintain countermeasure security requirements specifically fashioned for a facility in accordance with Interagency Security Committee (ISC) standards. Charges are assessed to Federal agency customers for building-specific security services that include the acquisition, oversight, and administration of PSOs, security equipment installation, operations, maintenance and repair, consultation on security fixtures, and contractor background suitability determinations.

Reimbursable Agency-Specific Security Revenue: Reimbursable agency-specific security revenue is funded via a Security Work Authorization (SWA), or reimbursable agreement, between FPS and another Federal agency for the occupants of Federally-owned or leased facilities requiring the same services provided as part of building-specific security but provided

to an individual customer. Reimbursable agency-specific security agreements may include other traditional reimbursable activity, such as FEMA mission assignments.

Building-Specific Security Oversight Fee: A six-percent oversight fee is applied to the costs for building-specific security to fund FPS for direct and indirect costs associated with providing building-specific security. Revenue collected from the oversight fee is combined with the revenue from the basic security charge to fund FPS operating resource requirements.

Reimbursable Agency-Specific Security Oversight Fee: A six-percent oversight fee is applied to the cost for reimbursable agency-specific security to fund FPS for direct and indirect costs associated with delivering single customer requested protective services, to include PSO and technical countermeasure (TCM) services. Revenue collected from the oversight fee is combined with the revenue from the basic security charge to fund FPS operating resource requirements.

FPS identified the 20 agencies which generate 90 percent of the oversight fee revenue. The table below lists FY 2014 actual revenue by customer agency.

Agency Name	FY 2014 Basic Security Charge (\$0.74 / sq. ft.)	FY 2014 Building Specific and Reimbursable Agency Specific Revenue	Oversight Fee 6%	Total Revenue Collected
Department of Homeland Security	31,730,602	192,803,216	11,568,193	236,102,010
Social Security Administration	22,357,623	173,623,141	10,417,388	206,398,153
Department of Justice	38,345,649	95,388,174	5,723,290	139,457,114
Department of the Treasury	22,947,931	78,550,128	4,713,008	106,211,067
Department of Health & Human Services	12,836,943	65,197,978	3,911,879	81,946,799
Judiciary	31,747,684	40,723,393	2,443,404	74,914,480
General Services Administration	18,482,217	52,850,626	3,171,038	74,503,880
Environmental Protection Agency	5,177,808	22,621,708	1,357,302	29,156,818
Department of Veterans Affairs	5,746,564	20,925,888	1,255,553	27,928,005
Department of Agriculture	9,290,423	17,480,218	1,048,813	27,819,454
Office of the Secretary of Defense	7,076,468	15,564,014	933,841	23,574,322
Department of the Interior	10,508,182	11,571,335	694,280	22,773,797
Department of Army	7,252,963	13,483,982	809,039	21,545,983
Department of Commerce	8,114,967	11,539,141	692,348	20,346,457
Department of Labor	4,536,072	9,244,277	554,657	14,335,006
Department of Transportation	4,747,709	8,474,091	508,445	13,730,246
Agency for International Development	800,609	11,434,752	686,085	12,921,446

Independent US Government Offices	1,783,889	6,766,537	405,992	8,956,418
All Other Agencies	29,362,673	42,197,288	2,531,837	74,091,799
Total	\$ 275,434,914	\$ 909,024,618	\$ 54,541,477	\$ 1,239,001,009

C. Budget Request Summary:

For FY 2016, FPS requests 1,481 positions, 1,386 FTE and \$1.443 billion. The total adjustments-to-base is \$100.843 million and 15 FTPs/15 FTEs. Within these funds, FPS has a current services operating requirement of \$370.377 million with anticipated operating fund revenue of \$336.458 million for 1,386 FTE. FPS plans to use prior year carry-over and recoveries to fund the remaining operating requirement of \$33.919 million.

D. Congressionally-Mandated Requirements:

FPS Operating Funds

FPS continues to build upon its activity-based costing (ABC) model to improve internal financial management and to more clearly identify the costs to protect Federal facilities and their occupants. The model is a strong management tool that enables operational decisions and tradeoffs involving risks associated with the cost and performance of the impacted activities. The first iteration of the cost model informed the FY 2015 budget request as well as this budget submission.

The table below displays the operating resources required to maintain current services. Specific pay related adjustments in FY 2016 include:

- Increase of \$0.448 million for the annualization of 2015 pay raise (funded through prior-year carryover)
- Increase of \$1.817 million for the 2016 pay raise (funded through prior-year carryover)
- Increase of \$2.566 million and 15 FTPs/15 FTEs for the DHS FY 2016 Balanced Workforce Initiative

Operating Expenses (Dollars in Thousands)	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request
Personnel Compensation & Benefits	\$179,153	\$186,358	\$190,383
Working Capital Fund	\$8,147	\$7,466	\$7,643
Rent	\$29,328	\$29,328	\$29,328
Fleet	\$12,581	\$12,581	\$12,581
Facilities Projects	\$5,410	\$5,410	\$5,410
DHS Service Level Agreements	\$4,882	\$4,882	\$4,882
Department of Labor - Workers' Compensation	\$1,600	\$1,600	\$1,600
Information Technology Support	\$22,665	\$22,665	\$20,060
Law Enforcement Operations	\$35,811	\$35,811	\$35,811
MegaCenter and Radio Communications	\$28,916	\$28,916	\$28,916
Business and Mission Support	\$33,299	\$29,533	\$29,533
Automated Tool Enhancement (MIST/PTS)	\$5,000	\$5,000	\$4,230
Total Operating Expenses	\$366,792	\$369,550	\$370,377

Revenue from the basic security charge provides base funding of resource requirements for FPS personnel and the services they perform in law enforcement, investigations, information and intelligence sharing, security assessments, crime prevention and awareness training, program administration of countermeasure programs, MegaCenter alarm monitoring and dispatch operations, capital investments for operations and business management tools, and mission support and oversight activities.

In addition to the revenue collected from the 74-cent-per-square-foot basic security charge, FPS is authorized to use revenue collected from the building-specific and reimbursable agency-specific security fees for operating expenses. The table below displays FPS operating funding levels for FY 2014, FY 2015, and FY 2016 at the current fee rates.

Base Operating Funding Sources (Dollars in Thousands)	FY 2014 RevisedEnacted	FY 2015 President's Budget	FY 2016 Request
Basic Security	\$275,763	\$275,763	\$275,763
Building-Specific Security — Oversight Fee	\$29,984	\$31,723	\$35,248
Reimbursable Agency-Specific Security — Oversight Fee	\$24,006	\$23,349	\$25,447
Total Base Operating Funds	\$329,753	\$330,835	\$336,458

In FY 2016, FPS operating expense requirements are \$370.377 million, which will be funded with \$336.458 million in current year operating revenue and \$33.919 million in prior year carryover and recoveries. FPS is working on a sustainable revenue model where the revenue collected sustains the requirements of the same year as reliance on carryover and recoveries is a short-term fix and not a long-term solution.

The paragraphs below describe the major operating expense categories that are required to maintain current services in FY 2016.

Personnel Compensation & Benefits

Personnel compensation and benefits in FY 2016 include all salaries and benefits, career ladder promotions, within grade promotions, awards, and overtime.

FPS is also responsible for deploying its law enforcement officers to Federal facilities adjacent to or in the vicinity of national security events (e.g., the national conventions and inauguration held every four years). These deployments are consistent with risk assessments and intelligence coordinated with other Federal, State, and local law enforcement organizations and/or to provide protective services during national emergencies, exemplified by deployments after the 2013 Boston Marathon bombing or Federally declared disasters like Hurricane Sandy, or high visibility events such as the 2013 Boston trial of defendant “Whitey” Bulger and the 2014 Boston Marathon. These deployments are made within available resources and represent FPS's risk mitigation strategy, which necessitates drawing resources from lower risk facilities and tasks to deploy to facilities identified as having a higher risk mitigation requirement. Additionally, FPS works closely with the Administrative Office of the U.S. Courts and the U.S. Marshals Service to provide for the protection of Federal Courthouses during high-

profile trials (such as terrorists, cartel drug lords, and other trials where protests or other security incidents may occur).

Working Capital Fund (WCF)

FPS provides funding to the DHS WCF, a managed account from which a full range of oversight support services such as finance, accounting, information technology, and personnel administration are provided to all DHS components, including FPS. The DHS WCF determines a component's funding requirement employing algorithms to assess charges.

Rent

FPS maintains a law enforcement and security presence in all 50 states and the U.S. Territories of Guam and Puerto Rico. FPS occupies approximately 975,000 square feet of operational and support space obtained through GSA.

Fleet

FPS's Administrative Services Division tracks and maintains a fleet of around 1,200 vehicles to ensure that FPS officers are in a position to respond and protect the people and buildings under its protection. The vast majority of the FPS fleet is leased through GSA, with the exception of specialty vehicles (i.e., mobile command vehicles, x-ray vehicles, motorcycles) which are purchased because they aren't available to lease through GSA. Vehicle leasing has been an effective alternative to vehicle purchasing for FPS and ensures that vehicles are routinely replaced at the expiration of the lease period as well as normalizes the cost over a 3-year or 5-year period.

DHS Service Level Agreements

FPS participates in cooperative service level agreements (SLA) with other DHS Components to receive support and services from those offices with specialized staff and skills. FPS achieves economies and efficiencies by avoiding the need to duplicate support that is available from these specialized service providers. In FY 2016, FPS will have SLAs with the Office of General Counsel for legal services, Office for Civil Rights and Civil Liberties for Equal Employment Opportunity support, and the DHS Office of Security for conducting background investigations of FPS employees.

Department of Labor Workers' Compensation Payments

The Department of Labor Office of Workers' Compensation Programs (OWCP) pays for costs associated with FPS work-related injuries and illnesses in real time (during the year in which they are incurred). FPS is required to reimburse OWCP for those payments. Reimbursements are due to OWCP in FY 2016 for payments made between July 1, 2014, and June 30, 2015.

Information Technology Support

Information technology support and services are anticipated to be fully transitioned from Immigration and Customs Enforcement to the DHS Office of the Chief Information Officer/Information Technology Services Office by the end of FY 2016.

Law Enforcement Operations

FPS law enforcement operations encompass all aspects and resources required to deliver law enforcement protective services. FPS law enforcement personnel perform facility security assessments (FSAs) in accordance with Interagency Security Committee (ISC) standards, and provide oversight and inspection of the approximately 13,000 PSOs at roughly 6,000 posts in over 3,000 buildings across the United States and its territories. FPS has a target of completing over 2,000 FSAs annually for high risk facilities. FPS law enforcement personnel also respond to more than 40,000 incidents per year at Federal facilities and perform visible deterrence through mobile patrol and response activities. FPS law enforcement personnel are assigned to analyze criminal intelligence, investigate threats made against Federal Officials, and investigate incidents occurring in Federal facilities. Training, firearms, ammunition, and uniforms all support the ability of FPS law enforcement personnel to deploy each day to protect Federal facilities.

MegaCenter and Radio Communications

As the provider of protection services to more than 9,000 Federal facilities, FPS personnel are required to respond to a variety of incidents 24 hours a day, some of which entail responding to criminal activity in progress, and others to protect life and property. To provide around-the-clock capabilities to take calls for assistance, dispatch personnel, and ensure the appropriate response to incidents, FPS has four MegaCenters strategically located throughout the country in Denver, Colorado; Suitland, Maryland; Battle Creek, Michigan; and Philadelphia, Pennsylvania. They provide a vital communications link between FPS law enforcement personnel, PSOs manning posts at or patrolling in Federal facilities, and other Federal, State, and local law enforcement entities; the MegaCenters also facilitate the swift and efficient flow of information across the Nation and territories. FPS MegaCenters monitor multiple types of alarm systems and wireless dispatch communications within Federal facilities throughout the Nation. The related alarm-monitoring function for GSA and other federally-owned and leased facilities includes approximately 8,800 alarms, and provides a dedicated capability to ensure prompt dispatch of law enforcement and emergency first responders to situations at those facilities nationwide. FPS MegaCenters are structured to allow for failover to a sister site in the event of a partial or catastrophic failure at one center without disruption to alarm and communication services. FPS MegaCenters are in operation 24 hours a day, 7 days a week.

Business and Mission Support

FPS business and mission support activities include headquarters leadership; management and operations; field operations oversight; training; resource management to include budget, finance, revenue, and performance management; administrative services; contracting and procurement; human capital coordination; program management; and acquisition program and information technology system planning and oversight.

Automated Tool Enhancement

In FY 2015, FPS will deploy Modified Infrastructure Survey Tool (MIST) 2.0 development, which includes converting MIST 1.0 functionality into a web-based application, building the approval work flow into the system, and creating management reports. After implementation, FPS will continue to work closely with the DHS Science and Technology (S&T) Directorate to prototype a post tracking system, automating what is now a manual process of ensuring that the contracted PSOs are working at a post as scheduled and that they possess the required training and certifications.

III. Current Services Program Description by PPA

**Department of Homeland Security
National Protection & Programs Directorate
Basic Security
Program Performance Justification**
(Dollars in Thousands)

PPA: Basic Security

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	1,371	1,371	\$275,763
FY 2015 President's Budget	1,466	1,371	\$275,763
2016 Adjustments-to-Base	15	15	-
FY 2016 Current Services	1,481	1,386	\$275,763
FY 2016 Program Change	-	-	-
FY 2016 Total Request	1,481	1,386	\$275,763
Total Change 2015 to 2016	15	15	-

FPS collects a basic security charge of 74-cents-per-rentable-square-foot for GSA-controlled space. The total square footage inventory varies from month to month but averages 372.653 million square feet. Based on this inventory, FPS anticipates collecting \$275.763 million in FY 2016.

Adjustments-to-Base in FY 2016 include:

- Increase of 15 FTPs/15 FTEs for the DHS FY 2016 Balanced Workforce Initiative
 - 4 FTPs/4FTEs for the Delegation of Authority and Security Program to provide a standing capability within FPS to review delegations (according to 40 U.S.C. 1315 authority), provide cost analysis, address delegation requests and manage the recommendations through DHS, manage the criteria necessary for oversight when DHS delegates security to an agency, and keep all program documentation up to date.
 - 10 FTPs/10 FTEs for the Protective Security Officer (PSO) Program to continue improvements in the national management of 13,000 PSOs and approximately \$1 billion in contract costs. The Federal staff will set national policy, respond to program inquiries, oversee standardization, manage the contract requirements, produce reports and analyze and monitor the success of the program. Work will also focus on strengthening the integration of PSO training efforts and a shift towards performance-based contracting.
 - 1 FTEs/FTPs conversion for Privacy.

CURRENT SERVICES PROGRAM DESCRIPTION:

The FPS basic security charge provides operating funding for services associated with law enforcement, threat management and information sharing, protective and criminal investigations, risk management, oversight and administration of the contracted PSOs and technical countermeasure security programs, as well as MegaCenter alarm monitoring and dispatch operations, training, and equipment.

Using FY 2014 expenses and FY 2014 distribution of labor survey results, FPS has projected an FY 2016 view of resource consumption using the ABC model. The deployment of the 1,481 positions/1,386 FTEs by activity groupings is set forth in the table below. The activity groupings in the table are not PPAs and are only used to present greater transparency into FPS's operational and mission support activities.

Activity Groups	Total Head-count*	Total FTE	Total Cost (\$M)***
Primary	1,152	715	\$ 125.7
Law Enforcement Response	872	106	\$ 17.7
Protective Investigations	274	18	\$ 4.1

Notes:			
* Individual positions within FPS are often required to support multiple activities; as such, each individual may be counted in multiple activities. The numbers do not distinguish the percentage of time an individual spends on each activity.			
** This is not the sum of the head count outlined in the activity groupings, rather it is the number of positions requested in FY 2016.			
*** FPS will use prior year carryover and recoveries to support its FY 2016 operating requirements.			

FPS can further look at resource consumption against the assignment of FTE directly supporting facilities by facility security level and by facility profile, which identifies resource consumption by facilities that have posts and/or TCMs or no countermeasures to begin to show how FPS is assigning staff to mitigate risk.

FY 2014 Cost Model Facility List*

Facility Security Level (FSL)	No. of Facilities	Primary FTE
FSL 5	47	8
FSL 4	785	215
FSL 3	1,196	140
FSL 2	4,343	240
FSL 1	2,317	89
FSL 0 / TBD	710	23
Total	9,398	715

*Cost Model Facility List based on FY 2014 facilities to project Primary FTE for FY 2016

Cost Model Post Count¹

Posts & TCM		Posts Only		TCM Only		No Posts / No TCM		FY 2016 Total	
Primary FTE	No. of Bldgs	Primary FTE	No. of Bldgs	Primary FTE	No. of Bldgs	Primary FTE	No. of Bldgs	Primary FTE	No. of Bldgs
211	421	274	2,576	20	113	232	6,288	715	9,398

It is important to note that these tables are based on FY 2014 survey results and will continue to be refined as FPS conducts facility security assessments, improves data integrity and collection capabilities, and implements management initiatives drawn from the initial model information.

¹ This chart does not reflect the distribution of these facilities by FSL level. As FPS continues to analyze operational and ABC data, greater fidelity will be provided into the FTE workload.

MAJOR ACQUISITIONS:

FPS Tactical Communications Program (TACCOM) / TACCOM Equipment and Support

The FPS Tactical Communications Program (TACCOM)* provides a centralized dispatch capability that supports 11 FPS regions, and FPS Headquarters. The TACCOM Land Mobile Radio (LMR) communication system is a vital link to performing FPS’s mission of securing and protecting Federal facilities and those inside them, by providing centralized dispatch capabilities and office-to-officer communications. Four MegaCenters, located across the country, provide these critical dispatch capabilities. Communication between the officers and their respective MegaCenters via radio is vital to providing effective protection of employees and visitors in Federal facilities nationwide. Radio communication is also imperative for maintaining continuity of operations and officer safety.

FY 2014 Activity Funding (\$\$\$ thousands)	FY 2015 Activity Funding (\$\$\$ thousands)	FY 2016 Activity Request (\$\$\$ thousands)

PPA: Building Specific Security

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	-	-	\$545,615
FY 2015 President's Budget	-	-	\$600,615
2016 Adjustments-to-Base	-	-	\$64,506
FY 2016 Current Services	-	-	\$665,121
FY 2016 Program Change	-	-	-
FY 2016 Total Request	-	-	\$665,121
Total Change 2015 to 2016	-	-	\$64,506

For FY 2016, FPS requests \$665.121 million in offsetting collection authority for ongoing building-specific security requirements. Oversight fee revenue is combined with the basic security charge to provide FPS annual base operating revenue. Any carryover funds associated with this PPA may be used to fund operating or other expenses related to the protection of Federal facilities.

Adjustments in FY 2016 include an increase of \$64.506 million to Building Specific Offsetting Collections Authority. The amount includes:

- A \$58.749 million increase to countermeasure (PSO and TCM) contracts. This 11-percent increase from FY 2015 will address contract security cost escalation, labor rate adjustments that were either projected or exceeded, and collective bargaining-related cost increases.
- A \$3.525 million increase in the 6-percent oversight fees resulting from the increased countermeasures.
- A \$2.232 million increase in available authority for new customer requirements. FPS is moving unutilized authority within building-specific security (TCM contracts) to better align authority with where customers are requesting services. Associated oversight fee revenue is included in this increase.

CURRENT SERVICES PROGRAM DESCRIPTION:

Building-specific security services are provided in accordance with countermeasure security requirements generated through a facility security assessment or a customer request specific to a particular building. These costs are funded by the tenants in a building. An annual cost estimate for the security services is prepared by building and the costs are recovered in monthly increments through the DHS Monthly Security Bill process. The charge includes an oversight fee to fund FPS oversight

and overhead costs. Building costs are distributed to tenants based on the square footage assigned to them in the GSA Occupancy Agreements.

The table below breaks down the available building-specific security resources into major expense categories. An explanation of the items included in those categories is provided below the table.

Program/Project/Activity (Dollars in Thousands)	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	Change from FY 2015
Building-Specific Security				
Total Countermeasures ²	\$499,739	\$528,724	\$587,473	\$58,749
Available Authority For New Customer Requirements	\$14,992	\$37,894	\$40,000	\$2,106
Oversight Fee	\$29,984	\$31,723	\$35,248	\$3,525
Oversight Fee Associated with New Requirements	\$900	\$2,274	\$2,400	\$126
Total Revenue Collection Authority	\$545,615	\$600,615	\$665,121	\$64,506

Building-specific security will fund the following:

Protective Security Officers (PSO)

Contract PSO services are a key component of the execution of FPS's protective security mission. Individual risk assessments combined with the specific customer requirements of each facility drive the placement of PSO-staffed security posts at different facilities. These posts are charged with minimizing specific vulnerabilities to identified credible threats. The functions that PSOs provide include:

- Access Control: ensuring access to secured areas in accordance to access control procedures;
- Control Center Operations: integrating multiple countermeasures through monitoring of security equipment and facilitating communication with other posts or law enforcement as necessary;
- Patrol and Response: patrolling and monitoring the facility for safety, security, and enforcement purposes;
- Screening: identifying and interdicting unlawful, dangerous, or prohibited items to ensure that they do not enter a secured area; and
- Visitor Processing: identifying and documenting visiting individuals.

² Total Countermeasures includes dollars for Protective Security Officers (PSOs) and Technical Countermeasures (TCMs).

Technical Countermeasures (TCMs)

TCMs allow FPS to provide an integrated and cost-effective level of protection. They include x-ray machines, magnetometers, alarm systems, and camera systems. The FPS national countermeasure program includes design, implementation, and oversight as well as collaborative efforts with Federal partners, such as DHS's S&T Directorate and TSA.

Available Authority for New Customer Requirements

At the beginning of each fiscal year, FPS requests authority, via OMB, to collect revenue sufficient to accommodate changing customer requirements. For example, new customer security requirements can be accommodated during the fiscal year for customer relocation to an expanded facility, to cover inflation, or to implement countermeasures at a higher facility security level building. When these situations occur, FPS has the available funding authority necessary to provide new security without potential procedural delays caused by having to request additional offsetting collection authority.

Oversight Fee

Oversight fee activities are designed to recover the FPS management, administration, and oversight activities required to deliver PSO services and TCMs. The oversight fee revenue is combined with the basic security charge to provide FPS annual base operating revenue.

Oversight Fee Associated with New Requirements

FPS expects to collect additional oversight fee revenue if requested authority for new customer requirements is received and new building-specific security revenues are realized.

PPA: Reimbursable Agency Specific Security

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	-	-	\$521,228
FY 2015 President's Budget	-	-	\$466,228
2016 Adjustments-to-Base	-	-	\$36,337
FY 2016 Current Services	-	-	\$502,565
FY 2016 Program Change	-	-	-
FY 2016 Total Request	-	-	\$502,565
Total Change 2015 to 2016	-	-	\$36,337

For FY 2016, FPS requests \$502.565 million for offsetting collection authority for ongoing reimbursable agency-specific security operations. Oversight fee revenue is combined with the basic security charge to provide FPS annual base operating revenue. Any agreements that include requirements for FPS personnel will incur payroll expenses within this PPA. Any carryover funds associated with this PPA may be used to fund operating or other expenses related to the protection of Federal facilities.

Adjustments in FY 2016 include an increase of \$36.337 million to Reimbursable Agency Specific Offsetting Collections Authority. The amount includes:

- A \$34.967 million increase to authority for countermeasure (PSO and TCM) contracts. This 9-percent increase from FY 2015 will address contract security cost escalation, labor rate adjustments that were either projected or exceeded, and collective bargaining-related cost increases.
- A \$2.098 million increase in the 6-percent oversight fees resulting from the increased countermeasures.
- A \$0.728 million decrease in available authority for new customer requirements. FPS is moving unutilized authority in reimbursable agency-specific security to building-specific security to better align authority with where customers are requesting services. Associated oversight fee revenue is included in this decrease.

CURRENT SERVICES PROGRAM DESCRIPTION:

Reimbursable agency-specific security, also called tenant-specific security, is negotiated via SWAs or reimbursable agreements between FPS and another Federal agency to provide for the same services performed as part of building-specific security (PSOs and TCMs), but is configured to meet the

security needs of an individual customer agency rather than the needs of a multi-tenant facility. Reimbursements consist of the estimated direct cost of the security services requested, plus the oversight fee to cover the oversight and overhead costs as with the building-specific oversight fee.

The table below breaks down the available reimbursable agency-specific security resources into major expense categories and an explanation of the items included in those categories is provided below the table. The explanations are the same as for building specific.

Program/Project/Activity (Dollars in Thousands)	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	Change from FY 2015
Reimbursable Agency-Specific Security				
Total Countermeasures ³	\$400,107	\$389,151	\$424,118	\$34,967
Available Authority For New Customer Requirements	\$91,618	\$50,687	\$50,000	(\$687)
Oversight Fee	\$24,006	\$23,349	\$25,447	\$2,098
Oversight Fee Associated with New Requirements	\$5,497	\$3,041	\$3,000	(\$41)
Total Revenue Collection Authority	\$521,228	\$466,228	\$502,565	\$36,337

Reimbursable agency-specific security will fund the following:

Protective Security Officers (PSO)

Contract PSO services are a key component of the execution of FPS's protective security mission. Individual risk assessments drive the placement of PSO-staffed security posts at different facilities. These posts are charged with minimizing specific vulnerabilities to identified credible threats. The functions that PSOs provide include:

- Access Control: ensuring access to secured areas in accordance to access control procedures;
- Control Center Operations: integrating multiple countermeasures through monitoring of security equipment and facilitating communication with other posts or law enforcement as necessary;
- Patrol and Response: patrolling and monitoring the facility for safety, security, and enforcement purposes;
- Screening: identifying and interdicting unlawful, dangerous, or prohibited items to ensure that they do not enter a secured area; and
- Visitor Processing: identifying and documenting visiting individuals.

³ Total Countermeasures includes dollars for Protective Security Officers (PSOs) and Technical Countermeasures (TCMs).

Technical Countermeasures (TCMs)

TCMs allow FPS to provide an integrated and cost-effective level of protection which includes x-ray machines, magnetometers, alarm systems, and camera systems. The FPS national countermeasure program includes design, implementation, and oversight as well as collaborative efforts with Federal partners, such as DHS's S&T Directorate, and TSA.

Available Authority for New Customer Requirements

At the beginning of each fiscal year, FPS requests authority to collect revenue sufficient to accommodate changing customer requirements. For example, with approved authority, new customer security requirements can be accommodated during the fiscal year due to temporary higher facility security levels based on current intelligence or a potential for increased risk at a specific location or geographic area.

This authority is also utilized to provide temporary additional security for FEMA disaster relief deployments, which can be substantial depending on the number of natural and weather-related disasters that FEMA requests FPS assistance for in any given year (i.e., Hurricane Sandy, etc.). When these situations occur, FPS has the available funding authority necessary to provide new security without potential procedural delays caused by having to request additional offsetting collection authority.

Oversight Fee

Oversight fee activities are designed to recover the FPS management, administration, and oversight of delivered protective services to include PSO and TCMs. The oversight fee revenue is combined with the basic security charge to provide FPS annual base operating revenue.

Oversight Fee Associated with New Requirements

FPS expects to collect additional oversight fee revenue if requested authority for new customer requirements is received and new reimbursable agency-specific security revenues are realized.

IV. Program Justification Changes

Basic Security Mission Statement

Basic security services include law enforcement services on federally controlled property, preliminary investigations of incidents, and capture and arrest of suspects. This security also includes the 24-hour security alarm monitoring, nationwide dispatch services, facility security assessments, and assistance to Facility Security Committees. Carryover and recoveries in this PPA may be used to fund operating or other expenses related to the protection of Federal facilities.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$122,594	\$127,525	\$130,307	\$2,782
11.3 Other than Full-Time Permanent	\$825	\$858	\$873	\$15
11.5 Other Personnel Compensation	\$15,298	\$15,913	\$16,208	\$295
12.1 Civilian Personnel Benefits	\$40,436	\$42,062	\$42,840	\$778
Total, Salaries & Benefits	\$179,153	\$186,358	\$190,228	\$3,870

Salaries and Benefits include costs for 1,385 FTE. The FY 2016 request includes funding for career ladder promotions, within grade promotions, annualization of FY 2015 pay, pay inflation in 2016, and an increase of 14 FTP / 14 FTE as part of the DHS Balanced Workforce Initiative.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.1 Rental Payments to GSA	\$2,270	\$2,964	\$3,409	\$445

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent-related services. The FY 2016 Request includes an increase of \$445k for additional lease costs.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$6,721	\$6,721	\$4,116	(\$2,605)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts. The FY 2016 Request includes a decrease of \$2,605K as a result of IT reductions.

Building Specific Security Mission Statement

Building-specific security is based on countermeasure requirements specific to a particular building based on a FPS vulnerability assessment. The two components are the contract Protective Security Officers (PSOs) and technical countermeasures. The PSO services includes access control, control center operations, patrol and response, screening, and visitor processing. Technical countermeasures include the purchase, installation, and maintenance of security equipment, such as cameras, alarms, magnetometers, and x-ray machines. FPS acquires countermeasures for our customers based on their needs, as identified through security assessments and other risk mitigation strategies, and manages to a standard replacement schedule. Carryover and recoveries in this PPA may be used to fund operating or other expenses related to the protection of Federal facilities.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$535,061	\$617,061	\$668,567	\$51,506

Other services include report contractual services with non-federal sources that are not otherwise classified under Object Class 25. The contract Protective Security Officers and technical countermeasures are coded to this object class. Additional obligations are aligned to the fees located in the basic security and reimbursable agency-specific PPAs.

Reimbursable Agency Specific Security Mission Statement

Reimbursable agency-specific security, or Security Work Authorizations (SWA) - FPS enters into SWAs with customer agencies to procure countermeasures beyond those included within basic security and building-specific security. The requirement for these security services is determined by the operational security and risk mitigation needs of the customer agencies. Carryover and recoveries in this PPA may be used to fund operating or other expenses related to the protection of Federal facilities.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$514,859	\$502,545	\$513,196	\$10,651

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The contract PSOs and TCMs are coded to this object class. In FY 2015, a technical adjustment is requested to decrease offsetting collections authority and align it more closely with anticipated requirements.

K. DHS Balanced Workforce Strategy

In order to establish a high-performing workforce comprised of a strong internal core of Federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience, and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment, the Department will realign contractor and/or Federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with Federal employees to better realize the full potential of our total workforce – both contracted and Federal. A strong internal core of Federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for Federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into tiered ranking.

NPPD requests \$2.566 million in FPS salaries, benefits and program dollars and an offset of \$2.566 million in program/contract dollars for 15 FTPs/15 FTEs as part of the FY 2016 DHS Balanced Workforce Strategy.

Position Type	FY 2014 Revised Enacted		FY 2015 President's Budget		FY 2015 Annualization		FY 2015 Follow On		FY 2016 Increase		Total FY 2014 - FY 2016 DHS BWF Strategy

FY 2016 DHS Balanced Workforce Strategy

- Amount of salaries, benefits and program dollars in direct support of Federal employees:
 - o \$2.566 million for 15 FTPs/15 FTEs.
- Amount of program/contract funding that will be terminated:
 - o \$2.566 million program/contract cost.
- Implementation timeline:
 - o NPPD’s FY 2016 Balanced Workforce Strategy will be implemented in FY 2016.
 - o Contractor functions will be reduced and positions will be converted in accordance with the Department’s Balanced Workforce Initiative with a particular focus on contractors who are performing “nearly government inherent” responsibilities.
 - o Contractor reductions will be absorbed by the existing Federal Government employees and new FTE converted positions.

A. Component Overview

The National Protection and Programs Directorate (NPPD) is comprised of the following mission-oriented programs that support achievement of the DHS strategic missions, goals, and objectives.

Infrastructure Protection (IP): The Infrastructure Protection (IP) program leads coordinated efforts to strengthen the security and resilience of critical infrastructure (CI), reducing risk to the Nation's physical CI from terrorist attacks, natural disasters, and other catastrophic incidents. IP's core focus is on integrating and disseminating CI threat, consequence, and vulnerability information; developing and sharing risk mitigation strategies; and building national capacity to address security and resilience issues within the CI community. IP's efforts help to ensure that those assets, systems, and networks that underpin American society, including essential government missions, public services, and economic functions, are sustained during steady-state and all-hazards situations. IP also ensures that CI elements are not exploited to inflict harm against people or institutions through regulatory initiatives and partnership efforts to share information and lessons learned from mass casualty events.

Cybersecurity and Communications (CS&C): The Cybersecurity and Communications (CS&C) program collaborates with public, private, and international partners to ensure the security and continuity of the Nation's cyber and communications infrastructures in the event of terrorist attacks, cyber events, natural disasters, and catastrophic incidents. Additionally, CS&C protects and strengthens the reliability, survivability, and interoperability of the Nation's communications capabilities, including those utilized during emergencies, at the federal, state, local, tribal, and territorial levels.

Office of Biometric Identity Management (OBIM): The Office of Biometric Identity Management (OBIM) program provides enterprise-level biometric identity management services to customers across DHS, at other federal agencies, in state and local law enforcement, and overseas through storing biometric identities, recurrent matching against derogatory information, and providing other biometric expertise and services. This ensures essential support for enforcing immigration laws through prevention of unlawful entry into the United States. OBIM's biometric identification and verification support also helps to secure our borders and prevent illegal entry. These services broaden the scope of information available to OBIM users and leads to identifying tens of thousands of known or suspected terrorist (KSTs) and watchlist matches every year in support of efforts to protect critical infrastructure and other DHS operations.

Federal Protective Service (FPS): The Federal Protective Service (FPS) program secures and protects the buildings, grounds, and property owned or occupied by the Federal Government, as well as any people on those properties. In this capacity, FPS conducts protective law enforcement and security services and leverages the intelligence and information resources of FPS' network of federal, state, and local partners. FPS conducts Facility Security Assessments (FSAs) and recommends appropriate countermeasures, ensures stakeholder threat awareness training, and oversees a large contract Protective Security Officer workforce. As the primary law enforcement entity for General Services Administration (GSA) facilities, FPS responds to more than 40,000 calls for service annually, investigates a wide range of crimes related to federal property and federal employees, protects federal facilities during national and local security special events, and provides protection services for disaster and emergency response.

Office of Cyber and Infrastructure Analysis (OCIA): The Cyber and Infrastructure Analysis (OCIA) program supports integrated analysis of all-hazards risk to the Nation’s critical infrastructure by evaluating the potential consequences of disruption to infrastructure, including dependencies, interdependencies, and cascading impacts from physical or cyber threats or incidents. NPPD utilizes its analysis and modeling capabilities to prioritize infrastructure both during steady-state and crisis situations to ensure resources are focused to maximize effectiveness.

Management and Administration: This program captures activities that provide enterprise leadership, management and/or business administration services and describes the capabilities and activities that support the day-to-day management and back office functions enabling the Department to operate efficiently and effectively. Key capabilities include conducting agency planning and performance management, managing finances, managing agency workforce, providing physical and personnel security, acquiring goods and services, managing information technology, managing agency property and assets, managing agency communications, managing legal affairs, and providing general management and administration.

FY 2016 Budget Request

The table below shows National Protection and Programs Directorate (NPPD) FY 2016 Budget request by its mission-oriented programs.

Program	FY 2016 Request	
	FTE	Dollars (in thousands)
Infrastructure Protection (IP)	680	254,034
Cybersecurity and Communications (CS&C)	818	1,016,777
Office of Biometric Identity Management (OBIM)	168	283,533
Federal Protective Service (FPS)	1,385	1,443,449
Office of Cyber and Infrastructure Analysis (OCIA)	107	40,878
Management and Administration	367	64,191
Total Budget Request	3,525	3,102,862

B. Component Contributions to Achieving Departmental Missions

The table below shows the alignment of the NPPD programs to the DHS Missions and Mature and Strengthen Homeland Security.

Programs	DHS Missions					Mature and Strengthen Homeland Security
	Prevent Terrorism and Enhance Security	Secure and Manage Our Borders	Enforce and Administer Our Immigration Laws	Safeguard and Secure Cyberspace	Strengthen National Preparedness and Resilience	
Infrastructure Protection (IP)	43%			57%		
Cybersecurity and Communications (CS&C)				82%	18%	
Office of Biometric Identity Management (OBIM)		43%	57%			
Federal Protective Service (FPS)	94%			6%		
Office of Cyber and Infrastructure Analysis (OCIA)				100%		
Management and Administration						100%

Mission 1: Prevent Terrorism and Enhance Security

Resources Requested

NPPD resources supporting *Prevent Terrorism and Enhance Security* are provided in the table below.

\$ in thousands

Program	FY 2014		FY 2015		FY 2016	
	\$	FTE	\$	FTE	\$	FTE
Infrastructure Protection (IP)	94,852	252	98,281	265	109,328	294
Federal Protective Service (FPS)	1,247,046	832	1,250,747	835	1,351,261	844
Total	1,341,898	1,084	1,349,027	1,100	1,460,588	1,138

Performance Measures

For *Prevent Terrorism and Enhance Security*, two types of performance measures are presented. Strategic Measures represent NPPD’s measures that gauge achievement for this mission area, and are considered to be our Government Performance and Results Act Modernization Act (GPRAMA) performance measures. Additional Management Measures are displayed, as appropriate, to provide a more thorough context of expected performance results.

Strategic Measures

Measure: Percent of performance standards implemented by the highest risk chemical facilities and verified by DHS						
Description: This measure reports the percent of applicable risk based performance standards (RBPS) that are approved and implemented within site security plans (SSPs) or alternative security programs (ASPs) for Tier 1 and Tier 2 facilities that are compliant with the Chemical Facility Anti-terrorism Standards (CFATS) regulation. Following submission of a proposed SSP/ASP by a covered facility, the CFATS regulatory authority will conduct an “authorization inspection” of the covered facility to verify that the SSP/ASP is compliant with the CFATS regulation. For this measure, SSPs/ASPs determined to meet the RBPS requirements with current and planned measures will be approved. Upon approval of its SSP/ASP, the covered facility is required to fully implement the existing measures that are described in the SSP/ASP.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	57%	97%	95%	95%
Result:	N/A	N/A	46%	78%*	N/A	N/A

*Due to the fluctuation in the risk-based classification for facilities and the significant amount of time required for approval of the performance standards, the program did not meet its target. The program is on track to continue its upward trend and will continue to prioritize, authorize, inspect, and approve site security plans for the highest risk chemical facilities.

Measure: Percent of tenants satisfied with the level of security provided at federal facilities						
Description: This measure assesses the effectiveness of security services provided by the Federal Protective Service (FPS) to the Government Services Agency (GSA) tenants through the use of a formal customer satisfaction survey. FPS uses the feedback from this survey to identify opportunities for improvement in the security services provided to its customers.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	82%	83%	84%	85%	86%	87%
Result:	77.8%	78%	82%	76%	N/A	N/A

Management Measures

Measure: Percent of contract security force evaluations conducted at high-risk facilities resulting in no countermeasure-related deficiencies						
Description: This performance measure provides the percentage of Facility Security Level IV facilities identified with no countermeasure-related deficiencies during contract security force evaluations conducted during each fiscal year quarter. Countermeasure-related deficiencies are the total of covert security testing (investigative operation used to identify deficiencies in security countermeasures, training, procedures, and technology) deficiencies and countermeasure (access control, alarms, barriers, communications, guard force, screening, and surveillance) deficiencies identified during post inspections. Level IV is defined as high risk based on the Interagency Security Committee Standards as having over 450 federal employees; high volume of public contact; more than 150,000 square feet of space; tenant agencies that may include high-risk law enforcement and intelligence agencies, courts, judicial offices, and highly sensitive government records.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	90%	98%	98%	98%	98%
Result:	N/A	98%	97%	97%	N/A	N/A

Measure: Percent of performance standards implemented by high risk (Tier 3 and Tier 4) chemical facilities and verified by DHS						
Description: This measure reports the percent of applicable risk based performance standards (RBPS) that are approved and implemented within site security plans (SSPs) or alternative security programs (ASPs) for Tier 3 and Tier 4 facilities that are compliant with the Chemical Facility Anti-Terrorism Standards (CFATS) regulation. Following submission of a proposed SSP/ASP by a covered facility, the CFATS regulatory authority will conduct an “authorization inspection” of the covered facility to verify that the SSP/ASP is compliant with the CFATS regulation. For this measure, SSPs/ASPs determined to meet the RBPS requirements with current and planned measures will be approved. Upon approval of its SSP/ASP, the covered facility is required to fully implement the measures that are described in the SSP/ASP.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	N/A	N/A	45%	75%
Result:	N/A	N/A	N/A	N/A	N/A	N/A

Measure: Percent of required post inspections completed of federal facilities						
Description: This measure will report the percent achievement by Federal Protective Service (FPS) in completing Protective Security Officer (PSO) post inspections. The number of post inspections conducted per year are set annually per directives guiding protective security force performance monitoring. FPS sets policy to ensure that countermeasures are effectively functioning as designed and that the contracted service is in compliance with contract requirements. FPS post inspections review compliance in the operation of the post including identification of the individual on duty, post desk book, cleanliness and orderly operation of the post, PSO knowledge of the post orders, and PSO performance of duties in accordance with the post orders (to include professionalism, proper certifications and licenses). When technical countermeasures are deployed at a post, the effectiveness of that countermeasure is also assessed.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	100%	100%	100%	100%
Result:	N/A	N/A	79%	74%*	N/A	N/A

*FPS did not meet its FY 2014 target due to limited resources and other mission critical priorities, such as the completion of Facility Security Assessments. FPS anticipates that as a result of bringing the Facility Security Assessments in alignment with the Interagency Security Committee (ISC) standards, a FY14 priority, FPS will have more time and resources going forward to devote to completing post inspections.

Measure: Percent of respondents reporting that the counter improvised explosive device information provided by DHS is a valuable resource to support their responsibilities						
Description: This measure provides an indication of the value of information sharing via the Technical Resource for Incident Prevention (TRIPwire) to a diverse array of homeland security stakeholders (federal, state, local, territorial, tribal, and private sector partners) related to improvised explosive device (IED) threats and corresponding preparedness measures. TRIPwire users complete voluntary questionnaires on a quarterly basis rating their satisfaction with the utility of the information provided by TRIPwire. This ensures that TRIPwire's information sharing capabilities are keeping pace with what users seek and need to support their responsibilities.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	N/A	N/A	75%	78%
Result:	N/A	N/A	N/A	N/A	N/A	N/A

Mission 2: Secure and Manage Our Borders

Resources Requested

NPPD resources supporting *Secure and Manage Our Borders* are provided in the table below.

\$ in thousands

Program	FY 2014		FY 2015		FY 2016	
	\$	FTE	\$	FTE	\$	FTE
Office of Biometric Identity (OBIM)	99,590	98	109,490	90	121,637	79
Total	99,590	98	109,490	90	121,637	79

Performance Measures

For *Secure and Manage Our Borders*, Management Measures are displayed to provide a more thorough context of expected performance results.

Management Measures

Measure: Average biometric watch list search times for queries from ports of entry (in seconds)						
Description: This measure reports the average response time of biometric watchlist queries processed through the Automated Biometric Identification System (IDENT) system in response to queries from ports of entry (POE) where fingerprints are captured. The target is less than 10 seconds to provide critical watchlist and identity screening information to inspectors in a timely manner to facilitate traveler processing.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	<10	<10	<10	<10	<10	<10
Result:	8.59	10.11	6.92	6.54	N/A	N/A

Measure: Percent of daily travelers referred to additional screening due to false fingerprint matches						
Description: OBIM will measure the percent of travelers whose biometric information are queried through OBIM's biometric matching systems and are referred to secondary screening because of false matches. This will include travelers whose information was incorrectly matched to somebody on a watchlist ("watchlist false accepts") and travelers whose fingerprints were incorrectly matched to other peoples' fingerprints ("finger print 1-1 mismatches"). This information is collected daily by OBIM based on screenings conducted at ports of entry by Customs and Border Protection.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	<=0.33%	<=0.32%	<=0.31%	<=0.30%	<=0.29%
Result:	N/A	0.26%	0.12%	0.10%	N/A	N/A

Mission 3: Enforce and Administer Our Immigration Laws

Resources Requested

NPPD resources supporting *Enforce and Administer Our Immigration Laws* are provided in the table below.

\$ in thousands

Program	FY 2014		FY 2015		FY 2016	
	\$	FTE	\$	FTE	\$	FTE
Office of Biometric Identity (OBIM)	127,398	109	142,094	100	161,896	89
Total	127,398	109	142,094	100	161,896	89

Performance Measures

For *Enforce and Administer Our Immigration Laws*, Management Measures are displayed to provide a more thorough context of expected performance results.

Management Measures

Measure: Average biometric watch list search times for queries from U.S. consulates (in minutes)						
Description: This measure is used to determine the average amount of time required to complete an automated search processed through the United States Visitor and Immigrant Status Indicator Technology (US-VISIT) Automated Biometric Identification System (IDENT) system in response to queries from consular offices worldwide where fingerprints are captured as part of the BioVisa form process. The service level agreement with the Department of State is less than 15 minutes to provide critical identity and watch list information in a timely manner to not impede traveler processing. In light of past performance, the program has set a target of processing BioVisa searches within 5 minutes.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	<5	<5	<5	<5	<5	<5
Result:	1.85	0.91	0.65	1.06	N/A	N/A

Mission 4: Safeguard and Secure Cyberspace

Resources Requested

NPPD resources supporting *Safeguard and Secure Cyberspace* are provided in the table below.

\$ in thousands

Program	FY 2014		FY 2015		FY 2016	
	\$	FTE	\$	FTE	\$	FTE
Infrastructure Protection (IP)	138,864	403	140,024	404	144,707	386
Cybersecurity and Communications (CS&C)	807,918	588	765,355	648	837,964	677
Federal Protective Service (FPS)	95,560	540	91,859	537	92,188	541
Office of Cyber and Infrastructure	29,530	53	32,841	83	40,878	107
Total	1,071,871	1,584	1,030,079	1,672	1,115,737	1,711

Performance Measures

For *Safeguard and Secure Cyberspace*, two types of performance measures are presented. Strategic Measures represent NPPD’s measures that gauge achievement for this mission area, and are considered to be our Government Performance and Results Act Modernization Act (GPRAMA) performance measures. Additional Management Measures are displayed, as appropriate, to provide a more thorough context of expected performance results.

Strategic Measures

Measure: Percent of facilities that are likely to integrate vulnerability assessment or survey information into security and resilience enhancements						
Description: This measure demonstrates the percent of facilities that are likely to enhance their security and resilience by integrating Infrastructure Protection vulnerability assessment or survey information. Providing facilities with vulnerability information allows them to understand and reduce risk of the Nation's critical infrastructure.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	N/A	65%	80%	80%
Result:	N/A	N/A	N/A	89%	N/A	N/A

Measure: Percent of high risk facilities that receive a facility security assessment in compliance with the Interagency Security Committee (ISC) schedule						
Description: This measure reports the percentage of high risk (Facility Security Level 3 & 4) facilities that receive a facility security assessment (FSA) in compliance with the ISC schedule. An FSA is a standardized comprehensive risk assessment that examines credible threats to Federal buildings and the vulnerabilities and consequences associated with those threats. Credible threats include crime activity or potential acts of terrorism. Each facility is assessed against a baseline level of protection and countermeasures are recommended to mitigate the gap identified to the baseline or other credible threats and vulnerabilities unique to a facility. Requirements for the frequency of Federal building security assessments are driven by the ISC standards with high risk facility assessments occurring on a three year cycle.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	63%	100%	100%	100%
Result:	N/A	N/A	34%	93%	N/A	N/A

Measure: Percent of incidents detected by the U.S. Computer Emergency Readiness Team for which targeted agencies are notified within 30 minutes						
Description: The United States Computer Emergency Readiness Team (US-CERT) detects malicious cyber activity targeting Federal agencies. This measure assesses the percent of incidents directed at Federal agencies and detected by the US-CERT for which agencies are informed of this malicious activity within 30 minutes. This measure demonstrates the US-CERT's ability to share situational awareness of malicious activity with its Federal agency stakeholders through the EINSTEIN intrusion detection systems and other tools.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	86%	90%	92%	94%
Result:	N/A	N/A	89%	87.2%	N/A	N/A

Measure: Percent of known malicious cyber traffic prevented from causing harm at federal agencies						
Description: This performance measure assesses the percent of known malicious activity that is mitigated on federal agencies' networks through an active defense capability known as EINSTEIN 3 Accelerated (E3A). This is achieved by actively defending against malicious activity through detection and prevention, and applying countermeasures if needed for protection. This measure assesses the ability of the Department of Homeland Security to defend federal civilian agency networks from cyber threats.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	N/A	80%	85%	90%
Result:	N/A	N/A	N/A	100%	N/A	N/A

Measure: Percent of organizations that have implemented at least one cybersecurity enhancement after receiving a cybersecurity vulnerability assessment or survey						
Description: This measure addresses the extent to which critical infrastructure owners and operators use the results of cybersecurity vulnerability and resiliency assessments to improve their cybersecurity posture. This measure demonstrates the percent of assessed asset owners and operators that are not only developing a better understanding of their cybersecurity posture, but also implementing at least one cybersecurity enhancement to improve that posture.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	50%	55%	60%	65%
Result:	N/A	N/A	100%	63%	N/A	N/A

Measure: Percent of respondents indicating that operational cybersecurity information products provided by DHS are timely and actionable						
Description: This measure assesses whether the products that the DHS National Cybersecurity and Communications Integration Center (NCCIC) provides are timely and actionable for its customers. The NCCIC will follow up with cyber customers, to whom information products were provided, in order to determine the timeliness and effectiveness of those products. A customer survey will be used to acquire data on areas such as usefulness, timeliness, actionable nature, and relevance.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	50%	60%	75%	82%	90%
Result:	N/A	58%	74%	79%	N/A	N/A

Measure: Percent of traffic monitored for cyber intrusions at civilian Federal Executive Branch agencies						
Description: This measure assesses DHS's scope of coverage for malicious activity across those non-DOD Chief Financial Officers (CFO) Act and Trusted Internet Connection Access Provider (TICAP) Federal Executive Branch civilian agency networks. Federal Executive branch network monitoring uses EINSTEIN 2 intrusion detection system sensors, which are deployed to Trusted Internet Connections locations at agencies or Internet Service Providers. These sensors capture network flow information and provide alerts when signatures, indicative of malicious activity, are triggered by inbound or outbound traffic. The federal government's situational awareness of malicious activity across its systems will increase as more networks are monitored and the methodology will require data normalization to account for the addition of large numbers of networks.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	55%	70%	85%	89%	89%
Result:	N/A	73.0%	82.4%	88.5%	N/A	N/A

Management Measures

Measure: Percent of federal agencies participating in the Continuous Diagnostics and Mitigation program						
Description: This performance measure assesses the extent to which Federal agencies are becoming participants in the Continuous Diagnostics and Mitigation (CDM) program, which prepares federal departments and agencies to receive advanced analytical oversight of their respective networks.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	N/A	80%	90%	95%
Result:	N/A	N/A	N/A	46%*	N/A	N/A

*While the target is not met when measured by counting the number of participating agencies, Memorandum of Agreements (MOAs) that have been signed account for approximately 97% of the total Federal civilian workforce when measured by the population of users. To increase the number of departments and agencies that sign MOAs, NPPD will continue updating OMB and the National Security Council (NSC) staff on the agencies' progress.

Measure: Percent of malware submissions for which a report is generated within 15 minutes						
Description: This performance measure assess how quickly the National Cybersecurity and Communications Integration Center analyzes and generates a report for malware submitted through automated processes to the United States Computer Emergency Readiness Team's (US-CERT) Advanced Malware Analysis Center (AMAC).						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	N/A	75%	80%	85%
Result:	N/A	N/A	N/A	94%	N/A	N/A

Measure: Percent of unique high alert level events detected by the National Cyber Protection System, also known as EINSTEIN, validated as legitimate incidents						
Description: This measure reflects improvements in efficiency of the United States - Computer Emergency Response Team (US-CERT) through more effective resourcing to analyzing legitimate, high-alert level cyber incidents. A high-alert level cyber incident poses a potentially severe impact to the security or operations of a Department or Agency's network, or to the integrity of its proprietary information. The National Cyber Protection System (NCPS) reduces the number of false positives through improved signature development and enhanced automated detection capabilities. This measure tracks improvements in signature methodology by focusing on unique high-level events and provides a key indicator for the overall accuracy of the NCPS in detecting malicious activity in the .gov domain. The percent of legitimate incidents detected will increase as the signatures used for detection of malicious activity are improved with technology, tuning, and information sharing activities.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	55%	60%	65%	90%	91%	92%
Result:	93%	97%	89%	87%	N/A	N/A

Mission 5: Strengthen National Preparedness and Resilience

Resources Requested

NPPD resources supporting *Strengthen National Preparedness and Resilience* are provided in the table below.

\$ in thousands

Program	FY 2014		FY 2015		FY 2016	
	\$	FTE	\$	FTE	\$	FTE
Cybersecurity and Communications (CS&C)	113,587	142	161,066	144	178,813	141
Total	113,587	142	161,066	144	178,813	141

Performance Measures

For *Strengthen National Preparedness and Resilience*, strategic performance measures are presented. Strategic Measures represent measures that gauge achievement for this mission area, and are considered to be our Government Performance and Results Act Modernization Act (GPRAMA) performance measures.

Strategic Measures

Measure: Percent of calls made by National Security/Emergency Preparedness users during emergency situations that DHS ensured were connected						
Description: This measure gauges the Government Emergency Telecommunications Service (GETS) call completion rate. The GETS call completion rate is the percent of calls that a National Security/Emergency Preparedness (NS/EP) user completes via public telephone network, landline, or wireless, to communicate with the intended user/location/system/etc, under all-hazard scenarios. Hazard scenarios include terrorist attacks or natural disasters such as a hurricane or an earthquake.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	90%	90%	100%	100%	97%	97.5%
Result:	97.8%	99.4%	96.8%	99.3%	N/A	N/A

Mature and Strengthen Homeland Security

Resources Requested

NPPD resources supporting *Mature and Strengthen Homeland Security* are provided in the table below.

\$ in thousands

Program	FY 2014		FY 2015		FY 2016	
	\$	FTE	\$	FTE	\$	FTE
Management and Administration	56,069	305	65,910	358	64,191	367

BUDGET REQUEST AND SUPPORTING INFORMATION

Office of Health Affairs

I. Appropriation Overview

A. Mission Statement for Office of Health Affairs:

The DHS Office of Health Affairs (OHA) is at the intersection of homeland security and public health, better known as health security. OHA's mission is to advise, promote, integrate, and enable a safe and secure workforce and Nation in pursuit of national health security. OHA achieves this by enhancing the health and wellness of the DHS workforce, and by protecting the Nation from the health impacts of incidents, including biological and chemical events.

Specifically, OHA provides medical and health expertise in support of the DHS vision to ensure a homeland that is safe, secure, and resilient against terrorism and other hazards. OHA serves as the Department's primary point of contact for State, local, territorial, and tribal governments on medical and health issues. OHA's responsibilities include serving as the principal advisor to the Secretary, Federal Emergency Management Agency (FEMA) Administrator, and other DHS officials and Components on medical and health issues. In addition, OHA supports DHS chemical and biological defense activities, including pandemic preparedness; provides medical and health expertise for DHS preparedness, response, and resilience efforts; enhances national and DHS medical first responder capabilities; and supports the Department's occupational health and operational medicine activities, including providing policies and guidance. Through its Food, Agriculture, and Veterinary Defense (FAVD) Program, OHA provides oversight and management of DHS's implementation of Homeland Security Presidential Directive-9 (HSPD-9) Defense of United States Agriculture and Food.

B. Budget Activities:

OHA funding is structured into five programs, projects, and activities (PPA): BioWatch, Chemical Defense Program (CDP), National Biosurveillance Integration Center (NBIC), Planning and Coordination (P&C), and Salaries and Expenses (S&E).

BioWatch Program:

The BioWatch Program is the Nation's only federally managed, locally operated nationwide biosurveillance system designed to detect the intentional release of select biological threat agents. BioWatch is a key part of the Department's layered approach for protection against a catastrophic biological terror attack, and early detection translates into lives saved. The BioWatch Program provides public health officials with a warning of potentially hazardous biological agent release before exposed individuals would typically develop symptoms of illness.

Chemical Defense Program:

CDP is a comprehensive program to address Federal, State, and local risk awareness, planning, and response mechanisms in the event of a catastrophic chemical incident. OHA provides subject matter expertise on medical toxicology, industrial hygiene, and responder workforce protection related to chemical threats and works directly with communities to understand their capabilities, limitations, and needs. The program provides fundamental links between Federal interagency efforts and unique community vulnerabilities, focusing on integrating threat-based risk assessments, technology (e.g., detection capabilities and decision-support tools), mass decontamination procedures and whole-of-community response best practices into community preparedness in close coordination with FEMA.

National Biosurveillance Integration Center

The National Biosurveillance Integration Center's (NBIC) mission is to enable early warning and shared situational awareness of acute biological events and support better decisions through rapid identification, characterization, localization, and tracking. To accomplish this mission, NBIC works closely with Federal, State, local, and private sector partners to detect health anomalies as rapidly as possible and to effectively characterize potential human, animal, or plant health events as they unfold. NBIC provides to its customers: (1) products such as daily monitoring lists of health issues around the world and more in-depth Biosurveillance Event Reports; (2) tools such as providing direct access to open-source data collection platforms for their biosurveillance use; and (3) services such as weekly interagency biosurveillance calls and the National Biosurveillance Integration System (NBIS) Protocol which brings federal NBIC partners together on a short-notice teleconference to share information on a potentially significant biological event.

Planning and Coordination

Planning and Coordination (P&C) consists of programs that primarily support Mission 5 of the Quadrennial Homeland Security Review (QHSR): *Strengthening National Preparedness and Resilience*. These programs support Mission 5 through a variety of activities directed both externally to Federal, State, and local stakeholders and internally within the Department. Initiatives within the P&C PPA build resilience by providing appropriate information, resources, and guidance to help State and local communities as well as the DHS workforce to bolster efforts to prepare for and respond to catastrophic health threats. P&C ensures medical quality management across DHS, and provides medical countermeasures (MCM) to the DHS workforce and those in its care and custody. In addition, P&C provides health and medical expertise for formulating national preparedness and contingency planning at all levels, and supports exercises designed to improve preparedness and response to catastrophic incidents across the health security spectrum.

Salaries & Expenses

The Salaries and Expenses (S&E) PPA funds the salaries and benefits for all full-time equivalents (FTE) within OHA, the activities of the Office of the Assistant Secretary (OAS), and supports the work of OHA's programs. Expenses for OHA's share of the DHS Working Capital Fund, office supplies, training, travel for senior management, and other various shared services are funded out of S&E.

C. Budget Request Summary:

OHA requests \$124.069 million, 103 full-time positions (FTP), and 96 FTEs. The total adjustments-to-base is a decrease of \$1.698 million and a decrease of 3 FTE.

III. Current Services Program Description by PPA

**Department of Homeland Security
Office of Health Affairs
BioWatch
Program Performance Justification**
(Dollars in Thousands)

PPA: BioWatch

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	-	-	\$85,277
FY 2015 President's Budget	-	-	\$84,651
2016 Adjustments-to-Base	-	-	(\$1,373)
FY 2016 Current Services	-	-	\$83,278
FY 2016 Program Change	-	-	-
FY 2016 Total Request	-	-	\$83,278
Total Change 2015 to 2016	-	-	(\$1,373)

OHA requests \$83.278 million in FY 2016 for the BioWatch PPA.

Adjustments-to-Base include:

- Increase of \$2.200 million for refresh and recapitalization of BioWatch equipment.
- Decrease of \$3.113 million from savings achieved from moving contractors to Federal space.
- Realign \$0.460 million into Salaries and Expenses for Working Capital Fund rent increase from contractor move to federal space.

CURRENT SERVICES PROGRAM DESCRIPTION:

Biological attacks can begin without overt signs, therefore early warning and detection capabilities are essential for mitigating consequences and savings lives. The BioWatch program is the Nation’s only federally managed, locally operated nationwide biosurveillance system designed to detect the intentional release of select aerosolized biological agents. BioWatch is a key part of the Nation’s layered approach for protection against a catastrophic biological terror attack, and each hour gained in detection translates into lives saved. Deployed in more than 30 metropolitan areas throughout the country, the system is a collaborative effort of health personnel at all levels of government. Coordinated teams of field operators, laboratory technicians, and public health officials from city, county, State, and Federal organizations are responsible for installing biocollectors (portable sampling units - PSUs), collecting daily samples, analyzing and reporting laboratory results, and having pre-coordinated plans in place to respond to a confirmed detection (a BioWatch Actionable Result (BAR)). The current detection capabilities used by the BioWatch program consist of outdoor and limited indoor aerosol collectors whose filters are manually retrieved for subsequent analysis in BioWatch laboratories located in State or county public health laboratories that are members of the Centers for Disease Control and Prevention Laboratory Response Network.

The BioWatch program complements existing public health surveillance systems, allowing information to be shared with health care providers, and has succeeded in bringing together State and local public health, first responder, and law enforcement personnel, resulting in communities that are better prepared not only for a biological attack, but also for an all-hazards response. Additionally, the BioWatch program manages a national notification process and offers laboratory support, environmental sampling, and event modeling.

The BioWatch program recognizes the essential role of State and local jurisdictions in responding to a bioterrorism event, and to this end, utilizes Jurisdictional Coordinators (JCs) to assist in the operation of the BioWatch Advisory Committees, facilitate communications among State and local partners, assist in preparedness and response plan development, and help coordinate exercise and special event planning. This locally embedded network of JCs provides jurisdictions and the BioWatch program leadership with information regarding challenges encountered across jurisdictions serving to inform operational and programmatic directions.

The performance of all aspects of current operations laboratory and field activities are monitored by a robust quality assurance (QA) program that was instituted in FY 2010. The QA program ensures the technical validity of field and laboratory operations and monitors the performance of the analytical processes at every facility on a daily basis.

In addition to detection and analysis technology, BioWatch develops national guidance documents to socialize best practices and procedures as well as to create consistency of operations. Guidance documents are used by BioWatch jurisdictions as a basis of formulating their response concept of operations (CONOPS) and contain “points to consider” as well as required program activities in the event of a BAR. BioWatch assists local jurisdictions in the development of location-specific CONOPS guidance and coordination of Homeland Security Exercise and Evaluation Program compliant exercises, from table top discussions to full scale exercises. BioWatch also provides technical assistance to the BioWatch Advisory Committees notification-response checklists, and conducts after-action reviews with the jurisdictions to improve operations.

The BioWatch program supports National Special Security Events (NSSE) such as the Presidential Inauguration, the Super Bowl, and the national nominating conventions by providing laboratory analysis procedures, laboratory equipment, and personnel to assist with the large number of samples that NSSE produce both in current BioWatch jurisdictions and in cities that are not currently equipped with BioWatch systems. BioWatch works with State and local public health agencies in formulating and conducting exercises based specifically on the scheduled NSSE event. BioWatch supports local special events every year such as the Super Bowl, college bowl games, parades, and marathons.

The requested funding for BioWatch will enable the continuation of current operations in all jurisdictions where the BioWatch system is presently deployed and operating. This includes conducting QA audits and proficiency tests.

National Biosurveillance Integration Center
Program Performance Justification
(Dollars in Thousands)

PPA: National Biosurveillance Integration Center

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	-	-	\$10,000
FY 2015 President's Budget	-	-	\$8,000
2016 Adjustments-to-Base	-	-	-
FY 2016 Current Services	-	-	\$8,000
FY 2016 Program Change	-	-	-
FY 2016 Total Request	-	-	\$8,000
Total Change 2015 to 2016	-	-	-

OHA requests \$8.000 million in FY 2016 for the National Biosurveillance Integration Center (NBIC), to fund technical support services, information technology operations and improvements, and support coordination efforts with Federal, State, local tribal, and territorial governments. The requested funding will allow NBIC to continue monitoring biological events on a 24/7 basis for shared situational awareness and operationalize successful innovation projects from prior years.

CURRENT SERVICES PROGRAM DESCRIPTION:

The mission of NBIC is to enable early warning and shared situational awareness of acute biological events and support better decisions through rapid identification, characterization, localization, and tracking of biological events. NBIC does so by working with stakeholders to produce innovative and integrated products, tools, and services for stakeholders with varying biosurveillance needs across the human health, animal, plant, food, and environmental domains distributed across Federal, State, local, tribal, and territorial governments.

NBIC aggregates and analyzes targeted health and medical information from thousands of public sources from around the world and integrates the verification, validation, and contextualization of this time-sensitive information with the reporting and expertise of the National Biosurveillance Integration System (NBIS), a community of 14 Federal Departments, as well as State and local authorities. Through this collaborative process, NBIC provides both routine reporting and short turnaround, expert assessments as requested by government officials to analyze potential impacts of biological events on US interests. Reports are distributed through a number of mechanisms including the Homeland Security Information Network (HSIN), the DHS Common Operating Picture, and the BioWatch portal to a broad audience of more than 1,500 users at all levels of government. In urgent situations, the NBIC coordinates information-sharing efforts by initiating the “NBIS Protocol,” a short-notice

teleconference held with all Federal partners to rapidly share information on potentially significant biological events of national concern. Similarly, NBIC collaborates with the BioWatch Program to provide additional contextual information in the event of a BioWatch Actionable Result declaration.

NBIC's operational capabilities are built from a robust federal governance structure combined with ongoing outreach and engagement of Federal, State, and local authorities as well as professional and academic organizations. The chartered NBIC Advisory Board is comprised of senior officials from the 14 NBIS partner Federal Departments and provides recommendations to DHS based on timely input on operational, programmatic, and scientific issues affecting the broader biosurveillance community. NBIC coordinates outreach to State and local authorities not only through the BioWatch program and the Health Security Intelligence Enterprise within DHS/OHA but also with NBIS Federal Departments.

NBIC manages several innovation projects to evaluate opportunities to identify and use novel data sets and information, advanced analytic approaches and tools, and improved methods of collaborating with new and existing partners. Examples of NBIC innovation projects include:

- Open source data and analytics which automatically translate multilingual biosurveillance information available on the internet for operational use within the Center
- Social media analytics which validate methods for early detection and situational assessment of health-related events in Twitter data for operational use
- Visual and text analytics which enhance the visual display of data and clean incoming data feeds to improve analyst efficiency

These projects seek to serve not only NBIC's ability to accomplish its mission but also the needs of the interagency biosurveillance community. NBIC is working to transition successful innovation projects from prior years into operational use.

Department of Homeland Security
Office of Health Affairs
Chemical Defense Program
Program Performance Justification
(Dollars in Thousands)

PPA: Chemical Defense Program

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	-	-	\$824
FY 2015 President's Budget	-	-	\$824
2016 Adjustments-to-Base	-	-	-
FY 2016 Current Services	-	-	\$824
FY 2016 Program Change	-	-	-
FY 2016 Total Request	-	-	\$824
Total Change 2015 to 2016	-	-	-

OHA requests \$0.824 million in FY 2016 for the Chemical Defense Program (CDP). In FY2016, CDP will utilize lessons learned from its collaboration through several exercises with local communities to further the development of guidance documents, which are shared with Federal, State, and local partners. CDP will also continue to provide expertise in medical toxicology, industrial hygiene, and chemical detection to the National Security Council, Federal partners, the Secretary of Homeland Security, FEMA, and other DHS Components to enhance strategic policy and plans related to relevant toxicology issues including the preparation for and response to chemical events.

CURRENT SERVICES PROGRAM DESCRIPTION:

CDP is a comprehensive program, providing subject matter expertise related to a broad range of medical toxicology issues; assisting with Federal, State, and local planning in the event of a catastrophic chemical incident; and directly engaging communities to learn best practices for enhancing the nation’s preparedness for chemical incidents from an intentional or accidental release.

For example, CDP has partnered with a number of Federal partners to draft “Patient Decontamination in a Mass Chemical Exposure Incident: National Planning Guidance for Communities.” Compiled from evidence-based information, the document focuses on providing options for responses to such chemical events, whether accidental or intentional.

Department of Homeland Security
Office of Health Affairs
Planning and Coordination
Program Performance Justification
(Dollars in Thousands)

PPA: Planning and Coordination

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	-	-	\$4,995
FY 2015 President's Budget	-	-	\$4,995
2016 Adjustments-to-Base	-	-	(\$38)
FY 2016 Current Services	-	-	\$4,957
FY 2016 Program Change	-	-	-
FY 2016 Total Request	-	-	\$4,957
Total Change 2015 to 2016	-	-	(\$38)

OHA requests \$4.957 million in FY 2016 for Planning and Coordination (P&C). The funding requested in FY 2016 will support a suite of activities that bolster health security preparedness and resilience, both within DHS and throughout the Nation. This includes providing medical and health subject matter expertise to DHS preparedness and planning activities, supporting response to national disasters, integrating State and local public health within the national network of State and local fusion centers, and leading DHS workforce health and medical support efforts.

Adjustments-to-Base include:

- Decrease of \$0.038 million for planning and exercise support to intra/interagency partners.

CURRENT SERVICES PROGRAM DESCRIPTION:

P&C is comprised of initiatives that primarily support *QHRS Mission 5: Strengthen National Preparedness and Resilience*. Major programs include: Health Security Integration (HSI); Food, Agriculture, and Veterinary Defense (FAVD); and Workforce Health and Medical Support (WHMS).

Health Security Integration

HSI delivers medical and public health expertise and support to DHS Components, and State and local entities and partners to further support communications, situational awareness, and effective operational planning. HSI helps build national resilience against health incidents through preparedness enhancement and capabilities development, and executes the Chief Medical Officer's statutory responsibility to be the primary DHS point of contact with State and local stakeholders on medical and health issues.

HSI provides the medical interface between OHA and DHS Component contingency and operational planning cells and supports the development of Federal plans and policies related to natural and man-made events having catastrophic consequences on human, agricultural, and animal health. Leveraging OHA health and medical expertise, HSI works with planning teams throughout DHS to develop, conduct, influence, and participate in a broad range of exercises that advance national preparedness and response capability for threats having catastrophic health consequences, with a focus on all hazards events and incidents. Expected FY 2016 activities include planning and exercise support, continuity of operations, 24/7 watch officer support to the National Operations Center and the DHS Office of Operations Coordination and Planning, and the Health Security Intelligence Enterprise, as well as outreach to targeted State and local public health, the intelligence community, and homeland security partners.

HSI also provides support to State and local public health and homeland security partners to build and improve their capability to prepare for and respond to health incidents. HSI provides security clearances for appropriate State and local public health officials and coordinates classified briefings to enable the sharing of critical threat information and intelligence to support increased awareness of the medical and public health aspects of chemical, biological, radiological and nuclear threats and enhance biodefense prevention and preparedness activities including threats to health, water, food, and agriculture sectors. Key FY 2016 activities will include improving and facilitating public health threat information sharing within the national network of State and local fusion centers; providing technical assistance to fusion centers for development of public health capabilities; providing support and medical and health subject matter expertise to the DHS Office of Intelligence and Analysis to inform intelligence information; and, accessing, analyzing, and promoting appropriate sharing of intelligence community health threat and risk information and products.

Food, Agriculture, and Veterinary Defense

FAVD is responsible for oversight and management of the Department's implementation of HSPD-9: Defense of United States Agriculture and Food. FAVD ensures adequate response capability at the State, local, tribal and territorial levels for incidents occurring within the food and agriculture sector, whether intentional or naturally occurring; coordinates the Department's food and agriculture sector activities with appropriate Federal partners, State and local government entities and the private sector; and provides subject matter advice and expertise to DHS leadership on matters related to food protection, agricultural production systems, health issues such as emerging and re-emerging zoonotic diseases; trade issues involving phyto and phyto sanitary regulation; and animals in disasters. The National Preparedness Goal under Presidential Policy Directive-8 established a requirement for Federal doctrine to embrace the full range of statutory authorities related to disasters and emergencies. This resulted in requests for FAVD to provide expertise beyond the Stafford Act requirements for care and sheltering of household pets and service animals to include a broader range of species and partner agencies that may be impacted during a disaster.

Workforce Health and Medical Support

WHMS is focused on four core areas that lead the Department's workforce health and medical oversight functions:

- Medical First Responder Coordination (MFRC) provides medical guidance, standards, policy, and outreach to medical first responder stakeholders, both internal to and external to the

Department. Within this branch resides the DHS Emergency Medical Services (EMS) System and Program.

- Occupational Health mitigates all types of adverse health impacts of work-related risks for the DHS workforce by providing medical guidance and executing programs to provide standards, establish clear policy, and develop and implement enterprise solutions to resolve health issues. Occupational Health includes Medical Countermeasures (MCM) and DHS *Together* resiliency programs.
- Medical Quality Management (MQM) provides expert advice, oversight, consultation, and assistance to directly enable the DHS Components to improve the quality, safety, efficiency, and effectiveness of health care provided to the workforce. The MQM branch also oversees the Electronic Health Information System (eHIS) initiative for the Department.
- Medical Liaison Officer (MLO) program provides experienced health care clinicians who serve as Senior Medical Advisors and are embedded in DHS operational Components. These highly experienced medical professionals represent the CMO, and provide subject matter expertise and medical advice to Component leadership. Immediate reach back to OHA on issues related to policy, planning, mitigation, response, and workforce health protection provide essential support to DHS Operations, including engagements with those in the Department's custody and care.

Medical First Responder Coordination

MFRC plays a key role in integrating the EMS community into Federal, State, local, territorial, and tribal disaster preparedness and policy activities. It builds and leverages collaborative working relationships between DHS and major EMS national associations to address gaps, enhance efficiency, and develop medical first responder and EMS best practices for use in disaster planning, preparedness, response, and recovery. MFRC also represents the internal DHS EMS community to external stakeholders and other Federal agencies.

MFRC provides detailed guidance for external (non-DHS) medical first responders and medical oversight and guidance to more than 3,500 internal DHS EMS providers. The program supports EMS integration toward improved domestic preparedness for DHS, Federal, State, local, tribal and territorial governments, and national EMS communities. MFRC also works closely with external and internal medical first responder communities across the nation to address and resolve gaps identified in EMS coordination and integration.

MFRC provides oversight of essential DHS EMS functions. For example, it develops and maintains electronic systems to track pre-hospital patient care rendered by DHS EMS personnel and their professional credentialing, and guides the standardization of related training and education. MFRC develops policies and protocols for DHS EMS personnel and the greater EMS community, and provides subject matter expertise to the DHS enterprise on health and medical topics ranging from education and training to technology.

MFRC also works closely with other Federal agencies and the National Security Council to develop and distribute essential medical guidance and host national stakeholder engagements for first

responders on improving survivability in incidents such as those involving improvised explosive devices, active shooter, and anthrax threats.

Occupational Health

Occupational Health mitigates the adverse health impacts of work-related risks to the DHS workforce and those in DHS custody by developing programs, strategy, policy, requirements, and metrics for the medical aspects of a Department-wide occupational health program. DHS workforce-related activities are executed in partnership with the Office of the Chief Human Capital Officer Safety and Health Division. The Occupational Health program works with components to find enterprise solutions to medical issues for the DHS workforce and those in DHS custody, to include providing subject matter expertise and guidance to U.S. Customs and Border Protection and U.S. Immigration and Customs Enforcement to find solutions to provide effective medical care and public health screening along the border.

Occupational Health maintains two key activities/initiatives:

- **Medical Countermeasures Program** - The MCM program procures, manages, and distributes MCM to the entire DHS workforce and those under DHS care and custody. This program ensures that the DHS workforce is protected and able to perform the mission-essential functions of the Department following a biological or radiological event. It also provides technical assistance and guidance to the DHS Components on proper MCM use, storage, and management of MCM assets. In FY 2015 and 2016, the MCM Program is expanding its capabilities in support of the Department's workforce, by providing geocoding (geomapping) information, improved stockpile accountability capabilities, and standardization and quality assurance within the MCM storage environments. The program continues to strengthen program sustainability, foster existing and new partnerships within the inter/intra agency preparedness community, and focus on improving communication and understanding of programs at the Federal, State, and local levels.
- **DHSTogether Employee and Organizational Resilience Program** - The *DHSTogether* program promotes resilience across the Department with the focus that a resilient department starts with resilient individual employees. *DHSTogether* is the only comprehensive agency-wide program that identifies and implements resilience interventions and best practices to ensure that employees have the tools and resources they need to manage the stresses inherent in their occupations. The program supports targeted activities that fill significant identified gaps in health and medical services, including strategic communication, training, peer-to-peer support, health and medical expertise, grass-root projects, and individual resilience assessments. With the stand-up of the *DHSTogether* Senior Leadership Council (SLC), decisions supported by Department leaders will help to sustain, and improve a wide-range of resilience-strengthening activities.

Medical Quality Management

The MQM program advises, consults, and assists DHS Components on issues related to the improvement of the quality, safety, efficiency, and effectiveness of health care for DHS employees and persons in DHS care and custody. MQM provides quality management subject matter expertise to ensure that health care service standards are consistently and appropriately applied across the Department. For example, the MQM project exercises oversight for the development of quality management including quality improvement, risk management documentation, medical record

management, credentialing, clinical competency, performance measurement, and review of standard operating procedures and protocols. MQM also chartered and chairs the internal cross-component DHS Health Care Quality Committee, which develops, coordinates, and oversees detailed cross-component initiatives and works to improve the Department's enterprise-wide delivery of healthcare services.

MQM has recently launched several initiatives that promote continuous quality improvement, create efficiencies, and improve communication:

- The MQM-on-the-Go initiative allows the MQM staff to visit the Components on a routine basis and provide one-on-one support with the Component's quality efforts.
- The quarterly Office of Health Affairs and Civil Rights and Civil Liberties coordination meeting which provides an opportunity for OHA Leadership and Senior Medical Advisors to collaborate on matters regarding health equities.
- MQM has expanded to include the Health Information Technology project which enables the standardization and centralization of common and essential information, and allows continuous support for coordinating program and project needs.
- In 2015, MQM will host the first annual Quality Showcase, which will give the Components an opportunity to share their quality and performance improvement activities, and promote best practices throughout DHS.
- Electronic Health Information System (eHIS) is an electronic system that will provide uniform collection, sharing, and analysis of health and safety data across the DHS enterprise. eHIS will promote consistent policies, processes, and procedures. This includes use of a common set of tools available to all users, in order to improve the flow of health and safety communications within the DHS workforce and strengthen accountability for the execution of health-related programs and operations

Medical Liaison Officers

The MLO program provides senior medical advisors (physicians) to DHS Components as direct representatives of the CMO, and offers subject matter expertise in developing the health and medical aspects of planning, response, and workforce protection policy. This program ensures that Component medical issues are rapidly identified and quickly resolved, and provides Components with a direct link to OHA and the CMO. The MLO program also identifies common gaps in medical and health standards, policy, and guidance, and engages with a broad range of health and medical experts (including the CMO and OHA staff) to provide enterprise solutions to bridge those gaps. These solutions could aid in improving medical quality while decreasing workers compensation and other associated costs. In addition, the MLO program provides timely and valuable medical expertise in support of the traveler health, medical first responder, and FEMA search and rescue programs. The MLO program continues to coordinate the employment of senior medical advisors throughout DHS operational Components.

Department of Homeland Security
Office of Health Affairs
Salaries and Expenses
Program Performance Justification
(Dollars in Thousands)

PPA: Salaries and Expenses

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	106	99	\$25,667
FY 2015 President's Budget	106	99	\$27,297
2016 Adjustments-to-Base	(3)	(3)	(\$287)
FY 2016 Current Services	103	96	\$27,010
FY 2016 Program Change	-	-	-
FY 2016 Total Request	103	96	\$27,010
Total Change 2015 to 2016	(3)	(3)	(\$287)

A request for S&E of \$27.010 million in FY 2016 will fund 103 FTP and 96 FTE.

Adjustments-to-Base include:

- Transfer of \$0.002 million from S&E for Data Center Support to DHS OCIO
- Realignment of \$0.460 million from BioWatch to S&E for WCF rent increase from contractor move to federal space
- Increase of \$0.039 million for annualization of FY 2015 pay raise
- Increase of \$0.153 million for 1.3 percent pay raise in FY 2016
- Decrease of \$0.780 million for efficiencies as follows:
 - \$0.457 million for 3 mission support FTE positions
 - \$0.054 million for WCF cellular wireless savings
 - \$0.241 million for Voluntary Early Retirement Authority/Voluntary Separation Incentive Payment savings
 - \$0.028 million for WCF parking subsidy savings
- Decrease of \$0.157 million for contract support offsets to fund annualization and the 2016 pay raise

CURRENT SERVICES PROGRAM DESCRIPTION:

The Assistant Secretary for Health Affairs and Chief Medical Officer leads a team of highly skilled professionals who provide expertise and specialized abilities that are essential to achieving OHA's mission. OHA's staff is composed of doctors, veterinarians, nurses, scientists, public health professionals, and other public servants recruited for their experience and skills. The unique role of OHA's staff in providing medical and health security expertise to DHS and the Federal Government make their level of knowledge and skill very important, and they are considered OHA's most valuable resource. OHA requires highly qualified employees as well as the support personnel to complete its robust mission, all funded through this PPA.

The Office of the Assistant Secretary (OAS) provides executive direction and leadership to all divisions and branches and ensures that OHA's critical mission can be accomplished efficiently and effectively. OAS includes both the immediate Office of the Assistant Secretary and Chief Medical Officer. The OAS includes the management operations activities of OHA, including finance, acquisition, human capital, information technology, emergency preparedness, and facilities/property services. These functions ensure the resilience of OHA, and ensure that resources are effectively allocated to best support DHS's mission.

Salaries and Expenses Mission Statement

The Salaries and Expenses PPA funds the salaries and benefits for all full-time equivalents (FTE) within OHA and the activities of the Office of the Assistant Secretary (OAS). OAS supports OHA's mission by providing executive direction and leadership to all divisions and branches and ensures that OHA's critical mission can be accomplished efficiently and effectively through policy coordination, communications, external relations, strategic planning, and correspondence management. OAS also provides for the management of all relevant business operations including financial management, program analysis, facilities maintenance and planning, human capital management, and information technology support.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$10,876	\$12,063	\$11,745	\$(318)
11.5 Other Personnel Compensation	\$202	-	-	-
11.8 Special Personal Services Payments	\$1,079	\$1,090	\$1,090	-
12.1 Civilian Personnel Benefits	\$3,260	\$3,604	\$3,498	\$(106)
Total, Salaries & Benefits	\$15,417	\$16,757	\$16,333	\$(424)

Salaries and Benefits includes costs for 96 FTEs, OGC support, and the DHS PHSO Coordinator. In FY 2016, 3 FTE are eliminated.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.1 Rental Payments to GSA	\$2,928	\$3,342	\$3,726	\$384

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The increase reflects the additional office space needed by transferring BioWatch staff to federally leased property.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$6,516	\$6,527	\$6,280	(\$247)

The FY 2016 request funding level reflects net changes to Interagency Agreements for contractual services for the purchase of goods and services and efficiencies in WCF categories. Additionally, S&E funds OHA's WCF charges from this account.

Planning and Coordination Mission Statement

The Planning and Coordination PPA (P&C) is comprised of programs that primarily support Mission 5 of the Future Years Homeland Security Program (Ensuring Resilience to Disasters), as well as and Maturing and Strengthening the Homeland Security Enterprise. Major programs include: Health Security Integration; Food, Agriculture, and Veterinary Defense; and Workforce Health and Medical Support. These activities support 24/7 National Operation Center Watch Operation and other missions through a variety of activities directed both externally to Federal, State, and local stakeholders and internally within the Department.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.8 Special Personal Services Payments	\$765	\$1,499	\$1,499	-
Total, Salaries & Benefits	\$765	\$1,499	\$1,499	-

The amount requested in FY 2016 is to cover the Public Health Service Officers (PHSO) assigned to P&C and a proportionate share of the watch desk officer operations.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$2,593	\$1,150	\$1,112	(\$38)

The FY 2016 requested funding level reflects a decrease from FY 2015 to FY 2016 due to a decrease in contractor support. The request includes support for proprietary software for the electronic patient care record (ePCR) system, coordination for food-specific standardized response plan that will be integrated into the National Response Framework, recommendations on key preparedness policies, and subject matter experts and federally-funded research and development center support for key projects.

BioWatch Mission Statement

The BioWatch Program is the Nation's only federally managed, locally operated nationwide biosurveillance system designed to detect the intentional release of select biological threat agents. BioWatch is a key part of the Department's layered approach for protection against a catastrophic biological terror attack, and early detection translates into lives saved. The BioWatch program deploys collection devices and analytical capability in more than 30 high-risk metropolitan areas, called BioWatch Jurisdictions. BioWatch provides public health officials with a warning of potentially hazardous biological agent release before exposed individuals would typically develop symptoms of illness. This detect-to-treat approach provides public health officials with an opportunity to respond aggressively to help mitigate the potentially catastrophic impact on the population of a biological agent release.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.8 Special Personal Services Payments	\$1,865	\$1,651	\$1,539	\$(112)
Total, Salaries & Benefits	\$1,865	\$1,651	\$1,539	\$(112)

The amount requested in FY 2016 is to cover the Public Health Service Officers (PHSO) assigned to BioWatch and a proportionate share of the watch desk officer operations. The reduction is due to higher-ranking officers being succeeded by slightly lower-ranking officers.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
21.0 Travel and Transportation of Persons	\$147	\$150	\$204	\$54

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. Steps to assure appropriate travel include evaluation of needs and stringent approval processes. An increase is requested to more fully support the National BioWatch Stakeholders' Workshop by providing travel to selected State and local officials who could not otherwise participate and to pay for travel for selected SMEs in support of developing guidance documents and ConOps for use by the BioWatch Jurisdictions and other Federal, State and local BioWatch partners.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.3 Communications, Utilities, and Misc. Charges	\$62	\$77	\$20	(\$57)

The FY 2016 request is for projected IT costs.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
24.0 Printing and Reproduction	\$0	\$0	\$4	\$4

Printing at the GPO of the agenda/program for the annual National BioWatch Stakeholders' Workshop.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$32,287	\$32,555	\$30,744	(\$1,811)

Advisory and assistance services include services acquired by contract from non-Federal sources. The FY 2016 funding level reflects a commitment by OHA/BioWatch to engage expertise associated with Field Operations support; Laboratory Operations support; Public Health and Preparedness support; the National BioWatch Stakeholders' Workshop; Jurisdictional Coordinator Management and Training; Quality Assurance support; Program Management support; and laboratory staffing in many Jurisdictions. However, the funding level assumes achieving \$3.1M in SETA contract savings to offset costs rising elsewhere in the BioWatch budget. Funding for OHA's part of PCR standards work at the National Academy of Science will be eliminated.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$10	\$10	\$7	(\$3)

The FY 2016 request is for the hazardous material pickup contract in Washington, DC. Contract cost was slightly lower than expected.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$10,481	\$8,315	\$6,110	(\$2,205)

The FY 2016 funding level reflects support from Interagency Agreements for: Assays; Guidance; Site Modeling; Engineering/Data Analysis; Field Operation and Support; Public Health and Preparedness Support; and Logistics Support. The funding supports work that the National Laboratories perform such as studies and analysis, and other Federal entities perform on behalf of BioWatch but at a reduced level from prior years.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.7 Operation and Maintenance of Equipment	\$63	\$20	\$0	(\$20)

Project will be completed in FY 2015.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
26.0 Supplies and Materials	\$10,288	\$12,288	\$13,941	\$1,653

The requested funding level reflects the purchases for supplies and materials associated with Laboratory Operations, Field Operations, and QA support. Increase supports projected costs associated with replenishment of critical supplies for mission needs.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
31.0 Equipment	\$1,256	\$0	\$2,200	\$2,200

BioWatch equipment, particularly lab instruments, are nearing the end of their expected life span. Increase funds replacement of aging instruments.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
41.0 Grants, Subsidies, and Contributions	\$28,818	\$29,585	\$28,509	(\$1,076)

Grants/Subsidies/Contributions includes cash payments to States, other Federal agencies, associations, individuals, commissions, proceedings, or projects. The requested funding level will provide funding to BioWatch Jurisdictions through Cooperative Agreements for current operations. The change from FY 2015 to FY 2016 reflects an estimate for the cost of operations in the 30+ BioWatch Jurisdictions. Management has been pursuing efforts in cost control, which have been successful to date, but future opportunities for savings will be reduced as operations are right sized.

A. Component Overview

The Office of Health Affairs is comprised of the following mission-oriented programs that support achievement of the DHS strategic missions, goals, and objectives.

Health Threats Resilience: Health Threats Resilience (HTR) coordinates DHS efforts dedicated to national resilience against health incidents and supports DHS programs related to biological and chemical defense. HTR manages BioWatch, an early warning system to rapidly detect dangerous pathogens in the air, and the National Biosurveillance Integration Center, which enables the early warning and shared situational awareness of biological events so that critical decisions directing response and recovery efforts are well-informed and ultimately save lives. HTR provides health and medical expertise related to chemical preparedness, detection, and response; and provides expertise to federal planning and policy development. HTR also coordinates DHS programs related to the security of our nation’s food, agriculture, and animal health; and provides technical assistance to help state and local communities bolster efforts to prepare for and respond to catastrophic health threats.

Workforce Health and Medical Support: Workforce Health and Medical Support (WHMS) leads the Department’s workforce health and medical oversight activities. WHMS ensures medical first responder coordination by providing support to DHS personnel who perform operational medical services. WHMS supports the “One DHS” concept through the following initiatives: Developing cross-DHS emergency medical services (EMS) protocols, quality assurance standards, credentialing standards, and validation processes; providing quality assurance and medical advice; advising FEMA on safety and environmental health housing issues; and creating a medical oversight framework. WHMS focuses on DHS occupational health, which involves mitigation of adverse health impacts of work-related risks for the DHS workforce by developing strategy, policy, requirements, and metrics for the medical aspects of a Department-wide occupational health and safety program.

Management and Administration: This program captures activities that provide enterprise leadership, management and/or business administration services, and describes the capabilities and activities that support the day-to-day management and back office functions enabling the Department to operate efficiently and effectively. Key capabilities include conducting agency planning and performance management, managing finances, managing agency workforce, providing physical and personnel security, acquiring goods and services, managing information technology, managing agency property and assets, managing agency communications, managing legal affairs, and providing general management and administration.

FY 2016 Budget Request

The table below shows the Office of Health Affairs’ FY 2016 Budget request by its mission-oriented programs.

Program	FY 2016 Request	
	FTE	Dollars (in thousands)
Health Threats Resilience	38	\$103,086
Workforce Health and Medical Support	25	\$10,056
Management and Administration	33	\$10,927
Total Budget Request	96	\$124,069

B. Component Contributions to Achieving Departmental Missions

The table below shows the alignment of the Office of Health Affairs programs to the DHS Missions and Mature and Strengthen Homeland Security.

Programs	DHS Missions					Mature and Strengthen Homeland Security
	Prevent Terrorism and Enhance Security	Secure and Manage Our Borders	Enforce and Administer Our Immigration Laws	Safeguard and Secure Cyberspace	Strengthen National Preparedness and Resilience	
Health Threats and Resilience	82%				3%	15%
Workforce Health and Medical Support					18%	82%
Management and Administration						100%

Mission 1: Prevent Terrorism and Enhance Security

Resources Requested

The Office of Health Affairs' resources supporting *Prevent Terrorism and Enhance Security* are provided in the table below.

Program	FY 2014		FY 2015		FY 2016	
	\$	FTE	\$	FTE	\$	FTE
Health Threats Resilience	86,244	7	85,690	7	84,297	6
Total	86,244	7	85,690	7	84,297	6

\$ in thousands

Performance Measures

For *Prevent Terrorism and Enhance Security*, Management Measures are displayed to provide a more thorough context of expected performance results.

Management Measures

Measure: Estimated time between an indoor monitoring unit exposure to a biological agent and the declaration of a confirmed positive sample result (in hours)						
Description: This performance measure calculates the time between an indoor monitoring unit exposure to a biological agent and the declaration of a confirmed positive sample result by the local laboratory official. The indoor detection goal for BioWatch is a maximum time to confirmed positive result (BioWatch Actionable Result declaration) of <33 hours. This time is based on an average of the daily 24-hour aerosol collection cycle at some locations and shorter aerosol collection cycles at other locations (three pickups per day) followed by up to a 12-hour transport and laboratory analysis period.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	<=33	<=33	<=33	<=33	<=33	<=33
Result:	30	30	32	32	N/A	N/A

Measure: Estimated time between an outdoor monitoring unit exposure to a biological agent and the declaration of a confirmed positive sample result (in hours)						
Description: This performance measure calculates the time between an outdoor monitoring unit exposure to a biological agent and the declaration of a confirmed positive sample result by the local laboratory official. The outdoor detection goal for BioWatch is a maximum time to confirmed positive result (BioWatch Actionable Result declaration) of < 36 hours. This time is based on the daily 24-hour aerosol collection cycle and up to a 12-hour transport and laboratory analysis period.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	<=36	<=36	<=36	<=36	<=36	<=36
Result:	36	36	36	36	N/A	N/A

Measure: National Biosurveillance Integration System operational response time to incoming queries relative to biosurveillance (in hours)						
Description: Elapsed time between NBIC receiving relevant information and disseminating to interagency partners. This time includes search requirements within applicable systems and getting permission to release the information.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	<48.00	<24.00	<20.00	<20.00	<20.00
Result:	17.87	15.42	17.42	4.06	N/A	N/A

Mission 5: Strengthen National Preparedness and Resilience***Resources Requested***

The Office of Health Affairs' resources supporting *Strengthen National Preparedness and Resilience* are provided in the table below.

\$ in thousands

Program	FY 2014		FY 2015		FY 2016	
	\$	FTE	\$	FTE	\$	FTE
Health Threats Resilience	3,157	9	3,253	9	3,104	7
Workforce Health and Medical Support	1,645	5	1,697	5	1,791	6
Total	4,802	14	4,950	14	4,895	13

Performance Measures

The Office of Health Affairs contributes to this mission, but does not have performance measures in this area.

Mature and Strengthen Homeland Security***Resources Requested***

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Emergency Management Agency Salaries and Expenses

• Appropriation Overview

A.Mission Statement:

The FEMA Salaries and Expenses (S&E) appropriation provides core mission funding for the development and maintenance of an integrated, Nationwide capability to prepare for, mitigate against, respond to, and recover from the consequences of major disasters and emergencies regardless of cause, in partnership with other Federal agencies, State, local and tribal governments, volunteer organizations, and the private sector. The account supports core operations for all FEMA organizations, providing resources for mission activities and administrative support. S&E resources are directed to both Headquarters and Regional operations.

B.Budget Activities:

Activities are organized according to the following program/project/activity (PPA) structure:

Administrative and Regional Offices (ARO)

ARO incorporates the essential command and control functions of the Agency. The Administrative arm coordinates all policy, strategic planning, resources, managerial, and administrative actions to include the Federal Coordinating Officers, National Capital Region Coordination, and the Evaluations and Assessment Program. The Regional Operations include the leadership, management, and mission support functions of the 10 FEMA Regions. These Regions execute the operational direction received from Headquarters to ensure FEMA can execute its primary mission: preparedness; protection; response; recovery; and mitigation.

Preparedness and Protection

Preparedness - The Preparedness mission seeks to reduce the loss of life and property and protect the Nation by planning, training, exercising, and building the emergency management profession. As manager and coordinator of the preparedness cycle, FEMA provides assistance, support, and leadership to help Federal, State, Tribal and local governments and the private sector build the operational capabilities needed to implement preparedness strategies successfully.

Protection - The Protection mission seeks to protect our Nation's constitutional form of government and ensures that a system is in place to warn our citizens of impending hazards. FEMA is responsible for supporting the enhancement of protection capabilities for all hazards, which in turn helps to integrate the tools and mechanisms for capability building across mission areas; streamlines the delivery of assistance to State, Tribal and local governments, as well as non-governmental entities; and

leverages existing intergovernmental coordination infrastructures. FEMA's primary continuity business lines and associated continuity activities include: Continuity Planning; Continuity Training and Exercises; and Continuity Operations.

Response

The Response mission is to conduct emergency operations to save lives and property through positioning emergency equipment, personnel, and supplies; evacuating survivors; providing food, water, shelter, and medical care to those in need; and restoring critical public services. FEMA conducts response operations in partnership with: State, Tribal and local governments; interagency Federal partners; nongovernmental organizations; and the private sector. Response also manages FEMA responsibilities associated with the Stafford Act Declarations process.

FEMA executes response operations through established incident management and incident support entities that capitalize on FEMA's nationwide organizational structure, occupying specific disaster facilities at the National Headquarters level, in the affected Regional office, and in temporary field locations established near the scene of a disaster or emergency. FEMA's response operations include logistics, search and rescue, disaster emergency communications, and planning.

Recovery

The Recovery mission seeks to support communities in rebuilding so that individuals, civic institutions, businesses, and governmental organizations can function on their own, return to normal life, and protect against future hazards.

FEMA's Recovery mission is accomplished through a combination of programs and functions that provide direct and indirect support. These include recovery planning, and programs specifically designed to assist both individuals and local governments that have been affected by disasters.

Mitigation

The Mitigation mission seeks to reduce or eliminate long-term risks to people and property from hazards and their effects. Mitigation benefits society by creating safer communities, enabling people to recover more rapidly from floods and other disasters, and reducing the financial impact on Federal, State, Tribal and local governments and communities. FEMA's Mitigation mission is accomplished through the following basic mitigation business lines: Risk Analysis, Risk Reduction, and Risk Insurance.

Mission Support

Mission Support provides the corporate support, tools, and resources the agency needs to build, sustain, and improve its primary mission of preparedness, protection, response, recovery, and mitigation. Functions include information technology, human capital management, acquisition management, security, and administration which include facilities management, records management, and occupational health and safety.

Centrally Managed Accounts

Centrally managed accounts are critical bills that must be managed at the enterprise level to ensure efficient and effective cost management, which includes streamlining cost factors and prompt payment. The authority and responsibility for the individual accounts are assigned by the FEMA Office of the Chief Financial Officer (OCFO) to the individual functional components.

C. Budget Request Summary:

The Federal Emergency Management Agency requests \$949.296 million, 4,126 positions and 4,126 FTE for FY 2016. The total adjustments-to-base are increase of 85 positions, 85 FTE and an increase of \$10.3 million. FEMA is also requesting two program change increases totaling \$14.3 million in FY 2016. In order to provide greater transparency and specificity in this budget request, FEMA has provided detailed supporting information. The anticipated obligations detailed herein are not intended to be programs, projects or activities (i.e. they are not, in of themselves, elements within the budget account) and, consequently, deviating from those estimates in budget execution would not constitute a reprogramming. Programs, projects and activities are detailed in supporting table II “Summary of FY 2016 Budget Estimates by Program/Project Activity (PPA).

The request reflects FEMA’s priority to manage resources more effectively and continue to support the Department of Homeland Security’s (DHS) strategic priorities. FEMA’s focus is on continuing to maintain and strengthen the agency’s ability to respond to disasters while reducing costs and improving the efficiency of our operations. FEMA’s swift and effective response to the tornadoes, floods, earthquakes, and hurricanes of recent years demonstrates the impact of internal capacity that FEMA has developed and will maintain at the requested level.

The Salaries and Expenses (S&E) request supports the workforce and is critical to the effective execution of FEMA’s mission. S&E funds the vast majority of FEMA’s permanent workforce which is the backbone of our operations. Our personnel work collaboratively with States, local governments, communities, tribes, and other citizens and first responders to build, sustain, and improve our capability to prepare for, protect against, respond to, recover from, and mitigate all hazards.

Even though FEMA provides response and recovery assistance through the auspices of other appropriations – the Disaster Relief Fund, Flood Hazard Mapping and Risk Analysis, Disaster Assistance Direct Loan Program, and the National Flood Insurance Fund – the personnel and programs in S&E are the critical enablers. Without the people and programs funded by S&E, FEMA cannot manage those programs, staff response teams, process survivor assistance applications, provide emergency communications, or perform other immediate response activities.

The FY 2016 President’s Budget provides the resources to support FEMA’s ability to work with its partners to strengthen the Nation’s preparedness for and resilience to future disasters. The Budget reflects lessons learned from recent disasters as well as overall trends in disaster losses. The agency has enhanced its focus on maturing plans and processes to better serve survivors and communities; becoming an expeditionary organization that ensures the right people and resources are in the right places at the right times to provide appropriate services to disaster survivors; and catalyzing national disaster risk reduction. The Budget is also focused on enhancing FEMA’s organizational foundation through building effective management structures. These structures are inseparable from our mission

and are critical to its support – whether through building the mission workforce (with a focus on hiring, managing performance, and career development) or through building secure information technology infrastructure that facilitates our response to catastrophic disasters.

In July 2014, FEMA released the 2014-2018 FEMA Strategic Plan that articulates 16 strategic objectives the Agency will accomplish to provide the best possible support to the American people before, during, and after disasters. The Plan was developed with the input of hundreds of FEMA employees and many external stakeholders who are now working together to execute the Plan's five strategic priorities:

- Be survivor-centric in mission and program delivery;
- Become an expeditionary organization;
- Posture and build capability for catastrophic disasters;
- Enable disaster risk reduction nationally; and
- Strengthen FEMA's organizational foundation.

FEMA leadership is committed to basing the Agency's resource decisions on achieving outcomes defined in the Plan, and selected areas of focus within the five strategic priorities are highlighted below.

Be Survivor-Centric in Mission and Program Delivery

The whole community approach to emergency management calls for those who manage disasters to understand and recognize both the needs and the capabilities of affected survivors. Hurricane Sandy and other recent disasters highlighted the need to make FEMA's programs and processes as accessible and user-friendly as possible for survivors rather than prioritizing FEMA's ease of administration. In delivering its Individual Assistance and Public Assistance programs, FEMA will therefore endeavor to anticipate and adapt to survivors' needs, maximizing the speed, efficiency, accessibility, and ease of use of our programs and services for individuals and communities. As an example of our efforts to strengthen a survivor-centric focus, FEMA's FY 2016 budget requests a transfer of funding from the Recovery PPA to the Administrative and Regional Offices PPA for the recovery planning program led by the Office of Federal Disaster Coordination. This will allow FEMA to engage and provide support to local leaders and tribal officials to help focus on survivor and community needs and capabilities to strengthen planning for future management of disasters.

Become an Expeditionary Organization

The overall Hurricane Sandy response demonstrated the significant progress achieved in recent years by FEMA and our whole community partners. However, it also confirmed that large and complex incidents will stress FEMA and the Federal Government's capacity to anticipate survivor needs, maintain unity of effort, and provide rapid support to State, local and tribal partners. As a result, FEMA's Response Directorate, Logistics Directorate, Office of Federal Disaster Coordination, and the Regional offices are working to build the capacity to respond rapidly and to appropriately sustain incident operations. Through efforts such as the development of enhanced geospatial analytical capabilities and continued implementation of the FEMA Qualifications System, FEMA will build out its ability to become an expeditionary organization with the right people and resources in the right places at the right times to meet the needs of disaster-affected communities.

Posture and Build Capability for Catastrophic Disasters

The greatest challenge in emergency management lies in preparing for a catastrophic disaster. FEMA will lead the effort to prepare the Nation for a catastrophic event, engaging the whole community to harness and enhance the capabilities of citizens and communities. In recognition that any government-centric response to a catastrophic incident will fail, FEMA's Protection and National Preparedness and Response and Recovery Offices continue to work to deliberately identify gaps in the Nation's capabilities to respond to and recover from a catastrophic event, and to work with whole community partners to address the identified gaps through better planning and through continued efforts to build and sustain the capabilities that matter most. The centerpiece of these efforts is implementing the National Preparedness System, including numerous elements such as the Threat and Hazard Identification and Risk Assessments (THIRAs), State Preparedness Reports (SPRs), National Training and Education System, National Exercise Program, National Preparedness Report (NPR), and National Planning Frameworks.

Enable Disaster Risk Reduction Nationally

The Nation faces increasing disaster risk in the near and long term due to multiple interacting factors. Reducing loss of life, injuries, and disaster costs will require concerted action by individuals, businesses, and communities, as well as a range of state, tribal, territorial, and Federal government agencies. To further enable national disaster risk reduction, FEMA identifies and assesses risk; reduces risk through providing land use incentives, building codes, and providing Hazard Mitigation Grant Program funding; and, spreads the risk of flood loss through the National Flood Insurance Program. Through these programs, FEMA reduces the likelihood of future losses, enables individuals to recover more rapidly from floods and other disasters, and minimizes the financial impact of disasters on the U.S. Treasury, States, Tribal and local communities.

Strengthen FEMA's Organizational Foundation

FEMA must be adaptable and flexible as an organization in order to fulfill its emergency management mission. The Agency has recognized the critical importance of achieving excellence in human capital, data analytics, information technology, and other business functions in order to realize unity of effort and effectively advance our strategic priorities. FEMA has also prioritized investments to strengthen the cyber security of its systems, centralizing funding to ensure a focused and consistent approach within the Office of the Chief Information Officer.

FEMA's leadership is actively executing the Strategic Plan and the Administrator is committed to further aligning FEMA's resources to achieve the outcomes stated in the Plan. FEMA is just one part of the Nation's emergency management team and must build, sustain and draw upon the capabilities of the whole community to accomplish the National Preparedness Goal of a secure and resilient Nation with the capabilities required across the whole community to prevent, protect against, mitigate, respond to, and recover from the threats and hazards that pose the greatest risk.

FEMA requests \$243.323 million, 1,607 positions and 1,607 FTE in the Administrative and Regional Offices PPA. This includes the following adjustment-to-base:

- Increase of \$1.491 million for 2016 pay increase
- Increase of \$0.4 million for annualization of 2015 pay raise
- Transfer of \$1.4 million for Cyber Security to Mission Support PPA
- Transfer of \$3.919 million and 18 positions and FTE for Federal Disaster Coordination recovery programs from Recovery PPA
- Transfer of one position, FTE, and funding \$0.131 million from Office of External Affairs to Recovery PPA.
- Decrease of \$0.421 million to Office of External Affairs for contract services and supplies
- Increase of three positions and \$0.369 million for Office of External Affairs
- Increase of six positions for Office of Program Policy and Analysis through grade restructuring and non-pay to S&B realignment
- Decrease of \$0.497 million to Office of Program Policy and Analysis for defense production act and database support
- Increase of one position and FTE for Office of the Chief Financial Officer through in-sourcing
- Transfer of one position, FTE and \$0.165 million from the Office of Chief Procurement Officer Mission Support PPA to the Office of the Chief Financial Officer.
- Increase to OCFO for financial management system transition \$3.2 million
- Decrease to OCFO for financial contractor support services \$1.5 million
- Decrease to OCFO for savings related to in-sourcing \$0.2 million
- Decrease to OCFO for integrated financial management system support \$1.636 million
- Reduction to 10 regional offices for incident management support team transition to Disaster Relief Fund \$5 million
- Transfer to Mission Support PPA – OCCHCO \$0.654 million for central Presidential Management Fellows program

CURRENT SERVICES PROGRAM DESCRIPTION:

Administrative and Regional Offices incorporate the essential command and control functions of the Agency. The following activities directly support FEMA’s mission to support our citizens and first responders to ensure that as a Nation we work together to build, sustain and improve our capability to prepare for, protect against, respond to, recover from and mitigate all hazards.

1) Office of the Administrator

Activity/Office	FY 2014 Revised Enacted	FY 2015 President’s Budget	FY 2016 Request	FY 2016 +/- FY 2015
Office of the Administrator				
Non-Pay	\$1,909	\$1,910	\$2,295	\$385
Salaries and Benefits	\$5,177	\$5,202	\$5,249	\$47
<i>Sub Total Budget</i>	\$7,086	\$7,112	\$7,544	\$432
Positions	35	35	35	0

The Administrator and the Deputy Administrator have the ultimate responsibility for providing leadership and direction that enables FEMA to accomplish the Agency’s mission: to support our citizens and first responders to ensure that as a nation we work together to build, sustain, and improve our capability to prepare for, protect against, respond to, recover from, and mitigate all hazards.

Collaborating with State and local governments, and other emergency providers to build a National system of emergency management, the Administrator integrates the Agency’s emergency preparedness, protection, response, recovery, and mitigation responsibilities to confront the challenges of a natural disaster, act of terrorism or other manmade disaster. The Administrator coordinates the implementation of a risk-based, all-hazards strategy. The increase is to build upon outreach through physical engagement by FEMA senior leadership.

2) Office of the Chief Counsel

Activity/Office	FY 2014 Revised Enacted	FY 2015 President’s Budget	FY 2016 Request	FY 2016 +/- FY 2015
Office of Chief Counsel				
Non-Pay	\$1,006	\$1,006	\$956	(\$50)
Salaries and Benefits	\$11,623	\$11,569	\$11,675	\$106
<i>Sub Total Budget</i>	\$12,629	\$12,575	\$12,631	\$56
Positions	74	74	74	0

The Office of Chief Counsel (OCC) supports FEMA’s efforts to reduce loss of life and property, and protect the Nation from all hazards by providing the Agency with legal advice, counsel, risk analysis, and dispute resolution services. The FY 2015 to FY 2016 deltas represents the proposed 2016 pay increase and programmatic contribution to strengthening FEMA’s mission support activities.

3) Office of Equal Rights

Activity/Office	FY 2014 Revised Enacted	FY 2015 President’s Budget	FY 2016 Request	FY 2016 +/- FY 2015
Office of Equal Rights				
Non-Pay	\$1,168	\$1,168	\$1,168	\$0
Salaries and Benefits	\$2,573	\$2,586	\$2,610	\$24
<i>Sub Total Budget</i>	\$3,741	\$3,754	\$3,778	\$24
Positions	23	23	23	0

- Increase relates to the proposed 2016 pay increase.

The Office of Equal Rights (OER) serves the Agency and the Nation by promoting affirmative employment, a discrimination-free workplace, and equal access to FEMA programs and benefits.’

4) Office of External Affairs

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Office of External Affairs				
Intergovernmental Affairs	\$1,300	\$1,330	\$1,202	(\$128)
Strategic Communications	\$2,113	\$2,117	\$2,113	(\$4)
Ready Campaign	\$2,185	\$2,380	\$2,230	(\$150)
Public Affairs	\$1,851	\$1,733	\$1,712	(\$21)
Congressional Affairs	\$1,737	\$1,444	\$1,769	\$325
Private Sector Division	\$800	\$669	\$661	(\$8)
Disaster Operations	\$1,050	\$1,156	\$1,044	(\$112)
Front Office	\$2,289	\$2,359	\$2,365	\$6
Coordination and Business Operations	\$1,175	\$975	\$975	\$0
Sub Total Budget	\$14,500	\$14,163	\$14,071	(\$92)
Positions	83	78	80	2

The Office of External Affairs (OEA's) mission is to engage, inform, and educate all FEMA stakeholders in support of the Agency's programs and initiatives to achieve its mission. OEA accomplishes its mission by coordinating and maintaining visibility of public and internal communications and advising FEMA program and support offices on decision-making regarding policies, plans, and actions that affect stakeholder, media, and Congressional audiences. In addition organize outreach efforts targeted at principal stakeholders to include local, State, territorial, and Tribal governments, the private sector, national organizations and associations, and the American public.

OEA will reduce contractual services and supplies in the amount of \$0.421 million. Additionally, \$0.131 million in S&B as well as one position/FTE was transferred to the Recovery Directorate for the individual assistance programs, and \$0.369 million was provided to supplement three additional positions in the Congressional Affairs Division.

OEA-Intergovernmental Affairs

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
OEA-Intergovernmental Affairs				
Non-Pay	\$275	\$318	\$189	(\$128)
Salaries and Benefits	\$1,025	\$1,013	\$1,013	\$0
Sub Total Budget	\$1,300	\$1,330	\$1,202	(\$128)
Positions	8	8	8	0

Intergovernmental Affairs (IGA) serves as FEMA's primary National-level liaison for State, local, tribal and territorial officials and governments, non-governmental community partners, and governmental and non-governmental associations that represent their interests. The division forges trusting relationships with stakeholder groups at every level in order to facilitate open and effective communication about the needs and capabilities of the communities FEMA is charged with serving.

OEA-Strategic Communications

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
OEA-Strategic Communications				
Non-Pay	\$3	\$7	\$3	(\$4)
Salaries and Benefits	\$2,110	\$2,110	\$2,110	\$0
<i>Sub Total Budget</i>	\$2,113	\$ 2,117	\$ 2,113	(\$4)
Positions	14	14	14	0

The Strategic Communications Division (SCD) enhances agency messaging by increasing direct communication among agency programs. SCD acts as a direct liaison between program offices in order to ensure that internal and external agency communications and messaging efforts are clear, consistent, timely and relevant. SCD coordinates with other Federal agencies and internal FEMA program offices to develop and execute communications strategies including: the dissemination of current policy information and preparedness information through the Ready Campaign.

OEA-Ready Campaign

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
OEA-Ready Campaign				
Non-Pay	\$1,800	\$2,000	\$1,850	(\$150)
Salaries and Benefits	\$385	\$380	\$380	\$0
<i>Sub Total Budget</i>	\$2,185	\$ 2,380	\$ 2,230	(\$150)
Positions	3	3	3	0

The Ready Campaign develops and executes a National public service campaign designed to educate and empower the American people to prepare for and respond to disasters affecting their families and communities. Launched in 2003, the Ready Campaign involves the public in emergency management efforts by increasing awareness regarding potential hazards, providing knowledge and tools to facilitate preparedness and response capabilities locally, and helping disaster survivors become a resource in the “Whole Community” approach to emergency management. Ready provides resources through a multi-prong approach that includes public service announcements, a web site and social media outreach.

OEA-Public Affairs

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
OEA-Public Affairs				
Non-Pay	\$185	\$213	\$192	(\$21)
Salaries and Benefits	\$1,666	\$1,520	\$1,520	\$0
<i>Sub Total Budget</i>	\$1,851	\$ 1,733	\$1,712	(\$21)
Positions	13	12	12	0

The Public Affairs Division (PAD) coordinates FEMA’s public message with the goal of providing

information to the American public that helps them prepare for, protect against, respond to, recover from and mitigate disasters in their area, and also serves as the primary point of contact with the media, and is the lead for all social media platforms including fema.gov and the FEMA App. PAD's programs and activities provide disaster survivors with timely, accurate information and also facilitate the maintaining of effective, ongoing relationships with the media in order to promote FEMA's programs and goals.

OEA-Congressional Affairs

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
OEA-Congressional Affairs				
Non-Pay	\$83	\$95	\$91	(\$4)
Salaries and Benefits	\$1,654	\$1,349	\$1,678	\$329
<i>Sub Total Budget</i>	\$1,737	\$1,444	\$1,769	\$325
Positions	16	14	17	3

The Congressional Affairs Division (CAD) serves as FEMA's primary liaison to the United States Senate and House of Representatives on emergency management issues. The division works with U.S. Congressional committees, Members of Congress, and their professional office staff to inform Capitol Hill of FEMA's programs and initiatives on issues including Prevention, Preparedness, Mitigation, Response, Recovery, and National Continuity. CAD responds to Congressional inquiries related to all topics ranging from government-wide policies to individual constituent casework and also provides critical updates, reports, and analysis regarding the Agency's operations, programs, and policies.

OEA-Private Sector Division

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
OEA-Private Sector Division				
Non-Pay	\$31	\$36	\$28	(\$8)
Salaries and Benefits	\$769	\$633	\$633	\$0
<i>Sub Total Budget</i>	\$800	\$669	\$661	(\$8)
Positions	6	5	6	1

The Private Sector Division (PSD) is FEMA's primary non-acquisition point of coordination and dialogue between the Agency and the Nation's multitude of large and small businesses, trade associations, universities, think tanks, and their extended network of members and employees. The PSD is a driver of positive change within the Agency, delivering new, innovative ways to engage this national network of resources and individuals in emergency management at every level by leveraging opportunities to help business communities recover more quickly.

OEA-Disaster Operations

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
OEA-Disaster Operations				
Non-Pay	\$18	\$124	\$12	(\$112)
Salaries and Benefits	\$1,032	\$1,032	\$1,032	\$0
<i>Sub Total Budget</i>	\$1,050	\$1,156	\$1,044	(\$112)
Positions	7	7	7	0

The Disaster Operations, Training & Cadre Management Division provides leadership, training, coordination, and support to FEMA's External Affairs function during incidents requiring a Federal response. Disaster Ops supports FEMA response and recovery operations through the compilation and distribution of daily EA reports – from situational awareness to incident communications summaries. In addition, Disaster Operations manages a cadre of approximately 950 people who can be deployed to impacted areas to perform the External Affairs mission.

OEA Front Office

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
OEA-Front Office				
Non-Pay	\$1,466	\$1,490	\$1,496	\$6
Salaries and Benefits	\$823	\$869	\$869	\$0
<i>Sub Total Budget</i>	\$2,289	\$2,359	\$2,365	\$6
Positions	3	3	3	0

The OEA Front Office is comprised of the Director and Deputy Director of External Affairs who are charged with the oversight and management of all divisional components.

OEA-Coordination and Business Operations

Activity/Office	FY 2014 Revised Enacted	FY 2015 President Budget	FY 2016 Request	FY 2016 +/- FY 2015
OEA-Coordination/Business Operations				
Non-Pay	\$0	\$0	\$0	\$0
Salaries and Benefits	\$1,175	\$975	\$975	\$0
<i>Sub Total Budget</i>	\$1,175	\$975	\$975	\$0
Positions	13	12	10	(2)

Coordination and Business Operations (CBO) Division which provides consolidated management and administrative support for the Office of External Affairs (OEA). The mission of the division is to ensure OEA staff has the resources, training and processes necessary to meet its mission, and that to ensure these resources are managed effectively on behalf of the Agency.

5) Office of Policy and Program Analysis

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Office of Policy & Program Analysis				
Non-Pay	\$5,286	\$5,148	\$4,651	(\$497)
Salaries and Benefits	\$6,457	\$6,489	\$6,548	\$59
<i>Sub Total Budget</i>	\$11,743	\$11,637	\$11,199	(\$438)
Positions	41	41	47	6

The Office of Policy and Program Analysis (OPPA) fosters strategic coherence across FEMA, in support of the Administrator, by leading and coordinating the development and implementation of Agency policy, strategy, resource planning, enterprise analytics, international affairs, and FEMA’s use of the Defense Production Act authorities. OPPA drives the integration of Agency strategy, resources, and performance to improve mission impact, and helps the Agency effectively analyze complex issues to find solutions that advance how resources are executed and managed.

Reductions in non-pay will be met by a decrease in technical support for the Defense Production Act Program and GAO/OIG database system support. The pay increase will support resource planning and programming initiatives.

6) Office of Federal Disaster Coordination

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Office of Federal Disaster Coordination				
Non-Pay	\$31	\$31	\$1,230	\$1,199
Salaries and Benefits	\$161	\$138	\$2,863	\$2,725
<i>Sub Total Budget</i>	\$192	\$169	\$4,093	\$3,924
Positions	2	1	19	18

The mission of the Office of Federal Disaster Coordination (OFDC) is to access, train, equip, and manage FEMA's Federal Coordinating Officers (FCO) and Federal Disaster Recovery Coordinators (FDRC), as well as manage the Joint Field Office Chief of Staff and Executive Specialist cadres to ensure their availability for rapid deployment in response to any disaster; deliver training to develop and sustain their professional competencies; and coordinate assignments to meet the on-scene needs of FEMA and its emergency management partners. Additionally, OFDC is responsible for leading the implementation, coordination and other activities associated with the National Disaster Recovery Framework (NDRF) and the Federal Interagency Operations Plan (FIOP) for Recovery.

- Transfer of \$3.919 million (pay and non-pay) and 18 positions/FTE for recovery planning programs from Recovery PPA to the Administrative and Regional Offices PPA.

This request will align resources in conjunction of FEMA’s strategic goal of “Be survivor-Centric in Mission and Program Delivery”. FEMA will be better prepared, engaged and provide support to local leaders and tribal officials to help focus on survivor and community needs and capabilities to strengthen planning for future management of disasters.

7) National Capital Region Coordination

Activity/Office	FY 2014 Revised Enacted	FY 2015 President’s Budget	FY 2016 Request	FY 2016 +/- FY 2015
National Capital Region Coordination				
Non-Pay	\$974	\$961	\$961	\$0
Salaries and Benefits	\$2,426	\$2,439	\$2,461	\$22
<i>Sub Total Budget</i>	\$3,400	\$3,400	\$3,422	\$22
Positions	22	22	22	0

The Office of National Capital Region Coordination (NCRC) enhances preparedness and promotes resiliency by enabling better communication and planning between and among Federal, State, local, regional, nonprofit, and private sector stakeholders in the National Capital Region (NCR). Established by Congress in the Homeland Security Act of 2002 (section 882), NCRC’s work addresses a major gap identified on 9/11 within the NCR, which is home to a large number of Federal Departments and Agencies, numerous State and local jurisdictions and our Nation’s Capital, among others.

8) Office of the Chief Component Human Capital Officer

Activity/Office	FY 2014 Revised Enacted	FY 2015 President’s Budget	FY 2016 Request	FY 2016 +/- FY 2015
Office of the Chief Component Human Capital Officer				
<i>Sub Total Budget</i>	\$539	\$654	\$0	(\$654)

- Funding for the central Presidential Management Fellows program transferred to the Mission Support PPA.

9) Office of the Chief Financial Officer

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Office of the Chief Financial Officer				
Non-Pay	\$7,088	\$3,603	\$4,266	\$663
Salaries and Benefits	\$22,334	\$27,128	\$27,647	\$519
<i>Sub Total Budget</i>	\$29,422	\$30,731	\$31,913	\$1,182
Positions	185	190	192	2

The Office of the Chief Financial Officer (OCFO) provides funds control, financial information, financial operations, and financial policy support to FEMA’s management and oversight organizations. The Chief Financial Officer (CFO) is the principal advisor to the Administrator, Deputy Administrator, and other Agency Leadership on matters relating to FEMA’s financial resources. OCFO also oversees the External Coordination and Liaison unit that supports the Congressional Appropriations Committees, the Office of Management and Budget, and the DHS CFO’s office.

The request includes an enhancement in support of FEMA Strategic Objective 5.4, *Streamline and strengthen FEMA’s business processes and systems*. FEMA requests \$3.2 million to support the replacement of the Integrated Financial Management System (IFMIS). The financial management system will be able to provide consistent, standardized information for program managers, financial managers, Agency executives, and oversight organizations. The system also must meet federal statutes, regulations, and standards.

- Increase of one position/FTE for Officer of the Chief Financial Officer through in-sourcing. Funding provided through realignment of \$0.136 million from non-pay to S&B.
- Increase for annualization of 2015 pay raise and FY 2016 pay increase
- Transfer from MS PPA Office of Chief Procurement Officer of one position/FTE and \$0.164 million

10) Cyber security

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Cyber security	\$875	\$1,400	\$0	(\$1,400)

- Transfer of Cyber Security funding \$1.4 million to Mission Support PPA. Information on FEMA’s OCIO is covered within the Mission Support PPA.

11) Evaluation and Assessments

- Regional Offices transferred Incident Management Support Team activities to the Disaster Relief Fund.

FEMA's Regional Offices are empowered to implement the programmatic and doctrinal guidance developed by Headquarters, which serves as the Agency's primary point of contact with whole community stakeholders, and provide incident management and support during disasters. To perform this array of mission functions, each office is led by a Regional Administrator – who reports directly to the FEMA Administrator – and is organized into programmatic divisions that resemble the structure and scope of the Agency. Through the work of the Regional Offices and their staff, FEMA supports the development of an all-hazards, risk-based emergency management system across the Nation.

**In FY 2014 Revised Enacted, \$9.793 million was appropriated for Evaluations and Assessments Program in the Administrative and Regional Offices PPA

FEMA requests \$190.928 million, 527 positions and 527 FTE in the Preparedness and Protection PPA. This includes the following adjustments-to-base:

- Increases of \$0.426 million for 2016 pay increase
- Increase of \$0.114 million for annualization of 2015 pay raise

- Increase of \$0.234 million for vacancy fill of a Senior Executive position
- Increase of \$1.118 million for grants auditing and oversight
- Decrease of \$0.920 million from PNP travel efficiency
- Decrease of \$0.915 million for system migration to FEMA's website
- Decrease of \$6.362 million from Mount Weather Emergency Operation Center
- Transfer of \$2.067 million for Cyber Security to Mission Support PPA
- Increase of 30 positions and FTE for the conversion of contraction to permanent full time employees in-sourcing
- Increase of four positions and FTE through grade restructuring
- Increase of one position and FTE related to a schedule C position

The FY 2016 requests also include the following program changes:

- Increase for programmatic change \$4.3 million to the integrated public alert warning system (IPAWS) program (See Exhibit IV)
- Increase for programmatic change \$10 million for grants system modernization. \$1.9 million is included in the Disaster Relief Fund for this initiative (See Exhibit IV)

CURRENT SERVICES PROGRAM DESCRIPTION:

Protection and National Preparedness (PNP) is responsible for the coordination of preparedness and protection-related activities throughout FEMA. This includes grants, planning, training, exercises, individual and community preparedness, assessments, lessons learned, and continuity. PNP is composed of the Office of Deputy Administrator (ODA), Office of Counterterrorism and Security Preparedness (OCSP), Office of Preparedness Integration and Coordination (OPIC), National Preparedness Directorate (NPD), Grant Programs Directorate (GPD) and National Continuity Programs (NCP).

MAJOR ACOUISIONS:

IPAWS-OPEN System

The IPAWS-OPEN system is a mission critical application that provides for access and authentication of alert messages from public safety officials at all levels of government, the Department of Defense, Universities and State health departments to the Emergency Alert System (EAS), Wireless Emergency Alerts (formerly the Commercial Mobile Alerting System), National Oceanographic and Atmospheric Administration (NOAA) All Hazards Weather Radio network, and Internet alert and warning communications services. IPAWS-OPEN enables public safety officials at all levels to provide timely alerts to citizens in danger over multiple communications paths simultaneously. Access to Wireless Emergency Alerts, short text alerts that are broadcast from cellular towers to cellular phones in a particular area regardless of the devices home origin, is a key capability used by the National Weather Service, the National Center for Missing and Exploited Children, and State and local authorities through IPAWS-OPEN.

Positions	198	198	198	-

- Increase of \$10.0 million for grants system modernization. \$1.9 million is included in the Disaster Relief Fund
- Increase of \$1.118 million for HSGP grants internal control, auditing and oversight
- Increases of \$0.192 million for annualization of FY 2015 pay raise and FY 2016 pay increase
- Decrease of \$0.303 million for travel efficiencies

Funding made available in this PPA is utilized by the Grant Programs Directorate (GPD) to provide oversight and leadership of grant-related activities. GPD activities are broadly categorized in four areas:

- Establishing grant guidance, which includes reviewing and revising strategic objectives and priorities; collecting data and feedback from constituent groups; and developing, coordinating and adjudicating Funding Opportunity Announcements with FEMA program offices, DHS, OMB, the National Security Council Staff and other federal agencies as necessary;
- Processing applications and awarding grants, which involves conducting programmatic, fiscal, and peer reviews of grant investments; establishing and implementing a risk methodology to determine allocation amounts; and collaborating with federal interagency partners to maximize the efficiency and effectiveness of federal grant programs by minimizing overlap and duplication;
- Managing grant awards, a multi-faceted activity that includes regular grant monitoring and oversight; coordinating and enforcing the implementation of audit report corrective actions; conducting Environmental and Historic Preservation (EHP) reviews; providing technical and administrative assistance to grantees to ensure that projects remain on schedule; and developing internal controls, policies, and processes to enable consistent grants management practices; and
- Managing grant closeout processes, which involves receiving and evaluating final performance reports, conducting financial resolution, establishing and implementing a disposition of funds process, and processing appeals as necessary.

In FY 2016, the Grant Programs Directorate will focus on strengthening the management and oversight of the grants portfolio by eliminating the backlog of grants eligible for close out, improving monitoring by ensuring that 100% of open grants receive an initial assessment through a first line review and/or cash analysis every year, and eliminating the backlog of open audit findings relating to both GPD and grantee activities. GPD’s monitoring efforts will include an expanded focus on state and local law enforcement investments in tactical equipment to ensure compliance with on-going Executive Branch reviews of equipment transfer programs and efforts to improve community-law enforcement relations. GPD is working with DOD, DOJ and other federal agency partners to improve the coordination and oversight of programs designed to provide equipment to law enforcement agencies.

Positions	121	143	146	3

*In FY 2014 Revised Enacted, \$9.793 million was appropriated for EAP in the Administrative and Regional Offices PPA

- A net decrease in non-pay from FY 15 to FY16 reflects a decrease of \$0.915 million due to efficiencies gained from migrating the Lessons Learned Information Sharing (LLIS) system to the FEMA website; and a decrease of \$0.255 million for travel efficiencies.
- Increase of \$0.121 million for the annualization of 2015 pay raise and 2016 pay increase.
- Increase of three positions through grade restructuring

The National Preparedness Directorate (NPD) develops and provides doctrine, programs, and resources to help minimize the loss of lives, property, and infrastructure by preparing the Nation for disasters. NPD is responsible for coordinating the Nation's preparedness through stewardship of a comprehensive cycle of activities to plan, organize, equip, train, exercise, evaluate, and improve capabilities.

These activities support the ongoing management and maintenance of the National Preparedness Goal (the Goal) and System as required in law and Presidential policy. The System is the instrument the Nation employs to achieve the goal of a secure and resilient Nation, and includes the following components:

- Identifying and assessing risk
- Estimating capability requirements
- Building and sustaining capabilities
- Planning to deliver capabilities
- Validating capabilities
- Reviewing and updating capabilities, resources, and plans

NPD Office of the Assistant Administrator

Positions	48	52	52	0

*Includes: \$1 million; \$1 million and \$0.561 million for EMAC in FYs 2014, 2015, and 2016 respectively

In FY 2016, the National Integration Center (NIC) will continue to focus on full implementation of the National Preparedness System. This includes the refinement of preparedness doctrine, policy, guidance, and tools as well as the stewardship and operation of the National Incident Management System (NIMS). Through the implementation of NIMS, the NIC addresses resource typing, credentialing, information management, and mutual aid. This effort includes support for the Emergency Management Assistance Compact (EMAC), which is the principal national mechanism for mutual aid during a disaster. EMAC will serve as a foundational element of a national mutual aid plan, integrating EMAC's efforts with more localized mutual aid compacts. EMAC also provides critical information on needed assets during disaster, which will aid in prioritizing resource typing efforts as well as other preparedness activities. The National Planning System—another key element of the National Preparedness System—includes national planning frameworks, federal interagency operational plans and procedures, and planning guidance for the whole community. Development and refinement of the planning system will continue in FY 2016 based on lessons learned.

Individual and Community Preparedness Division (ICPD)

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
ICPD				
Non-Pay	\$9,692	\$11,470	\$10,465	(\$1,005)
Salaries and Benefits	\$2,001	\$1,900	\$1,915	\$15
<i>Sub Total Budget</i>	\$11,693	\$13,370	\$12,380	(\$990)
Positions	17	17	17	0

National resilience stems from individual and community resilience. National preparedness harnesses the power of every individual to make communities safer, stronger, and better prepared to respond to disasters of all kinds. This mission is supported by a national network of State, local, and tribal Citizen Corps Councils, and partner programs such as the Community Emergency Response Teams (CERT). In FY 2016, ICPD will continue to conduct a campaign to build and sustain national preparedness, including public outreach and community-based programs. Building from the past year's efforts to move the needle from awareness to action, ICPD will engage people at a deeper level, by updating messages to reflect regional and demographic differences and by connecting with social networks, such as schools, the workplace, and community organizations.

National Training and Education Division (NTED)

Efforts to build and sustain preparedness depend on people—particularly the men and women who serve as first responders and coordinators across the range of emergency disciplines. The National Preparedness Directorate, through NTED, will continue to build and expand the National Training and Education System (NTES). NTES will take information from the THIRAs and other sources to forecast the training and educational needs of responders and coordinators in all disciplines based on the capabilities outlined in the Goal and ensure we are developing and delivering the best mix of high quality, cost-effective courses in a variety of formats. Through the NTES, NTED collaborates across FEMA and with our partners to develop knowledge, skills, and abilities of homeland security professionals that support the Goal.

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
NTED				
Non-Pay	\$3,565	\$3,705	\$3,705	\$0
Salaries and Benefits	\$2,813	\$2,790	\$2,812	\$22
<i>Sub Total Budget</i>	\$6,378	\$6,495	\$6,517	\$22
Positions	24	24	24	0

Technical Assistance Program (TAP)

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
TAP				
Non-Pay*	\$4,758	\$5,208	\$4,775	(\$433)
Salaries and Benefits	\$1,909	\$1,885	\$1,900	\$15
Sub Total Budget	\$6,667	\$7,093	\$6,675	(\$418)
Positions	13	13	13	0

*Includes: \$1 million; \$1 million and \$0.561 million for EMAC in FYs 2014, 2015, and 2016 respectively

The Technical Assistance Program provides specialized expertise and services to State, local, tribal and territorial homeland security and emergency management agencies as well as whole community partners that participate in FEMA homeland security grant programs. Technical assistance addresses areas of greatest need based on risk and national priorities. It provides services, analytical capacities, and guidance in two primary areas: (1) capability-building across the five homeland security mission areas (prevention, protection, mitigation, response, and recovery); and (2) homeland security grants management. This two-pronged approach ensures that the assistance measurably enhances State and local programs and the specific capabilities they build and manage. The assistance results in knowledge transfer to requesting organizations and their whole community partners, greater unity of effort in planning for catastrophic disasters, more-effective fusion centers, and improved grants management and program delivery. As a component of the TAP, the NIC will work closely with partners to help them complete the fourth iteration of Threat and Hazard Identification and Risk Assessments (THIRAs). FEMA Regions, States, urban areas, and tribal grant program recipients are required to conduct THIRAs annually. THIRAs play a critical role in our efforts to work together more systematically as a Nation to manage risk and build, sustain, and deliver the capabilities identified in the National Preparedness Goal and improve our security and resilience.

