**Related Follow-On Requirements**

| <b><u>Follow-On Requirement Description</u></b> | <b><u>FY 2009<br/>Cost Estimate</u></b> |
|---|---|
| Follow-on or sustainment funding for NAIS       | 10,902                                  |
| <b>Follow-On Requirements Total:</b>            | <b>10,902</b>                           |

**Method of Performance**

The NAIS Project Office will manage the technical aspects of the project by using Integrated Product Teams (IPT) and an Integrated Digital Environment (IDE). The IPTs include government project office and Coast Guard Centers of Excellence (COEs), contractor, and other industry members. The IPTs and appropriate working groups will conduct formal and informal technical interchange meetings. These meetings will focus on the timely and free exchange of information. The IPT process will be augmented and supported by an interactive IDE to enable the paperless exchange of information among teammates and stakeholders across nearly transparent boundaries. For example, the Government and the Contractor will use the IDE to submit, review, and approve contract data deliverables. This day-to-day process will be overlain by a series of formal project reviews, design reviews (Preliminary Design Review (PDR) and Critical Design Review (CDR)), and award fee evaluations that will be used to monitor technical performance.

The Government will monitor performance and schedule adherence effectiveness through Integrated Baseline Reviews (IBR), Integrated Master Schedules (IMS), program reviews, regular and frequent meetings and analysis of monthly progress reports. The NAIS Project will also establish a Project Resident Office to facilitate contract administration and monitor progress. Contracts will include Earned Value Management (EVM) as a project management tool as required by OMB Circular A-11. The Government will require the contractor to implement an EVM System, using ANSI/EIA 748 as guidance to manage, monitor and measure cost, schedule and performance; and to integrate EVM principles into management processes. The contractor will be required to provide near real-time access via the IDE to EVM data. Performance reports will be required at minimum on a monthly basis as a contract data item deliverable. The NAIS Project Office will ensure dedicated resources are established to actively monitor and track program cost and schedule using the EVM data and reports and provide timely

**Nationwide Automatic Identification System (NAIS)** **\$14,600**

notification to the NAIS Project Manager of negative trends or projected variances discovered. Additionally, each Government IPT leader will use EVM as a tool in managing the program.

Within 90 days of award of a contract for this acquisition, an IBR will be conducted to verify the technical content of the Performance Measurement Baseline (PMB), the accuracy and logic of schedules, and the adequacy of budgets. As future planning packages in the baseline are developed into detailed plans, the Government and Contractor will work “shoulder to shoulder” to review those detailed baseline plans.

Once the IBR has been completed and the PMB established, the contractor will submit monthly contract performance reports showing cost and schedule adherence to the PMB. The COTR and other Project Office staff will review these reports and work with contractors to develop and implement corrective actions as necessary. Award fee determinations will consider, among other things, the contractor’s effectiveness of managing schedule to the PMB.

**Budget Allocation to Mission-Program**

**Compliance with Public Laws, Regulations, Standards & Executive Orders**

Adhering to the National Environmental Policy Act (NEPA), the NAIS project has completed a Programmatic Environmental Impact Statement (PEIS), dated October 6, 2006. The proposed action analyzed in the PEIS is the broad scope of implementation of the NAIS project. As supported by the analysis in the PEIS, the NAIS Project Manager decided to implement the project using the preferred alternative, which is a combination of coverage mechanisms, including a combination of collocated and newly built shore-based Radio Frequency (RF) sites for short-range AIS coverage. Implementation of the proposed NAIS project through the Preferred Alternative ensures that the USCG satisfies the purpose and need for NAIS. The Preferred Alternative implementation approach offers siting flexibility that will help mitigate or minimize the potential for environmental impacts, and allow the USCG to maximize the use of existing assets to meet coverage requirements. This decision is documented in a Record of Decision issued on October 27, 2006

*U. S. Coast Guard - FY 2009 Congressional Budget Submission*

**Nationwide Automatic Identification System (NAIS)** **\$14,600**

The PEIS provides a general level of analysis of alternatives and environmental impacts and serves as a top-tier environmental analysis of the general project of installing a nationwide AIS-based vessel detection, identification, tracking, and communication system. As a continuation of the environmental planning process, the Coast Guard is conducting site-specific environmental analysis coincident with the project implementation as specific sites are identified. All sites selected and implemented under Increment 1 of NAIS has been surveyed and Categorically Excluded from further analysis under NEPA.

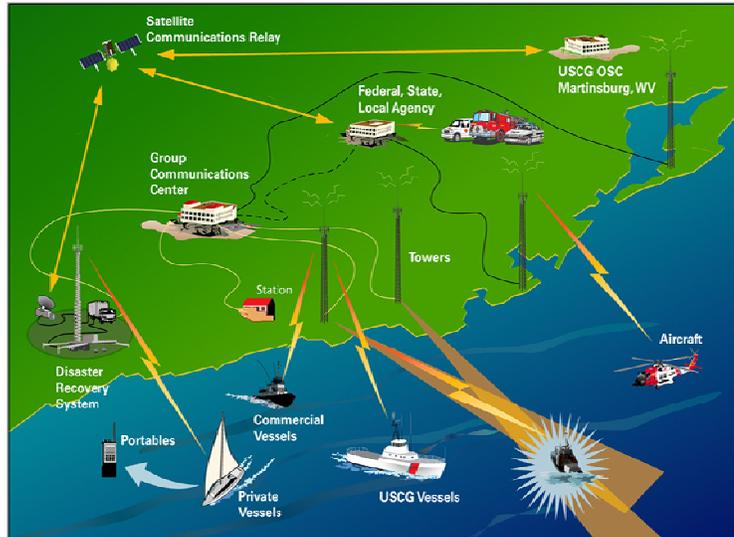

**U. S. Coast Guard Justification  
Acquisition, Construction & Improvements  
FY 2009 Congressional Budget Submission  
(Dollars in Thousands)**

**Rescue 21**

**\$73,000**

**Project Description, Justification and Scope**

The Rescue 21 project (formerly the National Distress and Response System Modernization Project or NDRSMP) will replace the existing National Distress and Response System (NDRS) and enhance the U.S. Coast Guard's ability to execute all of its missions through improved communications, command and control capabilities in the coastal zone. The basic NDRS components include radios, transceivers, towers for antennas, and an interconnecting network. It is the foundation for coastal Search and Rescue (SAR), and is a critical enabler of efficient and effective command and control for all missions in coastal zones.

**Rescue 21:**

- Eliminates many existing communication coverage gaps ("dead zones") while ensuring continuous, enhanced VHF-FM marine radio coverage out to 20 nautical miles from shore within the coastal zone;
- Features digital voice recording capability with immediate playback, improving the ability to review and resolve garbled or unclear transmissions - critical to search and rescue planning and response;
- Provides improved direction finding capability for more timely response to mariners in distress and an ability to distinguish "hoax" calls from actual distress calls;
- Increases the number of voice channels from one to five, allowing watch standers to conduct multiple operations, while offering protected (secure) communications for homeland security missions when needed;
- Enhances Maritime Domain Awareness (MDA) by maintaining communications with mariners, and facilitating the timely flow of information between the Coast Guard and other government and law enforcement agencies; and
- Supports five DHS strategic goals: 1) Awareness; 2) Prevention; 3) Protection; 4) Response; and 5) Recovery.

**Funds requested in FY 2009 will specifically accomplish the following work:**

*Rescue 21 Ground Subsystem (GSS) Deployment (partial) – Full Rate Production (FRP) Group III*

- Great Lakes and Outside Continental U.S. Islands
  - Sector Lake Michigan; Sector Sault Ste Marie, MI; Sector Detroit, MI; Sector Buffalo, NY
  - Sector Hawaii, Sector Guam, Sector San Juan, Puerto Rico

**At the end of FY 2008, the following Sectors are scheduled to be operational:**

- Initial Operating Capability (IOC) Sectors

**Rescue 21**

**\$73,000**

- Atlantic City, NJ (incorporated into Sector Delaware Bay)
- Eastern Shore, VA (in 2008, will be incorporated into Sector Hampton Roads)
- Low Rate Initial Production (LRIP) Sectors
  - Sector Mobile, AL
  - Sector St. Petersburg, FL
  - Sector Seattle, WA
  - Sector Port Angeles, WA
- Full Rate Production (FRP) Sectors
  - Sector Long Island, NY/CT
  - Sector Delaware Bay (Philadelphia)
  - Sector New York, NY
  - Sector Jacksonville (Mayport), FL
  - Sector Hampton Roads, VA
  - Sector Miami, FL
  - Sector New Orleans, LA (Phase I)
  - Sector Baltimore, MD
  - Group/Air Station North Bend, OR
  - Sector Portland, OR
  - Sector Key West, FL
  - Group/Air Station Astoria, OR

**At the end of FY 2009, the following additional Sectors are scheduled to be operational:**

- Full Rate Production (FRP) Sectors
  - Sector Galveston, TX
  - Sector New Orleans, LA (Phase II)
  - Sector Charleston, SC
  - Sector North Carolina (Fort Macon and Cape Hatteras)
  - Sector Boston, MA
  - Sector San Diego, CA
  - Sector Humboldt Bay, CA

**Production Contractor:**

- General Dynamics C4 Systems (GDC4S) of Scottsdale, AZ is the Rescue 21 Phase II Contractor. The Phase II contract is a delivery order based Indefinite Delivery, Indefinite Quantity (IDIQ) contract with award term incentives. The contract has a base period of six years, plus two four-year award terms and one five-year award term. GDC4S is responsible for complete system maintenance and operates a 24/7 Customer Care Center (CCC) to respond to system discrepancies.

*Subcontractors:*

- Motorola, Inc. (Columbia, MD) - Responsible for hardware integration.
- Consolidate Analysts Centers, Inc (CACI) (Chantilly, VA) - Responsible for wide area network (WAN) installation, Direction Finding (DF) equipment and the Coast Guard Data Network Plus (CGDN+). Operates Network Operations Center (NOC).
- Communication Services, Inc (CSI) - Responsible for remote fixed facilities (or high-level sites) infrastructure preparation, installation and testing for the Low Rate Initial Production (LRIP) Sectors only.
- General Dynamics Information Technology (GDIT) (Needham, MA) - Responsible for remote fixed facilities (or high-level sites) infrastructure preparation, installation and testing for the Full Rate Production (FRP) Sectors.
- Stanley Associates, Inc. (formerly Fuentez Systems Concepts (FSC)) (Arlington, VA) - Responsible for fixed facility and disaster recovery asset construction and testing.
- Chelton Inc. (Lewisville, TX) - Responsible for Co-site Interference Mitigation (CIM).
- Proteus Technical Solutions, Inc. (Rancho Cordova, CA) – Responsible for manufacturing all Remote Fixed Facilities (RFF) steel shelters used in R21 installations – project is shifting to concrete composite shelters.

*U. S. Coast Guard - FY 2009 Congressional Budget Submission*

**Rescue 21**

**\$73,000**

- SkyWaves, Inc. (Charleston, SC) – Responsible for manufacturing all Remote Fixed Facility (RFF) concrete composite shelters used in R21 installations.
- Andrew Systems, Inc (Westchester, IL) – Responsible for system support and warranty issues, including some elements of cutover and some third party inspections.
- AllPro Consulting (Dallas, TX) – Responsible for architecture and engineering review services, including some design reviews and professional evaluations.
- Flash Technologies (Franklin, TN) – Responsible for monitoring and maintaining tower lighting systems in accordance with FAA regulations.
- MWH Americas, Inc. (Novi, MI) – Responsible for all environmental surveys, including identification of protected areas, wetlands, and threatened/endangered species.

**Significant Changes**

The first three Full Rate Production (FRP) Sectors (Sectors Delaware Bay, Long Island Sound, and New York) have been accepted by the Coast Guard and are now operational. Sectors Delaware Bay and New York were both accepted ahead of schedule. Along with the LRIP Sectors (Mobile, AL; St. Petersburg, FL; Seattle, WA; Port Angeles, WA) and the Initial Operating Capability (IOC) regions (Atlantic City, NJ; Eastern Shore, VA/DE/MD), the Rescue 21 system now stands watch along 10,042 miles of coastline and is already saving lives.

**Method of Performance**

The contractor provides monthly Cost Performance Reports (CPR) based on an approved Earned Value Management System. These reports allow the Coast Guard to examine the contractor's cost and schedule estimates, variances, and projections for completion.

**Compliance with Public Laws, Regulations, Standards & Executive Orders**

This project is being conducted in compliance with the National Environmental Policy Act (NEPA).

**U. S. Coast Guard Justification  
Acquisition, Construction & Improvements  
FY 2009 Congressional Budget Submission  
(Dollars in Thousands)**

**High Frequency (HF) Modernization and Recapitalization** **\$2,500**

**Project Description, Justification and Scope**

This request will fund the purchase and installation of 12 HF transmitters (\$200K per transmitter.)

This initiative recapitalizes the Coast Guard's High Frequency (HF) communications system, including replacement of 88 twenty-five-year-old, unserviceable, shore-side, high power HF transmitters. This FY 2009 request will fund the recapitalization of the HF communications system as part of a multi-year installation schedule. As a signatory nation of the International Safety of Life At Sea (SOLAS) treaty, the United States is required to continuously monitor several HF emergency and distress channels to respond to at-sea emergencies and requests for assistance, and to provide warnings to ships relating to "...gales, storms, and tropical storms" by radio messages. This information is provided by the Coast Guard via HF transmitters in the form of text and fax messages.

Existing HF transmitters are available for operational use only 72% of the time due to the frequency of failure, far from meeting the 95% industry standard of availability. Maintenance of the existing HF system is not viable as spare parts are no longer manufactured for these obsolete radios. Excessive system downtime and subsequent lack of adequate HF communications coverage prevents the Coast Guard from consistently meeting United States SOLAS obligations. Without continued system recapitalization in FY 2008, the Coast Guard will be unable to meet SOLAS mandates regarding HF communications by the end of CY 2008, at which time existing transmitters are predicted to completely fail based on current casualty trends.

Satellite communication (SATCOM) systems cannot accomplish or replace many HF requirements. Moreover, not all Coast Guard vessels and aircraft have SATCOM capability, and satellite coverage is not available in all Coast Guard operating areas. Replacement of shore-side, high power HF radios will improve effectiveness through increased system reliability, throughput, and reduced operating and maintenance costs. It will also increase interoperability with international commercial maritime and distress systems, SOLAS and non-SOLAS vessels, and DHS, DoD, allied and other government assets, thus contributing to the integrated, interoperable maritime security screening system envisioned in the Maritime Strategy for Homeland Security.

These transmitters will be purchased from and installed by Rockwell Collins via existing U.S. Customs and Border Protection or U.S. Air Force contracts to ensure full interoperability with other government operated HF networks.

**Significant Changes**

There are no significant changes from the previous budget submission.

**Method of Performance**

Contract oversight for the procurement of these radios lies with Customs and Border Protection (CBP) or the U.S. Air Force; the Coast Guard procures these radios from CBP through these contracts.

Performance of the new transmitters will be measured by the success rate of HF communications. Two basic measures are used: 1) the ability to make a transmission (is the transmitter working), and 2) feedback from the maritime public on whether or not the transmission was received.

**High Frequency (HF) Modernization and Recapitalization**

**\$2,500**

**Compliance with Public Laws, Regulations, Standards & Executive Orders**

Compliance with International Convention of Safety of Life at Sea (SOLAS), Chapter IV; Communications Act of 1934, as amended; 47 USC Title III Part II and III; implemented in 47 CFR 80.801. 46 USC 4502/4506; implemented in 46 CFR 28.245; U.S. Navy requirement for HF broadcast capability for U.S. Maritime Operations; Coast Guard assignment as National Coordinator for Broadcast Notice to Mariners (BNM) and National Emergency HF Network requirement.

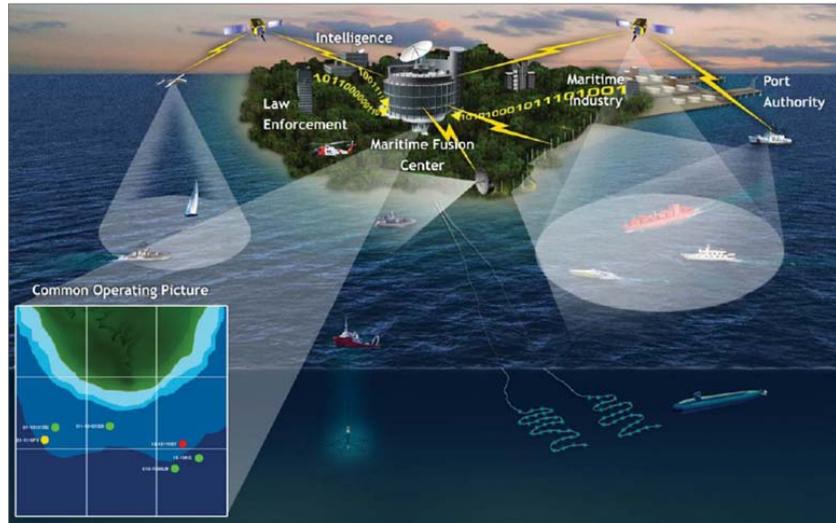

**U. S. Coast Guard Justification  
Acquisition, Construction & Improvements  
FY 2009 Congressional Budget Submission  
(Dollars in Thousands)**

**Command 21**

**\$1,000**

**Project Description, Justification and Scope**

Command 21 (formerly known as *Command 2010*) is designed to transform the Coast Guard's security posture in vulnerable port, waterways and coastal areas through improving awareness by proactively *sensing* vessel activities, *understanding* their intent, and *sharing* that information. Command 21 provides the capability to **SENSE**, **UNDERSTAND** and **SHARE** situation-relevant information through a network of radars and cameras integrated with proven information sharing and decision making technologies.

The Maritime Transportation Security Act of 2002 requires “a system of surveillance and notice designed to safeguard against as well as ensure earliest possible notice of a transportation security incident and imminent threats of such a security incident.” Acts passed in 2004 and 2006 reiterate this mandate and further define the need for seamless interoperability and information sharing with all port partners. Command 21 is the critical piece that lies at the heart of meeting these mandates.

Additionally, the Security and Accountability for Every Port Act of 2006 (the SAFE Port Act) specifically requires the Secretary to "establish interagency operational centers for port security at all high-priority ports not later than 3 years after the date of the enactment of the SAFE Port Act." Command 21 is the Coast Guard initiative that provides Interagency Operation Center capability at our Sector Command Centers by facilitating interagency cooperation, information-sharing and joint, port-level operations.

The requested funding supports continued requirements definition and development of the WatchKeeper software to improve its ability to proactively sense and monitor vessel activities, detect potential threats and share the information to ensure an appropriate, integrated and effective response. When fully developed, WatchKeeper will incorporate all available information sources - including dedicated radar/camera information, available sensor capability from port partners, intelligence information, Nationwide Automatic Information System (NAIS) data and “blue force” tracking capability.

**Significant Changes**

This is the first submission for Command 21 in the President's Budget. Congress provided \$9.1 million for Command 21 in the FY08 Omnibus Appropriations Act as part of \$60 million specified for Interagency Port Security Operational Centers.

**Method of Performance**

One of the principles of this acquisition is to rapidly supply capability to the field through an evolutionary acquisition strategy. The capabilities defined in this document are intended to support a spiral development process, where the end-state requirements are continually refined through demonstration, risk management, continuous user feedback and technology maturation. Other goals for the acquisition include maximizing the use of commercial and government off-the-shelf technologies, re-using or refurbishing existing equipment and facilities and leveraging a wide variety of existing prototypes, test beds, other systems and other governmental activities.

**U. S. Coast Guard Justification  
Acquisition, Construction & Improvements  
FY 2009 Congressional Budget Submission  
(Dollars in Thousands)**

**Defense Messaging System (DMS) Implementation on Ships** **\$4,074**

**Project Description, Justification and Scope**

This project will replace the Coast Guard's current legacy military (record) messaging system with the Department of Defense's (DoD's) mandated replacement, the Defense Message System (DMS), thereby facilitating continued messaging interoperability with DoD, allies and other government agencies. The Coast Guard is responsible for funding, staffing, and implementing DMS for organizational users (shore-based and mobile). Closure of DoD's legacy messaging system was accomplished on 30 Sep 2003 when DoD shifted to DMS. To bridge this gap between AUTODIN and DMS messaging, DoD has been supporting the Tactical Message Gateway (TMS), with a plan to shutdown the gateway in 2010. Without transitioning to DMS, the Coast Guard will be required to maintain redundant, expensive workarounds of the Tactical Message Gateway, which will no longer be supported by DoD.

DMS is the DoD replacement system for messaging and has been mandated by DoD for all U.S. Armed Services. Prior to FY 2006, the Coast Guard was funded for DMS shore installation in order to remain interoperable with DoD, other government agencies, and allied military forces for secure record messaging. This request finalizes the project with DMS installations on Coast Guard cutters.

DMS enables the Coast Guard to implement the U.S. Navy's DMS solution on all major cutters between FY 2008 and FY 2010, matching the U.S. Navy's schedule to implement DMS on their ships during the same timeframe. After implementation is complete in FY 2010, support for all legacy messaging services will be terminated (i.e. CUDIXS, Fleet Broadcast, NAVMACS-II and TMG).

The \$19M expended to date on the implementation of the ship and shore DMS has been used to develop, purchase and implement the shore infrastructure as well as purchase and install NAVMACS-II on 24 capital cutters in preparation for DMS. DMS funding was used for the NAVMACS-II installs because it is the U.S. Navy's path toward installing DMS on ships.

The implementation schedule is as follows: (1) Funding requested for FY 2008 (\$5,000K) will implement DMS on 378' High Endurance Cutters, half the 270' Medium Endurance Cutters, Training Center Petaluma, and at the SPAWAR Lab in Charleston; (2) funding requested in FY 2009 (\$4,074K) will implement DMS on the rest of the 270' Medium Endurance Cutters, 210' Medium Endurance Cutters and the Polar Class Ice Breakers and fully complete the project. SPAWAR will service and maintain the DMS equipment on board Coast Guard cutters so there is no follow-on costs associated with the FY 2008 request.

**Significant Changes**

This request funds the completion of major cutter DMS installations if the President's FY 2008 \$5M request is enacted.

**Method of Performance**

This FY 2009 request will install DMS onboard cutters in two phases, with all installations to be conducted by the Space and Naval Warfare (SPAWAR) Systems Center, Charleston, SC. Funds will be executed through a Military Interdepartmental Purchase Request (MIPR) to SPAWAR to conduct the installation of DMS.

**Compliance with Public Laws, Regulations, Standards & Executive Orders**

The installation of DMS for ship and shore communications is required by OPNAV Instruction 2000.20C, "Effective U.S. Navy – U.S. Coast Guard Communications Policy" which requires the Navy and Coast Guard communications systems be interoperable and ensure avoidance of unnecessary duplication of systems, equipment and facilities.

**U. S. Coast Guard Justification  
Acquisition, Construction & Improvements  
FY 2009 Congressional Budget Submission  
(Dollars in Thousands)**

**Survey and Design (Outyear)**

**\$2,050**

**Project Description, Justification and Scope**

The Coast Guard's FY 2009 Survey and Design (S&D) budget request includes survey and design funding essential to future year AC&I shore projects. Coast Guard shore facility AC&I funding has a three year life span necessitating the requirement for out year S&D funding to ensure timely execution of shore facility AC&I appropriations. In contrast, DoD military construction (MILCON) funding has a five year life span.

Funding will provide in-house capability for planning and engineering studies, project design, master plans, appraisals, real property requirements and other architectural/engineering efforts. Completing proper planning and design helps to ensure AC&I projects are properly assessed, planned and prioritized prior to seeking project appropriations. The projects supported by this request contribute to the long-range plans and support of operational units. Specifically, this funding is requested to complete initial S&D for the following facilities/purposes:

- Sector San Francisco – Address Command Center deficiencies including co-location of the Vessel Traffic Service (VTS) and providing adequate space for DHS and port partners.
- Station Coos Bay – Construct covered mooring for 47' MLB.
- Support Center Elizabeth City – Replace Thrun Hall (barracks).
- Coast Guard Academy – Continue next project phase to recapitalize Chase Hall.
- Air Station Elizabeth City – Consolidate Air Station and small boat station facilities.
- Sector San Juan – Renovate Building 126.
- AC&I Admin Expenses – General overhead required to conduct initial survey and design.

**Significant Changes**

This submission reflects currently planned out-year projects.

**Compliance with Public Laws, Regulations, Standards & Executive Orders**

Project plans and designs will comply with the National Environmental Policy Act (NEPA).

**U. S. Coast Guard Justification  
Acquisition, Construction & Improvements  
FY 2009 Congressional Budget Submission  
(Dollars in Thousands)**

**TISCOM-TSD Building** **\$2,500**

**Project Description, Justification and Scope**

This project will construct a 5,000+ SF addition to the Mid-South building which houses part of the Telecommunication Systems Directorate (TSD) at the Coast Guard's Telecommunications and Information Systems Center (TISCOM) in Alexandria, VA. Since 2002, the number of personnel (military, government civilian and contractors) employed by TISCOM's technical staff has increased from ~150 personnel to ~240 personnel, which has resulted in TSD staff working in widely dispersed offices that were converted from valuable lab, meeting, and storage space and in temporary trailers. The TSD is responsible for the technical and contractual support and administration of the Coast Guard's Networks, Messaging Systems, and RF Communication Systems.

**Significant Changes**

This is a new request.

**U. S. Coast Guard Justification  
Acquisition, Construction & Improvements  
FY 2009 Congressional Budget Submission  
(Dollars in Thousands)**

**Coast Guard Air Station Cape Cod - BRAC MMR - Runway Lighting \$5,000**

**Project Description, Justification and Scope**

This request will provide funding for a replacement of the runway lighting system at the Massachusetts Military Reservation (MMR) for Air Station Cape Cod (ASCC). As a result of being realigned by BRAC 2005, the Massachusetts Air National Guard 102nd Fighter Wing will no longer fund airfield capital requirements. It is anticipated that the 102nd will stop operating the airfield in Sep 2008.

Air Station Cape Cod currently uses the airfield, utilities, and emergency services that are operated and maintained by the Massachusetts Air National Guard 102nd Fighter Wing, which was “realigned” as part of BRAC 2005. As part of that realignment, the 102nd Fighter Wing’s jets will move from Otis Air National Guard Base to the Air National Guard base in Barnes, MA.

**Significant Changes**

This is a new request.

**U. S. Coast Guard Justification  
Acquisition, Construction & Improvements  
FY 2009 Congressional Budget Submission  
(Dollars in Thousands)**

**Sector Delaware Bay-Consolidate Cape May Sta, CPB, ANT FAC \$13,000**

**Project Description, Justification and Scope**

This project will construct a new 23,000 gross square foot consolidated Station, Aids to Navigation Team (ANT) and Coastal Patrol Boat (CPB) facilities on the existing Station/ANT site. This will provide an appropriately sized and maintainable facility for Station Cape May. It will also improve working/living conditions, reduce maintenance workload and improve morale/retention for each of these commands. Existing facilities will be demolished.

Station Cape May, ANT Cape May, and the homeported Coastal Patrol Boats operate out of spaces which are currently 50% space deficient in facilities that are on average 63 years old. Growth and evolution in the mission requirements of the Station, ANT, and CPB commands have made these makeshift facilities obsolete. Key facility deficiencies include:

- The watch berthing facilities are sub-standard. There is a single berthing room for males and a single berthing room for females. The personnel lockers are located in these rooms.
- Work on the Rigid Hull Inflatable boats (RHI) must be done outside since the doorway to the shop is insufficient to allow access.
- There is a severe lack of adequate storage space.

ANT Cape May is located in a facility which is a small single story stucco building. Storage is located in several portable wooden sheds. Key facility deficiencies include:

- The shop space is inadequate. The floor area does not meet Commandant standards and ventilation requires opening all the doors and windows to keep welding and paint fumes from spreading to adjacent spaces.
- The toilet facilities are inadequate. A single unisex head/ shower also serves as the coffee mess and women's locker room.
- The ANT survival gear is stored in a locker outside the building.

The CPB shore support facilities are scattered throughout Training Center Cape May between three buildings, none of which are in close proximity to the waterfront.

**Significant Changes**

There was no previous submission for this project.

**Compliance with Public Laws, Regulations, Standards & Executive Orders**

This project will comply with the National Environmental Policy Act (NEPA).

**U. S. Coast Guard Justification  
Acquisition, Construction & Improvements  
FY 2009 Congressional Budget Submission  
(Dollars in Thousands)**

**Cordova Housing**

**\$11,600**

**Project Description, Justification and Scope**

This funding will address housing needs for Coast Guard personnel stationed in Cordova, Alaska. The request will fund the third and final phase of this project. Phase III will complete 6 duplex units (12 housing units).

Phase I contained in the Coast Guard's FY 2007 appropriation will complete initial site preparation work, plus 3 duplex units (6 units of housing). Phase II, contained in the Coast Guard's FY 2008 budget request, completes an additional 4 duplex units (8 units of housing).

**Significant Changes**

There are no significant changes from the previous budget submission.

This project will comply with the National Environmental Policy Act (NEPA).

**U. S. Coast Guard Justification  
Acquisition, Construction & Improvements  
FY 2009 Congressional Budget Submission  
(Dollars in Thousands)**

**CG Academy, Recapitalize Chase Hall Phase II, N. Annex A \$10,300**

**Project Description, Justification and Scope**

This request will fund the second phase of a multi-phased project to renovate the cadet barracks at the Academy by providing a wing-by-wing recapitalization to modernize the facilities. Funding in FY 2006 and FY 2007 provided for construction of a new Annex E to Chase Hall. This request will recapitalize Chase Hall's North Annex A.

Chase Hall provides berthing for all cadets at the Academy. The facilities are over 50 years old and in need of modernization. The facilities have numerous safety code violations, and building systems such as plumbing and electrical are beyond useful life and have become an excessive maintenance burden. Moreover, student berthing lacks modern amenities such as computer network access cabling.

**Significant Changes**

There are no significant changes from the previous budget submission.

**Compliance with Public Laws, Regulations, Standards & Executive Orders**

This project will comply with the National Environmental Policy Act (NEPA).

**U. S. Coast Guard Justification  
Acquisition, Construction & Improvements  
FY 2009 Congressional Budget Submission  
(Dollars in Thousands)**

**Montauk Housing**

**\$1,550**

**Project Description, Justification and Scope**

This request will fund the purchase of three 3 and/or 4 bedroom housing units in the Montauk, NY area. There have been chronic long-term difficulties in securing adequate housing for members assigned to the Montauk area. Rental housing units are expensive, typically exceeding Basic Allowance for Housing (BAH) and expected out of pocket expenses. Moreover, housing availability is near 0% in this high cost tourist area. Lack of rental units limits CG leased (even with waivers of policies for lease cost and units size) or members leased housing opportunities. Families are forced to geographically separate awaiting available housing. This has an impact on operational readiness, retention and morale.

**Significant Changes**

This is a new request.

**U. S. Coast Guard Justification  
Acquisition, Construction & Improvements  
FY 2009 Congressional Budget Submission  
(Dollars in Thousands)**

**Waterways ATO N Infrastructure** **\$4,000**

**Project Description, Justification and Scope**

This request provides funding to establish, maintain and improve transportation on U.S. waterways through construction and improvements to buoys and structures which assist in navigation. Waterways infrastructure projects require an annual base funding level to support requirements from expanded U.S. Army Corps of Engineers (ACOE) activity and aging/damaged aids to navigation (AtoN).

There is a \$17.8M backlog for waterways short-range aids (SRA) improvements. This \$4M request will help fund projects that are critical to safe and efficient maritime transportation. If approved, the AC&I funding will go toward the following projects: Pleasant River, ME, Port Canaveral and Port Manatee, FL, Mobile, AL, Gulfport, MS, Port Charles, LA, Anaheim Bay and Mission Bay, CA, Puget Sound, WA, and Sumner Strait, AK

**Significant Changes**

There is no significant change from the previous budget submission.

**Compliance with Public Laws, Regulations, Standards & Executive Orders**

This project is being conducted in compliance with the National Environmental Policy Act (NEPA).

**U. S. Coast Guard Justification  
Acquisition, Construction & Improvements  
FY 2009 Congressional Budget Submission  
(Dollars in Thousands)**

**AC&I Core**

**\$500**

**Project Description, Justification and Scope**

This funding is necessary to cover costs associated with project overhead activities for major acquisition projects. The primary initiatives include contract support for financial management services, contracting support services, training and workforce certification. The funding allows the Coast Guard to maintain an effective acquisition process by providing AC&I resources that are not project-specific. Resources are needed to maintain core competencies and capabilities necessary to execute assigned workload while meeting various requirements established in the Chief Financial Officer Act, Clinger-Cohen Act, DHS certification level requirements and OMB Circular A-76.

**Significant Changes**

There is no significant change from the previous budget submission.

## Summary Justification and Explanation of Changes

### Travel

| 2007   | 2008    | 2009    | 2008 - 2009 |
|--------|---------|---------|-------------|
| Actual | Enacted | Request | Change      |
| \$ 467 | \$ 391  | \$ 517  | \$ 126      |

Travel includes all costs of transportation of persons, subsistence of travelers and incidental travel expenses in accordance with Federal travel regulations. Specifically, funds transport of personnel in support of training, project management and oversight of the Response Boat - Medium Project and Inland River-tender Emergency Sustainment Project. Increased funding in FY 2009 is a result of additional project funding for Response Boat - Medium delivery around the country.

### Transportation of things

| 2007   | 2008    | 2009    | 2008 - 2009 |
|--------|---------|---------|-------------|
| Actual | Enacted | Request | Change      |
| \$ 66  | \$ 55   | \$ 73   | \$ 18       |

Transportation of things includes all costs of the care of such things while in process of being transported and other services incident to the transportation of things. Specifically, funding provides for shipment of goods, equipment, supplies and materials to support completion of AC&I projects. Increased funding in FY 2009 is a result of additional project funding for Response Boat - Medium delivery around the country.

### Other rent

| 2007   | 2008    | 2009    | 2008 - 2009 |
|--------|---------|---------|-------------|
| Actual | Enacted | Request | Change      |
| \$ 142 | \$ 119  | \$ 157  | \$ 38       |

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Funding supports lease renewals for facilities (e.g., office space, waterfront/mooring facilities, equipment storage and maintenance facilities, etc.). Increased funding in FY 2009 is a result of additional project funding for Response Boat - Medium delivery around the country.

### Communication, utilities, and misc charges

| 2007   | 2008    | 2009    | 2008 - 2009 |
|--------|---------|---------|-------------|
| Actual | Enacted | Request | Change      |
| \$ 130 | \$ 109  | \$ 144  | \$ 35       |

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Specifically, funding includes data connectivity costs for Coast Guard shore facilities and cutters, utility costs, including shore facility utilities, cutter and boat fuel requirements, and postal costs. Increased funding in FY 2009 is a result of additional project funding for Response Boat - Medium delivery around the country.

**Advisory and assistance services**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 8,412  | \$ | 7,037   | \$ | 9,297   | \$ | 2,260       |

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. Specifically, funding supports contracted training and services to repair/maintain Coast Guard operational assets and facilities. Increased funding in FY 2009 is a result of additional project funding for Response Boat - Medium delivery around the country.

**Other services**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 2,110  | \$ | 1,765   | \$ | 2,332   | \$ | 567         |

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs in support of the President's Management Agenda and Program Assessment Rating Tool and other initiatives focused on improving performance of Coast Guard missions. Increased funding in FY 2009 is a result of additional project funding for Response Boat - Medium delivery around the country.

**Supplies and materials**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 5,800  | \$ | 4,852   | \$ | 6,410   | \$ | 1,558       |

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters and boats, supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies. Increased funding in FY 2009 is a result of additional project funding for Response Boat - Medium delivery around the country.

**Equipment**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 44,167 | \$ | 36,949  | \$ | 48,814  | \$ | 11,865      |

This object class covers the purchase of capitalized and non-capitalized assets. Increased funding in FY 2009 is a result of additional project funding for Response Boat - Medium delivery around the country.

**Land and structures**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 1,589  | \$ | 1,329   | \$ | 1,756   | \$ | 427         |

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease. Increased funding in FY 2009 is a result of additional project funding for Response Boat - Medium delivery around the country.

## Summary Justification and Explanation of Changes

### Travel

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 9,362  | \$ | 8,604   | \$ | 8,225   | \$ | (380)       |

Travel funds cover the travel costs of Coast Guard employees, while in an authorized travel status, either directly or by reimbursing the traveler. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

### Transportation of things

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 1,324  | \$ | 1,216   | \$ | 1,163   | \$ | (54)        |

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

### Other rent

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 2,846  | \$ | 2,616   | \$ | 2,500   | \$ | (115)       |

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Funding supports lease renewals for facilities (e.g. office space, waterfront/mooring facilities, equipment storage and maintenance facilities, etc.). Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

### Communication, utilities, and misc charges

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 2,604  | \$ | 2,394   | \$ | 2,288   | \$ | (106)       |

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Specifically, funding includes data connectivity costs for Coast Guard shore facilities, cutters, and aircraft, utility costs including shore facility utilities and cutter, boat and aircraft fuel requirements, and postal costs. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

**Advisory and assistance services**

|  | 2007<br>Actual |    | 2008<br>Enacted |    | 2009<br>Request |    | 2008 - 2009<br>Change |

|  | 2007<br>Actual |    | 2008<br>Enacted |    | 2009<br>Request |    | 2008 - 2009<br>Change |
|--|----------------|----|-----------------|----|-----------------|----|-----------------------|
|  | \$ 42,261      | \$ | 38,842          | \$ | 37,128          | \$ | (1,714)               |

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs in support of the President's Management Agenda and Program Assessment Rating Tool and other initiatives focused on improving performance of Coast Guard missions. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

**Supplies and materials**

|  | 2007<br>Actual |    | 2008<br>Enacted |    | 2009<br>Request |    | 2008 - 2009<br>Change |
|--|----------------|----|-----------------|----|-----------------|----|-----------------------|
|  | \$ 116,165     | \$ | 106,765         | \$ | 102,054         | \$ | (4,711)               |

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters, boats, aircraft, and supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

**Equipment**

|    | 2007    |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|---------|----|---------|----|---------|----|-------------|
|    | Actual  |    | Enacted |    | Request |    | Change      |
| \$ | 884,557 | \$ | 812,980 | \$ | 756,110 | \$ | (56,870)    |

This object class covers the purchase of capitalized and non-capitalized assets. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

**Land and structures**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 31,823 | \$ | 29,248  | \$ | 27,957  | \$ | (1,290)     |

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

## Summary Justification and Explanation of Changes

### Travel

| 2007   | 2008    | 2009    | 2008 - 2009 |
|--------|---------|---------|-------------|
| Actual | Enacted | Request | Change      |
| \$ 40  | \$ 110  | -       | \$ (110)    |

Travel funds cover the travel costs of Coast Guard employees, while in an authorized travel status, either directly or by reimbursing the traveler. There are no requests for Aircraft projects in FY09 and so no funding for this item.

### Transportation of things

| 2007   | 2008    | 2009    | 2008 - 2009 |
|--------|---------|---------|-------------|
| Actual | Enacted | Request | Change      |
| \$ 6   | \$ 16   | -       | \$ (16)     |

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. Specifically, funding supports the shipment of military member's household goods in conjunction with Permanent Change of Station (PCS) moves. There are no requests for Aircraft projects in FY09 and so no funding for this item.

### Other rent

| 2007   | 2008    | 2009    | 2008 - 2009 |
|--------|---------|---------|-------------|
| Actual | Enacted | Request | Change      |
| \$ 12  | \$ 33   | -       | \$ (33)     |

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Funding supports lease renewals for facilities (e.g. office space, waterfront/mooring facilities, equipment storage and maintenance facilities, etc.) There are no requests for Aircraft projects in FY09 and so no funding for this item.

### Communication, utilities, and misc charges

| 2007   | 2008    | 2009    | 2008 - 2009 |
|--------|---------|---------|-------------|
| Actual | Enacted | Request | Change      |
| \$ 11  | \$ 31   | -       | \$ (31)     |

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Specifically, funding includes data connectivity costs for Coast Guard shore facilities and aircraft, utility costs including shore facility utilities and aircraft fuel requirements, and postal costs. There are no requests for Aircraft projects in FY09 and so no funding for this item.

**Advisory and assistance services**

|  | 2007<br>Actual |     | 2008<br>Enacted |       | 2009<br>Request |   | 2008 - 2009<br>Change |
|--|----------------|-----|-----------------|-------|-----------------|---|-----------------------|
|  | \$             | 720 | \$              | 1,979 | \$              | - | \$ (1,979)            |

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. Specifically, funding supports contracted training and services to repair/maintain Coast Guard operational assets and facilities. There are no requests for Aircraft projects in FY09 and so no funding for this item.

**Other services**

|  | 2007<br>Actual |     | 2008<br>Enacted |     | 2009<br>Request |   | 2008 - 2009<br>Change |
|--|----------------|-----|-----------------|-----|-----------------|---|-----------------------|
|  | \$             | 181 | \$              | 497 | \$              | - | \$ (497)              |

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs is support of the President's Management Agenda and Program Assessment Rating Tool and other initiatives focused on improving performance of Coast Guard missions. There are no requests for Aircraft projects in FY09 and so no funding for this item.

**Supplies and materials**

|  | 2007<br>Actual |     | 2008<br>Enacted |       | 2009<br>Request |   | 2008 - 2009<br>Change |
|--|----------------|-----|-----------------|-------|-----------------|---|-----------------------|
|  | \$             | 497 | \$              | 1,365 | \$              | - | \$ (1,365)            |

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters, boats, aircraft, and supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies. There are no requests for Aircraft projects in FY09 and so no funding for this item.

**Equipment**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 3,782  | \$ | 10,393  | \$ | -       | \$ | (10,393)    |

This object class covers the purchase of capitalized and non-capitalized assets. There are no requests for Aircraft projects in FY09 and so no funding for this item.

**Land and structures**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 136    | \$ | 374     | \$ | -       | \$ | (374)       |

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease. There are no requests for Aircraft projects in FY09 and so no funding for this item.

## Summary Justification and Explanation of Changes

### Travel

| 2007<br>Actual | 2008<br>Enacted | 2009<br>Request | 2008 - 2009<br>Change |
|----------------|-----------------|-----------------|-----------------------|
| \$ 743         | \$ 1,678        | \$ 719          | \$ (959)              |

Travel funds cover the travel costs of Coast Guard employees, while in an authorized travel status, either directly or by reimbursing the traveler. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

### Transportation of things

| 2007<br>Actual | 2008<br>Enacted | 2009<br>Request | 2008 - 2009<br>Change |
|----------------|-----------------|-----------------|-----------------------|
| \$ 105         | \$ 237          | \$ 102          | \$ (136)              |

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

### Other rent

| 2007<br>Actual | 2008<br>Enacted | 2009<br>Request | 2008 - 2009<br>Change |
|----------------|-----------------|-----------------|-----------------------|
| \$ 226         | \$ 510          | \$ 219          | \$ (291)              |

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Funding supports lease renewals for facilities (e.g. office space, waterfront/mooring facilities, equipment storage and maintenance facilities, etc.). Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

### Communication, utilities, and misc charges

| 2007<br>Actual | 2008<br>Enacted | 2009<br>Request | 2008 - 2009<br>Change |
|----------------|-----------------|-----------------|-----------------------|
| \$ 207         | \$ 467          | \$ 200          | \$ (267)              |

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

### Printing and reproduction

| 2007<br>Actual | 2008<br>Enacted | 2009<br>Request | 2008 - 2009<br>Change |
|----------------|-----------------|-----------------|-----------------------|
| \$ 0           | \$ 1            | \$ 0            | \$ (1)                |

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. Funding includes charges associated with publication of Coast Guard training manuals, operational instructions, reports and other Coast Guard directives.

**Advisory and assistance services**

|  | 2007<br>Actual |        | 2008<br>Enacted |        | 2009<br>Request |        | 2008 - 2009<br>Change |
|--|----------------|--------|-----------------|--------|-----------------|--------|-----------------------|
|  | \$             | 13,365 | \$              | 30,198 | \$              | 12,945 | \$ (17,253)           |

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

**Other services**

|  | 2007<br>Actual |       | 2008<br>Enacted |       | 2009<br>Request |       | 2008 - 2009<br>Change |
|--|----------------|-------|-----------------|-------|-----------------|-------|-----------------------|
|  | \$             | 3,353 | \$              | 7,575 | \$              | 3,247 | \$ (4,328)            |

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs is support of the President's Management Agenda and Program Assessment Rating Tool and other initiatives focused on improving performance of Coast Guard missions. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

**Supplies and materials**

|  | 2007<br>Actual |       | 2008<br>Enacted |        | 2009<br>Request |       | 2008 - 2009<br>Change |
|--|----------------|-------|-----------------|--------|-----------------|-------|-----------------------|
|  | \$             | 9,215 | \$              | 20,822 | \$              | 8,926 | \$ (11,896)           |

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters, boats, aircraft, and supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

**Equipment**

|  | 2007<br>Actual |        | 2008<br>Enacted |         | 2009<br>Request |        | 2008 - 2009<br>Change |
|--|----------------|--------|-----------------|---------|-----------------|--------|-----------------------|
|  | \$             | 70,173 | \$              | 158,555 | \$              | 67,968 | \$ (90,587)           |

This object class covers the purchase of capitalized and non-capitalized assets. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

**Land and structures**

|  | 2007<br>Actual |       | 2008<br>Enacted |       | 2009<br>Request |       | 2008 - 2009<br>Change |
|--|----------------|-------|-----------------|-------|-----------------|-------|-----------------------|
|  | \$             | 2,525 | \$              | 5,704 | \$              | 2,445 | \$ (3,259)            |

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

## Summary Justification and Explanation of Changes

### Travel

| 2007<br>Actual | 2008<br>Enacted | 2009<br>Request | 2008 - 2009<br>Change |
|----------------|-----------------|-----------------|-----------------------|
| \$ 229         | \$ 1,206        | \$ 393          | \$ (812)              |

Travel funds cover the travel costs of Coast Guard employees, while in an authorized travel status, either directly or by reimbursing the traveler. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

### Transportation of things

| 2007<br>Actual | 2008<br>Enacted | 2009<br>Request | 2008 - 2009<br>Change |
|----------------|-----------------|-----------------|-----------------------|
| \$ 32          | \$ 170          | \$ 56           | \$ (115)              |

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

### Other rent

| 2007<br>Actual | 2008<br>Enacted | 2009<br>Request | 2008 - 2009<br>Change |
|----------------|-----------------|-----------------|-----------------------|
| \$ 70          | \$ 367          | \$ 120          | \$ (247)              |

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Funding supports lease renewals for facilities (e.g. office space, waterfront/mooring facilities, equipment storage and maintenance facilities, etc.). Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

### Communication, utilities, and misc charges

| 2007<br>Actual | 2008<br>Enacted | 2009<br>Request | 2008 - 2009<br>Change |
|----------------|-----------------|-----------------|-----------------------|
| \$ 64          | \$ 335          | \$ 109          | \$ (226)              |

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

### Advisory and assistance services

| 2007<br>Actual | 2008<br>Enacted | 2009<br>Request | 2008 - 2009<br>Change |
|----------------|-----------------|-----------------|-----------------------|
| \$ 4,114       | \$ 21,699       | \$ 7,081        | \$ (14,618)           |

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

**Other services**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 1,032  | \$ | 5,443   | \$ | 1,776   | \$ | (3,667)     |

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs in support of the President's Management Agenda and Program Assessment Rating Tool and other initiatives focused on improving performance of Coast Guard missions. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

**Supplies and materials**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 2,837  | \$ | 14,962  | \$ | 4,882   | \$ | (10,079)    |

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters, boats, aircraft, and supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

**Equipment**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 21,602 | \$ | 113,928 | \$ | 37,176  | \$ | (76,752)    |

This object class covers the purchase of capitalized and non-capitalized assets. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

**Land and structures**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 777    | \$ | 4,099   | \$ | 1,337   | \$ | (2,761)     |

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

| 42.0                                   | Insurance claims and indemnity                 | -             | -              | -              | -                  |
|  | <b>Total Other Objects</b>                     | <b>11,743</b> | <b>16,432</b>  | <b>500</b>     | <b>(82,220)</b>    |
|  | <b>Full Time Equivalents</b>                   | <b>619</b>    | <b>652</b>     | <b>-</b>       | <b>(652)</b>       |

Requesting the Acquisition, Construction and Improvement (AC&I) personnel account be transferred to the Operating Expenses (OE) appropriation (\$82.215 million transfer) in FY09. The successful and efficient execution of government acquisition programs depends upon careful management of contract administration. This funding transfer will significantly improve the Coast Guard's ability to successfully manage, oversee and administer Acquisition, Construction and Improvement (AC&I) contracts. The consolidation will allow the Coast Guard to build institutional competencies, surge acquisition expertise, streamline human resource and financial management functions and standardize human resource policies within DHS.

## I. Changes in Full-Time Equivalents

**U. S. Coast Guard**  
**Alteration of Bridges**

**I. Appropriation Overview**

**A. Mission Statement for Alteration of Bridges:**

The Coast Guard is not requesting funding for Alteration of Bridges in FY 2009. The alteration of unreasonably obstructive bridges ensures navigational safety and freedom of mobility to facilitate commerce, emergency response and U.S. Government operations, by providing sufficient clearances for the type of vessels that transit through the bridge. This appropriation reduces the risk of fatalities and collisions, prevents longer transit times, protects regional and national economies and facilitates response capabilities for emergency vessels and government vessels of the United States. It also deters increased waterway and highway/railway closures due to accidents.

**B. Budget Activities:**

This appropriation supports our Aids to Navigation mission.

**C. Budget Request Summary:**

The Coast Guard is not requesting funding for Alteration of Bridges in FY 2009.

| Total Change 2008-2009       | ...                 | ...        | <b>(\$16,000)</b> |

The Coast Guard does not request any funding for this activity in FY 2009.

#### **CURRENT SERVICES PROGRAM DESCRIPTION:**

##### FY 2007 Accomplishments:

- Florida Avenue Bridge across the Inner Harbor Canal in New Orleans, Louisiana: Completed alteration including all repairs due to the damages caused by Hurricane Katrina.
- Galveston Bridge across Gulf Intracoastal Waterway in Galveston, Texas: Entered final design stage.
- Chelsea Street Bridge in Boston, Massachusetts: Completed final design, all environmental documentation/clearances, and other required permits

##### FY08/FY09 Planned Accomplishments:

- Galveston Bridge across the Gulf Intracoastal Waterway in Galveston, Texas: Complete the final design, environmental documentation, and acquire necessary permits.
- CSXT Railroad Bridge across the Mobile River in Mobile, Alabama: Complete the Value Engineering redesign/modification to improve value or reduce the cost of the project.
- Canadian Pacific Railroad Bridge across the Upper Mississippi River at Lacrosse, Wisconsin: Continue design phase.

- The Coast Guard has deemed 30 bridges potential unreasonable obstructions to navigation. These bridges will require a Truman-Hobbs eligibility detailed investigation to definitively determine whether they are unreasonably obstructive.

The Alteration of Bridges program funds the Federal government's share of the costs for altering or removing bridges determined to be obstructions to navigation. Under the Federal-Aid to Highways Program, obstructive highway bridges may be eligible for funding. Under the Truman-Hobbs Act of 1940 (33 U.S.C. 511et seq.), the Federal government shares, with the bridge owner, the cost of altering railroad and publicly-owned highway bridges obstructing the free movement of vessel traffic.

