

Technology and threats evolve rapidly in today's ever-changing environment.

In 2014 the Transportation Security Administration screened 653 million passengers and 443 million checked bags

An estimated 240 million 911 calls are made in the U.S. each year.

25 million cargo containers are processed through our nation's ports.

The Pentagon receives 10 million attempted cyber-attacks each day.

To counter these threats, we will screen at the pace of life, provide information to decision makers at the speed of thought, equip responders to be protected and connected, protect internet privacy and commerce, and shield communities from disasters. Science and Technology is helping move the nation to a more secure, resilient future.