Evaluations and Assessments Program (EAP)

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
EAP*				
Non-Pay		\$6,526	\$6,384	(\$142)
Salaries and Benefits		\$1,990	\$2,005	\$15
Sub Total Budget		\$8,516	\$8,389	(\$127)
Positions		18	18	0

*FY 2014 Revised Enacted, \$9.793 million was appropriated in the Administrative and Regional Offices PPA

On an annual basis, the Federal Government provides millions of dollars in grants, thousands of hours of training, and hundreds of technical assistance visits and exercise support packages to improve our Nation's preparedness. EAP evaluates, assesses, and reports on these efforts and the Nation's overall preparedness. This program conducts evaluation and assessment across the entire Homeland Security enterprise.

At the State, local, tribal, territorial, and urban area level, the program establishes standardized reporting

requirements and tools for each jurisdiction/grantee that receives Federal assistance. The program collects and analyzes these annual reports to identify trends and inform the broader assessment of national preparedness. Additionally, the program is responsible for measuring the effectiveness of FEMA’s non-disaster grant programs in building State and local preparedness by establishing measurable goals and objectives for grantees that align with the National Preparedness Goal and System. In FY 2016, the program will continue to refine data collection to report in more detail grantees’ resource requirements to meet their capability targets, funding applied to building and sustaining capabilities, and the involvement of whole community partners in planning to deliver and assess capabilities.

National Continuity Programs

Activity/Office	FY 2014 Revised Enacted	FY 2015 President’s Budget	FY 2016 Request	FY 2016 +/- FY 2015
Office of the Assistant Administrator	\$3,431	\$3,427	\$3,442	\$15
Continuity of Operations	\$5,683	\$5,689	\$5,611	(\$78)
Operations	\$17,892	\$16,701	\$16,693	(\$8)
Readiness	\$11,194	\$11,204	\$11,192	(\$12)
IPAWS	\$10,864	\$10,852	\$15,121	\$4,269
Total Budget	\$49,064	\$47,873	\$52,059	\$4,186
Positions	128	128	158	30

- Increase in S&B is due to the in-sourcing of contract staff to 30 permanent full time employees and realignment of \$4.2 million from non-pay to S&B funds
- Increase in non-pay of \$4.3 million is for improvements to the Integrated Public Alert Warning System (IPAWS) system’s availability and reliability necessary to achieve the program’s Key Performance Parameters (KPPs). See Exhibit IV.

FEMA’s National Continuity Programs (NCP) Directorate serves the public by preserving our Nation’s constitutional form of government across a wide range of potential threats and emergencies. NCP serves as the President’s lead agent for ensuring the first National Essential Function of the Executive Branch, thereby allowing for the continuance of our Nation’s constitutional government under all conditions.

NCP performs this mission by coordinating activities across all levels of government: Federal, State, territorial, local, tribal, and is comprised of the Office of the Assistant Administrator, Continuity of Operations (COOP) Division, Readiness Division (Contingency Programs), Operations Division (COG), IPAWS, and the Mount Weather Emergency Operations Center (MWEOC).

Office of the Assistant Administrator

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Office of the Assistant Administrator				
Non-Pay	\$954	\$954	\$947	(\$7)
Salaries and Benefits	\$2,477	\$2,473	\$2,495	\$22
<i>Sub Total Budget</i>	\$3,431	\$3,427	\$3,442	\$15
Positions	18	18	18	0

The NCP Office of the Assistant Administrator is responsible for the administrative support, strategic guidance, and operational oversight to the National Continuity Programs and its divisions. This includes providing executive support to the NCP leadership through budget and fiscal management, human resources management, procurement support, internal controls, and other support services to ensure NCP's mission success.

Continuity of Operations Division

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Continuity of Operations				
Non-Pay	\$871	\$871	\$749	(\$122)
Salaries and Benefits	\$4,812	\$4,818	\$4,862	\$44
<i>Sub Total Budget</i>	\$5,683	\$5,689	\$5,611	(\$78)
Positions	39	39	39	0

The COOP Division leads FEMA's effort to ensure comprehensive and consistent COOP preparedness across Federal, State, territorial, tribal, and local governments, including coordinating and integrating Federal Executive Branch efforts. These efforts develop and improve Continuity capabilities and maintain the ability of all Federal departments and agencies to perform the eight National Essential Functions through the performance of their individual Mission Essential Functions and Primary Mission Essential Functions.

Contingency Programs (Readiness Division)

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Readiness				
Non-Pay	\$7,778	\$7,778	\$7,734	(\$44)
Salaries and Benefits	\$3,416	\$3,426	\$3,458	\$32
<i>Sub Total Budget</i>	\$11,194	\$11,204	\$11,192	(\$12)
Positions	27	27	27	0

NCP's Readiness Division develops, maintains, and provides an array of continuity information technology systems and communications capabilities. These provide the Executive Office of the President, the National Security Council Staff, the DHS Secretary, the FEMA Administrator, and other senior Federal leaders with a robust capability that allows them to maintain situational awareness before, during, and after a continuity event. These resources span the full spectrum of the National Security / Emergency Preparedness (NS/EP) community.

The Readiness Division ensures critical national security systems are available and evolve as necessary to meet continuity mission requirements. The continuity communications architecture is maintained for all of FEMA to include Headquarters, Regional Offices, Federal Readiness Centers and Area Offices. This network is also extended to State Emergency Operations Centers. The responsibilities include program management of the operations, maintenance, life-cycle updates and enhancements of these assets to satisfy Agency strategic and operational goals and objectives.

Continuity of Government (Operations Division)

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Operations				
Non-Pay	\$14,717	\$13,533	\$9,296	(\$4,237)
Salaries and Benefits	\$3,175	\$3,168	\$7,397	\$4,229
<i>Sub Total Budget</i>	\$17,892	\$16,701	\$16,693	(\$8)
Positions	27	27	57	30

The mission of NCP Operations Division is to prepare, coordinate, and implement the continuity plans and programs of the Federal Government. The Operations Division develops policy documents and authoritative directives related to the continuity mission.

The Continuity Readiness Center (CRC) is led by the Operations Division and focuses on continuity-related mission areas. The CRC provides continuity-related situational awareness, coordinates with Federal Executive Branch (FEB) D/As and analyzes and reports the impact of events on the eight National Essential Functions (NEFs). The CRC provides continuity situational awareness which includes forecasting, gaps, impacts, and proposed remediation.

Integrated Public Alert & Warning System (IPAWS) Program Management Office

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
IPAWS				
Non-Pay	\$8,524	\$8,524	\$12,772	\$4,248
Salaries and Benefits	\$2,340	\$2,328	\$2,349	\$21
<i>Sub Total Budget</i>	\$10,864	\$10,852	\$15,121	\$4,269
Positions	17	17	17	0

Executive Order (EO) 13407 established a policy requiring the United States to have an effective, reliable, integrated, flexible, and comprehensive system to alert and warn the American people. The Department of Homeland Security designated FEMA as the lead to implement the Executive Order. NCP established a program office to implement IPAWS. The IPAWS program is tasked with:

- Building and maintaining an effective, reliable, integrated, flexible, and comprehensive alert and warning system for the Nation
- Enabling Federal, State, territorial, tribal, and local alert and warning authorities to use the national system
- Sending emergency alerts via multiple communications pathways to inform their citizens about threats to their safety and well-being
- Conducting training, tests, and exercises for public alert and warning systems
- Educating the public on the functions of public alert and warning systems and how to access, use, and respond to emergency alerts
- Ensuring that alerts and warnings are accessible to those with disabilities and those without an understanding of the English language
- Diversifying and modernizing the Emergency Alert System (EAS)
- Ensuring that under all conditions, the President of the United States can alert and warn the American people

The IPAWS Program has two primary system components: National EAS and Primary Entry Point (PEP) systems which support alerts and warnings from the President; and the IPAWS-OPEN system, which provides alert message exchange from Federal, State, territorial, tribal, and local alert and warning authorities to multiple communications networks. The PEP system is a network of FEMA connected private sector radio stations. FEMA maintains communications equipment, power generation systems, electromagnetic pulse protection, and other back up equipment at each PEP station to enable broadcasting of a Presidential emergency alert to the public throughout all-hazards events. Starting from 34 legacy stations in 2009, the IPAWS program expanded the PEP network to 77 stations providing direct broadcast coverage to more than 90 percent of the United States population.

Mount Weather Emergency Operations Center (MWEOC)

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Mount Weather				
Mount Weather	\$29,000	\$33,862	\$27,500	(\$6,362)

MWEOC provides the infrastructure necessary to support COOP, incident management, classified programs, and other all-hazards activities for several executive branch agencies, including FEMA. Also, MWEOC supports a variety of disaster response and continuity missions and is a hub for emergency response activities.

In accordance with its Capital Improvement, MWEOC is in the middle of a significant infrastructure upgrade to replace old infrastructure, correct life/safety items, upgrade IT and develop a more resilient facility capable of supporting 21st century technology and current Federal departments and agencies requirements. Funds requested fully support activities planned for FY2016 in Mount Weather's capital investment plan.

Cyber Security

FEMA requests \$168.466 million, 775 positions, and 775 FTE in the Response PPA. This includes the following adjustment-to-base:

- Increase of \$0.643 million for 2016 pay increase
- Increase of \$0.172 million for annualization of 2015 pay raise
- Transfer of \$1.040 million for Cyber Security to Mission Support PPA
- Increase of seven positions and FTE (\$0.941 million) for the geospatial initiative (two positions and full time equivalents to ORR Front Office, five to Response Directorate)
- Transfer of \$1.026 million to the Mission Support PPA in increase organizational support (Response Directorate).
- Increase of one position and FTE through grade restructuring (Response Directorate).

Additional increase adjustments to base for transfers of programs from DHS to FEMA:

- \$0.9 million for Very Small Aperture Terminal (VSAT) (Response Directorate)
- \$0.5 million for Interagency Modeling and Atmospheric Center (IMAC) (Response Directorate).

CURRENT SERVICES PROGRAM DESCRIPTION:

The Office of Response and Recovery provides leadership to build, sustain, and improve the coordination and delivery of support to citizens and State, local, tribal and territorial governments to save lives, reduce suffering, protect property and recover from all hazards.

Office of Associate Administrator for Response and Recovery

- Transfer of VSAT and IMAC programs from OAARR to Response Directorate \$1.31 million

The Office of the Associate Administrator for Response and Recovery (OAARR) provides executive direction and support to the three major Directorates that report to it directly: the Response Directorate, Logistics Management Directorate, and the Recovery Directorate. This support includes long range strategic planning, communication and coordination of ORR policies, evaluating, assessing and reporting on the readiness of operational elements, conducting operational analyses on disaster response and recovery missions, managing continuous improvement processes, coordination of ORR innovation efforts, and providing enhanced geospatial information system (GIS) analytical capabilities. The OAARR also oversees the Declarations processes to ensure all gubernatorial requests to the President for emergency declarations and major disasters meet regulatory requirements and proceed as expeditiously as possible, and oversees other related actions under the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. §§ 5121-5208, including appeals, cost-share adjustments, and requests to reopen an incident period or expand the incident type.

Response Directorate

- \$0.9 million for Very Small Aperture Terminal (VSAT)
- \$0.5 million for Interagency Modeling and Atmospheric Center (IMAC)
- Reduction of \$1.026 million transferred to the Mission Support PPA to increase organizational support
- Increase of one position and FTE through grade restructuring
- Increase of five positions and full time equivalents for the geospatial initiative

The FEMA Response Directorate provides the leadership, organization, and operational resources necessary to deliver core Federal disaster response operational capabilities needed to save lives, minimize suffering, and protect property in a timely and effective manner in communities overwhelmed by acts of terrorism, natural

disaster, or other emergencies. The Response Directorate ensures the core, coordinated Federal operational response capability and program activities of all Federal emergency management response operations, response planning, and integration of Federal, State, local, and tribal disaster programs. This coordination ensures efficient and effective delivery of immediate emergency assistance to individuals and impacted communities.

A. Incident Workforce Management Division (IWMD)

IWMD deploys and supports a professional disaster workforce ready for the National, all-hazard response needs of FEMA headquarters and regional leadership. IWMD also assists in the deployment of responders from FEMA's full-time workforce and the DHS-supported surge capacity force.

B. Operations Division

The Operations Division is responsible for the management and coordination of the core Federal disaster response teams, resources, and programs needed to support the regions; interagency partners; and State, tribal, and local governments; voluntary agencies; and disaster survivors impacted by a major disaster or emergency.

C. Planning Division

The Planning Division leads the development of deliberate plans across the Federal Government for catastrophic incidents. The Division coordinates, and is responsible for, deliberate, adaptive interagency analysis and plans for potential/actual incidents while directing regional planning efforts for all-hazard events.

D. Disaster Emergency Communications (DEC) Division

The DEC Division leads FEMA's integrated Federal communications support to emergency managers at all levels of government. The Division develops, maintains, and employs FEMA's capability to provide integrated tactical voice, data, and video communications systems and services. This occurs before, during, and immediately after an incident to meet emergency manager and whole community requirements.

In FY 2016, the DHS Office of Operations Coordination and Planning's Very Small Aperture Terminal Satellite Network (VSAT) will transfer to the DEC Division. FEMA will lead the Contingency Communications Systems effort in order to provide non-Public Switched Telephone Network communications solutions to federal response teams for collection, storage, production, display, and dissemination of coordination and response information. This includes operational communications capabilities, terrestrial termination and connectivity into DHS OneNet, shared satellite bandwidth, and deployable communications systems for support to federal departments and agencies engaged in the delivery of incident support. As a Federal asset, DEC also supports National Special Security Events, and Special Event Assessment Rating events.

E. Program Management

The success of IWMD, Operations, Planning, and DEC requires strong executive oversight and business management. The Office of the Assistant Administrator (OAA) provides leadership necessary to integrate the Nation's emergency response teams, systems, and capabilities; coordinates all Federal emergency management disaster operational planning and programs; and executes the response mission through its three major

program areas: operations, planning, and disaster emergency communications. The Business Management Division (BMD) provides the major support requirements of the Directorate. The Division determines the Response Directorate's mission needs and provides support for day-to-day operations of the Directorate.

Logistics Program

The mission of the Logistics Management Directorate (LMD) is to effectively plan, manage, and sustain national logistics response and recovery operations, in support of domestic emergencies and special events. As the whole-community Logistics Coordinator, LMD establishes national procedures, fosters transparency through collaboration and coordination, and focuses on technology enhancements to expand Region & State level logistics capabilities.

Positions	393	393	378	(15)

- Transfer of \$3.919 million and 18 positions/FTE for recovery planning programs from Recovery PPA to the Administrative and Regional Offices PPA Office of Federal Disaster Coordination.

This request will align resources in conjunction of FEMA’s strategic goal of “Be Survivor-Centric in Mission and Program Delivery”. FEMA will be better prepared, engaged and provide support to local leaders and tribal officials to help focus on survivor and community needs and capabilities to strengthen planning for future management of disasters.

The Recovery Directorate provides program oversight for disaster assistance averaging more than \$8.0 billion annually. The Recovery Directorate oversees Federal disaster assistance programs; manages resources for readiness and recovery capability development; develops recovery strategies, policies, and doctrine for delivering assistance; plans for catastrophic events and continuity of operations; delivers grants and assistance for community and individual recovery; and develops and coordinates partnerships.

Individual Assistance Division

The IA Division ensures that disaster survivors have timely access to a full range of programs and services to maximize their recovery, through coordination among Federal, State, Tribal, and local governments; voluntary agencies; and the private sector. IA programs and functions are executed under Sections 403, 408, 410, 415, 416, 425, and 426 of the Stafford Act and funded by the DRF. The S&E appropriation funds all IA full-time permanent employees and operating expenses for the consistent implementation and management of IA programs including: development and maintenance of policies and doctrine; planning; training development and delivery; technology sustainment; outreach to improve integration and coordination among Federal, State, Tribal, and local governments, voluntary agencies, and the private sector; and National Processing Service Centers (NPSCs). NPSCs are a key component of the Agency’s ability to support survivors’ resilience to disaster through recovery programs. NPSCs are FEMA’s full-service disaster assistance processing and solution centers, and they are responsible for: registering individuals for assistance via phone and internet; verifying home and personal property losses through onsite inspections; processing applicant registrations to determine and communicate assistance eligibility; and responding to applicant questions by phone and mail throughout the disaster assistance process. Funding from the S&E appropriation supports full-time positions in NPSCs as well as other activities, such as technology requirements needed to maintain call centers, equipment, and training.

Public Assistance (PA) Division

PA Division programs provide assistance to State, Tribal, and local governments and nonprofit organizations to alleviate suffering and hardship resulting from major disasters or emergencies declared by the President. The S&E appropriation funds PA's full-time permanent employees and operating expenses for the implementation and management of PA programs. This includes the development and maintenance of policies and doctrine, planning, training development and delivery, technology sustainment, and outreach to improve integration and coordination.

Recovery Program Management

In order to effectively and efficiently deliver IA and PA services, the Recovery Directorate requires robust program management capabilities. The Recovery Analytics and Budget Division serves as the primary resource pool for business intelligence and analytics, as well as Directorate-wide financial management and budget formulation and execution. Recovery's Technology Division enables mission capabilities for Recovery and its partners through Information Technology (IT) advocacy, stewardship, governance, process improvement, and innovative technologies. The Division develops paths to modernization and virtualized hosting for all Recovery IT capabilities and creates standard program, product, and project management processes for technology programs. The Recovery Employee Support Division coordinates across the Recovery Directorate to recruit, develop, retain, equip and sustain Recovery staff in partnership with managers, employees and stakeholders. Activities focus on building and strengthening the workforce; supporting the workplace; and delivering timely and reliable services that enable the successful execution of Recovery programs. Finally, the Office of the Assistant Administrator provides strategic leadership and direction to support and strengthen Recovery Directorate programs and activities through program analysis and evaluation; policy coordination and analysis; performance measurement and management; development of doctrinal guidance; information management, analysis, and reporting; and internal and external partner coordination and integration. The Recovery Operations and Readiness Coordination Section provides management and leadership to execute the Disaster Survivor Initiative. Additionally, the Office of the Assistant Administrator supports the implementation of direct tribal declarations, authorized by the Sandy Recovery Improvement Act.

Mitigation

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Mitigation				
Dam Safety	\$9,100	\$8,051	\$7,406	(\$645)
National Earthquake Hazard Reduction Program (NEHRP)	\$8,500	\$7,506	\$7,515	\$9
Building Science	\$1,048	\$1,054	\$1,059	\$5
Hazard Mitigation Grant Program (HMGP)	\$1,160	\$1,160	\$1,160	\$0
Environmental & Historic Preservation	\$1,952	\$1,957	\$1,966	\$9
Disaster Management Support	\$1,354	\$1,359	\$1,367	\$8
Business Management Division (BMD)	\$4,287	\$4,095	\$4,132	\$37
Cyber security	\$375	\$600	\$0	(\$600)
Resilience Star	\$0	\$0	\$1,148	\$1,148
Total Budget	\$27,776	\$25,782	\$25,753	(\$29)
Positions	62	62	67	5

FEMA requests \$25.753 million, 67 positions, and 67 FTE in the Mitigation PPA. This includes the following adjustment-to-base:

- \$0.059 million for 2016 pay increase

- \$0.015 million for annualization of 2015 pay raise
- Transfer of \$0.6 million for Cyber Security to Mission Support PPA
- Decrease of \$0.650 million for Dam Safety Assistance Grants

Additional increase adjustments to base for transfer of Resilience STAR Initiative from DHS to FEMA of five positions, five FTEs and \$1.148 million.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Federal Insurance and Mitigation Administration (FIMA) creates safer communities by reducing risk of loss of life and property and preventing implementing measures to minimize potential disaster losses. This is accomplished through three core competencies and two support activities: analyzing risk through identification and assessment; reducing risk through land use, building codes, and the Hazard Mitigation Grant Program; spreading risk of flood loss through the National Flood Insurance Program; environmental planning and historic preservation; and the regional and disaster support activity.

These core competencies and support activity work jointly to reduce the likelihood of future losses, to enable individuals to recover more rapidly from floods and other disasters, and to minimize the financial impact of disasters on the U.S. Treasury, States, Tribal and local communities.

National Dam Safety Program (NDSP)

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Dam Safety				
Non-Pay	\$8,608	\$7,556	\$6,906	(\$650)
Salaries and Benefits	\$492	\$495	\$500	\$5
<i>Sub Total Budget</i>	\$9,100	\$8,051	\$7,406	(\$645)
Positions	3	3	3	0

FY 2016 reduction to the National Dam Safety Program will be applied to Dam State-assistance grants. The proposed reduction from FY 2015 funding levels will be absorbed through efficiencies and deferred updates to training materials. However, there may be minimal impacts to the Dam Safety State Assistance Grants.

As a critical element of the Nation's infrastructure, dams bring water, power, flood control, recreational opportunities, economic possibilities, and many other advantages. The number of high-hazard potential dams (dams whose failure would cause loss of human life) increased from 9,281 in 1998 to 14,726 in 2013. Since 1999, the recorded number of high-hazard potential deficient dams (those with structural or hydraulic deficiencies, leaving them susceptible to failure) has risen by more than 200 percent. While a majority of the federally-owned dams are in good condition, and there have been modest gains in repair, the number of state dams identified as deficient is increasing at a faster rate than those being repaired. FEMA assists States and communities in recognizing their risk and helps them develop mitigation plans. FEMA coordinates efforts through collaborative partnerships

between States, Federal agencies, and private sector and other stakeholders to secure the safety of these dams through research, training, and public awareness. The NDSP provides financial assistance to States' dam safety activities including:

- Inspecting and monitoring dams
- Training safety staff and inspectors
- Providing analysis and research to support the improvement of State Dam Safety Programs
- Preparing Emergency Action Plans
- Creating public and emergency manager awareness campaigns on dam safety

National Earthquake Hazards Reduction Program (NEHRP)

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
National Earthquake Hazard Reduction Program (NEHRP)				
Non-Pay	\$7,451	\$6,452	\$6,452	\$0
Salaries and Benefits	\$1,049	\$1,054	\$1,063	\$9
<i>Sub Total Budget</i>	\$8,500	\$7,506	\$7,515	\$9
Positions	8	8	8	0

Congress established NEHRP in 1977 and authorized agencies to conduct research on the causes and effects of earthquakes, produce technical guidance to develop earthquake-resistant design and construction standards, and developed techniques to educate the public about earthquake hazards and mitigation. NEHRP's ongoing efforts to support the creation and maintenance of disaster-resistant building codes and standards are a major focus and are important in reducing the losses from major U.S. earthquakes.

Each year, approximately 3,000 to 4,000 earthquakes strike our Nation. FEMA, along with partners from the U.S. Geological Survey, the National Institutes of Standards and Technology and the National Science Foundation, help communities identify earthquake risk and develop plans for reducing those risks. Specifically, NEHRP manages initiatives that reduce the risk to life and property from earthquakes, including the following:

- Translating research into technical guidance publications and best practices on seismic safety, building design and construction, building codes and standards, and reducing economic losses
- Working with States, territories, regional partners and local governments in building capabilities for determining potential damage and reducing the effects of earthquakes before they occur
- Working with national codes and standards organizations to develop and improve seismic building standards
- Providing technical assistance and support to public and private stakeholders

Building Science Program

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Building Science				
Non-Pay	\$476	\$476	\$476	\$0
Salaries and Benefits	\$572	\$578	\$583	\$5
<i>Sub Total Budget</i>	\$1,048	\$1,054	\$1,059	\$5
Positions	5	5	5	0

Building Science Program develops mitigation guidance that focuses on creating disaster-resilient communities. The program's mitigation activities include:

- Acting as a Technical Services Bureau for FEMA for the development and maintenance of over 100 technical manuals regarding evaluation, design, and construction standards for multiple hazards, which are used by builders and building owners, designers, and local officials.
- Assessing structural resiliency in post-disaster environments through immediate deployment of mitigation assessment teams following disasters
- Developing timely publications, guidance materials, tools, technical bulletins, and recovery advisories that incorporate the most up-to-date building codes, flood proofing requirements, and wind-resistant requirements for new construction or repairing existing buildings
- Supporting the development and adoption of disaster-resistant model building codes and standards.
- Providing building science technical support to public and private sector stakeholders.

Hazard Mitigation Grant Program (HMGP)

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Hazard Mitigation Grant Program (HMGP)				
Non-Pay	\$1,160	\$1,160	\$1,160	\$0
Salaries and Benefits	\$0	\$0	\$0	\$0
<i>Sub Total Budget</i>	\$1,160	\$1,160	\$1,160	\$0
Positions	0	0	0	0

HMGP is authorized by Section 404 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act, as amended (the Stafford Act), Title 42, U.S. Code (U.S.C.) 5170c. The key purpose of HMGP is to ensure that the opportunity to take critical mitigation measures to reduce the risk of loss of life and property from future disasters is not lost during the reconstruction process following a disaster. HMGP is available, when authorized under a Presidential major disaster declaration, in the areas of the State requested by the Governor. Indian Tribal governments may also submit a request for a major disaster declaration within their impacted area. The amount of HMGP funding available to the Applicant is based

upon the estimated total of Federal assistance, subject to the sliding scale formula outlined in 44 CFR Section 206.432(b), that FEMA provides for disaster recovery under the Presidential major disaster declaration.

Applications for HMGP are processed through the National Emergency Management Information System (NEMIS) Mitigation module (NEMIS-MT). The Risk Reduction Division will continue to maintain and enhance the NEMIS-MT system by:

- Repairing user created and system generated errors
- Operating & maintaining the legacy HMGP-NEMIS system
- Maintaining DHS-mandated IT security requirements on an ongoing basis
- Providing helpdesk support to state and FEMA program users

Environmental Planning and Historic Preservation

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Environmental & Historic Preservation				
Non-Pay	\$983	\$983	\$983	\$0
Salaries and Benefits	\$969	\$974	\$983	\$9
<i>Sub Total Budget</i>	\$1,952	\$1,957	\$1,966	\$9
Positions	8	8	8	0

The Environmental Planning and Historic Preservation (EHP) program manages FEMA’s responsibilities to be stewards of the natural and cultural environment and related compliance with all environmental planning and historic preservation laws, executive orders, and regulations across all FEMA programs. EHP’s mission is to help communities reduce the impact that disasters and emergency management decisions and operations have on the Nation’s natural and cultural resources. The program:

- Helps build a unity of effort across the emergency management team as it relates to EHP issues and requirements
- Acts as the functional authority on EHP activities.
- Oversees the development of all EHP regulations, policy, systems, human capital, outreach, and performance management

The program works closely with FEMA Directorates and Program Offices to provide technical assistance and support in integrating these stewardship responsibilities into program decision-making and policy implementation. EHP also shows offices how to use the process to further the whole community objectives of stakeholder engagement and collaboration as part of the decision-making process.

Regional and Disaster Support Branch

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Disaster Management Support				
Non-Pay	\$429	\$429	\$429	\$0
Salaries and Benefits	\$925	\$930	\$938	\$8
<i>Sub Total Budget</i>	\$1,354	\$1,359	\$1,367	\$8
Positions	7	7	7	0

Regional and Disaster Support (R&DS) Branch works to define and manage FIMA's role in FEMA's response and recovery operations as well as to ensure regional integration into National programmatic issues. This responsibility requires the R&DS to design consensus-based solutions to prepare the disaster workforce to consistently deliver program and technical assistance to affected local governments and disaster applicants, along with facilitating Regional input regarding crosscutting initiatives. The main goals of Regional and Disaster Support are:

- Translate HQ programs and initiatives into tools and resources to equip and enable the Hazard Mitigation Disaster Workforce to consistently deliver hazard mitigation and flood insurance in the disaster setting and to further the efforts of the FIMA programs.
- Engage a National network of Regional Managers to effectively integrate FIMA's performance in disaster operations.
- Coordinate FIMA disaster operations, National disaster policy analysis, and crosscutting program and administrative issues in support of the Regions and the Disaster Field organization.

FIMA Program Management

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Business Management Support (BMD)				
Non-Pay	\$306	\$123	\$123	\$0
Salaries and Benefits	\$3,981	\$3,972	\$4,009	\$37
<i>Sub Total Budget</i>	\$4,287	\$4,095	\$4,132	\$37
Positions	31	31	31	0

FIMA's mission support activities include management and oversight of Agency programs, business operations support, stakeholder engagement and outreach support, business process management and improvement activities, and information systems support activities.

Cyber security

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Cyber security	\$375	\$600	\$0	(\$600)

- Funding is transferred to the Mission Support PPA

Resilience STAR Initiative

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Resilience Star				
Non-Pay	\$0	\$0	\$510	\$510
Salaries and Benefits	\$0	\$0	\$638	\$638
<i>Sub Total Budget</i>	\$0	\$0	\$1,148	\$1,148
Positions	0	0	5	5

As one of many DHS-wide initiatives that assist with the Department's resilience mission, The Resilience Star Initiative will help communities to build a resilient Nation through the adoption of resilience standards and practices. Resilience STAR is a public-private partnership that seeks to encourage resilient design by assessing and conferring a standardized and objective measure of resilience on homes, buildings and infrastructure through a Resilience STAR designation scheme. Resilience STAR was initiated by the DHS Office of Resilience Policy as a pilot project for private residences in communities in coastal Alabama. It was transferred to FEMA's Mitigation Policy team to assess the feasibility of expanding the program to include designations at a community level.

Positions	756	748	772	24

FEMA requests \$168.437 million, 772 positions, and 772 FTE in the Mission Support PPA. This includes the following adjustments to base:

- Increase of \$0.699 million for 2016 pay increase
- Increase of \$0.186 million for annualization of 2015 pay raise
- Transfer from other PPAs of \$6.947 million for cyber security
- Increase of \$6.3 million for moving costs and new lease in FEMA Region IV
- Increase of \$5.917 million for continuing IT resilience review and cyber security efforts
- Increase of 26 positions/FTE and \$3.933 million for enhanced mission support staffing
- Increase of \$1.5 million for the leadership development program
- Reduction of one position/FTE and \$0.124 million for training and support functions

- Transfer of one position/FTE and \$0.165 million from the Office of Chief Procurement Officer to the Office of the Chief Financial Officer ARO PPA

CURRENT SERVICES PROGRAM DESCRIPTION:

Mission Support (MS) enables the Agency’s mission by providing strategic leadership to, and assuring the timely, efficient, and effective delivery of, information technology, human capital management, acquisition management, security, and administration, which includes facilities management, records and privacy management, and occupational safety and health.

MAJOR ACQUISITIONS:

IT Infrastructure

This investment supports implementing IT solutions across FEMA groups, and managing, directing, and supporting the daily operations and maintenance of the FEMA telecommunications and computing network.

The FEMA - Infrastructure investment fills a capability gap by supporting all FEMA automated systems including internet, desktop, voice, wireless, satellite, identity verification, site services, network, helpdesk, and the FEMA Virtual Data Centers (VDCs). FEMA’s IT Infrastructure investment ensures the communication, coordination, and integration that enables America to prepare for, prevent against, respond to, and recover from disasters that happen in today’s mobile, broad-based and technology-driven environment. FEMA’s IT Infrastructure accomplishes this through the inclusion of enhanced/emerging technologies, as well as the acquisition, integration, operations and maintenance of FEMA’s wide-area, local-area, and wireless networks; voice and video communications systems; helpdesk, desktop and site support. Our customers and stakeholders consists of an expansive team that includes Federal partners, State, local, and tribal communities, the private sector, non-profits, and faith-based groups and the general public.

FUNDING BREAKOUT (in millions of dollars)

IT Infrastructure Project*	PY	CY	BY	BY	BY	BY	Future
YEAR	2014	2015	2016	2017	2018	2019	2020
IT Infrastructure Budget Resources							
Planning	0.000	0.000	0.000	0.000	0.000	0.000	0.000
Acquisition	3.018	3.023	3.023	3.023	3.023	3.023	3.023
Maintenance	162.911	140.044	136.456	144.243	145.176	151.095	149.819
TOTAL	165.929	143.067	139.479	147.266	148.199	154.118	152.842

*IT Infrastructure includes funding from multiple FEMA appropriations

The functional responsibilities of each MS Office are detailed below.

The Mission Support Executive Office of the Associate Administrator (EO)

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Associate Administrator				
Non-Pay	\$1,660	\$508	\$283	(\$225)
Salaries and Benefits	\$5,238	\$5,253	\$5,547	\$294
<i>Sub Total Budget</i>	\$6,898	\$5,761	\$5,830	\$69
Positions	42	42	42	0

An increase to salaries and benefits is offset by across-the-board reductions in the travel, training, supplies, equipment object classes as well as the 2016 proposed pay increase.

The EO provides primary strategic oversight for integrating activities and seeking efficiencies among the five MS component offices. EO responsibilities include: leading activities to ensure information technology, human capital, acquisition, security, and administrative needs are met throughout FEMA; driving integration across MS through the Programming, Planning, Budgeting, and Execution (PPBE) process; and leading the effort toward business excellence across the Agency.

The Office of the Chief Administrative Officer (OCAO)

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Office of the Chief Administrative Officer				
Non-Pay	\$19,440	\$18,493	\$24,791	\$6,298
Salaries and Benefits	\$12,188	\$10,279	\$12,193	\$1,914
<i>Sub Total Budget</i>	\$31,628	\$28,772	\$36,984	\$8,212
Positions	102	102	104	2

The OCAO non-pay increase of \$6.3 million supports an \$8.6 million initiative to move and enter into a new lease for FEMA's Region IV office (Atlanta, GA, \$8.4 million) and consolidate the facilities footprint to maximize space utilization in the National Capital Region (\$0.200 million). This increase supports the execution of FEMA's Five-Year Real Property Plan which will result in reducing rent costs in the out years, and supports FEMA's Strategic Goal 5.3, Strengthening the Organizational Foundation.

The \$1.914 million salaries and benefits increase is a sustainment realignment for on board personnel, an increase of two OCAO positions and the increase in pay raise.

The OCAO provides critical administrative services including facilities, records and privacy management, occupational safety, health and environmental programs, and other support services to enable FEMA's mission success.

The Office of the Chief Component Human Capital Officer (OCCHCO)

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Office of the Chief Component Human Capital Officer				
Non-Pay	\$7,249	\$5,749	\$7,095	\$1,346
Salaries and Benefits	\$16,362	\$16,117	\$17,866	\$1,749
<i>Sub Total Budget</i>	\$23,611	\$21,866	\$24,961	\$3,095
Positions	121	113	124	11

Both the OCCHCO non-pay program increase of \$1.5 million for leadership development and a \$0.154 million reduction to human capital contract services, and the additional \$1.7 million for salaries and benefits to fund additional staffing positions, are requested to increase staffing operations capability and directly support FEMA’s Strategic Goal 5.3, Strengthening the Organizational Foundation and Mission Support’s Workforce Management Initiative. These enhancements will allow FEMA to eliminate the agency’s current HR action backlog by XX date.

OCCHCO provides leadership and strategic management of human capital strategies, policies, programs, and initiatives in a manner that promotes and supports a common understanding of and commitment to the mission, strategic goals, and core values of FEMA, DHS, and the American public.

The Office of the Chief Information Officer (OCIO)

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Office of the Chief Information Officer				
Non-Pay	\$23,931	\$19,296	\$34,006	\$14,710
Salaries and Benefits	\$33,045	\$34,267	\$33,367	(\$900)
<i>Sub Total Budget</i>	\$56,976	\$53,563	\$67,373	\$13,810
Positions	244	244	243	(1)

The OCIO increase includes \$12.864 million for cyber security activities, including \$6.947 million transferred from other PPAs, \$5.0 million for the IT resiliency review of FEMA’s systems, and \$0.917 million for support cyber-security personnel reforms being managed across the DHS. These investments support the ongoing security review and annual certification of FEMA’s complete headquarters and regional IT systems inventory, as well as the remediation activities associated with that review. FEMA anticipates that effort will identify further efficiencies and savings that will be used to offset the cost of future IT operations, maintenance, and enhancements. An additional increase of \$1.1 million provides funding to support added costs associated with the maintenance and enhancement for the Geospatial Information System (GIS) program capabilities.

OCIO supports FEMA’s mission by maintaining and enhancing mission critical technologies and telecommunications to support both fixed locations and staff, as well as enabling a critically mobile workforce that can include up to 25,000 personnel supporting our citizens and first responders in the disaster environment.

The Office of the Chief Procurement Officer (OCPO)

Activity/Office	FY 2014 Revised Enacted	FY 2015 President’s Budget	FY 2016 Request	FY 2016 +/- FY 2015
Office of the Chief Procurement Officer				
Non-Pay	\$1,172	\$1,172	\$1,172	\$0
Salaries and Benefits	\$20,582	\$20,687	\$21,617	\$930
<i>Sub Total Budget</i>	\$21,754	\$21,859	\$22,789	\$930
Positions	164	164	173	9

The OCPO salaries and benefits increase provides for nine additional staff to implement a top MS operating priority to Improve the Quality of Acquisitions and Procurement FEMA-wide, to address customer concerns and in response to GAO and DHS reports. This increase also supports FEMA's Strategic Goal 5.3, Strengthening the Organizational Foundation.

95% of OCPO’s budget consists of salaries and benefits. Federal employees are responsible for providing the full range of acquisition services and business solutions to all FEMA programs, partners, and stakeholders, in support of both steady state and disaster activities and operations.

The Office of the Chief Security Officer (OCSO)

Activity/Office	FY 2014 Revised Enacted	FY 2015 President’s Budget	FY 2016 Request	FY 2016 +/- FY 2015
Office of the Chief Security Officer				
Non-Pay	\$1,196	\$1,197	\$1,197	\$0
Salaries and Benefits	\$8,746	\$8,791	\$9,303	\$512
<i>Sub Total Budget</i>	\$9,942	\$9,988	\$10,500	\$512
Positions	83	83	86	3

89% of the OCSO budget consists of salaries and benefits. An increase of \$0.499 million funds three additional staff to provide comprehensive and value-based security services, programs, and activities designed to protect FEMA’s personnel, facilities, information, equipment, and to mitigate the risk of loss to the Government due to fraudulent activity.

CURRENT SERVICES PROGRAM DESCRIPTION:

Centrally managed accounts fund critical bills that must be managed at the enterprise level to ensure efficient and effective cost management which includes streamlining cost factors and prompt payment. Centrally managed accounts include:

- DHS Working Capital Fund (WCF)
- Mount Weather WCF contributions
- Rent
- Printing
- Postage
- Mail Operations (DHS Mail Facility Ops)
- Transit Subsidy Benefits

- Federal Protective Service (FPS) Guard Services
- Building Specific Security
- Office of Personnel Management (OPM) Investigations
- Wireless and Wire line Communications
- IT Project Management
- Long Haul (data) Circuits

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Office of the Chief Administrative Officer				
Non-Pay	\$34,974	\$29,825	\$28,736	(\$1,089)
Benefits- Transit Subsidy	\$3,627	\$4,093	\$3,350	(\$743)
<i>Sub Total Budget</i>	\$38,601	\$33,918	\$32,086	(\$1,832)
Positions	0	0	0	0

A reduction of \$1.089 million is related to rent savings achieved by consolidating offices space and minimizing FEMA's footprint through the Workplace Transformation initiative.

A reduction of \$0.743 million is associated with the decrease in ridership and maximum allowed reimbursement in the Transit Subsidy program.

OCAO uses the centrally managed account to fund "must pay" bills associated with rent at headquarters and the regions, postage, mail support costs, printing, and transit subsidy costs for staff.

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Office of the Chief Financial Officer				
Non-Pay	\$36,327	\$34,665	\$34,905	\$240
Salaries and Benefits	\$0	\$0	\$0	\$0
<i>Sub Total Budget</i>	\$36,327	\$34,665	\$34,905	\$240
Positions	0	0	0	0

An increase of \$0.240 million is associated with the DHS Working Capital Fund activity, enterprise license agreements.

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Office of the Chief Information Officer				
Non-Pay	\$17,663	\$17,633	\$17,663	\$0
Salaries and Benefits	\$0	\$0	\$0	\$0
<i>Sub Total Budget</i>	\$17,663	\$17,663	\$17,663	\$0
Positions	0	0	0	0

The OCIO centrally managed funding supports mobility for the FEMA workforce and delivers IT services including wireless, wireline, project management office, and satellite and long haul circuits.

Activity/Office	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Office of the Chief Security Officer				
Non-Pay	\$18,528	\$17,203	\$16,263	(\$940)
Salaries and Benefits	\$0	\$0	\$0	\$0
<i>Sub Total Budget</i>	\$18,528	\$17,203	\$16,263	(\$940)
Positions	0	0	0	0

The OCSO funding decrease of \$0.940 million is due to the reduction in guard services posts that were eliminated and replaced with technology at identified facilities. OCSO uses the centrally managed budget for building specific guard services, background investigations, and contract services for the maintenance of security equipment.

IV. Program Justification Changes

**Department of Homeland Security
Federal Emergency Management Agency
Salaries and Expenses
Justification of Program Changes
(Dollars in Thousands)**

Program Increase 1: Integrated Public Alert Warning System (IPAWS)
PPA: Protection and National Preparedness
Program Increase: Positions 0, FTE 0, Dollars \$4,300

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							17	17	10,821
Program Increase							-	-	4,300
Total Request	17	17	10,864	17	17	10,852	17	17	15,121

Description of Item

The Integrated Public Alert and Warning System (IPAWS) is an incremental effort, building an enhanced system with standards and protocols integrating existing emergency alert systems, modernizing the Emergency Alert System (EAS) and creating new capabilities to leverage new technologies for public safety alert and warning.

Justification

The Program will apply \$1.5M of this funding towards improving Primary Entry Point (PEP) station reliability. The PEP stations are the primary mechanism for disseminating a Presidential message and serves as a highly resilient communications resource for State and local governments. Specifically, the program intends to modernize PEP station WLS in Chicago, IL with High-Altitude Electromagnetic Pulse protection, resilient communications, fuel management and spill containment countermeasures. WLS provides coverage to approximately 16M citizens and is currently at risk of failure/severely degraded operations due to a lack of resilient communications, a 21 year old fuel system and 37 year old backup generator. These systemic upgrades will add resilient communications, mitigate the risk of fuel spills, and reduce the associated remediation costs which have cost FEMA in excess of \$4 million.

The program will apply \$2.8M of this funding towards improving IPAWS-OPEN reliability by seeking alternative commercial cloud hosting solutions to achieve 99.9% availability. IPAWS-OPEN requires that sufficient numbers of deployed hardware, software and network components, provided in a geographically diverse and redundant manner, are in place to ensure high reliability. Commercial hosting solutions provide an environment capable of meeting the programs KPP of 99.9% availability, while also increasing system resilience to enable reliable delivery of alerts and warnings to the American public. This redundancy will ensure effective, enduring communications across a host of potentially challenging circumstances.

Impact on Performance (Relationship of Increase to Strategic Goals)

PEP Station modernizations ensure the reliability for a Presidential warning to reach and communicate with over 90% of the US population under all operating environments. Fuel system and spill containment improvements reduce Agency risks to costly environmental remediation and protect the public trust in FEMA. Improving IPAWS-OPEN availability and reliability will ensure integrated services and capabilities are available to Federal, State, territorial, tribal, and local authorities that enable them to alert and warn their respective communities via multiple communications methods. All actions directly support FEMA’s Fiscal Year 2014-2018 Strategic Priority 1: Be Survivor Centric in Mission and Program Delivery; Objective (1.3): Increase disaster awareness and action by improving communication; and Strategy (1.3.2): Work with whole community partners (including survivors) and communications experts to develop, refine, and disseminate accessible and actionable messages directed toward survivors before, during and after disasters.

Program Increase 2: Grants System Modernization
 PPA: Protection and National Preparedness
 Program Increase: Positions 0, FTE 0, Dollars \$10,000

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President’s Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							10	10	11,100
Program Increase							-	-	10,000
Total Request	10	10	10,600	10	10	10,600	10	10	21,100

Description of Item

FEMA requests \$10.0 million for the Grants System Modernization within S&E. An additional \$1.9 million is requested in the Disaster Relief Fund appropriation.

FEMA’s grants system modernization effort will transform the agency’s current suite of aging, stove-piped, non-interoperable and technologically obsolete grants management systems into a modern, integrated financial and grants management enterprise architecture. The modernized system is envisioned as a set of loosely coupled, reusable components allowing the sharing of normalized grants data through application programming interfaces and includes business rules and process engines within a service bus layer to enable a single component to perform similar functions and avoid hard-coding business processes into a more legacy system implementation. The architecture also will include an application layer that allows programs to interface with their stakeholders in a way that best supports their mission. An additional \$1.9 million has been requested in the Disaster Relief Fund to support this initiative as well.

Justification

FEMA needs to re-engineer its grants management system to conduct effective and efficient grants management that meets communities’ and survivors’ needs. The current collections of grants management systems are not sufficiently scalable, adaptable, or robust for current and future reporting and analytical requirements.

FEMA currently has multiple non-interoperable grants management systems that are challenging to operate, costly to maintain, and unable to adapt to changing policies, business practices, and technology requirements. In addition, the multiple systems have unnecessarily complex data structures, redundant system interfaces/connections that are costly to maintain, and use out-of-circulation technology that is difficult to secure. As a result, changes to technology in FEMA and key strategic partners can have unintended negative consequences across the multiple grant management systems. Finally, the current data is not compliant with data.gov or the DATA Act data transparency objectives. The implementation of 2 CFR Part 200 also will require substantial changes to FEMA grant systems, particularly in the areas of the Universal Award ID, sub-recipient monitoring, and performance management.

The modernization will promote accountability, transparency, and standardization in accomplishing FEMA's mission in the regions and at headquarters, and will allow FEMA to respond to Congressional requests more efficiently and accurately.

Impact on Performance (Relationship of Increase to Strategic Goals)

This investment will directly support FEMA Strategic Objective #5.4, Streamline and strengthen FEMA's business processes and systems. The grants system modernization effort will deliver important benefits to FEMA and strategic partners through improved business efficiencies increased enterprise-wide access to grants data, and reduction of number of legacy IT systems that must be managed, sustained, and secured.

The key objectives for the effort are:

- **Streamline and Improve Operational Performance** by streamlining business processes, increasing the visibility and transparency of information across the grant management lifecycle, improving the opportunities to leverage multiple grant investments in order to minimize potential and serial disaster loss, increasing the identification of fraud, and integrating-financial reporting requirements.
- **Increase System Stability and Sustainability** by reducing mission failure risk, especially in the event of Agency devolution, by providing web-accessible capabilities with a redundant failover or alternate processing site.
- **Reduce overall O&M costs** by providing a common data, business process and geospatial technical architecture and decrease time needed to reflect changes in business processes or policy in the supporting consolidated grants architecture.
- **Improve Compliantcy** by reducing the burden to implement changing grant regulations and statutes (e.g., 2 CFR 200, Biggert Waters Act, etc.), improve the ability to address existing findings and recommendations, and improve financial auditing capabilities.
- **Identify Cost Savings and Avoidance** by identifying common data and functionalities across multiple grant management programs and consolidating duplicative areas.
- **Improve timeliness of providing grant funds** and sharing of information related to the performance of grant funds to support survivor and community resiliency.

This funding will help achieve Phase 1 of the grants modernization effort: Stabilization of Current FEMA Grants Management Functions and Systems

Planning and Establishing Scope

- Document the *As-Is* across all FEMA Grants Management functional lines of business, investment portfolios, systems and establish a charter with governance.

User-Defined Process Mapping and Analysis

- Conduct analysis of all business/functional process for Grants Management leverage current investments in Non-Disaster Grants and Public Assistance Grants Management.
- Conduct inventory of data assets and engineering analysis of the technology architecture and specifications as it relates to the Grant Management mission areas including back office support such as doctrine and training.
- Based on the analysis conducted, identify key functional requirements.
- Develop To-be Business Case and Roadmap including current design gaps, target solution architecture.
- Continuous validation and verification of gaps and targets with key stakeholders.
- Direct resources to initiate a Proof of Concept.

The total funds for FY2016 will be used to initiate the planning and establishment of scope, and the user-defined process mapping and analysis parts of Phase 1. While this project will benefit multiple FEMA grant-making organizations overall project management will be headed by the Office of Response and Recovery.

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For necessary expenses of the Federal Emergency Management Agency, [\$924,664,000]**\$949,296,000**¹, including activities authorized by the National Flood Insurance Act of 1968 (42 U.S.C. 4001 et seq.), the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5121 et seq.), the Cerro Grande Fire Assistance Act of 2000 (division C, title I, 114 Stat. 583), the Earthquake Hazards Reduction Act of 1977 (42 U.S.C. 7701 et seq.), the Defense Production Act of 1950 (50 U.S.C. App. 2061 et seq.), sections 107 and 303 of the National Security Act of 1947 (50 U.S.C. 404, 405), Reorganization Plan No. 3 of 1978 (5 U.S.C. App.), the National Dam Safety Program Act (33 U.S.C. 467 et seq.), the Homeland Security Act of 2002 (6 U.S.C. 101 et seq.), the Implementing Recommendations of the 9/11 Commission Act of 2007 (Public Law 110-53), the Federal Fire Prevention and Control Act of 1974 (15 U.S.C. 2201 et seq.), the Post-Katrina Emergency Management Reform Act of 2006 (Public Law 109-295; 120 Stat. 1394), [and] the Biggert-Waters Flood Insurance Reform Act of 2012 (Public Law 112-141, 126 Stat. 916), **and the Homeowners Flood Insurance Affordability Act of 2014 (Public Law 113-89, 128 stat. 120)**²: Provided, That not to exceed \$2,250 shall be for official reception and representation expenses: Provided further, That of the total amount made available under this heading, \$27,513,000 shall be for the Urban Search and Rescue Response System, of which none is available for Federal Emergency Management Agency administrative costs: Provided further, That of the total amount made available under this heading, [\$33,862,000]**\$27,500,000**³ shall remain available until September 30, [2016]**2017**⁴, for capital improvements and other expenses related to continuity of operations at the Mount Weather Emergency Operations Center.

Centrally Managed Accounts Mission Statement

Centrally managed accounts are critical bills that must be managed at the enterprise level to ensure efficient and effective cost management which includes streamlining cost factors and prompt payment. The authority and responsibility for the individual accounts are assigned by the FEMA Office of the Chief Financial Officer (OCFO) to the individual functional components.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
12.1 Civilian Personnel Benefits	\$4,026	\$4,093	\$3,350	\$(743)
Total, Salaries & Benefits	\$4,026	\$4,093	\$3,350	\$(743)

Decrease for transit subsidy based on decreased ridership and the change in the maximum reimbursement for the subsidy.

Preparedness and Protection Mission Statement

The Preparedness mission seeks to reduce the loss of life and property, and protect the Nation by; planning, training, exercising, and building the emergency management profession. As manager and coordinator of the preparedness cycle, FEMA provides assistance, support, and leadership to help Federal, State, Tribal and local governments and the private sector build the operational capabilities needed to successfully implement preparedness strategies. The Protection mission seeks to protect our Nation's constitutional form of government and ensures that a system is in place to warn our citizens of impending hazards.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$41,986	\$41,879	\$46,090	\$4,211
11.5 Other Personnel Compensation	\$460	-	-	-
12.1 Civilian Personnel Benefits	\$16,735	\$16,693	\$18,372	\$1,679
Total, Salaries & Benefits	\$59,181	\$58,572	\$64,462	\$5,890

The FY 2016 net increase of \$5.890 million reflects the annualization of the FY 2015 pay raise, FY 2016 pay increase, the in-sourcing of 30 contractor to full time positions, and (\$4.2M) for the National Continuity Programs.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$85,137	\$88,651	\$95,051	\$6,400

The net increase of \$6.4 million in Other Services from Non-Federal Sources reflects the transfer in funding for FEMA's Cyber Security efforts to the Mission Support PPA (\$2M), decrease in contractual services related to the in-sourcing of 30 positions (\$4.2M), increase for Grants auditing and oversight (\$1M), IPAWS program increase (\$4.3M) and Grants Modernization program increase (\$10M).

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
32.0 Land and Structures	\$13,705	\$26,157	\$19,795	(\$6,362)

The decrease of \$6.362 million in Land and Structures reflects the reduction in funding Mt. Weather Emergency Operation Center.

Mission Support Mission Statement

Mission Support provides the corporate support, tools, and resources that the Agency needs to build, sustain and improve our primary mission of preparedness, protection, response, recovery and mitigation. Functions include information technology, human capital management, acquisition management, security, and administration which include facilities management, records management, and occupational health and safety.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$67,433	\$67,454	\$71,423	\$3,969

Administrative and Regional Offices Mission Statement

Administrative and Regional Operations incorporates the essential command and control functions of the Agency. Administrative coordinates all policy, strategic planning, resources, managerial and administrative actions to include the Federal Coordinating Officers, the National Capital Region Coordination (NCRC) and the Evaluations and Assessment Program. Regional Operations includes the leadership, management, and mission support functions of the 10 FEMA Regions. The Regions execute the operational direction received from headquarters to ensure that FEMA can execute its primary mission: preparedness, protection, response, recovery and mitigation.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$149,787	\$150,257	\$149,696	\$(561)
11.5 Other Personnel Compensation	\$1,542	-	-	-
12.1 Civilian Personnel Benefits	\$59,705	\$59,893	\$59,669	\$(224)
Total, Salaries & Benefits	\$211,034	\$210,150	\$209,365	\$(785)

The FY 2016 request reflects a net decrease in Salaries and Benefits due to the annualization of FY 2015 pay raise and FY 2016 pay increase, a decrease transfer of the Incident Management Support Team to the Disaster Relief Fund from FEMA's regional offices as well as the transfer of Recovery Planning to Federal Coordinating Office.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$14,668	\$12,754	\$11,644	\$(1,110)

The FY 2016 request in Other Services from Non-Federal Sources reflects a net decrease \$1.110 million due to a shift in funding FEMA's cyber security support efforts to Mission Support PPA, a reduction in financial contractor support and a decrease in Integrated Financial Management Support Services which was offset by an increase for Recovery Planning realigning to Federal Coordinating Office and transition funding for a new financial management system in the Office of the Chief Financial Officer.

Response Mission Statement

The Response mission seeks to conduct emergency operations to save lives and property through positioning emergency equipment, personnel, and supplies; evacuating survivors; providing food, water, shelter, and medical care to those in need; and restoring critical public services. FEMA conducts response operations in partnership with State, Tribal, and local governments; interagency Federal partners; nongovernmental organizations; and the private sector.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$64,393	\$64,699	\$65,490	\$791
11.5 Other Personnel Compensation	\$669	-	-	-
12.1 Civilian Personnel Benefits	\$25,667	\$25,292	\$26,104	\$812
Total, Salaries & Benefits	\$90,729	\$89,991	\$91,594	\$1,603

The FY 2016 request in Salaries and Benefits reflects a net increase of \$1,603,000 which includes the annualization of the FY 2015 pay raise and the FY 2016 pay increase. The increase also includes additional 7 positions and 7 FTEs for the Geospatial initiative.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$28,172	\$26,759	\$26,246	(\$513)

The net decrease -\$513,000 reflects the shift in funding for FEMA's Cyber Security efforts to Mission Support PPA, transfer in of the Very Small Aperture Terminal (VSAT) and Interagency Modeling and Atmospheric Center (IMAAC) Program to FEMA along with increased a transfer of funding to the Mission Support PPA to increase organizational support.

Mitigation Mission Statement

The Mitigation mission seeks to reduce or eliminate long-term risks to people and property from hazards and their effects. Mitigation benefits society by creating safer communities, enabling people to recover more rapidly from floods and other disasters, and reduce the financial impact on Federal, State, Tribal and local governments and communities. FEMA's mitigation mission is accomplished through the following basic mitigation business lines: Risk Analysis, Risk Reduction and Risk Insurance.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$5,711	\$5,722	\$6,231	\$509
11.5 Other Personnel Compensation	\$60	-	-	-
12.1 Civilian Personnel Benefits	\$2,277	\$2,281	\$2,483	\$202
Total, Salaries & Benefits	\$8,048	\$8,003	\$8,714	\$711

The net increase in Salaries and Benefits reflects the annualization of the FY 2015 pay raise and the FY 2016 pay increase and the transfer of salaries and benefits for the Resilience Star staff.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$9,604	\$8,425	\$8,336	(\$89)

The net decrease reflects the shift in funding for FEMA's Cybersecurity efforts to the Mission Support PPA and the transfer in of the Resilience Star Program.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
41.0 Grants, Subsidies, and Contributions	\$9,305	\$8,600	\$7,949	(\$651)

Decrease reflects the reduction in Dam Safety Assisted Grants.

- **DHS Balanced Workforce Strategy**

In order to establish a high performing workforce comprised of a strong internal core of federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment the Department will realign contractor and/or federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with federal employees to better realize the full potential of our total workforce – both contracted and federal. A strong internal core of federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into Tiered ranking. The results of Tier 1 contract review are listed below. The results of the lower-priority contracts will post-date this budget submission and will be included in next year's budget submission.'

Federal Emergency Management Agency requests \$4.336 million and 31 FTE for the FY 2016 DHS Balanced Workforce Strategy.

FY 2016 DHS Balanced Workforce Strategy

- OCFO Contract
 - \$136,000 required to hire Federal employees.
 - Cost of the contract that will be terminated/reduced - \$171,000
 - The contract for the work as already expired and the new federal employee will assume the responsibilities previously provided by the contractor.
- National Continuity Contract
 - \$4,200,000 required to hire Federal employees.
 - Cost of the contract that will be terminated/reduced - \$798,000
 - We will convert the positions over FY15 and FY16 and we expect up to 30 days of overlap for each position to facilitate training and information exchange. The contract will end on June 5, 2016.
 - All contract functions will be absorbed by the new federal positions.

OFFICE OF RESPONSE AND RECOVERY

Salaries and Expenses PPA Consolidation

PURPOSE: FEMA is requesting to consolidate two separate Response and Recovery PPAs within its Salaries and Expenses appropriation into a single PPA. While FEMA has continued to mature and enhance its entire disaster management operations and business management processes to be more effective and efficient, the limitations and lack of benefit from having the separate PPAs have become clearer.

Disaster management (response and recovery funding) is not defined by these two key phases of a disaster, which are artificial timeframes and categories. Instead, the ebb and flow and integration of efforts across both response and recovery are operationally critical, and FEMA has been working to better define, manage and fund the key functions of the entire effort in its planning and execution phases. For example, the Mass Care function is a critical component of both response and recovery responsibilities, not an individual, separate response or recovery phase of a disaster. The efforts associated with this activity start before a disaster occurs, remains as the disaster is occurring, and continues throughout the disaster life cycle as needed and required. This is the same for Disaster planning functions. Resources used to carry out these functions (staffing, contracts, etc.) are implemented throughout the disaster life cycle regardless of the inferred response” and “recovery” phases of a disaster. To ensure recovery is incorporated from the beginning of a disaster, we need to ensure our planning efforts include activities that occur during both the response and recovery phase of a disaster. We need to be able to leverage the budget to maximize these types of results and outcomes based on the key functions, not based on the designation of a phase of the disaster.

OVERVIEW: This consolidation will align the budget structure with the organizational management structure, while increasing transparency and accountability for mission execution and performance. With one Response and Recovery PPA, FEMA will elicit stronger, institutionalized partnerships within ORR Directorates and narrow avoidable gaps. As a result, the Office of Response and Recovery will become more effective in supporting our citizens, communities, and emergency management partners to reduce suffering, protect property and recover from all hazards by adding unnecessary layers of funds management and tracking to achieve its overall congressional mandates and expectations.

As FEMA and the ORR organization has further matured and common integrated functions across ORR have evolved, leadership has identified opportunities for greater mission effectiveness through integration of ORR’s functions to outcomes. The development and implementation of the National Preparedness Goal (NPG) and the associated core capabilities has further supported an integrated view of Response and Recovery functions. The NPG includes three cross-cutting core capabilities (Planning, Operational Coordination, and Situational Awareness) that are required for all mission areas, for which FEMA, and subsequently ORR, is the lead. Currently the resources supporting these core capabilities are spread across the Directorates with varying levels of capability. Many of the required functions for the other core capabilities span across the Response and Recovery mission areas. For example the Infrastructure, Mass Care, and Housing core capabilities all have functions that begin as the event occurs.

However, the current appropriations structure with a separate PPA for Response and Recovery does not align with the organization and mission realities, presenting an “artificial” barrier to effective program management and execution. In many cases, robust capability has been developed in one Directorate, which with additional resource flexibility could be better utilized across ORR to achieve better

outcomes. Examples include planning and operational coordination activities, for which Response has built robust capability that could be better leveraged holistically to support recovery outcomes without the risk and additional work of properly aligning expenses to the right PPA.

Currently, ORR is experiencing challenges and extra work to ensure we legally and programmatically realign resources among the ORR directorates in order to better match operational requirements. One example was the Declarations Unit move from the Recovery Directorate to the Office of the Associate Administrator for Response and Recovery. Moving the Declarations Unit was vital to achieving ORR's mission, as it elevated the level of decision making and review. Since this reorganization crossed PPAs it took over two years to accomplish based on the budget cycles and required clearances.

Under the current PPA structure, management of the proper allocation of resources in accordance with appropriations law becomes difficult and time consuming as there are many overlapping duties. By combining the Response PPA and the Recovery PPA into one Response and Recovery PPA, FEMA will:

- Simplify and enhance budgetary planning and control;
- Promote more efficient performance reporting and evaluation;
- Streamline efficiencies across multiple functional areas without need to worry about potential violations of funding or other requirements;
- Facilitate improved and more effective overall management oversight;
- Further enforce recovery activities that start at the beginning of a disaster in alignment with response activities from a budgetary, planning and operational perspective;
- Ensure alignment between major investments and budgetary resources that cross the entire ORR operational structure; and
- Link strategy with resources more holistically without the need to artificially separate and disconnect across funding PPAs.

BENEFITS OF CONSOLIDATION: These benefits will particularly be evident in the following ORR functions:

1. The Recovery Directorate has been **re-engineering the Public Assistance grants** process by consolidating major Project Worksheet (PW) development functions and tasks into a centralized processing and evaluation model to achieve greater consistency, accuracy, and efficiency in funding Applicants' recovery projects. Despite being managed and funded through Recovery, the Public Assistance program funds a large majority of FEMA's response activities in every core capability area, through reimbursement of state and local emergency work and the provision of temporary facilities for permanent work projects. PPA consolidation would allow flexibility to coordinate the management of programs and resources to benefit both mission areas, without undue complexity of dual funding, which increases administrative time and cost.
2. The **Geospatial Enterprise Office (GIS)** is in the Response PPA, but it serves Recovery as much as Response. For example, GIS provided significant support to response and recovery during the first two weeks of the Hurricane Sandy operations. GIS simultaneously provided the geospatial common operating picture to support the full scope of FEMA's response and aided the Recovery Directorate in making Individual Assistance determinations and providing expedited funding to applicants. Although

GIS derives funding from the Response PPA, the capability development, operations, and maintenance costs support the full spectrum of the response and recovery mission.

3. The **Office of Readiness Assessment (ORA)** conducts operational readiness assessments, after action reviews, and coordinates the Continuous Improvement Work Group that determines corrective actions for all ORR operational activities. ORA activities provide support for all three ORR Directorates. Funding for ORA comes from the Response PPA, and the DRS/F as appropriate.
4. The **Declarations Unit** processes all requests for Emergency and Major Disaster declarations, which authorize the provision of Stafford Act assistance, which cuts across both Response and Recovery Directorates. The Declarations Unit is a component of the Office of the Associate Administrator for Response and Recovery. Funding for the Declarations Unit comes from the Response PPA.
5. The Response Directorate manages the **Mobile Communications Office Vehicle fleet** and the Logistics Management Directorate manages **Temporary Housing Unit (THU) storage**, using the Response PPA. Both of these activities support both response and recovery field operations.
6. The Recovery Directorate has been evaluating and developing an effective and efficient method of **delivering individual assistance to survivors** irrespective of current organizational structure. Despite being managed and funded through Recovery, the Individual Assistance program still funds numerous response activities related to response core capabilities including mass care and public health and medical services. A PPA consolidation would allow flexibility to coordinate the management of programs and resources to benefit both mission areas without the undue complexity of dual funding, which increases administrative time and cost.
7. Each Directorate is involved in the **planning activities** of the other Directorates, though each Directorate has a Planning division designed to meet its own requirements. Staff resources are commonly shared to ensure the appropriate subject matter experts contribute to plans. For example, Recovery routinely provides Mass Care staff to assist with Response plans. Though response and recovery are separate disciplines, they are functionally on a continuum that is gradual and overlapping. They use many of the same tools, systems, and organizational resources. Planning Divisions would benefit from the ability to share contract resources and potentially realign staff to ensure the existing capacity is better utilized to support all ORR outcomes.
8. FEMA has committed itself to promulgating a **comprehensive set of doctrine with the associated training curriculum** necessary to conduct consistent and effective response and recovery operations. Training and doctrine development is resourced from the Response PPA to serve the ORR mission by developing full spectrum response and recovery training, exercise, and documents, but because it is funded as part of the Response organization its focus is on the Response aspects of FEMA's

mission. Similar to Planning, there could be benefits from creating shared ORR Training and Doctrine resources. Similarly, ORR may realize efficiencies through a consolidation and streamlining of administrative overhead.

9. The Recovery Directorate is defining and developing a **standardized damage assessment program** capable of effectively, consistently, and accurately delivering information required to evaluate the need for an Emergency or Major Disaster Declaration by the President regardless of FEMA program that will provide assistance. Damage assessments serve both the response and recovery mission areas. Rapid needs assessments immediately identify challenges in a response environment. Preliminary Damage Assessments lay the foundation for major disaster declarations including the majority of the federal funding for state and local response activities.

RISKS: If FEMA continues forward with two separate PPAs, there will be a continuation of risks. These risks include loss of programmatic synergies, redundancy, as well as the duplications previously mentioned. In addition, there is the risk for inadvertent misallocation of fiscal resources. FEMA is normally provided the flexibility to reprogram funds between PPAs up to \$5M or 10% of the PPA amount, whichever is less, without first notifying Congress. However, the reprogramming is confined to the year in which it occurs and does not result in a permanent realignment of activities, staff, or funds. This is particularly challenging under a Continuing Resolution, which requires an additional level of planning and program management, as well as timing of key budget actions related to the development, presentation and approval of the new budget. This additional funding restriction further limits ORR's ability to manage limited available resources. Combining the Response and Recovery PPAs will allow FEMA to have more flexibility during a shortened period of funding availability. This flexibility will enable FEMA to realign resources to better support individuals and communities during disasters.

ORR has two organizational significant management challenges ahead:

1. Continue to develop and implement a seamless, holistic approach to response and recovery; and
2. Empower effective operations in a contracting budget environment.

NEXT STEPS: To ensure the proper allocation and expenditure of resources, all directorates within the Office of Response and Recovery will continue to maintain distinct spend plans and separate accounting codes in the financial system. The Office of Management and Budget will continue to apportion funds separately in accordance with these spend plans.

DETAILED CROSSWALK TABLE: The table below crosswalks the approved PPA structure into the structure outlined in this budget addendum.

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Emergency Management Agency State and Local Programs

I. Appropriation Overview

A. Mission Statement:

Through the State and Local Programs (SLP) appropriation, FEMA fulfills its role as the principal component of the Department of Homeland Security (DHS) responsible for preparing State, local and tribal governments to prevent, protect against, respond to, and recover from incidents of terrorism and other catastrophic events. The appropriation provides for grants, training, exercises, and other support to assist Federal agencies, States, territories, and tribal and local jurisdictions to prepare for terrorism and natural disasters.

B. Budget Activities:

The National Preparedness Grant Program consolidates current State and local preparedness grant programs, improves coordination among grantees, eliminates duplicative efforts and supports the sustainment and development of the core capabilities described in the National Preparedness Goal.

The Firefighter Assistance Grants request is comprised of two grant programs – Assistance to Firefighter Grants (AFG) and Staffing for Adequate Fire and Emergency Response (SAFER) Grants. AFG provides funds directly to fire departments and unaffiliated EMS organizations throughout the United States to support one-year projects that improve the effectiveness and safety of the Nation's first responders in homeland security, firefighting, and emergency medical services (EMS) operations. SAFER provides support to fire departments and unaffiliated EMS to improve the readiness and capability of local first responders during all-hazards emergencies, including firefighting and EMS operations.

The Emergency Management Performance Grants provide assistance to State and local governments in order to sustain and enhance the effectiveness of their emergency management program.

Education, Training and Exercises is an umbrella program comprised of five components that support homeland security preparedness activities. The five programs are:

- ***National Exercise Program (NEP)***: This program designs, coordinates, conducts, and evaluates exercises that rigorously test the Nation's ability to perform missions and functions that prevent, protect against, respond to, recover from, and mitigate all hazards.
- ***Center for Domestic Preparedness (CDP)***: CDP provides specialized all-hazards preparedness training to State, local, and tribal emergency responders on skills tied to national priorities, in particular those related to Weapons of Mass Destruction (WMD). It is the Nation's only live agent

training facility for civilian responders and offers a unique environment that enables responders to train using toxic nerve agents and live biological agents while ensuring their safety.

- ***Emergency Management Institute (EMI)***: EMI provides training to Federal, State, local, tribal, volunteer, public, and private sector officials to strengthen emergency management core competencies, knowledge and skills thus improving the nation's capability to prepare for, protect against, respond to, recover from, and mitigate all hazards.
- ***National Domestic Preparedness Consortium (NDPC)***: This program identifies training needs for all response disciplines responsible for terrorism and other catastrophic event prevention, deterrence, and incident response. The Consortium specifically focuses on enhancing first responders' capability to prepare for, respond to, protect against, and recover from incidents involving chemical, biological, radiological, nuclear, or explosive (CBRNE) agents.
- ***Center for Homeland Defense and Security (CHDS)***: CHDS is the nation's leading homeland security educator, developing and offering an array of educational resources to the entire homeland security enterprise.

These efforts support multiple priorities in the FEMA Strategic Plan (2014-2018), including priority 3's focus on strengthening core capabilities with the greatest potential to change outcomes on the ground in catastrophic disasters and priority 4's emphasis on enabling national risk reduction through risk-informed decision-making.

C. Budget Request Summary:

FEMA requests \$2.231 billion, 240 positions, and 240 FTE for FY 2016 as described below:

- \$1,043,200,000 for grants under the National Preparedness Grant Program;
- \$670,000,000 for Firefighter Assistance Grants (\$335,000,000 for SAFER and \$335,000,000 for AFG);
- \$350,000,000 for Emergency Management Performance Grants (EMPG); and,
- \$168,223,610, 240 positions and 240 FTE for Education, Training and Exercises.

FEMA requests \$1.043 billion for the National Preparedness Grant Program in FY 2016.

CURRENT SERVICES PROGRAM DESCRIPTION:

Federal investments in State, local and tribal preparedness capabilities are contributing to the development of a national-level capacity to prevent, protect against, respond to, and recover from all threats and hazards, including catastrophic incidents. To address evolving threats, FEMA will continue to focus on building and sustaining core capabilities associated with the five mission areas described in the National Preparedness Goal (herein referred to as the “Goal”) that are readily deployable and cross-jurisdictional, prioritizing cost-effective options to advance local and collective national preparedness.

The FY 2016 Request re-proposes the NPGP, originally presented in the FY 2013 President’s Budget, to create a robust national preparedness capability. The FY 2016 NPGP proposal reflects the broad stakeholder feedback received during the past several years. In particular, this proposal provides recipients and other stakeholders greater certainty regarding the sources and uses of available funding while maintaining the Administration’s vision for grants.

The FY 2016 proposal consolidates current state and local preparedness grant programs into one overarching program (excluding Emergency Management Performance Grants and First Responder Assistance Programs, i.e. Fire Grants) to enable recipients to collaborate in building and sustaining the core capabilities outlined in the Goal. As a single, comprehensive grant program, the NPGP eliminates the redundancies and requirements placed on both recipients and the Federal Government resulting from the current system of multiple, individual, and often disconnected, grant programs. A legislative

package for NPGP, first transmitted with the FY 2015 budget proposal, will be re-transmitted concurrently with this Congressional Justification.

The FY 2016 NPGP prioritizes the building and sustainment of core capabilities as outlined in the Goal. Particular emphasis will be placed on building and sustaining capabilities that address high consequence events which pose the greatest risk to the security and resilience of the United States and can be used to address multiple threats and hazards. FEMA continues to comprehensively assess regional and national capability requirements through the Threat and Hazard Identification and Risk Assessment (THIRA) and State Preparedness Report processes, to prioritize capability needs and invest in critical national capabilities.

As part of the THIRA process, jurisdictions conduct a capability estimation to determine the resources needed to deliver core capabilities to their desired targets, review the resources they currently have to meet those needs, and determine where they may need to maintain or rebalance resources to meet those targets. Jurisdictions examine current capability levels through the lens of real-world incidents, assessments, and exercises to determine whether changes to current capability levels are warranted. This capability estimation process incorporates community resources by engaging the expertise and capability of the whole community: individuals, communities, the private and nonprofit sectors, faith-based organizations, and all levels of government.

The outputs of the THIRA process serve as the foundation for jurisdictions to work with whole community partners. Together, jurisdictions and community partners develop strategies to reduce resource requirements through mitigation and protection activities, sustain resources for existing capabilities that meet target levels, add resources from whole community partners or mutual aid to bridge shortfalls in existing capabilities, and build new capabilities as needed to address emerging threats and hazards. Jurisdictions consider all resources available to them, including, for example, local and State appropriations, bond initiatives, mutual aid, and Federal grants (as appropriate) to build and sustain capabilities.

The proposed NPGP draws upon and strengthens existing grants processes, procedures, and structures—emphasizing the need for greater collaboration and unity among Federal, State, local and Tribal partners. This is particularly important as stakeholders work together to make informed investment decisions, develop shared or deployable capabilities, and share resources through Emergency Management Assistance Compacts (EMAC) or other mutual aid/assistance agreements. In many ways, the NPGP structure mirrors the collaboration and decision making process that occurs during disasters, when various stakeholders and jurisdictions come together to plan, build, and execute capabilities together.

Grant Priorities

The primary purpose of FY 2016 NPGP is to build and sustain core capabilities associated with the five mission areas described in the Goal. In addition, NPGP focus areas include (1) enhancing terrorism prevention and protection, and (2) strengthening critical infrastructure security and resilience, including port and transit facilities. Funding allocations, as described in the following section, will be based on risk; recipients will invest those allocations according to the capability requirements determined by the regional and state THIRAs.

Core Capabilities: The highest priority of the NPGP is to develop and sustain the core capabilities identified in the Goal. Particular emphasis will be placed on capabilities that address high consequence events which pose the greatest risk to the security and resilience of the United States and its borders, and can be used to address multiple threats and hazards. Funding will support, to the extent possible, deployable assets that can be used anywhere in the country via EMAC or other mutual aid/assistance agreements. In addition, states may use funding to build and sustain core capabilities that may not be deployable, such as interoperable communications systems, mitigation-related capabilities, and fusion centers. A portion of the funding will also be placed in a competitive pool for the development of new capabilities for which a need is identified in the THIRAs.

Enhancing Terrorism Prevention Capabilities: The NPGP will prioritize programs and initiatives that directly support local efforts to understand, recognize, and prevent pre-operational activity and other crimes that are precursors or indicators of terrorist activity, in accordance with applicable privacy, civil rights, and civil liberties protections. Those programs and initiatives include: maturation and enhancement of state and major urban area fusion centers, implementation of the Nationwide Suspicious Activity Reporting (SAR) Initiative, continued implementation of the “If You See Something, Say Something™” campaign to raise public awareness of indicators of terrorism and violent crime, and efforts to counter violent extremism.

Critical Infrastructure Security and Resilience: The NPGP also will support strengthening the security and resilience of critical infrastructure and reducing its long-term vulnerability. This includes physical security enhancements to Level 1 and 2 Critical Infrastructure/Key Resource sites in the National Critical Infrastructure Prioritization Program, transit facilities on the Top Transit Asset List, port facilities identified in Port Wide Risk Management Plans, and at risk non-profit organizations.

Allocation of Grant Funding

All NPGP awards will continue to be risk-informed, and FEMA will continue to base funding allocation decisions on risk and population and will emphasize the building and sustainment or building of the core capabilities identified in the National Preparedness Goal. In addition, a competitive allocation will be introduced to focus on areas of need identified in the National Preparedness Report as well as on comprehensive threat/risk assessments and gap analyses. State Administrative Agencies (SAAs) will each submit one coordinated statewide application, which will include investment justifications for building and sustaining new and existing capabilities, including funding for urban areas, port areas, transit agencies and non-profits, and for competitive funding opportunities. Project proposals, whether at the state or sub-grantee level, must reflect activities that are tied to the results of the State, urban area or local THIRAs and State Preparedness Reports, and must support a concept of building and/or sustaining national capabilities. To enhance collaboration and transparency in state-level decision-making, urban areas, and port and transit authorities will be required to participate in the state-level THIRA and State Preparedness Report processes in FY 2016.

Competitive funding for SAA and urban areas will be used to build capabilities to address the threats and hazards identified through FEMA regional THIRAs and the National Preparedness Report. Regional capability gaps will be published by region in the annual Notice Of Funding Opportunity, and proposals for competitive funding will be evaluated by national and regional review panels on the

ability for a jurisdiction to build, maintain and sustain the capability as a nationally deployable resource that will benefit multiple jurisdictions and increase the core capabilities for the region. The review process will be in two parts – a regional review panel score and national review panel score.

Tribal nations will continue to apply directly to FEMA under a competitive process. FEMA will ensure a portion of the overall funding is dedicated to Tribal nations.

Grants Governance

The FY 2016 NPGP builds upon existing State and local administrative/governing structures, strengthening coordination among recipients to ensure that preparedness grant dollars are utilized in a manner that promotes collaboration and coordination in the maintenance and sustainment of existing capabilities, and the development of new capabilities as prioritized in the urban area, State, and regional THIRAs. This collaborative process is designed to break down stovepipes among various stakeholders and give all recipients enhanced awareness of initiatives in the State and region. Additional requirements and methods of increasing collaboration include:

- SAAs must be a member of the Urban Area Working Groups (UAWG) and concur with the final budget proposal by the UAWGs in their State/territory.
- The SAA and the senior member of the Urban Area Working Groups must also be members of the relevant Regional Transit Security Working Group(s) and Area Maritime Security Committee(s) in their state/territory.
- Tribes should provide the regional review panels and SAAs with copies of their THIRA to ensure visibility and coordination. Similarly, SAAs should share copies of their THIRA with tribes for similar visibility and coordination.
- Port and transit authorities will be required to share their regional strategies (Port Wide Risk Management Plan or Regional Transit Security Strategy) with the SAA, and the SAA will participate in the budget formulation process at the port and transit area level where applicable.
- SAAs and urban areas will be required to coordinate with port and transit areas to ensure that statewide THIRAs consider the full scope of statewide risk and hazards, to include risks identified in the port and transit risk strategies. Similarly, all must collaborate on the State Preparedness Report submissions.
- SAA and Urban Areas will need to integrate nonprofit preparedness activities with broader State and local preparedness efforts.

Peer Review

All NPGP-funded grant projects will be validated via peer review to ensure that projects support the development and sustainment of core capabilities. The peer review process will incorporate elements of the DHS/Infrastructure Protection (IP) State, Local, Tribal, and Territorial Government Coordinating Council structure and engage representatives from stakeholder agencies from the jurisdiction receiving grant funds, peers from comparable jurisdictions, Federal Preparedness Coordinators and analysts from multiple State and regional grant program offices, DHS Component representatives, and representatives from national associations. Recipients will be expected to justify how projects align to their THIRA/SPRs. Further, recipients will articulate how these projects will, over the lifecycle of funding, sustain current capabilities and address gaps in capabilities. Proposals for

the development of new assets will be evaluated to ensure that new capabilities can be leveraged to the extent possible through EMAC or other mutual aid agreements to benefit the region as a whole in addition to the State or local jurisdiction. This approach will streamline existing application review processes into one coordinated approach, while at the same time, increasing accountability over the use of Federal grant funds. Additionally, direct involvement by regional FEMA representatives during the review process will assist in targeting funds for regionally critical projects, and will reduce the unnecessarily redundant capabilities throughout the region.

Monitoring and Feedback

Consistent with the recommendations made in the 2011 Redundancy Elimination and Enhanced Performance for Preparedness (REEPP) report, FEMA will continue to use project-based monitoring as the principal means of measuring project progress. Project-based monitoring is a method of following projects from inception to completion, providing basic data to measure impact over time, improving accountability, and enabling FEMA to identify progress made in preparedness. The FY 2016 NPGP will encourage the use of complete lifecycle planning of inventories and resources. This will allow recipients to plan and budget for equipment upgrades, develop and maintain skills through training and exercises, and update plans and procedures to enable delivery of core capabilities across the prevention, protection, mitigation, response, and recovery mission areas.

DHS will continue to solicit stakeholder feedback to ensure NPGP enables all levels of government to build and sustain, in a collaborative way, the core capabilities necessary to prepare for incidents that pose the greatest risk to the security of the Nation.

FY 2016 NPGP Notice of Funding Opportunity

SAAAs will each submit one application, which includes funding for sustainment and maintenance, as well as competitive funding. Investment justifications from urban areas, port areas, transit agencies, nonprofits, and other local jurisdictions will be provided to the SAA for inclusion in the final application. The SAA, in conjunction with the State Advisory Council, will develop a process for reviewing and evaluating investments from across the State to determine the most effective proposals. The sub-recipient proposals must reflect activities that are tied to the results of the state, Urban Area or local THIRAs/SPRs, and must support a concept of building and/or sustaining national capability.

NPGP will highlight the following in the FOA:

- Alignment to the National Preparedness Goal, National Preparedness System, and corresponding national planning frameworks.
- Focus on the development and sustainment of core capabilities.
- Recipients must implement programs based on the FEMA regional and state THIRAs/SPRs.
- Focus on regionally and nationally deployable assets sharable through EMAC and other interstate and intrastate mutual aid agreements.

Funding availability

Maintenance and sustainment funding for SAAs, urban areas, port authorities and transit agencies

Each SAA and eligible urban area will receive an amount of funding to enhance terrorism prevention and protection activities and to build and sustain core capabilities.

- Funding will be decided through a modified version of Section 2007 of the 9/11 Act (6 U.S.C. 608), which would require allocations be determined by consideration of threat, vulnerability, and consequence factors, as well as the presence of fusion centers, border security threats, and other known Federal priorities to include all-hazards.
- Sustainment funding amounts for SAAs, urban areas, port authorities and transit agencies will be published in the FOA. These entities will submit an investment justification (IJ) to support the implementation of that funding. The activities in the IJ must align with the state and/or urban area THIRA.

Competitive funding for SAAs, urban areas, and tribes

Each SAA and any current or past eligible urban area that has maintained its Urban Area Working Group (UAWG) can submit a competitive application (through the SAA) for additional funding to address regional priorities. The SAA will submit one application to FEMA that will cover competitive requests for the entire state and any eligible urban areas. The UAWG must include port and transit membership since competitive funding for port and transit projects may be included in this proposal. Competitive funding for SAAs and urban areas will be based on regional capability gaps as identified in the FEMA regional THIRAs.

Regional capability gaps will be published in the FOA (by region), and competitive applications will only be accepted for those regional priorities. The review process will be in two parts – a regional review panel score and a national review panel score. The scores will be based on the following:

- Does the application address a gap in capability identified in the applicant's THIRA/SPR?
- Does the proposed project support the development or sustainment of a NIMS-typed resource?
- Does the applicant belong to or is it located in member states of EMAC (exception for tribal governments, American Samoa, and the Commonwealth of the Northern Mariana Islands)?
- Does the applicant have the ability to sustain the capability into the future in order to ensure the capability gap is filled in the long-term?
- Is the capability redundant of a capability that already exists within a reasonable response time?
- Can the project be completed within the stated period of performance?
- Has the grantee been able to expend funding in a timely fashion for past projects?

Tribal nations will continue to apply directly to FEMA under a competitive process. FEMA will ensure a portion of the overall funding is dedicated to the tribal nations.

Stakeholder Feedback/Recommendations

In support of the Administration's initial FY 2013 proposal, FEMA conducted over 70 briefings, meetings and conference presentations with diverse stakeholder groups across the country throughout FY 2012, 2013 and 2014. The following major themes emerged and have been addressed in the FY 2016 President's Budget:

1. Desire to retain funding for law enforcement prevention, fusion centers and Operation Stonegarden.

FY 2016 Proposal: Maintenance and sustainment of core law enforcement prevention capabilities – including fusion centers, countering violent extremism and state and local information sharing – remain key Administration priorities. In addition, eligible law enforcement activities previously funded under other grants such as Operation Stonegarden, and port/transit operations will continue to be funded based on priorities outlined in state and urban area THIRAs/SPRs.

2. Desire by cities to retain the mandatory pass through of 80 percent of grant funding to local units of government coupled with concern voiced by States about the need for a higher percentage of the overall funding and allowable management and administration (M&A) to manage the proposed NPGP.

FY 2016 Proposal: Currently, port authorities, transit agencies, private sector and non-profit organizations may be classified as private organizations or State organizations which make them ineligible as a "local" designee, even though their activities are in support of local capabilities. The Administration recommends in the accompanying authorizing language for NPGP that all port areas, transit agencies, and non-profit organizations remain eligible for funding as sub-recipients of the state.

4. Concern for how the Threat and Hazard Identification and Risk Assessments (THIRA) would be used, who would be required to complete them, engagement and transparency of the THIRA process and the relationship of the THIRA to funding allocation decisions.

FY 2016 Proposal: Mandatory engagement of urban areas and port and transit authorities in SAA generated THIRAs and investment justifications will be required in FY 2016.

5. Concern for how existing governance structures such as State Senior Advisory Committees, Urban Area Working Groups, Regional Transit Security Working Groups and Area Maritime Security Committees continue to be used within the NPGP construct.

FY 2016 Proposal: Recipients will leverage existing governance structures, and enhance them where appropriate. NPGP will continue to require a State Advisory Council to oversee all grant-funded homeland security projects and programs to maximize coordination and ensure there is no unnecessary duplication of effort and resources. [See Governance Structures section above]

6. Concern that regulated port entities and transit systems would be required to apply through the SAA.

FY 2016 Proposal: Since a primary objective of the NPGP is to ensure SAAs have complete visibility on all grant funded projects within a state, the SAA will continue to be the only eligible applicant for NPGP funding in FY 2016.

7. Concern for how mitigation activities will be funded.

FY 2016 Proposal: The FEMA preparedness grant programs have always included mitigation planning activities as eligible expenses, and NPGP will continue to do so.

FEMA requests \$670.000 million for Firefighter Assistance Grants in FY 2016.

CURRENT SERVICES PROGRAM DESCRIPTION:

ACTIVITY/OFFICE	2014 Revised Enacted	2015 President's Budget	2016 Request	DELTA
Assistance to Firefighters Grants				
Non-Pay	\$340,000	\$335,000	\$335,000	\$0
Salaries and Benefits	\$0	\$0	\$0	\$0
Total Budget	\$340,000	\$335,000	\$335,000	\$0
Positions	0	0	0	0

Through the Assistance to Firefighter Grants (AFG) program, FEMA awards grants directly to fire departments, unaffiliated EMS organizations and certain other organizations throughout the United States to support one-year projects that improve the effectiveness and safety of the Nation's first responders in homeland security, firefighting, and EMS operations. The program is administered by FEMA's Grant Programs Directorate in cooperation with the U.S. Fire Administration (USFA).

The AFG grant process is fully automated through an electronic grants system. Applicants apply online, grants are awarded electronically, grantees manage their grants (payment requests, amendments, etc.) online, and grants are monitored and closed electronically. For FY 2016, eligible applicants will be invited to submit an application for assistance in the following program areas identified as being most-critical to enhancing the capabilities of the fire and EMS services:

- Operations and Safety programs, which include training, equipment, and personal protective equipment;
- Firefighting Vehicle Acquisition, which includes but is not limited to: pumpers, brush trucks, tankers/ tenders, rescue vehicles, ambulances, turntable ladder trucks with quintuple capabilities (quints), aerials, foam units, and fireboats less than 20 feet in length;
- Wellness/fitness activities;
- Increasing the number of trained, "front-line" firefighters;
- Modifications to facilities; and
- Fire Prevention and Safety (FP&S) activities, which include awareness and education, arson prevention, code enforcement, burn prevention, and firefighter safety research and development programs.

Funding priorities for each of the funding activities are determined by DHS/FEMA, are based on recommendations from the Nation’s fire service (represented by nine major fire service organizations), and are aligned to the core capabilities described in the National Preparedness Goal. Applications that most closely align to those announced priorities are reviewed by peer panels. Peer review panels typically convene within two weeks of the end of the grant application period and complete their reviews within three weeks of convening. Grant awards primarily are based on the results of the peer reviews.

Under Section 33 of the *Fire Prevention and Control Act of 1974, as amended January 2, 2013* (15 U.S.C. § 2229a), AFG must expend a minimum of 10 percent of available grant funding for fire prevention activities. The FP&S Grant program supports projects that enhance the safety of the public and firefighters from fire and related hazards. In addition to fire departments and unaffiliated EMS organizations; non-profit organizations, public health institutions and universities are eligible to apply for research & development funding. The primary goal of the FP&S program is to reduce injury and prevent deaths for populations determined as high risk by the applicants.

ACTIVITY/OFFICE	2014 Revised Enacted	2015 President's Budget	2016 Request	DELTA
Staffing for Adequate Fire and Emergency Response (SAFER) Act Grants				
Non-Pay	\$340,000	\$335,000	\$335,000	\$0
Salaries and Benefits	\$0	\$0	\$0	\$0
Total Budget	\$340,000	\$335,000	\$335,000	\$0
Positions	0	0	0	0

Staffing for Adequate Fire and Emergency Response (SAFER) grants provide funding to improve the readiness and capability of local firefighters for all-hazards emergencies, including firefighting operations. Fire departments and volunteer firefighter interest organizations receive grants to help them increase or maintain the number of trained, "front line" firefighters available in their communities. The goal of SAFER is to enhance the local fire departments' abilities to comply with staffing, response and operational standards established by the National Fire Protection Association (NFPA).

FEMA strongly encourages applicants, to the extent practicable, to seek, recruit, and hire post-9/11 veterans to increase their ranks within their department in order to take advantage of the provisions of the Veterans Opportunity to Work (VOW) to Hire Heroes Act of 2011.

Total Budget	\$350,000	\$350,000	\$350,000	\$0
Positions	0	0	0	0

EMPG is a formula-based grant program that provides assistance to States and territories in order to sustain and enhance the effectiveness of their emergency management programs. Funds are provided to all 50 States and six territories as well as to the Federated States of Micronesia and the Republic of the Marshall Islands. FEMA provides grantees with the flexibility to allocate funds according to risk and to address the most urgent needs within their State/territory relating to disaster protection, prevention, mitigation, response, and recovery.

EMPG works to support State, local, tribal, and territorial governments in achieving measurable results in addressing capability gaps in the 31 core capabilities outlined in the National Preparedness Goal. In addition, EMPG funding supports key functional areas of emergency management: laws and authorities; threat, hazard identification and risk assessment; hazard management; resource management; planning; direction, control, and coordination; communications and warning; operations and procedures; logistics and facilities; training; exercises; public education and information; and finance and administration.

EMPG has a 50 percent Federal cost share with the State or local government who are required to pay for the remainder of eligible costs under the program. Additionally, a maximum of five percent of funds awarded can be used, by both the state and local Emergency Management Agency (EMA) for Management and Administration (M&A) purposes associated with the grant award. If the State Administrative Agent (SAA) is not the EMA, the SAA is not eligible to retain funds for M&A.

FEMA requests \$168.224 million, 240 positions, and 240 FTE in FY 2016 for the programs under Education, Training and Exercises. This includes the following adjustments to base:

- Increase of \$0.066 million for the annualization of the 2015 pay raise.
- Increases of \$0.256 million for the 2016 pay increase.
- Center for Domestic Preparedness staffing adjustment of 1 position, 1 FTE.
- Decrease of \$0.367 million from PNP travel efficiency.
- Emergency Management Institute adjustment of 1 position, 1 FTE.
- Increase of \$60 million associated with the realignment of funds from the TPG PPA to support

the National Domestic Preparedness Consortium and the Center for Homeland Defense and Security programs.

CURRENT SERVICES PROGRAM DESCRIPTION:

National Exercise Program (NEP) - \$25,841,430

ACTIVITY/OFFICE	2014 Revised Enacted	2015 President's Budget	2016 Request	DELTA
National Exercise Program				
Non-Pay	\$16,678	\$14,591	\$20,448	\$5,857
Salaries and Benefits	\$4,416	\$5,328	\$5,393	\$65
Total Budget	\$21,094	\$19,919	\$25,841	\$5,922
Positions	45	45	45	0

The NEP serves as the principal mechanism for examining the preparedness and readiness of the United States across the entire homeland security and emergency management enterprise. The purpose of the NEP is to design, coordinate, conduct, and evaluate exercises that rigorously test the Nation’s ability to perform missions and functions that prevent, protect against, respond to, recover from, and mitigate all hazards.

The NEP fosters meaningful and systematic interaction of public officials at every level of jurisdiction while incorporating the participation of private-sector, faith-based, and non-governmental organizations, along with the public, against a set of common objectives. Each two-year NEP cycle is risk-driven, capabilities-based, guided by objectives, and responsive to changes in policy and lessons learned from previous exercises and actual events.

The exercises conducted in the NEP employ the doctrine and methodology of the Homeland Security Exercise and Evaluation Program (HSEEP) which provides exercise guidance and principles constituting a national standard for homeland security exercises. The HSEEP Toolkit serves as the supporting technology platform, providing the homeland security enterprise with access to preparedness services and technologies to meet current and emerging needs and support integration capabilities.

In FY 2016, FEMA will continue executing the second two-year NEP cycle, which uses realistic, efficient, and collaborative exercises that are scheduled throughout the country, culminating in a capstone full-scale exercise to be conducted in FY 2016. This cycle will incorporate lessons learned, best practices, and innovations identified throughout the inaugural cycle and result in exercises that examine and validate the Nation’s capabilities and our ability to deliver them across the whole community. The NEP FY 2015-2016 cycle supports the conduct and evaluation of approximately 75 exercises per year that will be designed to monitor, measure, and improve the preparedness of the Nation across the core capabilities defined in the National Preparedness Goal.

National Domestic Preparedness Consortium (NDPC) - \$42,000,000

ACTIVITY/OFFICE	2014 Revised Enacted	2015 President's Budget	2016 Request	DELTA
National Domestic Preparedness Consortium (NDPC)				
Non-Pay	\$98,000	\$0	\$42,000	\$42,000
Salaries and Benefits	\$0	\$0	\$0	\$0
Total Budget	\$98,000	\$0	\$42,000	\$42,000
Positions	0	0	0	0

Consistent with the 9/11 Reauthorization Act of 2007, the NDPC consists of the following members:

- Energetic Materials Research and Testing Center (EMRTC), Institute of Mining and Technology, Socorro, NM
- National Center for Bio-medical Research and Training (NCBRT) Louisiana State University, Baton Rouge, LA
- National Emergency Response and Rescue Training Center (NERRTC), Texas Engineering Extension Service (TEEX), Texas A&M University, College Station, TX
- Counter Terrorism Operations Support (CTOS), Nevada National Security Site (NNSS), National Nuclear Security Administration, U.S. Department of Energy, Las Vegas, NV
- National Disaster Preparedness Training Center at the University of Hawaii
- Transportation Technology Center, Inc.

The NDPC provides first responders with a comprehensive all hazards training program that includes a focus on weapons of mass destruction (WMD) and natural disasters aimed to improve their capacity to prevent, protect against, respond to, and recover from all hazards events including acts of terrorism. In administering this program, the FEMA's National Training and Education Division (NTED) oversees, coordinates, and strives to institutionalize the development and delivery of comprehensive training that targets members of the responder community, providing WMD knowledge to enhance their skills and abilities. Ensuring the quality and consistency of training of first responders is a key element in FEMA's preparedness mission.

Each of the NDPC components focuses on development and delivery of products and services according to its institutional expertise. The NDPC specifically focuses on enhancing first responders' capability to prepare for, respond to, protect against, and recover from all hazards incidents involving CBRNE agents. Under this arrangement, the NDPC demonstrated results in the Nation's unified effort to bring all levels of government, business, and the emergency response community to enhanced levels of preparedness.

Center for Homeland Defense and Security (CHDS) - \$18,000,000

ACTIVITY/OFFICE	2014 Revised Enacted	2015 President's Budget	2016 Request	DELTA
Center for Homeland Defense & Security (CHDS)				
Non-Pay	\$29,000	\$0	\$18,000	\$18,000
Salaries and Benefits	\$0	\$0	\$0	\$0
Total Budget	\$29,000	\$0	\$18,000	\$18,000
Positions	0	0	0	0

CHDS is the nation’s leading homeland security educator, developing and offering an array of educational resources to the entire homeland security enterprise. CHDS began offering a Master of Arts degree in January 2003. Since that time, more than 700 of the nation’s homeland security leaders have earned master’s degrees there. CHDS also provides education directly to governors, mayors, and other state and local leaders through more than 275 Executive Education Seminars, reaching more than 7,200 officials nationwide. The Center added an Executive Leaders Program in 2006 to provide policy and strategy education to high-level professionals from the Federal, tribal, State, local, territorial and private sectors; more than 400 professionals have participated in the program to date. To meet demand for its graduate program and meet the needs of the National Capital Region, CHDS opened a second campus in Shepherdstown, West Virginia, in 2007. The University and Agency Partnership Initiative (UAPI) shares CHDS’ state-of-art curriculum with more than 300 colleges and universities from across the country further enabling the capacity and reach of homeland security education. Additional resources offered through the Center include the Homeland Security Digital Library, the nation’s premier repository for homeland security documents, and Homeland Security Affairs, the nation’s first peer-reviewed, digital journal dedicated to homeland security policy and issues.

Center for Domestic Preparedness (CDP) - \$62,860,390

ACTIVITY/OFFICE	2014 Revised Enacted	2015 President's Budget	2016 Request	DELTA
Center for Domestic Preparedness (CDP)				
Non-Pay	\$55,117	\$52,985	\$52,811	(\$174)
Salaries and Benefits	\$9,874	\$9,927	\$10,049	\$122
Total Budget	\$64,991	\$62,912	\$62,860	(\$52)
Positions	101	101	102	1

The CDP provides specialized, all-hazards preparedness training in support of NTES to State, Local, Tribal and Territorial (SLTT) emergency responders on skills tied to national priorities, particularly those related to chemical, biological, radiological and nuclear weapons of mass destruction. To date, the CDP has trained more than 854,000 students from SLTT agencies. Training for SLTT responders is provided for ten disciplines and is designed to build the Nation’s capacity to respond to and stabilize a catastrophic event within 72 hours and restore basic services and community functionality within 60

days thereafter. The CDP also builds the knowledge, skills, and abilities of FEMA’s workforce by hosting and supporting the training of FEMA’s Incident Management Assistance Teams (IMATs), Incident Workforce Academy, New Employee Orientation, and FEMA Corps. The CDP also facilitates training for other Federal agencies to include the Centers for Disease Control and Prevention, Disaster Medical Assistance Teams, and the Department of Veterans Health Affairs.

The Chemical, Ordnance, Biological, and Radiological Training Facility is the Nation’s only toxic-agent training facility for civilian responders, providing a unique environment that enables them to train using military nerve agents and live biological materials in a safe and realistic training environment. The Noble Training Facility is also operated as part of the CDP and is the only hospital facility in the United States dedicated solely to training hospital and healthcare professionals in disaster preparedness and mass casualty operations. The Noble Training Facility addresses training gaps identified by the healthcare response community and trains healthcare professionals to meet all-hazard threats in a realistic hospital environment. In addition to developing and delivering emergency responder training at various levels for a broad range of emergency response disciplines, the CDP also participates in efforts to standardize this training for SLTT responders while maintaining training quality and gathering meaningful evaluation data for continuous program improvement and effective program management. The CDP maintains a campus of 124 acres and approximately 935,000 square feet of training and support facilities.

Emergency Management Institute (EMI) - \$19,521,790

ACTIVITY/OFFICE	2014 Revised Enacted	2015 President's Budget	2016 Request	DELTA
Emergency Management Institute				
Non-Pay	\$10,527	\$8,414	\$8,363	(\$51)
Salaries and Benefits	\$10,042	\$11,024	\$11,159	\$135
Total Budget	\$20,569	\$19,438	\$19,522	\$84
Positions	85	93	93	0

EMI is the emergency management community’s flagship training institution for Federal, SLTT, volunteer, public, and private sector officials to strengthen emergency management core competencies. EMI directly supports the implementation of the National Preparedness System, National Preparedness Goal, National Incident Management System, and the National Planning Frameworks by developing critical knowledge and skills to improve and sustain the Nation’s capability to prepare for, protect against, respond to, recover from, and mitigate all hazards using the whole community approach. EMI trains more than 2 million students annually. Training delivery systems include residential, onsite training; offsite delivery in partnership with emergency management training systems, colleges, and universities; and technology-based platforms to conduct individual training courses for emergency management personnel across the Nation.

As part of NTES, EMI, in partnership with academia and professional associations, is working to establish a common body of knowledge through the Emergency Management Professional Program (EMPP) that is designed to improve national capabilities. This program includes the National

Emergency Management Basic Academy, National Emergency Management Leaders Academy, and National Emergency Management Executive Academy.

IV. Program Justification Changes

Justification of Program Changes**
(Dollars in Thousands)

Program Increase 1: Climate Resilience Initiative and Workshops
PPA: Education, Training and Exercises
Program Increase: Positions 0, FTE 0, Dollars \$6,000

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							45	45	\$19,841
Program Increase							0	0	\$6,000
Total Request	45	45	\$21,094	45	45	\$19,919	45	45	\$25,841

Description of Item

FEMA requests \$6.0 million in additional funding to support increased climate resilience coordination and convenings with State, local, tribal, territorial, and Federal as well as private and non-profit sector partners. These investments are responsive to the President's Climate Action Plan as well as recommendations made by the State, Local, and Tribal Leaders Climate Resilience Task Force.

Requested funding will support increased regional engagement and exercises that bring together federal agencies; FEMA's regional offices and personnel; State, local, tribal, territorial and other levels of government; as well as private and non-profit sector partners to facilitate coordinated climate adaptation and preparedness efforts. Through regional trainings, FEMA will build state and local governments' capacity to access data housed in the climate toolkit, train local communities in the toolkit's use, and conduct local or regional exercises that inform preparedness activities and validate capabilities. FEMA will provide support to state and local governments as they replicate successful training and exercise activities in local communities.

Justification

Understanding and preparing for the effects of a changing climate is an Administration priority, and FEMA plays an important role. Expanding resilience-focused exercises advances preparedness in communities by identifying sustainable approaches to resilience, including capabilities needed to adapt to a changing climate. Whole community exercises provide a structured environment to examine hazards, risk, and vulnerabilities associated with potential consequences from a changing climate as well as investment opportunities that could reduce vulnerabilities long-term.

Effect on Performance (Relationship of Increase to Strategic Goals)

Resilience-focused exercises support each of the following principles identified in the President's State, Local, and Tribal Leaders Task Force recommendations:

- Require consideration of climate-related risks and vulnerabilities in the design, revision, and implementation of all Federal policies, practices, investments, regulations, and other programs.
- Maximize opportunities to take actions that have dual-benefits of increasing community resilience and reducing greenhouse gas emissions.
- Strengthen coordination and partnerships among Federal agencies, and across Federal, State, local, tribal, and territorial jurisdictions as well as economic sectors.
- Provide actionable data and information on climate change impacts and related tools and assistance to support decision-making at all levels.
- Consult and cooperate with Tribes and indigenous communities on all aspects of Federal climate preparedness and resilience efforts, and encourage States and local communities to do the same.

Specifically, resilience-focused exercises will help to identify collaborative and sustainable community-based approaches to resilience that could reduce long-term vulnerability at a local level through the following:

- Examination of methods to better integrate existing and emerging risk information and capability requirements into current and future planning to manage and adapt to climate-related risks, hazards, and vulnerabilities.
- Identification of collaborative and sustainable whole community approaches to advance and sustain local climate adaptation, preparedness, and resilience programs, policies, and strategies.
- Creation of investment opportunities and the development of coalitions between local, State, Federal, and private sector partners to support climate adaptation, preparedness, and resilience.

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For grants, contracts, cooperative agreements, and other activities, [\$2,225,469,000]\$2,231,423,610¹, which shall be allocated as follows:

(1) \$1,043,200,000 shall be for the National Preparedness Grant Program for the purpose of achieving the National Preparedness Goal: Provided, That grants may be awarded to achieve the National Preparedness Goal through the protection of critical infrastructure and key resources, the development and sustainment of capabilities, including nationally deployable resources to prevent and protect against terrorism and to respond to, recover from, and mitigate against all hazards: Provided further, That grants made under the National Preparedness Grant Program may provide a minimum allocation of funding to each state and territory, including the District of Columbia: Provided further, That, notwithstanding [section 2008(a)(11) of the Homeland Security Act of 2002 (6 U.S.C. 609(a)(11)), or]² any other provision of law, a recipient or subrecipient of a grant may use not more than 5 percent of the amount of [a]the grant or subgrant made available to them³ under this heading for expenses directly related to administration of the grant: Provided further, That applications for grants under the National Preparedness Grant Program shall be made available to eligible applicants not later than 60 days after the date of enactment of this Act, eligible applicants shall submit applications not later than 80 days after the grant announcement, and the Administrator of the Federal Emergency Management Agency shall act within 65 days after the receipt of an application.

(2) \$670,000,000 to remain available until September 30, [2016]2017⁴, shall be for necessary expenses for programs authorized by the Federal Fire Prevention and Control Act of 1974 (15 U.S.C. 2201 et seq.), of which \$335,000,000 shall be available to carry out section 33 of that Act (15 U.S.C. 2229) and \$335,000,000 shall be available to carry out section 34 of that Act (15 U.S.C. 2229a): Provided, That, in making such grants, the Secretary may grant waivers from the requirements in subsections (a)(1)(A), (a)(1)(B), (a)(1)(E), (c)(1), (c)(2), and (c)(4) of section 34 of that Act (15 U.S.C. 2229a).

(3) \$350,000,000 shall be available for necessary expenses for emergency management performance grants, as authorized by the National Flood Insurance Act of 1968 (42 U.S.C. 4001 et seq.), the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5121 et seq.), the Earthquake Hazards Reduction Act of 1977 (42 U.S.C. 7701 et seq.), and Reorganization Plan No. 3 of 1978 (5 U.S.C. App.).

(4) \$168,223,610 shall be to sustain current operations for training, exercises, technical assistance, and other programs, of which \$42,000,000 shall be for [Training Partnership Grants]National Domestic Preparedness Consortium for the purpose of achieving the National Preparedness Goal[:], \$18,000,000 shall be for the Center for Homeland Defense and Security to continue master's degree, executive leadership and associated programs in homeland security, and⁵[(5) \$102,269,000]\$108,223,610⁶ shall be for the Center for Domestic Preparedness, the Emergency Management Institute, and the National Exercise Program.

Note.—A full-year 2015 appropriation for this account was not enacted at the time the budget was prepared; therefore, the budget assumes this account is operating under the Further Continuing Appropriations Act, 2015 (P.L. 113–235, Division L). The amounts included for 2015 reflect the annualized level provided by the continuing resolution.

Language Provision	Explanation
1. [2,225,469,000] \$2,231,423,610 ...	Dollar change only. No substantial change proposed.
2. ...[section 2008(a)(11) of the Homeland Security Act of 2002 (6 U.S.C. 609(a)(11)), or]...	Current legislative proposal for the National Preparedness Grant Program would amend that section of the Homeland Security Act. Moreover, the “notwithstanding any other provision of law” language is sufficient to effectuate the purpose of the proviso.
3. ... <i>subrecipient</i> of a grant may use not more than 5 percent of the amount of [a]the grant <i>or subgrant</i> made available <i>to them</i> ...	Additional clarification of provision.
4. ...[2016] 2017 ...	Fiscal year change only. No substantial change proposed.
5. ... <i>\$168,223,610 shall be to sustain current operations for training, exercises, technical assistance, and other programs, of which \$42,000,000 shall be for [Training Partnership Grants]National Domestic Preparedness Consortium</i> for the purpose of achieving the National Preparedness Goal[:], <i>\$18,000,000 shall be for the Center for Homeland Defense and Security to continue master’s degree, executive leadership and associated programs in homeland security, and</i>	Change is intended to restructure the State and Local Programs appropriation to reflect the structure and conditions of preceding year appropriations under this heading.
6. [(5) \$102,269,000] \$108,223,610 ...	Dollar change only. No substantial change proposed.

Firefighter Grants Mission Statement

Firefighter Assistance Grants are provided to local fire departments for the purpose of protecting the health and safety of the public and protecting firefighting personnel, including volunteers and emergency medical service personnel, against fire and fire-related hazards.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
41.0 Grants, Subsidies, and Contributions	\$641,840	\$680,000	\$670,000	(\$10,000)

The \$10 million reduction reflects the FY 2014 enacted amount awarded in FY 2015 for the AFG and SAFER programs. The FY 2016 Request of \$670 million is consistent with the FY 2015 President's Budget amount.

Training Partnership Grants Mission Statement

Funds for the Training Partnership Grants will be awarded on a competitive basis to entities (e.g., State, local, tribal, and territorial governments; universities and higher education institutions; and nonprofits) that have demonstrable expertise and can develop/deliver training and education curricula that tie to the core capabilities in the National Preparedness Goal. The program will aim to incentivize innovation in homeland security training techniques through its competitive approach to awarding funds.

Education, Training and Exercises Mission Statement

Supports homeland security preparedness activities for state and local capabilities as outlined in the National Preparedness Guidelines and Homeland Security Act of 2002. The Education, Training and Exercise PPA includes the National Exercise Program, the Center for Domestic Preparedness, the Emergency Management Institute, the National Domestic Preparedness Consortium, and the Center for Homeland Defense and Security.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$17,595	\$19,039	\$19,238	\$199
11.3 Other than Full-Time Permanent	\$5	-	-	-
11.5 Other Personnel Compensation	\$163	-	-	-
12.1 Civilian Personnel Benefits	\$5,176	\$7,240	\$7,363	\$123
Total, Salaries & Benefits	\$22,939	\$26,279	\$26,601	\$322

Provides for the annualization of the 2015 pay raise and the 2016 pay raise effective January 1, 2016. Also includes the realignment of one position/FTE from the Salaries and Expenses appropriation to the Emergency Management Institute.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
21.0 Travel and Transportation of Persons	\$5,186	\$5,144	\$4,777	(\$367)

The 2016 Request reflects savings from travel efficiencies applied to all programs under Protection and National Preparedness.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$103,841	\$61,165	\$67,183	\$6,018

The 2016 Request provides \$6 million in support of the Administration's Climate Resilience Initiative. Of this amount, \$5 million will support regional convenings and exercises and \$1 million will support climate preparedness and adaptation workshops.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
31.0 Equipment	\$2,303	\$1,933	\$1,757	(\$176)

The 2016 Request reflects savings from the cyclical replacement of equipment in FY 2015.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
41.0 Grants, Subsidies, and Contributions	\$89,324	\$2,204	\$62,362	\$60,158

The 2016 Request reflects \$42 million for the National Domestic Preparedness Consortium, \$18 million for Center for Homeland Defense and Security, and, a nominal increase in subsidies issued to attend EMI sponsored training.

National Preparedness Grants Program Mission Statement

Federal investments in State, local and tribal preparedness capabilities have contributed to the development of a significant national-level capacity to prevent, protect against, respond to, and recover from catastrophic events. It is the purpose of the National Preparedness Grant Program (NPGP) to continue supporting the development of a robust cross-jurisdictional and readily deployable suite of State and local assets. The National Preparedness Goal recognizes that a secure and resilient Nation is one with the capabilities required, across the whole community, to prevent, protect against, mitigate, respond to, and recover from the threats and hazards that pose the greatest risk. With this in mind, the NPGP will work to build and sustain core capabilities in the National Preparedness Goal.

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Emergency Management Agency Radiological Emergency Preparedness

I. Appropriation Overview

A. Mission Statement for Radiological Emergency Preparedness:

The Radiological Emergency Preparedness Program (REPP) ensures that the public health and safety of citizens living near commercial nuclear power plants will be adequately protected in the event of a nuclear power station incident. In addition, the program informs and educates the public about radiological emergency preparedness. REPP provides funding only for emergency preparedness activities of State and local governments that take place beyond nuclear power plant boundaries.

B. Budget Activities:

Drills and Exercises

In conjunction with State, tribal, local and industry officials, REPP conducts and evaluates exercises and drills in the communities surrounding commercial nuclear power plants. These drills and exercises ensure there is adequate off-site emergency preparedness to protect the health and safety of citizens living around commercial nuclear power plants.

Rulemaking and Policy Development

REPP develops policy and guidance and coordinates the regulatory basis of the program with the Nuclear Regulatory Commission (NRC) as it relates to offsite planning and preparedness. This includes implementation of the National Preparedness System (NPS). The REPP team will update existing guidance to take full advantage of the NPS.

Federal Radiological Preparedness Coordinating Committee (FRPCC)

REPP also maintains the functionality of the FRPCC as a coordinating body for radiological preparedness across the Federal government. The FRPCC, some of whose functions are funded by REPP user fee collections, coordinates the activities of Federal agencies with responsibilities in the radiological emergency planning and preparedness process. The FRPCC serves as a radiological information clearinghouse among Federal departments and agencies and is responsible for updating the Nuclear/Radiological Incident Annex of the National Response Framework.

Radiological Emergency Preparedness Training Curriculum

REPP developed and continues to employ a robust professional development path to assist FEMA staff and Federal, State, tribal and local emergency planning, preparedness and response personnel in their emergency preparedness planning and training. This is accomplished by maintaining a high-quality national level cadre of Federal employee instructors to deliver training courses throughout the country.

C. Budget Request Summary:

The Federal Emergency Management Agency requests net budget authority of (\$0.305) million, 170 positions, and 170 FTE for FY 2016. The net budget authority consists of \$40,181,290 in offsetting collections and REPP operating expenses of \$39,876,296.

III. Current Services Program Description by PPA

**Department of Homeland Security
Federal Emergency Management Agency
Radiological Emergency Preparedness:
Program Performance Justification**
(Dollars in Thousands)

PPA: Radiological Emergency Preparedness:

	Perm. Pos.	FTE	Amount
FY 2014 Revised Enacted	170	153	(\$13)
FY 2015 President's Budget	170	170	(\$1,815)
2016 Adjustments-to-Base	-	-	\$1,510
FY 2016 Current Services	170	170	(\$305)
FY 2016 Program Change	-	-	-
FY 2016 Total Request	170	170	(\$305)
Total Change 2015 to 2016	-	-	\$1,510

FEMA requests \$40.181 million in FY 2016 budget authority for the collection of licensing fees. REPP will collect \$39.832 million in fees in FY 2015 to support 170 positions, 170 FTE and related operating costs.

The FY 2016 request includes the following:

- Increase of \$49,000 for annualization of 2015 pay raise.
- Increase of \$199,000 for the 2016 pay increase.
- Increase of \$149,000 for expansion of online and classroom courses.
- Increase of \$49,000 for DHS working capital fund costs.
- Adjustment to collections of \$1,064,000 from refinement of licensing fees calculation.

CURRENT SERVICES PROGRAM DESCRIPTION:

Total Budget	\$42,288	\$38,017	\$39,876	\$1,859
Offsetting Collections	\$37,359	\$39,832	\$40,181	\$349
Net Budget Authority	\$4,929	(\$1,815)	(\$305)	\$1,510
Positions	170	170	170	0

REPP ensures that the public health and safety of citizens living near commercial nuclear power plants will be adequately protected in the event of a nuclear power station incident. In addition, the program informs and educates the public about radiological emergency preparedness. REPP provides funding only for emergency preparedness activities of State and local governments that take place beyond nuclear power plant boundaries.

Drills and Exercises

REPP maintains its support to other FEMA, DHS, Department of Defense, and Federal partners involved in improvised nuclear device (IND) and radiological dispersal device (RDD) planning and exercises, as these programs share common elements with REPP's primary mission to ensure the health and safety of citizens in the event of a radiological emergency.

In FY 2016, REPP will complete 34 exercises (including the remaining hostile action-based (HAB) exercises) in the states and counties within the Emergency Planning Zones of NRC-licensed commercial nuclear power plant facilities.

Radiological Emergency Preparedness Training Curriculum

In FY 2016, REPP will deliver and conduct 45 REP Training courses. The REPP Course curriculum consists of: the REP Accident Assessment Course (RAAC), REP Core Concept Course (RCCC), REP Exercise Evaluation Course (REEC,) REP Plan Review Course (RPRC) and the REP Disaster Initiated Review (RDIR). These courses are taught throughout the FEMA Regions as requested by our stakeholders. Additional courses conducted at the Center for Domestic Preparedness (CDP) are the Radiological Emergency Response Operation (RERO), the Advance Radiological Incident Operations (ARIO) and Radiological Train the Trainer Course (RTtTC). Currently REP Training is developing an Exercise Controller Course (RECC) and plans to extend the RCCC to add a section that would address Hostile Action Based event response. REP FY 2016 Training is currently partnering with the CDP and Emergency Management Institute, along with State and local governments throughout the regions to provide courses to over 1,000 emergency responders.

Rulemaking and Policy Development

In FY 2016 REPP will continue the review, drafting and final issuance of the program regulations that govern the program (44 CFR Parts 350-354). This effort, which began in FY 2014, is a significant undertaking to ensure that REPP regulations reflect contemporary national preparedness doctrine, tenets, and lessons learned from the Fukushima accident in 2011. Examples include risk communications strategies to the public during an incident, enhancing coordination with Federal, State, local and tribal partners and stakeholders, and developing more precise financial models and methodologies for the assessment and collection of user fees from the nuclear industry.

REPP develops policy and guidance and coordinates the regulatory program foundation with the NRC as they relate to offsite planning and preparedness, including the implementation of the National Preparedness System. Outreach and implementation guidance is required for Federal, State, tribal, and local stakeholders on any refined or newly developed REPP guidance.

Federal Radiological Preparedness Coordinating Committee (FRPCC)

REPP co-chairs the FRPCC with FEMA Office of Response & Recovery. In FY 2015, the FRPCC began updating the Nuclear/Radiological Incident Annex (NRIA) of the National Response Framework. This update encompasses all phases of emergency response and recovery from all types of nuclear and radiological emergencies and is expected to be completed in FY2016.

In FY 2016, REPP will provide ongoing training and certifications through the “A-Team University”, a radiological emergency response group tasked with providing protective action recommendations to State and local governments on behalf of its member agencies. This program develops and maintains the members of the Advisory Team for Environment, Food and Health. The permanent membership includes representatives from the Environmental Protection Agency (EPA), the Food and Drug Administration (FDA), the Centers for Disease Control and Prevention (CDC) and the U.S. Department of Agriculture (USDA).

Alert and Notification Enhancements

REPP maintains oversight of Public Alert and Notification systems at over 64 sites in 36 States. These systems are designed to provide prompt alerting to the public in the event of an emergency. In FY 2016, REPP, in partnership with the Chemical Stockpile Emergency Preparedness Program (CSEPP), the National Integration Center (NIC), National Continuity Programs (NCP) and the Integrated Public Alert and Warning System (IPAWS) Office will provide direct technical support to State and local governments in implementing the latest public alert and notification technologies and procedures, enhancing emergency preparedness all hazards.

User Fee Improvements

In FY 2013, the REP program undertook a cost study to better refine its cost models. Thereafter, in FY 2014, \$5.1 million of carryover user fee collections were refunded to nuclear power station licensees as a result of REPP’s increased ability to produce transparent cost estimates. In FY 2015, \$3.7 million of carryover user fee collections will be refunded to industry. Automating the model should lead to more accurate price estimates, and consequently cost efficient bills to industry and smaller future refunds.

IV. Program Justification Changes

Radiological emergency preparedness Mission Statement

The Radiological Emergency Preparedness Program (REPP) ensures that the public health and safety of citizens living near commercial nuclear power plants will be adequately protected in the event of a nuclear power station incident. In addition, the program informs and educates the public about radiological emergency preparedness. REPP provides funding only for emergency preparedness activities of State and local governments that take place beyond nuclear power plant boundaries.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$14,736	\$15,551	\$15,751	\$200
11.5 Other Personnel Compensation	\$129	\$129	\$129	-

BUDGET REQUEST AND SUPPORTING INFORMATION
--

**Federal Emergency Management Agency
National Pre-Disaster Mitigation Fund**

I. Appropriation Overview

A. Mission Statement for National Pre-Disaster Mitigation Fund:

The National Pre-Disaster Mitigation Fund (PDM) provides technical assistance and grants to State, territory, local, and tribal governments to reduce the risks associated with disasters. The resources support the development and enhancement of hazard mitigation plans, as well as the implementation of disaster mitigation projects.

B. Budget Activities:

The PDM supports the Department's goal of strengthening capacity at all levels of society to withstand threats and hazards. PDM accomplishes this by providing Federal funding to State, territory, local and tribal governments for eligible planning and project activities. PDM supports the development of hazard mitigation planning and/or project applications that implement physical measures to avoid and/or reduce damage associated with natural disasters. Funding in FY 2016 for the PDM program supports climate resilience, as well as recommendations made by the State, Local, and Tribal Leaders Climate Resilience Task Force.

C. Budget Request Summary:

The Federal Emergency Management Agency requests \$200.001 million, 16 positions, and 10 FTE in FY 2016.

FY 2016 Total Request	16	10	\$200,001
Total Change 2015 to 2016	13	7	\$200,001

FEMA requests \$200.001 million, 16 positions, and 13 FTE in FY 2016 for the National Pre-Disaster Mitigation Fund. The PDM program provides funds on an annual basis for hazard mitigation planning and the implementation of mitigation projects. FEMA provides funding for measures to reduce or eliminate overall risk from natural hazards. 100 percent of requested funding will support grant activities with program support costs accommodated with current carry-over balances.

The FY 2016 request includes the following adjustments funded from unobligated prior year balances:

- Increase of \$1,040 for the annualization of the 2015 pay raise.
- Increase of \$4,056 for the 2016 pay increase.

CURRENT SERVICES PROGRAM DESCRIPTION:

ACTIVITY/OFFICE	2014 Revised Enacted	2015 President's Budget	2016 Request	DELTA
National Predisaster Mitigation Fund				
Non-Pay	\$39,339	\$42,852	\$198,806	\$155,954
Salaries and Benefits	\$420	\$424	\$1,195	\$771
Total Budget	\$39,759	\$43,276	\$200,001	\$156,725
Positions	3	3	16	13

The concept of resilience is closely related to the concept of hazard mitigation. Resilience refers to the ability of a community to recover from a disaster and adapt to new circumstances. After the occurrence of a hazard event, a resilient community will suffer fewer losses and be able to resume normal economic functions more quickly than a community that has not built resilience. Hazard mitigation is the only phase of emergency management specifically dedicated to breaking the cycle of damage, reconstruction, and repeated damage, thus developing a more resilient nation.

The Pre-Disaster Mitigation grant program (PDM) will assist State, territory, local and tribal governments as they plan for and execute sustained, pre-disaster natural hazard mitigation programs that consider climate change and reduce overall risk to structures, making communities and their citizens safer and more resilient. This approach lessens the probability of future disaster losses and has the potential to lead to a quicker recovery from a disaster for participating communities. The overall goal of the PDM program is to help us collectively “build to the future” rather than build to the risks of the past. The program will consider projects that address climate change.

FEMA has analyzed the PDM grant program to identify opportunities to implement climate resilient infrastructure projects. Utilizing the whole community approach of education, and partnership, FEMA continues to further hazard mitigation with regard to consideration of climate resilient planning and projects. In FY 2016, FEMA proposes to further integrate the concept of resiliency into the PDM program. This will enable FEMA to work with communities to lessen their losses and resume normal economic functions more quickly after a disaster occurs. The FY 2016 request will support FEMA’s ability to provide over 600 grants to State, territory, local and tribal governments. This increase will provide approximately \$600 million in losses avoided.

FEMA will continue to use more advanced analytics in PDM. Specifically, FEMA’s Benefit-Cost Tool, which is used for determining cost effectiveness for all projects funded by FEMA, now takes potential climate resilient activities into consideration, allowing for more complete, analytics-driven projections that better consider potential future risks.

In FY 2016 FEMA will continue to integrate the concept of resiliency into the PDM program. FEMA estimates that at this funding level, this new direction will enable FEMA to provide over 600 grants to States, Territories, Indian Tribal Governments and local communities. The increase in PDM funding will require additional staff to review, implement, monitor and closeout the grants. FEMA requests a total of 16 FTE to be distributed among Regional Offices and Headquarters. Regions with high volumes of grants will require multiple positions to ensure timeliness of grant implementation, accuracy of monitoring and efficient closeout.

IV. Program Justification Changes

**Department of Homeland Security
Federal Emergency Management Agency
National Pre-Disaster Mitigation Fund
Justification of Program Changes**
(Dollars in Thousands)

Program Increase 1: Climate Resilience Initiative
PPA: National Pre-Disaster Mitigation Fund
Program Increase: Positions 13, FTE 7, Dollars \$200,001

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							3	3	\$0
Program Increase							13	7	\$200,001
Total Request	3	3	\$25,000	3	3	\$0	16	10	\$200,001

Description of Item:

Understanding and preparing for the impacts of a changing climate is an Administration priority, and one in which FEMA plays an important role. The Administration strongly supports efforts to integrate climate considerations into existing programs and to use programs to build resilience. The FY 2016 Request provides much needed resources that will allow FEMA to continue further hazard mitigation with regard to climate adaptation. In FY 2016, FEMA proposes to further integrate the concept of resiliency into the PDM program. This new direction will enable FEMA to work with communities to lessen their losses and enable them to resume normal economic functions more quickly after a disaster occurs.

Justification:

In order to implement a \$200 Million Pre-Disaster Mitigation (PDM) program, a combined approach of staff and contractor support will provide the best mix of resources for the program to review applications for eligibility, work with applicants to resolve application deficiencies, monitor progress on subawards and closeout completed awards.

Currently, PDM has a staff of three full time positions. The FY 2016 Request would increase staffing by 13 for a total of 16 positions based on an expected increase in subapplications submitted and awarded. The requested positions are also consistent with PDM staffing levels and experience managing the program at higher historic funding levels. For example, in FY2008 when the program

was at approximately \$100 million, there were 15 positions to support the program. Typically, FEMA receives two to three times the amount of available funding in applications. With funding increased to \$200 million, FEMA anticipates receiving at least \$400-\$600 million in applications and expects up to 600 subapplications from applicants. The additional workload will require more staffing and contract support at both the headquarters and regional offices. The 3 positions that support the current program level of funding (\$25 million) are not adequate resources to support an eight fold increase in funding and associated workloads.

Impact on Performance (Relationship of Increase to Strategic Goals):

The FY 2016 request will support FEMA's ability to provide over 600 grants to State, territory, local and tribal governments. This investment will provide approximately \$600 million in losses avoided.

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For the predisaster mitigation grant program under section 203 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5133), \$200,000,720, to remain available until expended.

Explanation of Changes

Language Provision	Explanation
1 <u>For the predisaster mitigation grant program under section 203 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5133), \$200,000,720, to remain available until expended.</u>	Proposes appropriation language for the Predisaster program authorizing the use of new funding requested for FY 2016.

National Pre-Disaster Mitigation Fund Mission Statement

The National Pre-disaster Mitigation Fund provides technical assistance and grants to State, local, and tribal governments to reduce the risks associated with disasters. Resources support the development and enhancement of hazard mitigation plans, as well as the implementation of disaster mitigation projects.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$314	\$317	\$903	\$586

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Emergency Management Agency Emergency Food and Shelter

I. Appropriation Overview

A. Mission Statement for Emergency Food and Shelter:

The Emergency Food and Shelter Program (EFS) entrusted through the McKinney-Vento Homeless Assistance Act of 1987 (P.L. 100-77), provides grants to nonprofit and governmental organizations at the local level through the National Board to supplement and expand ongoing efforts to provide shelter, food, and supportive services for hungry and homeless people across the Nation.

B. Budget Activities:

EFS funds are used to supplement food, shelter, rent, mortgage, and utility assistance programs for people with non-disaster related emergencies.

The EFS program is administered via a national board of volunteer organizations currently chaired by FEMA. The National Board qualifies jurisdictions for annual EFS funding awards based on criteria involving current population, unemployment, and poverty levels. Grants are awarded to nonprofit community and government organizations that are chosen by local boards in the qualifying jurisdictions. In FY 2016, FEMA proposes to transfer authority of the Emergency Food and Shelter Program to the Department of Housing and Urban Development (HUD).

C. Budget Request Summary:

The Federal Emergency Management Agency requests \$100.000 million, 0 positions, and 0 FTE, and for FY 2016.

Currently the Emergency Food and Shelter Program (EFS) is administered by FEMA. FEMA is not seeking to eliminate the program, but instead to transition the authority to HUD. As EFS's goals align with HUD's mission, this transition will, improve coordination, increase accountability and transparency, as well as maximize the effectiveness of the use of these funds.

Total Change 2015 to 2016	-	-	-

FEMA requests \$100.000 million, 0 positions, and 0 FTE in FY2016 for Emergency Food & Shelter program.

CURRENT SERVICES PROGRAM DESCRIPTION:

The EFS program provides grants to nonprofit and governmental organizations at the local level to supplement their programs for emergency food and shelter.

Funding for this program is chaired by FEMA and distributed by the National Board, which consists of designees from six charitable organizations: American Red Cross, Catholic Charities USA, Jewish Federations of North America, National Council of Churches of Christ in the USA, Salvation Army, and United Way Worldwide.

Local jurisdictions (cities or counties) qualify for EFS program support when they demonstrate the highest need for emergency food and shelter services as determined by unemployment and poverty rates. Funding also may be provided to jurisdictions that do not qualify for funding under the formula through the National Board's State Set-Aside Committee process. The National Board allocates a portion of appropriated funds to each state based upon the unemployment rates in jurisdictions that did not qualify for direct funding from the National Board. The State Set-Aside Committee process allows states to address pockets of homelessness and poverty or address the immediate needs of a locality that might be going through a high economic impact event. Of note, disaster events are not a factor currently used to determine the allocation of EFS grants.

In FY 2016, FEMA plans to transition the authority to administer the EFS to HUD as their mission aligns to goals of the EFS. FEMA and HUD believe that this transition will improve program mission alignment, improve coordination, increase accountability and transparency, as well as maximize the effectiveness of the use of these funds. Federal expertise in homelessness assistance is largely resident at HUD, and HUD is already responsible for implementing many of the other authorities granted by the McKinney-Vento

Homeless Assistance Act. This includes the Emergency Solutions Grants which, similar to EFS, provides funds to States, cities, and counties for emergency shelters, street outreach, and other essential services to engage people who are living on the streets, as well as newer interventions such as rapid re-housing and homelessness prevention.

As highlighted by GAO and others,¹ fragmentation and overlap of services exists among Federal homeless assistance programs. However, through improved coordination between Federal, State and local partners, the Administration has made significant progress toward the goals of Opening Doors: The Federal Strategic Plan to End Homelessness. FEMA will continue to support disaster food and shelter requirements under its emergency assistance authorities in the Stafford Act.

¹ GAO. *Homelessness - Fragmentation and Overlap in Programs Highlight the Need to Identify, Assess, and Reduce Inefficiencies*, GAO-12-491 (Washington, D.C., May 2012).

IV. Program Justification Changes

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Emergency Management Agency Disaster Relief Fund

I. Appropriation Overview

A. Mission Statement for Disaster Relief Fund:

The Disaster Relief Fund (DRF) is the appropriation FEMA uses to direct, coordinate, manage, and fund eligible response and recovery efforts associated with domestic major disasters and emergencies that overwhelm State and tribal resources pursuant to the Robert T. Stafford Disaster Relief and Emergency Assistance Act. Through the DRF, FEMA can fund authorized Federal disaster support activities as well as eligible State, territorial, tribal, and local actions, such as providing emergency protection and debris removal. The DRF also funds:

- The repair and rebuilding of qualifying disaster-damaged infrastructure
- Eligible hazard mitigation initiatives
- Financial assistance to eligible disaster survivors
- Fire Management Assistance Grants for qualifying large wildfires

B. Budget Activities:

Major disasters and emergencies may be the result of disasters of all kinds and are declared by the President, typically in response to gubernatorial or tribal requests for assistance. States and Tribes request Federal assistance to supplement their available resources and to certify that a given disaster is beyond their capacity or capability to respond. The DRF also supports fire management assistance activities for the mitigation, management, and control of fires on public and private lands.

FEMA coordinates three major disaster assistance programs:

- Federal Assistance to Individuals and Households
- Public Assistance
- Hazard Mitigation assistance

Non-declaration specific readiness and support activities also are funded under the DRF. These activities provide indirect support across FEMA (and to our Federal partners) and are managed separately as Disaster Readiness and Support activities.

In order to provide greater transparency and specificity in this budget request, FEMA has provided detailed supporting information. The anticipated obligations detailed herein are not intended to be programs, projects or activities (i.e. they are not, in of themselves, elements within the budget account) and, consequently, deviating from those estimates in budget execution would not constitute a reprogramming. Programs, projects and activities are detailed in supporting table II "Summary of FY 2016 Budget Estimates by Program/Project Activity (PPA).

C. Budget Request Summary:

FEMA requests \$7.374 billion, 55 temporary full-time positions, and 7,134 FTEs for the Disaster Relief Fund in FY 2016. This includes \$661,740,300 for base/non-major disaster activities, including Disaster Readiness and Support (DRS) activities of \$342,000,000, a transfer of \$24,000,000 to DHS Office of Inspector General, and \$6,712,953,000 for major disasters declared pursuant to the Stafford Act and designated by the Congress as being for disaster relief pursuant to section 251(b) (2) (D) of the Balanced Budget and Emergency Deficit Control Act of 1985 (BBEDCA), as amended by the Budget Control Act of 2011 (BCA).