### PPA Mission Statement

The alteration of unreasonably obstructive bridges ensures navigational safety and freedom of mobility to facilitate commerce, emergency response and U.S. Government operations, by providing sufficient clearances for the type of vessels that transit through the bridge. This appropriation reduces the risk of fatalities and allisions, prevents longer transit times, negative impact on regional and national economies, negative impact on response capabilities for emergency vessels and government vessels of the United States, and avoids increased waterway and highway/railway closures due to accidents.

## Summary Justification and Explanation of Changes

**U. S. Coast Guard**  
**Research, Development, Test and Evaluation**

**I. Appropriation Overview**

**A. Mission Statement for Research, Development, Test and Evaluation:**

The Coast Guard requests \$16.000 million and 102 FTE in FY 2009, a decrease of \$9.000 million from the \$25.000 million FY 2008 enacted. Research, Development, Test and Evaluation (RDT&E) funding allows the Coast Guard to sustain critical missions by the Department of Homeland Security and Department of Defense. The RDT&E funding requested supports all 11 statutorily-mandated Coast Guard mission programs. These mission-programs in turn directly support the Coast Guard's role as the principal Federal agency for ensuring maritime safety, security and environmental stewardship.

**B. Budget Activities:**

RDT&E projects provide a direct mission benefit in many areas, including: Search and Rescue (SAR), Homeland Security, Marine Safety, Aids to Navigation (AtoN), Ice Operations, Marine Environmental Protection (MEP), Living Marine Resources (LMR), Drug Interdiction and Other Law Enforcement.

**C. Budget Request Summary:**

The Coast Guard requests \$16.000 million in FY 2009 to perform technology assessments/gap analyses of alternatives that meet requirements in the early stages of the acquisition process, to develop technologies and systems to support all mission areas, and to improve operational presence and response. Specific projects include developing advanced analytical techniques to support the acquisition process, building methods and procedures for mass rescue operations at sea, developing new technology for the recovery of oil and hazardous material in extreme cold weather conditions and developing standards for the approval of new aquatic nuisance species prevention systems. Funding also supports program operations and maintenance costs (e.g., salaries, facility rent, utilities, etc.) at the Coast Guard Research and Development Center.

The Coast Guard requests \$16.000 million for this activity. This is a decrease of \$9.000 million from the FY 2008 enacted.

#### **CURRENT SERVICES PROGRAM DESCRIPTION:**

The Coast Guard RDT&E Program supports Coast Guard missions through the development of technologies and systems which enhance Maritime Domain Awareness (MDA), improve operational presence and response and reduce risk in acquisition programs by providing modeling and simulation as well as test and evaluation services.

FY 2007 accomplishments include:

- Developed and evaluated at-sea biometrics system prototype for migrant identification.
- Developed new approach for estimating and improving survivability of distressed mariners.
- Developed new equipment to recover non-buoyant submerged oils that have been spilled into waterways.

FY 2008 funding requirements for the RDT&E Program are grouped into two categories: Coast Guard Mission Research and Operations & Maintenance (e.g., salaries, facility rent, utilities, etc.)

With FY09 funding, the Coast Guard RDT&E Program will conduct MDA research and development in the following areas: extended Situational Awareness out to 100 nautical miles from shore; net-centric data sharing and information security for maritime domain awareness information across agency boundaries to support publish-and-subscribe data

sharing in a future need-to-share environment; portable port security deterrence and detection systems for air, surface, and underwater attack scenarios; and improved boarding team member and support unit communication and connectivity technologies. In addition, the Coast Guard RDT&E Program will conduct legacy mission projects in the following areas: Search and Rescue, Marine Safety, Aids to Navigation, Aquatic Nuisance Species and Oil and Hazardous Material Spill Response.

With the RDT&E Program's integration into the Coast Guard Acquisitions Directorate, there is an increased focus on integrating RDT&E expertise and services into the pre-acquisition process across all major and non-major acquisition projects. The RDT&E Program offers risk-reduction services in the areas of requirements generation, test and evaluation (T&E), modeling and simulation (M&S), technology maturity assessment, technology insertion and alternatives analysis.

### **Projects Planned for FY 2008**

#### Marine Safety

- Search and Rescue Technology  
Mass Rescue Operations (MRO) are defined as civil search and rescue activities characterized by the need for immediate assistance to a large number of people in distress, such that the capabilities normally available to search and rescue authorities are inadequate. The Coast Guard needs sound techniques and procedures to effectively conduct MRO. In addition, this project will expand the knowledge of survival data and the quality of environmental data to support SAR guidance and decision support tools.

#### Protection of Natural Resources

- Oil Spill Response  
Continue research to develop systems and operational processes to address performance gaps in heavy, viscous oil recovery. Existing Coast Guard systems are inadequate for heavy, viscous oil recovery. This includes both emulsified oils floating on the surface and oils heavier than water that sink to the bottom. Regardless of whether the oil is on the surface, neutrally buoyant in the water column or sitting on the bottom, the ability to recover heavy, viscous oil prior to its impact on the coastline remains an elusive capability. The underwater environment poses major problems including poor visibility, difficulty tracking oil spill movement, colder temperatures, problems with containment methods and technologies and the electric or mechanical recovery equipment's interaction with water.
- Aquatic Nuisance Species Control  
Develop a means to ascertain the efficacy of Ballast Water Treatment systems. Reduce the number of incidental introductions of aquatic nuisance species into

U.S. waters during normal ship operations. Develop a regulation for control of non-indigenous species without causing undue hardship to the shipping industry.

## Homeland Security

- Command Centers  
Examine and understand the impact of command center resource investments on Coast Guard mission performance. Develop and assess operational concepts that support the sector command center and understand how variability and command center needs will affect future systems. Identify the impact of not co-locating the situation units with the sector command center.
- Port Security and Law Enforcement  
Develop tools to support boarding teams, compel compliance of people and vessels and understand how new explosive detection technologies can be employed in the maritime environment.

## Pre-Acquisition Support

- Technology Assessment  
Perform technology assessments/gap analyses of alternatives that meet requirements in the early stages of the acquisition process. The benefit of these assessments is an evaluation of the risk of the various alternatives. Unmanned Aerial Systems (UAS): Priority research will be conducted to determine the best unmanned aerial system to operate in conjunction with the National Security Cutter (NSC). Heartland Waterway Vessel (HWV): In-kind resources will contribute to a joint financial venture between DHS S&T, the Coast Guard and industry to investigate viability and applicability of emerging technologies for reduced emissions, alternative propulsion, “green” technologies and modular design in order to support the future major-acquisition recapitalization and multi-mission modernization of inland-river and Great Lakes cutter fleets. Polar Research:  
Investigate the Polar environment and technological issues associated with possible future expansion of Coast Guard operations in the Arctic and other extremely cold climate areas. Analyze the peculiarities of performing Coast Guard missions in such climates and develop new technologies and/or modify existing technologies to address the disparities between normal and extremely cold climate operations, allowing the Coast Guard to support the acquisition and management of resources important to national security across all Coast Guard mission areas. To the extent possible, collaborate with DHS S&T Universities Program and the Center of Excellence for Maritime, Island, and Extreme/Remote Environment Security.

## Projects Planned for FY 2009

### Marine Safety

- Search and Rescue Technology  
Continue research addressing the Coast Guard's need for methods and procedures to rescue large numbers of people in a SAR incident. Mass Rescue Operations (MRO) are defined as a civil search and rescue activity characterized by the need for immediate assistance to a large number of persons in distress, such that the capabilities normally available to search and rescue authorities are inadequate.

### Protection of Natural Resources

- Oil Spill Response  
Continue research to develop systems and operational processes to address performance gaps in heavy, viscous oil recovery, including detection of oil during low-visibility situations. This includes both emulsified oils floating on the surface and oils heavier than water that sink to the bottom. Regardless of whether the oil is on the surface, neutrally buoyant in the water or sitting on the bottom, the ability to recover heavy, viscous oil prior to its impact on the coastline remains a challenge. New initiatives will address the challenges posed by the underwater environment including: poor visibility, difficulty tracking oil spill movement, colder temperatures, limited containment methods and technologies and the electric or mechanical recovery equipment compatibility with water.
- Aquatic Nuisance Species Control  
Develop a means to ascertain the efficacy of Aquatic Nuisance Prevention measures on "non-ballast water" systems. Develop new initiatives to reduce the number of incidental introductions of aquatic nuisance species into U.S. waters during normal ship operations. Use requirements analysis and modeling and simulation to develop technical input into regulations for nuisance species control without causing undue burden to the shipping industry.

### Homeland Security

- Improved Maritime Domain Awareness  
Investigate technologies such as High Altitude Long Endurance UAV's to extend maritime domain awareness/coordinate long range operations. Provide technologies (e.g. biometrics, wireless boarding team connectivity) to support adaptive force packages. Investigate net-centric data sharing and information security for maritime domain awareness information across agency boundaries to support publish-and-subscribe data sharing in a future need-to-share environment.

## Pre-Acquisition Support

- Technology Assessment  
Apply the RDT&E Program's resident expertise to the pre-acquisition phase of major acquisitions to determine technology maturity and application. Pre-acquisition functions include: Market Surveys, Gap Analysis, Business Case, Development, User Wants & Needs Generation, Requirements Validation Cost Analysis, Modeling & Simulation, Prototyping & Field Tests, Trade-Off Studies, Human Factors Analysis, Alternatives Analyses, Proposal Review, and Technology Readiness Assessments. The benefit of conducting these analyses and assessments is an evaluation of the risk of the various alternatives and a resulting methodology for managing acquisition risk. Use the Mosaic system, a requirements generation tool developed by the Research and Development Center, to support Coast Guard resource allocation analysis. Heartland Waterway Vessel (HWV): Continue joint financial venture between S&T, the Coast Guard, and industry to investigate viability and applicability of emerging technologies for reduced emissions, alternative propulsion, "green" technologies and modular design in order to support the major acquisition future recapitalization and multi-mission modernization of inland, river, and Great Lakes cutter fleets.
- Modeling & Simulation (M&S)  
Adapt the RDT&E Program's resident M&S expertise to the many on-going acquisition projects and develop, adapt, and/or maintain effective, agile M&S tools to support the decision-making processes of the operational sponsors and acquisition project managers. For sponsors, M&S aids in the development of the proper asset mix and improves and validates user requirements. In acquisitions, M&S reduces the cost of design, development, testing and evaluation throughout the acquisition cycle by harnessing software to perform labor-intensive tasks, freeing resources which would otherwise be required.

#### **IV. Program Justification of Changes**

**Not Applicable**

## **V. Exhibits and Other Supporting Materials**

### **A. Justification of Proposed Legislative Language**

**Department of Homeland Security  
U. S. Coast Guard  
Justification of Proposed Changes in Research, Development, Test and Evaluation  
Appropriation Language**

For necessary expenses for applied scientific research, development, test, and evaluation; and for maintenance, rehabilitation, lease, and operation of facilities and equipment; as authorized by law; [\$25,000,000] **\$16,000,000** to remain available until expended, of which \$500,000 shall be derived from the Oil Spill Liability Trust Fund to carry out the purposes of section 1012(a)(5) of the Oil Spill Pollution Act of 1990 (33 U.S.C. 2712(a)(5)): *Provided*, that there may be credited to and used for the purposes of this appropriation funds received from State and local governments, other public authorities, private sources, and foreign countries, for expenses incurred for research, development, test and evaluation. (*Department of Homeland Security Appropriations Act, 2008.*)

**Explanation of Changes:**

No substantive changes proposed.

**B. FY 2008 to FY 2009 Budget Change**

\*The Coast Guard manages the military workforce by end strength, not FTE. The military FTE represented in these numbers are monthly end strengths averaged over the year.

\*\*The military pay and allowances averages include the costs associated with all pay and allowances paid to a particular paygrade, including: Basic Pay, Basic Allowance for Housing, Basic Allowance for Subsistence, Federal Insurance Contributions, Incentive/Special Pays, Clothing Allowances, Cost-of-Living Allowances and Selective Re-enlistment Bonus payments. The term "Officer" includes Chief Warrant Officers, Cadets and Officer Candidates.

**PPA Mission Statement**

Research, Development, Test and Evaluation (RDT&E) will allow the Coast Guard to maintain its non-homeland security research and development capability, while also partnering and leveraging initiatives identified by the Department of Homeland Security (DHS) and the Department of Defense (DOD) for efforts beneficial to the Coast Guard, DHS, and DOD for homeland security missions.

## Summary Justification and Explanation of Changes

### Salaries and Benefits

|  | 2007<br>Actual |    | 2008<br>Enacted |    | 2009<br>Request |    | 2008 - 2009<br>Change |
|--|----------------|----|-----------------|----|-----------------|----|-----------------------|
|  | \$ 10,497      | \$ | 10,927          | \$ | 11,429          | \$ | 502                   |

FY 2009 request includes funding for the proposed pay raise (currently predicted at 3.4% for military and 2.9% for civilians), medical benefits, other mandatory personnel entitlements.

### Travel

|  | 2007<br>Actual |    | 2008<br>Enacted |    | 2009<br>Request |    | 2008 - 2009<br>Change |
|--|----------------|----|-----------------|----|-----------------|----|-----------------------|
|  | \$ 614         | \$ | 715             | \$ | 353             | \$ | (362)                 |

Transportation of things includes all costs of the care of such things while in process of being transported and other services incident to the transportation of things. Reduced funding in FY 2009 is a result of shifts in project funding and their progress.

### Transportation of things

|  | 2007<br>Actual |    | 2008<br>Enacted |    | 2009<br>Request |    | 2008 - 2009<br>Change |
|--|----------------|----|-----------------|----|-----------------|----|-----------------------|
|  | \$ 81          | \$ | 94              | \$ | 47              | \$ | (47)                  |

Transportation of things includes all costs of the care of such things while in process of being transported and other services incident to the transportation of things. Specifically, funding provides for shipment of goods, equipment, supplies and materials to support completion of RDT&E projects. Reduced funding in FY 2009 is a result of shifts in project funding for technology demonstrations, testing and evaluations and their progress.

### GSA rent

|  | 2007<br>Actual |    | 2008<br>Enacted |    | 2009<br>Request |    | 2008 - 2009<br>Change |
|--|----------------|----|-----------------|----|-----------------|----|-----------------------|
|  | \$ -           | \$ | -               | \$ | 915             | \$ | 915                   |

Increased funding in FY 2009 is a result of the Research and Development Center's move from Groton, CT to a GSA lease in New London, CT scheduled for December 2009.

### Other rent

|  | 2007<br>Actual |    | 2008<br>Enacted |    | 2009<br>Request |    | 2008 - 2009<br>Change |
|--|----------------|----|-----------------|----|-----------------|----|-----------------------|
|  | \$ 514         | \$ | 599             | \$ | 238             | \$ | (361)                 |

Reduced funding in FY 2009 is a result of the Research and Development Center's move from Groton, CT to a GSA lease in New London, CT scheduled for December 2008.

**Communication, utilities, and misc charges**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 532    | \$ | 620     | \$ | 306     | \$ | (314)       |

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Reduced funding in FY 2009 is a result of shifts in project funding for technology demonstrations, testing and evaluations and their progress.

**Printing and reproduction**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 15     | \$ | 17      | \$ | 9       | \$ | (8)         |

Reduced funding in FY 2009 is a result of shifts in project funding for technology demonstrations, testing and evaluations and their progress.

**Advisory and Assistance**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 475    | \$ | 553     | \$ | 273     | \$ | (280)       |

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. Reduced funding in FY 2009 is a result of shifts in project funding for technology demonstrations, testing and evaluations and their progress.

**Other services**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 30     | \$ | 35      | \$ | 17      | \$ | (18)        |

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Reduced funding in FY 2009 is a result of shifts in project funding for technology demonstrations, testing and evaluations and their progress.

**Purchases of goods & svcs. from gov't accounts**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 28     | \$ | 33      | \$ | 16      | \$ | (17)        |

Reduced funding in FY 2009 is a result of shifts in project funding for technology demonstrations, testing and evaluations and their progress.

**Operation & maintenance of facilities**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 48     | \$ | 56      | \$ | 28      | \$ | (28)        |

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. Specifically, funds support contracted janitorial, landscaping, security, and environmental services (e.g. hazardous materials disposal) associated with the operation of Coast Guard facilities.

**Research and development**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 3,894  | \$ | 11,952  | \$ | 1,832   | \$ | (10,120)    |

Change results from an increase in advanced technology demonstrations and test and evaluations in support of Coast Guard acquisitions. Reduced funding in FY 2009 is a result of shifts in project funding for technology demonstrations, testing and evaluations and their progress.

**Operation and maintenance of equipment**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 27     | \$ | 28      | \$ | 13      | \$ | (15)        |

Reduced funding in FY 2009 is a result of shifts in project funding for technology demonstrations, testing and evaluations and their progress.

**Supplies and materials**

|    | 2007   |    | 2008    |    | 2009    |    | 2008 - 2009 |
|----|--------|----|---------|----|---------|----|-------------|
|    | Actual |    | Enacted |    | Request |    | Change      |
| \$ | 1,693  | \$ | 1,972   | \$ | 524     | \$ | (1,448)     |

Reduced funding in FY 2009 is a result of shifts in project funding for technology demonstrations, testing and evaluations and their progress.

**U. S. Coast Guard**  
**Medicare-Eligible Retiree Health Care Fund Contribution**

**I. Appropriation Overview**

**A. Mission Statement for the Health Care Fund Contribution:**

The Coast Guard requests \$257.305 million in FY 2009, a decrease of \$14.806 million over the FY 2008 enacted level. The Medicare-Eligible Retiree Health Care Fund Contribution (HFC) will provide funding to maintain the cost of accruing the military Medicare-eligible health benefit contributions to the Department of Defense Medicare-Eligible Retiree Health Care Fund. Contributions are for future Medicare-eligible retirees currently serving on active duty in the Coast Guard, retiree dependents, and their potential survivors. The authority for the Coast Guard to make this payment on an annual basis was provided in P. L. 108-375, the 2005 Defense Appropriations Act. While this expenditure requires no annual action by Congress, it is considered to be discretionary spending.

**B. Budget Activities:**

Although there are no budget activities directly related to providing this benefit to Active Duty personnel and their dependents, this appropriation supports the personal health and well-being of every uniformed member of the Coast Guard.

**C. Budget Request Summary:**

The Coast Guard estimate of \$257.305 million will be paid to the DOD Medicare-Eligible Retiree Health Care Fund in FY 2009 to support the benefits outlined above. The total adjustment to the base is \$14.806 million.

### PPA Mission Statement

The Medicare-Eligible Retiree Health Care Fund Contribution (HFC) will provide funding to maintain the cost of accruing the military Medicare-eligible health benefit contributions to the Department of Defense Medicare-Eligible Retiree Health Care Fund. Contributions are for future Medicare-eligible retirees, retiree dependents and survivors in the Coast Guard.

## Summary Justification and Explanation of Changes

### Salaries and Benefits

|  | 2007<br>Actual |    | 2008<br>Enacted |    | 2009<br>Request |    | 2008 - 2009<br>Change |
|--|----------------|----|-----------------|----|-----------------|----|-----------------------|
|  | \$ 278,704     | \$ | 272,111         | \$ | 257,305         | \$ | (14,806)              |

Salaries and Benefits include the annual contribution to the military Medicare-Eligible Retiree Health Care Fund. The FY 2009 request includes a decrease of \$14.806 million.

**U. S. Coast Guard**  
**Retired Pay**

**I. Appropriation Overview**

**A. Mission Statement for Retired Pay:**

The Coast Guard requests \$1.237 million in FY 2009, an increase of \$52.025 million over the FY 2008 enacted level. Retired Pay (RP) will provide payments as identified under the Retired Serviceman's Family Protection and Survivor Benefits Plans as well as other retired personnel entitlements identified under the National Defense Authorization Act. It also provides payments for medical care of retired personnel and their dependents.

**B. Budget Activities:**

Although there are no budget activities directly related to providing this benefit to Active Duty personnel and their dependents, it ensures the U. S. Government keeps faith with its commitments to Coast Guard retirees and their dependents.

**C. Budget Request Summary:**

The Coast Guard requests \$1.237 million in FY 2009 to support the benefits outlined above. The Coast Guard also requests that any FY 2009 funding remain available until expended. This is consistent with the enacted Consolidated Appropriations Act of 2008 (H.R. 2764). The Retired Pay appropriation is scored as a mandatory appropriation in the budget process.

The Coast Guard requests \$1.237 million for this activity. This is an increase of \$52.025 million over the FY 2008 enacted.

#### **CURRENT SERVICES PROGRAM DESCRIPTION:**

Retired Pay will provide payments as identified under the Retired Serviceman's Family Protection and Survivor Benefits Plans as well as other retired personnel entitlements identified under the National Defense Authorization Act. It also provides payments for medical care of retired personnel and their dependents.

### PPA Mission Statement

Retired Pay (RP) will provide payments as identified under the Retired Serviceman's Family Protection and Survivor Benefits Plans, payments for career status bonuses, concurrent receipts and combat related special compensation identified under the Nation.

## Summary Justification and Explanation of Changes

### Salaries and Benefits

|  | 2007       | 2008       | 2009         | 2008 - 2009 |
|--|------------|------------|--------------|-------------|
|  | Actual     | Enacted    | Request      | Change      |
|  | \$ 923,400 | \$ 988,790 | \$ 1,045,047 | \$ 56,257   |

Requested increase accounts for cost-of-living adjustments for all retirement and most survivor annuities as well as entitlement benefits authorized by the National Defense Authorization Act.

### Medical care

|  | 2007       | 2008       | 2009       | 2008 - 2009 |
|--|------------|------------|------------|-------------|
|  | Actual     | Enacted    | Request    | Change      |
|  | \$ 158,444 | \$ 195,930 | \$ 191,698 | \$ (4,232)  |

Decrease accounts for slightly lower projections for medical benefits. Once a member becomes eligible for Medicare, the Medicare-Eligible Retiree Health Care Fund (HFC) is responsible for these benefits.

**U. S. Coast Guard**  
**Boating Safety**

**I. Appropriation Overview.**

**A. Mission Statement for Boating Safety:**

The Coast Guard anticipates a program level of \$125.461 million and 8 FTE in FY 2009, a decrease of \$7.462 million under the FY 2008 enacted level of \$132.923 million. The Boating Safety (BS) program is designed, through preventive means, to minimize the loss of life, personal injury, property damage and environmental impact associated with the use of recreational boats in order to maximize safe use and enjoyment of U.S. waterways public. The program directly supports the Coast Guard's continuing and enduring role to ensure maritime safety. In its role as the designated National Recreational Boating Safety (RBS) Program Coordinator, the Coast Guard is charged with managing dedicated user fee funding to support the National Recreational Boating Safety Program provided from the Sport Fish Restoration and Boating Trust Fund (formerly Aquatic Resources Trust Fund). Under the provisions of the Sportfishing and Recreational Boating Safety Act of 2005 (Subtitle A, Title X, P.L. 109-59), the Coast Guard receives a percentage distribution of total trust fund receipts from the preceding fiscal year (i.e. FY09 funding will be a percentage of FY08 trust fund receipts), and a portion of the funds drawn out of the Boat Safety Account of the trust fund.

**B. Budget Activities:**

Boat Safety supports our Marine Safety mission and the Coast Guard's enduring maritime safety role.

**C. Budget Request Summary:**

The FY 2009 budget provides the anticipated amount that would be available from the trust fund for boating safety based on current estimates of FY 2008 trust fund receipts from the Office of Tax Analysis at the Department of the Treasury (adjusted to reflect amendments of current law enacted in P.L. 109-59). The estimated total distribution from the trust fund for boating safety in FY 2009 is \$125.461 million. Of that amount, \$5.500 million is available for use by the Coast Guard to coordinate and execute new and enhanced National RBS Program activities. The balance is authorized for the State RBS Federal Financial Assistance Program established by 46 U.S.C. 13101, et seq., minus not more than five percent for national boating safety activities of national non-profit public service organizations, and not more than two percent for Coast Guard expense to administer State RBS programs. This represents a \$7.462 million adjustment to the base from the FY 2008 enacted level.

Budget authority for personnel to conduct investigations and activities related to State recreational boating safety programs is not provided by regular, annual Coast Guard appropriations. It is available or transferred to the Coast Guard from trust accounts in the

Department of Treasury. While these amounts are available until expended, they are limited as to purpose and amount.

The FY09 Boating Safety budget includes 8 FTE for administering the Coast Guard RBS program. These FTE are displayed as reimbursable FTE within the Coast Guard Operating Expense (OE) appropriation in previous years.

The Coast Guard requests \$125.461 million for this activity. This is a decrease of \$7.462 million under the FY 2008 enacted.

#### **CURRENT SERVICES PROGRAM DESCRIPTION:**

The Boating Safety program is designed, through preventive means, to minimize the loss of life, personal injury, property damage and environmental impact associated with the use of recreational boats in order to maximize safe use and enjoyment of public U.S. waterways. The program directly supports the Coast Guard's continuing and enduring role to ensure maritime safety. In its role as the designated National Recreational Boating Safety (RBS) Program Coordinator, the Coast Guard is charged with managing dedicated user fee funding to support the National Recreational Boating Safety Program provided from the Sport Fish Restoration and Boating Trust Fund (formerly Aquatic Resources Trust Fund). Under the provisions of the Sportfishing and Recreational Boating Safety Act of 2005 (Subtitle A, Title X, P.L. 109-59), the Coast Guard receives a percentage distribution of total trust fund receipts from the preceding fiscal year (i.e. FY09 funding will be a percentage of FY08 trust fund receipts), and a portion of the funds drawn out of the Boat Safety Account of the trust fund.

FY 2007 planned accomplishments include:

- Development of new National Boating Survey to establish key new measurement for Program's effectiveness and capture other vital data for effective planning purposes.
- Implementation of measures of effectiveness of key public awareness projects to enhance voluntary life jacket wear rates.

- Initial allocation of resources to key strategies/projects identified in the Program's Strategic Plan, thus enhancing the following:
  - knowledge and certification of recreational vessel operators.
  - wearing of life jackets to prevent drowning.
  - other areas that will significantly reduce recreational boating casualties.
- Achieve significant participation from the States during the implementation of the Vessel Identification System.
- Revise and update non-profit grant application procedures and guidance.

FY2008 funds requested will support:

- Achieving the target performance goal of 3,959 casualties or fewer through the following measures:
  - Enacting a legislative change proposal provides the USCG authority to require proof of proficiency for select recreational boat operators.
  - Conducting approximately 2,000 recreational boat manufacturer factory visits to check compliance with manufacturing standards, thereby enhancing compliance and safety.
  - Testing approximately 50 new recreational boats for compliance with flotation and capacity regulations, thereby enhancing compliance and safety.
  - Conducting national outreach efforts in conjunction with the National Safe Boating Council and grantee to promote life jacket wear. If voluntary measures to increase life jacket usage are unsuccessful, initiate mandatory requirements for life jacket usage in high risk areas.
  - Increasing boating safety law enforcement, education and search and rescue efforts by the States through availability of additional recreational boating safety grant funds.
  - Revising and updating boat accident reporting requirements and related forms.
  - Progressing in adopting regulations that: (1) require life jacket wear in high-risk recreational boating activities (i.e., operating boats less than 21 feet in length); (2) mandate recreational vessel proof of operator proficiency standards; (3) require installation and wear of emergency cut-off devices (mechanical or wireless) on vessels under a certain length; (4) require operators to turn off the vessel when a swimmer is in close proximity to the stern of the vessel; (5) revise and update requirements for state numbering systems and boat accident reporting.

FY2009 funds requested will support:

- Implementation of additional elements of the "You're in Command. Boat Responsibly!" awareness initiative.
- Focusing on assuring manufacturer compliance with boat construction standards (i.e., identifying boats and manufacturers whose boats are involved in accidents where carbon monoxide, flotation, capacity, or fuel systems are causal factors).
- Conducting observation studies that measure life jacket wear and initiatives to measure the effectiveness of awareness campaigns in increasing life jacket wear rates in specific areas of the country.
- Continuing progress in adopting, or finalizing, regulations that: (1) require life jacket wear in high-risk recreational boating activities (i.e., operating boats less

than 21 feet in length); (2) mandate recreational vessel operator proficiency standards; (3) require installation and wear of emergency cut-off devices (mechanical or wireless) on vessels under a certain length; (4) require operators to turn off the vessel when a swimmer is in close proximity to the stern of the vessel; (5) revise and update requirements for state numbering systems and boat accident reporting.

- A Boating Under the Influence initiative to reduce the number of casualties where the use of alcohol by a boat's occupants was a cause of the accident.
- An operator compliance initiative to reduce deaths due to navigation rules violations (i.e., Reckless/Negligent Operation, Excessive Speed, Improper Lookout, Operator Inattention, and Rules of the Road).
- Development and implementation of State program approval systems (i.e., adequate enforcement/sufficient patrol, adequate education, numbering system, casualty reporting system).

### PPA Mission Statement

The Boating Safety (BS) program is designed, through preventive means, to minimize the loss of life, personal injury, property damage and environmental impact associated with the use of recreational boats in order to maximize safe use and enjoyment of public U.S. waterways. The program directly supports the Coast Guard's continuing and enduring role to ensure maritime safety. In its role as the designated National Recreational Boating Safety (RBS) Program Coordinator, the Coast Guard is charged with managing dedicated user fee funding to support the National Recreational Boating Safety Program provided from the Sport Fish Restoration and Boating Trust Fund (formerly Aquatic Resources Trust Fund). Under the provisions of the Sportfishing and Recreational Boating Safety Act of 2005 (Subtitle A, Title X, P.L. 109-59), the Coast Guard receives a percentage distribution of total trust fund receipts from the preceding fiscal year (i.e. FY09 funding will be a percentage of FY08 trust fund receipts), and a portion of the funds drawn out of the Boat Safety

## Summary Justification and Explanation of Changes

### Salaries and Benefits

|  | 2007<br>Actual |   | 2008<br>Enacted |     | 2009<br>Request |       | 2008 - 2009<br>Change |
|--|----------------|---|-----------------|-----|-----------------|-------|-----------------------|
|  | \$             | - | \$              | 945 | \$              | 1,003 | \$ 58                 |

The FY 2009 request includes funding for the proposed pay raise (currently predicted at 2.9%), medical benefits, other mandatory personnel entitlements.

### Transportation and Logistics

|  | 2007<br>Actual |     | 2008<br>Enacted |     | 2009<br>Request |     | 2008 - 2009<br>Change |

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Increased funding in FY 2009 is a result of increased costs to carry out and coordinate new and enhanced National Recreational Boating Safety (RBS) Program activities.

### Grants, Subsidies and Contributions

## **U. S. Coast Guard** **Oil Spill Recovery**

### **I. Trust Fund Account Overview**

#### **A. Mission Statement for Oil Spill Recovery:**

The Coast Guard estimates that expenditures from the Oil Spill Recovery fund will total \$149.095 million in FY 2009, an increase of \$1.825 million over the FY2008 enacted level. As the principal Federal agency charged with maritime safety, security, and environmental stewardship, the Coast Guard protects vital interests of the United States from internal and external threats. The Oil Spill Recovery fund provides a source of funds for removal costs and damages resulting from oil spills, or the substantial threat of a spill, into navigable waters of the United States.

In accordance with the provisions of the Oil Pollution Act of 1990 (OPA 90), the President may make available up to \$50.000 million annually from the fund for oil spill removal activities. The fund supports the Coast Guard's stewardship role by permitting payment of claims to remediate natural resource damages resulting from oil spills as well as payment of claims for other damages resulting from oil spills.

Federal, state, and Indian tribe trustees may present claims for natural resource damages resulting from a spill.

Government entities, the private sector or the general public may submit claims for: uncompensated removal costs; damage to real or personal property; loss of profits and earning capacity; loss of subsistence use of natural resources; loss of government revenues; and increased cost of public services resulting from an oil spill.

#### **B. Budget Activities:**

This funding directly supports our Marine Environmental Protection mission.

#### **C. Budget Request Summary:**

The Coast Guard estimates that expenditures from the Oil Spill Recovery fund will total \$149.095 million in FY 2009, an adjustment of \$1.825 million over the FY2008 enacted level. These estimated expenditures consist of a \$50.000 million expenditure transfer for oil spill response, an estimated \$1.100 million payment to the Oil Spill Recovery Institute, and \$97.995 million for payment of oil spill damages and natural resource damages claims.

The Coast Guard requests \$149.095 million for this activity. This is an increase of \$1.825 million over the FY 2008 enacted.

#### **CURRENT SERVICES PROGRAM DESCRIPTION:**

Title I of the Oil Pollution Act of 1990 (OPA) provided for the use of a \$1.000 billion Oil Spill Liability Trust Fund (OSLTF) to pay for expeditious oil removal and uncompensated damages. In Section Seven of Executive Order 12777, the President delegated management responsibility for the OSLTF to the Secretary of the Department in which the Coast Guard is operating. Upon re-delegation by the Secretary, the Commandant of the Coast Guard delegated responsibility to the National Pollution Funds Center (NPFC), which oversees the OSLTF. OSLTF uses under OPA include:

- Removal costs incurred by the Coast Guard and U. S. Environmental Protection Agency (EPA) Federal On-Scene Coordinators (FOSCs);
- Payments to Federal, state and Indian tribe trustees to conduct Natural Resource Damage Assessments (NRDAs) and restorations;
- Payment of claims for uncompensated removal costs and damages; and Administrative, operational, and expenses incidental to implementation, administration, and enforcement of OPA and certain provisions of Section 311 of 33 U.S.C. 1321.

Accomplishments for FY 2007 include:

- Provided funding for over 400 oil spill responses and two natural resource damage assessments at a cost of \$47.400 million.
- Provided \$839,562 for the Oil Spill Recovery Institute appropriation.

- Paid \$38.0 million in claims for oil spill damages and for natural resource damages from the OSLTF (parent fund to the recovery fund).
- Appropriated \$74.1 million to support implementation of OPA 90.

Planned accomplishments for FY 2008 include:

- Provide funding for 500 projected oil spills at a cost of \$50.0 million.
- Provide an estimated \$1.1 million for the Oil Spill Recovery Institute appropriation.
- Pay claims for oil spill damages and natural resource damages from the OSLTF (parent fund to the recovery fund) at an estimated \$96.17 million.
- Provide funding to support implementation of OPA 90.

Planned accomplishments for FY 2009 include:

- Provide funding for 500 projected oil spills at a cost of \$50.0 million.
- Provide an estimated \$1.1 million for the Oil Spill Recovery Institute appropriation.
- Pay claims for oil spill damages and natural resource damages from the OSLTF (parent fund to the recovery fund) at a projected \$97.99 million.
- Provide funding to support implementation of OPA 90.

### PPA Mission Statement

The Oil Spill Recovery fund will provide a source of funds for removal costs and damages resulting from oil spills, or the substantial threat of a spill, into navigable waters of the U.S. In accordance with the provisions of the Oil Pollution Act of 1990, the President may make available up to \$50 million annually from the Fund for oil spill removal activities. The Fund also pays all valid claims for removal costs and damages resulting from oil spills.

## Summary Justification and Explanation of Changes

### Other services

|  | 2007      |    | 2008    |    | 2009    |    | 2008 - 2009 |
|--|-----------|----|---------|----|---------|----|-------------|
|  | Actual    |    | Enacted |    | Request |    | Change      |
|  | \$ 87,278 | \$ | 147,270 | \$ | 149,095 | \$ | 1,825       |

Other services include contracted services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs in support of the President's Management Agenda and Program Assessment Rating Tool and other initiatives focused on improving performance of Coast Guard missions. Increased funding in FY 2009 is a result of anticipated claims to be paid for oil spill damages from the OSLTF (parent fund to the recovery fund).

**U. S. Coast Guard**  
**Miscellaneous Funds**

**I. General Gift Fund Overview**

**A. Mission Statement for General Gift Fund**

The Coast Guard estimates \$80.000 thousand in bequests in FY 2009. The Coast Guard General Gift Fund is authorized under Section 2601 of Title 10 USC provisions for such funds within the Department of Defense and the Coast Guard. The General Gift Fund is a vehicle that authorizes the Commandant of the Coast Guard to accept gifts and donations for the benefit of activities such as museums, chapels, and other organizations under the jurisdiction of the Coast Guard. A recent change also authorizes the Coast Guard to accept gifts to be used for the benefit of service members who are wounded, injured or taken ill while in the line of duty, as well as for those members' dependents and survivors.

**B. Budget Activities:**

The General Gift Fund enables the Coast Guard to accept gifts and donations which are deposited into the General Treasury. These gifts and donations are devised and bequests to support the Coast Guard, its institutions, and its qualifying service members and dependents.

**C. Budget Bequest Summary:**

The Coast Guard estimates \$80.000 thousand in bequests from various sources to the General Gift Fund in FY09.

**U. S. Coast Guard**  
**Miscellaneous Funds**

**II. Yard Fund Overview**

**A. Mission Statement for Yard Fund**

The Yard Fund is a revolving account supported by the Coast Guard's Operation Expense (OE) and Acquisitions, Construction & Improvements (AC&I) appropriations to pay for FTE and materials required for Coast Guard projects and work orders completed by the Coast Guard Yard, located in Curtis Bay, Maryland.

**B. Budget Activities:**

Through their completion of mission-essential logistics and engineering support (e.g., cutter drydocking), Coast Guard Yard personnel contribute to all Coast Guard missions: Search and Rescue (SAR); Marine Safety; Aids to Navigation (AtoN); Ice Operations; Marine Environmental Protection (MEP); Living Marine Resources (LMR); Drug Interdiction; Migrant Interdiction; Other Law Enforcement; Ports, Waterways and Coastal Security (PWCS); and Defense Readiness.

**C. Budget Request Summary:**

Not applicable.

**II. Supply Fund Overview**

**A. Mission Statement for Supply Fund**

The Supply Fund, in accordance with 14 U.S.C. 650, finances the procurement of uniform clothing, commissary provisions, general stores, technical material, and fuel for vessels over 180 feet in length. The fund is normally financed by reimbursements from sale of goods.

**B. Budget Activities:**

The Supply Fund enables the Coast Guard to fund the cost of uniforms, commissary provisions, stores, material and fuel.

**C. Budget Request Summary:**

1. Due to an administrative error in the FY07 President's budget, the civilian workforce was reduced by two FTE. The FY07 civilian FTE estimate should have been 490 vice 488. The two FTE have been added back.

The CG Yard was reduced by 50 FTE and 50 FTP as a result of the FY06 DHS Appropriations Act (P.L. 109-90). All 50 were initially shown to be taken from the civilian workforce; however in executing the reductions, five FTE/FTP were taken from the military. As such, five FTE/FTP have been reduced from the military workforce and added to the civilian workforce.

\*The Coast Guard manages the military workforce by end strength, not FTE. The military FTE represented in these numbers are monthly end strengths averaged over the year.

\*\*The military pay and allowances averages include the costs associated with all pay and allowances paid to a particular paygrade, including: Basic Pay, Basic Allowance for Housing, Basic Allowance for Subsistence, Federal Insurance Contributions, Incentive/Special Pays, Clothing Allowances, Cost-of-Living Allowances and Selective Re-enlistment Bonus payments. The term "Officer" includes Chief Warrant Officers, Cadets and Officer Candidates.

| U.S. Field                                    | 556            | 569             | 574             | 5              |
| Foreign Field                                 | -              | -               | -               | -              |
| <b>Total Permanent Positions</b>              | <b>556</b>     | <b>569</b>      | <b>574</b>      | <b>5</b>       |
| <u>Position Data:</u>                         |                |                 |                 |                |
| <b>Average Personnel Costs, ES Positions</b>  | n/a            | n/a             | n/a             | n/a            |
| <b>Average Personnel Costs, GS Positions</b>  | \$83,451.04    | \$91,767.44     | \$92,715.00     | \$947.56       |
| <b>Average Grade, GS Positions</b>            | 10             | 11              | 10              | (1)            |

The CG Yard was reduced by 50 FTE and 50 FTP as a result of the FY06 DHS Appropriations Act (P.L. 109-90). All 50 were initially shown to be taken from the civilian workforce; however in executing the reductions, five FTE/FTP were taken from the military. As such, five FTE/FTP have been reduced from the military workforce and added to the civilian workforce

The average personnel costs shown above include basic/locality pay, lump sum payments, awards, overtime, benefits such as retirement, health care and life insurance, and other compensation such as holiday, Sunday, hazardous duty, reemployment annuitant and severance pays, night differential, non foreign Cost-of-Living Allowance, premium compensation for firefighters. Civilian FTP is presented as a count of full time positions, vice full time employees.

## A. Mission and Description of Component

The U. S. Coast Guard, one of the nation's five armed services, is the principal Federal agency responsible for maritime safety, security and stewardship. As such, we protect the vital economic, environmental and security interests of the United States including the personal safety and security of the maritime public, our natural and economic resources, the global commerce infrastructure and the integrity of our maritime borders. We are committed to addressing all threats and hazards in a manner consistent with the law and in alignment with the Department of Homeland Security's (DHS) goals and objectives. We do this throughout the maritime domain including in U.S. ports and inland waterways, along the coasts, on the high seas and in other regions where our maritime equities are at stake.

The Coast Guard delivers value to the public through its roles and missions that ensure maritime safety, security and stewardship. These roles and missions are enduring – long-standing responsibilities accrued over two centuries of service. They are inherently governmental, serve the collective good, and are best accomplished by a single Federal maritime force.

The Coast Guard's enduring roles and missions also complement one another to serve the greater public good. For example, the Nation's responses to the terrorist attacks of September 11<sup>th</sup> and Hurricane Katrina, as well as the increasing pressures on our waterways and marine resources, are informing the development of new regimes for the U.S. maritime domain, borders, and sensitive environmental areas. Moreover, in this time of change, the Coast Guard's multi-mission nature, which is a major value proposition to the nation, is taking on new dimensions and significance:

- Our long-standing efforts and expertise in marine safety reinforce new initiatives and standards for vessel and facility security.
- Our waterways management capacity and expertise are essential to maritime preparedness and port resilience, poised to rapidly restore commerce and economic stability after an attack or disaster.
- Our efforts with Ports, Waterways and Coastal Security systemically couple with supporting Coast Guard missions and operations to enhance Maritime Domain Awareness (MDA) and reinforce our layered defense against terrorism and other threats and hazards.
- Our missions to protect the marine environment and resources are complemented by our safety and security missions; ensuring access to waterways and resources is balanced and sustainable.

### **Major Commands:**

Atlantic Command – Portsmouth, VA  
Pacific Command – Alameda, CA  
1<sup>st</sup> District – Boston, MA  
5<sup>th</sup> District – Portsmouth, VA  
7<sup>th</sup> District – Miami, FL  
8<sup>th</sup> District – New Orleans, LA  
9<sup>th</sup> District – Cleveland, OH  
11<sup>th</sup> District – Alameda, CA  
13<sup>th</sup> District – Seattle, WA  
14<sup>th</sup> District – Honolulu, HI  
17<sup>th</sup> District – Juneau, AK  
Coast Guard Headquarters – Washington, D.C.

### **Employees:**

|                   |        |
|-------------------|--------|
| Military          | 40,243 |
| Civilian          | 6,241  |
| Selected Reserves | 8,103  |
| Auxiliary         | 34,885 |

### **Major Assets:**

|                     |       |
|---------------------|-------|
| Major Cutters       | 41    |
| Patrol Boats        | 119   |
| Icebreakers         | 13    |
| Buoy Tenders        | 77    |
| Helicopters         | 144   |
| Fixed Wing Aircraft | 54    |
| Boats               | 1,709 |

- Our enforcement of laws and treaties protects the nation’s maritime borders from drugs, contraband, weapons, illegal immigration and terrorist mobility and exploitation.
- In moments of national crisis the Coast Guard serves as the lead Maritime Operational Threat Response (MOTR) Forces component for DHS, and readily and seamlessly operates with other military forces, as well as Federal, state, local and tribal partners and stakeholders.
- In moments of international crisis, the Coast Guard provides unique and complementary war-fighting, infrastructure protection and capacity-building capabilities to the Department of Defense and the Department of State. We are highly experienced in working with both foreign Ministries of Defense and Ministries of Interior.
- As a member of the Intelligence Community (IC), and in support of the National Strategy for Maritime Security, the Coast Guard collects, fuses and shares critical intelligence, data and information through the Global Maritime Intelligence Integration (GMII) and Global Maritime Situational Awareness (GMSA) programs.
- Most importantly, our multi-mission flexibility ensures all Coast Guard forces can respond to incidents of national significance, scaling quickly up to a Katrina and/or a 9/11-level response when our nation is in peril.

Coast Guard missions are integrated to protect and strengthen our interests in economic and national security throughout the maritime domain. For example, the United States’ maritime Exclusive Economic Zone (EEZ) encompasses energy, minerals, fishery resources, supports tourism, and acts as a highway for international commerce. It is also a critical layer of the nation’s maritime border serving to protect and warn of imminent threats to the homeland.

We are only able to protect such a broad array of valuable resources in the EEZ and elsewhere in the maritime domain through a wide-ranging spectrum of authorities and capabilities. Where we have gaps in authorities or capabilities, we are seeking to continue closing them in FY 2009. The resources we are requesting in the FY 2009 budget, coupled with our core values of honor, respect, and devotion to duty, ensure the Coast Guard is always ready to answer the call for the American public.

There are eleven specific statutorily-mandated Coast Guard mission-programs defining the Coast Guard’s primary roles of safety, security and stewardship.<sup>1</sup> While each of the Coast Guard’s mission-programs has a direct linkage to one of these three roles, many also overlap to support others. Table 1 shows the primary alignment of Coast Guard mission-programs with these enduring roles.

| <b>Safety</b><br><i>Saving lives &amp; protecting people</i> | <b>Security</b><br><i>Establishing &amp; maintaining a secure maritime system while facilitating its use for the national good</i>                  | <b>Stewardship</b><br><i>Managing the sustainable &amp; effective use of inland, coastal and ocean waters &amp; resources for the future</i> |
|--|---|--|

Table 1

<sup>1</sup> The term “mission-program” is used by the Coast Guard to identify each of its 11 statutorily mandated missions that guide Coast Guard budget presentations as well as strategic planning, programming and performance.

## B. Major Activities and Key Strategic Goals

### Major Activities

In FY 2008, the Coast Guard received \$783.3 million to improve operational capability through the Integrated Deepwater System (IDS) program, including \$165.7 million to finalize certifications and complete acquisition of the first three National Security Cutters (NSC) and purchase long-lead material for NSC #4. Additionally, we received \$170 million to complete the purchase of four HC-144A Maritime Patrol aircraft, \$89.6 million for new Command, Control, Communications, Computers, Intelligence, Surveillance and Reconnaissance (C4ISR) packages for our Deepwater and legacy fleet and \$55.5 million to fund operational and maintenance costs associated with new vessel and aviation assets. These initiatives provide needed capabilities and increased availability of assets to execute our missions. The assets improve the capability to detect, intercept, and interdict potential threats in the maritime domain using a layered defense of major cutters, patrol boats, helicopters, and maritime patrol aircraft through a single command and control architecture. IDS is pushing the nation's borders outward, not only ensuring national economic and environmental regulations are enforceable throughout our EEZ, but proactively providing forward security presence at sea, far away from our shores whenever possible.

The Coast Guard also received \$80.3 million to continue replacing the National Distress and Response System (NDRS) with the Rescue 21 system and \$12 million to expand coverage of Nationwide Automatic Identification System (NAIS) transmit and receive capabilities. These projects facilitate improved mission execution by processing more data prior to and during an incident. In addition, they provide enhanced communications and information-sharing among Coast Guard command centers and responding forces.

The Coast Guard is also taking steps to begin addressing a \$1.0 billion backlog of shore infrastructure priorities with \$41 million in projects to improve the living and working conditions of its personnel. This backlog includes a \$13.3 million Rescue Swimmer Training Facility to replace a facility built in 1948.

### Performance Milestones

In FY 2007, the Coast Guard issued the U.S. Coast Guard Strategy for Maritime Safety, Security and Stewardship (CGS) to provide the framework and strategic guidance for our doctrine and operations. CGS identifies strategic priorities for implementation across all Coast Guard mission-programs. We intend to make significant progress toward meeting the CGS' objectives and the associated mission program performance targets in FY 2009.

**Aids to Navigation (AtoN):** In FY 2007, our AtoN mission-program did not meet its performance target. We are working to better align our capabilities and results with performance targets. In FY 2007, the Coast Guard initiated an independent analysis of our Short Range Aids to Navigation system. In FY 2008, we intend to expand carriage requirements for Automatic Identification Systems and Electronic Chart Systems as well as continue a review of our Short Range Aid to Navigation system (currently being studied by the Center for Naval Analysis). This mission-program provides transportation safety and efficiency (mobility) improvements, and recovery from disasters on U.S. waterways through new construction, improvements or refurbishment of existing infrastructure. Waterway infrastructure projects respond to requirements from expanded U.S. Army Corps of Engineers (ACOE) activity or replace critical aging/damaged AtoN structures. Expansive growth in the global maritime industry continues with substantial increases in large, ocean-going merchant

vessels, U.S. Flag passenger vessels, and offshore oil industry vessels. Our program is supporting this growth while improving the Nation's AtoN system and safeguarding maritime commerce.

**Defense Readiness:** In FY 2007, our defense readiness mission-program did not meet its performance target, largely due to Port Security Units (PSUs) readiness remaining below standards. In addition, declining readiness in our aging legacy fleet limited asset availability to combatant commanders and affected the readiness measurement. We expect this trend to continue until new Integrated Deepwater System assets are fielded. In support of the Global War on Terrorism, the Coast Guard, protected and safely escorted nearly 75 military sealift movements carrying over six million square feet of indispensable military cargo in FY 2007. In the Arabian Gulf, six patrol boats, two Law Enforcement Detachments (LEDET) and their support and command elements bolstered the naval component commander's ability to secure the sea lanes, prosecute terrorism at sea, train Iraqi naval forces and protect the vital off shore oil structures of Iraq. A high endurance cutter conducted maritime security operations throughout the US Central Command region, including piracy suppression operations off Somalia and the Gulf of Aden. The Coast Guard continued port security deployments to Guantanamo Bay, Cuba in support of DoD operations. Coast Guard cutters and other forces supported theater security cooperation operations under the National Security and Defense Strategies off of West Africa and Central and South America. For FY 2008 and 2009, the Coast Guard is focusing on more extensive deployment of PSUs by increasing staffing levels to 95 percent and improving command and control. These efforts support naval combatant commanders involved with OPERATION IRAQI FREEDOM and OPERATION ENDURING FREEDOM. Additionally, the Coast Guard's strategic modernization efforts will provide "one stop shopping" for combatant commanders, resulting in simplified relationships and more effective sourcing of Coast Guard forces for defense operations."

**Drug Interdiction:** In FY 2007, our drug interdiction mission-program successfully met its performance target. Despite smugglers shifting tactical use of certain conveyances, the Coast Guard removed a record 355,754 pounds of cocaine with a street value almost half of the Coast Guard budget (\$4.6 billion). We continue expanding Airborne Use of Force (AUF) capabilities and capacities to deployed Coast Guard, U.S. Navy and Allied helicopters engaged in Drug Interdiction missions to maximize law enforcement and interdiction effectiveness. In FY 2008, the Coast Guard is improving Drug Interdiction capabilities by increasing its number of international liaison officers and establishing the Atlantic Area Deployment Center with ten AUF equipped and re-engined MH-65C helicopters in Jacksonville, Florida. These efforts continue into FY 2009 when additional counter-drug intelligence and operational analysts are assigned.

**Domestic Ice Operations:** In FY 2007, our ice operations mission-program successfully met its performance target. This was a result of cutter icebreaking efforts, particularly the new USCGC MACKINAW providing ice breaking services that resulted in no lost days for shipping in the Great Lakes Region due to ice accumulation. In FY 2008 and 2009, the Coast Guard intends to implement recommendations from internal studies to preserve readiness during rehabilitation efforts on our fleet of aging WTBG-140 foot icebreaking tugs.

