HSIN-CI Dams Portal

The Critical Infrastructure Community of Interest on the Homeland Security Information Network (HSIN-CI) allows Department of Homeland Security (DHS) and sector stakeholders to efficiently communicate, coordinate, and share information on a single platform. HSIN-CI serves as the primary vehicle for nationwide information sharing and collaboration between DHS, public and private critical infrastructure partners in all 16 sectors, and State and local, tribal and territorial governments, and fusion centers.

The Dams Portal on HSIN-CI constitutes the primary DHS information-sharing mechanism for the Dams Sector. The portal was developed to support the Dams Sector information-sharing environment by providing Web-based tools and capabilities proven to enable effective information sharing among public and private sector partners.

Source: DHS

The Dams Portal includes the following features:

Report suspicious activities using the **Suspicious Activity Reporting (SAR) Tool**.

Share sensitive information openly among trusted community members in members-only areas, including areas for only private sector users.

Research dam security and protection-related documents, including roadmaps, handbooks, technical guidelines, and strategic documents using the **Reference Library Tool**.

Access training products, including Dams Sector Web-based training modules, Webinars, and other related courses through the **Training Tool**.

Host virtual presentations, live review and editing of documents, and live chat with other experts in the field using the **Webinar Tool**.

Stay up-to-date on emerging threats and incident information through the **Intelligence Bulletins and Notes Tool**.

Dams, levees, and related facilities are a vital part of the Nation's infrastructure, providing a wide range of economic, environmental, and social benefits. Protection of the Nation's Dams Sector critical infrastructure is essential to maintaining a resilient Nation. Because the vast majority of the sector's assets are privately owned and operated, active collaboration and information sharing between public and private sector partners is essential to increasing the security and resilience of the Nation's Dams Sector critical infrastructure.