The DRF request is projected to support estimated requirements for all past declared catastrophic events (where expected Federal obligations exceed \$500 million) and the 10-year average obligation level for non-catastrophic disaster activity (where Federal obligations were under \$500 million). Additionally, FEMA also considers estimated prior year recoveries, available carryover funds, and disaster reserve requirements when formulating the request.

III. Current Services Program Description by PPA

**Department of Homeland Security
Federal Emergency Management Agency
Disaster Relief Fund
Program Performance Justification
(Dollars in Thousands)**

PPA: Disaster Relief Fund

	Perm. Pos.	FTE	Amount
FY 2014 Revised Enacted	55	4,893	\$6,220,908
FY 2015 President's Budget	55	7,134	\$7,033,465
2016 Adjustments-to-Base	-	-	\$339,328
FY 2016 Current Services	55	7,134	\$7,372,793
FY 2016 Program Change	-	-	\$1,900
FY 2016 Total Request	55	7,134	\$7,374,693
Total Change 2015 to 2016	-	-	\$341,228

Note: The 55 positions reflected above are FEMA's cadre of temporary full-time Federal Coordinating Officers (FCO) and Federal Disaster Recovery Coordinators (FDRCs). The bulk of the FTE reflected herein is made up of Disaster Reservists and Cadre of On-call Response Employees (CORE), primarily deployed for specific disasters.

The FY 2014 Enacted rescinded \$300.5 million in unobligated prior year balances in the "Base" DRF. The FY 2015 and FY 2016 Budgets similarly proposes to cancel \$200 million and \$250 million respectively in the same manner.

FEMA requests \$7.4 billion for the DRF in FY 2016, of which \$662 million is for base/non-major disaster activities Emergency, Fire Management Assistant Grants (FMAG), Surge and Disaster Readiness Support (DRS) and \$6.7 billion for major disasters declared pursuant to the Stafford Act and designated by the Congress as being for disaster relief pursuant to section 251(b)(2)(D) of the BBEDCA, as amended by the BCA. The DRF request for disaster relief cap adjustment funding is projected to support estimated requirements for all past declared catastrophic events (where expected Federal obligations exceed \$500 million) and the 10-year average obligation level for non-catastrophic disaster activity (where Federal obligations were under \$500 million). The DRF base/non-major request is projected to support the 10-year average obligation level for pre-disaster surge, FMAG, and Emergency activities together with \$342 million in spending for DRS activities. Additionally, estimated prior year recoveries and carryover funds are factored into formulating the request.

The FY 2016 request for the DRF includes the following:

- Increase of \$3.0 million for the 2016 pay increase;
- Increase of \$1.7 million for annualization of 2015 pay raise;
- Increase of \$1.9 million for the Grants System Modernization in the DRS; and
- Increase of \$341 million for the 10-year average adjustment obligation level.

CURRENT SERVICES PROGRAM DESCRIPTION:

Disaster Relief Fund			
	FY 2014 Revised Enacted	FY 2015 President Budget	FY 2016 President Request
Disaster Relief Cap:	6,220,908,000	6,438,000,000	6,712,953,000
Base/Non-Majors:	594,522,000	596,000,000	661,740,000
*Recoveries:	1,138,605,000	750,000,000	750,000,000
Adjustments/Transfer:	(592,122,000)	(224,000,000)	(274,000,000)
<i>of which IG Transfer</i>	(24,000,000)	(24,000,000)	(24,000,000)
<i>of which Transfer</i>	(267,600,000)	-	-
<i>of which Rescission</i>	(300,522,000)	(200,000,000)	(250,000,000)
Total:	7,361,913,000	7,560,000,000	7,850,693,000

Note:

FY 2014 Actual Recoveries of \$1.1B; FY15/16 Recoveries - anticipated at \$750M

The Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act), 42 U.S.C. 5121-5207 (P.L. 93-288, as amended), authorizes the President to provide Federal assistance to supplement State, local, tribal and territorial disaster response, recovery, readiness, and mitigation efforts. Under Section 504 of the Homeland Security Act, as amended, FEMA’s Administrator has been delegated the responsibility for administering the Stafford Act’s Federal assistance programs. The DRF provides funding for the following Stafford Act declarations or activities: (1) major disaster; (2) emergency; (3) fire management assistance; (4) pre-declaration surge; and (5) Disaster Readiness and Support (DRS).

By amending the BBEDCA, the BCA necessitated a new approach to accounting for disaster-related activity. Essentially, requests for DRF funding for FEMA’s Stafford Act programs and disaster support activities fall into two categories: (1) disaster relief cap adjustment; and (2) base/non-major disasters. Funding requested under the disaster relief cap adjustment is for major disasters declared pursuant to the Stafford Act and designated by the Congress as being for disaster relief pursuant to section 251(b)(2)(D) of the BBEDCA, as amended by the BCA. Funding requested under the base/non-major disasters category includes activities that are non-disaster specific, such as Emergencies, Pre-disaster Surge Support, and Fire Management Assistance Grants, Disaster Readiness Support (DRS) activities (e.g., distribution centers, reservist training, etc.). The funding level required for the catastrophic category (events with a total projected Federal cost in excess of \$500 million) is based on FEMA expenditure plans for all past declared catastrophic events.

The FY 2016 request includes no funds for new catastrophic events that may occur in 2016. The request assumes that new catastrophic events in 2016 will be funded with emergency supplemental funds as provided for in the BCA/BBEDCA. The non-catastrophic funding level is based on an approach that uses the 10-year average for non-catastrophic events in order to normalize the effects of outlier years and provide a more accurate projection of non-catastrophic needs. The chart below depicts the FY 2016 requirement for Catastrophic/Non-catastrophic events.

(Dollars in millions)	
DRF Need in 2016	7,375
Catastrophic	3,224
Non-catastrophic	3,901
Reserve	1,000
Estimated Recoveries	(750)
Breakdown per BCA	7,375
Disaster Relief Cap Adjustment	6,713
Base/Non-Major Disasters	662

The above figures are gross and do not include the proposed \$250 million cancellation to the "Base" of prior year unobligated balances, nor \$24 million transfer to DHS OIG.

The \$750 million in recoveries represents an estimate of the amount that FEMA will de-obligate and recover from unused prior year obligations. Starting in FY 2013, FEMA undertook an effort to improve the efficiency of the disaster closeout process. This effort streamlined the closeout process by issuing and enforcing standard closeout policies, procedures, and metrics. FEMA has aggressively recovered funds since implementing the streamlined process and will continue to do so in FY 2016.

Given the uncertainties associated with projecting disaster activity, the DRF request for FY 2016 includes a \$1 billion reserve to ensure solvency at year-end as we approach the most active months of hurricane season. The amount provided via the BCA disaster relief cap adjustment may only be obligated on declared major disasters.

Year in Summary

In FY 2014 FEMA supported 48 major disaster declarations and six emergency declarations. In response, the National Response Coordination Center (NRCC) was activated for five major incidents totaling of 34 days of operations. The NRCC was activated for nine other incidents for a total of 117 days of Enhanced Watch operations. These incidents included major responses to flooding and mudslides in Washington, ice-jams and flooding in Montana, and flooding in Alaska.

FEMA obligated over \$5.4 billion for Public Assistance including reimbursement to clear debris and rebuild roads, schools, libraries, and other public facilities. Additionally, \$84 million in Individual Assistance (IA) services were provided to 160,101 applicants, including housing, crisis counseling, legal services, disaster case management, and unemployment assistance, as well as other services. FEMA provided housing assistance to disaster survivors in 4.3 days on average and improved that to 3.6 days by the end of the year.

1. Illinois – Severe Storms

On November 26, 2013, the President declared a major disaster in the State of Illinois and ordered Federal aid to supplement State and local recovery efforts in the areas affected by November 17, 2013 severe storms, straight-line winds, and flooding.

Federal funding was made available to affected individuals in Champaign, Douglas, Fayette, Grundy, Jasper, La Salle, Massac, Pope, Tazewell, Vermilion, Wabash, Washington, Wayne, Will, and Woodford counties. Assistance can include grants for temporary housing and home repairs, low-cost loans to cover uninsured property losses, and other programs to help individuals and business owners recover from the effects of the disaster. Federal disaster assistance to Illinois tornado survivors has surpassed \$21 million. FEMA's Individual Assistance Program has approved more than \$2.5 million in grants to Illinois homeowners and renters for home repairs, rental assistance and grants to replace lost personal items. Federal funding is also available on a cost-sharing basis for hazard mitigation measures statewide.

2. Washington – Flooding and Mudslides

On April 2, 2014, the President declared a major disaster in the State of Washington and ordered Federal aid to supplement State and local recovery efforts in the areas affected by the flooding and mudslides during the period of March 22 to April 29, 2014. Federal funding was made available in Snohomish County including the lands associated with the Sauk-Suiattle, Stillaguamish, and Tulalip Tribes.

A look back at Super-storm Sandy Response

Debris Removal - In response to Super-storm Sandy, which affected 23 states on the eastern seaboard in October 2012, FEMA supported the removal of more than 15 million cubic yards of debris, providing access to heavily impacted areas for important response and recovery activities. 95-percent of the debris from Sandy was removed within the first 100 days of the storm's landfall. The debris included fallen trees, vehicles, boats, drywall and furniture, washers, dryers, and insulation. FEMA has approved more than 2,400 projects, totaling over \$1 billion, to help remove storm debris in affected states.

Super-storm Sandy Recovery as of January 5, 2015

The following provides highlights related to the Sandy recovery efforts:

- More than \$1.4 billion in assistance to more than 182,000 disaster survivors*
- More than \$7.7 billion in assistance to State, local and tribal governments for emergency protective measures, debris removal, and repair and replacement of infrastructure in the hardest hit areas
- More than \$529 million in Hazard Mitigation grants to implement long-term mitigation measures to minimize or prevent future damages
- More than \$2.4 billion in low-interest loans through the Small Business Administration (SBA) to individuals and businesses

- More than \$28 million in Disaster Unemployment Assistance to disaster survivors
- More than \$50 million in Disaster Case Management to connect disaster survivors to resources and services of multiple agencies

** Represents approved FEMA Individual Assistance grant funding for disaster survivors in Connecticut, Maryland, New Jersey, New York and Rhode Island.*

DISASTER RELIEF CAP ADJUSTMENT ACTIVITIES

Individual Assistance (IA), Public Assistance (PA), and the Hazard Mitigation Grant Program (HMGP) programs are managed and administered by the Recovery and Mitigation Directorates within FEMA and are FEMA's primary Direct Disaster programs. These activities fall under the cap adjustment allowance.

These programs constitute the majority of the resources provided by the Federal Government (through FEMA) to directly address the short-, medium-, and long-term impacts of a disaster on individuals and communities. Disaster assistance under the authorities of the Stafford Act can be provided to States (and further provided to local or tribal governments), the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, the Commonwealth of the Northern Mariana Islands, and Tribes.

Individual Assistance

The DRF provides funding for the following IA Programs:

Individual and Households Programs – 100-percent federally funded

- Temporary housing (rent and lodging expense): Funding is provided to rent alternate housing or a temporary housing unit when rental properties are not available.
- Repair: Funding is provided for homeowners to repair damage (to their primary residence) from the disaster that is not covered by insurance. A flood insurance purchase and maintenance requirement may be placed on the home if the home is in a Special Flood Hazard Area. Repair assistance is intended to repair the home to a safe, sanitary, and functional living condition.
- Replacement: Funds are made available to homeowners to assist with the replacement of a destroyed primary residence that is not covered by insurance. The goal is to help the homeowners with the cost of replacing their destroyed homes.
- Permanent Housing Construction: Funds are made available for the construction of a home, or FEMA will provide direct assistance with the construction. This type of assistance only occurs in insular areas or remote locations specified by FEMA, where no other type of housing assistance is possible, or where other temporary housing options are unavailable or infeasible. Construction shall follow current minimal local building codes and standards (where they exist), or minimal acceptable construction industry standards in the area. Construction will aim toward average quality, size, and capacity, taking into consideration any unique needs (such as disability requirements) of the occupant.

Other Needs Assistance (ONA)

ONA is available for necessary expenses and serious needs of survivors of the declared disaster. Assistance provided by the ONA program is cost-shared between FEMA (75-percent) and the State (25-percent). Assistance is provided to individuals contingent on their ability or inability to secure a loan from the U.S. Small Business Administration (SBA). If SBA determines that an applicant cannot afford a loan, SBA automatically will refer the applicant to the ONA program for assistance.

ONA can be provided for disaster-related serious needs in five categories:

- **Repair or Replacement of Personal Property:**
 - Clothing;
 - Household items (i.e., home furnishings, appliances);
 - Specialized tools or job-related protective clothing and equipment;
 - Educational materials (i.e., books); and
 - Cleaning supplies (i.e., wet/dry vacuum, air purifier, dehumidifier).
- **Transportation:** Repair or replacement of a vehicle that is deemed unusable due to disaster-related damage.
- **Medical and Dental Expenses:** Medical treatment or the purchase of medical equipment required due to physical injuries resulting from a disaster.
- **Funeral and Burial Expenses:** Funeral services, burial, or cremation and other funeral expenses related to a death caused by the disaster.
- **Other Items:** The State and FEMA can agree to pay for specific disaster-related costs that are not listed above. Some examples are generators, moving and storage expenses, and the cost of a National Flood Insurance Program Group Flood Insurance Certificate.

Crisis Counseling Assistance and Training Program

The Crisis Counseling Program, which is 100-percent federally funded, supports short-term interventions with individuals and groups experiencing psychological effects resulting from large-scale disasters. These interventions involve the counseling goals of assisting disaster survivors in understanding their current situation and reactions, mitigating additional stress, assisting survivors in reviewing their options, promoting the use or developments of coping strategies, providing emotional support, and encouraging linkages with other individuals and agencies that may help survivors recover to their pre-disaster level of functioning. Supplemental funding for crisis counseling is available to State mental health authorities through two grant mechanisms: (1) the Immediate Services Program; and (2) the Regular Services Program, which provide funds for up to nine months following a major disaster declaration. Grantees can apply for both programs if they choose to do so.

Substance Abuse and Mental Health Services Administration (SAMHSA) provides technical assistance for FEMA's Crisis Counseling Program (CCP) under an Interagency Agreement (IAA) with FEMA. FEMA HQ, Regions and Joint Field Office (JFO) staff work together with SAMHSA to award and monitor CCP grants to Grantees (States or Tribes) who apply and who are approved for the CCP.

Disaster Unemployment Assistance (DUA)

Through the Disaster Unemployment Assistance Program (DUA), FEMA provides unemployment benefits to disaster survivors who lose their job as a direct result of a disaster and who are ineligible to receive regular unemployment insurance compensation (UI) from their employer. FEMA delegates the administration of this program to the Department of Labor (DOL) and funds the program through an IAA with DOL. FEMA obligates the money for the program to DOL and DOL acts as a pass-through to the States, who draw down the funds from DOL in order to administer benefits to eligible survivors.

Legal Services

Legal services, which is 100-percent federally funded, may be provided to low-income individuals unable to secure such services adequate to meet their needs as a consequence of a major disaster.

Disaster Case Management Program

This program, which is 100-percent federally funded, provides case management services, including financial assistance, to States, local government agencies, and qualified private organizations.

Public Assistance (PA)

The PA program offers assistance to State, local, and tribal governments after a declared major disaster or emergency for eligible disaster-related damage. In addition, certain private non-profit organizations that operate eligible facilities and provide services to the public that are typically provided by a government agency may receive public assistance. PA is a cost-shared grant program. The Federal share of assistance is not less than 75% of the eligible cost for emergency measures and permanent restoration. The grantee (usually the State) determines how the non-Federal share (up to 25%) is split with the subgrantees, which may include state and local governments, private non-profit organizations and recognized Tribal governments and organizations. However, States may request, and the President may grant, a higher Federal cost share, pursuant to FEMA regulations, in situations in which the disaster has had a significant economic impact on the State.

PA provides funding to grantees for the repair and restoration of damaged public and eligible private nonprofit facilities, for emergency measures taken to protect lives and property, and in support of disaster-related debris removal. When PA is authorized, such assistance may be provided under one or more of the following seven categories:

- Category A – Debris Removal;
- Category B – Emergency Protective Measures;
- Category C – Repair of Roads and Bridges;
- Category D – Water Control Facilities;
- Category E – Public Buildings;
- Category F -- Public Utilities; and
- Category G – Other Facilities.

Alternative Procedures (Section 428)

The Sandy Recovery Improvement Act of 2013 amends the Stafford Act to authorize alternative procedures for the Public Assistance Program. It also authorizes FEMA to implement the alternative procedures through a pilot program. Based on the evaluation of the pilot, FEMA may elect to discontinue the program, extend the pilot for an additional performance period, or issue regulations that would institute the program changes authorized by the law. If successful, the new authorities will enable FEMA to reduce costs, expedite assistance, provide incentives for timely completion of projects, and increase flexibility for applicants so they can best meet their post-disaster recovery needs. The pilot allows FEMA to implement and evaluate the following alternative procedures for permanent work subgrants:

- Subgrants Based on Fixed Estimates (required for participation)
- FEMA Validation of Subgrantee-Provided Cost Estimates
- Referral of Cost Estimates to an Expert Panel (subgrants with a Federal share of \$5 million or greater)
- Consolidation of Multiple Fixed Subgrants into a Single Subgrant
- Elimination of the Alternate Project Penalty (for in-lieu contributions)
- Use of Excess Funds for Allowable Activities

An applicant's decision to use the alternative procedures is voluntary. If the applicant does not elect to use the alternative procedures, PA's standard program procedures will be in effect.

Hazard Mitigation Grant Program (HMGP)

HMGP provides State, local, and tribal governments with cost-shared grants (75-percent Federal, 25-percent non-Federal) to reduce the risk of potential damage, hardship, loss, and suffering in an area affected by a major disaster. Ultimately, HMGP reduces future need for Federal disaster assistance by reducing the impact of and increasing the resistance to natural hazards.

HMGP funding is made available to States based on 15-percent of the total Federal funds spent in the PA and IA programs (minus administrative expenses) for each major disaster costing up to \$2 billion; 10-percent for disasters between \$2 billion and \$10 billion; and 7.5-percent for major disasters between \$10 billion and not more than \$35.3 billion.

HMGP projects vary and may include retrofitting structures to resist flooding, winds, and earthquakes; elevating structures above base flood levels; property acquisition and demolition or relocation for open space; and minor flood reduction and drainage measures.

In 2005, the Multi-hazard Mitigation Council, a part of the National Institute of Building Sciences, published a report that analyzed the overall impact of FEMA's Hazard Mitigation Programs. The findings show that, on average, a dollar spent on hazard mitigation activities will save the Nation approximately four dollars in future payouts for damage caused by natural hazards.

Compacts of Free Association

The DRF provides funding for disaster relief and reconstruction activities in the Federated States of Micronesia and the Republic of the Marshall Islands pursuant to the Compacts of Free Association. This funding is provided through a direct transfer of DRF funds to the United States Agency for International Development.

BASE/NON-MAJOR DISASTERS ACTIVITIES

Disaster Relief Fund - Base Funding Estimates				
	FY 2014 Revised Enacted	FY 2015 President Budget	FY 2016 President Request	Delta
*DRF Base/Non-Major:	594,522	595,672	661,740	66,068
Emergency/Fire Mgmt Assistance Grants/Surge:	449,000	422,000	424,100	2,100
Disaster Readiness and Support:	383,000	341,000	341,500	500
IG Transfer:	(24,000)	(24,000)	(24,000)	-
Recoveries Offset:	(237,478)	(167,328)	(103,860)	63,468

**Does not include proposed cancellation of \$200M in FY15 and \$250M in FY16 of "Base" resources.*

Estimate does not specifically include additional expenses that may be incurred due to new federal employee health benefits (FEHB) program eligibility for certain FEMA Stafford Act employees (those on temporary appointments and certain employees on seasonal and intermittent schedules). FEMA will work with the Congress to adjust DRS estimates should the agency be unable to absorb these costs within currently planned spending limits.

The above chart provides the DRF “Base” requirement for FY 2016 which includes the 10-year average for Emergency, FMAG, and Surge activities.

Emergency activities

FEMA provides assistance via an Emergency Declaration, which can be declared for any occasion or instance when the President determines federal assistance is needed. Emergency Declarations supplement State and local efforts in providing emergency services, such as the protection of lives, property, public health, and safety, or to lessen or avert the threat of a catastrophe in any part of the United States. The total amount of assistance provided for a single emergency may not exceed \$5 million.

Fire Management Assistance

FEMA provides assistance for the mitigation, management, and control of any fires burning on publicly or privately owned forest or grasslands that threatens such destruction that would constitute a major disaster. Items eligible for funding under the Fire Management Assistance Grant Program include equipment and supplies, labor costs, emergency work, pre-positioning of resources, and temporary repair of damage caused by work directly related to firefighting activities associated with the declared fire.

Pre-declaration surge activities

FEMA has limited authority to assess the impact of an event through PDAs and to prepare and pre-position Federal resources for a present event for which a declaration is reasonably likely and imminent. Prior to a declaration, the FEMA may expend funds to ensure its ability to carry out effectively its authority under Titles IV and V of the Stafford Act.

Pre-declaration surge activities (“Surge”) include costs necessary to assess an incident to determine whether to recommend an emergency or major disaster declaration and to undertake such activities as are necessary to prepare and pre-position federal resources necessary for an effective response to a present event where a declaration is reasonably likely and imminent.

Disaster Readiness and Support (DRS) Programs

DRS funding was established to ensure FEMA’s general steady-state effectiveness and readiness. It enables FEMA to be more proactive and advance a robust readiness posture to respond to large-scale, complex, presidentially declared major disasters instead of waiting for disasters to occur and reacting with more costly and less efficient response actions.

FEMA manages DRS costs throughout the year. These expenses are essential for: (1) timely disaster response; (2) responsive customer service; and (3) cost-effective program oversight and delivery. DRS funds key activities and initiatives, such as:

- Strategic pre-positioning and management of disaster commodities
- Improved inventory of specialized assets
- Standby support to enable FEMA to increase response and recovery capacity as quickly as needed

DRS activities support FEMA’s all-hazards mission. They include initiatives and resources formerly funded from the DRF’s legacy disaster support activities and readiness contracts. Many of these costs are predictable on an annual basis and allow FEMA to support a cross-section of disasters utilizing an infrastructure of processing and distribution centers and information technology systems. In addition, the DRS include certain costs to help FEMA pre-position for disasters, including the establishment of large commodity and transportation service contracts that can be activated in the event of a major disaster.

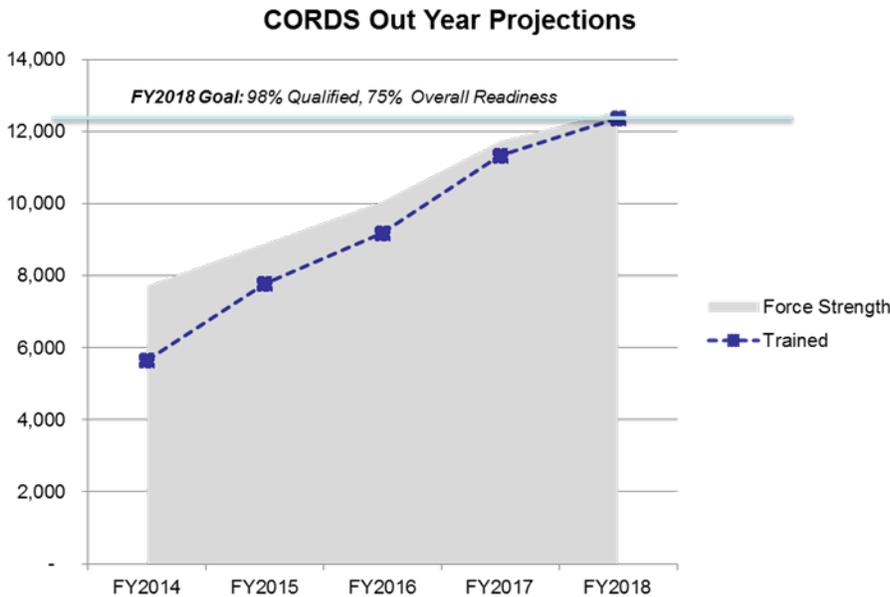

These efforts (including better communications, a more effective intake process, more efficient delivery systems for disaster commodities, and improved oversight of disaster aid through our technical assistance contractors) will continue to improve the quality of FEMA support to disaster survivors.

FEMA has increased transparency and budgetary discipline of the DRS through the implementation of detailed spend plans and program reviews. As a result, FEMA is better equipped to maintain its critical disaster support activities and infrastructure; and ensure the timely delivery of disaster assistance.

The DRS structure supports the Cadre Operational Readiness & Deployability Status (CORDS) structure. The CORDS Report provides FEMA leadership with an objective readiness report that demonstrates Cadre preparedness across staffing, equipping, and training metrics.

To ensure sound resource management and maximize readiness at the lowest cost to taxpayers, FEMA is currently developing a methodology for tracking incident workforce cadre readiness and standardizing costs across the incident workforce. This initiative will allow FEMA to link the DRS budget request to its efforts to maximize cadre readiness. The Cadre Operational Readiness and

Deployment Status (CORDS) Report will measure FEMA’s current state of readiness and will assist in determining future resource needs in order to improve FEMA’s readiness posture. FEMA’s FY 2016 DRS estimate supports progress toward our FY 2018 CORDS goal as displayed below.

Reflected in the chart below is a maturing approach, future versions will include metrics that tie back to the CORDS readiness assessment or other cost drivers. FEMA also make seek to revise the categorization of DRS activities given stakeholder feedback, lessons learned, and engagement with the Congress. The following are the categories within the DRS, with the first two categories most closely tied to achieving CORDS outyear goals:

- **Category 1: Disaster Staffing** - Costs associated with disaster staff where these salary and benefits (S&B) costs cannot be directly charged to a specific declared major disaster/DR. FEMA needs a prepared, ready and qualified workforce to prepare and respond to disasters, but we cannot wait for an actual declaration or the release of associated DRF funding before hiring and training disaster personnel, especially given the uncertain nature, size, and frequency of disasters. Disaster staff categories include: Incident Management Cadre of On-Call Response/Recovery Employment (CORE), FEMA Corps, Federal Coordination Officers/Federal Disaster Recovery Coordinators, and Disaster Reservists
- **Category 2: Disaster Staffing Readiness** - Costs associated with ensuring all disaster staff are ready to fully execute their roles and responsibilities, including training, equipment, and security processing required to meet FEMA Qualifying Standard (FQS) standards.
- **Category 3: Infrastructure Support** – Costs associated with the necessary infrastructure to support spending in the other categories, including information technology, telecommunications, and facility support (including necessary capital improvements).

- **Category 4: Stockpiling Delivery** - Costs associated with stockpiling of supplies and disaster-related equipment and the operation of associated delivery systems (e.g., the Inventory Management and Tracking and Logistics Supply Chain Management (LSCMS) systems).
- **Category 5: Stand-by Technical Assistance** - Costs associated with necessary stand-by technical assistance readiness contracts in support of PA and IA (e.g., Housing Inspectors)

CORDS Structure Budget Crosswalk

CAPABILITY	FY 2014 DRS Spend Plan	FY 2015 DRS Estimated Request	FY 2016 DRS Estimate	Delta (FY16-FY15)
Disaster Staffing Total	\$ 50,932,382	\$ 49,897,333	\$ 52,849,926	\$ 2,952,593
Disaster Staffing Readiness Total	\$ 49,535,545	\$ 50,225,232	\$ 54,911,813	\$ 4,686,581
Infrastructure Support Total	\$ 158,300,057	\$ 157,485,844	\$ 156,282,087	\$ (1,203,757)
Stockpiling Delivery Total	\$ 47,073,388	\$ 46,493,000	\$ 39,193,000	\$ (7,300,000)
Stand-by Technical Assistance Total	\$ 35,322,842	\$ 36,916,265	\$ 38,266,776	\$ 1,350,511
Grand Total	\$ 341,164,213	\$ 341,017,674	\$ 341,503,602	\$ 485,928

The FY 2016 request for the DRS includes the following:

- Increase of \$1.9 million for the Grants System Modernization in the DRS, which is the beginning of a multi-year effort;
- Increase of \$1.6 million for the maintenance and operations of the Training Center Facility for Incident Workforce, which will continue into the outyears;
- Increase of \$3.5 million for Incident Management Assistance Teams (IMAT) and IM COREs, which will continue into the outyears;
- Increase of \$3.9 million for background investigation for disaster personnel, which will continue into the outyears;
- Decrease of \$6.4 million for the Moffett Distribution Center renovation completed in FY 2015;
- Decrease of \$2.7 million for centrally managed cost; and
- Decrease of \$1.3 million for the Disaster Housing Program

Programs are assumed to continue into the outyears unless otherwise noted.

Budget estimates for the DRS do not specifically include additional expenses that may be incurred due to new federal employee health benefits (FEHB) program eligibility for certain FEMA Stafford Act employees (those on temporary appointments and certain employees on seasonal and intermittent schedules). FEMA will work with the Congress to adjust DRS estimates should the agency be unable to absorb these costs within currently planned spending limits.

Much of the variability in this plan year-to-year is driven by the continued maturation of the incident workforce, such as costs related to FEMA Corps, the Reservist management program, the FQS program, IM CORE, and support items related to the incident workforce (such as hiring costs, background investigations and other workforce-related expenses). Additionally, DRS spending on many incident workforce activities is affected by the severity of annual disasters. Typically, the more active the disaster season the more these costs shift to the Major Disaster portion of the DRF. Conversely, a less active disaster season results in greater obligations in the DRS spend plan.

FEMA intends to submit a detailed FY 2016 DRS spend plan as annually mandated by law.

Disaster Staffing activities:

FEMA estimates Disaster Staffing activities will total \$52.8 million in FY 2016 in support of the following offices and programs, among others:

FEMA Corps Program (\$27.1 million estimated for FY 2016) is a partnership between FEMA and the Corporation for National and Community Service (CNCS), which establishes an AmeriCorps component within FEMA to support the whole community approach to disaster management operations and emergency preparedness activities. The partnership leverages CNCS infrastructure, training programs, community-based experience and devoted members to provide a reliable, full-time, energized and motivated staff within FEMA disaster management operations and emergency preparedness activities. The Program strengthens the Nation's capability to prepare for, respond to and recover from disasters, promote an ethos of community and national service by focusing on community engagement, and increase the depth, reliability, diversity and stability of the FEMA disaster workforce.

National Incident Management Assistance Teams (IMATs) (\$11.1 million estimated for FY 2016) provide the initial National rapid response to major incidents, disasters, special events, and exercises. The primary mission of the National IMATs is to deploy rapidly to an incident or threatened area, State, or FEMA region to work with affected States to identify and satisfy initial requirements for Federal assistance. IMATs coordinate and integrate inter-jurisdictional response in support of affected States or U.S. territories. Additionally, IMATs specialize in management and assistance for chemical, biological, radiological, nuclear, and explosives (CBRNE) incidents. National IMATs provide initial situational awareness for Federal decision-makers, and support the initial establishment of a unified command.

Office of the Federal Disaster Coordinating Officer (OFDC) (\$5.9 million estimated for FY 2016): The Office of Federal Disaster Coordination (OFDC) is responsible for hiring, training, equipping, managing and evaluating FEMA's Federal Coordinating Officers (FCO), Federal Disaster Recovery Coordinators (FDRC) and their respective supporting cadres. OFDC ensures their availability for rapid deployment in response to any disaster; develops and delivers training to establish and sustain FCO and FDRC cadres professional competencies; coordinates FCO and FDRC assignments to meet the on-scene needs of FEMA and its emergency management partners. In the event of a Presidential disaster declaration, a Federal Coordinating Officer (FCO) is designated by name in the President's letter. OFDC ensures disaster leadership is established in a timely manner and Stafford Act provisions are in place, resulting in critical support of States and Tribes in responding to and recovering from a disaster. OFDC is also responsible for assuring FCOs and FDRCs make full use of federal and non-federal resources, and manage operations in a consistent manner to ensure equitable services are provided to all citizens and organizations impacted by disaster. Additionally, OFDC is responsible for leading the implementation, coordination and other activities associated with the National Disaster Recovery Framework (NDRF) and the Federal Interagency Operations Plan (FIOP) for Recovery.

Disaster Staffing Readiness activities:

Disaster Staffing Readiness activities are estimated to total \$54.9 million in FY 2016 in support of the following offices and programs, among others:

FEMA Qualifications System (FQS) Program (\$18.6 million estimated for FY 2016) works to establish the system for qualification and certification of the FEMA workforce through experience, training, and demonstrated performance; ensures a qualified workforce based on performance standards; establishes minimum, consistent, and fair qualification requirements for all workforce positions regardless of employment status; and works to strengthen the training and qualification standards for all workforce positions by implementing improvements based on analysis.

Background Investigations for Stafford Act Employees (\$9.1 million estimated for FY 2016) provides for the mandatory background and periodic investigations required by Office of Personnel Management (OPM) regulations.

Reservist Management Program (\$8.6 million estimated for FY 2016) provides the communication, coordination, and outreach of workforce procedures and program guidance to the National and regional cadre managers and liaisons on workforce deployment, readiness, and the FQS. The Program works to develop a Federal response capability that, when necessary and appropriate, can act effectively and rapidly to deliver assistance essential to saving lives or protecting or preserving property or public health and safety in a natural disaster, act of terrorism, or other man-made disaster.

National Evacuation Support (\$6 million estimated for FY 2016) provides FEMA with the ability to plan, execute, and exercise multi-modal evacuation capability in the event of catastrophic disasters. Program activities address evacuation capabilities by motor coach, rail, air, and ambulance. The program consists of an ambulance contract, which provides for the evacuation of medical/mobility challenged persons; motor coach planning and operational support contract, which provides detailed and robust pre-event bus evacuation planning efforts in support of States; air evacuation ground support contract, which provides airfield assessments and operational planning to pre-identified airfield evacuation points; provides ground and passenger support services during a disaster; and air transportation support services contract, which provides turnkey air support in the event of a disaster (both evacuation and non-evacuation). Together, the program provides the full-spectrum (planning, readiness, execution) support to States requiring Federal assistance to evacuate all populations in threatened areas.

Deployment Program and the Deployment Tracking System (DTS) (\$3.1 million estimated for FY 2016) provides FEMA the means to manage, implement and improve standardized deployment processes for all-hazards response and to provide oversight of deployment including the tracking of personnel during pre-event (availability), event (deployment), and post event (de-mobilization) cycles of an incident. The DTS was developed to provide FEMA a framework for a robust, dynamic and interoperable deployment system. It will enable FEMA to more effectively identify and deploy responders to disaster locations and training locations. DTS will also enhance communication and collaboration between responders and their chain of command while providing interoperability to support teams and other responding organizations through the deployment process.

Federal Surge Capacity Force Program (\$0.6 million estimated for FY 2016) manages and coordinates all aspects of cadre and surge readiness and provides oversight for the surge and volunteer workforce programs within the Department. The staff coordinates directly with Departmental headquarters and component agencies on surge capacity force selection, training, exercises and readiness, and manage all facets of external surge capacity force training, requirement validation, and accountability of individual and cadre/surge readiness status.

Infrastructure Support activities:

Infrastructure Support activities are estimated to total \$156.2 million in FY 2016 in support of the following programs, among others:

Information Technology Support (\$42.7 million estimated for FY 2016) includes activities such as software support for NEMIS and other systems, enterprise license agreements, data center operations and maintenance, IT hardware solutions for network, video, teleconferencing, and provide enterprise-level services Geographic Information Systems.

GSA Rent (\$30.2 million estimated for FY 2016)

Registration Intake (\$17.6 million estimated for FY 2016) supports survivor registration via telephone and internet through the Disaster Assistance Improvement Program (DAIP) the Advanced Call Center Network (ACCN), and activities under the Contact Center Capability Modernization Program (C3MP).

Mount Weather and Department of Homeland Security Working Capital Fund (WCF) payments (\$17.2 million estimated for FY 2016)

National Warning System (NAWAS)/Washington Area Warning System (WAWAS) (\$6 million estimated for FY 2016): NAWAS is a 24-hour continuous private line telephone system used to convey warnings to Federal, State and local governments as well as the military and civilian populations.

Communication Integration (\$3 million estimated for FY 2016) supports integrated Federal communications support to emergency responders at all levels of government. The program helps assess emergency communications capabilities within respective FEMA regions, facilitates disaster preparedness through the promotion of multi-jurisdictional and multi-agency emergency communications networks, and ensures that activities are coordinated with all emergency communications stakeholders within the FEMA regions.

Stockpiling Delivery activities:

Stockpiling Delivery activities are estimated to total \$39.2 million in FY 2016 in support of the following programs, among others:

Logistics Supply Chain Management System (LSCMS) (\$22 million estimated for FY 2016): LSCMS manages the supply chain process including initial request for assets and commodities, orders

to FEMA and partners, transportation, inventory management at FEMA locations, shipment and receipt by the States. LSCMS provides situational awareness and in-transit visibility through reporting and geospatial information system (GIS) mapping capabilities.

Logistics Equipment Readiness Program (\$5.5 million estimated for FY 2016) supports the preventive maintenance and services for generators at FEMA's distribution centers (DCs).

Disaster Housing Program (\$5.3 million estimated for FY 2016) involves the acquisition, transport, placement, maintenance, and deactivation of housing units for use by disaster survivors. It also includes program management costs including travel to support readiness, rents/leases/utilities for two enduring sites, work force, facilities maintenance, telecommunication expenses, contract services and other costs.

Warehouse Inventory and Storage Program (previously "Distribution Centers") (\$4.5 million estimated for FY 2016) supports an inventory of life saving and life sustaining commodities and equipment that will be needed in a disaster. These goods are currently warehoused at nine distribution centers: six in the continental United States and an additional three in Guam, Hawaii and Puerto Rico. Most of the distribution centers store commonly needed disaster resources such as cots, blankets, emergency meals, bottled water, emergency generators, hygiene kits, plastic sheeting (roofing), and tarps. The centers also provide the critical equipment needed to outfit the Joint Field Offices (JFOs) which direct operations in support of disaster survivors and the impacted states and communities.

Mobile Communications Office Vehicles (MCOV) Program (\$1.8 million estimated for FY 2016) includes vehicles that are multi-purpose central office facilities activated to support FEMA response and recovery disaster missions. The thirty-nine foot long recreational vehicles have been modified and retrofitted with eight to nine work stations and satellite communications to provide voice and data connectivity into the FEMA network. During initial deployment, MCOVs are driven by Federal team requirements, to include support to Logistics Incident Support Bases (ISBs). MCOVs provide a seamless transition from response to recovery using reliable mobile communications platforms to provide incident response support to the public.

Stand-by Technical Assistance activities:

Stand-by Technical Assistance activities are estimated to total \$38.3 million in FY 2016 in support of the following programs, among others:

Damage Assessments & Validation Inspections (\$21.8 million estimated for FY 2016) Formerly Housing Inspection Services (HIS), Automated Construction Estimator (ACE), Individual Assistance (IA) Preliminary Damage Assessments (PDA), and Public Assistance (PA) PDA, these funds are used for operational preparedness for housing inspections, equipment and platform support for tablets used by damage assessors, and automated construction estimator applications and server hosting costs used to perform damage assessments. Includes security costs associated with these programs.

Individual Assistance (IA) Program Updates (\$6 million estimated for FY 2016) funds operations and maintenance and disaster support for IA programs such as for National Emergency Management Information System (NEMIS) IA, among others.

Public Assistance (PA) Technical Assistance Contract (TAC) (\$ 4 million estimated for FY 2016):

The PA TACs provide professional technical services in support of the Public Assistance Program such as architects, engineers, and other technically qualified professionals to evaluate damaged public facilities after Presidentially-declared major disasters. PA TACs work with FEMA and State and local officials on the development of a scope of work and cost estimate for the repair, replacement, or relocation of the facilities. Collected information is used to make eligibility determinations and process grants for public assistance applicants.

Major Acquisitions

FY 2014 Activity Funding (\$ thousands)	FY 2015 Activity Funding (\$ thousands)	FY 2016 Activity Request (\$ thousands)
22,360	21,500	22,000
Logistics Supply Chain Management System (LSCMS)	<p>The LSCMS Program, previously known as Total Asset Visibility (TAV), supports FEMA's mission of responding to all hazards expediently and efficiently by managing the nation's end-to-end supply chain of disaster assets and commodities. LSCMS addresses performance gaps identified in the Post Katrina Emergency Management Reform Act, SEC 636 LOGISTICS which identified the lack of efficient, transparent, and flexible logistics system for procurement and delivery of goods and services necessary for an effective and timely response to natural disasters, and Recommendation 38 from the President's report on Hurricane Katrina which identified the need to provide full disaster logistics supply chain visibility to FEMA and its partners.</p> <p>LSCMS addresses these gaps by providing automated systems for management of the end-to-end supply chain, and near real-time situational awareness and management information for FEMA, DHS, and other decision makers.</p>	
FY 2014 Activity Funding (\$ thousands)	FY 2015 Activity Funding (\$ thousands)	FY 2016 Activity Request (\$ thousands)
5,711	5,711	5,711
Disaster Management E-Government Initiative	<p>The role of the Disaster Management (DM) program is to offer innovative, effective, and efficient solutions to deliver information and services related to disasters for citizens and members of the Emergency Management community at the Federal, State, local, Tribal, and Territorial levels. The program focuses on achieving greater cost efficiencies, improving ease of access to key disaster preparedness and assistance information for the American public, and instituting an agency wide, web-centric culture for information sharing and collaboration. The DM Program supports the FEMA Public Web Strategy by ensuring the information relevant to disaster survivors, general public, and emergency management community is organized and presented in a manner that engages and improves the overall user experience. The DM Program supports the above through initiatives such as the Salesforce Customer Relations Management (CRM), FEMA Mobile App, Text Messaging functionality, and the Digital Imagery and Media On Demand application.</p>	

FY 2014 Activity Funding (\$thousands)	FY 2015 Activity Funding (\$thousands)	FY 2016 Activity Request (\$thousands)

FEMA – (WEB) Integrated Financial Management Information System (WebIFMIS)	The Integrated Financial Management Information System (IFMIS) is Federal Emergency Management Agency’s (FEMA) current core financial management system. The purpose of IFMIS is to maintain all of FEMA's financial data and be the source of financial data for both internal and external financial reporting. IFMIS receives data from other financial and mixed systems and from direct user input, and it provides data and supports processing for those systems that need it, including DHS and government-wide reporting systems. IFMIS supports a number of interfaces to disaster mission, payroll processing, travel management, credit card transaction, procurement and other accounting related information systems. Because IFMIS records all entries in the General Ledger, the entire enterprise is its key customers.

Supports the daily operations and maintenance of the FEMA telecommunications and computing network.	
FY 2014 Activity Funding (\$thousands)	FY 2015 Activity Funding (\$thousands)	FY 2016 Activity Request (\$thousands)
13,965	17,850	17,495
FEMA – (Contribution to) Disaster Assistance Improvement Plan (DAIP)	The Disaster Assistance Improvement Program (DAIP) was developed to meet the requirements of Executive Order 13411 which mandates the improvement of delivery of Federal disaster assistance. DAIP is a response to disaster victims' confusion and frustration with conflicting information and misdirected referrals as they sought disaster assistance from multiple Federal programs in the immediate aftermath of Hurricane Katrina. Executive Order 13411 mandates that DAIP ease the burden of victims by creating a single access point for federally-funded forms of assistance. DAIP consolidates benefit information, application intake, and status information into a unified system.	

IV. Program Justification Changes

**Department of Homeland Security
Federal Emergency Management Agency
Disaster Relief Fund
Justification of Program Changes**
(Dollars in Thousands)

Program Increase 1: Grants Systems Modernization
PPA:
Program Increase: Positions 0, FTE 0, Dollars \$1,900

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request

Current Services Level							-	-	
Program Increase							-	-	1,900
Total Request	-	-	-	-	-	-	-	-	1,900

Description of Item:

FEMA requests \$1.9 million for the Grants System Modernization within the DRF. An additional \$10.0 million is requested in the Salaries and Expenses appropriation.

FEMA's grants system modernization effort will transform the agency's current suite of aging, stove-piped, non-interoperable and technologically obsolete grants management systems into a modern, integrated financial and grants management enterprise architecture. The modernized system is envisioned as a set of loosely coupled, reusable components allowing the sharing of normalized grants data through application programming interfaces and includes business rules and process engines within a service bus layer to enable a single component to perform similar functions and avoid hard-coding business processes into a more legacy system implementation. The architecture also will include an application layer that allows programs to interface with their stakeholders in a way that best supports their mission. An additional \$10 million has been requested in the Salaries and Expenses appropriation to support this initiative as well.

Justification:

FEMA needs to re-engineer its grants management system to conduct effective and efficient grants management that meets communities' and survivors' needs. The current collections of grants management systems are not sufficiently scalable, adaptable, or robust for current and future reporting and analytical requirements.

FEMA currently has multiple non-interoperable grants management systems that are challenging to operate, costly to maintain, and unable to adapt to changing policies, business practices, and technology requirements. In addition, the multiple systems have unnecessarily complex data structures, redundant system interfaces/connections that are costly to maintain, and use out-of-circulation technology that is difficult to secure. As a result, changes to technology in FEMA and key strategic partners can have unintended negative consequences across the multiple grant management systems. Finally, the current data is not compliant with data.gov or the DATA Act data transparency objectives. The implementation of 2 CFR Part 200 also will require substantial changes to FEMA grant systems, particularly in the areas of the Universal Award ID, sub-recipient monitoring, and performance management.

The modernization will promote accountability, transparency, and standardization in accomplishing FEMA's mission in the regions and at headquarters, and will allow FEMA to respond to Congressional requests more efficiently and accurately.

Impact on Performance (Relationship of Increase to Strategic Goals):

This investment will directly support FEMA Strategic Objective #5.4, Streamline and strengthen FEMA's business processes and systems. The grants system modernization effort will deliver important benefits to FEMA and strategic partners through improved business efficiencies increased enterprise-wide access to grants data, and reduction of number of legacy IT systems that must be managed, sustained, and secured.

The key objectives for the effort are:

- **Streamline and Improve Operational Performance** by streamlining business processes, increasing the visibility and transparency of information across the grant management lifecycle, improving the opportunities to leverage multiple grant investments in order to minimize potential and serial disaster loss, increasing the identification of fraud, and integrating-financial reporting requirements.
- **Increase System Stability and Sustainability** by reducing mission failure risk, especially in the event of Agency devolution, by providing web-accessible capabilities with a redundant failover or alternate processing site.
- **Reduce overall O&M costs** by providing a common data, business process and geospatial technical architecture and decrease time needed to reflect changes in business processes or policy in the supporting consolidated grants architecture.
- **Improve Compliancy** by reducing the burden to implement changing grant regulations and statutes (e.g., 2 CFR 200, Biggert Waters Act, etc.), improve the ability to address existing findings and recommendations, and improve financial auditing capabilities.
- **Identify Cost Savings and Avoidance** by identifying common data and functionalities across multiple grant management programs and consolidating duplicative areas.
- **Improve timeliness of providing grant funds** and sharing of information related to the performance of grant funds to support survivor and community resiliency.

This funding will help achieve Phase 1 of the grants modernization effort: Stabilization of Current FEMA Grants Management Functions and Systems

Planning and Establishing Scope

- Document the *As-Is* across all FEMA Grants Management functional lines of business, investment portfolios, systems and establish a charter with governance.

User-Defined Process Mapping and Analysis

- Conduct analysis of all business/functional process for Grants Management leverage current investments in Non-Disaster Grants and Public Assistance Grants Management.
- Conduct inventory of data assets and engineering analysis of the technology architecture and specifications as it relates to the Grant Management mission areas including back office support such as doctrine and training.
- Based on the analysis conducted, identify key functional requirements.
- Develop To-be Business Case and Roadmap including current design gaps, target solution architecture.
- Continuous validation and verification of gaps and targets with key stakeholders.
- Direct resources to initiate a Proof of Concept.

The total funds for FY2016 will be used to initiate the planning and establishment of scope, and the user-defined process mapping and analysis parts of Phase 1. While this project will benefit multiple FEMA grant-making organizations overall project management will be headed by the Office of Response and Recovery.

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For necessary expenses in carrying out the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5121 et seq.), [\$7,033,465,000] \$7,374,693,000¹ to remain available until expended,: Provided, That of the funds provided herein, [\$ 6,437,793,000] \$6,712,953,000² shall be for major disasters declared pursuant to the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C.5121 et seq.), in the previous proviso is designated by the Congress as being for disaster relief pursuant to section 251(b)(2)(D) of the Balanced Budget and Emergency Deficit Control Act of 1985, as amended: Provided further, That of the funds provided herein other than for major disasters declared pursuant to the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5121 et seq.), \$24,000,000 shall be transferred to the Department of Homeland Security Office of Inspector General for audits and investigations related to disasters.

Explanation of Changes:

Language Provision	Explanation
1. ...[\$7,033,465,000] <u>\$7,374,693,000</u> ...	Dollar change only. No substantial change proposed.
2. ...[\$ 6,437,793.000] <u>\$6,712,953,000</u> ...	Dollar change only. No substantial change proposed.

B. FY 2015 to FY 2016 Budget Change

**Department of Homeland Security

FY 2015 to FY 2016 Change	-	-	\$341,228

¹Note: The 55 positions reflected above are FEMA's cadre of temporary full-time Federal Coordinating Officers (FCO) and Federal Disaster Recovery Coordinators (FDRCs). The bulk of the FTE reflected herein is made up of Disaster Reservists and Cadre of On-call Response Employees (CORE), primarily deployed for specific disasters. The FY 2014 Omnibus rescinded \$300.5 million in unobligated prior year balances in the "Base" DRF and \$28.526 million was transferred to ICE for emergency unaccompanied children activities. The FY 2015 budget request proposed to cancel \$200 million in the same manner. The FY 2016 Budget similarly proposes to cancel \$250 million in the same manner. The proposed cancellations are not reflected in the figures above. Estimate does not specifically include additional expenses that may be incurred due to new federal employee health benefits (FEHB) program eligibility for certain FEMA Stafford Act employees (those on temporary appointments and certain employees on seasonal and intermittent schedules). FEMA will work with the Congress to adjust DRS estimates should the agency be unable to absorb these costs within currently planned spending limits.

Disaster Relief Fund Mission Statement

Major disasters and emergencies may be the result of disasters of all kinds and are declared by the President, typically in response to gubernatorial requests for assistance. States and (or) Tribes request Federal assistance to supplement their available resources and to certify that a given disaster is beyond their capacity or capability to respond. The DRF also supports fire management assistance activities for the mitigation, management, and control of fires on public and private lands.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$182,825	\$183,976	\$186,007	\$2,031
11.3 Other than Full-Time Permanent	\$158,973	\$158,973	\$160,789	\$1,816
11.5 Other Personnel Compensation	\$97,820	\$94,580	\$95,660	\$1,080
13.0 Benefits for Former Personnel	\$20,790	\$20,790	\$20,790	-
Total, Salaries & Benefits	\$460,408	\$458,319	\$463,246	\$4,927

Salaries and Benefits includes costs for 7,134 FTEs. The FY 2016 request reflects an increase of \$4,927. This includes the annualization of the 2015 pay increase in FY16 and 1.0% pay increase in FY16.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.4 Operation and Maintenance of Facilities	\$17,986	\$17,986	\$19,613	\$1,627

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. The FY 2016 request has an increase of \$1,627 for maintenance activities for the Incident Management Workforce Training Center.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
41.0 Grants, Subsidies, and Contributions	\$4,485,027	\$5,994,214	\$6,328,888	\$334,674

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects.

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Emergency Management Agency Flood Hazard Mapping and Risk Analysis

I. Appropriation Overview

A. Mission Statement for Flood Hazard Mapping and Risk Analysis:

The mission of the Flood Hazard Mapping and Risk Analysis fund (Risk MAP) is to deliver quality data that increases public awareness and leads to action that reduces risk to life and property through collaboration with State, local, and tribal entities. Risk MAP drives national actions to reduce flood risk by addressing flood hazard data update needs, supporting local government hazard mitigation planning, and providing the flood risk data needed to manage the National Flood Insurance Program (NFIP) financial exposure.

B. Budget Activities:

FEMA is charged with maintaining reliable flood hazard information to support NFIP, where the U.S. Government has an exposure of \$1.2 trillion. The flood hazard maps determine who is required to purchase flood insurance in order to protect property owners and reduce taxpayer costs for flooding damage. The flood maps are also used to price the insurance to support the financial strength of the NFIP.

These NFIP mapping efforts also provide communities and citizens with information they need to reduce the risk of loss of life and property from flooding. Funding for Risk MAP supports FEMA's efforts to address existing gaps in the flood hazard data inventory and address changes that continue to occur over time. There are four major components to Risk MAP to drive these results: Partnerships and Data Acquisition; Hazards Analysis, Community Engagement and Risk Communications; Customer Service; and Operations.

Partnerships and Data Acquisition

FEMA works with State, local, tribal and territorial partners to identify flood risk data update needs. As flood risk mapping projects are initiated, FEMA engages with communities and other partners to explain the purpose of the Risk MAP project, assess the community needs and capabilities, identify available data for the project and develop a project plan that can be the basis for an ongoing partnership with the community and other participants on the Risk MAP project. FEMA will also work to establish interagency partnerships to acquire additional data to meet the project needs.

Hazards Analysis, Community Engagement and Risk Communications

Once the necessary data is acquired, FEMA begins the analysis of flood hazards, flood risk, and potential strategies to manage risk. FEMA engages with communities throughout a Risk MAP project as an integral part of this process. This engagement builds local officials' understanding and confidence in the data and analyses, awareness of the community's flood risk, knowledge of the

impacts of the project on citizens, and strategies for actions to reduce the risk. This activity results in a variety of updated products and information for communities to implement the NFIP and manage flood risk.

The community engagement process for Risk MAP is the best opportunity to increase local officials' awareness of the community's flood risk. Awareness tends to decrease over time when years can pass between major flood events and flood map updates. Local staff changes and a natural tendency for people to minimize risks that they live with every day also decrease awareness. The updating process helps to ensure that the topic of flooding remains active at the local level. In addition, FEMA is implementing the provisions of the recent NFIP reforms which put a larger focus on educating property owners on changes to the flood maps, their flood risk and measures to reduce risk.

Customer Service

The flood maps and other products generated by Risk MAP are used millions of times each year. Real estate transactions, planning of new development, permitting of new buildings, local risk assessments, hazard mitigation planning, comprehensive community planning, emergency response and many other activities rely on the flood maps and other Risk MAP products. Risk MAP serves these customers by distributing products, processing requests for small changes to the maps, answering questions from map users, community officials and other stakeholders, providing the supporting engineering data, providing tools to view, assess and manage risk and other activities.

Operations

A portion of the Risk MAP budget is used to support management and operations of the program. This includes personnel salaries and expenses, program management support such as tracking and reporting of program performance, and continually developing and improving Risk MAP as with the implementation of the requirements of the Biggert-Waters Flood Insurance Reform Act of 2012 (P.L. 112–141), and the Homeowner Flood Insurance Affordability Act of 2014 (P.L. 113–89).

C. Budget Request Summary:

The Federal Emergency Management Agency requests 57 positions, 57 FTE, and \$278.625 million for the FY 2016 Request.

III. Current Services Program Description by PPA

**Department of Homeland Security
Federal Emergency Management Agency
Flood Hazard Mapping and Risk Analysis
Program Performance Justification**
(Dollars in Thousands)

PPA: Flood Hazard Mapping and Risk Analysis

	Perm. Pos.	FTE	Amount
FY 2014 Revised Enacted	57	44	\$95,202
FY 2015 President's Budget	57	57	\$84,403
2016 Adjustments-to-Base	-	-	\$75
FY 2016 Current Services	57	57	\$84,478
FY 2016 Program Change	-	-	\$194,147
FY 2016 Total Request	57	57	\$278,625
Total Change 2015 to 2016	-	-	\$194,222

FEMA requests \$278.625 million in FY 2016 for this activity. These additional resources will fund Risk MAP to the authorized level, providing FEMA with the ability to begin full implementation of the expanded mapping responsibilities in the recent NFIP reform legislation and address the recommendations from the Technical Mapping Advisory Council created by those reforms. In addition, the requested funding will allow FEMA to make major progress in achieving the vision of Risk MAP in implementing community resilience. Under Risk MAP, FEMA will perform flood hazard mapping and risk analysis, increase awareness of flood risk and work with communities to identify action to reduce flood risk and increase resilience. This includes meeting the statutory requirement to review the flood hazard maps on a five-year cycle and address flood hazard data update needs over time. A 2008 analysis by the State of North Carolina, a partner through the Cooperating Technical Partners Program, estimated the benefits of updating its flood map inventory through an increase in the level of rigor and detail of the engineering analyses. The resulting expected annual economic benefits to flood insurance better matching risk and future flood losses avoided range between 0.86 and 2.24. Similar benefits extended nationwide could substantially improve management of the NFIP financial exposure.

FEMA's Risk MAP activities are funded from two primary sources of funds – the Flood Hazard Mapping and Risk Analysis Fund and the National Flood Insurance Fund. Both sources of funding are critical to the development and implementation of new flood maps in communities across the Nation.

The FY 2016 request includes the following:

- Increase of \$15,000 for the annualization of the 2015 pay raise.
- Increase of \$60,000 for the 2016 pay increase.

FY 2016 Budget Activity	Flood Hazard Mapping and Risk Analysis	National Flood Insurance Fund (Discretionary)	Total
Non Pay	\$272,364	\$110,012	\$382,376
Salaries & Benefits	\$6,261	\$11,377	\$17,638
TOTAL	\$278,625	\$121,389	\$400,014
Positions	57	81	138

CURRENT SERVICES PROGRAM DESCRIPTION:

One of the five priorities of the FEMA strategic plan is to enable disaster risk reduction nationally, and FEMA’s Risk MAP and NFIP are essential to managing and reducing the risk from flooding across the country. Risk MAP provides the intelligence that enables the NFIP to help build resilient communities by supporting management and mitigation of flood risks to reduce the impacts and costs of flooding. Risk MAP delivers quality data that increases public awareness and leads to action that reduces risk to life and property through collaboration with State, local, and tribal entities. Risk MAP drives national actions to build community resilience, reducing flood risk by addressing flood hazard data update needs, supporting local government hazard mitigation planning, and providing the flood risk data needed to manage the National Flood Insurance Program’s (NFIP) financial exposure. Understanding and preparing for the impacts of a changing climate is an Administration priority, and one in which FEMA plays an important role. Risk MAP collaborates with communities to build resilience to flood risks including increased flood risk resulting from the changing climate.

Risk MAP helps to build community disaster resilience so that disaster survivors and their communities are less reliant on the Disaster Relief Fund (DRF) to aid their recovery. The maps and community engagement throughout the Risk MAP process identify areas most vulnerable to flooding and alert homeowners of the inherent risk and necessity for flood insurance. They inform communities to support effective community hazard mitigation planning, floodplain management, improved building practices and site development for new construction, and drive other actions to reduce flood risk.

The funding requested will support the four major Risk MAP activities described above, which are Partnerships and Data Acquisition, Hazards Analysis, Community Engagement and Risk Communications, Customer Service, and Operations.

Flood Hazard Mapping and Risk Analysis

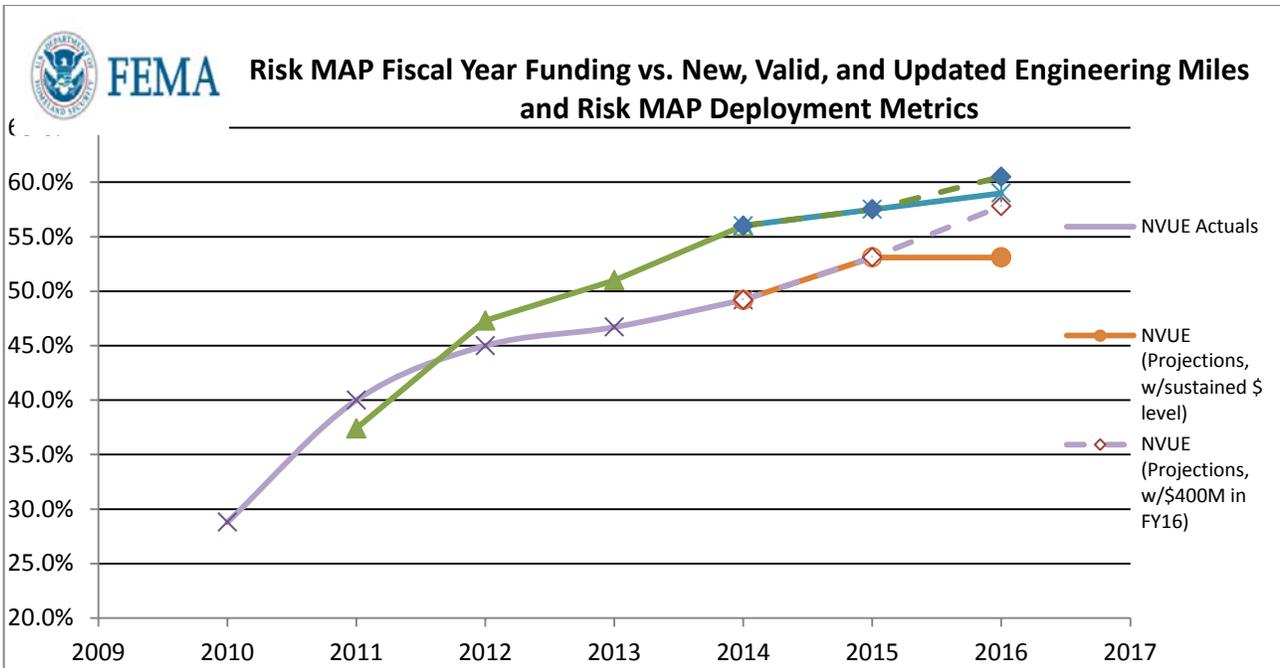

ACTIVITY/OFFICE	2014 Revised Enacted	2015 President's Budget	2016 Request	DELTA
Flood Hazard Mapping and Risk Analysis				
Non-Pay	\$88,981	\$78,198	\$272,364	\$194,166
Salaries and Benefits	\$6,221	\$6,205	\$6,261	\$56
Total Budget	\$95,202	\$84,403	\$278,625	\$194,222
Positions	57	57	57	0

The request for an increase in funding from FY 2015 will support the President's Climate Action Plan as well as recommendations made by the State, Local, and Tribal Leaders Climate Resilience Task Force. Furthermore, this proposed funding level meets the full authorized level of \$400 million as provided by Congress in the Biggert-Waters Flood Insurance Reform Act of 2012 (PL 112-141, section 100216(f)), allowing for major expansion of Risk MAP activities and implementation of legislative mandates, including:

- Significant progress on addressing the known flood map update needs, ensuring that an additional 160,000 flood map miles meet current standards;
- Initiating additional Risk MAP projects, increasing the population where Risk MAP risk assessments, community engagement, and support for hazard mitigation planning are helping to build resilient communities that are better able to withstand the impact of floods and other hazards;
- Working with the Technical Mapping Advisory Council to define the architecture and estimate the effort for FEMA to realize the expanded, technically credible flood mapping program consistent with the recent NFIP reforms; and
- Beginning to implement the expanded mapping responsibilities in the recent NFIP reform legislation, including specific mapping, community engagement, and risk communication activities directed by the reforms, and the recommendations that the Technical Mapping Advisory Council is expected to begin making over the next few years.

FEMA has defined four key measure areas to track Risk MAP performance. These areas include addressing gaps in flood hazard data, deploying Risk MAP, increasing risk awareness of local officials, and increasing risk reducing actions. Associated measures are:

- Ensure 80-percent of the Nation's flood hazard data is current – the flood hazard data are new, have been updated, or are deemed still valid through the Risk MAP review, and update process during the initial implementation of Risk MAP. See chart below indicating current and future progress.
- Continue to initiate Risk MAP on a watershed basis for an increasing amount of the U.S. population. See chart below indicating current and future progress.
- Ensure 70-percent flood risk awareness among local officials in Risk MAP communities.
- Increase the number of communities throughout the U.S. taking mitigation actions in order to increase their resilience to natural disasters and reduce the risk to life and property.

Delivery of Risk MAP

FEMA will continue to implement Risk MAP, and the requested funding will allow for a major expansion of Risk MAP implementation and advance the program in significant ways towards achieving the overall vision of mitigation actions building resilient communities.

FY 2016 funding for Risk MAP will allow FEMA to make significant progress on addressing the known flood map update needs by ensuring that an additional 160,000 of flood map miles meet current standards. The large scale updates of so many FEMA flood maps during Map Modernization and the

earlier phases of the Risk MAP program will continue to result in a large number of flooding sources needing assessment over the next several years, potentially reducing the total number of miles in FEMA's inventory that are valid. The FY 2016 Request will allow FEMA to initiate updates for 75,000 miles of the inland flooding sources that are currently not valid. The FY 2016 Request will also allow FEMA to inspect 230,000 miles of existing flooding sources to assess whether the existing analyses meet current requirements and identify flood hazard update needs.

In FY 2016, FEMA will continue its watershed validation strategy to identify physical, climatological, and scientific changes that impact the currency of existing flood hazard information. The reliability of flood hazard analyses and maps erodes over time. Changes in the built environment, additional storm, and precipitation data, and improvements in the engineering science all affect the currency of the risk analysis products. These changes can increase or decrease the risk and the changes can vary substantially over relatively small areas. Furthermore, as the precision of maps has been refined in recent years, there have been as many structures taken out of designated Special Flood Hazard Areas (SFHA) as there have been newly designated inside the SFHA.

The FY 2016 Request will allow FEMA to initiate a strategy and begin to address the remaining unmodernized map inventory. Stakeholders have repeatedly identified the legacy inventory as a priority even through the remaining legacy maps are in areas with low population. The additional funding will enable FEMA to address these areas and provide a consistent, modern, geospatial flood hazard data across all the mapped areas of the country and bring Risk MAP to these smaller communities. FEMA will also utilize funding to implement and evaluate new technologies and strategies for flood map updates to try and find ways to significantly increase mapping productivity and credibility.

In FY 2016, FEMA will initiate new Risk MAP projects and perform initial flood hazard data approximations to forecast: potential flood hazard change in watersheds with high risk; significant flood hazard data update needs; the potential to generate community actions to reduce flood risk; and the potential for partner cost sharing. These new projects will increase the population in watersheds where Risk MAP has begun, through performing discovery and by producing non-regulatory flood risk data and information products, such as flood depth and analysis grids and risk assessments. These new projects will increase the nations population impacted by Risk MAP by 9,375,000 people.

The FY 2016 Request for Risk MAP would increase lidar investment which is critical to accurate flood maps and has a greater than 4 to 1 benefit to cost ratio. FEMA will expand its investment in new elevation data to support flood risk mapping. Accurate ground elevation is essential to credible flood maps and is one of the specific elements addressed in the recent reforms. The U.S. Geological Service (USGS) is leading the 3D Elevation Program (3DEP) to acquire new three-dimensional elevation data for the Nation, and the 3DEP is one of the key elements of the President's response to the recommendations of the State, Local, and Tribal Leaders Climate Resilience Task Force to provide advanced mapping data and tools to support community resilience efforts. FEMA is one of the primary partners in this effort. These efforts are an important part of FEMA's intent to further enhance support of risk-informed decision-making under strategic priority four's focus on enabling disaster risk reduction.

The FY 2016 Request will provide for the implementation of new legislative mandates in the Biggert Waters Flood Insurance Reform Act of 2012 (BW-12) and the Homeowner Flood Insurance Affordability Act of 2014 (HFIAA). These Acts authorized an ongoing flood mapping program with several major expansions in scope, enhancements to community engagement, and risk communications to be implemented in collaboration with a Technical Mapping Advisory Council comprised of key stakeholders, subject matter experts, and representatives of Federal agencies. The requested funds will enable FEMA to begin the implementation of these new requirements. This includes specific mapping, community engagement, and risk communication activities directed by the reforms, and the recommendations that the Technical Mapping Advisory Council is expected to begin making over the next few years.

The FY 2016 Request will support FEMA efforts to improve engagement and increase the communication and coordination with communities and our partners. When FEMA initiates a Risk MAP project in a watershed, it begins a community engagement process intended to foster community resilience that continues throughout the lifecycle of the project. FEMA's community engagement activities build relationships which can be leveraged during and after a disaster, increase State and local risk management capability, and advance specific mitigation actions. Already a focus of Risk MAP, the recent NFIP reforms direct FEMA to continue to emphasize and expand this work. Through the use of "whole community" engagement processes, FEMA is working to:

- Understand specific community needs and capabilities;
- Deliver mutually supported flood risk products that inform communities;
- Support community multi-hazard mitigation planning;
- Increase community resilience by driving actions to reduce risk; and
- Build long-term relationships with key officials to increase and sustain community capabilities and resilience.

To monitor the impact of this approach, FEMA tracks where Risk MAP helped identify new strategies or improved current planned mitigation actions in direct collaboration with communities as well as those communities that have deployed mitigation actions as a result of advanced Risk MAP activities. FY 2016 funding will help FEMA provide data to 500 communities, enabling them to take action to reduce their flood risk and increase their resilience (i.e. building codes).

Many States and communities are willing to go beyond just coordinating with FEMA during a Risk MAP project and are interested in taking ownership of some or all of the work. FEMA created the Cooperating Technical Partners (CTP) program to enable these proactive partners to be directly involved in implementing Risk MAP in their jurisdiction. This involvement has a huge impact on the success of the community engagement activities in Risk MAP and can increase the credibility of the flood risk information delivered. Sustainable partnerships will continue to be vital. FEMA will maintain its partnerships and seek out new collaborations to support the Risk MAP program. When targeted at known flood hazard data update needs and included in the partnership agreement, FEMA will give its highest investment priority to capable partners who provide a 25-percent cost share. FEMA typically receives these partner contributions through existing successful partnerships within the (CTP).

MAJOR ACQUISITIONS:

Procurement Activity Name	FYHSP Description	FY 2014 Activity Funding	FY 2015 Activity Funding	FY 2016 Activity Request
Risk Mapping, Analysis and Planning (RiskMAP)	The purpose of the Risk Mapping, Analysis, and Planning Program (Risk MAP) is used to deliver quality data that increases public awareness of natural hazards and leads to action that reduces risk to life and property. Communities use Risk MAP data and tools to create or improve mitigation and disaster recovery plans, make informed decisions about land use and building codes, and communicate flood and other risks more effectively to citizens. Description of Item

These resources support the President's Climate Action Plan, the FY 2016 Climate Resilience Initiative, and recommendations made by the State, Local, and Tribal Leaders Climate Resilience Task Force. They also support one of the major elements of the FEMA strategic plan - to enable disaster risk reduction nationally.

Justification

Understanding and preparing for the impacts of a changing climate is an Administration priority, and one in which FEMA plays an important role. Building stronger and safer communities and infrastructure is a key component of the President's Climate Action Plan. Risk MAP and the NFIP are the primary Federal programs for reducing the risks to communities and infrastructure from flooding and better enabling communities to plan mitigation of all hazards. The Administration strongly supports FEMA efforts to integrate climate considerations into existing programs and to use programs to drive resilience. These additional resources bring Risk MAP to the funding level authorized, providing FEMA with the ability to begin to fully implement the expanded mapping responsibilities in the recent NFIP reform legislation and address the recommendations from the Technical Mapping Advisory Council created by those reforms.

The FY 2016 Request provides much needed resources that will build State, local, and tribal resilience before, during and after major flood events like Hurricane Sandy. Prior to landfall, the Risk MAP program significantly invested in developing improved coastal flood hazard and risk data along the New York and New Jersey shorelines. Further, FEMA regional offices had already begun building and supplementing state and local coastal flood risk management capabilities and strengthening

relationships among those responsible for public safety along the coast. Specific partnerships in New Jersey, New York, and New York City were well established prior to landfall with the New Jersey Department of Environmental Protection, New York State Department of Environmental Conservation, and New York City Mayor's Office of Long Term Recovery and Sustainability.

The relationships, flood risk data, and risk management capabilities developed through Risk MAP prior to landfall had a profound impact on the speed and strength of recovery from this devastating event. The ongoing Risk MAP projects in the area showed that existing flood hazard data understated the threat in many cases. Without Risk MAP, reconstruction of the hardest hit areas would have been based on the understated risk data, thus subjecting people to further harm and damage down the road and resulting in greater exposure and increased future disaster relief costs.

Risk MAP is also the principal way that FEMA equips communities with the knowledge to analyze their flood threat as the community prepares its Threat and Hazards Identification and Risk Assessment (THIRA). Risk MAP is the primary vehicle for implementing the community resilience doctrine articulated in Presidential Policy Directive (PPD)-8 and the Presidentially-mandated National Mitigation Framework.

Impact on Performance (Relationship of Increase to Strategic Goals)

The additional resources will allow FEMA to advance the program in significant ways. In FY 2016, FEMA will begin implementing a strategy to address the remaining unmodernized flood maps to provide consistent digital geospatial flood maps for all the mapped areas of the U.S. This funding will also enable FEMA to make significant progress on addressing the known flood map update needs, including expanding FEMA's investment in updated elevation data through the national partnership program led by the USGS. This elevation data partnership is a key element of the President's response to the recommendations of the State, Local, and Tribal Leaders Climate Resilience Task Force to provide advanced mapping data and tools to support community resilience efforts. These additional resources bring Risk MAP to the funding level authorized, providing FEMA with the ability to begin to fully implement the expanded mapping responsibilities in the recent NFIP reform legislation and address the recommendations from the Technical Mapping Advisory Council created by those reforms. The NFIP reforms also direct FEMA to further increase community engagement around the mapping process. FEMA will continue to expand and refine the community engagement and risk assessment component of Risk MAP to work collaboratively with communities to deliver credible flood risk information, increase communities' understanding of their risks, support the communities' multi-hazard mitigation planning efforts and drive community actions to reduce risk and build resilience to floods and other hazards. FEMA will continue to leverage and build on Cooperating Technical Partner relationships with State and local governments who are willing and able to take ownership of some or all of the Risk MAP operations in their jurisdictions.

V. Exhibits and Other Supporting Material
A. Justification of Proposed Legislative Language

For necessary expenses, including administrative costs, under section 1360 of the National Flood Insurance Act of 1968 (42 U.S.C. 4101), and under sections 100215, 100216, 100226, 100230, and 100246 of the Biggert-Waters Flood Insurance Reform Act of 2012, (Public Law 112–141, 126 Stat. 916), [\$84,403,000] \$278,624,800, and such additional sums as may be provided by State and local governments or other political subdivisions for cost-shared mapping activities under section 1360(f)(2) of such Act (42 U.S.C. 4101(f)(2)), to remain available until expended.

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Emergency Management Agency National Flood Insurance Fund

I. Appropriation Overview

A. Mission Statement for National Flood Insurance Fund:

National Flood Insurance Fund

Established in the U.S. Treasury by the National Flood Insurance Act of 1968, the National Flood Insurance Fund (NFIF) is a premium and fee-generated fund that supports the National Flood Insurance Program (NFIP). The Act, as amended, authorizes the Federal Government to provide flood insurance on a national basis.

National Flood Insurance Reserve Fund

Established in the U.S. Treasury by the Biggert-Waters Flood Insurance Reform Act of 2012 (BW-12), the National Flood Insurance Reserve Fund is a separate account funded through premiums that will be used to meet future obligations of the NFIP.

B. Budget Activities:

Homeowners Flood Insurance Affordability Act of 2014 (P.L. 113-89)

Signed into law March 21, 2014, the HFIAA requires the establishment of the Flood Insurance Advocate. The law calls for FEMA to advocate for the fair treatment of policyholders, educate property owners, assist policyholders on procedural requirements with respect to mapping and mitigation, assist in developing Regional capacity, coordinating outreach and education with local officials and community leaders, and aiding potential policyholders in obtaining and verifying accurate and reliable flood insurance information.

Biggert-Waters Flood Insurance Reform Act of 2012 (P.L. 112-141)

BW-12 was signed into law July 6, 2012, to strengthen and improve the fiscal soundness of the NFIP. Prior to this Act, the NFIP was, by statute and design, not actuarially sound. At the time the Act was passed, the percentage of NFIP policyholders that paid premiums that were actuarially sound was only around 80-percent, leaving the remaining 20-percent of the policyholders paying premiums that were less than actuarially sound, including many of the NFIP's highest risk structures. This resulted in subsidized premiums. The level of the subsidy was set so that the combined aggregate premium of the actuarial and subsidized policyholders would at least cover a "typical" loss year referred to as the "historical average non-catastrophic loss year." BW-12 improves fiscal soundness by phasing out subsidies and establishing a reserve fund to pay the expected future obligations of the flood insurance program.

- **Subsidy Phase Out**

BW-12 phases out the subsidy for structures built before their flood risk was identified on a Flood Insurance Rate Map (FIRM). These structures are referred to as pre-FIRM structures. Premiums for pre-FIRM subsidized second homes, businesses, Severe Repetitive Loss properties, and

substantially damaged or improved structures are to be increased 25-percent per year until the premiums are actuarially sound. Subsidies for primary residences may continue until the home is sold to a new owner or the policy is allowed to lapse. All new policies must pay full actuarial premiums.

- NFIP Reserve Fund

BW-12 set the required fund balance of the NFIP Reserve Fund at one percent of the prior fiscal year's insurance in force. The NFIP is authorized to collect and deposit 7.5-percent of the reserve fund target through additional Reserve Fund charges until the required balance is achieved. The amounts in the Reserve Fund can be used for the payment of claims and claims handling expenses, as well as principal and interest payments on any outstanding Treasury loans.

- Mapping Program

BW-12 established a Technical Mapping Advisory Council to review and recommend standards for mapping activities ensuring that the most accurate data be used for ongoing reviews, updates and maintenance of flood insurance rate maps.

NFIP Loss Estimates

Estimating the NFIP losses is challenging because losses vary greatly from year to year. NFIP losses during non-catastrophic years can range from a few hundred million to several billion dollars. Catastrophic events like Hurricane Katrina can result in tens of billions of dollars in losses. The NFIP has had only one catastrophic loss year prior to 2013. That year was 2005, which included losses from Hurricanes Katrina, Rita and Wilma.

Loss estimates in budgets prior to FY 2014 reflected only the expectation of non-catastrophic losses. Non-catastrophic losses were used because they illustrate typical annual losses. However, these estimates did not acknowledge the enormous loss potential of catastrophic loss years, which were experienced during Hurricanes Katrina and Sandy.

To more accurately estimate the full potential loss for the NFIP, the model underlying the FY 2016 Budget estimates catastrophic NFIP losses beyond the ten-year budget window. If no catastrophic events occur during the forecast period, estimated losses may be less than actual losses. Conversely, if one or more catastrophic events occur during the forecast period, actual losses may far exceed the estimated losses.

NFIF Program Elements

Funding for the NFIF is derived from offsetting collections from two primary sources:

- Flood insurance premiums, which are used to pay claims and flood-related grants, and provides funding to support the operating and administrative costs associated with maintaining the program.
- Policy fee income, also paid by flood insurance policy holders, supports floodplain management, flood mapping, flood insurance operations, and NFIF management.

The NFIF appropriation supports the following key program elements:

Flood Management and Insurance Operations

Flood Management supports the overall management of National Flood Insurance Fund. FEMA makes consumer-oriented flood insurance available to reduce the Nation's vulnerability to flood hazards and accelerate recovery from floods, mitigate future flood losses, and reduce personal and national costs of flood disasters. FEMA administers NFIP so that insurance and floodplain management policies and operations are mutually reinforcing. Further, FEMA works to increase the NFIP policy base so that more people are indemnified by insurance from future financial losses from flood, facilitating their recovery, rebuilding communities, and reducing costs to taxpayers.

Flood Insurance Operations provides for all aspects of managing the insurance program including: (1) development and oversight of insurance coverage policy and regulations; (2) analysis and evaluation of insurance risks and claims data used to determine actuarial premium rates; and (3) oversight of insurance companies that write flood insurance policies and adjust claims.

Floodplain Management and Flood Mapping

The mission of the Risk Mapping, Assessment, and Planning (MAP) Program is to deliver quality data that increases public awareness and leads to action that reduces risk to life and property through collaboration with State, local, and tribal entities. Risk MAP promotes public and private sector awareness and understanding of community specific risks through an integrated flood risk management approach that weaves flood hazard data developed to manage the National Flood Insurance Program (NFIP) financial exposure into watershed-based risk assessments that serve as the foundation for local Hazard Mitigation Plans and support community actions to reduce risk. These activities enable RiskMAP program to be a primary strategy for how FEMA delivers information necessary for flood risk reduction and disaster-resilient, sustainable community development.

Floodplain Management funds salaries and expenses for the implementation staff at FEMA's Headquarters and ten Regional offices to administer and deliver floodplain management activities that reduce flood risk. These activities include development of policy, guidance, regulations, and publications, administration of the Community Assistance Program-State Support Services Element (CAP-SSSE) grant program, as well as the provision of compliance monitoring and technical assistance

National Flood Insurance Fund (Mandatory)

The National Flood Insurance Act of 1968 (42 U.S.C. § 4001 et seq.), as amended, authorizes the Federal Government to provide flood insurance on a national basis. Flood insurance may be sold or continued only in communities that participate in NFIP, and that enact and enforce appropriate floodplain management measures. Federally regulated funding institutions cannot provide loans for properties in nonparticipating communities with an identified flood hazard.

Flood-Related Grants

NFIF supports flood hazard reduction efforts facilitated through its flood-related grants and assistance program, Flood Mitigation Assistance (FMA). The FMA provides grants to States, communities and Indian Tribal Governments to reduce the risk of flood damage to existing buildings and infrastructure. Flood-Related grants fund activities that decrease or eliminate risk of flood damage to structures insured under NFIP. Flood-Related grants also fund activities that decrease the long-term risk of flood damage to structures insured under NFIP that have experienced losses from previous flood damage.

C. Budget Request Summary:

The Federal Emergency Management Agency requests \$4.666 billion in spending authority, 383 positions, and 381 FTE for the FY 2016 Request. FY 2016 NFIF spending authority from offsetting collections consists of:

- \$3.504 billion in premium income (mandatory),
- \$181.198 million in Federal Policy Fee income (discretionary), and
- \$980.925 million in contributions and accrued interest to the Reserve Fund.

Department of Homeland Security
Federal Emergency Management Agency
Flood Mitigation and Flood Insurance Operations
Program Performance Justification
 (Dollars in Thousands)

PPA: Flood Mitigation and Flood Insurance Operations

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	110	92	\$18,972
FY 2015 President's Budget	124	114	\$23,759
2016 Adjustments-to-Base	-	8	(\$330)
FY 2016 Current Services	124	122	\$23,429
FY 2016 Program Change	10	10	\$1,870
FY 2016 Total Request	134	132	\$25,299
Total Change 2015 to 2016	10	18	\$1,540

FEMA requests \$25.299 million, 134 positions, and 132 FTE in FY 2016 discretionary offsetting collections to support flood management and insurance operations.

The FY 2016 request includes the following:

- Increase of \$40,000 for the annualization of the 2015 pay raise.
- Increase of \$155,000 for the 2016 pay increase.
- Increase of \$943,000 for the annualization of prior year FTE.
- Increase of ten positions, ten FTE and reallocation of \$1,870,000 to establish the Flood Insurance Advocate Office and convert two temporary economist positions to full time permanent. The development of the Flood Insurance Advocate Office supports FEMA's strategic priority of enabling risk reduction through enhancing stakeholder interaction to provide greater access to information on risk, insurance, and mitigation.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Federal Insurance Mitigation Administration (FIMA) developed a Concept of Operations (Con Ops) to establish the Flood Insurance Advocate Office. An Interim Office of the Advocate was stood up in December 2014 and an Acting Advocate was appointed. The Interim Office will continue to develop the functions and process while budgetary requirements are finalized.

Flood Management and Insurance Operations activities include management, oversight of NFIF insurance activities, business operations support, stakeholder engagement, outreach support, business process management and improvement activities. Appropriated funding also supports information systems support activities associated with the Federal Insurance and Mitigation Administration's (FIMA) executive oversight.

Flood Insurance Operations activities include:

- *Actuarial management* to analyze insurance risks, set insurance rates, and ensure the financial solvency of the program.
- *Operations management* of more than 5.5 million NFIP flood policies totaling over \$1.2 trillion of insurance in force involving policy issuance and renewal, oversight of claims payments, and training program partners.
- *Underwriting management* to define policy and develop regulations for insurance coverage eligibility and classification of risks.
- *Claims management* to set policy and develop regulations regarding the adjustment and payment of claims.
- *Management of the private insurance companies* that write flood insurance policies and adjust claims for the NFIP, including oversight required by the Write Your Own (WYO) Financial Control Plan.
- *Education, training, and technical assistance* for private insurance company agents and adjustors.
- *Oversight of contractors that provide services to NFIP*, such as the Bureau and Statistical Agent and the Direct Servicing Agent.

- *Management of flood insurance marketing and public communications, including advertising, community outreach programs, and publicity.*
- *Partnering with stakeholders in the private sector and other government agencies, including lenders who require the purchase of flood insurance for certain loans.*

Positions	133	136	136	0

Floodplain Management programs are designed to reduce risk through land use and building code regulations. Floodplain management activities are authorized under the National Flood Insurance Act, as amended. Through these programs, FEMA encourages communities and their citizens to take informed and effective mitigation actions before a flood in order to reduce the long-term risk to people and property. Structures built to NFIP standards experience 73-percent less damage than structures not built to these standards. In addition, based on FEMA's updated study for FY14, \$1.87 billion in flood losses are avoided annually as a result of the NFIP floodplain management standards.

FEMA and States partner in the Community Assistance Program-State Support Services Element (CAP-SSSE) Grants program to provide a means to ensure that communities participating in NFIP are achieving the flood loss reduction goals of the NFIP through a state grant mechanism. CAP-SSSE funds States to provide significant technical assistance to NFIP communities, evaluate community performance in implementing NFIP floodplain management activities, and building State and community floodplain management expertise and capability. The grant is a product-oriented program directly related to the flood loss reduction objectives of NFIP.

The Federal Policy Fee supports the salaries and operating expenses of program management and implementation staff at FEMA's Headquarters and ten regional offices that administer floodplain management programs. The responsibilities of these offices include reducing flood risk through floodplain management and flood hazard reduction efforts, providing technical assistance to communities participating in NFIP, and administration of the CAP-SSSE grant program. FY 2016 funding will support the delivery of technical assistance to NFIP participating communities and strengthening local flood loss reduction programs through onsite visits.

FEMA's Risk MAP program is essential to managing and reducing flood risk. Risk MAP provides the intelligence that enables the NFIP and the communities implementing it to reduce the costs of flooding by supporting management and mitigation of flood risks.

The maps generated through the Risk MAP program identify areas most vulnerable to flooding. They alert homeowners of the inherent risk and necessity for flood insurance. They inform communities to support effective floodplain management, leading to improved building practices and site development for new construction. Risk MAP helps to build community disaster resilience so that disaster survivors and their communities are less reliant on the Disaster Relief Fund (DRF) to aid their recovery.

FEMA's FY 2016 Risk MAP approach will continue to deliver quality data that increases public awareness and leads to action that reduces risk to life and property through collaboration with State, local, and tribal entities. The primary focus areas are building partnerships and acquiring data, engaging with communities to analyze and communicate flood risk, providing customer service to NFIP stakeholders and operations support including implementation of the requirements of the Biggert-Waters Flood Insurance Reform Act of 2012.

FEMA's Risk MAP activities are funded from two primary sources of funds, the Flood Hazard Mapping and Risk Analysis Fund and the NFIF. Both sources of funding are critical to the development and implementation of new flood maps in communities across the Nation. The NFIF funding is the core funding for the program and supports all aspects of the program including map production and technical services.

These flood maps provide information that supports risk-informed decision-making and they help ensure that insurance rates accurately reflect the real risk of flooding, helping to serve as a catalyst in driving actions to reduce the risk of flooding and building future community resilience, supporting FEMA's strategic priority to enable national risk reduction.

NFIP Management

NFIP Management is the overall management and oversight of the NFIP operations including the selling and servicing of policies provided by the NFIP WYO partners. FEMA and its partners apply insurance industry concepts and methods to provide consumer-oriented flood insurance to accelerate recovery from floods. FEMA administers the NFIP so that insurance and floodplain management

policies and operations are mutually reinforcing. Furthermore, FEMA works to increase the NFIP policy base so that more people are indemnified by insurance for future flood losses, facilitating their recovery, rebuilding communities, and reducing costs to taxpayers. Activities in this category include selling and servicing flood insurance policies, claims, and establishing appropriate premium rates.

NFIP Operation Expenses

FEMA provides for management and oversight of the insurance component of NFIP. This includes the development and oversight of insurance coverage policy and regulations; analysis and evaluation of insurance risks and claims data used to determine premium rates; and oversight of insurance companies that write flood insurance policies and adjust claims. It also includes crosscutting activities such as the Community Rating System (CRS) program, a Federal incentive program that rewards communities that take action above and beyond the minimum NFIP standards to reduce flood losses and NFIP operations in a post-disaster environment.

Due to FY 2014 losses lower than anticipated, on December 31, 2014, FEMA reduced the National Flood Insurance Program outstanding borrowing by \$1 billion from \$24 billion to \$23 billion.

MAJOR ACQUISITIONS

Title: National Flood Insurance Program Phoenix

Description: The National Flood Insurance Program (NFIP) Information Technology (IT) Systems and Services Program provides the underlying IT support for the Flood Insurance Program.

Procurement Activity Name	FYHSP Description	FY 2014 Activity Funding (\$ in 000s)	FY 2015 Activity Funding (\$ in 000s)	FY 2016 Activity Request (\$ in 000s)
National Flood Insurance Program PHOENIX	NFIP flood insurance is designed to provide an alternative to disaster assistance to meet the escalating cost of repairing damage to buildings and their contents caused by floods. Flooding is the #1 natural disaster in the United States, and just inches of water can cause thousands of dollars in damage. Flood insurance is vital. Flood insurance is available to any property owner located in a community participating in the NFIP. It supports DHS Goal 4: Strengthen Our Nation’s Preparedness and Emergency Response Capabilities. FEMA Goal 1: Lead an integrated approach that strengthens the Nation's ability to address disasters, emergencies, and terrorist events. Program GPRA/PART Metric: Improving the Income to Expense ratio of claims within established standards for timeliness and scope of damage. Without the NFIP IT Systems and Services the WYO program would be unable to issue, centrally monitor and maintain data on the insurance policies.	\$10,469	\$20,402	\$21,638

The Flood Mitigation Assistance (FMA) program is a key component of the business strategy to reduce the risk associated with flood events through grants. FMA provides funding on an annual basis to States, federally recognized Indian tribal governments, and communities so that cost-effective

measures can be taken to reduce or eliminate the long-term risk of flood damage to buildings insured under NFIP. On average, each dollar spent on Flood Mitigation grant activities reflects approximately \$2 in future losses avoided.

Funding in FY 2016 will further important loss reduction measures such as the acquisition and demolition of flood prone structures, elevation of homes above expected flood levels, and construction of minor drainage projects to reduce the impact of storms. These efforts support the strategic priority of enabling national disaster risk reduction through incentivizing investments to manage current and future risk within communities.

Established in October 2013, the purpose of the National Flood Insurance Reserve Fund is to meet the future obligations of the NFIP. These obligations include paying claims, claims adjustment expenses, and repayment of any outstanding debt owed to the U.S. Treasury under section 1309(a) [42 U.S.C. § 4016] of the Act. BW-12 required FEMA to establish this fund in the U.S. Treasury and also

authorized FEMA to increase or decrease assessments to ensure the Reserve Fund is credited with a balance equal to one percent of the sum of the total potential loss exposure of all outstanding flood insurance policies in force in the prior fiscal year or a higher amount as determined necessary by the Administrator of FEMA.

IV. Program Justification Changes

**Department of Homeland Security

Justification of Program Changes**
(Dollars in Thousands)

Program Increase 1: Flood Insurance Advocate Office
PPA: Flood Mitigation and Flood Insurance Operations
Program Increase: Positions 8, FTE 8, Dollars \$1,593

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	-
Program Increase							8	8	\$1,593
Total Request	-	-	-	-	-	-	8	8	\$1,593

Description of Item:

Eight positions, eight FTE, and \$1.593 million to establish the Flood Insurance Advocate Office. An additional \$1.252 million will be funded from NFIF mandatory operating expenses.

Justification:

The recently enacted Homeowners Flood Insurance Affordability Act (P.L. 113-89) requires the establishment of the Flood Insurance Advocate. The law calls for FEMA to advocate for the fair treatment of policyholders, educate property owners, assist policyholders on procedural requirements with respect to mapping and mitigation, assist in developing regional capacity, coordinating outreach and education with local officials and community leaders, and aiding potential policyholders in obtaining and verifying accurate and reliable flood insurance information. FEMA has identified an initial approach for implementing these requirements that involves three main elements:

1. Analysis and Evaluation. The Advocate's Office would be responsible for assessing the effectiveness and impact of NFIP Outreach and Communication's effort from the perspective of the customer's lens and providing this information as feedback to the programs. The implementation of this function would have both a regional and national perspective.
2. Advocacy. To help FEMA define the details of this role for the NFIP, we are undertaking a benchmarking effort with similar programs. Then we will look at how this role will function in conjunction with existing programs.

3. Policy. Given the other functions of this office, it is likely that it will also have a role in policy development and the impact of policies on our customers.

Impact on Performance (Relationship of Increase to Strategic Goals):

The establishment of this function would further FEMA's vision and goal of better serving policyholders. Providing an advocate office dedicated to responding to constituent concerns achieves this goal and meets the requirements defined in HFIAA.

**Department of Homeland Security
National Flood Insurance Fund
Justification of Program Changes**
(Dollars in Thousands)

Program Increase 2: Full time permanent Regulatory Economists
PPA: Flood Mitigation and Flood Insurance Operations
Program Increase: Positions 2, FTE 2, Dollars \$277

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							124	122	\$23,429
Program Increase							2	2	\$277
Total Request	110	101	\$22,000	124	115	\$23,759	126	124	\$23,706

Description of Item:

Two new full-time permanent positions, two FTE and \$277,000 in annualization of prior year pay for Regulatory Economists.

Justification:

The explanatory statement to the Consolidated Appropriations Act, 2014, H.R. 3547, states that, "FEMA must acquire additional economic expertise, for fiscal year 2014 and into the future, to more effectively assess the costs and benefits of policies and to better align disaster planning and resources. FEMA took action to fulfill this requirement for the NFIP by hiring two full time economists in temporary positions. However, FEMA currently has a large backlog of NFIP rules and regulations that need to be addressed from not only recent legislation but existing legislation necessary as part of normal program operations. For this reason, FEMA is proposing to convert the two temporary positions to permanent full time employees.

Impact on Performance (Relationship of Increase to Strategic Goals):

The addition of two full time economists would further improve the NFIP process of assessing the costs and benefits of policies impacted by proposed regulations. The economists provide the corresponding economic analyses necessary to support the regulatory process and meet requirements for federal rulemaking.

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For activities under the National Flood Insurance Act of 1968 (42 U.S.C. 4001 et seq.), the Flood Disaster Protection Act of 1973 (42 U.S.C. 4001 et seq.), [and] the Biggert-Waters Flood Insurance Reform Act of 2012 (Public Law 112 – 141, 126 Stat. 916), and the Homeowner Flood Insurance Affordability Act of 2014 (Public Law 113-89, 128 Stat. 1020)¹: [\$179,294,000]\$181,198,000,² which shall remain available until September 30, [2016]2017³, and shall be derived from offsetting amounts collected under section 1308(d) of the National Flood Insurance Act of 1968 (42 U.S.C. 4015(d)), [; which is available for salaries and expenses associated with flood mitigation and flood insurance operations; and floodplain management and additional amounts for flood mapping⁴ : Provided, That], of which⁴ [\$23,759,000]\$25,299,000⁵ shall be available for salaries and expenses associated with flood [mitigation]management and flood insurance operations[;]⁶ and [\$155,535,000]\$155,899,000⁷ shall be available for flood plain management and flood mapping: Provided further, That any additional fees collected pursuant to section 1308(d) of the National Flood Insurance Act of 1968 (42 U.S.C. 4015(d)) shall be credited as an offsetting collection to this account, to be available for flood plain management and flood mapping: Provided further, That, notwithstanding section 100236(d) of the Biggert Waters Flood Insurance Reform Act of 2012, funds are available until expended from the National Flood Insurance Fund as may be necessary to carry out section 100236: Provided further, That, in fiscal year [2015]2016⁸, no funds shall be available from the National Flood Insurance Fund under section 1310 of that Act (42 U.S.C. 4017) in excess of:

- (1) [\$132,000,000]\$133,252,000⁹ for operating expenses;
- (2)[\$1,139,000,000]\$1,123,000,000¹⁰ for commissions and taxes of agents;
- (3) such sums as are necessary for interest on Treasury borrowings; and
- (4)[\$150,000,000]\$175,000,000¹¹, which shall remain available until expended, for flood mitigation actions and for flood mitigation assistance under section 1366 of the National Flood Insurance Act of 1968 (42 U.S.C. 4104c), notwithstanding subsection (e) of section 1366 of the National Flood Insurance Act of 1968 (42 U.S.C. 4104c) and notwithstanding subsection (a)(7) of section 1310 of the National Flood Insurance Act of 1968 (42 U.S.C. 4017): Provided further, That the amounts collected under section 102 of the Flood Disaster Protection Act of 1973 (42 U.S.C. 4012a) and section 1366(e) of the National Flood Insurance Act of 1968 shall be deposited in the National Flood Insurance Fund to supplement other amounts specified as available for section 1366 of the National Flood Insurance Act of 1968, notwithstanding subsection (f)(8) of such section 102 (42 U.S.C. 4012a(f)(8)) and subsection 1366(e) and paragraphs (1) through (3) of section 1367(b) of the National Flood Insurance Act of 1968 (42 U.S.C. 4104c(e), 4104d(b)(1)-(3)): Provided further, That total administrative costs shall not exceed 4 percent of the total appropriation.

Flood Mitigation and Flood Insurance Operations Mission Statement

Flood Insurance Operations provides for all aspects of managing the insurance program including: the development and oversight of insurance coverage policy and regulations; analysis and evaluation of insurance risks and claims data used to determine premium rates; and, oversight of insurance companies that write flood insurance policies and adjust claims. FEMA applies insurance concepts and methods to reduce the nation's vulnerability to natural hazards and manages the National Flood Insurance Program (NFIP) to provide consumer-oriented flood insurance to accelerate recovery from floods, to mitigate future losses and to reduce personal and national costs of flood disasters. FEMA administers the NFIP so that insurance and floodplain management policies and operations are mutually reinforcing. Further, FEMA works to increase the NFIP policy base so that more people are indemnified by insurance for future flood losses, facilitating their recovery, rebuilding communities and reducing costs to taxpayers.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$10,353	\$12,366	\$13,393	\$1,027
11.5 Other Personnel Compensation	\$147	-	-	-

Floodplain Management and Flood Mapping Mission Statement

Through Floodplain Management programs, FEMA encourages communities and their citizens to take informed and effective mitigation actions before a flood in order to reduce the long-term risk to people and property. Through the delivery of mitigation programs, FEMA leads a national effort to: identify and improve the understanding of communities' hazards and their risks; develop and improve techniques and planning processes which mitigate those risks; provide an environment at the State and local levels that is conducive to applying those techniques and processes; provide financial and technical assistance to facilitate application of those techniques and processes; and support development of incentives and disincentives which make application of those techniques and processes a social, political and/or economic priority.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$18,732	\$19,453	\$19,804	\$351

National Flood Insurance Fund - Mandatory Mission Statement

The National Flood Insurance Act of 1968, as amended, authorizes the Federal Government to provide flood insurance on a national basis. Flood insurance may be sold or continued in force only in communities that enact and enforce appropriate floodplain management measures. Communities must participate in the program within 1 year of the time they are identified as flood-prone in order to be eligible for flood insurance and some forms of Federal financial assistance for acquisition or construction purposes. In addition, Federally regulated funding institutions cannot provide loans to nonparticipating communities with an identified flood hazard. More than 20,000 communities in all States and Territories participate in the NFIP. Structures built to NFIP criteria experience 80 percent less damage through reduced frequency and severity of losses. The flood mitigation program requirements are estimated to save in excess of \$1 billion per year in flood losses avoided. The NFIP limits the impact of disaster by encouraging property owners and others to manage their risk through flood insurance and other hazard insurance mechanisms.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$1,054,323	\$1,275,193	\$1,255,252	(\$19,941)

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Emergency Management Agency United States Fire Administration

I. Appropriation Overview

A.Mission Statement for U. S. Fire Administration:

The mission of the United States Fire Administration (USFA) is to provide National leadership to foster a solid foundation for our fire and emergency services stakeholders in prevention, preparedness, and response.

B.Budget Activities:

The USFA coordinates with Federal, State, and local emergency service agencies; the private sector; colleges and universities; and other Department of Homeland Security (DHS) educational consortium participants in fostering a solid foundation for our citizens and stakeholders in prevention, preparedness, and response. In fulfilling its mission, USFA utilizes the assets of the National Fire Academy (NFA); the National Emergency Training Center (NETC); Management, Operations, and Support Services (MOSS); and the National Fire Programs (NFP) Division.

C.Budget Request Summary:

The Federal Emergency Management Agency (FEMA) requests \$41.582 million, 134 positions, and 134 full time equivalents (FTE) for the FY 2016 request.

II. Summary of FY 2016 Budget Estimates by Program/Project Activity (PPA)

The USFA program promotes fire awareness, safety and risk reduction across communities, including children and adults with disabilities and others with access and functional needs. This effort supports FEMA's Strategic Plan Priority 4, "Enable Disaster Risk Reduction Nationally." USFA prepares the Nation's first responders through ongoing training in evaluating and minimizing community risk; improving protection of critical infrastructure; and preparing to respond to all-hazard emergencies. In fulfilling its mission, USFA utilizes the assets of the National Emergency Training Center (NETC) Facilities and Support Services; Management, Operations, and Support Services (MOSS); National Fire Academy (NFA); and the National Fire Programs (NFP) Division.

NETC Management, Operations, and Support Services Division

Positions Total	50	50	50	-

The MOSS provides administrative, operational, and emergency services in support of the program activities and special groups at NETC. MOSS manages, operates, and maintains the NETC facilities, comprised of 30 buildings covering 107 acres, and training resources. The facility includes 424 single-occupancy dormitory rooms (453 total beds), 18 classrooms, two auditoriums, and several specialty training areas for classes such as arson investigation, exercise simulations and emergency operations center training; in addition to off-site and independent study training. Resident classes run from two days to two weeks in duration and are conducted 46-47 weeks a year. The facility can handle approximately 15,000 resident students a year, depending on the duration of the classes.

- Management, administration and oversight of the USFA's NETC and USFA programs. (\$2,235,950 and 22.5 FTE)
- Operate and maintain the NETC facility providing a safe working and learning environment by providing support services such as office space, utilities, facility and grounds maintenance,

renovation, registration, housing, transportation, housekeeping, security, and information technology to all the staff and visitors to the NETC campus. (\$12,360,436 and 13 FTE)

- Provide admissions and other student support services to the National Fire Academy (NFA), the Emergency Management Institute (EMI) and FEMA Federal Qualification System (FQS) education programs. (\$1,718,190 and 14.5 FTE)
- Complete the radio communication replacement and the replacement of Building A’s roof. (\$2,018,453)
- Includes an increase of \$438,000 resulting from an increase of \$32,000 for FEMA Centrally Managed Accounts, \$65,000 for cost of living, and a USFA redistribution of \$367,000 within USFA to consolidate FEMA Centrally Managed Accounts funding and increase funding for capital maintenance.

National Fire Academy (NFA)

National Fire Academy	FY 2014 Revised Enacted	FY 2015 President’s Budget	FY 2016 Request	FY 2016 +/- FY 2015
Non-Pay	\$7,387	\$7,214	\$7,094	(\$120)
Salaries and Benefits	\$4,712	\$5,134	\$5,174	\$40
Total Budget	\$12,099	\$12,348	\$12,268	(\$80)
Positions Total	44	44	44	-

NFA promotes the professional development of the men and women within the fire and emergency response community. NFA programs are designed to support DHS and FEMA missions to help State and local first responders prevent, prepare for, mitigate, and respond to all hazard incidents during local, regional, and National emergencies. NFA supports State and local training organizations in fulfilling their obligation to the career and volunteer fire and emergency services. NFA develops, delivers, and manages educational and training programs with a National focus or that exceeds State and local capabilities because of cost or demand. With its State and local partnerships, NFA trains more than 105,000 students per year, about 7.5% of America’s fire and emergency services population.

- Management, administration and oversight of the NFA. (\$1,233,000 and 10 FTE)
- Delivery of 3,100 NFA on-campus and off-campus courses to 100,000 fire and emergency response personnel (\$8,440,000 and 26 FTE)
- Manage course curriculum in conjunction with emerging issues and review of existing curricula generating a combination of classroom instruction, paper-based, electronic self-study, blended learning, asynchronous and synchronous mediated and social media (Web 2.0) and mobile learning options. (\$1,555,407 and 4 FTE)
- A multi-year effort to standardize fire science degree curricula throughout the United States. (\$232,000 and 2 FTE)
- An externally hosted web-based Learning Management System (LMS) providing web-based training to audiences of fire and emergency services personnel and online mediated instruction program. (\$808,000 and 2 FTE)
- Includes a net decrease of \$80,000 from the base level. This is a result of an increase of \$40,000 for cost of living, a USFA redistribution of \$20,000 in postage funds to consolidate the funding for

FEMA Centrally Managed Accounts and a decrease of \$100,000 in Incident Command System and Scenario maintenance redistributed to NETC capital maintenance.

National Fire Programs Division (NFP)

National Fire Programs	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2016 +/- FY 2015
Non-Pay	\$7,179	\$6,289	\$6,042	(\$247)
Salaries and Benefits	\$4,879	\$4,901	\$4,939	\$38
Total Budget	\$12,058	\$11,190	\$10,981	(\$209)
Positions Total	40	40	40	-

NFP addresses the legislative directive to reduce the Nation’s losses caused by fire through improving the fire prevention, preparedness and response capabilities of local communities and their first responders. NFP’s efforts promote fire awareness, safety and risk reduction across the whole community, including children and adults with disabilities and others with access and functional needs. NFP supports FEMA’s Strategic Plan Priority 4, “Enable Disaster Risk Reduction Nationally,” by providing data and tools that support risk-informed decision-making. NFP manages the National Fire Incident Reporting System (NFIRS) and is responsible for the collection, analysis, publication, dissemination, and marketing of information related to the National fire problem. NFP develops and disseminates public fire education programs targeting children and adults with disabilities and others with access and functional needs and leads USFA research efforts related to fire detection, prevention, suppression technologies, and first responder health and safety. NFP develops and delivers programs designed to enhance the capacity of the Nation’s fire and emergency services as well as the public to prevent, mitigate, prepare for and respond to all hazards incidents during local, regional, and National emergencies.

- Management, administration and oversight of the NFP. (\$1,271,340 and 10 FTE)
- Develop and disseminate analytical studies on issues such as high-risk civilian populations and firefighter casualties. Conduct and publish studies on technologies and operations to improve and enhance responder performance and public safety. (\$1,670,732 and 7 FTE)
- Expand the audiences, the partnerships, and the risk associated with the National “Fire is Everyone’s Fight” initiative and expand social media outreach as an information delivery channel for USFA products, services, and messages. (\$2,528,408 and 8 FTE)
- Develop and administer a means of Federal and State ready access to structural firefighters as an Emergency Support Function-4 resource. (\$1,437,084 and 9 FTE)
- In addition to maintenance and operation of the NFIRS, provide leadership and assistance to State and local NFIRS participants with data analysis to improve the quality of their NFIRS data submissions. (\$3,152,000 and 4 FTE)
- In FY 2014, NFIRS enhancements reengineered the NFIRS architecture to implement a reusable, service based framework that will follow Java platform leading practices, FEMA standards and is also consistent with the FEMA OCIO Architecture Roadmap. The FY 2016 Budget Request does not include funding for additional NFIRS enhancements.

- Publication and maintenance of web content for the fire service, public, and other stakeholders. (\$921,000 and 2 FTE)
- Includes a net decrease of \$209,000 from the base level. This is a result of an increase of \$38,000 for cost of living, a USFA redistribution of \$20,000 in postage funds to consolidate the funding for FEMA Centrally Managed Accounts, a decrease of \$192,000 in printing, and \$35,000 decrease for PSA/video developing redistributed to NETC capital maintenance.

IV. Program Justification Changes

N/A

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For necessary expenses of the United States Fire Administration and for other purposes, as authorized by the Federal Fire Prevention and Control Act of 1974 (15 U.S.C. 2201 et seq.) and the Homeland Security Act of 2002 (6 U.S.C. 101 et seq.), [\$41,407,000] **41,582,000***1*.

United States Fire Administration Mission Statement

The mission of the United States Fire Administration (USFA) is to provide National leadership to foster a solid foundation for our fire and emergency services stakeholders in prevention, preparedness, and response.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$10,615	\$10,621	\$10,753	\$132
11.5 Other Personnel Compensation	\$101	-	-	-
12.1 Civilian Personnel Benefits	\$4,231	\$4,286	\$4,297	\$11
Total, Salaries & Benefits	\$14,947	\$14,907	\$15,050	\$143

The FY 2016 request includes the proposed January 2016 1.3 percent cost of living adjustment.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
21.0 Travel and Transportation of Persons	\$297	\$297	\$255	(\$42)

The All Hazardous Incident Management Team (AHIMT) is now a train-the-trainer program rather than hands-on certification, funds have been moved accordingly to Advisory and Assistance (14K) and Grants, Subsidies, and Contributions (28K).

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
22.0 Transportation of Things	\$69	\$69	\$54	(\$15)

Cost savings realized by increased use of electronic fire prevention and course materials.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.2 Rental Payments to Others	\$31	\$31	\$306	\$275

Copier agreements have been converted from lease-to-purchase to lease.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.3 Communications, Utilities, and Misc. Charges	\$2,446	\$2,446	\$1,164	(\$1,282)

Funds were moved to Rental Payments to Other for copier lease (275K). Utility cost savings were moved to Equipment for campus radio-upgrade (968K) and Operation and Maintenance of Facilities (39K) for capital maintenance.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
24.0 Printing and Reproduction	\$374	\$374	\$182	(\$192)

Cost savings from making materials available electronically. Funds were moved to Other Services from Non-Federal Services .

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$7,011	\$6,011	\$4,671	(\$1,340)

Funding for the LRC (502K), NFIRS (286K), and Blended Learning (111K) contracts were moved to Other Services from Non-Federal Sources and funds for Blended Learning (441K) were moved to Operation and Maintenance of Equipment.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$2,111	\$1,752	\$3,369	\$1,617

Realignments of LRC Contract (502K), and NFIRS contract (327K), from Advisory and Assistance Services; All Hazards Incident Management Team from Travel and Transportation of Persons (14K), and DHS Working Capital from Other Goods and Services from Federal Sources (309K). Increase for contract instructors and curriculum development as a result of costs savings from Transportation of Things (15K), Printing and Reproductions (192K), and Supplies and Materials (258K).

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$309	\$309	\$0	(\$309)

Transfer of funds for DHS Working Capital to Other Services from Non-Federal Sources.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.4 Operation and Maintenance of Facilities	\$7,094	\$6,900	\$7,033	\$133

Increase in Capital Maintenance from utility (39K) and supply (94K) cost savings.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.7 Operation and Maintenance of Equipment	\$4,948	\$4,948	\$5,389	\$441

Transfer of funding for Blended Learning from Advisory and Assistance Services.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
26.0 Supplies and Materials	\$1,072	\$1,072	\$720	(\$352)

Cost savings from reduction in use of natural gas.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
31.0 Equipment	\$379	\$379	\$1,736	\$1,357

Increase to replace campus radios (968K) and classroom educational equipment (389K).

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
41.0 Grants, Subsidies, and Contributions	\$2,912	\$1,912	\$1,653	(\$259)

Funds to support the firefighter memorial (287K) were transferred to Other Services from Non-Federal Sources and funding for AHIMT (28K) was moved from travel.

A. Component Overview

The Federal Emergency Management Agency (FEMA) is comprised of the following mission-oriented programs that support achievement of the DHS strategic missions, goals, and objectives.

Preparedness: The National Preparedness Program works to ensure that the Nation is prepared for disasters of all kinds. This program houses management and administrative support functions associated with training and national exercise programs funded through the State and Local Programs appropriation.

Protection: The National Continuity Program carries out a mandated mission to provide Executive Agent leadership to guarantee the survival of an enduring Constitutional government by ensuring continuity of national operations in response to national emergencies. FEMA maintains an appropriately resourced, staffed, and equipped ability to provide Executive Leadership for Continuity of Government (COG), Continuity of Operations (COOP), and national contingency programs.

Response: The Response programs provide the core Federal response capability to save lives and protect property in communities throughout the Nation that have been overwhelmed by the impact of a major disaster or an emergency. Response Operations ensures that Federal disaster response systems and capabilities are properly positioned to support Federal decision-makers to immediately receive and react to the requirements to support states that have been overwhelmed by the demands of an emergency or major disaster.

Recovery: The Recovery program ensures that individuals and communities affected by disasters of all sizes, including catastrophic and terrorist events, return to normal function with minimal suffering and disruption of services through Individual Assistance and Public Assistance. Through the Recovery program, FEMA takes the lead among federal agencies, State and local governments and representatives of non-governmental organizations to support communities in rebuilding so individuals, civic institutions, businesses, and governmental organizations can function on their own, return to normal life, and protect against future hazards.

Mitigation: The Mitigation program works to strengthen mitigation nationwide to reduce the Nation's vulnerability to natural disasters or other emergencies, and to facilitate adoption and enforcement of up-to-date design and construction practices through State and local building codes. Mitigation supports activities that result in sound risk management decisions by individuals, private-sector, and public-sector entities. The Mitigation program conducts three core activities: risk analysis, risk reduction, and insurance against flood risk. These areas work together to reduce the loss of life and property, to enable individuals to recover more rapidly from floods and other disasters, and to lessen the financial burden on taxpayers.

Integrated Operations: A program whose predominant function is to provide command and control; coordination; information and situational awareness; or occupational health and safety to multiple DHS mission programs.

Management and Administration: This program captures activities that provide enterprise leadership, management and/or business administration services and describes the capabilities and

activities that support the day-to-day management and back office functions enabling the Department to operate efficiently and effectively. Key capabilities include conducting agency planning and performance management, managing finances, managing agency workforce, providing physical and personnel security, acquiring goods and services, managing information technology, managing agency property and assets, managing agency communications, managing legal affairs, and providing general management and administration.

FY 2016 Budget Request

The table below shows FEMA’s FY 2016 Budget request by its mission-oriented programs.

Program	FY 2016 Request	
	FTE	Dollars (in thousands)
Preparedness	924	\$2,242,206
Protection	128	\$79,559
Response	8,049	\$7,320,389
Recovery	378	\$209,999
Mitigation	475	\$4,954,843
Integrated Operations	1,178	\$190,272
Management and Administration	1,120	\$469,746
Total Budget Request	12,252	\$15,467,014

B. Component Contributions to Achieving Departmental Missions

The table below shows the alignment of the FEMA programs to the DHS Missions and Mature and Strengthen Homeland Security.

Programs	DHS Missions					Mature and Strengthen Homeland Security
	Prevent Terrorism and Enhance Security	Secure and Manage Our Borders	Enforce and Administer Our Immigration Laws	Safeguard and Secure Cyberspace	Strengthen National Preparedness and Resilience	
Preparedness					100%	
Protection					100%	
Response					100%	
Recovery					100%	
Mitigation					100%	
Integrated Operations					100%	
Management and Administration						100%

Mission 5: Strengthen National Preparedness and Resilience

Resources Requested

FEMA resources supporting *Strengthen National Preparedness and Resilience* are provided in the table below.

\$ in thousands

Program	FY 2014		FY 2015		FY 2016	
	\$	FTE	\$	FTE	\$	FTE
Preparedness	\$2,680,080	890	\$2,366,948	924	\$2,242,206	924
Protection	\$78,064	128	\$81,735	128	\$79,559	128
Response	\$5,856,084	5,419	\$6,811,973	7,935	\$7,320,389	8,049
Recovery	\$228,455	396	\$213,501	396	\$209,999	378
Mitigation	\$3,600,239	444	\$ 4,310,913	472	\$4,954,843	475
Integrated Operations	\$184,070	1,177	\$182,592	1,176	\$190,272	1,178
Total	\$ 12,626,992	8,454	\$13,967,662	11,031	\$14,997,268	11,132

Performance Measures

For *Strengthen National Preparedness and Resilience*, two types of performance measures are presented. Strategic Measures represent FEMA’s measures that gauge achievement for this mission area, and are considered to be our Government Performance and Results Act Modernization Act (GPRAMA) performance measures. Additional Management Measures are displayed, as appropriate, to provide a more thorough context of expected performance results.

Strategic Measures

Measure: Number of states and territories that have demonstrated improvement towards achieving their core capability targets established through their Threat and Hazard Identification and Risk Assessment (THIRA)						
Description: This measure assesses the number of states that have demonstrated an improvement in their assessment of their capabilities to prepare for, protect against, respond to, recover from and mitigate against disasters. States and territories assess themselves annually on the 31 core capabilities identified in the National Preparedness Goal and this captures the number of states and territories that demonstrated improvement from the base year of 2012 on at least one core capability.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	N/A	28	29	30
Result:	N/A	N/A	N/A	28	N/A	N/A

Measure: Percent of communities in high earthquake, flood, and wind-prone areas adopting disaster-resistant building codes						
Description: This measure assesses the number of communities adopting building codes containing provisions that adequately address earthquake, flood, and wind hazards. FEMA works with code adoption and enforcement organizations to support community implementation of disaster resistant building codes, defined as being in compliance with the National Flood Insurance Program regulations, equivalent to the National Earthquake Hazards Reduction Program recommended provisions, and in compliance with the provisions of the International Codes as designated by the International Codes Council. FEMA also works with the Insurance Services Office (ISO) Building Code Effectiveness Grading Schedule (BCEGS) data to track the number of high-risk communities subject to flood, wind, earthquake, and combined perils that have adopted disaster resistant building codes over time.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	45%	49%	53%	57%	61%	62%
Result:	48%	56%	57%	61%	N/A	N/A

Measure: Percent of federal agencies ready to initialize continuity of essential functions and services in the event of a catastrophic disaster						
Description: This measure assesses the percent of federal agencies ready to respond immediately to a continuity of operations event. This measure encompasses Category I through IV Federal agencies that respond to Department and Agency (D/A) monthly notification tests and real-world incidents within four hours.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	N/A	N/A	94.0%	95.5%
Result:	N/A	N/A	N/A	N/A	N/A	N/A

Measure: Percent of high-priority core planning capabilities rated as proficient by states and territories						
Description: This measure reports the percent of high-priority core capabilities related to planning that states and territories rate as proficient. Planning is a key indicator of their overall level of preparedness. This information is gathered from the State Preparedness Report (SPR), which is an annual self-assessment by states and territories of their levels of preparedness in nationally established capabilities to prevent, protect against, mitigate the effects of, respond to, and recover from those threats and hazards that pose the greatest risk to the security of the Nation.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	36.9%	40.0%	42.0%	44.0%	46.0%
Result:	N/A	39.6%	38.3%	44.3%	N/A	N/A

Measure: Percent of households that participated in a preparedness exercise or drill at their workplace, school, home or other community location in the past year						
Description: This measure calculates the percent of households responding to a survey who indicate that they have participated in a preparedness exercise or drill in their workplace, school, home, or community in the past year. The survey collects individual disaster preparedness data from a random sample of households across the nation. Improving the public's knowledge and ability to take effective protective actions for hazards is a key objective of preparing the public to act quickly and effectively in emergency situations.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	N/A	42%	44%	46%
Result:	N/A	N/A	N/A	43%	N/A	N/A

Measure: Percent of incident management and support actions taken that are necessary to stabilize an incident that are performed within 72 hours or by the agreed upon time						
Description: This measure reflects FEMA's role in effectively responding to any threat or hazard, with an emphasis on saving and sustaining lives within 72 hours, in support of state, local, tribal and territorial governments. "Actions necessary to stabilize an incident" are defined as those functions that must be initiated immediately following an incident in order to ensure the best outcomes for survivors. These actions include establishing joint federal/state incident objectives and interoperable communications between FEMA-supported incident sites, deploying urban search and rescue resources, rapidly activating response coordination centers, and issuing timely alerts, warnings, operations orders, and situation reports.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	100%	100%	100%	100%
Result:	N/A	N/A	100%	100%	N/A	N/A

Measure: Percent of Incident Management Assistance Teams establishing joint federal and state response objectives within 18 hours						
Description: This measure gauges the percent of time that Incident Management Assistance Teams (IMATs) have deployed and have established initial joint federal and state response objectives within 18 hours of a request from a state or jurisdiction. IMATs rapidly deploy to an incident, provide leadership for federal assistance, and coordinate and integrate inter-jurisdictional response in support of an affected state or territory.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	100%	100%	100%	100%
Result:	N/A	N/A	100%	100%	N/A	N/A

Measure: Percent of orders for required life-sustaining commodities (meals, water, tarps, plastic sheeting, cots, blankets and generators) and key initial response resources delivered by the agreed upon date						
Description: This measurement evaluates the percentage of orders from FEMA Distribution Centers or logistics partners that arrive at the specified location by the validated and agreed upon delivery date. Orders include but are not limited to: meals, water, tarps, plastic sheeting cots, blankets and generators. The measure is derived by dividing the number of orders that are received by the total number requested.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	85%	95%	95%	95%	95%	95%
Result:	93.3%	92.8%	95.4%	97.9%	N/A	N/A

Measure: Percent of recovery services through Individual Assistance delivered to disaster survivors gauging the quality of program services, supporting infrastructure, and customer satisfaction following a disaster						
Description: This is a weighted percent that reflects FEMA's role in delivering quality services to disaster survivors. This measure is based upon three categories: program services, supporting infrastructure, and customer satisfaction. Sub-elements within these three categories include providing temporary housing assistance and case management; having available grant management and internet and telephone registration systems; ensuring call centers respond quickly and business staff are in place; and, delivering these services to enhance customer satisfaction of those receiving individual assistance from FEMA following a disaster. Recovery assistance helps individuals affected by disasters and emergencies return to normal quickly and efficiently.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	91%	92%	93%	94%
Result:	N/A	N/A	94.5%	91.5%	N/A	N/A

Measure: Percent of recovery services through Public Assistance delivered to communities gauging the quality of program services, supporting infrastructure, and customer satisfaction following a disaster						
Description: This is a weighted percent of how FEMA delivers quality services to communities following a disaster based upon three categories: program services, supporting infrastructure, and customer satisfaction. Sub-elements within these three categories include ensuring timely kickoff meetings following requests for public assistance; having available grant management systems; assuring that business staff are in place; and, delivering these services to enhance customer satisfaction of those receiving public assistance. Supporting and ensuring our citizens have quality support after a disaster is critical to facilitating a community's recovery.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	92%	93%	93%	93%
Result:	N/A	N/A	86.2%	90.9%	N/A	N/A

Measure: Percent of states and territories with a Threat and Hazard Identification and Risk Assessment (THIRA) that meets current DHS guidance						
Description: This measure quantifies the percentage of states and territories that develop a THIRA in accordance with the DHS guidance. The FY 2012 Homeland Security Grant Program (HSGP)/Urban Areas Security Initiative (UASI) grant guidance requires the development and maintenance of a THIRA. Developing and maintaining an understanding of risks faced by communities and the Nation is an essential component of the National Preparedness System. THIRA guidance provides a common and consistent approach for identifying and assessing risks and their associated impacts. This common approach will enable the whole community to maintain a baseline understanding of the risks that they face, facilitating efforts to identify capability and resource gaps, focus capability improvements, and inform the community of actions they can take to manage their risks.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	100%	100%	100%	100%
Result:	N/A	N/A	86%	71%	N/A	N/A

Measure: Percent of the U.S. population directly covered by FEMA connected radio transmission stations						
Description: This measure tracks the percentage of U.S. residents that will be capable of receiving an emergency alert message from a broadcast station that is connected and enhanced by FEMA to provide resilient, last resort capability for the President to address the American people. Executive Order 13407 requires the Integrated Public Alert Warning System (IPAWS) to implement a capability to alert and warn the American people in all hazards and "to ensure that under all conditions the President can communicate with the American people."						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	80%	90%	90%	90%	90%	90%
Result:	84%	85%	90%	90%	N/A	N/A

Measure: Percent of U.S. population (excluding territories) covered by planned mitigation strategies						
Description: This is a point in time metric that determines the percent of U.S. population (excluding territories) covered by approved or approvable local Hazard Mitigation Plans. The population of each community with approved or approvable local Hazard Mitigation Plans is used to calculate the percentage of the national population. The FEMA Mitigation program gathers and analyzes critical data to aid in future mitigation efforts and enable communities to be better informed and protected. FEMA Mitigation helps communities reduce risk through sound land-use planning principles (such as planned mitigation strategies), floodplain management practices, and financial assistance.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	80%	80%	85%	77%	78%	79%
Result:	68.7%	70.96%	76.68%	79.6%	N/A	N/A

Measure: Reduction in the potential cost of natural disasters to communities and their citizens (in billions)						
Description: This measure reports the estimated dollar value of losses to the American public which are avoided or averted through a strategic approach of natural hazard risk management.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	\$2.3	\$2.40	\$2.40	\$2.60	\$2.60	\$2.60
Result:	\$3.4	\$2.97	\$3.21	\$3.92	N/A	N/A

Management Measures

Measure: Loss of life per million people due to fire in the U.S.						
Description: This measure analyzes the reduction in the rate of loss of life from fire-related events by one percent per year. It examines the fatalities in the U.S. per million population using modified targets based on the review of historical data. The National Fire Protection Association (NFPA) reports data in September for the previous year. NFPA Survey data are analyzed to produce the report on fire related civilian fatalities.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	<=12.6	<=12.5	<=12.4	<=9.8	<=9.7	<=9.6
Result:	10.1	9.6	9.1	10.2	N/A	N/A

Measure: Percent accuracy of inventory of disaster response supplies						
Description: This measure assesses the accuracy of the physical inventory of disaster response supplies stored in strategic storage sites. Strategic sites are FEMA Distribution Centers, Food Banks, Private Sector/Vendor managed sites and state owned warehouses where FEMA-controlled stocks are stored under an official memorandum of agreement. Ensuring an accurate stock of these supplies enhances the government's ability to effectively and efficiently provide emergency supplies to disaster survivors.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	95%	95%	98%	98%	98%	98%
Result:	99.75%	100%	99%	98%	N/A	N/A

Measure: Percent of attendees from all levels of government including tribal, public and private sector, and non-governmental organizations reporting they are better prepared to deal with disasters and emergencies as a result of training						
Description: This measure reports the percent of students attending training at the Emergency Management Institute (EMI) who responded to a survey indicating that they are better prepared to deal with disasters and emergencies as a result of the training they received. Training is conducted at the EMI dedicated training facility in Emmitsburg, MD, the Noble Training Center in Anniston, AL, as well as other off-site resident classroom courses taught by EMI instructors. This training provides Federal, State, local and tribal officials, and public and private sector officials, and volunteer organizations having key emergency responsibilities with the knowledge and skills needed to strengthen nationwide preparedness and respond to, recover from, and mitigate against acts of terrorism, natural disasters, and other emergencies.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	96%	96%	96%	96%	96%	96%
Result:	96%	96.42%	96.4%	95%	N/A	N/A

Measure: Percent of Federal Departments and Agencies that have viable continuity programs to maintain essential functions in case of disaster						
Description: This measure enables FEMA to track the percent of Category 1, 2, and 3 Federal Departments and Agencies with viable Continuity of Operations capabilities to perform essential functions in the event of disruption of normal operations. In addition, this measure allows for FEMA National Continuity Programs to track which agencies are in compliance with current Federal requirements and guidance.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	Classified	Classified	Classified	Classified	Classified	Classified
Result:	Classified	Classified	Classified	Classified	N/A	N/A

Measure: Percent of population where Risk MAP has been deployed enabling communities to take mitigation action to reduce risk						
Description: This measures the percent of the population that where Risk MAP has been deployed to provide communities with flood information and tools which they can use to enhance their mitigation plans and better protect their citizens. The population of each community with Risk MAP products is used to calculate the percentage of the national population. Flood risk data products provide information to states and local communities in order for them to develop sound Hazard Mitigation Plans, communicate risks to citizens, and allow the public to take action to prevent risks.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	40%	44%	47%	51%	57.5%	59%
Result:	N/A	47.30%	50.60%	56.0%	N/A	N/A

Measure: Percent of supervisors of students trained who believe their staff are better prepared as a result of National Fire Academy training						
Description: The measure assesses the increase in the level of students trained as reported by individual first-line supervisors. These supervisors observe and report through an on-line survey how training skills are being used on-the-job and whether or not their subordinate is better prepared to respond to disasters and emergencies as a result of the National Fire Academy training they received.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	81%	82%	85%	86%	86%	88%
Result:	88%	93.9%	90.7%	86%	N/A	N/A

Measure: Percent of time the Integrated Public Alert and Warning System (IPAWS) infrastructure is operating and available for use by Federal, State and Local officials for the dissemination of emergency alerts						
Description: EO 13407 states "It is the policy of the United States to have an effective, reliable, integrated, flexible, and comprehensive system to alert and warn the American people in situations of war, terrorist attack, natural disaster, or other hazards to public safety and well-being (public alert and warning system), taking appropriate account of the functions, capabilities, and needs of the private sector and of all levels of government in our Federal system, and to ensure that under all conditions the President can communicate with the American people." The IPAWS infrastructure provides alert and warning message collection and dissemination so that United States residents will receive authenticated emergency alert messages over as many communications paths as possible.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	100%	99.9%	99.9%	99.9%	99.9%	99.9%
Result:	N/A	96.6%	98.0%	98.4%	N/A	N/A

Mature and Strengthen Homeland Security

Resources Requested

FEMA resources supporting *Mature and Strengthen Homeland Security* are provided in the table below.

Program	FY 2014		FY 2015		FY 2016

ii. Status of Congressionally Requested Studies, Reports and Evaluations

Fiscal Year	Due Date	Reference/Citation	Requirement	Status
FY 2014	October 15, 2014	S. Rpt. 113-77	EB-5 Visa Program – Within 90 days of the date of enactment, and every 180 days thereafter, the Director of USCIS is directed to provide a report to the committee on the EB-5 visa program that includes the number of applications pending, the period of time each application has been under review, benchmark review periods for the economic evaluation of projects and suitability of petitioners, a description of any additional resources necessary to efficiently administer the program, and the number of applications that are approved or denied each period with an accompanying explanation of their disposition.	Overdue
FY 2015	April 15, 2015	S. Rpt. 113-77	H-1B – In order to provide better feedback to small employers and others throughout the H-1B application process, it is important that USCIS, to the extent practicable, create an online interface. The Committee directs USCIS to submit an annual report that includes: the number of H-1B visa applications received and visas granted broken down by business size (0–25 employees, 26–50 employees, 50–100 employees, 100–500 employees, and more than 500 employees) and also expressed as a percentage of the total; the number of H-1B visa applications broken down by North American Industry Classification System Code; and the number and percentage of businesses—broken down by business size—that utilized the Premium Processing Service and received a visa compared with those businesses that did not utilize the service.

BUDGET REQUEST AND SUPPORTING INFORMATION

U.S. Citizenship & Immigration Services Salaries and Expenses

I. Appropriation Overview

The Salaries and Expenses (S&E) appropriation encompasses all of the discretionary funding for U.S. Citizenship and Immigration Services (USCIS). Appropriated funds support E-Verify and the Citizenship and Integration Grant Program (CIGP).

A. Mission Statement for Salaries and Expenses:

USCIS has established six goals:

- 1) strengthen the security and integrity of the immigration system,
- 2) provide effective customer-oriented immigration benefits and information,
- 3) support immigrants' integration and participation in American civic culture,
- 4) promote flexible and sound immigration policies and programs,
- 5) strengthen the infrastructure supporting the USCIS mission, and
- 6) operate as a high-performance organization that promotes a highly talented workforce and a dynamic work culture.

Through its S&E appropriation, USCIS ensures the integrity of the immigration system through the operation and enhancement of E-Verify and promotes awareness and understanding of citizenship through the CIGP.

E-Verify is an Internet based program that enables an employer to determine a newly-hired employee's eligibility to work in the United States by verifying information reported on an employee's Employment Eligibility Form (Form I-9) against Department of Homeland Security (DHS), Social Security Administration (SSA), Department of State (DOS), and participating State departments of motor vehicles (DMV) data.

The CIGP is the sole Federal program that supports the civic integration of lawful immigrants through citizenship preparation programs. The competitive grants expand the availability of high quality citizenship preparation programs for permanent residents in communities nationwide and assist in the identification of education practices that are effective for citizenship and most closely associated with positive outcomes for lawful immigrants seeking services.

B. Budget Activities:

E-Verify Program

The FY 2014 DHS appropriation included funding for the Verification Information System (VIS) Modernization initiative. In early FY 2014, the VIS Modernization initiative was renamed Verification (VER) Modernization to more accurately describe the full scope of the initiative which includes the modernization of the business processes, systems, and infrastructure that supports the E-

Verify Program. VIS is the information technology platform that supports the verification activities related to the E-Verify program. The VER Modernization initiative will tailor the E-Verify experience for each employer, automate the employer enrollment process, and provide additional system capacity for expected increases in workload. The program continues to grow by approximately 1,300 new employers per week. At the end of FY 2014, 553,628 employers were enrolled in E-Verify and those employers generated more than 28 million queries during FY 2014.

The FY 2015 President's Budget includes funding for the following VER Modernization projects: E-Verify operations, continued development of myE-Verify, VIS enhancements and improvements, and identification and implementation of a Final Non-Confirmation (FNC) appeals process.