**Living Marine Resources (Domestic Fisheries) and Other Law Enforcement (Foreign Fisheries):** In FY 2007, our foreign fisheries mission-program successfully met its target while our domestic fisheries mission-program did not. Foreign fishery enforcement efforts were notably successful in working with the Department of State (DOS) to engage Central American Governments and ensure their fishing fleets honor U.S. Exclusive Economic Zone (EEZ) restrictions in

the Pacific Ocean. Guided by intelligence and threat analysis and supported by strong multi-agency coordination, Coast Guard domestic fisheries enforcement uncovered significant regulatory compliance shortfalls in a number of Northeastern Atlantic fisheries. Increased violations in these fisheries were the primary driver for the program not meeting its performance target for 2007. In FY 2008 and 2009, performance in both mission-programs will be temporarily affected by the reduction in available patrol boats, as these assets are taken out of service to undergo Mission Effectiveness Program (MEP) enhancements. These effects are short-term set-backs that will ultimately yield more sustained long-term performance as the legacy patrol boats return to service. Offsetting this decline is the addition of our first three new Maritime Patrol Aircraft, each of which will provide added monitoring and detection capabilities.

**Marine Environmental Protection (MEP):** In FY 2007, our MEP mission-program was successful in meeting its performance target. Effective industry partnerships resulted in mandatory vessel response and salvage plans onboard vessels, barges, and facilities handling hazardous materials. The Coast Guard, along with the Environmental Protection Agency (EPA), led the 2007 Spill of National Significance (SONS) Exercise, which tested the entire National Response System at the local, regional and national levels and increased preparedness for large oil and hazardous material spills resulting from a natural disaster. The exercise included participation from 11 states, 14 federal agencies and multiple non-governmental/industry entities. The Coast Guard is also working to update a joint contingency plan between the United States and Mexico (MEXUS) which establishes guidelines in coordinating bilateral responses to pollution incidents that occur in, or threaten, coastal waters or areas of the border zones between Mexico and the United States. In addition, the National Strike Teams and National Strike Team Coordination Center were transferred to the new Deployable Operations Group (DOG), integrating the MEP mission into the Coast Guard's Deployable Specialized Forces (DSF) and adaptive force packaging structure. In FY 2008, the Coast Guard will enforce the mandatory ballast water management program to prevent the introduction of invasive species into U.S. waterways. Additionally, the Coast Guard will continue to engage the Government of Canada to develop and implement a Joint Oil Spill Contingency Plan. In FY 2009, we will continue these efforts by conducting a national District Response Advisory Team (DRAT) conference to better share best-practices in environmental protection.

**Marine Safety:** In FY 2007, our Marine Safety mission-program did not meet its performance targets because of a recent addition of untested performance targets for recreational boating injuries. In FY 2007, the Coast Guard, as the lead U.S. delegate to the 167 member-state International Maritime Organization (IMO), continued to spearhead efforts for completion of a Voluntary Member State audit. We also continued implementation of the Global Maritime Distress and Safety System-based Long Range Identification and Tracking (LRIT) program. On the domestic front, the Coast Guard partnered with state governments to increase Personal Flotation Device (PFD) use in high-risk recreational boating activities. These efforts continue in FY 2008 and include new recreational boating initiatives such as ensuring manufacturer compliance with recreational boating standards. Moreover, the Coast Guard is encountering serious stakeholder concern about our capacity to conduct marine inspections, investigations and rulemaking. In FY 2008, we received funding to increase rulemaking throughput, and our FY 2009 budget request includes funding to increase our marine safety inspectors. The overall goal is to provide the highest quality service possible and meet the anticipated growth of the maritime industry. Since the establishment of 35 field-level Sectors (e.g. Sector New York, Sector Los Angeles/Long Beach, Sector Miami, etc.) the Coast Guard has integrated safety and security missions on the front lines while employing a business model focused on efficient, consistent, high quality service delivery to industry and the public.

**Ports, Waterways, and Coastal Security (PWCS):** In FY 2007, our PWCS mission-program achieved its performance target. Of particular note, interagency partnerships improved by the Spill of National Significance (SONS) exercise and TOPOFF 4. In partnership with TSA, the Coast Guard is implementing the Transportation Worker Identification Card (TWIC) and is responsible for establishing and enforcing TWIC access control requirements at regulated vessels and facilities and anticipates publishing a final rule on cardreader requirements by the SAFE Port Act deadline of April, 2009. The Coast Guard is partnering closely with the Domestic Nuclear Detection Office (DNDO) to equip Coast Guard boarding teams with radiation detection equipment and implement the Preventative Radiation/Nuclear Detection (PRND) Pilot Program. This latter program, currently in early stages, will deploy preventive radiation/nuclear detection (PRND) capabilities in the ports of Seattle and San Diego. Internationally, initial country visits with all U.S. foreign maritime partners were completed in 2007, which furthered efforts to reduce maritime risks. Nearly 50 U.S. and Canadian officers completed eight days of joint training in July 2007 at the Maritime Law Enforcement Academy in Charleston, SC. This effort culminated in the award of U.S. and Canadian law enforcement “cross-designations” for each nation and the authority to carry arms and enforce laws in opposing jurisdictions. The Coast Guard received \$45.000 million in FY 2008 to procure an additional 14 RB-M vessels, and we expect they will be operational in FY 2009. In addition, the FY 2008 appropriation provided \$29.400 million to procure 26 additional RB-S vessels and 238 FTE. In FY 2009, the publishing of final performance-based regulations governing security screening standards onboard ferries will continue to enhance the effectiveness of the PWCS mission-program.

**Undocumented Migrant Interdiction:** In FY 2007, our Undocumented Migrant Interdiction mission-program met the legacy outcome performance metric being phased-out in 2008 but did not meet the performance target for its new measure. The Coast Guard interdicted a 12 year high in Cuban migrants and observed an increase in the use of high-speed vessels by Cuban migrant smugglers. The Coast Guard countered this increased threat with vessel-on-vessel use of force tactics and high speed interdiction boats. In FY 2008, the Coast Guard received \$11.500 million to fund additional maintenance requirements associated with double-crewing 110-ft patrol boats in the Seventh District (Florida and the Caribbean). Double-crewing stems a gap in patrol boat resource hours that significantly improves migrant interdiction performance including “at-sea” biometric identification, assistance with prosecution and reduction in recidivism. Since the maritime biometric identification proof-of-concept began in the Mona Pass in November of 2006, the Coast Guard has observed a 53 percent reduction in the flow of migrants from the Dominican Republic. Improved border surveillance capability through integration and cooperation with other DHS components’ programs such as the Secure Border Initiative (SBI) will help to further improve program performance. Continued progress on the Deepwater MEP for WMECs and WPBs is delivering upgraded operational and communications capabilities on legacy assets necessary for all mission responsibilities.

**Search and Rescue (SAR):** In FY 2007, the SAR mission-program successfully met its performance target. Installation of 406 MHz Direction Finding (DF) capability onboard C-130 aircraft resulted in successful prosecution of several notable search and rescue cases. Delays in fielding Rescue 21 and Response Boat – Medium limited further SAR improvements due to continued reliance on older and less effective equipment. In FY 2008, SAR mission performance is expected to benefit from the additional installation of improved technologies of 406 MHz direction finders on more aircraft and Digital Selective Calling capability onboard additional Cutters and small boats. The addition of SAR and exercise planning to National Maritime Security Plan will enhance the incident

management expertise necessary to improve national SAR performance. These efforts will carry into FY 2009 which, together with the completed roll-out of the majority of SAR-related technology upgrades and delivery of 14 RB-M vessels from the FY 2008 appropriation will improve mission performance.

## Key Strategic Issues

The President's FY 2009 Budget Request will fund a mission-focused Coast Guard capable of answering the Nation's call. Events such as the 9/11 terrorist attacks and Hurricane Katrina demonstrated the complexity of emerging threat situations and highlighted our nation's growing vulnerability. While the U.S. capacity to save lives in the aftermath of these tragedies was exceptional, more can be done to prevent, protect, respond and recover from the next major disaster. The Coast Guard faces the following five major challenges:

**Recapitalizing and Preserving Aging Infrastructure:** The Coast Guard needs to replace aging vessels, aircraft and shore infrastructure. The cost of maintaining and operating the Coast Guard's assets is continually increasing, while operational availability is decreasing. In addition to vessels and aircraft, the vital shore infrastructure required to maintain our front line assets is in critical need of renovation and repair. Finally, housing shortages and lack of adequate barracks adversely affect the quality of life for service members. Ultimately, the future operational success of the Coast Guard is dependent upon a comprehensive recapitalization of front line assets, as well as support and shore infrastructure.

**Enhancing Marine Safety:** Coast Guard partnerships with maritime industry enable continual improvement of our public safety and security programs. The success of the maritime industry is bolstered by an integrated Coast Guard approach to safety and security. The goals in preventing or responding to a major safety or security incident in our ports and waterways are the same: save lives and minimize damage to property, the environment and the global economy. We recognized the threat posed to our nation by radical extremists and taken prompt and substantial action to fortify our ports, waterways, coastal areas and maritime infrastructure. With maritime security needs better-addressed, we are again continuing our long-standing efforts to enhance marine safety. Among other initiatives, our FY 2009 request includes funding to increase our marine inspector complement and build rulemaking capacity. Additional ongoing initiatives include streamlining licensing and documentation for our merchant marine customers and further development of Flag Officer oversight of program management and industry relations. This renewed focus on regulatory functions will meet the needs of the maritime community while continuing to provide for the safety of commerce in the maritime domain.

**Improving Command and Control:** The maritime environment continues to grow in complexity as the global marketplace expands. The Coast Guard faces a critical need to update its command and control capability to better identify and classify potential threats in the maritime realm in a real-time environment. The lack of offshore sensors and joint-service personnel to staff command and intelligence centers reduces our ability to protect crucial coastal resources and port infrastructure. The lack of adequate information-sharing and secure communications capability negatively impacts identification of potential terrorists while still at-sea. The Command 21 initiative, which received \$9.100 million in FY 2008, and other Maritime Domain Awareness projects such as the Nationwide Automatic Identification System and Long Range Identification and Tracking leverage technology, will increase the flow of information and enhance unity of effort across all levels of government.

Cooperative efforts such as the Joint Harbor Operations Centers (JHOC) with the U.S. Navy (i.e., including the newly established facility in Seattle, WA) and Project SeaHawk with the Departments of Justice and State as well as local partners from Charleston, SC demonstrate the benefits of improving information-sharing and interagency command center operations nationwide. Interagency command centers supported by Command 21, will provide operational commanders and National-level decision-makers with a continuous flow of port-level information and will link with the DHS Common Operating Picture (COP) to provide increased command and control capability government-wide. The Coast Guard will leverage the \$60 million received in FY 2008 to advance the interagency operations center initiative.

**Maintaining Polar Presence and Capabilities:** Recent years have seen a significant increase in Arctic activity, including efforts by multiple polar nations to define and claim Arctic seabed and access to natural resources. The Government of Russia recently completed an expedition to establish the geological relation between the North Pole zone, the Siberian platform, and Russia's continental shelf. The Government of Canada recently decided to establish a port in Nanisivik on the north end of Baffin Island. The Bering Strait serves as a critical choke-point providing access to the Northern Sea Route and Northwest Passage. Already the primary access route, the Bering Strait will become even more critical with expected growth in maritime activity in the Arctic region. The need to address energy security, U.S. sovereignty, increased Arctic shipping, prevention and response activities and the growing need for maritime domain awareness will increase the tempo of Coast Guard operations in the Arctic. Often, the Coast Guard is the sole federal presence in these regions and the only entity positioned and able to enforce all aspects of U.S. sovereignty while supporting scientific research. The Coast Guard is aggressively considering alternatives to improve and sustain operational presence in the Arctic. Due to the long lead time required for acquisition of Polar-capable assets, infrastructure needs are being assessed concurrent with ongoing U.S. policy review for this region.

**Establishing Comprehensive Intelligence and Awareness Regimes:** Collecting, fusing, and sharing intelligence are critical for protecting the American public against our determined enemies. It is equally important to safeguard our intelligence resources from compromise and exploitation. As a member of the Intelligence Community (IC), the Coast Guard must be fully and properly vested in both intelligence-sharing and long range tracking activities and partnerships such as the Global Maritime Intelligence Integration (GMII) and Global Maritime Situational Awareness (GMSA). In our unique role as the lead intelligence agency for DHS in the maritime domain, we provide intelligence partners with a critical maritime and homeland security perspective during intelligence collection, fusion, analysis and sharing. A key component of our efforts to expand Maritime Domain Awareness is the continued cooperation and collaboration with other IC partners that expand our visibility into the maritime domain through technical means and in cooperation with IC partners including the National Security Agency (NSA), National Reconnaissance Office (NRO) and National Geospatial-Intelligence Agency (NGA). The Coast Guard received \$11.600 million in FY 2008 to increase intelligence watchstanders. The FY 2009 request includes funding for intelligence integration, counter-intelligence and cryptologic services.

### C. Resources Requested and Performance Impact

**Improving Service Delivery with our Base:** The Coast Guard is modernizing its command and control structures, support systems, and business intelligence practices to make it more agile and responsive to the threats and challenges our nation faces in the 21st century. This strategic modernization is funded primarily from within our base in FY 2007, FY 2008 and FY 2009. The

major changes include the merging of the Atlantic and Pacific Area Commands into one Coast Guard Operations Command (OPCOM) and the establishment of a Coast Guard Forces Readiness Command (FORCECOM) to eliminate programmatic redundancy posed by two regional Area Commands. Creating these single-points of field accountability, each responsible for their respective functional areas (i.e., operations and force readiness), will address the challenges we face in our current construct resulting from dilution of functions by distribution of duplicative responsibility among Headquarters, two separate Areas and two Maintenance and Logistics Commands. Most importantly, it will improve service delivery to the American public.

Additionally, the Coast Guard will create the Headquarters office of the Deputy Commandant for Operations (DCO) which will provide a single point of accountability for the Coast Guard's 11 mission-programs. This will give full credence to the fact that all Coast Guard operations have an equal level of precedence; none is more or less critical to America's safety, security and stewardship. DCO will eliminate program stovepipes among competing mission-programs in our Headquarters construct while providing for the integrated development, implementation, and oversight of operational policy, planning and engagement at the strategic level. DCO will also maintain relations with industry, public advocacy groups, DoD and the Service's interagency partners, i.e. CBP, TSA, FEMA, FBI, EPA, NOAA, etc. at the national level, and provide the necessary capabilities to meet all Coast Guard operational requirements. Similarly, formulation of the Headquarters office of the Deputy Commandant for Mission Support (DCMS) will consolidate and integrate into a single entity, the responsibilities for developing and overseeing policies and programs for Coast Guard human resources management, acquisitions, engineering and logistics support of operating forces and shore infrastructure; as well as the technical aspects of the information systems utilized to carry out Coast Guard operations. This will enable more effective acquisition governance and oversight while mitigating current challenges with programs such as Deepwater. The creation of DCMS will standardize maintenance processes and lead to strict configuration control across the enterprise, providing single-point accountability for life-cycle management of assets and human resource management. In turn, DCMS will further relieve operational commands of support obligations, enabling them to fully focus on Coast Guard mission execution.

The Coast Guard's strategic service-wide modernization will improve global resource allocation, force generation, and overall risk management, and enhance the Service's unity of effort within the Department of Homeland Security and at all levels of government. It will result in stronger Headquarters and Field alignment, improved readiness management, and enhanced mission execution across all Coast Guard operations.

The Coast Guard also intends to create efficiencies which shift resources to support new Deepwater assets scheduled for delivery in FY 2009 and offset the annualizations required from new program initiatives in FY 2008. These efficiencies include the termination of FY 2008 one-time \$36.211 million costs; the decommissioning of four older or less efficient cutters that will save over \$9.536 million and 127 FTEs; and the decommissioning of six Coast Guard aircraft at a savings of over \$22.382 million and 106 FTEs. In addition, a base reduction across the Coast Guard's operating and maintenance (PPA IV) and training and recruiting (PPA III) accounts will generate \$34.098 million to help offset the increased annualization of new programs from FY 2008. The replacement of legacy assets with more capable Deepwater cutters and aircraft will improve overall performance levels.

The Coast Guard remains fully committed to achieving greater efficiency through implementation of President's Management Agenda (PMA). For example, to meet the Competitive Sourcing component of the PMA, the Coast Guard's Research and Development center has completed a streamlined

competition within its technical services function which has resulted in a 10% savings in FTE. Similarly, in alignment with the PMA's E-Government "To-Be" architecture, the Coast Guard continues to promote the principles of interoperability and consolidation by incorporating aviation, finance, and vessel data into one business model and Information Technology system.

As good stewards, the Coast Guard is determined to effectively and efficiently meet our mission execution and mission support requirements. To achieve this, we are aggressively pursuing a comprehensive (i.e., high performing organization-type) functional and organizational evaluation and modernization. Experience designing our own Civil Engineering program HPO (CE HPO) has convinced us of both the merit and the value of that type of approach. The CE HPO's improved set of business practices and related organizational realignment will serve as a model for our impending national Strategic Modernization efforts. Strategic Modernization is a complex transformation effort that will leverage experience the Coast Guard has gained through its Competitive Sourcing program. Coast Guard Strategic Modernization will enable a top to bottom, iterative alignment of strategy, policy, investment and performance. Such an alignment is not fully possible within our current national organization and functional distribution. Successful Strategic Modernization will drive our increased relevance and at the same time, improve the Coast Guard's value proposition to the nation. We are leveraging the tenants of High Performing Organization initiatives to become a higher performing agency. We are also in the process of centralizing our leased real property inventory which will enable strategic asset management for the entire Coast Guard real property portfolio (both leased and owned). Additionally, the Coast Guard created the Office of Financial Transformation and Compliance to coordinate the transformation of financial policy, processes, information technology systems, and personnel practices in order to improve financial business processes and improve financial support to operational field units. These achievements represent a comprehensive Financial Strategy for Transformation and Audit Readiness through which the Coast Guard expects to be in a position to earn an unqualified internal control assertion statement by FY 2010.

D. Program Performance Highlights, Resources, and Alignment to Strategic Goals

For each major program, the performance goal, alignment to DHS goals and objectives, total dollars and FTE, and main performance measure/s are shown below. For many of the programs, more performance information may be found on the OMB web site [Expectmore.gov](http://Expectmore.gov) (program names may differ slightly from those used in this document).

**Performance Budget Highlights by Program**

Performance Plan Measure

|  |
|--|
| <b>Measure:</b> Five - Year Average of Number of Collisions, Allisions, and Groundings (CAG) |
|--|

**Description of Measure:** The mission of the Coast Guard's Waterways Management program is to manage, influence, and provide access to a safe, secure, efficient and environmentally sound waterways system. Several statutes clearly link the various components (Navigation Systems, Marine Transportation System services, and Bridge Administration) back to this mission. The program facilitates maritime commerce by minimizing disruptions to the movement of goods and people, while maximizing recreational enjoyment and environmentally sound use of navigable waters, all while maintaining robust waterway restoration capabilities when disruptions do occur.

Alignment to DHS objective 3.2.

| <b>Fiscal Year:</b> | FY 2004        | FY 2005        | FY 2006 | FY 2007 | FY 2008 | FY 2009 |
|---------------------|----------------|----------------|---------|---------|---------|---------|
| <b>Target:</b>      | 1,923 or fewer | 1,831 or fewer | 1,748   | 1,664   | 1,756   | 1752    |
| <b>Actual:</b>      | 1,876          | 1825           | 1,765   | 1,823   | N/A     | N/A     |

### Additional Measures

**Measure:** Federal Aids to Navigation Availability

**Description of Measure:** The aid availability rate is based on an international measurement standard established by the International Association of marine Aids to navigation and Lighthouse Authorities (IALA), which published Recommendations on Availability Objectives of Aids to Navigation Services, IALA Recommendation O-130 in December 2004. The Integrated Aids to Navigation Information System (I-ATONIS) is the official system used by the Coast Guard to store pertinent information relating to short-range aids to navigation. The Total time short range Aids to Navigation are expected to be available is determined by multiplying the total number of federal aids, by the number of days in the reporting period they were deployed, by 24 hours. The result of the aid availability calculation is dependent on the number of federal aids in the system on the day the report is run. A short range Aid to Navigation is counted as not being available from the initial time a discrepancy is reported until the time the discrepancy is corrected. Temporary changes to the short-range Aids to Navigation System are not considered discrepancies.

Alignment to DHS objective: 4.1

| <b>Fiscal Year:</b> | FY 2004 | FY 2005 | FY 2006 | FY 2007 | FY 2008 | FY 2009 |
|---------------------|---------|---------|---------|---------|---------|---------|
| <b>Target:</b>      | 99.7%   | 97.5%   | 97.5%   | 97.5%   | 97.5%   | 97.5%   |
| <b>Actual:</b>      | 97.5%   | 97.1%   | 97.0%   | 97.9%   | N/A     | N/A     |

### **Program: Defense Readiness**

**Performance Goal:** Improve our national security and military strategies by ensuring assets are at the level of readiness required by the combatant commander.

**DHS strategic objectives supported and % allocation of activities:** The Defense Readiness mission-program aligns to multiple DHS objectives: 1.1 (99%) and 3.1 (1%)

| <b>Fiscal Year:</b> | FY 2004   | FY 2005   | FY 2006   | FY 2007   | FY 2008   | FY 2009   |
|---------------------|-----------|-----------|-----------|-----------|-----------|-----------|
| <b>\$ Thousands</b> | \$229,068 | \$612,554 | \$509,691 | \$601,494 | \$659,788 | \$547,707 |
| <b>FTE</b>          | 996       | 2,942     | 2,076     | 4,038     | 3,644     | 3,422     |

### Performance Plan Measure

**Measure:** Percent of time that Coast Guard assets included in the Combatant Commander Operational Plans are ready at a Status of Resources and Training System (SORTS) rating of 2 or better.

**Description of Measure:** This metric measures the readiness of Port Security Units, 110 foot Patrol boats, and High Endurance Cutters against the requirements of DOD operational plans. Coast Guard expeditionary forces provide non-redundant capabilities to combatant commanders to assist, among other reasons, in meeting the major objective of the National Strategy for Combating Terrorism to battle

terrorism overseas rather than inside our borders. Asset readiness is reported through the Navy Status of Readiness and Training System (SORTS) assessment program. The data includes readiness information about the unit's people (such as training and billet-fill), equipment (physical operating condition), and health of its supplies and logistics - in essence, all pertinent information that could bear on a unit's war fighting capability. No pertinent data is excluded. Data is always current; the automated collection system is required to be updated immediately upon a change in readiness. There are no limitations (with regard to timeliness, completeness, or accuracy, etc.) to using this data for measurement purposes.

Alignment to DHS Objective: 1.1

| <b>Fiscal Year:</b> | FY 2004 | FY 2005 | FY 2006 | FY 2007 | FY 2008 | FY 2009 |
|---------------------|---------|---------|---------|---------|---------|---------|
| <b>Target:</b>      | 100%    | 100%    | 100%    | 100%    | 100%    | 100%    |
| <b>Actual:</b>      | 76%     | 69%     | 62%     | 50.66%  | N/A     | N/A     |

### Additional Measures

#### **Measure:** Defense Readiness of Patrol Boats

**Description of Measure:** This measure is the percent of time that the number of units called for in combatant commander operational plans are ready at SORTS category 2 or better. Coast Guard expeditionary forces provide non-redundant capabilities to combatant commanders to assist, among other reasons, in meeting the major objective of the National Strategy for Combating Terrorism to battle terrorism overseas rather than inside our borders. Asset readiness is reported through the Navy Status of Readiness and Training System (SORTS) assessment program. The data includes readiness information about the unit's people (such as training and billet-fill), equipment (physical operating condition), and health of its supplies and logistics - in essence, all pertinent information that could bear on a unit's warfighting capability. No pertinent data is excluded. Data is always current; the automated collection system is required to be updated immediately upon a change in readiness. There are no limitations (with regard to timeliness, completeness, or accuracy, etc.) to using this data for measurement purposes.

Alignment to DHS Objective: 3.1

| <b>Fiscal Year:</b> | FY 2004 | FY 2005 | FY 2006 | FY 2007 | FY 2008 | FY 2009 |
|---------------------|---------|---------|---------|---------|---------|---------|
| <b>Target:</b>      | None    | None    | 100%    | 100%    | 100%    | 100%    |
| <b>Actual:</b>      | None    | None    | 100%    | 100%    | N/A     | N/A     |

#### **Measure:** Defense Readiness of Port Security Units (PSUs)

**Description of Measure:** This measure is the percent of time that the number of units called for in combatant commander operational plans are ready at SORTS category 2 or better. Coast Guard expeditionary forces provide non-redundant capabilities to combatant commanders to assist, among other reasons, in meeting the major objective of the National Strategy for Combating Terrorism to battle terrorism overseas rather than inside our borders. Asset readiness is reported through the Navy Status of Readiness and Training System (SORTS) assessment program. The data includes readiness information about the unit's people (such as training and billet-fill), equipment (physical operating condition), and health of its supplies and logistics - in essence, all pertinent information that could bear on a unit's warfighting capability. No pertinent data is excluded. Data is always current; the automated collection system is required to be updated immediately upon a change in readiness. There are no limitations (with regard to timeliness, completeness, or accuracy, etc.) to using this data for measurement purposes.

Alignment to DHS Objective: 3.1

| <b>Fiscal Year:</b> | FY 2004 | FY 2005 | FY 2006         | FY 2007 | FY 2008 | FY 2009 |
|---------------------|---------|---------|-----------------|---------|---------|---------|
| <b>Target:</b>      | None    | None    | 100%            | 100%    | 100%    | 100%    |
| <b>Actual:</b>      | None    | None    | less than<br>1% | 4.52%   | N/A     | N/A     |

#### **Program:** Drug Interdiction

**Performance Goal:** Reduce the flow of illegal drugs entering the U.S. via non – commercial maritime

|  |           |             |             |             |             |             |
|--|-----------|-------------|-------------|-------------|-------------|-------------|
| shipping sources.  |           |             |             |             |             |             |
| <b>DHS strategic objectives supported and % allocation of activities:</b> 1.1 (100%) |           |             |             |             |             |             |
| <b>Fiscal Year:</b>  | FY 2004   | FY 2005     | FY 2006     | FY 2007     | FY 2008     | FY 2009     |
| <b>\$ Thousands</b>  | \$907,232 | \$1,017,478 | \$1,243,683 | \$1,115,654 | \$1,041,395 | \$1,100,893 |
| <b>FTE</b>   | 5,494     | 4,662       | 6,333       | 6,159       | 6,006       | 5,798       |

### Performance Plan Measure

|   |         |         |         |                                     |         |         |
|---|---------|---------|---------|-------------------------------------|---------|---------|
| <b>Measure:</b> Removal rate for cocaine that is shipped via non - commercial maritime means.   |         |         |         |                                     |         |         |
| <b>Description of Measure:</b> The removal rate is the amount of drugs lost to the smuggler through seizure, jettison, or purposeful destruction (to avoid seizure), divided by the non-commercial maritime (NMCM) cocaine flow. Removal information is provided through the Consolidated Counter-Drug Database; the NCM is provided by the Interagency Assessment of Cocaine Movement. Both sources of information are independently derived, and not subject to Coast Guard approval. |         |         |         |                                     |         |         |
| <b>Fiscal Year:</b>   | FY 2004 | FY 2005 | FY 2006 | FY 2007                             | FY 2008 | FY 2009 |
| <b>Target:</b>  | 15%     | 19%     | 22%     | 26%                                 | 28%     | 23.8%   |
| <b>Actual:</b>  | 30.7%   | 27.3%   | 25.3%   | 355,754lbs<br>of Cocaine<br>Removed | N/A     | N/A     |

|  |           |           |           |           |           |           |

**Performance Plan Measure**

|  |         |         |         |         |         |         |
|--|---------|---------|---------|---------|---------|---------|
| <b>Measure:</b> Percent of fishermen complying with federal regulations.   |         |         |         |         |         |         |
| <b>Description of Measure:</b> The measure is the number of Coast Guard boardings that resulted in no significant fisheries violation, divided the total number of Coast Guard fisheries boardings. The measure is an observed compliance rate: the Coast Guard does not randomly board fishing vessels, but rather targets boardings to those vessels deemed most likely to be in violation based on intelligence, operational experience, and other factors. |         |         |         |         |         |         |
| <b>Fiscal Year:</b>  | FY 2004 | FY 2005 | FY 2006 | FY 2007 | FY 2008 | FY 2009 |
| <b>Target:</b>   | 97      | 97      | 97%     | 97%     | 97%     | 97%     |

**Performance Plan Measure**

|   |         |         |         |         |         |         |
|---|---------|---------|---------|---------|---------|---------|
| <b>Measure:</b> Percent of undocumented migrants who attempt to enter the U.S. via maritime routes that are interdicted or deterred.  |         |         |         |         |         |         |
| <b>Description of Measure:</b> The Coast Guard has been charged through Executive Orders and Presidential Decision Directive to enforce the Immigration and Nationality Act. Performance is measured by the percent of undocumented migrants who are interdicted while, or deterred from, attempting to enter the U.S. via maritime routes. Haitian, Cuban, Dominican Chinese are tracked, as they constitute the majority of the migrant flow entering the U.S. via maritime means. The measure is computed by dividing the number of successful landings by the migrants who actually attempt illegal immigration or were deterred from making an attempt. Subtracting this percentage from 100% gives the total migrants interdicted or deterred. The migrant flow is provided by the Coast Guard Intelligence Coordination Center; interdictions and landings are reported by Coast Guard units other law enforcement agencies. |         |         |         |         |         |         |
| <b>Fiscal Year:</b>   | FY 2004 | FY 2005 | FY 2006 | FY 2007 | FY 2008 | FY 2009 |
| <b>Target:</b>  | None    | None    | None    | 91%     | 93%     | 95%     |
| <b>Actual:</b>  | None    | None    | None    | 93.7%   | N/A     | N/A     |

**Additional Measures**

|  |         |         |         |         |         |         |
|--|---------|---------|---------|---------|---------|---------|
| <b>Measure:</b> Percent of undocumented migrants who attempt to enter the U.S. via maritime routes that are interdicted.   |         |         |         |         |         |         |
| <b>Description of Measure:</b> This is the new measure that will become the main outcome metric for FY08. The Coast Guard has been charged through Executive Orders and Presidential Decision Directive to enforce the Immigration and Nationality Act. Performance is measured by the percent of undocumented migrants of all nationalities who are interdicted while attempting to enter the U.S., its possessions, or territories via maritime routes. The measure is computed by dividing the number of successful landings by the number of migrants who attempt illegal immigration. Subtracting this percentage from 100% gives the migrant interdiction rate. Migrant interdictions and landings are reported by Coast Guard units and other law enforcement agencies. |         |         |         |         |         |         |

|---|--|--|--|--|--|--|
| <b>Measure:</b> Risk Reduction percentage for the transfer of a Terrorist(s) Meta-scenario  |  |  |  |  |  |  |
| <b>Description of Measure:</b> Estimated percent of terrorist-related maritime risk reduction in the transfer of a terrorist(s) through the maritime domain (as a percent of the risk that the Coast Guard has the ability to impact). This is a risk-based measure that involves the scoring (by maritime security representatives) with respect to threat, vulnerability and consequence of the transfer of a terrorist(s) into the United States with intent and capability to carry out terror attacks within the United States where vessels en route from foreign countries are used as a means of conveyance. Such scoring generates an index of |  |  |  |  |  |  |

"raw risk" that exists in the maritime domain. Next, Coast Guard incremental interventions (awareness, operational and regulatory -based) that have taken place throughout the fiscal year are scored with regard to the effectiveness that each has been estimated to have afforded. The resultant measure shows the change in "raw risk" (due, in large part, to things outside of the Coast Guard's ability to control) and the reduction in total risk the Coast Guard estimates that it has affected.

Aligns to DHS objective: 1.1

**Measure:** Number of Transportation Workers Identification Credential (TWIC) spot checks per year by CG officials

**Description of Measure:** Number of TWIC spot checks per year by Coast Guard officials. This is a new metric that is being base lined this year. It is anticipated that the Coast Guard will purchase TWIC card readers in FY08 and will spot check TWIC cards during vessels and facility inspections. Annually, the Coast Guard averages approximately 6,600 facility inspections (11 spot checks per visit) and 7,300 vessels inspections (3 spot checks per vessel).

Aligns to DHS objective: 1.3

**Measure:** Risk Reduction percentage for the transfer of a Weapon of Mass Destruction Meta-scenario

**Description of Measure:** Estimated percent of terrorist-related maritime risk reduction in the transfer of a Weapon of Mass Destruction (WMD)/ materials into the United States through the maritime domain (as a percent of the risk that the Coast Guard has the ability to impact). This is a risk-based measure that involves the scoring (by maritime security representatives) with respect to threat, vulnerability and consequence of the transfer of a WMD/materials into the United States to support ongoing terrorist operations where vessels en route from foreign countries are used as a means of conveyance. Such scoring generates an index of "raw risk" that exists in the maritime domain. Next, Coast Guard incremental interventions (awareness, operational and regulatory -based) that have taken place throughout the fiscal year are scored with regard to the effectiveness that each has been estimated to have afforded. The resultant measure shows the change in "raw risk" (due, in large part, to things outside of the Coast Guard's ability to control) and the reduction in total risk the Coast Guard estimates that it has affected. This scenario is a composite of chemical, biological, radiological and nuclear material; presently the metric doesn't allow the level of fidelity to separate out biological and nuclear / radiological material - in alignment with the DHS objectives. The Coast Guard is continually maturing and improving its strategic risk management including the risk assessment portion that is comprised of this and other scenarios.

Aligns to DHS objective: 2.1 and 2.2

### **iii. Status of Congressional Requested Studies and Reports**

**Department of Homeland Security  
Science and Technology Directorate**

| <b>Fiscal Year</b> | <b>Due Date</b>                                      | <b>Reference/Citation</b>   | <b>Requirement</b>   | <b>Status</b>   |
|--------------------|--|---|--|---|
| 2008               | None specified                                       | House Report 110-181, Title IV, p 120   | However, \$13,818,000 requested to procure approximately 125 low rate initial production units (for the BioWatch generation 3 program) has been denied. Before this procurement can occur, S&T must review and respond to the results from the National Academy of Sciences study recommended and discussed under the Office of Health Affairs. The Committee requires this study to ensure that BioWatch detection systems are the most cost effective detection approach.  | S&T review and response regarding the LRIP is pending the completion of the NAS study by OHA.   |
| 2008               | None specified                                       | House Report 110-181, Title IV, p 120 and Senate Report 110-84, Title IV, p 116 | HOUSE: Bill language is included that prohibits the obligation of funds for ADVISE until the DHS completes a Privacy Impact Assessment for this program as recommended by the GAO. SENATE: The report accompanying the House passed FY 2007 Homeland Security Appropriations bill (House Report 109-476) directed the Department to submit a program plan, including goals and costs, by November 3, 2006. This report has not been submitted. The Committee recommends no funding for this program in FY 2008. Future year funding will depend on the Department's willingness to provide a program plan and a privacy statement. | ADVISE has been terminated. A letter was submitted to Congress on October 2, 2007, acknowledging the cancellation of ADVISE.  |
| 2008               | Spring of 2008                                       | House Report 110-181, Title IV, p 121   | In fiscal year 2006, Congress appropriated \$30,000,000 for S&T to conduct three air cargo screening pilots programs to test different concepts of operations. Results to date from the three airports participating in the pilots appear promising. The Committee eagerly awaits the results of this work, which is scheduled to be completed in December 2007, with a final report due in the spring of 2008.  | Currently, the program is scheduled to be completed in Spring of 2008, the final report scheduled for completion three months after, in approximately June of 2008. |
| 2008               | End of fiscal year 2009, per requested extension     | Senate Report 110-84, Title IV, p 115   | The Committee directs the Department to report on the first portion of (Counter MANPADS) Phase III testing by the end of fiscal year 2008 and provide a recommendation on whether these systems are suitable for deployment or not.  | Deadline has been extended to the 4th quarter of fiscal year 2009.  |
| 2008               | <b><u>120 days from enactment of Approps Act</u></b> | Senate Report 110-84, Title IV, p 116   | Transportation Security Laboratory: The Committee directs S&T to report on the costs and benefits of charging companies for certification of their products in light of the potential to provide enhanced certification services and the capital improvement needs of the laboratory housing the ITE program. S&T is directed to report to the Committee on this cost-benefit analysis by February 5, 2008.  | Future requirement  |
| 2007               | 1/23/2007  | Conference Report 109-699, Title I, p. 124                                      | The ADVISE program is designed to extract relationships and correlations from large amounts of data to produce actionable intelligence on terrorists. A prototype is currently available to analysts in Intelligence and Analysis using departmental and other data, including some on U.S. citizens. The conferees understand up to \$40,000,000 has been obligated for ADVISE. The ADVISE program plan, total costs and privacy impacts are unclear and therefore the conferees direct the Inspector General to conduct a comprehensive program review and report within nine months of enactment of this Act.                   | ADVISE has been terminated. A letter was submitted to Congress on October 2, 2007, acknowledging the cancellation of ADVISE.  |
| 2006               | 3rd report - 12/19/2007; final report - 6/17/2008    | Conference Report 109-241, Title IV, p. 79.                                     | The conferees direct \$30,000,000 be used to conduct three cargo screening pilot programs to test different concepts of operation, as described in the House report. The conferees direct S&T to begin all pilots in fiscal year 2006, to report on the initial results of the pilots every six months after initiation of the first pilot, and to report on the final results four months after the last pilot is completed.  | S&T has submitted three Air Cargo reports. The final report is due 6/17/2008.   |
| 2006               | 4th Quarter 2009                                     | Conference Report 109-699, Title IV, p. 170                                     | The conferees provide \$35,000,000 as proposed by the Senate for a comprehensive passenger aircraft suitability assessment. The conferees urge S&T to include the passenger airline industry in the evaluation phase of this assessment. The conferees direct the Under Secretary to brief the Committees on Appropriations, no later than 60 days after the enactment of this Act, on the expenditure plan for this suitability assessment.   | Report due in 4th Quarter of 2009.  |

# BUDGET REQUEST AND SUPPORTING INFORMATION

## SCIENCE AND TECHNOLOGY DIRECTORATE MANAGEMENT AND ADMINISTRATION

### I. Appropriation Overview

#### **A. Mission Statement for Management and Administration:**

The Management and Administration (M&A) appropriation provides for salaries and expenses related to 257 full time equivalent (FTE) personnel in Washington, D.C. This appropriation provides for the operation of the Science and Technology (S&T) Directorate's Washington, D.C. headquarters, including business operations, contributions to the DHS Working Capital Fund, and other administrative functions associated with the management of the S&T Directorate and its resources.

#### **B. Budget Activities:**

The M&A appropriation provides for salaries and benefits related to 257 FTE at the S&T Directorate headquarters. The 257 FTE provide executive direction to the S&T Directorate for policy analysis, planning, financial management and guidance formulation. FTE's also conduct program management, program execution oversight, program analysis, and operations and maintenance support for all S&T Directorate programs.

The M&A appropriation additionally provides for all business operations and financial management activities, including those covered by the DHS Working Capital Fund. The Business Operations functions include paying for rent, office supplies, utilities, and other operational functions associated with the S&T Directorate's Washington DC headquarters. This account pays for the training and travel associated with senior management of the S&T Directorate, and contractor staff who support the execution of headquarters functions, such as financial management, facility planning and maintenance, and other administrative functions. M&A also funds the administration of the S&T Directorate's regulatory and treaty compliance activities, the management of the Small Business Innovation Research (SBIR) program and the financial and programmatic databases. The M&A appropriation does not fund the contractor support or travel associated with the direct execution of Research, Development, Test and Evaluation (RDT&E) programs across the S&T Directorate.

The S&T Directorate implemented several efficiency initiatives to make better use of its resources. Overall, the S&T Directorate reduced Business Operations costs by more than 50 percent over the last two years. This includes consolidating the National Capital Region floor space to one location by bringing the Counter-Man-Portable-Air-Defense-Systems (C-MANPADS) Special Program Office to the headquarters office space. In FY 2009, the S&T Directorate plans to consolidate floor space at EML to decrease the rent and operations and maintenance costs. In addition, the S&T Directorate holds each of its Divisions to managing their programs to less than 10 percent for SBIR, contractor staff, travel, conferences and Intergovernmental Personnel Agreements (IPAs). The S&T Directorate reduced the number of

employees hired through IPAs by 20 percent, and reduced its reliance on contractor staff by increasing its Federal staff, to the full request of 381 by the end of FY 2008.

**C. Budget Request Summary:**

The S&T Directorate requests 257 positions, 257 FTE for M&A and \$132,100,000 for FY 2009, a decrease of \$6,500,000 from FY 2008. The total adjustment-to-base, 93 less FTEs, includes a transfer of 124 FTE to the Research and Development Appropriation and the annualization of 31 FTE within the Management and Administration Appropriation. There are no program increases for FY 2009.

The S&T Directorate requests \$132.100 million for this activity. This is a decrease of \$6.500 million over FY 2008.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The M&A appropriation provides for salaries and benefits related to 257 FTE at the S&T Directorate headquarters. The 257 FTE provide executive direction to the S&T Directorate for policy analysis, planning, financial management and guidance formulation. FTE also, conduct program management, program execution oversight, program analysis, and operations and maintenance support for all S&T Directorate programs.

The M&A appropriation provides all of the corporate level functions in the S&T Directorate that allow the technical divisions to manage the RDT&E programs. Those functions include the Strategy, Policy and Budget Division which includes the functions of Chief Financial Officer; the Business Operations Division, which manages the facilities, personnel and the information technology infrastructure; the Operations Analysis Division, which provides science-based risk analyses and other tools; and the Corporate Communications Division, which coordinates internal and external information. The DHS Working Capital Fund provides those shared services that the components rely on to execute their missions such as contracting officers and the DHS-wide information technology infrastructure.

**Strategy, Policy and Budget Division**

The Strategy, Policy and Budget Division provides the S&T Directorate with high-quality, efficient, and cost-effective financial management services through four branches. The Program Analysis and Evaluation (PA&E) Branch develops long-term plans for resource allocation, execution plans, Congressional Justifications, and management of financial resources within the S&T Directorate. The Strategy, Planning and Integration (SPI) Branch manages and provides training for the S&T Directorate's Planning, Programming, Budgeting, and Execution (PPBE)

system and associated processes, including PPBE database development and implementation. SPI also develops and implements internal and external performance metrics for S&T Directorate programs, as well as risk assessment methodologies to help inform programming decisions. The Acquisition Branch develops the S&T Directorate's acquisition strategy, and manages the travel and purchase card programs. The Financial Operations Branch, is dedicated to: sound fiscal stewardship of the S&T Directorate's appropriations and reimbursable funding; timely and accurate budget execution, financial management and financial reporting; and a sound monitoring process of programs and activities to provide reasonable assurance about the adequacy of the internal controls program within the S&T Directorate.

### **Business Operations Division**

The Business Operations Division provides critical infrastructure support to the S&T Directorate and is composed of eight components: Facilities, Human Capital Office (HCO), Office of the Chief Information Officer (OCIO), Executive Secretariat, Office of the Chief Administrative Officer (CAO), Office of Administration and Audits, Central Security Office (CSO), and Readiness and Operational Coordination (ROC). In compliance with Presidential Directives, Federal Regulations and Department guidance, the Business Operations Division provides support and continuous process improvement through problem identification and solution, sound policy and procedure development, and high-quality service.

Facilities Branch - The Facilities Branch focuses primarily on the S&T Directorate's headquarters offices and is dedicated to providing its customers with a facility that is fully operational, well maintained and conducive to business operations, while focusing on, and providing excellent customer service. This branch also funds rent and Federal Protective Services for S&T Directorate headquarters facilities.

Human Capital Branch (HCO) - The HCO leads, manages and coordinates the delivery of the full range of human capital services in support of the S&T Directorate. The S&T Directorate supports the Department's initiatives to enhance employee satisfaction and motivation. Consistent with the Department's goals, the S&T Directorate is committed to a human capital management approach that achieves the following goals: recruit, train, and retain a workforce skill set mix focused on research and transition; maintain a personnel evaluation system that is based on performance and is fair; and recognize the contributions by personnel at all levels.

HCO provides a full range of human resource services in support of staffing: recruitment; labor and employee relations; position management and classification; performance management; compensation and benefits; employee and workforce development; manpower and strength management; in and out processing; awards management; and internal management controls. HCO implements DHS Human Capital policies and acts as a liaison with the DHS Management Directorate, Chief, Human Capital Office.

HCO maintains the S&T Directorate's Staffing Management System (SMS). It maintains real-time information regarding the S&T Directorate's staffing positions, the details regarding its staff (Federal, contractors, detailees), and resources used by the staff, such as offices and government-issued equipment. The system assists in developing workforce plans, facility plans, equipment acquisition plans and future-year budgets.

HCO has enacted policies concerning Tele-work/Tele-commute and Alternate Work Schedules to establish a family-friendly workforce environment. HCO is responsible for Workforce Development and external training and education. This includes coordinating courses for managers and supervisors that discuss current human resource issues and policies and the implementation of the e-pilot tool for performance management and evaluation and DHScovery, an on-line learning management system.

Office of the Chief Information Officer (OCIO) - The S&T Directorate's OCIO advises senior leadership and program offices on all aspects of Information Technology (IT) business processes, policies, standards and guidelines for the development of IT and compliance with DHS and Federal policies. OCIO ensures the delivery of information technology services to support the S&T Directorate's mission, goals and objectives; and represents S&T Directorate priorities on DHS and cross-agency IT initiatives, which support distributed and centralized technical and business operations to increase cost-effectiveness. OCIO accomplishes this by: (1) Business Planning – efficient and cost effective management of the S&T Directorate's IT investments, oversight & maintenance of the IT budget, capital planning and investment control, and Enterprise Architecture; (2) IT Engineering and Technology – technical service and guidance in IT infrastructure design and build-out of core systems and applications to improve timeliness, accuracy, and comprehensiveness of the S&T Directorate; (3) IT Systems Standards and Interoperability – standard data structures, databases, communications security, and solutions engineering to improve the collection, access, analysis, and dissemination of systems and data; (4) IT Infrastructure – infrastructure to ensure reliability, security and asset management; and (5) IT Security – information assurance services, oversees and coordinates security planning, testing, certification, and routine monitoring of S&T Directorate systems, and Federal Information Security Management Act of 2002 (FISMA) compliance.

Executive Secretariat (S&T Exec Sec) - The Office of the S&T Exec Sec oversees official communications to and from the Under Secretary for Science and Technology and ensures compliance with the roles and responsibilities stated in DHS Management Directive 10100. The S&T Exec Sec is a critical communicative instrument between the S&T Directorate and DHS components and other S&T Directorate customers. The S&T Exec Sec works with S&T Directorate staff on behalf of the Under Secretary to respond to congressional requests, Government Accountability Office (GAO) and DHS Office of Inspector General (DHS OIG) requests, general public requests and other inquiries. The S&T Exec Sec provides administrative support on behalf of the Under Secretary to include record management, forms management, document control and establishing correspondence procedures for the S&T Directorate. Additionally, the S&T Exec Sec interfaces with DHS components and external customers.

Office of the Chief Administrative Officer (CAO) - The CAO provides and manages quality services and assets that enable the S&T Directorate to achieve its mission. The CAO provides services, policy and oversight to the S&T Directorate and liaises with the DHS Management Directorate for real and personal property, environmental management, compliance and planning, historic and cultural preservation, employee health and safety, emergency preparedness and energy management. In addition, it maintains a liaison with the DHS Management Directorate for mail management, records management, printing and library services.

Office of Administration & Audits - The Administration & Audits office works as a liaison for the S&T Directorate to DHS OIG and GAO, and the general public regarding the Freedom of Information Act (FOIA). All three areas require policy and procedures to keep in compliance with specific Presidential Directives, Federal regulations and Congressional oversight.

Central Security Office (CSO) - The S&T CSO supports and provides the government and contractor personnel the security information and expertise to perform the S&T Directorate's mission. The CSO implements and adheres to policies, management directives and regulations implemented by DHS Headquarters, and ensures the protection of facilities and of critical information from unauthorized disclosure.

Readiness and Operational Coordination (ROC) - The ROC enhances operational coordination, integration, communications and decision-support of incident management through scientific and technical support to Federal, State, tribal and local decision makers. The ROC also provides operational coordination of the S&T Directorate's role in the Department's operations and response programs to ensure the scientist-to-responder link. Additionally, the ROC maintains the S&T Directorate's Continuity of Operations program to ensure the effectiveness and survivability of DHS and S&T Directorate capabilities to execute critical mission essential functions.

### **Operations Analysis Division**

The Operations Analysis Division provides the S&T Directorate with a wide range of scientific and technical tools to inform planning and management activities. The division provides information to decision-makers and program managers resulting from research, studies, operational analyses, risk analyses, analytic and computational models, simulations, war-games, and experimentation events that it oversees. The division uses these technical and analytical support activities to establish baseline operational capabilities and goals, integrate policy and program planning, and inform management decisions and the development of strategic objectives. The Operations Analysis Division has primary oversight of the activities of the Homeland Security Institute (HSI), other Federally Funded Research and Development Centers (FFRDCs), and the Homeland Security Science and Technology Advisory Committee (HSSTAC), in addition to managing gaming and simulation and other experimentation activities.

### **Corporate Communications Division**

The Corporate Communications Division communicates the objectives and status of homeland security technology programs, disseminates information regarding opportunities for private sector entities (corporate and academic), and ensures that DHS technologies and programs are understood and accurately represented by the media. The Corporate Communications Division holds conferences and manages the S&T Directorate's presence at other information sharing events to improve contact among technology developers, vendors, and acquisition personnel, as well as reports on demonstrations of technologies both intramural and extramural. They also promote the participation of colleges, universities, private research institutes, and companies (and consortia thereof) in the research process by disseminating information regarding research conducted or sponsored by the Department, and provide public communication support to FFRDCs. This is achieved through the S&T Directorate's business-based web presence, which

provides information for persons seeking guidance on how to pursue proposals to develop or deploy technologies that would enhance homeland security.

**Working Capital Fund**

Funds provided within the M&A appropriation acquire services through the DHS Working Capital Fund, this includes: IT services, human resources, procurement operations, and financial systems. Other services provided are consolidated subscriptions, government-wide mandated services and DHS crosscutting activities.

### PPA Mission Statement

The Management and Administration (M&A) appropriation provides for salaries and expenses related to 381 full time equivalent (FTE) personnel in Washington, D.C. and in the field. Field operations include the Plum Island Animal Disease Center (PIADC), Environmental Measurements Laboratories (EML), the National Biodefense Analysis and Countermeasures Center (NBACC), the Chemical Security Analysis Center (CSAC), and the Transportation Security Laboratory (TSL). This appropriation also provides for the operation of the S&T Directorate's Washington, D.C. headquarters including business operations, contributions to the DHS Working Capital Fund, and other administrative costs associated with the management of the S&T Directorate and its resources.

