Pre-Hospital Ventilators
(AEL reference number 09ME-02-VENT)

Ventilators are positive pressure devices that deliver regulated volumes of air and supplemental oxygen to patients requiring respiratory support. The concentration of air and oxygen can be adjusted as needed with each breath and with the number of breaths per minute. Pre-hospital ventilators are used during emergency response operations and for ground or air transport.

In order to provide responders with information on currently available pre-hospital ventilators, Science Applications International Corporation conducted a comparative assessment of these devices for the System Assessment and Validation for Emergency Responders (SAVER) Program in May 2012. Detailed findings are provided in the Pre-Hospital Ventilators Assessment Report, which is available by request at https://www.rkb.us/saver.

Assessment Methodology

Prior to the assessment, eight emergency medical technicians and paramedics were chosen from various jurisdictions to participate in a focus group. The group identified evaluation criteria and recommended product selection criteria and possible scenarios for assessment.

After identifying evaluation criteria, the focus group assigned each criterion to one of five SAVER categories, and then assigned a weight for its level of importance. Once the criteria were weighted, the five SAVER categories were assigned a percentage value to represent the level of each category’s importance relative to the other categories.

Based on focus group recommendations, market research, and system availability, the following pre-hospital ventilators were selected for assessment:

- AutoVent™ 3000, Allied Healthcare Products Inc.;
- Simplified Automated Ventilator (SAVe™), AutoMedx Inc.;
- AEV® Automatic Emergency Ventilator, Impact Instrumentation Inc.; and
- MCV200 Portable Ventilator, Allied Healthcare Products Inc.
Eight responders served as evaluators for this assessment. All evaluators had received Emergency Medical Technician—Intermediate or Paramedic certification or licensure by a national or state agency, and had at least 8 years of professional experience providing advanced adult and pediatric patient airway management.

During the assessment, evaluators rated the pre-hospital ventilators based on evaluation criteria established by the focus group. The assessment was separated into two phases: the specification assessment and the operational assessment. Evaluators assessed the systems based on vendor-provided information during the specification assessment. Hands-on experience using the pre-hospital ventilators during four scenarios served as the basis for the operational assessment. Mannequins were used to simulate adult patients during each of the scenarios.

Assessment Results

Table 1 displays the composite assessment scores as well as the category scores for each pre-hospital ventilator. Higher scores indicate a higher rating by evaluators. For specifications, see table 2. The advantages and disadvantages of each pre-hospital ventilator, as identified by evaluators, are listed in table 3. To view how each pre-hospital ventilator scored against the evaluation criteria assigned to the SAVER categories, see table 4.

An analysis of evaluator comments and scores revealed the following common observations concerning the assessed pre-hospital ventilators:

- Evaluators placed a high value on pre-hospital ventilators that are intuitive and easy to use.
- Evaluators expressed a strong preference for pre-hospital ventilators capable of operating in a wide range of environments.
- Evaluators preferred pre-hospital ventilators with dual settings that allow the unit to be used on both adult and pediatric patients.
- Evaluators placed a high value on pre-hospital ventilators that are sensitive to changes in airway pressure.
- Evaluators expressed a strong preference for pre-hospital ventilators that can be easily deployed due to being compact, lightweight, and/or mountable.
- Evaluators preferred pre-hospital ventilators that are reasonably priced and have low maintenance costs.
- Evaluators placed a high value on pre-hospital ventilators that can be easily cleaned.
- Evaluators expressed a strong preference for pre-hospital ventilators that include a warranty.
- Evaluators placed a high value on pre-hospital ventilators that have lengthy run times and reduced charge times.
- Evaluators expressed a strong preference for pre-hospital ventilators that include audio and visual alarms.

Responder agencies considering the purchase of a pre-hospital ventilator should review the detailed findings in the Pre-Hospital Ventilators Assessment Report and carefully consider each device’s overall capabilities and limitations in relation to their jurisdiction’s operational needs. All reports in this series, as well as reports on other technologies, are available in the SAVER section of the Responder Knowledge Base (RKB) website, https://www.rkb.us/saver.

Table 3. Pre-Hospital Ventilator Advantages and Disadvantages (Continued)