The FY 2016 Budget includes funding for VER Modernization activities including the integration of VIS with other systems (e.g., Customer Relationship Management (CRM), Data Analytics Tool (DAT), Telephony, Records and Information from DMVs for E-Verify (RIDE), and myE-Verify), and a continuation of base services for the E-Verify program. In addition, funding is included for the continuation of the FNC appeals process.

Citizenship and Integration Grant Program

From FY 2009 to September 30, 2014, USCIS has awarded approximately \$43 million (in both discretionary and fee funding) to support the CIGP. Since the inception of the program, 222 grants to non-profit recipients have enabled the provision of citizenship preparation services to more than 99,000 permanent residents in 35 States and the District of Columbia.

In FY 2015, USCIS plans to award up to \$10 million in grants to non-profit recipients. Grant recipients will serve approximately 25,000 permanent residents with citizenship preparation services. In FY 2016, services will be provided to an additional 25,000 permanent residents.

C. Budget Request Summary:

The FY 2016 Budget requests \$129.7 million, 419 positions, and 398 full-time equivalent (FTE) for the USCIS S&E account, a decrease of \$5.1 million from the FY 2015 President's Budget. There is no change in positions or FTE from FY 2015.

Adjustments to base include a reduction of \$5.8 million (0 FTP/0 FTE) associated with non-recurring costs for the FNC appeals process and cost efficiencies from the telephony project as the system application moves from development to operations and maintenance; and a net increase of \$723,000 for the 2015 pay annualization, the 2016 pay increase, and increases to contributions to the Federal Employees Retirement System (FERS) based on updated actuarial assumptions.

III. Current Services Program Description by PPA

**Department of Homeland Security
Citizenship & Immigration Services
E-Verify
Program Performance Justification
(Dollars in Thousands)**

PPA: E-Verify

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	388	352	\$113,889
FY 2015 President's Budget	419	398	\$124,755
2016 Adjustments-to-Base	-	-	(\$5,084)
FY 2016 Current Services	419	398	\$119,671
FY 2016 Program Change	-	-	-
FY 2016 Total Request	419	398	\$119,671
Total Change 2015 to 2016	-	-	(\$5,084)

The FY 2016 Budget includes \$119.7 million, 419 FTP, and 398 FTE for E-Verify.

Adjustments to Base:

- Increase of \$446,000 for the 2016 pay raise.
- Increase of \$107,000 for annualization of the 2015 pay raise.
- Increase of \$170,000 for increases to Federal Employees Retirement System (FERS) contributions based on updated actuarial estimates.
- Decrease of \$4.0 million for nonrecurring costs associated with the E-Verify Final Non-Confirmation Review Process.
- Decrease of \$1.8 million for efficiency savings in the telephony initiative.

CURRENT SERVICES PROGRAM DESCRIPTION:

E-Verify was established by the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (P.L. 104-208) and is based on the Form I-9. E-Verify is an internet based program that enables an employer to determine an employee's eligibility to work in the United States by verifying information reported on an employee's Form I-9 against DHS, SSA, DOS and DMV data from participating States. At the end of FY 2014, 553,628 employers were enrolled in E-Verify and they ran more than 28 million queries. The program continues to grow by approximately 1,300 new employers per week.

USCIS launched the E-Verify Self Check service in March, 2011 and completed nationwide implementation in February, 2012. A Spanish language version was launched in August 2011. Self Check was developed through a partnership between DHS and SSA to provide individuals with a tool to check their own employment eligibility status, as well as to provide guidance on how

to update their DHS and SSA records. It is the first online E-Verify service offered directly to workers and improves employee understanding of the employment eligibility process.

Self Check also helps businesses by providing U.S. workers with the opportunity to ensure their employment related records are accurate before getting a job. After reaching full operating capacity in 2012, USCIS developed additional Self Check enhancements for launch in FY 2014 and FY 2015, including additional access to DOS data and the driver's license databases from participating states.

E-Verify launched the first phase of a Data Analytics Tool (DAT) in FY 2012. The first phase of DAT offered advanced analytic techniques, including models addressing compliance and program effectiveness. E-Verify deployed a Voice of the Customer analytics tool, designed to use customer feedback from the E-Verify Listens initiative to improve service, policy, and systems operations. Since the initial launch of DAT, USCIS has focused on improving the potential fraud and discrimination models; developed a new outcome based compliance index that will provide an overall view of compliance and will change how monitoring and compliance activities are evaluated and managed. Recent work has focused on making the models operational.

In FY 2014, USCIS began the Verification Modernization initiative which encompasses both VIS Modernization and the roll-out of several initiatives to enhance the technology and business processes supporting the E-Verify Program. Using DAT, USCIS launched fraud and discrimination modeling capabilities for E-Verify. These fraud and discrimination models build upon earlier monitoring and compliance activities aimed at decreasing the incidences of non-compliant behavior by E-Verify employers. USCIS continued to test the DAT fraud and discrimination models and incorporated them into existing monitoring and compliance processes. Additionally, USCIS finalized the requirements for the electronic Form I-9 and its supporting processes.

In early FY 2015, USCIS began deploying myE-Verify, which allows individuals to create a secure account once they have completed a Self Check query. After users have created a myE-Verify account, employees will be able to lock their SSN in E-Verify, thereby preventing others from fraudulently using it to obtain a job with an E-Verify employer. Similar to Self Check, myE-Verify is being implemented in a phased approach. Planning efforts for additional myE-Verify functionality will occur in the ensuing fiscal years.

Also in FY 2015, USCIS will complete the multi-year initiative for reducing FNCs that may have been issued in error. A new FNC letter will be issued for the FNC review process and USCIS will be able to use E-Verify to track and monitor cases that are submitted for review. USCIS will phase-in the Verification Modernization initiative. Some of the planned changes include:

- An enhanced employer enrollment process and account maintenance initiative for E-Verify; and
- Development of an electronic Form I-9 that is compatible with E-Verify. This electronic Form I-9 will enable users to automatically populate and submit Form I-9 data into E-Verify, eliminating the need for duplicative data entry by the employer when submitting a query. Users will also be able to store and manage their electronic Form I-9s as required.

In FY 2016, USCIS will continue development of Verification Modernization activities that will increase the scalability of VIS – the underlying technology that supports E-Verify – for future expansion. USCIS will expand access to new data systems, which will support the RIDE initiative.

RIDE helps to prevent identity fraud in E-Verify by verifying the authenticity of drivers' licenses with the issuing state.

Other planned FY 2016 activities include:

- Increased use of E-Verify fraud and misuse detection tools;
- Continuation of the FNC appeals process;
- Launch of a new independent evaluation of program effectiveness.

FY 2016 Total Request	-	-	\$10,000
Total Change 2015 to 2016	-	-	-

The FY 2016 Budget includes \$10.0 million, 0 FTP, and 0 FTE for this activity in the S&E Account.

There are no adjustments to base or program changes for this PPA.

CURRENT SERVICES PROGRAM DESCRIPTION:

Continued success as a Nation of immigrants depends on the ability of lawful newcomers to permanently settle in communities and enjoy the rights and freedoms that define the United States. Naturalization is a critical milestone for immigrants in achieving full civic participation, gaining a sense of belonging, and receiving equality under the law. The CIGP is an important capacity-building initiative that supports immigrant civic integration through the naturalization preparation process.

The CIGP funds competitive grants with the goal of expanding the availability of high quality citizenship preparation programs for permanent residents in communities nationwide, to include citizenship instruction and naturalization application assistance services. The CIGP is the sole Federal program that supports the civic integration of lawful immigrants through citizenship preparation programs.

Through September 30, 2014, USCIS grant recipients have provided citizenship preparation services to 99,402 permanent residents in 33 States and the District of Columbia. Specifically, grant recipients enrolled 52,623 students in citizenship classes, offered 180,819 hours of instruction, provided naturalization eligibility screenings to 68,426 permanent residents, and prepared and submitted 42,059 naturalization applications.

In FY 2014, CIGP recipients provided citizenship preparation services to 26,543 permanent residents under the program. Specifically, grant recipients enrolled 12,236 students in

citizenship classes, provided naturalization eligibility screenings to 19,843 permanent residents, and prepared and submitted 13,134 naturalization applications.

Summary Table of CIGP Results

Type of Service	Total*
Cumulative number of permanent residents provided with citizenship preparation services	99,402
Number of permanent residents provided with citizenship preparation services in FY 2014	26,543
Permanent residents enrolled in citizenship classes	52,623
Hours of classroom instruction	180,819
Permanent residents provided with naturalization eligibility screenings to date	68,426
Naturalization applications prepared and submitted to date	42,059

*through September 30, 2014

In addition to the provision of direct services, the CIGP has increased the capacity of organizations to provide naturalization application services. Under the program, 20 grant-receiving organizations attained recognition by the Board of Immigration Appeals (BIA) and 67 individuals were accredited by the BIA. BIA recognition and accreditation are valuable assets that attest to an organization's capacity to respond to the citizenship preparation needs of the community for years to come.

The program has also allowed grant recipients to develop improved service delivery models and promising practices that can be replicated in other programs across the country. Several of these promising practices are highlighted on the online USCIS Citizenship Resource Center (www.uscis.gov/citizenship). Promising practices include the use of technology in the citizenship classroom, effective instructional strategies, and innovative use of volunteers to support citizenship instruction. Sharing promising practices developed under the CIGP allows organizations to learn from past successes, increase efficiency, and improve the quality of local citizenship preparation programs.

Summary Table of Program Impact and Legacy

Type of Service	Total*
Grant receiving organizations that attained recognition by the Board of Immigration Appeals (BIA) to date	20
Individuals accredited by the BIA as a result of the program to date	67
Promising practices published to the online USCIS Citizenship Resource Center to date	9

*through September 30, 2014

In FY 2015, CIGP recipients will provide 25,000 permanent residents with citizenship preparation services, and another 25,000 in FY 2016.

MAJOR ACQUISITIONS:

Verification Modernization (VER)

VIS is utilized for the E-Verify program, to allow participating employers to verify the employment eligibility of all newly hired employees. The E-Verify program is mandated by the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IIRIRA). Any legislation enacted making participation in the E-Verify program mandatory will necessitate the usage of VIS as the primary information system used.

USCIS VIS also supports the (Systematic Alien Verification for Entitlements) SAVE Program, allowing federal, state and local benefit granting agencies to verify the immigration status of applicants/customers applying for a government benefit. The SAVE program is mandated by the Immigration Reform and Control Act of 1986 (IRCA) and the Personal Responsibility and Work Opportunity Reconciliation Act of 1996 (PRWORA).

This investment proposed to be funded out of the Salaries and Expenses PPA in FY 2016 is as follows:

- Salaries and Expenses \$59.702 million

Activity Funding

(\$ in Thousands)

FY 2014 Enacted	FY 2015 President's Budget	FY 2016 Budget
\$61,170	\$63,947	\$59,702

FY 2016 Funding Breakout

(\$ in Thousands)

Program Area	Sub-Program	Mission Need
Benefits Administration (\$59,702)	Immigration Management	The VIS system allows participating employers to verify the employment eligibility of all newly hired employees and also addresses a capability gap by allowing federal, state, and local benefit granting agencies to verify the immigration status of applicants/customers applying for a government benefit.

IV. Program Justification Changes

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For necessary expenses for citizenship and immigration services, [~~\$134,755,000~~]\$129,671,000¹, of which [~~\$124,755,000~~]\$119,671,000² is for the E-Verify Program, as described in section 403(a) of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (8 U.S.C. 1324a note), to assist United States employers with maintaining a legal workforce, and of which \$10,000,000 is for the Citizenship and Integration Grant Program: Provided, That, notwithstanding any other provision of law, funds otherwise made available to United States Citizenship and Immigration Services may be used to acquire, operate, equip, and dispose of up to 5 vehicles, for replacement only, for areas where the Administrator of General Services does not provide vehicles for lease: Provided further, That the Director of United States Citizenship and Immigration Services may authorize employees who are assigned to those areas to use such vehicles to travel between the employees' residences and places of employment.

Language Provision	Explanation
¹ ...[\$134,755,000] <u>\$129,671,000</u> ...	Dollar change only. No substantial change proposed.
² ...[\$124,755,000] <u>\$119,671,000</u> ...	Dollar change only. No substantial change proposed.

E-Verify Mission Statement

E-Verify is an Internet-based system that enables an employer to determine an employee's eligibility to work in the United States by verifying information reported on an employee's Form I-9 against DHS, Social Security Administration (SSA), and Department of State data.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$30,776	\$34,942	\$35,499	\$557
11.3 Other than Full-Time Permanent	\$641	\$100	\$96	\$(4)
11.5 Other Personnel Compensation	\$328	\$366	\$372	\$6
12.1 Civilian Personnel Benefits	\$9,313	\$10,388	\$10,552	\$164
Total, Salaries & Benefits	\$41,058	\$45,796	\$46,519	\$723

An increase of \$723,000 is requested in Salaries and Benefits for costs related to the annualization of the 2015 pay raise, proposed 2016 pay raise, and increased retirement contributions for FERS employees.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$46,536	\$51,246	\$47,020	(\$4,226)

A decrease of \$4,226,000 is requested for advisory and assistance services, including services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$1,976	\$2,165	\$2,006	(\$159)

A decrease of \$159,000 is requested for other services, including contractual services with non-Federal sources that are not otherwise classified under Object Class 25.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$6,487	\$7,106	\$6,584	(\$522)

A decrease of \$522,000 is requested for purchases from Government Accounts, including costs for purchases from other Federal Government agencies or accounts that are not otherwise classified.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.7 Operation and Maintenance of Equipment	\$11,171	\$12,237	\$11,337	(\$900)

A decrease of \$900,000 is requested for the operation and maintenance of equipment, including costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account.

Immigrant Integration & Citizenship Mission Statement

The Office of Citizenship promotes the rights and responsibilities of citizenship and provides integration tools and resources for immigrants, organizations, and other stakeholders. Our continued success as a nation of immigrants depends on the ability of lawful newcomers to permanently settle in communities and enjoy the rights and freedoms that define our Nation. Naturalization is a critical milestone for immigrants in achieving full participation, gaining a sense of belonging, and receiving equality under the law. American society must remain open and welcoming to immigrants and provide essential tools and support for them to gain a sense of belonging and ownership in the future of our country. This program supports these goals.

BUDGET REQUEST AND SUPPORTING INFORMATION

U.S. Citizenship & Immigration Services Immigration Examinations Fee Account

I. Appropriation Overview

The Immigration Examinations Fee Account (IEFA) is the primary funding source for U.S. Citizenship and Immigration Services (USCIS). Fees collected from immigration benefit applications and petitions are deposited into the IEFA and are used to fund the cost of processing immigration benefit applications and associated support benefits, as well as to cover the cost of processing similar benefit requests for applicants without charge, for example, for refugee and asylum applicants.

A. Mission Statement for Immigration Examinations Fee Account:

USCIS is the Department of Homeland Security (DHS) component that facilitates legal immigration for people seeking to enter, reside, or work in the United States. USCIS possesses the authority to grant or deny immigration benefits with a workload estimated at more than six million immigration benefit requests each year. These immigration benefits range from requests for work authorization documents and adjustment of status, to petitions for immediate relatives to immigrate to the United States and requests to become U.S. citizens through naturalization.

The IEFA account provides necessary resources for USCIS to:

- Strengthen and effectively administer the immigration system.
- Strengthen national security safeguards and combat fraud.
- Reinforce quality and consistency in administering immigration benefits.
- Enhance customer service and public engagement.

B. Budget Activities:

Adjudication Services

Through a network of approximately 226 domestic and foreign offices, USCIS is responsible for the timely and quality processing of:

- Family-based petitions - facilitating the process for close relatives of U.S. citizens and permanent residents to immigrate, gain permanent residency, work, etc.
- Employment-based petitions - facilitating the process for current and prospective employees to immigrate or work in the United States temporarily.
- Asylum and Refugee applications and petitions - adjudicating asylum and refugee status applications for individuals seeking protection from persecution and facilitating the process for close relatives of approved refugees and asylees to immigrate to the United States.

- Naturalization applications - processing applications of those who wish to become U.S. citizens.

Secure identity cards and travel document booklets are personalized and provided to recipients of certain immigration benefits as evidence of immigration status and for use in proving eligibility to work and live in the United States and/or to re-enter the U.S. after travel abroad. Premium processing revenues that are deposited into this account fund the Transformation Program, which is a multi-year effort to modernize USCIS business processes and supporting systems, as well as infrastructure improvements identified as critical to sustaining USCIS operations.

Information and Customer Services

The Customer Service and Public Engagement Directorate (CSPED) provides clear, accurate, and timely responses to customer concerns and questions, and engages the public through transparent dialogue that promotes participation and feedback. The CSPED is dedicated to proactively providing information and guidance to USCIS applicants, petitioners, and advocates regarding immigration benefits. The CSPED Public Engagement Division is dedicated to coordinating and directing agency-wide dialogue with external stakeholders to actively collaborate and maintain open and transparent communication, and to seek feedback regarding policies, priorities, and organizational performance reviews.

Administration

The Administration activity supports a variety of headquarters offices including the Office of the Director, Administration, the Chief Financial Officer, Chief Counsel, Contracting, Communications, Legislative Affairs, Policy and Strategy, Equal Opportunity and Inclusion, Chief Human Capital Officer, and Security and Integrity.

Systematic Alien Verification for Entitlements

Systematic Alien Verification for Entitlements (SAVE) is an intergovernmental information-sharing program that assists Federal, State, and local benefit-granting agencies in verifying individuals' immigration status, or naturalized or derived citizenship, when they apply for licenses or public benefits. Customers include Federal agencies, State departments of motor vehicles, licensing bureaus, etc. SAVE is also used to verify the immigration status, or naturalized or derived citizenship, of applicants for health insurance under the Patient Protection and Affordable Care Act (PPACA). SAVE helps other government agencies ensure that only persons eligible for benefits receive them by providing relevant immigration status information.

C. Budget Request Summary:

The FY 2016 Budget includes \$3.814 billion, 17,963 positions, and 16,499 FTE for the USCIS IEFA, an increase of \$233.2 million, 1,256 positions, and 1,771 FTE above the FY 2015 Estimate.

The increase in projected spending authority is the net result of the following:

- \$15.2 million for the 2016 pay raise
- \$3.7 million for the annualization of the 2015 pay raise
- \$5.4 million for increases for Federal Employees Retirement System (FERS) contributions based on updated actuarial estimates.
- \$21.6 million for costs associated with Financial Systems Modernization (FSM)
- \$5.4 million to support the expansion of the Electronic Immigration System (ELIS) technical helpdesk
- \$181.9 million for a technical adjustment to ensure FY 2016 current services funding is consistent with anticipated revenue collections and cost to carry out USCIS's mission.

FY 2014 Revised Enacted	7,158	6,333	\$1,557,336
FY 2015 Estimate	8,426	7,434	\$1,778,209
2016 Adjustments-to-Base	1,176	1,159	\$138,135
FY 2016 Current Services	9,602	8,593	\$1,916,344
FY 2016 Program Change	-	-	-
FY 2016 Total Request	9,602	8,593	\$1,916,344
Total Change 2015 to 2016	1,176	1,159	\$138,135

The FY 2016 Budget includes \$1.9 billion; 9,602 positions; and 8,593 FTE for USCIS to process more than three million immigration benefit applications annually and to maintain processing time goals while ensuring the security and integrity of the immigration system.

Adjustments to Base:

- Increase of \$7.7 million for the 2016 pay raise
- Increase of \$1.9 million for the annualization of the 2015 pay raise
- Increase of \$2.9 million for Federal Employees Retirement System (FERS) contributions based on updated actuarial estimates
- Increase of \$125.6 million for a technical adjustment to ensure FY 2016 current services funding is consistent with anticipated revenue collections and cost to carry out USCIS’s mission

CURRENT SERVICES PROGRAM DESCRIPTION:

Field Operations

Field Operations conducts in-person interviews for all immigration and naturalization benefit types that require an interview. Chief among these are adjustment of status applications to become a permanent resident and naturalization applications to become a U.S. citizen. Field Operations has established performance objectives for completing these applications, ancillary applications (e.g. work and travel authorization) and other assigned applications and petitions in a timely manner. Critical elements of providing effective adjudication services include providing accurate and timely immigration information and customer service. This is done through targeted public dissemination of information and by conducting outreach to better understand the potential pool of applicants and so that potential applicants better understand immigration and naturalization processes.

Fraud Detection and National Security

The Fraud Detection and National Security Directorate (FDNS) leads USCIS efforts to determine whether individuals or organizations requesting immigration benefits pose a threat to national security, public safety, or the integrity of the Nation's immigration system by:

- Detecting, deterring, and administratively investigating immigration-related fraud, and working to eliminate systemic vulnerabilities that could present a threat to national security and public safety;
- Serving as primary conduit for information sharing and collaboration with interagency law enforcement and intelligence community partners;
- Establishing guidance and overseeing the process for identifying, reviewing, vetting, and adjudicating cases involving national security concerns;
- Developing and implementing efficient and effective security screening policies, programs, and procedures; and
- Developing innovative technical capabilities and effective data collection and analysis tools to support the agency's fraud detection, national security, public safety, and intelligence operations.

Office of Information Technology

The Office of Information Technology (OIT), a component of the Management Directorate, provides the information technology, equipment, software, services, expertise, and the strategic vision to enable USCIS to deliver effective, efficient, and secure immigration services and products. OIT leads USCIS in the design, development, delivery, and deployment of a wide range of IT services and solutions that are collectively improving the Nation's immigration system. Of particular importance, OIT is working in close partnership and collaboration with the Office of Transformation Coordination in order to deliver the USCIS Transformation program and the Electronic Immigration System (ELIS).

Biometrics

The Enterprise Services Directorate's Biometrics Division (BD) is responsible for collecting biometric and biographic data from applicants that are required to provide this data when requesting immigration benefits in the United States. For benefits requiring a biometric check, USCIS schedules applicants to appear at one of the 137 Application Support Centers located nationwide, by scheduled appointment, for biometric and biographic data collection. The biometrics are used by USCIS adjudicators to determine benefit eligibility and are also incorporated into DHS-issued benefit documents. The BD plays a vital role in fulfilling the DHS and USCIS missions of ensuring the integrity of the immigration system through the collection of biographic and biometric data that is sent to the Federal Bureau of Investigation to detect persons with known criminal or terrorist history. In addition, the Division collects, on a cost reimbursable basis, biometrics and biographic data for individuals present in the United States applying for United Kingdom and Canadian visas. BD plans to begin offering this service to Ireland in the fourth quarter of FY 2015.

Office of Citizenship

The Office of Citizenship promotes the rights, responsibilities, and importance of U.S. citizenship and provides educational tools and resources for immigrants, organizations, and other stakeholders. Continued success as a Nation of immigrants depends on the ability of lawful newcomers to permanently settle in communities and enjoy the rights and freedoms that define the Nation. Naturalization is a critical milestone for immigrants in achieving full civic participation, gaining a sense of belonging in U.S. society, and receiving equality under the law.

The CIGP, funded partially through fee collections in FY 2014, is an important capacity-building initiative that supports immigrant civic integration through the naturalization preparation process. The program funds competitive grants with the goal of expanding the availability of high quality citizenship preparation programs for permanent residents in communities nationwide to include citizenship instruction and naturalization application services. In FY 2015 and FY 2016, USCIS has requested discretionary appropriations in the Salaries and Expenses account to fund the grants program. Support through discretionary appropriations recognizes the general benefit to the Nation of preparing qualified permanent residents for the rights and responsibilities of citizenship.

Office of Performance and Quality

The Office of Performance and Quality seeks to preserve and enhance the quality of USCIS data by serving as diligent stewards of the data. Through the use of sound data collection, validation, and management techniques, and by ensuring a high degree of data quality, OPQ provides relevant and actionable datasets to USCIS directorates and program offices, as well as to external stakeholders from the Department, Administration, and public at large. By providing these datasets along with pertinent analysis and continuous improvement guidance, OPQ is a key partner in ensuring the efficiency, effectiveness, and integrity of America's immigration system. In addition, OPQ recommends volume-driven staffing levels in order to facilitate agency-wide operational and budgetary planning efforts.

- **Provide relevant and timely data and analysis:** OPQ provides stakeholders with immigration information and analysis critical to daily planning and strategic policy decisions. Regardless of their final destination, OPQ seeks to ensure the data and information provided are relevant to the issue and delivered on time with the highest quality possible. In addition, OPQ seeks to provide value added insights to the data, facilitating and enhancing the decision-making process.
- **Prepare comprehensive staffing models and volume projections:** In conjunction with the Office of the Chief Financial Officer, the Office of Policy and Strategy, and the operational directorates, OPQ leads the development of staffing models, providing recommendations to leaders in an effort to align resources where they are most needed. Similarly, OPQ develops volume projections for all major benefit types, providing the basis upon which all operational and financial planning takes place.
- **Improve the quality of data and data reporting systems:** Working with the Office of Information Technology and the Office of Policy and Strategy, OPQ aligns data quality improvement efforts, leading the identification of business requirements associated with the identification, collection, storage, management, dissemination, and archiving of USCIS' immigration related data. Additionally, OPQ works with the Office of Transformation

Coordination to define data requirements for ELIS, ensuring integration of legacy and emerging data systems.

- **Support quality compliance and continuous improvement efforts across the agency:** OPQ has put into place tools and resources that allow managers across the agency to initiate and implement improvements to realize gains in operational efficiency by lowering direct costs, increasing productivity, and avoiding unnecessary expenditures. Apart from these improvement efforts, OPQ also manages the All Forms Review process to ensure compliance with decisional accuracy and process compliance standards.

Office of Administrative Appeals

The Office of Administrative Appeals issues immigration appeals decisions, including precedent decisions to guide officers and the public, and provides the public with clear and accessible information about the immigration appeals process.

MAJOR ACQUISITIONS

The USCIS Office of Communications (OCOMM) and the Office of the Chief Information Officer (OCIO) established the public - facing Customer Service Web Portal (CSWP) in October 2006. The primary goal of the CSWP is to provide the public with a positive, understandable and effective online experience. A public user, with minimal computing skills, can access the CSWP and easily access information, download forms, educational and instructional materials, and gain access to other systems responsible for scheduling interviews and applying for immigrant benefits. Customer access to the CSWP is seamless, regardless of technical sources, so that all information sources have a similar, if not the same, look and feel and apply a consistent and intuitive navigation strategy. The CSWP went through an exhaustive redesign in September 2009, including the deployment of USCIS Espanol.

(\$ in Thousands)

Program Area	Sub-Program	Mission Need
Benefits Administration (\$9,881)	Knowledge Management	Customer Service Web Portal closes a gap in technical capabilities by implementing a content management system that provides the technical capability for managing the information, establishing a workflow for content reviews, and creating a capability for simply and safely publishing content to the internet.

Immigration - CLAIMS 3.0

CLAIMS 3 is a legacy case application tracking and processing system used for the adjudication of applications and petitions for immigration benefits and services except asylum and naturalization. It is the primary source of applicant/petitioner information used to perform background checks, conduct the examination (review of information that is being provided by petitioners), and adjudication. The information within CLAIMS 3 is used to assist the examiner in verifying and corroborating applicant petitions through the use of business rules to ensure that the process is consistent with all applicable laws and regulations. CLAIMS 3 resides in four service centers, the National Benefits Center, the Administrative Appeals Office, and Baltimore Field Office. It channels information to over 90 district offices via the Integrated Case Management System (ICMS) Web Interface for Family Based 485 Forms, and is a source for accessing information for Performance Measures and Production Numbers.

This investment is included in the District Operations PPA in FY 2016, as follows:

Benefits Administration (\$18,214)	Immigration Management	CLAIMS 3 addresses a capability gap by allowing USCIS to effectively and efficiently adjudicate immigration benefits. CLAIMS 3 LAN allows USCIS to process over six million benefits annually and plays an important role in closing performance gaps within USCIS for benefit timeliness, data-sharing, and completing immigration services reports to USCIS stakeholders

Infrastructure (End User Support)

Infrastructure-End User Support (I-EUS) investments support the operations and maintenance infrastructure of the immigration system. This investment consists of an enterprise Service Desk which includes Tier I, Incident and Problem Management support, Deskside Support, Deployment Services, Hardware Maintenance, and Asset Management. I-EUS provides Systems Assurance solutions to support systems engineering; Independent Testing and Integration services to sustain system acceptance, user acceptance, interoperability and performance testing; Change, Configuration, and Release Management to manage changes to the USCIS operating environment; and Master Delivery Order vehicle for purchasing information technology hardware and minimal maintenance support.

This investment is included in the District Operations PPA in FY 2016, as follows:

Infrastructure (Enterprise)

This program provides capabilities to USCIS employees to access all voice and data communications of USCIS. It is the basic infrastructure that represents information technology utility to USCIS and the comprehensive support of that infrastructure. This program provides support to the Data Center Migration effort. However, this program does not include help desk services, ICE shared services, and ICENET costs. USCIS Infrastructure (Enterprise) program is made up of Shared Services, Global Services, Hosting Services, and Converged Services. Shared Services group administrates and performs Contracting Officer Representative and Designated Agency Representative duties for all data services, telecommunications services and a majority of data center hosting services for USCIS. The investment supports/provides enterprise level data service, DSL data service, cable data service, enterprise level voice circuits, long distance service, toll free service, Note: See CASR for full description.

Naturalization - CLAIMS 4.0

CLAIMS4 (C4) is the primary case processing system for the adjudication of Applications for Naturalization (N-400, N600, N600K, N336). C4 is operational at ninety-eight locations nationwide (4 Service Centers, the National Benefit Center, 92 Field Offices, & Headquarters) & offers a standardized automated process for adjudicating applications. C4 system designed to meet the USCIS vision & mission to provide: 1) customer-focused benefits processing; 2) credible source of useful

information & contributor to the US security; 3) accurate & useful information to our customers; 4) granting immigration & citizenship benefits; and 5) ensuring the integrity of our immigration system. C4 continues to be one of the primary multi-tier client/server workflow management systems that is designed to strengthen America's future & secure America's promise by providing Citizenship and Naturalization benefits to our applicants.

Biometrics Division Program

The USCIS Biometrics Division (BD) is statutorily required to collect biometric and biographic data from applicants who seek immigration benefits in the United States. Applicants appear at one of the 137 application support centers located nationwide, by scheduled appointment, for data collection. The biometrics are used by USCIS adjudicators to determine benefit eligibility and are also incorporated into DHS-issued benefit documents. It is essential to the mission of DHS and USCIS that the identity of individuals who seek immigration and naturalization benefits is verified, and biometric data that is captured is checked to identify whether any known criminal or terrorist history exists within various law enforcement databases.

The FY 2016 Budget includes \$694.3 million; 4,240 positions; and 3,999 FTE for USCIS Service Center Operations to adjudicate applications and ensure improved customer service while delivering the right benefit, to the right person, without undue delay.

Adjustments to Base:

- Increase of \$3.3 million for the 2016 pay raise
- Increase of \$812,000 for the annualization of the 2015 pay raise
- Increase of \$1.1 million for Federal Employees Retirement System (FERS) contributions based on updated actuarial estimates
- Increase of \$32.8 million for a technical adjustment to ensure FY 2016 current services funding is consistent with anticipated revenue collections and cost to carry out USCIS's mission

CURRENT SERVICES PROGRAM DESCRIPTION:

Service Center Operations

Service Center Operations Directorate (SCOPS) is one of the key operational components of USCIS and is responsible for adjudicating the majority of benefit types that do not require an in-person interview. SCOPS is tasked with adjudicating the largest volume of applications across the broadest and most diverse cross-section of immigration benefits. SCOPS is a strong and vital partner in developing immigration policies and programs that ensure exceptional customer service while delivering the right benefits to the right persons at the right time, and not to those who are underserving. SCOPS continuously evaluates and modifies workflow processes in order to more effectively and efficiently administer immigration laws within established processing times, and is dedicated to ensuring the security and integrity of the immigration system through a workforce of highly trained adjudication officers that conduct numerous security checks on a broad range of immigration benefit applications. Specialized teams of Service Center adjudications staff, along

with law enforcement agencies, and other government agencies, work together to conduct extensive research and vetting of individuals and organizations seeking immigration benefits to protect the national security of the United States.

Office of Intake and Document Production

The Office of Intake and Document Production (OIDP) is responsible for the beginning and end of the process for individuals who are seeking immigration benefits. OIDP creates and distributes USCIS forms, secure certificates and informational materials; receives applications and petitions; processes filing fees; generates and distributes USCIS appointment notices; and provides approved individuals with secure documents such as permanent resident (green) cards, employment authorization documents and travel booklets.

The FY 2016 Budget includes \$268.0 million; 1,526 positions; and 1,449 FTE for USCIS to extend humanitarian protection, citizenship, and other immigration benefits to eligible individuals as well as detecting fraud and protecting national security.

Adjustments to Base:

- Increase of \$1.4 million for the 2016 pay raise
- Increase of \$309,000 for the annualization of the 2015 pay raise
- Increase of \$479,000 for Federal Employees Retirement System (FERS) contributions based on updated actuarial estimates
- Increase of \$11.4 million for a technical adjustment to ensure FY 2016 current services funding is consistent with anticipated revenue collections and cost to carry out USCIS's mission

CURRENT SERVICES PROGRAM DESCRIPTION:

Refugee, Asylum, and International Operations Directorate (RAIO) extends humanitarian protection, citizenship, and other immigration benefits to eligible individuals, while detecting fraud and protecting national security. RAIO is comprised of a headquarters management unit and three operational divisions. The Asylum Division has eight domestic offices that adjudicate asylum applications from individuals not in removal proceedings (affirmative asylum) and conduct credible fear screenings for all persons placed in expedited removal that request asylum or express a fear of persecution or torture on return to their country of origin. The Refugee Affairs Division is a headquarters-based operation whose officers travel internationally to conduct refugee processing in accordance with U.S. law and international obligations and conduct credible fear screenings for certain migrants at sea. With worldwide jurisdiction, the International Operations Division adjudicates immigration petitions and applications and provides immigration services in 25 embassies and consulates abroad in 22 countries. The International Operations Division also adjudicates requests for parole and oversees a cooperative agreement to provide resettlement services to qualified Cuban and Haitian migrants in the United States. In addition, the

International Operations Division is involved with the naturalization of military service members abroad. With a wide footprint extending from U.S. embassies and consulates to additional refugee processing locations, RAIO is the face of USCIS abroad. In furtherance of USCIS's mission and United States interests, RAIO engages in liaison with other U.S. government agencies and foreign governments, international organizations, civil society, non-governmental organizations, and private entities worldwide.

The FY 2016 Budget \$124.2 million; 349 positions; and 332 FTE for USCIS management of U.S. immigration records.

Adjustments to Base:

- Increase of \$320,000 for the 2016 pay raise
- Increase of \$82,000 for the annualization of the 2015 pay raise
- Increase of \$114,000 for Federal Employees Retirement System (FERS) contributions based on updated actuarial estimates
- Decrease of \$6.0 million for a technical adjustment to ensure FY 2016 current services funding is consistent with anticipated revenue collections and cost to carry out USCIS's mission

CURRENT SERVICES PROGRAM DESCRIPTION:

The Records Operations PPA funds the management of U.S. immigration records. This PPA includes two components of the Enterprise Services Directorate, the Records Division and the National Records Center (NRC).

The Records Division administers immigration records created by USCIS and enforcement records created by other DHS entities, including alien registration files (A-files). Functions performed by the Records Division include: 1) development, implementation, monitoring, and training of records management policy to ensure accuracy, availability, and security of immigrants' information held both in paper and electronic form; 2) cataloging, maintaining, and researching historical agency information; 3) managing the USCIS genealogy program; and 4) performing specialized search, retrieval, and interpretation of immigration records in response to authorized government agency, Congressional, and public inquiries.

NRC stores and accesses over 18 million A-files, providing customers with timely and appropriate access to requested records and information in an efficient manner. NRC is also responsible for overseeing operations to store and manage destruction of over 25 million receipt files. Customers requiring access to A-files include Federal, state, and local agencies. In addition, NRC is responsible for the largest Freedom of Information Act (FOIA) program within the Federal Government. In FY 2014, the NRC processed 141,747 FOIA requests.

The FY 2016 Budget includes \$226.4 million, 0 positions, and 0 FTE to transition USCIS from a fragmented, paper-based operational environment to a paperless, centralized, and consolidated environment, utilizing electronic processing for benefits filing and adjudication.

Adjustments to Base:

- Increase of \$5.4 million to support the expansion of the ELIS technical helpdesk to serve the system’s growing customer base
- Increase of \$21.6 million for the Financial Systems Modernization Initiative (FSM)
- Increase of \$4.4 million for a technical adjustment to ensure FY 2016 current services funding is consistent with anticipated revenue collections and cost to carry out USCIS’s mission

CURRENT SERVICES PROGRAM DESCRIPTION:

As part of a comprehensive set of initiatives to modernize the agency, USCIS embarked on an enterprise-wide Transformation investment that has begun to transition the agency from a fragmented, paper-based operational environment to a centralized and consolidated environment that facilitates electronic benefits processing. This investment is a large-scale, complex undertaking with the goal of modernizing USCIS-wide business processes using information technology (IT) enabled reengineering. Transformation will be accomplished through implementation of an integrated operating environment system, ELIS. This system will employ the types of online customer accounts used in the private sector to manage transactions and track activities while accomplishing the USCIS mission of enforcing and administering our immigration laws. The revised processes, enabled by ELIS, will help USCIS meet customer expectations for on-demand information and immediate real-time electronic service over the Internet.

The Office of Transformation Coordination provides a centralized management structure to oversee all transformation activities associated with ELIS. The USCIS goals for the Transformation investment address four major initiatives:

- National Security and Integrity: USCIS will ensure the integrity of the immigration system and help safeguard the country by effectively collecting, analyzing, and sharing information used to verify identity, eligibility, and the status of individuals seeking to become U.S. citizens, lawful permanent residents, or study, live, or work temporarily in this country;
- Customer Service: USCIS will deliver world-class customer service by adjudicating requests for benefits accurately and within acceptable timeframes, by providing timely and accurate information about immigration benefits and the status of customer requests and by promoting civic values;
- Operational Efficiency: USCIS will be an innovative, flexible, and accountable organization that invests in its people and infrastructure to ensure cost-effective and consistent results; and
- Quality: USCIS will consistently issue high-quality immigration benefit decisions.

USCIS remains committed to developing capability with flexibility to handle its current workload of benefit requests, estimated at more than six million annually, as well as changes in laws or regulations.

To address legacy financial management system inadequacies, DHS launched the FSM initiative in 2011 to modernize the financial management systems that are being used by DHS components. The Department must invest in modernizing financial management systems in order to improve financial accountability and financial reporting, and enable business process standardization. The FSM initiative follows DHS directives, OMB guidance, and processes developed by the Department of the Treasury's Office of Financial Innovation and Transformation.

In FY 2016, USCIS requires \$21.6 million for the FSM initiative. FY 2016 funds are to initiate the migration of USCIS to a shared service provider for financial, acquisition and asset management solution services. USCIS is proposing to expand the use of premium processing funds for the FSM initiative. The migration is scheduled to be completed in FY 2017. The DHS Office of the Chief Financial Officer provides guidance and oversight to Component FSM initiatives.

MAJOR ACQUISITIONS

Transformation

The goal of Transformation is to modernize USCIS agency-wide business processes using IT-enabled reengineering. Transformation will be accomplished through implementation of an integrated operating environment that will transition the agency from a fragmented, paper-based operational environment to a consolidated environment that allows electronic processing of benefit requests. The key customers, stakeholders, and beneficiaries of the Electronic Immigration System (ELIS) are: enterprise partners; DHS components; USCIS employees; customers and advocates (the persons petitioning USCIS for benefits and services and the organizations representing those individuals), stakeholders with oversight and review responsibilities including Congress, the Office of Management and Budget, the Government Accountability Office, and the DHS Office of the Inspector General; and other stakeholders including public IT industry groups, U.S. citizens, and media outlets.

This investment is included in the Transformation PPA in FY 2016, as follows:

- Transformation: \$180.911 million

Total Change 2015 to 2016	-	58	\$6,011

The FY 2016 Budget includes \$142.6 million, 462 positions, and 438 FTE for USCIS to provide timely, consistent, and accurate information to customers.

Adjustments to Base:

- Increase of \$374,000 for the 2016 pay raise
- Increase of \$86,000 for annualization of the 2015 pay raise
- Increase of \$120,000 for Federal Employees Retirement System (FERS) contributions based on updated actuarial estimates
- Increase of \$5.4 million for a technical adjustment to ensure FY 2016 current services funding is consistent with anticipated revenue collections and cost to carry out USCIS’s mission

CURRENT SERVICES PROGRAM DESCRIPTION:

The Customer Service and Public Engagement Directorate (CSPED) provides clear, accurate, and timely responses to customer concerns and questions, and engages the public through transparent dialogue that promotes participation and feedback. The Customer Service Division (CSD) is dedicated to proactively providing information and guidance to USCIS applicants, petitioners, and advocates regarding immigration benefits.

CSD manages the National Customer Service Center (NCSC) 1-800 number for USCIS. This number provides the general public with prompt and accurate information to their telephonic inquiries regarding case information and immigration laws and benefits. The NCSC 1-800 number averages nearly 1 million telephonic inquiries per month. When a customer calls the NCSC, the call is routed directly to the IVR system, which is available twenty-four hours per day, seven days per week in English and Spanish. Through the IVR, customers can learn about basic eligibility, basic filing, ordering forms, and other services. Customers can obtain information about their local field office, including location and hours of operation. Customers can also obtain case status information for most cases if they have a receipt number. If the customer cannot resolve his or her inquiry through the IVR,

the customer is transferred to a customer service representative (CSR) at a Tier 1 contract call center. CSD operates four Tier 1 contract call center locations providing first line support to our customers. These centers are located in Barbourville and London, Kentucky, and Fort Worth and El Paso, Texas. After speaking to a CSR, if the customer requires additional support or has a unique and complex inquiry, the CSR will transfer the call to a Tier 2 call center to speak with an Immigration Services Officer (ISO). The USCIS employees at Tier 2 have an extensive immigration law and operational background. The Tier 2 call centers are located in New York City and Los Angeles.

For almost two decades, USCIS has relied on its call centers as its primary means of providing customer service. In response to the increasing costs of providing customer service, changing customer demographics, emerging technology and customer preferences, USCIS is moving toward a new customer service model, evolving from traditional call centers to a full scale customer engagement center. The foundation of this new center will be a mix of technology, processes, and policies engineered to provide a suite of customer facing tools that will offer a superior customer experience in a digital environment. The intention of this mix of tools, processes, and policy is to not only provide a new customer experience but to reduce the operational costs of providing service using our current model.

The FY 2016 Budget includes \$415.1 million; 1,561 positions; and 1,476 FTE for USCIS to strengthen key management processes, systems, and administrative support activities; and to facilitate mission success and enhance the timeliness, accountability, efficiency, and effectiveness of service delivery.

Adjustments to Base:

- Increase of \$1.8 million for the 2016 pay raise
- Increase of \$450,000 for annualization of the 2015 pay raise
- Increase of \$673,000 for Federal Employees Retirement System (FERS) contributions based on updated actuarial estimates
- Increase of \$8.2 million for a technical adjustment to ensure FY 2016 current services funding is consistent with anticipated revenue collections and cost to carry out USCIS's mission

CURRENT SERVICES PROGRAM DESCRIPTION:

The Administration PPA includes the Office of the Director, several offices within the Management Directorate, as well as other program offices. The Management Directorate responsibilities with the Administration PPA include: procurement operations; management of property plant and equipment, and other material resources; budget, planning and performance measures, strategic sourcing, financial and capital asset management; human resources and personnel recruitment, hiring, training, leadership development, employee benefits, and work-life programs; immigration forms, print services, and the management of security and emergency management operations.

The **Management Directorate** offices in the Administration PPA include the following:

- The Investment Management Division: strives to provide transparency in acquisition and investment management within USCIS programs by analyzing contract performance, assessing and mitigating investment risks, ensuring effective utilization of

resources, and enabling effective decision-making by senior leadership. The Division is also responsible for managing, promoting and implementing the agency's Balanced Workforce Strategy and In-Sourcing initiatives.

- The Office of Administration: plans, develops, implements, and evaluates agency-wide policies, procedures, and programs for personal property, facilities, and mail management, for the operation of centrally-managed, agency-wide support activities, and for the direct delivery of administrative support to USCIS headquarters.
- The Office of the Chief Financial Officer: coordinates the development and execution of the budget and biennial fee reviews; manages the performance measurement processes; and conducts financial management activities consistent with law, regulation, standards, and best practices.
- The Office of Contracting: provides the execution, management, oversight, and guidance for the contracting program. The primary role of the office is to provide USCIS with the supplies/services necessary to accomplish the mission in accordance with the Federal Acquisition Regulation and Departmental policy.
- The Office of Human Capital and Training: provides oversight, direction, and operational support for an integrated program of recruitment, hiring, training, leadership development, performance management, employee benefits, and work-life programs for the USCIS workforce.
- The Office of Security and Integrity: provides leadership in security and emergency management within USCIS to protect employees, facilities, assets and information to advance the USCIS mission by ensuring effective, efficient, and continual operations.

In addition, other core offices that are not part of the Management Directorate include the following:

- The Office of the Chief Counsel: consists of various legal divisions dedicated to advising and representing USCIS operational components both at headquarters and in the field. Headquarters divisions include Adjudications Law, Refugee and Asylum Law, Commercial and Administrative Law, Regulatory and Verification Law, Ethics, Transformation Law, and Training and Knowledge Management. Field divisions include Northeastern, Southeastern, Central, Western, Service Centers, and Litigation and National Security Coordination. Each division is responsible for reviewing, interpreting, and providing legal advice and guidance to USCIS operational components.
- The Office of Communications: oversees and coordinates communication to both internal and external stakeholders to empower employees with the tools needed to perform their jobs, educate the public regarding USCIS benefits and services, and facilitate consistent messaging and imaging for USCIS.
- The Office of Legislative Affairs: maintains communication with Congress through its responses to constituent concerns, promotion of USCIS priorities, proactive outreach on

issues of interest, and ongoing educational activities for Members of Congress and staff.

- The Office of Policy and Strategy: directs, prioritizes, and sets the agenda for agency-wide policy, strategy, and long-term planning activities. In addition, the office undertakes economic analysis supporting regulations development and conducts research and analysis on immigration services issues.
- The Office of Privacy: provides advice and technical assistance to leadership and management to ensure privacy protections are implemented throughout USCIS programs, systems, processes and operations, and ensure USCIS' adherence to federal, regulatory, statutory, and Departmental privacy requirements, mandates, directives and policy. The Chief Privacy Officer leads the privacy team in evaluating USCIS programs, systems and operations to identify privacy sensitivities; recommend mitigation strategies to reduce potential privacy impact; and provide guidance and assistance to USCIS program offices and directorates in meeting such requirements.
- The Office of Equal Opportunity and Inclusion: provides services and programs to help USCIS maintain an efficient, fair and impartial employment discrimination complaint resolution process; promote inclusion and diversity at all levels of the organization through workforce analysis and barrier elimination/mitigation; and, provide an effective disability accommodation program to ensure that individuals with disabilities receive full access to employment opportunities.

PPA: SAVE

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	223	196	\$24,823
FY 2015 Estimate	223	212	\$26,648
2016 Adjustments-to-Base	-	-	\$373
FY 2016 Current Services	223	212	\$27,021
FY 2016 Program Change	-	-	-
FY 2016 Total Request	223	212	\$27,021
Total Change 2015 to 2016	-	-	\$373

The FY 2016 Budget includes \$27 million, 223 positions, and 212 FTE for Systematic Alien Verification for Entitlements (SAVE).

Adjustments to Base:

- Increase of \$195,000 for the 2016 pay raise
- Increase of \$50,000 for annualization of the 2015 pay raise
- Increase of \$75,000 for Federal Employees Retirement System (FERS) contributions based on updated actuarial estimates
- Increase of \$53,000 in spending authority for a technical adjustment to ensure FY 2016 current services funding is consistent with anticipated revenue collections and cost to carry out USCIS's mission

CURRENT SERVICES PROGRAM DESCRIPTION:

SAVE assists Federal, State and local agencies in determining an individual's eligibility for public benefits by checking their immigration status or naturalized/derived citizenship status in Federal immigration databases. At the end of FY 2014, 1,111 agencies were enrolled in SAVE and they ran more than 22.7 million queries¹. The program has grown by 49 new agencies² in FY 2014. Large agency customers include the US Department of Health and Human Services (Centers for Medicare and Medicaid Services), the Social Security Administration, the U.S. Department of Housing and Urban Development, the U.S. Department of Education, and the California Department of Motor Vehicles. Every state and the District of Columbia are represented in SAVE's customer base. The SAVE program is funded by a combination of user charges paid by its agency customers and general fee receipts paid by USCIS immigration benefit applicants and

¹ Total includes initial verification plus second and third step requests.

² Total new agencies for FY14 includes total new agencies registered (59) minus total agencies terminated (10)

petitioners. USCIS is committed to ensuring that SAVE user charges are set at a level that supports effective program operations and encourages SAVE users to complete all the appropriate steps in the verification process.

Eligibility for benefits identified in the Patient Protection and Affordable Care Act (PPACA), such as qualified health plans, Medicaid, and the Children's Health Insurance Program (CHIP), is limited to citizens, nationals and lawfully present aliens. Under the PPACA, Health and Human Services (HHS) is required to verify immigration status through DHS. Undocumented/illegal aliens are not eligible for benefits under the PPACA.

In FY 2014, as the PPACA exchanges became operational and benefits incrementally went into effect, SAVE received a case volume increase of 7.1 million first step queries and 987,045 additional verifications for FY 2014. HHS originally estimated that during this open enrollment period, SAVE could see about 1.7 million to 3.5 million first step queries and 175,000 to 355,000 additional verifications. SAVE is planning to use revised HHS estimates for the FY 2015 open enrollment period, currently scheduled for November 15, 2014 to February 15, 2015, with a total of about 4.5 million initial and about 445,000 additional verification queries. SAVE will also extend the FY 2015 estimates to FY 2016 until further guidance is provided by HHS.

District Operations Mission Statement

USCIS ensures through program directorates and offices the efficient adjudication of immigration benefits; timely action on related ancillary applications and other assigned product lines; direct customer service, immigration information, assurance of the integrity of the immigration system; assistance to applicants, petitioners, and beneficiaries; detects and combats immigration benefit fraud; identifies threats to national security and public safety; and serves as an effective conduit of information between USCIS and the law enforcement and intelligence communities to address threats to national security and public safety.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$518,139	\$591,809	\$697,907	\$106,098
11.3 Other than Full-Time Permanent	\$8,643	\$9,872	\$11,642	\$1,770
11.5 Other Personnel Compensation	\$19,956	\$22,793	\$26,880	\$4,087
12.1 Civilian Personnel Benefits	\$165,699	\$189,258	\$223,189	\$33,931
13.0 Benefits for Former Personnel	\$2	\$2	\$3	\$1
Total, Salaries & Benefits	\$712,439	\$813,734	\$959,621	\$145,887

An increase of \$145,887,000 is requested in Salaries and Benefits for costs related to the annualization of the FY 2015 pay raise, proposed FY 2016 pay raise, and increased retirement contributions for FERS employees.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
21.0 Travel and Transportation of Persons	\$6,208	\$7,708	\$8,208	\$500

An increase of \$500,000 is requested for travel, including all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
22.0 Transportation of Things	\$2,230	\$2,594	\$2,624	\$30

An increase of \$30,000 is requested for the transportation of things, including all costs of the care of such things while in process of being transported, and other services incident to the transportation of things.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
23.1 Rental Payments to GSA	\$137,855	\$143,603	\$149,647	\$6,044

An increase of \$6,044,000 is requested for GSA Rent, including all payments to General Services Administration (GSA) for rental of space and rent related services.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
23.2 Rental Payments to Others	\$9,961	\$11,592	\$11,721	\$129

An increase of \$129,000 is requested for other rent, including all payments to a non-Federal source for rental space, land, and structures.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
23.3 Communications, Utilities, and Misc. Charges	\$33,043	\$38,739	\$39,162	\$423

An increase of \$423,000 is requested for communications, utilities, and miscellaneous charges, including all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services.

	FY 2014	FY 2015	FY 2016	FY 2015 to
				FY 2016

	Revised Enacted	Estimate	Request	FY 2016 Change
24.0 Printing and Reproduction	\$1,711	\$2,004	\$2,025	\$21

An increase of \$21,000 printing, including all costs for printing and reproduction obtained from the private sector or from other Federal entities.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$305,270	\$358,754	\$358,691	(\$63)

A decrease of \$63,000 is requested for advisory and assistance services, including services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$114,065	\$133,316	\$134,777	\$1,461

An increase of \$1,461,000 is requested for other services, including contractual services with non-Federal sources that are not otherwise classified under Object Class 25.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$105,420	\$123,446	\$107,335	(\$16,111)

A decrease of \$16,111,000 is requested for purchases from Government Accounts, including costs for purchases from other Federal Government agencies or accounts that are not otherwise classified.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
25.4 Operation and Maintenance of Facilities	\$84	\$98	\$99	\$1

An increase of \$1,000 is requested for the operation and maintenance of facilities, including all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
25.7 Operation and Maintenance of Equipment	\$47,369	\$55,079	\$55,688	\$609

An increase of \$609,000 is requested for the operation and maintenance of equipment, including costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
26.0 Supplies and Materials	\$9,014	\$10,532	\$10,646	\$114

An increase of \$114,000 is requested for supplies and materials that are ordinarily consumed or expended within one year after they are put into use, converted in the process of construction or manufacture, used to form a minor part of equipment or property, or other property of little monetary value that does not meet any of the three criteria listed above.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
31.0 Equipment	\$54,754	\$63,741	\$64,444	\$703

An increase of \$703,000 is requested for equipment, including all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
32.0 Land and Structures	\$10,515	\$13,251	\$11,638	(\$1,613)

A decrease of \$1,613,000 is requested for land and structures, including the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural (or resource) improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
42.0 Insurance Claims and Indemnities	\$15	\$17	\$18	\$1

An increase of \$1,000 is requested for payments to creditors for the use of moneys loaned, deposited, overpaid, or otherwise made available; distribution of earnings to owners of trust or other funds; and interest payments under lease-purchase contracts for construction of buildings.

Service Centers Mission Statement

Service Center Operations partners in the development of immigration policies and programs to ensure improved customer service while delivering the right benefit, to the right person, without undue delay. USCIS continuously evaluates and modifies workflow processes at the four service centers in order to more effectively and efficiently administer immigration laws within the established cycle times, and ensures the security and integrity of the immigration system through a workforce of highly trained adjudication officers that conduct numerous security checks on a broad range of immigration benefit applications.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$209,794	\$237,147	\$263,351	\$26,204

Records Operations Mission Statement

The Records Division is the caretaker of the country's immigration records, commonly known as alien files or A-files, which document individuals' journeys from (or even before) their original entries into the United States to naturalization. NRC provides customers with timely access to information from the agency's A-files and subsidiary data systems.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$21,550	\$22,248	\$22,565	\$317
11.3 Other than Full-Time Permanent	\$250	\$819	\$831	\$12
11.5 Other Personnel Compensation	\$1,449	\$1,694	\$1,726	\$32
12.1 Civilian Personnel Benefits	\$6,891	\$8,056	\$8,211	\$155
Total, Salaries & Benefits	\$30,140	\$32,817	\$33,333	\$516

An increase of \$516,000 is requested in Salaries and Benefits for costs related to the annualization of the FY 2015 pay raise, proposed FY 2016 pay raise, and increased retirement contributions for FERS employees.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
22.0 Transportation of Things	\$69	\$85	\$79	(\$6)

A decrease of \$6,000 is requested for the transportation of things, including all costs of the care of such things while in process of being transported, and other services incident to the transportation of things.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
23.1 Rental Payments to GSA	\$7,155	\$7,469	\$7,784	\$315

An increase of \$315,000 is requested for GSA Rent, including all payments to General Services Administration (GSA) for rental of space and rent related services.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
23.3 Communications, Utilities, and Misc. Charges	\$5,542	\$6,813	\$6,362	(\$451)

A decrease of \$451,000 is requested for communications, utilities, and miscellaneous charges, including all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$56,416	\$69,356	\$64,759	(\$4,597)

A decrease of \$4,597,000 is requested for advisory and assistance services, including services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$3,605	\$4,432	\$4,139	(\$293)

A decrease of \$293,000 is requested for other services, including contractual services with non-Federal sources that are not otherwise classified under Object Class 25.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$2,370	\$2,914	\$2,721	(\$193)

A decrease of \$193,000 is requested for purchases from Government Accounts, including costs for purchases from other Federal Government agencies or accounts that are not otherwise classified.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
25.4 Operation and Maintenance of Facilities	\$38	\$47	\$44	(\$3)

A decrease of \$3,000 is requested for the operation and maintenance of facilities, including all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
25.7 Operation and Maintenance of Equipment	\$187	\$230	\$215	(\$15)

A decrease of \$15,000 is requested for the operation and maintenance of equipment, including costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
26.0 Supplies and Materials	\$685	\$842	\$786	(\$56)

A decrease of \$56,000 is requested for supplies and materials that are ordinarily consumed or expended within one year after they are put into use, converted in the process of construction or manufacture, used to form a minor part of equipment or property, or other property of little monetary value that does not meet any of the three criteria listed above.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
31.0 Equipment	\$659	\$810	\$756	(\$54)

A decrease of \$54,000 is requested for equipment, including all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract.

	FY 2014 Revised Enacted	FY 2015 Estimate	FY 2016 Request	FY 2015 to FY 2016 Change
32.0 Land and Structures	\$2,953	\$3,630	\$2,983	(\$647)

A decrease of \$647,000 is requested for land and structures, including the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural (or resource) improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease.

Transformation Mission Statement

Transformation is an enterprise-wide investment that will transition USCIS from a fragmented, paper-based operational environment to a paperless, centralized, and consolidated environment, utilizing electronic processing for benefits filing and adjudication that will ensure national security and integrity, customer service, operational efficiency, and quality in immigration benefit decisions.

Summary Justification and Explanation of Changes

K. DHS Balanced Workforce Strategy

In order to establish a high performing workforce comprised of a strong internal core of Federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience and other resources necessary to balance the total DHS workforce. Pursuant to Section 736 of Division D of the Omnibus Appropriations Act, 2009 (P.L. 111-8), the Department is required to issue guidelines to DHS Components to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment the Department will realign contractor and/or Federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with Federal employees to better realize the full potential of the total DHS workforce – both contracted and Federal. A strong internal core of Federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for Federal employees. As the Department has a large magnitude of contracts, all Contracts have been prioritized based on risk into a tiered ranking. The results of Tier 1 contract review are listed in the table that follows.

USCIS requests \$0.0 and 0 FTE for the FY 2016 DHS Balanced Workforce Strategy.

BUDGET REQUEST AND SUPPORTING INFORMATION

U.S. Citizenship & Immigration Services H-1B Nonimmigrant Petitioner Account

I. Appropriation Overview

The American Competitiveness and Workforce Improvement Act (ACWIA) requires employers who participate in the H-1B program to pay \$1,500 (or \$750 for those petitioners who employ fewer than 25 full-time equivalent employees) in addition to the base processing fee (currently \$325) for the Petition for Nonimmigrant Worker (Form I-129). U.S. Citizenship and Immigration Services (USCIS) receives five percent of the ACWIA collections, which are deposited into the H-1B Nonimmigrant Petitioner Account. The remaining revenue is shared between the Department of Labor and the National Science Foundation. The H-1B Nonimmigrant Petitioner Account comprises less than one percent of the total USCIS budget. In FY 2013, the USCIS share of the H-1B revenue collection was \$15.1 million and, in FY 2014 USCIS received \$16.6 million. USCIS estimates that it will receive \$13.5 million in FY 2015 and \$15.0 million in FY 2016.

The FY 2010 Emergency Supplemental Appropriation for Border Security Act (P.L. 111-230) increased the supplemental H-1B and L-1 application fees for certain employers. This law requires an additional filing fee of \$2,000 for H-1B petitions and \$2,250 for certain L-1 petitions where the petitioner employs 50 or more individuals in the United States and more than 50 percent of its employees are in H-1B or L-1 nonimmigrant status. Revenue from this additional fee is deposited into the General Fund of the Treasury, and is unavailable for use by USCIS.

A. Mission Statement for H-1B Nonimmigrant Petitioner Account:

Resources deposited in the H-1B Nonimmigrant Petitioner Account support USCIS's efforts to reinforce quality and consistency in administering immigration benefits.

B. Budget Activities:

Funding from the H-1B Nonimmigrant Petitioner Account supports the Service Center Operations Directorate, which is the USCIS organizational element that processes and adjudicates nonimmigrant worker petitions. The revenue primarily funds contract activities (mail, filing, and data entry) and facility rent expenses related to the processing of immigration benefit applications at the USCIS Service Centers.

III. Current Services Program Description by PPA

Department of Homeland Security
Citizenship & Immigration Services
Adjudication Services
Program Performance Justification
(Dollars in Thousands)

PPA: Adjudication Services

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	-	-	\$13,000
FY 2015 President's Budget	-	-	\$13,500
2016 Adjustments-to-Base	-	-	\$1,500
FY 2016 Current Services	-	-	\$15,000
FY 2016 Program Change	-	-	-
FY 2016 Total Request	-	-	\$15,000
Total Change 2015 to 2016	-	-	\$1,500

The FY 2016 Budget includes \$15.0 million for USCIS contract activities and facility rent expenses that support the processing of immigration benefit applications. The fee associated with the requested amount is set by statute and provides USCIS with five percent of the fees collected for the H-1B visa (Nonimmigrant Petitioner), in addition to the base-processing fee to file a Petition for a Nonimmigrant Worker (Form I-129).

The USCIS Service Center Operations Directorate manages four regionally-based Service Centers which receive, process, and adjudicate applications and petitions for immigration benefits not requiring face-to-face contact with the applicant, petitioner, or beneficiary, which include:

- **Family-based petitions** – facilitating the process for close relatives to immigrate, gain permanent residency, work, etc.
- **Employment-based petitions** – facilitating the process for current and prospective employees to immigrate or stay in the United States temporarily.

USCIS annually processes millions of immigration benefit applications at its Service Centers. The \$15.0 million requested in FY 2016 for contract activities and facility rent finances a portion of the total contract and rent expenses. The balance is covered by funding from the Immigration Examinations Fee Account.

Adjudication Services Mission Statement

Resources from the H-1B Nonimmigrant Petitioner Account support USCIS's efforts to reinforce quality and consistency in administering immigration benefits.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$11,000	\$11,500	\$13,000	\$1,500

An increase of \$1,500,000 is requested for advisory and assistance services, including services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government.

BUDGET REQUEST AND SUPPORTING INFORMATION

U.S. Citizenship & Immigration Services Fraud Prevention and Detection Account

I. Appropriation Overview

The Fraud Prevention and Detection Account supports activities related to preventing and detecting fraud in the delivery of all immigration benefit types. These funds primarily support the United States Citizenship and Immigration Services (USCIS) goal to ensure the security and integrity of the immigration system.

The L-1 Visa and H-1B Visa Reform Act of 2004 (Title IV of Division J of P.L. 108-447, later amended by P.L. 109-13) requires petitioners to pay \$500 when filing a petition for a beneficiary's initial grant of H-1B or L nonimmigrant classification, as well as for a beneficiary who is changing employers within these classifications. Petitioners also pay \$150 when filing a petition on behalf of H-2B workers, in addition to the base processing fee of \$325 for a Petition for Nonimmigrant Worker (Form I-129). USCIS receives one-third of the revenue and the remaining revenue is shared equally between the Department of Labor and the Department of State. USCIS received \$42.3 million in fraud fees in FY 2013 and \$44.8 million in FY 2014. USCIS estimates its share of revenue will be \$41.0 million in FY 2015 and \$45.0 million in FY 2016.

A. Mission Statement for Fraud Prevention and Detection Account:

USCIS uses resources from the Fraud Prevention and Detection account to combat fraud, safeguard national security, and ensure public safety.

B. Budget Activities:

The Fraud Detection and National Security Directorate (FDNS) leads agency efforts to determine whether individuals or organizations filing for immigration benefits pose a threat to national security, public safety, or the integrity of the nation's immigration system by:

- Detecting, deterring, and administratively investigating immigration-related fraud, and working to eliminate systemic vulnerabilities that could present a threat to national security and public safety;
- Serving as the primary conduit for information sharing and collaboration with law enforcement and Intelligence Community partners;
- Establishing guidance and overseeing the process for identifying, reviewing, vetting, and adjudicating cases involving national security concerns;
- Developing and implementing efficient and effective security screening policies, programs, and procedures; and
- Developing innovative technical capabilities, and effective data collection and analysis tools, to support the agency's fraud detection, national security, public safety, and intelligence operations.

FDNS personnel in the field participate in a wide range of activities to combat fraud and safeguard national security. FDNS staff conduct administrative investigations of immigration-related fraud, manage cases involving national security concerns, conduct background checks, perform site visits and compliance reviews, liaise with law enforcement counterparts, and develop intelligence reporting and analysis regarding key trends and threats. As part of a joint anti-fraud strategy in partnership with U.S. Immigration and Customs Enforcement (ICE), FDNS refers select cases for criminal investigation, such as those involving mass conspiracy.

In FY 2014, FDNS Officers completed over 30,700 administrative fraud investigations, finding fraud in over 14,300 of those investigations. FDNS' activities support USCIS's dual priorities of ensuring the integrity of the U.S. immigration system and safeguarding national security.

C. Budget Request Summary:

The FY 2016 Budget includes \$45.0 million, 185 positions, and 185 FTE for the USCIS Fraud Prevention and Detection account. The FY 2016 funding level is fully supported by projected FY 2016 fee receipts.

FY 2016 Total Request	115	115	\$29,523
Total Change 2015 to 2016	-	-	\$3,479

The FY 2016 Budget includes \$29.5 million, 115 positions, and 115 FTE for this activity.

Adjustments to Base:

- Increase of \$147,000 for the 2016 pay raise
- Increase of \$38,000 for annualization of the 2015 pay raise
- Increase of \$67,000 for the Federal Employees Retirement System (FERS) contribution based on updated actuarial estimates
- Increase of \$3.2 million to reflect changes in operating requirements

CURRENT SERVICES PROGRAM DESCRIPTION:

FDNS Officers are posted in every USCIS regional, district, and field office within the United States. As part of their duties, FDNS Officers participate in Immigration and Customs Enforcement’s Document Benefit Fraud Task Forces, the Federal Bureau of Investigation’s Joint Terrorism Task Forces, State and Local Fusion Centers and other Federal and local law enforcement initiatives, through which they share immigration related information, assist law enforcement investigations, and provide subject matter expertise.

In order to ensure compliance in select visa petition categories, FDNS district-based officers conduct unannounced pre- and post-adjudication site inspections under the Administrative Site Visit and Verification Program (ASVVP). In FY 2014, FDNS expanded the ASVVP to include petitions for L-1A Intra-company Transferee Executive or Manager, in addition to organizations filing Form I-129 (Petition for a Nonimmigrant Worker) petitions for H-1B temporary workers and Form I-360 (Petition for Amerasian, Widow(er) or Special Immigrant) petitions for religious workers. Pursuant to regulation, site inspections are conducted prior to the adjudication of religious worker petitions. Compliance reviews are also conducted on a random sample of approved petitions for religious

workers and H-1B temporary workers as well as L-1As. During these site visits, FDNS officers seek to determine whether the petitioner and beneficiary have met, or continue to meet, eligibility requirements for the immigration benefit sought. FDNS officers verify information submitted with the petition, confirm the existence of the petitioning entity, review public records, take photographs, and speak with organizational representatives and the beneficiary.

In FY 2015, FDNS will pilot an expansion of the ASVVP site visit program to include 1) targeted site visits based on suspected immigrant investor (employment-based visa, fifth preference, EB-5) fraud or fraud trends and patterns; and 2) site visits on randomly selected EB-5 petitions.

FY 2016 Program Change	-	-	-
FY 2016 Total Request	70	70	\$15,169
Total Change 2015 to 2016	-	-	\$523

The FY 2016 Budget includes \$15.2 million, 70 positions, and 70 FTE for this activity.

Adjustments to Base:

- Increase of \$72,000 for the 2016 pay raise
- Increase of \$19,000 for annualization of the 2015 pay raise
- Increase of \$30,000 for the Federal Employees Retirement System (FERS) contributions based on updated actuarial estimates
- Increase of \$402,000 for operating requirements

CURRENT SERVICES PROGRAM DESCRIPTION:

This activity supports immigration officers and specialized teams of adjudication staff located in USCIS service centers that work with law enforcement agencies and other government agencies to conduct extensive research and vetting of individuals and organizations to protect the national security of the United States.

In addition to investigating cases referred for suspected fraud, FDNS officers conduct a range of specialized activities, including: managing the ASVVP workload; receiving and reviewing consular returns marked for confirmed or suspected fraud; and collecting, analyzing, and reporting information on immigration benefit fraud trends in support of local, USCIS, DHS, and national intelligence priorities. Service Center adjudicators and FDNS officers also vet companies through the Validation Instrument for Business Enterprises (VIBE), a web-based tool that uses commercially available information to validate the business operations of companies and organizations looking to employ foreign workers. VIBE enhances USCIS's ability to adjudicate employment-based immigrant and nonimmigrant petitions efficiently and accurately.

The FY 2016 Budget includes \$308,000; 0 positions; and 0 FTE for this activity in FY 2016.

Adjustments to Base:

- Decrease of \$2,000 to reflect changes in operating requirements

CURRENT SERVICES PROGRAM DESCRIPTION:

FDNS officers are located at each of the USCIS asylum offices located in the United States, the headquarters elements of the Refugee Asylum & International Operations (RAIO) Directorate as well as three overseas locations. Fraud Prevention and Detection Account funding supports program operations administered by FDNS employees stationed overseas, including site visit travel costs related to fraud verification activities carried out by FDNS officers.

An increase of \$8,000 is requested for the transportation of things, including all costs of the care of such things while in process of being transported, and other services incident to the transportation of things.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.1 Rental Payments to GSA	\$774	\$876	\$913	\$37

An increase of \$37,000 is requested for GSA Rent, including all payments to General Services Administration (GSA) for rental of space and rent related services.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.2 Rental Payments to Others	\$40	\$26	\$35	\$9

An increase of \$9,000 is requested for other rent, including all payments to a non-Federal source for rental space, land, and structures.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.3 Communications, Utilities, and Misc. Charges	\$10	\$6	\$8	\$2

An increase of \$2,000 is requested for communications, utilities, and miscellaneous charges, including all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
24.0 Printing and Reproduction	\$16	\$10	\$13	\$3

An increase of \$3,000 printing, including all costs for printing and reproduction obtained from the private sector or from other Federal entities.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$2,420	\$1,566	\$2,079	\$513

An increase of \$513,000 is requested for advisory and assistance services, including services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$685	\$443	\$588	\$145

An increase of \$145,000 is requested for other services, including contractual services with non-Federal sources that are not otherwise classified under Object Class 25.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$498	\$322	\$428	\$106

An increase of \$106,000 is requested for purchases from Government Accounts, including costs for purchases from other Federal Government agencies or accounts that are not otherwise classified.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.7 Operation and Maintenance of Equipment	\$10,799	\$6,990	\$9,280	\$2,290

An increase of \$2,290,000 is requested for the operation and maintenance of equipment, including costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
26.0 Supplies and Materials	\$123	\$80	\$106	\$26

An increase of \$26,000 is requested for supplies and materials that are ordinarily consumed or expended within one year after they are put into use, converted in the process of construction or manufacture, used to form a minor part of equipment or property, or other property of little monetary value that does not meet any of the three criteria listed above.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
31.0 Equipment	\$417	\$270	\$358	\$88

An increase of \$88,000 is requested for equipment, including all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract.

A. Component Overview

The United States Citizenship and Immigration Services (USCIS) is comprised of the following mission-oriented programs that support achievement of the DHS strategic missions, goals, and objectives.

Immigration Security and Integrity: Immigration Security and Integrity detects, pursues, and deters fraud; ensures law enforcement background checks are conducted on all persons seeking benefits prior to according such benefits; identifies systemic vulnerabilities and other weaknesses that compromise the integrity of the legal immigration system; performs as USCIS's primary conduit to and from the law enforcement and intelligence communities; and coordinates interagency policies, procedures, and other issues with U.S. Customs and Border Protection and U.S. Immigration and Customs Enforcement.

Adjudication Services: The Adjudication Services program oversees the legal review and adjudication of six to eight million immigration applications and petitions annually, including asylum applications, petitions by companies on behalf of foreign workers, and applications to naturalize and become a U.S. citizen.

Information and Customer Service: The Information and Customer Service program manages and coordinates USCIS's information and customer service functions and operations, policies and activities, and manages customer service call center operations. This program helps USCIS's customers to understand eligibility rules and USCIS's procedures, provides case status information, and answers thousands of written inquiries and millions of phone calls regarding immigration programs and benefits.

Citizenship: The Office of Citizenship strengthens the cohesion of the nation by promoting the integration of immigrants into American civic culture. The Citizenship program: 1) develops educational products and information resources to foster immigrant integration and participation in American civic culture; 2) enhances training initiatives to promote an understanding of and appreciation for U.S. civic principles and the rights and responsibilities of citizenship; and 3) provides federal leadership on immigrant civic integration issues. The Office works with other federal agencies, state and local governments, community and faith-based organizations, adult educators, and other organizations that work with immigrants.

Immigration Status Verification: Immigration Status Verification delivers employment and immigration status verification with innovative and unparalleled customer service. Through our Verification Information System, we enable authorized E-Verify and Systematic Alien Verification for Entitlements (SAVE) users to verify work authorization and immigration status. E-Verify enables employers to quickly and easily verify the work authorization of their newly-hired employees, and SAVE enables federal, state and local government agencies to obtain immigration status information to determine applicants' eligibility for public benefits and licenses.

Crosscutting Investments: The Cross-Cutting Investments program includes major cross-cutting acquisitions to improve the overall business processes of USCIS. The focus of these acquisitions is currently on information security, information sharing, and infrastructure enhancements.

Management and Administration: This program captures activities that provide enterprise leadership, management and/or business administration services and includes the capabilities and activities that support the day-to-day management and back office functions that enable USCIS to operate efficiently and effectively. Key capabilities include conducting agency planning and performance management, managing finances, managing agency workforce, providing physical and personnel security, acquiring goods and services, managing information technology, managing agency property and assets, managing agency communications, managing legal affairs, and providing general management and administration.

FY 2016 Budget Request

The table below shows USCIS' FY 2016 Budget request by its mission-oriented programs.

Program	FY 2016 Request	
	FTE	Dollars (in thousands)
Adjudication Services	11,977	2,446,232
Information and Customer Service	1,889	389,071
Citizenship	26	15,896
Immigration Status Verification	610	146,692
Immigration Security and Integrity	963	243,922
Crosscutting Investments	21	33,335
Management and Administration	1,596	728,490
Total Budget Request	17,082	4,003,638

B. Component Contributions to Achieving Departmental Missions

The table below shows the alignment of the USCIS programs to the DHS Missions and Mature and Strengthen Homeland Security.

Programs	DHS Missions					Mature and Strengthen Homeland Security
	Prevent Terrorism and Enhance Security	Secure and Manage Our Borders	Enforce and Administer Our Immigration Laws	Safeguard and Secure Cyberspace	Strengthen National Preparedness and Resilience	
Adjudication Services			99%			1%

Performance Measures

For *Enforce and Administer Our Immigration Laws*, two types of performance measures are presented. Strategic Measures represent USCIS’ measures that gauge achievement for this mission area, and are considered to be our Government Performance and Results Act Management Act (GPRAMA) performance measures. Additional Management Measures are displayed, as appropriate, to provide a more thorough context of expected performance results.

Strategic Measures

Measure: Average of processing cycle time (in months) for adjustment of status to permanent resident applications (I-485)						
Description: An I-485, Application to Register for Permanent Residence or Adjust Status, is filed by an individual to apply for permanent residence in the United States or to adjust their current status. This measure assesses the program's ability to meet its published processing time goals by reporting on the volume of pending applications and petitions by Center or Field Office. The Cycle Time, reflected in months (e.g. 4.0 months), measures only the pending volume in Active Pending status, deducting from Gross Pending the total volume of cases subject to customer-induced delays and Department of State visa availability, categorized as Active Suspende.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	<=4	<=4	<=4	<=4	<=4	<=4
Result:	4.4	5.1	4.7	6.0	N/A	N/A

Measure: Average of processing cycle time (in months) for naturalization applications (N-400)						
Description: An N-400, Application for Naturalization, is filed by an individual applying to become a United States citizen. This measure assesses the program's ability to meet its published processing time goals by reporting on the volume of pending applications by Center or Field Office. The Cycle Time, reflected in months (e.g. 5.0 months), measures only the pending volume in Active Pending status, deducting from Gross Pending the total volume of cases subject to customer-induced delays, categorized as Active Suspende.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	<=5	<=5	<=5	<=5	<=5	<=5
Result:	4.6	4.6	4.7	5.5	N/A	N/A

Measure: Overall customer service rating of the immigration process						
Description: This measure gauges the overall rating of the immigration process and is based on the results from the following areas: 1) Accuracy of information; 2) Responsiveness to customer inquiries; 3) Accessibility to information; and 4) Customer satisfaction.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	80%	80%	85%	85%	85%	85%
Result:	80%	93%	87%	86%	N/A	N/A

Measure: Percent of initial mismatches for authorized workers that are later determined to be "Employment Authorized"						
Description: This measure assesses the accuracy of the E-verify process by assessing the percent of employment verification requests that are not positively resolved at time of initial review.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	<=3%	<=1%	<=1%	<=1%	<=0.9%	<=0.9%
Result:	0.28%	0.24%	0.22%	0.19%	N/A	N/A

Measure: Percent of non-immigrant worker (H1-B) site visits where potential fraud or other technical noncompliance concerns were identified						
Description: This measure reflects how many H1-B fraud incidents have been discovered by the Administrative Site Visit Verification Program (ASVVP). This information begins the process to identify and counter systematic vulnerabilities that exist in our immigration system.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	<=11%	<=11%	<=15%	<=15%	<=15%	<=15%
Result:	1%	15%	12%	11%	N/A	N/A

Measure: Percent of religious worker site visits where potential fraud or other technical noncompliance concerns were identified						
Description: This measure reflects how many religious worker fraud incidents have been discovered as part of the Administrative Site Visit Verification Program (ASVVP). This information begins the process to identify and counter systematic vulnerabilities exist in our immigration system.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	<=11%	<=11%	<=10%	<=10%	<=10%	<=10%
Result:	1%	7%	7%	5%	N/A	N/A

Measure: Percent of students enrolled in classes under the Citizenship and Integration Grant Program that show educational gains						
Description: This measure reports on the success of grant recipients to increase knowledge of English necessary for students receiving services under the program to pass the naturalization test. Under the Citizenship and Integration Grant Program, grant recipients are required to use a nationally normed standardized test of English language proficiency for student placement and assessment of progress. This measure evaluates the percentage of students receiving these services who demonstrate an increase in score.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	N/A	N/A	80%	80%
Result:	N/A	N/A	N/A	N/A	N/A	N/A

Management Measures

Measure: Accuracy rate of USCIS's processing of manual verifications for Systematic Alien Verification for Entitlements (SAVE) referrals						
Description: The measure tracks the accuracy of SAVE manual verifications using a quality review which is a monthly review of verification work performed by Status Verifiers (SV) to determine whether SAVE referrals are resolved correctly. Specifically, they determine whether the response provided to by USCIS reflects the immigration status on record for persons seeking benefits from other governmental agencies using the SAVE program.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	98%	98%	98.2%	98.4%	98.6%
Result:	N/A	98%	99.3%	99.2%	N/A	N/A

Measure: Average online Citizenship Resource Center customer satisfaction rate						
Description: This measure tracks how well customers are satisfied with the Citizenship Resource Center (CRC). The CRC is a newly developed, free and easy-to-use website that helps immigrants better understand the citizenship process and gain the necessary skills required to be successful during the naturalization interview and test. It provides citizenship applicants, educators and immigrant-serving organizations with a one-stop portal for citizenship information and resources. It was established with appropriated FY 2010 Immigrant Integration dollars and is the landing portal for our appropriations-funded Citizenship Public Education and Awareness Initiative.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	80%	85%	85%	85%	85%
Result:	N/A	88%	87%	84%	N/A	N/A

Measure: Percent of approved applications for naturalization that were appropriately decided						
Description: A N-400, Application for Naturalization, is filed by an individual applying to become a United States citizen. The USCIS conducts quality reviews on a quarterly basis to determine the accuracy rate of final decisions on approved N-400 applications. Quality reviews are conducted using a team of experienced subject matter experts. This measure assesses the program's ability to process the N-400 to provide immigration benefit services in a fully supportable and accurate manner. Additionally, the results of this quality review process are used to improve the training of adjudicators and the processes used in conducting adjudications.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	99%	99%	99%	99%
Result:	N/A	N/A	99%	99%	N/A	N/A

Measure: Percent of approved applications for permanent residence that were appropriately decided						
Description: An I-485, Application to Register for Permanent Residence or to Adjust Status, is filed by an individual to apply for permanent residence in the United States or to adjust their current status. The USCIS conducts quality reviews on a quarterly basis to determine the accuracy rate of final approved decisions. Quality reviews are conducted using a team of						

experienced subject matter experts. This measure assesses the program's ability to process the I-485 to provide immigration benefit services in a fully supportable and accurate manner. Additionally, the results of this quality review process are used to improve the training of adjudicators and the processes used in conducting adjudications.

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Law Enforcement Training Center Salaries and Expenses

I. Appropriation Overview

A. Mission Statement for Salaries and Expenses:

We train those who protect our homeland.

B. Budget Activities:

The Federal Law Enforcement Training Center (FLETC) is the Nation's largest provider of law enforcement training. FLETC serves as an interagency law enforcement training organization for over 90 Federal Partner Organizations (POs) and numerous State, local, tribal, and international law enforcement agencies.

Most of the Federal POs that train with FLETC attend one of our multi-agency basic programs, and then continue with their unique agency-specific follow-on programs at their own academies, most of which are co-located at one of FLETC's four domestic training sites. In addition to basic training, FLETC also offers a variety of advanced law enforcement training programs.

FLETC embraced the philosophy that homeland protection is not the sole province of the Federal Government, and therefore offers specialized training programs for State, local, tribal, and, through partnerships with the Department of State (DOS), the Department of Justice (DOJ), and the Department of the Treasury (Treasury), and also with international law enforcement personnel. These programs are designed to meet critical training needs and to enhance networking and cooperation domestically and globally.

In furtherance of FLETC's mission, our reach is extended through the use of non-traditional training delivery techniques, including online training and technology-based simulation. Additionally, FLETC exports training programs to various locations when a concentrated law enforcement audience in need of training is identified and the programs being conducted do not require the use of specialized facilities.

Training law enforcement officers in a collaborative, multi-agency environment offers both fiscal and qualitative advantages. FLETC teams with its training partners to jointly prepare Federal law enforcement professionals to perform their duties in the safest possible manner, at the highest possible level of proficiency. It endeavors to accomplish this critical mission by delivering consistent, accredited instruction using a proven consolidated training model.

C. Budget Request Summary:

The FY 2016 Budget includes 1,117 positions, 1,090 FTE and \$239,141,000 for FLETC. The adjustments-to-base include:

- Increase of \$1,233,000 for the 2016 pay raise
- Increase of \$315,000 to annualize the 2015 pay raise
- Increase of \$150,000 for Increased Retirement Contributions
- Increase of \$702,000 for cybersecurity pay reform
- Decrease of \$5,062,000 for efficiencies
- Decrease of \$136,000 for the reduction in continuous monitoring
- Decrease of \$16,214,000 to non-recur the costs associated with training the additional CBP Officers requested in the FY 2014 Omnibus (-24 FTE)

There is one program change of \$26,406,000 to train 2,000 additional Customs and Border Protection (CBP) Officers requested in the FY 2015 President's Budget (39 FTE)

D. Efficiencies:

Mission Support Personnel - \$112,000

Pay efficiencies will be realized by reducing Permanent Change of Station (PCS) moves and premium pay in the Law Enforcement Training Program, Project, or Activity (PPA).

Travel - \$213,000

Efficiencies will be realized by reductions in staff travel and PCS expenses in the Law Enforcement Training PPA.

Transportation of Things - \$47,000

The reduced number of funded PCS moves will reduce the associated cost of the transportation of things in the Law Enforcement Training PPA.

Rent, Communication and Utilities - \$544,000

Efficiencies will be realized primarily by implementing and maintaining energy efficient utility services in the Law Enforcement Training PPA.

Printing - \$31,000

Efficiencies will be realized by minimizing all non-mission critical print services and products in the Law Enforcement Training PPA.

Advisory and Assistance Contracts - \$3,242,000

FLETC will adjust the levels on non-mission critical service contracts, generating savings in the Law Enforcement Training PPA.

Supplies, Materials and Equipment - \$873,000

FLETC will adjust the levels of non-mission critical supplies, materials and equipment requirements, generating savings in the Law Enforcement Training PPA.

III. Current Services Program Description by PPA

**Department of Homeland Security
Federal Law Enforcement Training Center
Management and Administration
Program Performance Justification**
(Dollars in Thousands)

PPA: Management and Administration

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	223	217	\$28,420
FY 2015 President's Budget	223	217	\$27,982
2016 Adjustments-to-Base	-	-	\$341
FY 2016 Current Services	223	217	\$28,323
FY 2016 Program Change	-	-	-
FY 2016 Total Request	223	217	\$28,323
Total Change 2015 to 2016	-	-	\$341

The FY 2016 Budget includes 223 positions, 217 FTE, and \$28.323 million for FLETC's Management and Administration (M&A) PPA.

Adjustments to Base:

- Increase of \$248 thousand for 2016 pay raise
- Increase of \$63 thousand for the annualization of the 2015 pay raise
- Increase of \$30 thousand for increased retirement contributions

CURRENT SERVICES PROGRAM DESCRIPTION:

The M&A PPA provides funding for the FLETC Director, the Director's Office, and immediate staff including the Office of Chief Counsel, the Washington Office, the Protocol and Communications Office, the Office of Organizational Health, and the Inspection and Compliance Division. Also included is the Chief Financial Officer Directorate, which provides budget, finance, accounting, financial systems, financial statements, relocation, travel, and strategic planning functions.

The M&A program also comprises Asset Management functions, such as Procurement, Real and Personal Property Management, Environmental Compliance, and Safety. It includes the Operation Support functions such as Human Capital to promote consistency and efficiency in the utilization of human capital.

FY 2016 Total Request	887	866	\$209,507
Total Change 2015 to 2016	15	15	\$7,035

The FY 2016 Budget includes 887 positions, 866 FTE, and \$209.507 million for FLETC's Law Enforcement Training PPA.

Adjustments to Base:

- Transfer of \$7 thousand to DHS Office of Chief Information Officer for data center support
- Increase of \$977 thousand for 2016 pay raise
- Increase of \$250 thousand for the annualization of the 2015 pay raise
- Increase of \$112 thousand for employee retirement contributions
- Increase of \$702 thousand for cybersecurity pay reform
- Decrease of \$112 thousand for personnel efficiencies
- Decrease of \$222 thousand for travel efficiencies
- Decrease of \$3.770 million for contractual reduction efficiencies
- Decrease of \$958 thousand for supplies and equipment efficiencies
- Decrease of \$16.214 million to non-recur the cost of training 1,200 additional CBP Officers as requested in the FY 2015 President's Budget
- Decrease of \$136 thousand for continuous monitoring

This PPA includes one program change of \$26.406 million to train 2,000 additional Customs and Border Protection (CBP) Officers requested in the FY 2015 President's Budget.

CURRENT SERVICES PROGRAM DESCRIPTION:

Law Enforcement Training: FLETC's services to its three major client groups underscore its homeland security support mission in promoting intergovernmental cooperation in law enforcement preparedness.

- **Federal** – FLETC provides law enforcement training to over 90 Federal agencies with law enforcement responsibilities. FLETC prepares new and experienced law enforcement

professionals to fulfill their responsibilities in a safe manner and at the highest level of proficiency. The average basic student spends 12 weeks training at FLETC, and receives a combination of classroom instruction and hands-on practical exercise training in all aspects of law enforcement from firearms and high-speed vehicle operations to legal case instructions and defendant interview techniques. Students must apply their classroom knowledge during exercises that simulate typical situations encountered on the job. Each of the basic programs provides core knowledge essential for new Federal officers or agents to carry out their duties in a safe and efficient manner.

In addition to basic training, FLETC offers advanced and specialized training for career-long law enforcement preparation in subjects that are common to two or more of its POs. Examples include Antiterrorism Port Security Boat Operations, Cyber Counterterrorism Investigator Training, Covert Electronics Surveillance, Critical Infrastructure Protection, Financial Forensics Techniques, Intelligence Analysts Training and Land Transportation Antiterrorism Training.

- ***State and local*** – FLETC trains personnel from State and local law enforcement agencies in advanced topics designed to develop specialized law enforcement skills. The participants benefit from Federal expertise, specialized training, and instruction specific to their needs.
- ***International*** – In the interest of combating global crime and protecting U.S. interests abroad, FLETC offers a range of training programs to foreign law enforcement agencies in coordination with DOS, DOJ, and Treasury. Training focuses on the U.S. Government’s Law and Democracy Program and the International Law Enforcement Academy (ILEA) programs in Europe, Asia, Africa, and other regions in the world. In cooperation with DOS, FLETC manages the ILEA in Gaborone, Botswana, and a FLETC staff member serves as Deputy Program Director at the ILEA in Bangkok, Thailand. Additionally, FLETC provides training and technical assistance at locations worldwide in collaboration with and support of the respective U.S. embassies.

**Department of Homeland Security
Federal Law Enforcement Training Center
Accreditation
Program Performance Justification**
(Dollars in Thousands)

PPA: Accreditation

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	7	7	\$1,300
FY 2015 President's Budget	7	7	\$1,300
2016 Adjustments-to-Base	-	-	\$11
FY 2016 Current Services	7	7	\$1,311
FY 2016 Program Change	-	-	-
FY 2016 Total Request	7	7	\$1,311
Total Change 2015 to 2016	-	-	\$11

The FY 2016 Budget includes 7 positions, 7 FTE, and \$1.311 million FLETC's Accreditation PPA.

Adjustments to Base:

- Increase for 2016 pay raise of \$8 thousand
- Increase for the annualization of the FY 2015 pay raise of \$2 thousand
- Increase for employee retirement contributions of \$1 thousand

CURRENT SERVICES PROGRAM DESCRIPTION:

Accreditation: The Federal Law Enforcement Training Accreditation (FLETA) process sets the standards for Federal law enforcement training. The accreditation of a Federal law enforcement academy or program provides assurance to the citizens they serve that they have voluntarily submitted to a process of self-regulation, and that they have successfully achieved compliance with a set of standards that have been collectively established by their peers within their professional community that demonstrate their adherence to quality, effectiveness and integrity. To accomplish this goal, trainers in the same discipline, working through a professional accrediting body, assist each other in evaluating and improving their professionalism. The focus of the effort is to accredit Federal academies, entry-level and advanced or specialized training programs, instructor training, and other programs that affect multiple Federal, State and local law enforcement officers.

IV. Program Justification Changes

**Department of Homeland Security
Federal Law Enforcement Training Center
Salaries and Expenses:
Justification of Program Changes**
(Dollars in Thousands)

Program Increase 1: Train 2,000 Additional CBP Officers
PPA: Law Enforcement Training
Program Increase: Positions 39, FTE 39, Dollars \$26,406

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$0
Program Increase							39	39	\$26,406
Total Request	0	0	\$0	0	0	\$0	39	39	\$26,406

Description of Item:

FLETC will provide basic training for up to 2,000 additional new CBP officers, proposed in the President's 2015 Budget, to support increased travel and trade through air, land, and sea ports of entry. Training funding is requested in 2016 due to the hiring processes and time it takes to onboard CBP officer personnel.

Justification:

Newly hired CBP officers must attend an 89 day basic training program at FLETC. Trainees receive extensive training in Title 8 Immigration Law, Title 19 Customs law, and all other laws, rules and regulations that CBP enforces nationwide. The training emphasizes basic law enforcement skills such as integrity, firearms handling, defensive tactics and driving, arrest techniques, entry and control procedures, interviewing skills, behavioral analysis, and report writing. CBP officers who graduate from the basic program and are selected for certain duty locations may also receive an additional 30 days of Spanish language training.

Impact on Performance (Relationship of Increase to Strategic Goals):

This initiative supports Homeland Security Mission 2 – Securing and Managing Our Borders, which is derived from the Quadrennial Homeland Security Review.

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For necessary expenses of the Federal Law Enforcement Training Center, including materials and support costs of Federal law enforcement basic training; the purchase of not to exceed 117 vehicles for police-type use and hire of passenger motor vehicles; expenses for student athletic and related activities; the conduct of and participation in firearms matches and presentation of awards; public awareness and enhancement of community support of law enforcement training; room and board for student interns; a flat monthly reimbursement to employees authorized to use personal mobile phones for official duties; and services as authorized by section 3109 of title 5, United States Code; [~~\$231,754,000~~]\$239,141,000; of which up to [~~\$54,154,000~~]\$65,387,000 shall remain available until September 30, [~~2016~~]2017, for materials and support costs of Federal law enforcement basic training; of which \$300,000 shall remain available until expended to be distributed to Federal law enforcement agencies for expenses incurred participating in training accreditation; and of which not to exceed \$9,180 shall be for official reception and representation expenses: *Provided*, That the Center is authorized to obligate funds in anticipation of reimbursements from agencies receiving training sponsored by the Center, except that total obligations at the end of the fiscal year shall not exceed total budgetary resources available at the end of the fiscal year: *Provided further*, That section 1202(a) of Public Law 107-206 (42 U.S.C. 3771 note), as amended under this heading in division F of Public Law 113-76, is further amended by striking “December 31, [~~2016~~]2017” and inserting “December 31, [~~2017~~]2018”: *Provided further*, That the Director of the Federal Law Enforcement Training Center shall schedule basic or advanced law enforcement training, or both, at all four training facilities under the control of the Federal Law Enforcement Training Center to ensure that such training facilities are operated at the highest capacity throughout the fiscal year: *Provided further*, That the Federal Law Enforcement Training Accreditation Board, including representatives from the Federal law enforcement community and non-Federal accreditation experts involved in law enforcement training, shall lead the Federal law enforcement training accreditation process to continue the implementation of measuring and assessing the quality and effectiveness of Federal law enforcement training programs, facilities, and instructors.

Law Enforcement Training Mission Statement

We train those who protect our homeland.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$67,434	\$69,357	\$70,960	\$1,603
11.3 Other than Full-Time Permanent	\$847	\$872	\$891	\$19
11.5 Other Personnel Compensation	\$2,584	\$2,658	\$2,720	\$62
12.1 Civilian Personnel Benefits	\$24,827	\$25,919	\$26,515	\$596
Total, Salaries & Benefits	\$95,692	\$98,806	\$101,086	\$2,280

Salaries and Benefits includes costs for 883 FTEs. The FY 2016 Request includes a \$977,000 increase for pay inflation, a \$250,000 increase for the annualization of the FY 2015 pay raise, a \$4,378,000 decrease for the non-recur training of 1,200 additional CBP Officers and a \$112,000 decrease for efficiencies. The FY 2016 request also includes an increase of \$119,000 for Federal employees retirement costs, a \$702,000 increase for cybersecurity pay reform and a \$4,758,000 increase to train 2000 additional CBP Officers.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
21.0 Travel and Transportation of Persons	\$4,136	\$5,435	\$4,824	(\$611)

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2016 request includes reductions of \$510,000 to non-recur the training of 1,200 additional CBP Officers, \$213,000 for efficiencies, and \$821,000 for an adjustment. The FY 2016 request also includes a \$933,000 increase to train 2,000 additional CBP Officers.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
22.0 Transportation of Things	\$865	\$1,198	\$1,064	(\$134)

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. The FY 2016 request includes reductions of \$112,000 to non-recur the training of 1,200 additional CBP Officers, 47,000 for efficiencies and \$181,000 for an adjustment. The FY 2016 request also includes an increase of \$206,000 to train 2,000 additional CBP Officers.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.3 Communications, Utilities, and Misc. Charges	\$9,976	\$13,818	\$12,263	(\$1,555)

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2016 request includes reductions of \$1,296,000 to non-recur the training of 1,200 additional CBP Officers, \$544,000 for efficiencies and \$2,088,000 for an adjustment. The FY 2016 request also includes an increase of \$2,373,000 to train 2,000 additional CBP Officers.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
24.0 Printing and Reproduction	\$580	\$803	\$714	(\$89)

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2016 request includes reductions of \$75,000 to non-recur the training of 1,200 additional CBP Officers, \$31,000 for efficiencies and \$121,000 for an adjustment. The FY 2016 request also includes an increase of \$138,000 to train 2,000 additional CBP Officers.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$4,242	\$5,875	\$5,141	(\$734)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2016 request includes reductions of \$551,000 to non-recur the training of 1,200 additional CBP Officers, \$245,000 for efficiencies, \$940,000 for an adjustment and \$7,000 for a transfer to DHS OCIO for data center support. The FY 2016 request also includes an increase of \$1,009,000 to train 2,000 additional CBP Officers.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$8,153	\$11,294	\$10,024	(\$1,270)

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2016 request includes reductions of \$1,059,000 to non-recur the training of 1,200 additional CBP Officers, \$444,000 for efficiencies and \$1,706,000 for an adjustment. The FY 2016 request also includes an increase of \$1,939,000 to train 2,000 additional CBP Officers.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$4,177	\$5,859	\$5,200	(\$659)

Purchases from government accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2016 request includes reductions of \$550,000 to non-recur the training of 1,200 additional CBP Officers, \$229,000 for efficiencies, and \$886,000 for an adjustment. The FY 2016 request also includes an increase of \$1,006,000 to train 2,000 additional CBP Officers.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.4 Operation and Maintenance of Facilities	\$27,948	\$38,461	\$34,133	(\$4,328)

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. The FY 2016 request includes reductions of \$3,610,000 to non-recur the training of 1,200 additional CBP Officers, \$1,507,000 for efficiencies, and \$5,798,000 for an adjustment. The FY 2016 request also includes an increase of \$6,587,000 to train 2,000 additional CBP Officers.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.6 Medical Care	\$2,619	\$3,627	\$3,219	(\$408)

Medical care includes payments to contracts for medical services, but excludes contracts with individuals who are reportable under OPM regulations as federal employees or payments to compensate casual workers and patient help. The FY 2016 request includes reductions of \$340,000 to non-recur the training of 1,200 additional CBP Officers, \$142,000 for efficiencies, and \$548,000 for an adjustment. The FY 2016 request also includes an increase of \$622,000 to train 2,000 additional CBP Officers.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.7 Operation and Maintenance of Equipment	\$11,920	\$16,511	\$14,518	(\$1,993)

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change

by contract with the private sector or another Federal Government account. The FY 2016 request includes reductions of \$136,000 for a reduction in manual continuous monitoring, \$1,549,000 to non-recur the training of 1,200 additional CBP Officers, \$648,000 for efficiencies, and \$2,495,000 for an adjustment. The FY 2016 request also includes an increase of \$2,835,000 to train 2,000 additional CBP Officers.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.8 Subsistence & Support of Persons	\$499	\$692	\$615	(\$77)

Subsistence and support of persons includes costs for contractual services with the public or another Federal government account for the board, lodging, and care of persons, including prisoners. The FY 2016 request includes reductions of \$65,000 to non-recur the training of 1,200 additional CBP Officers, \$27,000 for efficiencies and \$104,000 for an adjustment. The FY 2016 request also includes an increase of \$119,000 to train 2,000 additional CBP Officers.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
26.0 Supplies and Materials	\$6,706	\$9,288	\$8,243	(\$1,045)

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2016 request includes reductions of \$871,000 to non-recur the training of 1,200 additional CBP Officers, \$365,000 for efficiencies, and 1,403,000 for an adjustment. The FY 2016 request also includes an increase of \$1,594,000 to train 2,000 additional CBP Officers.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
31.0 Equipment	\$9,347	\$12,947	\$11,517	(\$1,430)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2016 request includes reductions of \$1,247,000 to non-recur the training of 1,200 additional CBP Officers, \$508,000 for efficiencies, and \$1,955,000 for an adjustment. The FY 2016 request also includes an increase of \$2,280,000 to train 2,000 additional CBP Officers.

BUDGET REQUEST AND SUPPORTING INFORMATION

Federal Law Enforcement Training Center Acquisition, Construction, Improvements & Related Expenses

I. Appropriation Overview

A. Mission Statement for Acquisition, Construction, Improvements & Related Expenses:

We train those who protect our homeland.

B. Budget Activities:

The Federal Law Enforcement Training Center (FLETC or Center) is the leading service provider for Federal law enforcement training. FLETC serves as an interagency law enforcement training organization for over 90 Federal Partner Organizations (POs) with personnel located throughout the United States and its territories. FLETC's personnel conduct instructional programs for basic law enforcement recruits and some advanced training based on agency requests. FLETC also provides the necessary facilities, equipment, and support services for conducting advanced, specialized, and refresher training for Federal law enforcement personnel.

FLETC provides services to State, local, tribal, international and other Federal law enforcement agencies with related law enforcement missions on a space-available basis. FLETC also provides export training conducted at other locations when the programs being conducted do not require the use of certain specialized facilities and when a geographical concentration of personnel is identified.

Consolidation of law enforcement training permits the Federal Government to cost-effectively emphasize training program excellence and shared experiences in cooperative training. Professional instruction and practical application provide students with the skills and knowledge necessary to meet the demanding challenges of a Federal law enforcement career. New Federal hires and journey-level personnel learn not only the responsibilities of a law enforcement officer and agent, but through interaction with students from many other agencies, they also become acquainted with the missions and duties of their colleagues. This interaction provides the foundation for a more cooperative Federal law enforcement effort.

FLETC's POs have considerable input regarding training issues as well as operational and functional aspects of the Center. Representatives from these agencies take part in regular curriculum review and development conferences, and participate in the development of FLETC policies and directives. This relationship is characteristic of a "true partnership," which is responsive to the training mission.

C. Budget Request Summary:

The FY 2016 Budget includes \$27,553,000 for FLETC's Acquisition, Construction, Improvements and Related Expenses (ACI&RE).

Adjustments to Base:

- Efficiencies of \$288,000

D. Efficiencies:

Operation and Maintenance of Facilities - \$288,000

Efficiencies will be realized by reevaluating maintenance priorities.

FY 2016 Program Change	-	-	-
FY 2016 Total Request	-	-	\$27,553
Total Change 2015 to 2016	-	-	(\$288)

The FY 2016 Budget includes \$27.553 million for FLETC's ACI&RE

Adjustments to Base:

- Efficiencies of \$288 thousand

CURRENT SERVICES PROGRAM DESCRIPTION:

ACI&RE: This account provides for the acquisition and related costs for the expansion and maintenance of FLETC, to include funding for the Facilities Master Plan, Minor Construction and Maintenance, Environmental Compliance, and Communications Systems. The Master Plan provides the long range blueprint for expansion of facilities to meet the training requirements of over 90 POs. Minor Construction and Maintenance provides alterations and maintenance funding for approximately 300 buildings. Environmental Compliance funding is to ensure compliance with the Environmental Protection Agency and State environmental laws and regulations. Communications Systems funding is to maintain and repair or replace the fiber optics telecommunications cable system.

IV. Program Justification Changes

N/A

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For acquisition of necessary additional real property and facilities, construction, and ongoing maintenance, facility improvements, and related expenses of the Federal Law Enforcement Training Center, [\$27,841,000]\$27,553,000, to remain available until September 30, [2019]2020: *Provided*, That the Center is authorized to accept reimbursement to this appropriation from government agencies requesting the construction of special use facilities.

A. Component Overview

The Federal Law Enforcement Training Center (FLETC) is comprised of the following mission-oriented programs that support achievement of the DHS strategic missions, goals, and objectives.

Law Enforcement Training: The Law Enforcement Training program provides law enforcement training to federal, state, local, tribal, campus, and international law enforcement agencies.

Accreditation: The Federal Law Enforcement Training Accreditation Board enhances the quality of federal law enforcement by establishing and maintaining a body of standards for federal law enforcement training. Currently, there are more than twenty-five federal law enforcement agencies participating in the accreditation process.

Management & Administration: This program captures activities that provide enterprise leadership, management and/or business administration services and describes the capabilities and activities that support the day-to-day management and back office functions enabling the Department to operate efficiently and effectively. Key capabilities include conducting agency planning and performance management, managing finances, managing agency workforce, providing physical and personnel security, acquiring goods and services, managing information technology, managing agency property and assets, managing agency communications, managing legal affairs, and providing general management and administration.

FY 2016 Budget Request

The table below shows FLETC's FY 2016 Budget request by its mission-oriented programs.

Program	FY 2016 Request	
	FTE	Dollars (in thousands)
Law Enforcement Training	866	\$237,060
Accreditation	7	\$1,311
Management & Administration	217	\$28,323
Total Budget Request	1,090	\$266,694

B. Component Contributions to Achieving Departmental Missions

The table below shows the alignment of the FLETC programs to the DHS Missions and Mature and Strengthen Homeland Security.

Federal Law Enforcement Training Centers - Strategic Context

Programs	DHS Missions					Mature and Strengthen Homeland Security
	Prevent Terrorism and Enhance Security	Secure and Manage Our Borders	Enforce and Administer Our Immigration Laws	Safeguard and Secure Cyberspace	Strengthen National Preparedness and Resilience	
Law Enforcement Training*	9%	52%	14%	1%		25%
Management & Administration						100%
Accreditation						100%

Management & Administration	\$28,420	217	\$27,982	217	\$28,323	217
Total	\$83,924	470	\$86,429	475	\$88,967	480

Performance Measures

For *Mature and Strengthen Homeland Security*, two types of performance measures are presented. Strategic Measures represent Federal Law Enforcement Center’s measures that gauge achievement for this mission area, and are considered to be our Government Performance and Results Act Modernization Act (GPRAMA) performance measures. Additional Management Measures are displayed, as appropriate, to provide a more thorough context of expected performance results.

Strategic Measures

Measure: Number of Federal law enforcement training programs and/or academies accredited or re-accredited through the Federal Law Enforcement Training Accreditation process						
Description: This performance measure reflects the cumulative number of Federal law enforcement training programs and/or academies accredited or re-accredited through the Federal Law Enforcement Training Accreditation (FLETA) process. Accreditation ensures that training and services provided meet professional training standards for law enforcement. Re-accreditation is conducted every five years to remain current. The results of this measure provide on-going opportunities for improvements in Federal law enforcement training programs and academies.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	56	74	99	107	113	119
Result:	66	83	97	107	N/A	N/A

Measure: Percent of Partner Organizations that agree the Federal Law Enforcement Training Center training programs address the right skills (e.g., critical knowledge, key skills and techniques, attitudes/behaviors) needed for their officers/agents to perform their law enforcement duties						
Description: This performance measure reflects the satisfaction of Partner Organizations that Federal Law Enforcement Training Center (FLETC) training programs address the right skills needed for their officers/agents to perform their law enforcement duties such as the prevention of the introduction of high-consequence weapons of mass destruction, terrorism and other criminal						

Federal Law Enforcement Training Centers - Strategic Context

activity against the U.S. and our citizens. The results of the measure provide on-going opportunities for improvements that are incorporated into FLETC training curricula, processes and procedures.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	84%	97%	97%	97%	94%	95%
Result:	98.5%	96%	100%	91%	N/A	N/A

Management Measures

Measure: Number of Federal Law Enforcement Training Accreditation assessments conducted for accreditation or re-accreditation						
Description: This performance measure reflects the number of Federal Law Enforcement Training Accreditation (FLETA) assessments conducted for Federal law enforcement training programs and academies in the current fiscal year. Assessments are conducted to determine if training programs and/or academies meet FLETA standards for accreditation or re-accreditation. FLETA assessments for accreditation are conducted when Federal law enforcement agencies submit an application requesting accreditation of their training programs and/or academies. Assessments for re-accreditation are conducted every five years. Working through FLETA, trainers in the same discipline assist each other in evaluating and improving their professionalism, leading to a high-degree of public confidence in competent Federal law enforcement agents and officers.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	21	23	41	25	25	25
Result:	29	39	33	27	N/A	N/A

Measure: Percent of Partner Organizations satisfied with the overall Federal Law Enforcement Training Center's training experience						
Description: This performance measure reflects the satisfaction of Partner Organizations (POs) with the overall Federal Law Enforcement Training Center (FLETC) training experience. The training experience is defined as law enforcement training and services (e.g., housing, food, logistics, recreation, etc.) provided to PO students and training staff. FLETC training programs prepare PO officers/agents to perform their law enforcement duties such as terrorism and other criminal activity against the U.S. and our citizens.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	93%	97%	97%	95%	95%	95%
Result:	98.5%	98%	100%	95%	N/A	N/A

Measure: Percent of Partner Organizations satisfied with the training provided by the Federal Law Enforcement Training Center						
Description: This performance measure reflects the satisfaction of Partner Organizations with the training provided by the Federal Law Enforcement Training Center (FLETC) to their officers/agents to perform their law enforcement duties such as the prevention of the introduction of high-consequence weapons of mass destruction, terrorism and other criminal activity against the U.S. and our citizens. The results of the measure provide on-going opportunities for						

Federal Law Enforcement Training Centers - Strategic Context

improvements that are incorporated into FLETC training curricula, processes and procedures.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016

BUDGET REQUEST AND SUPPORTING INFORMATION

Science & Technology Management and Administration

I. Appropriation Overview

A. Mission Statement for Management and Administration: Fund the effective and efficient management and leadership of the Science and Technology (S&T) Directorate activities to deliver advanced technology solutions to DHS Components and first responders.

B. Budget Activities: The Management and Administration (M&A) appropriation provides for salaries and benefits related to 342 full-time equivalents (FTE) at the S&T Directorate headquarters. The 342 FTE provide executive direction to the S&T Directorate for program management, program execution oversight, program analysis, policy analysis, planning, financial management, guidance formulation, and operations and maintenance support for all S&T Directorate programs.

The M&A appropriation funds business operations and the S&T Directorate's share of the DHS Working Capital Fund (WCF). The Business Operations functions pay for rent, office supplies, utilities, and other operational functions associated with the S&T Directorate's Washington, D.C. headquarters. This account pays for the training and travel associated with senior management of the S&T Directorate and contractor staff who support the execution of headquarters functions including financial management, facility planning, maintenance, and other administrative functions. M&A also funds the administration of the S&T Directorate's regulatory and treaty compliance activities, headquarters shared services agreements, and the financial and programmatic databases. The M&A appropriation does not fund contractor support or travel associated with the direct execution of Research, Development, Test, and Evaluation (RDT&E) programs across the S&T Directorate.

C. Budget Request Summary:

The S&T Directorate requests 342 positions, 342 FTE and \$132.115 million for M&A in FY 2016, an increase of \$1.968 million from FY 2015. The total adjustments-to-base includes a decrease of 1 FTE and decrease of \$0.533 million.

The program changes include:

- Increase of \$1.854 million for implementation of Developmental, Test and Evaluation programs, Acquisition Life-cycle support and Financial Systems Modernization (FSM).
- Increase of \$0.647 million for FSM Modernization initiative (remaining increase is within the RDAO appropriation).

Total Change 2015 to 2016	5	5	\$1,968

The S&T Directorate requests 342 positions, 342 FTE, and \$132.115 million for Salaries and Expenses. There is an increase of \$1.968 million from FY 2015 and includes the following adjustments-to-base:

- Increase of \$0.733 million for the 2016 pay raise and annualization of FY 2015 pay raise
- Transfer of \$0.438 million two FTE from the Office of Operations Coordination and Planning (OPS)
- Increase of \$1.482 million for contractor support services to maintain current operations
- Increase of \$0.237 million for Normal Cost Retirement Contribution Increase
- Increase of \$0.401 million for the Cyber Professionals pay raise
- Transfer of \$0.017 million to DHS OCIO for Data Center Support
- Decrease of \$1.655 million for the Working Capital Fund (WCF)
- Decrease of \$1.467 million for the HQ efficiencies Voluntary Early Retirement Authority (VERA) and Voluntary Separation Incentive Payments (VSIP)
- Decrease of \$0.685 million for the HQ efficiencies Reduction in Vacancies

CURRENT SERVICES PROGRAM DESCRIPTION:

The M&A appropriation funds salaries and benefits related to 342 FTE at the S&T Directorate headquarters. The 342 FTE provide executive direction to the S&T Directorate for policy analysis, planning, financial management, and guidance formulation. These FTE also conduct program management, execution, oversight, and analysis, as well as operations and maintenance support for all S&T Directorate programs.

The M&A appropriation funds all of the corporate-level functions in the S&T Directorate that allow the technical divisions to manage the Research, Development, Test, and Evaluation (RDT&E) programs. Those functions include the Finance and Budget Division, including the Chief Financial Officer; the Administration and Support Division, which manages the facilities, personnel, and information technology (IT) infrastructure; and the Corporate Communications Division, which coordinates internal and external information dissemination. The DHS Working Capital Fund provides those shared services that the components rely on to execute their missions, such as contracting officers and the DHS-wide IT infrastructure.

This budget request supports the overhead and administration of the four groups, each of which has an important role in implementing RDT&E activities. These groups are: First Responders, Homeland Security Advanced Research Projects Agency (HSARPA), Capabilities Development Support (CDS), and Research and Development Partnerships (RDP).

First Responders

The First Responders Group (FRG) identifies, validates, and facilitates the fulfillment of First Responder capability gaps through the use of existing and emerging technologies, knowledge products, and the acceleration of standards. FRG manages working groups, teams, and other stakeholder outreach efforts in order to better understand the needs and requirements of local, tribal, State, and Federal first responders, including those on the front line of border protection and transportation security. Additionally, FRG directs all Office for Interoperability and Compatibility, National Urban Security Technology Laboratory, and Technology Clearinghouse/R-Tech activities.

Homeland Security Advanced Research Projects Agency

HSARPA manages a portfolio of highly innovative programs that are transforming the future mission space for Homeland Security. Complementary to the S&T Directorate's other programs and projects, HSARPA projects push scientific limits to address customer-identified gaps in areas where current technologies and research and development are inadequate or non-existent. HSARPA program managers lead teams of national experts in the development of new homeland security technologies, demonstrations, and applications that offer significant breakthroughs for DHS operations.

Capabilities Development Support

The CDS Group is a customer-driven organization that supports S&T and other DHS Components with systems analysis, requirements analysis and development, and advisory services to achieve successful acquisition implementation. Through the engagement and partnership with the DHS Enterprise, CDS provides the corporate oversight of operational test and evaluation and standards.

Research and Development Partnerships

The RDP Group manages a set of core competencies that provide measureable value to DHS S&T in facilitating "win-win" relationships with members of the HSE comprising both government and nongovernment agencies and organizations. RDP conducts extensive outreach efforts with members of the HSE based on the strategic and programmatic needs of the Department and S&T. RDP assists in both transmitting and receiving information to stakeholders across the HSE. RDP enables opportunities for evaluating, expediting, and monitoring the execution of programs with an increased speed-of-execution compared to "in-house only" activities. RDP maintains extensive contacts and key references to conduct outreach and to provide research and funding opportunities to the public and

private sectors both domestically and internationally. RDP also manages the Small Business Innovation Research program for DHS, engaging the small business innovation engine of America to create new products and services for the Homeland Security Enterprise (HSE). In addition, RDP provides management of the Federally Funded Research and Development Centers (FFRDCs), Homeland Security Studies and Analysis Institute, and the Homeland Security System Engineering and Development Institute.

Finance and Budget Division

FBD provides the S&T Directorate with high-quality, efficient, and cost-effective financial management services through six branches. The Budget and Performance Office develops long-term plans for resource allocation, execution plans, Congressional Justifications, and management of financial resources within the S&T Directorate. It also develops and implements internal and external performance metrics for S&T Directorate programs, as well as risk assessment methodologies to help inform programming decisions. The Acquisition Branch develops the S&T Directorate's acquisition strategy. The Financial Services Branch manages the conferences, travel and purchase card programs. The Financial Operations Branch is dedicated to sound fiscal stewardship of the S&T Directorate's appropriations and reimbursable funding; timely and accurate budget execution, financial management, and financial reporting. The Internal Controls Branch monitors programs and activities to provide assurance about the adequacy of internal controls within the S&T Directorate. The Interagency Branch streamlines work with other agencies and supports the management and oversight of those agreements.

Administration and Support Division

The Administration and Support Division provides critical infrastructure support to the S&T Directorate and is composed of seven components: Facilities, Human Capital Office, Office of the Chief Information Officer, Office of the Chief Administrative Officer, Office of Administration and Audits, Central Security Office, and Readiness and Operational Coordination. In compliance with Presidential Directives, Federal regulations, and Departmental guidance, the Administration and Support Division provides support and continuous process improvement through problem identification and solution, sound policy and procedure development, and high-quality service.

Corporate Communications Division

The Corporate Communications Division communicates the objectives and status of homeland security technology programs, disseminates information regarding opportunities for private-sector entities (corporate and academic), and ensures that the media understands and accurately represents DHS technologies and programs. The Corporate Communications Division holds conferences and manages the S&T Directorate's presence at other information-sharing events to improve contact among technology developers, vendors, and acquisition personnel. It also promotes the participation of colleges, universities, private research institutes, and companies (and consortia thereof) in the research process by disseminating information regarding research conducted or sponsored by the Department, and provides public-communication support to the S&T Directorate-sponsored FFRDCs.

Working Capital Fund

Funds provided within the M&A appropriation are also used to acquire services through the DHS WCF, which includes: IT services, human resources, procurement operations, and financial systems. The WCF also provides consolidated subscriptions, government-wide mandated services, and DHS crosscutting activities.

MAJOR ACQUISITIONS:

Financial Management Services Initiative (FMSI)

To address legacy financial management system inadequacies, DHS launched the Financial Systems Modernization Initiative (FSMI) in 2011 to modernize financial management systems at Components. DHS and S&T must invest in modernizing financial management systems to improve system integration, efficiency, financial accountability, and financial reporting. The FMSI follows DHS directives, OMB guidance, and processes developed by the Department of the Treasury’s Office of Financial Innovation and Transformation.

Requested funds are to close the capability gaps by obtaining financial management services (FMS) from a shared services provider (SSP). The FMS solution would integrate financial, contracting, and asset management systems while complying with current and future financial guidelines and requirements

This project is proposed to be funded out of multiple PPAs in FY 2016, as follows:

Appropriation	S&T PPA	FSM
M&A	M&A	\$0.647
RDAO	RDI	\$1.973
RDAO	AOS	\$0.232
RDAO	UP	\$0.168
RDAO	Labs	\$0.660
	Totals	\$3.680

FY 2014 Activity Funding (\$\$\$ thousands)	FY 2015 Activity Funding (\$\$\$ thousands)	FY 2016 Activity Request (\$\$\$ thousands)
0	\$2.640	\$3.680

FY 2016 Funding Breakout:

Program Area (Funding in \$\$\$ thousands)	Sub-Program	Mission Need
Program Support Contract (\$0.200)	N/A	Provide program support services to plan and execute the migration to the FMS solution
Operations and Maintenance – FSM System (\$1.520)	N/A	Provide operations and maintenance of the FMS solution
Ongoing Organizational Change Management and Training (\$0.150)	N/A	Provide services to evaluate the current business and technical environment and to develop and administer training and guidance on the FMS solution
Independent Verification and Validation (\$0.600)	N/A	Provide services to evaluate the correctness and quality of the FMS solution and to ensure that requirements are met
Retirement of Existing System (\$0.100)	N/A	Provide services to evaluate the impact on legacy systems
Migration of Historical Data (\$0.190)	N/A	Provide services to evaluate current data, to develop a plan to configure and migrate current data, and migrate data to the FMS solution
Implementation (Licenses) (\$0.920)	N/A	Provide licenses for the FMS solution

IV. Program Justification Changes

**Department of Homeland Security
Science & Technology
Management and Administration
Justification of Program Changes**
(Dollars in Thousands)

Program Increase 1: Financial Systems Modernization
PPA: Salaries and Expenses
Program Increase: Positions 0, FTE 0, Dollars \$647

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level	-	-	-	-	-	-	-	-	-
Program Increase	-	-	-	-	-	-	-	-	\$647
Total Request	-	-	-	-	-	-	-	-	\$647

Description of Item

The increase provides funding for the Financial Systems Modernization Initiative (FSMI).

Justification

To address legacy financial management system inadequacies, DHS launched the FSMI in 2011 to modernize financial management systems at Components. DHS must invest in modernizing financial management systems in order to improve financial accountability and financial reporting, and enable business process standardization. The FSMI follows DHS directives, OMB guidance, and processes developed by the Department of the Treasury's Office of Financial Innovation and Transformation.

Requested funds are to migrate S&T to a shared service provider for financial, acquisition and asset management solution services. In FY 2016, S&T requires \$7.580 million in funding, of which \$3.900 million is from headquarters and \$3.680 million is from S&T, for their FSM initiative, with migration scheduled to be completed in FY 2018. The DHS Office of the Chief Financial Officer provides guidance and oversight to Component FSM initiatives.

S&T will prorate FSM funding across all S&T PPAs. FSM supports financial execution and reporting throughout the S&T Directorate. S&T's component-specific funding needs for this activity will be funded in the year of execution within the PPAs listed below.

Appropriation	S&T PPA	FSM
M&A	M&A	\$0.647
RDAO	RDI	\$1.973
RDAO	AOS	\$0.232
RDAO	UP	\$0.168
RDAO	Labs	\$0.660
	Totals	\$3.680

Impact on Performance (Relationship of Increase to Strategic Goals)

The FY 2016 funding increase supports the DHS Quadrennial Homeland Security Review (QHSR) goal of Maturing and Strengthening the Homeland Security Enterprise.

**Department of Homeland Security
Science & Technology
Management and Administration
Justification of Program Changes**
(Dollars in Thousands)

Program Increase 2: Implementation of DT&E, Acquisition Life-cycle support and FSM
PPA: Salaries and Expenses
Program Increase: Positions 6, FTE 6, Dollars \$1,854

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	-
Program Increase							6	6	\$1,854
Total Request	-	-	-	-	-	-	6	6	\$1,854

Description of Item

The increase provides funding for the implementation of DT&E, Acquisition Life-cycle support and FSM.

Justification

In FY 2016, S&T is requesting two FTE per function for a total of six Federal subject matter experts in the implementation of Developmental, Test and Evaluation (DT&E), Acquisition Life-Cycle Support, and Financial System Modernization (FSM) Programs. S&T is involved in all aspects of T&E and will be setting policy and guidance for and overseeing DT&E, approving the DT&E plan supporting the decision to begin initial productions, and the integration of DT&E with operational T&E. In addition, subject matter experts are needed to continue and sustain the Acquisition Life-Cycle Support program for the Department and to ensure seamless migration for S&T to the new financial system.

Impact on Performance (Relationship of Increase to Strategic Goals)

The FY 2016 funding increase supports the DHS QHSR goal of Maturing and Strengthening the Homeland Security Enterprise.

Salaries and Expenses Mission Statement

The Management and Administration (M&A) appropriation provides for salaries and expenses related to 342 full time equivalent (FTE) personnel in Washington, D.C. This appropriation also provides for the operation of the S&T Directorate's Washington, D.C., headquarters including business operations, contributions to the DHS Working Capital Fund, and other administrative costs associated with the management of the S&T Directorate and its resources.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$41,788	\$42,226	\$43,500	\$1,274
11.3 Other than Full-Time Permanent	\$3,540	\$3,575	\$3,575	-
11.5 Other Personnel Compensation	\$1,508	\$1,508	\$1,508	-

BUDGET REQUEST AND SUPPORTING INFORMATION

Science and Technology Research, Development, Acquisitions, and Operations

I. Appropriation Overview

A. Mission Statement for Research, Development, Acquisitions, and Operations:

The mission of DHS S&T is to *strengthen America's security and resiliency by providing knowledge products and innovative technology solutions for the Homeland Security Enterprise*. Congress created the S&T Directorate under the Homeland Security Act of 2002, to among other things “[conduct] basic and applied research, development, demonstration, testing, and evaluation activities relevant to any or all elements of the Department.”¹ S&T also has a statutory responsibility for establishing a system for transferring homeland security developments or technologies to Federal, State, local governments, and private sector entities.

In the past decade, S&T has undergone many changes and continues to evolve. The extraordinary breadth and diversity of DHS's missions requires S&T to address a wide range of programs including DHS Components' near-term needs for new operational capabilities and improved operational effectiveness, efficiency, and safety. S&T also has responsibilities related to understanding and creating solutions to biological and chemical threats, and to conducting the research and development (R&D) required to meet homeland cybersecurity needs. While DHS S&T's work is often identified with technology development, equally important are the Directorate's contributions to homeland security in the form of analyses or “knowledge products.” These include analyses of alternative technology options; assessments of complex issues such as the relative risk of different chemical, biological, radiological and nuclear threats; operational testing and evaluation of technologies proposed for acquisition; detailed technical characterization of potential biological threat organisms to support both human and agricultural biodefense; and the creation of consensus standards that enable cost-effective progress across many fields. S&T also manages five national laboratories that provide unique homeland and national security capabilities and has direct access to the Department of Energy's (DOE) extensive national laboratory system. In addition, the Directorate's capacity to engage R&D activities worldwide is greatly augmented by S&T's university-based Centers of Excellence (COEs), the tenth of which will stand up in FY 2015, and 13 bilateral international agreements.

In order to meet the broad scope of our mission, S&T has built a highly trained and technically-proficient staff that is DHS's core source of science, engineering, and analytical expertise. Using our staff and budget for maximal impact, we have focused our energies on efforts that have a direct and demonstrable link to improving the efficiency, effectiveness, and safety of DHS's operational missions and enhancing the safety, interoperability, and communications capabilities of the first responder community. S&T's contributions to the Department and the Homeland Security Enterprise (HSE) fall into four general categories:

- *New capabilities and knowledge products* – S&T creates new technological capabilities that address DHS operational needs or are necessary to address evolving homeland security threats.

¹ Sec. 302(4) of Public Law 107-296 (codified at 6 U.S.C. § 182(4)).

- *Process enhancements and efficiencies* – S&T conducts systems-based analysis to provide streamlined, resource-saving process improvements to existing operations.
- *Acquisition support* – The Department achieves more effective and efficient operations and avoids costly acquisition failures and delays by leveraging S&T’s technical expertise to improve project management, operational analysis, and acquisition management.
- *Understanding of homeland security risks and opportunities* – S&T’s relationships across DHS and the HSE contribute to strategic understanding of existing and emerging threats as well as opportunities for collaboration across departmental, interagency, and State/local boundaries.

B. Budget Activities:

The Directorate has four research, development, test and evaluation (RDT&E) program, project, and activities (PPAs), and various thrust areas, each of which has an important role in implementing research and development activities. These four PPAs are: Acquisition and Operations Support; Laboratory Facilities; Research, Development, and Innovation; and University Programs.

Acquisition and Operations Support (AOS)

AOS provides expert assistance to entities across the HSE to ensure that the transition, acquisition, and deployment of technologies, information, and procedures improve the efficiency and effectiveness of the operational capabilities across the HSE mission. The five thrust areas of Acquisition and Operations Support are: Operations Research and Analysis; Safety Act; Standards; Technology Transition Support; and Testing and Evaluation.

Laboratory Facilities

The Office of National Laboratories (ONL) manages the Laboratory Facilities Programs. ONL provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations and institutions, which can provide the knowledge and technology required to secure our homeland. ONL executes two thrust areas: Construction and Lab Operations.

Research, Development, and Innovation (RD&I)

RD&I provides state-of-the-art technology and/or solutions to meet the needs of the operational Components of the Department and the first responder community. It includes customer-focused and output-oriented RDT&E programs that balance risk, cost, impact, and time to delivery. RD&I includes: Apex; Border Security; Chemical, Biological, and Explosive (CBE) Defense; Counter Terrorist; Cyber Security/Information Analytics; and First Responder/Disaster Resilience.

University Programs

University Programs supports critical homeland security-related research and education at U.S. colleges and universities to address high-priority DHS-related issues and to enhance homeland security capabilities over the long term. University Programs includes Centers of Excellence and Minority Serving Institutions.

C. Budget Request Summary:

The S&T Directorate requests 130 positions, 130 FTE, and \$646.873 million for RDA&O in FY 2016, a decrease of \$294.798 million from FY 2015. The total adjustments-to-base is a \$299.685 decrease.

The program changes total an increase of \$4.887 million and include:

- A program increase of \$5.399 million for Development, Test, and Evaluation (DT&E) and for S&T analyses supporting the Joint Requirements Council (JRC).
- An increase of \$63.237 million in research and development areas such as Apex Programs and Engines which is realigned from other areas in research and development work totaling \$62.175 million in Border Security, CBE Defense; Counter Terrorist; Cyber Security/Information Analysis, and First Responder/Disaster Resilience resulting in an overall increase of \$1.062 million in Research, Development, and Innovation.
- An increase of \$5.336 million in Laboratory Operations and a decrease of \$6.910 million in Infrastructure Upgrades.

II. Summary of FY 2016 Budget Estimates by Program/Project Activity (PPA)

Department of Homeland Security Science & Technology

Research, Development, Acquisitions, and Operations

Summary of FY 2016 Budget Estimates by Program Project Activity

FY 2016 Request (Dollars in Thousands)

Program Project Activity	FY 2014			FY 2015			FY 2016			Increase(+) or Decrease(-) for FY 2016

III. Current Services Program Description by PPA

**Department of Homeland Security
Science & Technology
Acquisition and Operations Support
Program Performance Justification**
(Dollars in Thousands)

PPA: Acquisition and Operations Support

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	-	-	\$41,703
FY 2015 President's Budget	-	-	\$41,703
2016 Adjustments-to-Base	-	-	-
FY 2016 Current Services	-	-	\$41,703
FY 2016 Program Change	-	-	\$5,399
FY 2016 Total Request	-	-	\$47,102
Total Change 2015 to 2016	-	-	\$5,399

S&T requests \$47.102 million for AOS in FY 2016. This includes a program increase of \$5.399 million for Development, Test, and Evaluation (DT&E) and the Joint Requirements Council (JRC).

CURRENT SERVICES PROGRAM DESCRIPTION:

Acquisition and Operations Support PPA – Provides expert assistance, including systems engineering, to entities across the HSE to ensure that the transition, acquisition, and deployment of technologies, information, and procedures improve the efficiency and effectiveness of the operational capabilities across the HSE mission. This includes providing technological assessment of major acquisition programs in the DHS to help ensure that technologies, concept of operations (CONOPS), and procedures meet operational requirements, technology analysis and technology review of analysis of alternatives at the beginning and throughout an acquisition program’s life; oversight of the T&E of DHS major acquisition programs; standards to support the homeland security mission; and administration of the Support Anti-Terrorism by Fostering Effective Technologies (SAFETY) Act program.

The five thrust areas of AOS are: Operations Research and Analysis; SAFETY Act; Standards; Technology Transition Support; and Testing and Evaluation.

- 1. Operations and Requirements Analysis Thrust** – FY 2015: \$10.043 million. FY 2016 Request: \$10.110 million.
 - *Problem:* The need to identify and prioritize cross-Department capability gaps, overlaps, and duplications as well as identify solutions for Component operations and process inefficiencies.
 - *Solution:* Execute enterprise capabilities based assessments to identify cross-Department capability gaps and develop courses of action to address the identified gaps; and conduct operations and process analyses to address Component operations issues.
 - *Impact:* Ensures Department improves operations efficiencies and unifies its efforts to reduce duplicative programs through joint capability developments where appropriate.

Acquisitions Support and Operations Analysis (ASOA)

This project provides S&T and DHS with leadership and oversight of: 1) standards, 2) systems analysis, 3) research and development testing and evaluation (T&E), 4) operational T&E, and 5) systems engineering. Working with the Under Secretary for Management, ASOA leverages S&T's critical mass of scientific and engineering expertise to ensure that DHS develops and/or procures technologies that work as expected, and are delivered, or transitioned on time and on budget. In addition, this project supports S&T's role in providing support for Department capabilities and requirements analysis.

Joint Requirements Support

This effort leads capabilities and requirements analysis for the DHS Joint Requirements Council (JRC). A key element of the Secretary's Unity of Effort initiative, the JRC is a Component-led body that aims to identify and prioritize cross-Department capability gaps, overlaps, and duplications. The JRC analysis allows DHS leadership to address the gaps, overlaps, and duplications at the enterprise level rather than at the individual Component level, potentially enabling DHS to realize cost savings of tens of millions of dollars. This effort is responsible for performing capabilities and requirements analysis for each of the DHS portfolio areas brought before the JRC. It draws upon S&T's previous development of a repeatable, structured analytic process that was successfully validated in the Integrated Investment Life Cycle Management pilot analyses. Key outputs of this effort for each portfolio area include operational visualizations, functional analyses, operational analysis reports, capabilities based assessments, and prioritized shortfalls.

Operations Analysis

The effort employs a "systems thinking" approach to comprehensively define operational problems, characterize current operations and processes, describe the future state for operations and processes, and identify alternative solutions to enable the future operational state. This effort leverages S&T's subject matter expertise in systems analysis, process mapping, and Lean Six Sigma process improvement and applies its technical skills to support Headquarters and Component mission analyses. Key outputs of this project include process maps, value streams, efficiency opportunities, and cost benefits analyses.