**Summary Justification and Explanation of Changes**

|                              | <b>2007</b>       | <b>2008</b>    | <b>2009</b>    | <b>2008 to 2009</b> |
|------------------------------|-------------------|----------------|----------------|---------------------|
|                              | <b>EOY Actual</b> | <b>Enacted</b> | <b>Request</b> | <b>Change</b>       |
| <b>Salaries and Benefits</b> | \$35,325          | \$51,886       | \$45,779       | (\$6,107)           |

Salaries and Benefits includes costs for 257 FTEs. The FY 2009 request includes an increase of \$1,221,000 for the proposed January 2009 2.9-percent increase in personnel compensation, \$454,000 for annualization of the prior-year pay raise, an increase of \$4,183,000 to annualize 102 federal positions to be filled in FY 2008 and non pay inflation of \$1,734,000. Also included is the transfer of 124 FTE and \$14,000,000 to the Laboratory Facilities PPA.

|               | <b>2007</b>       | <b>2008</b>    | <b>2009</b>    | <b>2008 to 2009</b> |
|---------------|-------------------|----------------|----------------|---------------------|
|               | <b>EOY Actual</b> | <b>Enacted</b> | <b>Request</b> | <b>Change</b>       |
| <b>Travel</b> | \$744             | \$1,199        | \$920          | (\$279)             |

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. A decrease of \$279,000 is included to help cover increased GSA rent costs.

|                                 | <b>2007</b>       | <b>2008</b>    | <b>2009</b>    | <b>2008 to 2009</b> |
|---------------------------------|-------------------|----------------|----------------|---------------------|
|                                 | <b>EOY Actual</b> | <b>Enacted</b> | <b>Request</b> | <b>Change</b>       |
| <b>Transportation of Things</b> | \$100             | \$10           | \$0            | (\$10)              |

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. A decrease of \$10,000 is included to cover increased GSA Rent costs.

|                 | <b>2007</b>       | <b>2008</b>    | <b>2009</b>    | <b>2008 to 2009</b> |
|-----------------|-------------------|----------------|----------------|---------------------|
|                 | <b>EOY Actual</b> | <b>Enacted</b> | <b>Request</b> | <b>Change</b>       |
| <b>GSA rent</b> | \$5,290           | \$5,217        | \$6,445        | \$1,228             |

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. A increase of \$1,228,000 is required to cover the increased costs associated GSA Rent for additional space required by additional new federal employees.

|  | <b>2007</b>       | <b>2008</b>    | <b>2009</b>    | <b>2008 to 2009</b> |
|--|-------------------|----------------|----------------|---------------------|
|  | <b>EOY Actual</b> | <b>Enacted</b> | <b>Request</b> | <b>Change</b>       |
| <b>Communication, Utilities, and miscellaneous charges</b> | \$0               | \$347          | \$431          | \$84                |

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. An increase of \$84,000 is required to cover increased costs of Communications and Utilities.

|                 | <b>2007</b>       | <b>2008</b>    | <b>2009</b>    | <b>2008 to 2009</b> |
|-----------------|-------------------|----------------|----------------|---------------------|
|                 | <b>EOY Actual</b> | <b>Enacted</b> | <b>Request</b> | <b>Change</b>       |
| <b>Printing</b> | <b>18</b>         | <b>50</b>      | <b>\$50</b>    | <b>\$0</b>          |

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities.

|   | <b>2007</b>       | <b>2008</b>     | <b>2009</b>     | <b>2008 to 2009</b> |
|---|-------------------|-----------------|-----------------|---------------------|
|   | <b>EOY Actual</b> | <b>Enacted</b>  | <b>Request</b>  | <b>Change</b>       |
| <b>Advisory and Assistance Services</b> | <b>\$9,888</b>    | <b>\$35,364</b> | <b>\$31,968</b> | <b>(\$3,396)</b>    |

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. A decrease in Advisory and Assistance Services is required to cover additional costs in GSA Rent, Working Capital Fund.

|                       | <b>2007</b>       | <b>2008</b>    | <b>2009</b>    | <b>2008 to 2009</b> |
|-----------------------|-------------------|----------------|----------------|---------------------|
|                       | <b>EOY Actual</b> | <b>Enacted</b> | <b>Request</b> | <b>Change</b>       |
| <b>Other Services</b> | <b>\$34,923</b>   | <b>\$1,761</b> | <b>\$1,649</b> | <b>(\$112)</b>      |

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. A decrease to Other Services is required to cover required equipment purchases in FY 2009.

|  | <b>2007</b>       | <b>2008</b>     | <b>2009</b>     | <b>2008 to 2009</b> |
|--|-------------------|-----------------|-----------------|---------------------|
|  | <b>EOY Actual</b> | <b>Enacted</b>  | <b>Request</b>  | <b>Change</b>       |
| <b>Purchase from Government Accounts</b> | <b>\$39,127</b>   | <b>\$36,526</b> | <b>\$37,876</b> | <b>\$1,350</b>      |

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. An increase of \$1,350,000 is required to cover the increased cost of the working capital fund.

|                                 | <b>2007</b>       | <b>2008</b>    | <b>2009</b>    | <b>2008 to 2009</b> |
|---------------------------------|-------------------|----------------|----------------|---------------------|
|                                 | <b>EOY Actual</b> | <b>Enacted</b> | <b>Request</b> | <b>Change</b>       |
| <b>Research and Development</b> | <b>\$285</b>      | <b>\$0</b>     | <b>\$0</b>     | <b>\$0</b>          |

Research and Development includes costs for contracts for the conduct of basic and applied research and development.

|   | <b>2007</b>       | <b>2008</b>    | <b>2009</b>    | <b>2008 to 2009</b> |
|---|-------------------|----------------|----------------|---------------------|
|   | <b>EOY Actual</b> | <b>Enacted</b> | <b>Request</b> | <b>Change</b>       |
| <b>Operation &amp; Maintenance of equipment</b> | <b>\$1,914</b>    | <b>\$0</b>     | <b>\$0</b>     | <b>\$0</b>          |

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account.

|                                 | <b>2007</b>       | <b>2008</b>    | <b>2009</b>    | <b>2008 to 2009</b> |
|---------------------------------|-------------------|----------------|----------------|---------------------|
|                                 | <b>EOY Actual</b> | <b>Enacted</b> | <b>Request</b> | <b>Change</b>       |
| <b>Supplies &amp; materials</b> | <b>\$1,696</b>    | <b>\$805</b>   | <b>\$805</b>   | <b>\$0</b>          |

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency.

|                  | <b>2007</b>       | <b>2008</b>    | <b>2009</b>    | <b>2008 to 2009</b> |
|------------------|-------------------|----------------|----------------|---------------------|
|                  | <b>EOY Actual</b> | <b>Enacted</b> | <b>Request</b> | <b>Change</b>       |
| <b>Equipment</b> | <b>\$5,257</b>    | <b>\$5,435</b> | <b>\$6,177</b> | <b>\$742</b>        |

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. An increase of \$607,000 is included to annualize 102 federal positions to be filled in FY 2008. An additional increase of \$135,000 is included to cover increased costs associated with IT equipment.

# BUDGET REQUEST AND SUPPORTING INFORMATION

## SCIENCE AND TECHNOLOGY DIRECTORATE RESEARCH, DEVELOPMENT, ACQUISITIONS, AND OPERATIONS

### I. Appropriation Overview

#### **A. Mission Statement for Research, Development, Acquisitions, and Operations:**

The Science and Technology (S&T) Directorate is the primary research and development (R&D) arm of the Department of Homeland Security (DHS). The S&T Directorate will improve homeland security by providing to our customers, the operating components of DHS and State, local, tribal and territorial emergency responders and officials, state-of-the-art technology that helps them accomplish their missions.

The S&T Directorate will fulfill its mission by:

- Developing and deploying state-of-the-art, high performance, low-operating-cost systems and technology to prevent, detect, and mitigate the consequences of chemical, biological, and explosive attacks;
- Developing equipment, protocols, and training procedures for response to and recovery from all-hazards including chemical, biological, and explosive attacks;
- Enhancing the technical capabilities of the Department's operational elements and other Federal, State, local, and tribal agencies to fulfill their homeland security related missions;
- Developing methods and capabilities to test and assess threats and vulnerabilities, and prevent technology surprise and anticipate emerging threats;
- Developing technical standards and establishing certified laboratories to evaluate homeland security and emergency responder technologies, and evaluate technologies for SAFETY Act certification; and
- Supporting U.S. leadership in science and technology.

A FY 2007 review of strategy and technology requirements resulted in a shift in the S&T Directorate's focus to a new strategic approach. This new approach, reflected in a realigned organization and research portfolio management strategy, allows the S&T Directorate to better identify, enable, and transition new capabilities to our customers to better protect the Nation. To that end, the S&T Directorate develops and manages an integrated program of science and technology, from basic research through technology product transition.

The S&T Directorate is customer-focused and delivers capabilities that DHS components can rely on to meet their operational needs. To accomplish this, the S&T Directorate facilitated customer-led Capstone Integrated Product Teams (IPTs) charged with identifying functional capability requirements across the Department. The S&T Directorate uses the outcomes of these IPTs to identify the highest priority needs and allocate resources to those programs that support

the priorities established by its DHS customers. The S&T Directorate's new business model of structured Capstone IPTs ensures that product transition investments align to customer mission requirements.

The Capstone IPTs are led by senior leadership from DHS Components in the following 11 major Homeland Security functional areas:

- Border Security;
- Cargo Security;
- Chemical/Biological Defense;
- Cyber Security;
- Explosive Prevention;
- Incident Management
  - Interoperability
  - Prep & Response
- Information Sharing/Management;
- Infrastructure Protection;
- Maritime Security; and
- People Screening.

Each Capstone IPT works to identify, validate, and prioritize capability requirements across the Department (within a functional area) that the S&T Directorate can address. The interaction of technologists and operators has improved the prioritization of efforts, and the focus on relevant, cost-effective solutions that make a significant difference. The S&T Directorate's product transition process ensures that appropriate technologies are harvested and integrated into the DHS acquisition system for our customers. As part of this process, the Homeland Security Institute (HSI) provides capability gap analysis and quick-response studies on topics that arise during the S&T Directorate's capstone IPT process. Outputs from the IPTs were used to formulate the FY 2009 budget request, reflecting the important role the IPTs play in determining priorities.

About 20 percent of the S&T Directorate's budget goes toward basic research. Work in this area establishes partnerships among academia, industry and national laboratories to study fundamental science to develop the understanding of the relevant basic science that will eventually provide the technical solutions our customers' need. In addition, through the scholars and fellows program in University Programs, S&T develops the future science and engineering workforce by educating and encouraging the academic and professional development of scientists and engineers in fields relative to homeland security. The S&T Directorate uses four criteria to drive its basic research investment:

- Areas unique to DHS (e.g., psychology of terrorism, hostile intent, and informed decision making in terrorist risk-based analysis);
- Areas where there are DHS customer capability gaps, but no near-term or innovative solutions exist;
- Areas where DHS can leverage basic research investment of other government agencies or international partners (e.g., National Science Foundation, Department of Defense); and

- Areas of mandated investment (e.g., Congress or DHS leadership) or areas of technology discovery/surprise (i.e., how to counter a new technology that could be used by terrorists).

## **B. Budget Activities:**

### Border and Maritime Security

The Border and Maritime Security Division develops and transitions tools and technologies that improve the security of our Nation's borders and waterways without impeding the flow of commerce and travelers.

### Chemical and Biological

The Chemical and Biological Division works to increase the Nation's preparedness against chemical and biological threats through improved threat awareness, advanced surveillance and detection, and protective countermeasures.

### Command, Control, and Interoperability

The Command, Control, and Interoperability Division develops interoperable communication standards and protocols for emergency responders; cyber security tools for protecting the integrity of the Internet; and automated capabilities to recognize and analyze potential threats.

### Explosives

The Explosives Division develops the technical capabilities to detect, interdict, and lessen the impacts of non-nuclear explosives used in terrorist attacks against mass transit, civil aviation and critical infrastructure.

### Human Factors

The Human Factors Division applies the social and behavioral sciences to improve detection, analysis, and understanding of the threats posed by individuals, groups, and radical movements; it supports the preparedness, response, and recovery of communities impacted by catastrophic events; and it advances homeland security by integrating human factors into homeland security technologies.

### Infrastructure and Geophysical

The Infrastructure and Geophysical Division develops technology to increase the Nation's preparedness for and response to natural and man-made threats through superior situational awareness, emergency response capabilities, and critical infrastructure protection.

### Innovation

Innovation activities focus on homeland security R&D that could lead to significant technology breakthroughs that would greatly enhance DHS operations. The Office of the Director of Innovation oversees the Homeland Security Advanced Research Project Agency (HSARPA). HSARPA funds R&D of homeland security technologies to "support basic and applied homeland security research to promote revolutionary changes in technologies that would promote homeland security; advance the development, testing and evaluation, and deployment of critical

homeland security technologies; and accelerate the prototyping and deployment of technologies that would address homeland security vulnerabilities.”

#### Test & Evaluation and Standards

The Test & Evaluation and Standards programs provide technical support and coordination to assist the Nation’s emergency responders in the acquisition of equipment, procedures and mitigation processes that are safe, reliable, and effective.

#### Transition

The Transition Office focuses on delivering near-term products and technology enhancements by working with the Department’s components to expedite the technology transition process. The transition budget also houses the Directorate’s FFRDC funding including the Homeland Security Institute (HSI).

#### Laboratory Facilities

Laboratory Facilities programs are executed through the Office of National Laboratories (ONL). ONL provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations and institutions, which can provide the knowledge and technology required to secure our homeland.

#### University Programs

University Programs engages the academic community to conduct research and analyses and provides education and training programs to support DHS priorities and enhance homeland security capabilities.

### **C. Budget Request Summary:**

The S&T Directorate requests \$736,737,000 for Research, Development, Acquisitions, and Operations for FY 2009. This is an increase of \$45,002,000 above the FY 2008 Enacted level in support of the development of additional technologies for specific high-priority, customer-identified needs identified during the S&T Capstone IPT process, specifically:

- Border and Maritime Security:
  - Maritime Security; and
  - Border Officers Tools and Safety.
- Command, Control and Interoperability:
  - Internet-based Control System Protection – Supervisory Control and Data Acquisition (SCADA) and Process Control Systems (PCS); and
  - Sensors & Investigative Tools.
- Explosives:
  - Vehicle Borne Improvised Explosive Device/ Suicide Bomber Improvised Explosive Device (VBIED/SBIED) to improve large threat mass detection in such areas as the transit environment, special events and other large areas
  - Additional efforts in Render Safe; and
  - Additional efforts in Detection and Neutralization Tools.
- Human Factors:

- Suspicious Behavior Detection to provide a culturally independent, real-time, multi-modal (behavioral, physiological, and auditory), automated capability to detect suspicious behavior that indicates the intent to cause harm.
- Infrastructure and Geophysical
  - High-priority technology gaps in Infrastructure Protection and Emergency Incident Management.
- Laboratory Facilities:
  - Operations costs for the National Biodefense Analysis and Countermeasures Center (NBACC) and pre-construction costs of the National Bio and Agro-Defense Facility (NBAF);
  - Salaries and benefits of full-time equivalents located at the laboratories; and
  - One-time cost for final cleanup of Environmental Measurements Laboratory (EML) space.

## II. Summary of FY 2009 Budget Estimates by Program/Project (PPA)

| 2009 Program Change          |                     |            | 9,821            |
| <b>2009 Request</b>          |                     |            | <b>35,300</b>    |
| Total Change 2008-2009       |                     |            | 9,821            |

The Science and Technology Directorate requests \$35.300 million for this activity, of this amount \$0.883 million supports the SBIR Program. This is an increase of \$9.821 million above FY 2008. The FY 2009 program increase allows the Border and Maritime Security Division to develop additional technologies for specific high-priority, customer needs identified during the S&T Capstone IPT process – specifically, it will fund efforts for Maritime Security and Border Officer Tools and Safety.

#### **CURRENT SERVICES PROGRAM DESCRIPTION**

The Border and Maritime Security Division develops and transitions tools and technologies that improve the security of our Nation’s borders and waterways without impeding the flow of commerce and travelers. The division works closely with its operational customers to identify and generate the best technologies for securing U.S. borders, including ports-of-entry and vast stretches of remote terrain and waterways – with the ultimate goal of stopping threats before they enter the United States.

The primary Federal customers for the Border and Maritime Security Division are the Department’s Customs and Border Protection (CBP), Immigration and Customs Enforcement (ICE) and the U.S. Coast Guard (USCG). Requirements from these customers are reflected in the FY 2009 activities. Successful transition of these capabilities and technologies will improve DHS components’ performance and support the Secretary’s goals of:

- Protecting the Nation from dangerous people; and
- Protecting the Nation from dangerous goods.

**Border Watch Thrust Area** – Develops and applies technologies and tools that increase detection of illegal border activity, reduce manpower, improve agent response times and increase officer safety. Programs include developing a network of advanced sensor and communication technologies that will connect law enforcement officers to crucial information and alerts about illegal activities along the U.S. border. Currently, border operations, both at and between ports-of-entry, depend highly on a professional’s institutional knowledge and outdated technology.

Through Border Watch technologies, law enforcement officers will be able to access information about events in progress from wherever they operate, even in remote areas.

Activities in the Border Watch thrust area support the Secure Border Initiative (SBI), a comprehensive multi-year plan to secure America's borders and reduce illegal migration, and Command 2010, an initiative to enhance command-and-control capabilities for the Coast Guard. The thrust area includes the following programs that address different aspects of the border security mission: Border Technologies, Maritime Technologies, and Border Officer Tools and Safety.

***Border Technologies Program*** – FY 2008: \$14,893; FY 2009 estimate: \$13,650. Delivers technologies to provide advanced detection, identification, apprehension and enforcement capabilities along land and maritime borders. The program develops:

- Detection, classification, and localization sensor technologies to monitor illegal border activity with a wider range and greater accuracy than current technologies;
- Command and control systems that deliver more comprehensive information about events-in-progress to different levels of law enforcement; and
- Communications systems that provide connectivity to law enforcement officers working in remote locations.

These technologies and systems will help ensure border security assets are used efficiently and effectively and give law enforcement officers access to robust and reliable information when they need it. The following projects are within the Border Technologies program:

***Border Detection Grid Project*** – Provides a grid of advanced sensors and detection, classification, and localization technologies to detect and classify cross-border movement (e.g., friendly forces, animals, weather or illegal activity). This technology will revolutionize border control by providing a way for a single Border Patrol officer to effectively monitor more than 10 miles of border. In FY 2007, the project investigated and reported on advanced power sources and energy storage methods for sensors in remote locations; developed a buried tripwire system to both sense intrusions and provide communications to remote locations; and evaluated electro-optic (daytime/visual) camera technologies. In FY 2008, the project will pilot a tripwire technology that can locate activity anywhere along many miles of the border (on the order of 4 miles). In FY 2009, the project plans to complete these activities and transition to the operational end-user (CBP, ICE and USCG).

***BorderNet Project*** – Develops BorderNet, a wireless data network that will connect law enforcement officers in the field to real-time, tactical, scene-awareness information, including geographic features, sensor data, and agent location data; as well as provide access to law enforcement databases. In FY 2007, the S&T Directorate expanded BorderNet surveillance capabilities along the southwest border by extending access to multiple law enforcement databases; deploying an in-field, 10-fingerprint reading system; improving radio direction finding of individuals conducting counter-surveillance for illegal activities; and adding a law enforcement asset location tracking capability (blue force tracking). In FY 2008, the project will install a Northern Border testbed demonstration in a northeast Border Patrol sector that will

provide technology insertion and lessons learned to the Secure Border Initiative Network (SBI<sup>net</sup>). The testbed will include a multi-sensor fusion, field-level, scene-awareness capability and a law enforcement data base query capability. In FY 2009, the project plans to transition these technologies to the operational end-user (CBP, ICE, and USCG).

*Sensors/Data Fusion and Decision-Aids Project* – Develops systems to enable law enforcement officers and commanders to have full situational awareness, enabling effective decision making and execution in complex and dynamic operational environments. Current operations rely mostly on verbal coordination for real-time operational knowledge and situational awareness. This project will:

- Provide the capability to fuse tactical information from multiple data sources such as sensors and databases (both law enforcement and commercial databases);
- Provide real-time situational awareness;
- Eliminate scene clutter;
- Automatically identify and track high-risk targets (e.g., people, vehicles, and vessels);
- Provide decision aids; and
- Facilitate multi-agency coordination for rapid response.

In response to a CBP request, the S&T Directorate tested technologies during Operation NorthGuard, a western Lake Erie pilot project conducted in the summer of 2007, which demonstrated the operational utility of coupling advanced sensor fusion and tracking technology with a common operational picture for detecting and apprehending border violators in a maritime environment. This effort gave insight into operational issues such as the effectiveness of the Trusted Traveler program, required assets to effectively shut down illegal activities, needed collaboration between Federal and state and local law enforcement agencies, and reconciliation of multiple policies and regulations. In FY 2008, the project will develop Automated Scene Understanding (ASU) and visualization tools for maritime and inland waterways. In FY 2009, the project plans to develop and demonstrate an advanced ASU system for land applications.

*SBI Systems Engineering and Modeling & Simulation Project* – Helps border enforcement agencies make informed decisions in immigration/border security policy and operations using systems engineering tools and models. It provides systems engineering, analysis, and trade-off studies to SBI. In FY 2007, the project developed an immigration model that will support immigration reform decision making. In FY 2008, the S&T Directorate will add the capability to model materials and goods, both legal and illegal, through the U.S. In FY 2009, the project plans to review the System of Systems model and ensure that it correctly represents the SBI and provide modeling capability for other projects.

*BorderTech Project* – In FY 2009, the S&T Directorate plans to initiate a project called BorderTech for the development, integration and testing of sensor technologies in an operational environment to provide in-the-field capabilities, improving mission effectiveness and agent safety. This project will develop, demonstrate and test unproven technologies as a risk reduction activity for the SBI Network (SBI<sup>net</sup>). It will include:

- BorderTech Testbed – provides a test platform for evaluating technologies in an operational environment, enabling agent training and tactics development;
- Advanced Sensor Technologies – investigates technologies and methodologies for improving operational performance of unattended ground sensors, electro-optical/infrared (EO/IR) devices and associated sensor signal processing; and
- Advanced Ground Surveillance Radar – assesses active and passive technologies and develops/demonstrates a system for detecting and tracking humans.

In FY 2009, the project plans to demonstrate and insert the BorderTech Testbed and Advanced Ground Surveillance Radar technologies into *SBI<sub>net</sub>*.

***Maritime Technologies Program*** – FY 2008: \$0; FY 2009 estimate: \$5,000. Starting in FY 2009, this program plans to address a wide range of capability gaps generated through the S&T Directorate’s Capstone IPT process. The majority of the capability gaps were identified by USCG, CBP, the Transportation Security Administration (TSA) and ICE. The program will develop:

- Advanced detection, identification, apprehension and enforcement capabilities along the maritime borders; and
- Technologies that support a framework for rapid, coordinated responses to maritime anomalies and threats.

A science and technology investment in these areas will provide significant risk mitigation and be completely complimentary to proposed major acquisition efforts, such as the USCG’s Command 21 program. These technologies and systems will help to ensure that border security assets are used efficiently and effectively and enable law enforcement to have access to robust and reliable information when they need it. The Maritime Technologies program includes the following projects: Sensors and Surveillance; and Situational Awareness and Information Management.

***Sensors and Surveillance Project*** – Starting in FY 2009, this project plans to assess, document and demonstrate visual and non-visual technologies for monitoring the maritime border. Visual technologies provide an eyes-on capability that enables agents to verify visually if an activity is illegal. Non-visual technologies provide low-cost, long-endurance monitoring to detect and track objects that are not captured by cameras. The project will include the following visual and non-visual technologies:

- Affordable Wide-Area Surveillance (WAS) Capability – demonstrates persistent and WAS commercial off-the-shelf/government off-the-shelf (COTS/GOTS) technologies to explore Concept of Operations (CONOPS) and data integration issues associated with the detection, tracking and classification of vessel traffic 12-120 nautical miles offshore;
- Advanced Geospatial Intelligence (AGI) Technical Exploitation – demonstrates a processing and exploitation capability that provides wide-area surveillance of the offshore maritime environment;
- Port and Coastal Radar Improvement – documents radar performance, maintainer/operator proficiency, and recommended improvements, and implements a

prototype radar system enhanced for harbor and 0-20 nautical miles offshore to detect, track, and identify vessels in ports and coastal regions and;

- Small Boat Harbor Surveillance Study/Pilot – assesses near-term technologies for tracking small boats in a port environment then demonstrates the improved situational awareness through an operational test/pilot program.

*Situational Awareness and Information Management Project* – Starting in FY 2009, this project plans to provide law enforcement agents the ability to know instantaneously when a threat presents itself at the maritime border and to rapidly provide required information to decision makers and security forces. These functions are performed through an arrangement of personnel, equipment, communications, and facilities as well as the procedures agents employ in operations. The project will include:

- Advanced Automated Scene Understanding (ASU) – Improves efficiency and effectiveness of the watchstanders/agents by autonomously detecting prohibited, suspicious, and anomalous behaviors based on self-learning of normal behaviors or operator-generated rules;
- Covert Illegal Contraband Tracker – Provides the ability to track illegal contraband to its final location after being detected by law enforcement, linking illegal shipments to the organizations that are smuggling them; and
- Boarding Team Communication – Enhances the USCG’s ability to more quickly, safely, and effectively board and inspect vessels by providing boarding teams continuous, reliable, inter-deck, team-to-ship, and team-to-command-center communications platform for voice and data.

***Border Officer Tools and Safety Program*** – FY 2008: \$0; FY 2009 estimate: \$3,851. Provides tools and technologies to border security law enforcement officers to efficiently, effectively and safely perform inspections of vehicles and vessels. This program will provide a wide variety of tools, possibly leveraged from other Departments, which can be adapted for CBP and USCG.

*Border Officer Tools Project* – Develops a prototype of a repeater-based communications system that will meet specific Coast Guard requirements. This type of system permits communication among boarding team members, no matter where they are in the vessel. Repeaters are small transmission devices that are deployed like breadcrumbs as officers enter and search a vessel. In FY 2008, the project will transition a deployable communications repeater for boarding teams. Starting in FY 2009, the Border Officer Tools and Safety Program plans to expand the scope of the project to include land and maritime law enforcement efforts. It will improve Coast Guard boarding teams’ and Border Agents’ effectiveness and enhance officer/agent safety while searching vessels/vehicles. Many of these tools will leverage technology currently under development by DHS or Department of Defense (DOD) for other purposes. These tools will provide:

- Secure communications (i.e., voice and data) between field operators, and between field operators and their command centers;
- Intrusive (i.e., requires contact) as well as non-intrusive, non-destructive technologies to aid in the identification of contraband; and

- A technology survey to identify documentation resolution versus bandwidth solutions for providing 24-hour real-time image transmission of high-definition images and documents.

*Border Officer Safety Project* – Starting in FY 2009, this project plans to integrate technologies that will enable border security law enforcement agents to more safely perform their mission. These technologies include, but are not limited to:

- Enhanced Ballistic Protection – will deliver lighter weight, more durable and higher strength materials and equipment to increase the level of a field agent’s ballistic protection while reducing his equipment load;
- Automatic Facial Recognition – will capture images of individuals and compare them to law enforcement databases;
- Hidden Compartment Inspection Device – will allow for agents to non-intrusively detect, from greater stand-off ranges, people and contraband hidden behind walls and other barriers; and
- Pursuit Termination-Vehicle/Vessel Stopping – will provide for a user-safe, non-lethal means of stopping uncooperative vehicles and vessels attempting to evade apprehension.

In FY 2009, the project plans to develop and document ballistic vest performance requirements for border security as well as develop gun-fire location requirements for law enforcement officers.

**Cargo Security Thrust Area** – Develops technologies to ensure the integrity of cargo shipments and enhance the end-to-end security of the supply chain – from the manufacturer of goods to final delivery. One of the most significant potential terrorist threats to the Nation is the vast numbers of shipping containers that flow through our borders each year, most of which enter without physical inspection. This thrust area will deliver technological capabilities that address supply chain vulnerabilities – reducing the risk that cargo conveyed across various transit modes in the international supply chain can be manipulated for terrorist activity. This includes the ability to communicate container status as well as security information that will assure government customs agents and shippers of the integrity of containers and cargo. Private industry has expressed interest in the cargo security technologies being developed within this thrust area based on their added potential to increase business efficiency.

**Cargo and Conveyance Security Program** – FY 2008: \$9,949; FY 2009 estimate: \$15,825. Improves supply chain security and practices in order to secure the Nation’s borders and cargo – reducing illegal immigration and preventing the transport of illegal drugs, contraband, and weapons of mass destruction into the United States. Using a system-of-systems approach, the program develops advanced sensor and communication technologies within a security architecture that encompasses the world’s supply chain – from the manufacturer of goods to final delivery. Some technologies developed in this program will enable CBP officers to identify tampering events and their location, track shipping containers, and ensure that alarm data is communicated reliably and securely. The program will transition most of these technologies to the commercial sector which will then be purchased by industry and adopted as an international

standard that will meet DHS's core security requirements. The program carries out its activities through the following projects:

*Marine Asset Tag Tracking System (MATTS) Project* – Establishes a remote global communications and tracking network to be used with the Advanced Container Security Device (ACSD). The MATTS communicates world-wide, even when stacked in a yard of densely-packed metal containers that can block communication. The project will ensure that container alarm conditions are reliably communicated to CBP officers, to enable more informed targeting and high-risk container inspection decisions. In addition, industry can know the status of and track cargo as it moves through the supply chain. In FY 2007, the project tested MATTS prototypes domestically and internationally (including a port-to-port and an in-bond shipment tracking test) to demonstrate that they work in operational environments. In FY 2008, final technical requirements will be released and MATTS will be available for transition to industry.

*Advanced Container Security Device (ACSD) Project* – Develops an advanced sensor system for monitoring the container's integrity. The ACSD is a small unit that attaches to the inside of a container to monitor all six sides of the container to report any intrusion or door opening. It will also detect the presence of humans in the container. If ACSD detects an intrusion, breach, door opening or human, it will transmit this alarm information through MATTS to CBP. The ACSD will also build in a standard plug-and-play interface capability so that other security or commercial sensors (e.g., radiological/nuclear, chemical/biological) can be easily integrated through the standard interface. The ACSD must be able to withstand the harsh environmental conditions of global shipping and be economical for shippers to use. In FY 2007/2008, the project delivered 20 ACSD prototypes each from two vendors and integrated them with the MATTS global communications system. In FY 2008, the project will deliver a complete prototype system for testing. In FY 2009/2010, the project plans to complete field testing of the ACSD prototypes and conduct a large-scale operational test.

*Container Security Device (CSD) Project* – Develops a device whose sensor(s) can detect the opening of container doors. Since the ACSD's development will not be complete for two to three years and since the current generation of mechanical seals can be easily circumvented, the CSD will focus solely on monitoring the status of container doors as a stop-gap measure until ACSD is available. The CSD is a small, low-cost device mounted on or within a container. It detects the opening or removal of both container doors and reports to CBP. CBP Officers can then interdict the container if it poses a security threat. In addition, the S&T Directorate, in coordination with DHS Policy Directorate and CBP, is developing CSD technical requirements that they will couple with an overall concept-of-operations to ensure interoperability with DHS targeting systems and ease of integration with commercial systems. In FY 2007-2008, the project will have completed the development and laboratory testing of one CSD prototype solution and integrated the MATTS global communications system. In FY 2008, a second CSD prototype will be completed. Additionally, the project will support CBP's evaluation of solutions submitted in response to the Conveyance Security Device Request for Information. In FY 2009, the project plans to conduct vulnerability assessments and communications testing of CSDs selected by CBP for evaluation.

*Advanced Screening & Targeting (ASAT) Project* – Provides next-generation risk assessment and targeting tools, such as automated anomaly detection and pattern discovery algorithms, for determining high-risk cargo. ASAT develops computer algorithms and software that will

automatically collect, combine and analyze shipping container information to find suspicious patterns. The S&T Directorate will incrementally transition ASAT to DHS targeting systems and will significantly improve targeting containers for inspection. In FY 2007, the project transitioned software and supporting documentation to CBP for operational use by their cargo analysts. In FY 2008, the project will complete design reviews and beta testing of desktop anomaly detection software. Starting in FY 2009, the project results will allow CBP to identify and prioritize which containers to search and provide dynamic targeting patterns that adjust to changes in cargo movement patterns over time. Also, the project plans to conduct requirements analysis for improved algorithms and architecture interoperability for CBP and TSA.

*Supply Chain Security Architecture (SCSA) Project* – Maps the international supply chain including: all the various nodes (e.g., point of stuffing, port of entry); participants (e.g., shippers, CBP, foreign Customs); and information flow (e.g., container manifest is provided to CBP 24 hours before the container is loaded on a ship). This security architecture should provide DHS the framework to incorporate near-term (CSD) and future container security technologies (ACSD) into supply chain operations. CSD and ACSD alarm information will be transmitted to CBP through the architecture's information backbone. The architecture defines the standards with which vendor technology must comply to ensure secure and reliable data communication. These standards will lead to the development of information management systems that will support improved data collection and risk assessment. In FY 2007, the project completed the final architecture and technical requirements. The SCSA project was completed in FY 2007.

*Composite Container Project* – Develops a potential next-generation International Standards Organization (ISO) shipping container with embedded security sensors to detect intrusions. The container will be constructed from composite materials with embedded sensors. Composites are stronger than steel; and composite shipping containers are 40 percent lighter than current shipping containers. Saving weight benefits shippers by allowing them to load more goods per container than with steel containers. Also, composites are easier to repair, therefore decreasing their overall life cycle costs compared to existing steel containers. In FY 2007, and in 2008, the project will build two full-size ISO-compliant composite container prototypes and conduct a full-scale design review. The project will complete security sensor system development. The composite container will be available to industry in FY 2009.

*Air Cargo Composite Container Project* – Starting in FY 2009, this project plans to expand upon the composite material developed in the Composite Container project to determine whether it can be used to develop an Air Cargo Composite Container that will be able to detect tampering or intrusion with potential blast-resistant capability. The project's success depends on ensuring weight comparability to existing aluminum containers and interoperability with existing aircraft loading infrastructure. In FY 2009, the project plans to conduct requirements and critical design reviews with the air cargo community, complete security sensor system development, and complete structural system design and weight optimization.

*CanScan Project* – Starting in FY 2009, CanScan plans to develop capability enhancements to existing, secondary, non-intrusive inspection (NII) systems to detect or identify terrorist contraband items (e.g., drugs, money, illegal firearms) or humans. These system enhancements will provide increases in penetration, resolution, and throughput compared to existing NII systems. The project will integrate Future Automatic Target Recognition (ATR) capability into

the CanScan system. This project addresses the Cargo Security IPT's highest capability gap to enhance cargo screening and examination systems through advanced non-intrusive inspection. Additionally, the capabilities developed will apply to air cargo security. This project aligns with the Secretary's Secure Freight Initiative to deploy next-generation tools and integrated systems to scan maritime container cargo and gather imagery data. In FY 2009, the project plans to develop technical requirements for non-intrusive system capability enhancements.

*Secure Carton Project* – Starting in FY 2009, the Secure Carton project plans to leverage and further develop an S&T Directorate Small Business Innovative Research (SBIR) project to develop a shipping carton with embedded security sensors that detect tampering/opening of the carton once it has been sealed. The carton will communicate, via radio frequency identification (RFID), any tampering event. This project provides improved supply chain visibility and security closer to the point of manufacture or packing. It is scalable and applicable across various shipping modalities including maritime, ground and air cargo. The development phase of this project will end in FY 2008, and in FY 2009, the project plans to conduct prototype field experiments and perform testing in an air cargo environment.

| 2009 Program Change          |                     |            | (7,612)           |
| <b>2009 Request</b>          |                     |            | <b>200,408</b>    |
| Total Change 2008-2009       |                     |            | (7,612)           |

The Science and Technology Directorate requests \$200.408 million for this activity, of this amount \$5.010 million supports the SBIR Program. This is a decrease of \$7.612 million below FY 2008. This reduction is primarily a result of several projects coming to an end in the Surveillance and Detection R&D Program within the Biological Countermeasures Thrust Area and in the Detection Program within the Chemical Countermeasures Thrust Area. The decrease is also a result of the S&T Capstone IPT process, which shifted funds to high-priority R&D projects such as the explosive countermeasure program.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The Chemical and Biological Division works to increase the Nation’s preparedness against chemical and biological threats through improved threat awareness, advanced surveillance and detection, and protective countermeasures. The division carries out its activities through three thrust areas: Biological Countermeasures, Agriculture, and Chemical Countermeasures.

**Biological Countermeasures Thrust Area** – Provides the understanding, technologies and systems needed to protect against possible biological attacks on the Nation’s population or infrastructure. The thrust area places its emphasis on those biological attacks that have the greatest potential for widespread catastrophic damage. These include – but are not limited to – aerosolized anthrax and smallpox. Where appropriate, the program incorporates biodefense as part of an integrated chemical, biological, radiological, nuclear and explosive (CBRNE) defense across civil and military agencies. This thrust area supports the President’s *Biodefense Strategy for the 21<sup>st</sup> Century*, Homeland Security Presidential Directive (HSPD-10), which provides a comprehensive framework for our Nation’s biodefense. This thrust area carries out its activities through six main programs:

- Systems studies and decision support tools;
- Threat awareness;
- Surveillance and detection research and development;
- Surveillance and detection operations;
- Forensics; and
- Response and restoration.

This work includes advanced technologies for BioWatch, a bio-aerosol monitoring system designed to provide cities the earliest possible detection of a biological attack, and the National Biodefense Analysis and Countermeasures Center (NBACC), which supports the assessment, characterization and forensic analysis of biological agents.

***Systems Studies and Decision Tools Program*** – FY 2008: \$6,754; FY 2009 estimate: \$9,001. Provides the analysis and tools that help generate requirements for program execution within the Chemical and Biological Division. Activities include conducting system studies and net assessments that are used to identify effective measures for deterrence, detection, and mitigation of biological terrorism acts against the U.S. population and infrastructure. A portion of this work supports system design and systems tradeoffs for future BioWatch systems. In addition, Federal, State, and local emergency responders use tools developed in this thrust area, such as Biological Warning and Incident Characterization (BWIC) operational models.

***Biodefense Net Assessments Project*** – Conducts net assessments of this Nation’s overall biodefense strategy every four years as required by HSPD-10, *Biodefense for the 21<sup>st</sup> Century*, to provide “recommendations for re-balancing and refining investments among the pillars of our overall biodefense policy.” This project addresses the HSPD-10 requirement through a series of reports that analyze and provide fresh perspectives on the fundamental assumptions underlying the current national biodefense strategy. In FY 2008, the project will deliver the first of these Biodefense Net Assessments (BNAs) to Homeland Security Council (HSC). They will address 10 fundamental questions related to the strategy contained in HSPD-10. In FY 2009, the project will initiate the second round of BNAs. These BNAs will take a longer range strategic perspective that focuses on our and our adversaries’ competitive strengths, tipping points and potential responses to our actions.

***Decision Support Tools Project*** – Plans to develop fully integrated operational tools for surveillance, detection, incident characterization, and response systems, including improved models of transportation systems and their associated response options and concepts of operations (CONOPS) for chemical and biological attacks. These tools provide architecture design and supporting tools for detection, incident characterization, and response systems. Starting in FY 2009, the project plans to transition tools and data to the DHS Office of Health Affairs’ (OHA) Biological Warning and Incident Characterization (BWIC) Program and the Interagency Modeling and Atmospheric Assessment Center (IMACC) to support various architectures for both chemical and biological detection systems and incident characterization systems. Additionally in FY 2009, the project plans to use real-world data to support the validation of subway models that are currently used in systems studies and deployed operational systems.

***System Studies Project*** – Performs studies that use reference scenarios to assess the capability of the Nation’s current biodefense, identify critical gaps, and perform cost-benefit tradeoffs of different options for addressing those gaps. The OHA and the Secretary of Homeland Security use the results of system studies to help coordinate DHS-led biodefense for the Nation, such as operation of the third-generation (Gen 3) BioWatch system. In FY 2007, the project completed preliminary Gen 3 Biowatch systems tradeoffs (e.g., How sensitive is the deployment architecture to the final level of detection attained by the new Gen 3 detectors?). In FY 2008, the

project will transition the final Gen 3 BioWatch system architecture design and deployment strategy to OHA, which operates the BioWatch system. The project will conduct red-teaming of BioWatch operations to influence the ongoing refinement of BioWatch CONOPS. In FY 2008 and FY 2009, the project plans to shift its focus to the analysis of detect-to-warn systems and indoor facility/critical infrastructure protective architectures.

***Threat Awareness Program*** – FY 2008: \$33,061; FY 2009 estimate: \$37,360. Characterizes threats posed by biological weapons, anticipates future threats, and conducts comprehensive threat and risk assessments to guide prioritization of the Nation's biodefense investments. The *Project BioShield Act of 2004* launched an effort to develop modern, effective medical countermeasures to protect Americans against attack by chemical, biological, radiological, or nuclear weapons. It assigned DHS the lead in conducting threat analyses to determine what constitutes a significant material threat to public health and national security. The primary output – which is used by OHA, the HSC and partnering agencies [e.g., Department of Health and Human Services (DHHS), Environmental Protection Agency (EPA), U.S. Department of Agriculture (USDA), and the Intelligence Community] – is an intelligence-informed, scientific characterization and prioritization of bio-terrorist risks to the Nation.

In FY 2007, the program completed the Project BioShield material threat determinations for all traditional biothreat agents of significant public health concern. These determinations are required before the President and Office of Management and Budget (OMB) can authorize use of the BioShield Special Reserve Fund to procure new medical countermeasures.

The threat awareness program carries out these activities through two main operational facilities that it sustains: the Biological Threat Characterization Center (BTCC) and the Biodefense Knowledge Center (BKC).

***Biological Threat Characterization Center (BTCC)*** – Conducts two major activities: (1) biennial, systematic end-to-end risk assessments on both traditional and advanced biological agents; and (2) laboratory studies to close major scientific gaps that could significantly impact how the nation structures its defenses. Foremost amongst the analytical studies are the biennial Bioterrorism Risk Assessments (BTRAs) that are required under HSPD-10. The BTRA provides the basis for risk-informed investments for National strategic biodefense planning while identifying key knowledge gaps and defining critical vulnerabilities. The BTRA accomplishes this via a thorough analysis of the likelihood and consequence of a biological attack – from the acquisition and production of an agent, to its dissemination in a broad range of scenarios, to the human health and economic impacts of those attacks. The resulting information is used to prioritize the risks posed by various agents, to identify vulnerabilities, and to identify associated major scientific knowledge gaps.

The BTCC also conducts laboratory studies, which help to answer key knowledge gaps identified in the BTRAs and reduce associated uncertainties with biological agents of interest. In FY 2008, the BTCC will provide the second BTRA report and an associated risk assessment tool to HSC. This BTRA expands the agents of concern in the risk assessment to include enhanced biological threat agents and agricultural threats while also providing an assessment of the associated economic and public health consequences. The utility and success of the BTRAs conducted to

fulfill HSPD-10 requirements has led to an HSPD-18, *Medical Countermeasures Against Weapons of Mass Destruction*, requirement that a biennial integrated risk assessment across all of chemical, biological, radiological and nuclear (CBRN) threats. The first such assessment is due to the HSC in June, 2008, and every two years thereafter. In 2009, activities will focus on the BTRA and the iCBRN Risk Assessments due in 2010 – including improved treatment of the intelligent adversary, simplified modeling tools that allow a greater range of ‘what if’ exercises, and inclusion of economic affects for all the threats. Also in FY 2008, the BTCC will conduct laboratory studies that close key knowledge gaps for traditional agents (e.g., “What is the infectious dose for a particular agent in air, food and water and how long does that agent remain infectious once in the environment or when processed in food?”). The BTCC should close the remaining gaps on most of the classical, known agents by FY 2009, at which time, attention will be increasingly focused on addressing future threats.

*Biodefense Knowledge Center (BKC)* – The BKC is responsible for providing analysis and operational support to DHS and other Federal agencies – including 24/7 science and technology reachback for the DHS National Operations Center (NOC) and tailored, in-depth analysis of biodefense issues. The BKC also supports knowledge discovery tools for data integration, analysis, and visualization, as well as software pilots to DHS users so they can more rapidly characterize and understand biological threats. In FY 2007 and 2008, the BKC will provide analysis and operational support activities, including the delivery of all the high-priority biological Population Threat Assessments (PTAs) to DHHS and OHA. PTAs provide an estimate of the number of people exposed to different dose levels of an agent under a plausible high consequence scenario and are used by DHHS to inform their subsequent health effects modeling in support of defining requirements for new medical countermeasures. BKC, also piloted a web-based Biodefense Knowledge Management System (BKMS) allowing users easier access to BKMS data sources and analysis capabilities. In FY 2008 and 2009, the BKC plans to perform PTAs for new material threats identified in the 2008 BTRA and iCBRN Risk Assessment and to provide an improved BKMS with additional curated data sources and enhanced analysis capabilities.

***Surveillance and Detection R&D Program*** – FY 2008: \$62,496; FY 2009 estimate: \$38,099. This program develops next-generation detectors for biological threat agents, including fully autonomous detection capabilities for the third generation (Gen 3) BioWatch system. These detectors will operate with lower costs and faster detection times – thus allowing a significant increase in the portion of the U.S. population that can be protected. In addition, this program works to develop the assays (i.e., signatures or fingerprints of biological agents) needed by detectors to accurately recognize a biological agent. Another focus is on developing detect-to-protect systems specifically for use indoors as well as detection systems for protecting food products.

*BioWatch Generation 3 (Gen 3) Detection System Project* – Develops the Gen 3 BioWatch detection system, including development of: (1) the Bio-Agent Autonomous Networked Detector (BAND), an automated, fully integrated “lab-in-a-box” that is capable of aerosol collection, molecular analysis and identification, and reporting of results with networking capability for real-time control of the entire sensor network; and (2) Deployable Aerosol

Collection Systems (DACS), remotely programmable, automated samplers that can preserve viable samples for one to three days.

The automated detection capability provided by BAND and DACS will significantly reduce BioWatch operational costs thereby, allowing expanded and more frequent monitoring of the U.S. population. In FY 2007, the project developed field prototypes of the leading Gen 3 designs and they will be field tested in late FY 2007 and early 2008. In FY 2008, the Gen 3 BioWatch detection system and initial assays will be transitioned to OHA for the operational Gen 3 BioWatch pilot. The S&T Directorate will provide approximately 26 detection units, associated consumables and technical support to support the OHA-led pilot tests. Funding toward completion and transition of BAND systems will end in FY 2008. In FY 2009, the project will complete full characterization of the DACS, an augment to the BAND and prior BioWatch systems to enable capture and maintenance of viable bioaerosol particles.

*BioAssays - Near Term Project* – Develops the assays (fingerprint signatures of biological agents) that detectors use to recognize biological agents. This project develops bioassays for use in U.S. Government-deployed systems with the very high sensitivity and specificity needed to give government officials an extremely high confidence that the detection warrants further action and investigation. These government-specific operational assays will allow Gen 2 and Gen 3 BioWatch to detect the top-twenty aerosolized biological threats identified in the 2006 BTRA. For security reasons, these assays are closely held and are not available for general commercial use. Therefore, this project is also establishing a mechanism to independently evaluate and validate assays for use in commercial instruments used by first-responders and the private sector. This ensures instruments have sufficiently high quality to have the confidence of the Public Health Community and would be deemed Public Health Actionable Assays (PHAAs). In FY 2007, the project developed signatures for the top-ten biothreat assays. In FY 2008, the project will develop signatures for the next 10 biothreat assays and pilot the PHAA process. In FY 2009, the project plans to transition validated assays to OHA for use in the BioWatch system and to establish an initial operational capability for the PHAA process.

*BioAssays – Next Generation Project* – Develops new approaches for detecting the broad range of possible future threats. The current strategy is to use basic biological building blocks – the subsystems that enable an agent to infect a person, to grow, and to multiply – as a way to identify future threats. Research efforts are focused on identifying these fundamental building blocks – e.g., infectivity-, virulence-, and antibiotic resistance-mechanisms – and developing appropriate assays for them. The S&T Directorate will use these new assays and their associated detection platforms to create novel sensing technologies. In FY 2007, the project focused on evaluating these fundamental building blocks and the initial development of potential applications for novel sensing technologies. In FY 2008, the project will begin laboratory studies to provide an initial proof-of-concept for novel sensing technologies. The project will also develop performance requirements, based on the performance characteristics of current operational systems and input from DHS customers and will identify a number of possible approaches for meeting those requirements. Because of the difficulty of this problem it will be necessary to conduct research on a number of these approaches before determining which is the most likely to succeed. Thus in FY 2009, this project plans to initiate multiple research efforts aimed at identifying the most promising approach for detecting a broad range of possible future threats.

*Detect to Protect (DtP): Remote Sensors and Triggers and Confirmers Projects* – Develop low-cost, bio-aerosol sensors and triggers to detect biological agents within a minute (acting as reliable ‘bio smoke alarms’) for protection of high-value facilities and their occupants. The goal is to provide commercially available detection systems that could enable transportation, entertainment, and other high-value facilities to monitor for airborne hazards and take low-regret precautions (e.g., turning off ventilation systems) to protect people by preventing mass exposure. In FY 2007, the comprehensive system and modeling designs will be independently verified at a government standardized testbed. In FY 2008, the project will develop prototypes suitable for extended field testing, with plans to subsequently conduct extended field testing and transition the systems to the private sector through product commercialization. Funding for this project ends in FY 2008.

*Food Biological Agent Detection Sensor (FBADS) Project* – Develops cost-effective detectors for use in central processing facilities for the food distribution system, with initial focus on liquid protein products. The FBADS detectors have very low false negative and false positive rates and can be used by personnel having only modest technical skills without slowing down current production processes. Funding for this project ends in FY 2007.

*National BioSurveillance Integration System (NBIS) Project* – Provides decision makers early identification of biological events of national significance such as disease outbreaks, the potential use of biological agents, and emerging biohazards. The S&T Directorate supports OHA’s operation of NBIS by providing subject matter expertise and developing modeling tools. NBIS acquires, integrates, analyzes, and disseminates information from existing human disease, food, agriculture, water, meteorological, and environmental surveillance systems and relevant threat and intelligence information. NBIS is currently developing a robust, domestic system, called Project Hyperion to assist with biosurveillance and provide the core of a permanent open-source biosurveillance capability. This project significantly improves information sharing and situational awareness for decision-makers and provides a common operating picture for all participating agencies to enable a timely response to biological events. The S&T Directorate’s support to NBIS will include subject matter expertise and development of modeling tools. In FY 2007, the S&T Directorate provided subject matter experts (SME) in bioinformatics and information technology systems for a customer requirements task force for the NBIS project and director. The S&T Directorate’s support also included the initiation of Project Hyperion development. In FY 2008, the S&T Directorate will continue providing SME support for bioinformatics and information technology systems, and in FY 2009, the project plans to model development within Project Hyperion to bring the overall system to an initial operating capability.

*Next Gen Biological Detection Project* – Starting in FY 2009, this project plans to develop technologies and systems to detect enhanced, emerging and advanced biological threats. The project will focus on developing universal detection technologies that do not require prior knowledge of the biological threat target. The goal is to develop an automated, fully integrated, end-to-end (collection, identification and reporting) system that can indicate the presence of a novel agent of concern, provide rough quantification of the amount of that agent and preserve samples for analysis. This project will both draw on and inform the BioAssay – Next Generation

project described above. Combined, these two projects will provide the Nation with a greatly enhanced surveillance and detection capability for addressing future threats. The S&T Directorate plans to initiate the Next Generation Detection project in FY 2009, with the solicitation of technology concepts, selection of performers, and initiation of laboratory studies to demonstrate technical feasibility.

*Portable Bio Detector Project* – Starting in FY 2009, this project will develop hand-held biological detector/identifier in spiral development process, beginning with a target to classify unknown samples as potential biological threats (or not) and culminating in approaches that identify at species level across an array of known agents. Target users are customs/border agents as well as responders. The project plans to start with the identification of technology solutions for the rapid, on-site discrimination of potential biological agents and initiation of development of concepts of operation for these technologies in target application environments.

