Introduction

The Computer Forensics Tool Testing (CFTT) program is a joint project of the Department of Homeland Security (DHS), the National Institute of Justice (NIJ), and the National Institute of Standards and Technology Special Program Office (SPO) and Information Technology Laboratory (ITL). CFTT is supported by other organizations, including the Federal Bureau of Investigation, the U.S. Department of Defense Cyber Crime Center, U.S. Internal Revenue Service Criminal Investigation Division Electronic Crimes Program, and the U.S. Department of Homeland Security's Bureau of Immigration and Customs Enforcement, U.S. Customs and Border Protection and U.S. Secret Service. The objective of the CFTT program is to provide measurable assurance to practitioners, researchers, and other applicable users that the tools used in computer forensics investigations provide accurate results. Accomplishing this requires the development of specifications and test methods for computer forensics tools and subsequent testing of specific tools against those specifications.

Test results provide the information necessary for developers to improve tools, users to make informed choices, and the legal community and others to understand the tools' capabilities. The CFTT approach to testing computer forensics tools is based on well-recognized methodologies for conformance and quality testing. Interested parties in the computer forensics community can review and comment on the specifications and test methods posted on the [CFTT website](#).

This document reports the results from testing MSAB XRY Kiosk v7.8.0 across supported mobile devices and associated media e.g., smart phones, tablets, feature phones and UICCs.

Test results from other tools can be found on the DHS S&T-sponsored digital forensics [web page](#).

How to Read This Report

This report is divided into four sections. Section 1 identifies and provides a summary of any significant anomalies observed in the test runs. This section is sufficient for most readers to assess the suitability of the tool for the intended use. Section 2 identifies the mobile devices used for testing. Section 3 lists testing environment, the internal memory data objects used to populate the mobile devices. Section 4 provides an overview of the test case results reported by the tool.

1 Results Summary

MSAB's XRY Kiosk enables investigators to perform 'logical' data and file system acquisitions from mobile devices. XRY Logical will allow you to recover most of the live and file system data from the device. It is an automated equivalent of manually examining each screen on the device and recording what is displayed. XRY Physical provides the ability for physical recovery of data from mobile devices providing access to system and deleted data.

XRY Kiosk was tested for its ability to acquire active data from the internal memory of supported mobile devices and associated media (i.e., smart phones, tablets, feature phones, UICCs/SIMs). Except for the following anomalies, the tool acquired all supported data objects completely and accurately for all mobile devices tested.

Connectivity:

- Physical data extraction resulted in the following error: no connections were found for the selected device. (Device: *LG G4*)
- Connectivity was not established to the BlackBerry Z10 or BlackBerry Z30. Development mode was successfully enabled. The device was recognized by Windows. No data was recovered. Processing ended with errors, could not connect to host. (Devices: *BlackBerry Z10, BlackBerry Z30*)

Personal Information Management (PIM) data:

- Document (i.e., txt, pdf) files were not reported. (Devices: *iPhone 4, iPhone 5S*)
- Address book entries/Contacts are not reported. (Devices: *LG Revere 3, Extravert 2*)
- Calendar related data is not reported. (Device: *Google Pixel XL*)
- Memo related data is not reported. (Device: *HTC 10*)
- Call log data (i.e., incoming, outgoing, missed) is not reported. (Devices: *Galaxy Tab-E, Galaxy Tab S2*)
- SMS and MMS related data via FireChat are not reported. (Devices: *Ellipsis 8, Galaxy Tab-E, Galaxy Tab S2*)

- Incoming and Outgoing MMS messages attachments (i.e., audio, graphic, video) are not viewable with the associated text message. (Device: *Galaxy S3*)
- MMS messages (i.e., audio, graphic, video) are not reported. (Devices: *LG Revere 3, Extravert 2*)

Social media Data:

