System Assessment and Validation for Emergency Responders

The U.S. Department of Homeland Security (DHS) established the System Assessment and Validation for Emergency Responders (SAVER) Program to assist emergency responders making procurement decisions.

Located within the Science and Technology Directorate (S&T) of DHS, the SAVER Program conducts objective assessments and validations on commercial equipment and systems, and provides those results along with other relevant equipment information to the emergency response community in an operationally useful form. SAVER provides information on equipment that falls within the categories listed in the DHS Authorized Equipment List (AEL). The SAVER Program mission includes:

- Conducting impartial, practitioner-relevant, operationally oriented assessments and validations of emergency responder equipment;
- Providing information that enables decision makers and responders to better select, procure, use, and maintain emergency responder equipment.

Information provided by the SAVER Program will be shared nationally with the responder community, providing a life- and cost-saving asset to DHS, as well as to federal, state, and local responders.

The SAVER Program is supported by a network of technical agents who perform assessment and validation activities. Further, SAVER focuses primarily on two main questions for the emergency responder community: "What equipment is available?" and "How does it perform?"

Portable Medical Suction Units

Portable medical suction units are used by emergency responders in various emergency medical situations to complete procedures that save lives. Possible applications include airway clearing, airway intubation, aspiration prevention, and wound management, among others. This type of equipment is typically small to allow for easy transport and storage.

To assist emergency responders in making procurement decisions, DHS S&T established the SAVER Program. As a SAVER Program Technical Agent, Science Applications International Corporation (SAIC) has conducted a comparative assessment of portable medical suction units for the SAVER Program. Prior to the assessment, SAIC conducted a market survey in order to provide information on commercially available equipment, and produced the *Portable Medical Suction Units Market Survey Report*. A focus group was then conducted to identify equipment selection criteria for the assessment, determine evaluation criteria, and recommend assessment scenarios. Results can be found in the *Portable Medical Suction Units Focus Group Report*.

All reports in this series, including the *Portable Medical Suction Units Assessment Report*, will be placed in the SAVER section of the RKB Web site (<https://www.rkb.us/SAVER>) as they become available. Information on other technologies being evaluated by the SAVER Program can also be found on the Web site.