DHS Systems Engineering Support & Assessment Activities

This effort identifies new processes for developing, promoting, and facilitating a rigorous systems engineering (SE) process across DHS, ultimately institutionalizing a "systems thinking" approach for transforming customer needs and requirements into operational capabilities. The Office of Systems Engineering (OSE) will use these SE principles as a technical framework to enable sound decision making relative to trade studies, system performance, risk, cost, and schedule. Current efforts include leading the Systems Engineering Center of Excellence (SECOE) that leverages SE expertise across DHS, maintaining the DHS Systems Engineering Life Cycle (SELC) and SE Technical Workforce Development policy and guidance. OSE supports DHS major acquisition programs by providing technical and transition assessments and by facilitating the tailoring and execution of the SELC. This effort also develops and implements the Capability Development Framework (CDF) in support of DHS R&D programs. The CDF is a standard set of foundational systems engineering activities, processes, and reviews that provides a common research and development management approach for all R&D programs within the DHS Science and Technology Directorate (S&T), and includes developing all associated guidance and evaluation criteria. OSE will also help DHS programs develop and implement business, technical and systems architectures.

SE Projects and Studies

This area improves the quality of DHS Systems Engineering by producing SE tools, projects and studies that will facilitate the transition of Systems Engineering research into practical applications for DHS Programs of critical national importance.

Homeland Security Studies and Analysis Institute (HSSAI)

HSSAI is a Federally Funded Research & Development Center (FFRDC) working in the public interest to ensure the highest levels of excellence by bringing together the expertise and point-of-view of government, industry, and academia. The Institute works to solve complex Homeland Security Enterprise (HSE) problems based on their core technical capabilities, their long-term relationship with the Department, their special access to data, and their inherent objectivity and independence. HSSAI supports DHS Components by providing specialized expertise in a spectrum of mission-critical capacities, to include program analyses and evaluation, targeted tradeoff studies of mission-level goals and strategies; analyzing operations and operational requirements; assessing DHS organizations and their governance; and evaluating performance metrics to effectively meet the future challenges facing the Nation.

Intelligence, Surveillance, and Reconnaissance

This program involves collaborating and partnering with the Department of Homeland Security Components and associated HSE members, the Department of Defense (DOD), the 16-member Intelligence Community, and other U.S. Government (USG) interagency members to share information and expertise, operational requirements, and material science and technology solutions to HSE intelligence challenges.

2. SAFETY Act Thrust – FY 2015: \$8.043 million. FY 2016 Request: \$8.043 million. This program creates legal liability protection for providers of qualified anti-terrorism technologies and incentivizes the private sector to commit additional resources to significantly improve anti-terrorism preparedness and resiliency. In accordance with the SAFETY Act of 2002, this program removes barriers to industry investments that could save lives. The SAFETY Act Program actively collaborates with DHS Components to reduce the risk to the Nation’s critical infrastructure. This program enables providers of effective anti-terrorism technologies to develop, deploy, and commercialize these technologies with liability limitations for claims arising out of, relating to, or resulting from an act of terrorism. In addition, the Program not only actively supports DHS programs and initiatives (e.g., Transportation Security Administration’s (TSA) Certified Cargo Screening Program, Customs and Border Protection’s (CBP) Customs-Trade Partnership Against Terrorism), critical R&D investments and programs in the S&T Directorate, as well as other Federal agencies anti-terrorism program initiatives by developing a streamlined procedure for providing SAFETY Act coverage known as Block Designations. CBP’s Targeting and Analysis Systems Program Office), critical R&D investments and programs in the S&T Directorate, as well as other Federal agencies anti-terrorism program initiatives by developing a streamlined procedure for providing SAFETY Act coverage known as Block Designations.

3. Standards Thrust – FY 2015: \$8.220 million. FY 2016 Request: \$7.370 million.

- *Problem:* The need to ensure that technologies and equipment are safe, stable, and successful in the field.
- *Solution:* Identify standards and test methods that verify equipment performance and meet acquisition requirements by working with end users to develop appropriate documentation.

- *Impact:* Ensures that first responders receive quality, high-performing, safe equipment and the right tools to protect the public and their own lives.

Chemical and Biological Systems Standards

This project improves the ability of first responders to access and receive information on Chemical, Biological, Radiological, and Nuclear (CBRN) sensor technologies interfaced with other instruments used to respond to developing events and incidents. The project standardizes device interfaces, facilitates seamless integration, and provides the necessary interoperability of CBRN devices with other equipment to first responders. It supports cost-effective deployment of chemical and biological countermeasure technologies at the Federal, State, and local levels by working with other DHS Components and Federal agencies and by providing an effective, coordinated response to chemical and biological events through standards development. This project has developed validated performance standards, technical methods, and training curricula that encourage capability building at the jurisdiction level that will provide manufacturers, responders, and facility operators with performance specifications, testing criteria, and application guidance.

Prior Year Key Events

- Published guidance and/or standards to communicate metrics and measurement uncertainty for assessing the quantity of microbial agent test materials.
- Published performance metrics for methods chosen to characterize microbial identity and identify needed standards to support microbial identity measurements.

Current Year Key Events

- Develop standards and test methods to support an integrated response to suspected biological incidents, fostering a coordinated response from first responder through law-enforcement, and forensics.

Budget Year Key Events

- Finalize efforts initiated in the previous year and initiate new standards activities to address emerging requirements, and will facilitate the integration of existing standards into Department and HSE operations.

Explosives Countermeasures Standards

This project enables technologies that keep explosives out of transportation systems, Federal buildings, and critical infrastructure. These technologies detect both small amounts of explosive (i.e., trace detection) on people or objects, as well as larger amounts of concealed explosives (i.e., screening standards). These standards include standard test materials and protocols for next-generation deployed trace explosives detection equipment, including new and emerging explosive threats.

Prior Year Key Events

- Developed methods to produce cost effective test materials for mass applications and complete development of particle test materials.
- Initiated standards development for security screening of luggage and liquids for computed tomography-based explosives detection system (CT/EDS) X-Ray

Current Year Key Events

- Develop detection standards for prevention and deterrence of homemade explosives (HME).

Budget Year Key Events

- Initiate development of new standards for the detection of other trace contraband substances such as narcotics or other emerging explosive threats.

Responder & Resiliency Standards

This project safeguards the Nation's HSE by facilitating coordinated responses to emergencies. Specifically, this project supports standards-based capabilities and standardized response plans and training for responders, localities, and communities. This project also develops performance-based design methodologies for buildings and infrastructures subjected to a variety of hazards and defined performance specifications, test methods to determine performance specifications, and guidance related to Federal, State, and local response to emergencies.

Prior Year Key Events

- Hosted robot evaluation and training at National Institute of Standards and Technology (NIST) and other locations.
- Designed and developed an executive management module for usability tests and symbols for fingerprint, face, and iris collection.
- Develop and publish a conformance testing suite for the web services (WS)-biometric device profiles

Current Year Key Events

- This project plans to initiate projects in biometric client technologies, latent fingerprint analysis, biometric quality, and biometric human factors and usability.
- This project plans to finalize standards for fire and arson resistance as well as complete regional resiliency planning standards, including radiological response planning standards.
- Support to APEX Secure Transit Corridors for performance standards and test methods.
- Design and retrofit strategies for resilience.

Budget Year Key Events

- Continue the development of response robot test methods, integrate test methods into training programs, and develop and update test methods for emerging technologies and requirements.
- Continue to finalize aspects of biometric client technologies standards, biometric human factors, and usability standards.
- Continue the development of standards for personal protective equipment (PPE) and initiate new standards development activities to address emerging requirements.

Standards Infrastructure

This project supports S&T's participation in national and international standards organizations and activities to ensure that DHS equities are addressed and that the development and use of standards meet Departmental mission needs. It enables DHS and its customers to procure and acquire reliable, interoperable, and effective technologies and processes. This project promotes and maintains relationships with standards-development organizations to ensure communication with and commitment to partnerships, as well as ongoing infrastructure such as databases and working groups. This project also supports programs across DHS and the Federal space with standards and test methods for key applications within DHS Components.

Prior Year Key Events

- Support DHS representation in national and international standards organizations

Current Year Key Events

- Draft, develop, adopt, and/or update standards, standard test/reference material, technical performance standards, test methods, and/or protocols for DHS equipment, systems, and programs/projects.
- Finalize standards for Radio Frequency Personal Alert Safety System (RF PASS) devices.

Budget Year Key Events

- Conduct analyses to facilitate the integration of existing standards and test methods into Department operations to include strategic sourcing, RDT&E, grants, and training.
- Continue to draft, develop, adopt, and/or update standards, standard test/reference material, technical performance standards, test methods, and/or protocols for DHS equipment, systems, and programs/projects.
- Facilitate the interaction between DHS and the private sector standards development organizations to initiate new standards projects, provide access to standards and to deconflict potentially competing standards activities.

4. Technology Transition Support Thrust – FY 2015: \$9.947 million. FY 2016 Request: \$14.343 million. This thrust facilitates the transition of S&T Directorate solutions to customers. These activities involve integrating technology development efforts across the S&T Directorate to develop the most cost-effective and timely solutions and processes to meet customer requirements, including first responders.

Interagency Programs

This program addresses high-priority homeland security needs through operational experimentation, facilitation, and collaboration with cooperative science, technology, research, development, testing, and evaluation (RDT&E) endeavors with other Federal agencies, academia, and the private sector. It leverages the capabilities and investments of external organizations to reduce duplication and identify unmet needs pursuant to §302 (13) of the Homeland Security Act of 2002. Outreach is conducted with Federal, State, local, territorial, and tribal government partners to strengthen collaborative efforts of and to collect input on their technology gaps.

Project Schedule including Milestones

- Conduct Homeland Security Interagency Symposia or Table Top Exercises/Discussions to further strengthen collaborative efforts, to collect customer/partner and private sector input on technology gaps and to communicate achievements (FY15).
- Expand collaborative relationships and outreach with DHS Components, customers/partners, as well as federal executive departments and agencies to include the Departments of Defense, Energy, Justice, Transportation, Health and Human Services, Agriculture, NASA, National Institute of Standards and Technology (NIST), and Federal Aviation Administration (FAA) (FY15).
- Facilitate DHS participation in and interagency support of White House Office of Science and Technology Policy (OSTP) National Science and Technology Council (NSTC) science committee efforts in the development and coordination of science and technology policy, strategic planning, and related implementation efforts across the Federal research and development enterprise (FY15).
- Expand DHS S&T HSARPA and First Responder Group project success by supporting regional collaboration, assistance, and partnering efforts that provide perspective and project contributing partnerships (FY15).

- Conduct Homeland Security Interagency Symposia or Table Top Exercises/Discussions to further strengthen DHS regional collaborative efforts and to collect customer/partner and private sector input on technology gaps and to communicate achievements (FY16).
- Expand collaborative relationships and outreach with DHS components, customers/partners, private sector, as well as federal executive departments and agencies to include the Departments of Defense (Joint Staff, Combatant Commands, National Guard, RDT&E components), Energy, Justice, Transportation, Health and Human Services, and Interior to leverage RDT&E efforts and capabilities (FY16).
- Facilitate DHS participation in and interagency support of White House OSTP and NSTC science committee efforts in the development and coordination of science and technology policy, strategic planning, and related implementation efforts across the Federal research and development enterprise (FY16).
- Expand DHS S&T HSARPA and First Responder Group project success by supporting regional collaboration, assistance, and partnering efforts that provide perspective and project contributing partnerships (FY16).
- Formulate collaborative relationship with DHS, DOD and interagency partners to strengthen and build and interagency technology discovery experimentation program that is a part of the operational analysis and rapid reaction technology development processes (FY16). Expand DHS S&T Interagency Partnerships through interagency collaboration projects with the federal interagency, regional partners, HSARPA and First Responders Group (FY16).

International Cooperative Programs

- *Problem:* As security challenges continue to emerge and evolve, S&T is developing relationships with international allies to enhance our innovative R&D knowledge, funding, and other unique capabilities and resources.
- *Solution:* Develop understandings and agreements and facilitate the planning and implementation of international cooperative activity to address the strategic priorities developed for the Department in support of the HSE.
- *Impact:* The United States and its allies in the global war on terrorism will mutually benefit from the sharing of technological expertise to combat domestic and international terrorism and other high consequence events.

Prior Year Key Events

- Facilitated nine bilateral meetings for the Under Secretary and Deputy Under Secretary for S&T.

Current Year Key Events

- Facilitate nine bilateral meetings for the Under Secretary and Deputy Under Secretary for S&T.
- Jointly fund European Union (EU) – U.S. Supply Chain Security Demonstration Pilot Project.

Budget Year Key Events

- Facilitate nine bilateral meetings for the Under Secretary and Deputy Under Secretary for S&T.

Knowledge Management and Tech Foraging

This program enhances the Directorate's ability to gather and manage accumulated knowledge and essential information for the benefit of the HSE to identify and evaluate existing or developing technologies, services, and emerging trends.

The Knowledge Management program develops and maintains an environment where S&T employees share and access relevant knowledge and lessons learned, and foster collaborative development efforts. Proper management of knowledge and information helps to protect the privacy of all individuals, ensures compliance with Freedom of Information Act (FOIA) requirements, and cost-effectively shares important information with a wide and diverse HSE audience. Knowledge Management works with S&T staff to assess privacy risks, recommend privacy protections, and mitigate improper disclosures and breaches of personal information, encourage cost effective use of electronic knowledge sharing, while also facilitating efforts to promote an open and transparent government.

Technology foraging is the identification of promising research and existing or emerging technology in government, academia, and industry. Results of foraging improve alternative options, may increase speed of project execution, and may reduce costs for projects. Technology foraging leverages domestic and international public and private sector technologies, products, services, and emerging trends. This approach enables S&T to rapidly match existing or near-term technologies to the operational requirements of the HSE, increasing efficiency in the expenditure of funds and accelerating time to fielding.

Program Transition

This project establishes and implements a technology development program to focus near-term S&T work on the transitioning projects and capabilities needed by DHS operational Components, Directorates, and their external customers. This includes partnering with In-Q-Tel, the not-for-profit venture capital firm that invests in high-tech companies for the Central Intelligence Agency (CIA), on projects for homeland security in high-tech, cutting-edge technologies such as DNA analysis, standoff explosives trace detection, cybersecurity, and secure covert surveillance. This program administers a requirements-driven, delivery-oriented effort that draws upon technologies that can be developed, matured, and delivered to DHS acquisition programs, commercialized, or validated as a standard within a three-year period.

5. Testing and Evaluation Thrust – FY 2015: \$5.450 million. FY 2016 Request: \$7.236 million.

The T&E Thrust establishes policies and procedures and coordinates T&E resources to verify attainment of technical performance specifications and to evaluate operational effectiveness/suitability prior to system deployment. T&E works to ensure that DHS integrates a uniform and centrally managed departmental T&E process into the systems engineering and acquisition lifecycle. The infrastructure area will assess, integrate, and coordinate DHS and non-DHS test assets to ensure that adequate test capabilities are available to support DHS programs and projects.

First Responder Technologies (System Assessment and Validation for Emergency Responders [SAVER])

- *Problem:* Emergency response equipment is being purchased at an increasing rate by Federal, State, local, and tribal emergency responders in order to meet current national security challenges. The State, local and tribal responders need an honest broker of procurement-related information on responder equipment to allow them to make informed procurement decisions.
- *Solution:* SAVER provides unbiased, comparative assessments of commercially available responder equipment and provides those results along with other relevant equipment information to the emergency response community in an operationally useful form. SAVER assesses those products using responders in realistic operational environments and real world scenarios. SAVER also performs verification tests; tests that verify manufacturer claims.
- *Impact:* SAVER performs the testing that provides the response community with knowledge products that enable first responders to better select, procure, use, and maintain equipment.

Currently, there is no readily available source of objective, operationally oriented testing information on commercially available responder equipment. This sharing of information is a life-saving and cost-saving asset for DHS, as well as for Federal, State, local, and tribal users of emergency response equipment.

T&E Oversight Activities

This project increases the quality of information provided to decision makers and ensures deployment of enhanced capabilities to the end-user by working directly with all DHS major R&D and acquisition programs on the DHS Master Acquisition Oversight List to assist in the development and execution of a robust T&E program. This project supports T&E oversight of Information Technology (IT) and non-IT Programs by increasing the quality of information relating to progress towards meeting operational requirements.

T&E Activities for Special DHS Projects

This project identifies, assesses, prioritizes, and develops solutions for crosscutting T&E initiatives in support of evolving and emerging Department needs in the areas of infrastructure, threat definition and portrayal, training, policy, procedures and processes. Project activities include development and validation of new or improved test procedures and processes, new or enhanced test infrastructure to address evolving Department requirements and threat vectors to include cybersecurity test capabilities, and implementation of improved tools, training, and resources through the T&E Center of Excellence and formal workforce training venues.

**Department of Homeland Security
Science & Technology
Laboratory Facilities
Program Performance Justification**
(Dollars in Thousands)

PPA: Laboratory Facilities

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	130	123	\$547,785
FY 2015 President's Budget	130	130	\$435,180
2016 Adjustments-to-Base	-	-	(\$299,685)
FY 2016 Current Services	130	130	\$135,495
FY 2016 Program Change	-	-	(\$1,574)
FY 2016 Total Request	130	130	\$133,921
Total Change 2015 to 2016	-	-	(\$301,259)

The S&T Directorate requests 130 positions, 130 FTE, and \$133.921 million for Laboratory Facilities in FY 2016. This \$301.259 million decrease includes the following adjustments to base:

- Increase of \$0.238 million for the 2016 pay raise and annualization of FY 2015 pay raise
- Increase of \$0.077 million for Normal Cost Retirement Contribution Increase
- Decrease of \$300.000 million for Laboratory Construction

CURRENT SERVICES PROGRAM DESCRIPTION:

Laboratory Facilities PPA – FY 2015: \$435.180 million. FY 2016 Request: \$133.921 million. The Office of National Laboratories (ONL) manages the Laboratory Facilities Programs. ONL provides the Nation with a coordinated, enduring core of productive science, technology, and engineering laboratories, organizations, and institutions, which can provide the knowledge and technology required to secure our homeland.

Construction Thrust – FY 2015: \$315.230 million. FY 2016 Request: \$8.319 million. This program oversees the planning, budgeting, and management of laboratory infrastructure construction and upgrade projects. Construction projects provide and maintain R&D capabilities to support the missions of the S&T Directorate, the Department, and other government agencies that have interrelated homeland security missions. The investments include the construction of future laboratories, where a current capability does not exist, and upgrades to extend the life and capabilities of present laboratory facilities.

The reduction is due to one-time construction costs for National Bio and Agro-Defense Facility.

Infrastructure Upgrades Project

This project ensures that S&T Directorate Laboratories do not reach a point where obsolete or insufficient infrastructure prohibits continued R&D operations. Capital upgrades are more than routine operations and maintenance or expected upkeep of infrastructure. In addition to major repairs of infrastructure systems (e.g., electrical, water/sewage), they may include new construction, renovation,

or remodeling to structures that enable scientists to pursue new capabilities based on customer requirements. These efforts are planned and coordinated to help prevent an unmanageable and unaffordable situation where multiple key facilities require upgrades simultaneously. The highest priority for lab facility upgrades is ensuring that the Plum Island Animal Disease Center (PIADC) remains operational until NBAF comes on line. In FY 2015, ONL will award the construction contract for the NBAF laboratory and continue to invest in the critical infrastructure upgrades for PIADC.

Laboratory Operations Thrust – FY 2015: \$119.950 million. FY 2016 Request: \$125.602 million. This program manages the operations, core capabilities, maintenance, and personnel requirements of the DHS S&T Laboratories and infrastructure. This program also oversees the continued operations of facilities to meet the mission requirements while maintaining safe, secure, compliant, and efficient operations.

Chemical Security Analysis Center (CSAC) Operations

This facility develops and informs risk assessments related to national chemical defense. CSAC is co-located at the DOD Edgewood Chemical Biological Center (ECBC) at the Aberdeen Proving Grounds in Maryland. CSAC supports a variety of customers within DHS, the Federal Government, and the HSE, to include the S&T Directorate's Chemical and Biological Division, DHS Components such as the National Protection and Programs Directorate (NPPD and TSA, and Federal agencies, such as the Environmental Protection Agency (EPA), Federal Bureau of Investigation (FBI), and DOD. CSAC also provides science- and technology-based quality assurance information regarding chemical threats to support the unified national effort to secure the Nation. The DOD Sample Receipt Facility at ECBC houses CSAC, providing the capability to integrate knowledge across the full chemical threat spectrum. Operational costs for this facility include rent, security, utilities, and information technology.

NBAF Operations

This effort will begin operational stand-up of NBAF, including on-site project staffing and the initial indefinite delivery indefinite quantity (IDIQ) contract award. Planning activities that will be awarded under the NBAF stand-up IDIQ contract include development of project plans, integrated schedules, risk management plans, etc. In addition to planning, activities that will be initiated under the NBAF stand-up IDIQ contract include creating an inventory of the existing biological materials at PIADC, including the bio-repository and vaccine bank to be transitioned.

National Urban Security Technology Laboratory (NUSTL) Operations

NUSTL provides T&E capabilities to the S&T Directorate and other DHS Components such as the Domestic Nuclear Detection Office (DNDO). NUSTL also is the liaison for the deployment of experimental technologies in the New York City metropolitan area and provides technical support to the regional first responder community. NUSTL is a Government-owned, Government-operated laboratory located in the borough of Manhattan, New York, NY. Major operational costs include rent, information technology, and security.

National Biodefense Analysis and Countermeasures Center (NBACC) Operations

NBACC provides the capability to characterize current and future biological threats, assess their impacts, and inform the development of countermeasures and vaccines in response to events and identified threats. The NBACC mission is to provide the Nation with the scientific basis for characterization of biological threats and bioforensic analysis to support attribution of their planned and actual use. NBACC is part of the National Interagency Biodefense Campus that includes the Department of Health and Human Services (HHS), DOD, and Department of Agriculture (USDA).

The unique missions of threat characterization and bioforensics enhance the Nation's overall biodefense capabilities. NBACC closely collaborates with the FBI and other law enforcement agencies. NBACC also continues to examine opportunities for the cooperative use of existing capacity for work needed by other Federal agencies. S&T operates NBACC as an FFRDC. The FFRDC plans, manages, and executes the NBACC research programs and operates the facility. NBACC has achieved all of the required certifications and registrations for its biosafety level (BSL) 2, 3, and 4 laboratories.

Plum Island Animal Disease Center (PIADC) Operations

PIADC conducts research on contagious foreign animal diseases (FAD) (e.g., foot-and-mouth disease [FMD]) and develops strategies and vaccines to protect the Nation's animal industries and exports from foreign animal diseases accidentally or deliberately introduced into the United States. DHS and USDA jointly perform the R&D work at PIADC. The combined work of both agencies supports the S&T Directorate's agro-terrorism countermeasures programs. Research at the facility occurs in BSL-2, BSL-3, and BSL-3Ag laboratory spaces. DHS is responsible for the management, operations, and maintenance of the facility. The laboratory is a self-sustaining operation, with its own power plant, fuel storage, fire protection, waste disposal, and security systems. S&T provides the only ferry transport to and from the island and is responsible for operating and maintaining the ferries, docks, and harbor. S&T delivers the day-to-day operational support, including the operations work force. Major operational costs include security, an operations and maintenance contract, utilities, and fuel.

Transportation Security Laboratory (TSL) Operations

TSL performs research, development, and validation of solutions to detect and mitigate the threat of explosives. TSL is an RDT&E laboratory that develops promising explosive detection technologies to the point of operational T&E. TSL supports S&T's Explosives Division and ASOA, and TSA. The real property and facilities belong to the Federal Aviation Administration (FAA). Major operational costs include rent, operation support contracts, building maintenance, utilities, security, and information technology. TSL is located at the FAA William J. Hughes Technical Center in Atlantic City, N.J.

Salaries and Benefits

Funds salaries and benefits for non-headquarters, Federal employees located at S&T's field laboratories. These employees operate and execute programs at the S&T Laboratories in support of S&T divisions, DHS Components, and other government agencies

National Bio and Agro-Defense Facility Program

The NBAF is an integrated foreign animal and zoonotic disease research, development and testing facility that will support complementary missions of DHS and USDA to protect the United States from the numerous infectious foreign animal and zoonotic diseases present throughout the world that could threaten our public health, agriculture, and economy, and bring effective countermeasures and vaccines to industry for further development. Several Presidential Directives and congressional mandates assign agricultural defense responsibilities to both DHS and USDA. Any animal disease outbreak posing a nationally significant impact on U.S. agriculture is within DHS's Homeland Security Presidential Directive 9 (HSPD-9) coordination responsibilities. DHS was authorized as the lead for bio- and agro-defense research and development at PIADC by the Homeland Security Act of 2002. PIADC is at the end of its lifecycle – as a facility it does not meet modern bio-containment standards and has several critical capability limitations. It does not possess large animal biosafety level 4 (ABSL-4) laboratory space, meaning that any outbreak of emerging or zoonotic disease requiring this bio-containment level could not involve direct livestock research, which would severely inhibit U.S.

response capability. As a BSL-3 facility, PIADC also has a limited capacity to perform R&D. NBAF will provide the United States with these capabilities to protect our agricultural economy, food supply, and public health. NBAF will provide the United States with ABSL-4 diagnostic and research capabilities rather than relying on limited large animal ABSL-4 facilities located in other countries.

The NBAF Program (construction, operational stand-up and operations) is funded out of the NBAF construction PPA and the Laboratory Operations PPA. FY 2016 will be used to begin operational stand-up of NBAF, including project staffing and the initial contract award, as follows:

- Lab Operations \$2 million

FY 2014 Activity Funding (\$\$\$ thousands)	FY 2015 Activity Funding (\$\$\$ thousands)	FY 2016 Activity Request (\$\$\$ thousands)
404,000	300,000	2,000

FY 2016 Funding Breakout:

Program Area (Funding in \$\$\$ thousands)	Sub-Program	Mission Need
NBAF Stand-up (2,000)	Stand-Up Project Staffing	On-site operational stand-up staff will be funded through NBAF operations funds beginning in FY 2016, including the project manager overseeing NBAF operational stand-up activities.
	Stand-up Planning	Planning tasks to be awarded under the NBAF standup IDIQ contract, including development of project plans, integrated schedules, risk management plans, etc.
	PIADC Transition Inventory	Initial task under the NBAF standup IDIQ contract to begin creating an inventory of the existing biological materials at PIADC, including the bio-repository and vaccine bank to be transitioned.

**Department of Homeland Security
Science & Technology
Research Development and Innovation
Program Performance Justification**
(Dollars in Thousands)

PPA: Research Development and Innovation

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	-	-	\$462,000
FY 2015 President's Budget	-	-	\$433,788
2016 Adjustments-to-Base	-	-	-
FY 2016 Current Services	-	-	\$433,788
FY 2016 Program Change	-	-	\$1,062
FY 2016 Total Request	-	-	\$434,850
Total Change 2015 to 2016	-	-	\$1,062

The S&T Directorate requests \$434.850 million for RD&I in FY 2016. The \$1.062 million increase in FY 2016 increases Apex Programs and Engines and realigns funding from R&D work in areas such as: Border Security, CBE Defense; Counter Terrorist; Cyber Security/Information Analysis, and First Responder/Disaster Resilience.

S&T uses Technology Readiness Levels (TRLs) to define the maturity of a technology. The following table describes each level.

Basic Research		Applied Research		Technology Development	Technology Demonstration	System Development	System Test and Launch		System Viability and Operations
Technology Readiness Level-1	Technology Readiness Level-2	Technology Readiness Level-3	Technology Readiness Level-4	Technology Readiness Level-5	Technology Readiness Level-6	Technology Readiness Level-7	Technology Readiness Level-8	Technology Readiness Level-9	Technology Deployment
Basic Principles Observed/ Reported	Technology Concept/ application formulated	Critical Function or Characteristic proof of concept	Validation in lab Environment	Validation in Relevant Environment	System Prototypes in relevant environment	System Prototypes in operational environment	Actual system completed and qualified through test and demonstration	Actual system proven through successful mission operations	Actual system commences with regular and sustained operations [to be cleared by S&T]

CURRENT SERVICES PROGRAM DESCRIPTION:

RD&I PPA – Provides state-of-the-art technologies and solutions to meet the needs of the operational Components of the Department and the first responder community. Includes customer-focused and output-oriented RDT&E programs that balance risk, cost, impact, and time to delivery. The six thrust areas of RD&I include: Apex; Border Security; CBE Defense; Counter Terrorist; Cyber Security/Information Analytics; and First Responder/Disaster Resilience.

1. **Apex** – FY 2015: \$15.013 million. FY 2016 Request: \$78.250 million. Consists of crosscutting, multi-disciplinary projects agreed to by the requesting DHS Component Head and the Under Secretary for Science and Technology.

Apex Air Entry/Exit Re-Engineering (AEER)

- *Problem:* Increases in international travel have strained CBP resources, resulting in increased wait times and delays for passengers to clear some Federal Inspection Service areas. CBP is seeking DHS S&T's assistance over growing concerns of inefficient legacy traveler processes and inspection wait times at Miami International Airport and other major international airport hubs to identify potential improvements that will improve efficiency without any degradation in security. In addition, DHS is required by law to implement a cost-effective biometric exit process to increase CBP's ability to confirm the identity of persons departing the United States
- *Solution:* Analyze current entry operations, and implement technologies and enhancements to existing airport operations, to increase CBP's capability to expedite screening of travelers entering the U.S. The program will also develop and evaluate new concepts of operations and capabilities for more efficient traveler entry inspection initiatives at Miami International Airport or other large U.S. airports. This approach will include establishing baseline data to evaluate the effectiveness and efficiency of operation and technology modifications, enhancement of CBP mobile capabilities, and reengineering of egress operations. Apex AEER will also develop recommended approaches and implement technologies for cost-effective and integrated biometric exit capabilities to meet the Congressional mandate for biometric exit. Throughout the project, AEER will actively engage its industry stakeholders to understand the challenges and impacts of current operations and proposed changes.
- *Impact:* With S&T's assistance, CBP will increase its ability to confirm the identity of persons entering and departing the U.S., fulfill its obligation to implement a biometric air exit solution, and ensure that processes are efficient and keep pace with growth in international air travel.

Prior Year Key Events

- Established Test Capabilities and Facility.
- Completed iris, fingerprint, and face biometric device laboratory qualification testing.
- Validated biometric air entry/exit CONOPS and technologies with scenario based testing.
- Conducted performance and cost-benefit analysis of biographic and biometric exit.
- Completed airport entry/exit analytical tools and document for transition to CBP.

Current Year Key Events

- Complete scenario-based test and evaluation.
- Develop scenario based evaluation and test reports.
- Deliver biometric exit Business Case Analysis inputs.
- Evaluate and select biometric technology candidates for field evaluation.
- Evaluate and select airport site candidates for field evaluation.
- Evaluate and select biometric air exit CONOPS candidates for field evaluation.
- Conduct initial validation of biometric air entry/exit CONOPS and technologies through scenario-based testing.
- Develop and evaluate air entry technologies and CONOPS for field evaluation.

Budget Year Key Events

- Execute biometric air entry/exit CONOP and biometric technology candidates in field evaluation.

- Deliver Business Case Analysis to CBP for acquisition follow up and development of acquisition documentation.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	7,500	7,506	7,506	4,500

Project Schedule Including Milestones

- Select airport site candidates for field evaluation (FY15).
- Complete scenario-based test and evaluation (FY15).
- Develop scenario-based evaluation and test reports (FY15).
- Deliver Biometric Exit Business Case Analysis Inputs (FY15).
- Select airport site candidates for field evaluation (FY15).
- Select biometric technology candidates for field evaluation (FY15).
- Conduct initial validation of biometric air entry/exit CONOPS and technologies through scenario-based testing (FY15).
- Initiate field trial evaluation (FY16).
- Complete field trial evaluation (FY16).
- Deliver field trial evaluation report (FY16).
- Complete air entry/exit Business Case Analysis (FY16)

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

6

Transition Plans

All air entry/exit analysis, models, technology prototypes, and knowledge products will be transitioned to CBP for use after AEER concludes. Products include:

- Federal Inspection Service Model Toolkit, to enhance CBP’s capability to analyze and evaluate both process and technology solutions.
- Biometric Capability, to include cost effective, integrated Air Biometric Entry/Exit Concepts of Operations and technologies.
- Business Case documentation for follow-on CBP acquisition and/or sustainment to include Business Case Analysis and foundational acquisition documentation.

Apex Border Enforcement Analytics Project (BEAP)

- *Problem:* U.S. Immigration and Customs Enforcement (ICE) Homeland Security Investigations (HSI) requires data driven business models for lead development, senior agent knowledge capture, and improved access to a wide variety of authorized information sources.
- *Solution:* S&T is partnering with ICE HSI to develop and deliver emerging Big Data capability in the form of new information architectures and algorithms that improve the efficiency of law enforcement operations.

- *Impact:* S&T will provide a scalable and efficient information analytics system that can assimilate authorized data sets to improve lead development and law enforcement operations using the best of breed commercially open source technology. This will improve ICE investigation capabilities and improve ICE’s ability to interdict illegal exports.

Prior Year Key Events

- Transition Initial Operational Capability to DHS Data Center.
- Evaluation of Geocoding Algorithms.
- Evaluation of leading emerging analytic and storage technologies.
- Demonstration of algorithms that reflect best analytic practices of senior ICE investigative agents.

Current Year Key Events

- Transition exploratory methodology mapping capabilities to ICE.

Budget Year Key Events

- Operational assessment of the system’s impact on the Counter-Proliferation Intelligence.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	7,500	7,507	7,507	2,500

Project Schedule Including Milestones

- Evaluation of Operational Capability (FY15).
- Deployment of Capability to Second Investigative Domain (FY15).
- Deployment of Capability to Third Investigative Domain (FY15).
- Transition exploratory methodology mapping capabilities to ICE (FY15).
- Delivery of Exploratory Methods Mapping (EMM) Capability to ICE (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

7

Transition Plans

Deliver exploratory, developmental, and operational capabilities directly to sustained HSI operations. The ICE HSI operational environment directly reflects the best industry practices for developing and deploying analytic capabilities for supporting data driven business models for homeland security investigations.

Apex Border Situational Awareness (BSA)

- *Problem:* CBP and partner law enforcement agencies (Federal, State, local, tribal, and international) need improved situational awareness to more effectively and efficiently deploy its resources to the areas of highest risk, with an initial focus on the land border between the ports-of-entry on the Southwest border.

- *Solution:* The goal is to improve border situational awareness by establishing an enterprise capability to (1) access more data sources, (2) make available decision support tools to translate the available data into actionable information and intelligence, and (3) share that actionable information and intelligence with partner law enforcement agencies.
- *Impact:* The Apex BSA project will enable the Homeland Security Enterprise to achieve increased border situational awareness leading to increased border incursion detection, interdictions, and deterrence. Specifically, the increased situational awareness will result in:
 - Improved measurement of border illegal activity to understand current state and impacts from addition of resources or other actions taken to improve security.
 - Improved assessment of risks by identifying current threats along with emerging patterns and trends.
 - Improved alignment of resources to risk for current and future operations on both a tactical and strategic level.

Prior Year Key Events

- Established capability need with CBP.

Current Year Key Events

- Initiate the program by planning the cost, schedule, and performance baseline.
- Perform requirements analysis and develop requirements.
- Release Broad Agency Announcement (BAA) for decision support tools.
- Begin evaluation of selected Government off the shelf (GOTS) solutions.

Budget Year Key Events

- Begin evaluation of selected commercial off the shelf (COTS) solutions.
- Begin integration and developmental testing of selected COTS and GOTS solutions.
- Begin coordination and planning of field test and evaluation activities.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	N/A	N/A	N/A	8,875

Project Schedule Including Milestones

- Program Baseline Approval (FY15).
- Program Kickoff (FY15).
- Develop Requirements (FY15).
- Release BAA for decision support tools (FY15).
- Develop System Design (FY16).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

The program plans to begin at TRL 5 and end at TRL 8.

Transition Plans

- Establish an initial funding program line item with CBP that begins in FY18.
- Pilot integrated enterprise proof-of-concept capability at select Southwest border locations.
- Establish operational utility and prove cost/benefit of capability.
- Enhance capability based on user-defined operational needs and field analysis.
- Demonstrate initial operating capability and transition to CBP.
- Assist CBP in implementing full operating capability.
- Transition Barriers:
 - DHS and other Federal, State, local, tribal, and international information sharing policy constraints.
 - DHS adoption of the reference architecture for the information sharing segment architecture (ISSA).

Apex Flood Awareness

- *Problem:* Floods are the most common and destructive natural disaster in the United States; 90 percent of all national disasters involve flooding. In the aftermath of a flooding event, the window for informing community investment decisions and working to create outcomes that are more resilient is very narrow. The response coordination timeframe prior to a flooding event is also compressed. Both benefit from a unified understanding of the critical systems which, in combination, enable communities to function. To date, this integrated ‘system of systems’ understanding of community resilience is unavailable to decision makers at all levels in a timely manner. Consequently, opportunities to manage future risk and enhance community-wide resilience can be missed in both pre- and post-event timeframes.
- *Solution:* This Apex project will translate the concepts of resilience science into an actionable, integrated decision support tool (National Flood Decision Support Tool [NFDST]) to manage risk exposures and enhance resilience within communities with known and potential future flood hazards.
- *Impact:* With support from DHS S&T, the Federal Emergency Management Agency (FEMA) will be able to: 1) leverage existing data sources to create multi-domain representations of critical community functions using an integrated ‘system of systems’ approach; 2) enhance collaboration and coordination around disaster risk reduction; 3) identify indicators of community resiliency and opportunities to introduce advanced technologies; 4) empower communities with a decision support tool to enable both pre-event scenario-based risk planning and adaptive recovery in the post-event environment; and 5) enable faster speed to decision in the operational theater for warnings and evacuations.

Prior Year Key Events

- N/A

Current Year Key Events

- Engagement and on-going coordination with FEMA’s Office of Response and Recovery, Federal Insurance & Mitigation Administration, and Office of the Chief Technology Officer to identify key requirements and gaps.
- Conduct research to identify community resilience indicators which will be used for quantifying and projecting the impact and cost of flood-related disasters on populations, properties, and infrastructure disruptions.

Budget Year Key Events

- Develop data roadmap of critical data sources sufficient to support resilience indicators and all emergency support functions (ESFs), which will create a comprehensive understanding of community resilience to flood-related disasters.
- Develop plans for community benchmarking pilot studies to ‘ground truth’ resilience indicators.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	N/A	N/A	N/A	8,875

Project Schedule Including Milestones

- Initiate community resilience indicator study (FY15).
- Initiate data roadmap development (FY15).
- Deliver findings of initial inputs to the Data Roadmap (FY15).
- Deliver findings of significant indicators of community resilience (FY16).
- Deliver recommendations for Community Benchmarking Pilot Studies (FY16).
- Initiate Community Benchmarking Pilot Studies (FY16).
- Initiate Regional “Mutual Aid” Pilot Studies (FY16).
- Initiate Technology Portfolio Development (FY16).
- Initiate development of decision support logic (FY16).

Delayed Milestones

None

Type of Research

Applied Research

Technical Readiness Level

2

Transition Plans

- Development of charter and Integrated Product Team (IPT) to maintain close coordination with FEMA and to ensure the program’s development aligns with operational requirements.
- Development of transition agreement to transfer decision support tool to FEMA for deployment to Federal, State, and local users.

Apex Next Generation Cyber Infrastructure

- *Problem:* Compromise of the cyber fabric underlying our nation’s critical infrastructure (CI) is a threat to U.S. national security. Known penetration of financial sector networks by sophisticated adversaries combined with existing fragilities exist in the core of the financial sector present a clear and growing risk to our economic and national security.
- *Solution:* S&T is partnering with the Financial Services Sector (FSS) to develop and deliver advanced sensing technologies, situation understanding, response and recovery and network protections to the institutional, sector and cross sector levels.
- *Impact:* With S&T’s assistance, the FSS will reduce security vulnerabilities, improve information sharing and increase response and recovery times.

Prior Year Key Events

- N/A

Current Year Key Events

- Start Business Case Analysis

Budget Year Key Events

- Technology Experiment 1

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	N/A	N/A	N/A	8,875

Project Schedule Including Milestones

- Business Case Analysis completed (FY 16).
- Technology Insertion (Spiral 2) (FY16).
- Phase 1 Technology Evaluation (FY 16).
- Go/No-Go Decision for Phase 1 Technology (FY 16).
- Technology Insertion (Spiral 3) (FY 17).
- Technology Experiment 2 (FY 17).
- Phase 2 Technology Evaluation (FY 17).
- Go/No-Go Decision for Phase 2 Technologies (FY 18).
- Financial Services Sector exercise (FY 19).
- Cross Sector exercise (FY 19).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

6

Transition Plans

All analyses, models, technology prototypes, and knowledge products will be transitioned to FSS institutions, commercialized or made available through open source during the course of the Apex project. Products may include, but are not limited to:

- Sensor capabilities to verify the presence or absence of attacker modifications to network infrastructure.
- Real Time Intrusion prevention capability using non signature based technologies.
- Behavior modeling tools to detect potential violations of system security policy by an authorized user, identify anomalous behavior within a network in real time using probabilistic modeling and traffic analysis, and detect patterns of impending pending data exfiltration.
- Sensor correlation tools and tools to drastically reduce the amount of data that requires analysis.
- Tools to measure logical and physical internet topologies and measure the effectiveness of routing in order to determine problem areas.

- Advanced network control plane technologies to include secure routing and secure dynamic enclaves.

Apex Next Generation First Responder (NGFR)

- *Problem:* First responders rely primarily on disparate voice radio communications, limited network connectivity for data and video, and outdated PPE that offer limited protection with little or no access to available or advanced sensor technologies.
- *Solution:* The Apex Next Generation First Responder (NGFR) program focuses on connecting, protecting, and being fully aware. NGFR will utilize emerging technologies to design and enhance PPE that will not only better protect responders, but also provide them with real-time situational awareness tools to recognize and avoid hazards before, during, and after incidents. NGFR seeks to seamlessly integrate wearable computing devices, voice and data connectivity, and other information delivery tools into ruggedized gear that can be adapted for all response disciplines.
- *Impact:* Through NGFR, first responders will become better equipped with the latest advanced materials, sophisticated analytical and visual capabilities, and actionable information to withstand threats they cannot avoid—resulting in fewer fatalities and injuries. Additionally, as part of the NGFR program, the First Responders Group has launched the Responder Technology Alliance, bringing together responders, industry, federal agencies, research institutions, academia, and other stakeholders from across all emergency response disciplines that will focus on the most difficult technology challenges along the road to identifying the “Responder of the Future.”

Prior Year Key Events

- N/A

Current Year Key Events

- Complete NGFR Apex PM Artifacts.
- Evaluation of technical projects to align/support NGFR Apex Program.
- Validate requirements baseline with first responder stakeholders.
- Define Tech Foraging methodology and demonstrate Starlight technology.

Budget Year Key Events

- Integrated master schedule.
- Create cross functional technology and operational integrated project teams (IPTs).
- Conduct first responder technology and operational assessments.
- Develop technology roadmap.
- Evaluate potential technology.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	N/A	N/A	N/A	8,875

Project Schedule Including Milestones

- Executive Steering Committee brief to obtain full approval (FY15).
- Integrated master schedule (FY15).
- First responder scenarios and use cases (FY15).
- Technology Roadmap (FY15).
- NGFR Requirements, iterative process (FY15).

- Initial assessment of NGFR Visionary Design (FY15).
- Technology Forage and Market Assessment (FY15).
- Voice and data communications prototype system (FY16).
- Conceptual communications hub design with multiple network access (FY16).
- NGFR Prototype and Operational Field Assessment (FY16).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

2

Transition Plans

- Deliver PPE that protects, connects, and provides full situational awareness for the first responder. The multi-purpose PPE incorporates integrated communications and situational awareness capabilities that provide cross-functional wearable uniforms for effective environmental and mission specific safeguards for the first responder. These enhancements will provide real-time situation awareness that enables first responders to recognize and avoid hazards—before, during, and after incidents. Operational testing and evaluation of these products and capabilities with the first responder community will increase the likelihood of successful transition and adoption of this Apex program investment.

Apex Real-Time BioThreat Awareness

- *Problem:* There is a lack of prompt recognition, coordination and early response action protocols within Federal, State governments, and industries in the event of a biological attack or disease outbreak.
- *Solution:* This project assembles and demonstrates biosurveillance technology advances and data fusion concepts to build CONOPS with strong coordination in the Federal interagency and local community arenas. It explores a variety of methods and systems to rapidly collect and exploit information useful for identifying outbreaks or unusual events using existing cloud-based computing architectures. To inform requirements and potential operational architectures, a demonstration will be conducted in partnership with DOD, USDA, and HHS, and will be based on scenario(s) of interest to these stakeholders and selected local communities.
- *Impact:* Optimized collection and integration of relevant environmental, animal, and public health data will promote prompt awareness of a bio-attack or disease outbreak, resulting in reduced casualties and the application of early mitigation steps.

Prior Year Key Events

- N/A

Current Year Key Events

- Release solicitations (RFIs and BAAs) for technology enhancements to BioWatch for environmental monitoring, down-select appropriate commercial and prototype technologies for operational demonstrations.

- Demonstration of rapid data feed integration from four disparate environmental monitoring and emergency call sources, analysis, and reporting using the National Biosurveillance Integration System.

Budget Year Key Events

- Continue operational demonstrations and transition of technology improvements for BioWatch.
- Integration of additional data sources and demonstration of information sharing platforms within local jurisdictions.
- Issue a Biosurveillance Prize for innovation in cross-jurisdictional information sharing.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	N/A	N/A	N/A	8,875

Project Schedule Including Milestones

- Release solicitations (RFIs and BAAs) for technology enhancements to BioWatch for environmental monitoring, down select appropriate commercial and prototype technologies for operational demonstrations (FY15).
- Demonstration of rapid data feed integration from four disparate environmental monitoring and emergency call sources, analysis, and reporting using the National Biosurveillance Integration System (FY15).
- Continue operational demonstrations and transition of technology improvements for BioWatch (FY16).
- Integration of additional data sources and demonstration of information sharing platforms within local jurisdictions (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

The program plans to begin at TRL6 and end at TRL 8.

Transition Plans

Technologies and data integration processes developed under this project will be demonstrated and transitioned to the Office of Health Affairs (OHA) BioWatch and NBIC programs, as well as to the State and local public health departments.

Apex Screening at Speed

- *Problem:* While current and emerging checkpoint equipment may be adequate to meet specific TSA requirements, the continued viability of this ever-growing array of checkpoint equipment is undermined by rapidly evolving terrorist threats. Furthermore, the range of standalone checkpoint equipment has increased operating costs and is more intrusive on passenger privacy.
- *Solution:* S&T is developing a checkpoint architecture supporting high-performing, modular screening devices that will enable fast, low-cost screening of passengers and their carry-on items

with improved probability of detection, and fewer false alarms. Data pushed to the checkpoint regarding each passenger’s threat risk will be fused with data collected by the checkpoint equipment creating a more dynamic and holistic threat assessment.

- *Impact:* Improved detection probabilities and reduced false alarms will translate to fewer secondary inspections meaning lower per-passenger costs for TSA and less inconvenience for airline passengers. The ability to remotely update threat detection algorithms and the ability to quickly swap out hardware, results in a faster and optimal response to emerging threats.

Prior Year Key Events

N/A

Current Year Key Events

- Development of the checkpoint architecture
- Development of a checkpoint test bed.

Budget Year Key Events

- Development of advanced passenger screening devices.
- Test and Evaluation of advanced carry-on bag screening devices.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	N/A	N/A	N/A	8,875

Project Schedule Including Milestones

- Remote Screening CONOPS Final Report (FY15).
- Demonstration of 1st Generation Advanced Advanced Imaging Technology (AIT) with dynamic aperture (FY15).
- Demonstration of Coded Aperture Advanced Technology (AT) X-ray Imaging System (FY15).
- Demonstration of Checkpoint Checkpoint computed tomography (CT) system for carry-on bags (FY15).
- Delivery of checkpoint architecture (FY15).
- Demonstrations of 2nd Generation Advanced AIT (FY16).
- Delivery of advanced carry-on bag screening device prototype (FY16).
- Coded Aperture Micro Mass Spec Explosives Trace Detection (ETD) Prototype Delivery (FY16).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

The program plans to begin at TRL 5 and end at TRL 6.

Transition Plans

- S&T will work closely with TSA to create a checkpoint architecture evolution plan. Screening device development spirals will be coordinated with TSA’s recapitalization plans ensuring smooth and timely technology insertion. Screening device development will be coordinated with the

Detection Equipment Commodity Council ensuring applicability to multiple DHS operating agencies.

Apex Technology Engines FY 2015: \$0.000 million. FY 2016 Request: \$18.000. This project provides program-specific support through cross-cutting multi-use technologies/functions that will provide the same services to all Apex programs and to S&T at large, but tailored based on the Apex program's individual focus and capability needs. The Engines will provide best practices, reusable products and solutions, lessons learned, and technical services to respond rapidly and provide technical subject matter expertise to the Apex programs and other projects and cross-cutting initiatives. The Engines enable S&T to apply its skills and promote common approaches and solutions that are tailored to S&T programs, Component sponsors across program areas, and throughout the HSE. The Engines accomplish this by collaborating with external scientific, technical, industrial, and academic communities, proactively monitoring trends for emerging capabilities and maintaining an in-depth understanding of state-of-the-art techniques in specific capability areas.

The APEX Engines include:

- **Data Analytics** – Leverages emerging storage, security, computation, and analytics technologies to create information leverage and rapidly convert data to decisions for homeland security systems, missions and operations.
- **Situational Awareness and Decision Support (SANDS)** – Provides Apex programs with assured, secure access to databases (or knowledge bases), modeling and simulation tools, and shared situational awareness.
- **Communication and Network Technologies (CNET)** – Provides integrated networking solutions ensuring interoperable communication across all network platforms.
- **Identity Access and Management (IDAM)** – Provides individuals and systems with a Digital Identity, Credentials, Authentication, and Authorization to allow the right people the right data at the right time in a secure manner.
- **Human Systems** – Provides for human centered design and consideration of human performance capability and training requirements as part of the technology development processes for engineering an operational end user system.
- **Modeling and Simulation** – Provides a repository for mission based models as well as modeling and simulation tools.
- **Targeted Innovative Technologies Acceleration Network (TITAN)** – Conducts developmental operational exercises modeled after DoD's Trident Spectre, an annual battle lab to test and evaluate emerging technologies both from government and commercial industries in tactically-focused scenarios.

2. Border Security – FY 2015: \$49.100 million. FY 2016 Request: \$41.824 million. DHS secures the borders, territorial waters, ports, terminals, waterways, and air, land, and sea transportation systems of the United States. S&T invests in border security research and development for technologies and solutions to prevent the illicit movement and illegal entry or exit of people, weapons, dangerous goods, and contraband, and to manage the risk posed by people and goods in transit.

- A. **Cargo Security** – FY 2015: \$18.300 million. FY 2016 Request: \$15.474 million. This program develops technologies to ensure the integrity of cargo shipments (including sea, air, and land conveyances) and enhances the end-to-end security of the supply chain, from the manufacturer of goods to final delivery, while ensuring economic throughput for the U.S. economy. This work will reduce the risk of terrorists and transnational criminal organizations from manipulating cargo as it conveys across various transit modes in the international supply chain.

Air Cargo Screening

- *Problem:* Current Air Cargo screening is accomplished by private industry through TSA’s Certified Cargo Screening Program (CCSP). Screening facilities are low margin facilities using the least expensive methods of screening air cargo. Even a low false alarm rate causes additional labor to resolve and therefore, affect lifecycle costs and throughput. Future increases in air cargo volume will necessitate more automation/technology, fewer false alarms, and increased throughput to maintain or improve the current probability of detection capability.
- *Solution:* S&T will develop technologies which decrease false alarms and system lifecycle costs for emerging Electronic Trace Detection (ETD) and X-Ray systems while improving throughput and probability of detection. S&T will also develop the Opacity and Complexity Assessment Software Tool (OCAST) to automatically predict the likelihood that an explosive threat could be reliably detected by a human operator using an X-ray image for a particular package, develop palletized screening X-ray systems offering Computed Tomography images to enable effective screening of medium and high-density pallets, and develop field deployable Mass Spectrometry (MS) for Explosives Trace Detectors to enable more effective identification of complex HME.
- *Impact:* The development of low cost air cargo screening systems, offering improved probabilities of detection, would enhance TSA’s ability to ensure a more effective air cargo screening capability by enabling the procurement of these systems by indirect air carriers (IACs) and air carriers at costs that are deemed acceptable.

Prior Year Key Events

- Delivered Opacity and Complexity Assessment Software Tool (OCAST) to assist personnel in air cargo screening.
- Completed development and test of Quantum Magnetics’ prototype palletized cargo screening system.
- Demonstrated new portable trace detection systems for air cargo screening.
- Completed meta-study to determine effectiveness of screening systems against various streams of commerce. Study will include recommendations to address technology gaps.
- Developed portable Mass Spectrometry ETD systems.
- Completed DT&E of numerous COTS and near-COTS technologies to address TSA needs.
- Produced training curriculum for break-bulk and palletized cargo screening covering IED recognition and X-ray image interpretation.
- Characterized cargo environment and assessed HME trace detection efficacy.

Current Year Key Events

- Complete “ground truth” cargo IED study to determine available trace signatures for ETDs.
- Complete IED Cargo Build Studies - Report on First 6 Threats.

Budget Year Key Events

- Start Owner/Operator Needs Study to ensure industry’s business models, CONOPS, and requirements are understood
- Continue adapting other explosive division (EXD) systems (ETD & x-ray) to the air cargo mission area developing new, air cargo unique systems, only when necessary

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
15,920	12,083	11,944	2,000	5,000	5,200

Project Schedule Including Milestones

- Complete development and test Astrophysics’ prototype palletized cargo screening systems (FY15).
- Complete “ground truth” cargo IED study to determine available trace signatures for Explosive Testing Database (ETDs) (FY15).
- Complete development and test Quantum Magnetics' prototype palletized cargo screening systems. (FY15).
- Begin Air Cargo Owner / Operator Needs Study (FY16).
- Issue IED Cargo Build Studies - Report on Additional Threats (FY16).
- Demonstrate retrofit of ETD System (13-03) (FY16).

Delayed Milestones

None

Type of Research

Technology Development

Technical Readiness Level

The program plans to begin at TRL 3 and end at TRL 5-

Transition Plans

- Report identifying effectiveness of screening systems against various streams of commerce (Inform TSA of potential regulatory changes).
- Report describing air cargo owner/operator business processes, CONOPS, and associated needs (for update TSA/S&T strategic plans and roadmaps).
 Hardware / Software modifications to existing or emerging technology to improved capabilities (Decreased False-Alarms, Decreased Lifecycle Costs, Increased Throughput).

Cargo Container Security

- *Problem:* The lack of actionable information used in the targeting of cargo for inspection, diverts resources from higher risk shipments, while reducing the efficient flow of low risk/legitimate cargo. Inefficient targeting and lack of confidence in the security of containerized cargo in the global supply chain, costs U.S. importers billions in lost revenue per year. Moreover, the volume of inbound cargo to U.S. ports-of-entry (POEs) is projected to continue to increase from year to year while CBP manpower will not be increased proportionately. As such, new or improved technology can be a force multiplier or enabler to help address these problems.

- *Solution:* This project develops technologies for collecting additional cargo security data, while also investing in the analysis methods for transforming new and existing cargo security data into actionable information in the form of improved targeting that leads to a higher probability of detecting illegal or hazardous materials in cargo while expediting the delivery of legitimate cargo.
- *Impact:* Improved targeting and improvements in container security through the use of technology will reduce the number of containers requiring scanning and/or manual inspection saving CBP millions annually in labor and facility costs, while increasing the throughput of legitimate cargo. The use of technology could yield millions of dollars of additional tax revenue and would allow the automation of manual processes at the POEs, freeing up thousands of hours/years of CBP labor.

Prior Year Key Events

- Piloted a supply chain management system using Reusable Electronic Conveyance Security Devices (RECONS) for CBP’s Centralized Examination Station (CES) and In-bond Operations.
- Piloted a supply chain management system using RECONS to secure deliveries in the National Capital Region for the Federal Protective Service (FPS).
- Delivered Secure Hybrid Composite Container Environmental Testing Report.
- Delivered Secure Hybrid Composite Container Operational Evaluation Report.

Current Year Key Events

- Finalize U.S.-EU Maritime Cargo Security Pilot Test Plan.
- Preliminary assessment of the efficacy of various cargo security devices for use in the U.S.-EU Maritime Cargo Security Pilot.
- Conduct end-to-end analysis that will influence electronic chain-of-custody processes, procedures, and technology implementations.
- Government RECONS: Complete CBP Maritime and Truck Demos (Oakland and Detroit), and Phase II FPS Demos (DC).
- Border Wait Time/Supply Chain Security Roadmap.
- Border Wait Time Pilot Candidate Technologies.

Budget Year Key Events

- Government RECONS: Transition to CBP and FPS (T&E Analysis, Cost/Benefit Analysis, Acquisition Recommendation, and Vendors List).
- Commercial RECONS: Transition Guideline to CBP/Mexico/Canada.
- Transition Border Wait Time Proven Technologies.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
1,450	1,000	2,812	3,450	1,400	774

Project Schedule Including Milestones

- Complete development and test Astrophysics’ prototype palletized cargo screening systems (FY15).
- Complete “ground truth” cargo IED study to determine available trace signatures for Explosive Testing Database (ETDs) (FY15).

- Complete development and test Quantum Magnetics' prototype palletized cargo screening systems (FY15).
- Government RECONS: Transition to CBP and FPS (T&E Analysis, Cost/Benefit Analysis, Acquisition Recommendation, Vendors List) (FY16).
- Commercial RECONS: Integrate with CBP Targeting System (FY16).
- Commercial RECONS: Transition Guideline to CBP/Mexico/Canada (FY16).
- Transition Border Wait Time Proven Technologies (FY16).

Delayed Milestones

- Finalization of U.S.-EU Maritime Cargo Security Pilot Test Plan delayed until FY15 Q3.
- Delivery of CES/In-Bond prototype to CBP delayed until FY16 Q1.
- Delivery of National Capital Region Secure Delivery prototype to FPS delayed until FY16 Q1.

Type of Research

Developmental

Technical Readiness Level

TRL will vary between specific portfolio projects.

Transition Plans

- (CBP and Industry) Conduct a Truck Cross Border Commerce pilot of the use of reusable electronic conveyance security devices (RECONS) at high volume Northern and Southern border ports of entry to evaluate methods to expedite trade and create government and industry efficiencies. In FY 2017 the project will deliver to CBP:
 - Hardware/Software used during operational assessment to include the data management system, RECONS, and any supporting infrastructure
 - Draft Performance Specification for RECONS proven to allow vendor development of COTS products which are interoperable and certifiable
 - Acquisition documentation for follow-on CBP acquisition and/or sustainment to include an enterprise architecture, certification test plan, and data management system requirements document
- Deliver to DHS Law Enforcement agencies (CBP, ICE, et. al.) a secure communications and database architecture to enable Law Enforcement Officers to share information securely and to store or access information such as new threats and countermeasures, new smuggling methods, new procedures, results of searches and seizures, etc. The data base would serve as a repository of “experience” and be access controlled.
- Deliver to CBP an adjunctive pre-processor for the existing cargo targeting system that will provide a higher probability of detecting illegal or hazardous materials while expediting the processing of legitimate cargo. Following successful operational evaluation the project will contract for a limited production of processor units.
- Transition Barriers:
 - Schedule risk due to the sensitive nature of the data and data systems involved
 - Security certification requirements of information systems
 - Technical challenge of developing an aircraft cargo container of required strength within weight constraints

Cargo Validation

- *Problem:* CBP has limited capability to collect and analyze evidence from cargo and cargo containers to enforce trade law. CBP is solely dependent on commercial laboratory to process pollen samples for enforcement of trade compliance. Not only is this expensive, it induces a large time delay that results in lost opportunities to enforce trade law/collect customs revenue. Pollen sample analysis demands have more than doubled in the last 10 years. Similarly, CBP’s limited capability to collect and analyze DNA samples from cargo/packaging limits their ability to investigate and prosecute illegal activity.
- *Solution:* This project provides CBP with the capability to detect and prosecute illegal activity through the forensic analysis of material collected from suspicious cargo/packages.
- *Impact:* Improved tools and methods to validate cargo and enforce trade compliance will increase the availability of forensic evidence enabling enhanced trade compliance enforcement. Improved enforcement of trade law will allow for the collection of millions of dollars of currently uncollected tariffs and duties.

Prior Year Key Events

- The Pollen identification and geo-location databases were developed and populated.
- Developed Pollen collection protocols and sample processing methods.
- Characterized and documented DNA sampling methods for CBP OIIL evidence with performance measures.

Current Year Key Events

- DNA and metadata evidence collection, characterization, and database development.
- Populate database with DNA and metadata evidence.
- Develop pollen sample collection and processing directive for preparing pollen evidence to improve collection and processing efficiency.
- Prototype evaluation of Polymerase Chain Reaction (PCR) Collection techniques.
- Prototype evaluation of Pollen Forensic techniques.

Budget Year Key Events

- Transition of Pollen Forensic Capability.
- Transition of PCR Collection Capability.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
12,633	2,000	5,302	8,406	8,300	8,900

Project Schedule Including Milestones

- Conduct laboratory testing of microwave and acoustic systems for detection of invasive species (FY15).
- Field test a currency detection system at a border crossing in order to assess performance under real conditions. Detection performance, usability, and operational reliability will be evaluated (FY15).
- Develop database for DNA and metadata evidence (FY15).
- Develop pollen sample collection and processing directive for preparing pollen evidence to improve collection and processing efficiency (FY15).

- Determine performance (sensitivity and cycle time) of a prototype mobile screening unit against counterfeit items packed in containers (FY15).
- Operational Evaluation of PCR Collection Capability (FY16).
- Operational Evaluation of Pollen Forensic Capability (FY16).
- Transition of Pollen Forensic Capability (FY16).
- Transition of PCR Collection Capability (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

TRL will vary between specific portfolio projects.

Transition Plans

- Transition to CBP (1) an in-house capability for pollen sample collection, preparation, analysis, and storage, (2) a robust regional pollen database, and (3) compiled reference material on the geographic distribution of pollen.
- Transition to CBP methods and efficiency measures for four steps of the DNA analysis process; DNA purification, DNA extraction, PCR analysis versus other methods, and geo-location or criminal database comparison analysis.

Land/Sea Cargo Screening

- *Problem:* Several CBP non-intrusive cargo scanning systems are reaching the end of their service life and are exhibiting reduced performance and rising maintenance costs. Other scanning systems are using technology that needs to be refreshed to maintain parity with the smuggling threat. In addition, CBP lacks the capability to non-intrusively detect contraband hidden in the walls of refrigerated cargo containers and in structural voids of conveyances and vehicles, requiring them to use time intensive manual inspection techniques. CBP has limited capability to collect and analyze evidence from cargo and cargo containers to enforce trade law. Currently, CBP Agriculture Inspectors search for pests/invasive species using time-consuming manual techniques. CBP/ICE has limited ability to detect/interdict counterfeit merchandise entering the U.S. and the estimated \$65 billion in bulk cash being illegally smuggled out of the United States each year.
- *Solution:* This project develops software and hardware upgrades for the legacy cargo scanning units, infusing state-of-the-art technology which will enhance their detection performance and extend their service life, and prototypes non-intrusive scanning capabilities for refrigerated cargo containers and structural voids. This project also provides CBP with the capability to detect the transport of contraband, counterfeit merchandise, or invasive species in inbound and outbound cargo at the POEs.
- *Impact:* The S&T Directorate's efforts will enhance CBP's effectiveness in detecting contraband at Ports of Entry while increasing the throughput of legitimate cargo. Project will also increase the availability of evidence enabling enhanced trade compliance enforcement, allowing for the collection of millions of dollars of currently uncollected tariffs and duties. Upgrades to CBP cargo scanning systems will improve performance, while significantly

reducing operation and maintenance (O&M) costs. Anticipate the seizure of a larger portion of the estimated \$65 billion in bulk cash being illegally smuggled out of the U.S. each year.

Prior Year Key Events

- Contract award of the Mid-Level Energy Scanning System Upgrade.
- Technology foraging report identifying the option(s) for development of a Void and Anomaly Detector.
- Technology foraging report identifying the option(s) for development of the Mobile Backscatter Scanning System Upgrade.
- Test Ion Mobility Spectrometry (IMS) system with real currency samples and backgrounds. Develop algorithms to optimize signal use and analytical figures of merit.
- Deliver Tech Foraging report on bulk currency detection using X-ray technology.
- Determine the size, mobility, and water content range of detectable pests and vermin via microwave and acoustic sensor modalities to support design trades for invasive species detection equipment.
- Identify unique physical properties of key counterfeit goods that can be exploited with the use of non-invasive sensors.

Current Year Key Events

- Critical design of the Mid-Level Energy Scanning System Upgrade.
- Develop preliminary design of the Void and Deck Anomaly Detector.
- Develop preliminary design of the Mobile Backscatter Scanning System Upgrade.
- Laboratory prototyping and testing of microwave and acoustic systems for detection of invasive species. Performance comparison will be made with human operators.
- Determine performance (sensitivity and cycle time) of a prototype mobile screening unit against counterfeit items packed in containers.
- A prototype currency detection system will be field tested at a border crossing in order to assess detection performance, usability, and operational reliability.

Budget Year Key Events

- Initiate transition of pre-production Mobile Backscatter Scanning System.
- Initiate transition of Currency Detection System.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	N/A	2,600	3,600	600

Project Schedule Including Milestones

- Hold critical design review of the Mid-Level Energy Scanning System Upgrade (FY15).
- Develop the preliminary design of the Void and Deck Anomaly Detector (FY15).
- Develop the preliminary design of the Mobile Backscatter Scanning System Upgrade (FY15).
- Operational Testing & Evaluation of Mobile Backscatter Scanning System (FY16).
- Initiate transition of pre-production Mobile Backscatter Scanning System (FY16).
- Operational Testing & Evaluation of Void & Deck Anomaly Detector (FY16).
- Transition pre-production Void & Deck Anomaly Detector (FY17).
- Operational Testing & Evaluation of Mid-Level Scanning System (FY17).

- Transition pre-production Mid-Level Scanning System (FY17).
- Invasive Species Detection System Laboratory Testing (FY17).
- Invasive Species Detection Demonstration Test and Evaluation (FY17).
- Transition Invasive Species Detection System Low Rate Initial Production (LRIP) units (FY17).
- Operational Evaluation of a currency detection system under real conditions (FY17).
- Initiate transition of Currency Detection System (FY17).
- Determine performance (sensitivity and cycle time) of a prototype mobile screening unit against counterfeit items packed in containers (FY17).
- Transition Counterfeit Goods Detection Operational System (FY17).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

TRL will vary between specific portfolio projects.

Transition Plans

- Deliver to CBP one or more pre-production Mid-Level Energy Scanning System units and the associated technical data package from which to develop an acquisition package and procure additional systems. The S&T development contract will contain an option by which CBP can procure additional units. S&T will assist CBP with acquisition or commercialization.
- Transition a field installation kit to modernize the CBP Mobile Backscatter Scanning Systems, extend the life of the units, and create a baseline for modernization and upgrade of other CBP Backscatter units. Specifically the project will deliver to CBP one or more pre-production units and the associated technical data package from which to develop an acquisition package and procure additional systems. The S&T development contract will contain an option by which CBP can procure additional units. S&T will assist CBP with acquisition or commercialization.
- Transition to CBP and ICE a Conveyance Void and Anomaly Detection system with the ability to quickly detect the existence of a false compartment aboard ship/boats as well as in automobiles and small trucks where narcotics and other contraband are frequently hidden and smuggled into the U.S. The project will transition several pre-production units and the associated technical data package from which to procure additional systems. The S&T development contract will contain an option by which CBP/ICE can procure additional units. S&T will assist with the acquisition or commercialization.
- Transition a pre-production Refrigerated Cargo Scanning system that will have the material discrimination capability to detect anomalies in the “between-wall” areas indicative of concealed narcotics (inbound), currency (outbound), or other contraband. Transition will include one or more operational pre-production systems and the associated technical data package from which to procure additional systems. The S&T development contract will contain an option by which CBP can procure additional units. S&T will assist CBP with the acquisition or commercialization.
- Deliver to CBP an operational pre-production counterfeit goods detection system and the associated technical data package to allow for the procurement of additional systems.

- Transition operational prototype currency detection tools for field evaluation at selected POEs. Assuming successful operational evaluation, in FY17 the project will contract for Low Rate Initial Production (LRIP) of detection units. LRIP contract will include options for CBP to procure additional units.
- Deliver prototype hand-held devices to quickly and accurately detect invasive species that may be hazardous to the food supply and/or the environment. Following successful operational evaluation, project will contract for Low Rate Initial Production (LRIP) of the detection units. LRIP contract will include options for CBP to procure additional units.
- Transition Barriers:
 - Technical challenge of providing adequate scanning system performance within acceptable personal radiation dosage levels

B. Land Border Security – FY 2015: \$20.550 million. FY 2016 Request: \$20.800 million. This program develops and transitions technical capabilities that strengthen U.S. land border security by safeguarding lawful trade and travel and by helping to prevent illegal goods and people from crossing the border.

Air Based Technologies

- *Problem:* DHS operating Components have the responsibility to detect and interdict illegal entry and smuggling activity along the vast expanses of U.S. land and maritime borders between the POEs. DOD and industry developed airborne surveillance systems could be repurposed/adapted/leveraged to dramatically improve CBP’s situational awareness of remote regions of the U.S. border. Small unmanned aircraft systems (SUAS) will soon be widely utilized by DHS and first responders, requiring knowledge about capabilities, benefits, and the safe operations of SUAS within the National Airspace System (NAS).
- *Solution:* This project identifies, tests, and evaluates sensors mounted on fixed and rotary wing manned aircraft, unmanned aerostats, and SUAS for possible use by DHS components for improved detection, classification, and tracking of illicit activity. It also provides DHS Components and the First Responder community unbiased assessments of available airborne sensors in realistic, operationally relevant scenarios for improved situational awareness for both law enforcement and during emergency events (e.g. floods, forest fires). In addition, the project is developing technologies to enable/enhance SUAS access to the NAS.
- *Impact:* Airborne sensors and sensor systems can provide DHS operating components and First Responders with invaluable situational awareness before making the decision to dispatch agents/assets to respond to and engage in potentially dangerous operations. The project will improve CBP, the U.S. Coast Guard (USCG), and the first responder community’s awareness and understanding of the utility of mature airborne sensor systems and platforms for border security and public safety missions.

Prior Year Key Events

- Continued to post online operational field assessment reports of SUAS for improved detection, identification, and classification of illicit activity and improved situational awareness during emergency events (e.g. floods, forest fires).
- Delivered Wide Area Airborne Surveillance System Operational Evaluation Report to CBP.

Current Year Key Events

- Continue to perform operational field training and assessments of SUAS for improved detection, identification, and classification of illicit activity and improved situational awareness in land operational scenarios.
- Perform operational field assessments of SUAS for improved detection, identification, and classification of illicit activity and improved situational awareness in maritime operational scenarios.
- Publish reports assessing performance of SUAS in land operational scenarios.
- Publish reports assessing performance of SUAS in maritime operational scenarios.
- Conduct search for Sense and Avoid technologies that could be incorporated into the small form factor of a SUAS.
- Conduct analysis of technologies for countering the threat of illicit techniques (GPS Spoofing, network hacking, cell data skimming, etc.) and enable safe and effective use of SUAS in operational environments.
- Integrate Moving Target Indicator (MTI) radar system on CBP Office of Air and Marine aircraft in preparation for extended operational assessment.
- Commence Operational Evaluation of Moving Target Indicator technology.
- Assess issues and recommend solutions to nonstandard UAS data protocols that prevent UAV track data or video from being readily ingested by data management systems.

Budget Year Key Events

- Test and demonstrate Wide Area Air Surveillance Sensor (WAASS) technology to CBP customers.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
1,219	5,000	4,469	2,618	5,250	3,500

Project Schedule Including Milestones

- Publish reports assessing performance of SUAS in the maritime operational context (FY15).
- Conduct search for Sense and Avoid technologies that could be incorporated into the small form factor of a small unmanned aerial system (SUAS) (FY15).
- Conduct analysis of countermeasure technologies (GPS Spoofing, network hacking, cell data skimming, etc.) for SUAS in operational environments (FY15).
- Conduct assessment of multiple SUAS platforms to aid CBP Office of Border Patrol (OBP) in determining operational, maintenance and training requirements (FY15).
- Develop conceptual design of OAM system or system components to improve border security operations (FY15).
- Integrate Moving Target Indicator (MTI) radar system on OAM aircraft in preparation for extended operational assessment (FY15).
- Assess issues and recommend solutions to nonstandard UAS data protocols that prevent UAV track data or video from being readily ingested by data management systems (FY15).
- Deliver Test Reports to CBP customers (FY16).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

TRL will vary between specific portfolio projects.

Transition Plans

- The project plans to transition the following technologies to enable/enhance SUAS access to the NAS resulting in improved surveillance capabilities of high-risk land border areas:
 - GPS Spoofing Countermeasures for SUAS (in FY17)
 - Sense and Avoid capabilities for SUAS (in FY17)
- The project plans to perform evaluations of aircraft mounted sensor performance and DHS utility resulting in the following transitions:
 - SUAS in maritime operational scenarios
 - Publish test reports (FY15)
 - Manned aircraft surveillance capabilities
 - Deliver performance, procurement, and integration data (FY16)
 - SUAS for Border Security scenarios
 - Publish test reports (FY 15-16)
 - Moving Target Indicator System
 - Deliver performance, procurement, and integration data (FY16)
- Transition Barriers:
FAA restrictions on use of SUAS in NAS

Ground Based Technologies (GBT)

- *Problem:* CBP is in need of new or improved border surveillance capabilities, especially for difficult terrains, harsh weather, and remote locations. Border spotters interfere with U.S. law enforcement efforts.
- *Solution:* In 2008, the S&T Directorate established the Border Surveillance Working Group comprised of Border Patrol personnel and other subject matter experts to: (1) assess capability gaps on both the Northern and Southern borders, and (2) develop the Border Surveillance Technology Roadmap (2009). This project is pursuing technologies to provide the capabilities outlined in the roadmap including radars, imagers, unattended ground sensors (UGS), tripwires, and related communication/power technologies. The recently developed Border Patrol Research and Development Strategic Plan validate the roadmap and the technologies being pursued under GBT. The project is also identifying methods and technology to effectively counter Border Spotters.
- *Impact:* CBP's improved situational awareness of U.S. terrestrial borders between the POEs will result in higher interdiction rates of illegal activity through higher detection rates, fewer false alarms, and better utilization of highly limited Border Patrol agents and assets.

Prior Year Key Events

- Turned over Buried Tripwire capability to CBP for Operational Assessment.
- Turned over Automated Scene Understanding (ASU) Surveillance Capability to CBP for Operational Assessment.
- Turned over Slash CameraPole capability to CBP for Operational Assessment.
- Conducted Canadian-U.S. Sensor Sharing Pilot (CUSSP) implementation and engineering test.

- Obtained Office of Technology, Innovation, and Acquisition (OTIA) decision to either go forward with the Mobile Surveillance System Upgrade (MSS-U) configuration or revert the unit to its original status.

Current Year Key Events

- Demonstrate Automated Scene Understanding (ASU)/Canadian-U.S. Sensor Sharing Pilot (CUSSP).
- Draft final "Summer" (no ice on the bay) engineering test report of the Canadian-U.S. Sensor Sharing Pilot (CUSSP).
- Hold Phase I System Design Review of the RF Sensing Unattended Ground Sensor.
- Transition Slash CameraPole (1 pole configuration).
- Install the 3 pole configuration of the Slash CameraPole system and commence operational assessment.
- Perform independent laboratory and field testing of piezo-electric unattended ground sensor.
- Buried Tripwire Demonstration.
- Draft the Final Assessment Report of the prototype buried tripwire system.
- Transition Buried Tripwire to CBP Border Patrol.

Budget Year Key Events

- Transition Automated Scene Understanding (ASU)/Canadian-U.S. Sensor Sharing Pilot (CUSSP) capability to CBP.
- Transition (System 1) Unattended Ground Sensors.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
5,385	4,000	4,002	5,219	8,400	8,800

Project Schedule Including Milestones

- Hold Phase I System Design Review of the RF Sensing Unattended Ground Sensor (UGS) (FY15).
- Install the 3 pole configuration of the Slash CameraPole system (FY15).
- Draft final "Summer" (no ice on the bay) engineering test report (FY15).
- Perform independent laboratory and field testing of piezo-electric sensor (FY15).
- Draft the Final Assessment Report of the prototype buried tripwire system (FY15).
- Obtain OTIA decision to either go forward with the MSS-U configuration or revert the unit to its original status (FY15).
- Transition Automated Scene Understanding (ASU)/Canadian-U.S. Sensor Sharing Pilot (CUSSP) capability to CBP (FY16).
- Operational assessment of the 3 pole configuration of the Slash CameraPole system (FY16).
- Transition (System 1) Unattended Ground Sensors (FY16).
- Operational Assessment of (System 2) Unattended Ground Sensors (FY16).
- Initiate Operational Assessment of Radio Frequency Sensing Unattended Ground Sensors (FY17).
- Operational Assessment of Northern Border Buried Tripwire (FY17).
- Transition Northern Border Buried Tripwire (FY17).
- Transition (System 2) Unattended Ground Sensors (FY17).
- Transition Slash CameraPole (3 pole configuration) (FY17).

- Transition Radio Frequency Sensing Unattended Ground Sensors (FY18).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

TRL will vary between specific portfolio projects.

Transition Plans

- Transition Buried Tripwire to provide high probability of detection and enhance classification capability to discriminate between humans, animals, vehicles, and aircraft without the use of imagers.
- Transition Slash CameraPole (1-pole configuration) technology to improve CBP’s ability to detect and classify illegal border incursions. 3-pole configuration to transition in FY17.
- Transition ASU/CUSSP system providing a joint surveillance capability to both CBP and Royal Canadian Mounted Police agents, using both U.S. and Canadian sensor information.
- Transition technology to detect, locate, and disrupt Border Spotters employed by traffickers along the Southwest border.
- Transition Radio Frequency sensing UGS system technology to track illegal incursions.
- Transition Barriers:
 - Technical challenges for projects less than TRL 8

Rapid Response Prototyping Team / Border Technologies Trident Spectre

- *Problem:* CBP/OTIA needs the ability to inexpensively and rapidly field prototypes for use and assessment in order to gather input for future OTIA acquisitions.
- *Solution:* This project enables short term delivery of high priority new technology prototypes to the field. This project will jointly assess COTS or near-COTS solutions for use in areas of critical need for border security. The need will be identified by CBP; the near-term requirements will be jointly evaluated, and the S&T Directorate will provide one or more prototype units for field use and evaluation.
- *Impact:* This project will enhance CBP’s ability to quickly adopt available technology to improve their capabilities and/or reduce O&M costs of existing capability.

Prior Year Key Events

- Transition Forward Operating Base (FOB) Camp Grip power assessment and fuel efficient generator to CBP.

Current Year Key Events

- Provide engineering analysis and system design for a fuel efficient power system for FOB in Ajo, Arizona.

Budget Year Key Events

- Develop, test, and evaluate technology (i.e., COTS and near-COTS) solutions.
- Deliver test reports and recommendations to CBP customer(s)

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	1,045	979	1,100	4,000

Project Schedule Including Milestones

- Perform equipment procurement and site work for installation of a fuel efficient power system for FOB in Arizona (FY15)
- Identify critical CBP capability gaps or area of potential cost savings, conducted in partnership with CBP OTIA (FY16).
- Conduct detailed interviews of customer staff and field officers to define/validate requirements for rapid evaluation and integration of COTS and near-COTS technology (FY16).
- Perform tech foraging and an analysis of alternatives (with strong customer and user input) to identify a tech development strategy (FY16).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

TRL will vary between specific portfolio projects.

Transition Plans

- FOB Camp Grip power assessment and fuel efficient generator transition.
- FOB Ajo, Arizona fuel efficient power system transition.

Tunnel Detection and Surveillance

- *Problem:* Cross-border tunnels are dug by transnational criminal organizations to smuggle contraband into the U.S. Current detection capabilities rely on random tips and a laborious human intelligence (HUMINT) collection process, and when tunnels are discovered, CBP/ICE lack the ability to exploit the tunnel to arrest and prosecute those involved in the creation and use of the tunnel.
- *Solution:* This project provides CBP and ICE the capability to locate clandestine tunnels, and the ability to perform forensic analysis of a detected tunnel to support investigations and prosecution.
- *Impact:* Using the S&T Directorate-developed tools, we anticipate a 50 percent increase in the number of detected tunnels resulting in a reduction in the flow of contraband smuggled into the U.S. via tunnels, keeping hundreds of tons of drugs off U.S. streets while saving thousands of CBP labor hours. Forensic tools/processes developed will increase the ability to arrest and prosecute individuals involved in the creation/use of tunnels for smuggling.

Prior Year Key Events

- Delivered Sensor Performance Tool and Sensor Guidebook to help CBP make better use of tunnel detection equipment they already bought and better understand their performance limitations.
- Demonstrated Sensor Performance Tool on Southwest border with currently deployed CBP Tunnel Van being used for tunnel detection, location, surveying, and remediation efforts.

- Determined key physical attributes to discriminate tunnels from underground clutter and identify one or more sensor modalities that can utilize those attributes effectively.

Current Year Key Events

- Demonstrate method for sample collection and analysis to determine tunnel age in a controlled (lab) environment.
- Laboratory Test of Developmental Prototype of Tunnel Age Kit.
- Transition Lab Developmental Prototype of Tunnel Age Kit.
- Laboratory Test of Developmental Prototype of Tunnel Detection System.
- Develop and test prototype components that will be eventually combined into a tunnel detection system (FY15 Q2-3).

Budget Year Key Events

- Field Test Developmental Prototype of Tunnel Detection System
- Field Test of Tunnel Age Kits

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
1,524	N/A	2,894	4,626	5,800	4,500

Project Schedule Including Milestones

- Demonstrate method for sample collection and analysis to determine tunnel age in a controlled (lab) environment (FY15).
- Develop and test prototype components that will be eventually combined into a tunnel detection system (FY15).
- Field Test Demonstration Tunnel Age Kit (FY16).
- Field Test Developmental Prototype of Tunnel Detection System (FY16).
- Transition LRIP Tunnel Age Kits along with Test Report and Technical Data Package (FY17).
- Operational Test of Demonstration Tunnel Detection System (FY17).
- Transition Prototype, Test Report, and Tech Data for Tunnel Detection System (FY18).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

3

Transition Plans

- Tunnel Detection Prototype
 - Delivered Sensor Performance Tool and Guidebook to inform which sensor types work best in the various border locations and the confidence level using each. This tool will help CBP make better use of tunnel detection equipment they already bought and better understand their performance limitations.
 - Conduct field testing of a prototype of a new tunnel detection system.

- Deliver developmental and demonstration prototype(s) for operational evaluation by CBP.
- Deliver final prototype Tunnel Detection system and Technical Data Package to CBP Acquisition Program Office.
- Tunnel Age Kit
 - Deliver a toolkit that can be routinely used by CBP and ICE agents to analyze and determine the age of discovered tunnels.
 - Provide a contract vehicle for Low Rate Initial Production that will include options for CBP to procure additional kits.
- Transition Barriers:
 - The technical challenge of transforming a tunnel-age determination capability in the lab (which we aim to develop first) into a portable, accurate toolkit that can be operated in the field

C. Maritime Border Security – FY 2015: \$10.250 million. FY 2016 Request: \$5.550 million. This program develops and transitions technical capabilities that enhance U.S. maritime border security by safeguarding lawful trade and travel and helps to prevent illegal use of the maritime environment to transport illicit goods or people.

Port and Coastal Surveillance

- *Problem:* DHS operating agencies have limited capability to detect, track, identify, and interdict maritime threats such as self-propelled semi-submersible (SPSS), fully submersible vessels (FSV), and small vessels transporting contraband or people unlawfully into the United States.
- *Solution:* This project develops solutions to improve maritime situational awareness, informational analytics, and information sharing/distribution to Federal, State, local, tribal, and international partners to enable an appropriate and rapid tactical response to maritime threats as well as enhancing strategic planning/resource allocation at the regional and national level. The Integrated Maritime Domain Enterprise (IMDE) delivers to DHS a compliant reference segment architecture integration platform for agile information sharing and discovery. The Coastal Surveillance System (CSS) delivers to CBP and USCG a coastal maritime sensor fusion system that enables cooperative maritime awareness of non-emitting vessels and the sharing of that time-critical, mission-useful sensor information between DHS components including USCG, CBP, and State, local and regional partners.
- *Impact:* The S&T Directorate developed technology will dramatically improve the maritime domain awareness of DHS components and Federal, State, local, and tribal, and international partners, increasing small vessel interdiction efficiency three-fold in five years and enabling risk-based resource allocation at local, regional, and national levels.

Prior Year Key Events

- Delivered CSS Mission Needs Statement.
- Delivered Smart Chart AIS app for other smart phone platforms.

Current Year Key Events

- Deliver CSS Information Sharing Tools.
- Install, test, and evaluate Coastal Surveillance System operational nodes at strategic locations to improve U.S. maritime domain awareness.

- Expand CSS Pilot to include USCG Sector San Diego.
- Expand CSS Pilot to include USCG Sector Los Angeles.
- Expand CSS Pilot to include CBP OIC Detroit.
- Expand CSS Enterprise to USCG Sector Seattle.
- Integrate new data sources into CSS.
- Authority To Operate (ATO) for CSS General Support System.
- Technical Test (TT-1), St. Petersburg, FL.
- Technical Demonstration (TD-1), Southern California AOR.

Budget Year Key Events

- IMDE Reference Architecture Package delivery to OCIO.
- IMDE transition to DHS HQ as enterprise service.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
6,306	3,134	6,683	7,250	9,500	5,550

Project Schedule Including Milestones

- Install, test, and evaluate Coastal Surveillance System operational nodes at five strategic locations to improve U.S. maritime domain awareness (FY15).
- Identify appropriate DHS maritime enterprise sustainment entity and establish a draft architecture (FY15).
- Rapid Tech Integration Demos at Maritime Security conferences (FY16).
- IMDE Reference Architecture Package delivery to OCIO (FY16).
- CSS Operational Demonstrations (OD-1 and OD-2) (FY16).
- IMDE transition to DHS HQ as enterprise service (FY16).
- CSS Initial Operating Capability to Joint Task Force (JTF)/Air and Marine Operations Center (AMOC)/USCG (FY17).

Delayed Milestones

- Expansion of CSS Pilot to include USCG Sector San Diego delayed to FY15.
- Expansion of CSS Pilot to include CBP OIC Detroit delayed to FY15.
- Expansion of CSS Pilot to include USCG Sector Los Angeles delayed to FY15.

Type of Research

Developmental

Technical Readiness Level

6

Transition Plans

- Integrated Maritime Domain Enterprise (IMDE) – Deliver to DHS HQ a compliant reference segment architecture integration platform for agile information sharing and discovery.
- Coastal Surveillance System (CSS) – Deliver to CBP and USCG a coastal maritime sensor fusion system that enables cooperative maritime awareness of non-emitting vessels and the

sharing of that time-critical, mission-useful sensor information between DHS Components including USCG and CBP and State, local and regional partners.

- Transition Barriers:
 - DHS does not adopt the IMDE reference architecture for the DHS information sharing segment architecture (ISSA).
 - Access to coastal maritime sensor data is stalled due to Policy issues.

3. CBE Defense – FY 2015: \$125.426 million. FY 2016 Request: \$97.626 million. S&T Directorate invests in R&D to support prevention and protective strategies and coordinated surveillance and detection to address CBE threats. R&D work includes: prevention of terrorism; reduction of vulnerability of critical infrastructure from terrorist attacks and other hazards; and prevention of the illicit movement and illegal entry or exit of people, weapons, dangerous goods, and contraband by providing technology, methods, and procedures to detect CBE threats.

- A. Bioagent Detection** – FY 2015: \$35.676 million. FY 2016 Request: \$25.000 million. This program conducts research and develops and identifies tools to enable rapid detection and provide advanced warning of attacks or releases of biological threat agents against the population and agriculture of the United States. It defines the intended use and application, develops the requirements, and executes the technology developmental efforts to support early detection and warning of potential bioagent threats to humans and animals.

Agricultural Screening and Surveillance

- *Problem:* High-priority foreign animal diseases in livestock and wildlife threaten the U.S. agricultural critical infrastructure.
- *Solution:* This project will develop and standardize technologies and protocols, including immunoassay-based approaches and mobile technologies, to identify current and emerging agricultural threats on the farm and at the border.
- *Impact:* The diagnostic screening tools developed and deployed to the USDA National Animal Health Laboratory Network (NAHLN) and the border will help prevent high-priority foreign animal diseases such as foot-and-mouth disease, and Rift Valley fever. The Enhanced Passive Surveillance (EPS) program technology and Agriculture Surveillance Demonstration will allow early detection, and thus quicker response, to an animal health event.

Prior Year Key Events

- Developed Swine EPS application for use on multiple mobile platforms
- Dossier presented to NAHLN (National Animal Health Laboratory Network) Methods Technical Working Group to transition PCR for bulk milk tank detection for Foot and Mouth Disease virus (FMD) to NAHLN
- Demonstrated integrated RNA extraction and nucleic acid amplification of FMD sequences using Portable PCR; evaluated limits of detection with cartridge
- Demonstrated Molecular Transport Media (MTM) capable of irreversibly neutralizing FMDV and Classical Swine Fever virus (CSF) while stabilizing nucleic acid for RT-PCR detection for over six months
- Primers developed and mapped to all available full length Vesicular Stomatitis virus (VSV) NJ (New Jersey) genome sequences; pilot RT-LAMP assay for VSV has been designed for VSV-NJ serotype

Current Year Key Events

- Transition validated sensitive molecular screening tool for the detection of FMD in bulk milk tanks using the existing dairy industry milk transportation and quality control infrastructure in the NAHLN and key dairy states
- Enhance Passive Surveillance iOS app in Apple store/ Droid App available in Google Play Store to promote and enable wider use of animal disease surveillance toolset.
- Deliver report summarizing the occurrence of Foreign Animal Diseases (FADs) in wildlife species in endemic regions, including a compilation of susceptible U.S. species with data on ecological, behavioral and environmental factors that could influence disease severity and spread.
- Develop a Rift Valley Fever (RVF) cELISA for possible commercialization and use with multi-species samples-
- Statement of procedures created for use of stabilization/inactivation media in conjunction with oral fluid sampling in herds for surveillance and disease detection; currently in the process of being entered into the APHIS Master Control ISO document database

Budget Year Key Events

- Down select applicable technologies for enhanced development and initial testing of Border Agricultural Screening System.
- Develop fit-for-purpose standard operating procedures with the user for implementation into the Border Agricultural Screening System.
- Deliver risk analysis and modeling tools (including spatial disease risk maps) and an analysis of countermeasure and strategies to mitigate and control disease in free ranging wildlife populations and feed biosurveillance systems.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
3,248	3,325	3,304	7,273	750	2,000

Project Schedule Including Milestones

- Deliver report summarizing the occurrence of FADs in wildlife species in endemic regions, including a compilation of susceptible US species with data on ecological, behavioral and environmental factors that could influence disease severity and spread (FY15).
- Transition validated sensitive molecular screening tool for the detection of FMD in bulk milk tanks using the existing dairy industry milk transportation and quality control infrastructure in the NAHLN and key dairy states (FY15).
- Enhanced Passive Surveillance iOS app in Apple store/ Droid App available in Google Play Store to promote and enable wider use of animal disease surveillance toolset (FY15).
- Down select applicable technologies for enhanced development and initial testing of Border Agricultural Screening System (FY16).
- Develop fit-for-purpose standard operating procedures with the user for implementation into the Border Agricultural Screening System (FY16).
- Deliver risk analysis and modeling tools (including spatial disease risk maps) and an analysis of countermeasure and strategies to mitigate and control disease in free ranging wildlife populations and feed biosurveillance systems (FY16).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

The program plans to begin at TRL 4 and end at TRL 6.

Transition Plans

- Assays and screening tools that demonstrate sufficient analytical performance, as per the NAHLN Methods Technology Working Group guidance, will be transitioned to the NAHLN.
- The EPS project will result in the development of a full concept of operations in each participating industry/state that can be transitioned to any industry/state with stakeholder commitment to continue utilization without DHS support. In addition, the development of freely available apps for use on veterinarian's personal equipment and a verification process for including that data into the relevant state/industry data stream will contribute to the creation of a broad user base. The EPS system itself will transition to a non-profit or commercial entity that will be provided with the ability to license the open architecture framework for independent development. The funds from licensing will support the maintenance of the framework and part of the licensing agreement will be the provision of data back into the system to ensure that every licensing opportunity also expands the impact of the EPS system. Full transition of the system should be completed by the end of FY16.
- Findings from the FADs in wildlife susceptibility report will inform development of a diagnostic disease panel that can be used to detect and identify prioritized FADs, and be transitioned to and modified by stakeholders as needed. The disease panel will be delivered through an existing platform, which will entail technology transfer to stakeholders interested in employing this diagnostic system.

Bioassays

- *Problem:* First Responders and Public Health officials do not have well-validated detection assays to analyze potential bio-threat samples and inform appropriate actions to ensure public safety and public health actions and decision.
- *Solution:* Develop highly robust assays; that includes test, evaluation, and validation of nucleic acid detection assays (TaqMan PCR); antigen detection assays (immunoassays); and rapid antimicrobial susceptibility assays (based on micro-culture and PCR) for deployment and employment through the Centers for Disease Control and Prevention (CDC) Laboratory Response Network and other federally sponsored laboratory response networks to support rapid detection of an event, respond to an event, and recover from an event. These assays are intended to be dual-use assays that can be used for environmental sample analysis as well as clinical specimen analysis.
- *Impact:* Enables capabilities to rapidly screen and detect high-consequence biological pathogens and toxins to provide critical information to support actions and decisions regarding public health and public safety. This project will also develop bioinformatics resources, reference strain and antibody repositories along with appropriate standards to recognize and identify traditional, emerging, advanced, and enhanced threat agents.

Prior Year Key Events

- Transitioned validated laboratory detection assays for high consequence (*Y. pestis*, *Rickettsia* and *Variola*) pathogens and toxins (*C. botulinum* and Abrin) to the CDC Laboratory Response Network (LRN) for deployment and employment.

- Conducted test, evaluation and validation of Lateral Flow assays for *Bacillus anthracis*, *Yersinia pestis* and *Francisella tularensis* for First Responder use in support of public safety actions and screening of suspicious material in the field.
- Transitioned robust and accurate Lateral Flow Assays for Ricin and Abrin toxins for First Responder use in support of public safety actions and screening of suspicious material in the field.
- Completed Rapid Antimicrobial Susceptibility tests for *Y. pestis*.

Current Year Key Events

- Complete testing, evaluation and validation of *Burkholderia mallei* and *pseudomallei* nucleic acid PHAA assays.
- Complete testing, evaluation of *Bacillus anthracis*, *Yersinia pestis* and *Francisella tularensis* lateral flow assays for First Responder use in support of public safety actions and screening of suspicious materials in the field.
- Complete Rapid Antimicrobial Susceptibility tests for *Francisella tularensis*.
- Transition a suite of fully validated TaqMan PCR Assays with multiple primer and probe sets for use in the detection of Filoviruses Ebola and Marburg, both are CDC Category A viral biothreat agents.
- Transition a suite of fully validated TaqMan PCR Assays with multiple primer and probe sets for use in the detection of *Variola* a CDC Category A viral biothreat agent.

Budget Year Key Events

- Complete testing, evaluation and validation of *Bacillus anthracis* nucleic acid PHAA assays.
- Conduct testing and validation of *Brucella suis*, *abortus* & *melitensis* PHAA assays.
- Conduct assay optimization for the *Coxiella burnetti* PHAA assay.
- Conduct testing and validation of the *T2 Mycotoxin* and *Saxitoxin* toxin PHAA assays.
- Complete Rapid Antimicrobial Susceptibility tests for *Burkholderia mallei* and *pseudomallei*.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
15,007	4,000	3,975	7,000	4,000	2,000

Project Schedule Including Milestones

- Complete testing, evaluation and validation of *Bacillus anthracis*, *Burkholderia mallei*, and *pseudomallei* PHAA assays (FY15).
- Complete testing, evaluation of *Bacillus anthracis*, *Yersinia pestis*, and *Francisella tularensis* lateral flow assays for First Responder use in support of public safety actions and screening of suspicious materials in the field (FY15).
- Complete Rapid Antimicrobial Susceptibility tests for *Francisella tularensis* (FY15).
- Complete testing, evaluation and validation of *Bacillus anthracis* nucleic acid PHAA assays (FY16).
- Complete testing and validation of *Brucella suis*, *abortus* and *melitensis* PHAA assays (FY16).
- Complete assay optimization for the *Coxiella burnetti* PHAA assay (FY16).
- Complete testing and validation of the *T2 Mycotoxin* and *Saxitoxin* toxin PHAA assays (FY16).

Delayed Milestones

- Delays in the Rapid Antimicrobial Susceptibility tests were incurred due to the shutdown the CDC experienced in 2014.
- Due to the filovirus outbreak in West Africa and our need to expand designs to meet laboratory response network requirements we had to delay *Bacillus anthracis* and *Burkholderia* assay testing and evaluation activities.

Type of Research

Applied

Technical Readiness Level

The program plans to begin at TRL 5 and end at TRL 6.5-6

Transition Plans

- Transition PHAA validated assays to CDC LRN to support national bio-preparedness and defense mission.
- Rapid Biothreat Screening assays will be transitioned to FEMA and the FRG to support First Responders to support screening of suspicious material in the field and public safety actions in a timely manner.

Biosurveillance Systems

- *Problem:* There is a lack of prompt recognition, coordination and early response action protocols within the Federal, State governments and industry's in the event of a biological attack or disease outbreak.
- *Solution:* This project assembles and demonstrates biosurveillance technology advances and data fusion concepts to build CONOPS with strong coordination in the Federal interagency and local community arenas. It explores a variety of methods and systems to rapidly collect and exploit information useful for identifying outbreaks or unusual events using existing cloud-based computing architectures. To inform requirements and potential operational architectures, a demonstration will be conducted in partnership with DOD, the U.S. Department of Agriculture, and Health and Human Services (HHS) and will be based on scenario(s) of interest to these stakeholders and selected local communities.
- *Impact:* Optimized collection and integration of relevant environmental, animal, and public health data will promote prompt awareness of a bio-attack or disease outbreak, resulting in reduced casualties and the application of early mitigation steps.

Prior Year Key Events

- Initiated biosurveillance analysis of alternatives and market survey for applicable technologies
- Delivered conceptual architecture for national bio-surveillance system of systems and deliver pilot project to link data from clinical and diagnostic networks.
- Established stakeholder group and hold workshops to begin evaluation of surveillance response SOPs/CONOPS and requirements.

Current Year Key Events

- Conduct stakeholder workshops to refine requirements for information needs during a biological event.
- Enhanced Passive Surveillance (EPS) iOS app available in Apple Store and the Droid app available in Google Play Store.

- Initiate development of requirements for integrated biological, chemical, and radiological surveillance architectures.
- Evaluate existing modeling and analytical tools for baseline capabilities in aggregating surveillance data around biological events.

Budget Year Key Events

- Build standard data set of biosurveillance information that will be used to evaluate model performance improvements throughout project.
- Initiate series of tabletop exercises with two local jurisdictions to demonstrate information aggregation tools for rapid awareness of a biological event.
- Demonstrate feasibility of a low-cost, sustainable environmental detection architecture (SenseNet) using dual-use technologies.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	N/A	1,046	8,900	16,000

Project Schedule Including Milestones

- Initiate development of biological surveillance architecture (FY15).
- Conduct stakeholder workshops to refine requirements (FY15).
- Down select appropriate commercial and prototype technologies for future year demonstrations (FY15).
- Evaluate and down select feasible system solutions for continuous environmental monitoring (FY15).
- Define requirements for distributed sensor architecture data integration networks (FY15).
- Find test data points from 3-4 data modalities for improved incident awareness (FY16).
- Pilot technologies for massive data ingest and improved data processing (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

5

Transition Plans

An operational demonstration of integrated response CONOPS for a biosurveillance system will be held in a jurisdiction. The tools and CONOPS developed through the workshops and exercise will be transitioned to the local jurisdiction.

Rapid Biodetection

- *Problem:* There is a need for Federal, State, and local responders to rapidly identify biological threat agents and toxins in the field through use of fixed installation sensors, person-portable sensors, and/or mobile laboratory systems, to rapidly provide advance warning of biological attacks.

- *Solution:* This project will develop affordable and effective environmental biological detection and collection systems that are suitable for urban environments use for event detection and characterization purposes following an attack. The detection system outputs will feed into the emerging local, State, or national-level cloud processing architecture for rapid awareness and response in the event of a biological event/attack.
- *Impact:* The resulting advanced warning system will support indoor, outdoor, national security, and other biosurveillance monitoring in order to reduce the time it takes to identify biological threat agents in the field and increase effective response efforts.

Prior Year Key Events

- Prototype testing of improved laboratory modules for bio-threat agent sample preparation techniques.
- Analysis of alternatives for new assay concepts to detect emerging, advanced, or engineered threats.
- Finalize Environmental Monitoring requirements, issue broad agency announcement, and competitively select performers.

Current Year Key Events

- Evaluate and down select feasible system solutions for continuous environmental monitoring.
- Feasibility of creating a model to predict virus function (i.e. pathogenicity) from genetic sequence information.
- Define requirements for distributed sensor architecture data integration networks.

Budget Year Key Events

- Validate rapid Point of Care/Need test for 2 high consequence pathogens (Plague and Tularemia) in simultaneous multiplexed syndromic diagnostic
- Initiate the development of two other high-consequence pathogen (Melioidosis and Glanders) diagnostics. This will include, nucleic acid, antigen and immune signature based detection assays.
- Transition rapid point of care/point of need test to CDC and global partners such as WHO and other Health Foundations to support the President’s Global Health Security initiative.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
11,708	4,163	12,488	8,191	12,726	5,000

Project Schedule Including Milestones

- Evaluate and down select feasible system solutions for continuous environmental monitoring (FY15).
- Feasibility of creating a model to predict virus function (i.e. pathogenicity) from genetic sequence information (FY15).
- Define requirements for distributed sensor architecture data integration networks (FY15).
- Test, evaluate and validate syndromic POC diagnostic test for clinical use and application in endemic threats, and in routine clinical diagnostics in the United States (FY16).
- Enhance clinical specimen repository to support test, evaluation and validation efforts for clinical diagnostic tests developed by DHS S&T (FY16).
- Validate Peptide-based Array for clinical use and application (FY16).

- Evaluate appropriate clinical diagnostic sample matrices for Plague and Tularemia to support POC/PON diagnostic test use and application (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

6

Transition Plans

- New laboratory modules for biothreat characterization will be transitioned into use as commercial products.
The environmental monitoring system will be a leave-behind system demonstrated in a full-scale demonstration in FY17 and linked to the operations center of a local jurisdiction.

B. Chemical Detection – FY 2015: \$3.000 million. FY 2016 Request: \$3.000 million. This program seeks to develop more reliable chemical detectors, which will promote their use and reduce vulnerabilities of the population and critical infrastructure in a wide array of operational applications.

Integrated Chemical Detection System

- *Problem:* Currently available chemical detectors experience significant false positive responses in varying backgrounds, undermining the confidence of response assets in their value in responder and infrastructure protection scenarios. This problem results in delay in improving the defensive posture to chemical attack or major accident scenarios.
- *Solution:* This project will consider evolving technologies that offer “orthogonal” approaches (examining data on different physical features of chemicals) to increase the probability of correct identification and explore the application of these technologies in operational scenarios.
- *Impact:* The development of more reliable chemical detectors will promote their use and reduce vulnerabilities of the population and critical infrastructure in a wide array of operational applications. The outcome of this project will affect operational capabilities of multiple DHS components (e.g. USSS, USCG, TSA, CBP, OHA), critical infrastructure owners and first responders.

Prior Year Key Events

- N/A

Current Year Key Events

- Develop and document requirements in cooperation with user community.
- Initiate concept exploration with market survey and analysis of alternatives of applicable technologies guided by lessons learned from prior year pilot demonstrations.

Budget Year Key Events

- Design of orthogonal system shows that false alarms are reduced by 50 percent or more.

- Operational demonstration planned with a location. MOU or Cooperative Research and Development Agreement (CRADA) in place to perform technology demonstration.
- Sensitivity versus System Performance Trade-off Report completed to inform on minimal acceptable detection thresholds.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	N/A	N/A	3,000	3,000

Project Schedule Including Milestones

- Develop and document requirements in cooperation with user community (FY15).
- Initiate concept exploration with market survey and analysis of alternatives of applicable technologies guided by lessons learned from prior year pilot demonstrations (FY15).
- Design of orthogonal system shows that false alarms are reduced by 50 percent or more (FY16).
- MOU/CRADA in place with operational demonstration location (FY16).
- Sensitivity vs System Performance Trade-off Report completed to inform on minimal acceptable detection thresholds (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

The program plans to begin at TRL 3 and end at TRL 7.

Transition Plans

This project will leverage the Chemical Detection Field Experiments Project in that the performance metrics and false alarm rates from current systems will be documented as a baseline for the targeted Broad Agency Announcement.

C. Explosives Detection – FY 2015: \$86.750 million. FY 2016 Request: \$69.626 million. This program researches, develops, and/or identifies tools to detect and locate explosives intended to be used as terrorist weapons and strengthens aviation security by bolstering the international aviation security system, processes, and technologies, and by encouraging partnerships with industry. It defines concepts, requirements, and procedures for improved techniques for early detection and warning of potential explosive threats, including explosive threats to the Nation’s transportation systems and large public gatherings.

Canine Explosives Detection

- *Problem:* TSA canine teams and local law enforcement have limited access to the training materials and limited time canine teams can train on particular explosive materials, thus decreasing their proficiency and ability to improve detection techniques. The development of non-detonable, non-hazardous training aids allow the teams to train on them more frequently in order to maintain a high level of proficiency and frequently assess the effectiveness of current concepts of operations (CONOPS). The growing threat of person-

borne IEDs(PB-IEDs) has led to the need for canine explosives detection teams to expand their CONOPS to include person-search capabilities. This necessitates the need for surrogate continuation aids (i.e. non-detonable training aids) and the need to determine the strengths and weaknesses of the person-search canine operating in HSE within high throughput mass transit rail venues and large public crowd events.

- *Solution:* S&T will develop and test non-hazardous HME canine training aids to provide performance results in the field equivalent to or better than performance on the actual explosive. Secondly, S&T will provide the TSA National Explosive Detection Canine Team Program (NEDCTP) and any other DHS explosive canine team users with operational performance data to make decisions on improved concept of operations, techniques, and training. Lastly, S&T will determine through scientific analysis and controlled testing of the combination of the refined pure odor sets and basic canine olfaction that significant efficiencies can be made to improve the operational performance of the explosive detection canines while dramatically reducing the resources in time and cost needed to establish and maintain a high level of proficiency.
- *Impact:* Completion of this program will result in improved overall proficiency of DHS's and other Homeland Security Enterprise partners' explosive detection canines by improving training and operational procedures. Development of a formal testing capability and lower-cost training aids will significantly lower lifecycle costs and expedite training and deployment of canine teams.

Prior Year Key Events

- Delivered first of two field validated, low-cost, non-hazardous canine training aids for peroxide-based HMEs to TSA/HSE.
- Tested and delivered results to TSA on the operational performance of the Remote Explosive Sensing Techniques (REST) systems used by UK, FR, and NL to screen air cargo.

Current Year Key Events

- Deliver second of two field validated, low-cost, non-hazardous canine training aids for peroxide-based HMEs to TSA/HSE.
- Deliver explosive odor generalization study to support reducing the current number of trained odors.
- Determine operational performance parameters and recommended CONOPS of person-search canine in high throughput subway rail environment.
- Assess/implement canine application focused on force protection for insider threat (DHS Chief Security Officer).

Budget Year Key Events

- Odor Reduction proof of principle.
- Operational assessments for person-search (mass transit, force protection, large crowd events), other TSA/partner testing.
- Determine operational performance parameters of person-search canine in large crowd venues.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
2,489	2,513	2,497	4,200	4,500	4,800

Project Schedule Including Milestones

- Deliver explosive odor generalization study to support reducing the current number of trained odors (FY15).
- Determine operational performance parameters of person-search canine in high throughput subway rail environment (FY15).
- Delivery of PSC team final report (FY16).
- Determine operational performance parameters of person-search canine in a large crowd public event environment (FY16).
- Deliver canine cognition and olfaction research report (FY17).
- Deliver non-hazardous canine training aids for conventional explosives (FY17).
- Deliver TSA canine operational assessment results (FY17).
- Deliver subway rail operational assessment results (FY17).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

The program plans to begin at TRL 5 and end at TRL 7

Transition Plans

- **Training Aids**
 - Delivered canine training aids for TSA regional rollout for homemade explosives detection.
 - Transferred Government owned design and manufacturing methodology to third party manufacture.
 - Provide RFP to industry.
 - Integrate into TSA canine training aid acquisition programs.
- **Operational Test and Evaluation (OT&E)**
 - Results are guiding operational deployment decisions by TSA and HSE.
 - Informed TSA Passenger Screening Canine testing to support risk-based screening-managed inclusion (RBS-MI) deployment.
 - Increased partner evaluation of first responder proficiency of canines using non-hazardous training aids.
 - Results informed U.S./UK sharing for recent aviation threat vector.
 - Results informed TSA policy decisions for TSA air cargo screening with Remote Explosive Scent Tracing/Remote Air Sampling for Canine Olfaction (REST/RASCO) methods.

Checked Baggage

- *Problem:* TSA needs enhanced explosive detection devices (EDS) to detect the full array of potential improvised explosives threats in checked baggage. Tuning existing equipment to these threats would result in greatly increased false alarm rates with commensurate increases in operating costs.
- *Solution:* In collaboration with TSA, S&T is developing next generation X-ray systems that incorporate enhanced measurement techniques, novel detection algorithms, subsystem retrofits, and new standalone systems. There is a focus on collaboration between different performers to develop these innovative systems, relying, in part, on the advancements produced by DARPA's

Knowledge Enhanced Compressive Measurement (KECoM) program. Checked Baggage invests in high-performing enabling technologies that will be migrated into next generation checkpoint screening equipment.

- *Impact:* These next generation X-ray systems are anticipated to provide TSA with enhanced threat detection capabilities and reduced false alarm rates (below 10 percent) for checked baggage screening operations allowing the TSA to be more efficient and effective.
- These next generation X-ray systems are anticipated to provide TSA with enhanced threat detection capabilities, improved onscreen alarm resolution, lower false alarm rates (below 10 percent), and reduced lifecycle cost.

Prior Year Key Events

- Delivered Phase 2 X-ray diffraction (XRD) proof of product design.
- Completed DPC/PeXsa System Concept Review.

Current Year Key Events

- Deliver X-ray diffraction based (XRD) hold baggage screening system prototype.
- Complete Adaptive X-ray explosives detection system (EDS) preliminary design review (PDR).
- Award up to eight contracts on BAA 13-05 Advanced X-ray Material Discrimination (AXMD).

Budget Year Key Events

- Deliver Ayasdi’s System Design Document.
- Finalize Ayasdi’s Topological Data Analysis (TDA) Tool Application Tutorial document.
- Complete TeleSecurity Science’s Final Classification and Metrics Review.
- Deliver General Electric (GE) Global’s System Design Document.
- Deliver GE Global’s software tool kit.
- Complete live demonstration of Quantum Magnetic’s (QM) Partially Observable Markov Decision Process (POMDP).
- Deliver QM’s System Design Document.
- Complete QM’s Final Architecture and Critical Design Review.
- Deliver of Stochastic Bag Generator by the University of Arizona.
- Complete AQT Critical Design Review and Final Trade Study.
- Deliver AQT System Design Document.
- Complete Rapiscan’s Critical Design Review and Final Trade Study.
- Deliver Rapiscan DHS Facility Test Plan.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
19,698	16,697	21,701	21,700	20,700	16,376

Project Schedule Including Milestones

- Conduct demonstration of X-ray Diffraction (XRD) hold baggage screening system prototype (FY15).
- Develop Systems Development BAA technical strategy using lessons learned from Industry Day (FY15).
- Complete Advanced X-Ray Material Discrimination interim technical review (FY15).
- Conduct one Advanced X-Ray Material Discrimination Industry Day (FY15).

- Deliver advanced explosives detection system (EDS) systems with improved HME detection capability for operational assessment (FY16).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

The program plans to begin at TRL 5 and end at TRL 7.

Transition Plans

- Develop a fully functional and testable X-ray diffraction explosive detection system suitable for acquiring data at airports and government test facilities. Prototype will be subject to independent certification readiness testing and preliminary operational evaluation at TSA's Transportation Systems Integration Facility. Effectiveness and cost of product will be proven to TSA.
- Demonstrate enhanced materials discrimination using technologies based on Defense Advanced Research Projects Agency/Knowledge Enhanced Compressive Measurement (DARPA/KECOM) and University Research Programs. Perform independent readiness testing to determine detection, identification, and false alarm performance characteristics. Complete trade study analysis of probability of detection, probability of false alarm, threat weight.

High Resolution Explosives Trace Detectors

- *Problem:* Current Explosive Trace Detectors (ETDs) are limited to a desktop configuration and have a limited ability to expand their libraries of trace explosives without substantial performance penalties.
- *Solution:* Develop ETDs that can selectively and sensitively identify threats from an expanded library and are modular to enable spiral upgrades as improvements in explosives detection are realized. Special emphasis will be placed on achieving such capabilities in a small, portable form factor.
- *Impact:* This project will provide TSA and other DHS Components with the ability to respond to emerging threats and broaden their concept of operations for primary and secondary screening.

Prior Year Key Events

- Release of a BAA and completion of source selection activities for multiple one to three year projects for the development of next-generation desktop and portable ETDs, along with research and development of direct contact and non-contact sampling tools and methods.

Current Year Key Events

- Contract negotiations and project kick-offs for multiple one to three year projects for desktop and portable ETDs, and advanced direct contact and non-contact sampling tools and methods.

Budget Year Key Events

- Develop desktop ETDs through preliminary design review (PDR) pending contract awards.
- Develop desktop ETDs through critical design review (CDR) pending contract awards.

- Develop direct contact and non-contact sampling tools and methods through proof-of-concept and PDR pending contract awards.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
5,612	N/A	587	12,100	16,300	10,000

Project Schedule Including Milestones

- Deliver Retrofit ETD prototype to DT&E testing pending contract award (FY15).
- Develop next generation desktop ETDs through PDR pending contract award (FY15).
- Complete advanced detection tools and methods Government testing and evaluation (FY15).
- Complete development of desktop ETDs through preliminary design review (PDR) (FY16).
- Complete development of desktop ETDs through critical design review (CDR) (FY16).
- Complete development of portable ETDs through PDR (FY16).
- Complete development of direct contact and non-contact sampling tools and methods through proof-of-concept and PDR (FY16).

Delayed Milestones

- FY15 Milestones were delayed to FY16 due to delays in releasing BAA and making contract awards in FY14.

Type of Research

Developmental

Technical Readiness Level

The program plans to begin at TRL 3 and end at TRL 7.

Transition Plans

- Development of desktop and portable ETDs for acquisition by TSA and other DHS components.
- Coordination with DHS Office of the Chief Procurement Officer/Strategic Sourcing Office and TSA Office of Acquisitions. The goal is incorporation of procurement windows for products developed under this program to be eligible for their upcoming ETD FY15 solicitation for ETD procurement when they become available in FY17, FY18, and FY19. TSA is the lead agency for DHS for the strategic sourcing procurement of ETD equipment.

Integrated Passenger Screening Systems

- *Problem:* Current Advanced Imaging Technology (AIT) for personnel screening and Advanced Technology (AT) X-Ray systems for carry-on baggage screening provide limited passenger throughput due to the need for extensive passenger divestiture and the large number of items to be individually screened. The AIT systems require full divestiture of shoes, outerwear, belts, jewelry, and personal items which will be screened by the AT X-Ray system. Additionally, the AT X-Ray systems require the removal of liquids and electronics from carry-on bags. These system limitations increase 1) The time per passenger screening, 2) The number of items to be screened and 3) customer inconvenience and privacy concerns.
- *Solution:* Modular, flat-panel AIT systems provide a more flexible solution for personnel screening. The systems reduce the need for divestiture; passengers wear their shoes and

outerwear during screening. Innovative techniques under development include compressive measurement, metamaterial antenna components, and agile multi-band imaging (K-band and W-band radar frequencies) for AIT systems. Their application will provide improved imaging resolution, improved detection, and higher screening throughput, while reducing system architecture complexity. The need to divest liquids and electronics will be reduced or eliminated by X-ray systems that incorporate coded apertures, compressive sensing, and energy-resolved detectors for enhanced material discrimination.

- *Impact:* Flat-panel AIT solutions will provide high-throughput screening of personnel walking at a normal pace (stopping to pose will no longer be required) at standoff distances. Modular flat-panel AIT systems will enable widespread deployment and improved threat detection capabilities with lower false alarm rates, thereby strengthening security and reducing airport operational costs. Limited divestiture will decrease passenger inconvenience and increase checkpoint throughput.

Prior Year Key Events

- Initial review with HSARPA Front Office.

Current Year Key Events

- AIT K-band and W-band demonstrations featuring automated threat recognition (ATR).
- A BAA solicitation will be released to fund vendor-based system development teams. This will build on current EXD project activities for high-resolution AIT systems and short standoff screening.

Budget Year Key Events

- Integration of multiple frequencies (K-band and W-band) into a single system to allow interrogation of anomalies with a reduced probability of false alarms.
- Development of a flat-panel AIT system through its critical design phase, including the use of metamaterial-based transceivers to improve signal-to-noise and allow screening at short standoff distances (1 to 3 meters).
- Developmental test and evaluation of the enhancement to commercial dual-energy X-ray system from the incorporation of energy-resolved detectors.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
1,117	N/A	1,202	15,533	19,250	19,250

Project Schedule Including Milestones

- Stanford will present a preliminary design review (PDR) on their one grating system (FY15).
- Develop flat panel AIT systems with integrated shoe screeners through critical design phase as part of Duke University metamaterials program (FY15).
- Delivery of prototype flat panel AIT systems for developmental test and evaluation by Government laboratories (FY16).
- Evaluation of prototype flat panel AIT systems to determine operational CONOPS for deployment (FY16).

Delayed Milestones

Delay to the development of metamaterial-based flat-panel AIT systems due to the research required to raise the Technology Readiness Level of these cutting-edge technologies.

Type of Research

Developmental

Technical Readiness Level

The program plans to begin at TRL 3 and end at TRL 6.

Transition Plans

- After system development completion including successful test and evaluation at Government laboratories, vendors' equipment will undergo certification and deployment via acquisition through TSA's Passenger Screening Program.
- Technologies developed under the IPSS program will provide the backbone for the APEX: Screening at Speed Program.

Mass Transit

- *Problem:* Current security capabilities for screening of people, vehicles, and baggage in mass transit environments are extremely limited. The mass transit end-user community has unique requirements for an open system with no fixed checkpoints, extremely high throughput, and an unalterable existing infrastructure within which technologies for explosives detection must fit necessitates a dedicated program to address this significant vulnerability to terrorist attack.
- *Solution:* S&T will develop intelligent video capabilities to automatically detect and rapidly assess leave behind packages, continue the evaluation of advanced security technologies for mass transit applications, provide the mass transit end-user community with a layered and integrated capability to detect and mitigate the explosive threat. S&T will develop a system capable of detecting Person-borne and Leave-behind improvised explosive devices (IEDs) in a mass transit environment during rush hour without impeding passenger throughput. S&T will also develop technologies that utilize advanced materials and high throughput/high-speed anomaly detection technologies (Active sub-millimeter wave [MMW], intelligent video algorithm, metamaterials, etc.) to provide rapid screening of passengers and rail cars.
- *Impact:* Completion of this program will result in high-throughput security technology for detection of explosive threats carried by persons or attached to rail vehicle undercarriages. The result will address a critical vulnerability for which there is currently no viable, affordable solution for the mass transit end-user community.

Prior Year Key Events

- Delivered of Sensor Integration Analysis field test report.
- Demonstrated advanced prototype leave-behind detection software in operational mass transit environment.
- Tested Video Forensics Toolset in an operational environment.

Current Year Key Events

- Deliver Intelligent Video Analytics final report.
- Conduct laboratory T&E of Intelligent Video (IV) algorithm with realistic data set
- Deliver Video Forensics Toolset to Washington Metropolitan Area Transportation Authority (WMATA), Amtrak, and Niagara Frontier Transportation Authority (NFTA).
- Deliver integrated COTS sensor suites final report.
- Test stand-alone MMW system in TSA sponsored mass transit test beds.
- Demonstrate leave behind package detection software in operational environment.

- Assess emerging technologies for potential application within integrated layered detection system architecture for subway rail passenger screening operations.

Budget Year Key Events

- Complete Under Vehicle Screening System prototype.
- Complete Intelligent Video System prototype laboratory demo with realistic Leave-Behind dataset.
- Test and evaluate multistatic ultra-sparse MMW arrays and Fast Fourier Transform imaging for evaluation of person-borne threats and integration into a layered detection system architecture.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
23,400	15,750	14,261	9,400	5,600	4,000

Project Schedule Including Milestones

- Deliver COTS/Near-COTS integrated sensor suite testing report on applicability to mass transit rail environment (FY15).
- Test broadly deployable millimeter wave imaging array testbed for application of digitally reconfigurable focal plane/flat panel array to mass transit threat detection (FY15).
- Conduct laboratory testing of the prototype intelligent video leave behind bag detection and tagging algorithms with operational video data set (FY15).
- Assess emerging technologies for potential application within integrated layered detection system architecture for subway rail passenger screening operations (FY15).
- Prototype Intelligent Video System for OT&E (FY16).
- Prototype UVSS for OT&E (FY16).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

The program plans to begin at TRL 4 and end at TRL 5.

Transition Plans

The TSA Mass Transit Test Bed will be used for developmental testing and evaluation. The Office of Security Capability (OSC) will perform operational testing and evaluation. With assistance from the Transportation Security Grant Program, qualified products will be produced. Mass transit authorities in cities such as Washington, D.C., New York, Chicago, and San Francisco will then purchase these qualified products.

Next Generation Passenger Checkpoint Technologies

- *Problem:* Aviation checkpoints require technologies with enhanced threat detection performance that will reduce false alarm rates, screen an increased volume of travelers, and detect an expanding number of threats. Technology advances are required to meet TSA’s

increased detection requirements, as well as the changing functional and operational requirements at TSA checkpoints.

- *Solution:* S&T will develop new checkpoint screening technologies to improve detection capability and increase passenger throughput, while maintaining or improving life cycle costs. Specifically, this program delivers Advanced Technology (AT) X-Ray systems with enhanced and automated homemade explosives and liquid detection capabilities, Advanced Imaging Technology (AIT) passenger screening systems, Bottle Liquid Scanners (BLS) to allow screening of a wider range of liquids and bottle materials, and affordable explosive trace detectors (ETD) with expanded threat libraries. A Remote Screening Concept of Operations is being evaluated, where carry-on bags from high traffic checkpoint lanes may be reviewed from other locations within the airport, improving efficiency and resource use.
- *Impact:* The new checkpoint system will enable Transportation Security Officers to screen for a wider range of concealed threats on passengers and in carry-on items. The technologies will provide a faster, less invasive, and more efficient method, while increasing threat detection and operational effectiveness and decreasing traveler inconvenience through reduced divestiture and wait times.

Prior Year Key Events

- Demonstrated enhanced AT (carry-on bag) screening devices.
- Delivered the Department of Homeland Security (DHS) Explosives Detection Images Database Final Report.
- Completed mass spectrometry based desktop ETD developmental test and evaluation and operational test and evaluation.
- Began qualification readiness testing of Fluorescence-based handheld ETD.

Current Year Key Events

- Deliver AT remote screening CONOPS Final Report.
- Collect data for advanced X-Ray-based bottle liquid screening devices (BLS).
- Deliver two Coded Aperture Micro Mass Spectrometry ETD prototypes to enable secondary screening against a broad range of potential threats.

Budget Year Key Events

- Non-contact optically based ETD prototype delivery.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
4,038	15,732	18,080	19,045	8,000	8,000

Project Schedule Including Milestones

- Demonstrate K-band field prototype demonstration (FY15).
- Duke will deliver coded Aperture X-Ray Systems to S&T (FY15).
- Deliver non-contact optically based ETD prototype (FY16).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

The program plans to begin at TRL 4 and end at TRL 6

Transition Plans

- Explosive detection technologies will transition to TSA acquisition through TSA's Passenger Screening Program (PSP).
- Projected Full Operational Capability (FOC) quantities for TSA checkpoint technologies at 450 airports include:
 - 930 AIT systems
 - 2,215 Advanced Technology (AT) X-ray systems
 - 1,660 BLS systems
 - 2,820 ETD systems
- On-going Next Generation Passenger Checkpoint projects will transition to Integrated Passenger Screening Program and High Resolution Trace in FY17.

Screener Training and Selection

- *Problem:* Current methods, tools, and technologies used by Transportation Security Officers (TSOs) at operational screening checkpoints result in more than 84,876,000 searched items taking more than 3,536,500 man hours annually. There is a need to provide new screener training and selection methods and tools to increase operational security and efficiently. Current training evaluation methods are unable to identify root causes of performance errors and do not leverage the latest research developments and technology innovations.
- *Solution:* A protocol analysis on high performing TSOs was conducted to identify cues, techniques, methods, and strategies related to X-ray imagery analysis that were consistently used by the highest of these top performers. In this effort, the resultant training material developed for IEDs(IEDs) and IED components will be evaluated to determine the impact of the new training system/procedures/methods through a Training Effectiveness Evaluation (TEE) in the field with current TSOs.
- *Impact:* Implementing the training materials from the best practices of TSA's best screeners will make screening operations more effective and efficient by lowering secondary screening rates at checkpoints and increasing checkpoint throughput, thereby saving TSA money and lowering wait times for the traveling public.

Prior Year Key Events

- Enhanced X-ray skills threat detection instructional framework.
- Developed comprehensive test plan outlining experimental design, procedures, and planned analyses.

Current Year Key Events

- Develop and execute field validation of image based training solutions.
- Deliver Final Technical Report.
- Transition image based training materials and train trainers.

Budget Year Key Events

- Develop training materials for guns, knives and other threat types.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	N/A	501	500	500

Project Schedule Including Milestones

- Develop and execute field validation of image based training solutions (FY15).
- Deliver Final Technical Report (FY15).
- Transition training materials and train trainers (FY15).
- Enhance prototype system and with additional capabilities such as eye tracking and cognitive state assessment (FY16).
- Transition prototype system to TSA and other appropriate component customers (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

7

Transition Plans

- TSA Operational Training Deployment Schedule:
 - Adding improved training material to existing curriculum: 1 to 2 years
- Transition Barriers:
 - Coordination and logistics involved with accessing airports and various stakeholder organizations across TSA

Stand-off Trace Detection

- *Problem:* The General Services Administration (GSA) and Federal Protective Service (FPS) have operational requirements to detect explosives on vehicles and people prior to entry into federal facilities. Conventional explosive trace detectors, such as those deployed at aviation checkpoints, are labor and time intensive, requiring physical contact with the subject. A high-throughput, standoff screening capability is necessary to improve security measures for federal facilities against emerging explosive threats.
- *Solution:* S&T will develop standoff explosives trace detection systems for vehicles and people that will enable FPS to screen all entering vehicles for explosive residues that are indicative of possible explosive threats, without the need for additional manpower.
- *Impact:* Standoff explosives trace detection systems will provide meaningful screening of 100 percent of vehicles for indications of explosive threats without the need for additional guards.

Prior Year Key Events

- Completed EOS Photonics Preliminary Design Review (PDR) and Critical Design Review (CDR) - Widely Tunable Infrared Source (WTIRS) program.
- Completed Maxion PDR – WTIRS program.
- Completed Northwestern University PDR – WTIRS program.
- Completed Corning PDR WTIRS program.

- Completed EOS Photonics Preliminary Design Review (PDR) and Critical Design Review (CDR) – Vehicle Eye-Safe Trace (VEST) program.
- Completed Maxion PDR – VEST program.
- Completed Northwestern University PDR – VEST program.
- Completed Corning PDR – VEST program.

Current Year Key Events

- Northwestern University CDR and component laser prototype development – WTIRS program.
- Corning CDR– WTIRS program.
- EOS Photonics component laser prototype delivery WTIRS program.
- Maxion CDR and component laser prototype development – WTIRS program.
- EOS Photonics handheld standoff system (Defense Threat Reduction Agency funded) test and evaluation – VEST program.
- Physical Sciences Inc. passive infrared system (Defense Advanced Research Projects Agency funded) test and evaluation – VEST program.
- Alakai Ultraviolet Raman prototype (SBIR funded) delivery – VEST program.
- Laser eye safety evaluation tool development continuation via Phase II SBIR – VEST program.
- BAA release – VEST program.
- Polestar Technologies standoff concealed explosive developmental test and evaluation final report – VEST program.
- National Institute of Standards and Technology optical standards development.
- Massachusetts Institute of Technology Lincoln Laboratory advanced optical signatures risk reduction and analysis of contamination studies.
- Johns Hopkins University Applied Physics Laboratory safety attribution and test and evaluation methodologies.

Budget Year Key Events

- Test and evaluate EOS Photonics component laser prototype– WTIRS program.
- Northwestern University component laser prototype delivery – WTIRS program.
- Maxion component laser prototype delivery – WTIRS program.
- Corning component laser prototype delivery – WTIRS program.
- Award (3-5) BAA Phase I Contracts – VEST program.
- Conduct Advanced Feasibility Demonstrations – VEST program.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	571	6,300	7,200	6,700

Project Schedule Including Milestones

- Complete Corning widely tunable infrared light source (WTIRS) preliminary design review (PDR) (FY15).
- Complete Northwestern University widely tunable infrared light source (WTIRS) critical design review (CDR) (FY15).
- Demonstrate EOS Photonics widely tunable infrared light source (WTIRS) Prototypes (FY15).
- Demonstrate Maxion widely tunable infrared light source (WTIRS) Prototypes (FY15).
- Release Vehicle Eye Safe Trace (VEST) solicitation and complete Source Selection process (FY15).

- Complete EOS Photonics component laser prototype test and evaluation (FY16).
- Northwestern University component laser prototype delivery (FY16).
- Maxion component laser prototype delivery (FY16).
- Award (3-5) BAA Phase I Contract (FY16).
- Conduct Advanced Feasibility Demonstrations (FY16).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

The program plans to begin at TRL 3 and end at TRL 7.

Transition Plans

- WTIRS enables component technologies for VEST and person-borne applications.
- VEST will deliver GSA/FPS standoff detection capabilities for explosive residues for 100% of vehicles entering federal facilities.
- Program will adapt DOD technologies as potential, interim solutions for Department of Homeland Security components and end users.
- Program will develop additional standoff capabilities for a variety of end users and operational concepts, such as portable / handheld detection for both trace explosives and concealed person-borne explosive threats.

4. Counter Terrorist – FY 2015: \$64.650 million. FY 2016 Request: \$57.000 million. The S&T Directorate invests in the R&D technologies, methods, and procedures to counter terrorists. Efforts include R&D to identify individuals or groups that intend to conduct terrorist attacks or to illicitly move weapons, dangerous goods, and contraband. It also includes providing threat assessments of the high-consequence attack methods such as CBE that terrorists may use to attack the Nation.

A. Bioagent Threat Assessment – FY 2015: \$26.000 million. FY 2016 Request: \$25.400 million. This program addresses biological and agricultural knowledge gaps and develops defensive strategies to counter potential threats. It also supports a full spectrum of knowledge products (e.g. reports/studies) to better inform policy makers on the attributes, risks, and consequences associated with the intentional release of a biological or agricultural (livestock) agent.

Biodefense Knowledge Center (BKC)

- *Problem:* Customers from around the HSE require vetted information, knowledge and expertise to help them make decisions that involve biological sciences and bio-threats. HSE customers' information and decision needs vary considerably across DHS Components, multiple Federal, State, and local agencies.
- *Solution:* The BKC is an enduring DHS center of expertise, with knowledge products that bridge science, technology, intelligence, health threats, and law enforcement. BKC provides customer requested bio-threat and science assessments as well as in-depth analyses of biodefense issues and biotechnologies. Its key assessments and analytical products include: biological threat agent fact books; material threat assessments; a Biodefense Knowledge

Management System which extracts and develops information for multiple Federal, State, and local users.

- *Impact:* The Biodefense Knowledge Center increases the awareness and understanding of biological threats across the HSE at multiple levels of classification. This project increases the probability of preventing and minimizing the impact of biological threat attacks.

Prior Year Key Events

- Delivered upgraded Biodefense Knowledge Management System (BKMS) with user community data and finalize hosting of historical biological data for community access on three levels of classification (FOUO, Secret, and Top Secret).
- Deployed BKMS to intelligence analysts at fusion centers from two Homeland Security Intelligence Network regions (comprising 15 states total).
- Published classified Bioagent act book (electronic publication only). Completed classified Bioagent Factsheets development (65 agents).

Current Year Key Events

- Deliver two Material Threat Assessments Version 2 requested by customers within Integrated Product Team. (The Material Threat Assessments (MTAs) are developed by DHS in conjunction with HHS BARDA to project human exposures to a biological threat agent release. After releasing the first-generation MTAs in the 2000s, DHS has begun the developing second-generation MTAs. These MTAs 2.0 improve upon the methodology and coordination between the two agencies to positively inform Material Threat Determinations and use of Project BioShield funding.)
- Deploy BKMS to intelligence analysts at fusion centers at remainder of Homeland Security Intelligence Network regions (all 50 states plus 22 metropolitan areas).

Budget Year Key Events

- Develop and finalize two additional MTA Version 2 on different biological agents, as requested by customers with the Integrated Product Team.
- Expand use of BKS as trusted third party review of government biothreat research programs within and outside DHS.
- Update scientific and sensitive holdings for Biodefense Knowledge Management System.
- Host Directory of Cleared Life Scientists, listing scientists that possess security clearances.
- Finalize BKMS rollout to DHS Intelligence and Analysis State and local fusion centers (Goal is delivery of BKMS to the nation’s 77 fusion centers, begun in FY13).

