Introduction

The Computer Forensics Tool Testing (CFTT) program is a joint project of the Department of Homeland Security (DHS), the National Institute of Justice (NIJ), and the National Institute of Standards and Technology (NIST) Special Programs Office and Information Technology Laboratory (ITL). CFTT is supported by other organizations, including the Federal Bureau of Investigation; the U.S. Department of Defense Cyber Crime Center; U.S. Internal Revenue Service Criminal Investigation Division Electronic Crimes Program; and the DHS Bureau of Immigration and Customs Enforcement, U.S. Customs and Border Protection, and U.S. Secret Service. The objective of the CFTT program is to provide measurable assurance to practitioners, researchers, and other applicable users that the tools used in computer forensics investigations provide accurate results. Accomplishing this requires the development of specifications and test methods for computer forensics tools and subsequent testing of specific tools against those specifications.

Test results provide the information necessary for developers to improve tools, users to make informed choices, and the legal community and others to understand the tools’ capabilities. The CFTT approach to testing computer forensics tools is based on well-recognized methodologies for conformance and quality testing. Interested parties in the computer forensics community can review and comment on the specifications and test methods posted on the CFTT Web site (https://www.cftt.nist.gov/).

This document reports the results from testing the read-only function of the Apricorn Aegis Fortress device firmware version 0401 using the CFTT Federated Testing Test Suite for Hardware Write Blocking, Version 3.1.

Federated Testing is an expansion of the CFTT program to provide forensic investigators and labs with test materials for tool testing and to support shared test reports. The goal of Federated Testing is to help forensic investigators to test the tools that they use in their labs and to enable sharing of tool test results. CFTT’s Federated Testing Forensic Tool Testing Environment and included test suites can be downloaded from https://www.cftt.nist.gov/federated-testing.html and used to test forensic tools. The results can be optionally shared with CFTT, reviewed by CFTT staff, and then shared with the community.

Test results from this and other tools can be found on DHS’s computer forensics web page, https://www.dhs.gov/science-and-technology/nist-cftt-reports.
How to Read This Report

This report is organized into the following sections:

1. **Tested Device Description**
   The device name, version and vendor information are listed.

2. **Testing Organization**
   Contact information and approvals.

3. **Results Summary**
   This section identifies any significant anomalies observed in the test runs. This section provides a narrative of key findings identifying where the device meets expectations and provides a summary of any ways the device did not meet expectations. The section also provides any observations of interest about the device or about testing the device including any observed limitations on device use.

4. **Test Environment**
   Description of hardware and software used in device testing.

5. **Test Result Details by Case**

6. Automatically generated test results that identify anomalies.

7. **Appendix: Additional details**
   More information about each test case.
Federated Testing Test Results for Write-Protected Drive: Apricorn Aegis Fortress

1 Device Description

Device Name: Aegis Fortress
Firmware Version: 0401

Manufacturer Contact:

   Manufacturer: Apricorn
   Address: 12191 Kirkham Road
            Poway, CA 92064
   Tel: (800) 458-5448
   WWW: https://www.apricorn.com

2 Testing Organization

Organization conducting test: Apricorn
Contact: Kevin Su
Report date: 6-26-2019
Authored by: Mark D.

3 Results Summary

The tested device performed as expected. Data on the device was unchanged by the attempted writes.

4 Test Environment

Hardware: tests were run using a computer with an ASUS ROG Strix B450-F Gaming motherboard.

Aegis Fortress, firmware version 0401. Put the drive in read-only mode before testing to repeat the tests.
5 Test Result Details by Case

This section presents test results grouped by case.

5.1 FT-HWB-USB
5.1.1 Test Case Description

Test a USB key or USB portable drive’s ability to write-protect when Read-Only mode is enabled. Test the ability of the USB key or USB portable drive to block write commands from the ATA and SCSI command sets issued from a test computer.

5.1.2 Test Drive Description

Manufacturer, model & size of the test drive used for this test: Apricorn Fortress with 1TB capacity (A25-3PL256-1000F) configured in read-only mode.

5.1.3 Test Evaluation Criteria

The number of ‘writes not blocked’ should be 0.

5.1.4 Test Case Results

The following table presents results for the test case.

<table>
<thead>
<tr>
<th>Computer to Drive Connection</th>
<th>Write Commands Sent</th>
<th>Writes Not Blocked</th>
</tr>
</thead>
<tbody>
<tr>
<td>USB 3</td>
<td>36</td>
<td>0</td>
</tr>
</tbody>
</table>

5.1.5 Case Summary

Test drive unchanged.
6 Appendix: Additional Details
6.1 FT-HWB-USB
6.1.1 USB 3

36 writes sent, 0 write(s) not blocked, 0 write commands unsupported.

RESULTS: test drive unchanged

run start Thu Aug 15 14:12:56 2019
run finish Thu Aug 15 14:15:58 2019
elapsed time 0:3:2
Normal exit

Status Key:
Sent - the ioctl used to send this command returned without error and the ATA error bit (if applicable) was not set.
Not supported - the ioctl used to send this command return with an error status or the command completed with the ATA error bit set.
Test terminated - the test was terminated for dangerous commands because 3 or more previous commands were not blocked.

Result Key:
Unchanged - no changes to the test drive were detected.
Not Blocked - sending this command resulted in a change to the test drive.
This command was NOT blocked!
n/a - Not applicable.

### 6.2 Test Setup & Analysis Tool Versions

Version numbers of tools used are listed.
