

The Technical Resource for Incident Prevention (TRIPwire) (www.tripwire.dhs.gov) is the Department of Homeland Security (DHS) Office of Infrastructure Protection's 24/7 online, collaborative information-sharing network for bomb squads, first responders, military personnel, Government officials, intelligence analysts, and security professionals. Information is provided to increase awareness of evolving terrorist improvised explosive device (IED) tactics, techniques, and procedures, as well as to share incident lessons learned and counter-IED preparedness information. Developed and maintained by the DHS Office for Bombing Prevention, TRIPwire combines expert analyses and reports with relevant documents, images, and videos gathered directly from terrorist source materials to help users anticipate, identify, and prevent IED incidents.

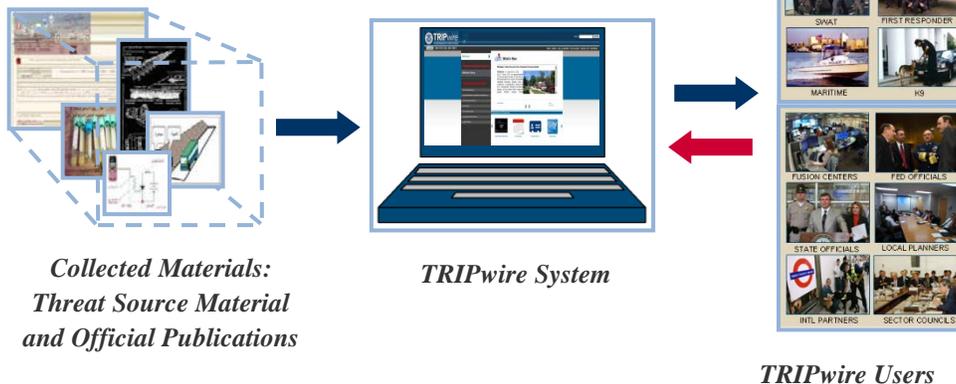

"TRIPwire is exactly the kind of support local law enforcement needs on the Federal level to combat and to interdict terrorism."

Chief William Bratton,
Los Angeles Police Department

Terrorist-source Materials, Expert-Validated IED Analysis, and Domestic Incident Data for the Bombing Prevention Community

IED Threat Information Sharing: Bombing Prevention at your fingertips

- Use the "What's New" feature for coverage and analysis of the latest domestic and international IED-specific events and incidents.
- Leverage the wealth of explosives-related information and analysis to identify explosive hazards, including IED components, and potential terrorist tactics in high-risk operations.
- Access critical counter-IED information, such as common site vulnerabilities, potential threat indicators, protective measures, bombing prevention training, planning, and policy guidance, to enhance domestic preparedness.
- Review expert-validated profiles and cutting-edge terrorist IED videos to recognize operational tactics and to prioritize and improve protective measures or training scenarios.
- Use the Domestic IED Incident Map and Reports to understand risks in your community.