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
4,800	1,600	5,433	6,000	6,000	3,000

Project Schedule Including Milestones

- Deploy BKMS to intelligence analysts at fusion centers at remainder of Homeland Security Intelligence Network regions (all 50 states plus 22 metropolitan areas) (FY15).
- Deliver two Material Threat Assessments Version 2 requested by customers within Integrated Product Team (FY15).
- Expand use of BKC as trusted third party reviewer of government biothreat research programs outside DHS (FY16).

- Finalize Material Threat Assessments Version 2, begun in FY14, for DHS Secretary and HHS. Continue to deliver tailored assessments requested by customers within Integrated Product Team (FY16).
- Update scientific and sensitive holdings for Biodefense Knowledge Management System. Expand use BKMS as host for interagency biosurveillance data sharing platform, begun in FY13-14 (FY16). Continue use of BKMS as repository for on-line, dynamic system for maintaining data about biothreat agents, per data rights, privacy and sharing agreements.
- Host Director of Cleared Life Scientists, to provide reviewers of classified life sciences projects. Continue use of BKMS to perform automated, continuous life sciences data scan to check for anomalous exchanges or data. Finalize BKMS rollout to Intelligence and Analysis (I&A) State and local fusion centers (Goal is delivery of BKMS to the nation's 77 fusion centers, begun in FY13) (FY16).
- Use BKC as trusted third party reviewer of government biothreat research programs inside and outside DHS (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

N/A

Transition Plans

BKC is an enduring center established by S&T and is not planned to transition itself.

Biothreat Characterization (BTC)

- *Problem:* The HSE lacks essential data on the characteristics of many biological threat agents, and the impact of technological advances on those characteristics. Improved data is needed to estimate the risk and consequences of a bioterrorist attack on the U.S., and to operationally plan for and respond to such an event.
- *Solution:* BTC projects provide knowledge products (technical reports) generated through laboratory experimentation describing the properties of potential bioterrorism agents that influence assessments of consequences and risk. Knowledge products are made available to U.S. Government biological hazard assessment, policy, and modeling communities and to operational elements for use in planning for and responding to natural and intentional disease outbreaks.
- *Impact:* The Biothreat Characterization project establishes and leverages innovative science-based capabilities to provide the HSE with data and knowledge products which improve pre-event planning and event-specific operational decisions. BTC provides the knowledge products and capabilities required for effective preparedness & response to current and future biological threats. The Biothreat Characterization project establishes and leverages innovative science-based capabilities to provide the HSE with data and knowledge products which improve pre-event planning and event-specific operational decisions. BTC provides the knowledge products and capabilities required for effective preparedness and response to current and future biological threats.

Prior Year Key Events

- Developed plans and conduct experimentation to address the top five highest priority knowledge gaps identified by stakeholders to provide actionable information to support to support modeling and planning including: the fate of selected high-priority biological threat agents in aerosols; the infectious dose of a high-priority threat agent in relevant model systems, evaluation of the fate of high-priority threat agents in foods of concern.
- Collection and evaluation completed of historical documents on U.S. research involving biological threat agents.
- Developed synthetic biology capabilities to support threat characterization of newly identified threats
- Developed capabilities for the characterization various powders potentially containing biological threat agents to support research and in response to a bioterrorist event.

Current Year Key Events

- Enhance Interagency and International collaboration regarding biological threat characterization.
- Develop plans and conduct experimentation to address the top ten traditional biological key threat-related knowledge gaps identified by stakeholders to provide actionable information on agent characteristics such as the fate of select bacteria, toxins, and viruses in the environment; the feasibility of agent aerosol dissemination; the requirements and limitations for an adversary's production of bacterial and viral threat agents; the survival of select deposited agents on operationally-relevant surfaces; the deposition patterns of aerosols in the respiratory system of non-human primates; development of experimental and surveillance systems to correlate animal models of infectivity and disease progression with human disease; and the development of environmental systems that will support work with animals in biocontainment in order to assess risks from zoonotic agents.
- Develop aerosol operational capability to characterize vulnerabilities associated with identified threats from BSL-3 and BSL-4 agents.
- Determine the surface stability of Ebola Virus on various operational surfaces representing PPE, medical waste, hospital surfaces, and commercial airlines, and then determine protocols for effective decontamination of operationally relevant surfaces.
- Determine the risk of aerosol or droplet transmission of Ebola Virus in hospital settings to inform PPE, health care protocols, and patient and health care worker risk of infection.

Budget Year Key Events

- Develop plans and experimentation to address additional traditional biological threat-related knowledge gap requirements identified by stakeholders to provide actionable information.
- Employ aerosol operational capabilities developed in FY15 to characterize vulnerabilities associated with additional threats.
- Address additional critical knowledge gaps on the production, formulation, dissemination, persistence, and virulence of Tier 1 biological threat agents to support the Biological Terrorism Risk Assessment (BTRA) program and other government stakeholders responsible for biodefense preparedness and response. Transition six knowledge products to the BTRA program for utilization in modeling bioterrorism risk.
- Develop additional capabilities to conduct relevant testing on the stability of biological agents when exposed to environmental conditions. Transition three knowledge products to the BTRA program for utilization in modeling bioterrorism risk.

- Implement capabilities to work with additional species of animals in biocontainment to permit the assessment of threat characteristics of human high-hazard zoonotic agents.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
17,500	8,000	12,247	14,000	11,400	18,400

Project Schedule Including Milestones

- In collaboration with the National Institutes of Health National Institute of Allergies and Infectious Diseases Integrated Research Facility (NIH NIAID IRF), characterize the deposition pattern of a range of different aerosol particle sizes in the respiratory system of non-human primates (FY15).
- Address critical knowledge gaps on the production, dissemination, persistence, and virulence of Tier 1 biological threat agents to support the Biological Terrorism Risk Assessment (BTRA) program and other government stakeholders responsible for biodefense preparedness and response. Transition four knowledge products to the BTRA program for utilization in modeling bioterrorism risk (FY15).
- Develop additional capabilities to conduct relevant testing on the stability of biological agents when exposed to environmental conditions and establish and demonstrate a capability to work with additional species of animals in biocontainment to permit the assessment of threat characteristics of human high-hazard zoonotic agents (FY15).
- Determine the feasibility of creating a model to predict virus function (i.e. pathogenicity) from genetic sequence information (FY15).
- Develop plans for experimentation to address additional traditional biological threat-related knowledge gap requirements identified by stakeholders to provide actionable information (FY16).
- Employ aerosol operational capabilities developed in FY15 to characterize vulnerabilities associated with additional threats (FY16).
- Address additional critical knowledge gaps on the production, formulation, dissemination, persistence and virulence of Tier 1 biological threat agents to support the Biological Terrorism Risk Assessment (BTRA) program and other government stakeholders responsible for biodefense preparedness and response. Transition six knowledge products to the BTRA program for utilization in modeling bioterrorism risk (FY16).
- Develop additional capabilities to conduct relevant testing on the stability of biological agents when exposed to environmental conditions. Transition three knowledge products to the BTRA program for utilization in modeling bioterrorism risk (FY16).
- Implement capabilities to work with additional species of animals in biocontainment to permit the assessment of threat characteristics of human high-hazard zoonotic agents (FY16).

Delayed Milestones

In response to U.S. efforts regarding the 2014/2015 Ebola outbreak in West Africa, a number of BTC projects were delayed from FY15 to FY16 so that all available resources (including limited financial, temporal, and capability resources) could be reallocated to address, inform, and improve the public health response to Ebola in Western Africa as well as the United States. The BTC program is limited financially, but delayed milestones are largely the result of limited laboratory and staff capabilities, specifically for viral and aerosol biology projects.

- Address critical knowledge gaps on the production, dissemination, persistence, and virulence of biological threat agents (Delayed FY15 to FY16; FY16 to FY17).

- Determine the influence of particle size on anthrax virulence for aerosol as well as ingestion methods of infection (Delayed FY15 4Q to FY16).
- Employ aerosol operational capability to characterize the infectious dose of identified viral threats (Delayed FY15 4Q to FY16).

Type of Research

Development

Technical Readiness Level

None

Transition Plans

- Stakeholders make final technical reports available to users across the Homeland Security Enterprise via the Bio-Defense Knowledge Center Management System, which is accessible.
- Final technical reports are made available to the Bioterrorism Risk Assessment (BTRA) to reduce uncertainty and improve confidence in their estimation of consequences and risk, and impact of specific biodefense investments and strategies.
- Results of Ebola stability, decontamination, and infection risks will be shared with HHS, CDC, and other public health groups to improve public health preparedness and response to current and future Ebola outbreaks/epidemics.

Bioterrorism Risk Assessment (BTRA)

- *Problem:* Homeland Security Presidential Directive 10 (HSPD-10) directs the need for the comprehensive computational analysis program to help inform investments for national strategic biodefense planning, while identifying key knowledge and capability gaps and also evaluating critical vulnerability mitigation strategies.
- *Solution:* The BTRA project produces periodic risk assessments that estimate terrorism risk as the probability of an attack occurring, and the consequences of an attack, should it occur. It incorporates the judgments of the intelligence and law enforcement communities with input from the scientific, medical, and public health communities to integrate risk as a function of threat, vulnerability, and consequences. This project is responding to the needs of interagency partners by enhancing reliance on national strategic guidance to frame the problem space; redesigning the analytic process to ensure maximal partner input; and refining, updating, and validating BTRA models. An important evolution in this process is the development of a Countermeasure Assessment and Planning Tool, which will inform assessment of the relative importance and value of various defensive options (e.g., detectors, medical countermeasures, etc.) to reduce risk associated with bioattack scenarios. A variety of rapid analysis tools are being developed to allow users to explore a variety of CONOPS and make judgments regarding which scenarios merit further investment.
- *Impact:* This project informs decision-making and shapes resource allocations across Federal agencies through the development and execution of a probabilistic risk assessment and alternative methodologies for comparison and verification. These risk assessments integrate the judgments of the intelligence and law enforcement communities (threat) with input from the scientific, medical, and public health communities to estimate the probability of an attack occurring and the consequences of an attack. The BTRA provides the data, models, tools, and analysis to evaluate and compare the potential benefits of different strategies across the biodefense solution space, and provides decision support to guide investments that lower risk of a bioterrorist attack.

Prior Year Key Events

- Gathered, incorporated, and vetted suggested changes for alternative data and models (including Bioterrorism Countermeasure Assessment and Planning Tool) with stakeholders.
- Gathered requirements from external and internal stakeholders for next generation BTRA.
- Conducted SME elicitation of law enforcement, intelligence, and operational communities to obtain data that is current of the current threat picture.

Current Year Key Events

- Release beta-version of bio-CAPT (the Countermeasure Assessment and Planning Tool) for pilot testing with three to four Federal Agency partners.
- Develop tailored interim assessments (to be published 2014-2016, as completed) that address stakeholder requests. The interim assessments will be subcomponents of the more comprehensive BTRA report (BTRA 5.0).
- Gather requirements from external and internal stakeholders for next generation BTRA, by taking an agent agnostic approach to capture risks associated with unknown and emerging threats, and to develop a robust adaptive adversary model.

Budget Year Key Events

- Improve capabilities of Bio-CAPT base on pilot test including a novice interface, ability to perform batch runs and save scenarios.
- Improve subway model to include indoor and outdoor consequences
- Develop database to improve interagency access and transparency
- Deliver comprehensive BTRA report (BTRA 5.0).

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	2,500	2,485	4,073	3,800	2,000

Project Schedule Including Milestones

- Release beta-version of b-CAPT for pilot testing with three to four Federal Agency partners (FY15).
- Develop tailored interim assessments (to be published 2014-2016, as completed) that address stakeholder requests. The interim assessments will be subcomponents of the more comprehensive BTRA report (BTRA 5.0) (FY15).
- Gather requirements from external and internal stakeholders for next generation BTRA, by taking an agent agnostic approach to capture risks associated with unknown and emerging threats, and to develop a robust adaptive adversary model (FY15).
- Improve capabilities of b-CAPT base on pilot test including a novice interface, ability to perform batch runs and save scenarios. (FY16).
- Improve subway model to include indoor and outdoor consequences (FY16).
- Develop database to improve interagency access and transparency (FY16).
- Deliver comprehensive BTRA report (BTRA 5.0) (FY16).

Delayed Milestones

- Conduct SME elicitation of law enforcement, intelligence, and operational communities to obtain data current for today’s threat picture (Initiated but delayed, projected to finalize FY15 Q3).

Type of Research

Applied

Technical Readiness Level

6

Transition Plans

- The BTRA program is an enduring analytic capability mandated by HSPD-10 and established by S&T; the program partners with the Interagency level to help guide biodefense investments to reduce vulnerability and Risk. Individual reports and tools of the BTRA program will be immediately available to the Interagency to support their strategic objectives.

Integrated Terrorism Risk Assessment (ITRA)

- *Problem:* HSPD-18 requires the Secretary of Homeland Security to “develop a strategic, integrated all-CBRN risk assessment that integrates the findings of the intelligence and law enforcement communities with input from the scientific, medical, and public health communities.”
- *Solution:* This project supports national preparedness initiatives by providing a systematic, scientifically-defensible integrated CBRN terrorism risk assessment product that provides insights into likelihoods, consequences, and relative risks of terrorism, which complements the individual class-specific terrorism risk assessments.
- *Impact:* The ITRA informs resource allocation for medical countermeasures and will be used by a broader range of Federal decision makers to support development of risk management strategies that have tangible operational impact on cross-CBRN terrorism risk such as prevention, protection, mitigation, surveillance and detection, and response and recovery activities.

Prior Year Key Events

- Finalized risk-informed study for Strategic National Stockpile (SNS) for use in establishing resource allocation priorities in determining the Stockpile’s makeup.
- Completed draft of the ITRA 3.0 for release to key stakeholders with harmonized event tree across CBRN probabilities.
- Implemented adaptive adversary in TRA risk model in response to external review and to build stakeholder confidence in the models.

Current Year Key Events

- Finalize comprehensive model updates (across threat areas) to include public health response model, economic impact, food, water, indoor and outdoor release, and initiate building an integrated Countermeasure Assessment and Planning Tool (i-CAPT).
- Gather requirements from external and internal stakeholders for next generation ITRA to target analysis with outputs that comprise greater relevance to stakeholder mission objectives.
- Deliver comprehensive 2015 ITRA, in addition to including the above updates along will feature an enhanced Intel elicitation.

Budget Year Key Events

- Deliver ITRA 4.0 Report to ITRA Working Group Stakeholders.
- Deliver ITRA CAPT software tool demonstrating the impact of CBR events.

- Deliver follow-on studies to the Risk Informed Resource Allocation Study for the SNS assessing the impact of budget optimization, detection and diagnostics.
- Deliver impact of additional federal investments in medical staffing to buy-down risk of CBRN agents.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	2,500	2,489	3,800	3,800	2,000

Project Schedule Including Milestones

- Finalize comprehensive model updates to include public health response model, economic impact, food, water, indoor and outdoor release, and initiate building an integrated Countermeasure Assessment and Planning Tool (i-CAPT) (FY15).
- Gather requirements from external and internal stakeholders for next generation ITRA to target analysis with outputs that comprise greater relevance to stakeholder mission objectives (FY15).
- Deliver comprehensive 2015 ITRA, in addition to including the above updates along will feature an enhanced Intel elicitation (FY15).
- Use CBRN Adversary Decision Model in ITRA 4.0 elicitation (FY16).
- Deliver comprehensive Integrated CBRN Terrorism Risk Assessment 4.0 Report, in addition to including the above updates along will feature an enhanced Intel elicitation (FY16).

Delayed Milestones

- Incorporate Adaptive adversary models from BTRA and RNTRA (FY14 Q4). BTRA model delayed, RNTRA model incorporated.

Type of Research

Applied

Technical Readiness Level

6

Transition Plans

The ITRA program is an enduring analytic capability mandated by HSPD-18 and established by S&T; the program partners work with the interagency to help guide WMD defense investments to reduce vulnerability and Risk. Individual reports and tools of the ITRA program will be immediately available to the Interagency to support their strategic objectives.

- B. Chemical Threat Assessment*** – FY 2015: \$7.000 million. FY 2016 Request: \$6.300 million. This program researches and identifies current and potential chemical threats to understand the risk posed to the United States by their illicit use. This program encompasses risk-based, chemical threat agent characterization programs, domestic defense strategic planning, and analytical technologies, strategies, and procedures.

Chemical Security Analysis Center (CSAC)

- *Problem:* The need exists for a single centralized repository of chemical threat information (hazard and characterization data) for analysis of the nation’s vulnerabilities to such chemical events to serve key customers.

- *Solution:* The Chemical Security Analysis Center (CSAC) conducts key analytical assessments, including hazard assessments and Material Threat Assessments (MTAs), and the Chemical Terrorism Risk Assessment. In addition, CSAC is funded to develop knowledge management capabilities such as the chemical knowledge management system, the CARD (chemical agent reactions database), and several other user-specific electronic libraries. This project will also identify, finalize, and secure the selection of a test site for a robust analysis of chlorine tank release (known as Jack Rabbit II).
- *Impact:* CSAC serves key customers such as NPPD, OHA, TSA, and I&A within DHS, as well as several Interagency partners. CSAC is the nation's first and only Federal studies, analysis, and knowledge management center for assessing the threat or hazard associated with an accidental or intentional large-scale chemical event in the American homeland.

Prior Year Key Events

- Delivered Version 2 of the CTRA Desktop Tool.
- Conducted three detailed risk analyses using the Chemical Terrorism Risk Assessment: 1) Mitigation techniques; 2) Application of Detectors for various scenarios; and 3) Food Sensitivity.
- Developed the Test Execution Plan for the Jack Rabbit II Field Trials.
- Completed market survey and analysis of computational toxicology software, methodologies, and the use of in vitro studies to support this approach.

Current Year Key Events

- Deliver Version 2 of the CARD system, incorporating requirements from the FBI chemical forensics program.
- Conduct 1-2 detailed risk analyses identified by stakeholders, using the Chemical Terrorism Risk Assessment.
- Conduct Phase I of Jack Rabbit II Field Trials.
- Develop Computational Toxicology Methodology for key toxidromes.

Budget Year Key Events

- Deliver an updated Chemical Terrorism Risk Assessment.
- Deliver 1-2 hazard assessments or material threat assessments based on customer/stakeholder requirements.
- Deliver 4-6 chemical bulletins.
- Deliver updated human toxicity estimates for a select number of high risk toxic chemical threat materials.
- Complete all chlorine testing with larger quantity releases (phase II) of Jack Rabbit II.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
4,638	4,000	5,250	7,000	7,000	6,300

Project Schedule Including Milestones

- Deliver Version 2 of the CARD system, incorporating requirements from the FBI chemical forensics program (FY15).
- Conduct 1-2 detailed risk analyses identified by stakeholders, using the Chemical Terrorism Risk Assessment (FY15).

- Develop Computational Toxicology Methodology for key toxidromes (FY16).
- Deliver an updated Chemical Terrorism Risk Assessment (FY16).
- Deliver 1-2 hazard assessments or material threat assessments based on customer/stakeholder requirements (FY16).
- Deliver 4-6 chemical bulletins (FY16).
- Deliver updated human toxicity estimates for a select number of high risk toxic chemical threat materials (FY16).
- Complete all chlorine testing with larger quantity releases (phase II) of Jack Rabbit II (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

The program plans to begin at TRL 5 and end at TRL 8

Transition Plans

Transition CTRA Desktop Version 2 to HHS, FDA, USDA, and ISCD by FY15 Q4.

- C. Explosives Threat Assessment** – FY 2015: \$14.100 million. FY 2016 Request: \$10.500 million. This program researches and identifies current and potential explosive threats to understand the risk posed to the United States, strengthens aviation security by bolstering the international aviation security system, improves security processes and technologies, and encourages partnerships with industry. It encompasses risk-based threat characterization, attribution, strategic planning, prediction of magnitude of explosive disasters, and analytical technologies, strategies, and procedures.

Aircraft Vulnerability

- *Problem:* Vulnerability of the wide variety of commercial aircraft types (e.g., wide body, narrow body, regional jet) to the broad range of conventional and emerging IED threat configurations is not thoroughly understood and/or characterized, including blast effects vulnerability of new composite aircraft structures currently entering the civil transport fleet (e.g. Airbus A380, A350, Boeing B787).
- *Solution:* Identify the minimum size of the explosive threat that would result in catastrophic aircraft loss if undetected, and develop commercial aircraft blast mitigation technology that will provide protection to commercial aircraft from explosive threats that fall outside the range of current Explosive Detection Systems (EDS) capabilities.
- *Impact:* Commercial aircraft vulnerability data collected under this project will be used by TSA to validate and refine explosives detection standards for checkpoints, checked luggage, and air cargo. TSA will ensure that EDS threat mass detection thresholds are sufficient to prevent introduction of explosive threats onboard the aircraft that would otherwise result in catastrophic aircraft loss if detonated during operational flight.

Prior Year Key Events

- Delivered Hardened Unit Load Device-R (HULD-R) prototypes.

- Delivered Commercial Aircraft Vulnerability Report, Boeing 737 Explosive Vulnerability Testing.
- Delivered Advanced Hardened Unit Load Device (HULD-A) prototype.
- Evaluated blast mitigation capability of composite Hardened Unit Load Device prototypes (HULD-R and HULD-A variants) to IED threats in checked passenger luggage and air cargo contents.
- Delivered Hardened Unit Load Device (HULD) cost benefit analysis report and analysis tool to TSA.

Current Year Key Events

- Deliver updated DHS SharePoint-based Explosive Testing Database (ETDB) to TSA.
- Conduct explosive testing on primary structure composites used in new commercial aircraft designs (e.g. B787, A380, and A350) and deliver initial report on IED blast effects on commercial aircraft composite design vulnerability.
- Conduct preliminary (unpressurized) explosive vulnerability testing on Boeing 767 wide body commercial aircraft test asset and deliver report.
- Complete testing of Modified Least Risk Bomb Location (M-LRBL) procedure on Wide Body Commercial Aircraft and deliver report.
- Complete design, fabrication, and explosive testing of explosive Threat Mitigation Unit (TMU) for U.S. Secret Service Technical Security Division (USSS-TSD) customer.

Budget Year Key Events

- Deliver updated (incorporating TSA User Feedback updates) DHS SharePoint-based Explosive Testing Database (ETDB) to TSA.
- Conduct follow-on explosive testing on primary structure composites (curved test panels) used in new commercial aircraft designs (e.g. B787, A380, A350) and deliver initial report on IED blast effects on commercial aircraft composite design vulnerability.
- Complete testing and deliver Wide Body Commercial Aircraft Vulnerability Report, Boeing 767 Explosive Vulnerability Testing.
- Deliver explosive TMU prototype(s) to U.S. Secret Service Technical Security Division (USSS-TSD) for use in operational pilot testing.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
1,219	700	1,242	1,750	1,750	1,750

Project Schedule Including Milestones

- Deliver report to TSA on Wide Body Commercial Aircraft (M-LRBL) Testing (FY15).
- Deliver updated DHS SharePoint-based ETDB to TSA (FY15).
- Conduct explosive testing on primary composite structural components used in new commercial aircraft designs (e.g. B787, A380, and A350) and deliver initial report to TSA on IED blast effects on vulnerability of commercial aircraft composite structure designs (FY15).
- Conduct initial Boeing 767 Explosive Vulnerability Testing and deliver Wide Body Commercial Aircraft Vulnerability Report to TSA (FY15).
- Fabricate TMU prototype(s) and provide to USSS-TSD for operational pilot testing (FY16).
- Deliver updated DHS SharePoint-based ETDB to TSA (FY16).

- Conduct follow-on explosive testing on primary structure composites (curved test panels) used in new commercial aircraft designs (e.g. B787, A380, A350) and deliver initial report on IED blast effects on commercial aircraft composite design vulnerability (FY16).
- Complete Boeing 767 explosive vulnerability testing and delivery report (FY16).
- Commence Boeing 757 narrow body commercial aircraft explosive vulnerability testing and deliver initial report. (FY16).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

7 (HULD technology)

Transition Plans

- Planned Demos & Deliverables/Transitions
 - Deliverable of preliminary blast testing of composite aircraft panels
 - Deliverable of Final design of reduced threat composite HULD (HULD-R)
 - Deliverable of prototype design of advanced composite HULD (HULD-A)
 - Demo – Explosive testing of explosive TMU
 - Deliverable of composite aircraft design blast testing and modeling report
- Transition Products
 - Deliver knowledge products that support requirements development, risk assessment and policy decisions (e.g. setting minimum detection requirements)
 - Deliver technology and methodologies for blast mitigation protection of commercial aircraft (e.g., Hardened Unit Load Devices, Least Risk Bomb Location Procedures)
 - DOT/FAA Airworthiness certification of finalized HULD-R design
 - Prototype explosive TMU finalized design and full-scale prototype(s) for USSS-TSD operational pilot.

Home Made Explosives Characterization

- *Problem:* The use of HME creates emerging hazards for responders and new challenges to detection and intelligence organizations. The difficulty is the almost endless amount of fuels, oxidizers, and synthesis procedures that can be combined to form an indeterminate number of HMEs, presenting an enormous problem set with respect to detection, incident management and planning for first responders.
- *Solution:* S&T investment in the HME program provides capabilities for improved prevention, detection, analysis, and decision support for homeland security operations. The program will provide HME signature data for vendor development of HME detection, threat validation data, and tools for more safely planning and managing incidents. The HME Characterization Program identifies and characterizes explosive threats and their explosives performance; collects chemical and radiographic signatures of HMEs for use in explosives detection systems training and testing; and provides input into detection standards, and certification of detection equipment for the TSA (the primary customer).
- *Impact:* Knowledge products provided by the HME Program influence TSA's Concept of Operations and policy decisions in Checked Baggage, Air Cargo, and Checkpoint domains and are leveraged in systems development, training, and testing. Program data will have a direct

impact on policy influencing the commercial availability of precursors. Pre-planning tools will help first responders and engineers more safely navigate future incidents involving HME.

Prior Year Key Events

- Delivery of penta erythritol tetranitrate (PETN) explosive characterization reports and monograph.
- Delivery of chlorates/fuel explosive characterization reports and monograph.
- Characterized the chemical, physical, and explosive properties of HME’s and reported the findings to TSA and other interagency partners.

Current Year Key Events

- Characterize the chemical, physical, and explosive properties of HMEs and report findings to TSA and interagency partners to support requirements development.
- Deliver hydrogen peroxide/foodstuffs explosive characterization reports and monograph.
- Deliver new HME detection windows to TSA for incorporation into existing and future bulk and trace explosives screening systems in coordination with the European Civil Aviation Council.
- Deliver nitrated sugars characterization report.
- Deliver select Liquid, Military, and HME explosive data to the TSA Rapid Algorithm Development program.
- Deliver/publish Improvised/Homemade Explosives (IE/HME) Safety Standards Protocols document.
- Begin explosive performance signature collection effort with the Department of Justice (DOJ) for the Chemical Facility Anti-Terrorism Standards (CFATS) policy initiative and HME Desensitization Technical Reference.
- Transition of the Interagency HME Database to reside at the National Ground Intelligence Center.

Budget Year Key Events

- Hydrogen Peroxide Region of Responsibility Recommendations.
- European-U.S. Region of Responsibility Data Collection.
- Homemade explosives Safety Standards.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
8,077	9,000	13,787	10,850	10,350	8,750

Project Schedule Including Milestones

- Characterize the chemical, physical, and explosive properties of HMEs and report findings to TSA and interagency partners to support requirements development (FY15).
- Deliver new HME detection windows to TSA for incorporation into existing and future bulk and trace explosives screening systems (FY15).
- Deliver final Nitrated Sugar report that details the physical characterization, X-ray, and Trace detection signatures (FY15).

- Deliver explosive data to the TSA Rapid Algorithm Development program for select Liquid, Military, and HME (FY15).
- Start explosive performance signature collection effort in conjunction with the DOJ (FY15).
- Evaluate the detection performances and false alarm rate (FAR) of new threats in several kinds of shapes and forms and support bulk detection improvements to current detection algorithms (FY15).
- Develop the Homemade Explosives Database (FY15).
- Conduct data exchange with Sweden to look at agents to inhibit the use of precursors for homemade explosives (FY15).
- Characterize the chemical, physical, and explosive properties of HMEs and report findings to TSA and interagency partners to support requirements development (FY16).
- Deliver new HME detection windows to TSA for incorporation into existing and future bulk and trace explosives screening systems (FY16).
- Deliver the upgraded IMPACT with a training package to enable its use by the first/emergency responder community (FY16).
- Complete final transition of the HME Database (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

The program plans to begin at TRL 6 and end at TRL 7

Transition Plans

- The development of Regions of Responsibility enables the TSA to support deployment of mature screening technology.
- Explosives characterization aids in safety information, assists with explosive detection equipment by providing data regarding explosive materials and the sensitivity of various explosive detection technologies to explosive material, and validates threats.
- The development of safety protocols will provide personnel working with and testing homemade explosives with standardized safety guidelines that will decrease the risk of accident and/or injury. This will benefit end users from the National Laboratories, Federal Bureau of Investigation, DHS, DOD, and other mission partners.
- In partnership with the FBI, HSARPA will facilitate the CFATS and explosives desensitization efforts.
- The rollout of IMPACT will enhance situational awareness, communication, and collaboration during and for security events. Transition the Homemade Explosives Database to a permanent database for use by the HME community.

D. Hostile Behavior Predict and Detect - FY 2015: \$9.200 million. FY 2016 Request: \$14.300 million. This program leverages social and behavioral science research, data, and theory to understand the determinants and timing of group conversions to terrorism and the intent to engage in violence. Knowledge from this program informs analytical, operational, and policy concerns related to terrorists and terrorist activities. This program also develops and builds the capability to noninvasively detect suspicious behavior that indicates the intent to cause harm.

Actionable Indicators and Countermeasures

- *Problem:* The United States has been attacked by violent extremists over 2,500 times since 1970. Analyses of extremist violence based on a limited number of case studies, and the effectiveness of programs developed to counter violent extremism is often not clear.
- *Solution:* S&T will collect and analyze data on extremist violence in the United States, measure the impact of Countering Violent Extremism (CVE) programs, and develop tools to support policymakers and practitioners in their efforts to counter violent extremism.
- *Impact:* New capabilities will support more efficient and accurate analysis of the threats posed by violent extremists and evidence-based CVE policies and programs.

Prior Year Key Events

- Delivered reports on factors that influence terrorist disengagement, re-engagement, and recidivism.

Current Year Key Events

- Deliver integrated database to support analysis of violent extremism in the United States at the incident, perpetrator, and geospatial levels.

Budget Year Key Events

- Transition Terrorism and Extremist Violence in the United States (TEVUS) Database.
- Complete update of data Included in TEVUS.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
3,708	N/A	1,277	1,001	1,000	1,000

Project Schedule Including Milestones

- Demo final web interface developed for the TEVUS database (FY15).
- Final report completed on surveys about public attitudes towards violent extremism and support for efforts to counter it (FY15).
- Deliver integrated database to support analysis of violent extremism in the United States at the incident, perpetrator, and geospatial levels (FY15).
- Deliver comprehensive evaluation of DHS/USG program developed to counter violent extremism (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

TRL will vary between specific portfolio projects.

Transition Plans

- Each project activity benefits from the direct involvement of DHS and interagency end users, who shape the project, ensure it continues to address their requirements, and provides feedback on all deliverables.
- No additional investment is required to transition the knowledge products this project produces, which are generated throughout the project and are being incorporated into official DHS analytic products and training materials.
- Tools such as databases will be maintained by the researchers who create them as they have been developed for the public good and their maintenance is essential to these entities' future research activities.

Hostile Intent Detection and Surveillance/Screening—Trident Spectre

- *Problem:* Approximately 1.2 million passengers fly within the United States daily. This number is projected to increase at a rate of approximately four percent per year. With passenger volumes increasing, the challenge is to increase the scale and accuracy of the existing screening processes while continuing to secure aviation and ground transportation portals without a similar increase in the number of screening personnel.
- *Solution:* S&T will develop non-invasive technologies to enable screening at speed with an increased observation/screening area (to include the entire portal). These technologies will result in faster passenger throughput in lieu of increased volume and increased screening accuracy with fewer false positives.
- *Impact:* Increased efficiency and effectiveness through screening higher passenger volumes with fewer operational personnel (force multiplier) and increased screening accuracies.

Prior Year Key Events

- Risked reduction demonstration/pilot to be conducted at the Transportation Security Administration's Systems Integration Facility (TSIF).
- Delivered market survey of video tracking software.
- Established video test bed operational partner.
- Released competitive BAA

Current Year Key Events

- Deliver report on the feasibility of video-based versus direct-based suspicious behavior detection (i.e. Centralized Hostile Intent).
- Data collection event at T.F. Green airport (Providence, Rhode Island) of behavioral indicators and person tracking across multiple cameras. The data collection effort will utilize volunteer actors (as opposed to the general public) to role play TSA specified behavioral indicators of criminal activity.
- Conduct analysis and provide a report on the outcomes of the risk reduction demonstration/pilot at the TSIF

Budget Year Key Events

- Conduct field test of Future Attribute Screening Technology (FAST) at Maryland Test Facility (MdTF)
- Award new contract for transition of FAST capabilities and research.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
12,280	N/A	2,644	4,950	5,700	8,000

Project Schedule Including Milestones

- Complete behavior data collection at T.F. Green Airport, which will be used to evaluate the potential for centralized screening of behaviors (FY15).
- Report on feasibility of video-based screening (i.e., centralized behavior screening) (FY15).
- Research Field Test of FAST at MdTF (FY15).
- Field Test of FAST at Airport (Location TBD) (FY16).
- Limited User Evaluation of FAST at Airport (Location TBD) (FY16).
- Conduct pilot tests of the remote screening protocol in cooperation with the operational customer (FY16).

Delayed Milestones

- Publication of scholarly article documenting results of prior years' Future Attribute Screening Technology (FAST) research protocols.

Type of Research:

Applied

Technical Readiness Level:

6 (at completion of research)

Transition Plans

- The end products will be transitioned to the TSA in accordance with components' acquisition strategy and per transition agreements.

Risk-based Resource Deployment Decision-aid (R2D2)

- *Problem:* The TSA employs risk-based, intelligence-driven operations to prevent terrorist attacks and to reduce the vulnerability of the Nation's transportation system to terrorism. TSA's security resources require proper allocation to create a multi-layered system of transportation security that mitigates risk and, the Federal Air Marshal Service (FAMS) requires that system to allocate its limited resources to the highest risks as the last line of defense for air, rail, subway, and water security transportation modes.
- *Solution:* R2D2 integrates multi-modal threat forecast algorithms that combine infrastructure vulnerability and consequence to the Nation into a single, interactive, visually intuitive risk assessment tool that dynamically communicates the highest, current transportation risk for TSA operations to allocate resources to counter the risk.
- *Impact:* R2D2 provides the needed risk assessment in an operationally timely fashion to enable TSA/FAMS operations personnel to assign Federal Air Marshals, and other TSA resources, to the highest transportation risk. The R2D2 solution addresses and aligns with TSA's policy to continue employing risk-based, intelligence-driven operations to prevent terrorist attacks.

Prior Year Key Events

- Finalized CONOPS of the FAMS current resource deployment.
- Developed R2D2 technical architecture.

- Implemented R2D2 Version 1.

Current Year Key Events

- Develop operational use cases for reference implementation.
- Incorporate requirements collected from end-users to design an end-user interface.
- Implement R2D2 Version 1.
- Assess Version 1 through direct user experience.
- Develop R2D2 Version 2 of the reference implementation

Budget Year Key Events

- Assess Version 2 through direct user experience.
- Incorporate requirements collected from end-users.
- Develop R2D2 Version 3.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	277	1,200	500	300

Project Schedule Including Milestones

- Apply multiple analytical algorithms to historical and current threat incidents (FY15).
- Adapt algorithms to identify future threat likelihood and location (FY15).
- Develop R2D2 system architecture (FY15).
- Release initial R2D2 version in a fully operational state sufficient for submission for TSA/FAMS Certification and Accreditation (C&A) (FY15).
- Development and testing of R2D2 Version 3 (FY16).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

The program plans to begin at TRL 5 and end at TRL 8

Transition Plans

- Federal Air Marshal Services and TSA Offices of Law Enforcement, Security Capabilities, and Intelligence and Analysis are committed to deploying R2D2 into operations. TSA/FAMS acquisition program is co-funding this development effort with in-kind support in FY14 and funding in FY15 and FY16.

Human Systems Research

- *Problem:* Technologies and advanced systems are often developed in laboratory environments and deployed with little regard to how implementation will affect the end user, to include operational physical requirements and limitations.
- *Solution:* Human Systems Research will develop synchronization between hardware, software, and human elements of the Homeland Security Enterprise. Quantitative, evidence-based research will be conducted to focus on the human as an integral element of every system

deployed with a focus on improving human-systems integration. This is accomplished through investments in key science and technology capabilities that support improved operations performance, training programs, and next generation equipment to support the Homeland Security Enterprise.

- *Impact:* The improvements developed will result in optimized performance and enable first responders and law enforcement operators to perform their mission more safely, efficiently and effectively.

Prior Year Key Events

- N/A

Current Year Key Events

- N/A

Budget Year Key Events

- Partnerships in government; Federal, State, and local will be developed to ensure resilience will be implemented into all improvements being developed under this project.
- Begin research focused on process modeling, system integration, and improving human-systems integration of identified technologies.
- Consider the use of modeling and simulations tools and techniques as predictors of human performance.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	N/A	N/A	N/A	3,000

Project Schedule Including Milestones

Analyze current and emerging human performance risks and issues in identified technology development and deployed systems (FY16).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

2

Transition Plans

Products and training materials developed will be transitioned to the First Responder communities within the Federal, State, and local governments.

Wide Area Surveillance

- *Problem:* Owners of surveillance technology face operational challenges with existing camera technology and analysis. Existing camera technology (e.g., Closed-circuit television (CCTV), Pan, Tilt, Zoom (PTZ)) is generally limited by a trade-off between image resolution and

distance, limiting scene understanding at various distances and applicable image regions for analytics. Meanwhile, as camera networks grow in size the abundance of data can actually diminish its value to response staff and forensic investigators in a time-sensitive situation. This issue can be further exacerbated from analysis of private or third-party video data, which may be incompatible with an emplaced Video Management System (VMS), due to factors such as resolution and format. Further, analytics built into most VMS architectures overpromise capability, are not customizable, and can be expensive.

- *Solution:* The Wide Area Surveillance portfolio bridges these gaps with the Imaging System for Immersive Surveillance (ISIS) and Scalable Integration of Geo-dispersed Monitoring Assets (SIGMA) projects. The ISIS camera system provides high-resolution, 360° coverage of a scene. The SIGMA system will develop an open-architecture platform for integration of video-data (from multiple sources and feeds) and allow for execution, development, and integration of third-party analytics that can be executed on-demand and as necessary.
- *Impact:* The ISIS system enables operators to detect and monitor suspicious individuals, vehicles, and objects, while maintaining a wide-area field of view that does not sacrifice resolution as physical distance from the camera increases. The SIGMA technology will result in significantly improved large-scale video data integration, access, and analysis for major incidents. It also allows for routine use to help first responders approach disaster scenes and forensic investigators collect physical evidence to identify the scale of the event and, in the case of a terrorist event, the sophistication and type of the attack vector.

Prior Year Key Events

- Identified commercial partner for ISIS transition.
- Acquired data for concept validation.
- Online demonstration of ISIS system by the Boston Police Department during the 2014 Boston Marathon
- Preliminary demonstration of SIGMA software to key stakeholders

Current Year Key Events

- Production of ISIS prototype units.
- Demonstration of most recent ISIS system at a site (Boston, North/South Station)
- Initial pilot of SIGMA prototype utilizing video data belonging to a member of the stakeholder team.

Budget Year Key Events

- Initial concept demonstration of large scale video data analysis.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
2,500	N/A	90	2,000	1,500	2,000

Project Schedule Including Milestones

- Technology demonstration of ISIS system at North (or South) Station in Boston (FY15).
- Initial concept demonstration of large scale video data analysis (FY15).
- Production of ISIS prototype units (FY15).
- Additional SIGMA pilot with increased scope and with a different partner (FY 16).

Delayed Milestones

- ISIS commercial transition
- Funding delays

Type of Research

Developmental

Technical Readiness Level

6

Transition Plans

- Venues that have expressed interest in ISIS have security budgets which include periodic technology refreshes for surveillance systems. Mass transit grant funding and DHS acquisition budgets may be used to procure units.
- Project is identifying commercial partner(s) to manufacture the technology and promote in the marketplace.

E. Identity Management Program FY 2015: \$8.350 million. FY 2016 Request: \$0.500 million. This program researches and develops biometrics-based technologies, procedures, CONOPS, and information to identify known terrorists and criminals and prevent their movement into and out of the United States through effective, interoperable multi-biometrics in diverse areas, including border crossings, ports of entry, and visa application sites.

Non-Cooperative Biometrics

- *Problem:* Due to increasing travel and evolving border threats, there is an identified capability need to assist operations with screening technology to increase efficiency and agent safety by developing technologies to identify non-cooperative individuals.
- *Solution:* S&T will develop technical specifications for biometric systems that identify persons encountered by operational end users. In addition, S&T will evaluate face recognition systems and report on their capabilities in operationally realistic environments.
- *Impact:* Provide component end-users with technical specifications for biometric systems designed to identify persons prior to being processed, increasing security, and promoting agent safety.

Prior Year Key Events

- Collected and grounded truth face video data.
- Analyzed face video data using vendor algorithms.
- Resilient Systems Division (RSD) OBP Tactical Awareness and Biometrics Build (TABB) Activity Charter signed.
- Final Technical Specification Document delivered to CBP, OBP for acquisition.

Current Year Key Events

- Video face data collections.
- Report on vendor face recognition algorithm performance.

Budget Year Key Events

- Ground truth dataset

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	1,100	2,000	3,900	500

Project Schedule Including Milestones

- Video data collection plan & Institutional Review Board/Privacy Impact Statement (IRB/PIA) approval (FY14).
- Run operational data against face recognition algorithms (FY15).
- Evaluation report (FY15).
- Engineer rugged design prototypes and integrate with biometric sensors (FY15).
- Assess performance of detection / recognition algorithms (FY16).
- Assess ability to cluster bulk data (FY16).
- Transition Technical Specifications to USBP (FY16).
- Integrate biometric system into operational environments (FY16).
- Perform Human Systems Testing on Biometric System under the auspices of an accredited Institutional Review Board (IRB) (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

6

Transition Plans

- Refine functional requirements and system design based on Operational T&E results and deliver Technical Specifications Document to OBP for system acquisition.
- Final report detailing face recognition system performance will be shared with the entire USG.

5. Cyber Security/Information Analytics – FY 2015: \$77.010 million. FY 2016 Request: \$66.974 million. Conducts and supports RDT&E and transition for advanced cybersecurity and information assurance technologies to secure the Nation’s current and future cyber and critical infrastructures. These solutions include user identity and data privacy technologies, end system security, research infrastructure, law enforcement forensic capabilities, secure protocols, software assurance, and cybersecurity education.

A. Cyber Security Research Infrastructure – FY 2015: \$13.200 million. FY 2016 Request: \$11.000 million. This program provides the infrastructure necessary to support the cyber R&D that is critical for matching the growing and adapting threat. Much like testing for CBE R&D, special testbeds and data sets must be made available to the cyber research community, and unlike CBE, there is not a large selection of facilities or capabilities like missile ranges or BSL-4 laboratories that can be used to safely test malicious code somewhere other than on the live Internet or on real data.

Experimental Research Testbed

- *Problem:* Due to the increasing sophistication of cybersecurity attacks, it is necessary to test new cybersecurity defenses and research in a repeatable manner at a realistic scale in order to determine the best approach. Furthermore, such research and experimentation must be conducted in a secure environment to allow for testing against “live” threats, without endangering the larger Internet.
- *Solution:* Provide the Defense Technology Experimental Research (DETER) Testbed, which provides a contained “virtual Internet” environment to conduct large scale, repeatable cybersecurity research experiments.
- *Impact:* As the only freely available testbed of this scale, DETER improves attack mitigation and confinement strategies and the quality of new cybersecurity technologies as it is used by hundreds of organizations, including other government agencies, for test and evaluation purposes. Furthermore, DETER is also used as a tool for academia to enhance the educational experience of cybersecurity students, providing a realistic “hands-on” experimentation platform for thousands of university students.

Prior Year Key Events

- Extend federation of testbed facilities to support Process Control System focused experiments.

Current Year Key Events

- Expand experiment and test tools to allow for quicker experimentation cycles and greater insight.

Budget Year Key Events

- Increase overall testbed capacity and scaling capabilities

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
3,962	2,962	4,795	3,940	4,000	3,500

Project Schedule Including Milestones

- Expand experiment and test tools to allow for quicker experimentation cycles and greater insight (FY15).
- Increase overall testbed capacity and scaling capabilities (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

N/A

Transition Plans

The Experimental Research Testbed project is a resource for the cybersecurity research community and does not currently have a plan to transition, but rather an enduring infrastructure level resource.

Research Data Repository

- *Problem:* Without access to large scale, real-world data, cybersecurity technology developers and evaluators often have to determine the value of their technical solutions based on anecdotal evidence or small-scale test experiments.
- *Solution:* Develop and maintain the Protected Repository for the Defense of Infrastructure Against Cyber Threats (PREDICT), the only freely-available, legally and ethically collected, repository of large-scale datasets containing real network traffic and system logs for use by cybersecurity researchers.
- *Impact:* PREDICT is helping users accelerate the design, production, and evaluation of next-generation cybersecurity solutions, including commercial products by allowing solutions to be based on more comprehensive real-world data. Further, PREDICT is improving the ethics of cybersecurity research on a larger scale through the development of an ethics framework and disclosure control principles available to the broader community.

Prior Year Key Events

- Create a program structure to support the cataloging, hosting and/or mirroring of publicly available research grade datasets.
- Develop draft agreement supporting limited trials with several international partner countries.

Current Year Key Events

- Development of several analytical/policy papers that address fostering Information and Communication Technology Research (ICTR) ethics from principles to practice in the form of Institute of Electrical and Electronics Engineers (IEEE) and other community working groups.
- Creation of a legal framework and infrastructure to facilitate live streaming of data sets.
- Expand mobile data availability to support context aware computing paradigms.

Budget Year Key Events

- Create a program structure to support the cataloging, hosting and/or mirroring of International datasets.
- Establish agreements with the EU or individual countries in Europe.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
3,556	3,500	3,846	3,515	4,000	4,000

Project Schedule Including Milestones

- Support the creation of three new international agreements to facilitate sharing of datasets internationally (FY15).
- Create a program structure to support the cataloging, hosting and/or mirroring of International datasets (FY16).
- Agreements with the EU or individual countries in Europe (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

N/A

Transition Plans

The Research Data Repository is a resource for the cybersecurity research community and does not currently have a plan to transition, but rather an enduring infrastructure level resource.

Software Assurance Marketplace

- *Problem:* There is a need to develop more secure and resilient software code as defects in code cost billions of dollars to fix each year, particularly when these defects are not identified until late in the software development process, and introduce vulnerabilities into the systems in which the code is deployed.
- *Solution:* Initiate the Software Assurance Marketplace (SWAMP), to improve development activities by offering a collection of software quality assurance tools and assurance services for developers to test and evaluate code for weaknesses and vulnerabilities; and provide tool developers an environment where they can test, calibrate, and improve the coverage area in their tools.
- *Impact:* SWAMP will reduce the number of vulnerabilities found in software, by applying the principle of continuous assurance throughout the software development process, affording developers the opportunity to detect bugs and defects in their code before it leaves their desktops.

Prior Year Key Events

- Delivered the initial operating capability of SWAMP.

Current Year Key Events

- Conduct second SWAMP Community User Meeting to improve the community's understanding of the SWAMP capability.
- Transition Code Pulse (developed as part of the Software Quality Assurance activity in the Improving Foundational Elements of Cybersecurity project) into the SWAMP.
- Transition Code Hawk (developed as part of the Software Quality Assurance activity in the Improving Foundational Elements of Cybersecurity project) into the SWAMP to measure and provide benchmark for C Source Code static analysis tools.

Budget Year Key Events

- Develop, build, and test procedures for initial package/tool set and new customers.
- Deliver Version 3 of Continuous Software Assurance Laboratory (CoSALab).
- Conduct 3rd SWAMP Community User Meeting to improve the community's understanding of the SWAMP capability.
- Transition Tunable Information Flow (developed in the Software Quality Assurance project) capabilities to the SWAMP, which includes run-time analysis.
- Implement additional open source static analysis tools into the SWAMP.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
5,078	2,925	4,216	4,345	5,200	3,500

Project Schedule Including Milestones

- Provide a mobile code assessment platform for vetting mobile applications (Android & iOS) for security weaknesses (FY15).
- Provide the ability to run dynamic analysis on software to allow users to run more comprehensive assessments (FY15).
- Develop, build, and test procedures for initial package/tool set and new customers (FY16).
- Deliver Version 3 of CoSALab (FY16).
- Conduct third SWAMP Community User Meeting to improve the community’s understanding of the SWAMP capability (FY16).
- Implement additional open source static analysis tools into the SWAMP (FY16).
- Transition Tunable Information Flow (developed in the Software Quality Assurance project) capabilities to the SWAMP, which includes run-time analysis. (FY16)

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

N/A

Transition Plans

The SWAMP has been set up as a resource for the cybersecurity research community and thus does not currently have a plan to transition but rather is envisioned as an enduring infrastructure level resource.

B. Cyber Transition and Outreach FY 2015: \$8.960 million. FY 2016 Request: \$6.700 million. This program accelerates the transition of new and existing cybersecurity technologies, including open-source solutions, into commercial products and services, through robust internal assessments, evaluations, pilots, and experiments. This program also improves the human element of cybersecurity through multi-disciplinary research into workforce development, education, team and multi-team training.

Cybersecurity Outreach

- *Problem:* As cybersecurity becomes significantly more important each year, there is an increasingly growing need to improve awareness, training, and education.
- *Solution:* Improve cybersecurity training and education of the cybersecurity workforce. In particular, S&T sponsors cybersecurity competitions for high school and college students and runs activities to identify and address educational needs of those individuals working on Computer Security Incident Response Teams (CSIRTs).
- *Impact:* S&T’s sponsored cybersecurity competitions improve the quality and skill set of the next generation of cybersecurity professionals by providing an opportunity for students in a

competitive environment and exposing them to the latest defense technologies and solutions, including those developed by S&T. S&T’s work with CSIRTs will improve the performance of these groups by identifying needed knowledge, skills, and abilities for key CSIRT roles, providing recommendations for optimal performance, and developing and transitioning decision aids into commercial use.

Prior Year Key Events

- Deliver initial research results of dynamics and effectiveness development of CSIRTs.
- Engage with internal DHS customers and relevant Government wide organizations to develop a strategy to identify emerging cyber security threats and develop a methodology for scenario development for use in innovation competitions.
- Pilot and deploy S&T funded visualization, network analysis and open source technologies within customer network infrastructures.

Current Year Key Events

- Deliver a series of tools and capabilities for transition to on-going DHS supported competitions.

Budget Year Key Events

- Test DHS S&T funded technologies in cyber gaming challenges

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	1,000	1,748	2,481	1,500	1,700

Project Schedule Including Milestones

- Conduct the 10th annual National Collegiate Cyber Defense Competitions (NCCDC) (FY15).
- Transition CSIRT handbook to user community to improve skills, dynamics, and effectiveness (FY15).
- Perform workforce vetting pilot with the FBI through the cybercompex.org web portal (FY15).
- Develop and integrate automation technologies for streamlining the development of interactive and dynamic cybersecurity awareness storylines (CyberWISE) (FY15).
- Test DHS S&T funded technologies in cyber gaming challenges (FY16)

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

TRL will vary between specific portfolio projects.

Transition Plans

- The developed CSIRT best practices and guidebook will be transitioned and available for use by all CSIRT teams. Funding for cybersecurity competitions at the high school and collegiate level is viewed as an enduring need to improve the quality of the future cybersecurity

workforce and therefore there is no current plan to transition S&T’s activities in this area, however, other developed technologies and tools will continue to be deployed and used within the competition frameworks.

Transition to Practice

- *Problem:* Each year the Federal Government spends a significant amount of money on cybersecurity research. However, only a minimal amount of that research transitions into operational and commercial products.
- *Solution:* Transition research that addresses imminent needs in cybersecurity systems that impact national security. These activities include test and evaluation of technologies, setting up forums to introduce technologies to potential transition partners, and funding pilots of technologies in a variety of operational environments.
- *Impact:* By creating a heightened focus around transition, technology that could have otherwise “sat on the shelf” is now introduced to partners and end users who can take advantage of solutions to enhance the cybersecurity of the systems the Nation relies on. S&T is leveraging millions of dollars of research investment while ensuring that technologies and solutions developed with federal research dollars meet operational needs to protect the Nation’s critical infrastructure and systems.

Prior Year Key Events

- Design and conduct the first phase of a cybersecurity net technical assessment.
- Conduct four to six cybersecurity collaboration events.
- Conduct 5 industry specific technology demonstrations with the public and private sectors to include the Finance and Energy sections.

Current Year Key Events

- Identify and test/pilot/deploy at least two S&T Cyber Security Division funded technologies based on customer requirements.
- Pilot three to six technologies in production environments in the Homeland Security Enterprise.
- Provide three to five red-teaming reports and vulnerabilities assessments.

Budget Year Key Events

- Conduct five industry specific technology demonstrations with the public and private sectors to include the Finance and Energy sectors.
- Transition three to five technologies via license or open source in order to make commercially available.
- Pilot three to six technologies in production environments with public or private sector partners.
- Conduct a comparative analysis of past red-teaming efforts and develop cross-cutting lessons learned.
- Conduct four to six collaboration events.
- Provide two to three red-teaming reports and vulnerabilities assessments.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
2,794	5,338	10,706	11,108	7,460	5,000

Project Schedule Including Milestones

- Identify, test, pilot, and deploy at least two S&T Cyber Security Division funded technologies based on customer requirements (FY15).
- Pilot 3-6 technologies in the public or private sector networks (FY15 and 16).
- Provide up to three red teaming reports and vulnerability assessments (FY15).
- Transition three technologies to the market place via open source or licensing agreement (FY15).
- Transition three to five technologies via license or open source in order to make commercially available (FY16).
- Pilot three to six technologies in production environments with public or private sector partners (FY16).
- Identify six to ten technologies that are candidates for transition (FY16).
- Conduct a comparative analysis of past red-teaming efforts and develop cross-cutting lessons learned (FY16).
- Conduct four to six collaboration events (FY16).
- Conduct five industry specific technology demonstrations with the public and private sectors to include the Finance and Energy sectors (FY16).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

TRL will vary between specific portfolio projects.

Transition Plans

Technologies going through the Transition to Practice project will transition in a variety of manners including commercially available products, open source, and direct use by Federal agencies depending on the technology and community need.

- C. *Information Analytics*** – FY 2015: \$5.000 million. FY 2016 Request: \$9.000 million. This program researches, analyzes, and develops technologies to strengthen interoperable communications and improve effective information sharing at all levels of government.

Predictive/Decision Analytics

- *Problem:* DHS Component organizations have identified numerous gaps in information analytics that would vastly improve operational efficiencies and homeland security missions.
- *Solution:* S&T is leveraging academic, government and commercial solutions as well as investing in national laboratory research to solve some of the more difficult challenges identified by DHS Components. HSARPA has developed an analytics center where operational problems identified by the DHS Components can be defined and potential solutions examined. The analytics center utilizes authorities to conduct experiments to expose key information regarding future potential architectures, system performance, as well as potential security and privacy issues.

- *Impact:* Delivery of technical and information services that assist DHS Components with key information architecture strategy, provide data for alternatives analysis, and validate vendor claims with respect to information analytics in far less time and with much greater accuracy than DHS Components.

Prior Year Key Events

- Completed assessment of 43 Big Data requirements for DHS components.
- Evaluated distributed storage systems, graph processing and big data analytics capabilities.
- Completed third party risk computation study for TSA, initiated independent risk modeling, and supported operational evaluation for third party risk computation services.
- Introduced leading edge information ingestion capabilities, NoSQL data bases, and analytic services models for DHS Components.
- Established general purpose laboratory environment for in-house evaluations of DHS and vendor algorithm performance.

Current Year Key Events

- Develop and deliver cross cutting solutions for application to DHS component missions.

Budget Year Key Events

- Lead Department Data Analytics Strategy Development
- Study the effectiveness of in-memory architectures for improving algorithm performance across the Department
- Document DHS High Performance Computing requirements.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	5,469	10,000	5,000	9,000

Project Schedule Including Milestones

- Transition third Party Screening to S&T Testing and Evaluation Group (FY15).
- Complete Entity Resolution Study (FY15).
- Multi-level Security Framework to ICE Export Enforcement Coordination Center (E2C2) to guide implementation for cross-domain solution (FY15).
- Analytic evaluation and analysis of alternatives for Big Data Analytic tools (FY15).
- Evaluation of Entity Risk Scoring Algorithms (FY15).
- Demonstrate the viability of distributed information analytics across DHS component storage architectures (FY16).
- Deliver predictive analytics capabilities to DHS components (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

6

Transition Plans

Deliver targeted exploratory, developmental, and operational capabilities directly to sustained component operations. Many deliverables will be transitioned through the commercial market place in the form of commercially supported open source products.

- D. Network and System Security and Investigations** – FY 2015: \$43.350 million. FY 2016 Request: \$40.274 million. This program produces technologies needed to secure information and software that resides on the networks and systems that make up the Internet and provide analytic tools for the law enforcement community to investigate crimes committed in cyberspace.

Cybersecurity for Law Enforcement

- **Problem:** A significant barrier for law enforcement is keeping abreast of technology changes. New technology, both hardware and software, is released into the market at a very rapid pace and used in criminal and terrorist activity almost immediately.
- **Solution:** Develop new technologies, capabilities, and standards to assist law enforcement in investigations and the forensic analysis of technologies used in criminal activity, and to aid organizations in mitigating the potential impact and damage posed by insider threat activity.
- **Impact:** These technologies, capabilities, and standards will reduce the amount of time needed to analyze technology used in illicit activity, reduce the cost of acquisition for law enforcement agencies whose budgets are stretched thin, and narrow the technology capability gap between criminals and law enforcement.

Prior Year Key Events

- Commence development of, and deliver, link analysis tools for mobile device forensics.
- Conduct testing on a Database Monitoring System algorithm prototype.

Current Year Key Events

- Deliver tool capable of performing a forensic comparison of individual storage profiles across an organization to detect anomalous behavior.
- Test and evaluate deployable cloud forensics solutions and new capabilities in partnership with law enforcement customers.

Budget Year Key Events

- Completion of additional open source module development for law enforcement forensics
- Completion of Vehicle Infotainment and Navigation Forensics project including transition of enhanced capabilities
- Transition of hand-held hardware to law enforcement customer for operational use
- Transition of additional protocol support capabilities
- Completion of online fraud and illicit commerce study
- Completion of operational pilot of Insider Threat Database Managing System Data Exfiltration Monitoring System at selected government agency
- Transition of Insider Threat Study for DHS Office of Security

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
6,088	4,100	6,126	9,704	9,800	8,400

Project Schedule Including Milestones

- Complete controlled laboratory testing of database management system data exfiltration anomaly detection tool (FY15).
- Complete and transition field-ready, rapid extraction version of the mobile device flash memory forensics tool (FY15).
- Completion of additional open source module development for law enforcement forensics (FY16)
- Completion of Vehicle Infotainment and Navigation Forensics project including transition of enhanced capabilities (FY16)
- Transition of hand-held hardware to law enforcement customer for operational use (FY16)
- Transition of additional protocol support capabilities (FY16)
- Completion of online fraud and illicit commerce study (FY16)
- Completion of operational pilot of Insider Threat Database Managing System Data Exfiltration Monitoring System at selected government agency (FY16)
- Transition of Insider Threat Study for DHS Office of Security (FY16)

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

TRL will vary between specific portfolio projects.

Transition Plans

End-users and customers test developed tools and technologies and at times, the project provides limited hardware/software licenses to support transition. Otherwise, tools and technologies are transitioned into commercially available tools or integrated into law enforcement field deployment.

Data Privacy and Identity Management

- *Problem:* Agencies and organizations are experiencing a lack of processes and tools to share and coordinate information effectively because of an inadequate amount of security, trust, usable tools, policies, and procedures.
- *Solution:* Enhance the security of information sharing environments and the protection of users by improving authentication for persons, hardware devices, and software applications across all levels of Government.
- *Impact:* This project provides interoperable access control technologies that provide a cost effective solution to all levels of government, including State and local levels. Additionally, this work enables information sharing without compromising the privacy of individuals (i.e. Personally Identifiable Information) or organizations.

Prior Year Key Events

- Identify and prioritize privacy research and development projects through continued collaboration with DHS component and Headquarters Privacy Offices.
- Conduct proof-of-concept demonstrations to validate the use of open standards based on Federal, State, local, public, private sector logical and physical access control use-case and capability needs.

Current Year Key Events

- Issue BAA for specific topic areas with a focus on data privacy technologies.
- Conduct system integration and interoperability tests and evaluations for capability needs provided by local, tribal, State, and DHS operational components through the Identity Management Testbed.

Budget Year Key Events

- Deliver a tool, technology or knowledge product for securing personally identifiable information (PII) within the department of homeland security.
- Transition research and development capabilities, especially using mobile devices, to the communities of interest in providing fine-grain secure information access and physical access.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
2,599	2,597	4,994	4,837	8,500	4,500

Project Schedule Including Milestones

- Architect three use cases for enhancing the operational capabilities of analysts in fusion centers by examining privacy data on law enforcement information sharing mission requirements (FY15).
- Enhance the policy reasoning engine that reasons over laws and regulations around the usages of sensitive data such as PII by demonstrating interoperability with National Information Exchange Model (NIEM) ontologies and extensions and adding reporting tools (FY15).
- Deliver a tool, technology or knowledge product for securing PII within the department of homeland security (FY16)
- Transition research and development capabilities, especially using mobile devices, to the communities of interest in providing fine-grain secure information access and physical access (FY16)

Delayed Milestones

- Conduct pilots using the developed communications standard and cost-effective solution that improves the verification process of emergency response officials' authorization to access an incident scene. Transition an end-to-end solution to FEMA and State/locals to transmit emergency responder attributes (e.g. skills and certifications) to mobile handheld devices, providing access control at incident scenes.
 - The pilots were conducted in FY13; however, the transition to FEMA is still on-going as FEMA's Certification and Accreditation to operationalize the S&T prototype just recently completed. A portion of the solution is now live but FEMA is currently working through the remaining standard protocols that were developed.

- Provide a demonstration and transition the identity verification gateway to the Finance Sector in order to improve the identity proofing process and reduce the risk of identity fraud for financial services.
 - The demonstration has been completed and S&T is currently working through the finalization and approval of the transition package.

Type of Research

Developmental

Technical Readiness Level

TRL will vary between specific portfolio projects.

Transition Plans

Transition plans in this project consist of a mixture of open source releases of technology and knowledge products as well as direct transitions to Federal Government agencies such as FEMA.

Disrupting Cyber Attacks

- *Problem:* As cyber threats and crime have become more persistent and sophisticated, there is a need to invest in research, technologies, and solutions that address the root cause of known threats.
- *Solution:* Develop fundamentally different approaches to improving the cybersecurity of critical infrastructure with activities focused on areas such as understanding cyber economic incentives and the development of dynamic new system defenses.
- *Impact:* By disrupting the status quo through radically different techniques, S&T will be able to address some of the most difficult cybersecurity issues.

Prior Year Key Events

- Develop initial draft models of cyber economic incentives, and the coupling of cyber economics and cyber/user behaviors.
- Deliver analytic models for cybersecurity investment (private sector focus).
- Develop and conduct initial testing of a commercially viable and operational ready network appliance for enterprise-level implementation.
- Deliver nature inspired algorithms for testing malware detection in computer networks.

Current Year Key Events

- Complete testing and large scale experimentation of Bio-Inspired Distributed Decision Algorithms based on social insect behavior.
- Complete transition of network traffic monitoring capability to at least one Information Sharing and Analysis Center (ISAC) member group.
- Complete development of software to tag, track, and block access to digital objects.
- Initial development of a research community oriented on the different areas of cyber economic incentives.
- Provide recommendations for policies, procedures, (and regulations) that incentivize the appropriate level of private sector cybersecurity investment.
- Development of economic models that can be transferred for use by different users and organizations.
- Complete and publish for collaboration draft Moving Target Defense (MTD) architectures.

- Prototype hardware/software system elements to expand MTD capabilities.

Budget Year Key Events

- Development of tools for the automated analysis of sensor data, strategy planning execution, human-in-the-loop components for Planning and Analysis functions, and execution based on utility measurements of actual MTD strategies.
- Release of cybercrime datasets; replication of the data in PREDICT data repository; development of specialized visual analytics capabilities for these data and their dissemination through the FBI’s National Cyber-Forensics & Training Alliance (NCFTA).
- Web-enabled software releases of cybercrime indicators for use by outside law enforcement agencies.
- Transition to and commercialization by industry of specified subsystems, for example, automatically detecting websites vulnerable to cybercrime and hijacking.
- Evaluation of eight major case studies and industry survey of 200 companies using statistical and econometric methods, and delivery of the first wide-scale study of cyber security investments throughout the U.S. business community.
- Publication of new models for determining optimum levels for cyber security investment to include internal and external factors.
- Completion of capabilities for security risk assessment and prediction, cyber insurance policy design, and the creation and continued refinement of cyber-risk actuarial tables.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	9,300	6,151	5,562	4,450	1,774

Project Schedule Including Milestones

- Complete testing and large scale experimentation of Bio-Inspired Distributed Decision Algorithms based on social insect behavior (FY15).
- Complete transition of a bio-inspired network traffic monitoring capability for installation and testing at DOE (FY15).
- Complete development of software to tag, track, and block access to digital objects (FY15).
- Initial development of a research community oriented on the different areas of cyber economic incentives (FY15).
- Provide recommendations for policies, procedures, (and regulations) that incentivize the appropriate level of private sector cybersecurity investment (FY15).
- Complete development of economic models that can be transferred for use by different users and organizations (FY15).
- Prototype hardware/software system elements to expand MTD capabilities (FY15)
- Develop design document detailing design choices for a federated defense command and control infrastructure that enables visibility, accessibility, and understandability in federated resources (FY15).
- Development of tools for the automated analysis of sensor data, strategy planning execution, human-in-the-loop components for Planning and Analysis functions, and execution based on utility measurements of actual MTD strategies (FY16)
- Release of cybercrime datasets; replication of the data in PREDICT data repository; development of specialized visual analytics capabilities for these data and their dissemination through the FBI’s NCFTA (FY16).

- Web-enabled software releases of cybercrime indicators for use by outside law enforcement agencies (FY16).
- Transition to and commercialization by industry of specified subsystems, for example, automatically detecting websites vulnerable to cybercrime and hijacking (FY16).
- Evaluation of eight major case studies and industry survey of 200 companies using statistical and econometric methods, and delivery of the first wide-scale study of cyber security investments throughout the US business community (FY16).
- Publication of new models for determining optimum levels for cyber security investment to include internal and external factors (FY16).
- Completion of capabilities for security risk assessment and prediction, cyber insurance policy design, and the creation and continued refinement of cyber-risk actuarial tables (FY16).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

TRL will vary between specific portfolio projects.

Transition Plans

A variety of methods will be used to transition the tools, technologies, and methods produced under this project to include commercialization, transition to specific Federal Government organizations and both limited and open source licensing, depending on the product.

Improving Foundational Elements of Cybersecurity

- *Problem:* Many of today's networking and information technologies contain inherent vulnerabilities, a legacy of a time when systems were designed without security in mind.
- *Solution:* To focus R&D activities on the characteristics essential to the desired end states of trustworthy systems with activities that include securing cloud based systems, improving the quality of software assurance tools, and developing metrics that aid organizations in measuring the security of their cyber systems.
- *Impact:* This project will develop new cybersecurity technologies and solutions that are designed with security built in from the ground up rather than needing to secure a technology's vulnerabilities once it is already in operational use.

Prior Year Key Events

- Study the feasibility of applying new metrics to existing security processes.
- Transition software quality assurance technologies to commercial products.

Current Year Key Events

- Develop test and evaluation facilities to investigate new and existing capabilities of software analysis.
- Develop a systematic method to map natural language security controls to Common Weakness Enumerations (CWE).

- Develop software/Tools to enhance usability and security of identity and user authentication.

Budget Year Key Events

- Delivery of Active-defense Resilient Mission-Oriented (ARMOR) Cloud platform software, data sets, analyses and documentation
- Produce tools for identifying, analyzing, and rectifying latent vulnerabilities in software
- Transition Tunable Information Flow to the SWAMP

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
6,603	1,875	8,938	7,159	7,800	10,000

Project Schedule Including Milestones

- Develop test and evaluation facilities to investigate new and existing capabilities of software analysis (FY15).
- Develop a systematic method to map natural language security controls to CWE (FY15).
- Develop software/tools to enhance usability and security of identity and user authentication (FY15).
- Delivery of Active-defense Resilient Mission-Oriented (ARMOR) Cloud platform software, data sets, analyses and documentation (FY16).
- Produce tools for identifying, analyzing, and rectifying latent vulnerabilities in software (FY16).
- Transition Tunable Information Flow to the SWAMP (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

TRL will vary between specific portfolio projects.

Transition Plans

Developed tools, technologies, and methods will be transitioned in a number of ways to include integration into existing open source tools, release as open source resources, and commercialization.

Leap Ahead Technologies

- *Problem:* As cyber-attacks and crime are constantly evolving, Government and industry face a continuing need to respond to emerging cyber threats.
- *Solution:* Identify, incubate, and execute early research projects that may significantly advance current capabilities through moderate risk and high-payoff outcomes in areas such as Open Source technology development, mobile device security, and defense against distributed denial of service attacks.
- *Impact:* These activities give organizations the ability to quickly shift to and respond to new and potential threats by focusing attention on cutting edge issues that are not currently being

addressed. For example, efforts in the area of mobile device security focus attention on the vulnerabilities this computing platform presents to an organization as their use becomes more prevalent.

Prior Year Key Events

- Developed a resource for open source acquisition and accreditation in the Government.
- Updated the inventory of open source software being used across the Government.
- Developed technologies that will improve the survivability and resiliency of cyber systems while experiencing attacks, failures and other accidents.

Current Year Key Events

- Complete transition of mobile security solutions initiated in FY13.
- Complete evaluation of existing mobile security solutions being used in the Homeland Security Enterprise.

Budget Year Key Events

- Produce an inventory of key open source security technologies that are of vital interest to government and critical infrastructure systems.
- Provide a guide for helping open source developers provide cost effective security solutions to government IT managers.
- Transition Software Based Roots of Trust Mobile Device Security Technology into the Commercial Market Place
- Demonstrate the ability to withstand a 500 Gigabits per second (Gbps) Denial of Service Attack directed at medium scale organization such as a government agency, regional bank, or other commercial organization.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
3,155	2,100	7,735	7,092	12,800	15,600

Project Schedule Including Milestones

- Publish a guide for federally funded researchers developing open source security technologies (FY 15).
- Complete an open source security gaps and solutions report for Unmanned Autonomous Vehicles (UAVs) (FY15).
- Conduct initial technical assessment across multiple and different leap-ahead technology areas (FY 16).
- Use assessment results and evaluation results to identify new leap-ahead technology directions for research (FY 16).
- Produce an inventory of key open source security technologies that are of vital interest to government and critical infrastructure systems (FY16).
- Provide a guide for helping open source developers provide cost effective security solutions to government IT managers (FY16).
- Transition Software Based Roots of Trust Mobile Device Security Technology into the Commercial Market Place (FY16).

- Demonstrate the ability to withstand a 500 Gigabits per second (Gbps) Denial of Service Attack directed at medium scale organization such as a government agency, regional bank, or other commercial organization (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

TRL will vary between specific portfolio projects.

Transition Plans

The transition plans for this project will adjust dependent on the individual efforts which are addressing cutting-edge cybersecurity issues. Currently, the primary focus is open source release of technologies and knowledge products.

6. First Responder/Disaster Resilience – FY 2015: \$102.589 million. FY 2016 Request: \$93.176 million. Work includes reduction of vulnerability of critical infrastructure, key leadership, and events to terrorist attacks and other hazards; working with State, local, tribal, and territorial governments to secure their information systems; working with local and regional partners to identify hazards, assess vulnerabilities, and develop strategies to manage risks associated with all hazards; increasing the state of preparedness of State, local, regional, tribal, and territorial partners, as well as nongovernmental organizations, the private sector, and the general public; advancing and improving disaster emergency and interoperable communications capabilities; and, improving the capabilities of DHS to lead in emergency management.

- A. Bioagent Attack Resiliency** – FY 2015: \$35.300 million. FY 2016 Request: \$30.800 million. This program provides advanced planning; develops CONOPS; develops and provides capabilities to support forensics, laboratory response, personnel protection, and decontamination; and utilizes exercises and training for responding to and recovering from a biological disaster. This program includes actions to limit the spread of disease among animal species to protect the United States economy.

Bio Event Recovery

- *Problem:* The Emergency Responder and Recovery worker communities need operational tools to respond to and recover from biological agent events. Currently there are only limited and time-consuming means of cleaning up large areas and critical assets after a biological event.
- *Solution:* This project will assess requirements and potential technology solutions for biological agent clean-up, including the feasibility of modifying COTS technologies, developing strategies and methods for rapid recovery, and demonstrating protocols for rapidly determining the extent of contamination to inform remediation actions and the establishment of risk-based clearance goals.
- *Impact:* Bio Event Recovery will provide public health officials, transit system authorities, environmental cleanup managers, and emergency management at the Federal, State, and local levels with field-tested decision-support tools, recovery strategies, and methods for decontamination of critical infrastructure. It will deliver operational guidance that enables facility and transit system owners and operators to decontaminate and return to service essential

facilities and critical assets, including aircraft, subway and passenger rail cars, buses, and emergency vehicles, among others, following a chemical or biological agent incident.

Prior Year Key Events

- Initiated planning of and preparations for Field Demonstrations to establish efficacy and operational parameters of current decontamination technologies for recovery of subway system rolling stock.
- Initiated planning of fate and transport field tests in a subway system to enhance capability of existing dispersion and airflow models to predict extent of contamination and enable faster start of remediation actions.

Current Year Key Events

- Conduct a large field test in a major subway system to validate the ability of updated dispersion and airflow models, combined with targeted environmental sampling, to rapidly map extent of contamination following a biological agent event in the subway.
- Initiate evaluation of decontamination technologies for rolling stock recovery and area isolation methods in limited locations of a partner subway.
- Demonstrate ability of composite sampling and an improved rapid viability PCR technique to speed a clearance process through reduction and better prioritization of environmental samples requiring traditional laboratory analysis (i.e., culturing).

Budget Year Key Events

- Conduct evaluation of decontamination technologies and area isolation methods in limited locations of a partner subway or surrogate location.
- Release draft interim guidance document for interagency feedback.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
9,375	7,147	6,261	5,000	5,000	4,000

Project Schedule Including Milestones

- Validate ability of updated dispersion and airflow models, combined with targeted environmental sampling, to rapidly map extent of contamination following a biological agent event in the subway (FY15).
- Initiate evaluation of decontamination technologies and area isolation methods in limited locations of a partner subway (FY15).
- Demonstrate ability of composite sampling and an improved rapid viability PCR technique to speed a clearance process through reduction and better prioritization of environmental samples requiring traditional laboratory analysis (i.e., culturing) (FY15).
- Validate ability of updated dispersion and airflow models, combined with targeted environmental sampling, to rapidly map extent of contamination following a biological agent event in the subway (FY16).
- Assess updated sampling and decontamination capability against customer goals (>25 percent reduction in samples for lab analysis; decontamination efficacy achieves “no detection of viable spores” to meet interim EPA/CDC clearance goal) (FY16).
- Draft interim guidance document (FY16).

Delayed Milestones

Conduct agent fate and transport field tests in a subway system to update capability of existing dispersion and airflow models to predict extent of contamination and enable faster start of remediation actions. Due to delay in assignment of funding to the project under FY14 continuing resolutions, this milestone is now scheduled for FY15 Q3.

Type of Research

Applied

Technical Readiness Level

5

Transition Plans

DHS will transition concepts of operation, field-tested technology solution recommendations, and standard operating procedures (SOPs) to the local transportation emergency personnel, and the EPA. Transition will occur via a series of workshops held on location of the transportation systems to demonstrate and exercise use of the guidance and SOPs. A Unified Command comprised of local, State, and Federal participants will direct the implementation of remediation guidance and decision-support tools in a clean-up event.

Bioforensics

- *Problem:* Bioforensics research and development is required to improve the ability to identify and characterize source material collected from a bio-crime in order to pursue legal prosecution against the responsible party (or parties). This research provides investigators such as FBI and USSS with critical tools that provide investigative leads for attribution.
- *Solution:* This project develops advanced forensic capabilities to determine the source and production method of biological threat agents (BTAs) collected from crime scenes. Specifically, the project develops protocols for characterization and identification of BTAs, and utilizes a robust sample management, molecular signatures, and physical/chemical analysis research program. Bioforensics R&D is currently focused on establishing a methods-based approach to BTA characterization, which does not depend on prior knowledge of the organism and can detect novel and/or emerging organisms. Establishment of this approach includes development of orthogonal approaches to agent characterization initiation of an effort to build a national sequence database for whole genome comparison and development of computational algorithms for data analysis.
- *Impact:* The Bioforensics R&D project leads national research efforts in microbial forensics and transitions analytical techniques to the National Bio-forensics Analysis Center (NBFAC) and other government stakeholders.

Prior Year Key Events

- Transitioned forensics assays and/or signatures for all CDC-designated category A and B bacterial and viral pathogens.
- Developed procedures to interrogate samples and identify production-related signatures for multiple components of the agent production process.
- Established the Microbial Forensics Encyclopedia, a query-able database containing forensic typing signatures and virulence data for biological agents.
- Developed improved vacuum sampling filter and front-end modification and distribute to all FBI field offices for use in investigative sample collection.

Current Year Key Events

- Develop and populate databases for comparative whole genome analysis and host genome subtraction of select agents for forensics characterization.
- Develop and transition mass spectrometry-based methods for identifying production-related signatures of organisms used in a biocrime to bioforensics operations.
- Develop and transition computational methods for analyzing metagenomic data.
- Identify gaps in and develop new methods for toxin detection and characterization.

Budget Year Key Events

- Develop analytical standards for whole genome sequencing.
- Fill gaps in infectious organism biology and publish results to support legal admissibility of analytical results into court.
- Develop methods that support definitive bioforensics identification and characterization for emerging, enhanced, chimeric, engineered and purely synthetic threat agents to NBFAC.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
11,049	4,000	4,870	4,000	6,500	6,500

Project Schedule Including Milestones

- Develop computational methods for analyzing metagenomic data (FY15).
- Identify gaps in toxin detection and characterization technologies (FY15).
- Transition mass spectrometer-based methods of characterizing biological toxins (ricin and abrin) used in a biocrime to bioforensics operations (FY15).
- Develop analytical standards for whole genome sequencing (FY16).
- Fill gaps in infectious organism biology and publish results to support legal admissibility of analytical results into court (FY16).
- Develop methods that support definitive bioforensics identification and characterization for emerging, enhanced, chimeric, engineered, and purely synthetic threat agents to NBFAC (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

The program plans to begin at TRL 4 and end at TRL 6.

Transition Plans

- This project provides NBFAC and law enforcement agencies with the required tools and methods to analyze bioagent samples involved in a biological terrorist attack or crime. This project also provides enhanced scientific data and analysis for legal admissibility into the U.S. courts.

National Bioforensics Analysis Center (NBFAC)

- *Problem:* The anthrax mailings of 2001, demonstrated the need for a dedicated capability to conduct the scientific analysis and support the traditional forensic analysis of evidentiary samples from biocrime and bioterror investigations or from an actual event to support attribution investigations. This capability must provide high quality, validated processes and methods that meet admissibility requirements for federal prosecution of crimes involving biological agents.
- *Solution:* The NBFAC, located at the NBACC, is the Nation’s lead facility for technical analysis of samples from biocrime and bioterror investigations. NBFAC has established the necessary dedicated staff, equipment and biocontainment laboratories to provide scientific data to support attribution investigations. The NBFAC provides a 24/7 capability using ISO 17025 accredited processes, agent based assays and genomics to identify and characterize traditional, non-traditional, emerging, genetically engineered and synthetic biological agents. NBFAC's ISO 17025 accredited capabilities ensure rigorous chain-of-custody, third party review and quality-controlled procedures to ensure the integrity of evidentiary samples and their analysis.
- *Impact:* NBFAC provides Federal law enforcement agencies with centrally coordinated and validated capabilities for sample handling, sample processing, and bioforensic analyses of evidentiary material derived from biocrime and bioterror investigations or from the actual use of a biological agent.

Prior Year Key Events

- Provided 24/7 bioforensic casework support.
- Completed capability for the identification and characterization of rare variant strains via sequencing to support bioforensic casework.

Current Year Key Events

- Provide 24/7 bioforensic casework support.
- Develop/demonstrate an operational capability to characterize individual components of a sample to support the analysis of: limited sample, non-cultureable agents, rare variants, and metagenomics.
- Transition mass spectrometer-based toxin identification capability from Bioforensics R&D project.

Budget Year Key Events

- Provide 24/7 bioforensic casework support.
- Establish capability for the identification and characterization of rare variants and quasi species to support bioforensic casework.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
13,639	8,333	8,483	5,875	6,500	6,500

Project Schedule Including Milestones

- Provide 24/7 bioforensic casework support (FY15).
- Develop/demonstrate an operational capability to characterize individual components of a sample to support the analysis of: limited sample, non-cultureable agents, rare variants, and metagenomic (FY15).

- Transition mass spectrometer-based toxin identification and production deduction capability from Bioforensics R&D project (FY15).
- Continue to provide 24/7 bioforensic casework support (FY16).
- Develop metagenomics and host based capabilities to support bioforensic casework (FY16).

Foreign Animal Disease Vaccines, Diagnostics, and Countermeasures

- *Problem:* This project directly addresses HSPD-5 and HSPD-9 by ensuring that USDA and other first responders in the animal agriculture community have the countermeasure tools needed to safely and effectively respond to and recover from foreign animal and zoonotic disease outbreaks.
- *Solution:* New and next-generation countermeasures are developed and transitioned directly to USDA response labs or through veterinary biologic industry partners for commercialization and access by USDA. This project plans to complete the regulatory requirements (master-seed, pre-licensing serials, clinical trials) for additional foot and mouth disease (FMD) serotypes/subtype molecular vaccine candidates. It also coordinates with animal health industry partners on regulatory development programs for vaccine candidates for African swine fever (ASF), classical swine fever (CSF), and zoonotic diseases including Rift Valley fever and Henipavirus.
- *Impact:* This project strengthens the defense of the U.S. agricultural infrastructure by developing new and next- generation countermeasures (vaccines and diagnostics) to protect the livestock industry against FMD and other high-consequence FADs. Efforts from this project will provide data to support the regulatory licensing and/or use of new countermeasures by USDA in the event of a high-consequence FAD outbreak in the United States.

Prior Year Key Events

- Proof of concept cattle serology interference study completed for Trivalent molecular adenovirus vectored FMD vaccine.
- FMD serology assay deployed to National Animal Health Laboratory Network (NALHN)
- Commercial partner in place for FMD diagnostic licensed assay compatible with FMD mono-, multi- and panvalent vaccines.
- International Workshop held to discuss requirements and study design for International FMD Vaccine Trial project.

Current Year Key Events

- Adenovirus vectored foot & mouth disease (AdFMD) master seed viruses USDA approved.
- Country selection process for International FMD Vaccine Trial project initiated.

- Additional proof of concept efficacy studies for FMD multivalent or ASF monovalent vaccine candidates.
- Report on the current status of science and product development of broad spectrum antivirals, biotherapeutics, immunomodulators and pan-valent vaccines.

Budget Year Key Events

- Adenovirus vectored foot and mouth disease product licences (multiple).
- Adenovirus vectored foot and mouth disease vaccines for initiation of international field trial (vaccination of animals)

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
13,846	11,000	10,932	14,125	12,300	13,800

Project Schedule Including Milestones

- Transition the production of second serotype for the Human Adenovirus Type 5 (Ad-5) vector FMD vaccine to industry partners for development and regulatory processes (FY15).
- Produce master seeds for three additional (8th – 10th) serotypes (FY15).
- Conclude assessment of broad spectrum countermeasure alternatives to address emerging disease threats (FY15).
- AdFMD product licenses (multiple) (FY16).
- Initiation of international field trial (vaccination of animals) (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

The program plans to begin at TRL3 and end at TRL 7.

Transition Plans

Vaccines developed are transitioned to industry for commercial production in the U.S. and marketing in endemic countries to ensure availability in the United States in the event of a foreign animal disease outbreak. Commercial partners are engaged in the early stages of development to assess commercial viability.

- B. Chemical Attack Resiliency** – FY 2015: \$5.000 million. FY 2016 Request: \$2.000 million. Provides advanced planning; develops CONOPS; develops and provides capabilities in forensics, laboratory response, personnel protection, and decontamination; and utilizes exercises and training for responding to and recovering from a chemical disaster.

Chemical Forensics

- *Problem:* There is a need to provide timely and comprehensive forensic support to investigations of chemical terrorist and criminal acts by collecting, preserving, analyzing, and matching chemical samples collected at scenes with samples obtained from people, places, and other events, as well as production sources. The Supreme Court has rules that it must be

demonstrated that chemical forensics and attribution findings are sufficiently reliable for admissibility in judicial proceedings.

- *Solution:* The Chemical Forensics project develops and maintains a robust and enduring national capability for the collection, preservation, and processing of chemical threat agents and associated evidence to provide comprehensive and timely forensic analysis and attribution. This project is incrementally developing and transitioning additional collection and preservation methods and devices, as well as expanded laboratory analytical methods to provide the capability to address the numerous chemical threat agents of interest in a prioritized manner.
- *Impact:* This project is providing law enforcement with the capability to promptly conduct chemical forensics analyses and attribute terrorist acts to their source, and thus providing highly valuable investigative leads that can identify perpetrators and prevent follow-on and copycat attacks.

Prior Year Key Events

- Development and transition of a Chemical Sampling Guidebook for use of law enforcement and first responders.
- Development of a Relevant Accrued Chemical Threats Studies (REACTS) (Ver. 0.7.2) database on CD-ROM.
- Published and transitioned to customers of at least four Chemical Forensics Standard Methods for the collection or analysis of Chemical Threat Agents of interest.
- Published at least two Chemical Forensics articles in relevant scientific journals.

Current Year Key Events

- Publishing and transition to customers of at least four Chemical Forensics Standard Methods for the collection or analysis of Chemical Threat Agents of interest.
- Publishing of at least two Chemical Forensics articles in relevant scientific journals.
- Development of an expanded REACTS database on CD-ROM.
- Development and transition of a Chemical Sampling Kit for distribution to chemical attack crime scene personnel.

Budget Year Key Events

- Publishing and transition to customers of at least four Chemical Forensics Standard Methods for the collection or analysis of Chemical Threat Agents of interest.
- Publishing of at least two Chemical Forensics articles in relevant scientific journals.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
4,718	2,643	3,478	3,500	2,000	2,000

Project Schedule Including Milestones

- Publish and transition to customers at least four Chemical Forensics Standard Methods for the collection or analysis of Chemical Threat Agents of interest (FY15).
- Publish at least two Chemical Forensics articles in relevant scientific journals (FY15).
- Provide a Chemical Sampling Guidebook for use of law enforcement and first responders both in electronic and hard copy (FY15).
- Publish and transition to customers at least four Chemical Forensics Standard Methods for the collection or analysis of Chemical Threat Agents of interest (FY16).

- Publish at least two Chemical Forensics articles in relevant scientific journals (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

The program plans to begin at TRL 3 and end at TRL 4

Transition Plans

Performers are strongly encouraged to publish the results of research efforts in a relevant scientific journal, if possible. Final reports and methods are provided directly to primary customer (FBI) and archived in Chemical Library maintained at Chemical Security Analysis Center, Aberdeen Proving Ground (APG), Maryland.

- C. ***Explosives and Radiological/Nuclear (Rad/Nuc) Attack Resiliency*** – FY 2015: \$3.250 million. FY 2016 Request: \$3.500 million. This program provides advanced planning, develops CONOPS, develops advanced materials, and funds exercises and training for responding to and recovering from a disaster employing nuclear or radiological explosives.

Radiological/Nuclear Response and Recovery (RNRR)

- *Problem:* The detonation of a Radiological Dispersal Device or an Improvised Nuclear Device, would pose tremendous challenges to the first responder community and HSE, and have high consequences to the economy and national security posture. The presence of radiation during an emergency drastically increases the complexity of response operations, and requires advanced data collection and specialized capabilities to ensure the safety of the public and responders.
- *Solution:* Increase responder preparedness for radiological incident response and recovery operations by working with partner agencies, Federal interagency working groups, and first responders to identify impactful research and development opportunities that address technology and capability needs in the areas of radiological response management, incident characterization, initial response capabilities, medical care/triage, casualty/evacuee care, impacted area stabilization/control, and site cleanup/decontamination.
- *Impact:* This research and development will improve radiological response capabilities at both the local, State, and national level, improve Government understanding of impacts and risks, and find technological solutions to radiological capability gaps and mission needs. It will also increase preparedness and responder capabilities in advance of an incident and minimize the impact of a radiological or nuclear detonation.

Prior Year Key Events

- Completed first responder prioritization of existing radiological/nuclear response mission requirements, and worked with technologists and subject matter experts to identify and scope current/emerging solutions.
- Finalized the Rad/Nuc Response and Recovery Investment Plan for Fiscal Years 2015-2019, and initiated priority efforts.

Current Year Key Events

- Execute top priorities from the Rad/Nuc Response and Recovery Investment Plan and initiate the development of program/project management documents for future fiscal years based on responder and interagency priorities.

Budget Year Key Events

- Continue to fund Investment Plan priorities and conduct review of existing technology used by specialized radiological response operators to identify technologies and tools with potential for increasing operational capabilities of State/local agencies.
- Work closely with the Federal interagency to ensure Rad/Nuc Response and Recovery research and development projects meet the operational requirements of end users and assist in filling identified gaps and needs.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	4,928	5,000	3,250	3,500

Project Schedule including Milestones

- FY15
 - Develop communications networks to share data between response organizations
- FY16
 - Develop scientific response guidance for radiological contamination containment and early phase waste management
 - Develop bilateral agreements with key international partners and organizations
 - Research radiological response decision making requirements to better understand how technical data can be interpreted and rapidly integrated into tools and products for local officials
 - Identify post incident multi-modal information dissemination requirements to determine technology improvements for radiological response coordination and release of public messaging

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

TRL will vary between specific portfolio projects.

Transition Plans

- Leverage existing radiological training and preparedness organizations to assist in distributing and integrating developed technology and knowledge products into State/local rad/nuc preparedness and response activities:
 - DOE National Laboratories
 - FEMA - Emergency Management Institute
 - Center for Radiological/Nuclear Training
 - Defense Threat Reduction Agency

- Utilize project partners to connect first responders with Federal agencies and specialized radiological assets that will assist them during a radiological response:
 - Environmental Protection Agency’s Regional Field Coordinators
 - National Guard Civil Support Teams
 - Interagency Modeling and Atmospheric Assessment Center (IMAAC)
 - National Nuclear Security Administration (NNSA) – Federal Radiological Monitoring and Assessment Center (FRMAC)
- Transition Barriers:
 - Unit price
 - Life cycle cost
 - Integration of knowledge products and technology into existing plans and preparedness efforts

D. First Responder Capability – FY 2015: \$17.900 million. FY 2016 Request: \$21.800 million. This program develops technologies, information, procedures, and CONOPS to aid first responders, emergency managers, and incident commanders as they respond to hazardous situations. It assists the emergency response communities to establish requirements and tests technologies and assesses them for usability to help make the technologies available across all first responder communities.

First Responder Technologies/Trident Spectre

- *Problem:* The response environment that our Nation’s first responders operate in on a day to day basis is constantly changing and requires an ongoing evaluation of needs, required capabilities, and potential investments and/or innovations, to allow them to conduct their missions more safely, effectively, and efficiently. Due to the lengthy process it normally takes to commercialize technology that fully meet these challenges, there is a need to rapidly develop technologies that address high priority capability gaps identified by Federal, State, local, and tribal first responders.
- *Solution:* Identify high priority needs, develop prototype solutions, and conduct operational field assessments of next generation technologies to address gaps, with the goal of rapidly fielding technologies that meet at least 80 percent of the operational requirement in a 12 to 18 month timeframe.
- *Impact:* This will strengthen the response community’s ability to protect the homeland, respond to disasters, and to save lives through the increased availability and reliability of technology for first responders.

Prior Year Key Events

- Developed readily accessible, high-fidelity simulation tools to support training and exercises in incident management and response for an active school shooting scenario.
- Began development of technology to provide the ability to remotely monitor the tactical actions and progress of all responders involved in the incident in real time.
- Used the PPE Strategic Plan to begin development of protective clothing and equipment for all first responders that protects against multiple hazards.

Current Year Key Events

- Complete development of an improved structural firefighter glove, to provide improved dexterity and don/doff ability.

- Complete development of a low light covert camera for law enforcement, to provide ICE and other law enforcement agencies with a non-existent capability.
- Complete development of an internet protocol encoder, which provides the ability to stream data from the low light camera in real time, at a low cost.

Budget Year Key Events

- Commence development of a thermal imaging camera that integrates with first responder self-contained breathing apparatus (SCBA).
- Conduct a body-worn electronics study that analyzes data pertaining to the impact that a rapidly growing number of wireless devices has upon the first responder environment.
- Complete development and transition readily accessible, high-fidelity simulation tools to support training and exercises in incident management and response.
- Complete development and testing of a low-power microwave system that assist search and rescue personnel detect and located the small movements from breathing and the heartbeat of a buried victim following disasters.
- Develop a gun holder device that mimics the movements and reactions of a human firing a gun; the goal of this development is to reduce wear and tear on personnel, allow for more consistent test results, and enhance testing productivity.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
8,669	4,798	10,947	7,978	11,400	16,300

Project Schedule including Milestones

- FY16:
 - Gather requirements and start prototype development for the following efforts: Personal Protection equipment base-layer ensemble (2), accountability and proximity system that will aid in firefighter safety, thermal imaging camera integrated with a self-contained breathing apparatus, body-worn electronics interference, simultaneous radio transmissions, integration of field-based hazard detection, three dimensional IED vehicle mapping, self-detecting and decontaminating PPE, improved PPE protection around interfaces.
 - Perform Operational Field Assessment for “New Starts” projects (five total)
 - Gather requirements and start prototype development for “New Starts” projects (six total)

Delayed Milestones

Type of Research

Developmental

Technical Readiness Level

7

Transition Plans

The program’s main stakeholders are Federal, State, local, tribal, and territorial first responders who do not generally make bulk group purchases or enter into technology transition

agreements, due to the uncertain nature of funding availability. Therefore, the First Responders Group works with the vendor at the onset of the project to develop a commercialization plan that will require that the vendor invest internal funds to transition the technology to the first responder community.

Response and Defeat Operations Support (REDOPS)

- *Problem:* IEDs are generally easy to develop, difficult to combat, and cause damage to life and/or property.
- *Solution:* Establish a collaboration effort with the FBI to conduct systems analysis approach involving explosives countermeasures experts from all levels of government and direct Research, Development, Testing & Evaluation (RDT&E) of technologies needed by State and local bomb squads (SLBS).
- *Impact:* The new capabilities developed as well as the performance and training standards will help protect and save the lives of State and local bomb techs and the public. In addition, the outputs associated with this project will provide SLBS the confidence and authority to perform activities associated with response and defeat operations.

Prior Year Key Events

- N/A

Current Year Key Events

- Convene C-IED Requirements Review Panel.
- Perform RDT&E on Camera Boom for robots.
- Update Vehicle-borne IED (VBIED) Tool Kit.

Budget Year Key Events

- In collaboration with the FBI, conduct Domestic Controlled Urban Testing and Evaluation of Electronic Countermeasures (ECM) technologies for use by SLBS.
- Support FBI ECM Acquisition for support of SLBS.
- Initiate three dimensional Scanning Technology for VBIED.
- Conduct technology assessments of three SLBS technologies.

Funding History

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	N/A	N/A	1,500	1,500

Project Schedule including Milestones

- FY16
 - Gather requirements and start prototype development for the following efforts: three dimensional Scanning Technology; Enhanced Render Safe Tools, Disposable Grid Aim; Portable X-ray Systems.
 - Perform Operational Field Assessment for “New Starts” projects.
 - Gather requirements and start prototype development for “New Starts” projects.

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

Transition Plans

The program's main stakeholders are Federal, State, local, tribal, and territorial bomb squads who do not generally make bulk group purchases or enter into technology transition agreements, due to the uncertain nature of funding availability. Therefore, REDOPS works with the government partners, end-users, and the vendor at the onset of each activity to develop a transition plan to ensure State and local bomb squads have the confidence and authority to perform activities associated with response and defeat operations.

Tech Clearinghouse

- *Problem:* S&T must maintain effective communication with the first responder and emergency preparedness and response communities in order to gather necessary information for its program and to keep those communities informed about the technologies and knowledge products the Directorate is developing on their behalf.
- *Solution:* A three-pronged communications effort that includes:
 1. FirstResponder.gov: S&T's premiere online portal for sharing information about its own projects and initiatives as well as outside technology-related programs and events of interest to first responders
 2. First Responder Communities of Practice (FRCoP): a vetted online forum that enables first responders to collaborate and share best practices while also providing: 1) developers with operational requirements and information needed to design and manufacture increasingly useful tools and technologies, as well as 2) users with information related to procuring, deploying, and maintaining technologies and training for their proper use
 3. Outreach and Engagement: an ongoing suite of communications activities that enables S&T to gain a fuller understanding of the capability gaps, needs and requirements of first responders and thus strengthen its focus on essential technologies with the greatest potential for transition to use.
- *Impact:* Tech Clearinghouse increases first responder awareness of the Directorate's work, facilitates the flow of important information throughout the emergency response community, and enables the Directorate to design and manage projects that truly meet its mission. It is a cost-effective, multi-channel communications effort that steadily expands S&T's reach into stakeholder communities.

Prior Year Key Events

- Develop a prototype social media aggregator tool and demonstrate it through a pilot program.
- Refreshed FirstResponders.gov website that included an improved search capability, added a document library, and included links to key resources (e.g. grants and training information, SAVER, etc.) for first responders.
- Launched a social media experiment with Facebook to increase traffic to firstresponder.gov

Current Year Key Events

- ***FirstResponder.gov***
 - Refresh FirstResponders.gov website to add new pages for Anthrax Preparedness for First Responders, Next Generation First Responder, video capability through YouTube, and other enhanced pages.
 - Continue the social media experiment with Facebook, increasing traffic to FirstResponder.gov.
 - Leverage new S&T Microsite on DHS.gov to promote content on FirstResponder.gov
 - Continue to support and enhance the development of FRG presence on current and future social media pages (i.e., Facebook, Twitter, YouTube, etc.) with the intent of increasing traffic to FirstResponder.gov.
 - Produce project-based 100-second and other videos targeted to the first responder community.
 - Implement and refine the development of partnerships with the public and private sectors to facilitate and create efficiencies to collect feedback and reviews on responder safety and knowledge products that could evolve into new requirements.
- ***First Responder Communities of Practice***
 - Continue outreach and support to community administrators.
 - Continue to provide reports on community and user activities.
 - Continue the addition of new communities and users.
 - Continue outreach to academic institutions and associations to identify collaboration opportunities and prospective members.
 - Continue to support the various communities on FRCoP by uploading relevant materials, including blog posts, documents, and bookmarks, and by collaborating with community administrators to enhance or provide additional structure as needed.

Budget Year Key Events

- ***FirstResponder.gov***
 - Continue to refresh FirstResponders.gov website to add new pages and capability as needed to reach the broadest first responder audience.
 - Expand the social media experiment with Facebook, increasing traffic to FirstResponder.gov.
 - Continue to leverage the S&T Microsite on DHS.gov to promote content on FirstResponder.gov.
 - Continue to support and enhance the development of FRG presence on current and future social media pages (i.e., Facebook, Twitter, YouTube, Instagram, etc.) with the intent of increasing traffic to FirstResponder.gov.
 - Continue producing project-based videos targeted to the first responder community.
 - Implement and refine the development of partnerships with the public and private sectors to facilitate and create efficiencies to collect feedback and reviews on responder safety and knowledge products that could evolve into new requirements.
- ***First Responder Communities of Practice***
 - Continue outreach and support to community administrators.
 - Continue to provide reports on community and user activities.
 - Continue the addition of new communities and users.
 - Continue outreach to academic institutions and associations to identify collaboration opportunities and prospective members.

- Continue to support the various communities on FRCoP by uploading relevant materials, including blog posts, documents, and bookmarks, and by collaborating with community administrators to enhance or provide additional structure as needed.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
3,284	5,616	2,273	2,000	5,000	4,000

Project Schedule including Milestones

- FY15
 - Develop and publish the ORDs for each of the First Responder Resource Group (FRRG) identified capability gaps following FRG’s Solution Development Process
 - Implement and refine the development of partnerships with the public and private sectors.
 - Collect feedback and reviews on responder safety and knowledge products that could evolve into requirements.
 - Conduct outreach to the first responder community by interacting with professional homeland security, public safety, responder, and criminal justice associations such as the Interagency Board (IAB), the National Public Safety Telecommunications Council (NPSTC), the International Association of Chiefs of Police (IACP), the International Association of Fire Chiefs (IAFC), etc.
 - Further outreach to the first responder community through FirstResponder.gov and the First Responder Communities of Practice.
 - Facilitate engagement with S&T program managers and first responders
 - Publish and make the Project Responder 4 report available to the practitioner community.
 - Produce narrow-channel video programming targeted to the first responder community in the United States.
 - Develop and produce international first responder programming in cooperation with those nations with which S&T has bi-lateral agreements, and make that programming available to FRG’s first responder constituency.
- FY16
 - Update FirstResponder.gov with relevant content, including internal and external information on first responder related projects/programs and increase usage by first responders via marketing.
 - Increase membership in Communities of Practice and the extension of Communities of Practice to DHS operational elements.
 - Meet and implement the goals of the FRG social media strategy.
 - Support and enhance the development of FRG presence on current and future social media pages (i.e., Facebook, Twitter, LinkedIn, and GovLoop).
 - Oversee and improve as necessary the collection of feedback and reviews on responder safety and knowledge products that could evolve into requirements through a public/private partnership.
 - Conduct meeting(s) (in person and/or virtual) of the FRRG.
 - Conduct FRRG work group/task group meetings (in person and/or virtual).
 - Facilitate the prioritized identification of cross cutting first responder capability gaps.

- Develop and publish the ORDs for each of the FRRG identified capability gaps following CORE's SDP.
- Conduct outreach to the first responder community by interacting with professional homeland security, public safety, responder, and criminal justice associations such as the IAB, NPSTC, IACP, IAFC, etc.
- Conduct outreach to the first responder community through FirstResponder.gov and the First Responder Communities of Practice.
- Facilitate engagement with S&T program managers and first responders.
- Produce narrow-channel video programming targeted to the first responder community in the United States.
- Develop and produce international first responder programming in cooperation with those nations with which S&T has bi-lateral agreements, and make that programming available to FRG's first responder constituency.

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

N/A

Transition Plans

- Continue to leverage the Firstresponder.gov website to inform the first responder community about ongoing R&D efforts and provides a secure network and collaboration platform. In addition, this project will support FRG's technology roadmap development process by soliciting capability gaps and developing requirements from the first responders themselves.

E. Information Sharing and Interoperability – FY 2015: \$14.639 million. FY 2016 Request: \$14.300 million. This program creates an integrated information sharing architecture and links that architecture to interagency efforts to prevent terrorism while protecting privacy, civil rights, and civil liberties.

Cross Border Communications

- *Problem:* Coordinating responses and sharing information for situational awareness and decision making during critical incidents involving multiple agencies on both sides of the United States border is a challenge.
- *Solution:* Conduct carefully designed, robust experiments to identify how best to address issues that make it difficult to share essential capabilities across the border when bi-national responses are essential.
- *Impact:* Nations will better handle cross-border technology and policy issues and will leave behind trusted relationships, collaborative processes, and international technology solutions. Binational coordination is extended to public safety issues that simultaneously affect both nations, regardless of where incidents occur.

Prior Year Key Events

- The Canada-U.S. Resiliency Experiment III (CAUSE III) was conducted in November 2014. CAUSE III is built on the lessons learned from CAUSE I and II, and addressed improving

interoperable communications (Land-Mobile Radio, Data, GIS), resource management/sharing protocols, and to develop a cross-border Concept of Operations (CONOPS). The outcomes included:

- Conducting planning sessions of the Communications Interoperability Working Group (CIWG),
- Building upon CAUSE II, the Canada-U.S. Resiliency Experiment III involved different Canadian and U.S. Federal, State, and local agencies and systems/software applications and continue to demonstrated the ability to exchange information;
- Demonstrating enhanced resilience through improved interoperable shared situational awareness during major events;
- Demonstrating the use of deployable communications capabilities on both sides of the Canada-U.S. border to support emergency response;
- Executing CAUSE III as a catalyst to build trust relationships in support of the Beyond the Border Action Plan; and
- Build enhanced cross border trust relationships.

Current Year Key Events

- CAUSE IV will include data and a stronger focus on voice communications interoperability, including the use of social media, virtual working groups to support operations, and further testing of deployable communications capabilities on both sides of the border.
- The development of a CONOPS will result from the efforts of CAUSE IV. This CONOPS will be further refined and validated for the follow on CAUSE V activities.
- With CAUSE “experiments” occurring in CAUSE I through III, it is anticipated that CAUSE IV will culminate in an actual exercise, perhaps with all previous CAUSE participants.

Budget Year Key Events

- CAUSE V will be designed to independently validate and verify (IV&V) the CAUSE CONOPS developed in CAUSE IV.
- Identify sensor requirements required by first responders.
- Develop training and exercise plans to document sensor needs.
- Perform a training exercise and document requirements within an After Action Report of Findings.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	N/A	N/A	300	300

Project Schedule including Milestones

- FY15
 - CAUSE IV Design Plan
 - Develop CAUSE CONOPS.
 - CAUSE IV Exercise.
 - Develop CAUSE CONOPS.
 - CAUSE IV Exercise.

Technical Readiness Level

6

Transition Plans

The transition plan for the CAUSE activities is to compile the best practices and lessons learned from all the CAUSE efforts (CAUSE I-IV) so other jurisdictions along the Canada-U.S. border may build similar capabilities. This compilation has, to date, occurred in the form of After Action Reports and illustrative videos. An operational prototype for situational awareness and information sharing will also be made available as was developed and used by those agencies participating in the CAUSE experiments.

Emergency Response and Management Tools for First Responders

- *Problem:* First responders often lack timely access to the information they need to operate safely and enhance their ability to save lives and protect property. Whether they are not sharing due to unfamiliarity with their response partners or because their systems are not interoperable, decisions are not made in the most effective and timely manner.
- *Solution:* Develop and transition to operational use the technologies required so that emergency managers and first responders will have the incident information they require when and how they need it. In addition, this project will provide the standard operating procedures, training, and governance needed to effectively and efficiently conduct response and recovery efforts from day-to-day incidents to large-scale emergencies, including visualization, geospatial and analytics technologies.
- *Impact:* Increased safety of U.S. citizens and first responders, more effective incident response and recovery leading to fewer lives lost, decreased property damages, and increased national resilience from incidents of all types and scales.

Prior Year Key Events

- Capstone 2014 Demonstration in eight Central U.S. Earthquake Consortium (CUSEC) states using the Mutual Aid Support System (MASS) resource identification and sharing solution as well as demonstrating the enhanced Virtual USA Library tools. Capstone-14 Exercise had approximately 13,000 injects across states, federal partners, and voluntary organizations sharing 2,000 data layers, in 450 counties with seven states reporting the live status of 18 essential elements of information, and 78 private sector companies participating.
- Full transition of the Virtual USA Library to; 1) have the “Refresh” be deployed to the National Capital Region – Geospatial Data Exchange (NCR-GDX); and 2) the National Information Sharing Consortium (NISC) whereby the existing Virtual USA Library will retire and the NISC will work with the Environmental Systems Research Institute (ESRI) to deploy information-sharing tools via ESRI’s cloud-based, geospatial solution.
- Presented 12 Capacity Building Webinars to educate the first responder community for augmenting their abilities and capabilities to share information during critical incidents. The

events attracted 2,295 live attendees, with over 1,440 podcast plays, and 780 recipients of Continuing Education Unit (CEU) credits.

- Developed an Incident Management Information Sharing Capability Maturity Model (IMIS-CMM) for jurisdictions to objectively assess their maturity to share information during critical incidents.
- Enhanced the Next Generation Incident Command System (NICS) for broader community operational adoption as evidenced by partner use in 250+ live operational evaluations across 500 organizations and 3,000+ users.
- Developed the Geospatial Interoperability Reference Architecture in cooperation with the Program Manager-Information Sharing Environment (PM-ISE).
- Assess the Federal Request for Information (RFI) and Alerts, Warnings and Notifications (AWN) operational landscape.
- Established and co-chair the Incident Management Information Sharing (IMIS) Committee, chartered under the Information Sharing and Access Interagency Policy Committee (ISA IPC) with the PM-ISE. Established membership drawn from the public safety community (e.g. law enforcement, fire, emergency medical and emergency management) the Committee established expert working groups to determine priority assessment areas for first responders.

Current Year Key Events

- Refine and validate the IMIS-CMM with practitioners and publish a guide for its application within a jurisdiction to assess and augment their information sharing capabilities.
- Assist in publishing grant funding guidance for jurisdictional recipients to augment their capabilities to conform to FRG's IMIS-CMM.
- Finalize and validate the Public Safety Cloud strategy that addresses identity management issues and computer aided dispatch (CAD to CAD) jurisdictional interoperability for information sharing.
- Develop NICS open source licensing agreement and post as open source software to GitHub for broader public safety community involvement and use.
- Through the IMIS Subcommittee, identify, validate and prioritize public safety technology gaps and work with the private industry to develop and transition solutions for operational use and commercialization.
- Deliver and post GIRA as wiki-like community sustainable guidance with the PM-ISE and the Federal Geographic Data Committee.
- With the PM-ISE, develop geospatial enhancements to the National Information Exchange Model (NIEM) incorporating security tagging elements.
- With the PM-ISE, in support of the ISA IPC, developed RFI and Alert, Warning and Notification (AWN) Report of Findings and Recommendations.

Budget Year Key Events

- Through the IMIS Subcommittee, identify, validate and prioritize public safety technology gaps and work with the private industry to develop and transition solutions for operational use and commercialization.
- Via the IMIS Committee, provide recommendations to the PM-ISE recommending the adoption of open standards needed to meet requirements and fill gaps from the first responders community at all levels of government.
- Initiate the Public Cloud infrastructure leveraging federal and industry capabilities as a community of practice collaboration environment.

- Develop Essential Elements of Information as core open data exchange requirements targeted to Public Safety community and establish as National Information Exchange Model (NIEM) standards.
- Incorporate NICS as a mobile application within the DHS Geospatial Information Infrastructure as an enterprise service homeland security community.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	2,673	6,953	2,000	4,000	4,000

Project Schedule including Milestones

- FY15
 - Develop IMIS Subcommittee public safety requirements catalog by developing Use Case Best Practices review and preparation of templates and guides.
 - Develop draft IMIS-CMM Guidance documentation.
 - Develop NICS Open Source License Agreement.
 - Publish NICS Open Source Software on GitHub.
 - Post GIRA on Federal Geographic Data Committee GeoPlatform as wiki-like community collaboration guidance.
 - Develop NIEM geospatial security tagging exchanges.
 - Deliver to PM-ISE and ISA IPC the interagency RFI and AWN Report of Findings and Recommendation.
 - Develop CAD-2-CAD NIEM compatible exchange standards and Essential Elements of Information for industry review and comment.
- FY16
 - Provide technical and governance support to the user consortium (NISC).
 - Research, analysis and development of tools related to the mobile environment and the compromised/degraded communications and information sharing environment.
 - Test initial context aware applications for use by first responders.
 - Incorporate NICS within DHS Geospatial Information Infrastructure enterprise capability.

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

6

Transition Plans

- The Virtual USA Library will follow two transition paths: 1) The operational information sharing capability will be transitioned to the NCR-GDX; and 2) The developmental prototype will be transitioned to the NISC as they work with ESRI to deploy aspects of the Virtual USA Library in ESRI's ArcGIS On-line solution.

- California Wild-land firefighting communities will have installed NICS in California at the San Diego State University Super-Computing Center for utilization. The Portable Handset Integrated Next Generation Incident Command System (PHINICS), will transition to the USCG whereby FRG will no longer provide on-going operations and maintenance support. The NICS will be made available as open source via the U.S. Government’s GitHub collaboration site.
- The IMIS-CMM will be published and shared via the NISC to the first responders’ community for their efforts to assess their maturity and capabilities for information sharing during critical incidents.

Interoperability and Compatibility Standards

- *Problem:* The proliferation of new technologies makes it difficult for first responders to communicate with each other during emergencies.
- *Solution:* Identify and develop standards essential to ensuring that all the new technologies are interoperable so first responder agencies can make good decisions about new technologies.
- *Impact:* These new and strengthened standards will help first responders to make smart choices of new technologies so they will be interoperable and can migrate successfully to the new nationwide public safety broadband network without putting a \$7 billion national investment at risk.

Prior Year Key Events

- Work with Accreditation Bodies and Project 25 Compliance Assessment Program (P25 CAP) Laboratories to develop the DHS Office for Interoperability and Compatibility (OIC) – P25 CAP Laboratory Policy Document.
- Develop Quantitative Broadband Launch Requirements and submit to FirstNet for consideration.
- Develop public safety console requirements for Long Term Evolution (LTE).

Current Year Key Events

- Work with Accreditation Bodies and P25 CAP Laboratories to develop the DHS OIC – P25 CAP Laboratory Policy Document.
- Reconvene the P25 CAP Governing Board under the existing Charter.
- Update the P25 CAP Governing Board Charter.
- Transition the P25 CAP web site from the FEMA Lessons Learned Information Sharing site to FirstResponder.gov.

Budget Year Key Events

- Update the P25 CAP Governing Board Charter.
- Draft Local Control Requirements document.
- Add P25 Common Air Interface Conventional Interoperability Tests to the program.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	4,112	2,000	2,000	3,000

Project Schedule including Milestones

- FY15
 - Create digital audio files for speech codec intelligibility testing
 - Identify objective intelligibility estimates for codecs
 - Develop P25 Specific SME materials and training for partner accreditation body assessors
 - Begin recognizing test labs that have received Accreditation Body accreditation for P25 CAP testing
- FY16
 - Develop first responder data interoperability standards for the nationwide public safety LTE network
 - Oversee P25 processes to help leadership group maintain effective user input of features and functionality requirements into the Telecommunications Industry Association (TIA) Technical Report-8 Committee. This Committee formulates and maintains standards for private radio communications systems and equipment for both voice and data applications.
 - Leverage 3rd Generation Partnership Project specifications and other appropriate standards development organizations to identify and prioritize first responder broadband requirements and develop solutions for locally deployed applications

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

N/A

Transition Plans

- P25 CAP will continue to expand its suite of test capabilities to include P25 CAP interoperability, performance, and conformance testing so that first responder agencies can make more confident acquisition decisions for their P25 systems. Additionally, this program will continue to focus on public safety broadband requirements as a means to accelerate the development of common standards and in an effort to enhance interoperability and compatibility among broadband systems.

Operational Assessment Tools to Strengthen Agency Acquisition

- *Problem:* New networking systems are extremely expensive and public safety does not have a reliable way to assess the best solutions before they make major investments.
- *Solution:* Develop best practice and knowledge product tools to help public safety make more informed procurement decisions for everything from user equipment to applications and services and make them available to first responders before they make major investments.
- *Impact:* These tools will make it possible for first responder agencies to determine whether a given investment is the best possible and thus avoid wasting significant resources.

Prior Year Key Events

- Development of the Consumer Digital Video Library (www.cdvl.org)
- Development of the “Defining Video Quality Requirements: A Web Tool for Public Safety (Version 2)”
- Development of the Digital Video Quality Handbook

Current Year Key Events

- Publish results of subjective video tests for new/advanced video codecs.
- Publish technical document on Optimizing Network Resources for Transmitting Video on Public Safety LTE Networks
- Development of the Digital Video Quality Handbook Volume II

Budget Year Key Events

- Conduct efficient network utilization research to provide for dynamic spectrum allocation based on user applications and network capacity.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
745	N/A	N/A	N/A	3,000	3,000

Project Schedule including Milestones

- FY15
 - Develop initial draft of mobile application security services to support public safety’s mobile application survey report.
 - Develop initial draft set of public safety identity attributes.
 - Document a set of public safety identity attributes for incorporation with the Global Federated Identity and Privilege Management (GFIPM) and National Information Exchange Model (NIEM).
 - Survey mobile authentication solutions for appropriateness to different public safety disciplines.
- FY16
 - Establish a new Video Quality in Public Safety (VQiPS) working group subcommittee focused on issues such as video retention rates and privacy.
 - Hold Annual VQiPS Workshop.
 - Develop a video system design improvement process that can be leveraged by public safety.
 - Develop a network optimization model that can be tested which will help public safety make more efficient network resource decisions.

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

N/A

Transition Plans

- This project will continue to develop tools for public safety agencies; helping them to define their true requirements and ultimately allowing them to make better procurement decisions on their video systems. All knowledge products and tools are delivered to end users via the FirstResponder.gov web site and other government partner web sites (www.pscr.gov). These products are used by Federal, State, and local first responder agencies. More specifically, often the targeted audience for VQiPS tools may be procurement officials within these agencies.

Wireless Communications

- *Problem:* Technologies capable of bridging disparate but essential communications systems are not currently available, making it difficult for first responders to communicate with each other during emergencies.
- *Solution:* Develop viable research, development, testing, and evaluation capabilities to ensure that new technologies that claim to be interoperable with existing public safety systems actually are.
- *Impact:* This project provides a critical testing and evaluation capability for first responders to gain knowledge on how communication devices work on broadband networks and determine how the systems will meet user needs. This project brings together public safety practitioners, Federal partners, manufacturers, and representatives of standards making bodies to improve the way in which video and other technologies serve the public safety community.

Prior Year Key Events

- Completed technical demonstration for one of three wireless broadband technology demonstrator solutions.
- Finalized program for the Public Safety Mobile Application Security Requirements Workshop.
- Co-hosted the Public Safety Mobile Application Security Requirements Workshop.
- Completed technical architecture and test plan for the Chicago Long Term Evolution pilot.
- Completed PHY layer performance characterization and document results in report.
- Provided preliminary results on incident scenario modeling.
- Reported results of study of mobility estimation parameters for small cell deployments and submit conference article on the topic.

Current Year Key Events

- Complete technical demonstrations for remaining two wireless broadband technology demonstrator solutions.
- Conduct field demonstrations for two wireless broadband technology demonstrator solutions.
- Develop and implement usage scenarios and metrics for the evaluation of Proximity Services (PROSE) according to the 3rd Generation Partnership Project (3GPP) evaluation methodology.
- Develop PROSE modeling and analysis framework to study the functionality defined by 3GPP Release 12.
- Develop final version of mobile application security services to support public safety's mobile application survey report.
- Develop final version of mobile authentication solutions for different public safety disciplines survey report.

Budget Year Key Events

- Conduct field demonstration for final wireless broadband technology demonstrator solution.
- Create extended simulation models to support additional PROSE functionality.
- Contribute results to 3GPP Release 13 & 14.
- Publish results in professional conference proceedings and journals.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
1,163	2,676	5,587	8,500	5,338	4,000

Project Schedule including Milestones

- FY15
 - Develop description and feasibility of local control features.
 - Develop test plan to evaluate local control features.
 - Conduct lab characterization testing for 100 kilometer operation.
 - Complete extended cell drive tests for antennas at 280 meters.
- FY16
 - Conduct extended cell testing on a 280 meter site as well and develop Phase II Test Plan.
 - Complete final report for two of three wireless broadband technology demonstrator solutions.
 - Complete alternatives analysis for the wireless broadband technology demonstrator program.
 - Obtain field measurements and conduct analysis of results for extended cell testing.
 - Conduct Chicago Long Term Evolution pilot test and evaluate results.
 - Complete wireless broadband technology demonstrator field test reports.
 - Contribute results of extended simulation models to support additional PROSE functionality to 3GPP Release 13 and 14.
 - Publish results of extended simulation models to support additional PROSE functionality in professional conference proceedings and journals.

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

N/A

Transition Plans

- The maintenance of a 700MHz broadband demonstration network capable of providing first responders with a test environment, as FirstNet creates a nationwide public safety broadband network, will remain a critical resource for testing and evaluating technology solutions. In addition to aiding first responders through publishing of test results, this project will also

develop knowledge products to better inform stakeholders about the state of the art technologies.

- Provide the Department of Homeland Security, including CBP up to three prototypes for public safety and DHS operational components to consider, allowing them to leverage their existing land mobile radio (LMR) assets and augment them with broadband/smart device capability.
- Publish a lessons learned document on public safety broadband performance and impacts after live test and evaluation.

F. *Natural Disaster Resiliency* – FY 2015: \$26.500 million. FY 2016 Request: \$20.776 million. This program develops and provides advanced planning, CONOPS, disaster management tools, and training aids for responding to and recovering from a large-scale natural disaster. This includes providing assistance to the private sector to design-in greater resilience for critical infrastructure and providing DHS with more robust tools for disaster response, disaster logistics, individual and public assistance programs, and national continuity programs.

Community Resilience and Communications

- *Problem:* There is insufficient social and behavioral science research to support the development of effective communication strategies to successfully promote resilience to disasters in U.S. communities and that focus on helping disaster survivors, enhancing communities’ robustness, adaptability, and recovery capabilities.
- *Solution:* Develop more targeted and effective risk and crisis communications in order to produce evidence-based guidance to promote resilience in communities.
- *Impact:* Communities that are more resilient will support dramatically improved response efforts and significantly reduce the time and resources required for recovery from natural and manmade disasters.

Prior Year Key Events

- Began evidence-based analysis in support of whole community implementation. As part of this activity, the program will begin the conduct of social and behavioral science research to develop communication strategies to successfully promote resilient to disasters in U.S. communities focused on helping disaster survivors, enhancing communities’ robustness, adaptability, and recovery capabilities.

Current Year Key Events

- Deliver a knowledge product that provides the result of the evidence-based analysis completed to date with a goal of developing more targeted and effective risk and crisis communications in order to provide evidence-based guidance that can be used by communities to promote resilience.

Budget Year Key Events

- Initiate new start development.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16

Acquisition program establishment subsequent to successful completion of Operational Testing, Verification, and Validation.

Cyber Physical Security (CPS)

- *Problem:* The increased integration of Cyber Physical Systems (CPS) into many critical physical infrastructure and systems including, electric, water, transportation, and more, has introduced new and unknown possible vulnerabilities within single and potentially across multiple systems. As the systems are relatively new and growing in complexity and number, an understanding of the new challenges and information and decision support tools for owners and operators are needed for continued safe and secure operation and avoidance or limitation of disruptions or destruction from natural or manmade hazards.
- *Solution:* Focusing on high priority sectors such as energy (electrical grid) and water, this project will leverage past and current assessments and research efforts to provide decision support tools and mitigation solutions to address critical infrastructure vulnerabilities and the associated risks. Partnerships in government; Federal, State, local, and the private key critical sectors will be developed to ensure resilience will be implemented into the systems such as the electrical grid and water.
- *Impact:* This project will enhance resilience of the Nation's many critical infrastructure systems that are controlled by cyber systems in an interconnected environment. This increased level of resilience from all hazards allows the owners and operators to have an increased ability to assess and militate against potential threats and vulnerabilities from manmade and natural hazards. There will be an increase in overall understanding and mitigation development for cyber-physical systems which will benefit resiliency of future systems.

Prior Year Key Events

- Developed framework and approach to CPS in a multi-disciplinary systems way (e.g., cyber-security; physical-security; physical infrastructure; IT infrastructure; human-systems), and analysis of sector and cross-sector considerations and inter-dependencies.

Current Year Key Events

- Develop initial overarching architecture for CPS analysis and experimentation with high priority sectors.
- Develop pilot plans for engaging the energy and water sector.

Budget Year Key Events

- Develop a scientifically-based and field-tested CPS assessment framework that incorporates multi-disciplinary factors to provide decision makers and CI owners/operates the ability to make more accurate and consistent risk, mitigation, and investment decisions.
- Develop a scientifically-based and field-tested algorithm which can be implemented into existing assessment tools/systems to calculate holistic resiliency at the facility, sector, and eventually cross-sector levels.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
1,524	1,638	1,788	8,242	5,750	7,750

Project Schedule Including Milestones

- Complete assessments of current tools, interdependencies, gather requirements, and develop a CONOPS (FY15).
- Conduct case study of an east coast electric power grid including the specification of the threat model; a detailed representation of the sector; identification of sector interdependencies. Conduct a table top assessment (FY15).
- Conduct proof-of-concept to validate CPS resiliency framework and algorithmic approaches to improved assessment methodologies (FY16).
- Provide a final report articulating the results of the new methodology and the mission impact to the selected pilot partners including transition planning considerations for adjustments that may be needed for operational process transition and system integration with existing tools (FY16).

Delayed Milestones

FY14 milestones delayed due to contracting issues.

Type of Research

Developmental

Technical Readiness Level

TRL will vary between specific portfolio projects

Transition Plans

- Close communication and coordination have been established and will be maintained throughout the entire project with DHS NPPD. Solutions will be developed that are practical

and able to be integrated into current systems and operations. Beta testing and evaluation opportunities will be investigated and determined early on and agreements will be made with partners for such. Once development is completed, maintaining the relationship will ensure that the developed product is acceptable and desired by the owners and operators and will be put into operation to increase security and resilience of critical infrastructure.

Drinking Water Resilience

- *Problem:* The drinking (potable) water infrastructure is aging and experiencing serious failures. The water infrastructure supports commerce and a major dependency for emergency response, healthcare, and community resilience. Likewise, communities lack the means to assess the health (current ability to deliver necessary services) and disaster/change resilience of the lifeline infrastructure sectors on which they depend.
- *Solution:* Develop a framework that enables utility owners to self-assess risk with the aid of advanced scientific input from the national labs. At the heart is a new American National Standards Institute (ANSI) standard that provides standard definitions for the basic and critical risk assessment terms and measures, so that every assessment, from any sector, can be comparatively ranked to enable decisions at the community, regional and national levels. The effort also includes decision support tools at every level.
- *Impact:* Water utilities will save 50 percent over the current cost of manual risk assessment with a web-based interactive tool. Safe, reliable, and resilient drinking water systems planned for anticipated risks over the next few decades will meet the dependencies of the health, emergency response, community preparedness, electronics, communications, power generation, industrial and many other vital sectors of the Nation’s economy and well-being. The systems prototyped for drinking water can be duplicated for the other lifeline sectors of power, transportation, and communication.

Prior Year Key Events

- Prototyped utility self-assessment methodology, web-based and interactive, utilizing the existing EPA and J100-based assessment methodologies.
- Interfaced framework for national model with identified data interlinks to risk assessment methodologies.
- Tested Prototype with one or more volunteer water utility companies.

Current Year Key Events

- Implement framework interface between the national labs, existing risk assessment methodologies, including J100, and data links to provide scientific support for utility self-assessment.
- Implement secure data sharing from utilities to national labs.

Budget Year Key Events

- Implement national/regional risk assessment.
- Plan/socialize national risk-based prioritization for water infrastructure investment

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	394	1,200	2,500	1,000

Project Schedule Including Milestones

- Prototype testing complete (FY15).
- Submit infrastructure risk assessment standard to ANSI for certification (FY15).
- Develop and demonstrate with historic data a framework for infrastructure system risk assessment, prototyped on a potable drinking water utility (FY15).
- Prototype methodology for calculating regional impacts of significant water disruptions (FY15).
- Prototype interface for community, State, and regional risk assessments (FY15).
- Establish integrated project team with component, State, local, tribal, private sector, and sector-specific membership and draft plans for regional demonstration (FY15).
- Submit infrastructure risk assessment standard to ANSI for certification (FY16).
- Develop and demonstrate with historic data a framework for infrastructure system risk assessment, prototyped on a potable drinking water utility (FY16).
- Establish integrated project team with component, State, local, tribal, private sector, and sector-specific membership and draft plans for regional demonstration (FY16).
- Prototype methodology for calculating regional impacts of significant water disruptions (FY16).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

The program plans to begin at TRL 5 and end at TRL 6

Transition Plans

- Long-term support & maintenance of the national risk assessment tool to reside with NPPD Office of Infrastructure Protection (OIP) / Homeland Infrastructure Threat and Risk Analysis Center (HITRAC), the agency charged with analyzing the risk and consequences of threats to the nation's infrastructure.
- Partners in the final prioritization process include: NPPD/HITRAC; EPA, the sector-specific agency for water; and FEMA National Preparedness and Response Directorates.
- Utility companies will pay a nominal fee to support hosting and maintenance of the J100 tool after initial development.

GPS Vulnerability Assessment in the Critical Infrastructure

- *Problem:* U.S. critical infrastructure is dependent on GPS for many applications to maintain operations. In addition to the use of GPS for position and navigation, timing is an essential element for many critical infrastructures such as the electric grid, telecommunications, transportation, emergency services, etc. Timing is typically derived and maintained in these networks through GPS receivers and as the threats to GPS from jamming and spoofing continue to grow, so do the vulnerabilities within our critical infrastructure. Initial testing by DHS S&T showed that the GPS receivers used within critical infrastructure do not always behave as desired, further increasing the vulnerability.
- *Solution:* This assessment will conduct comprehensive testing on GPS receivers used within the critical infrastructure networks against various jamming and spoofing threats. The project will

also engage with the receiver manufacturers to begin developing and fielding mitigations at low cost to the critical infrastructure owner and operators.

- *Impact:* The results will inform DHS and the private sector of more realistic vulnerabilities as opposed to various paper studies that base vulnerabilities upon expected receiver behavior (i.e. timing is not affected because the receiver switches to its back-up oscillator when faced with a threat – turns out this is not always the case). The project will result in a much better understanding of the vulnerabilities to GPS interference (intentional and unintentional) and will enable critical infrastructure owners and operators to take action to protect against these threats. Additionally, with the engagement of the receiver manufactures identified issues can be addressed and implemented on new receivers prior to being placed on the market as well as the possibility of software or firmware upgrades to protect legacy equipment within the critical infrastructure.

Prior Year Key Events

- Partnership with DHS NPPD OIP to coordinate with the Cross-Sector Council and conducted a Protected Critical Infrastructure Information (PCII) data-call to all Sectors for technical details of GPS user equipment in use and Sector prioritization of use of GPS user equipment.
- Initiated a second round of jamming and spoofing testing of GPS user equipment based upon critical infrastructure Sector identification and prioritization in order to assess systemic issues and risks, and to begin to identify mitigation approaches.

Current Year Key Events

- Conduct ongoing jamming and spoofing testing of GPS user equipment of priority use equipment within critical infrastructure.

Budget Year Key Events

- Coordinate with private sector GPS user equipment manufacturers and vendors to recommend mitigations and/or upgrades to next-generation products and production lines.
- Transition intellectual property and/or transition paths for commercialization of new equipment or other mitigation solutions and best practices.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	N/A	N/A	1,000	1,000

Project Schedule Including Milestones

- Conduct comprehensive testing on GPS receivers used within the critical infrastructure networks against various jamming and spoofing threats (FY15).
- Conduct analysis and research for development of mitigation designs and practices for commercialization potential and/or use by critical infrastructure to mitigate risks of jamming/spoofing (FY16).

Delayed Milestones

None

Type of Research

Test and Evaluation; Developmental

Technical Readiness Level

TRL varies 4-8. Current GPS-PNT user equipment are commercial and in use. New designs and/or other mitigation solutions for jamming/spoofing risks may vary (e.g., user equipment, antennas).

Transition Plans

- Partnership and coordination with DHS NPPD OIP for communication and dissemination of GPS knowledge products to critical infrastructure Sectors and owners/operators. Coordination with private sector manufactures and vendors for knowledge products and testing results for improvements or upgrades to product lines. Coordination with FFRDC and National Laboratories and others for opportunities for commercialization or other transition or intellectual property.

National Hurricane Technology

- *Problem:* FEMA's National Hurricane Program (NHP), mandated by Post Katrina Emergency Reform Act (PKEMRA), provides hurricane evacuation preparedness technical assistance to State, local, and tribal governments. It includes the preparation of hurricane evacuation studies and technical assistance in developing evacuation plans, assessing storm surge estimates, establishing evacuation zones, evacuation clearance times, transportation capacity, and shelter capacity. The current system relies upon legacy processes and technology. There is an opportunity to reduce both the manpower and funding resources required to operate the program as well as leverage current technology and comprehensive analysis to reduce the time required to provide timely and actionable results in evacuation planning.
- *Solution:* This project will modernize technology and processes used by the NHP by developing decision aids, leveraging new methods and simulation tools, and integrating these with new visual analytic capabilities to enable end users at the State and local level to conduct planning, training, and operational decision-support for hurricane evacuation.
- *Impact:* The modernized components of the NHP will enhance the ability of the end users at the State and local level in planning and managing local hurricane response. The NHP will use these system enhancements to significantly improve the ability of the users to evaluate hurricane hazards, the forecast process, hurricane advisories, warnings and other decision support products; thereby enhancing the efficiency and effectiveness of emergency management actions such as hurricane evacuation decisions and orders.