***Surveillance and Detection Operations Program*** – FY 2008: \$5,800; FY 2009 estimate: \$0. Prior to FY 2007, this program operated the BioWatch monitoring system and the piloting of the associated BWIC system.<sup>1</sup> In FY 2007, responsibility and associated funding requirements for operating these systems was transferred to OHA. Additional support to these activities, specifically the procurement of units for BioWatch Gen 3 pilot testing and the initial increment of low rate initial production units, will end in FY 2008.

***Forensics Program*** – FY 2008: \$24,002; FY 2009 estimate: \$28,370. In fulfillment of the President's *Biodefense for the 21<sup>st</sup> Century* (HSPD-10), this program operates the National BioForensics and Analysis Center (NBFAC) and conducts bioforensics research in support of criminal investigations and attribution by the appropriate Federal agency. These activities provide facilities, tools (e.g., assays, protocols, strain libraries), analyses, and rigorous chain-of-custody controls needed to support the FBI and others in their investigation of potential biocrimes or acts of bioterrorism. The center analyzes a large number of samples for the Federal Bureau of Investigation (FBI) and other national security partners in secure, contamination-free, biocontainment laboratories.

*National BioForensics Operations (NBFAC) Project* – As designated in HSPD-10, NBFAC is the Nation's lead facility for technical analysis of samples from potential biocrimes or bioterrorism. As an operational facility NBFAC provides:

- Secure, state-of-the-art, contamination-free, biocontainment space for the analysis of evidentiary material;
- Validated protocols for the biological, chemical and physical 'fingerprints' that those samples may contain;
- Rigorous 'chain-of-custody' and quality-control procedures to ensure the integrity of the sample and its analysis; and
- 'Spoke laboratories' to provide specialized capabilities.

---

<sup>1</sup> BWIC interprets warning signals from BioWatch, public health surveillance data, and incident characterization tools (plume and epidemiological models) to quickly determine the impacts a release may have. Together, the BioWatch and BWIC systems provide public health and emergency personnel with the information they need to respond effectively and initiate life-saving medical countermeasures.

NBFAC provides the Nation with a unique capability to conduct forensic analysis of evidence from biocrimes or bioterrorism. This helps prevent and deter biocrime and terrorism by providing unimpeachable data for attribution. Throughout FY 2007-2009 the NBFAC will continue to provide scientific analysis and support to the FBI to analyze biological threat evidence. In FY 2007, NBFAC earned initial ISO 17025 accreditation for sample handling, tracking, and analyses procedures; and validated forensic assays for the top-twenty threat agents. In FY 2008, the NBFAC facility is scheduled to move to the new NBACC facility. In FY 2009, NBFAC plans to complete validation of forensic assays for the top-thirty biological threat agents.

*Bioforensics R&D - Near Term & Long Term Projects* – These projects develop next-generation tools for collecting and concentrating samples and for biological, chemical, and physical characterization of the sample and its surrounding materials and improved methods for extracting genetic materials and proteins from samples. This is achieved by providing the scientific foundation for material attribution, developing protocols for the characterization and identification of biological threat agents, and developing a robust sample management, molecular signatures and physical/chemical analysis research program to address FBI/NBFAC requirements. Bioforensics R&D - Near Term provides NBFAC with tools to analyze the top-thirty agents of concern and methods for analyzing enhanced and engineered threats. Bioforensics - Long Term advances forensics science, establishes an inter-disciplinary approach to the Bioforensics problem, and engages academia in scientific research that supports homeland security. In FY 2007, assays for the top-twenty biothreat agents were transitioned from bioforensics R&D to NBFAC operations. In FY 2008, this project will transition assays for the top-twenty-eight bio threat agents from Bioforensics R&D to the NBFAC for operational use. Additionally, the S&T Directorate will draft a Bioforensics R&D Plan for developing forensics assays for advanced agents. In FY 2009, planned activities include investigating methods for enhanced biological threats, with an anticipated transfer of these methods to NBFAC for operational use in FY 2010.

***Response and Restoration Program*** – FY 2008: \$5,171; FY 2009 estimate: \$6,467. Provides advanced planning, develops concepts-of-operation, and funds exercises and training for responding to and recovering from a large-scale biological attack. Biological agents have the potential to contaminate large portions of a city, covering multiple city blocks and the facilities therein. The objective is to provide a more rapid and less expensive post-attack cleanup and restoration in such situations. This program is developing a systems approach for the restoration of citywide areas and of critical facilities, such as major transportation hubs, and is not developing specific decontamination technologies. Restoration demonstrations, which bring together Federal, State, and, local partners to develop, test, and then share the concepts-of-operations for key scenarios, are at the heart of this approach. In carrying out these efforts, the S&T Directorate partners with EPA, who has the overall lead in this area.

*Systems Approaches for Restoration Project* – Develops a coordinated systems approach to the restoration of wide urban areas, to include high-traffic areas (transit/transportation facilities) and Department of Defense (DOD) infrastructures, following the aerosol release of a biological agent. Prior activities focused on guidelines and protocols for protecting and restoring airports and other critical transportation hubs, e.g., subways. These activities were successfully

concluded in FY 2007, the S&T Directorate is now focusing on restoring wide urban areas, like city neighborhoods, following a biological attack. This is being accomplished through the Interagency Biological Demonstration (IBRD), conducted in partnership with the DOD, the EPA, DHHS, Seattle, and county authorities and agencies. When completed, IBRD will provide a set of concepts, protocols and tools that can then be adopted and modified by other communities in developing their restoration plans. During FY 2007, the project established user requirements. In FY 2007 and 2008 the project is developing restoration plans and templates; conducting technology readiness assessments; establishing requirements; and developing policy and implementation guidance. In FY 2009, the project plans to conduct an exercise and demonstration of wide-area decontamination methods and restoration system tools. These exercises and demonstrations will be performed through a series of tabletops, field exercises, and workshops.

**Agriculture Thrust Area** – Expands current and develops new agricultural countermeasures and plans to provide safe, secure, state-of-the-art biocontainment laboratories for researching foreign and zoonotic diseases. The President’s *Defense of the U.S. Agriculture and Food*, Homeland Security Presidential Directive (HSPD-9) is the primary driver of this thrust. The thrust area also supports work related to the operations and research conducted at the Plum Island Animal Disease Center (PIADC) as well as the conceptual planning of the soon-to-be constructed National Bio and Agrodefense Facility (NBAF). Additionally, this thrust supports the Joint Agro-Defense Office (JADO), which is being established to coordinate, integrate and oversee an interagency agrodefense R&D program.

**Foreign Animal Diseases Program** – FY 2008: \$17,382; FY 2009 estimate: \$21,170. Develops technology to defend the Nation against the natural and intentional introduction of selected foreign animal diseases (FAD), in partnership with the U.S. Department of Agriculture (USDA). The program includes the following projects:

**FAD Modeling Project** – Develops national-scale modeling to inform decision makers on the advantages and disadvantages of various outbreak control strategies, to guide the formulation of countermeasure requirements and to support responders during an outbreak. Through FY 2007, this program developed a national scale-model that coupled the spread of foreign animal diseases with their economic impacts to evaluate strategies for controlling outbreaks. Scenarios developed on the first generation of this model, known as MESA, the Multi-scale Epidemiologic and Economic Simulation Analysis Decision Support System, have been used by both DHS and USDA to analyze a variety of scenarios to help better understand the roles of movement controls, diagnostics and vaccines in controlling outbreaks. Beginning in FY 2008, the project will expand the modeling effort to add two other elements critical to developing future generations of models: focused analysis of key strategic issues in FAD modeling and a longer-term R&D effort involving a broad segment of academia. The focused strategic analysis will draw on the leading modelers worldwide to examine the following key issues:

- How to validate models in the absence of real-world outbreak data; and
- Necessary detail to make a model (e.g., individual animal, herd, farm, county) to support national decision making or local responses to an outbreak.

In FY 2007, this project transitioned a foot-and-mouth (FMD) MESA model to the Biodefense Knowledge Center (BKC). In FY 2008, the long-term R&D element will partner with the new National Science Foundation (NSF) Mathematical Biology Center and will provide a venue for academics interested in modeling FAD defense, including disease, economic, and immune systems modeling and analyses of animal genomics. The partnership will begin with focused strategic analyses and select a limited number of initial projects for both NSF Mathematical Biology Center and the S&T Directorate. By FY 2009, the project plans to extend the MESA model to support analysis of additional FADs of interest. Additionally, the project will start to use results from the first strategic analyses (e.g., how detailed must a model be depending on its intended use) to guide its efforts.

*FAD Vaccine and Diagnostics – Near & Long Term Projects* – Researches and diagnoses FADs, initially developing more effective vaccines and biotherapeutics for FMD, the nation’s top-priority animal pathogen. This research will result in more effective vaccines for FMD. This project focus develops “trade friendly” Differentiating Infected from Vaccinated Animals (DIVA) (distinguish infected from vaccinated animals) vaccines. DIVA vaccines cause an animal to develop protective antibodies that can be differentiated from antibodies that are associated with the presence of disease or infection. Ultimately, DIVA vaccines will allow animals to be vaccinated against a disease without the fear that, once vaccinated, healthy animals will test positive for disease due to the presence of protective antibodies in their bloodstream. This project will additionally research vaccines for FADs, for which no vaccine exists. In FY 2007-2009, the project plans to conduct pilot tests on next-generation FMD vaccines for one new serotype (i.e., major FMD variants, such as type A24, Asia, and O1) per year. These vaccines are currently serotype-specific, and FMD has multiple serotypes and sub-serotypes. In FY 2008, the project will test to determine how quickly this generation of serotype-specific FMD vaccines provides immunity and how long that immunity lasts. In FY 2009, this project plans to complete: licensure testing for its FMD vaccine for the first targeted FMD serotype; advanced development testing on the vaccine for the second FMD serotype; and work with USDA to identify the lead candidates for the third FMD serotype.

*Joint Agro Defense Office (JADO)* – Provides coordination and oversight of an integrated R&D program for defending against foreign animal diseases. JADO is the S&T Directorate-led interagency office formulated by the National Science and Technology Council (NSTC). JADO enables better leveraging and integration of interagency agro-defense research and development, which speeds the transition of FAD modeling, veterinary countermeasures and diagnostics to operational users. Initial efforts focused on defining and initiating an integrated modeling program. In FY 2008, JADO will establish the Joint Modeling Operations Center (JMOC) and related research modeling centers to provide decision makers with well documented, validated, version-controlled models to support policy decisions and requirements generation. JADO will also develop detailed integrated roadmaps for future efforts in vaccine and diagnostics development. In FY 2009, JADO plans to support interagency FAD analyses and exercises, add improved transportation models to the JMOC, and begin developing a transition path for the next-generation FMD vaccines to the National Veterinary Stockpile (NVS).

**Chemical Countermeasures Thrust Area** – Develops technology to reduce the Nation’s vulnerability to chemical warfare agents (CWAs) and commonly used toxic industrial chemicals

(TICs) and provides countermeasures to emerging non-traditional chemical threat agents (NTAs). The program's objectives are to:

- Provide a comprehensive understanding and analyses of domestic chemical threats;
- Develop pre-event assessment, discovery, and interdiction capabilities for chemical threats;
- Develop warning, notification, and timely analysis of chemical attacks;
- Optimize technologies and processes for recovery from chemical attacks; and
- Enhance capability to identify chemical attack sources.

The S&T Directorate coordinates with interagency partners, such as DOD and EPA, to maximize resources and minimize duplication. While DOD's program focuses on the needs of the battlefield, the S&T Directorate's program actively seeks to incorporate DOD technologies where they have relevant impact against domestic needs. DHS investments provide amplification to EPA's program to ensure that major operational gaps in domestic chemical defense are addressed.

***Analysis Program*** – FY 2008: \$12,431; FY 2009 estimate: \$14,212. Develops a robust and enduring analytical capability to support the chemical countermeasures development. Activities focus on: (1) developing a fundamental understanding of toxic chemical threat properties and conducting risk and vulnerability assessments based on those properties; (2) developing and sustaining expert reach-back capabilities to provide rapid support in domestic emergencies; and (3) developing and validating forensic methodologies and analytical tools, such as chemical signatures, which are used to help identify the nature and origin of chemical threats used by terrorists and criminals. In addition, the S&T Directorate maintains infrastructure, consisting of receipt, laboratory, and storage spaces to accommodate highly toxic chemicals and associated evidence, to provide a fully operational capability. This includes trained and fully certified scientific and technical staff available, to process this type of evidence. To ensure a cohesive effort to describe threats and countermeasures, the Chemical Security Analysis Center (CSAC) conducts key analytical assessments, such as Population Threat Assessments (PTAs). The Office of Intelligence and Analysis (I&A) is the primary DHS customer for the CSAC, funded by the Chemical Analysis Program. CSAC provides completed PTAs to DHHS to fulfill BioShield requirements.

**CSAC** – The CSAC is a national resource that develops and sustains expert reach-back capabilities to provide rapid support in domestic emergencies. Once fully operational (anticipated in FY 2008), the CSAC will be the Nation's first centralized repository of chemical threat information (hazard and characterization data) for analysis of the Nation's vulnerabilities to chemical agent attacks. This will assist the Department and the interagency community with planning for responses to chemical threats. The CSAC researches the fundamental toxic chemical threat properties and assesses risk and consequence due to chemical attacks on population and infrastructure. In FY 2007, the CSAC delivered the Chemical Source Book II: Organophosphorus Pesticides to I&A. In addition, CSAC transitioned all high-priority chemical PTAs to HHS to fulfill BioShield requirements. PTAs characterize the threat posed by specific chemical agents and help to inform policy, acquisition, and deployment considerations on medical countermeasures. In FY 2008, the CSAC will deliver the first Chemical Terrorism Risk

Assessment (CTRA) to the HSC. In FY 2009, the CSAC plans to deliver the biennially updated CRTA to OHA. From FY 2007-2009 the program plans to continue offering a CSAC technical reach-back capability for decision makers as well as a common direct access point for chemical threat data for interagency partners.

*Chemical Infrastructure Risk Assessment Project* – Develops tools to help assess the risk to the chemical industry by identifying and quantifying various infrastructure gaps and vulnerabilities, and potential key hazardous chemicals and associated processes. It also maintains a fully operational reach-back capability that supports the development of chemical security regulations. The project will begin in FY 2008, with a comprehensive assessment of chemical dispersion models' validity and user benefit. Such models are used to measure the downwind hazard and downstream impacts from sabotage or disruption of chemical infrastructure. In FY 2009, the project plans to complete assessment of chemical dispersion models and downstream impacts from infrastructure disruptions. Also in FY 2009, the project plans to assess safer alternative processes that may reduce risk to a select subset of high-volume toxic chemicals.

*Large-Scale Chemical Transport Release Modeling* – Starting in FY 2009, this project will develop an improved understanding of the consequences of release of large volumes of hazardous chemical in transport (e.g., rail cars or tankers). In FY 2009, the project plans to conduct a critical assessment of existing dispersion models as applied to observations made during and following releases from rail car accidents. Subsequent efforts will identify improvements in models that promise to more closely approximate the actual effects of large scale releases and seek to validate those improvements through test and comparison with existing field data.

*Chemical Forensics and Attribution (FAP) Project* – Develops and maintains new chemical forensics and attribution analytical tools, techniques, and enduring technical capabilities for chemical threat agents and associated evidence. The Chemical FAP is developing the technical capability to rapidly, accurately and credibly characterize and support the attribution of origins of intercepted, or collected, hazardous chemical materials. This capability will support the investigation of terrorist and criminal incidents involving chemical threat agents by enabling attribution to the original source. FAP provides essential information for criminal prosecutions and intelligence analysis activities, which serves to prevent, deter, detect, disrupt and respond to chemical terrorists and chemical incidents. In addition, Chemical FAP gives decision makers the information necessary to determine appropriate government action. In FY 2007, the project validated forensic analytical methodologies for G-series<sup>2</sup> nerve agents. In FY 2008, the project will validate forensic analytical methods for H-series blister agents. Also in FY 2009, the project plans to validate forensic analytical methodologies for V-series nerve agents.

**Detection Program** – FY 2008: \$25,217; FY 2009 estimate: \$21,021. Develops technology to warn and notify of a chemical threat release. It includes technologies responders need to survey potentially contaminated scenes, while limiting their exposure to chemical agents. This program aims to provide technologies that can, in a single package, sense chemical agents and more commonly monitored chemicals, at costs that will support dual-use application. Developing this capability requires a leap forward in technology for next-generation systems. Due to the various

---

<sup>2</sup> Letters such as G, H and V denote classes of chemical warfare agents.

physical properties associated with detecting high-vapor pressure versus low-vapor pressure chemical threats, an array of technologies is required to ensure that the full spectrum of chemical hazards is adequately addressed. This program will develop the five detection systems described below. The Office of Infrastructure Protection (OIP) is the primary DHS customer and will be responsible for supporting transition of many detection programs to local communities.

Two of the detection systems – The Autonomous Rapid Facility Chemical Agent Monitor (ARFCAM) and the Lightweight Autonomous Chemical Identification System (LACIS) – are the first-generation chemical detection systems for facility monitoring and handheld use, respectively. Current systems are unable to detect a wide range of CWAs and TICs and often exhibit high false-alarms rates. ARFCAM and LACIS address these gaps.

*ARFCAM Project* – Develops a low-cost, fully autonomous, networkable chemical monitor that will “detect-to-warn” the presence of up to 20 CWAs and high-priority TICs simultaneously within a single device. This project will improve protection of facility occupants through its ability to detect a wide range of agents with increased reliability. In FY 2007, the project completed testing of laboratory prototypes. In FY 2008, the S&T Directorate will refine the ARFCAM algorithm using the results from testing in the Washington Metropolitan Area Transit Authority (WMATA) Metro testbed. In FY 2009, the project plans to conduct independent laboratory test and evaluation of prototypes.

*LACIS Project* – Develops a networkable handheld detector for responders, which will detect up to 20 TICs and CWAs in a single sensor package. LACIS hopes to detect TICs and CWAs below the Immediately Dangerous to Life and Health (IDLH) level, emphasizing a very low false-negative response. This system allows for more reliable detection across a broader range of chemical agents for improved protection of responders to a chemical incident. Additionally, it will enable enhanced detection capabilities at borders, portals and other nodes of people and cargo flow. In FY 2007, the project completed testing of laboratory prototypes. In FY 2008, the S&T Directorate will evaluate LACIS prototypes in an operational testbed. FY 2009, the project plans to conduct independent laboratory testing of field prototypes.

The S&T Directorate is developing the following other detection systems:

*Integrated CBRNe Detection System Project* – Develops an architecture that integrates reporting from disparate chemical, biological, radiological, and potentially nuclear and explosive (CBRNe) detection/collection systems. This system will provide timely CBRNe detection, identification, and assessment of the threat and enables appropriate response by local, State and Federal officials. It will greatly improve the integration of alarm and response assets across multiple potential attack modes, resulting in more rapid and informed decisions at the appropriate response level. In FY 2007, the project conducted a study of potential architectures. In FY 2008, the project will conduct a two-city pilot of the chemical and biological portions of the integrated CBRNe Detection. In FY 2009, the project plans to expand Integrated CBRNe pilot testing to include radiological and explosive detection. Upon successful pilot testing of all portions of the Integrated CBRNe Detection System, the project plans to perform a full-scale demonstration.

*Low-Vapor Pressure Chemicals Detection Systems (LVPCDS) Project* – Investigates transportable technology to detect and identify persistent low vapor pressure chemical threats on surfaces. This system will enable a rapid, stand-off survey of areas potentially contaminated with persistent chemical agents, thus accelerating facility restoration. In FY 2007, the project demonstrated a laboratory prototype. In FY 2008, the project will conduct independent test and evaluation on laboratory prototypes. In FY 2009, the project plans to conduct test and evaluation of the field prototype systems in a simulated operational environment.

*Non-Intrusive Container Monitor Project* – Starting in FY 2009, this project plans to investigate technology to rapidly and efficiently determine the contents of suspicious containers in cargo or passing through security portals. Work will focus on enhancing security at portals within and at the perimeter of key elements of our national infrastructure. This technology will promote the interception and confiscation of illicit materials by a variety of customs, law enforcement, and responder personnel. In FY 2009, the project plans to explore new concepts, including the characterization of the range of hazards that can be effectively interrogated through common packaging materials.

*Rapidly Deployable Chemical Detection System (RDCDS) Project* – Develops a deployable chemical monitoring system, consisting of airborne and ground based elements, that can monitor special events and emergency situations for seven CWAs and at least 19 TICs. The S&T Directorate transitioned this project to OHA in FY 2007.

***Response and Recovery Program*** – FY 2008: \$10,504; FY 2009 estimate: \$19,698. Provides technologies for returning a chemically contaminated area to a normal condition. This work primarily supports the development of technologies and guidelines for decontamination and the analysis of contaminated areas both before and after restoration processes. This program includes:

- Development of a mobile chemical analysis laboratory;
- Development of fixed-site chemical analysis laboratories for CWAs; and
- Development and demonstration of facility restoration and decontamination technologies and guidelines.

Taken together, these efforts will decrease the unacceptably long duration of cleanup efforts after attack with a persistent chemical on key infrastructure.

*Facility Restoration Demonstration Project* – Develops a systems approach to restoration and response (R&R) of critical transportation facilities following a chemical agent release. This project will develop efficient planning tools, identify decontamination methods, identify sampling methods, and develop analysis tools. Facility Restoration Demonstration will enable rapid recovery from a chemical agent release in a major transportation facility, minimize the economic impact of a chemical agent release, and provide defensible public health decisions concerning the re-opening of major transportation facilities following a chemical agent release. In FY 2007, the project completed draft remediation guidance and submitted it for peer review. In 2008, the project will complete a final restoration plan. The project plans to complete a final, full-scale facility restoration demonstration in FY 2009.

*Fixed Laboratory Response Capability Project* – Develops prototype environmental laboratories and protocols to assist with the assessment and remediation of CWA contamination. These laboratories will have full EPA quality certification, standard methods for analysis of CWAs agents in environmental matrices, and standard reporting protocols. The laboratories will be located in high-threat areas and be available to assist law enforcement with rapid identification of unknown chemical hazards. The optimization of laboratory protocols will maximize overall throughput and the capability will be appropriately sized to assist in remediation of incidents involving CWA or non-traditional agents (NTAs) releases. This project will greatly reduce the time needed to restore contaminated facilities and inform public health decisions regarding re-use. In FY 2007, this project established three initial prototype laboratories in the northeast region and an ultradilute CWA standards program. In FY 2008, it will establish laboratories for prototyping in the west and southeast regions and will determine the laboratory capacity required to enable acceptable remediation times in context of plausible contamination scenarios. In FY 2009, the project plans to complete optimization of the high-throughput analytical methods, jointly with EPA, and initiate transition to EPA.

*Portable High-throughput Integrated Laboratory Identification System (PHILIS) Project* – Implements a rapidly deployable, mobile chemical laboratory system to support high throughput analysis (several hundred samples per day) of environmental samples that may contain TICs and CWAs. On-site, high-throughput analysis of environmental samples will facilitate accelerated disposition of the high volume of samples collected during the hazard mapping, decontamination, and remediation phases, which will enable rapid return to normal use. In FY 2007, the project completed final design, fabrication and initial operational demonstration of this capability. In FY 2008, the project will complete documentation, to include detailed standard operating procedures, maintenance documentation and cost-of-ownership analysis; the project will transition a final prototype and technical data package to the EPA.

*NTA Mobile High-Throughput Laboratory Project* – Starting in FY 2009, this project plans to develop a mobile, rapidly deployable chemical laboratory system for analysis and identification of NTAs. The project will enable high-throughput analysis (several hundred samples per day) for rapidly mapping contamination and supporting the recovery of contaminated areas. This project will help government officials make rapid determinations and expedite the return of areas contaminated with classified chemical threats to normal use. In FY 2009, the project plans to complete initial conceptual designs.

*Integrated Detection/Decontamination Demonstration Project* – Starting in FY 2009, this project plans to demonstrate newly evolving tools for detecting the release of chemical threats, mapping chemical contamination, and monitoring the decontamination process through facility clearance. This project plans to reduce the overall time for recovery of critical infrastructure by focusing response on affected areas. In FY 2009, this project plans to define and identify operational test environments and perform a market survey of existing detection/decontamination technologies.

*Chemical Decontamination R&D Project* – Develops and tests technologies that decontaminate NTAs, CWAs, and persistent TICs. The project will assess the validity of current techniques for decontamination of NTAs, describe performance gaps, and begin to fill performance gaps

through a measured R&D program. In FY 2007, the project initiated a laboratory assessment of efficacy of commercial and available developmental decontamination approaches. In FY 2008, the project will continue this testing. In FY 2009, the project plans to complete the testing and describe key performance gaps. The project plans to initiate a R&D program to develop improved technologies that address the full range of persistent CWAs, TICs, and NTAs.

*Integrated Consortium of Laboratory Networks (ICLN) Project* – Starting in FY 2009, the S&T Directorate plans to initiate funding the ICLN. The ICLN consists of a national homeland security infrastructure with a coordinated and operational system of laboratory networks that provide timely, high-quality, interpretable results for early detection and effective consequence management of acts of terrorism and other events requiring an integrated laboratory response. This project will provide optimized national laboratory preparedness by improving 1) coordination of laboratory response to incidents and 2) common standards of performance across laboratory response assets. In FY 2009, the project plans to complete execution of an interagency plan for the validation of methods used in detection of anthrax contamination in facilities and to initiate the integration of the nation's laboratory response networks with the National Biosurveillance Integration System (NBIS).

PPA: COMMAND, CONTROL, AND INTEROPERABILITY

|                              | <b>Perm<br/>Pos</b> | <b>FTE</b> | <b>Amount</b>    |
|------------------------------|---------------------|------------|------------------|
| <b>2007 EOY Actual</b>       |                     |            | <b>\$ 74,672</b> |
| <b>2008 Enacted</b>          |                     |            | <b>56,980</b>    |
| 2009 Adjustments-to-Base     |                     |            | 0                |
| <b>2009 Current Services</b> |                     |            | <b>56,980</b>    |
| 2009 Program Change          |                     |            | 5,410            |
| <b>2009 Request</b>          |                     |            | <b>62,390</b>    |
| Total Change 2008-2009       |                     |            | 5,410            |

The Science and Technology Directorate requests \$62.390 million for this activity, of this amount \$1.560 million supports the SBIR Program. This is an increase of \$5.410 million above FY 2008. This increase allows the Command, Control, and Interoperability Division to develop additional technologies for specific high priority customer-identified needs identified during the S&T Capstone IPT process – specifically it will fund efforts in Internet-based Control System Protection – Supervisory Control and Data Acquisition (SCADA) and Process Control Systems (PCS).

**CURRENT SERVICES PROGRAM DESCRIPTION**

The Command, Control, and Interoperability Division (CID) focuses on operable and interoperable communications for emergency responders; security and integrity of the Internet; and the development of automated capabilities to recognize potential threats. The division meets its goals by transforming new and promising concepts into a real operational capability through the judicious blending of new technologies and current capabilities. CID supports partners in Federal, State, local, and tribal emergency response; DHS operational components (in predicting, detecting, and responding to all hazards); and private sector partners who own, operate, maintain, and use much of the Nation’s cyber infrastructure.

CID thrust areas include: Cyber Security; Communication, Interoperability, and Compatibility; Knowledge Management Tools; Basic/Futures Research; Surveillance, Reconnaissance and Investigative Technologies; and Emergent Threat Assessment.

**Cyber Security Thrust Area** – Leads cyber security RDT&E to secure the Nation's current and future critical cyber infrastructure. Cyber attacks are increasing in frequency and impact. As outlined in the President’s *National Strategy to Secure Cyberspace* (NSSC), our Nation’s economy and national security depend on information technology and the information infrastructure. Information networks directly support the operation of all sectors of our economy – energy (electric power, oil and gas), transportation (rail, air, merchant marine), finance and banking, information and telecommunications, public health, emergency services, water, chemical, defense industrial base, food, agriculture, and postal and shipping. Computer networks also control electrical transformers, trains, pipeline pumps, chemical vats, radars, etc. Cyber attacks can have serious consequences including the disruption of critical operations, loss of revenue and intellectual property, and loss of life.

Activities in this thrust area are carried out through three programs: Information Infrastructure Security, Research Tools and Techniques, and Next Generation Technologies.

***Information Infrastructure Security (IIS) Program*** – FY 2008: \$9,880; FY 2009 estimate: \$11,181. Facilitates implementing the President’s NSSC. This program leverages the collective resources of private companies and technology vendors to identify and demonstrate new technologies to help protect the nation’s infrastructure. Through the IIS program, the S&T Directorate engages with industry, government, and academia to ensure that the core functions of the Internet develop securely and benefit all owners, operators and users, including Internet Operations Organizations. In addition, the IIS program addresses economic assessment, risk analysis, and modeling requirements on implementation and deployment of cyber security technologies that support internal DHS customers and external partners. This program includes the following projects: Secure Protocols, Process Control Systems; and Cyber Security Assessment.

*Secure Protocols Project* – Develops secure protocols for the cyber-components that make up the Internet, specifically the Internet’s Domain Name System (DNS) and routing infrastructure. This project combines Domain Name Security System Security (DNSSEC) and Secure Protocol for the Routing Infrastructure.

In the area of DNS security, activities focus on enabling all DNS-related traffic on the Internet to be compliant with the DNSSEC standard protocol that secures DNS communications. The DNS translates alphabetic domain names (such as website addresses) into their corresponding numeric Internet Protocol (IP) addresses, which is what computers, networks, and Internet sites actually use to ‘call’ one another. The entire Internet relies on DNS to function, so its security is paramount. In FY 2007, within DNSSEC, the program developed secure domain resolvers (the mechanism that DNS uses to find the correct IP address), associated end-system resolvers and DNSSEC-aware software applications. The project also inserted DNSSEC standard protocol into the *Federal Information Security Management Act (FISMA)*, which requires that government agencies deploy the DNSSEC standard protocol. In FY 2008, the project will complete the modification of end-user applications, such as web browsers and e-mail clients, to make them DNSSEC-aware, providing end-to-end security for Internet users to assure authenticity and integrity of information coming to the end system. In FY 2009, the project plans to include increasing deployment of the DNSSEC protocol and gathering operational DNSSEC query data, with the goals of further analyzing DNS security, and initializing deployment within government networks.

This project also develops a more secure routing infrastructure for the Internet by engaging private-sector internet infrastructure owners and operators as well as government agencies. In FY 2008, the project will develop and deploy a Public Key Infrastructure (PKI) (a system of ‘keys’ that securely ‘locks’ and ‘unlocks’ information passing through the Internet) with the American Registry for Internet Numbers (ARIN), which controls and allocates IP addresses for North America. The PKI with ARIN will ensure that when addresses are distributed there can be mutual authentication between ARIN and the entity receiving the address. The PKI will enable Internet Service Providers (ISPs) to generate more accurate route filters to process Border Gateway Protocol (BGP) update messages and to detect entities attempting to “hijack” address

space. The project will also work with ARIN to cleanup the ARIN database, eliminating many of routing errors and vulnerabilities to cyber attacks that are caused by inaccurate information in the database. In FY 2009, the project plans to continue deployment of the routing PKI with global registries in addition to ARIN.

*Process Control Systems (PCS) Security Project* – In FY 2009, this project plans to support improved security for PCS associated with the Nation’s infrastructure. PCS deal with organizing architectures, mechanisms, and algorithms for controlling the output of specific processes. PCS control with water supply, electrical power, gas and oil pipelines, and other distributed processes. Planned activities include developing a PCS architecture document and a PCS model for the oil and gas sector. It will be a guiding document provided to vendors to produce products that create and/or maintain interoperability with existing PCS systems. This interoperability will allow PCS systems to easily integrate new products into existing systems and enhance information sharing within the critical infrastructure sectors using PCS.

*Cyber Infrastructure and Emerging Threats Project* – The Distributed Environment for Critical Infrastructure Decision-Making Exercises (DECIDE) effort is a distributed scenario-based exercise (war-gaming) environment designed to enable large businesses in critical infrastructures to develop coordinated responses to a variety of disruptions based on their individual and collective business models. In FY 2008, the S&T Directorate will award the contract. In FY 2009, the project plans to complete the Software Requirements Specification, Software Project Management Plan, System Design Document, Functional Design Document, including a draft system architecture, and Concept of Operations Document. Additionally in FY 2009, the project will deliver the Alpha Version (including Source Code, Test Plan, Test Results, Updated Design Documents).

*Network Identity Management* – In FY 2008 the S&T Directorate will establish and operate a computer Network Identity Management Testbed to test, pilot and validate an ongoing stream of technology, process and policy concepts for managing user identities, rights, and authorities within, and external to, an organization’s computer networks. The project will enhance the security of DHS information-sharing environments by improving authentication for persons, hardware devices, and software applications. Planned test scenarios include: identity federation (SAML 2.0 / WS-Federation), SAML profiling, use of XACML for access control, Secure Token Service, fine-grained authorization, malicious internal user simulation, auditing capabilities, and intrusion detection.

*Cyber Security Research Tools and Techniques (RTT) Program* – FY 2008: \$7,160; FY 2009 estimate: \$6,971. Provides secure facilities and methods for testing cyber security technologies under real-life conditions. Neither existing research network infrastructures nor the operational Internet provide adequate means for testing defense technologies. To accelerate research, development and deployment of effective defenses for U.S.-based computer networks, CID is developing a cyber security testing infrastructure that allows researchers, developers and operators from government, industry and academia to experiment with potential cyber security technologies. CID will produce scientifically rigorous testing frameworks and methodologies to support national-scale experimentation. The program includes three projects: Experimental Research Testbed, Research Data Repository, Experiments and Exercises and Internet Route

Monitoring. The end-users for these research tools and techniques include cyber security researchers, developers, and operators.

*Experimental Research Testbed Project* – Provides a cyber security testbed to evaluate defense mechanisms against attacks on the infrastructure and support mitigation of attacks. The project supports the S&T Directorate by working with the National Science Foundation (NSF) to create the Defense Technology Experimental Research (DETER) cyber security testbed. Existing testing facilities cannot handle experiments on a large enough scale to represent today's operational networks or the portion of the Internet that might be involved in a security attack. Industry has only been able to test and validate new security technologies in small- to medium-scale private research laboratories that do not adequately simulate a real networking environment. The DETER cyber security testbed will address these gaps. In FY 2007, the project combined several other government-funded testbeds to increase capabilities to create a realistic model of the Internet to test cyber security technologies. In FY 2008, the project will increase the testbed's capacity to allow large-scale malicious-code experiments. The project will also increase the number of testbed users and large-scale data set applications. In FY 2009, the project plans to test five new technologies that may include: worm defense, routing security, distributed denial of service defense, malware detection and domain name system security.

*Research Data Repository Project* – Creates and maintains a large-scale data set repository of real network and system traffic for use by the cyber security research community to accelerate design, production, and evaluation of next-generation cyber security solutions, including commercial products. In FY 2007, the project finalized certification of the Protected Repository for the Defense of Infrastructure against Cyber Threats (PREDICT) dataset portal and process. It also rolled out the PREDICT program to stakeholders. Through FY 2008-2010, the program plans to continue building datasets, with a goal of having 250 data sets added to the protected repository by FY 2010. These datasets may consist of netflow, packet traces, critical infrastructure data, topology data, performance data, network management data, voice over IP data, and blackhole traffic.

*Experiments and Exercises Project* – Addresses cyber security requirements from internal DHS customers in support of their operational missions in critical infrastructure protection. Through this project, DHS participates in experiments and exercises that facilitate the development and deployment of technologies to significantly improve the security of key infrastructure sectors. In FY 2007, through a public-private partnership with several companies from the oil and gas sector, including Chevron, Citgo, British Petroleum, and Ergon, the S&T Directorate demonstrated a framework for assessing risks and evaluating new technologies to reduce vulnerabilities in oil and gas sector PCS. This framework helps to identify, integrate, and demonstrate commercial event detection and correlation technologies that can significantly enhance situational awareness on distributed control systems (DCS) networks and secure the DCS used in refineries and other large industrial facilities.

*Internet Route Monitoring Project* – Starting in FY 2009, this project plans to identify critical internet infrastructure, incorporating an understanding of geographic and topological mapping of internet hosts and routers. The goal is to complete geographic router-level maps in FY 2010.

These maps will enhance internet monitoring and modeling capabilities to identify threats and predict the cascading impacts of various damage scenarios.

***Next-Generation Technology (NGT) Program*** – FY 2008: \$2,841; FY 2009 estimate: \$0. Addresses next-generation cyber security R&D needs in support of DHS components' mission requirements. It will define technical areas of interest, based on customer requirements, and allow university and private sector researchers to submit their best and most innovative ideas to the S&T Directorate. This program will accelerate transition of new cyber security technologies into commercial products and services. End-users for these technologies include: first responders, critical infrastructure providers, the banking and finance sector, private industry, and government.

In FY 2007, the program continued IP network vulnerability and compliance assessment software (VCAS) trials, expanding from three sites to six sites. VCAS analyzes proposed network configuration changes for vulnerabilities and compliance issues before the change is implemented. Detection of vulnerabilities stemming from configuration errors will significantly improve the security of operational IP networks. In FY 2008, the program will develop technology and infrastructure to allow secure government data and video communication and coordination using hand-held devices. DHS users will be able to ensure secure communications wherever they are located. By the end of FY 2008, the project will offer tools and techniques to defend against identity theft attacks and other financial system attacks to the commercial marketplace, business and financial sectors, DHS and other government infrastructures. In FY 2009, the S&T Directorate plans to continue to foster partnerships to accelerate transition of new technology into commercial cyber security products and services.

**Communications, Interoperability and Compatibility Thrust Area** – Strengthens interoperable wireless communications and improves effective information sharing. Currently, the Nation's capacity for interoperable voice and data communications is hindered by poor and fragmented planning and coordination. This thrust area addresses this critical capability gap by developing tools to enhance overall planning and coordination at all levels of government. The thrust area has two programs: the Office for Interoperability and Compatibility (OIC) and the Integrated Federal, State, and Local (IFSL) Information Sharing.

***OIC Program*** – FY 2008: \$10,290; FY 2009 estimate: \$11,084. Strengthens and integrates interoperability and compatibility activities to improve preparedness and response among Federal, State, local, and tribal governments. OIC addresses the myriad complexities of improving interoperable communications, including:

- Spectrum allocation;
- Incompatible proprietary systems and infrastructure;
- Inadequate standard operating procedures (SOPs); and
- Multi-jurisdictional, multi-disciplinary governance structures.

Emergency responders – police officers, fire personnel, emergency medical services – need to share vital voice and data information across disciplines and jurisdictions to successfully respond to day-to-day incidents and large-scale emergencies. Unfortunately, responders often cannot talk

to some parts of their own agencies – let alone across cities, counties, and states. Ineffective communications risk the lives of responders in the field and can mean the difference between life and death for those awaiting help. OIC relies heavily on input from State and local emergency responders and works cooperatively with the Nation's 60,000 emergency response agencies, State homeland security officials, associations, and policy makers throughout all levels of government. OIC also conducts the RDT&E and standards aspects of the SAFECOM program. In FY 2008, OIC will support the following projects:

- Compliance Assessment;
- Outreach;
- Public Safety Architecture Framework (PSAF);
- Standards and Modeling;
- Statement of Requirements (SoR); and
- Technology Demonstration Projects.

FY 2009 will serve as a transition year as OIC's project portfolio reprioritizes funding to meet DHS customer requirements resulting from the S&T Directorate's Interoperability Integrated Product Team (IPT). By FY 2009, OIC will transition to the emergency response community the products of the following projects: Public Safety Architecture Framework (PSAF), the Statement of Requirements (SoR), and the practitioner-focused interoperability tools developed under the Outreach project(s). The FY 2009 planned project portfolio is as follows:

- Project 25 (P25) Interfaces;
- Emergency Data Exchange Language (EDXL) Data Standards;
- Compliance Assessment;
- IP Backbone Test & Evaluation; and
- Wireless Broadband Production.

Through these projects, OIC will promote and achieve both near- and long-term interoperability by developing technologies, best practices, and methodologies that close explicit gaps within DHS components.

In FY 2009, CID plans to split its Standards and Modeling activities into two projects to distinguish between activities related to P25 standards and other initiatives. The P25-related aspects of the Standards and Modeling project will shift to the P25 Interfaces project and the non-P25-related aspects of the Standards and Modeling project will shift to the EDXL Standards project.

*P25 Interfaces Project* – Accelerates emergency response interoperable communications through the development of national voluntary consensus standards. It was created in partnership with the S&T Directorate's standards efforts and the National Institute of Standards and Technology (NIST). Through this project, OIC participates on the Telecommunications Industry Association's P25 Interfaces standards committee. P25 is a suite of manufacturing standards for interoperable, digital, two-way wireless communications products. The project will ultimately enable connections between multi-vendor and multi-jurisdiction communications infrastructure components and allow for greater interoperability and flexibility. In FY 2008, the project will

test, model and evaluate broadband standards. In FY 2009, the project plans to launch a demonstration between Voice over Internet Protocol (VoIP) and P25 gateways. The project will also accelerate the development and testing of P25 IP-based interfaces for:

- Infrastructure Inter-Radio Frequency Subsystem Interface (ISSI) that will promote the ability of any jurisdictional network to communicate with any neighboring network and/or vendor system;
- Console Subsystem Interface (CSSI) that will provide a common language for dispatch (console) equipment to communicate with land-mobile radio systems; and
- Fixed/Base Station Subsystem Interface (FSSI) that will directly promote communications system hardware interoperability.

*Emergency Data Exchange Language (EDXL) Standards Project* – Facilitates the RDT&E of practitioner-driven information-sharing standards and encourages their implementation into software, systems, and devices. Activities in FY 2009 will address the emergency response community's growing need for new standards for newly developed technologies. Development of these standards will ensure that new technologies improve interoperability for both legacy and state-of-the-art communications systems. In FY 2009, the EDXL Standards project plans to significantly expand the OIC program's existing standards work by developing and piloting data messaging standards for emergency response (e.g., computer aided dispatch systems and emergency operations software systems) as well as identifying other core messaging standards via extensive outreach to the practitioner community. In addition, this project plans to expand messaging standards to work seamlessly with emergency responders, including police, fire and health personnel, in emergency-related exchanges.

*Compliance Assessment Project* – Evaluates existing and emerging technologies to ensure operational effectiveness and conformance to standards. Current work validates that P25 standardized systems are indeed P25-compliant and that equipment from different manufacturers can interoperate, thereby ensuring that Federal grant dollars are being used appropriately. OIC works with NIST and the Department of Justice (DOJ) to execute this project. The overall objective is to develop complimentary test procedures to ensure equipment from different manufacturers can interoperate. In FY 2007, the project completed the first informal round of compliance assessment testing. In FY 2008, the compliance assessment process will be fully operational. In FY 2009, the project plans to begin VoIP testing and data messaging verification.

*IP Backbone Test and Evaluation Project* – Starting in FY 2009, this project plans to research IP-enabled communication backbones and evaluate promising technologies. Backbones are the core "back office" components of communications systems. Standards-based, IP-enabled backbones will provide greater flexibility and increasingly scalable architectures. Through this project, the emergency response community will be able to confidently deploy and use IP backbones and integrate cell phone and satellite communications into interoperable communications networks. In FY 2009, the project plans to sponsor an industry VoIP summit and begin analysis of commercial IP applications, as well as begin equipment testing of bridging solutions with basic VoIP audio connectivity. In future years, the project plans to conduct relevant gap analyses and gather stakeholder requirements for VoIP-related communications technology.

*Wireless Broadband Productization Project* – Starting in FY 2009, this project plans to test and evaluate commercially available and emergent wireless broadband products. The overall goal of the project is to ensure that technologies developed in the laboratory work in a real-world environment to support the emergency response community. The testing and evaluation will reveal capability gaps. Ultimately, emergency response agencies will be able to purchase solutions that meet their needs and remain interoperable as future networks are deployed. In FY 2009, the project plans to analyze IP applications and develop a migration strategy to help emergency responders shift to IP applications.

***Integrated Federal, State, and Local (IFSL) Information Sharing Program*** – FY 2008: \$2,674; FY 2009 estimate: \$0. Develops technologies, techniques and processes to discover new and secure methods for disseminating threat information among Federal, State, local, and tribal government entities. The program activities include rapid prototyping, experimentation, and operational demonstrations of new processes and applications being developed by DHS and in other government agencies. During FY 2007, DHS demonstrated the effectiveness of leveraging existing public safety networks and regional initiatives as the conduit to share public safety information nationwide. In FY 2008, the IFSL program will develop new capabilities to allow a mobile law enforcement official in a remote location to issue a single query that simultaneously accesses multiple databases across jurisdictions. In FY 2009, CID plans to transition legacy IFSL activities that address capability gaps identified by the S&T Directorate's Information Sharing IPT to new projects in the Knowledge Management Tools thrust area.

**Knowledge Management Tools Thrust Area** – Provides knowledge management capabilities to reduce the risk of terrorist attacks and to prepare for and respond to natural and man-made disasters. The thrust area is developing new capabilities for the DHS Office of Intelligence and Analysis (I&A) and the DHS information enterprise, which is a gateway for users to retrieve information, services or resources from the Department. This includes tools and methods to handle massive amounts of information that is widely dispersed in a great variety of forms. The best way to save lives is to find pertinent information, understand its meaning, and then use it to assess an actual threat and determine the level of risk *before an attack or incident occurs*. Work in this thrust area is collaborative and complements efforts in the intelligence, law enforcement, and homeland security communities. In addition, the thrust area focuses on applied R&D in visualization and information analytics, which are critical to the usability and effectiveness of converting raw data into useful information. This thrust area conducts its work through the Knowledge Frameworks, Analytical Research, and Collaborative Information Sharing programs.

***Knowledge Frameworks Program*** – FY 2008: \$9,555; FY 2009 estimate: \$13,425. Develops and tests technologies that can rapidly integrate threat information and provide targeted and actionable information to the various operational entities within DHS and those Federal, State, and local agencies which perform homeland security missions. The program also provides the ability to process structured and unstructured data from a variety of sources and in a variety of formats. In prior years, this program consisted of two projects: the Interagency Center for Applied Homeland Security Technology (ICAHST) Project and the Architecture and Framework Project. To address capability gaps identified through the S&T Directorate's Information

Sharing IPT, the thrust area in FY 2008 will reorganize these efforts, with plans to initiate five new projects in FY 2009.

*Interagency Center for Applied Homeland Security Technology (ICAHST) Project* – Provides a laboratory environment where the Department and our homeland security partners can effectively cooperate in experimentation, testing, and evaluation activities. ICAHST activities focus on testing and evaluating algorithms, software, systems, and architectural options for processing information within the homeland security community. In FY 2008, ICAHST will evaluate high-priority needs identified in the community research agenda. In FY 2009, the Division plans to transition legacy ICAHST activities that address capability gaps identified by the S&T Directorate's Information Sharing IPT to other projects.

*Architecture and Framework Project* – Delivers products and tools to DHS components to address their emerging data processing and visualization needs. These components have near real-time analytical application of current intelligence targeting international Weapons of Mass Effect (WME) procurement networks and other applications to help secure the nation. In FY 2007, this project focused on developing a secure, integrated framework known as Analysis, Dissemination, Visualization, Insight and Semantic Enhancement (ADVISE) to better understand and identify linkages in terror groups' activities, organizations, and consequent threats. The project conducted a pilot of the Everest stand-alone visualization tool to view multiple data points for the U.S. Computer Emergency Readiness Team (US-CERT) and developed a multi-dimensional representation of data information sources (a data cube) for the Immigration and Customs Enforcement (ICE)/Office of Investigations. The S&T Directorate is not funding this project beyond FY 2007.

*Cross Target Threat Awareness Project* – Develops technologies for correlating terrorist attack attempt information across potential targets to create broad, terrorists threat awareness. In FY 2008 and FY 2009, this project will extend and apply pattern recognition technologies to cross-target threat applications (e.g., aviation to rail) in order to develop a terrorist attack pattern recognition tool to alert analysts to events that could be part of a developing, coordinated terrorist attack based on data from all-source intelligence leads and incident reports.

*Collective Situational Awareness Project* – Starting in FY 2009, this project plans to begin developing architecture for accessing and exchanging situational awareness information among the U.S. Coast Guard and its maritime, law enforcement, and intelligence partners. The project will establish information-sharing protocols to enable the exchange of information across disparate national security networks. In FY 2009, this project plans to identify collective situational awareness architecture and design specifications and conduct an analysis of existing laboratory and commercial technologies for collective situational awareness.

*Common Operating Picture (COP) Data Fusion Technologies Project* – Starting in FY 2009, this project plans to begin developing sensor-integration technology to fuse massive volumes of potential hostile surveillance activity information from government agency and private-sector sensor systems. It will enable operators to rapidly analyze the nature, composition, and pattern of the threat in support of a common operating/intelligence picture. In FY 2009, the project

plans to identify operator requirements for hostile-surveillance sensor fusion and initiate analysis of laboratory and commercial sensor fusion and integrated analysis technologies.

*Integrated Data Processing and Analysis Project* – Starting in FY 2009, this project plans to begin developing a single, scalable framework for the integrated analysis of free text, database records, audio, video, imagery, transactional data, geographical data, and sensor information. According to the 9/11 Commission report, this provides technological tools to connect the dots of information that has been legally collected to protect the homeland. In FY 2009, the project plans to assess operator requirements as well as analyze laboratory and commercial data processing and analysis technologies.

*Law Enforcement and Intelligence Sensor Fusion Project* – Starting in FY 2009, this project plans to begin developing comprehensive sensor-fusion standards and protocols for sharing sensor information between traditional law-enforcement organizations and intelligence partners. It will also accelerate the integration of sensor fusion standards and protocols into DHS' cross-domain threat assessment and mitigation systems to support a common operating picture. In FY 2009, this project plans to conduct standards and policy assessments for data exchange with law-enforcement and intelligence partners, and develop design specifications for sensor-fusion standards and exchange protocols.

*Real Time Data Processing and Visualization Project* – Starting in FY 2009, this project plans to begin developing a technology suite for the dynamic, real-time processing and visualization of information in multiple forms and from diverse, distributed sources. It will automate the selection, ranking, and correlation of relevant information for purpose-driven decision making. In FY 2009, the Real Time Data Processing and Visualization project plans to transition the Everest visualization tool to ICE and US-CERT. The project will also identify user requirements for real-time decision making and perform an analysis of existing laboratory and commercial data processing and visualization technologies.

***Collaborative Information Sharing Program*** – FY 2008: \$0; FY 2009 estimate: \$9,133. Starting in FY 2009, in response to the S&T Directorate's Information Sharing IPT, CID plans to establish this program to focus on the development and deployment of advanced technologies to support inter-organizational and multi-level dissemination of information and intelligence products. This includes:

- Pattern recognition and correlation technologies for creating broad threat awareness;
- Operational support capabilities for protecting infrastructure, guarding against threats, and providing relevant, actionable intelligence to operators;
- Strategic analysis capabilities to recognize, track, and accurately assess the significance of patterns and trends in suspicious activity reports; and
- Advanced encryption and redaction tools, digital rights management technologies, and automated destruction capabilities to increase the multi-level security of distributed products.

Projects within this new program include Data Privacy Technologies, Threat Dissemination Standards, Multi-Level Information Dissemination, and Suspicious Activity Reporting.