<table>
<thead>
<tr>
<th>Product</th>
<th>Advantages</th>
<th>Disadvantages</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>SAVe™</strong>&lt;br&gt;Composite Score: 3.6</td>
<td>• Well suited for pre-hospital response  &lt;br&gt;• Simplistic use  &lt;br&gt;• Small learning curve  &lt;br&gt;• Battery powered with 5.5-hour run time  &lt;br&gt;• Will operate without compressed gas  &lt;br&gt;• Durable; designed for forward combat life-savers  &lt;br&gt;• Automatic shutoff; prevents overpressure or over insufflations  &lt;br&gt;• Tactical mode; allows user to turn off audible and visual alarms  &lt;br&gt;• Inexpensive initial cost  &lt;br&gt;• 1-year warranty; extended warranty available  &lt;br&gt;• Loaner units available  &lt;br&gt;• Low maintenance costs  &lt;br&gt;• Lightweight, compact, portable  &lt;br&gt;• Rapid deployment time  &lt;br&gt;• Easily decontaminated  &lt;br&gt;• No software updates needed</td>
<td>• Fixed ventilator; only for apneic patient  &lt;br&gt;• Preset settings; unable to change or customize (e.g., tidal volume, rate, etc.)  &lt;br&gt;• Only administers 600 mL; cannot be used on patients weighing less than 100 pounds  &lt;br&gt;• 14-hour charge time; slow trickle charge</td>
</tr>
<tr>
<td><strong>AEV®</strong>&lt;br&gt;Composite Score: 3.3</td>
<td>• Well suited for critical care transport  &lt;br&gt;• Capable of operating without a compressed gas source  &lt;br&gt;• Sensitive to change in airway pressure  &lt;br&gt;• Easy to troubleshoot  &lt;br&gt;• 10-hour battery life  &lt;br&gt;• High operating temperatures  &lt;br&gt;• Audible and visual alarms  &lt;br&gt;• Customizable settings  &lt;br&gt;• Allows for spontaneous breathing  &lt;br&gt;• Extra features (e.g., waveform display, safety features, multi-step processes)  &lt;br&gt;• Good in-service training/DVD</td>
<td>• Requires moderate level of training; not an entry level unit  &lt;br&gt;• Selector knob slippage  &lt;br&gt;• CPAP mode required for manual breath to work  &lt;br&gt;• Initial cost  &lt;br&gt;• Carrying case not included  &lt;br&gt;• Operating manual not included; $27 additional cost  &lt;br&gt;• Loaner unit provided based on availability  &lt;br&gt;• Maintenance costs  &lt;br&gt;• Extended warranty costs  &lt;br&gt;• Poor handle; no straps to tie to stretcher</td>
</tr>
<tr>
<td><strong>MCV200</strong>&lt;br&gt;Composite Score: 3.0</td>
<td>• Operates independently on compressed gas or will operate on battery with room air  &lt;br&gt;• Automatically changes to room air if compressed gas is depleted  &lt;br&gt;• Audio and visual alarms  &lt;br&gt;• Can be used on both adult and pediatric patients  &lt;br&gt;• Will accept CBRNE air filter/cartridge; can be used in hazardous environments  &lt;br&gt;• Straps included to secure unit to stretcher</td>
<td>• Labels for adult settings should be larger and brighter  &lt;br&gt;• Heavy and cumbersome  &lt;br&gt;• No security locks; controls easily unintentionally adjusted  &lt;br&gt;• Lag time in adjustment knobs  &lt;br&gt;• No values on electronic control knobs  &lt;br&gt;• Difficult to read color on pressure gauge  &lt;br&gt;• No legend on screen; difficult to see in low light  &lt;br&gt;• Slow to respond to changes in air pressure  &lt;br&gt;• High pressure alarm reads from 0 to 80 psi; only works from 0 to 20 psi; does not alarm between 20 and 80 psi  &lt;br&gt;• Straps not attached or durable; can be easily lost  &lt;br&gt;• Initial cost</td>
</tr>
</tbody>
</table>

Notes:

CBRNE = chemical, biological, radiological, nuclear, and explosive
CPAP = continuous positive airway pressure
DVD = Digital Versatile Disc
mL = milliliter
PEEP = positive end expiratory pressure
psi = pounds per square inch

#### Affordability

- **Value for cost**:
  - AutoVent™ 3000: 2
  - SAVe™: 2
  - AEV®: 2
  - MCV200: 2

- **Replacement parts costs**: 2

- **Accessory costs**: 2

- **Maintenance costs**: 2

#### Capability

- **Decontamination capability**: 3

- **Power supply options**: 2

- **System durability**: 3

- **System alarms**: 1

- **Oxygen adjustments**: 2

- **System features**: 2

- **Multifunctional ventilation**: 2

- **Initial implementation**: 3

- **Equipment compatibility**: 2

#### Deployability

- **Ease of transport**: 3

- **Ease of site setup**: 3

#### Maintainability

- **Ease of decontamination**: 2

- **User serviceability**: 2

- **Warranty**: 2

- **Software updates**: Not applicable

#### Usability

- **Ease of use**: 3

- **User-friendly controls**: 3

- **Easy-to-read display**: 3

- **Functional component connections**: 3

---

**Note:**

1. Averaged criteria ratings for each assessed product are graphically represented by colored and shaded circles. Highest ratings are represented by full green circles.

2. This criterion was not assessed for the AutoVent 3000 or the SAVe as it was not applicable. This did not affect the products’ final scores.