Prior Year Key Events

- Established National Hurricane Program Working Group to include emergency management managers on federal, State, and local levels.

Current Year Key Events

- Develop National Hurricane Program Operational Model that represents the emergency manager's decision process and associated decision information. Capturing the decision process will aid in addressing challenges associated with disaster planning, evacuations, emergency management level decision making processes, and training.
- Create technology pilots for enhancing emergency manager decision products, virtual training, and next generation decision support and display tools.

Budget Year Key Events

- Complete NHP Guidance Document (1.0).

- Develop Functional Prototype (2.0) of Enhanced HURREVAC Platform.
- Release software tool for resilience and mitigations.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	N/A	N/A	1,000	1,000

Project Schedule Including Milestones

- Deliver infrastructure gaps, proposed hurricane decision metrics and HES (Hurricane Evacuation Studies) specifications for data interfaces and modular algorithms (FY15).
- Finalize decision making section of the NHP Guidance Document for 120-hour and beyond pre-storm landfall (FY15).
- Conduct a NHP Working Group meeting to continue collecting input toward the NHP Guidance Document (FY15).
- Demonstrate Emergency Management decision support products (FY15).
- Develop Hurricane Evacuation Studies (HES) prototype 1.0 (FY15).
- Complete NHP Guidance Document (1.0) (FY16).
- Release software tool for resilience and mitigations (FY16).

Delayed Milestones

None

Type of Research

Development

Technical Readiness Level

7

Transition Plans

- Develop transition agreements with FEMA Office of Response and Recovery (ORR).
- Conduct pilot experimentation at the State and local levels to support product refinement and the transition process.

Resilient Structures

- *Problem:* Critical infrastructures are vulnerable to manmade and natural hazards, resulting in crippling effects on mass transportation, buildings, and other critical infrastructure.
- *Solution:* This project will design, fabricate, and test protective measures for tunnels, subway systems, bridges, buildings, and other critical transportation infrastructure. S&T will also develop software analysis tools to aid in analysis of vulnerabilities and improved design. Includes development of tunnel plugs under the Resilient Tunnel Project.
- *Impact:* The project will minimize and/or prevent the disruption to transportation services associated with terrorist attacks and natural disasters, to include Sandy-like storm surge flooding. Other solutions will increase structural resilience of high-risk critical infrastructure, to include tunnels, bridges, and buildings, such as commercial establishments, Government buildings, and schools.

Prior Year Key Events

- Integrated system and subsystem designs for tunnel plug.

- Reconfigurations of tunnel plug testing facilities.
- Production of tunnel plug prototype.

Current Year Key Events

- Full-scale tunnel plug pressure testing.
- Full system testing of tunnel plug prototype.

Budget Year Key Events

- Small-scale blast testing for unmitigated masonry tunnels.
- Small-scale blast testing of protective schemes for masonry tunnels.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
3,309	N/A	2,375	3,050	7,050	6,526

Project Schedule Including Milestones

- Conduct small-scale blast testing for unmitigated masonry tunnels (FY15).
- Small scale blast testing of protective schemes for masonry tunnels (FY15).
- Conduct full-scale tunnel plug testing with air pressurization (FY15).
- Conduct full system testing of tunnel plug prototype, to include storage, inflation, and control subsystems (FY15).
- Requirements generation for additional transit systems (FY16).
- Design higher strength tunnel plug to address requirements from additional transit systems (FY16).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

6

Transition Plans

- The primary transit partner will install tunnel plugs as part of their Security Capital Program. Agency will apply for FEMA Transit Security Grant Program funding to supplement internal funding for tunnel plug installation.
- Leverage ongoing partnership with other subway systems, including New York, San Francisco, Boston, and Washington, D.C., to further transition.
- Transition to highway tunnels (e.g., Brooklyn Battery Tunnel and Alabama I-10 tunnel) is of great interest following Hurricane Sandy, and application of the plug in these larger tunnels appears feasible with modifications to the design.

Solar Storm Mitigation

- *Problem:* Extreme solar storm activity produces ground induced currents (GIC) that can impact the electric grid performance and significantly damage critical components of the grid. There is

very limited capability to accurately forecast a GIC-related event that would impact critical infrastructure in a timely manner.

- *Solution:* Develop the capability to forecast and model GICs and their impacts at specific nodes in the U.S. power grid.
- *Impact:* Provide the utility owners and operators with timely and accurate GIC forecast information, allowing them to make key operational decisions, such as shutting down, reducing load, or rerouting load to minimize the impact of a GIC event.

Prior Year Key Events

- Developed of user-defined requirements.
- Developed and coupled of key models as inputs into the GIC forecasting system.

Current Year Key Events

- Develop the GIC forecasting model.
- GIC forecasting model validation and verification.

Budget Year Key Events

- GIC Program Element – Transformer Testing.
- Future Program Element – Blocking Devices Testing.
- Possible Future Program Element – Advanced Instrumentation Development.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
N/A	N/A	N/A	500	2,000	300

Project Schedule Including Milestones

- Validation and verification of GIC Forecasting Model (FY15).
- Develop Version 1 of the geo-magnetically induced currents for all forecasting model (FY 15).
- Conduct validation of GIC forecasting model. (FY15).
- Real-time execution of GIC Forecasting Model (FY16).

Delayed Milestones

None

Type of Research

Applied

Technical Readiness Level

7

Transition Plans

- Transition to operational environment through existing SUNBURST program within Electric Power Research Institute (EPRI) currently circulated with the utilities as well as directly to the utility industry itself.

Standard Unified Modeling Mapping Integrated Toolkit (SUMMIT)

- *Problem:* Planning and conducting exercises are costly as they require significant resources to develop objectives, analyze and design scenarios, and support the conduct phase by providing

reach back subject matter expertise, data needs, and injects. This cycle of activities, from pre-event planning, to training and exercise, to evaluation and improvement, is often repeated for every exercise and is inefficient.

- *Solution:* SUMMIT is a modeling and simulation toolkit/platform that enables the emergency management community to access and connect suites of modeling tools and data sources for planning, exercises, or operational response on the web. SUMMIT improves the preparedness effectiveness by providing a collaborative environment that makes the linking of models and underlying data reusable so as to decrease the time and cost needed to train for, analyze, and respond to real or potential incidents.
- *Impact:* SUMMIT is available to Federal, State, and local agencies at no cost and used at various Federal, State, and local exercises and operational planning efforts including: National Level Exercise (NLE) 11, NLE12, FEMA Region 2 Blue Surge 2013 Exercise and Anaheim/Santa Ana Urban Area Threat and Hazard Identification and Risk Assessment (THIRA) planning process. FEMA adopted this tool and saved approximately \$2 million per National Level Exercise. Sweden’s Civil Contingencies Agency (MSB) adopted it internationally for regional exercises.

Prior Year Key Events

- Deployed SUMMIT at FEMA Region II Wildcat exercise and planning efforts in preparation for 2014 NFL Super Bowl.
- Deployed SUMMIT at the State of Georgia to generate scenarios and preparedness considerations for regional hospital need planning.
- Complete DHS-Sweden, Swedish MSB 3-year pilot of SUMMIT for country preparedness.
- Integrate SUMMIT into Homeland Security Exercise and Evaluation Program Enterprise Platform (HSEEP-EP).
- Upgrade SUMMIT capabilities to handle FEMA Region II Threat and Hazard Identification and Risk Assessment (THIRA) process to enhance effectiveness of FEMA preparedness grant dispersal.

Current Year Key Events

- Develop SUMMIT analytical capabilities to support FEMA Threat and Hazard Identification and Risk Assessment (THIRA) process to enhance effectiveness of FEMA preparedness grant dispersal.
- Pilot SUMMIT support of FEMA Region VI jurisdictional THIRA applications in Louisiana and Texas.
- Pilot SUMMIT support of FEMA Region VI regional THIRA application, and provide training to enable utilization of capability by FEMA personnel in year-round preparedness activities.
- Pilot deployment of SUMMIT in FEMA response environment (e.g., National Hurricane Program) to enhance effectiveness of emergency response during declared national disasters.

Budget Year Key Events

- Complete pilot deployment of SUMMIT in FEMA response environment to enhance effectiveness of emergency response during declared national disasters.

Funding History (thousands)

FY11	FY12	FY13	FY14	FY15	FY16
3,047	N/A	4,500	3,650	3,500	2,500

Project Schedule Including Milestones

- Develop SUMMIT technology, CONOPS and transition requirements for planning and response (FY15).
- Extend SUMMIT-R Architecture with batch and real-time analytics (FY15).
- Extend SUMMIT-R Architecture with live data fusion and uncertainty visualization (FY15).
- Complete pilot deployment of SUMMIT in FEMA response environment to enhance effectiveness of emergency response during declared national disasters (FY15).
- Capture lessons learned and refine requirements from pilots of SUMMIT in planning and response operations (FY15).
- Establish Transition Working Group (FY15).
- Pilot SUMMIT-R in response operation (FY16).
- Mature SUMMIT-R Core Architecture Planning and Response Features Based on Pilot Feedback (FY16).
- Apply SUMMIT-R to planning (e.g., THIRA) and response (e.g., National Hurricane Program) operations to repeatedly demonstrate enhance effectiveness of emergency response during declared national disasters (FY16).
- Capture lessons learned from pilots (FY16).
- Implement Technical Transition Path (FY16).

Delayed Milestones

None

Type of Research

Developmental

Technical Readiness Level

7

Transition Plans

- FEMA National Training, Exercise and Education (NTEE) committed to establishing SUMMIT as the enabling technology for the NEP Modernization (FY13 FEMA NTEE Investment – Transition and Response Operations).
- Transition to California Exercise Simulation Center, which is first hub-partner of FEMA National Exercise Simulation Center in the National Exercise Division: March 2015.
- Integrate with HSEEP-EP and transition to FEMA production environment: May 2015.
- Transition to FEMA Region VI (Continuity exercises, THIRA, Planning and Response): 2016.

S&T Framework for Prioritizing R&D Projects

DHS has a mission to strengthen America's security and resiliency by providing knowledge products and innovative technology solutions for the HSE. To achieve this mission, S&T has outlined three critical areas of strategic focus. Firstly, S&T will pursue technology options and process enhancements that are focused on DHS Component operational priorities. Secondly, S&T will seek innovative, systems-based solutions to operationally complex problems. Thirdly, S&T will foster robust partnerships across the USG; State, local, and tribal governments; universities; the private sector; and internationally in order to leverage expertise and solutions and share resources. S&T priorities for areas of research, development, and analysis are derived from an understanding of near-

and long-term threats, national needs, and DHS mission needs and operational vulnerabilities, as articulated in the President's National Security Strategy, the Quadrennial Homeland Security Review (QHSR), and the capability gaps and operational requirements of DHS Components and first responder communities.

To ensure that individual R&D projects are meeting the priorities established by its partners in the operational Components and the broader HSE, S&T has instituted an annual review of its portfolio of basic and applied R&D and all proposed "new start" projects. The review process consists of written materials, an oral presentation by the project manager, and careful analysis of the project's likely impact and feasibility (or "riskiness") as judged against specific metrics determined by S&T with input from the operational Components. The metrics are designed to address elements essential to programmatic success in the context of DHS's QHSR missions and include:

- *Systems Analysis*: How well does the project's product(s) align with a customer's existing operational context/concept of use or an alternative that is agreeable to the customer?
- *Customer Buy-in*: Have the project objectives been developed through close consultation with appropriate decision authorities?
- *Efficiency*: What level of savings can be achieved by this project with respect to the customer's operations?
- *Capability*: To what extent does this project provide risk or threat reduction and/or improved fidelity, performance, etc.?
- *Technical/Research Feasibility*: How likely is it that the team will overcome the technical and/or research challenges facing this technology and/or knowledge product?
- *Transition Likelihood*: Is there a clear path/mechanism to enable transition/commercialization?
- *Customer Readiness*: Are there any secondary issues related to the concept of use, prepotency, budgeting, affordability, regulatory or statutory realities, or business value?
- *Timeline*: When will the project achieve either an efficiency or capability improvement, as part of normal operations? Or, when will the first demonstration of the capability/efficiency be observed in an operational context?
- *Innovation*: Does the project attempt to realize its objectives in a way that others have not previously considered or exploited?
- *Resource Leverage*: What level of interaction exists between the project team and the target Component or customer?
- *Foraging*: Does the project exploit existing technology or research, and/or new or existing partnerships to minimize time and expense?
- *Cost Realism*: Is the cost projection credible?

- *Project Clarity:* How well is the project described, laid-out – is it clear what the team will do? Are the problems well defined and the approach clear? Has a letter of intent or technology transition agreement been obtained?

In addition, S&T established the following methods to ensure that S&T projects support the Component's highest priorities in supporting DHS QHSR missions:

- *S&T Component Liaisons:* Component liaisons are a primary coordination mechanism for both S&T and the Components to ensure strong communication throughout the R&D process. Liaisons from TSA, CBP, ICE, NPPD, USSS, and USCG are detailed to S&T and S&T has provided liaisons to CBP, USSS, DHS's Office of Policy, DHS Tactical Communications Program Office, DNDO, TSA, and FEMA.
- *Component R&D Agreements:* R&D agreements with Components strengthen cooperation, coordination, and investment in projects. S&T's Apex projects begin with a memorandum of understanding signed by the Undersecretary of Science and Technology and Component leadership. This process solidifies the agreement that both entities will provide resources and oversight for the length of the project. S&T has agreements with CBP and USSS regarding ongoing R&D efforts in various stages of completion, and plans to expand partnerships with other DHS Components.
- *Component R&D Strategies:* S&T and TSA issued a joint R&D strategy for aviation security that identified TSA's R&D priorities. That plan was a result of an internal planning process that prioritized capability gaps and focused on the work between TSA's and S&T's Explosives and Human Factors/Behavioral Sciences Divisions. S&T also is planning to work with USSS, CBP, ICE, and FEMA to build component-specific R&D strategies that are linked to component acquisition programs.

R&D Coordination Teams: S&T plans to replace the current Integrated Product Team process with two new coordination teams—a cross-functional team comprised of S&T personnel focusing on strategic priorities and an integral partner team—led by S&T's newly created ASOA division to focus on DHS Components' operational needs.

FY 2016 Program Change	-	-	-
FY 2016 Total Request	-	-	\$31,000
Total Change 2015 to 2016	-	-	-

The S&T Directorate requests \$31.000 million for University Programs in FY 2016.

CURRENT SERVICES PROGRAM DESCRIPTION:

University Programs PPA – The Office of University Programs (OUP) supports critical homeland security-related research and education at U.S. colleges and universities to address high-priority DHS-related issues and to enhance homeland security capabilities over the long term. The program brings together scientists, mathematicians, and engineers from many academic disciplines and institutions. These researchers are investigating research questions important to DHS as well as developing new technologies and approaches to solve complex and challenging homeland security problems. The program focuses on building homeland security expertise in the academic community, creating strategic partnerships among universities and public agencies, and developing a new science and engineering workforce dedicated to homeland security. The primary customers for OUP are the S&T Directorate’s divisions, the DHS Component agencies, and Federal, State, and local government agencies.

Investments in university research and support for students in relevant fields are critical to preserving the United States’ strategic/economic security and carrying out activities in two program areas: the S&T Directorate University Centers of Excellence (COEs) and Minority Serving Institutions (MSI) program.

1. Centers of Excellence - FY 2015: \$27.419 million. FY 2016 Request: \$27.604 million. The COEs work with the S&T Directorate, the DHS Component agencies, and State, local, and tribal first responders. COE research complements existing DHS R&D programs including those of Federal laboratories and FFRDCs. They take advantage of other relevant Federal agency-sponsored research and provide outcomes useful to Federal, State, and local governments, the private sector, and

international partners. The selection process for the COEs is highly competitive, rigorously peer-reviewed, and merit-based.

Research focuses on:

1. Areas identified as priorities in the QHSR
2. Research that is clearly within DHS’s purview and closely related to DHS missions
3. Research that is not being done elsewhere
4. Research that can make a difference in operations or intelligence-gathering

	Center of Excellence	Research Topic	Start FY	End FY
1	Center for Awareness and Localization of Explosives-Related Threats (ALERT)	Explosives	2013	2018
2	Coastal Hazards Center (CHC) Coastal Resilience Center (CRC)	Natural Disasters	2008 2015	2015 2020
3	Center for Risk and Economic Analysis of Terrorism Events (CREATE)	Risk and Economics	2010	2016
4	Center for Visualization and Data Analytics (CVADA)	Visualization and Data Analytics	2009	2016
5	Center for Maritime Security Research (CMR)	Maritime Security	2014	2019
6	National Center for Border Security and Immigration (NCBSI) Center for Border, Trade, and Immigration Research (CBTIR)	Border Security	2008 2015	2015 2020
7	National Center for Food Protection and Defense (NCFPD)	Food Defense	2010	2016
8	National Consortium for the Study of Terrorism and Responses to Terrorism (START)	Terrorism Studies	2012	2017
9	National Center for Zoonotic and Animal Disease Defense (ZADD)	Animal Diseases	2010	2016
10	Critical Infrastructure Research Center of Excellence (CIRC)	Critical Infrastructure	2015	2020

In FY 2015, OUP plans to announce awards for three COEs to conduct research and education in the following topic areas: coastal resilience, border security and immigration, and critical infrastructure resilience (a new topic area), increasing the number of COEs to ten.

In FY 2016, to more effectively allocate its resources, OUP plans to fully fund the highest priority COEs. This will provide newly awarded COEs with the resources required to successfully launch and to enable COEs whose grant terms are continuing beyond FY 2016 to operate at full capacity. OUP plans to continue transition-related activities, increasing resources dedicated to COE flagship End-to-End projects – larger research efforts with particular emphasis on end-user engagement from inception to product use.

The COEs are funded through research cooperative agreements, grants, and contracts, depending on the nature of the projects. The COEs are building expertise and reach-back capabilities in multi-disciplinary fields of study important to homeland security.

The National Center for Border Security and Immigration (NCBSI)

This Center improves the capabilities of the CBP, ICE, U.S. Citizenship and Immigration Services (USCIS), USCG, and other Federal, State and local agencies to detect people and goods moving across U.S. borders (legally or illegally), using a fully integrated, system-of-systems approach. NCBSI provides fundamental research in support of DHS's goals of strengthening border security, immigration enforcement, and immigration services. This Center is co-led by the University of Arizona at Tucson and the University of Texas at El Paso (<http://www.borders.arizona.edu/>
<http://osi.utep.edu/NCBSI/index.html>). The period of performance for this Center is 2008-2015.

Center for Visualization and Data Analytics (CVADA)

This Center's tools and analyses improve the data analysis abilities of FEMA, CBP, ICE, USCG, I&A, and more than 25 regional, State, and local public safety and emergency response agencies. CVADA develops new methods, algorithms, and technologies that enable Federal, State, and local homeland security agencies to efficiently manage, analyze, visualize, and understand vast amounts of diverse, ever-changing, and distributed data. Such capabilities help to identify vulnerabilities, detect threats, improve information analysis techniques, improve resource management and operational analysis capabilities, mitigate catastrophic events, and plan post-event analysis for remediation activities. This Center is co-led by Rutgers and Purdue Universities, (<http://ccicada.rutgers.edu/>,
<http://www.purdue.edu/discoverypark/vaccine/>). The period of performance for this Center is 2009-2016.

The Center for Awareness and Localization of Explosives-Related Threats (ALERT)

This Center supports the NPPD Office of Infrastructure Protection (OIP) and Office for Bombing Prevention (OBP), DHS Office of Policy, TSA, ICE, state homeland security agencies, and State and local police bomb squads by providing research and training to prepare for, prevent, mitigate, respond to, and recover from terrorist attacks involving explosives. ALERT provides basic explosives-related research to advance the technical tools and information that the S&T Directorate's customers will need

in the future. This Center is led by Northeastern University (<http://www.northeastern.edu/alert/>). The period of performance for this Center is 2013-2018.

The National Center for Food Protection and Defense (NCFPD)

This Center improves the ability of the S&T Directorate, NPPD Office of Infrastructure Protection (OIP), OHA Food, Agriculture, Veterinary Defense, CBP, USDA, the Food and Drug Administration, CDC, EPA, State and local agencies, and the food and agriculture private sector to respond to catastrophic food system events by minimizing or eliminating food/agriculture system vulnerabilities. NCFPD conducts research and education aimed at reducing the potential for contamination at any point along the food supply chain and at mitigating the potentially catastrophic public health and economic effects of such attacks. This Center is led by the University of Minnesota (www.ncfpd.umn.edu). The period of performance for this Center is 2010-2016.

National Center for Zoonotic and Animal Disease Defense (ZADD)

This Center conducts research and develops products that improve the ability of the S&T Chemical and Biological Division, OHA, NPPD, PIADC, NBACC, USDA, CDC, State and local governments, and the agricultural industry to protect the Nation's agriculture and public health sectors against high-consequence foreign, emerging, and/or zoonotic animal disease threats in the United States. This Center is co-located at Texas A&M University and Kansas State University (<http://fazd.tamu.edu/>, <http://www.ceezad.org>). The period of performance for this Center is 2010-2016.

Center of Excellence for Maritime Research (CMR) formerly Center of Excellence for Maritime, Island and Remote, and Extreme Environmental Security (MIREES)

This Center, awarded in FY 2014, conducts research and develops education to enhance USCG, CBP, FEMA, and State homeland security agencies' ability to detect and interdict threats, respond to catastrophic events, and secure marine transportation systems, particularly for U.S. ports, islands, and extreme environments. This Center is co-led by the University of Alaska Anchorage and Stevens Institute of Technology (<http://www.stevens.edu/csr/>). The period of performance for this Center is 2014-2019.

The National Consortium for the Study of Terrorism and Responses to Terrorism (START)

This Center provides DHS Components, other Federal, State, and local agencies, private security agencies, and academia with data-driven research and capability strategies to disrupt terrorist networks, reduce the incidence of terrorism, and enhance the preparedness of American society. The Center uses advanced behavioral and social science theories, methods, and data analysis to better understand the origins, dynamics, and impacts of terrorism and counterterrorism strategies. START is used by agencies throughout Federal, State, and local governments, industry, academia and the news media as a source of objective data and analysis regarding terrorism and trans-national criminal activities. This Center is led by the University of Maryland (www.start.umd.edu). The period of performance for this Center is 2012-2017.

Coastal Hazards Center of Excellence (CHC)

This Center provides FEMA, USCG, National Oceanic and Atmospheric Administration (NOAA), U.S. Army Corps of Engineers (USACE), State and local emergency managers, and infrastructure managers with improved coastal hazards planning, response, and recovery capabilities such as providing more accurate storm surge estimates within minutes instead of hours. CHC conducts basic and transformational research in coastal hazards modeling, coastal engineering, disaster response, and resiliency planning, and also develops expertise in related disciplines through education. This Center is co-led by the University of North Carolina at Chapel Hill and Jackson State University (<http://coastalhazardscenter.org/>). The period of performance for this Center is 2008-2015.

National Center for Risk and Economic Analysis of Terrorism Events (CREATE)

This Center's models and analyses improve the ability of DHS Components, Federal, State, and local agencies, private sector security/operators, and academia to predict, evaluate and counter terrorist attacks, and allocate limited resources more efficiently. CREATE develops advanced models and tools to evaluate the risks, costs, and consequences of terrorism and security operations, and to identify economically efficient investments to improve security and resilience. This Center is co-led by the University of North Carolina at Chapel Hill and Jackson State University (<http://coastalhazardscenter.org/>). The period of performance for this Center is 2010-2016.

New Center of Excellence for Critical Infrastructure Resilience

This Center will conduct research and education to enhance the resiliency of the Nation's critical infrastructures and the businesses and public entities that own and operate those assets and systems. The research will provide a better understanding of the complex business of risk management in the context of potential catastrophic disruptions to infrastructure operations. The Center will develop an understanding of the ingredients for a sound business case for preparing for, and mitigating the effects of catastrophic incidents, as well as how to integrate community considerations into business decisions. The Center's work should result in data-rich quantitative analyses, technologies, and knowledge products (e.g., business case studies, policy analyses and recommendations, analytic tools and techniques, data visualizations, software, and publications) that assist in understanding threats and vulnerabilities, risk management strategies, and costs and trade-offs of risk management decisions. The contract for this new COE is mid-competition and hopefully will be awarded in 2015 and run through 2020.

DHS Center for Innovation (CoI) at U.S. Air Force Academy (USAFA)

In addition, OUP funds the CoI. This partnership initiative supports DHS S&T, DHS NPPD, DHS I&A, DHS S&T FRG, DHS S&T OUP's COE's, as well as the CIA, DOD, and U.S. Cyber Command, in conducting research leading to disruptive capabilities for the DHS enterprise. Working with USAFA cadets and the other Federal Service Academies and private industry, the CoI develops innovations and capabilities for both the USG, and the HSE. Through the CoI, the USG has access to market-shaping technologies before these products hit the marketplace. Also through the CoI, DHS is building relationships with the Nation's future military leaders, and placing them in homeland security settings. The CoI supports USAFA and other service academy cadets and midshipmen and women for summer internships at DHS Components, DHS COEs, and elsewhere in the HSE to strengthen the relationships and core knowledge between DHS and DOD.

2. *Minority Serving Institutions* - FY 2015: \$3.581 million. FY 2016 Request: \$3.396 million. This program enhances the capabilities of MSIs to conduct HS-STEM related research and move MSI students into successful HSE careers. Current MSI programs, including the Scientific Leadership Award program and the Summer Research Team program, are developing course content and training in areas critical to homeland security, while they also build enduring partnerships with the COEs. With small investments, S&T expects to realize significant returns in the development of a new generation of scientists and engineers focused on homeland security. In addition, the programs can increase diversity and representation within the future homeland security science and engineering workforce.

IV. Program Justification Changes

**Department of Homeland Security
Science & Technology
Research, Development, Acquisitions, and Operations
Justification of Program Changes
(Dollars in Thousands)**

Program Increase 1: Acquisition and Operations Support
PPA: Acquisition and Operations Support
Program Increase: Positions 0, FTE 0, Dollars \$5,399

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	\$500
Program Increase							-	-	\$5,399
Total Request	-	-	-	-	-	-	-	-	\$5,899

Description of Item

The increase of \$5.399 million provides funding for Development, Test, and Evaluation (DT&E) and for S&T analyses supporting the Joint Requirements Council (JRC).

Justification

S&T establishes policies and procedures to coordinate and monitor the T&E activities across the DHS acquisition framework including Developmental Test and Evaluation (DT&E). Requested funds are for S&T to be involved in all aspects of T&E including setting policy and guidance for and overseeing DT&E, approving the DT&E plan supporting the decision to begin initial productions, and the integration of DT&E with operational T&E.

In addition, S&T is requesting funds for performing capabilities and requirements analysis for each of the DHS portfolio areas brought before the DHS JRC. A key element of the Secretary's Unity of Effort initiative, the JRC is a Component-led body that aims to identify and prioritize cross-Department capability gaps, overlaps, and duplications. The JRC analysis allows DHS leadership to address the gaps, overlaps, and duplications at the enterprise level rather than at the individual Component level. The project draws upon S&T's previous development of a repeatable, structured analytic process included in the Integrated Investment Life Cycle Management pilot analyses. Key outputs of this project for each portfolio area include operational visualizations, functional analyses, operational analysis reports, capabilities based assessments, and prioritized shortfalls.

Impact on Performance (Relationship to Strategic Goals)

The FY 2016 increase will allow AOS to continue to maintain established direct relationships between its researchers and customers across DHS. S&T's support to Components include acquisition support, requirements generation, test and evaluation, operational analysis, standards development, and non-traditional efforts. Collectively, these additional avenues for the thoughtful application of analytical and scientific expertise expand the ways S&T delivers efficiencies and cost savings to the HSE.

Department of Homeland Security
Science & Technology
Research, Development, Acquisitions, and Operations
Justification of Program Changes
(Dollars in Thousands)

Program Increase 2: Laboratory Operations
PPA: Laboratory Facilities
Program Increase: Positions 0, FTE 0, Dollars \$5,336

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	\$120,266
Program Increase							-	-	\$5,336
Total Request	-	-	-	-	-	-	-	-	\$125,602

Description of Item

The increase of \$5.336 million provides additional funding for NBAF and PIADC laboratory operations.

Justification

The Laboratory Facilities Programs provides the Nation with a coordinated, enduring core of productive science, technology, and engineering laboratories, organizations, and institutions, which can provide the knowledge and technology required to secure our homeland.

These funds will be used to begin operational stand-up of NBAF, including on-site project staffing and the initial contract award. Planning activities that will be awarded under the NBAF stand-up contract include development of project plans, integrated schedules, risk management plans, etc. In addition to planning, activities for future initiation under the NBAF stand-up contract includes assessment of baseline conditions, such as the inventory of the existing biological materials at PIADC, including the bio-repository and vaccine bank to be transitioned.

These funds will also be used to meet the bio-containment waste management requirements set under the current consent order with the New York State Department of Environmental Conservation (DEC) and the new select agent Tier one requirements for high threat biologic select agent(s) at PIADC, such as foot and mouth disease. Additional funds will also be used to focus on waste characterization and management requirements in order to minimize the potential for enforcement actions (e.g. fines, suspension of permits) that could adversely impact PIADC's ability to complete its mission. Funding will also support PIADC in meeting additional Tier one regulatory requirements to strengthened

security monitoring (cameras), intrusion detection and screening (x-ray and metal detectors), and occupation health medical evaluations of staff.

Impact on Performance (Relationship to Strategic Goals)

The FY 2016 funding will increase Laboratory Facilities' ability to establish additional direct relationships between its researchers and customers across DHS. This extensive network facilitates the delivery of enduring capabilities vital to DHS and the national homeland security mission, and houses some of the most advanced scientific expertise and capabilities in the world. As a result, the Homeland Security Enterprise is able to leverage, transfer, and apply a wealth of expertise to inform policy, improve operations, and advance research in support of homeland security.

Department of Homeland Security
Science & Technology
Research, Development, Acquisitions, and Operations
Justification of Program Changes
(Dollars in Thousands)

Program Increase 3: Apex Programs and Apex Engines
PPA: Research Development and Innovation
Program Increase: Positions 0, FTE 0, Dollars \$63,237

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	\$15,013
Program Increase							-	-	\$63,237
Total Request	-	-	-	-	-	-	-	-	\$78,250

Description of Item:

The increase of \$63.237 million in the Research, Development, and Innovation budget reflects the expansion of the Apex Program. \$62.175 million is realigned from other programs within the RDI PPA in addition to a \$1.062 million increase to the RDI PPA.

The Under Secretary of S&T has worked to establish visionary goals that would serve as 30-year horizon points for S&T to build toward. These goals strive for previously unachieved capabilities and lower-cost equivalents to existing capabilities. They help orient an organization and inspire stakeholders, including operators, end users, and performers in industry and academia. A working group from within S&T generated four Visionary Goals:

- Screening at Speed: Matching the Pace of Life
- A Trusted Cyber Future: Protecting Privacy, Commerce, and Community
- Enable the Data: Driving Decisions at the Speed of Thought
- First Responder of the Future: Protected, Connected, and Fully Aware

The Apex programs are targeted at beginning to turn these visionary goals into reality.

This realignment of RDI projects supports the S&T Undersecretary's directive to streamline resources and increase support for Apex.

Justification:

The Apex program has been very successful and has generated a full range of lessons learned including front-end assessment and capability base-lining, working jointly with DHS operational partners, and joint program execution. The new expanded Apex projects will be cross-cutting, multi-disciplinary

efforts intended to solve problems of strategic operational importance – but the projects are being scaled to apply to a wider portion of the portfolio and will operate on longer five-year timelines. The new Apexes will include some current efforts rolled up with expanded or new ones. With high-profile programs, concrete deliverables, precise milestones and timelines, and significant increases in dollar and workforce investment, the new, scaled Apex efforts will bring substantial gains for our operational partners involved with screening, border security, network security, flood resilience, biodetection, and emergency response.

Apex includes technology engines that provide program-specific support through cross-cutting multi-use technologies/functions that will provide the same services to all Apex programs and to S&T at large, but tailored based on the Apex program's individual focus and capability needs.

The current Apex Engines are: Data Analytics, Situational Awareness and Decision Support (SANDS), Communication and Network Technologies (CNET), Identity Access and Management (IDAM), Human Systems, Modeling and Simulation, and Targeted Innovative Technologies Acceleration Network (TITAN).

Impact on Performance (Relationship to Strategic Goals):

Apex programs have been very successful and have generated a full range of lessons learned including front-end assessment and capability base lining, working jointly with DHS operational partners, and joint program execution. With high-profile programs, concrete deliverables, precise milestones and timelines, and significant increases in dollar and workforce investment, S&T believes Apex efforts will bring substantial gains for our operational partners involved with screening, border security, network security, flood resilience, bio-detections, and emergency response.

Department of Homeland Security
Science & Technology
Research, Development, Acquisitions, and Operations
Justification of Program Changes
(Dollars in Thousands)

Program Decrease 1: Laboratory Construction
PPA: Laboratory Facilities
Program Decrease: Positions 0, FTE 0, Dollars \$(6,910)

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	\$15,229
Program Decrease							-	-	(\$6,910)
Total Request	-	-	-	-	-	-	-	-	\$8,319

Description of Item

FY 2016 funding will support planned infrastructure upgrades at the Transportation Security Laboratory (TSL). As part of Phase III of the TSL Infrastructure Investment Program (IIP), the dated Heating, Ventilating, and Air Conditioning (HVAC) and roofing systems of Building 315 will be replaced with new systems. Also, design and permitting will begin for a new facility, the Detection Sciences Testing & Applied Research (DSTAR) Center.

Justification

The Laboratory Facilities Programs provides the Nation with a coordinated, enduring core of productive science, technology, and engineering laboratories, organizations, and institutions, which can provide the knowledge and technology required to secure our homeland. The TSL IIP integrates the priorities and mission focus areas previously identified by DHS and TSL with individual project requirements. These priorities and mission focus areas provide TSL the needed capabilities at the right time and in the most efficient manner.

The largest and oldest facility in the TSL complex, Building 315, was constructed and occupied in 1992. Its primary purpose was to provide both laboratory and separate administration space. It's HVAC and roofing systems are reaching the end of their expected service life. The existing HVAC systems are undersized and energy inefficient. In order to maximize the use of these office and hardened laboratories and increase energy efficiency, the existing systems are proposed to be replaced with new equipment.

The proposed DSTAR Center will be a one-story stand-alone facility, approximately 35,000 square feet total, to support personnel growth associated with mission expansion. It will consolidate scientific,

office, and warehousing functions that are current spread across the TSL campus in temporary facilities, improving operational and cost efficiencies. The DSTAR Center is envisioned as the new “front door” of the TSL campus, and will present a modern, collaborative image to the public. It will become the focus for campus wide activities and other collaborative opportunities. In addition to office space, the DSTAR Center will house moderately-hardened and non-hardened, general purpose, laboratory space, adjacent to offices, training, and other support spaces. The DSTAR Center will accommodate individual moderately-hardened (up to 5 lbs. net explosive weight NEW) rooms for Bulk Detection Research/High-Energy X-ray (HEX), electromagnetic studies of explosives EMX and the Work-for-Others Labs (Secure Moderate-Explosives Labs for undefined clients (i.e. FBI); and non-hardened rooms for the consolidated Trace Lab.

Impact on Performance (Relationship to Strategic Goals)

The FY 2016 funding will increase Laboratory Facilities’ ability to establish additional direct relationships between its researchers and customers across DHS, leverage the depth of capacity in national labs, and expand future funding mechanisms for its wide range of programs. The TSL IIP was created to support DHS Strategic Plan goals, including preventing terrorism and enhancing security and conducting research and development to strengthen the homeland security mission.

Program Decrease 2: Research, Development and Innovation
PPA: Research Development and Innovation
Program Decrease: Positions 0, FTE 0, Dollars \$(62,175)

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	\$433,788
Program Decrease							-	-	(\$62,175)
Total Request	-	-	-	-	-	-	-	-	\$371,613

Description of Item

A realignment within Research, Development, and Innovation of \$62.175 million in research and development work areas such as: Border Security, CBE Defense; Counter Terrorist; Cyber Security/Information Analysis, and First Responder/Disaster Resilience supports the expansion of Apex.

Justification

This realignment of RDI projects supports the S&T Undersecretary's directive to streamline resources and increase support for Apex.

The table below reflects the realignment from the various areas to support within RDI.

Program Project and Activity (PPA)	FY2015	Realignment	FY2016
Research, Development & Innovation	433,788,000		434,849,863
APEX	15,013,273		78,250,000
Apex Programs			60,250,000
Apex Engines			18,000,000
Border Security	49,100,000	(7,276,000)	41,824,000
CBE Defense	125,426,229	(27,800,229)	97,626,000
Counter Terrorist	64,650,000	(7,650,000)	57,000,000
Cyber Security/Information Analytics	77,010,000	(10,036,137)	66,973,863
First Responder/Disaster Resilience	102,588,498	(9,412,498)	93,176,000
Total	433,788,000	(62,174,864)	434,849,863

Impact on Performance (Relationship to Strategic Goals):

The S&T Under Secretary requested that projects in the Research, Development and Innovation (RDI) budget be reviewed based on how projects aligned to the Department’s, Secretary’s, and Under Secretary’s priorities, to identify potential funding sources to reallocate to the Apex budget. Directors of each Homeland Security Advanced Research Projects Agency division and the First Responders Group division (a total of 8 executives) were convened to review the RDI projects. From this intensive review, the Directors identified projects whose planned funding could be used to fund the new Apex program which better aligns to the Departments Strategic plan by working jointly with DHS operational partners to solve problems of strategic operational importance such as screening, border security, network security, flood resilience, bio-detection, and emergency response. Through the development of high-profile projects with increased funding resulting in new Apex efforts yielding substantial gains for our operational partners, the realignment of funding from Border Security, CBE Defense, Counter Terrorist, Cyber Security/Information Analytics, and First Responder/Disaster Resilience illustrated below, strengthens S&T’s ability to achieve the Department’s following mission areas: Mission 1: Prevent Terrorism and Enhance Security, Mission 2: Secure and Manage Our Borders, Mission 4: Safeguard and Secure Cyberspace, and Mission 5: Strengthen National Preparedness and Resilience.

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For necessary expenses for science and technology research, including advanced research projects, development, test and evaluation, acquisition, and operations as authorized by title III of the Homeland Security Act of 2002 (6 U.S.C. 181 et seq.), and the purchase or lease of not to exceed 5 vehicles [\$941,671,000] \$646,873,000, of which [\$506,491,000] \$512,952,000, to remain available until September 30, [2017] 2018; and of which [\$435,180,000] \$133,921,000, to remain available until September 30, [2019] 2020, solely for operation and construction of laboratory facilities.

Language Provision	Explanation
1 ...[\$941,671,000] \$646,873,000...	Dollar change only. No substantial change proposed.
2 ...[\$506,491,000] \$512,952,000...	Dollar change only. No substantial change proposed.
3 ... [2017] 2018...	Fiscal year change only. No substantial change proposed.
4 ... to remain available until...	Provides S&T with 3-year authority for the \$481,709,000 available for advanced research projects, development, test and evaluation, acquisition, and operations
5 ...[\$435,180,000] \$133,921,000...	Dollar change only. No substantial change proposed.
6 ... [2019] 2020...	Fiscal year change only. No substantial change proposed.
7 ... to remain available until...	Provides S&T with 5-year authority for the \$133,921,000 available solely for operation and construction of laboratory facilities

Laboratory Facilities Mission Statement

Manages the Laboratory Facilities programs. The Office of National Laboratories (ONL) provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations and institutions, which can provide the knowledge and technology required to secure our homeland. ONL executes two programs: Construction and Laboratory Operations.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$13,702	\$13,893	\$14,208	\$315
11.7 Military Personnel	\$1,561	\$1,561	\$1,561	-
12.1 Civilian Personnel Benefits	\$3,850	\$4,026	\$4,026	-
Total, Salaries & Benefits	\$19,113	\$19,480	\$19,795	\$315

Salaries and Benefits includes costs for FTEs located at DHS S&T-operated laboratories. The 2016 pay increase of 1.3%.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.4 Operation and Maintenance of Facilities	\$50,475	\$55,523	\$60,859	\$5,336

Operation and maintenance of facilities provides normal daily operations of PIADC, NUSTL, TSL, and NBACC. The costs include maintenance and repair of buildings and land.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
32.0 Land and Structures	\$433,250	\$315,230	\$8,320	(\$306,910)

Land and Structures provides costs for construction and capital improvement activities. The decrease is associated with non-recurring costs associated with NBAF.

A. Component Overview

The Science & Technology Directorate (S&T) is comprised of the following mission-oriented programs that support achievement of the DHS strategic missions, goals, and objectives.

Acquisition & Operations Support: Acquisition and Operations Support provides expert assistance to entities across the Homeland Security Enterprise to ensure that the transition, acquisition and deployment of technologies, information, and procedures improve the efficiency and effectiveness of operational capabilities across the HSE mission. The five areas within AOS are: Operations Research and Analysis; SAFETY Act (Support Anti-terrorism by Fostering Effective Technologies Act of 2002); Standards; Technology Transition Support; and Testing and Evaluation.

Laboratory Facilities: Laboratory Facilities provides a coordinated, enduring core of productive science, technology and engineering laboratories, organizations and institutions, which can provide the knowledge and technology required to secure our homeland. The laboratories' critical missions include the following: (1) assess and identify vulnerabilities and respond to potential chemical threats and hazards; (2) characterize biological threats and bio forensic analysis to support attribution of the planned or actual use of biological weapons; (3) support first responders by conducting tests, evaluations, and assessments of technologies and systems; (4) serve as the front line of the nation's defense against diseases that could impact livestock, meat, milk, and other animal products; and (5) provide a continuously available national capability to mature, evaluate, and certify emerging explosives detection technologies.

Research, Development, and Innovation: Research, Development, and Innovation is a portfolio of customer-focused and output-oriented research, development, testing and evaluation (RDT&E) programs that balance risk, cost, impact, and time to delivery. These RDT&E programs support the needs of the operational components of the Department and the first responder community and address crosscutting areas such as standards and interoperability.

University Programs: University Programs supports critical homeland security-related research and education at U.S. colleges and universities to address high-priority, DHS-related issues and to enhance homeland security capabilities over the long term. The mission is carried out through activities under the S&T Directorate's University Centers of Excellence (COEs), Education Program, and the Minority Serving Institutions (MSIs) Program. The program brings together scientists, mathematicians, and engineers from many academic disciplines and institutions. These researchers are investigating research questions important to DHS and developing new technologies and approaches to solve complex and challenging homeland security problems. The program focuses on building homeland security expertise in the academic community, creating strategic partnerships among universities and public agencies, and developing a new scientific workforce of homeland security experts.

Management & Administration: This program captures activities that provide enterprise leadership, management and/or business administration services and describes the capabilities and activities that support the day-to-day management and back office functions enabling the Department to operate efficiently and effectively. Key capabilities include conducting agency

planning and performance management, managing finances, managing agency workforce, providing physical and personnel security, acquiring goods and services, managing information technology, managing agency property and assets, managing agency communications, managing legal affairs, and providing general management and administration.

FY 2016 Budget Request

The table below shows S&T FY 2016 Budget request by its mission-oriented programs.

Program	FY 2016 Request	
	FTE	Dollars (in thousands)
Acquisition & Operations Support	0	\$47,102
Laboratory Facilities	130	\$133,921
Research, Development, and Innovation	0	\$434,850
University Programs	0	\$31,000
Management & Administration	342	\$133,921
Total Budget Request	472	\$778,988

B. Component Contributions to Achieving Departmental Missions

The table below shows the alignment of the S&T programs to the DHS Missions and Mature and Strengthen Homeland Security.

Programs	DHS Missions					Mature and Strengthen Homeland Security
	Prevent Terrorism and Enhance Security	Secure and Manage Our Borders	Enforce and Administer Our Immigration Laws	Safeguard and Secure Cyberspace	Strengthen National Preparedness and Resilience	
Acquisition & Operations Support					17%	83%
Laboratory Facilities						100%
Research, Development, and Innovation	36%	28%	<1%	13%	21%	2%
University Programs						100%
Management & Administration					13%	87%

Mission 1: Prevent Terrorism and Enhance Security

Resources Requested

S&T’s resources supporting *Prevent Terrorism and Enhance Security* are provided in the table below.

\$ in thousands

Program	FY 2014		FY 2015		FY 2016	
	\$	FTE	\$	FTE	\$	FTE
Research, Development, and Innovation	\$215,480	0	\$186,726	0	\$156,126	0
Total	\$215,480	0	\$186,726	0	\$156,126	0

Performance Measures

S&T contributes to this mission, but does not have performance measures in this area.

Mission 2: Secure and Manage Our Borders

Resources Requested

S&T’s resources supporting *Secure and Manage Our Borders* are provided in the table below.

\$ in thousands

Program	FY 2014		FY 2015		FY 2016	
	\$	FTE	\$	FTE	\$	FTE
Research, Development, and Innovation	\$58,780	0	\$64,114	0	\$120,074	0
Total	\$58,780	0	\$64,114	0	\$120,074	0

Performance Measures

S&T contributes to this mission, but does not have performance measures in this area.

Mission 3 : Enforce and Administer Our Immigration Laws

Resources Requested

S&T’s resources supporting *Secure and Manage Our Borders* are provided in the table below.

\$ in thousands

Program	FY 2014		FY 2015		FY 2016	
	\$	FTE	\$	FTE	\$	FTE
Research, Development, and Innovation	\$10,500	0	\$8,350	0	\$500	0
Total	\$10,500	0	\$8,350	0	\$500	0

Performance Measures

S&T contributes to this mission, but does not have performance measures in this area.

Mission 4: Safeguard and Secure Cyberspace

Resources Requested

S&T’s resources supporting *Safeguard and Secure Cyberspace* are provided in the table below.

\$ in thousands

Program	FY 2014		FY 2015		FY 2016	
	\$	FTE	\$	FTE	\$	FTE
Research, Development, and Innovation	\$70,254	0	\$72,010	0	\$57,974	0
Total	\$70,254	0	\$72,010	0	\$57,974	0

Performance Measures

For *Safeguard and Secure Cyberspace*, strategic performance measures are presented. Strategic Measures represent measures that gauge achievement for this mission area, and are considered to be our Government Performance and Results Act Modernization Act (GPRAMA) performance measures.

Strategic Measures

<p>Measure: Percent of planned cyber security products and services transitioned to government, commercial and open sources</p>
<p>Description: This measure reflects the percent of identified and completed planned transitions of cybersecurity products and/or services (e.g. technologies, tools, capabilities, standards, knowledge products) within Science & Technology Directorate’s Cyber Security Division projects to government, commercial or open sources. The percent reported is reviewed using the number of planned transition milestones stated in the Cyber Security Division's budget execution plan for the fiscal year, and the explanation that is provided in each quarterly performance data call. The Program identifies funds and coordinates cyber security research and development resulting in deployable security solutions. These solutions include user identity and data privacy technologies, end system security, research infrastructure, law enforcement forensic capabilities,</p>

secure protocols, software assurance, and cybersecurity education.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	60%	65%	80%	80%
Result:	N/A	N/A	89%	93%	N/A	N/A

Mission 5: Strengthen National Preparedness and Resilience

Resources Requested

S&T’s resources supporting *Strengthen National Preparedness and Resilience* are provided in the table below.

\$ in thousands

Program	FY 2014		FY 2015		FY 2016	
	\$	FTE	\$	FTE	\$	FTE

Performance Measures

S&T contributes to this mission, but does not have performance measures in this area.

Mature and Strengthen Homeland Security

Resources Requested

S&T’s resources supporting *Mature and Strengthen Homeland Security* are provided in the table below.

\$ in thousands

Program	FY 2014		FY 2015		FY 2016	
	\$	FTE	\$	FTE	\$	FTE
Acquisition & Operations Support	\$33,823	0	\$33,660	0	\$39,059	0
Laboratory Facilities	\$547,785	130	\$435,180	130	\$133,921	130
Research, Development, and Innovation	\$10,000	0	\$5,000	0	\$9,000	0
University Programs	\$39,724	0	\$31,000	0	\$31,000	0
Management & Administration	\$111,480	337	\$112,614	337	\$115,004	342
Total	\$742,812	467	\$617,454	467	\$327,984	472

Performance Measures

For *Mature and Strengthen Homeland Security*, two types of performance measures are presented. Strategic Measures represent S&T’s measures that gauge achievement for this mission area, and are considered to be our Government Performance and Results Act Modernization Act (GPRAMA) performance measures. Additional Management Measures are displayed, as appropriate, to provide a more thorough context of expected performance results.

Strategic Measures

Measure: Percent of Apex technologies or knowledge products transitioned to customers for planned improvements in the Homeland Security Enterprise						
Description: This measure gauges the transition of high priority, and high value research and development projects known as Apex projects. Apex technologies and knowledge products are quickly delivered to improve homeland security operations. Apex products consist of cross-cutting, multi-disciplinary efforts which employ 3 to 5 year innovation cycles from project inception through operational testing.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	N/A	N/A	80%	80%
Result:	N/A	N/A	N/A	N/A	N/A	N/A

Management Measures

Measure: Number of SAFETY Act "transition" (new, highly innovative) technologies awarded	
Description: In order to stay up to date with the continually changing nature of terrorism, the Office of SAFETY (Support Anti-Terrorism by Fostering Effective Technologies) Act Implementation (OSAI) will seek out those evolving technologies that can serve a homeland security mission and provide coverage to enable their transition into the commercial market, at a rate of 20 percent a year. A "transition" technology is defined as any technology that is awarded Developmental Testing and Evaluation (DTE) Designation, and those that can be considered new	

and innovative (i.e. a new technological application in the homeland security arena). OSAI is actively seeking out these technologies in an effort to address the ever-changing nature of terrorism. The SAFETY Act program is the only federal program that attempts to help industry transition these developmental technologies into the commercial marketplace.

Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	21	21	21	21	21	21
Result:	21	21	11	22	N/A	N/A

Measure: Percent of Capabilities Development Support Group program milestones that are met, as established in the fiscal year's budget execution plan

Description: This measure reflects the Capabilities Development Support Group program milestones that meet their fiscal year budget execution and five - year plan goals. These milestones reflect the programmatic and technical events, accomplishments, or intermediate goals in the life of projects and programs. These milestones indicate satisfactory progress toward achieving long - term program performance goals and Department - wide goals and objectives. Milestones are defined as significant events, accomplishments, or intermediate goals in the life of projects, programs, etc. used to indicate satisfactory progress toward achieving long - term program performance goals and Department - wide goals and objectives. They help identify specific and established criteria for measuring incremental progress associated with long - term activities and program outcomes.

Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	75%	75%	75%	75%	75%
Result:	N/A	100%	100%	87%	N/A	N/A

Measure: Percent of fiscal year milestones met for the Administration and Support Division governed by applicable laws, regulations and management directives

Description: This measure reflects the Administration and Support Division milestones identified in the Future Years Homeland Security Program (FYHSP), Program Data Module (PDM) and are governed by applicable laws, regulations and management directives. These milestones reflect the business and administrative requirements of DHS S&T including facilities, property, administration, audits and assessments, physical and information security, information technology, human capital, occupational health and safety, environment and energy, and readiness and operations coordination. Milestones are defined as significant events, accomplishments, or intermediate goals in the activities of the administrative support functions used to indicated satisfactory progress toward achieving long-term performance goals and Department-wide goals and objectives. They help identify specific and established criteria for measuring incremental progress associated with long-term activities and program outcomes.

Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	75%	75%	75%	75%	75%
Result:	N/A	100%	100%	100%	N/A	N/A

Measure: Percent of Homeland Security Advanced Research Projects Agency (HSARPA) program milestones that are met, as established in the fiscal year's budget execution plan

Description: This measure reflects the Homeland Security Advanced Research Projects Agency

(HSARPA) program milestones that meet their fiscal year budget execution and five-year plan goals. HSARPA manages a portfolio of highly innovative programs that are transforming the future mission space for Homeland Security. Complimentary to the S&T Directorate's other programs and projects, HSARPA projects push scientific limits to address customer-identified gaps in areas where current technologies and R&D are inadequate or non-existent. HSARPA program managers lead teams of national experts in the development of new homeland security technologies, demonstrations and applications that offer significant breakthroughs for DHS operations. These milestones reflect the programmatic and technical events, accomplishments, or intermediate goals in the life of HSARPA projects and programs.

Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	75%	75%	75%	75%	75%
Result:	N/A	85%	62%	77%	N/A	N/A

Measure: Percent of Research and Development Partnerships (RDP) program milestones that are met, as established in the fiscal year's budget execution plan

Description: This measure reflects the Research and Development Partnerships (RDP) Group program milestones that meet their fiscal year budget execution and five-year plan goals. RDP conducts extensive outreach efforts with members of the HSE based on the strategic and programmatic needs of the Department and S&T. The R&D Partnerships Group assists in both "transmitting and receiving information" to stakeholders across the HSE. The R&D Partnerships Group enables opportunities for evaluating, expediting and monitoring the execution of programs with an increased speed-of-execution compared to "in-house only" activities. Our Group maintains extensive contacts and key references to conduct outreach, and provide research and funding opportunities to the public and private sectors both domestically and internationally.

Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	75%	75%	75%	75%	75%
Result:	N/A	91%	95%	77%	N/A	N/A

Measure: Percent of the Homeland Security Enterprise and First Responders Group program milestones that are met, as established in the fiscal year's budget execution plan

Description: This measure reflects the Homeland Security Enterprise and First Responders Group (FRG) program milestones that meet their fiscal year budget execution and five-year plan goals. FRG identifies, validates, and facilitates the fulfillment of First Responder capability gaps through the use of existing and emerging technologies, knowledge products, and the acceleration of standards. FRG manages working groups, teams, and other stakeholder outreach efforts in order to better understand the needs and requirements of local, tribal, state, and Federal First Responders, including those on the front line of border protection and transportation security.

Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	75%	75%	75%	75%	75%
Result:	N/A	83%	77%	78%	N/A	N/A

Measure: Percent of university programs milestones that are met, as established in the fiscal year's budget execution plan

Description: This measure reflects the percent of University Programs milestones that meet

their fiscal year budget execution and five-year plan goals. University Programs works closely with its stakeholders to identify requirements, set goals for milestones and deliverables, discuss the status of projects, and plan for the allocation of resources.

Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	75%	75%	75%	75%	75%	75%
Result:	92%	85%	100%	86%	N/A	N/A

BUDGET REQUEST AND SUPPORTING INFORMATION

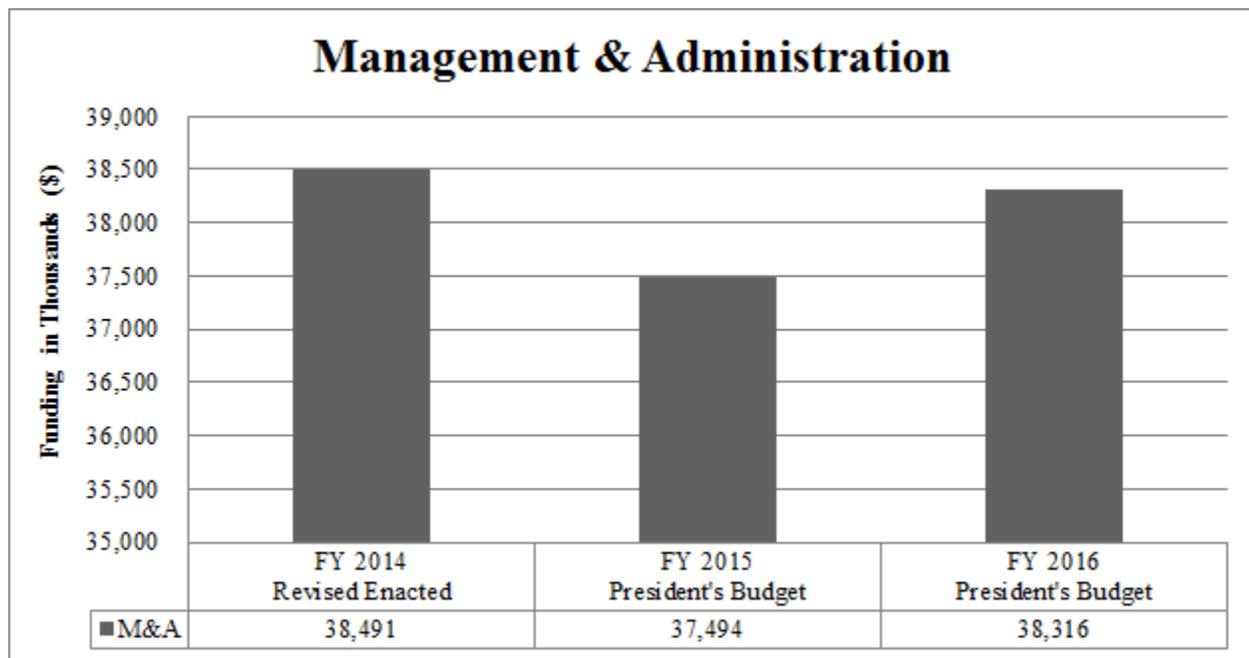

Domestic Nuclear Detection Office Management and Administration

I. Appropriation Overview

A. Mission Statement for Management and Administration:

The Management and Administration (M&A) appropriation provides for the support to accomplish the DNDO mission of serving as the primary entity of the United States Government (USG) to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop, or use an unauthorized nuclear explosive device, fissile material, or radiological material in the United States, and to improve that system over time. M&A includes all costs related to Federal personnel (including detailees from other organizations), supplies and materials, and information technology (IT) equipment and support, as well as financial management support. DNDO also contributes M&A funds to the DHS Working Capital Fund (WCF) for facilities, other infrastructure and security costs, human resource support, acquisition support, IT services, training, and travel costs. Most of DNDO's contributions to the DHS WCF are included within the M&A request with the exception of procurement support costs.

B. Budget Activities:

The DNDO FY 2016 request for M&A provides for 137 full-time positions (FTP) and 137 full-time equivalents (FTE). As a jointly staffed office with personnel from across the Federal Government, DNDO provides reimbursement to parent organizations for detailed staff. Twelve personnel from various Federal agencies are fully integrated into DNDO's office structure to enhance the workforce of

137 employees.

DNDO anticipates completing the transition to an integrated acquisition, asset, and financial management solution in FY 2016 that will address inefficiencies and duplicative work in its current business operations. With support from the DHS Under Secretary of Management, Office of the Chief Financial Officer, and Office of the Chief Procurement Officer, DNDO will begin the transition in FY 2015.

C. Budget Request Summary:

The FY 2016 President's Budget requests 137 positions, 137 FTE and \$38,316,000 for Management and Administration. The total adjustments-to-base is \$822,000.

II. Summary of FY 2016 Budget Estimates by Program/Project Activity (PPA)

Program Performance Justification**
(Dollars in Thousands)

PPA: Management and Administration

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	128	121	\$38,491
FY 2015 President's Budget	127	127	\$37,494
2016 Adjustments-to-Base	10	10	\$822
FY 2016 Current Services	137	137	\$38,316
FY 2016 Program Change	-	-	-
FY 2016 Total Request	137	137	\$38,316
Total Change 2015 to 2016	10	10	\$822

The FY 2016 President's Budget requests \$38.316 million and 137 FTE for M&A.

Adjustments-to-base include:

- Transfer of \$0.031 million to Data Center Support DHS OCIO
- Increase of \$0.052 million to annualize the 2015 pay increase
- Increase of \$0.207 million for 2016 pay increase
- Increase of \$0.105 million for Working Capital Fund Adjustment
- Increase of \$0.041 million for Transit Program
- Increase of \$1.183 million the DHS Balanced Workforce Strategy
- Increase of \$0.087 million for Pension Contribution Liability Increase
- Decrease of \$0.071 million for GSA Rent
- Decrease of \$0.401 million and 1FTP/1FTE for HQ Efficiency VERA & VSIP and Vacancies
- Decrease of \$0.105 million for HQ Efficiency Parking & Cellular Wireless
- Decrease of \$0.245 million for Business Operations and Support

Management & Administration

Program	Project	Level of Effort	General Description
Operating Expenses	Business Operations Support	Ongoing	Provides support for financial management systems and services, events, supplies, security, accounting operations, reception and representation, professional development, and travel management.
	Information Technology Support	Ongoing	Provides support for Information Technology (IT) expenses and contributions to IT infrastructure costs paid through the working capital fund.
	DHS Shared Expenses (WCF)	Ongoing	Includes fee-for-service, Government-wide mandated service activities, DHS crosscutting activities, and WCF management activities.
	Operations and Facility Management	Ongoing	Supports operation and maintenance of equipment, appliance replacement and repair, storage services, building services and utilities, and preventative facility maintenance.
Work Force	Work Force Management	Ongoing	Includes personnel, compensation, and benefits for Federal employees and reimbursable detailees, as well as support for DHS's Balanced Workforce Strategy, and annual performance awards.

CURRENT SERVICES PROGRAM DESCRIPTION:

The M&A appropriation funds the administration of DNDO and provides for the execution of salaries, benefits, and expenses. With the conversion of positions completed in FY 2014 and the 10 additional conversions anticipated to be completed by the end of FY 2015 as well as the reduction of one GS position for the HQ Efficiency, DNDO will achieve an FTP strength of 137 positions. The budget request reflects an anticipated savings of \$377K as decreases to the accounts that previously funded the contracted position. Additionally, funds are provided to the WCF, which provides such services as rent, acquisition support from Office of Procurement Operations, and Information Technology infrastructure support.

To address legacy financial management system inadequacies, DHS launched the Financial Systems Modernization (FSM) initiative in 2011 to modernize financial management systems at Components. DHS must invest in modernizing financial management systems in order to improve financial accountability and financial reporting, and enable business process standardization. The FSM initiative follows DHS Directives, OMB guidance, and processes developed by Treasury's Office of Financial Innovation and Transformation. DNDO will migrate to a shared service provider for financial, acquisition, and asset management solution services in FY 2015. Requested funds are for Operations and Maintenance (O&M) costs.

DNDO shares the cost of FSM with the Department and its portion will be implemented in FY 2015 at a projected O&M M&A cost of \$2.59M. In FY 2016, DNDO will be operational with O&M M&A cost projected at \$3.80M.

In addition to providing funding for Federal salaries and benefits for DNDO personnel, M&A funds support detailees from other DHS Components and from other Federal agencies such as Department of

Energy, the Federal Bureau of Investigation, the Department of Defense, and the Nuclear Regulatory Commission.

The M&A appropriation provides funding that assists in the achievement of DNDO's mission through the following leadership and administrative elements:

Office of the Director

- **Director's Office**

The Director's Office supports the Director in disseminating information and communicating the DNDO vision, plans, strategies, and activities to partners including DHS Components, other Executive Branch agencies, Congress, international partners, and the American public. Communications and policy support for the Director and Deputy Director include coordination of DNDO messaging and external affairs and associated preparation of materials (e.g., papers, responses, speeches, testimony, fact sheets, briefings, etc.), as appropriate.

- **Budget and Finance Office**

DNDO's Office of the Chief Financial Officer oversees financial management activities including budget planning and formulation, budget execution, internal controls, data management, and performance-based budgeting.

- **Office of the Assistant General Counsel**

The Office of the Assistant General Counsel serves as primary advisor to DNDO regarding legal issues arising under all aspects of the DNDO mission. This includes advising on the scope of authority of DNDO, procurement contracts, assistance agreements, claims, protests, litigation, ethics, privacy, and other areas. In addition, the office serves as liaison between DNDO and the DHS Headquarters Office of the General Counsel.

- **Red Team and Net Assessments (RTNA)**

RTNA serves as DNDO's primary means to assess the operational effectiveness and performance of DNDO programs and deployed rad/nuc detection capabilities at the Federal, State, local, and tribal levels in support of the GNDA.

Office of the Chief of Staff

- **Information Technology**

Provides oversight of and leads DNDO IT initiatives and programs and coordination with the Office of the Chief Information Officer.

- **Executive Secretariat**

Collaborates within DNDO and with other Component Executive Secretariats to ensure full compliance with and cross-coordination for tasks assigned to DNDO. Coordinates internally generated tasks, ensuring timely response.

- **Security**

Implements, directs, and manages the following programs for DNDO: Counterintelligence,

Information Security, Foreign Disclosure, Operations Security, Physical Security, Personnel Security, Anti-Terrorism/Force Protection, and Crime Prevention.

- **Human Resources**

Executes the functions of the Human Resources Officer and ensures the provision of a variety of human capital services in support of DNDO personnel in accordance with DHS Chief Human Capital Office requirements. This includes overseeing recruitment, staffing, performance management, professional development, and employee relations.

- **Administration and Facility Resources**

Oversees and provides various administrative support services pertaining to general office operations, facilities, purchase cards, travel, and records management.

M&A also provides support to the Directorates operating within the organizational structure of DNDO. The functions of each Directorate include:

- **Architecture and Plans Directorate (APD)**

In cooperation with DNDO's intra- and interagency partners, APD develops the GNDA strategies and plans for improving the Nation's ability to detect and prevent rad/nuc attacks. APD also identifies, coordinates, and prioritizes programs across DNDO that meet the needs and enhance the capabilities of stakeholders, thereby reducing the risk of rad/nuc terrorism.

- **National Technical Nuclear Forensics Center (NTNFC)**

Provides national-level integration, centralized planning, and stewardship for the technical nuclear forensics community and leads the USG efforts in establishing a robust and enduring pre-detonation nuclear materials forensics capability.

- **Operations Support Directorate (OSD)**

OSD provides the capability to monitor the status of GNDA resources and provides the information sharing and analytical capability necessary to support decision makers. OSD also fosters standard-based training, exercises, outreach, and technical assistance in support of rad/nuc detection programs, fulfilling GNDA goals among Federal, State, local, and tribal partners.

- **Product Acquisition and Deployment Directorate (PADD)**

Carries out the engineering development, production, logistics, procurement, and deployment of current and next-generation nuclear detection systems in support of DNDO's end-user partners, including U.S. Customs and Border Protection, the United States Coast Guard, and the Transportation Security Administration.

- **Systems Engineering and Evaluation Directorate (SEED)**

Characterizes and evaluates technical solutions for rad/nuc detection and ensures that systems are thoroughly tested prior to deployment. SEED also maintains DNDO's test infrastructure and works to develop standards for rad/nuc detection equipment.

- **Transformational and Applied Research Directorate (TAR)**

Through an aggressive and expedited research and development program, TAR develops break-through technologies that will address gaps in the GNDA and will have a positive impact on capabilities to detect nuclear threats.

DNDO Financial, Acquisition, and Asset Management Solution (FAAMS)

The purpose of the Financial, Acquisition, and Asset Management Solution (FAAMS) program is to obtain a business management solution. The FAAMS program is intended to provide DNDO with a fully integrated procurement and asset management system that seamlessly integrates into DNDO’s financial record system. DNDO requires a capability that effectively manages resources and enhances mission execution while complying with Federal laws, requirements, directives, and guidance regarding transparency and accountability.

The current financial management system used by DNDO is the U.S. Coast Guard’s Core Accounting System (CAS). CAS is a suite of application systems that support financial, procurement, and asset management activities for the administration of financial support functions.

This project is proposed to be funded out of one Joint Inter-agency Agreement (IAA) for Federal Financial Implementation Support Services for USCG/TSA/DNDO from FY 2014/15, as follows:

- HSHQDC-14-X-00216

FY 2014 Activity Funding (\$\$\$ thousands)	FY 2015 Activity Funding (\$\$\$ thousands)	FY 2016 Activity Request (\$\$\$ thousands)
\$273	\$7,748	\$5,188

FY 2016 Funding Breakout:

Program Area (Funding in \$\$\$ thousands)	Sub-Program	Mission Need
Financial Modernization Solution (5,188)	Financial, Acquisition, and Asset Management Solution (FAAMS)	The FAAMS program is intended to provide DNDO with a fully integrated procurement and asset management system that seamlessly integrates into DNDO’s financial record system.

Funding for the implementation of this contract is from multiple sources, not limited to DNDO appropriations. The implementation costs include contract labor, Federal labor, service provider system and labor, and the O&M costs for the implementation year.

IV. Program Justification Changes

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For salaries and expenses of the Domestic Nuclear Detection Office, as authorized by title XIX of the Homeland Security Act of 2002 (6 U.S.C. 591 et seq.), for management and administration of programs and activities, [\$37,494,000] \$38,316,000¹: Provided, That not to exceed \$2,250 shall be for official reception and representation expenses.[Provided further, That not later than 120 days after the date of enactment of this Act, the Secretary of Homeland Security shall submit to the Committees on Appropriations of the Senate and the House of Representatives a strategic plan of investments necessary to implement the Department of Homeland Security's responsibilities under the domestic component of the global nuclear detection architecture that shall:

- (1) define the role and responsibilities of each Departmental component in support of the domestic detection architecture, including any existing or planned programs to pre-screen cargo or conveyances overseas;
- (2) identify and describe the specific investments being made by each Departmental component in fiscal year 2015 and planned for fiscal year 2016 to support the domestic architecture and the security of sea, land, and air pathways into the United States;
- (3) describe the investments necessary to close known vulnerabilities and gaps, including associated costs and timeframes, and estimates of feasibility and cost effectiveness; and
- (4) explain how the Department's research and development funding is furthering the implementation of the domestic nuclear detection architecture, including specific investments planned for each of fiscal years 2015 and 2016.]²

Explanation of Changes:

Language Provision	Explanation
¹ ...[\$37,494,000] <u>\$38,316,000</u> ...	Dollar change only. No substantial change proposed.

² [Provided further, That not later than 120 days after the date of enactment of this Act, the Secretary of Homeland Security shall submit to the Committees on Appropriations of the Senate and the House of Representatives a strategic plan of investments necessary to implement the Department of Homeland Security's responsibilities under the domestic component of the global nuclear detection architecture that shall:

- (1) define the role and responsibilities of each Departmental component in support of the domestic detection architecture, including any existing or planned programs to pre-screen cargo or conveyances overseas;
- (2) identify and describe the specific investments being made by each Departmental component in fiscal year 2015 and planned for fiscal year 2016 to support the domestic architecture and the security of sea, land, and air pathways into the United States;
- (3) describe the investments necessary to close known vulnerabilities and gaps, including associated costs and timeframes, and estimates of feasibility and cost effectiveness; and
- (4) explain how the Department's research and development funding is furthering the implementation of the domestic nuclear detection architecture, including specific investments planned for each of fiscal years 2015 and 2016.]

Propose removing report language from appropriation language as deliverable is proposed to change from a report to a brief.

Management and Administration Mission Statement

Per the National Security Presidential Directive (NSPD) 43 / Homeland Security Presidential Directive (HSPD) 14, the mission of Domestic Nuclear Detection Office (DNDO) is to substantially reduce the risk of nuclear terrorism against the United States by continuously improving capabilities to deter, detect, respond to, and attribute attacks, in coordination with domestic and international partners. The M&A appropriation provides for the management and administrative support of that goal. M&A includes all costs related to Federal personnel, including detailees from other organizations. The M&A appropriation accounts for the funding that assists in the achievement of DNDO's mission through the maintenance of an operations level that provides facilities, supplies and materials, IT equipment and administrative support. Most of DNDO's contributions to the DHS Working Capital Fund are included within the M&A request.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
11.1 Full-time Permanent	\$16,939	\$16,841	\$17,067	\$226
11.5 Other Personnel Compensation	\$200	\$200	\$200	-
12.1 Civilian Personnel Benefits	\$6,239	\$4,165	\$6,354	\$2,189
Total, Salaries & Benefits	\$23,378	\$21,206	\$23,621	\$2,415

The FY 2016 request is \$23,621,000 for personnel compensation and benefits. The FY 2016 request for Management and Administration includes funding for a staffing level of 137 FTEs.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
21.0 Travel and Transportation of Persons	\$40	\$100	\$75	(\$25)

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
23.1 Rental Payments to GSA	\$5,031	\$5,298	\$5,227	(\$71)

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. Factored into the GSA cost is the rental of space through GSA to accommodate DNDO office requirements at a secondary location in Washington D.C.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
24.0 Printing and Reproduction	\$20	\$20	\$22	\$2

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$1,105	\$1,046	\$515	(\$531)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc) as well as from other units within the Federal Government. The decrease in advisory and assistance services reflects a shift in the allocation of DNDO's resources in support of the Financial, Acquisition, Asset Management Solution Project.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$188	\$174	\$190	\$16

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25 including training development and delivery.

	FY 2014	FY 2015	FY 2016	FY 2015 to

	Revised Enacted	President's Budget	Request	FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$7,949	\$8,920	\$7,882	(\$1,038)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. Included in the budget request is an allocation of funding to support the Financial, Acquisition, Asset Management Solution Project with a new integrated management system.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.7 Operation and Maintenance of Equipment	\$194	\$385	\$389	\$4

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
31.0 Equipment	\$416	\$199	\$249	\$50

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract.

K. DHS Balanced Workforce Strategy

In order to establish a high performing workforce comprised of a strong internal core of federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience and other resources necessary to balance the total DHS workforce.

Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment the Department will realign contractor and/or federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with federal employees to better realize the full potential of our total workforce – both contracted and federal. A strong internal core of federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for federal employees. As the Department has a large magnitude of contracts, all contracts have been prioritized based on risk into a Tiered ranking. The results of Tier 1 contract review are listed below.

DNDO requests 10 FTE for the FY 2016 DHS Balanced Workforce Strategy.

Position Type	FY 2014 Revised Enacted		FY 2015 President's Budget		FY 2016 Annualization		FY 2016 Follow On		FY 2016 Increase		TOTAL FY 2014 – FY 2016 DHS Balanced Workforce Strategy

*Amounts for FY 2015 reflect reprogramming approved in FY 2014 and positions planned for conversion in 2015.

FY 2016 DHS Balanced Workforce Strategy

The FY 2016 budget request reflects changes to our FTE counts from two sets of position conversions. In FY 2014 DNDO completed the conversion of 8 positions from contractors to Federal employees. These conversions focused on staffing to address the most critical vulnerabilities in business areas where “Nearly Inherent Government Functions” are performed by Federal employees; specifically, ensuring that financial operations are being handled by Federal employees.

The budget request also includes the anticipated changes in accounts and FTE from the conversion of 10 positions to be completed in FY2015 to achieve savings of \$377K in the FY 2016 budget.

Annualization of FY 2015 Base DHS Balanced Workforce Strategy

The conversions anticipated to be completed in FY 2015 will result in additional savings of \$377K.

DHS Balanced Workforce Strategy Follow-On

The plan in FY 2015 is to convert 10 positions with an assumed lapse rate of 50 percent (i.e. 5 positions filled and 5 positions unfilled). Saving in FY2015 for these positions remains in the program areas from which conversions are made. Annualized savings are reflected as downward adjustments to base starting in FY 2016.

BUDGET REQUEST AND SUPPORTING INFORMATION

Domestic Nuclear Detection Office Research, Development, and Operations

I. Appropriation Overview

A. Mission Statement for Research, Development and Operations:

The Domestic Nuclear Detection Office (DNDO) was established by National Security Presidential Directive (NSPD)-43/Homeland Security Presidential Directive (HSPD)-14 to protect against radiological and nuclear (rad/nuc) threats directed against the United States or its interests. Title V of the Security and Accountability for Every Port Act of 2006 (SAFE Port Act of 2006) (P.L. 109-347) directs DNDO to “serve as the primary entity of the United States Government (USG) to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop, or use an unauthorized nuclear explosive device, fissile material, or radiological material in the United States, and improve that system over time.”

The Nuclear Forensics and Attribution Act of 2010 (P.L. 111-140) codified the mission of nuclear forensics within DNDO and included specific requirements to lead the development and implementation of the *National Strategic Five-Year Plan for Improving the Nuclear Forensics and Attribution Capabilities of the United States* and to establish a National Nuclear Forensics Expertise Development Program (NNFEDP) to address the workforce pipeline needs in nuclear forensics. In addition to serving as the integrator for the USG nuclear forensics community, DNDO develops the technical capability to determine the nature and origin of nuclear or other radioactive materials out of regulatory control to support national priorities for deterrence, attribution, and prosecution.

To fulfill its mandates, DNDO’s activities are focused on developing the Global Nuclear Detection Architecture (GNDA), implementing its domestic component, and advancing technical nuclear forensics capabilities through the nuclear forensics program. Together, the GNDA and nuclear forensics efforts strengthen the detection of nuclear or other radioactive materials that are out of regulatory control;¹ enable the identification and closure of illicit radiological and nuclear trafficking networks; promote nuclear security; and deter potential adversaries by increasing their perceived risk of failure and the prospect of being held accountable for planned and executed attacks.

To be effective, the GNDA requires close coordination between Federal, State, local, tribal, and territorial stakeholders, as well as private sector and international partners. DNDO is authorized to coordinate the development of the GNDA among the USG partners. The GNDA represents a framework for detecting (through technical and non-technical means), analyzing, and reporting on nuclear and other radioactive materials that are out of regulatory control. In 2014, interagency partners jointly developed a new GNDA Strategic Plan that builds upon collaborative work done across the USG and replaces the GNDA Strategic Plan 2010. This new plan details the mission, goals, and

¹ The term “out of regulatory control” refers to materials that are being imported, possessed, stored, transported, developed, or used without authorization of the appropriate regulatory authority, either inadvertently or deliberately.

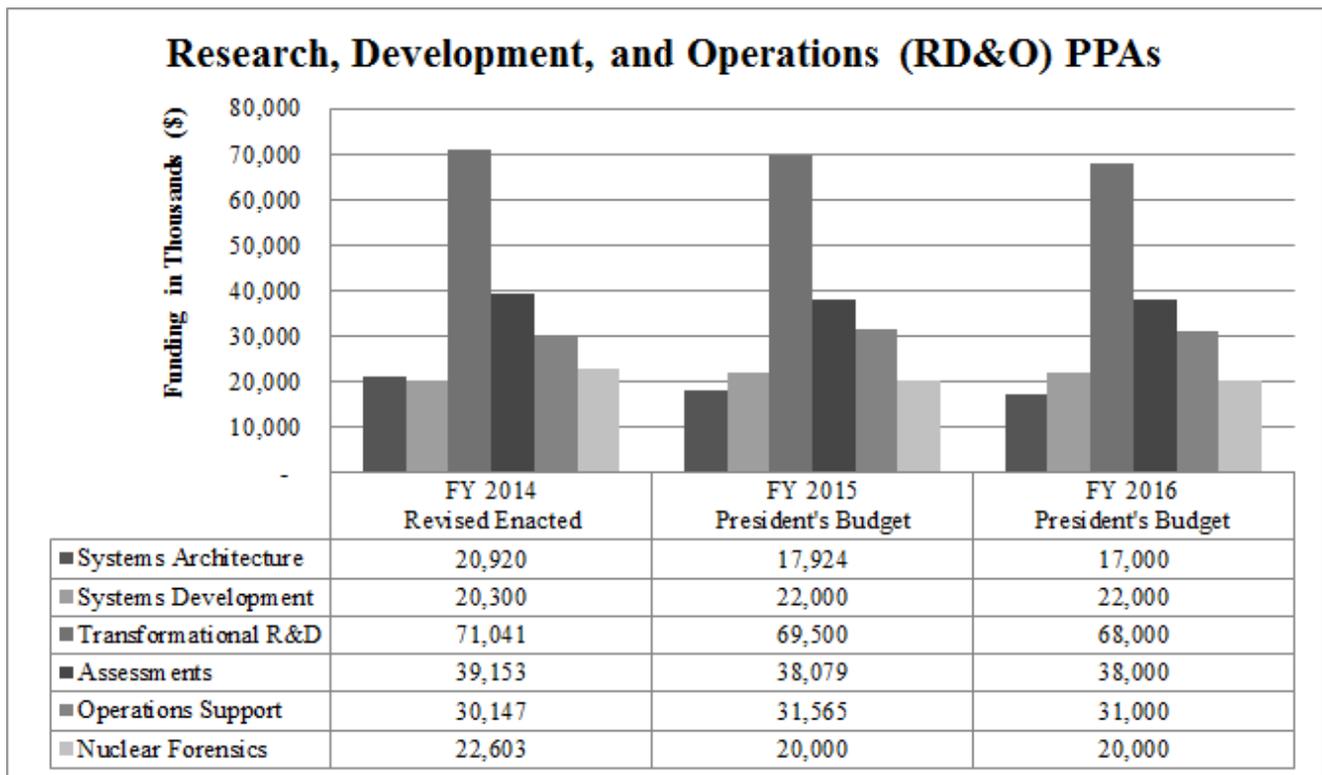

objectives for Federal nuclear detection programs, activities, and capabilities and will guide implementation of our Nation’s nuclear detection efforts over the next five years. DNDO seeks to make nuclear terrorism prohibitively difficult for our adversaries through the implementation of an architecture that is responsive to intelligence cues and relies on effective detection technologies in the hands of well-trained law enforcement officers and public safety officials.

Through its integration and technology development missions, implementation of the National Nuclear Forensics Expertise Development Program and the *National Strategic Five-Year Plan for Improving the Nuclear Forensics and Attribution Capabilities of the United States*, DNDO is striving to advance nuclear forensics capabilities in order to support the U.S. declared commitment to hold fully accountable any State, terrorist group, or other non-State actor which enables terrorist efforts to obtain or use weapons of mass destruction.

Research, Development, and Operations (RD&O) requests funds to advance technology development, testing, product acquisition, red team, and net assessments required for GNDA implementation and technical capabilities to support deterrence, attribution, and prosecution via nuclear forensics.

B. Budget Activities:

Program/Project Activity (PPA) Overview

Systems Architecture

At the core of all DNDO activities is the systems architecture function: determining gaps and vulnerabilities and then formulating recommendations and plans to mitigate the same. DNDO

organizes and facilitates collaborative activities with GNDA stakeholders to accomplish these analytical tasks. In collaboration with all USG GNDA partners, current capabilities are assessed, gaps and vulnerabilities are determined, and then future investments in implementing the GNDA are made to reduce risk.

The funding provided for the Systems Architecture PPA is used to conduct a congressionally-mandated Joint Annual Interagency Review of the GNDA that provides the USG a means to evaluate, document, and report on the status of the GNDA. Systems Architecture investments enable DNDO to develop an enhanced GNDA, including both domestic and international components. DNDO Systems Architecture programs also support Department efforts to analyze rad/nuc risk through development of the biennial Rad/Nuc Terrorism Risk Assessment, required by HSPD-18, and risk assessment activities that impact interagency and international rad/nuc detection activities.

Systems Development

DNDO Systems Development programs conduct engineering and program management activities necessary to mature and/or select systems for procurement. DNDO has implemented a “Commercial First” approach in that all DNDO programs will engage the private sector for solutions to address the capability or framework gaps prior to moving into a government-sponsored and managed development effort. In keeping with this “Commercial First” approach for all acquisitions, DNDO has been seeking to identify commercially available equipment to meet its requirements. DNDO continues to foster open communications with all industry partners to share key aspects of future requirements and projected quantities of planned procurements. Additionally, DNDO takes promising concepts for new detection systems identified through its transformational research efforts to a level of maturity sufficient for production and deployment. Under this approach, Systems Development activities support engineering development and developmental logistics.

Transformational Research and Development (R&D)

DNDO Transformational R&D identifies, explores, develops, and demonstrates scientific and technological approaches that address gaps in the GNDA, dramatically improve the performance of rad/nuc detection and technical nuclear forensics (TNF) technology, and/or significantly reduce the operational burden of rad/nuc detection and TNF. Dramatic technological improvements may include improvements in system or component effectiveness and performance characteristics, reduction in cost of acquisition or maintenance, or reduction of operational burden by users in the field. R&D investments are made based on competitive awards, with investigators in all sectors – government laboratories, academia, and private industry – encouraged to participate. This program takes advantage of the qualities and respective advantages of all three sectors to develop products and methods and to encourage teaming among them. Transformational R&D is carried out within three major programs: Advanced Technology Demonstrations (ATD), the Exploratory Research (ER) Program, and the Academic Research Initiative (ARI).

Assessments

The DNDO capability development process is anchored by critical assessments of technologies as they are developed, deployed, and operated, as well as a continual assessment of the GNDA itself. Development and acquisition programs are supported by a rigorous and objective test and evaluation (T&E) program to characterize technologies and systems to understand technical performance, operational effectiveness, and system limitations. Red teaming deepens DNDO’s understanding of

deployed capabilities and presents adversarial-based scenarios to Federal, state, local, tribal, and territorial stakeholders in overt and covert operational assessments. Program assessments provide objective reviews to identify the effectiveness of planned and deployed programs and operations, which support the implementation of the GNDA.

Operations Support

DNDO Operations Support provides advisory and assistance services to Federal, state, local, tribal, and territorial stakeholders who are developing or enhancing rad/nuc detection capabilities. This support includes assistance in developing and integrating local or regional programs into the GNDA, guiding the development of concepts of operations (CONOPS) and standard operating procedures, and developing training and exercise products to ingrain those procedures into day-to-day activities. DNDO also keeps stakeholders aware of relevant nuclear detection information or incidents. DNDO's Operations Support activities are grouped into three basic functions: Training, Exercises, and Assistance (TE&A); the Joint Analysis Center (JAC); and Securing the Cities (STC). STC is funded under the Systems Acquisition PPA.

DNDO is also responsible for developing the information sharing and analytical tools necessary to create an integrated and common operating picture. DNDO coordinates with stakeholders to establish protocols and procedures to ensure that the detection of unauthorized nuclear explosive devices, fissile material, or radiological material is promptly reported to the Secretaries of Homeland Security, Defense, and Energy, the Attorney General, and others as appropriate for action by law enforcement, military, emergency response, or other authorities.

DNDO fuses radiation alarm information with intelligence assessments in a timely manner to provide information that enables broader situational awareness regarding threats and strategic, operational, and tactical conditions. DNDO closely interacts with the Intelligence Community to develop information requirements and receive assessment products. DNDO also partners directly with the law enforcement community, which is the primary user of radiation detection equipment in the interior layer of the GNDA, which comprises all U.S. territory within ports of entry (POEs).

Nuclear Forensics

The National Technical Nuclear Forensics Center (NTNFC), which serves as the USG focal point for National Technical Nuclear Forensics (NTNF), was established within DNDO through NSPD-17/HSPD-4 (Annex IV) of July 2007. This Presidential Directive assigned roles and responsibilities to six Federal departments and agencies for developing and maintaining a comprehensive NTNF capability. DNDO was given two core missions. The first is to provide national-level integration, centralized planning, assessment, and stewardship as the USG integrator for a nuclear forensics capability that must be ready, robust, and enduring. The second mission is to advance the capability to conduct forensics on rad/nuc materials prior to detonation, including materials, which may have been illicitly trafficked and/or extracted from an interdicted weapon. The Nuclear Forensics and Attribution Act (P.L. 111-140), signed into law on February 16, 2010, further codified this two-tiered mission and mandated DNDO to lead the development and implementation of the NNFEDP and the *National Strategic Five-Year Plan for Improving the Nuclear Forensics and Attribution Capabilities of the United States*.

DNDO staffs the NTNFC with DHS experts and detailees from partner agencies, including DOE and the FBI, which provides a Supervisory Special Agent from the FBI Laboratory as the NTNFC Deputy Assistant Director. This team addresses the program integration, pre-detonation materials, and expertise development missions comprehensively by organizing NTNFC's activities into three key work areas: 1) Operational Readiness, 2) Technology Advancement, and 3) Expertise Development.

C. Budget Request Summary:

The FY 2016 President's Budget requests \$196,000,000 for RD&O. The total adjustments-to-base is a decrease of \$973,000. The program changes total a decrease of \$2,095,000 to:

- Decrease funding for Long Range Radiation Detection in favor of commercially available technology
- Decrease the number of projects in the Exploratory Research program

FY 2016 Total Request	-	-	\$17,000
Total Change 2015 to 2016	-	-	(\$924)

The FY 2016 President's Budget requests \$17.000 million for Systems Architecture. Adjustments-to-Base include:

- Increase of \$0.005 million for Working Capital Fund adjustments
- Decrease of \$0.290 million for the DHS Balanced Workforce Strategy²
- Decrease of \$0.290 million for GNDA Solutions Management Cross Cutting

Program Changes include:

- Decrease of \$0.349 million for Long Range Radiation Detection

CURRENT SERVICES PROGRAM DESCRIPTION:

The DNDO Systems Architecture PPA coordinates the development of an enhanced GNDA and implementation of its domestic component. Systems Architecture efforts and analysis assist in determining gaps and vulnerabilities in existing rad/nuc detection capabilities and formulating program plans and investment recommendations to mitigate them.

Systems Architecture - Program/Project Overview

² See Exhibit K Balanced Workforce Strategy in the Management and Administration Appropriation

Program	Project	Level of Effort	General Description
GND Planning and Reporting	GND Planning Project	Ongoing	These efforts support fulfillment of DNDO’s mandate to coordinate an enhanced GND by facilitating the development of strategic, implementation, and operational concept plans for nuclear detection programs, activities, and capabilities.
	GND Reporting Project	Ongoing	GND Reporting summarizes the accomplishments of DNDO, DHS, and the interagency and provides a critical periodic snapshot of the GND as well as an overview of future investments.
GND Analysis	GND Enterprise Architecture Project	Ongoing	This effort will produce a model that will ensure a common analytical framework to support our ability to evaluate current GND capabilities, identify vulnerabilities and gaps, and inform our planning to develop future capabilities for the GND.
	GND Threat and Adversary Project	Ongoing	The adversary and weapons models allow DNDO to account for the range of probable threat objects and to ensure that future detection system requirements are matched to adversary capabilities.
	Risk Project	Ongoing	Risk assessments that measure the combined effect of threat, vulnerability, and consequences and provide input to project, program, and portfolio decisions.
	Capabilities- Based Planning Project	Ongoing	DNDO planning and analysis efforts for the GND include a series of Capability Based Assessments designed to highlight and analyze specific areas in the architecture at a level that breaks down the building blocks of each capability. This information will feed the project, program, and portfolio decisions and will be used to optimize risk buy-down.
GND Solutions Management Program	Aviation Solutions Management Project	Ongoing	Aviation efforts examine ways to reduce the risk of adversarial use of commercial and general aviation to conduct a rad/nuc attack against the United States.
	Interior Solutions Management Project	Ongoing	Current Interior efforts are examining Federal, State, local, tribal, and territorial detection capabilities and program development. Efforts are focused on developing nuclear detection capabilities within the domestic interior that include ways to increase mobile detection assets across Federal, State, local, tribal, and territorial entities.
	Land Border Solutions Management Project	Ongoing	Land Border efforts identify requirements and develop solution concepts to address operational deficiencies and vulnerabilities at and between land border ports of entry (POE).
	Maritime Solutions Management	Ongoing	Maritime efforts address ways to reduce the risk of adversarial use of sea, ocean, or other navigable waterways to conduct a rad/nuc attack against the United States.
	Cross Cutting	Ongoing	Cross Cutting efforts address operational gaps and vulnerabilities common to multiple mission areas and pathways.
International Program	Analysis & Reporting of GND Exterior Layer Capabilities	Ongoing	DNDO conducts international studies and analyses to characterize the gaps, identify options, evaluate the advantages and disadvantages of alternative solutions, and formulate time-phased plans to reduce risks to the exterior layers of the GND.

Program	Project	Level of Effort	General Description
	International Development & Outreach	Ongoing	Through both bilateral and multilateral (e.g., Global Initiative to Combat Nuclear Terrorism and the International Atomic Energy Agency) discussions and engagement efforts, DNDO works with foreign counterparts and USG partners to further develop the exterior layer of the GNDA.

SYSTEMS ARCHITECTURE (SA)

SA programs advance the ability to understand, anticipate, and reduce the threat of nuclear terrorism. Each of the following contributes to the development of strategies for implementing the GNDA:

PLANNING AND REPORTING PROGRAM

The GNDA Planning and Reporting Program coordinates engagement with a variety of interagency partners for strategic and implementation planning, to summarize the accomplishments through reporting, and to promote interagency dialogue and engagement.

GNDA Planning

As the planning and coordinating function, this program provides the framework upon which all other GNDA-related programs are justified and employed, including DNDO’s solution development process (SDP). Recurring or annual planning processes include office-level, Department, and interagency engagement.

GNDA Reporting

The GNDA Annual Report is a critical, periodic snapshot of the global nuclear detection architecture. Accomplished through intensive interagency collaboration, this document is provided to the Congress each year, as required by Section 1907 of the Homeland Security Act of 2002 (6 U.S.C. 101 et seq.) as amended by Section 1103 of the Implementing Recommendations of the 9/11 Commission Act of 2007 (P.L. 110-53). This annual submission is jointly prepared by the Secretaries of Homeland Security, State, Defense, and Energy; the Attorney General; the Director of National Intelligence; and the U.S. Nuclear Regulatory Commission. The Annual Report is unique in compiling all the USG programs, assets, and capabilities that contribute to the GNDA. The Annual Report summarizes the results and analyses of progress in implementing the GNDA and constitutes a reference for future activities.

As part of the reporting efforts, DNDO is also responsible for coordinating and managing performance measure development. These activities are pursued to assist DNDO, DHS, and the interagency in meeting its requirements to baseline the existing global nuclear detection architecture, identify potential gaps and vulnerabilities, and formulate recommendations and plans to address those gaps and vulnerabilities.

GNDA ANALYSIS PROGRAM

DNDO is responsible for conducting periodic, in-depth analysis of the GNDA to inform strategic, budgetary, and operational decisions across the Federal Government. Strategic planning and risk assessments provide both the status of current detection architecture capabilities as well as further assess and prioritize proposed enhancements across the architecture. An effective planning, modeling, and analysis function directly contributes to programming and budgeting for the GNDA that enables effective implementation of enhanced detection.

Architecture Development Project

The Architecture Development Project will produce a model to support our ability to analyze current GNDA capabilities, identify vulnerabilities and gaps, and inform our planning to develop future GNDA capabilities. It will ensure the use of common terminology, capability sets, assumptions, and constraints to support risk assessments, Capability Based Assessments (CBAs), and cost-benefit analyses of proposed GNDA portfolios.

Adversary Threat Project

Planning for the GNDA requires an understanding of the adversary's capabilities and intent and the availability of materials that may be utilized in a rad/nuc attack. DNDO continually seeks to refine the basis for planning, through collaboration with experts within the USG intelligence community and National Laboratories, into a suite of improved adversary and weapons models that can be used to produce risk assessments of the GNDA or evaluate proposed technologies or concept of operations (CONOPS).

DNDO elicits input from the intelligence community regarding a wide range of adversary characteristics to inform the risk analysis of the GNDA and develop an adversary model. In addition, DNDO facilitates discussions within the interagency about weapon type and yield characteristics for input into the DNDO weapons model. The DNDO weapons model will be updated to accommodate an expanded threat definition and higher fidelity handling of threat signatures. Using this information, DNDO will continue to apply the threat definition to DNDO programs within the SDP, to support risk assessments, and to conduct cost trade studies for individual enhancements to the GNDA or implementation of capabilities.

Risk Project

To analyze and optimize the effectiveness of GNDA implementation, DNDO uses risk assessments that measure the combined effect of threat, vulnerability, and consequences. This process allows us to evaluate the effectiveness of currently deployed systems and plan for future technology development using a cost-benefit methodology. DNDO produces a suite of modeling, simulation, and assessment tools to calculate the risk from particular pathways, particular transport modes, particular threat objects, or adversaries.

Capabilities-Based Planning Project

At the core of all DNDO detection programs is the Systems Architecture function: determining gaps and vulnerabilities and then formulating recommendations and plans to mitigate them. To accomplish these analytical tasks, DNDO organizes and facilitates collaborative activities with domestic and international partners and stakeholders in the global nuclear detection architecture. This is achieved through a structured collaborative assessment of current capabilities, followed by the application of systems engineering principles as we seek to implement a balanced architecture.

In FY 2015 DNDO will complete a series of capability based assessments (CBA) that will examine specific areas of the architecture that present the greatest risk to national security, as well as investment options to mitigate areas of risk. DNDO will utilize the results from completed analyses to inform budgetary prioritization and early stage solution management for the present and future and continue additional CBAs in FY 2016.

GND A SOLUTIONS MANAGEMENT PROGRAM

The GND A Solutions Management Program works with stakeholders to develop materiel and non-materiel solutions to reduce risk within the GND A. Following the SDP, the program leverages the outputs of CBAs and other analyses to identify GND A capability gaps and engages stakeholders, end-users, technology developers, and systems developers to capture requirements and develop actionable programmatic documents, such as Mission Needs Statements or other documentation. These efforts focus on specific pathways, operating environments, modes of transportation, and/or specific threats.

Aviation Solutions Management Project

The Aviation Solutions Management Project examines ways to reduce risks from adversarial use of commercial and general aviation to conduct a rad/nuc attack against the United States. In FY 2015, DNDO, with its Domestic General Aviation (DGA) Federal partners, will complete a DGA surge planning workshop and initiate requirements documents addressing DGA surge-specific gaps in the GND A. In FY 2016, DNDO will continue to work with its DGA partners to complete requirements documents and develop capabilities to address identified gaps.

To address potential aviation threats, in FY 2016 DNDO will continue to collaborate with Federal partners to utilize the operational model and develop security solutions to address requirements for enhanced security in air cargo operational environments overseas at last points of departure. Additionally, DNDO and CBP will continue analysis of specific operational systems that could potentially be used in Airports of Entry (APOE) air cargo surge operations, including modeling and simulation of potential APOE surge operations and will coordinate with Federal partners to initiate development of guidelines and CONOPS for surge operations. To support the DHS International General Aviation Strategic Plan, in FY 2016, DNDO will continue analysis of operational alternatives to reduce identified International General Aviation vulnerabilities, as well as coordinate with Federal partners to develop guidelines and CONOPS for surge operations.

Interior Solutions Management Project

The Interior Solutions Management Project examines Federal, State, local, tribal and territorial detection capabilities and program development. Overarching efforts focus on increasing nuclear detection within the domestic interior, as well as on investigating ways to increase mobile detection assets across Federal, State, local, tribal and territorial entities.

In FY 2016, DNDO will improve the Capabilities Development Framework (CDF) with State and regional-level analysis, as well as with additional data sources to explore the direct linkage of the CDF products with architecture and risk modeling.

In FY 2015 and FY 2016, DNDO will update the Domestic Partners Capability Development effort to close gaps within the domestic nuclear detection architecture. In FY 2016, DNDO will continue to focus on building rad/nuc detection capabilities in concert with Federal partners, such as the National Protection and Programs Directorate's Office of Bombing Prevention and Immigration and Customs Enforcement.

In FY 2015 and continuing in FY 2016, DNDO will facilitate the Interior Focus Group, a Federal, State, and local working group that supports the Interior Mission Area by identifying interior rad/nuc detection stakeholder requirements and helping to develop DNDO analyses and products. Interior Focus Group efforts include the collection of user needs to drive future capability development, identification of areas of interest for future DNDO studies, and roundtable discussions to review proposed ideas and identify future initiatives to address domestic rad/nuc detection gaps. In FY 2016, DNDO will facilitate these working groups in order to continue to capture State and local needs and requirements.

In FY 2015 and FY 2016, DNDO will continue the development of national rad/nuc detection guidance for State, local, tribal, and territorial partners, encompassing a portfolio of activities focused on developing national planning guidance for building and sustaining rad/nuc detection capabilities. In FY 2016, DNDO will continue the national rad/nuc detection activities described above while starting to evaluate integration with response and recovery mission areas.

Land Border Solutions Management Project

The Land Border Solutions Management Project identifies requirements and develops solutions to address rad/nuc detection deficiencies and vulnerabilities at and between land border POEs.

In FY 2016, DNDO will support United States Border Patrol (USBP) with deployment, training, exercise, and doctrine development of the selected rad/nuc detection solutions from the USBP Checkpoint Pilot. DNDO will also continue to assist USBP Special Operations Group with deployment, training, exercise, and doctrine development of the selected systems for rad/nuc detection, to include Human Portable Radiation Detection Systems (HPRDS).

Maritime Solutions Management Project

The Maritime Solutions Management Project addresses ways to reduce the risk of an adversary using the sea, ocean, or other navigable waterways pathway to conduct a rad/nuc attack against the United

States with an emphasis on small maritime vessels under 300 gross tons. It also provides information to facilitate and support opportunities to advocate for the enhancement of Maritime Domain Awareness with Federal, State, local, tribal, and territorial stakeholders and partners.

DNDO will work with partners to define Small Maritime Vessel (SMV) pathway activities, threat scenarios, perform an SMV detection/deterrence assessment, and develop a process flow visual representation of deterrence activities. Results of the SMV study are expected to identify the detection/deterrence activities that have the greatest impact on an adversary's decision making process related to the SMV threat.

Cross Cutting

Cross Cutting efforts address operational gaps and vulnerabilities common to multiple mission areas and pathways.

Airborne Radiation Detection (ARD) is a new initiative beginning in FY 2016 that will evaluate the merit of rad/nuc detectors on various aerial platforms. Traditional fixed and rotary wing aircraft will be considered, along with unmanned aerial systems of differing sizes. In FY 2016, the mission needs and capability gaps to be addressed will be documented and an analysis of potential solutions begun.

INTERNATIONAL PROGRAM

Development of the GNDA requires a comprehensive understanding of existing rad/nuc detection capabilities in the exterior layer in order to better inform capacity-building efforts to fill gaps in the architecture. As such, DNDO's coordination of the exterior layer of the GNDA centers on both characterization and prioritization of rad/nuc detection capabilities worldwide. These efforts include targeted bilateral and multilateral outreach to foreign counterparts to raise situational awareness and enhance broader rad/nuc detection efforts.

Analysis & Reporting of GNDA Exterior Layer Capabilities Project

DNDO conducts international studies and analyses to characterize the gaps, identify options, evaluate the advantages and disadvantages of alternative solutions, and formulate time-phased plans to reduce risks to the exterior layers of the GNDA. As a crosscutting function, ongoing development of the GNDA must involve analyses of all potential pathways, suggest technologies or programs to address any identified vulnerabilities, and strive for stronger partner connectivity at every point in the architecture. This effort includes performing international geographical architectural analyses and investigation of key relationships with international partners to enhance national-level detection capacity in their respective countries.

International Development & Outreach Project

A significant portion of the development of the external layer of the GNDA is dependent on the sovereign decisions of foreign partners to enhance their own national and regional-level detection architectures and capabilities. Through both bilateral and multilateral (e.g., Global Initiative to

Combat Nuclear Terrorism and the International Atomic Energy Agency) discussions and engagement efforts, DNDO works with foreign counterparts to further develop the exterior layer of the GNDA.

DNDO conducts annual workshops to facilitate the continued development of best practices guides and planning and implementation tools for nuclear detection architecture development within bilateral or multilateral constructs. In FY 2016, DNDO will continue to work with international counterparts on detection strategies and guidelines, focusing on promoting national-level implementing frameworks and leveraging lessons learned and best practices from domestic application.

Total Change 2015 to 2016	-	-	-

The FY 2016 President’s Budget requests \$22.000 million for Systems Development. Adjustments-to-Base include:

- Increase of \$0.018 million for WCF adjustments
- Increase of \$0.092 million for On Dock Rail
- Decrease of \$0.110 million for the DHS Balanced Workforce Strategy³

CURRENT SERVICES PROGRAM DESCRIPTION:

DNDO is responsible for ensuring that the Nation maintains a preeminent systems development program to translate user requirements into rad/nuc detection systems. Systems development activities are primarily focused on conducting systems engineering lifecycle activities to ensure the delivery of high-quality systems to DHS’s operational components. In addition, systems development activities include providing management and task execution of DNDO’s SDP as well as support to DNDO’s Governance Review Board.

Recognizing the rapid advancement of technology and innovation, constrained budgets, and market forces, DNDO has shifted focus from Government-sponsored development of materiel solutions to a “Commercial First” approach that gives preference for solutions available in the private sector marketplace. Using this approach, DNDO can leverage important industry-led innovations and developments, and only resort to a Government-sponsored and -managed development and acquisition process when no commercial solution is feasible or private industry chooses not to commercialize a product.

³ See Exhibit K Balanced Workforce Strategy in the Management and Administration Appropriation

DNDO, in concert with the end-user community, is required to execute systems development activities throughout the systems engineering lifecycle but will primarily be focused on activities at the front end (e.g., requirements analysis and development, program planning, and test planning) and the back end (e.g., verification and validation activities, technical performance, and user assessments) of the lifecycle. The specific approach for developing or procuring new technologies will be based on the unique requirements and characteristics of each program.

Systems Development - Program/Project Overview

Program	Project	Level of Effort	General Description
Human Portable Tripwire (HPT) Program	HPT	Complete in FY 2015	HPT addresses the Human Portable Radiation Detection System (HPRDS) Mission Needs Statement Gap of a “tripwire” capability needed to increase the probability of encountering and detecting nuclear or other radioactive materials out of regulatory control. DNDO is executing the HPT Program with CBP, USCG, and the Transportation Security Administration (TSA) as major stakeholders.
Human Portable Radiation Detection Systems Helium-3 (³He) Alternative Implementation Program	³ He Alternative – Backpack	Ongoing	The HPRDS ³ He Alternative Implementation Program utilizes the results of test and evaluation performed under the ³ He Shortage Mitigation Program to work with industry to integrate alternative technologies for neutron detection into detection systems and to evaluate these systems for future deployment. The project will address form, fit, and function of alternative technologies into backpack detectors.
	³ He Alternative – Basic Handheld RIID	Ongoing	As part of the HPRDS ³ He Alternative Implementation Program described above, the Basic Handheld radioisotope identification device (RIID) project will address form, fit, and function of alternative technologies into handheld RIIDs for CBP, TSA, and USCG.
Radiation Interdiction Technology For Conveyances (RITC) Program	RITC Program	Ongoing	The RITC Program’s goal is to develop solutions to scan conveyances arriving at land and sea POEs, checkpoints, and between POEs through the use of large-scale, fixed/mobile radiation detection equipment. The program will identify, acquire, and deploy promising next generation and future technology with expanded interdiction capability.
	Radiation Portal Monitor (RPM) Replacement Project	Ongoing	The RPM Replacement Project will evaluate current and next generation technology solutions to assess replacement technologies for currently deployed fixed and mobile RPMs. The objectives of the program are: 1) identify solution(s) to complete a full or partial system replacement of fixed and mobile RPMs; and 2) identify next generation or future large-scale radiation detection equipment.

Program	Project	Level of Effort	General Description
	On Dock Rail (ODR) Project	Reinitiate in FY 2015	The ODR Project was launched in FY 2009 to deploy solutions for ship-to-rail scanning to address efficiency concerns with the current mobile RPM-based solution. The program was put on hold in FY 2013 due to funding requirements for higher priority programs within the GNDA. When reinitiated in FY 2015, the program will begin reviewing prior results and consider commercial off the shelf (COTS) options available for alternative solutions, including fixed RPM and conveyor solution initially evaluated under Cooperative Research and Development Agreements (CRADA).
	International Rail (IRail) Project	Reinitiate in FY 2016	The IRail Project intends to analyze options, develop a programmatic approach for implementing solutions, and generate requirements for solutions to detect and identify illicit rad/nuc material entering the U.S. via freight rail cargo through the 31 POEs identified in the Trade Act of 2002 (P.L. 107-210).
	Long-Range Radiation Detection (LRRD) Project	Ongoing	The LRRD Project's objective is to provide enhanced standoff rad/nuc detection capability for preventive rad/nuc detection activities within the interior of the United States.
RITC Program	U.S. Border Patrol (USBP) Checkpoint Project	Ongoing	The USBP Checkpoint Project's objective is to address rad/nuc detection deficiencies and vulnerabilities between land border POEs for large-scale conveyance scanning, including a move away from exclusive use of equipment and technology worn by agents.
Algorithm Improvement Program (AIP)	Algorithm Improvement	Ongoing	AIP is developing a set of benchmarks for improving the performance of rad/nuc detection algorithms and increasing detection and identification speed and accuracy. Additionally, the program will develop the infrastructure needed for scoring algorithms and maintain the DHS Isotope ID algorithm analysis tool to support secondary reachback analysis.
Small Vessel Standoff Detection (SVSD) Program	Boat-to-Boat Scanning	Complete in FY 2015	The project will initially procure a commercial capability for scanning small vessels from maritime law enforcement vessels. Follow on projects may address aerial and land based deployment of sensors to complement the boat-to-boat system.
Aerial Detection Program	Aerial Detection	Initiate in FY 2016	The primary objective of the Aerial Detection Program is to detect and intercept illicit radiological threats as far away from U.S. ports as possible. An aerial detection capability will provide a valuable means to detect and intercept at much greater distances from major population centers and critical infrastructure and with faster response times than interdictions made via boats and cutters during intelligence-driven operations.

HPRDS HELIUM-3 ALTERNATIVE IMPLEMENTATION PROGRAM

The HPRDS Helium-3 (^3He) Alternative Implementation Program utilizes the results of test and evaluation performed under the ^3He Shortage Mitigation Program to develop implementation plans for the equipment in the HPRDS Program portfolio.

³He Alternative – Backpack Project

The project will identify and field radiation detection backpacks with ³He alternative technology, transitioning DHS Components away from ³He dependent systems. In FY 2015, the program will release a request for proposal and perform test and evaluation for new ³He alternative radiation detection backpack systems. Backpacks will be evaluated against a variety of use scenarios including small vessel standoff detection and wide-area search. In FY 2016, DNDO will complete the source selection and award contract(s).

³He Alternative – Basic Handheld RIID Project

The project will identify and field basic handheld RIIDs with ³He alternative technology, transitioning CBP, TSA, and USCG from ³He-dependent systems.

In FY 2016, the project will evaluate solutions and acquisition strategies for providing alternative neutron detection components to basic handheld RIIDs with the same or enhanced form, fit, and function (e.g., use of existing contracts and release of a new request for proposal).

RADIATION INTERDICTION TECHNOLOGY FOR CONVEYANCES (RITC) PROGRAM

Under the RITC program, DNDO will work closely with DHS partners to protect against the introduction of unauthorized nuclear explosive devices, fissile material, or illicit radiological material into the United States.

One of the radiation interdiction challenges faced by DHS, in particular CBP, is maintaining security with minimal impact on the flow of commerce. The RITC program strives to develop solutions to scan conveyances arriving at land and sea POEs, checkpoints, and between POEs through the use of large-scale, fixed and/or mobile radiation detection equipment. The program will identify, acquire, and deploy promising next generation and future technology with expanded interdiction capability.

Radiation Portal Monitor (RPM) Replacement Project

RPM systems have been successfully deployed in the field over the last decade. Using market research and analytical studies, this project is developing a strategy for system replacement that is consistent with objectives of the GNDA and SAFE Port Act of 2006 (P.L. 109-347). The project will evaluate current and next generation technology solutions and assess replacement technologies for currently deployed fixed and mobile RPMs. The objectives are to: 1) identify solution(s) and impact to GNDA risk to complete a full or partial system replacement of fixed and mobile RPMs; and 2) optionally identify next generation or future large-scale radiation detection equipment. An RPM Analysis of Alternatives (AoA) is underway and will be completed in FY 2015. The AoA results will be reviewed and assessed to help provide a path forward for RPM replacement options in FY 2015 and FY 2016.

On Dock Rail (ODR) Project

The ODR project was launched in FY 2009 to deploy solutions for ship-to-rail scanning to address efficiency concerns with the current mobile RPM-based solution. Work continued through FY 2012 when an Alternatives Analysis (AA) was completed that examined potential solutions for ship-to-rail scanning leveraging modeling, testing, and user surveys.

In FY 2015, the project will review the AA results and consider COTS options available for alternative solutions, to include the fixed RPM and conveyor solution. Based on the results from these reviews, the AA will be refined appropriately, accounting for the fact that one solution may not be viable for all ports due to the wide variability in port operations and configurations. In FY 2016, the program will proceed with developing requirements and program documentation for ODR POEs not covered under the CRADA activities previously discussed.

International Rail (IRail) Project

The International Rail (IRail) project analyzes options, develops a programmatic approach for implementing solutions, and generates requirements for solutions to detect and identify nuclear or other radioactive materials out of regulatory control entering the United States via freight rail cargo through the 31 POEs.

The IRail project was put on hold in 2012 to fund programs that provide greater risk buy down within the GNDA. To be reinitiated in FY 2016, the project will review the AoA results and consider COTS options available for alternative solutions that may not have been available or fully developed during the AoA. Based on the results from these reviews, the AoA will be refined appropriately.

Long Range Radiation Detection (LRRD) Project

The Long-Range Radiation Detection (LRRD) program addresses existing gaps in the global nuclear detection architecture and an operational need for enhanced standoff radiological/nuclear detection capability. The goal is to detect, identify, locate, and track radiological/nuclear threats at distances up to 100 meters, enabling more efficient interdiction. LRRD technology has demonstrated enhanced capabilities compared to current assets, achieving greater detection sensitivity equating to increased detection distances and lower minimal detectable activities of anomalous radiation sources. LRRD is a continuation of DNDO efforts to assess and enhance the performance of long-range radiation detection technologies developed under multiple transformational research and development projects. The technology base was recently characterized as part of a DNDO Advanced Technology Demonstration.

The LRRD capability would support search, survey/sweep, and monitor missions as part of rad/nuc detection efforts. In FY 2015, an analysis will be initiated and work will be done to develop requirements for the solution in coordination with multiple stakeholders from DHS operational Components, as well as key State and local stakeholders. If it is determined that the operational utility and technology readiness exists, FY 2016 work will include planning activities for solution design, development, and testing of LRRD systems.

U.S. Border Patrol (USBP) Checkpoint Project

The USBP Checkpoint Project's objective is to address rad/nuc detection deficiencies and vulnerabilities at and between land border POEs that would require large scale scanning technologies. USBP seeks to move away from equipment and technology worn by agents that requires indiscriminate examination of all alarms. Unlike ports of entry, examinations conducted in the interior of the country are subject to Fourth Amendment restrictions. As such, radiation detection equipment that requires indiscriminate examination of all events places undue burden upon the agency. Likewise, more simple detections, including those for which no data is available beyond an alert on the PRD, delay the legitimate flow of commerce and tax an already encumbered force by requiring adjudication in secondary inspections. Large scale rad/nuc scanning technology (e.g., transportable RPMs) that would enable adjudication without requiring a vehicle and/or passenger to be examined in secondary is preferred. Transportable RPMs were piloted recently by DNDO and rendered a successful proof of concept. The USBP would seek to install such technology at most of its permanent checkpoints along the Southwest Border. In FY 2016, DNDO will evaluate COTS candidates by conducting performance and operational testing and down-select COTS candidates, anticipating Initial Operating Capability (IOC) by end of fiscal year.

ALGORITHM IMPROVEMENT PROGRAM (AIP)

AIP's goal is to develop a set of benchmarks for improving and verifying the performance of radiation detection algorithms. AIP seeks to increase detection and identification speed and accuracy in the field for spectroscopic (e.g., sodium iodide systems). In addition to the benchmark datasets, AIP will also develop algorithm performance metrics. DNDO will perform a phased collection of benchmark datasets from a variety of sensor types. The program will also develop the infrastructure needed for scoring algorithms and maintain the DHS Isotope ID algorithm analysis tool, which is crucial for secondary reachback analysis.

Benchmark datasets will be made available to commercial algorithm developers, which will facilitate a better outcome for DNDO's "Commercial First" approach. The benchmarks will facilitate a common environment in which the commercial sector, academia, and Government can engage in algorithm development and advancement. Ultimately, the benchmarks will be archived within the algorithm testbed where replay tools can be used to evaluate and score the performance of any submitted algorithm.

In FY 2016, DNDO will complete the comparison of Strontium Iodide (SrI₂) to high-purity germanium (HPGe) benchmark data collections and create open and closed gamma spectrum benchmarks. In addition, DNDO will complete cooperative agreements and release the algorithm tool.

RADIATION PORTAL MONITOR (RPM) PROGRAM

The RPM Program is managing immediate, near, and long-term needs to deploy, improve, and replace fixed and mobile RPM systems at U.S. land border crossings and sea POEs through the execution of three synchronized projects:

- RPM Deployment through systems acquisition

- RPM Improvement Project
- RITC/RPM Replacement Project through systems development

RPM Improvement Project

RPM systems have been successfully deployed in the field over the last decade. Many of the RPMs are currently at the end of their service life or will exceed their service life in the next few years. While the design operating life is a minimum of 10 years, a DNDO study has indicated that the lifespan of the systems may be upwards of 13 years. Using market research and analytical studies, this project is developing a strategy for system renewal and/or service life extension that is consistent with objectives of the GNDA and SAFE Port Act of 2006 (P.L. 109-347). Among the options to be evaluated in the analytical studies is the technology refresh of system components to extend the RPM service life time. This option may provide an effective path to sustain the rad/nuc detection capability provided by the deployed RPM systems.

In FY 2015, the project will continue SDP activities, utilizing the “Commercial First” approach, associated with laboratory and field evaluations of RPM systems incorporating the technology refresh concept. Based on lessons learned from field deployments of improvements, the project will refine analytical tools and methodologies for predicting improvement candidate performance.

SMALL VESSEL STANDOFF DETECTION (SVSD) PROGRAM

The SVSD Program’s functional mission is to protect major population centers and critical infrastructure from the direct-to-target threat, defined as rad/nuc weapons transported by way of small vessels to a “high-impact target.” The program will initially procure a commercial capability for scanning small vessels from maritime law enforcement vessels on the water. These systems will be deployed onboard USCG and CBP Office of Air and Marine (OAM) patrol vessels for employment during periods of heightened maritime security force posture. The capability also provides a CONOP platform when there is a need for enhanced detection solutions, like at special events. Potential follow-on projects to reduce the risk include aerial and land-based deployment of sensors to complement the boat-to-boat system.

Boat-to-Boat (B2B) Scanning Project

Current and future force levels for USCG, CBP, and other Federal, State, and local partners are only capable of boarding a fraction of the daily U.S. small vessel traffic. The SVSD B2B Project will increase the probability of successfully encountering and detecting direct-to-target threats on small maritime vessels by providing portable standoff detection capability on USCG and CBP OAM law enforcement small boats. This capability will be deployed during steady state and enhanced steady state operations using routine patrols, chokepoint, and crowded harbor tactics.

The SVSD B2B project conducted test and evaluation of the USCG’s currently deployed backpack detector and determined it is effective and suitable for deployment in the SVSD B2B mission. The project was therefore authorized to procure systems to deploy to the USCG and CBP OAM. Full operational capability is expected to be achieved in FY 2015. In FY 2016, an operational analysis and post-implementation review will be conducted on the steady state system.

AERIAL DETECTION PROGRAM

In order to improve the performance of the GNDA mission functions of Encounter, Detection, and Identification, an aerial detection capability is a critical element for a robust layered defense. There is an established Mission Needs Statement for required aerial detection capabilities and the feasibility and effectiveness of aerial detection has been proven technologically. In FY 2016, DNDO will perform system development activities for aerial detection to determine operational effectiveness and suitability based on currently available commercial products. It is anticipated that aerial detection capabilities will decidedly reduce rad/nuc risk by increasing the probability that law enforcement will be able to detect traffickers and illicit materials.

An aerial detection capability will provide a valuable means to detect and intercept at much greater distances from major population centers and critical infrastructure and with faster response times than interdictions made via boats and cutters during intelligence-driven operations.

In addition, the DNDO Airborne Radiological Enhanced Sensor System (ARES) ATD is developing and characterizing standoff radiation measurement technology for the detection of radiological and nuclear material from an airborne platform. A technology demonstration and characterization will be completed in FY 2015 to assess technology transition potential. These results will help inform possible application of the aerial detection capability to additional mission needs to include that of the SVSD program.

(Dollars in Thousands)

PPA: Transformational Research and Development

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	-	-	\$71,041
FY 2015 President's Budget	-	-	\$69,500
2016 Adjustments-to-Base	-	-	\$246
FY 2016 Current Services	-	-	\$69,746
FY 2016 Program Change	-	-	(\$1,746)
FY 2016 Total Request	-	-	\$68,000
Total Change 2015 to 2016	-	-	(\$1,500)

The FY 2016 President's Budget requests \$68.000 million for Transformational Research and Development.

Adjustments-to-base include:

- Increase of \$0.041 million for WCF adjustments
- Increase of \$0.495 million for Academic Research Initiative Solicitation
- Decrease of \$0.290 million for the DHS Balanced Workforce Strategy⁴

Program Change includes:

- Decrease of \$1.746 million for Evaluations and Demonstrations

CURRENT SERVICES PROGRAM DESCRIPTION:

DNDO's Transformational R&D program seeks to identify, explore, develop, and demonstrate scientific and technological approaches that address gaps in the GNDA; significantly improve the performance of rad/nuc detection and technical nuclear forensics (TNF) methods, components, and systems; and/or significantly reduce the operational burden of these technologies. DNDO works closely with partners to transition technologies from research to the field, including transfer of technology to the commercial sector for development and commercialization.

⁴ See Exhibit K Balanced Workforce Strategy in the Management and Administration Appropriation

R&D investments are made based on competitive awards open to investigators from all sectors, Government laboratories, academia, and private industry. The transformational research efforts take advantage of the qualities and advantages of all three sectors to develop products. Teaming is encouraged across the sectors. Transformational R&D is carried out within four major programs: Advanced Technology Demonstration (ATD), Exploratory Research (ER), Academic Research Initiative (ARI) and the Small Business Innovation Research program (SBIR). Each program is described in detail below along with the corresponding projects and research areas. Many research areas remain consistent from year-to-year, with ongoing work for multiple projects.

The Transformational R&D programs and activities that address TNF gaps and improvements are also aligned with the goals and investment priorities delineated in the *Nuclear Defense Research and Development Roadmap, Fiscal Years 2013 – 2017* and the *National Strategic Five-Year Plan for Improving the Nuclear Forensics and Attribution Capabilities of the United States*.

Transformational Research and Development – Program/Project Overview

Program	Project	Level of Effort	General Description
Advanced Technology Demonstration (ATD)	Shielded Nuclear Alarm Resolution (SNAR)	Multi-year; completion in FY 2015	The SNAR Project develops and characterizes advanced technologies required to resolve alarms and to detect special nuclear material (SNM), even when heavily shielded or masked.
	Intelligent Radiation Sensing System (IRSS)	Multi-year; completion in FY 2014	The IRSS Project utilizes advanced data fusion algorithms to maximize performance of multiple independent radiation sensors communicating through a flexible wireless network.
	Advanced Radiation Monitoring Device (ARMD)	Multi-year; completion in FY 2014	The ARMD Project builds upon advances in new detection materials discovered under previous ER projects utilizing advanced scintillator materials and neutron detection techniques.
	Airborne Radiological Enhanced-sensor System (ARES)	Multi-year; completion in FY 2015	The ARES Project develops and characterizes standoff radiation measurement technology for the detection of nuclear or other radioactive materials out of regulatory control from an airborne platform.
	Long-Range Radiation Detection (LRRD)	Multi-year; completion in 2014	The LRRD Project continues DNDO efforts to assess and enhance the performance of long-range radiation detection technologies developed during the Road Side Tracker (RST), Target Linked Radiation Imaging (TLRI) and Standoff Radiation Detection System (SORDS) transformational R&D projects.
	Nuclear and Radiological Imaging Platform (NRIP)	Multi-year; completion in FY 2016	The NRIP Project leverages recent advancements in the commercial sector as well as results from prior Transformational R&D work. By combining the merits of passive and active technologies, new systems are being developed so that a single system is able to detect radiological and nuclear threats, regardless of the amount of shielding or the complexity of cargo, in primary mode with minimal impact to the flow of commerce.

Program	Project	Level of Effort	General Description
	Radiation Awareness and Interdiction Network (RAIN)	Multi-year; completion in FY 2017	The RAIN Project will develop and characterize technologies for monitoring free-flowing traffic on highways and on-ramps for radiological or nuclear threat materials. In combination with other sensors such as license plate readers and video cameras, this technology will provide actionable information so that the threat can be interdicted prior to it reaching its intended target.
	Wearable Intelligent Nuclear Detection (WIND)	Multi-year; completion in FY2018	The planned WIND Project will develop a highly-modular, multi-purpose, and man-portable detection system such as backpacks to improve the ability to interdict a potential threat during wide area search missions. The project will characterize several promising state-of-the-art technological advancements, and then coordinate with end-users to avoid a significant operational burden.
	High Accuracy and Resolution Pager (HARP)	Multi-year; completion in FY 2019	The planned HARP Project will accelerate the fabrication of new semiconductor gamma-ray and neutron detection materials and integrate these materials into pager sized detectors that have superior identification accuracy to eliminate nuisance alarms and extremely low power consumption for extended operations.
Exploratory Research (ER)	Materials Research and Supporting Technology (Materials)	Multi-year	The Materials project has the technical objective of discovering new gamma-ray sensing materials. These materials could then enable the next generation of passive or active threat-sensing technologies, to include RPMs, hand-held RIIDs, and a range of other detection technologies.
	Neutron Detection Including ³ He Alternatives (Neutron)	Multi-year	The Neutron Project explores near-term and longer-term alternatives to ³ He neutron detectors currently used in various nuclear detection systems, to include portal monitors, handheld, backpack, and personal radiation detectors, and active interrogation systems.
	Radiation Detection Technology (Radiation)	Multi-year	The Radiation Project emphasizes investigating novel approaches to greatly improve the ability to detect, identify, locate, and track threat materials based on their intrinsic radiological signatures and the fusion of auxiliary sensors.
	Shielded SNM (Shielding)	Multi-year	The Shielding Project addresses the critical challenge of being able to detect threats even when heavily shielded or masked, with a specific focus on the detection of SNM.
	Modeling and Algorithms (Algorithms)	Multi-year	The Algorithms Project develops computer based algorithms and models to support the design, development, and enhancement of the GNDA at all levels including individual detectors, detection systems, and local and global architectures.
	Nuclear Forensics (Forensics)	Multi-year	The Forensics Project coordinates with DNDO's NTNFC mission to execute transformational research and development to discover new forensics signatures or develop the tools to enable comprehensive and timely analytical results.
	Solicitation for New ER Activities	Annual	New Exploratory Research Activities are initiated each year to address gaps in the GNDA and TNF through a Broad Agency Announcement for industry and academia and a Call for Proposals for National and Government Laboratories.

Program	Project	Level of Effort	General Description
Academic Research Initiative (ARI)	Materials Research and Support Technology	Multi-year	This project focuses on fundamental, high-risk, long-term research aimed at developing greatly improved radiation detector materials such as semiconductors and scintillators that are highly sensitive, selective, low-cost, and rugged.
	Alternative Neutron Detection Technologies	Multi-year	This project investigates new neutron detection approaches to greatly improve neutron detection capabilities over existing ³ He-based detection technologies and near term replacement alternatives.
	Radiation Detection System Concepts, Approaches, and Architectures	Multi-year	Explores radically new approaches to threat detection, eventually leading to sensor or detection system concepts that are highly sensitive to radiological/nuclear signatures and selective in their ability to distinguish and locate these materials from naturally occurring background radiation.
	Shielded SNM	Multi-year	This research area includes investigations to overcome the challenge of detecting shielded SNM, principally through advanced or enhanced nonintrusive inspection or active interrogation approaches for cargo scanning; vehicle scanning; and human portable scanning applications.
	Modeling and Algorithms	Multi-year	This portfolio investigates innovative data processing and analysis techniques that will lead to significant performance improvements to include machine learning, signal processing, data fusion, predictive modeling, data visualization, and advisory theory.
	Nuclear Forensics	Multi-year	This investigates advanced analytical techniques used to determine the processing history and transit route of pre-detonation nuclear materials.
	Solicitation for New ARI Activities	Annual	The ARI program refreshes its research portfolio every year through an annual solicitation. Research topics must address gaps in the GNDA or TNF while developing students and academic programs.
Small Business Innovation Research (SBIR)	Phase I	Annual	Six month effort to demonstrate feasibility towards the topic objectives.
	Phase II	Multi-Year	Generally, 24 month effort to conduct the full R&D of the proposed effort and develop and demonstrate a prototype.
	Phase III	Multi-Year	There is no limit on the period-of-performance for the effort to perform follow-on and final R&D towards product (or service) development and transition into the commercial market.

ADVANCED TECHNOLOGY DEMONSTRATION PROGRAM

The Advanced Technology Demonstration (ATD) program performs accelerated development, characterization, and demonstration of leading-edge technologies that address critical gaps in nuclear detection capabilities. It builds on technology concepts previously demonstrated under the ER program, research conducted by our interagency partners, or privately funded research. Through the ATD program, technology concepts are developed into prototype systems called Performance Test

Units (PTU) which provide reliable and scalable performance measurements in a challenging and realistic simulated or controlled operational environment. Through this technology characterization process, sufficient understanding of the technology is obtained to recommend a technology transition path for the PTU technology to a Government acquisition program, commercial system development, or additional basic and applied research.

New ATD projects are initiated approximately yearly based on: 1) prioritized gaps in the GNDA and; 2) technological successes from the ER program, the ARI, or other private or public research programs that support the prioritized gaps. Multiple research projects are being monitored for potential transition to an ATD. The ongoing and planned ATD projects for each fiscal year are summarized in the table below followed by a brief description of each project:

ATD Project Name	Abbreviation	Initiation Year	Completion Year	Technologies Characterized
Nuclear and Radiological Imaging Platform	NRIP	2012	2016	3
Radiation Awareness and Interdiction Network	RAIN	2013	2017	3
Wearable Interdiction Nuclear Detection	WIND	2015	2018	TBD
High Accuracy and Resolution Pager	HARP	2016	2019	TBD

Nuclear and Radiological Imaging Platform (NRIP) Project

The NRIP Project leverages recent advancements in the commercial sector as well as results from prior Transformational R&D work. By combining the merits of passive and active technologies, new systems are being developed so that a single system is able to detect radiological and nuclear threats, regardless of the amount of shielding or the complexity of cargo, in primary mode with minimal impact to the flow of commerce. The technologies being investigated include muon tomography, which offers a potential solution to cargo imaging without requiring a man-made radiation source; radiation detectors integrated into commercially available radiographic imaging systems; and radiation detectors integrated into a previously demonstrated Shielded Nuclear Alarm Resolution (SNAR) PTU that utilizes high energy backscatter and photofission. By looking at unique data signatures and methodologies for fusing active interrogation signatures with the passive detection capabilities, the holistic system has advanced detection capabilities that have the potential to solve the shielded SNM problem at chokepoints. In addition to the regular ATD characterization in a simulated operation environment, these systems will also undergo testing in a controlled, but realistic, operational environment. This will provide a unique data set to better estimate false alarm rates and additionally provide data on operational utility. The demonstration and characterization of the commercial PTU will be completed in 2014; the muon tomography-based PTU evaluation will be completed in 2015. The characterization of the SNAR-inspired PTU will be completed in 2016.

Radiation Awareness and Interdiction Network (RAIN) Project

The RAIN Project, an initiative closely tied to the Securing the Cities program, is intended to develop and characterize technologies for monitoring free-flowing traffic on highways and on-ramps for radiological or nuclear threat materials. RAIN technologies will couple networked radiation sensors with vehicle detection and identification systems to allow monitoring and tracking of vehicles passing by the system at highway speeds. It is envisioned that multiple technical approaches will be explored and integrated during the effort, ranging from sophisticated networked radiation detection arrays

allowing tracking of radiological materials to advanced optical target tracking systems. In 2013 and early 2014 the technical support team consisting of the Government and national laboratory scientists worked with the New York Police Department (NYPD) to develop the operational requirements, conditions and constraints in monitoring traffic and vessels approaching a protected city via highways, bridges, and tunnels. Analysis of these vignettes helped generate the required performance and suitability requirements for the ATD systems. Early in 2014, a solicitation was issued for proposed research and development of these technologies. Three technologies were subsequently selected, with three awards made in 2014. The resulting research efforts will culminate in 2017 with a test, demonstration, and characterization of the PTUs, and an operational demonstration of the technology at a location(s) as determined by the user group.

Wearable Intelligent Nuclear Detection (WIND) Project *(This project replaced the Mobile Radiation Imaging and Tracking System Project listed last year.)*

One of the major technical challenges is the ability to interdict a moving threat or localize an emplaced threat during wide area search missions. The planned WIND Project will develop and characterize a highly-modular, multi-purpose, and man-portable (e.g., backpack or vest) system that greatly advances the ability to detect and interdict threats during wide area search missions. The technical approach will merge two major sources of input in informing the design requirements. The first approach will utilize threat analysis to compare several critical design options, including the enhanced sensitivity of state-of-the-art radiation anomaly detection algorithms. The second complementary approach will first incorporate end users to generate requirements and then will utilize a phased approach to develop upon a balanced and flexible system. To achieve the objective, a number of advanced capabilities will be fully characterized, to include spectral anomaly detection, spatial mapping/tracking, sophisticated background subtraction, and sensor fusion. In FY 2015, a solicitation will be issued for proposed research and development. By FY 2018, the performance test units will be delivered and have characterization testing completed.

High Accuracy and Resolution Pager (HARP) Project

The planned HARP Project will do for semiconductor detector materials much the same as what the successful ARMD Project (see above) did for scintillator detectors. The HARP Project builds upon advances in new detection materials discovered under previous ER and ARI efforts utilizing advanced semiconductor materials and readout techniques. Candidate materials include thallium bromide (TlBr) and lithium-indium-diselenide (6LiInSe₂, or LIS), the former for gamma detection and the latter for neutron detection. Both of these materials have made great progress over the last few years and are reaching the maturity level appropriate for an accelerated aggressive project such as an ATD. Semiconductors offer several distinctive capabilities relative to scintillators, such as higher efficiency in compact size, high energy resolution, low power, and no need for photomultiplier tubes (PMT). As such these are much more amenable to smaller detector devices and systems such as pagers. This project combines these breakthroughs in new detection materials with both gamma and neutron detection capabilities to develop lower cost and greater efficiency page detection systems to enable wider deployment of high performance equipment. This project will initiate in FY 2016.