*Data Privacy Technologies Project* – Begin developing technologies to enable lawful use of U.S. persons data for counter terrorism intelligence analysis. This includes the automatic identification of U.S. persons information using the National Information Exchange Model (NIEM) or other markup languages, and advanced data integrity techniques to automatically purge or anonymize and protect the privacy of data that cannot be otherwise legally retained. If probable cause is established, it will enable the retention of key attributes to support lawful disambiguation and recovery of encrypted U.S. persons data. In FY 2009, the project plans to review Privacy Act rules and integrate these with intelligence oversight purge requirements. The project also plans to perform Privacy Act and DHS intelligence policy assessments for use of data requiring privacy safeguards.

*Threat Dissemination Standards Project* – Begin developing information sharing technical standards and protocols for rapidly sharing terrorism information within and between homeland security sectors (such as energy, banking and finance, transportation and others outlined in the DHS National Infrastructure Protection Plan) with common vulnerabilities or mission needs. The project will accelerate integration of information sharing standards and protocols into DHS' new and legacy cross-sector, threat assessment and mitigation systems. In FY 2009, the project plans to evaluate a DHS information and assurance, cross-target modeling, event-detection solution across multiple data sources.

*Multi-Level Information Dissemination Project* – Starting in FY 2009, this project plans to begin providing secure inter-organizational and multi-level dissemination capabilities for its information and intelligence products. The advanced multi-level security and multi-level of trust technologies resulting from this project will support the distribution of intelligence products to State, local, tribal, and industrial homeland security mission partners. Some examples of these technology topics include advanced encryption and redaction tools to increase security of distributed products, digital rights management, and automated destruction capabilities. Ultimately, this project will enable the secure, accurate, timely, and thorough distribution of DHS finished intelligence products to external homeland security partners will ultimately improve coordinated threat assessment and mitigation activities across the nation. In FY 2009, the project plans to conduct a phased comparative scenario-based exercise to evaluate implementation of the Controlled Unclassified Information (CUI) framework. The CUI provides a framework for all controlled unclassified information and replaces the older, chaotic, Federal framework which included the 'Law Enforcement Sensitive' and 'For Official Use Only' designations. The project's first step in FY 2009 will be the exercise to determine the role of new technologies in the framework.

*Suspicious Activity Reporting Project* – Starting in FY 2009, this project plans to begin developing a DHS cross agency suspicious activity reporting system to track, in real-time, all encounters with individuals on government watch lists, including outcomes and adjudication statuses and while protecting privacy. It will build and sustain a strategic analysis capability to recognize, track, and accurately assess the significance of patterns/trends in suspicious activity reports. In FY 2009, the project plans to gather interagency suspicious activity reporting requirements as well as conduct a system design and integration review.

**Basic/Futures Research Thrust Area (formerly the Analytical Research program)** – FY 2008: \$4,235; FY 2009 estimate: \$4,536. In FY 2009, CID plans to re-direct its Analytical Research program into a Basic/Futures Research Thrust Area to focus on long-term and fundamental basic research that will support activities throughout the division. The objective of this new thrust area will be to identify, investigate, and develop techniques supporting an effective risk management approach to homeland security that is usable by the Department as well as its various Federal, State, local, and tribal partners. The thrust area will carry out its activities through two programs: the Visual Analytics and Physics-based Simulation Program and the Data-intensive Computing, Privacy and Forensics Program.

**Visual Analytics and Physics-based Simulation Program** – Builds on current activities in the Analytical Research program, which focuses on developing new methods by which analysts and operators can discover, comprehend, and apply information – specifically, by presenting large, diverse, and dynamic datasets in easy-to-use visual forms. Activities in this program are supported by the National Visualization and Analytics Center (NVAC) – established by the S&T Directorate in 2005 at the Pacific Northwest National Laboratory (PNNL). The overall objectives are to create a single, common analytical framework for all data types; to provide a truly scalable capability, which maintains its real-time nature as the amount and variety of data increases; and to develop application-specific interfaces and analytical capabilities for systems ranging from handheld, mobile devices to single-analyst computers to command-center installations suitable for wide-area situation-awareness.

In FY 2007, NVAC completed development of several first-generation applications, including strategic visualization capabilities for critical infrastructure protection and pandemic visual analytics. In FY 2008, the program will develop and install extensive enhancements, including interactive, full-text, analytical visualization capabilities for up to one million documents simultaneously and visual analytics tools suitable for mobile and hand-held devices. It will also significantly advance core capabilities to enable new applications of visual analytics and simulation tools, such as a streaming foreign news interactive touch-screen display; a privacy-preserving foundation for visual analytics; and visual analytics for social-behavioral research on terrorist motivations and the public's response to terrorist threats. Most importantly, the program will initiate a new collaborative effort with the National Science Foundation on the Mathematical Foundations for Visual Analytics. In FY 2009, the program plans to initiate development of a multi-modal (text, audio, video, imagery) common visual analytics framework. This project plans to expand the NVAC Industry Consortium to 35 members. In addition, the program will integrate the current University Programs' Institute for Discrete Sciences and its University Affiliates with the NVAC and its current Regional Visualization and Analytics Centers (RVACs). The program also plans to complete a visual analytics prototype capability to support joint Federal, State, and local information sharing and analysis for the Seattle, Washington region in preparation for the 2010 Olympics. In FY 2009, NVAC plans to conduct research and development of a large incident-scale simulation capability based on real physical parameters and conditions, rather than artificial or computer-generated models as is common now.

**Data-intensive Computing, Privacy, and Forensics Program** – Starting in FY 2009, this program plans to begin developing and applying next-generation knowledge management capabilities to perform comprehensive threat assessment. A key focus is on R&D and

application of data-intensive, rather than numerically intensive, computing techniques that provide the basis for the use of the visually based analytical and physics-based simulation capabilities. Such techniques depend on novel, advanced software algorithms and hardware architectures that are not addressed by most academic, commercial, and federally funded research activities. Research in data-intensive computing will also enable the development of new, effective privacy-ensuring capabilities that can be intrinsic (or built-in) to automated information management systems and efficient computer forensics capabilities.

In FY 2009, the program plans to focus on simpler, more efficient software algorithms and hardware architectures for CID transition efforts. The program also plans to initiate R&D of novel, effective, privacy-ensuring capabilities for automated information management systems. CID will investigate and develop algorithms for providing comprehensive, real-time information on threat agents or hazards and their potential environmental, human, and economic impacts.

**Surveillance, Reconnaissance and Investigative (SRI) Technologies Thrust Area** – Research and develop technologies that aid in the discovery, investigation, and prosecution of terrorists and criminals, with a major emphasis on support to the United States Secret Service (USSS) and Federal Air Marshal Service (FAMS). Current activities underway within this thrust area will be completed with FY 2008 funds and new programs are planned in FY 2009. Examples of specific projects coming to completion in 2008 include:

- Advanced Route Evaluation System (ARES) – an automated system that enables FAMS to associate risk with flight routes;
- Forensic Speaker Recognition tool – an automated USSS tool that reduces the time it takes to analyze certain types of evidence from tens of hours to less than an hour;
- Enhanced “Safe-Cracker” – a tool that will enable law enforcement investigators to determine (and testify about) the way the information was accessed; and
- Fully Searchable Digital Ink Library – a fully searchable database of 8,500 samples that automated the USSS ink library’s analog collection of binders.

**Sensors and Investigative Tools (SIT) Program** – FY 2008: \$1,155; FY 2009 estimate: \$0. Starting in FY 2009, this program plans to begin enhancing the capabilities of law enforcement (LE) officers, investigators, analysts and examiners by developing prototypes that increase operational efficiency and create new capabilities in the areas of criminal and terrorist investigations. The program will build upon the projects developed in the USSS Support Program and broaden the customer base beyond the USSS, to include the entire DHS LE community [including FAMS, the Coast Guard, Federal Protective Services, CBP, and ICE]. In addition, as technologies developed in the SIT program mature, they will benefit the LE community at large including the FBI as well as State, local and tribal practitioners.

**Emergent Threat Assessment Thrust Area** – Performs all-source assessments of chemical, biological, cyber security, and advanced explosives threats, as well as threats against infrastructure. The goal is to understand terrorist group capabilities and intentions in each area, and to develop an overall understanding of the types of threats and tactics likely to be used against the United States. This thrust area also provides components of DHS, the Intelligence Community and other government agencies programmatic and technical expertise in emerging

threats, risk sciences and other areas applicable to homeland security that may be especially sensitive, classified or requiring extraordinary security protection

***Countermeasures Development Program*** – FY 2008: \$1,482; FY 2009 estimate: \$1,800.

Addresses the dynamic nature of threats and anticipates and responds to these new and evolving threats. This program recognizes that modern science and technology may enable new threats to be developed, as well as new ways to employ them. The program focuses on developing capabilities to counter emergent threats for which countermeasures capabilities do not yet exist. It also fosters innovative and creative exploratory RDT&E projects to anticipate and counter new and dynamic emerging threats.

***Countermeasures Development Project*** – In FY 2007, this project developed countermeasure prototypes for two ongoing mission support areas and these prototypes were turned over to DHS component(s) for operational test and evaluation; conducted testing to determine the feasibility of a specific mass transit mitigation strategy to a specific vulnerability; teamed with the U.S. Air Force (USAF) to develop a countermeasure to Man Portable Air Defense Systems (MANPADS) for small aircraft and Unmanned Aerial Vehicles (UAV). In FY 2008, the project will complete operational development of two countermeasures for ongoing mission support and turn over those countermeasures to DHS component(s) for field deployment. In addition, the project will participate with the USAF in conducting live-fire testing of a unique small aircraft and UAV defense system. The project will also initiate countermeasure development for those high-priority emerging threats identified and assessed in FY 2007. In FY 2009, the project plans to assess the current state of countermeasure capabilities and initiate countermeasure development for those high-priority emerging threats identified in FY 2008. These efforts will continue to be conducted, as appropriate, with other Federal agencies in the Intelligence Community and DOD.

***Identification and Assessment Program*** – FY 2008: \$3,813; FY 2009 estimate: \$2,400.

Focuses on anticipating and defining potential threats arising from new scientific and technological advances as well as evaluating terrorist use of existing capabilities in new or unexpected ways. It includes identifying and assessing emerging threats to the national infrastructure, such as transit systems and the electric power grid, and conducting emerging threat assessments in support of mission requirements for operational components of the Department. The program carries out its activities through two projects: the Identification and Assessments Project and the Risk Sciences Project.

***Identification and Assessments Project*** – In FY 2007, this project completed eight studies that address the following topics:

- Globalization of biotechnology;
- Vulnerability of the Nation's electric power grid;
- Identification of future biological threats;
- Identification and assessment of emerging threats specific to the mission requirements of DHS components; and
- Vulnerability of underwater mass-transit and vehicular tunnels and countermeasures that can be used to mitigate the threat.

The project also completed one conference titled “Assessing Progress on the War on Terror” co-sponsored with the National Counterterrorism Center (NCTC) and continued a project that uses a structured ‘red team’ process in which imaginative capabilities and ingenuity of potential terrorists are captured and potential threat scenarios are analyzed for feasibility, vulnerability and consequence.

In FY 2008, the project will sponsor follow-on reports for synthetic DNA screening, conduct a fourth installment of emerging tactics that can be used against DHS components, evaluate sensors, complete an initial report on future biological threats and conduct studies that are focused on aviation assessments.

Additionally, the project will transfer its transit security work to the S&T Directorate’s Infrastructure and Geophysical Division for further development of mitigation measures. The project also will complete a classified identification and assessment of emerging threats in support of mission requirements of DHS components.

In FY 2009, the project plans to complete additional future studies on topics identified during FY 2008. The project will conduct additional classified ‘red team’ studies to identify and assess emerging threats and tactics and plans to continue to team with other agencies within the Department, the Intelligence Community and DOD, to identify and assess emerging technologies and how they may be used to threaten the Nations.

*Risk Sciences Project* – Develops a long-term, strategic, view of risk to help DHS components in their risk-assessment work and improve DHS understanding of how to use risk assessment in making risk-based decisions.

In FY 2007, the project completed a paper examining highly problematic characteristics of the homeland security problem space (especially uncertainty, complexity and ambiguity) and the difficulties those characteristics pose for homeland security risk analysts and risk management decision makers. The S&T Directorate will use this paper to inform future project activities and improve Department-wide understanding of risk and its use in informing homeland security decision-making.

In FY 2008, the project will support development of a risk-assessment methodology model using actual information from one of the transit security projects. It will continue to help focus the Department’s efforts in risk identification and assessment and will assist the Department in using a risk-informed process for critical strategic and tactical decisions. The project will conduct additional studies, such as RAND studies, to continue to identify critical parameters in ongoing efforts to secure the homeland.

In FY 2009, this project plans to foster more systematic, transparent, and goal-focused application of risk concepts and tools to provide better support to strategic, operational and tactical decision-makers across the national homeland security enterprise. The project plans to foster a DHS “community of interest” on risk, with a longer-term goal of building a true “community of practice” to help create a unifying departmental perspective on important risk concepts and the ways in which risk can be used to inform homeland-security decision-making.

In FY 2009, the project plans to sponsor additional work in risk assessment methodology and testing, conduct ongoing evaluations of terrorist behaviors and responses to security measures, and independently evaluate current homeland security efforts to identify potential blind spots in the homeland security R&D framework.

***Future Capabilities Research and Development Program*** – FY 2008: \$2,472; FY 2009 estimate: \$300. Conducts high-risk, high-payoff basic research in areas relevant to emerging threats to homeland security. Activities include research on risk assessment methods and research collaboration with external agencies and international partners on emerging technologies. Specific products are classified.

| Total Change 2008-2009       |                     |            | 18,495            |

The Science and Technology Directorate requests \$96.149 million for this activity, of this amount \$2.404 million supports the SBIR Program. This is an increase of \$18.495 million above FY 2008. The increase in FY 2009 supports the Vehicle Borne Improvised Explosive Device/ Suicide Bomber Improvised Explosive Device (VBIED/SBIED) Program, the Render Safe Program, and the Detection and Neutralization Tools Program. The increase in funding in the VBIED/SBIED will allow the Explosives Division to improve large threat mass detection in the transit environment, special events and other large areas.

**CURRENT SERVICES PROGRAM DESCRIPTION**

The Explosives Division develops the technical capabilities to detect, interdict and lessen the impact of non-nuclear explosives used in terrorist attacks against mass transit, civil aviation and critical infrastructure. This includes passenger-, baggage-, and cargo-screening technologies; blast-resistant aircraft construction; and integrated protective systems for high-value facilities.

The primary customers for the Explosives Division are the Transportation Security Administration (TSA), U.S. Secret Service (USSS), Customs and Border Protection (CBP), U.S. Coast Guard (USCG), and first responders.

The Explosives Division carries out its activities through five thrust areas: Explosives Detection, Mitigation, Counter-MANPADS, Research, and Counter-IED.

**Explosives Detection Thrust Area:** Develops advanced technologies to detect explosive threats to the Nation’s aviation, rail and ship transportation systems. Activities in this thrust area: (1) improve existing explosive detection methods; (2) develop new detection methods for screening people, baggage and cargo; and (3) ensure freedom-of-movement for people and commerce.

The Explosives Detection Thrust Area includes the following programs: Homemade Explosives, Cargo, Check Point, Checked Baggage, and Manhattan II.

***Homemade Explosives (HMEs) Program*** – FY 2008: \$0; FY 2009 estimate: \$7,000. Investigates all potential detection technologies capable of detecting and distinguishing explosives and flammable liquids from benign liquids (e.g., drinks, hygiene products and contact lens solutions). This program supports the ongoing effort to counter the threat of homemade explosives. In FY 2008, this program

will consist of the Homemade Explosives project. In FY 2009, this program plans to include characterization, stand-alone detection, and technology integration.

*Homemade Explosives (HMEs) Project* – Investigates all potential detection technologies capable of detecting and distinguishing explosives and flammable liquids from benign liquids. This project supports the work to counter the recent increased threats from HMEs. This project improves products and systems capable of detecting HMEs, supports the research and development of next-generation, novel technologies, algorithms or prototypes for the detection of HMEs and addresses potential operational venues, including airport and mass-transit checkpoints for passengers and carry-on baggage (not cargo or checked baggage). In FY 2007, the project conducted test and evaluation of commercial-off-the-shelf (COTS) devices. In FY 2008, the project will complete COTS technology demonstrations and produce final report for TSA. In FY 2009, the project plans to complete new technology test and evaluation and provide a report to TSA.

*Home Made Explosives Characterization Project* – Provides a better understanding of how to protect aircraft from HME threats as well as the potential damage HME can cause. This will help the S&T Directorate determine what technologies are needed to counter HME threats. In FY 2007, the S&T Directorate conducted detonation assessment tests (to determine the combination/quantity of chemicals that will explode from various ignition sources) and analyzed results for the first group of HME formulas. The S&T Directorate, in coordination with TSA, determined which HME formulas to study based on potential threat, lethality, availability of materials or chemicals to potential terrorists, and any other considerations based on intelligence information. In FY 2008, the S&T Directorate will conduct detonation assessment tests and analyze results for the second group of HME formulas. In FY 2009, this plans to become a stand-alone project that plans to determine the impact, friction, and electrostatic discharge sensitivities of HME threats. Researchers need characterization information to safely handle and store volatile materials used to develop explosive detection systems and other countermeasures. The yearly test results will assist S&T Directorate customers in assessment of potential risk to various transportation modalities and improve DHS's ability to counter HME threats.

*Home Made Explosives Stand-Alone Detection Project* – This new project plans to provide a stand-alone detection capability for HME or novel explosives by improving COTS technologies. The S&T Directorate will develop these technologies and integrate them into a suite of technologies to detect multiple types of HMEs. The S&T Directorate will conduct the Stand-Alone Detection project in conjunction with the yearly assessment of different HME formulas in the HME Characterization project. This will allow the S&T Directorate to prioritize its technology development to counter HMEs that cause the most damage to the mass-transit infrastructure. In FY 2009, the project plans to complete COTS detection assessments for the first group of HME formulas, produce a technical report for TSA, and complete spiral upgrades to COTS equipment.

*Home Made Explosives Technology Integration Project* – This new project plans to develop integrated detection technologies for HME or novel explosives. This project will evaluate stand-alone technologies in COTS equipment for integration into passenger screening portals. This capability will provide customers with an assessment of next-generation Explosive Detection System

capabilities for passenger-concealed HME threats. In FY 2009 and FY 2010 the project plans to test and evaluate spiral upgrades to integrated equipment.

***Cargo Program*** – FY 2008: \$2,306; FY 2009 estimate: \$3,450. Develops advanced air-cargo screening systems and improves canine detection capabilities. This program builds on the congressionally directed Air Cargo Pilot program with a broadened investment strategy to mitigate the threat of explosives placed in air cargo containers. To address DHS customer capability gaps, the Explosives Division plans to enable DHS canine user agencies such as TSA, CBP, USSS and Office of Infrastructure Protection (OIP) to meet new threats and increased demand for canine inspections. The program will continue to research, develop, test and evaluate the next-generation of air cargo screening systems. The program includes two projects: Air Cargo and Canine Explosives Detection.

***Air Cargo Project*** – Develops technologies to enable screening of 100-percent of cargo with minimal false alarms and reduces operational costs. Based on the FY 2006 pilots, the project will conduct a system-of-systems study in FY 2007 and FY 2008, with TSA participation, to determine the optimal points in airport systems for security interventions (e.g., trusted shippers, freight forwarders or airport sites). Results will contribute to TSA's development of an integrated approach to prevent explosives in air cargo. In FY 2008, the project will continue to research, develop, test and evaluate the next generation of air cargo screening systems, develop technology to detect metallic IED components and disable intact IEDs in cargo. In FY 2009, the project plans to complete technology demonstrations and transition technology to TSA.

***Canine Explosives Detection Project*** – Develops more effective training aids and advanced training techniques to improve canine detection of improvised explosives (e.g., homemade or liquid explosives) as well as their performance in complex screening environments (e.g., airport, terminal or mass transit venues with numerous lots of passengers and baggage). In FY 2009, the project plans to develop improved canine training aids and advanced canine training techniques. In addition, the project will explore Remote Air Sampling Canine Olfaction (RASCO) sensors, which are embedded in a jacket worn by a trained canine to augment its detection ability and provide a link to a remote monitoring system. The project will provide a recommendation report on Cargo Screening and the integration of additional sensor capabilities embedded in jackets worn by trained canines. The project plans to prepare status reports on progress and accomplishments each fiscal year, with the goal of transitioning training aids to end-users.

***Check Point Program*** – FY 2008: \$28,407; FY 2009 estimate: \$11,653. Develops advanced capabilities to detect explosives and concealed weapons, including small IEDs or HMEs, which terrorists could use in the hostile takeover of mass transit. This program develops passenger and carry-on-baggage screening systems. These technologies will meet TSA requirements for automation, efficiency, and cost reduction. The program is developing a next-generation checkpoint that will enable passengers to travel seamlessly from public areas to secure areas via a high-tech corridor that will automatically screen for and identify threats. The corridor would contain an integrated system of detectors (sensors, biometrics, radio frequency identification technologies) networked with command control operations. Specific projects under the Check Point program include:

*Automated Carry-On Detection Project* – Develops advanced capabilities to detect explosives and concealed weapons, including IEDs or HMEs that could be detonated in passenger cabins and weapons that could be used in the hostile takeover of mass-transit. This project also plans to introduce new standalone technologies or adjunct technologies, such as computed tomography (CT), to continue improving detection performance and the detection of novel explosives. In FY 2009, the project plans to award a development contract for the detection of novel explosives in the next-generation checkpoint detection system.

*Next Generation Carry-On Detection Project* – Develops automated, carry-on-bag detection system requirements, performance goals and demonstrations. In FY 2007 the project completed testing and evaluation of the automated carry-on-bag detection system. In FY 2008, the project will complete new technology demonstrations for TSA. Project funding ends in FY 2008.

*Next Generation Passenger Check Point Project* – Develops a next-generation detection system to screen passengers for explosives at mass transit checkpoints. This project will facilitate the development of requirements for domain, operations and screening policies to ensure identification of streamlined, innovative, risk-based solutions. It integrates emerging threats, such as liquid- and gel-based explosives, into a complete system. In FY 2007, the project conducted systems studies on the passenger checkpoint technology. In FY 2008, the project will complete a technology demonstration on the passenger checkpoint system and deliver a fully functional laboratory breadboard portal to improve passenger checkpoint throughput using real-time sampling of the passenger's wake while walking through the portal (no stopping required). The project will transition a dual-energy checkpoint detection system to TSA in FY 2009 that identifies potential threats based on atomic number, mass, and other physical characteristics.

*Explosives Trace Detection Project* – Develops automation capabilities, increases efficiency and reduces cost in explosive detection. It will enhance passenger screening by increasing throughput (i.e., the speed at which passengers can pass through screening checkpoints). In FY 2009, the Explosives Trace Detection (ETD) project plans to deliver a fully functional laboratory breadboard portal to improve passenger checkpoint throughput by sampling a passenger's wake while he/she walks through the portal (no stopping required).

***Checked Baggage Program*** – FY 2008: \$6,000; FY 2009 estimate: \$0. Identifies and develops the next generation of checked baggage screening systems and supports continuous improvements toward the Congressionally directed goal of 100-percent screening of aviation checked baggage by electronic or other approved means, with minimum or no impact to the flow of people or commerce. Goals include reducing the rate of false alarms and lowering operating costs. TSA is the primary customer for this program, while the end-users are the aviation industry and transportation screeners.

*Improvements to Deployed Check Baggage Technology Project* – Improves current technologies used in airports and other transit centers across the Nation. It evaluates systems operations, taking into account how useable, reliable, maintainable and operable they are. Understanding the root cause of false alarms will help develop technological advances to reduce their frequency. In FY 2007, the project completed a system false alarm analysis and provided the results to TSA. The project also finalized its certification of Explosive Detection Systems (EDS) for their ability

to detect smaller amounts of explosives. In FY 2008, the project will conduct spiral upgrades to existing developed and deployed check baggage technologies. Program funding ends in FY 2008.

***Manhattan II Program*** – FY 2008: \$14,000; FY 2009 estimate: \$12,641. Initiates cost-performance tradeoff studies to provide TSA better information upon which to acquire the “best performance and affordability” screening systems. In FY 2007, the S&T Directorate, in close coordination with TSA, restructured the Manhattan II program to meet customer requirements. The objective is to stimulate commercial development of next-generation systems that provide the best-value combination of performance and affordability for screening checked baggage. The program will measure performance based on the probability of detection, level of false alarms, and throughput. The project will measure affordability based on initial purchase price, operating costs, maintainability, and other components of full life-cycle costs. The program has multiple phases:

- Phase 0 – Baseline Determination and Identification of Technology Gaps completed in FY 2007– assessed the current state of EDS (e.g., strengths and weakness of such systems). This assessment refines the R&D investment and acquisition strategy for subsequent phases of the program.
- Phase I – Novelty Explosive Characterization and Data Collection initiated in FY 2007 – Collects raw data and images for the various EDS for new HME machines now in commercial operation or soon to be in commercial operation. These data were compiled by both industry and government laboratories and filed in a common, non-proprietary data base. Information will assist government and industry in determining modifications necessary to future hardware and software to provide better detection performance and a larger portfolio of explosives threats.
- Phase II – Performance Standard Development will begin in FY 2008 and FY 2009 – will develop a performance standard that will describe how hardware and software for future EDS systems are linked, collaborated by Government and industry.

**Mitigation Thrust Area** – Reduces the effects of bombs that cannot be detected or be rendered safe through available means. This thrust area concentrates on Conveyance Protection – the hardening of a vehicle against threats (e.g., blast-resistant cargo containers) or the protection of high-value or prominent buildings and infrastructure (e.g., blast-resistant building materials, tunnels, and bridges).

***Conveyance Protection Program*** – FY 2008: \$3,200; FY 2009 estimate: \$1,500. Assesses risks and mitigates consequences of intentional assault on air, surface and marine vehicles. The overall objectives are to:

- Assess the vulnerability and survivability of commercial vehicles to high-energy explosives;
- Develop materials, technologies, and techniques to decrease vulnerability or improve survivability of commercial vehicles;

- Develop domain awareness systems and other information technology that help security organizations thwart intentional assault; and
- Develop information systems that allow first responders to respond in the most effective way to terrorist attack, other intentional assault, natural disaster, or other catastrophes.

TSA is the primary customer for this program, while the end-users are the aviation, maritime and transportation industry. Specific projects under the Conveyance Protection program include Aircraft Hardening and Aircraft Vulnerability Tests.

*Aircraft Hardening Project* – Develops technologies to harden passenger cabins and cargo holds against blasts for retrofit into existing aircraft or incorporation into new aircraft design. This project addresses the risk of catastrophic loss of passenger aircraft, resulting from small IEDs or HMEs detonated in the passenger cabin or cargo hold. This project will deliver ready-for-production designs that meet TSA and Federal Aviation Administration (FAA) requirements. The ultimate goal is to establish another layer of defense capable of defeating IEDs or HMEs not caught by airport explosives detection systems.

*Aircraft Vulnerability Tests Project* – Assesses the vulnerability of narrow- and wide-body aircraft passenger cabins and cargo holds to homemade, commercial, military and other novel explosives. These assessments will help understand damage effects, such as the minimum quantities of explosives needed to cause catastrophic damage to various aircraft types and necessary screening equipment sensitivity to detect a minimum quantity of explosive material. In FY 2007, the project completed vulnerability testing of wide-body aircraft and overhead bins. In FY 2008, the S&T Directorate will continue assessments on aircraft vulnerability, focusing on narrow-body aircraft and blast testing of fuselage liners. In FY 2009, the project plans to deliver computational models to predict aircraft vulnerability to HME threats at various locations within the passenger cabins and cargo holds.

**Counter-MANPADS Thrust Area** – Develops countermeasures to detect and divert incoming Man-Portable-Air-Defense-Systems (MANPADS), protecting the host aircraft from hits. This thrust area, Counter- MANPADS, looks at the viability of equipping commercial transport aircraft with defense systems for mitigating shoulder-fired, surface-to-air missile attacks.

***Counter-MANPADS Directed Infrared Countermeasures (DIRCM) Program*** – FY 2008: \$1,500; FY 2009 estimate: \$0. Evaluates available technologies in three major areas: system performance, system suitability and cost for countering MANPADS attacks by equipping commercial transport aircraft with defense systems. The program has three phases that include developing two Counter-MANPADS prototypes (JETEYE<sup>TM</sup> and GUARDIAN<sup>TM</sup>), performing systems analyses and flight tests, and devising a plan to permit modifications of commercial aircraft with the least disruption and out-of-service costs to the airline industry. Funding for this program ends in FY 2008.

**Research Thrust Area** – Develops integrated countermeasures to explosives threats. The thrust area carries out its activities through the Explosives Research Program.

***Explosives Research Program*** – FY 2008: \$4,175; FY 2009 estimate: \$8,423. Improves explosives detection capabilities by performing multi-disciplinary research and development in imaging, particle physics, chemistry, and algorithms. These result in the development of enhanced detection capabilities and lead to next-generation detection systems. Projects in this program include Fundamental Particle Physics; Algorithm and Analysis of Raw Images; Liquid and Homemade Explosives Chemical Characterization; and Detection Technology and Material Science.

***Fundamental Particle Physics Project*** – Improves comprehension of how technology can be used to best exploit particle behavior and properties. This fundamental research can lead to developing new sampling technologies and enhancing currently used devices. The next generation of sampling technologies could spring from advances made in the understanding of particle behavior. In FY 2007, the project conducted an Enabling Science workshop with subject matter experts from industry, the national laboratories and academia to identify key enabling technologies for future investment in support of S&T Directorate Explosives Detection program objectives. In FY 2008, the project will develop a multi-year, integrated research plan. In FY 2009, the project plans to conduct preliminary data analysis to identify potential application to customer capability gaps.

***Algorithm and Analysis of Raw Images Project*** – Collects and consolidates Computed Tomography (CT) and Digital Radiography (DR) images from commercial vendors and coordinates purchase of additional images and data from CT, EDS, Trace, and new emerging detection devices. The S&T Directorate will coordinate development of a non-proprietary database of images for detection program participants. The evaluation of images will determine how an image's quality impacts false alarm rates, detection accuracy and image resolution. In FY 2007, the project completed the evaluation of algorithm concepts for deployed Explosive Detection Systems equipment for checked baggage screening. In FY 2008, the project will focus on collecting and consolidating images from commercial vendors, and other sources of additional images from various devices and systems, to include novel explosives and other technologies. In FY 2009, the project plans to complete preliminary research and data analysis with identification of potential application to customer capability gaps and detection programs.

***Liquid and Home Made Explosives Chemical Characterization Project*** – Qualifies and quantifies the physical and chemical properties of HME threats. This project supports the ongoing effort to counter recent, increased HME threats. This project will identify explosive properties including density, dielectric constant, chemical composition of products, molecular structure, thermal decomposition rates, etc. In FY 2007, the project completed data collection and analysis for a first group of HMEs' physical and chemical properties and provided test results to the explosive-detection community. In FY 2008, the project will complete data collection and analysis for a second group of HME physical and chemical properties. FY 2009 the project plans to continue work based on prior year analysis.

***Detection Technology and Material Science Project*** – Employs the latest advances in high-performance materials to enhance aircraft survivability in the event of an onboard blast. The project focuses on blast-resistant materials and develop advanced materials to reduce the effects of an explosives detonation, including the attenuation of the explosive shock wave and containment of blast fragmentation (shrapnel). The main goal is to enhance the survivability of

the aircraft and limit casualties in the event of a blast. In FY 2007, the project conducted an Enabling Science workshop with subject matter experts from industry, national laboratories and academia to identify key enabling technologies for future S&T Directorate investments. In FY 2008, the project will develop strategies for blast resistant and blast mitigating building materials to reduce casualties from explosives threats. In FY 2009, the project plans to integrate the promising materials technologies into products to improve protection of persons, conveyances and infrastructures.

**Counter IED Thrust Area** – FY 2008: \$14,625; FY 2009 estimate: \$49,078. Starting in FY 2008, the S&T Directorate will accelerate and bolster the R&D to deliver critical counter IED technologies and products. This work will directly support HSPD-19 and its resulting *National Strategy for Improvised Explosive Devices*, which calls for protection against domestic threats. Existing solutions developed for the military and used in the Afghanistan and Iraq theater of operations have limited adaptability to domestic protection of people and property. This thrust area will address three major domestic threats: suicide bombers, vehicle borne IEDs, and devices targeting valuable infrastructure. To support these activities, the S&T Directorate, in conjunction with the NPPD's Office of Bombing Prevention (OBP) and the U.S. Secret Service, will leverage existing multi-agency counter-IED investment. The IED Thrust Area will carry out its activities through five programs (Deter, Predict, Detect, Respond/Defeat, and Mitigate) that will apply scientific disciplines of four S&T Divisions (Explosives, Infrastructure Protection and Geophysical, Human Factors, and T&E/Standards divisions).

**Deter Program** – Conducts social and behavioral sciences research to identify actionable indicators and warnings of IED threats posed by individuals and groups in the U.S. Activities in this program will:

- Uncover the pathways to radicalization and the role of communities in supporting or preventing terrorist violence;
- Analyze indicators that groups and individuals are moving towards IED use and identify points of intervention; and
- Integrate motivation-and intent-based indicators and tools to augment existing indication and warning systems.

This program will provide practical tools for intelligence analysts, law enforcement personnel, and policymakers by synthesizing social science analyses of state-of-the-art databases, case studies, surveys, and fieldwork. In FY 2008, the program will document the organizational characteristics of groups that use IEDs. Additionally, drawing on previous U.S. and international case study efforts, the program will develop an integrated coding scheme that will be applied to the cases of individuals and groups who have engaged in IED attacks in the United States. In FY 2009, the program will conduct case studies, analyze the successes and failures of various intent-based IED countermeasures, and initiate the development of an integrated framework for intelligence analyst use.

**Predict Program** – Develops technologies to secure U.S. borders that will automatically identify, alert on, and track suspicious behaviors that precede a suicide bombing attack; and automatically identify and prioritize the risk of likely potential targets of attack. These capabilities will

enhance DHS operational components' people screening by reducing reliance on manual and subjective processes. This program will include two projects that address different aspects of IED prediction: Predictive Screening and Risk Prediction.

*Predictive Screening Project* – Develops technologies to automatically identify, alert authorities to, and track suspicious behaviors that precede suicide-bombing attacks. This project will leverage existing indicators of suspicious behavior that statistically relate to illegal-weapons and false-documents possession; video tracking algorithms; and maturing video-based behavior identification algorithms. The S&T Directorate will test technologies at ports of entry, transit portals and special events. Operational benefits derived from predictive screening include increased probability of identifying suicide bombing behaviors before an attack occurs; significant expansion of active surveillance within a target environment; and increased deterrence of travelers carrying illegal weapons and false documents. In FY 2009, the S&T Directorate plans to transition behavioral indicators of suicide bombers to DHS operational customers and begin operational testing.

*Risk Prediction Project* – Develops technology to rapidly and automatically identify potential IED targets and staging areas within the United States. This project will leverage existing geo-behavioral pattern discovery algorithms from overseas attacks and the understanding of domestic infrastructure, terrorist tactics and demographic data, to identify U.S. vulnerabilities. Operational benefits from risk prediction research included support for interdiction and resource allocation prioritization decisions; better indication and warning assessments; and training. In FY 2009, the project will develop multi-cultural data sets related to IED use and begin operational tests at customer sites.

***Detect Program*** – Develops advanced technologies to detect explosive threats to the Nation's aviation, rail and ship transportation systems. Activities in this program will:

- Improve existing explosive detection methods;
- Develop new detection methods for screening people, baggage and cargo; and
- Ensure freedom-of-movement for people and commerce.

This program includes projects that address five specific aspects of IED detection: Suicide Bomber Improvised Explosive Device Detection, Technology Demo/System Integration, Vehicle-Borne Improvised Explosive Device Detection, Canine Detection Research and Development, Standards, Tagging and Modeling and Simulation.

*Suicide Bomber Improvised Explosive Devices (SBIED) Detection Project* – investigates potential technologies capable of detecting all types of explosive threats such as homemade, commercial and military explosives. In FY 2008, the S&T Directorate will test a prototype backscatter x-ray portal. In FY 2009, the project plans to increase funding to both transitional technologies and basic research. The basic research will focus on a balanced, broad, and long-term strategy that will apply fundamental sciences to enable improved detection of SBIEDs. Basic research efforts will include expanded chemical characterization and small-scale testing for detonability of threats; the advancement of scientific understanding behind deposition,

sampling, removal and trace detection of explosive particles on people and packages; and fundamental science behind explosive particle behavior for insight into sampling technology.

For the transitional portion of this project, in FY 2009, the S&T Directorate will expand contamination studies for non-intrusive sampling and detection of explosives residues, algorithm development for fusing multiple technologies, and investigate increased automation for SBIED detection.

*Technology Demo/System Integration Project* – Consolidates work with first responders, State and local public safety officials as well as Federal homeland security officials in developing a comprehensive plan and venue for technology demonstrations, to determine and validate system-integrated technologies to detect IEDs to improve system performance definition and integration. In FY 2009, the project plans to conduct a larger-scale NSSE technology field demonstration.

*Vehicle-Borne Improvised Explosive Devices (VBIED) Detection Project* – Develops technologies to:

- Detect or image the physical Improvised Explosives Device (IED) within a vehicle;
- Sample and detect explosive residues and components non-intrusively;
- Fuse multiple technologies and provide a level of automation for VBIED detection; and
- Provide automation to help to speed screening and enable security screeners to concentrate on potentially high-risk vehicles.

In FY 2008, the project will complete the assessment and demonstration of vibrometric- and neutron-based technologies to screen VBEIDs. In FY 2009, the S&T Directorate plans to conduct expanded contamination studies for sampling and trace detection of explosives residues from vehicles.

*Canine Detection Research & Development Project* – Significantly broadens the Canine Detection investment. In FY 2008, this project will initially convene a panel of subject matter experts from other Government departments such as DOD, DOJ and law enforcement agencies to develop a comprehensive Canine Research Investment Strategy. In FY 2009 the project plans to initiate the following Canine Detection R&D efforts:

- Improve cross generalization of canine performance for threat materials;
- Investigate common components or markers, such as stabilizers in commercial explosives, as opposed to training canines on specific threats;
- Improve quality control aids to monitor performance of canines in the field; and
- Conduct a systematic analysis of Remote Air Sampling Canine Olfaction (RASCO) collection and screening to determine failure modes, technical basis for success or failure and enhanced reverse engineering of the actual canine receptor functioning for olfactory sampling and recognition.

The project will also conduct extensive modeling of canine sampling to support further basic research in canine pattern recognition for trace detection, which will facilitate development of an electronic nose to mimic canine detection of trace particles and vapor for threat materials.

*Standards Project* – Supports the development of a comprehensive set of performance standards and evaluation criteria for IED detection and defeat technologies. This project will support technology and standards to ensure that the developed products meet user-validated performance metrics and that the manufacturers understand their technology objectives. In FY 2009, the S&T Directorate will develop minimum performance standards for Portable X-Ray and 3D imaging systems.

***Respond/Defeat Program*** – Conducts R&D to better respond to and defeat explosive threats. This program plans to:

- Provide tools to assess explosive threats once they are detected or partially detonated and then render them safe for disposal; and
- Develop advanced technologies to defeat IEDs by means other than the current practice of detonation.

The program will complement other S&T Directorate R&D efforts for response to and defeat of explosives. The program includes the following Response and Defeat projects: (Defeat) Electronic Countermeasures, Robotics, Render Safe/Diagnostics and Directed Energy and (Response) Post Blast Forensics, Bomb Components, Body Armor and Outreach.

*Electronic Countermeasures Project* – Develops new radio frequency (RF) or infrared (IR) jamming technologies to inhibit RF hazardous devices while allowing the bomb squad to maintain the RF capabilities of their robot and communications system during an emergency. In FY 2008, the S&T Directorate will initiate the development of a prototype and users' manual. In FY 2009, the project plans to test and evaluate the prototype and manuals for their transition to private industry for further development and production.

*Robotics Project* – Improves robotics design and ability to defeat and disarm IEDs using fast, lightweight robotic platforms with a suite of tools for emerging explosive threats. In FY 2009, the S&T Directorate plans to conduct developmental test, evaluation and customer concept-of-operations (CONOP) planning on a prototype. Additional efforts will improve IED robotic standards and compliance tests, workshops with users/responders on robotic applications to IED situations and guides, practices, and test methods for using robots to defeat IEDs.

*Render Safe / Diagnostics Project* – Increases standoff capabilities, reduces collateral damage, and provides precision disruption and disablement capabilities and techniques. In FY 2009, the project plans to deliver a complete IED tool characterization guide to aid bomb technicians in the tactical decision making process for disabling the threat device. Also in FY 2009, the project plans to develop technologies for precision disruption, aiming and ranging systems to disable and render safe IEDs, to assist bomb squads in accessing and analyzing an improvised terrorist device.

*Directed Energy Project* – Develops technology to defeat IEDs by means of directed energy (e.g., laser, etc.) aimed to destroy critical components (e.g., a power source, igniter or detonator) and prevent detonation of the explosive. This project plans to identify and mature advanced

directed-energy technologies, demonstrations and pilot activities. In FY 2009 and FY 2010, the projects plan to develop technology roadmaps and a demonstration plan for this new technology.

*Post Blast Forensics Project* – Develops and enhances technologies, tools and procedures used by post-blast forensic teams to improve investigation and data collection. In FY 2009 and 2010, the S&T Directorate plans to develop improved post-blast forensic technology for demonstration and follow-on feasibility studies.

*Bomb Components Project* – Develops and enhances technologies, tools and procedures available to detection teams to improve the tracking and detection capabilities of commercial explosive components. This project will investigate critical IED component detection, advanced/improved IED component analysis, as well as conduct demonstrations and pilots. In FY 2009, this project plans to deliver to DHS customers a list of critical components used to construct IEDs, which will enhance decisions on policy, tracking and detection of these components.

*Body Armor Project* – Develops improved and advanced body armor for new threats and improves wearability in adverse environmental conditions. In FY 2008, the project will deliver a prototype, body-armor system for developmental testing and CONOPS planning. In FY 2009, the project plans to complete a study of the cost benefit of new body armor materials.

*Outreach Project* – Coordinates requirements from user communities/first responders/public safety officials and various Federal organizations. The project will include requirements understanding and development, vetting and coordination, as well as coordinating Test and Evaluation Master Plans. Each year, the S&T Directorate will conduct an outreach meeting with first responders and other customers to further develop requirements for new technology advancements.

*Mitigation Program* – Reduces the effects of bombs that cannot be detected or cannot be rendered safe through practical and available means. This project plans to concentrate on Conveyance Protection –the hardening of a vehicle against threats (for example, blast-resistant cargo containers) – or the protection of high-value or prominent buildings and infrastructure (for example, blast-resistant building materials, tunnels, and bridges). The program area contains the following projects: Infrastructure Blast Mitigation, Conveyance Blast Mitigation, Marking, Tagging, Advanced Surveillance, Inerting and Modeling & Simulation.

*Infrastructure Blast Mitigation Project* – Develops proof-of-concept technologies to mitigate the explosive and damaging force from an IED. This project will include basic research studies on advanced mitigation technologies, including new glass materials and deflecting structures that reduce damage to critical infrastructure or personnel. In FY 2008, the project will to conduct test and evaluation of prototype technologies to evaluate blast mitigation performance and to conduct proof-of-concept demonstrations. In FY 2009, the project plans to begin to develop models to further determine the vulnerability of infrastructure, bridges, and tunnels to various explosive threats.

*Conveyance Protection Project* – Enhances and broadens the investment in the Conveyance Protection Program, which focuses on aircraft hardening and the risk of catastrophic loss of passenger aircraft, resulting from various sizes of IEDs detonated in the passenger cabins or cargo holds. In FY 2008, the project will continue assessments on aircraft vulnerability, focusing on narrow-body aircraft and blast testing of fuselage liners. In FY 2009, the project plans to deliver computational models to predict aircraft vulnerability to homemade explosives threats at various locations within the passenger cabins and cargo holds.

*Marking (Forensics) Research & Development Project* – Identifies and matures enabling technologies that improve ‘marking’ capabilities so explosives can be reliably identified pre-detonation as to manufacturer, production location, distribution and sales. This project plans to develop technology to improve pre-detonation marking, and identify efficient processes in production/manufacturing. In FY 2009, the project will conduct a cost-benefit analysis of marking technologies.

*Tagging Research & Development Project* – Identifies and matures enabling technologies to improve ‘tagging’ capabilities so explosives can be reliably identified post-detonation as to manufacturer, production location, distribution and sales. This project plans to develop technology to improve post-detonation tagging and identify of efficient processes in production/manufacturing. In FY 2009, the project will conduct a cost-benefit analysis of marking technologies.

*Advanced Surveillance Project* – Develops technology to provide constant surveillance of a post-blast event to protect first responders from being baited to a secondary blast or from being further endangered by unstable structures. This project will investigate surveillance of high-value infrastructure to evaluate threats before and after an event. In FY 2009, this project will investigate using automatic target recognition, data processing and imaging to address the large number assets.

*Inerting Project* – Develops advanced applications, improved strategies and implementation planning to render a compound non-explosive. This project plans to investigate advanced inerting applications and technologies and perform cost-benefit analyses as well as technology and pilot demonstrations. In FY 2009, the project will deliver a cost-benefit analysis and a list of potential inerting materials.

PPA: HUMAN FACTORS

The Science and Technology Directorate requests \$12.460 million for Human Factors, of this amount \$0.312 million supports the SBIR Program. This is a \$1.746 million decrease below FY 2008 as a result of no additional R&D funding for the Institute for Homeland Security Solutions.

**CURRENT SERVICES PROGRAM DESCRIPTION**

The Human Factors Division applies the social and behavioral sciences to improve detection, analysis, and understanding of the threats posed by individuals, groups, and radical movements; it supports the preparedness, response, and recovery of communities impacted by catastrophic events; and it advances homeland security by integrating human factors into homeland security technologies.

**Human System Research and Engineering Thrust Area** (*formerly Human Research and Engineering Thrust Area*) – Focuses on integrating human factors into the development and use of homeland security technologies across the S&T Directorate, with the goal of achieving high levels of system effectiveness, safety, and acceptance. The division, in some cases, directly manages programs or the relevant portion of programs housed in other divisions, and provides guidance and tools where needed. The division helps homeland security customers identify critically needed human systems integration initiatives.

**Human Systems Optimization Program** – FY 2008: \$0; FY 2009 estimate: \$228. Starting in FY 2009, this program plans to develop and validate a suite of technologies and procedures designed to insert the operational user into and throughout the development process of physical- and information-based systems. This will reduce programmatic risk and increase effectiveness, efficiency, and user acceptance for DHS operational customers.

**Human Performance Project** – Builds upon accepted human systems integration principles and ensures that human knowledge, skills, and abilities are embedded into requirements, design, testing, and logistics components of the larger life-cycle development process for new technologies. Accepted human systems integration principles and processes include task analyses, modeling and simulation, structured experimentation and operations research, functional- and participatory-based design and testing, and operator-based effectiveness evaluations. Key planned deliverables include establishing a technical baseline of existing technologies and a concept-of-operations for a test program in FY 2009.

***Personal Identification Systems Program*** – FY 2008: \$2,842; FY 2009 estimate: \$3,400.

Develops biometrics-based technologies to identify known terrorists and criminals and prevent their movement into and out of the United States. Projects in this program are Biometrics, Credentialing, Commercial Data Source and Mobile Biometrics.

*Biometrics Project* – Develops biometric tools to identify accurately – without physical contact – known terrorists and criminals using fingerprints, iris scans/images, and facial recognition, while allowing the unconstrained movement of legitimate travelers. Currently, no contact-free identification system exists. The goal of the project is to have a system that can perform with 99.5-percent accuracy from 30 feet away within 15 seconds. In FY 2007, the project refined an existing multi-modal (finger, face and iris) biometric framework for test and evaluation activities. In FY 2008, the project will complete a multi-modal biometrics system design and enhance capturing face and iris images for multi-modal systems. In FY 2009, the program plans to deliver an enhanced multi-modal (face, iris, finger) biometrics T&E framework for government-sponsored multi-modal vendor testing. Additionally, in FY 2009 the program plans to initiate development of a contactless multi-modal biometrics identification prototype and create corresponding reference datasets. The datasets are key to system design and prototype delivery.

*Credentialing Project* – Develops tamper-proof credentialing systems that incorporate biometric information; such as a biometrics-based, card-and-reader system. Homeland Security Presidential Directive 12 (HSPD-12), *Policy for a Common Identification Standard for Federal Employees and Contractors* directed the use of this technology for DHS personnel. This project also supports development of the Transportation Worker Identification Credential (TWIC), which will produce a tamper-proof, electronic, biometrics/biographical credential to identify 850,000 port and transportation workers. In FY 2007, the S&T Directorate supported the TWIC Los Angeles/Long Beach port demonstration project by assisting the development of a test and evaluation plan and conducting the control testing of TWIC card-and-reader prototypes. In FY 2008, the program will initiate research efforts for a phase IV, non-contact, biometrics card-and-reader-system. In FY 2009, the program plans to initiate research efforts for secure contactless technologies.

*Commercial Data Source Project* – Starting in FY 2009, the project plans to improve screening and interviewing processes at the borders. Additionally, this effort will examine the utility of multiple commercial data sources to improve screening during interviews conducted by the Citizenship and Immigration Services (CIS), CPB, and TSA. The program plans to demonstrate prototypes, validate requirements and quantify gaps for interview support.

*Mobile Biometrics System Project* – Starting in FY 2009, the project plans to develop mobile biometrics systems for use at remote sites along U.S. borders, during disasters and terrorist incidents, or at sea, where only wireless network access would be available. In FY 2009, the program plans to define system requirements and develop design and demonstration plans for multiple implementations. The goal is to demonstrate high-data-rate communications and near-real-time biometrics processing.

***Technology Acceptance and Integration Program*** – FY 2008: \$350; FY 2009 estimate: \$350. Addresses user acceptance and application of new technologies. Research examines peoples’ attitudes toward new technologies and factors that drive their successful adoption to guide technology and process improvements.

*Community Acceptance of Technology (CAT) Panel* – Brings together industry, public interest, and community-oriented organizations to better understand and integrate their perspectives and issues in the development, deployment, and public acceptance of technology. In FY 2007, the division established a process of how the panel will operate. In FY 2008 through FY 2013, the program plans to coordinate three to five meetings per year, resulting in recommendations on strategies to facilitate the acceptance of new technologies.

***Transportation Technology-Human Integration Program*** – FY 2008: \$1,438; FY 2009 estimate: \$0. Addresses integration of human-in-the-loop technology systems used by transportation screeners. The program’s objectives include increasing the effectiveness and efficiency of transportation screening systems, decreasing physical stress and fatigue, and reducing human error in the transportation screening process while reducing training requirements and overall cost.

*Enhanced Screener-Technology Interface Project* – Characterizes screener-performance issues, propose new screener technologies and procedures, and develops training curricula to optimize security effectiveness and reduce human fatigue and injury, while reducing training requirements and overall cost. Starting in FY 2008, work will initially focus on a display for baggage screening sensors used at transportation checkpoints, for which significant data on screeners’ perceptual and cognitive processes already exists. The results will be integrated into system upgrade designs. Program funding ends in FY 2008. The results will be integrated into system upgrade designs.

**Social Behavioral Threat Analysis (SBTA) Thrust Area** – Applies social and behavioral sciences to improve the detection, analysis, and understanding of threats posed by individuals, groups, and radical movements. It also addresses the psychological, social, and economic impacts of catastrophic events to inform risk analyses, risk communications, preparedness, response, resiliency, and recovery efforts. Programs within SBTA include Community Preparedness, Response, and Recovery; Motivation and Intent; and Suspicious Behavior Detection.