- Social media related data (i.e., Facebook, LinkedIn) is partially reported (account, profile related information). (Device: *Galaxy S3*)
- Social media related data (i.e., Facebook) is partially reported (account, profile related information). (Devices: *Galaxy S5, Galaxy Note 3*)
- Social media related data (i.e., Facebook, Twitter, LinkedIn) is not reported. (Device: *Motorola Droid Turbo 2*)
- Social media related data (i.e., Instagram) is partially reported (pictures). (Device: *Motorola Droid Turbo 2*)
- Social media related data (i.e., Twitter) is partially reported (pictures). (Device: *Google Pixel XL*)
- Social media related data (i.e., Facebook, LinkedIn, Instagram) is not reported. (Device: *Google Pixel XL*)
- Social media related data (i.e., Facebook, Twitter, LinkedIn, Instagram) is not reported. (Devices: *Motorola Z Force, HTC 10*)
- Social media related data (i.e., Facebook, LinkedIn) is partially reported (account, profile related information). (Device: *iPhone 5S*)
- Social media related data (i.e., Facebook) is partially reported (account, profile related information). (Devices: *iPhone 6S Plus, iPhone 7 Plus*)
- Social media related data (i.e., Instagram) are not reported. (Devices: *iPhone 6S Plus, iPhone 7 Plus*)
- Social media related data (i.e., Facebook, Twitter, LinkedIn) is partially reported (account, profile related information). (Device: *iPad Air*)
- Social media related data (i.e., Facebook, Instagram) are not reported. (Devices: *iPad Mini, iPad Pro*)

➤ **Note:** *The acquisition and reporting of social media related data extracted from a mobile device is dependent upon various factors - the state of the device (e.g., jailbroken, rooted), the data extraction method (e.g., logical, physical), the version of the app and how the data is stored.*

➤ **Note for Android Devices:** *Non-system Android apps can choose to opt-out of the backup (e.g. WhatsApp). If the app manufacturer selects, then no app data is stored in the backup; a method commonly used for logical data recovery from mobile devices.*

Internet Related Data:

- Internet related data (i.e., email) is not reported. (Device: *Motorola Droid Turbo 2*)
- Internet related data (i.e., bookmarks, history, email) is not reported. (Devices: *Google Pixel XL, Motorola Z Force, HTC 10*)

GPS Related Data:

- GPS related data (i.e., longitude, latitude coordinates) are not reported for associated Maps navigational apps. (Device: *Motorola Droid Turbo 2*)

4 Test Results

This section provides the test cases results reported by the tool. Sections 4.1 – 4.4 identify the mobile device operating system type, media (e.g., Android, iOS, BlackBerry, Feature phones, UICC) and the make and model of mobile devices used for testing XRY Kiosk v7.8.0.

The *Test Cases* column (internal memory acquisition) in sections 4.1 - 4.4 are comprised of two sub-columns that define a particular test category and individual sub-categories that are verified when acquiring the internal memory for supported mobile devices and UICCs within each test case. Each individual sub-category row results for each mobile device/UICC tested. The results are as follows:

As Expected: the mobile forensic application returned expected test results – the tool acquired and reported data from the mobile device/UICC successfully.

Partial: the mobile forensic application returned some of data from the mobile device/UICC.

Not As Expected: the mobile forensic application failed to return expected test results – the tool did not acquire or report supported data from the mobile device/UICC successfully.

NA: Not Applicable – the mobile forensic application is unable to perform the test or the tool does not provide support for the acquisition for a particular data element.

4.1 Android Mobile Devices

The internal memory contents for Android devices were acquired and analyzed with XRY Kiosk v7.8.0.

All test cases pertaining to the acquisition of supported Android devices were successful with the exception of the following.

- Incoming and Outgoing MMS messages attachments (i.e., audio, graphic, video) are not viewable with the associated text message for the Galaxy S3.

- Social media related data (i.e., Twitter) is partially reported (i.e., pictures) for the Google Pixel XL.
- Social media related data (i.e., Facebook, LinkedIn, Instagram) is not reported for the Google Pixel XL.
- Social media related data (i.e., Facebook, Twitter, LinkedIn, Instagram) is not reported for the Motorola Z Force and HTC 10.
- Internet related data (i.e., email) is not reported for the Motorola Droid Turbo 2.
- Internet related data (i.e., bookmarks, history, email) is not reported for the Google Pixel XL, Motorola Z Force and HTC 10.
- GPS related data (i.e., longitude, latitude coordinates) are not reported for associated Maps navigational apps for the Motorola Droid Turbo 2.

Notes:

- Address book entries/Contacts were not reported when performing a logical acquisition for the Galaxy S3. However, they were reported with the physical data extraction.
- When performing a logical acquisition for the Galaxy S5 no data was reported. However, data was reported with the physical data extraction.
- Physical data extraction for the LG G4 resulted in the following error: no connections were found for the selected device. The logical acquisition only returned: pictures, audio, video, documents and location related data.