EXPLORATORY RESEARCH (ER) PROGRAM

The ER program explores innovative, high-risk, early to later-stage technologies, concepts, and ideas that can make transformational contributions to support the GNDA and reduce the risk of nuclear terrorism. Specifically, the ER program researches technologies and techniques that:

- Address capability gaps and weaknesses in the GNDA;
- Provide substantial performance improvement and/or cost reduction of rad/nuc detection capabilities; and
- Improve nuclear forensics capabilities.

Efforts under the ER program are intended to transform the basic building blocks of rad/nuc detection technology and supporting fields, with the research generally culminating in a feasibility evaluation or proof-of-concept demonstration in a laboratory setting. Successful ER technologies and concepts may then transition to support subsequent ATD projects or directly spur commercial development. ER projects also provide performance modeling, improved algorithm development, and other support capabilities for the broader DNDO mission. The ER program is divided into the six project areas (or portfolios) described below, many of which remain consistent from year to year. At the beginning of fiscal year 2015, the ER program will support 58 projects spanning 12 States (33 projects company-led, four university-led, 21 laboratory-led – many collaborative).

Materials Research and Support Technology (Materials) Project

The Materials Project has the technical objective of discovering new gamma-ray sensing materials, significantly improving existing materials, and improving or developing new signal readout methods for these materials. As these sensing materials are at the core of most radiation detectors, improvements in this area can have an impact across the GNDA. These materials could then enable the next generation of passive or active threat-sensing technologies, to include RPMs, backpacks, hand-held RIIDs, pagers, and a range of other detection technologies.

Currently-deployed radiation sensors are limited in sensitivity and selectivity for detecting, identifying, and locating nuclear and radiological threats, and have other operational limitations to include high cost, inadequate reliability, or complex operation. These limitations often are related directly to the material used to sense gamma and neutron radiation. Desired materials must be low-cost, sensitive, provide adequate performance, and be available in large sizes and volumes to enable widely deployable sensors. In particular, they must provide good gamma-ray energy resolution to differentiate threat from benign radiological materials, and be rugged, stable, nonhazardous, and operate at room temperature. In addition, sometimes they must be light weight, low power, low voltage, and compact. This project pursues the development of both low cost scintillators and semiconductors materials and the unique electronics required to read out and process the signal.

A new area of emphasis in 2015 will be research in advanced materials that can support advanced active interrogation detection concepts for shielded SNM (see below). Active detection poses unique challenges in radiation sensing to include the ability for these materials to discriminate between the interrogating radiation(s) and the unique signal or signature from SNM or the shielding surrounding it. A precursor to this research was a workshop in 2014 that brought together the materials developer

community with the active interrogation systems community in order to identify the detector material requirements needed for active interrogation systems. This workshop resulted in the new solicitation topic described below.

The table below lists the ongoing Materials activities for FY 2016 as recorded at the end of FY 2014.

ER: Materials Activity	Sector	State	Initiation Year	Completion Year
High-Throughput Discovery of Scintillation Materials Using Automated Processing	Laboratory	CA	2006	2018
Discovery of Single Crystal and Ceramic Forms of Large Scintillators and Integration into Detectors	Laboratory	CA	2006	2018
Improvement of Energy Resolution in Alkali Halide Scintillators with Co-Doping Technique	Industry	MA	2013	2016
Development of Thallium Chalcogenide Semiconductor Materials	Industry	MA	2013	2016
Zinc-Telluride Doped Scintillator Development	Industry	UK	2013	2016
Ternary Chalcogenide Semiconductor Development	Industry	PA	2013	2017
Photonic Crystal Structures for Improvement in Scintillator Performance	Industry	MA	2013	2016
Aluminum Arsenide Solid-State Photomultiplier	Industry	MA	2013	2016
Metal Loaded Plastic Scintillators	Laboratory	CA	2014	2016

Neutron Detection Including ^3He Alternatives (Neutron) Project

The Neutron Project explores near-term and longer-term alternatives to ^3He neutron detectors currently used in various nuclear detection systems to include portal monitors, handheld, backpack, and personal radiation detectors, and active interrogation systems. ^3He has been a vital isotope in neutron detectors because of its high absorption cross-section for thermal neutrons, excellent gamma rejection properties, and until recently, historically low cost. However, there is now clear recognition of a worldwide critical shortage of ^3He due to: 1) increased demand by industries such as oil, medicine, basic science, defense, and security; and 2) decreased supply of ^3He being generated from current national tritium reserves associated with nuclear weapons programs. These simultaneous issues have driven the need for detection schemes that do not use ^3He while also pursuing approaches that provide superior performance to ^3He -based detectors.

Starting in 2009, this project initially focused on portal applications because portals require the most ^3He . The results of this R&D led to a number of commercially available alternatives for portal monitors. Some of these alternative technologies not only met the requirements set by ^3He , but exceeded the performance of ^3He detectors in a number of ways. Following the success with portals, increased attention was given to applications that are the next largest users of ^3He , backpacks and handhelds, paving the way for the development of new handheld detectors and backpack systems that do not rely on ^3He . This new capability was demonstrated through a series of DNDO run neutron detection test campaigns from 2010 to 2013.

Emphasis of the Neutron Project is now placed on compact, low-power, rugged neutron detection technologies for personal radiation detection instruments. This project investigates a range of materials, technologies, and sensor systems. This project also explores novel materials and techniques for fast neutron detection that can enable shielded SNM detection approaches (see below). Materials

capable of gamma and neutron detection in a single material have also been investigated under this project, leading to the availability of a combined gamma-neutron detection scintillator material as a commercial product.

The table below lists the ongoing Neutron activities for FY 2016 as recorded at the end of FY 2014.

ER: Neutron Activity	Sector	State	Initiation Year	Completion Year
Low-cost and high-efficiency LiInSe ₂ semiconductor for neutron detectors	University	TN	2013	2016
High-efficiency boron nitride silicon solid-state thermal neutron detector	University	NY	2013	2016

Radiation Detection Technology (Radiation) Project

The Radiation Project emphasizes investigating novel approaches to greatly improve the ability to detect, identify, and locate threat materials based on their intrinsic radiological signatures. The primary emphasis is in next-generation gamma-ray and neutron detection systems that support agile, mobile, and multi-modal detection of threats. Research in this project leverages new materials developed under the Materials or Neutron Projects integrated with advanced electronics, new detector configurations, and specialized algorithms to greatly improve detection sensitivity and selectivity, while also minimizing operational burdens and costs associated with deployment of these systems. Specific technical approaches that have previously been examined in this project area included advanced concepts in radiation imaging (Compton imaging, and coded-aperture imaging and dual scatter imaging (for neutrons)) as well as radiation imaging combined with additional sensing modalities to include machine vision to further enhance performance. In 2014, research continued to expand the use of additional sensor data such as three-dimensional electro-optical, lidar, and short-wave infrared to enhance performance of networked and radiation imaging sensors. Performance benefits to be derived from this research include longer-range standoff detection of threat materials, improved differentiation of threat materials from environmental background and benign sources of radioactivity, decreased false alarms, and enhanced ability to locate and track radiation sources.

The table below lists the ongoing Radiation activities for FY 2016 as recorded at the end of FY 2014.

ER: Radiation Activities	Sector	State	Year Started	Year Completed
Enhanced Identification Sensitivity Against Radiological Threats Through Fusion of Orthogonal short wave infrared (SWIR) Technology	Industry	MA	2013	2016
Data Fusion of Radiation Detectors & Auxiliary Sensor for Improved Vehicular Monitoring and Interdiction	Industry	MA	2013	2016
Accurate Radiological Background Estimation Through Semantic Mapping and Classification of Environments Using Geo-Referenced Imagery	Laboratory	CA	2013	2016
	Industry	MA		

Shielded SNM (Shielding) Project

The Shielding Project addresses the critical challenge of being able to detect special nuclear material (SNM) and other threats even when heavily shielded or masked. Radiation signatures from SNM can be shielded, making passive detection difficult, if not impossible in some scenarios. This project strongly focuses on active interrogation (AI) techniques, including advanced radiography and particle interrogation, to produce unique signatures from SNM to greatly improve detection performance. AI detection methods typically employ x-rays, gamma-rays, or neutrons to penetrate shielding and the normal cargo found in containers, trucks, rail, airplanes, or vehicles. Specific research includes advanced x-ray systems that employ sophisticated algorithms to detect high mass and atomic number objects within radiographic images. These objects can be an indicator of SNM or the shielding used to conceal SNM or other radiological sources. Research also includes neutron and photon interrogation approaches that detect SNM by inducing fission or nuclear resonance fluorescence. Other techniques of interest use natural fields such as cosmic ray-generated muons and gravity fields without any man-made radiation to sense within large cargo volumes and detect the presence of objects with high mass density. Finally, this project focuses on advanced source technologies that can be used to minimize dose to the environment, and to be deployed in human-portable, mobile, and re-locatable applications. The table below lists the current ongoing

The table below lists the ongoing Shielding activities for FY 2016 as recorded at the end of FY 2014.

ER: Shielded SNM Activities	Sector	State	Year Started	Year Completed
Multi-Source Rail Cargo Inspection System	Company	CA	2013	2017
Low-Dose Radiation Source Development for Rail Scanning	Company	CA	2013	2016
Low-Dose Radiography from Laser Driven X-Rays	University	NE	2013	2016
Radiographic Imaging Components for Dose Reduction	Company	MA	2013	2016

Modeling and Algorithms (Algorithms) Project

The Algorithms Project utilizes advanced signal processing and cutting-edge analyses to greatly enhance the ability to detect, locate, track, and identify potential threat materials and devices across a broad range of environments. The challenge to current detection systems is that background radiation and other commonly occurring non-threat sources may result in false alarms that otherwise limit their detection sensitivity to true threats. To address this challenge, this project strives to expand our understanding of the background and the observed threat signatures and then exploit them with machine learning, novel signal filtering, Bayesian statistics, and principal component analysis to both improve threat detection performance and enable broader operational agility. The project area leverages the rapidly growing computational capabilities that can be either embedded within instruments, or attached to instruments through smart phones and tablets. The desired goal of current algorithm projects is to utilize a greater portion of detection system data and then translate that data into actionable information for the end user.

This project area also emphasizes development of predictive modeling and simulation capabilities for current and future detection concepts. These models help guide research efforts, support capability-

based design of advanced detection concepts, enable understanding of how new or existing detection assets may be best employed, and support trade analyses in detection approaches for new missions. The desired goal of the model and simulation projects is to develop effective and accurate software tools to support the spectrum from GNDA planning down to end-user operations.

The table below lists the ongoing Algorithm activities in FY 2016 as recorded at the end of FY 2014.

ER: Algorithm and Modeling Activities	Sector	State	Year Started	Year Completed
MCNP Physical Model Interoperability & Validation	Laboratory	NM	2012	2018
SoftWare for Optimization of Radiation Detectors (SWORD) Upgrades	Laboratory	DC	2013	2016
Radionuclide Analysis Kit (RNAK) Development and Implementation	Laboratory	CA	2013	2016
Robust Network Fusion Algorithms for Detection and Localization of Radiation Sources	Laboratory	TN	2013	2017
	University	SC		
	University	TN		

Nuclear Forensics (Forensics) Project

The Forensics Project coordinates with DNDO’s NTNFC mission to execute transformational research and development to discover new forensics signatures or to develop the tools enabling comprehensive and timely analytical results. As with conventional forensics, the goal is to use quantifiable, actionable, and defensible technical information to help link places, people, objects, and events. Specifically, analytical methodologies are required to characterize materials, samples, devices, constituent parts, output signals, and other related items resulting from the illicit use or intended illicit use (e.g., in trafficking) of nuclear and other radioactive material.

This project area seeks to develop laboratory analytical techniques that improve on existing methods to determine physical, chemical, radiological, or morphological properties of sample material. The desired goal of Forensics Project is to improve or replace current analytic measurement methodologies and tools with ones that achieve greater accuracy and precision for the interagency technical nuclear forensics mission.

The table below lists the ongoing Forensics activities in FY 2016 as recorded at the end of FY 2014.

ER: Forensics Activity	Sector	State	Year Started	Year Completed
Uranium Aging and Morphological Analysis	Laboratory	NM	2013	2016
Quantitative Image Analysis Software	Laboratory	NM	2013	2016
Focused Ion Beam Optimization for 3D Imaging	Laboratory	CA	2013	2016

Solicitation for New ER Activities

New ER activities are initiated through an annual Broad Agency Announcement (BAA) for industry and academia and a Call for Proposals (CFP) for National and Government Laboratories. Topic areas for this research are defined from prioritized gaps in the GNDA and the NTNFC Strategic Plan. These

topic areas may be refined or influenced from technology needs as defined by DNDO, other DHS Components, other Federal departments and agencies, or State and local law enforcement. Topics may also originate from remaining technology hurdles discovered or not fully addressed in prior research. These research topic areas generally address one or more of the projects discussed above. In 2014, a CFP to the National Labs was issued and contracts awarded for a number of specific studies to help inform a future R&D solicitation in 2016 with the following topic areas:

- Research needed to better integrate rad/nuc detection capability with other efforts to improve domain awareness across the homeland defense infrastructure;
- Requirements for Mono-Energetic Photon Sources (MEPS) needed for shielded threat detection; and
- Research and development needed to better integrate rad/nuc detection capability with chemical, biological, explosives and other contraband detection technology.

Also in 2014, a BAA / CFP was released for award in 2015 that covered the following topic areas:

- Detector Materials Development for Active Interrogation Techniques;
- Shielding Anomaly Detection;
- Reduction in Cost of Existing and Near-Term Nuclear / Radiological Threat Detection Systems;
- Model-driven Analysis Tool Research and Development; and
- Nuclear Forensics Laboratory Analytical Methods (CFP only).

This solicitation resulted in 175 white papers with proposals due in early 2015. A similar solicitation is expected in 2016 with topics developed based on the most recent GNDA gap analyses, GNDA technical grand challenges, on-going research results, current operational issues, and the results of the 2014 CFP studies.

ACADEMIC RESEARCH INITIATIVE

The ARI Program has two primary objectives: 1) Engage the academic community to advance fundamental knowledge for radiological/nuclear threat detection and related sciences with emphasis on fundamental research to solve long-term, high-risk challenges, and 2) Develop human capital in the nuclear science and engineering professions, and related fields. Further, the program works to sustain a long-term commitment to basic research in these fields and coordinates these research efforts with other federally sponsored research in industry and at the National Laboratories. The ARI program funds projects in the areas (or portfolios) described below. Since inception, 57 grants have been awarded to more than 42 academic institutions across the country. In 2013, the ARI program sponsored 40 grants (six of which are collaborative), supported 154 students and involved 94 students, and resulted in 51 papers. In addition to its focus on basic and fundamental radiation detection science, the ARI funds academic disciplines traditionally not associated with radiological / nuclear detection, such as social sciences, deterrence theory, and applied mathematics. The ARI encompasses a number of research categories as described below.

Materials Research and Support to Technology Project

Research in this area focuses on high-risk long-term research aimed at developing greatly improved radiation detector materials that are highly sensitive, selective, low-cost, and rugged. This research encompasses a family of investigations to understand the fundamental properties of radiation sensing materials, to include the mechanisms of light production in scintillator materials and charge mobility and lifetimes in semiconductor materials. Research also includes efforts to conduct predictive modeling of materials properties, novel synthesis and growth techniques for materials, and advanced material analysis and characterization techniques. The goals of this research include discovery and development of scintillator materials that have faster response, higher light output, better linearity, and improved yields during growth, and semiconductor materials that have optimized charge transport and collection properties, and room-temperature operation, and excellent sensitivity and energy resolution. The table below lists the ongoing activities in FY 2016 as recorded at the end of FY 2014.

ARI: Materials Research and Support to Technology	Sector	State	Initiation Year	Completion Year
Development of Improved Cadmium Manganese Telluride (CMT) and Cadmium Zinc Telluride (CZT) Nuclear Detectors for Homeland Security	University	AL MN	2011	2016
Pioneering Crystal Growth of Large High Resolution Scintillators	University	TN	2011	2016

Alternative Neutron Detection Technologies Project

Alternative Neutron Detection Technologies research investigates alternatives for neutron detection due to the scarcity of ^3He . It also seeks to greatly improve neutron detection capabilities in general, with performance that would provide substantial improvements over existing ^3He technologies. This includes development and improvement of neutron sensitive scintillator materials as well as semiconductor materials with the goals of excellent efficiency and excellent ability to discriminate neutrons from gamma rays. Additionally, neutron detection systems that improve the ability to localize, and/or image neutron emitting materials also are being investigated. The table below lists the ongoing activities in FY 2016 as recorded at the end of FY 2014.

ARI: Alternative Neutron Detection Technologies	Sector	State	Initiation Year	Completion Year
Very Large Area, High Sensitivity Neutron Detection System (collaborative)	University	TX AZ	2011	2016
Fabrication of Solid-State Large Area Thermal Neutron Detectors at a Low Cost	University	NY	2013	2016

Radiation Detection System Concepts, Approaches, and Architectures Project

Explores radically new approaches to threat detection, eventually leading to sensor or detection system concepts that are highly sensitive to radiological/nuclear signatures and selective in their ability to distinguish and locate these materials from naturally occurring background radiation. This includes fundamental research into new detection system concepts that provide new insights in how threat

materials can be detected even in challenging pathways. The table below lists the ongoing activities at the in FY 2016 as recorded at the end of FY 2014.

ARI: Radiation Detection System Concepts, Approaches, and Architectures	Sector	State	Initiation Year	Completion Year
Electron Tracking for Advanced Gamma-Ray Imaging Applications in Homeland Security	University	CA	2011	2016

Shielded SNM Project

This research area includes investigations to overcome the challenge of detecting shielded SNM, principally through advanced or enhanced nonintrusive inspection or active interrogation approaches for cargo scanning; vehicle scanning; and human portable scanning applications. Fundamental research in this area addresses a range of studies to augment conventional nonintrusive inspection approaches including: 1) transformational low-power, low-weight, high-yield neutron and gamma-ray producing sources; 2) high-efficiency, fast-recovery, low-cost detectors for active detection; 3) novel active interrogation inspection concepts; and 4) investigations into unique signatures and fundamental data associated with active detection methods such as nuclear resonance fluorescence. The table below lists the ongoing activities in FY 2016.

ARI: Shielded SNM	Sector	State	Initiation Year	Completion Year
Nuclear Data Measurements Using Gamma rays and Radiation Detector Development	University	NC	2011	2016
Low-Dose Inspection for Nuclear Threats Using Monochromatic Gamma-Rays (collaborative)	University	MA PA	2014	2019

Modeling and Algorithms Project

This portfolio investigates innovative data processing and analysis techniques that will lead to significant performance improvements. Current and prior research in this area has included algorithm development for simultaneous real-time gamma-ray imaging and isotope identification and application of machine learning (supervised detection, supervised classification, and anomaly detection) to facilitate mobile search/detection performance. The research also includes advances in simulation and modeling techniques to provide early understanding of the operational benefits of new threat detection approaches. There are no ongoing activities in FY 2016, however, FY 2015 or FY 2016 solicitations may result in new efforts.

Nuclear Forensics Project

This portfolio investigates advanced analytical techniques used to determine the processing history and transit route of pre-detonation nuclear materials. Research emphasis includes identifying ways to improve analytical techniques and methodologies (e.g., speed, accuracy, and precision) for determining the physical, chemical, radiological, or morphological properties of nuclear or radioactive materials.

Objectives include determining the specific processing the material underwent, geographic origins, transport pathways, and intended use. It also includes improving the separation or analysis of nuclear and nonnuclear material constituents of forensics materials. Finally, it includes both discovery and

characterization of new signatures associated with the processing history of materials as they progress through the nuclear fuel cycle. The table below lists the ongoing activities in FY 2016 as recorded at the end of FY 2014.

ARI: Nuclear Forensics	Sector	State	Initiation Year	Completion Year
Structure Property Relationships of Metal Actinide Alloys	University	GA	2014	2019

Solicitation for New ARI Activities

The ARI program refreshes its research portfolio every year through an annual solicitation. Topic areas for this research solicitation must address gaps in the GNDA or TNF while developing students and academic programs. For example, the 2014 solicitation resulted in approximately 60 proposals across the five topic areas listed below:

- Materials Research Approaches to develop Cost Effective Monitoring Solutions for Radiological and Nuclear Threats;
- Approaches to Detect Shielded Special Nuclear Materials (SNM);
- Threat Detection through Data Fusion, Informatics and/or Non-Radiological Signal/Signature Exploitation;
- Monitoring and Detection along Challenging Pathways; and
- Science and Engineering of Nuclear Forensics

A solicitation with revised topic areas is expected to be released in 2015 and 2016.

SMALL BUSINESS INNOVATION RESEARCH (SBIR)

The statutory purpose of the SBIR Program is to stimulate technological innovation by strengthening the role of innovative small business concerns (SBCs) in federally funded R&D. This program is implemented by the Policy Directive as administered by the Small Business Administration (SBA). Currently, 11 Federal agencies participate in the SBIR program. The goals of the program include:

- Stimulate technological innovation;
- Meet Federal research and development needs;
- Foster and encourage participation in innovation and entrepreneurship by socially and economically disadvantaged persons;
- Increase private-sector commercialization of innovations derived from Federal research and development funding.

The DNDO SBIR Program includes funding across all PPAs that perform R&D per guidance of the SBA. Because the majority of the SBIR funding comes on the Transformational R&D PPA, it is included in this section of the report.

The DNDO SBIR program transitions near-term solutions, supporting the technical gaps in the GNDA, into a commercial product or service. The gaps are addressed through technical topics in an annual solicitation, typically 2-4 topics. These topics are developed by program managers across the DNDO

Directorates identifying technical needs. Successful SBIR technologies ultimately transition their technologies into the market covering a broad range of applications. At the beginning of fiscal year 2015, the SBIR program will support 14 projects. The current ongoing activities under the DNDO SBIR program follow a rigid phase and funding structure is broken down as follows:

Phase I: Feasibility Demonstration

The proposed effort will demonstrate a proof-of-feasibility towards objectives listed in the solicitation topic. The following projects are currently in their phase I addressing the need for a smartphone-compatible module to identify and categorize radiation sources and technologies to shrink the footprint of the support infrastructure for high-energy x-ray sources.

SBIR Phase I	State	Initiation Year	Completion Year
Low-Cost Radiation Detection Using a Smart Phone	MA	2014	2017
Smartphone Enabled Spectroscopic Gamma-Neutron Radiation Sensor	MA	2014	2017
Portable High-Intensity X-Ray Source Based on a 10 MeV Superconducting Electron Linac	MI	2014	2017
Miniaturized High Energy X-ray Source for Mobile Non-Intrusive Inspection Systems	CA	2014	2017

Phase II: Research and Development

The effort will perform the full R&D scope of activities to develop and demonstrate a prototype. The following projects are currently in their phase II addressing the following needs: growth and characterization of recently-discovered Ba-mixed halides scintillators of enhanced gamma detection, development of handheld and/or backpack detectors, development of advanced neutron detectors, purification of precursor materials for Strontium Iodide (SrI₂) and Cesium Lithium Yttrium Chloride (CLYC) scintillators, development of Thallium Bromide (TlBr)-based gamma detectors operable at near-room temperature, development of a repository for test and evaluation data, and development of smartphone applications supporting reach-back and wide-area search techniques. Current projects, initiated in FY 2011 and FY 2013 are expected be completed in FY 2015.

Phase III: Commercialization

The effort will be conducting the final R&D to transition the prototype into a commercial product or service. The following project is developing a novel fast neutron detector material for portable neutron detection applications.

SBIR Phase III	State	Initiation Year	Completion Year
Stilbene Production for Fast Neutron Detection	NJ	2011	2016

New SBIR Activities

The DNDO SBIR Program issues an annual solicitation. Each solicitation generally receives approximately 30 proposals results in a 5-7 new SBIR projects in phase I. The program further

conducts outreach through an annual national SBIR conference for all SBIR-participating Federal agencies.

PPA: Assessments

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	-	-	\$39,153
FY 2015 President's Budget	-	-	\$38,079
2016 Adjustments-to-Base	-	-	(\$79)
FY 2016 Current Services	-	-	\$38,000
FY 2016 Program Change	-	-	-
FY 2016 Total Request	-	-	\$38,000
Total Change 2015 to 2016	-	-	(\$79)

The FY 2016 President's Budget requests \$38.000 million for Assessments.

Adjustments-to-Base include:

- Increase of \$0.029 million for WCF adjustments
- Increase of \$0.259 million for Test and Evaluation Operations
- Decrease of \$0.367 million for the DHS Balanced Workforce Strategy⁵

CURRENT SERVICES PROGRAM DESCRIPTION:

The DNDO development and acquisition process is anchored by the assessment of DNDO mission-related technologies as they are developed, deployed, and implemented. DNDO continually assesses the GNDA and implemented capabilities through a variety of means, including:

- Test and evaluation campaigns to characterize and collect performance data on commercially available and emerging technologies and systems.
- Execution of pilots with operational agencies to evaluate CONOPS.
- Red team assessments deepen our understanding of deployed capabilities by presenting overt and covert adversarial-based scenarios to Federal, State, local and tribal stakeholders.
- Program assessments to identify the effectiveness of planned and deployed programs and operations.
- Development of national consensus standards and interagency technical capability standards (TCS) for rad/nuc detection systems.

⁵ See Exhibit K Balanced Workforce Strategy in the Management and Administration Appropriation

Assessments – Program/Project Overview

Program	Project	Level of Effort	General Description
Test And Evaluation Program	T&E Operations Project	Ongoing	The T&E Operations project funds the staff resources to independently plan test activities, ensure scientific defensibility and rigor, oversee test execution, and report results.
	T&E Facilities And Infrastructure Project	Ongoing	The T&E Facilities and Infrastructure project provides the facilities, test instrumentation, special nuclear material (SNM) and radiological sources, and data collection systems required to support the testing activities described in the T&E Operation project above.
	Operational Analysis And Technical Assessments (OATA)	Ongoing	This project consolidates and integrates three previous projects within the Assessments PPA, specifically Test Data Management, Algorithm Testbed, and Test Modeling and Simulation. The activities and products produced from this effort will transform data collected during testing, modeling & simulation, and replay/injection studies, into actionable knowledge that will enable informed decisions regarding the effectiveness and suitability of rad/nuc detectors.
	Directed Testing	Ongoing	DNDO conducts test campaigns using mature, commercially available rad/nuc detection systems in operational scenarios faced by State, local, and tribal end-users. Such tests provide for the independent assessment of equipment to confirm vendor performance claims.
Rad/Nuc Detection Standards and Conformity Assessments	Rad/Nuc Detection Standards	Ongoing	The Rad/Nuc Detection Standards Project helps to ensure that detection equipment obtained by Federal, State, local, tribal, and territorial end-users is effective, safe, reliable, and affordable. In addition, the project influences the development of more capable technologies by establishing and validating threshold and objective performance requirements, associated test methods, and testing processes.
	Conformity Assessments	Ongoing	The Conformity Assessment Program influences the development of more capable technologies by establishing and validating threshold and objective performance requirements, associated test methods, and testing processes.
Red Team And Net Assessments (RTNA)	Red Team (RT) Project	Ongoing	The RT presents adversary tactics and radiological signature training devices to Federal, State, local, tribal, and territorial rad/nuc detection and interdiction operations. These presentations can either be covert or overt in nature.
	Net Assessments (NA)	Ongoing	NA performs objective reviews of the effectiveness of GNDA programs and their associated activities by examining DNDO programs, CONOPS, protocols, policies, procedures, and training.

TEST AND EVALUATION PROGRAM

The DNDO research, development, and acquisition process is anchored by rigorous assessments of mission-related technologies as they are developed, deployed, and implemented. These programs are supported by T&E campaigns to characterize technical performance and assess the operational effectiveness of technologies under development, as well as that of commercially available systems. The testing of detection systems against SNM in significant quantities and in realistic configurations is a key to assessment of rad/nuc systems. This type of testing requires highly specialized and secure

testing facilities, such as the Radiological & Nuclear Countermeasures Test and Evaluation Complex (RNCTEC) at the Nevada National Security Site, which are resourced with appropriate test instrumentation, equipment, SNMs and other radioactive sources, measurement devices/sensors, and test data collection, analysis, and archiving systems. Equally important, rigorous and scientifically defensible testing requires a team of trained and experienced nuclear physicists, subject matter experts, statisticians, analysts, and testers. The T&E program is comprised of the following projects: T&E Operations, T&E Facility Infrastructure, Operational Analysis and Technical Assessments, and Directed Testing in Support of State and Local Partners.

T&E Operations Project

R&D, developmental T&E, operational T&E, and directed testing are planned and executed to generate data that is analyzed and reported to support the design and development of rad/nuc detection systems. These activities support rad/nuc detection strategies and mitigate risk in R&D and acquisition programs. Decision-makers are provided with analytical results necessary to make informed judgments.

The credibility and timeliness of test products are paramount to advancing technology development programs at key milestones. As such, the need for a repeatable, controlled process in the planning and conduct of testing is required to manage all testing complexities. The rigor of DNDO's test planning and test execution and the quality of the results are widely recognized in the interagency and international rad/nuc detection community.

T&E operations are complex and rely on assembling the proper mix of experts such as test scientists, test directors, test engineers, operational users, development program managers, and test executors to develop and execute timely and credible test and evaluation campaigns, technology demonstrations, operational tests, and characterizations. To this end, DNDO leverages the intellectual and manpower resources of other organizations, such as the U.S. Department of Energy (DOE) National Nuclear Security Administration (NNSA) National Laboratories, the National Institute of Standards and Technology (NIST), other Federal agencies, public and private universities, and other private subject matter experts (SME). The T&E Operations project funds the staff resources necessary to independently plan test activities, ensure scientific defensibility and rigor, oversee test execution, and report results. This project also includes travel necessary to provide oversight of field activities. It should be noted that funding for actual execution of test activities at test facilities in the field is typically funded under the development programs for each project, for example, the Systems Development PPA.

T&E Facilities and Infrastructure Project

The T&E Facilities and Infrastructure project provides the facilities, test instrumentation, SNM and radiological sources, and data collection systems required to support the testing activities described in the T&E Operation project above.

Rad/nuc detection systems testing has been accomplished at several locations including RNCTEC, as well as various national laboratory facilities such as Pacific Northwest, Los Alamos, Oak Ridge, and Savannah River National Laboratories. This project funds the baseline operations and maintenance of the RNCTEC facility to support DNDO's testing needs. DNDO has also developed and maintains a

mobile test center that supports testing activities and data collections at POEs and other operational venues.

Rad/nuc detection systems require specialized equipment to measure results and collect the necessary data to conduct credible testing with repeatable results. The Data Collection System (DCS), which uses a client-server software architecture model, is a highly configurable test data management system that is customizable for each specific test event. The baseline DCS software will require continued development to keep pace with the new technologies and operational environments being considered by DNDO programs. An effort is underway to redesign database schema, create user-friendly interfaces, and provide offsite access.

This project coordinates with DOE and the National Laboratories to fabricate new SNM sources, manage their deployment and handling at test sites, their packaging and shipment, and ultimately their disposal. The use of SNM sources in testing is necessary to ensure robust and high-fidelity evaluations, and helps DNDO to meet the goal of performing comprehensive technology and operational evaluations of developmental and commercially available rad/nuc detection systems and processes.

Due to their potential high costs and challenges associated with their safety and transportation, DNDO must carefully consider and balance the design, fabrication, handling, and transportation costs of SNM sources. As a result, this project has established overarching functional and operational requirements for all SNM sources. Each source will have its own individual technical requirements.

Operational Analysis and Technical Assessments (OATAs) Project

OATAs are core functions of DNDO's T&E capability. This project consolidates and integrates three previous projects within the Assessments PPA, specifically Test Data Management, Algorithm Testbed, and Test Modeling and Simulation. The activities and products produced from this effort will transform data collected during testing, modeling and simulation, and replay/injection studies, into actionable knowledge that will enable informed decisions regarding the effectiveness and suitability of rad/nuc detectors under acquisition consideration or that are being considered for COTS procurement. The operations research activities will utilize existing data stored in archives such as the Archive and Retrieval Management System (ARMS) and Report Analysis Archive System (RAAS), along with newly collected test and/or modeling and simulation data to address operational questions, issues, and unknowns that often arise while developing and deploying new capability. The OATA project has four main elements: Tools for Test Data Management, Spectral Data and Algorithm Analysis Tools, Test Modeling and Simulation, and Technical Assessment.

Tools for Test Data Management

This activity focuses on the collection, verification and validation, analysis, reporting, and archiving of test data collected during DNDO test campaigns as well as the collection of similar test reports by other agencies. Currently two test data management systems have been developed and maintained by DNDO: ARMS and RAAS. The ARMS is a repository that stores and retrieves all T&E data collected by DNDO. This includes spectra, scenarios, sources, test plans, and reports.

RAAS was developed to store and retrieve test reports containing evaluations of radiation detection and radiography systems from various agencies such as DHS, Defense Threat Reduction Agency, DOE National Laboratories, and others.

Spectral Data and Algorithm Analysis Tools

DNDO test campaigns of commercial detection systems have frequently demonstrated opportunities for significant improvement in the embedded vendor-supplied software intended for automated threat determination. Ideally, these software-based algorithms minimize the need for human operator interpretation of data. Building upon DNDO-required standardized data formats, DNDO has established and maintains a capability to evaluate proposed or modified algorithms using existing data from ARMS, a process referred to as “replay.” To balance the tradeoff between improved detection/identification and increased false alarm rate, one typically runs thousands of data files through the replay process. DNDO maintains this capability and continues to utilize replay to improve algorithmic performance while minimizing the need for expensive field testing.

DNDO is compiling a searchable catalog of radiological backgrounds drawn from our numerous data collections. DNDO has conducted over one hundred tests at many locations and under a wide variety of operational and environmental conditions. By compiling and providing access to this information, DNDO can inform activities such as Analyses of Alternatives in support of the GNDA, design of experiments and recommendations for instrument settings and CONOPs relevant in the operational environment. A searchable catalog also supports the Model-Test-Model (MTM) paradigm by providing real background information against which operational and physical models can be developed and improved.

Test Modeling and Simulation

A recent National Academies’ evaluation of DNDO efforts recommended increased focus on modeling and simulation as part of the overall system evaluation. In response, DNDO has established a Model-Test-Model strategy to guide various testing efforts supporting DNDO programs. The purpose of the effort is to leverage the substantial radiation detector test, evaluation, and analysis work that has been done, and to continuously improve the efficacy and cost-effectiveness of testing. The use of modeling enhances test design, improves DNDO confidence in the use of science-based models for describing observed behavior, and extends DNDO’s understanding of system performance beyond conditions that are empirically tested.

Technical Assessment

To date, DNDO T&E efforts have been focused narrowly on the class of system under test. This activity will conduct technical assessments broadly across all T&E activities to draw conclusions and lessons learned that can be applied more generally to other classes of systems or operational environments. These types of crosscutting analyses can streamline future T&E efforts and increase overall efficiencies. The project will produce supplemental reports and studies based on recommendations from previous tests and an annual technical assessment of rad/nuc detection equipment based upon DNDO tests and analysis conducted during the year.

Directed Test Project

State, local, and tribal law enforcement partners have repeatedly stated that in order to develop effective nuclear detection programs, they need reliable and objective information on the technical performance and operational effectiveness of currently available rad/nuc detection equipment. Through this program, DNDO conducts test campaigns using mature, commercially available rad/nuc detection systems in operational scenarios faced by State, local, and tribal end-users. Such tests provide for the independent assessment of equipment to confirm vendor performance claims, and can help with development and/or refinement of concepts of operations (CONOPS).

The following classes of detectors have been evaluated in the past: Personal Radiation Detectors (PRDs), handheld, backpack, and mobile detection systems, and radiation detection systems suitable for maritime environments and aerial platforms. DNDO has been actively engaged with stakeholders from the State, local, and tribal communities on future directed testing that will provide end-users with reliable performance information. DNDO may conduct a Directed Test involving DHS partners that will examine surge capabilities at the State, local, tribal, and territorial level.

RAD/NUC DETECTION STANDARDS AND CONFORMITY ASSESSMENT PROGRAM

The Rad/Nuc Detection Standards and Conformity Assessment Program helps to ensure that detection equipment obtained by Federal, State, local, tribal, and territorial end-users are effective, safe, reliable, and affordable, and influences the development of more capable technologies by establishing and validating threshold and objective performance requirements, associated test methods, and testing processes.

The Program includes five elements: U.S. National and International Consensus Standards, Technical Capability Standards, Standards Validation, Graduated Rad/Nuc Detector Evaluation and Reporting (GRaDER[®]), and Interagency Characterization and Assessment. This integration of projects into the more holistic Rad/Nuc Detection Standards and Conformity Assessments Program establishes a more direct feedback loop between the testing community and standards developers. Consequently, lessons learned during testing are more readily incorporated into standards, helping to ensure that standards are more relevant to the needs of the end-users, more testable, and more affordable.

Rad/Nuc Detection Standards Project

National and International Consensus Standards

The National Technology Transfer and Advancement Act (P.L. 104-113) and the OMB Circular A-119, "Federal Participation in the Development and Use of Voluntary Consensus Standards and in Conformity Assessment Activities" (1998), direct Federal agencies to use voluntary standards in lieu of governmental standards whenever feasible. DNDO facilitates the maintenance of these standards by providing resources to ensure that they are periodically reviewed and then revised as necessary. This revision is normally done every three years to ensure the standards reflect the latest in rad/nuc detection equipment and procedures. In addition, DNDO continues to support the

development of new consensus standards as innovative equipment categories are established and enter into widespread use.

DNDO will also continue to sponsor development of U.S. national standards through the American National Standards Institute (ANSI), supporting development and maintenance of the ANSI N42 series of standards that address performance requirements for multiple types of preventive rad/nuc detection equipment.

For international consensus standards, DNDO will engage with and support the International Electrotechnical Commission's (IEC) Subcommittee 45B is the multinational body that has the responsibility to develop consensus standards for rad/nuc detection equipment.

Technical Capability Standards

The SAFE Port Act of 2006 (P.L. 109-347) requires that the Secretary of Homeland Security, acting through the Director of DNDO, and in collaboration with NIST, publish Technical Capability Standards for the use of nonintrusive imaging and radiation detection equipment in the United States. Technical Capability Standards are Government-unique standards, as opposed to private sector voluntary consensus standards. Technical Capability Standards establish targeted performance requirements for radiation detection and nonintrusive imaging systems used in support of the rad/nuc detection mission of DHS. Technical Capability Standards are also threat-informed standards. The purpose of a Technical Capability Standard is to have, where practical, threat-informed unclassified test objects with associated test protocols for use by testing organizations. In support of this effort, unclassified detection capability benchmarks are established that do not compromise nuclear weapon design information.

Standards Validation (Testing the Standard)

Rad/nuc detection standards are written by committees of subject matter experts who are attempting to balance requirements for detection capability against the capability of existing technology. When a newly adopted standard is used as the basis of a conformity assessment for the first time, unforeseen deficiencies often become apparent. Such a situation calls for a timely revision of the standard before valuable testing effort is wasted on misunderstood test configurations, procedures, or requirements that will produce inappropriate or unexpected results. For this reason, DNDO initiated the standards validation process. Each standard is validated after the coordination phase. Any deficiencies discovered are then corrected before the standard is used as a basis for testing or adopted by the rad/nuc detection community.

Conformity Assessment Project

Graduated Rad/Nuc Detector Evaluation and Reporting (GRaDER®)

Conformity assessments are a systematic examination of the extent to which a rad/nuc detection system conforms to specified standards. Such conformity assessments require testing facilities that can reliably test equipment against the standards. The GRaDER® Program provides for the establishment of independent testing facilities that become or are accredited under the NIST National Voluntary Laboratory Accreditation Program. Accredited GRaDER® Program facilities can evaluate rad/nuc detection equipment against applicable U.S. National consensus standards and Technical Capability Standards. The cost of such testing is covered by commercial rad/nuc detection equipment vendors, U.S. Government agencies, or other governmental entities.

Interagency Characterization and Assessment (ICAP) (Testing Equipment against Standards)

ICAP is an interagency program established to evaluate rad/nuc detection systems against consensus standards and technical capability standards. This interagency characterization and assessment effort provides Government cost efficiencies through sharing of test infrastructure, personnel, technologies, methodologies, test events, data collection, data analysis and reporting. Following each project, ICAP will prepare and distribute reports to Government agencies, update a shared database to inform stakeholders, and provide feedback to participating manufacturers and the standards development community with the goal of helping to ensure the most capable detection devices are available to the preventative rad/nuc detection community.

RED TEAM AND NET ASSESSMENTS (RTNA) PROGRAM

RTNA is DNDO's primary means to objectively assess the operational effectiveness and performance of DNDO programs and deployed rad/nuc detection capabilities at the Federal, State, local, tribal, and territorial levels in support of the GNDA.

Red Team (RT)

RT operations fulfill a mission need to evaluate deployed systems and operations, and their associated tactics, techniques and procedures, in as-close-to-realistic-environments as possible. The RT presents adversary tactics and radiological signature training devices to Federal, State, local, tribal, and territorial rad/nuc detection and interdiction operations. These presentations can either be covert or overt in nature.

Covert assessments provide the radiation detection system operators experience with detecting adversary tactics in day-to-day operations without any forewarning. The operators believe they may be experiencing an actual threat situation. These operations provide valuable feedback to front-line operations on the performance of their tactics, techniques, and procedures from detection through reporting and adjudication to response. This feedback enables operators to modify their CONOPS and training requirements. Covert and overt assessments are generally the only opportunity for operators of radiation detection systems to have experience detecting uncommon radiation sources to include actual threat signatures. In addition, the RT conducts adversarial-based assessments without

using any “inside” information of current or planned capabilities. These assessments give planners an understanding of what adversaries may know about current and planned capabilities. The RT identifies and shares best practices across the GNDA to help improve it over time. Depending on the complexity of the chosen venues, the RT plans to conduct more than 20 (covert and overt) operations in FY 2016.

DNDO also builds models that integrate validated lessons learned from overt and covert operations and assessments, intelligence estimates, expert elicitation, and workshops into probabilistic measures of the effect that implemented capabilities have on adversary decision-making. This allows cost-effective computer modeling of how implementing different GNDA capabilities may change adversary behavior. The resultant analysis can help inform decision-makers on the relative benefit of allocating scarce resources across various development and architecture efforts.

Net Assessments (NA)

NA performs objective reviews of the effectiveness of GNDA programs and their associated activities by examining DNDO programs, CONOPS, protocols, policies, procedures, and training. NA conducts assessments that provide insights on what is successfully being accomplished and identifies areas for improvement. These assessments are conducted to provide objective findings and recommendations and establish a documented baseline to provide a historic perspective for future endeavors. One of NA’s primary goals is to continue assessing STC activities and providing recommendations for incorporation into future STC activities.

**Department of Homeland Security
Domestic Nuclear Detection Office
Operations Support
Program Performance Justification**
(Dollars in Thousands)

PPA: Operations Support

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	-	-	\$30,147
FY 2015 President's Budget	-	-	\$31,565
2016 Adjustments-to-Base	-	-	(\$565)
FY 2016 Current Services	-	-	\$31,000
FY 2016 Program Change	-	-	-
FY 2016 Total Request	-	-	\$31,000
Total Change 2015 to 2016	-	-	(\$565)

The FY 2016 President’s Budget requests \$31.000 million for Operations Support. This funding will be used to continue efforts in monitoring the GNDA and providing the data and analyses required to make effective operational decisions. It will also fund efforts to coordinate the implementation of the domestic component of the GNDA and its operational relationships and detection capabilities among GNDA partners.

Adjustments-to-Base include:

- Increase of \$0.020 million for WCF adjustments
- Decrease of \$0.256 million for the DHS Balanced Workforce Strategy⁶
- Decrease of \$0.329 million for Capabilities Integration

CURRENT SERVICES PROGRAM DESCRIPTION:

Operations Support plays a pivotal role in implementing the domestic component of the GNDA by ensuring that the training, exercise, and cross-jurisdictional protocols integral to these elements are adopted and sustained. In addition, Operations Support includes integration and outreach efforts necessary to ensure that GNDA partners know how to access available resources to support the rad/nuc detection mission. The activities of this PPA are tightly integrated with those of the STC Program, described in the DNDO Systems Acquisition PPA. Also included in the Operations Support PPA is a description of Information Sharing which is critical to the Operations Support effort.

⁶ See Exhibit K Balanced Workforce Strategy in the Management and Administration Appropriation

Operations Support – Program/Project Overview

Program	Project	Level of Effort	General Description
Joint Analysis Center (JAC)	JAC Operations	Ongoing	The JAC serves as an interagency coordination mechanism and central monitoring point for the implemented GNDA, maintaining situational awareness of GNDA programs, activities, and capabilities, to include status of rad/nuc detection operations, visibility into the status of rad/nuc alarms, and awareness of rad/nuc-related incidents and events.
	Joint Analysis Center Collaborative Information System	Ongoing	JACCIS is a web-based system that provides Federal, State, local, tribal, and territorial stakeholders adjudication connectivity, a detector database, and situational awareness regarding the events and activities relating to rad/nuc detection and the GNDA.
Federal, State, and Local Outreach	State and Local Working Groups	Annual, ongoing	State and Local Stakeholder Working Group and Executive Steering Council are DNDO-sponsored strategic engagements intended to promote capability development and sustainment, and foster strong relationships with and among our State, local, and tribal agency mission stakeholders. Urban Shield, a regional competitive exercise that is conducted annually in the San Francisco Bay area and is being adopted in other Urban Area Security Initiative (UASI) regions, has incorporated a competitive exercise concept.
	Capabilities Integration	Annual, ongoing	Capabilities Integration ensures that systems, organizations, and/or procedural changes introduced to the GNDA are properly coordinated with interagency partners and address the full range of operational and technical challenges and opportunities that accompany them.
Training	Training	Ongoing	The Training Program supports Federal, State, local, tribal and territorial GNDA stakeholders in developing and/or enhancing rad/nuc detection plans, policies, procedures, communications, tactics and operations with other relevant stakeholders. Training establishes qualification standards for rad/nuc detection operations, builds curricula to support the standards, enables agencies and their instructors to teach the material, and captures feedback used for process and product improvement.
	TSA VIPR	Ongoing	DNDO partners with the Transportation Security Administration's (TSA) Visible Intermodal Prevention and Response (VIPR) program to enhance security on aviation, rail, mass transit systems, and maritime venues nationwide. DNDO supports TSA by ensuring VIPR teams are equipped with rad/nuc detection equipment through DNDO's HPRDS Program. DNDO has procured personal radiation devices, radioisotope identification devices, and radiation detection backpacks.
Exercises	Exercises	Ongoing	The Exercises Program supports Federal, State, local, tribal and territorial GNDA stakeholders in developing and/or enhancing rad/nuc detection plans, policies, procedures, communications, tactics and operations with other relevant stakeholders. The Exercises Program supports the development, validation, and dissemination of rad/nuc detection-specific exercise templates, guidance, and standards; validates that rad/nuc detection equipment is properly employed and alarm adjudication processes are operated per Federal, State and local protocols; and ensures notifications are escalated to appropriate Government agencies.

Program	Project	Level of Effort	General Description
Assistance	Interior Assistance	Ongoing	The Interior Assistance Program provides standardized processes and products to assist GNDA stakeholder with how to plan, develop, manage, evaluate, and sustain a rad/nuc detection program. Assistance efforts support multi-jurisdictional, multi-disciplinary policy makers, program managers, and operational administrators to work together to design and implement land-based rad/nuc detection programs that will build and enhance detection capabilities in support of the GNDA.
	Maritime Assistance	Ongoing	Maritime Assistance efforts work with regional Area Maritime Security Committees to develop operational procedures, training, and exercises that support the region's Area Maritime Security Plans. The Maritime Assistance Project reduces stakeholder time and resources needed to establish a maritime rad/nuc detection program.
	Mobile Detection Deployment Units	Ongoing	Mobile Detection Deployment Units (MDDU) are national rad/nuc detection "surge" assets that supplement first responders' existing detection and reporting capabilities in support of national and other special security events. MDDUs contain radiation detection equipment packages housed in mobile trailers that are located throughout the United States and maintained in coordination with the DOE's Radiological Assistance Program (RAP).
Information Sharing Support	Interoperability Support	Ongoing	The DNDO Information Sharing Support program advocates and enables standards-based, interoperable exchanges rad/nuc information for DNDO and its Federal, State, local, tribal, and territorial GNDA partners. The program creates and maintains necessary enterprise and data architectures to promote standardization, effectiveness, and economy. Information Sharing Support projects address the diverse information sharing matters specifically related to Department and interagency rad/nuc detection data and information.
	Information Sharing Tools and Technology Support	Ongoing	
	Information Security Support	Ongoing	

JOINT ANALYSIS CENTER PROGRAM

The Joint Analysis Center was established as an element of DNDO to provide a timely information sharing and analysis capability that monitors the status of and facilitates the analysis and distribution of information from both overseas and domestic components of the GNDA. The JAC serves as an interagency coordination mechanism and central monitoring point for the GNDA, maintaining situational awareness of GNDA capabilities, to include status of rad/nuc detection operations, visibility into the status of rad/nuc alarms, and awareness of rad/nuc-related incidents and events. The JAC participates in adjudication of nuclear detection events and drafts technical requests for information; analyzes intelligence and sensor information; provides technical support to state, local, and tribal authorities; and assists in the USG technical response to rad/nuc detection incidents. JAC functions are aligned to two operational activities:

- JAC Operations maintains a common operating picture for stakeholders throughout the GNDA and provides technical assistance, data mining relating to the current status and disposition of GNDA resources, and vulnerability and threat trend analyses to GNDA decision makers.
- The JAC Collaborative Information System (JACCIS) is the IT system infrastructure, including hardware and software that enables JAC Operations.

JAC Operations Project

JAC information sharing is a key function of JAC Operations that supports collaboration among GNDA partners and provides timely data and analyses regarding the current status and disposition of GNDA resources, vulnerabilities, and threat trends, which enable sound and timely leadership decisions. The three primary activities under this project are Information Product Development and Deployment, Operational Planning Support, and Cross-jurisdictional Collaboration Support.

- Information Product Development and Deployment generates packaged information on both a routine and on-demand basis and delivers products directly to stakeholders or publishes information on appropriate Community of Interest sites.
- Operational Planning provides information to DNDO Assistance projects and stakeholders to support and promote the planning and execution of rad/nuc detection operations.
- Cross-jurisdictional collaboration facilitates the timely delivery of operational information to appropriate stakeholders to enhance situational awareness of ongoing operations.

JAC Information Analysis, a second key function of JAC Operations, consists of Adjudication Support, and Data Fusion and Trend Analysis in coordination with DOE's National Nuclear Security Administration.

- The JAC provides 24/7 capability to facilitate radiation detection alarm resolution and share GNDA information to effectively transition to response operations if required.
- To accomplish the Data Fusion and Trend Analysis, the JAC maintains a qualified and trained expert workforce, ensures that the reachback community has access and training on the best analytic tools, conducts data fusion of multiple data sources to provide a complete view of the operational environment, and develops awareness within the nuclear detection community to enable alarm resolution at the lowest level possible.

Data Fusion and Trend Analysis ensures that stakeholders are provided with complete and relevant information to include spectral analysis support to ensure timely adjudication of detection events. Data Fusion and Trend Analysis integrates broader knowledge of the operational situation with data derived from a detection event to help set adjudication and post-adjudication action priorities.

Joint Analysis Center Collaborative Information System (JACCIS) Project

The JACCIS supports the JAC in both its Information Sharing and Information Analysis roles. It is the information technology system developed to receive, manage, analyze, transfer, and report on data relevant to the GNDA. The JACCIS provides infrastructure to integrate the JAC operational construct and its processes by means of a focused fusion of raw data from multiple sources (alarm adjudication, intelligence sources, etc.). This system also facilitates the sharing of radiation detection data among Federal, State, local, tribal, and territorial users and empowers the lowest level of authority to evaluate detection events as either threat or non-threat, rapidly determining the appropriate response while reducing the impact on commerce and personal movement. This system is also the backbone for moving technical data from the field to the Nation's technical experts for cases when the operators need

assistance to resolve alarms. This integration was previously done via phone and e-mail and was manpower intensive. JACCIS achieved initial operating capability in October 2011.

Capability Development Portfolio

DNDO's capability development portfolio consists of four programs: Federal, State, and Local Outreach; Assistance; Training; and Exercises. The four capability development portfolio programs are managed together to ensure a fully integrated environment for the development of efficient and effective operational rad/nuc detection capabilities.

DNDO's capability development programs support implementation of the GNDA by assisting Federal, State, local, tribal, and territorial agencies to efficiently develop and maintain rad/nuc detection capabilities that conform to and support National policy. The cooperation and participation of all agencies across the GNDA are central to its success, as the USG relies heavily upon State, local, tribal, territorial, and private sector agencies and stakeholders for the domestic component of the GNDA. However, in this era of shrinking State and local budgets and Federal grant funding, it has become much more difficult for stakeholders to build and maintain rad/nuc detection capabilities.

FEDERAL, STATE, AND LOCAL OUTREACH PROGRAM

Central to the success of an integrated, layered national defense from the rad/nuc threat is a strong partnership with Federal, State, local, tribal, and territorial agencies responsible for the rad/nuc detection mission within their areas of responsibility. The Federal, State, and local outreach project increases awareness by executing broad outreach efforts that include:

- Conducting stakeholder events;
- Establishing communication mechanisms that will facilitate interactions with DNDO's State and local stakeholders; and
- Increasing the visibility of DNDO.

The major elements of this project include the State and Local Stakeholder Working Group (SLSWG), Executive Steering Council (ESC), Urban Shield, and Capabilities Integration. These activities support the development of a sustainable partnership between DNDO and the State and local community to strengthen rad/nuc detection capabilities across the Nation, in support of the GNDA.

Urban Shield, a regional competitive exercise that is conducted annually in the San Francisco Bay area and is being adopted in other UASI regions, has incorporated the Rad/Nuc Challenge competitive exercise concept. The Rad/Nuc Challenge was an outreach activity intended to share best practices within the operational community to stimulate interest, and to facilitate improvements in rad/nuc detection equipment to strengthen National rad/nuc detection capability. DNDO's support to Urban Shield will be in the form of a rad/nuc detection competitive exercise scenario for State and local law enforcement and other first responders.

DNDO looks at the current capabilities of the implemented GNDA and engages stakeholders in finding solutions to challenges and shortcomings that could inhibit full effectiveness. This function promotes operational GNDA partner engagement on an ongoing basis for ideas regarding improving

performance, lowering costs, and ensuring that operational best practices are actively and deliberately promulgated across GNDA partners.

TRAINING PROGRAM

The Training Program supports Federal, State, local, tribal and territorial GNDA stakeholders in developing or enhancing rad/nuc detection plans, policies, procedures, communications, tactics and operations with other GNDA stakeholders. Training evaluates GNDA stakeholder rad/nuc detection capability and provides data used to assess rad/nuc detection operational effectiveness.

The Training Program is responsible for the development, oversight, and administration of the design, delivery, evaluation, and continual improvement of rad/nuc detection training. The Training Program's objectives are to:

- Increase operational capabilities at the Federal, State, local, tribal, and territorial levels;
- Develop training standards for effective use of rad/nuc detection equipment, alarm resolution, and reporting processes;
- Develop standardized training curricula in support of emerging rad/nuc detection technologies; and,
- Foster organic capabilities by assisting Federal, State, local, tribal, and territorial agencies with institutionalizing training within their agencies.

The Training Program is working on training requirements that include:

- Awareness courses for field operators, program managers, executive leadership, and elected officials
- Basic radiation safety, equipment operations, tactical deployment of equipment and teams, and technical reachback courses
- Specialty courses for maritime detection, aerial detection, spectroscopy analysis, and special event planning
- Program management information and team drills to support refresher training and proficiency

These training requirements will significantly increase the number, awareness, and capabilities of GNDA participants involved in the rad/nuc detection mission.

TSA Visible Intermodal Prevention and Response (VIPR) Project

DNDO partners with the Transportation Security Administration's (TSA) Visible Intermodal Prevention and Response (VIPR) program to enhance security on aviation, rail, mass transit systems, and maritime venues, nationwide. The Training Program develops curriculum; and provides course materials, instruction, instructors and the training venue for basic and advanced TSA VIPR training. Through delivery of training, and a suite of rad/nuc detection equipment, TSA VIPR teams represent an additional federal asset capable of performing regular rad/nuc detection operations that can be called upon during periods of heightened alert levels. TSA VIPR Teams are deployed with state and local security and law enforcement officials to supplement existing resources, provide a deterrent presence and detection capabilities, and introduce an element of unpredictability to disrupt potential

adversary planning activities. The DNDO and TSA VIPR partnership complements and mutually supports the missions of both organizations.

EXERCISES PROGRAM

The Exercises Program seeks to validate and enhance emerging and existing capabilities and architectures in an effort to coordinate and integrate detection and interdiction of nuclear or other radioactive materials out of regulatory control that are out of regulatory control and may be used as a weapon against the United States. This is accomplished by developing, validating, and implementing standards and proven exercise practices that comply with the Homeland Security Exercise and Evaluation Program (HSEEP) methodology. This program promotes the advancement of best practices and supports self-sustainment of exercise efforts to enhance and coordinate the rad/nuc detection efforts of State, local, tribal, and territorial governments.

The Exercises Program provides support to Federal, State, local, tribal, and territorial GNDA stakeholders, in addition to developing, validating, and disseminating rad/nuc detection-specific exercise templates, guidance, and standards. The level of exercise support provided in the planning, design, execution, and evaluation of exercises is dependent upon the stakeholders' level of knowledge and experience in conducting the rad/nuc detection mission. In some cases, the Exercise Program takes a lead role in the planning, design, conduct, and evaluation of the exercise. Conversely, a less direct level of support may be provided where the stakeholders are more experienced. In all cases, the Exercise Program aids adherence to published guidance and standards and tracks the correction of improvement areas identified during the exercises.

The Exercise Program also employs standardized HSEEP, which generate exercise feedback, enabling DNDO to assess the maturity of rad/nuc detection capability within a jurisdiction. Following the official updates to Presidential Policy Directive (PPD)-8, and HSEEP revisions released in FY 2013, the Exercise Program team works diligently to make all necessary process and product changes, while continuing to support exercise requests from stakeholders.

ASSISTANCE PROGRAM

Assistance provides standardized processes and products to assist Federal, State, local, tribal, and territorial GNDA stakeholders in planning, developing, managing, evaluating, and sustaining a rad/nuc detection program. The Assistance Program is designed to help multi-jurisdictional, multi-disciplinary, policy-makers, program managers, and operational administrators work together to design and implement land-based and maritime rad/nuc detection programs that build and enhance detection capabilities in support of the GNDA. A focused activity within the Assistance Program is maritime capability development, which works with regional Area Maritime Security Committees to develop operational procedures, training, and exercises that support the region's Area Maritime Security Plans and address the small vessel threat.

These assistance efforts are accomplished using a system of standardized processes and products that guide GNDA stakeholders through a series of development phases. This phased approach includes providing comprehensive guidance for the Planning, Organizing, Equipping, Training, and Exercising

(POETE) process through the entire rad/nuc detection program lifecycle, thus creating a sustainable framework for the administration of a domestic preventive rad/nuc detection program at both the senior policymaking and operational levels.

Mobile Detection Deployment Units (MDDU) Project

The MDDU project provides detection equipment packages for Federal, State, local, tribal, and territorial authorities to augment their incident response teams and to support special events and enhanced steady-state operations by functioning as a force multiplier to the rad/nuc detection mission. The MDDU detection package and support personnel are available to support planned activities, such as National Special Security Events, Special Event Assessment Rating activities, and intelligence-driven detection operations. The MDDU project includes six MDDUs pre-staged at DOE Radiological Assistance Program team locations around the United States. Each MDDU is outfitted with rad/nuc detection equipment for use by Federal, State, and local first responders when needed, and requested. MDDU requests are approved based on rad/nuc detection mission and capability development and sustainment priorities.

INFORMATION SHARING SUPPORT PROGRAM

The DNDO Information Sharing program is renamed the Information Sharing Support program. The program's projects were reorganized to more accurately depict scope and roles and emphasize alignment of information sharing support projects and activities with DNDO, DHS, and GNDA strategies and implementation plans. An Information Security Support project has been added to Information Sharing Support program.

The Information Sharing Support program is responsive to Federal and DHS architecture mandates. The program establishes and maintains the necessary enterprise and data architectures conformant with DHS guidance and direction. The program encourages and facilitates collaboration on the development and implementation of standards, conventions, and agreements to effectively share rad/nuc information to prevent terrorism and enhance national security among GNDA Federal, State, local, tribal, territorial, and commercial partners. The program provides subject matter experts, tools, and technology support to meet increasing needs to aid the evolution of standardized systems for robust rad/nuc information exchange and supports other DNDO programs and projects in collection, documentation, analysis and validation of GNDA-related IT initiatives.

Governance and Compliance Project

The Governance and Compliance project provides support to most aspects of integrated governance, investment management, and accessibility. The project includes Clinger-Cohen Act (P.L. 104-106) Capital Planning and Investment Control (CPIC) and IT acquisition reviews and reporting, as well as Section 508 independent reviews and testing. The project provides support for fulfillment of DHS-required enterprise architecture and data architecture governance and includes participation in the DHS Headquarters governance entity meetings. The project supports review and reporting of DNDO program and project artifacts for compliance with DHS and GNDA architectures. The project also

assists program and project managers in the review and tailoring of architecture, lifecycle, and investment management artifacts to meet SDP and other requirements.

Interoperability Support Project

The Interoperability Support project supports creation, evolution, and sustainment of policies, plans, models, standards, and conventions essential to interoperability. DNDO participates in creating and updating voluntary consensus standards promoting and supporting interoperability and compatibility of data and communications interfaces of radiation detectors for homeland security. Supported standards and conventions include the GNDA-relevant American National Standards Institute (ANSI) N.42 and International Electrotechnical Commission (IEC) standards, the National Information Exchange Model (NIEM) CBRN domain, and the NIEM N.25 messaging protocol. The project provides technical expertise for analysis of DNDO's standards and architecture and support of legacy interfaces and, in conjunction with exchanges among existing and emerging GNDA partners, provides support to verification of associated technical deployments and configurations.

Information Sharing Tools and Technology Project

The Information Sharing Tools and Technology project aids DNDO and GNDA program and project capability development through diverse technical methods and means to implement and assess interoperable capabilities. The project develops and maintains applications to improve business and solution development processes. Project support ranges from repository-based business intelligence tools for high-level portfolio and project decision making to low-level tools for design, construction, and verification of standards-based, interoperable information exchanges.

Information Security Support Project

The Information Security Support project supports the creation, update, and periodic review of information sharing and safeguarding agreements consistent with DHS guidance and direction. The project also supports deployment, configuration, and verification of systems implemented in support of information sharing. Periodic re-validation of security controls is included to comport with Federal and DHS information security requirements.

PPA: Nuclear Forensics

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	-	-	\$22,603
FY 2015 President's Budget	-	-	\$20,000
2016 Adjustments-to-Base	-	-	-
FY 2016 Current Services	-	-	\$20,000
FY 2016 Program Change	-	-	-
FY 2016 Total Request	-	-	\$20,000
Total Change 2015 to 2016	-	-	-

The FY 2016 President’s Budget requests \$20.000 million for this Nuclear Forensics.

Adjustments-to-Base include:

- Increase of \$0.016 million for WCF adjustments
- Increase of \$0.193 million for National Nuclear Forensics Expertise Development Laboratories
- Decrease of \$0.209 million for the DHS Balanced Workforce Strategy⁷

CURRENT SERVICES PROGRAM DESCRIPTION:

To fulfill DNDO’s responsibilities, the Nuclear Forensics (NF) PPA is organized into three key mission areas. The first assures Operational Readiness of the entire USG National Technical Nuclear Forensics (NTNF) enterprise. The integration and readiness of TNF activities and capabilities are critical to the success of the forensics mission; ad hoc actions in the aftermath of an event will fail to meet intense demands for rapid and effective response. DNDO is leading the development of requirements across the interagency and coordinating increasingly rigorous exercises and assessments of TNF activities to assure readiness at all times and without warning.

Second, the Technology Advancement program supports the DNDO mission to serve as the national capability developer for the forensics of nuclear materials interdicted before a detonation. These efforts focus on advancing the speed, accuracy, and confidence of TNF analyses in support of attribution or prosecution. This includes the development of reference materials necessary for the validation of methods used for characterizing materials; development of unique signatures to help

⁷ See Exhibit K Balanced Workforce Strategy in the Management and Administration Appropriation

identify the origin and pathway of materials; and creation and improvement of data evaluation and simulation tools to enable the linking of measurement results to both comparison samples and characteristics predicted through modeling and simulation.

Finally, DNDO leads the National Nuclear Forensics Expertise Development Program (NNFEDP) to restore and sustain an enduring NF expertise pipeline, one of the most significant challenges facing the national capability. DNDO is increasing the emphasis it has placed on the development and retention of NF expertise, across the spectrum from the most junior (e.g., undergraduate scholars, graduate fellows, and junior faculty) to the most senior, through stable and sufficient academic and R&D programs and forensic scientists’ mentoring of students. The activities in this mission area are well-aligned with the goals for the NNFEDP as outlined in the Nuclear Forensics and Attribution Act of 2010.

The DNDO programs and activities focused on NF are also aligned with the goals and investment priorities delineated in the *National Strategic Five-Year Plan for Improving the Nuclear Forensics and Attribution Capabilities of the United States*.

Nuclear Forensics – Program/Project Overview

Program	Project	Level of Effort	General Description
Operational Readiness	Assessments and Analysis	Ongoing	Strengthen TNF capability through regular evaluations.
	Centralized Planning	Ongoing	Conduct efficient interagency program planning and integration of respective agency TNF capabilities and resources.
	Exercises	Ongoing	Strengthen TNF capability and readiness through multi-agency exercises.
	International Engagements	Ongoing	Facilitate multilateral and bilateral collaborations to advance international TNF core capabilities, build partnerships, and establish an international framework to facilitate cooperation.
Technology Advancement	Data Evaluation Tools	Ongoing	Develop and demonstrate the next generation of tools for pattern analysis and methods to articulate whether or not measurements from questioned samples can be linked and included or excluded from specific families of signatures.
	Material Characterization	Ongoing	Allows for operational use of validated analytical methods, to inform and support signature development.
	Methodology Benchmarking	Ongoing	Evaluate and benchmark laboratory capability to perform specific analyses and methods.
	New Methodology Development	Ongoing	Advance the speed, accuracy, and precision of measurement techniques.
	New Signature Development	Ongoing	Perform studies to determine material and statistical population characteristics that can uniquely identify linkages with known or predicted material characteristics.
	Plutonium Processing Signatures	Ongoing	Develop a capability to simulate industrial-scale plutonium materials processing on a much smaller, laboratory scale.
	Reference Material Development	Ongoing	Prepare reference materials and standard tracers to support the schedule of the Methodology Benchmarking project, exercises, and operational quality assurance activities.

Program	Project	Level of Effort	General Description
	Uranium Processing Signatures	Ongoing	Develop a capability to simulate industrial-scale uranium materials processing on a much smaller, laboratory scale.
Expertise Development	Academics	Ongoing	Implement academic and workforce initiatives designed to fill gaps in the expertise pipeline and to ensure a robust and enduring TNF workforce.
	Assessments	Ongoing	Maintain a current assessment of the needs and status of the TNF workforce and pipeline.
	Laboratories	Ongoing	Support post-doctorate fellowships, mentorship, and nuclear forensics training for the Federal workforce.

OPERATIONAL READINESS PROGRAM

As the USG’s NTNF program integrator, DNDO provides centralized planning, evaluation, and stewardship of NF capabilities through interagency coordination and integration, international collaboration, and leading joint exercises, assessments, and corrective actions. DNDO leads the development of foundational planning documents that establish interagency strategic goals, objectives, requirements, processes, plans, and operational procedures for the NTNF mission. DNDO sponsors and leads assessments to evaluate these efforts and improve the NF capability across the mission spectrum from pre- to post-detonation, both within the United States and abroad. DNDO also coordinates partner agency budgets to facilitate program alignment. Improved integration yields better results by eliminating duplication of effort and examining unfunded gaps. In FY 2016, DNDO will continue to advance interagency coordination and integration by leading the *Joint Interagency Annual Review of the National Strategic Five-Year Plan for Improving the Nuclear Forensics and Attribution Capabilities of the United States FY 2015-2019*. DNDO will also continue to further efforts of the NTNF Requirements Center. The Requirements Center is the USG mechanism for identifying, clarifying, codifying, and documenting TNF requirements to assist with operational and program planning.

Concurrent with interagency integration, another key component of ensuring operational readiness emphasized by the National Academy of Sciences is the conduct of regular, rigorous NF exercises. Such exercises assess multiagency integration, readiness, field sampling techniques, laboratory analysis, data evaluation and reporting, and communication flow. The major exercises alternate between pre- and post-detonation scenarios involving nuclear materials. These exercises focus on the continuous improvement of interactions across the NF community. Exploring the technical and operational shortcomings and gaps enable DNDO and its partners to identify corrective actions based on after-action reports and lessons learned. In FY 2016, DNDO will coordinate, plan, and assess a domestic pre-detonation materials exercise that assesses the nuclear forensics portion of the USG response to an interdicted nuclear device as well as a post-detonation material and debris exercise that may involve an international/foreign scenario and venue.

Assessments and Analysis Project

The Assessments and Analysis project strengthens NF capability through regular evaluations and assesses TNF processes and capabilities to ensure operational readiness and to identify lessons learned, best practices, capability strengths, and areas of improvement. An important aspect of the Assessments and Analysis Project is the Nuclear Forensics Science Panel (NFSP). The NFSP is comprised of experts

in technical fields with relevance to NF, such as nuclear weapons design and testing, analytical and radio-chemistry, statistics, nuclear production processes, and modeling and simulation of nuclear processes. At the request of DNDO and our interagency partners, the NFSP strives to assess aspects of the USG implementation of NTNF or to answer technical questions that may guide operational or R&D activities in the future.

Centralized Planning Project

The Centralized Planning project conducts efficient interagency program planning and integration of respective agency NF capabilities and resources. This includes centrally planning, coordinating, and aligning USG technical capabilities and operational activities while leveraging interagency investment in R&D to address priority needs and ensure unity of effort.

Exercises Project

The Exercises project strengthens nuclear forensics capability through jointly planned and executed exercises across the entire nuclear forensics mission space and inclusive of all partner agencies. Of most importance are well-documented lessons learned and a robust corrective actions program to improve the collective nuclear forensics capabilities and future exercise planning and execution. This includes the conduct of rigorous full-scale interagency exercises regularly to rehearse, evaluate, and improve the nuclear forensics capabilities.

International Engagements Project

The International Engagements project facilitates multilateral and bilateral collaborations in a strategic, cost-effective manner that supports the USG objectives to: advance international nuclear forensics core capabilities, promote TNF expertise development, and establish an international framework to facilitate cooperation. This includes work through international forums such as the Nuclear Security Summits, Global Initiative to Combat Nuclear Terrorism, International Atomic Energy Agency, and the Nuclear Forensics International Technical Working Group to develop key technical and policy-oriented guidance documents, focused training courses, table-top and comparative material exercises, practical development and implementation of national nuclear forensics libraries, and frameworks for sharing nuclear forensics information as part of an evolving and maturing international nuclear forensics community.

TECHNOLOGY ADVANCEMENT PROGRAM

Technology Advancement Program is advancing and history of nuclear materials intercepted before a detonation. The Technology Advancement program is working to benchmark and advance methodologies that will provide quality results with well-understood uncertainties in the exploitation of signatures for nuclear forensics purposes. The program is also developing signatures and data evaluation tools that incorporate all relevant nuclear forensics information into technical conclusions that support attribution assessments. Developed methods and signatures are provided to the operators in the FBI, DOD, DOE, and intelligence community. In FY 2016, the program will complete evaluation of the trace actinides in plutonium methodology benchmarking study and the related laboratory method improvements or enhancements which result from the study. The program will also

continue our groundbreaking efforts to be able to process uranium and plutonium on a laboratory scale to develop new signatures which enable the linking of nuclear fuel cycle processes.

Two directorates within DNDO will address Technology Advancement of the nuclear forensics mission. Specifically, within the New Methodology Development and New Signature Development Projects, DNDO will mesh efforts funded through the Transformational R&D ER Program and the existing NTNFC activities in this area. ER will fund efforts at the technology readiness levels (TRLs) 1-6, while NTNFC will continue to fund activities at TRLs 5-8, prior to transition to our operational partners in the interagency. While aligning priorities, DNDO leverages the expertise and experience in both directorates to achieve significant advances with a longer-term view of filling the most crucial capability gaps.

Data Evaluation Tools Project

The Data Evaluation Tools project will develop and demonstrate the next generation of tools for pattern analysis and methods to assess whether or not measurements from samples can be linked and included or excluded from specific families of signatures.

Material Characterization Project

The Material Characterization project allows for operational use of validated analytical methods, to inform and support signature development, and to provide information to the Nuclear Materials Information Program. As new signatures are developed, materials will be characterized to support development and validation of those signatures. This is a continuing effort, coordinated with DOE, New Methodology Development, New Signature Development, and Data Evaluation Tools projects.

Methodology Benchmarking Project

The Methodology Benchmarking project will evaluate and benchmark laboratory capabilities to perform specific analytical methods. This project will identify the most accurate, precise, and timely methods available and appropriate for operational use and identify gaps where improved methods are needed. Method improvements are then transitioned to the operational labs through a technology transfer workshop to ensure that they are effectively utilized for nuclear forensics analyses.

New Methodology Development Project

The New Methodology Development project is advancing the accuracy, precision, and timeliness of measurement techniques. Methodologies developed under this project will advance to the Methodology Benchmarking schedule. In this project area, DNDO's NTNFC will focus on activities at TRLs 5-8, while Transformational and Applied R&D in the ER Program will address efforts at TRLs 1-6.

New Signature Development Project

The New Signature Development project performs studies to determine material and statistical population characteristics that can uniquely identify linkages with known or predicted material

characteristics. In this project area, DNDO's NTNFC will focus on activities at TRLs 5-8, while Transformational and Applied R&D in the ER Program will address efforts at TRLs 1-6.

Plutonium Processing Signatures Project

The Plutonium Processing Signatures project is developing a capability to simulate industrial production-scale plutonium materials processing on a much smaller, laboratory scale. The produced materials are analyzed for discriminating signatures and are also used for creating well-pedigreed reference materials for methodology validation. In FY 2016, this project is expected to begin the first of several processing batches of plutonium oxides.

Reference Material Development Project

Reference materials serve as the "gold standard" for assessing forensic analysis methods. The Reference Material Development project prepares certified reference materials and other well-characterized materials to support the Methodology Benchmarking project, exercises, and operational Quality Assurance activities, such as validation of measurement methods and operational laboratory proficiency testing, performed by the interagency Bulk Special Nuclear Materials Analysis Program.

Uranium Processing Signatures Project

The Uranium Processing Signatures project is developing a capability to simulate industrial production-scale uranium materials processing on a much smaller, laboratory scale. The materials are analyzed for discriminating signatures and are also used for creating well-pedigreed reference materials for methodology validation.

NATIONAL NUCLEAR FORENSICS EXPERTISE DEVELOPMENT PROGRAM

The NNFEDP is the comprehensive USG effort to grow and sustain the uniquely qualified technical expertise required to execute the Nation's nuclear forensics mission. NNFEDP initiatives aim to create a vibrant and enduring academic pathway from undergraduate to post-doctorate study in nuclear and geochemical science specialties directly relevant to nuclear forensics, with the end goal of filling specific expertise needs at the national laboratories through targeted recruitment. The NNFEDP promotes a unique interdisciplinary approach that emphasizes collaboration among students, academic departments, universities, and DOE/DOD laboratories. Initiatives include graduate and undergraduate scholarships, fellowships, internships, and mentoring; post-doctoral fellowships; and university and junior faculty awards for studies and research in TNF-related disciplines.

DNDO continuously evaluates the state of the workforce within the national laboratory system relative to USG NTNFC mission requirements in order to appropriately scale and scope the NNFEDP into the outyears. In addition, DNDO chairs the NTNFC Expertise Development Committee in order to ensure cross-agency integration and participation in the NNFEDP. The committee provides a forum to plan, coordinate, and execute joint initiatives within the NNFEDP, facilitating collaborative efforts among nuclear forensics interagency partners, avoiding duplication, leveraging funding, and

ensuring robust Federal support and unity of effort. Active participants include DHS, DOE, DOD, and the FBI.

Academics Project

The Academics project supports a current DHS management performance measure for DNDO. National Strategic Five-Year Plan activities and investment areas under this goal include the implementation of academic and workforce programs designed to fill gaps in the expertise pipeline and ensure a robust and enduring nuclear forensics workforce. Initiatives included in this project are graduate and undergraduate scholarships, fellowships, and internships as well as university and junior faculty awards for studies and research in specialties relevant to nuclear forensics.

Assessments Project

The Assessments project maintains a current assessment of the needs and status of the TNF workforce and pipeline.

Laboratories Project

The Laboratories project supports post-doctorate fellowships at the national laboratories and funds these laboratories to provide one-on-one mentoring to graduate students in nuclear forensics -related research areas. This project area also supports development and presentation of curricula related to nuclear forensics training for the Federal workforce.

IV. Program Justification Changes

**Department of Homeland Security
Domestic Nuclear Detection Office
Research, Development, and Operations
Justification of Program Changes**
(Dollars in Thousands)

Program Decrease 1: Systems Architecture

PPA: Systems Architecture

Program Decrease: Positions 0, FTE 0, Dollars \$(349)

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	\$17,349
Program Decrease							-	-	(\$349)
Total Request	-	-	\$20,920	-	-	\$17,924	-	-	\$17,000

Long-Range Radiation Detection (\$0.349M)

The Systems Architecture analysis portion of the Long-Range Radiation Detection (LRRD) program was planned to address existing gaps in the global nuclear detection architecture and an operational need for enhanced standoff radiological/nuclear detection capability independent of currently established mission needs. The LRRD program is a technology push to multiple users with the need to detect radiation from large distances. The goal of the program is to detect, identify, locate, and track radiological/nuclear threats at distances up to 100 meters, enabling more efficient interdiction. LRRD technology has demonstrated enhanced capabilities compared to current assets, achieving greater detection sensitivity equating to increased detection distances and lower minimal detectable activities of anomalous radiation sources. LRRD is a continuation of DNDO efforts to assess and enhance the performance of long-range radiation detection technologies developed under multiple transformational research and development projects. The technology base was characterized as part of a DNDO Advanced Technology Demonstration.

Justification

The Systems Development portion of the program will focus on advancing the underlying technology to develop it into a form, fit, and function with increased operational suitability that would represent viable alternatives to be considered under the existing programs listed above. Systems Development activities would eventually include planning activities for solution design, development, and testing to address specific mission needs. The LRRD project is based on newer technology that would need to be developed by the Government with the commensurate risk and higher cost. The program decrease supports Departmental and DNDO priorities to focus on addressing other gaps in the architecture, buying down risk and improving operational efficiencies in other areas.

Impact on Performance

There will be no impact to the LRRD program. Under the new strategy, there is no need to determine an operational need for enhanced standoff rad/nuc detection capability independent of currently established mission needs. The underlying technology will be considered, alongside other potential solutions, in other programs with established mission needs where it has applicability.

Total Request	-	-	\$71,041	-	-	\$69,500	-	-	\$68,000

Total Program Change (\$1.746M)

Reduction in Exploratory Research Projects

DNDO's Transformational Research and Development (R&D) program seeks to identify, explore, develop, and demonstrate scientific and technological approaches that address gaps in the (GNDA), dramatically improve the performance of rad/nuc detection and (NTNF) methods, components, and systems, and/or significantly reduce the operational burden of these technologies.

R&D investments are made based on competitive awards open to investigators from all sectors: government laboratories, academia, and private industry. The transformational research efforts take advantage of the qualities and advantages of all three sectors to develop products. Teaming is encouraged across the sectors. Transformational R&D is carried out within three major programs: Advanced Technology Demonstration, Exploratory Research (ER), and the Academic Research Initiative.

The ER program explores innovative, high-risk, early-stage technologies, concepts, and ideas that can make transformational contributions to support the technical grand challenges and reduce the risk of nuclear terrorism. Specifically, the ER program researches technology and techniques that:

- Address capability gaps and weaknesses in the GNDA, with emphasis on rad/nuc detection
- Provide substantial performance improvement or cost reduction of rad/nuc detection capabilities
- Improve nuclear forensics capabilities

Efforts under the ER program are intended to transform the basic building blocks of rad/nuc detection technology and supporting fields, with the research generally culminating in a proof-of-feasibility or proof-of-concept demonstration in a laboratory setting. Successful ER technologies and concepts may then transition to support subsequent ATD projects or directly spur commercial development. ER projects also provide performance modeling, improved algorithm development, and other support capabilities for the broader DNDO mission.

The budget decrease will come out of the new initiative line of the ER Program. The actual projects to be affected by this budget reduction will be determined in the execution year and will depend on the strategic priorities at that time and the quality of proposals received. However, current research planned for FY 2016 includes expanding the forensics research portfolio in preparation of a technology demonstration in FY 2021. This encompasses research on bulk material characterization, associated analytical techniques, and modeling capabilities to associate interdicted nuclear material with their process history and point of origin.

Justification

The new initiative line of the ER Program included funding to expand the nuclear forensics R&D portfolio. Due to the quality and importance of ongoing projects, it was decided to delay the initiation of new work over prematurely stopping successful work. .

Impact on Performance

Historically, four to seven topics areas are included in the annual solicitations, and can result in as many as 20 new research activities being initiated. DNDO will decrease the number of new projects in the (ER) Program by five new research projects. The actual projects to be affected will be determined in the execution year and will depend on the strategic priorities at that time and the quality of proposals received. However, current research planned for FY 2016 includes expanding the forensics research portfolio in preparation of a technology demonstration in FY 2021.

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For necessary expenses for radiological and nuclear research, development, testing, evaluation, and operations, [\$199,068,000] \$196,000,000¹, to remain available until September 30, [2017] 2018².

Systems Architecture Mission Statement

System Architecture: Programs are developing an enhanced global nuclear detection architecture, including both domestic and international components. The GNDA incorporates detector systems, telecommunications, and personnel, with the supporting information exchanges, programs, and protocols that serve to detect, analyze, communicate, and coordinate on rad/nuc materials that are out of regulatory control.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
21.0 Travel and Transportation of Persons	\$167	\$348	\$301	(\$47)

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2016 request is \$301,000.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
24.0 Printing and Reproduction	\$0	\$8	\$0	(\$8)

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2016 request is \$0.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$8,929	\$8,266	\$10,839	\$2,573

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc) as well as from other units within the Federal Government. The FY 2016 request is \$10,839,000.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$685	\$1,346	\$687	(\$659)

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25 including training development and delivery. The FY 2016 request is \$687,000.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$11,139	\$7,956	\$5,162	(\$2,794)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2016 request is \$5,162,000.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
26.0 Supplies and Materials	\$0	\$0	\$11	\$11

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2016 request is \$11,000.

Systems Development Mission Statement

Systems Development is responsible for the engineering development, production, and all developmental logistics products associated with the current and next generation of nuclear detection systems. Product lines include radiation portal monitors (and associated materials development and facilitation), radiography, human-portable systems, and integration programs to address the needs of our operational customers (Federal, State, local, and tribal authorities).

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
21.0 Travel and Transportation of Persons	\$80	\$128	\$65	(\$63)

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2016 request is \$65,000.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$11,353	\$11,273	\$12,350	\$1,077

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc) as well as from other units within the Federal Government. The FY 2016 request is \$12,350,000.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.2 Other Services from Non-Federal Sources	\$378	\$720	\$65	(\$655)

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25 including training development and delivery. The FY 2016 request is \$65,000.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$6,656	\$6,988	\$3,084	(\$3,904)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2016 request is \$3,084,000.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.5 Research and Development Contracts	\$1,833	\$2,891	\$6,436	\$3,545

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The FY 2016 request is \$6,436,000.

Transformational Research and Development Mission Statement

DNDO's Transformational and Applied R&D program, seeks to identify, explore, develop, and demonstrate scientific and technological approaches that meet one or more of the following criteria: address gaps in the GNDA, dramatically improve the performance of nuclear detection components and systems, or significantly reduce the operational burden of rad/nuc detection. Dramatic technological improvements may include improvements in system or component effectiveness and performance characteristics; reduction in cost of acquisition or maintenance; or reduction of operational burden by users in the field. R&D investments are made based on competitive awards, with investigators in all sectors government laboratories, academia, and private industry encouraged to participate. This program takes advantage of the qualities and respective advantages of all three sectors to develop products, and teaming among them is encouraged. Transformational and applied R&D is carried out within three major programs: Exploratory Research (ER), Academic Research Initiative (ARI), and Advanced Technology Demonstrations (ATD).

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change

Assessments Mission Statement

Assessments: The DNDO research, development, and acquisition process is anchored by an independent assessment of DNDO-mission related programs as they are developed, deployed, and implemented, as well as a continual assessment of the global nuclear detection and reporting architecture, through a variety of means. Assessments programs include test and evaluation (T&E) campaigns to characterize technologies and systems, execution of pilots with operational agencies to evaluate concepts of operation, red teaming assessments to deepen our understanding of adversary capabilities, and net assessments to identify the effectiveness of the planned and deployed global nuclear detection and reporting architecture.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change

Operations Support Mission Statement

DNDO Operations Support is responsible for supporting the situational awareness of the nuclear and radiological landscape and the global nuclear detection architecture, while directly facilitating the technical adjudication of rad/nuc incidents. The capability of the JAC is the 24/7 DNDO information hub, and the essence of DNDO's rapid information reporting. Additionally, Operations Support develops training, exercises, information sharing capabilities, and analytical tools necessary to create a fully integrated operating environment to be used by Federal, State, tribal, and local law enforcement agencies, as well as the larger intelligence and counterterrorism communities.

Summary Justification and Explanation of Changes

Nuclear Forensics Mission Statement

DNDO's National Technical Nuclear Forensics (NTNF) capability serves as an integral component and layer of the United States Government (USG) effort to combat nuclear terrorism. This capability provides means for the collection, analysis, and evaluation of rad/nuc materials and associated evidence for the purpose of comprehensive and timely forensic analysis to contribute to attribution conclusions. An effective forensics and attribution capability will inform national response deliberations and can also help to prevent a follow-on attack. At the strategic level, nuclear forensics can contribute to deterrence and prevention by promoting the concept of nuclear accountability for nations that may wittingly or unwittingly enable a terrorist to obtain nuclear devices or materials.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change

BUDGET REQUEST AND SUPPORTING INFORMATION

Domestic Nuclear Detection Office Systems Acquisition

I. Appropriation Overview

A. Mission Statement for Systems Acquisition

The Domestic Nuclear Detection Office (DNDO) was established by National Security Presidential Directive (NSPD)-43/Homeland Security Presidential Directive (HSPD)-14 to protect against radiological and nuclear (rad/nuc) threats directed against the United States or its interests. Title V of the Security and Accountability for Every Port Act of 2006 (SAFE Port Act, P.L. 109-347) directs DNDO to serve as the primary entity of the United States Government (USG) to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop, or use an unauthorized nuclear explosive device, fissile material, or radiological material in the United States, and improve that system over time.

To fulfill the mandates of the authorizing legislation, DNDO's activities are focused on coordinating the global nuclear detection architecture (GNDA) and implementing domestic rad/nuc detection. The GNDA is a framework for detecting (through technical and non-technical means), analyzing, and reporting on nuclear and other radioactive materials that are out of regulatory control.¹ DNDO has been charged with coordinating the development of the GNDA among the USG partners. DNDO seeks to make radiological and nuclear terrorism prohibitively difficult for our adversaries through the acquisition of an adaptable and agile detection architecture that can readily surge in response to intelligence cues.

DNDO acquires rad/nuc detection equipment for other Department of Homeland Security (DHS) Components, including the U.S. Coast Guard (USCG), U.S. Customs and Border Protection (CBP), and the Transportation Security Administration (TSA). DNDO also issues cooperative agreements under the Securing the Cities (STC) Program, supporting State, local, tribal, and territorial authorities in the development of nuclear detection capabilities for high-threat, high-density urban areas. All deployed technologies for Federal, State, local, tribal, and territorial partners are accompanied by the appropriate concepts of operations (CONOPS), training, exercises, and alarm response protocols.

Recognizing the rapid advancement of technology and innovation, constrained budgets, and market forces, DNDO has shifted focus from government-sponsored development of materiel solutions to a "Commercial First" approach. To address capability gaps and by using a "Commercial First" approach, DNDO can leverage important industry-led innovations and technologies.

¹ The term "out of regulatory control" refers to materials that are being imported, possessed, stored, transported, developed, or used without authorization of the appropriate regulatory authority, either inadvertently or deliberately.

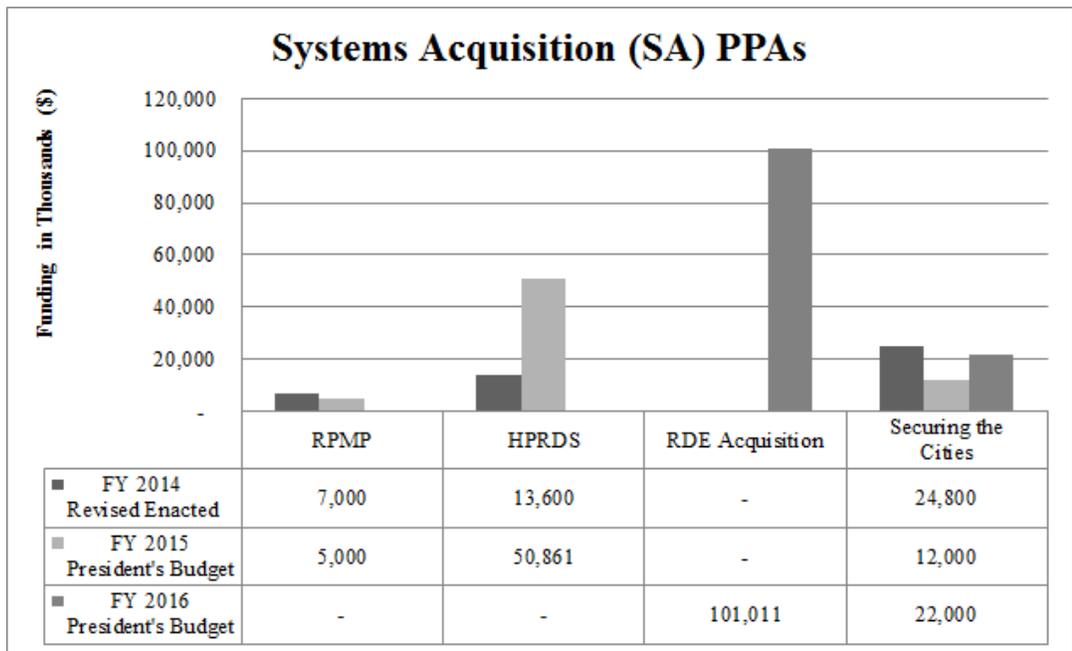

The “Commercial First” approach is based on the principle that all DNDO programs will first engage the private sector for solutions to address capability gaps. There are several “Commercial First” pathways that a program can follow depending on the defined gap, the technical maturity, and the commercial availability of potential materiel solutions that may be able to address that gap. These pathways include:

- Commercial-off-the-Shelf (COTS)
- Customized COTS: COTS modified by the government or industry partner
- Commercialization (e.g., Commercial Development): Industry-developed solutions using industry internal research and development (R&D) funding
- Government-sponsored development

In concert with the end-user community and in keeping with this “Commercial First” approach for acquisitions, DNDO first attempts to identify commercially available equipment to meet customer requirements. DNDO continues to foster open communications with industry partners to share key aspects of future requirements and projected quantities of planned procurements.

The DNDO Systems Acquisition (SA) request includes resources to procure and deploy small (i.e., human portable) and large-scale radiation detections systems to DHS operational end-users, to support State and local rad/nuc detection operations through the STC Program and to provide Federal, State, and local law enforcement and emergency response communities with human portable radiation detection capabilities.

B. Budget Activities:

² DNDO is proposing the Radiation Portal Monitor Program (RPMP) and Human Portable Radiation Detection Systems (HPRDS) PPAs be merged into one PPA to be titled, “Radiological and Nuclear Detection Equipment (RDE) Acquisition.”

Radiological and Nuclear Detection Equipment (RDE) Acquisition:

In an effort to unify detection equipment acquisition strategies and management decisions, DNDO is proposing the Radiation Portal Monitor Program (RPMP) and Human Portable Radiation Detection Systems (HPRDS) PPAs be merged into one PPA to be titled, “Radiological and Nuclear Detection Equipment (RDE) Acquisition.” This will allow DHS leadership to manage all equipment acquisition projects together, ensuring that funding is allocated on a holistic, coordinated basis, and to be more responsive to emerging operational needs, without a loss of oversight or transparency.

The RDE Acquisition PPA will include the procurement and deployment of rad/nuc detection systems and provide the scientific and technical expertise to design, acquire, and deploy these systems. DNDO will continue to coordinate with the operational partners to refine and prioritize equipment requirements.

Securing the Cities:

The STC Program is the cornerstone of rad/nuc detection capability development within the interior layer of the GNDA, which comprises the domestic United States excluding the physical border. The program seeks to assist State, local, and tribal stakeholders to design and implement or enhance existing architectures for coordinated and integrated detection and interdiction of radiological and nuclear materials out of regulatory control within high-threat, high-density urban areas. In addition, STC aims to produce information linkages between STC implementation sites and other nodes of the GNDA, such as other regions or Federal capabilities in support of a comprehensive national security layer.

C. Budget Request Summary:

The FY 2016 President’s Budget requests \$123,011,000 for Systems Acquisition. The total adjustments-to-base is \$456,000. The program changes total an increase of \$54,694,000 to:

- Continue Radiation Portal Monitor deployment activities at sites
- Recapitalize Radiation Portal Monitors and Human Portable Radiation Detection Equipment that is at or past life expectancy
- Support engagement with a fifth Securing the Cities site in 2016

III. Current Services Program Description by PPA

**Department of Homeland Security
Domestic Nuclear Detection Office
Securing the Cities
Program Performance Justification
(Dollars in Thousands)**

PPA: Securing the Cities

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	-	-	\$24,800
FY 2015 President's Budget	-	-	\$12,000
2016 Adjustments-to-Base	-	-	-
FY 2016 Current Services	-	-	\$12,000
FY 2016 Program Change	-	-	\$10,000
FY 2016 Total Request	-	-	\$22,000
Total Change 2015 to 2016	-	-	\$10,000

DNDO requests \$22.000 million in FY 2016 for this activity.

Adjustments-to-Base include:

- Increase of \$0.109 million for Working Capital Fund
- Decrease of \$0.109 million for Securing the Cities

Program Change includes:

- Increase of \$10.000 million for Securing the Cities

CURRENT SERVICES PROGRAM DESCRIPTION:

The STC Program assists State, local, and tribal stakeholders to design and implement or enhance existing architectures for coordinated and integrated detection and interdiction of rad/nuc materials out of regulatory control within high-risk metropolitan areas³.

³ High-risk metropolitan areas are the eleven highest risk cities defined in FEMA's Urban Area Security Initiative (UASI). These metropolitan areas are: New York City, Jersey City/Newark, Los Angeles/Long Beach, the National Capital Region, the Bay Area of California, Boston, Chicago, Dallas/Fort Worth/Arlington, Houston, Philadelphia, and San Diego.

Program	Project	Level of Effort	General Description
Securing the Cities	STC Los Angeles (LA)/Long Beach (LB)	Annual, ongoing	The program assists State, local, and tribal stakeholders to design and implement or enhance existing architectures for coordinated and integrated detection and interdiction of nuclear materials out of regulatory control within high-risk metropolitan areas.
	National Capital Region	Annual, ongoing	

STC is a multi-year rad/nuc detection capability development project. The three-phase strategy enables DNDO to provide financial assistance to multiple regions simultaneously while expanding capabilities to further implement the domestic component of the GNDA. DNDO SA funds are disbursed under the STC program through competitively awarded cooperative agreements to a lead agency that then uses local procurement procedures to acquire equipment and services supporting STC goals and objectives. The lead agency establishes a regional governance structure among the major law enforcement, first responder, emergency management, and public health agencies to implement a regional rad/nuc detection program. The three phases of the project are:

Phase I – Initial Operating Capability

DNDO provides a mechanism for cities to develop an initial operating capability to detect and report the presence of nuclear and radiological material that are out of regulatory control. This capability utilizes detection equipment, protocols, and personnel and is integrated into and supports the GNDA. During Phase I, efforts focus on identifying and satisfying the immediate needs of State and local agencies in developing baseline detection and reporting capabilities. DNDO provides resources enabling partners to develop an increased understanding and awareness of the rad/nuc threat, enhance regional capabilities to detect and interdict such threats, and increase cooperation and coordination among regional jurisdictions and agencies. Initial capabilities developed in this phase include the development of Operations Plans including alarm adjudication protocols, procurement and deployment of equipment, training and exercise support, and technical program assistance. Phase I concludes when the region establishes a nuclear detection program encompassing coordinated operations, self-delivered nuclear detection training and exercise capabilities, and a plan to sustain the program over time in support of GNDA implementation. Phase I is expected to occur during the first three years of the engagement.

Phase II – Integration

DNDO provides additional resources to facilitate development of enhanced detection, analysis, communication, and coordination functionality. DNDO supports the integration of State, local, and tribal capabilities that previously existed or were established during Phase I with USG activities to ensure a national coordinated response in support of the GNDA. In addition, DNDO works with the STC partners to define end states for State, local, and tribal activities that receive direct DNDO support. Phase II concludes when a region successfully

demonstrates its ability to integrate into the GNDA. Phase II is expected to occur during years four and five of the engagement.

Phase III – Sustainment

DNDO provides indirect support to sustain the program. DNDO maintains connectivity with the established local architecture through alarm adjudication support and the availability of subject matter expertise to provide advice on training, exercise, and other program support. This support includes:

- Systems engineering and evaluation programs to provide detection equipment testing to aid partners in making equipment decisions.
- Product acquisition and deployment support such as guidance to help interpret equipment specifications so operators clearly understand equipment capabilities.
- Transformational and applied research programs that offer opportunities to explore up-and-coming rad/nuc detection technology.
- DNDO Red Team (overt or covert) operations which assist stakeholders in understanding potential vulnerabilities.
- Training and exercise programs provide training materials and exercise assistance.
- State and local participants will maintain and continue to improve their developed capabilities to support GNDA implementation using local funds or other Federal Government grant funds.

Throughout STC's implementation in the NYC and Jersey City/Newark areas, assessments of the program's effectiveness in building capabilities were conducted. DNDO Net Assessments published an interim report in September 2008 describing the business model and a second report was completed in January 2011 that focused on evaluating the program as implemented in the NYC and Jersey City/Newark area. Two other assessments were completed: an independent assessment of STC, conducted by a team from Lawrence Livermore National Laboratory, Oak Ridge National Laboratory and the University of Tennessee, completed in April 2011, and an assessment of the April 2011 full-scale exercise (FSE) completed in October 2011 by DNDO Net Assessments team. These reports assessed Phase I and II activities and indicated that the STC program had succeeded in developing a robust area-wide detection program focused on preventing a rad/nuc attack on the NYC and Jersey City/Newark regions. The recommendations from these assessments, as well as the extensive knowledge gained by the STC management team in implementing the project in the NYC area, led to the development of a repeatable program model for subsequent implementations. This model was first implemented in the Los Angeles/Long Beach (LA/LB) area in 2012. Assessments have continued with the LA/LB implementation, providing actionable feedback to continuously improve the STC process in LA/LB and future cities.

Implementation in both the NYC and Jersey City/Newark and the LA/LB areas have resulted in the development of a robust, repeatable development model, allowing DNDO to realize significant efficiencies as it supports future metropolitan areas. Funding for this program will continue to be used to procure, integrate, deploy, test, evaluate, train, and exercise multi-layer, multi-pathway, multi-jurisdiction rad/nuc detection and reporting architectures for all implementations. Funds will be allocated to ensure that detection capabilities are integrated with Federal, state, and local

command, control, and communication systems. State and local partners will provide in-kind resources by bearing operational costs. Funds will also be used for logistics, maintenance, and calibration costs as well as personnel costs to support the training necessary to operate detection equipment and conduct exercises. DNDO will work with state and local partners to budget appropriately for the long-term sustainability of capabilities implemented under this program.

DNDO has obligated \$158.65 million of acquisition funding in direct and indirect support to the NYC and Jersey City/Newark areas from 2007 through 2014. This region has entered the Sustainment Phase and DNDO will continue to provide indirect assistance as described in Phase III activities above.

DNDO has obligated \$22.0 million of acquisition funding in direct and indirect support to the LA/LB area from 2012 through 2014. In FY 2015, the LA/LB area is projected to receive up to \$6.0 million as it enters Phase II and demonstrates its ability to integrate its developed capability with Federal assets. In FY 2016, the LA/LB area will receive its final STC funding installment of up to \$2.0 million as it transitions to other funding sources to sustainment its rad/nuc detection capability.

DNDO has obligated \$7.0 million of acquisition funding in direct and indirect support to the National Capital Region in FY 2014. In FY2015, DNDO plans to provide up to \$9.0 million in direct and indirect support to build initial capability during Phase I activities. These activities include procuring detection and communications equipment, providing training and exercise support, and providing program management support. FY2016 funds will be used to conclude Phase I activities in this third implementation site and includes another \$7.0 million in direct support.

DNDO plans to expand to a fourth STC locale with FY 2015 acquisition funds and use FY 2016 acquisition funds to continue building initial capability in this locale. DHS intends to release a funding opportunity announcement in the spring of 2015 and hopes to award this fourth STC site by the end of FY2015. In FY2015, up to \$4.0 million will be applied to this region and up to \$9.0 million will be applied in FY2016. The first year of support will concentrate on planning and putting the program structure in place. The second year will include procuring detection and communications equipment, providing training and exercise support, and providing program management support.

DNDO will begin implementation in a fifth STC locale in FY 2016 based on a full and open competition of eligible cities. Up to \$4.0 million will be made available for this new site.

**Department of Homeland Security
Domestic Nuclear Detection Office
Radiological and Nuclear Detection Equipment (RDE) Acquisition
Program Performance Justification
(Dollars in Thousands)**

PPA: Radiological and Nuclear Detection Equipment (RDE) Acquisition

	<u>Perm. Pos.</u>	<u>FTE</u>	<u>Amount</u>
FY 2014 Revised Enacted	-	-	\$20,600
FY 2015 President's Budget	-	-	\$55,861
2016 Adjustments-to-Base	-	-	\$456
FY 2016 Current Services	-	-	\$56,317
FY 2016 Program Change	-	-	\$44,694
FY 2016 Total Request	-	-	\$101,011
Total Change 2015 to 2016	-	-	\$45,150

DNDO requests \$101.011 million in FY 2016 for this activity.

Adjustments-to-Base include:

- Increase of \$0.494 million for Working Capital Fund
- Decrease of \$0.038 million for DHS Balanced Workforce Strategy

Program Change includes:

- Increase of \$44.694 million for Radiological and Nuclear Detection Equipment Acquisition

CURRENT SERVICES PROGRAM DESCRIPTION:

In order to prevent nuclear and radiological terrorism, the implemented GNDA must be responsive, flexible, adaptable, and supportable. Deployment of capabilities must be dynamic to capture the numerous technological advances in both rad/nuc detection systems and equipment, and to incorporate new or improved capabilities and processes that improve interoperability and responsiveness, reduce risks, and increase information availability and quality. Current detection strategies are focused on deploying capabilities to numerous combinations of pathways, through domains and layers, in an effort to close capability gaps and minimize vulnerabilities. Sufficient rad/nuc detection equipment is critical for the Nation's ability to detect, interdict, and deter rad/nuc threats and prevent nuclear terrorism.

The RDE Acquisition PPA includes the procurement and/or deployment of rad/nuc detection systems at land border crossings, seaports, international airports (including international preclearance sites), and international mail and express consignment courier facilities, and provides the scientific and technical expertise to design, acquire, and deploy these systems. Beginning in FY 2016, the PPAs for

RPMP and HPRDS will be combined into a single, unified PPA for rad/nuc detection equipment, which will allow DHS leadership to manage all equipment acquisition projects together, ensuring that funding is allocated on a holistic, coordinated basis, and to be more responsive to emerging operational needs. DNDO will continue to coordinate with the operational partners to refine and prioritize equipment requirements.

DNDO conducts research, development, and test and evaluation activities necessary to mature and/or select radiation detection equipment for procurement that meets end-user needs and fills gaps in the GNDA. DNDO acquires radiation detection equipment for DHS Components, including the USCG, CBP, and TSA, and also supports State and local users with acquisition of radiation detection equipment for the Mobile Detection Deployment Units (MDDUs). Through strategic sourcing initiatives, DNDO is also able to support additional DHS components. The RDE Acquisition PPA facilitates the Department’s ability to define the required capabilities, solution deployment, operational costs, and acceptable risk that must be considered across pathways for radiation detection equipment.

RADIOLOGICAL AND NUCLEAR DETECTION EQUIPMENT ACQUISITION

Program	Project	Level of Effort	General Description
RPM Program	RPM	Ongoing	Support CBP’s efforts to maintain scanning coverage at previously deployed sites. Decommission low-use RPMs and reconfigure sites as required. Deploy new RPMs and redeploy previously decommissioned RPMs as necessary to address required level of scanning capability needs at sites, to potentially include land border crossings, seaports, international airports (including international preclearance sites), and international mail and express consignment courier facilities.. Deploy additional large-scale systems at or between POEs. Deploy improvements to fielded systems.
HPRDS Program	CBP- Joint Acquisition Strategy (JAS)	Ongoing	Per the cooperatively developed JAS, DNDO coordinates with CBP for the deployment of human portable systems for CBP officers and agents to scan people, cargo, and privately owned vehicles at and between POEs. CBP requirements include PRDs, advanced handheld RIIDs, radiation detection backpacks and basic handheld RIIDs. DNDO may also purchase equipment for the Human Portable Tripwire (HPT) mission in FY 2016 (pending test and evaluation results and funding availability).
	USCG-JAS	Ongoing	Per the cooperatively developed JAS, DNDO procures rad/nuc detection systems to satisfy USCG requirements and recapitalize equipment to maintain the current capability. Required equipment includes PRDs, advanced and basic handheld RIIDs, linear and handheld radiation monitors, and backpack systems. In addition to these requirements, DNDO may also purchase equipment for the HPT and/or boat-to-boat detection missions in FY 2016 (pending test and evaluation results and funding availability).
	Visible Intermodal Prevention and Response (VIPR) Sustainment	Ongoing	DNDO supports the needs of TSA VIPR teams for rad/nuc detection equipment by providing teams with PRDs, basic handheld RIIDs, and radiation detection backpacks. HPRDS FY 2016 funding will be used to sustain the equipment of the existing VIPR teams and may also purchase equipment for the HPT mission (pending test and evaluation results and funding availability).

Program	Project	Level of Effort	General Description
	DNDO Mobile Detection Deployment Program (MDDP)	Ongoing	DNDO acquires rad/nuc detection systems to meet the needs of DNDO's MDDP. Mobile Detection Deployment Units (MDDU) are deployable, mobile trailer packages, containing rad/nuc detection equipment for up to 40 public safety professionals allowing the Department to surge rad/nuc detection capabilities based on threats. The equipment includes portable rad/nuc detection backpacks, basic and advanced handheld RIIDs, and PRDs. HPRDS FY 2016 funding will be used to sustain the equipment of the existing MDDU, and may also purchase equipment for the HPT mission (pending test and evaluation results and funding availability).
	Helium-3 (³ He) Shortage Mitigation/ ³ He Gas Procurement for Legacy Neutron	Not funded in FY 2016	DNDO planned to acquire ³ He gas for use in neutron detectors in HPRDS in FY 2014 and FY 2015. Gas procurements were not necessary in FY 2014 or FY 2015 and are not anticipated as necessary in FY 2016. Systems development continues efforts to identify and evaluate alternative neutron detectors.

Radiation Portal Monitor (RPM) Program

Currently, program funds are used to support CBP's efforts to maintain scanning coverage at previously completed POEs (e.g., sustainment of existing POEs). As POEs are reconfigured, RPMs must be relocated, decommissioned, and/or additional RPM systems must be deployed to maintain current scanning capabilities.

In addition, improvements aimed at extending the service life of RPMs, as well as detection efficacy and operational performance, will be deployed to fielded systems pending availability of funding. Additional large-scale scanning systems will be deployed at or between POEs.

Historically, the RPM Program has been the source of funding for the acquisition and deployment of RPMs at land and sea POEs. DNDO will continue to manage the deployment of the remaining poly-vinyl toluene (PVT)-based systems in its inventory and will deploy selected improvements, evaluated by the RPM Improvement Project, that have been projected to enhance operational or threat detection performance to fielded systems in FY 2016. Also, DNDO may begin the recapitalization of mobile RPMs and the deployment of U.S. Border Patrol (USBP) Checkpoint and RPM replacement solutions.

Human Portable Radiation Detection Systems (HPRDS) Program

The HPRDS program consists of several projects supporting multiple users whose mission is to detect and identify rad/nuc threats. The objectives of the HPRDS program are to provide more capable systems, expand the range of activities, and address different types of conveyances and cargo to be scanned for rad/nuc material. These systems are relatively lightweight, easy to use, and of sufficiently low cost to support widespread deployment. Projects include all HPRDS devices that can be worn, carried, or moved by a person.

The devices procured under the HPRDS program are:

- Personal Radiation Detector (PRD)
 - Pager-size devices to detect rad/nuc materials. The PRDs are typically clipped to a uniform or belt. They automatically monitor the environment and alert the user if rad/nuc material is detected. PRDs are continuously worn by operators for rad/nuc detection and personal protection.
- Human Portable Tripwire (HPT)
 - Small/wearable systems that provide next-generation capabilities to detect, identify, communicate, and adjudicate rad/nuc threats. HPTs will also function as personal protective equipment and warn operators of potential exposure to harmful levels of radiation.
- Basic Handheld Radioisotope Identification Devices (RIIDs)
 - Designed for search, detection, localization, and identification of radionuclide composition of rad/nuc materials and for quick and accurate measurement of dose rate and count rate. Used to support secondary screening and small-area searches.
- Advanced Handheld RIIDs
 - Often used as the final arbiter in situations where illicit trafficking is suspected due to their superior capability for rad/nuc detection and identification. They are also used in laboratory settings as reference detectors.
- Radiation Detection Backpack
 - Used in situations where a wide-area rad/nuc detection capability is necessary, potentially in covert operations. They are used to quickly detect and locate a radiation threat in public, wide-area search, or maritime (e.g., small vessel standoff) environments.
- Linear Radiation Monitor (LRM)
 - Provide both gamma and neutron detection capabilities, and are specifically designed in a rope configuration to be lowered into small spaces, such as in between large stacks of intermodal shipping containers..
- Handheld Radiation Monitor (HRM)
 - Used to quickly and discreetly detect and locate a radiation threat. The HRM can also be used to detect rad/nuc sources underwater, such as underneath a boat or large ship.

Today, legacy handheld radiation detection equipment, particularly basic handheld radioisotope Identification Devices (RIIDs) used by CBP, USCG, and TSA, has reached or exceeded its expected service life and is in need of immediate replacement. In FY 2016, DNDO will continue recapitalization efforts to maintain current capability. This recapitalization will provide Department-wide cost savings by replacing antiquated equipment, which has higher Operations and Maintenance (O&M) costs, with modernized replacement basic handheld RIID systems with greater capability and lower O&M costs.

FY2016 Human Portable Radiation Detection Procurement Plan

Activity	FY2016 Planned Procurement
	Units
USCG

Handheld Radiation Monitors (HRMs)	34

U.S. Customs and Border Protection Joint Acquisition Strategy (JAS)

CBP Office of Field Operations supports the CBP rad/nuc mission at land, sea, and air POEs. The SAFE Port Act of 2006 (P.L. 109–347 Section 121) requires that “all containers entering the United States through the 22 ports through which the greatest volume of containers enter the United States by vessel shall be scanned for radiation.” A risk-informed approach to scanning for rad/nuc material is applied to other POEs.

Per the cooperatively developed JAS, DNDO coordinates with CBP for the deployment of human portable systems for CBP officers and agents to scan people, cargo, and privately owned vehicles at and between POEs. Border Patrol Agents currently use PRDs and handheld RIIDs for rad/nuc detection, enhanced steady state scanning operations, and safety where contact is anticipated with cargo and conveyances. U.S. Border Patrol radiation detection equipment capability is focused on station and checkpoint operations; no radiation detection equipment capability for line watch operations is currently planned. USBP is currently at full operational capacity (FOC) for PRDs and basic handheld RIIDs; however, basic handheld RIIDs employed by USBP are near or past their expected service life and require replacement. In addition, the current suite of radiation detection equipment deployed at USBP checkpoints does not support expeditious examination of travelers and requires significant secondary inspection for resolution. Based on the results of a joint USBP/DNDO pilot, USBP has requested enhanced radiation detection equipment with the capability to detect and identify rad/nuc materials in trucks and passenger vehicles during the primary inspection. This capability will increase operational efficiency by reducing the need for secondary inspections.

U.S. Coast Guard JAS

USCG is equipped with radiation detection equipment to conduct its rad/nuc detection mission in the maritime domain. Per the cooperatively developed JAS, DNDO procures rad/nuc detection systems to satisfy USCG requirements. Required equipment includes PRDs, advanced and basic handheld RIIDs, LRMs, HRMs, and backpack systems. DNDO provides this equipment to USCG law enforcement personnel, inspectors, and marine investigators to increase the probability of rad/nuc detection across the USCG mission space. There are more than 13 million recreational vessels, 82 thousand fishing vessels, and 100 thousand other commercial small vessels registered or operating in U.S. waters. Seven hundred large commercial vessels (both U.S. and foreign flagged) arrive at U.S. ports daily, and eight thousand foreign flagged vessels enter U.S. ports annually with an average of 10 port calls per vessel. Currently, 100 percent of all boardings of vessels (small and large) are conducted by USCG personnel with radiation detection equipment. Additionally, USCG Deployable Specialized Forces have been equipped with radiation detection equipment to conduct advanced rad/nuc operations. However, this boarding percentage is misleading since only a small fraction of the vessels entering or transiting U.S. waters are actually boarded on an annual basis.

Visible Intermodal Prevention and Response (VIPR) Sustainment

TSA VIPR teams have been equipped with radiation detection equipment to conduct rad/nuc mission for the interior layer. VIPR teams deploy for steady state and enhanced steady state operations. VIPR teams are uniquely equipped to support the rad/nuc detection mission, because they can deploy to key transportation facilities around the country, and have law enforcement authority within their jurisdiction.

DNDO supports the needs of TSA VIPR teams for rad/nuc detection equipment by providing teams with PRDs, basic handheld RIIDs, HPT devices, and radiation detection backpacks. HPRDS FY 2016 funding will be used to sustain, in terms of lifecycle replenishment, the equipment of the existing VIPR teams that is nearing the end of its useful life as well as provide equipment for training and surge support.

Mobile Detection Deployment Program

DNDO's MDDUs are equipped with radiation detection equipment that supplements existing rad/nuc detection resources in support of special events and intelligence-driven operations. MDDUs are stationed regionally across the United States and maintained by Department of Energy Radiological Assistance Program Teams through an interagency agreement with DNDO. There are two large-capacity MDDUs and four small-capacity MDDUs currently operational. Each large capacity MDDU is configured to support up to 40 personnel and each small-capacity MDDU is configured to support up to 20 personnel. FY 2016 funding will be used to replace MDDU equipment that is near or past its expected service life.

Helium-3 (³He) Shortage Mitigation/ ³He Gas Procurement for Legacy Neutron Detectors

No SA funds are requested for procurement of ³He gas in FY 2016. The Helium-3 (³He) Shortage Mitigation Program ensured DHS had the gas required to execute its mission during the transition to alternative technologies. ³He is released for use when authorized by the ³He Sub-Interagency Policy Committee.

The HPRDS ³He Alternative Implementation (in the Research, Development, and Operations Appropriation) is currently identifying technologies that may replace legacy neutron detectors acquired by CBP, TSA, and USCG.

IV. Program Justification Changes

**Department of Homeland Security
Domestic Nuclear Detection Office
Systems Acquisition
Justification of Program Changes**
(Dollars in Thousands)

Program Increase 1: Securing the Cities
PPA: Securing the Cities, Securing the Cities
Program Increase: Positions 0, FTE 0, Dollars \$10,000

Funding Profile

	FY 2014 Revised Enacted			FY 2015 President's Budget			FY 2016 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	\$12,000
Program Increase							-	-	\$10,000
Total Request	-	-	\$24,800	-	-	\$12,000	-	-	\$22,000

Total Program Change \$10.0M

Securing the Cities

The STC Program seeks to assist state, local, and tribal stakeholders to design and implement or enhance existing architectures for coordinated and integrated detection and interdiction of nuclear and other radioactive materials out of regulatory control within high-risk metropolitan areas. The FY 2016 Budget continues an emphasis on supporting state and local rad/nuc detection operations through a three-phase approach. This approach provides for the implementation of rad/nuc detection capabilities in select high-risk metropolitan areas.

Justification

In FY 2015, STC was reduced. Although STC is the cornerstone of rad/nuc detection capability development within the interior layer of the GNDA, funding was prioritized within DNDO to maintain current STC operations and ensure accomplishment of Government Performance and Results Act (GPRA) measures in other programs within DNDO's portfolio. In FY 2016, the Department requests funding to expeditiously reduce risk in the highest risk metropolitan areas by expanding to new STC sites.

Impact on Performance

Increasing the STC funding by \$10M will allow DNDO to maintain its implementation schedule. The additional funds will increase from the planned activities from two concurrent

implementations to up to four STC regions concurrently and allow all eligible cities to compete implementing STC by 2027.

Failure to restore funding will add additional years to the STC implementation schedule. DNDO needs to continue expeditious implementation to complete all locales so as to prevent the transfer of risk from STC covered cities to those waiting for STC implementations to begin. At the \$12M level, DNDO is only funded for two concurrent implementations. At the \$22M level, DNDO may implement in up to four STC regions concurrently and allowing all eligible cities to complete, therefore implementing STC by 2027.

**Department of Homeland Security
Systems Acquisition
Justification of Program Changes**
(Dollars in Thousands)

Program Increase 2: Radiological and Nuclear Detection Equipment (RDE) Acquisition
 PPA: Radiological and Nuclear Detection Equipment (RDE) Acquisition
 Program Increase: Positions 0, FTE 0, Dollars \$44,694

Total Program Change \$44.694 M

Radiological and Nuclear Detection Equipment (RDE) Acquisition

RDE Acquisition includes the procurement and deployment of monitoring equipment at U.S. POEs and provides the scientific and technical expertise to design, acquire, and deploy these systems. RPMs are deployed at our ports of entry, enabling scanning of greater than 99 percent of containerized cargo. DNDO procures multiple types of rad/nuc detection and identification equipment on behalf of DHS Components and for specific events supplementing State and local law enforcement agency capabilities. The Human Portable Radiation Detection Systems (HPRDS) program consists of several projects supporting multiple users whose mission is to detect and identify rad/nuc threats. The objectives of the HPRDS program are to provide more capable systems, expand the range of activities, and address different types of conveyances and cargo to be scanned for rad/nuc material. These systems are relatively light, easy to use, and of sufficiently low cost to support widespread deployment. Projects include all HPRDS devices that can be worn, carried, or moved by a person. The devices procured under the HPRDS program are fully developed and most are commercially available.

Justification

The increased level of funding will support continued Radiation Portal Monitor (RPM) deployment activities while also proactively addressing sustainability concerns with aging fielded systems through recapitalization efforts. The increased funding level for the program will ensure compliance with the relevant requirements in the SAFE Port Act as DHS formulates a long-term resolution to the replacement of RPMs at the end of their life cycle.

Impact on Performance

Basic and advanced handheld Radioisotope Identification Devices (RIID), Personal Radiation Detectors (PRD), Human Portable Tripwires (HPT), and Backpacks procured will reduce the rate of degradation of scanning capability in the field. Additionally, based on system development project outcomes, a wider array of both large and small scale radiation detection equipment technologies may become available for acquisition in the out year. Deployment of these future systems will also be prioritized with RPMs and HPRDS.

Additional impacts that will be avoided due to the program increase are as follows:

- Reduction in RPM alarm adjudication capability at seaports by approximately 30 percent, which would have delayed the processing of legitimate commerce.
- Reduction in number of radiation scanning operations by half, except for personnel safety, at U.S. international airports and pre-clearance passenger operations located in oversea airports, including inbound general aviation aircraft, air cargo, passengers, and baggage, which would have limited small-area search and delayed radiation alert adjudication.
- Elimination of surge/enhanced steady-state capability due to reduction in handheld RIIDs available for immediate use by CBP for mobile operations in response to natural disasters, National Special Security Events (NSSE), and requests from POEs to support temporary scanning operations, pilots, or expansions resulting in less rad/nuc detection capability during disasters and at NSSEs.
- Elimination of the ability to replace handheld RIIDs out for scheduled (calibration) and unscheduled maintenance, which would have rendered many smaller POEs without identification and small area search capability (e.g., no fleet-wide spare handheld RIIDs).

V. Exhibits and Other Supporting Material

A. Justification of Proposed Legislative Language

For expenses for the Domestic Nuclear Detection Office acquisition and deployment of radiological detection systems in accordance with the global nuclear detection architecture, [\$67,861,000] \$123,011,000¹, to remain available until September 30, [2017] 2018².

Explanation of Changes:

Language Provision	Explanation
¹ ...[\$67,861,000] <u>\$123,011,000</u> ...	Dollar change only. No substantial change proposed.
² ... [2017] <u>2018</u> ...	Fiscal year change only. No substantial change proposed.

Radiological and Nuclear Detection Equipment (RDE) Acquisition Mission Statement

The Radiological and Nuclear Detection Equipment (RDE) Acquisition PPA supports the acquisition and deployment of rad/nuc detection equipment for DHS operational components. A function once funded independently under the Radiation Portal Monitor Program PPA and the Human Portable Radiation Detection Systems Program PPA will now be combined under the RDE Acquisition PPA which will allow DHS leadership to manage all rad/nuc equipment acquisition as a whole, ensuring that funding is allocated based on a coordinated strategy that is more responsive to emerging operational needs.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$1,077	\$1,339	\$1,571	\$232

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc) as well as from other units within the Federal Government.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$7,270	\$4,464	\$0	(\$4,464)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The decrease results from moving the funds used for equipment purchases to the equipment object class as procurement strategies have changed.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
31.0 Equipment	\$12,253	\$50,058	\$99,440	\$49,382

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The increase reflects funds moved from another object class and the increase in equipment funding. The increased equipment funding will contribute to the sustainment and recapitalization of existing stakeholder rad/nuc detection equipment.

Securing the Cities Mission Statement

The objective of the Securing the Cities (STC) initiative is to reduce the risk of a radiological or nuclear attack in high-risk metropolitan areas by enhancing regional capabilities to detect and interdict radiological material out of regulatory control. This initiative was initiated in the New York City (NYC region). Acquisition funds were utilized to procure, integrate, deploy, test, evaluate, train, and exercise a multi-layer, multi-pathway, multi-jurisdiction nuclear detection and reporting architecture for the region. Funds were also allocated to ensure that detection capabilities are integrated with Federal, State, and local command, control, and communication systems. State and local partners provided in-kind resources by bearing operational costs. Funds were also used for logistics, maintenance, and calibration costs as well as personnel costs to support the training necessary to operate detection equipment and conduct operational exercises. DNDO Systems Acquisition funds are dispersed under the STC program through competitively awarded Cooperative Agreements to the state and local agencies participating in the STC program.

Summary Justification and Explanation of Changes

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
21.0 Travel and Transportation of Persons	\$0	\$15	\$27	\$12

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.1 Advisory and Assistance Services	\$1,135	\$651	\$1,123	\$472

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector,

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
--	----------------------------	-------------------------------	--------------------	------------------------------

foreign governments, State and local governments, tribes, etc) as well as from other units within the Federal Government.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
25.3 Other Goods and Services from Federal Sources	\$2,065	\$1,299	\$2,800	\$1,501

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2016 increase will provide additional non-monetary support for the increase from two concurrent STC regions to up to four concurrent regions.

	FY 2014 Revised Enacted	FY 2015 President's Budget	FY 2016 Request	FY 2015 to FY 2016 Change
41.0 Grants, Subsidies, and Contributions	\$21,600	\$10,035	\$18,050	\$8,015

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The FY 2016 increase allows DNDO to increase from the planned activities of two concurrent implementations to up to four STC regions concurrently and allow all eligible cities to compete implementing STC by 2027.

A. Component Overview

The Domestic Nuclear Detection Office (DNDO) is comprised of the following mission-oriented programs that support achievement of the DHS strategic missions, goals, and objectives.

Domestic Rad/Nuc Detection, Forensics, and Prevention Capability: The Domestic Rad/Nuc Detection, Forensics and Prevention Capability program leads the U.S. Government (USG) with development of the Global Nuclear Detection Architecture and its domestic implementation, as well as coordination and stewardship of USG technical nuclear forensics efforts. Functions include integrating interagency efforts to develop nuclear detection technologies, evaluating detector performance, ensuring effective response to detection alarms, integrating and ensuring readiness of U.S. nuclear forensics capabilities, and conducting transformational research and development for radiological and nuclear (rad/nuc) detection and forensics technologies.

Management and Administration: This program captures activities that provide enterprise leadership, management and/or business administration services and describes the capabilities and activities that support the day-to-day management and back office functions enabling the Department to operate efficiently and effectively. Key capabilities include conducting agency planning and performance management, managing finances, managing agency workforce, providing physical and personnel security, acquiring goods and services, managing information technology, managing agency property and assets, managing agency communications, managing legal affairs, and providing general management and administration.

FY 2016 Budget Request

The table below shows DNDO's FY 2016 Budget request by its mission-oriented programs.

Program	FY 2016 Request	
	FTE	Dollars (in thousands)
Domestic Rad/Nuc Detection, Forensics and Prevention Capability	102	336,355
Management and Administration	35	20,972
Total Budget Request	137	357,327

B. Component Contributions to Achieving Departmental Missions

The table below shows the alignment of the DNDO’s programs to the DHS Missions and Mature and Strengthen Homeland Security.

Programs	DHS Missions					Mature and Strengthen Homeland Security
	Prevent Terrorism and Enhance Security	Secure and Manage Our Borders	Enforce and Administer Our Immigration Laws	Safeguard and Secure Cyberspace	Strengthen National Preparedness and Resilience	
Domestic Rad/Nuc Detection, Forensics and Prevention Capability	100%					
Management and Administration						100%

Mission 1: Prevent Terrorism and Enhance Security

Resources Requested

DNDO’s resources supporting *Prevent Terrorism and Enhance Security* are provided in the table below.

\$ in thousands

Program	FY 2014		FY 2015		FY 2016	
	\$	FTE	\$	FTE	\$	FTE
Domestic Rad/Nuc Detection, Forensics and Prevention Capability	266,984	96	282,087	92	336,355	102
Total	266,984	96	282,087	92	336,355	102

Performance Measures

For *Prevent Terrorism and Enhance Security*, two types of performance measures are presented. Strategic Measures represent DNDO’s measures that gauge achievement for this mission area, and are considered to be our Government Performance and Results Act Modernization Act (GPRAMA) performance measures. Additional Management Measures are displayed, as appropriate, to provide a more thorough context of expected performance results.

Strategic Measures

Measure: Number of people covered by Securing the Cities program preventive radiological and nuclear (rad/nuc) detection capabilities (in millions)						
Description: The Securing The Cities (STC) program provides financial assistance to State, local, and tribal organizations to develop a robust regional radiological/nuclear detection program. For the STC Program to count the population as covered by a robust radiological/nuclear detection capability, the region must demonstrate that 10% or more of its standing law enforcement are trained and equipped to conduct primary screening and patrolling as part of their daily routine duties and there are equipped and trained personnel to conduct secondary screening and alarm adjudication. In addition, the region must conduct at least one multi-jurisdictional exercise a year, and allow the exchange of information among regional partners and with federal agencies, and mutually assist each other in performing the radiological/nuclear detection mission. If the measure is met, the entire population from the statistical area is counted as covered.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	N/A	23	23	37.5
Result:	N/A	N/A	N/A	23	N/A	N/A

Measure: Percent of cargo conveyances that pass through radiation portal monitors upon entering the nation via land border and international rail ports of entry						
Description: This measure gauges the proportion of cargo scanned by radiation detection equipment deployed to the Nation's land border crossing ports of entry and international rail ports of entry. It is expressed in terms of the percent that is scanned by radiation portal monitors of the total number of cargo conveyances entering the Nation through land ports of entry and by international rail. DNDO procures and/or installs radiation portal monitors (RPMs) at ports of entry and the U.S. Customs and Border Patrol (CBP) conducts the cargo scanning using the RPMs to prevent nuclear and other radioactive materials that are out of regulatory control from being brought into the country via cargo conveyances.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	FOUO	FOUO	FOUO	FOUO	FOUO	FOUO
Result:	FOUO	FOUO	FOUO	FOUO	N/A	N/A

Measure: Percent of containerized cargo conveyances that pass through radiation portal monitors at sea ports of entry						
Description: This measure gauges the amount of containerized cargo scanned by the radiation detection equipment deployed to the Nation's sea ports of entry. It is expressed in terms of the percent that is scanned by fixed radiation portal monitors of the total number of containerized cargo conveyances entering the nation through sea ports of entry.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	FOUO	FOUO	FOUO	FOUO	FOUO	FOUO
Result:	FOUO	FOUO	FOUO	FOUO	N/A	N/A

Management Measures

Measure: Number of comprehensive evaluations and demonstrations of new and improved technologies to protect against nuclear terrorism						
Description: This measure includes several technology development activities: feasibility evaluations completed of proposed rad/nuc detection and forensics technologies through the Academic Research Initiative and the Exploratory Research Program; proof-of-concept demonstrations completed of emerging rad/nuc detection and forensics technologies through the Exploratory Research Program; technology demonstrations and characterizations completed of promising rad/nuc detection and forensics technologies in an operationally relevant environment through the Advanced Technology Demonstration program; and test campaigns planned and executed for systems development testing and commercial systems evaluation testing. Development and acquisition programs are supported by a rigorous and objective test and evaluation program to characterize technologies and systems to understand technical performance, operational effectiveness, and system limitations.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	23	65	65	60
Result:	N/A	N/A	42	48*	N/A	N/A

* Several tests executed in FY 2014 are awaiting final reports, and will be complete early in FY2015.

Measure: Number of exercises, assessments, and deployments to enhance Federal, State, local and tribal agencies' readiness to combat nuclear terrorism						
Description: Number of operational support exercises, assessments, and deployments conducted by DNDO that enhance the Global Nuclear Detection Architecture by assisting Federal, State, local and tribal partners to improve their rad/nuc detection tactics, techniques and procedures. This measure also includes the number of interagency nuclear forensics exercises in which DNDO serves as the Lead Planner. In leading these nuclear forensics exercises, DNDO ensures a consistent and comprehensive approach to assessing the government's operational capability to perform the nuclear forensics mission.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	61	110	144	164
Result:	N/A	N/A	106	161	N/A	N/A

Measure: Number of undergraduate, graduate, and post-doctorate fellowships and internships, university and junior faculty awards, and academic research awards in nuclear forensics and radiation detection-related specialties						
Description: This measure gauges the total number of undergraduate, graduate, and post-doctorate fellowships in nuclear forensics- and radiation detection-related sciences, research internships in nuclear forensics, and education awards and junior faculty awards per fiscal year to support nuclear-related academic programs. Recipients of the various Nuclear Forensics Fellowships and Faculty Award programs are selected from a competitive, merit-based application process. The Academic Research Initiative is a collaborative program with the National Science Foundation. These programs seek to advance fundamental knowledge for nuclear and radiological threat detection and related sciences with emphasis on fundamental research to develop human capital for the nuclear science and engineering professions.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	46	56	63	65	51	51
Result:	50	58	71	72	N/A	N/A

Measure: Percent of international air cargo, including special express commercial services cargo and mail, that passes through radiation detection systems upon entering the nation at air ports of entry						
Description: This measure gauges the proportion of international air cargo and international air mail scanned by radiation detection equipment deployed to the Nation's international cargo aviation airports (U.S. air ports of entry). It is expressed in terms of the percent of the total amount of air cargo, including mail and cargo at express consignment courier facilities, entering the Nation through the aviation pathway that is scanned using fixed and non-fixed radiation detection equipment.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	FOUO	FOUO	FOUO	FOUO	FOUO	FOUO
Result:	FOUO	FOUO	FOUO	FOUO	N/A	N/A

Measure: Percent of planned nuclear and radiation detection equipment acquired to combat nuclear terrorism						
Description: This measure reports the ratio of fixed, mobile, and portable radiation detection equipment that DNDO acquired for Federal operators to protect against rad/nuc threats to the baseline set out in the spend plan for a particular year. The spend plan is updated annually as requirements are identified by the Federal operators and funding is appropriated. All equipment will be acquired in accordance with Acquisition Directive 102-01 and will meet codified performance and operational requirements.						
Fiscal Year:	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016
Target:	N/A	N/A	95%	95%	95%	95%
Result:	N/A	N/A	63%	79%*	N/A	N/A

*DNDO did not reach the full acquisition target due to delay in procuring Basic Handheld detection units in FY 2013, funding delays in FY 2014, and the timing of contract awards.

Mature and Strengthen Homeland Security

Resources Requested

DNDO's resources supporting *Mature and Strengthen Homeland Security* are provided in the table below.

\$ in thousands

Program	FY 2014		FY 2015		FY 2016	
	\$	FTE	\$	FTE	\$	FTE
Management and Administration	21,071	32	22,336	35	20,972	35
Total	21,071	32	22,336	35	20,972	35

Performance Measures

DNDO contributes to this mission, but does not have performance measures in this area.