***Community Preparedness, Response, and Recovery Program*** – FY 2008: \$917; FY 2009 estimate: \$725. Sponsors analytical work to support the preparedness, response, and recovery of communities impacted by catastrophic events. The objective is to enhance the government’s and public’s ability to prepare for catastrophic events, and to respond to and recover from such events with effective risk communications and identification of public needs during emergencies. The program includes two projects: enhancing public response and community resilience; and researching risk perception, public trust and communication. This work enhances the mission performance of numerous DHS components, including the Policy Directorate, the Preparedness Directorate, Federal Emergency Management Agency (FEMA), and the Office of Public Affairs, as well as our State and local partners tasked with preparedness, response, and recovery efforts.

*Enhancing Public Response and Community Resilience Project* – Develops a database of public needs that were unmet during Hurricanes Katrina and Rita to make recommendations to address those needs during future emergencies. In FY 2007, the project was delayed, but in FY 2008, the project will provide a report detailing temporal analysis of needs for shelter, food, disaster relief, and others as identified by callers into the Texas 2-1-1 System during Hurricanes Katrina and Rita. In FY 2009, the project plans to provide a report detailing geospatial analysis of these needs.

*Risk Perception, Public Trust and Communication Project* – Identifies effective messaging strategies for diverse groups (varying socioeconomic, cultural, and ethnic backgrounds) to be used before, after and during a catastrophic event. In FY 2007, the project collected data during a large official homeland security exercise. In FY 2008, the project is analyzing this data to establish statistical baselines to improve communications with the public during catastrophic events. In FY 2009, the project plans to deliver a report detailing the most effective messaging strategies when communicating with diverse groups.

***Motivation and Intent (M&I) Program*** – FY 2008: \$576; FY 2009 estimate: \$3,029. Applies social and behavioral science research and theory to understand terrorist intent to engage in violence. This information enhances the understanding of analytical, operational, and policy concerns related to terrorist activities. This program develops capabilities to model likely scenarios for groups engaged in violence and develops a comprehensive global terrorist incident database to support analysis of trends, targets, and group violence. Current projects include Group Violent Intent Modeling and the Global Terrorism Database.

*Group Violent Intent Modeling Project* – Develops a computerized analytical framework and modeling tools focused on determining whether radical groups are likely to engage in violence and what ideological, organizational, and contextual factors may contribute to the emergence of violence as a means to further ideological goals. The social and behavioral framework will build upon work done in FY 2007 that assessed multiple modeling approaches and developed Version 1.0 of the system. In FY 2008, this project will conduct a demonstration of a social behavioral analytical framework/system and modeling capabilities, Version 2.0, a user site. In FY 2009, the project plans to add one additional modeling capability for delivery in FY 2010 as well as to identify new mechanisms for building out the ability to fuse data and analyze unstructured content.

*Global Terrorism Database (GTD) Project* – Funds the update of the unclassified GTD, housed at the DHS Center of Excellence for the Study of Terrorism and Responses to Terrorism (START). The GTD is the largest unclassified terrorist event database, with more than 80,000 events, and includes worldwide terrorist attacks that have occurred since 1970. Beginning in FY 2008, START will maintain the GTD.

***Suspicious Behavior Detection Program*** – FY 2008: \$416; FY 2009 estimate: \$4,417. Builds the capability to detect suspicious behavior indicating the intent to cause harm.

*Hostile Intent Detection-Automated Prototype Project* – Starting in FY 2009, the project plans to demonstrate real-time, non-invasive, automated, behavioral intent detection and to incorporate expanded multi-cultural intent indicators. Ultimately, this effort will provide a real-time, non-invasive, multi-modal, and culturally independent, hostile-intent detection prototype (behavioral, physiological, and auditory) to identify unknown or potential terrorists through an interactive process with 75 percent accuracy. The S&T Directorate will transition the indicators identified through this work to TSA for integration into their operational and training programs.

*Hostile Intent Detection-SPOT Project* – Starting in FY 2009, this project plans to provide cross-cultural validation of behavioral indicators contained within TSA's Suspicious Passenger by Observation Technique (SPOT), which currently supports screening at air portals, complementing the automated prototype work. This will support development of an enhanced capability to detect stand-off non-verbal indicators of hostile intent.

*Insider Threat Detection Project* – Starting in FY 2009, this project plans to develop technologies and methods for identifying an insider's intent to do harm. Insider threats originate from individuals or groups that have authorized physical or electronic access to information and infrastructure resources and therefore possess a greater opportunity to exploit vulnerabilities. In FY 2009, the project plans to conduct a market survey of existing insider countermeasure technologies and develop a concept-of-operations. Ultimately, this project will pilot and transition the product to critical industrial bases and to Federal and State agencies.

*Institute for Homeland Security Solutions* – FY 2008: \$7,313; FY 2009 estimate: \$0. As directed by Congress, in FY 2008, the Human Factors Division will fund the Institute for Homeland Security Solutions to conduct applied technological and social science research with universities, other Federal agencies, State and local security agencies and the private sector. The project will focus on developing near-term technological solutions to practical, real world problems that have broad applications. In addition, this project will address critical policy and operational implications of new technologies and will narrowly focus on information analysis tools and policies, including anomaly detection.

PPA: INFRASTRUCTURE AND GEOPHYSICAL DIVISION

The Science and Technology Directorate requests \$37.816 million for this activity, of this amount \$0.945 million supports the SBIR Program. This is a decrease of \$26.684 million below FY 2008.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The Infrastructure and Geophysical Division’s mission is to increase the Nation’s preparedness for and response to natural and man-made threats through superior situational awareness, emergency response capabilities, and critical infrastructure protection. The division develops technical solutions and reach-back capabilities to improve Federal, State, local, tribal, and private sector preparedness for and response to all-hazards events impacting the U.S. population and critical infrastructure. The Division also develops modeling and simulation and analysis capabilities applicable to communities, regions, the Nation and its critical infrastructures to determine how various scenarios will affect each sector, provide decision support tools to guide decision makers in identifying gaps and vulnerabilities, and develop predictive tools and methods to aid in preparing for and responding to various catastrophes. The primary Federal customers for the Infrastructure and Geophysical Division are the Department’s Office of Infrastructure Protection (OIP), National Protection and Programs Directorate (NPPD) and the Federal Emergency Management Agency (FEMA), who represent end-users including first responders; Federal, State, and local emergency managers; and critical infrastructure owners and operators.

Successful transition of the technologies contained within this Division will substantially improve DHS components’ performance and support the Secretary’s goals of:

- Protecting the Nation from dangerous people;
- Protecting the Nation from dangerous goods;
- Protecting Critical Infrastructure;
- Building a nimble and responsive emergency response system; and
- Strengthening and unifying DHS operations and management.

The Infrastructure and Geophysical Division carries out its activities through three thrust areas: Critical Infrastructure Protection, Preparedness and Response, and Geophysical.

**Critical Infrastructure Protection (CIP) Thrust Area** – Conducts research and development (R&D) activities on the 17 Critical Infrastructure/Key Resource (CI/KR) sectors identified in the *National Infrastructure Protection Plan* (NIPP). This meets the requirements of the OIP in the NPPD, and those that the President set forth in Homeland Security Presidential Directive 7 (HSPD-7), *Critical Infrastructure Identification, Prioritization, and Protection*. The NIPP provides the overarching approach for integrating the Nation’s many CI/KR protection initiatives into a single national effort. The CI/KR sectors, identified by HSPD-7 and the NIPP are: agriculture and food; the defense industrial base; energy; public health and healthcare; national monuments and icons; banking and finance; drinking water and water treatment systems; chemical; commercial facilities; dams; emergency services; commercial nuclear reactors, materials, and waste; information technology; telecommunications; postal and shipping; transportation systems; and government facilities.

***Protective Technologies (formerly Risk Reduction Technologies) Program*** – FY 2008: \$5,250; FY 2009 estimate: \$8,367. Conducts research on sector-specific and region-specific needs, as identified by OIP, or as requested from critical infrastructure sectors and Sector Specific Agencies (SSAs) (as designated by HSPD-7). The primary customer for these technologies is OIP, although end-users may include the SSAs, State and local governments, and in some cases the private sector. The program is developing revolutionary capabilities to protect the Nation’s most vital critical infrastructure targets primarily against blast loads and blast effects such as shrapnel from the weapon, flying debris fragments formed by the blast, and fire. The program will add other high-priority physical threats in future years. This will enable owners and operators of those infrastructure sites to implement effective, affordable and reliable materials, design procedures, and innovative construction methods to reduce the risk to critical infrastructure assets. The following projects support this program.

***Blast/Projectile Protection Project*** – Conducts basic research to understand the blast failure mechanisms of the most vital critical infrastructures such as dams, tunnels and bridges. The project develops suites of advanced materials, design procedures, and innovative construction methods that enable hardening or increasing the resiliency of assets deemed most vital to the safety, economy, and security of the Nation. It will leverage existing Department of Defense (DOD), Department of Transportation (DOT), and Department of Energy (DOE) R&D, along with other Federal, State, and private sector R&D efforts. In FY 2007, the program developed a program plan and began physical testing and numerical modeling of blast effects on embankment dams and mitigation (hardening) measures for tunnels and bridge cables. Based on adjustments to the FY 2008 funding levels, the project will no longer establish the foundation or first spiral for the unified blast tool nor study dimensional blast and reflection effects in urban “canyons” formed by tall buildings. In FY 2008, the project will evaluate blast effects and mitigation measures for dams, tunnels, and bridges which will feed into the transition projects below. There is no funding requested for this effort in FY 2009.

***Blast/Projectile - Advanced Materials Design Project*** – Conducts basic research in conjunction with existing Federal investments in nano-technology and other materials science efforts to develop extremely strong, lightweight, resilient materials. These advanced materials, design procedures for their use, and innovative construction methods will enable more effective and affordable hardening or increasing the resiliency of assets deemed most vital to the safety,

economy, and security of the Nation, for both existing infrastructure and new construction. In FY 2009, this project plans to: identify existing materials to consider; identify the appropriate scale of materials; identify the appropriate types of numerical analysis codes needed to model these materials at the molecular level; assemble a team of experts from universities, private industry, national and government laboratories, and international experts, to formulate the project plan; and begin first year modeling and testing efforts for the new materials.

*Blast/Projectile - Protective Measures and Design Tools Project* – Builds upon the basic research conducted up through FY 2008. The program will provide enhanced and additional protective measures along with the tools required to design them for the Nation’s most critical infrastructure assets. Protective measures could include blast protection, rapid mitigation and restoration technologies, and other defensive measures. In addition, the project plans to numerically analyze designs against blast and projectile threats and to conduct physical demonstrations. This work will help mature and expand existing protective measures such as developing ways to make existing designs less expensive, easier to apply, more effective, and derive entirely new materials and design concepts for additional classes of infrastructure. In FY 2009, the project plans to: (1) mature the protective measures for tunnels developed in the basic research project, update the respective design tools; (2) begin development of protective measures for additional classes of vital critical infrastructure such as bridges, dams, and other classes of CI/KR identified by OIP. Additionally in FY 2009, the project plans to demonstrate and conduct field experiments of the existing and new prototype protection measures for tunnels.

*Blast/Projectile - Unified Blast Analysis Tool Project* – Develops the next spiral for the uniform platform for practical, fast analysis of existing vulnerabilities and effectiveness of protective upgrades developed in the basic research FY 2007 and FY 2008 program. This tool will improve CI/KR capabilities to design against threats from blast and projectiles, by providing advanced analysis capabilities to the communities that design protective measures for key assets. In FY 2009, the program plans to develop additional vulnerability and mitigation design models for the most vital critical infrastructure and add these modules to the unified blast analysis toolkit.

***Modeling, Simulation, and Analysis Program*** – FY 2008: \$2,677; FY 2009 estimate: \$2,731. Develops modeling, simulation and analysis (MSA) capabilities that can improve the ability of decision makers to evaluate CI/KR risks and changes to risks (including interdependencies). This capability will help public service and private industry policy and decision makers, owners/operators, planners and responders to understand the consequences of policy and investment options before enacting solutions, and to provide support during crises. The program will enable:

- Rapid examination of interdependencies;
- Trade-offs between risk reduction benefits and protective action costs;
- Incorporation of threat information;
- Vulnerability assessments; and
- Understandings of disruption consequences.

*Interdependencies Model Build-Out (CIPDSS) Project* – Develops a risk-informed decision support system. It provides information for making critical infrastructure protection decisions by considering all 17 critical infrastructure sectors and their primary interdependencies, and

computing human health and safety, economic, public confidence, national security, and environmental impacts. In FY 2007, the project built out the CIP Decision Support System (CIPDSS) to include physical/natural disaster disruption and completed cyber-based attack scenarios. The project delivered the completed CIPDSS tool to OIP at the end of FY 2007.

*Sector and Threat Specific MSA Project* – Develops and implements a transition plan for deployment of the CIPDSS to the National Infrastructure Simulation and Analysis Center (NISAC) and pilots interdependencies tool to model regional interdependencies. The project will also develop the tool and capability to analyze infrastructure interdependencies within a discrete geographic region vice a more generic national or metropolitan level. It supports OIP-driven interactions with key stakeholders, such as the Homeland Infrastructure Threat and Risk Analysis Center (HITRAC), Government and Private Sector Coordinating Councils (GCCs and SCCs) (as described in the NIPP) and Sector Specialists, to vet metropolitan and national-scale CIPDSS models and provide analysis support for national exercises. In FY 2007, the project completed sector- and threat-specific analysis and studies and it will then deliver to customer-designated organizations such as HITRAC and dam sector agencies. Based on adjustments to FY 2008 funding levels, the project will integrate with the Real-time Decision Support Tool Project. The project will provide the framework for the FY 2009 efforts in the Real-Time Decision Support Tool to develop a more robust, interdependencies and cascading effects model that accounts for multiple threat attack types and vectors, and is capable of analyzing infrastructures down to the asset level.

*Real-time Decision Support Tool Project* – Activities will focus on interdependencies and cascading effects and the dynamics of multi-event and multi-vector attacks. This effort will provide significant improvements in timelines, quality and usability of information, so that decision makers are given up-to-date information to make informed decisions during an event. The program will leverage the capabilities developed for CIPDSS and sector-specific MSA to begin development and architectural design of a real-time decision support system (RT-DSS). The need for a dynamic updating capability for databases is a current analytical limitation to real-time modeling and simulation. The program will address this problem by improving the control and collection of information used by the RT-DSS models, allowing for testing of alternative solutions before, during, and after an event. In FY 2009, the program plans to continue the development of RT-DSS, based on the architecture design started in FY 2008, and include updated databases, as well as focus on the systems level design and interfaces of the technology.

***The National Critical Infrastructure Protection R&D Plan Program*** – FY 2008: \$1,000; FY 2009 estimate: \$634. The S&T Directorate prepares an annual update to the *National Critical Infrastructure Protection Research and Development Plan* (NCIP R&D Plan), as required by HSPD-7. This plan supports the implementation of the *National Infrastructure Protection Plan* (NIPP), and by corollary, the supporting Sector Specific Plans (SSPs), the Sector Annual Reports and the National Annual Report (NAR) in collaboration with OIP. The NIPP, the SSPs, the NAR, and the NCIP R&D Plan integrate near-term (i.e., NIPP), mid-term (i.e., SSPs), and long-term (i.e., NCIP R&D) research objectives to form a coordinated approach to technology development to meet sector infrastructure protection goals and work toward a national vision of a secure homeland. In FY 2007, the program completed an update to the plan, with synthesis across past annual plans, integrating information from the NIPP National Annual Report so that

Federal budgets and milestones are coordinated to meet sector and national R&D goals and preparedness metrics. In FY 2008, the program will update the plan to reflect improvements on baseline information established in previous years, unless there is a fundamental change in strategic direction or a transformational technical advance that requires restructuring of the plan. In FY 2009, the program plans to update the plan based on advances in technology. All these activities (in both FY 2008 and FY 2009) will be closely coordinated with the NPPD, the SSAs (as designated by HSPD-7), private industry through the NIPP Coordinating Council System, and all other agencies involved in funding R&D relevant to CIP, including international technical collaboration through the agreements established by the S&T Directorate.

***Advanced Surveillance and Detection Systems Program*** – FY 2008: \$0; FY 2009 estimate: \$3,986. Conducts R&D on the surveillance of the 17 CI/KR sectors identified in the NIPP and HSPD-7. The program will address OIP requirements by automating and increasing the fidelity of tasks currently performed by operators, allowing for detection of subtle changes against a background environment, and incorporating advanced sensors (including optical, infrared, ultraviolet, and acoustic). The program aims to provide advanced, automated, affordable technologies for monitoring, surveillance and detection that improve the ability of infrastructure owners and operators to more efficiently and effectively monitor their infrastructure assets. The project may also integrate affordable, effective chemical, biological detection equipment into critical infrastructure as appropriate.

***Advanced Surveillance Systems Project*** – Develops advanced surveillance technologies to more effectively monitor critical infrastructure and reduce manpower requirements. Activities will focus on developing automated anomaly detection that will replace operator-dependent monitoring of large numbers of cameras. The project will design the systems to interpret information from multiple surveillance modes (such as closed-circuit television cameras, infrared cameras, intrusion detection alarms, acoustic sensors) and provide actionable information to infrastructure operators. In FY 2009, the project plans to conduct an analysis of Commercial-Off-The-Shelf (COTS) advanced surveillance technologies and select sets of sensor systems (optical, infrared, ultraviolet, and acoustic) appropriate for monitoring infrastructure in both heavily populated urban settings and remote locales.

***Underwater Surveillance-Dams and Tunnels Project*** – Provide advanced, automated, affordable underwater monitoring and surveillance technologies to detect underwater threats against dams and tunnels. Since these structures are particularly vulnerable to a water-borne attack, detection of suspicious activity is critical to asset protection. Technologies must be capable of operating in harsh environments for extended periods, and should seamlessly and transparently integrate into existing infrastructure security operations. In FY 2009, the project plans to identify, prioritize, and select potential solutions for underwater surveillance based on cost, performance and integration.

***Underwater Surveillance Project*** – Conducts basic research to support the Underwater Surveillance-Dams and Tunnels project (described above). It will develop an underwater surveillance technique that links changes in the surrounding natural environment to the presence of potential threats. In FY 2009, the project plans to work closely with the USCG and DOD R&D investment on underwater monitoring, such as evaluating ways to use native fish and other

species to monitor changes in their environment indicative of an intruder. The project will also investigate interdiction of entry into underwater space to achieve required stand off distances from waterside critical infrastructure such as dams.

***Response and Recovery Technologies Program*** – FY 2008: \$0; FY 2009 estimate: \$4,521. Provides pioneering, automated response and rapid recovery technologies for the Nation's most vital infrastructure assets and their long-lead time components. Activities will focus on those infrastructure types where effective, affordable protective measures have not been previously addressed. The technologies developed in this program will provide all-hazards infrastructure resilience against multiple natural and man-made threats. Many infrastructure assets need these capabilities to prevent or limit structural failure, and maximize life safety; these measures also add to a layered defense system, thus further buying down risk. The following projects support this program.

***Recovery Transformer Project*** – Partners with OIP and DOE to specify, design, build, and demonstrate a new type of electrical power transformer to be used during recovery from emergency grid blackouts. The recovery transformer will be easy to transport and install, have low maintenance and long service life. This capability will eliminate the two-year lag in transformer replacement and will increase the resiliency of the power grid. In FY 2009, the project plans to design and demonstrate a recovery transformer in a laboratory environment.

***Rapid Mitigation and Recovery (for Critical Infrastructure) Project*** – Develops rapid mitigation and recovery technologies for CI/KR assets to limit damage and consequences and to more quickly resume normal operations. The project will investigate rapid response and recovery technologies in addition to conducting basic research for the most vital infrastructure assets, such as underwater tunnels, bridges, levees, and dams. In FY 2009, the project plans to develop and demonstrate protective sealing materials to mitigate the damage to a storage tank or railcar from a puncture or small-caliber weapon impact.

***Community Based CIP Institute Program*** – FY 2008: \$10,725; FY 2009 estimate: \$0. Supports university and private industry partnerships to develop community-based homeland security technologies and mature them so that they can become commercially viable. Products include: continuous monitoring of beef cattle; monitoring and securing milk from farm to processor; advances in less expensive biometrics for iris and handprint imaging; and development of affordable nanomaterials for blast mitigation. In FY 2007, the program designed and tested lightweight passenger/freight railcar armor against projectiles, IEDs, and explosives in-car or buried under track. It also tested multi-functional, carbon materials for modular assembly and spray-able foam coatings to provide blast mitigation, radiation/chemical protection, and enhanced electronic security. Based on additional funds in FY 2008, the program will continue to support partnerships to develop community-based homeland security technologies. There is no funding requested for FY 2009.

**Preparedness and Response (P&R) Thrust Area** – Develops and deploys capabilities that improve the Nation's ability to prepare for, respond to, and recover from all-hazards emergencies. P&R is dedicated to applying the best available science and technology to the safety and security of our emergency responders and homeland security professionals so that they effectively and efficiently perform their jobs – saving lives, minimizing damage and

restoring critical services. All programs will be compliant with the National Incident Management System (NIMS) and the National Response Plan (NRP), and in accordance with all HSPDs that enable all government, private-sector, and nongovernmental organizations to work together during domestic incidents of all sizes.

***Incident Management Enterprise (formerly Incident Management and Decision Support) Program*** – FY 2008: \$5,000; FY 2009 estimate: \$10,292. Develops advanced, scalable, interoperable, and non-proprietary incident information-management, decision-making, and training tools for emergency responders and incident commanders to use during everyday episodes to events of national significance that increasingly demand more highly coordinated responses. The need to manage incidents in a comprehensive and transparent way across the government and with various agencies is paramount to the first responder's ability to prepare, protect, and respond to all hazard incidents.

The program includes logistics and resource tracking systems that are critical in restoring services, replenishing critical infrastructure, and helping disaster victims in a timely fashion. The logistics systems will provide total asset visibility to incident responders and commanders and will help to manage the entire logistics supply chain – from inventory management to distribution and verification of supply disbursements.

***Interagency Modeling and Atmospheric Assessment Center (IMAAC)*** – Coordinates national capabilities in atmospheric modeling and provides the single Federal prediction of atmospheric hazards and their consequences. Incident commands across Federal, State and local jurisdictions use IMAAC model predictions for improved situational awareness. In FY 2007, IMAAC provided support to over 20 real-world incidents and participated in the planning and conduct of exercises (i.e., TOPOFF 4 Command Post Exercise) in support of the NRP and the National Preparedness Goal. It also supported the National Exercise program and instituted a suite of scientifically accredited models for atmospheric hazard predictions. In FY 2008, the program will deliver an accredited event reconstruction and building infiltration models. In FY 2009, the S&T Directorate plans to prepare for transition of the operational aspects of IMAAC to another DHS component.

***Unified Incident Command and Decision Support (UICDS) Project*** – Develops the UICDS framework based on the NIMS/Incident Command System (ICS) and NRP. It is developing compliant tools to manage and share incident information that will enhance incident command systems and multi-agency coordination with common situational awareness and decision support during all types of incidents. The UICDS framework will be based on an open-architecture to allow multiple responding organizations (using their own equipment) to jointly manage personnel, direct equipment, and seamlessly communicate, gather, store, redistribute, and secure any mission-critical information needed by incident commanders and emergency responders during an emergency situation. In FY 2007, the project selected a performer for the Phase II efforts. Due to adjustments to FY 2008 funding levels, UICDS will be unable to achieve its original plans, however it will use prior year funding to develop a draft information management architecture and pilot in an urban environment to demonstrate multi-jurisdiction incident response. In FY 2008, the project will deploy pilot implementations of the architecture at one or more Regional Technology Integration (RTI) cities. The project will initiate efforts to transition

into the Advanced Incident Management Enterprise System (AIMES) project described below. In FY 2009, the project will complete an advanced concept technology demonstration of the UICDS architecture, publish the UICDS standards-based architecture and integrate this into the DHS Grant Guidance process through the Department's Office of Grants and Training. Using this standards-based architecture will enable incident decision-makers to better manage a unified response and share a common situational awareness with organizations providing support and coordination.

*Training, Exercise & Lessons Learned (TELL) Project* – Develops a simulation-based training and exercise capability that uses advanced computer models and will allow responders at all levels to affordably train and exercise for large and complex events in a virtual/constructive/live environment. TELL will link multiple agencies, functions, and jurisdictions to improve preparedness for emergency responders and managers so they can improve their decision-making. TELL incorporates training objectives, scenarios, and metrics defined by other programs, and the capability to capture lessons learned for use in after-action reviews. TELL also enables the successful implementation of the NIMS and provides a quick, repeatable, economical, and effective means of training incident commanders so they can be better prepared to handle complex incidents. In FY 2007, the project completed development of system requirements that support national, interoperable simulation-based training and exercises. It subsequently conducted advanced concept demonstrations, which included the capability to simulate large-scale emergency response operations that require nationwide deployment of resources from Federal, State and local response organizations. In FY 2008, the project will develop a system prototype based on the architecture developed in FY 2007. In FY 2009, the project plans to conduct several joint training exercises, using the TELL prototype, across the United States with various first responder communities. The prototype will incorporate lessons-learned to enhance the functionality of the system prior to deployment of the pilot program. In FY 2009, the project plans to deploy the TELL architecture at the Seattle and Anaheim RTI cities. In FY 2009, the project also plans to identify sub-components to migrate to the AIMES project, described below.

*Advanced Incident Management Enterprise System (AIMES) Project* – Develops the next-generation incident management enterprise system that will revolutionize the way our Nation's responders handle incidents. It builds upon the UICDS architecture and TELL framework by providing an integrated interoperable, and unified common operating picture with total visibility into: incident information, resources, environment, logistics supply chain, response and recovery plans, methods, tactics, and policies. AIMES will integrate all elements of the incident management enterprise in order to provide a secure, scalable, interoperable, and unified situational awareness to the responder community. In FY 2009, the project plans to establish overall system requirements for AIMES through a series of workshops with customers such as FEMA and end-users in the emergency response communities. In FY 2009, the project plans to complete an execution plan and develop a system concept prototype to establish a high-level architecture for AIMES based on the UICDS effort, demonstrate its functionality, and validate and prioritize its requirements.

*Incident Logistics and Resource Tracking System Project* – Provides a comprehensive and transparent disaster logistics tracking system across the entire area of responsibility of all disaster response, public and private, partners. Lessons learned from past incidents such as Hurricane

Katrina have identified the need for an integrated logistics capability to provide relief supplies to victims in a timely manner. This capability will provide decision makers overall situational awareness relative to the public and private inventories, locations of resources, and supplies as it relates to timely procurement and disbursement supplies. The tracking system will allow FEMA to manage more effectively critical resources and will enhance real-time coordination and situational awareness, setting the standard for all disaster response partners. This capability will be scalable and interoperable with Federal, State and local systems (legacy and future) to enable efficient use of the supply chain by identifying the best routes between staging areas, disaster site, and supply areas. In FY 2009, the project plans to develop a prioritized list of FEMA logistics system requirements, establish a program execution plan and develop a functional logistics system prototype.

***Preparedness and Response Technologies Program*** – FY 2008: \$1,000; FY 2009 estimate: \$0. Develops tools and equipment to support rapid and effective emergency response and recovery for all-hazards for emergency responders. This capability will enable emergency responders to assess and respond to nationally significant incidents by creating science-based response guides to improve the response quality by an order of magnitude. The program is developing highly innovative and revolutionary protective materials that emergency responders and other homeland security operators can use in all hazardous situations. It is also developing procedures and response protocols for a radiological and/or nuclear event for the State and local responder community.

***Personal Protective Equipment (PPE) Project*** – Develops materials that can provide protection during response to chemical, biological, radiological, nuclear, and explosive (CBRNE) events. PPE made with these materials will have the following properties: self-decontamination for chemical and/or biological agents; increased service life; self-healing upon compromise (e.g., ripped, torn); and flame resistance. The PPE project will develop highly innovative and revolutionary protective materials and materials systems that can be used by emergency responders, Federal, State, local and tribal law enforcement officers, and other homeland security operators (e.g., Border patrol agents, USCG, in all hazardous environments. In FY 2007, the project provided a prototype suite of new materials and garments with improved protection capability for chemical/biological hazards. The project funded prototype testing in accordance with appropriate performance and operational requirements of the end-user. In FY 2008, this project will transition the new advanced personal protection materials to the material integration phase for the production of prototype first responder gear and will work in conjunction with the U.S. Army Natick Soldier Center and private sector technology developers to provide further RDT&E. In FY 2008, the project will be complete and transition technologies to the First Responder Technologies program.

***Preparedness and Response Advanced Concepts and Systems Program*** – FY 2008: \$1,500; FY 2009 estimate: \$0. Develops advanced technologies to improve the ability of emergency responders to instantly track, locate and identify responders. Requirements for these projects come from interaction with and assessments of the emergency response communities at the Federal, State, and local levels. Current technologies rely on antennas that require a long time to set up, sensors that operate in very idealistic environments, and radios that work in open fields. Most of these technologies are in a conceptual stage and do not account for the operational

issues, such as weight, power, form, fit, and accuracy that the responder community faces on a daily basis. Based on requirements captured from the responder community, the program plans to develop and experiment with advanced concepts and produce early prototypes to validate functional performance so the S&T Directorate can generate a detailed technology development and acquisition plan. Based on customer input, this program will develop technologies for locating first responders in challenged areas (e.g., subterranean facilities, skyscrapers and warehouses).

*Advanced Concepts & Special Studies Project* – Takes a systems approach in reviewing all preparedness and response capabilities to look for compatibility and interoperability issues across all S&T Directorate projects. In FY 2007, the project developed the system requirements and designs for a first responder 3D location system for tracking personnel that will provide incident commanders situational awareness through accurate location and monitoring inside threatened buildings, collapsed buildings, and subterranean areas. Additionally, the project prototyped the hardware and software for a structural integrity monitoring system to help emergency responders assess the stability of structures prior to entering them. Based on adjustments to FY 2008 funding levels, the project will conduct government testing of the 3D location system and plans to conduct a functional test of the real-time, distributable standoff structure integrity monitoring system. In FY 2009, this project will become the basis for the Advanced First Responder Locator project within the First Responder Technologies program, described below.

***First Responder Technologies Program*** – FY 2008: \$0; FY 2009 estimate: \$3,901. Develops advanced life saving technologies to track, locate, monitor, and protect first responders, emergency managers, and incident commanders as they respond to all-hazard incidents. For any response operation to be successful, commanders must know the whereabouts and health of their first responders. Additionally, first responders rely on effective personal protective equipment so they can save incident victims quickly and rapidly. The mission-critical technologies developed by this program will go through the test and evaluation (T&E) before they become part of any acquisition programs. The following projects support this program.

*Advanced First Responder Locator Project* – Develops an advanced first responder locating system. The system will include integrated sensor components and software for visualizing locations and tracks for incident commanders (such as building diagrams, floor maps, office/apartment location); and will securely connect to emergency operations centers (EOCs). In this manner, incident commanders and decision makers will be able to observe visually responders, their tracks, resources, and activities that will enhance overall situational awareness during an incident. Building on prior efforts, in FY 2009, the project plans to establish a prioritized list of technology challenges to improve accuracy and signal penetration through difficult structures (i.e., underground, over ground). The S&T Directorate will accomplish this through testing at major urban areas such as New York City and the City of Seattle, Washington. In addition, the project plans to develop a prioritized list of technologies for the advanced first responder locator system and demonstrate key 3D locator prototype sub-components to track first responders within an accuracy of three meters.

*First Responder Physiological Monitoring Project* – Develops an integrated sensor package that will monitor a responder’s vital signs such as cardiac rhythm, heart rate, blood pressure, body temperature, and oxygen saturation, which could indicate Pre-Ventricular Contractions (PVCs) or cardiac arrhythmias. The ability to monitor the health and vital signs of first responders entering the scene of an incident allows them and their commanders to pull them out in time to save their lives. First responders need a highly reliable metric and notification system for on-scene identification of firefighters who are about to experience an immediate heart attack or other life-threatening condition. This project plans to fuse these measurements to establish the physical health of the responder based on a set of metrics, and alarm both the wearer and command staff to prevent loss of life. In FY 2009, the project plans to establish system requirements through interaction with FEMA’s U.S. Fire Administration (USFA) and other end-users across the Nation. The project also plans to demonstrate a concept prototype to validate system requirements, architecture, and concept of operations.

***Regional Technology Integration (RTI) Program*** – FY 2008: \$9,410; FY 2009 estimate: \$0. Facilitates the transition of innovative technologies and organizational concepts to national, regional, State, and local jurisdictions. Four urban areas have served as pilot locations for this program: Anaheim (California), Memphis (Tennessee) - (activities incorporated through SERRI), Cincinnati (Ohio), and Seattle (Washington). These pilot sites provide an opportunity for fine-tuning new hardware and processes under real-life conditions and validate technology maturity for transition to other small/large jurisdictions. The program is testing key capabilities at the pilot locations. Ongoing and planned efforts include:

- Atmospheric monitoring and detection systems for chemical and biological toxins;
- Monitoring and detection systems that are integrated with existing emergency response and traffic management infrastructures (like video surveillance systems);
- Development and deployment of geospatial tools to enhance preparedness;
- Connecting emergency operations centers to a common operational picture and facilitate rapid and coordinated response across multiple jurisdictions;
- Planning and exercise tools to evaluate multi-jurisdictional performance for State and local decision-makers; and
- Technologies credentialing emergency responders and verifying victims’ identities during an incident.

In FY 2008 and 2009, the program plans to use lessons learned in the current RTI cities to prepare for the transition of technologies into other urban areas across the country where they can provide an immediate enhancement to the level of preparedness and response. Potential urban areas for applying the RTI technologies include areas that are home to a multitude of critical infrastructure that are subject to natural hazards, e.g. hurricanes, floods, etc.

***Regional Technology Integration Initiative – Anaheim Project*** – Deploys and demonstrates technology solutions in and around the Anaheim Convention Center (ACC). The project concentrates its efforts on securing two-way access to new sources of information; improved sensors and monitoring capabilities for detection of chemical agent or large scale biological attacks; and integration of new capabilities into the region’s current and emerging infrastructure to create a comprehensive situational awareness picture. This system will establish an optimum process to check people, packages, containers, and vehicles entering the ACC for explosives or

explosive devices, while minimizing disruption to the normal flow of events at the ACC. Customers that will benefit from this program are State and local first responders in and around the Anaheim Convention Center. In FY 2007, the project developed a system design and acquisition plans, and conducted three pilots: Bio Detect-to-Treat, Command, Control, and Interoperability and Explosives Protection. In FY 2008, the project will conduct another Command, Control and Interoperability Pilot and Chem/Bio Detect-to-Warn Pilot, transitioning to local operations and support. In FY 2009, the project plans to support the Anaheim urban area to conduct simulation based exercises using the TELL system in order to increase the local community's level of preparedness.

*Regional Technology Integration Initiative – Cincinnati Project* – Deploys and demonstrates technology solutions in the Cincinnati Urban Area, which includes the City of Cincinnati, Hamilton County, a portion of southwestern Ohio, southeastern Indiana and northern Kentucky. The population of the region in the 2000 census was 1,886,650, with the largest population and density being in Cincinnati-Hamilton County. This project will develop, integrate, and implement several technologies for Cincinnati building on the results of the regional preparedness needs assessment phase and in cooperation with the Office of Grants and Training. The technologies include: wired/wireless access to a “virtual EOC” capability; enhanced regional interoperable communications for voice and data exchange; regional exercise capability that more effectively engages all Emergency Support Functions (ESFs) and multiple jurisdictions in the Cincinnati Urban Area; and enhanced regional alert and notifications systems. Based on funding levels in FY 2008, the project will transition from an EOC connectivity prototype system in RTI Seattle for spiral 1 development/pilot. In FY 2009, the activity will transition to the Cincinnati Operations Center. In FY 2009, the project plans to begin testing the 3D Locator system in several venues in the area and deploy the TELL simulation based system to help the responder community train in various scenarios and conditions. In addition, this effort will integrate a variety of modeling and simulation tools in the interconnected EOCs to support analysis of disaster operations and related policies.

*Regional Technology Integration (RTI) Initiative – Seattle Project* – Serves as a blueprint for future planning of additional investment in communications systems and addresses known gaps, such as the need for high-speed mobile data and two-way mobile video, the development of new wireless technologies, and the availability of new spectrum for communications. RTI Seattle will address incident credentialing to provide a capability for the commanders to identify, track, and locate responders in a timely fashion. This will ensure that the commanders dispatch the right number of resources to respond to an event and can be contacted, if needed. Current information from across the region will be consolidated and interfaced with new sources of information in an interoperable data portal and provide a “picture” of the region for situational awareness. In FY 2007, the project piloted an EOC connectivity prototype system, conducted first responder credentialing pilot, and completed a wireless communication assessment that provided a roadmap for future technology investments. In FY 2008, the project will develop the RTI Seattle EOC connectivity prototype system spiral 2 and deploy it for use in the FY 2008 SoundShake Statewide exercise. It is also will demonstrate the 3D locator system at RTI Seattle and transition it to the Seattle Operations Center. In FY 2008 and 2009, the project plans to start developing and deploying technologies for rapid and effective decision making, coordinated response efforts, and effective planning and staging of resources to accelerate delivery of needed

supplies to incident response teams. Furthermore, the project plans to integrate several ongoing capabilities such as interconnected EOCs and sensor and data fusion tools to increase the urban area's levels of preparedness for the 2010 Olympics.

***Integrated Modeling, Mapping and Simulation Program*** – FY 2008: \$0; FY 2009 estimate: \$2,438. Develops and integrates advanced modeling and simulation technologies to support the incident management teams of first responders, commanders, and decision makers to better understand, be prepared, and plan for emergency operations to enhance the quality of response and recovery operations. Specifically, this program plans to conduct R&D in the following three technology areas: advanced models of the critical infrastructure; standard integration process and methodology to enable plug and play of legacy and new models; and support for a real-time modeling framework. This program will integrate these technologies in an advanced simulation infrastructure so that the first responders can conduct simulation-based planning exercises to economically verify and validate their response plans.

***Simulation Based Incident Planning and Response Project*** – Provides FEMA the following capabilities: accurate and reliable estimates of possible hazards from a wide range of natural and terrorist events; route mapping to effectively manage transportation assets during mass evacuations or the post-event flow of emergency supplies; and impact analysis that provides a better understanding of possible impacts from natural disasters and terrorist events. This capability will leverage the results of the TELL project and will follow three tracks: model development; integration framework; and support for conducting planning exercises. The project will use a spiral-development process to insert technology as it matures and to refine requirements and concepts before committing to significant development efforts. In FY 2009, the program plans to conduct workshops with stakeholders from FEMA and the modeling and simulation communities from across DHS and other government agencies to identify, capture, and prioritize the simulation models that need to be developed. The program also plans to conduct disaster planning training scenarios to prepare FEMA decision and policy makers to validate their plans, procedures, tactics, and doctrine when responding to major events.

**Geophysical Thrust Area:** Develops technologies and systems to address the geophysical concerns of the Nation, i.e., hurricanes, flooding, earthquakes. The thrust area includes the Southeast Regional Research Initiative (SERRI) program.

***Southeast Regional Research Initiative (SERRI) Program*** – FY 2008: \$26,325; FY 2009 estimate: \$0. Is a pilot research and development program created to assist State, local, and tribal leaders in developing the tools and methods required to anticipate and forestall terrorist events and to enhance disaster response. SERRI combines science and technology with validated operational approaches to address regionally unique requirements and suggests regional solutions with potential national implications. SERRI's regional approach capitalizes on the region's history of collaboration during natural disaster response as well as the inherent research capabilities resident in the Southeast United States. In FY 2007, the program developed an architecture design for suites of advanced materials, design procedures, and innovative construction methods that can protect metropolitan areas. The program will deliver a proof-of-concept study for mitigation methods for natural disasters. Based on additional funds in FY 2008, the program will continue its research the southeast region.

PPA: INNOVATION

|                              | <b>Perm<br/>Pos</b> | <b>FTE</b> | <b>Amount</b>    |
|------------------------------|---------------------|------------|------------------|
| <b>2007 EOY Actual</b>       |                     |            | <b>\$ 21,945</b> |
| <b>2008 Enacted</b>          |                     |            | <b>33,000</b>    |
| 2009 Adjustments-to-Base     |                     |            | 0                |

| 2009 Program Change          |                     |            | 12,000           |
| <b>2009 Request</b>          |                     |            | <b>45,000</b>    |
| Total Change 2008-2009       |                     |            | 12,000           |

The Science and Technology Directorate requests \$45.000 million for this activity. This is an increase of \$12.000 million above FY 2008. The increase will fund existing programs whose scopes increase as they mature and might allow for additional projects that would address gaps identified by the S&T Capstone IPT process. Unlike the transition programs, these solutions are high risk in nature but would dramatically increase capabilities in responding to threats posed by terrorism and natural disasters.

**CURRENT SERVICES PROGRAM DESCRIPTION**

The Office of the Director of Innovation oversees the S&T Directorate’s Homeland Security Advanced Research Projects Agency (HSARPA). Established by the *Homeland Security Act of 2002*, HSARPA funds research and development (R&D) of homeland security technologies to “support basic and applied homeland security research to promote revolutionary changes in technologies that would promote homeland security; advance the development, testing and evaluation, and deployment of critical homeland security technologies; and accelerate the prototyping and deployment of technologies that would address homeland security vulnerabilities.”

The Director of Innovation/HSARPA works closely with the Under Secretary for Science and Technology, the S&T Directorate’s divisions, DHS Components, industry, academia, and government to determine topic areas for projects. The Director’s many sources of guidance and recommendations include:

- Congressional direction;
- DHS Goals and Priorities as described by the Secretary of Homeland Security;
- Office of Management and Budget (OMB) and Office of Science and Technology Policy (OSTP) Research and Development Budget Priority Guidance;
- Goals set by the Under Secretary for Science and Technology;
- DHS Components input regarding their operational capability gaps; and
- The S&T Directorate’s Integrated Product Team (IPT) process.

Innovation focuses on high-risk/high-reward, homeland security R&D that could lead to technology breakthroughs that significantly enhance DHS operations. Its efforts are

complementary to the S&T Directorate's other programs and projects, pushing scientific limits to address gaps in areas where current technologies and R&D are inadequate or non-existent.

Given the nature of this work, Innovation must be flexible to quickly adapt projects to maximize their high-payoff potential. As part of this process, Innovation will constantly assess its activities to determine whether they should continue, end, be adapted by a division, or be transitioned to a customer – taking into consideration the impacts of emerging technologies and new opportunities to leverage other Federal programs and activities for homeland security. This process means that Innovation's projects may not follow the normal life cycle expected of transition programs. As projects fail or stop at critical decision points, new projects will begin. As a result, Innovation always has more projects under consideration than it can fund in expectation of such changes.

Innovation carries out its activities through two thrust areas: Homeland Innovative Prototypical Solutions (HIPS) and High Impact Technology Solutions (HITS). Current projects are described in further detail below.

**Homeland Innovative Prototypical Solutions (HIPS) Thrust Area** – FY 2008: \$28,000; FY 2009 estimate: \$27,930. HIPS are designed to deliver prototype-level demonstrations of game changing technologies in two to five years. These projects are moderate-to-high-risk with high-payoff potential.

***Project Chloe Project*** – Investigates innovative solutions for defense against MANPADS, focusing on technology that can protect airports over a wide area instead of relying on technologies installed on individual aircraft. Chloe is using a single high-altitude platform, such as an Unmanned Aerial Vehicle (UAV), to protect aircraft at an airport or at several nearby airports rather than installing full detect-to-engage systems on every commercial aircraft. This type of system would reduce the number of systems required to be maintained, eliminate the need to add weight to aircraft, and lower operations and maintenance costs for end-users. The technologies developed under Project Chloe may be leveraged to support other DHS mission areas including Borders and Maritime surveillance, critical infrastructure protection, and disaster relief support.

In FY 2007-2008, Project Chloe will demonstrate the ability of sensors based on a high-altitude platform to detect the launch of MANPADS. Project Chloe's first major achievement occurred in October 2007 as the project successfully demonstrated the detection of the launch of MANPADS from a height of 55,000 – 65,000 feet. Based on the FY 2008 funding levels, Project Chloe incurs a greater schedule risk due to partial funding of its contracts, but the S&T Directorate is committed to adhering to the original schedule to the extent possible. In FY 2008, the project will test both detection and disabling technologies that would effectively work with a high-altitude platform for comprehensive detect and defeat. These activities will continue into FY 2009. Project Chloe will be evaluated for transition options in FY 2009.

***Scalable Common Operational Picture Experiment (SCOPE) Project*** – Leverages an existing effort by the Department of Defense (DOD). The DOD effort, called the Joint Concept Technology Demonstration for Global Observer, is developing a high-altitude, long-endurance unmanned aircraft system (GO UAS). This aircraft-mounted system will enable homeland

security personnel at the Federal, State and local levels to collectively see what is happening during an event and potentially also provide a communication platform for regions where infrastructure has been destroyed. This will allow responders to quickly understand the extent of a natural disaster or terrorist attack, enable communications, and provide sufficient time to make critical decisions and mount a coordinated response. Today, no such capability exists.

In FY 2007 the project developed key UAS subcomponents structural and propulsion subcomponents critical for prototypical flight. In FY 2008, the project will develop and integrate modular sensor and communication payloads. In 2009, the project will conduct a series of operational utility assessments that will serve as a proof-of-concept for DHS operational security needs.

***Rapid Liquid Component Detector (MagViz) Project*** – Uses ultra-low-field Magnetic Resonance Imaging (MRI) technology to screen baggage for liquid explosives. To mitigate the liquid explosives threat, airline passengers currently must pack liquids or gels (such as certain toiletries and medicines) in containers that are 3 ounces or smaller. Those containers must be placed in a 1-quart-sized, clear-plastic, zip-top bags; and only 1-bag-per-traveller is allowed. These are known as “3-1-1 bags,” which undergo an X-ray inspection and possibly a secondary screening using multiple methods, such as visual inspection. The goal of MagViz is to eliminate the 3-1-1 rule and allow passengers to place liquids in their carry-on baggage. MagViz will scan and identify individual materials that may be packaged together or separately as they go through the scanning process and evaluate them against a database that will differentiate between those items considered safe for carrying onto an aircraft (e.g., mouthwash, toothpaste, etc.) and harmful ones. The intent is for the detection of liquids in baggage to be non-contact and to occur at the same rate as current X-ray machines, thus not hindering passenger throughput.

In FY 2007, the project conducted a proof-of-concept laboratory demonstration of the ability to differentiate between dozens of safe and hazardous materials. In FY 2008, the project will build and demonstrate a 3-1-1 bag screening prototype. Also in FY 2008, a parallel research effort will build and test designs that will be used towards developing a 40 cm stand off system. In FY 2009, the project plans to evaluate the results of 2008, which will determine if the project should continue to prototype and demonstrate stand-off detection technologies and the ability to detect liquid explosives within baggage.

***Safe Container (SAFECON) Project*** – Investigates various technologies, including probe systems that detect and identify dangerous cargo and could be mounted on cranes used for on- and off-loading ship-carried containers. SAFECON also looks for sensors and specialized container materials designed to make screening more effective while screening more cargo as much of the cargo entering the United States is currently unscreened or under-screened. The project aims to provide the capability to scan containers entering the country while minimizing the impacts to commerce; high reliability, high throughput detection of WMD, explosives, contraband, and human cargo; and immediate detection and isolation of suspected threat containers.

In FY 2007, the project began threat characterization and container characterization studies to inform decisions on sensors and prototype development. In FY 2008 and FY 2009, SAFECON

will identify and test promising technologies and work to reduce the time-to-screen, enabling significantly more cargo to be cleared. Based on adjustments to the FY 2008 funding levels, most of the testing of identified technologies will occur in FY 2009 instead of FY 2008.

***Future Attribute Screening Technologies Mobile Module (FASTM2) (formerly Future Attribute Screening Technologies) Project*** – Develops real-time, mobile screening technologies to automatically detect behavior indicative of malintent at security checkpoints such as border crossings, transportation portals, and other critical infrastructures. FAST technologies will prevent the unknown terrorist from gaining successful access to targets by detecting real-time behavior patterns through the use of mobile, real-time, non-invasive systems that detect culturally independent, multi-modal indicators using a diverse array of automated sensor technologies. This technology will directly support and augment the operational missions of Federal, State, and local agencies to conduct real-time screening of unknown threats across the operational mission space without impeding throughput.

In FY 2007, the project conducted a research survey on patterns indicating intent to cause harm (identified as malintent) and began building the hardware and software components of the FAST system. In early FY 2008, the project's first achievement was the identification of behavioral, physiological, and paralinguistic cues that likely detect malintent and potential sensors potentially capable of detecting physiological changes. These findings were well received by recognized subject matter experts and will guide the procurement and development of sensor algorithms. In FY 2008, the project will develop a concept of operations and conduct its first demonstration showing a mobile, integrated, non-invasive technology to validate the screening construct and establish viability and lay the groundwork for detecting malintent in an operational environment. In FY 2008/2009, the project will initiate work to determine the possibility of incorporating self-learning behavior into the FASTM2 system to improve sensor accuracy through multi-mode sensor architectures (e.g., heart beat, respiration, etc.); provide the ability to adjust screening processes to changing operational, threat or environmental issues; and detect and adapt to new cues. In FY 2009, the project plans to conduct a prototype demonstration of a real-time intent detection capability.

***Resilient Electric Grid (REG) Project*** – Demonstrates High Temperature Superconducting (HTS) technologies for reliable distribution and protection of electrical power. REG will protect critical, electric-power dependent infrastructure (like the Manhattan Financial District) from the cascading effects of a power surge on electrical grids. Much of the existing electric grid is highly susceptible to brown outs and black outs, and current methods for preventing power outages and restoring power are often costly, slow and require extraordinary efforts. Existing technologies and planned mitigations also require a lot of space, which is problematic in dense urban areas. This project will demonstrate key components of a future "micro grid" that will instantaneously reduce power surges and allow for multiple alternative pathways of power delivery, providing resilience against natural disasters and deliberate attacks. Across the country, a resilient electric grid will produce savings of billions of dollars each year in the course of normal operations through gains in efficiencies, and these benefits would multiply in the case of deliberate attacks and as power grids continue to grow. After a successful laboratory demonstration, the S&T Directorate will implement REG in the Borough of Manhattan in New York City's financial district to protect the economic infrastructure of American business, with

follow-on implementations for additional critical infrastructure in other metropolitan areas around the country.

In FY 2007, the S&T Directorate initiated a prototype project in upper Manhattan to develop a system for linking multiple electrical substations. The project's first major achievement in FY 2008 was the successful laboratory proof-of-concept demonstration of a fault current limiter (FCL) HTS cable that was able to transmit power with no electrical losses via HTS cables and simultaneously prevent cascading failures. This success indicates that the HTS FCL cable enables an innovative grid architecture that will act as a system of resilient power distribution pathways with built-in circuit breakers. Success in the proof-of-concept justifies a full scale laboratory test scheduled late in FY 2008. The project will continue to demonstrate key supporting technologies in laboratory and representative environments in FY 2009 in preparation for prototype deployment in the Manhattan electric grid in FY 2010.

***Hurricane & Storm Surge Mitigation Project*** – Develops innovative approaches to minimize suffering and damage by reducing the intensity of the storm surge produced by hurricanes and major storms. This project, which begins in FY 2008, will develop approaches and technology to duplicate the effect of natural features (such as marshlands and barrier islands) to reduce storm surge strength and prevent flooding. Possible technologies include: temporary, low-cost inflatable and drop-in structures that last just long enough to prevent severe damage; effective alternatives for rerouting flood waters; and flood-proofing critical infrastructure.

Based on adjustments to the FY 2008 funding levels, this project may be placed on hold to resume in FY 2010.

***Improvised Explosive Device (IED) Defeat Project*** – Investigates very high-risk technologies to detect and neutralize person borne and vehicle borne IEDs prior to their detonation and to mitigate the damage caused by successful IED attacks. The project is broken into two separate focus areas that will together form a total suicide bomber detection and defeat “system.” The first focus area, Detection and Deactivation, aims to develop (1) counter suicide bombing technologies that allow the operator to identify, with a high level of confidence, a suspected bomber well in advance of the explosive device detonation. Particular emphasis will be placed on those technologies that provide standoff detection capability of an explosive device on a person; (2) solutions intended to identify, with a high level of confidence, the existence of a bomb or its disassembled components while in transit. Particular emphasis will be placed on those technologies that allow detection of a device or device components in hand carried baggage; and (3) technologies that can defeat a suicide bombing by deactivation of the explosive device. Particular emphasis will be placed on those technologies focused on deactivation of the circuitry contained in the explosive device.

The second focus area, Blast Mitigation, will develop blast mitigation strategies and technologies to (1) focus explosive forces and deflect energy; (2) react to explosives and counter-act explosive energies; (3) enhance survivability and facilitate emergency response in the aftermath of an explosive event; and (4) primarily mitigate blasts but also provide significant protection from other, more frequent threats to populations and structures such as fire and natural disasters (including earthquakes).

Based on adjustments to the FY 2008 funding levels, this project will transition to become part of the Counter-IED program where it will continue to leverage other IED efforts.

***Levee Strengthening & Damage Mitigation Project*** – Develops techniques to: (1) rapidly detect potential failure locations in levees from events such as overtopping, slope failure, under seepage in the foundation, and through seepage of flood waters; (2) protect levees by using techniques such as natural covers and/or armoring to prevent levee failure by soil erosion or breaching as the result of overtopped levees by waves and/or storm surge; and (3) demonstrate the feasibility of one or more rapidly deployable systems to stop the flow of water through a breach within a few hours of a levee's failure.

In FY 2007, the project began efforts to develop and demonstrate advanced methods of sub-surface characterization using various geophysical sensors on water, ground and/or airborne platforms; and demonstrate various methods for using natural and engineered resources for levee strengthening. Based on adjustments to the FY 2008 funding levels, this project may be placed on hold to resume in FY 2010.

**High Impact Technology Solutions (HITS) Thrust Area** – FY 2008: \$5,000; FY 2009 estimate: \$17,070. High-risk, extremely-high-payoff, proof-of-concept technologies.

***Tunnel Detect Project*** – Develops detection technologies to locate underground tunnels that are used for cross-border illegal activities such as smuggling. In FY 2007, the S&T Directorate initiated the integration of tunnel detection sensors onto an unmanned aircraft system that will lead to a series of flight demonstrations/tests in FY 2008. If successful, this technology could be used to monitor the entire border area of the southern United States in a reasonable amount of time. In FY 2008, in addition to the testing of the unmanned aircraft system, the project will develop ground based technologies, to increase tunnel detection accuracy and effectiveness. FY 2008 is an important decision point for this project. Should the technologies prove promising, in FY 2009, the S&T Directorate plans to integrate sensors into modular designs and expand the system to include high-resolution listening devices and confirmation/denial technologies.

***Document Validator Project*** – Develops highly effective scanners that can identify fraudulent documents in a single pass. If successful, this technology will be able to validate thousands of document types (e.g., passports, birth certificates, etc. from around the world) and allow operators to develop new templates or models without the need for special assistance as documents change.

The S&T Directorate reviewed proposals from industry and concluded that they proposed only incremental improvements to existing technologies instead of highly innovative solutions. As a result, this project will use other mechanisms to seek and obtain more innovative concepts from industry in FY 2008. Also, based on the FY 2008 funding levels, planned funds for this project in FY 2008 will now apply to other existing projects in need of them.

***Biometric Detector Project*** – Develops small, non-contact fingerprint scanner technologies for use in biometric identification systems that will not impede the throughput at checkpoints and other portals. In FY 2008, the project will develop and test a laboratory prototype of a

contactless fingerprint reader which, if successful, would lead to development and demonstration of operational prototypes in FY 2009. Based on adjustments to the FY 2008 funding levels, some of the demonstrations in FY 2009 are likely to occur later than planned.

***Wide Area Surveillance*** – Critical Infrastructure Change Detection Project – Investigates novel sensors and systems to provide continuous surveillance of the nation’s highest priority infrastructure. A major goal is to increase coverage, reliability, and efficiency by screening out normal background information to highlight unusual behavior and alert surveillance personnel of the anomaly. The project will employ advanced, high-definition cameras and possibly other sensor options (such as infrared, ultraviolet, acoustic wave forms), combined with smart algorithms, to enhance surveillance of key infrastructure assets. The effort will include adaptation and further development of military grade optical sensors with far greater image resolution than currently available commercially. Sensors will be integrated into a system that must accommodate large data quantities, camera-to-camera handoff, and advanced image recognition. The project will focus on surveillance and tracking in densely populated urban areas, specifically adding advanced technology to the Lower Manhattan Security Initiative in coordination with the DHS Office of Infrastructure Protection and the New York City Police Department (NYPD). In FY 2007, the S&T Directorate analyzed system architectures/wave forms/algorithms for urban environments. In FY 2008, the S&T Directorate will conduct pilot demonstrations of wide-area surveillance and tracking technologies in lower Manhattan, including the high resolution optical sensor.

***Cell-All Ubiquitous Chem/Bio Detect Project*** – Creates a system of small chemical and biological agent detectors that will be widely distributed (in cell phones or other electronic devices) and provide rapid detection, classification, and notification to decision makers. Conceptually, users would have the option to enable the detector as well as the transmission of the detection time, and global positioning satellite (GPS) location information. Goals of this project include significant improvement in chemical and biological detectors’ size, initial and operating costs, power consumption, maintenance requirements, ruggedness, and response time. In FY 2007, the project conducted research for concept development. In FY 2008, the project will conduct laboratory demonstration of an early detection device. In FY 2009, the project plans to conduct field demonstrations.

***First Net Project*** – Investigates emerging technologies that could provide a rapidly deployable and self sufficient communications solution. The goal is to create a communications solution that provides a rapidly deployable 24/7 mobile emergency communications network capability to regions recovering from the catastrophic loss or degradation of their existing communications systems due to natural disaster, major incident, or acts of terror. In FY 2008, this project will create a preliminary design for First Net. In FY 2009, the project plans to conduct a laboratory demonstration.

***Real Time Bio Detect Project*** – Designs a near real-time genomic sequencing of biological threat agents. The system will perform an analysis once-per-10-minutes with 24/7/365 monitoring and simultaneously analyze for threats from the Centers for Disease Control (CDC’s) Category A and B agents list. Genomic sequencing technologies could eliminate the need to transfer samples to a laboratory for culturing and identification of the agent. As a result,

genomic sequencing would change the operational environment by dramatically decreasing the time to identify and respond to biological threats. In FY 2007, the project performed a proof-of-concept study to estimate how far state-of-the-art, real-time genomic sequencing could be advanced within a few years. In FY 2008, the project will complete a technology development roadmap. Based on the FY 2008 funding levels, the laboratory proof-of-concept demonstration planned for FY 2008 will occur in FY 2009. The S&T Directorate will evaluate this project for transition options by the end of FY 2009.

***Resilient Tunnel Project*** – Seeks approaches to address critical vulnerabilities in U.S. transportation tunnels. The project will validate and expand upon the analyses performed to date and identify alternative technical solutions that could be applied to mitigate the vulnerabilities. Studies to date have revealed vulnerabilities that terrorists using IEDs could exploit to cause catastrophic failure of a tunnel. In FY 2007, the project surveyed concepts for tunnel protection. This research resulted in alternatives of analysis studies on advanced materials for tunnel hardening and the identification of adapting existing European inflatable plugs that limit the spread of fire as a potential solution. In FY 2008, the project will design and begin to construct a prototype inflatable plug system based on the European technology. Based on the FY 2008 funding levels, development of some prototype subsystems and planned laboratory demonstrations will not occur until FY 2009. Completion and demonstration of a prototype inflatable plug, originally planned in FY 2009, will occur in FY 2010.

**Other HITS and HIPS** - In addition to the current projects previously discussed, Innovation has a number of projects as potential new starts should its current projects reach a critical decision point to stop or if funding otherwise becomes available. Candidate projects include the following:

***Advanced Behavioral Screening Technologies*** – Enhances the ability of first responders and screeners to detect malintent at increased standoff distances. The S&T Directorate has multiple efforts associated with the detection of the intent of an individual to commit a hostile act prior to the commission of such act. An example is the detection of the intent of an individual to commit a hostile act while the individual is undergoing screening at customs during entry into the United States. While those efforts have provided success, this effort could result in dramatic improvement of the success rates, decrease false alarm rates, new malintent indicators, new protocols, and detection of malintent at much greater ranges than current systems. These innovative approaches will complement the work done in earlier fiscal years.

***Genetically Altered Bio Agency Detect System*** – Examines innovative approaches to develop biological detectors to sense organisms that have been genetically altered to avoid detection. Current methods for biological detection rely on characteristics of individual organisms being detected. In many cases, detection can be thwarted by genetically modifying an organism so that it remains a biological hazard, but no longer has the clues that enabled its detection. This effort will encourage innovative approaches to develop biological detectors capable of detecting genetically modified biological agents.

***Advanced Area Surveillance Tech*** – Investigates innovative approaches to conduct surveillance on wide areas, increases endurance, reduces staffing requirements, automatically differentiates

human movement from other animal or wind driven movements, and reduces operating costs of such systems. These surveillance capabilities might include: automatically identifying individual of interest (e.g., intruders); tracking them; automatically reviewing previously recorded information to determine their previous locations; alerting security personnel; and determining changes to an area under surveillance and alerting personnel to anomalies.

PPA: LABORATORY FACILITIES

|                              | <b>Perm<br/>Pos</b> | <b>FTE</b> | <b>Amount</b>    |
|------------------------------|---------------------|------------|------------------|
| <b>2007 EOY Actual</b>       |                     |            | <b>\$ 72,230</b> |
| <b>2008 Enacted</b>          |                     |            | <b>103,814</b>   |
| 2009 Adjustments-to-Base     |                     |            | 14,000           |
| <b>2009 Current Services</b> |                     |            | <b>117,814</b>   |
| 2009 Program Change          |                     |            | 29,126           |
| <b>2009 Request</b>          |                     |            | <b>146,940</b>   |
| Total Change 2008-2009       |                     |            | 43,126           |

The Science and Technology Directorate requests \$146.940 million for this activity, of this amount \$14.000 million is for salaries and benefits for the Federal employees at the DHS S&T laboratories. This is an increase of \$43.126 million above FY 2008. The FY 2009 program increase reflects the move-in and operations costs for the National Biodefense Analysis and Countermeasures Center (NBACC), and a one-time cost for final cleanup of the Environmental Measurements Laboratory (EML) space. Also, the increase reflects the transfer of funds from the Management and Administration account to pay for salaries of FTEs located at laboratories operated by DHS S&T.

**CURRENT SERVICES PROGRAM DESCRIPTION**

Laboratory Facilities programs are executed through the Office of National Laboratories (ONL). ONL provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations and institutions, which can provide the knowledge and technology required to secure our homeland.

The *Homeland Security Act of 2002* assigns ONL the responsibility for “the coordination and utilization of the Department of Energy national laboratories and other sites under Section 309 in a manner to create a networked laboratory system for the purpose of supporting the missions of the Homeland Security Department.” In addition to oversight of laboratory operations in direct support of the Department and its missions, ONL is also responsible for coordinating homeland security related activities and laboratory directed research conducted within the Department of Energy (DOE) national laboratories.

ONL’s internal customers are the S&T Directorate’s executing divisions, including test and evaluation program areas. The primary external Federal customers are the United States Department of Agriculture (USDA), Transportation Security Administration (TSA), and the Federal Bureau of Investigation (FBI). ONL outlay activities lie in two thrust areas: Laboratory Operations and Construction.

**Laboratory Operations Thrust Area** – Manages the operations and maintenance of the DHS laboratories and infrastructure. ONL provides the planning, budgeting and coordination needed to ensure that these laboratories effectively support the S&T Directorate programs. The DHS laboratories include: Plum Island Animal Disease Center (PIADC), National Biodefense

Analysis and Countermeasures Center (NBACC), Transportation Security Laboratory (TSL), Chemical Security Analysis Center (CSAC) and Environmental Measurements Laboratory (EML).

***Plum Island Animal Disease Center (PIADC)*** – FY 2008: \$27,030; FY 2009 estimate: \$30,700. Researches contagious animal diseases (e.g., foot-and-mouth) that have been identified in other countries. The mission of the facility is to develop strategies and vaccines for protecting the Nation's animal industries and exports from foreign animal diseases accidentally or deliberately introduced into the United States. The R&D work at PIADC is a joint mission between DHS and USDA. Both organizations have a research presence at the laboratory including employees, but DHS is responsible for the operations and maintenance of the facility. The combined work of both agencies at PIADC directly supports the S&T Directorate's agro-terrorism countermeasures programs. Research at the facility occurs in laboratory spaces rated biosecurity level (BSL)-2, BSL-3, and BSL-3Ag.

PIADC is located on Plum Island off the eastern end of Long Island New York; it is a self sustaining operation, with its own power plant, fuel storage, fire protection, waste disposal, and security systems. The S&T Directorate provides the day-to-day operational support and manpower at the facility. Other major operations investments include security, utilities, and fuel costs. The S&T Directorate provides the only ferry transport to and from the island and is responsible for operating and maintaining ferries, docks and the harbor. These activities represent the largest portion of operations investments for PIADC in FY 2007, FY 2008, and FY 2009. Also, FY 2009 reflects a transfer of funds from Management and Administration to the Laboratory Facilities PPA to pay salaries and benefits of FTEs located at PIADC.

***National Biodefense Analysis and Countermeasures Center (NBACC) Operations*** – FY 2008: \$16,770; FY 2009 estimate: \$32,940. Directly supports the S&T Directorate's biological countermeasures programs. ONL oversees two additional centers within the NBACC complex: the National Bioforensics Analysis Center (NBFAC) and the Biological Threat Characterization Center (BTCC). The unique missions of threat characterization and bioforensics analysis complement the mission responsibilities of the Department of Defense (DOD), the DHHS, and USDA. Both centers currently conduct research in interim space with limited capabilities.

- BTCC conducts studies and laboratory experiments to fill information gaps in the understanding of current and future biological threats, assess vulnerabilities, conduct risk assessments, and determine potential impacts in order to guide the development of countermeasures such as detectors, drugs, vaccines, and decontamination technologies.
- NBFAC conducts forensic analysis of evidence from biocrimes and terrorism, to assist in identifying perpetrators and determining the origin and method of attack.

Construction on the new NBACC facility began in FY 2006. The construction should be substantially completed, and the facility should be ready for occupancy in FY 2008 (i.e., offices and administrative space, with a fully operational NBACC in FY 2009). The S&T Directorate began operation of the NBACC as a Federally Funded Research and Development Center

(FFRDC) in the first quarter of FY 2007. The FFRDC is responsible for planning, managing and executing the NBACC research programs and operating the facility.

In FY 2007, FY 2008, and FY 2009, operations investments are primarily for NBACC management, security, equipment/furnishings, utilities, and site services, fees, and insurance.

***Chemical Security Analysis Center (CSAC)*** – FY 2008: \$225; FY 2009 estimate: \$500.

Develops and informs risk assessments related to national chemical defense. CSAC is located at the DOD Edgewood Chemical Biological Center (ECBC) in Aberdeen, MD. CSAC directly supports the S&T Directorate's chemical countermeasures activities in the Chemical and Biological Division and is operated in cooperation with the FBI and DOD. The interim CSAC was established at ECBC in FY 2006 to leverage DOD infrastructure and legacy investments. The operations investments for this facility include rent, security, and utilities for office space and information technology infrastructure and storage.

In FY 2007, DOD commenced construction of a Sample Receipt Facility (SRF) at ECBC. This state-of-the-art facility will house the permanent CSAC, making it the premier facility with the capability to integrate knowledge across the full chemical threat spectrum. The S&T Directorate expects SRF and CSAC to commence operations by the end of FY 2008. In FY 2009, CSAC will commence full operations. Planned operations investments for this facility include rent, security, and utilities.

***Transportation Security Laboratory (TSL)*** – FY 2008: \$13,770; FY 2009 estimate: \$15,500.

Develops civil transportation security technologies, such as explosives and weapons detection systems. TSL is a science and engineering laboratory that enhances and accelerates development of promising technologies to the point of operational test and evaluation. TSL supports the S&T Directorate's explosives countermeasures programs and TSA.

TSL is located at the Federal Aviation Agency (FAA) William J. Hughes Technical Center in Atlantic City, N.J. The real property belongs to FAA. The FY 2007 and FY 2008 operations include buildings maintenance, utilities, security, environment, and safety. The other significant portion of operations investment provides infrastructure and personnel to conduct internal TSL research; engineering; and test and evaluation facilities. In FY 2009, planned operations investments for this facility include rent, security, utilities, and research support. Also, FY 2009 reflects a transfer of funds from Management and Administration to the Laboratory Facilities PPA to pay salaries and benefits of FTEs located at TSL.

***Environmental Measurements Laboratory (EML)*** – FY 2008: \$2,700; FY 2009 estimate: \$7,700. Provides testing and evaluation expertise to the S&T Directorate and the Domestic Nuclear Detection Office (DNDO) and acts as the DHS liaison for the deployment of experimental technologies in the New York City metropolitan area. EML is a government-owned, government-operated laboratory located in the Borough of Manhattan in New York City. Prior to its transfer from the Department of Energy (DOE) to DHS, EML's activities focused on the measurement of low-level radiation.

In FY 2006, ONL disposed of surplus materials and radioactive sources and began the decontamination/decommissioning of unused areas in the current EML space. These efforts continued in FY 2007. The FY 2007, FY 2008, and FY 2009 operations include rent, security, and utilities. The FY 2009 operations costs also reflect a transfer of funds from Management and Administration to pay salaries and benefits of FTEs located at EML. In FY 2009, ONL will conduct the remaining cleanup activities, and the space will be returned to commercial use specifications. The office space currently in use is larger than necessary and a determination has been made that EML will occupy a smaller set of offices and the remaining decontaminated space will be returned to the General Services Administration (GSA). The move will result in a reduction in rent and lower operational costs. The one-time EML costs for final cleanup are driven by GSA requirements and at a minimum will include the final disposal of contaminated materials and removal of fume hoods, large exhaust ducting, furnaces, and other equipment remaining from DOE program activities.

**Construction Thrust Area** – Oversees the planning, budgeting, and management of laboratory infrastructure construction and upgrade projects. Construction projects are required to maintain and provide R&D capabilities to support the missions of the S&T Directorate, the Department, and other government agencies that have interrelated homeland security missions such as USDA, DHHS, and DOD. The ONL construction investments include the construction of future assets, where a current capability does not exist, and upgrades to extend the life and capabilities of present facilities.

***Plum Island Animal Disease Center (PIADC) Upgrades*** – FY 2008: \$17,319; FY 2009 estimate: \$0. Provides research capabilities necessary to protect the Nation’s agriculture infrastructure. PIADC is the Nation’s first line of defense against foreign animal diseases and will need to remain a viable research facility until the National Bio and Agro-defense Facility is ready to provide this capability. These facility upgrades support ongoing and expanded research activities of USDA and DHS and ensure that this research can be performed in a safe and secure manner. In FY 2006, a detailed study identified essential and optional improvements to maintain and upgrade PIADC operations. In FY 2007, the designs began and support commencement construction activities will begin in FY 2008. Implementation of the upgrades will continue through FY 2010 when they are expected to be fully completed. The upgrades will enable the PIDAC facility to remain current through 2014.

In FY 2009, ONL plans to continue to fund projects that were identified in the multi-year Corrective Action Plan in a FY 2005 Report to Congress. These projects are in addition to the mission related upgrades, and occur in five general areas: (1) security programs and systems; (2) information technology and communication systems; (3) environmental, health, and safety systems; (4) buildings, grounds, and infrastructure systems; and (5) administrative and management programs.

***National Bio Agro Defense Facility (NBAF) Construction*** – FY 2008: \$11,000; FY 2009 estimate: \$35,600. Provides an integrated animal, foreign animal, and zoonotic disease research, development, and testing facility that will support the complementary missions of DHS and USDA. NBAF will replace PIADC and provide additional capabilities in state-of-the-art research, development, testing and evaluation infrastructure that enables research to enhance

agriculture and public health. It will house numerous laboratory spaces including biosecurity level laboratories to conduct research on high-consequence biological threats involving foreign animal and zoonotic (transmitted from animals to humans) diseases. NBAF will also provide enhanced capabilities to address a broader and more complete spectrum of threats posed by emerging bio- and agro-terrorism agents. In FY 2007, ONL conducted the conceptual design of the facility and down-selected potential sites for the NBAF. ONL commenced the second step in the selection process by beginning the Environmental Impact Statement (EIS) to evaluate the six remaining selected sites as part of the National Environmental Policy Act. The EIS will be used to determine site suitability. The final site selection is planned for early FY 2009. The program plans to begin a detailed design of the facility in FY 2009 to support the initiation of construction in FY 2010.

*NBAF Facility Space Justification* – NBAF will satisfy the requirements identified in Homeland Security Presidential Directives (HSPD) 9 and 10 by providing an integrated facility for studying diseases categorized as foreign animal diseases and zoonotic diseases (transmitted from animals to humans). The existing animal holding, laboratory, training, and support spaces at PIADC are severely limited in size and present challenges for scientists and building operators. Major limitations exist in the ability to conduct large animal research trials necessary for assessing and countering emerging threats and developing necessary vaccines. The primary limitations at PIADC are based upon an inability to conduct certain research activities because the facility does not meet current standards or there is insufficient space.

NBAF will have approximately 504,000 gsf. The overall space is broken out as follows:

| <b>Space</b>  | <b>GSF</b>     |
|---------------|----------------|
| Office/Admin. | 35,000         |
| BSL-2*        | 30,000         |
| BSL-3**       | 372,000        |
| BSL-4         | 55,000         |
| Vaccine Prod. | 12,000         |
| <b>NBAF</b>   | <b>504,000</b> |

\*BSL-2 includes laboratory and support areas.

\*\*BSL-3 includes laboratory, agriculture threat containment, and training and support areas.

The BSL-3 laboratory space is required for research studies on Foot and Mouth Disease (FMD) and developing countermeasures, while the BSL-4 laboratory space is required for research studies on zoonotic diseases. Upon completion, the facility will include: (1) BSL-4 space, large animal and laboratory space that is not currently available to DHS and USDA programs at PIADC; (2) facility space for a vaccine and reagent production module that will aid in providing biological product candidates for rapid licensure to meet the needs of the National Veterinary Stockpile; and (3) multi-purpose, state-of-the-art, distance-learning equipped, conference/training space, research and collaborative offices, and auxiliary spaces, that will make NBAF the world-class biocontainment research facility identified in HSPDs 9 and 10.

*NBAF Construction Offset* – All assets and liabilities of PIADC, including Plum Island, were transferred to DHS in the Homeland Security Act of 2002 [Section 310, Public Law 107-296]. After the planned renovations and upgrades to Plum Island, the fifty year old facility will be able to maintain current research capabilities through 2014, until activities can begin transfer to NBAF.

NBAF construction will begin in FY 2010, once the final location is selected from a list of six candidate sites across the country which also includes Plum Island. If Plum Island is not selected as the site for the replacement facility, DHS will consider the sale of the island and use the proceeds to fund the construction of NBAF, the demolition of the PIADC facility, and the clean up and remediation of the island. Should the island be available for sale, it would likely occur in the FY 2009 and FY 2010 time frame. The purchase agreement would allow current operations to continue during the construction of the NBAF and eventual transfer of functions in five years.

*Pacific Northwest National Laboratory (PNNL), Area 300* – FY 2008: \$15,000; FY 2009 estimate: \$10,000. Provides a capability replacement laboratory at the DOE's PNNL in Richland, WA. The DOE Office of Science manages this project. ONL represents DHS to provide project management oversight and coordination for the construction of this DOE-led project, scheduled to be operational in FY 2011. PNNL currently provides DHS with research and development capabilities in several areas, such as radiological detection and analysis, dosimetry for standards, and information analytics, in support of the S&T Directorate, National Programs and Preparedness Directorate, DNDO and CBP. In FY 2007, ONL supported the joint program's facility design activities. Design was completed in FY 2007, and construction will begin in FY 2008.

PPA: TEST & EVALUATION AND STANDARDS DIVISION

|                              | <b>Perm<br/>Pos</b> | <b>FTE</b> | <b>Amount</b>    |
|------------------------------|---------------------|------------|------------------|
| <b>2007 EOY Actual</b>       |                     |            | <b>\$ 24,910</b> |
| <b>2008 Enacted</b>          |                     |            | <b>28,520</b>    |
| 2009 Adjustments-to-Base     |                     |            | 0                |
| <b>2009 Current Services</b> |                     |            | <b>28,520</b>    |
| 2009 Program Change          |                     |            | (3,846)          |
| <b>2009 Request</b>          |                     |            | <b>24,674</b>    |
| Total Change 2008-2009       |                     |            | (3,846)          |

The Science and Technology Directorate requests \$24.674 million for this activity, of this amount \$0.617 million supports the SBIR Program. This is a decrease of \$3.846 million below FY 2008, due primarily to a decrease of \$3.000 million because the S&T Directorate is not requesting funding for the independent peer review project in FY 2009. Also, there is a decreased amount for Standards development for Human Factors and Interoperability.

**CURRENT SERVICES PROGRAM DESCRIPTION**

The Test & Evaluation and Standards program provides technical support and coordination to assist the Nation’s emergency responders in the acquisition of equipment, procedures and mitigation processes that are safe, reliable and effective. The program carries out its activities through two thrust areas: Test and Evaluation (T&E) and Standards. T&E works across DHS to measure whether technologies and tools perform well and are applicable to homeland security operations. T&E results are used as a basis to make informed acquisition and deployment decisions. Standards supports the development of consensus-based measures – from basic specifications to performance criteria – that give DHS and its customers confidence that technology and systems will perform as required. The S&T Directorate works across DHS and numerous external partners to build consensus and encourage the adoption of needed, voluntary standards.

**Standards Thrust Area** – Standards are the basic measures of effectiveness that provide specifications throughout the entire development cycle of a technology or system. The Standards thrust area coordinates the adoption of national standards and appropriate conformity assessment methods to ensure that our Nation's emergency responders can rely on the equipment, procedures and mitigation processes they need to do their jobs; that personnel from different jurisdictions can easily communicate with one another; that detection and testing for threat agents produces consistent, accurate results; and that training exercises provide the instruction and practice that will best prepare homeland security personnel for responding to certain events. The lack of effective standards can lead to inconsistent grant guidance and the purchase of inferior or inappropriate products.

DHS does not have authority to impose regulatory standards, and must therefore promote the development of voluntary consensus standards. Voluntary consensus standards rely on coordination and consensus between large numbers of entities. Therefore, the Standards thrust

area gathers requirements and facilitates the adoption of standards through formal standards working groups, interagency task forces, conferences, and workshops with private-sector standards organizations, such as the National Fire Protection Association (NFPA) and ASTM International. ASTM International is a voluntary standards development organization that sets industry standards world-wide. The Standards thrust area does not seek to generate new standards, but solicits and endorses existing national-level standards.

***Independent Peer Review Program*** – FY 2008: \$2,925; FY 2009 estimate: \$0. The S&T Directorate will establish a program to provide independent peer review of projects throughout DHS. As directed, the division will initiate the program with an evaluation of TSA's air cargo certified shipper program; focusing on evaluating the soundness of the measures used to evaluate the integrity of a certified shipper's security program. This will support TSA's 100% screening requirement. In FY 2008, the program will establish a peer review entity, and begin assessing TSA's program.

***Explosives Standards Program*** – FY 2008: \$3,511; FY 2009 estimate: \$3,000. Develops standards related to explosives detection, including standards for detectors and protective equipment, body scanning systems, and cargo. In FY 2007, the program began performance testing on a variety of explosives detection equipment. In FY 2008, the program will release image standards for X-ray inspection systems and draft standards for body scanning systems and the evaluation of their performance. In FY 2009, the program plans to draft standards for trace explosives detection; develop standards for high energy computed tomography systems; and develop a methodology and test kit for quality control and assurance of field-deployed equipment to determine their effectiveness in detecting explosives. The program also plans to initiate standards development for standoff explosives detectors, IED countermeasures technology (including radio frequency countermeasures used in jamming technologies), and terahertz technologies that can penetrate a wide variety of materials for body scanning.

***Chemical/Biological Standards Program*** – FY 2008: \$3,085; FY 2009 estimate: \$3,239. Develops standards related to chemical and biological threat detection. This includes development of a comprehensive suite of performance standards for detection equipment, guidance on how to respond to chemical/biological incidents, and the development of simulants (e.g., anthrax bacteria (*Bacillus anthracis*) and ricin) for testing. The program, working through two stakeholder groups, provides State and local authorities with guidance on purchases for chemical/biological detectors.

In FY 2007, the program continued standards development for integrated chemical, biological, radiological, nuclear and explosive (CBRNE) sensors as the incidence response community moves away from using multiple sensors to a single device that can detect all of these agents. The program also began to conduct risk assessments for both chemical warfare agents and toxic industrial chemicals to develop decontamination guidelines via an interagency process. In FY 2008, the program will issue a preliminary decontamination guidance based on FY 2007 findings and develop a concept of operations (CONOPS) for responding to chemical incidents. In FY 2009, the program plans to finalize standard test materials for anthrax and ricin, release interim guidance for chemical and biological decontamination, and develop guidance for first-responder assessment of chemical and biological detection technology claims.

***Command, Control, and Interoperability Standards Program*** – FY 2008: \$798; FY 2009 estimate: \$900. Develops standards related to interoperable communication and incident management. Specific projects within this area address gaps not covered in the larger, overarching SAFECOM and National Institute of Justice interoperable communications projects, but rather address issues related to interfaces with protective equipment.

In FY 2007, this program developed performance standards for emergency responder locator communications in collapsed structures. These standards will apply to new signal processing technologies that allow amplification of weak signals through rubble from collapsed structures. In FY 2008, the program will present these standards to U.S. manufacturers in workshops and test exercises.

Additional program activities focus on establishing communication and coordination with the FEMA's National Incident Management System (NIMS) Integration Center. In 2007, the program completed a clearinghouse of existing incident management standards that first responders can use to demonstrate NIMS compliance in order to receive Federal funding. In 2008, the program will work with the NIMS Integration Center to collect, assess, and evaluate FY 2007 compliance data to support revisions of NIMS-related standards. In FY 2009, the program plans to adopt or update existing incident management standards, complete gap analysis for new requirements, and formulate new standards as needed.

In FY 2009, the program also plans to initiate work in the area of Knowledge Management Standards, which address the need to organize, manage, and protect information databases used during incident management. This work will coordinate DHS standards adoption with national programs like the National Information Exchange Model (NIEM) and the Federal Geographic Data Committee, which is working with the DHS Office of the Chief Information Officer (OCIO) Data Management Working Group and the U.S. Coast Guard Position, Navigation and Timing Working Group.

***Borders/Maritime Standards Program*** – FY 2008: \$904; FY 2009 estimate: \$1,250. Develops cargo security and Radio Frequency Identification Device (RFID) technologies, which are used to tag and track containers. Standards for border security technologies and systems are critical to ensure their effectiveness in protecting the Nation's ports and borders. Program activities focus on: (1) standards to enhance the security of shipping containers and cargo handling processes; and (2) standards to facilitate the reliable use of RFID systems for homeland security and first-responder applications.

In FY 2007, the program reached full adoption of the American National Standards Institute (ANSI) and Institute of Electrical and Electronics Engineers (IEEE) gamma-ray technical performance standards for radiological/nuclear cargo screening equipment. In FY 2008, the program will work with Customs and Border Protection (CBP) and other organizations to review existing standards, conduct gap analyses, and gather user requirements to develop cargo security standards. In FY 2009, the program plans to support standards development for gaps previously identified, work with ANSI and other organizations to examine the current suite of applicable global trade and supply chain standards.

In FY 2007, program activities also supported the development of measurement methods, performance metrics, standards, testing protocols, and key technologies to facilitate reliable use of RFID systems for homeland security and first-responder applications. In FY 2008, the program will transition to developing performance requirements for RFID technologies. In FY 2009, the program plans to develop additional RFID-based sensor network standards requirements, and performance metrics for cargo and border security, evaluate the feasibility of RFID counterfeit detection by electromagnetic signatures or other means, and demonstrate technology required for Federal Information Processing Standards (FIPS) 140 Level IV compliant RFID systems and initiate Cargo security standards development based on FY 2008 analysis.

***Human Factors Standards Program*** – FY 2008: \$2,074; FY 2009 estimate: \$2,162. Develops standards for biometrics technologies and government personnel credentials. A primary focus is on developing biometric standards and tests to ensure that a nationwide biometrics system can accurately identify individuals. To facilitate the identification of individuals, biometric information must be housed in searchable databases that are accessible to many government entities. The overall success of such a database requires standards for acquiring biometric information.

In FY 2007, the program completed multi-modal (i.e., fingerprint, face, iris) biometrics standards, including standards for latent fingerprint analysis, rapid biometric evaluation, and biometric image and image feature quality (i.e., software automation ensuring a passport photo meets acceptability parameters). In FY 2008, the program will identify and integrate emerging biometric technologies into its efforts, ensuring through performance testing and analysis, that they meet the developing suite of biometrics standards. In FY 2009, the program plans to provide standards for image quality for biometric images of face, fingerprint and iris specifically to enhance interoperability of U.S. Visitor and Immigrant Status Indicator Technology (US VISIT) and FBI's Integrated Automated Fingerprint Identification System (IAFIS) fingerprint databases. In addition, the program plans to provide on-line test data sets that can be used by manufacturers to test and develop next-generation software.

In FY 2008, the program will also begin developing consensus standards for credentials for officials and responders at various levels in the government. These standards will integrate information stored in various databases to enable the rapid identification of personnel as well as verify their certifications, capabilities and duties. Also in FY 2008, the program will develop standards for version two of the TWIC and develop a suite of standards based on the universal access control mechanism through the American National Standards Institute's (ANSI) International Committee on Information Technology Standards Cyber Security 1 (INCITS/CS1). In FY 2009, planned activities include completing initial standardization of the data model/architecture for first responder credentials. While the TWIC program addresses specific mandates for the transportation sector, the credentialing standards address the needs of all responder and emergency personnel and ensure that their credentials mesh neatly into emerging data and incident command systems.

***Infrastructure/Geophysical Standards Program*** – FY 2008: \$6,729; FY 2009 estimate: \$5,974. Develops standards to enable emergency responders to purchase the right equipment to protect themselves and the best operational equipment to use in protecting the public. A key program focus is on protective clothing and gear, (e.g., breathing apparatus) used by emergency responders. In FY 2007, the program continued development of standards for protective clothing and respiratory protection equipment such as closed-circuit, self-contained breathing apparatus and chemical protective clothing. The program also worked on developing, in conjunction with the National Institute of Justice, standards for CBRN personal protective equipment (PPE) for tactical law enforcement; and the program transferred a bomb suit standard to ASTM International. Test methods and standards for blast-resistant trash receptacles will be developed in conjunction with ASTM International.

In FY 2008, activities will focus on further developing CBRN respiratory protection equipment standards, establishing certification programs, and updating, as necessary, previously developed standards. This includes revising the National Fire Protection Association (NFPA) PPE standards previously adopted by DHS. The program will also develop testing and conformity assessment programs for associated standards, such as the bomb suit standard and law enforcement CBRN PPE. In FY 2009, the program plans to continue to support development of draft all-hazards protective clothing standards (with attention to dermal hazards posed by toxic industrial chemicals and toxic industrial materials) and to continue facilitating the development of standards for law enforcement officer PPE. In addition, the program plans to implement standards for hybrid CBRN respiratory protection equipment such as combined self-contained breathing apparatus and air purifying respirator systems.

Current activities also focus on standards for Geographical Information Systems (GIS). (Standards development efforts for Urban Search and Rescue Robots have been transferred to the Platforms Program area.) In FY 2008, the program will coordinate with DHS users of GIS information to ensure that emerging information systems at DHS use the same relevant data standards as other Federal entities. The program will also support standards development for personal gear that helps locate responders and send alerts. In FY 2009, the program plans to finalize an NFPA standard for indoor localization technologies and to support NFPA development of a Personal Alerting Safety System standard and test method.

***Platforms Program*** – FY 2008: \$2,128; FY 2009 estimate: \$2,000. In FY 2008, the Standards Thrust area will organize standards development for Urban Search and Rescue (USAR) robots, sensor networks and alert systems, and HAZMAT equipment standards under the Platforms Program. The Standards Thrust area has received similar requirements from various customers cross-cutting operational areas, and consolidating customers' requirements for common detection technologies will prevent duplicative development efforts and reflects the move of DHS towards integrated technologies that will respond to a range of scenarios while lowering operational costs. The program will have two areas of work: (1) mobile platforms which includes robots and UAVs plus other mobile detection applications; and (2) sensors and alert networks which will include stationary sensor systems and the networks to support them.

In FY 2007, work in the area of mobile platforms involved completion of a standard taxonomy for USAR robots. In FY 2008, the program will support the development of standard test

methods for advanced sensors and mobility used in USAR robots. The program will also conduct technology maturity assessment exercises to identify new candidate robot and sensor technologies for standardization. In FY 2009, the program plans to support the development of standard test methods for advanced sensors and mobility.

In FY 2008, in the area of sensors and alert networks, the program will build on FY 2007 efforts to identify needed standards development efforts to ensure packages of sensors work together and provide data to users in a standardized, secure format. In FY 2009, program plans to focus on conducting technology maturity assessment exercises to identify new candidate sensor technologies for standardization, including sensor interfaces, data transmission/exchange and security.

***Standards Development Program*** – FY 2008: \$1,771; FY 2009 estimate: \$1,050. Standards development requires consensus and significant resources across and outside of DHS; success requires a unique commitment to partnerships and ongoing infrastructure to support both general activities (databases, working groups) and specific projects (biothreat identification protocols). For some private-sector standards development organizations, the S&T Directorate must pay to maintain its membership and ensure voting rights in decision-making processes. The S&T Directorate maintains important relationships with standards development organizations such as ANSI, ASTM International, IEEE, NFPA, National Institute of Occupational Safety and Health etc.; and program partners such as the NIMS Integration Center, TSL, AOAC International, Homeland Security Institute (HSI), and the Interagency Board for Equipment Standardization and Interoperability (IAB).

**Test and Evaluation Thrust Area** – Establishes and issues policy and procedures and coordinates T&E resources to verify attainment of technical performance specifications and operational effectiveness/suitability. The goal is to integrate a uniform and centrally managed Departmental T&E process into the entire development and acquisition life cycle via early and continuous evaluation of system test requirements, planning, and execution, providing for independent T&E oversight and assessment. An integrated T&E process will provide vital information to decision makers that can help ensure that DHS capability needs are met while reducing risk and aiding first responders' selection of systems. The role of these activities is to assess, integrate, and coordinate Federal and non-Federal test assets, such as colleges, universities, and local governmental and private research institutes and companies.

***T&E Plans and Policy Program*** - FY 2008: \$579; FY 2009 estimate: \$700. Develops and disseminates T&E policies and procedures that define T&E activities to be performed by all DHS components throughout the system acquisition process. In FY 2007, the program reviewed current DHS acquisition policies. This review led to the development of an initial DHS T&E directive and formulation of an implementation strategy. In FY 2008, the program will establish a T&E Council with representatives from DHS components. This council will address T&E policy, processes, and infrastructure issues. Also in FY 2008, the S&T Directorate will finalize policy and initiate implementation of the policy across the DHS components. In FY 2009, the program plans to fully implement a T&E oversight and monitoring process that will review T&E activities addressed in the policy. Additionally, the program plans to expand a web-based online source of information to provide Emergency Responders, purchasers, and planners with trusted,

integrated information on products, T&E, standards, certifications, grants, and other equipment-related information.

***Infrastructure Program*** – FY 2008: \$645; FY 2009 estimate: \$700. Assesses, integrates, and coordinates the physical Federal test assets and non-Federal assets at colleges, universities, local governments, private research institutes, and companies. This program will review the DHS acquisition programs' capability to perform required T&E. This gap analysis of existing DHS and non-DHS infrastructure will determine required investments or upgrades to DHS capabilities. Additionally, this program will implement a test-capability-accreditation program that provides formal recognition of the technical competency for test capabilities used to test and evaluate DHS products.

In FY 2007, the program coordinated with the T&E Plans and Policy Program to begin a review of the Department's existing T&E infrastructure and made an initial assessment of S&T's Capstone IPT program. The program also evaluated existing candidate, capability-accreditation programs to determine an appropriate DHS T&E accreditation process. In FY 2008, the program will continue to expand the infrastructure review to non-DHS T&E infrastructure, which will involve participation in requirements development and test planning across DHS and evaluation of potential partner activities across the Federal government. The program will also finalize a DHS test capability accreditation process that will allow it to begin accrediting T&E capabilities. In FY 2009, the program plans to complete the Integrated DHS T&E Infrastructure Plan that will matrix the available domain of T&E Capabilities to the DHS acquisition programs and the DHS S&T Capstone IPT projects. Also in FY 2009, the program plans to refine the test capability accreditation process as necessary and continue accrediting test capabilities.

***Test Area/Capabilities Program*** – FY 2008: \$2,658; FY 2009 estimate: \$3,082. Works directly with DHS acquisition programs to support their individual T&E needs by identifying the appropriate standards and testing assets for their respective technologies. The program will support DHS acquisition programs in following the policies and procedures of the Plans and Policy Program and leveraging the assets identified by the Infrastructure Program. The goal is to improve the DHS technology development and acquisition processes to accelerate the delivery of technologies, assure performance requirements are met, and reduce development-related risk, through coordination and integration of the activities department-wide. In FY 2007, the program began planning for T&E oversight efforts to be an integral part of the S&T Capstone IPT process. In FY 2008, the program will begin to develop a methodology to determine the required level of T&E oversight for DHS acquisitions. Additionally, the program will initiate an implementation strategy of T&E policies and procedures across the DHS components to ensure consistent and adequate T&E planning and execution. In FY 2009, the program plans to continue to assess gaps in DHS acquisition programs' T&E approach, continue refining the oversight process for DHS T&E programs, and continue carrying out the T&E oversight function.

Also beginning in FY 2008, the program will incorporate cost effective modeling and simulation (M&S) and computational science investments that have measurable benefits, provide timely insights, and build on or leverage best practices of DHS, other Federal agencies, academia, and the commercial sector. In FY 2008, the program will begin development of a MS&A strategic

plan, including an assessment of current MS&A focus areas for homeland security applications, evaluation of MS&A shortfalls and opportunities, M&S Master Plan, and proposed investments. Development of the strategic plan includes participation of M&S/computational science SMEs from government agencies, as well as from academia and industry. In FY 2009, the program plans to implement the strategic plan and establish an M&S Advisory Council of nationally recognized experts from government, academia, and the private sector to advise and support DHS on issues regarding the application and use of M&S and computational science.

The Science and Technology Directorate requests \$31.830 million for this activity, of this amount \$0.796 million supports the SBIR Program. This is an increase of \$1.565 million above FY 2008, which will support the competition of a new FFRDC contract when HSI's current contract expires in FY 2009.

**CURRENT SERVICES PROGRAM DESCRIPTION**

The Transition Office delivers near-term products and technology enhancements by working with the Department's components to expedite the technology transition process. The office provides personnel, processes and resources to support the transition and transfer of S&T Directorate technologies to customers. Activities focus on integrating technology development efforts across the S&T Directorate to develop the most cost effective and timely solutions and processes to meet customer requirements. The Transition Office carries out core responsibilities to ensure transition of technologies developed by the S&T divisions and related activities that complement the transition efforts through the following two thrust areas: SAFETY Act and Transition.

**SAFETY Act Thrust Area** – FY 2008: \$4,297; FY 2009 estimate: \$8,500. The Office of SAFETY Act Implementation (OSAI) evaluates and qualifies technologies for liability protection in accordance with the *SAFETY Act of 2002* and the supporting regulations of the Final Rule implemented on July 10, 2006. As part of the *Homeland Security Act of 2002* (Public Law 107-296), the SAFETY Act provides risk management and liability protections for sellers of qualified anti-terrorism technologies. The purpose of the SAFETY Act is to ensure that the threat of liability does not deter potential manufacturers or sellers of effective anti-terrorism technologies from developing, deploying and commercializing technologies that meet homeland security objectives.

There are three key areas of focus for OSAI: operations, outreach and coordination.

**Operations** – OSAI processes applications under the criteria stipulated by the provisions of the SAFETY Act in an expeditious manner. As part of this process, the OSAI evaluates the efficacy of candidate technologies, considers the insurance picture of the company and advises DHS whether to issue liability protection to the company under the SAFETY Act.

In FY 2007, the office implemented a remote evaluation process with subject matter experts (SMEs) that resulted in access to a greater number, variety, and quality of SMEs that were needed to streamline the evaluation process and concurrently reduce operating (i.e., travel) costs. This new process was more cost efficient than previous methods and allowed more effective application processing. In FY 2008, to improve service to the applicants and keep up with increasing volume, the OSAI will build an "application wizard" (*à la* TurboTax<sup>®</sup>) and will request a phone consultation with the applicants prior to the application process to lead them through the process, explain the documentation needed, provide examples, and answer questions before they fill out the application. Then, the software will automatically fill out basic information, cross-check information for errors or inconsistencies, and provide prompts for important technical and economic information that evaluators will need to properly process the application. Also in FY 2008, OSAI will have an independent assessment of the business process performance of the office to identify further efficiencies. In FY 2009, the program plans to continue evaluating and streamlining business processes so that at least 85 percent of applications are processed within 120 days and continue to grow the program by 10 percent.

***Outreach*** – OASI promotes homeland security technologies by raising public awareness of the benefits of liability protections available under the SAFETY Act and thereby expand the creation, proliferation and use of anti-terrorism technologies.

In FY 2007, OSAI continued outreach activities to encourage industry participation, particularly among small businesses. In addition to providing general information, the outreach program worked to better educate prospective applicants and encourage new applications by targeting audiences at approximately 40 conferences and major stakeholder meetings as well as implementing an aggressive communication strategy with industry groups and trade associations. In FY 2008, OSAI will continue expanding its outreach into untapped homeland security technology markets so as to encourage full industry participation. To this end, OSAI will attend approximately 24 conferences and stakeholder meetings as well as continue its aggressive communication strategy with previously unreached industry groups, trade associations and others involved in strategic areas of homeland security interest. In FY 2009, the program plans to continue its outreach efforts into priority homeland security technologies and under-represented technology areas to further industry participation.

***Coordination*** – OASI coordinates the SAFETY Act application review process across DHS and with other Federal agencies to support these partners in their missions and to minimize the burden on applicants for SAFETY Act protection. This crucial advance coordination regularly occurs wherever the SAFETY Act can play an important role in pending Federal procurements.

In 2008, OSAI will continue to align the SAFETY Act process to the Federal procurement process to (1) reduce submission of contingent contracts by offerors; (2) streamline the application process for similar or identical technologies containing the same basic scientific principles (such as different types of X-ray systems); and (3) identify, in advance of Requests for Proposals, appropriate anti-terrorism technologies that will be considered for, or entitled to, SAFETY Act protections. In FY 2009, the SAFETY Act program plans to expand coordination with other Federal agencies to assist in the creation of Federal best practices, standards and guidelines and work with public and private consortiums/associations to identify promising

technologies for prompt consideration under the SAFETY Act as well as sector-specific areas identified by the NIPP.

**Transition Thrust Area** – Provides personnel, processes and resources to support the transition and transfer of S&T Directorate technologies to customers. Activities focus on integrating technology development efforts across the S&T Directorate to develop the most cost-effective and timely solutions to meet customer requirements. This work includes coordinating technology efforts with international agencies and other government agencies and providing an appropriate venue for first-responder input to the S&T Directorate's transition process.

**International and Interagency Programs** – FY 2008: \$3,501; FY 2009 estimate: \$3,571. Leverages the capabilities of external organizations, within the United States and abroad, to address high-priority homeland security needs. The International and Interagency Divisions facilitate the S&T Directorate's cooperative RDT&E activities across Federal, State, local and tribal governments, the international community, and the private sector. These activities include:

- Guiding the S&T Directorate's coordination of Federal government and private-sector efforts to identify and develop countermeasures against current and emerging threats;
- Leading a world-wide staff of science and technology liaison officers who help execute S&T Directorate programs of national and international scope and impact; and
- Facilitating international technology awareness to avoid technological surprise and ensure the Department's technological superiority.

In FY 2007, the program leveraged external organizations in three venues: interagency agreements, international agreements and international collaborations, which include visiting scientist collaborations, conference/workshop collaborations, and science and technology international collaborations.

Interagency activities included establishing a liaison position within the State of California Office of Homeland Security and furthering outreach efforts with DHS customers and the National Guard to understand stakeholder and end-user priorities and inform the S&T Directorate's investments in homeland security-related science and technology. The program also enhanced relationships with DOD's Northern Command (NORTHCOM) were also enhanced to leverage other agencies' RDT&E efforts, The S&T Directorate also established a memorandum of agreement (MOA) with DOD concerning information sharing for homeland security and homeland defense-related science and technology. The S&T Directorate initiated an interactive relationship with the National Guard at both the individual state and Federal levels and enhanced relationships with its DHS customers. The program also recapitalized the partnership with the Interagency Technical Support Working Group (TSWG) by including TSWG in the S&T Directorate Integrated Product Team (IPT) process.

International activities included holding a Marine Asset Tag Tracking System (MATTS) workshop and conference on the MATTS test results with Japan and conducting a bi-national science and technology exercise with the Government of Sweden to identify transformational approaches to and science and technology needs for mitigating the effects of improvised explosive devices in mass transit systems. The Division established bi-national science and

technology programs under existing U.S.-Canada, U.S.-United Kingdom, and U.S.-Australia MOAs and developed new S&T Directorate MOAs with the governments of Singapore and Sweden. The S&T Directorate also established the S&T Directorate International Collaborations (STIC) program to sponsor DHS mission-oriented science and technology efforts within the international academic sector.

In FY 2008, the program will integrate the results of its FY 2007 activities into science and technology programs of record funded by the S&T Directorate as well as with interagency and international partner programs.

In addition, the program will establish coordinated R&D agendas with key Federal partners for S&T Directorate divisions: Explosives; Chemical and Biological Countermeasures; Borders and Maritime Security; Command, Control and Interoperability; Human Factors; and Infrastructure and Geophysical. These research agendas will address both urgently needed near-term solutions and longer-term strategic investments needed to ensure future game-changing homeland security capabilities. By FY 2009, the program plans to develop joint strategic R&D programs with the S&T Directorate's divisions and appropriate partner nations, as defined in the coordinated research agendas established in FY 2008.

In FY 2009 the Interagency Division plans to conduct a National Interagency (State, local, and tribal) Conference & Symposium to refine government science and technology research achievements; conduct a Baseline Federal Interagency RDT&E Conference & Workshop to validate current and future national R&D plans; establish and execute aggressive science and technology-related outreach efforts with State, local, and tribal participants; and implement an Interagency Exchange Program. The International Division plans to hold an International Conference on Science & Technology and expand its Scientist and Engineer Exchange Program with partner nations.

***Program Transition*** – FY 2008: \$7,210; FY 2009 estimate: \$4,463. Delivers near-term technology to meet customer-identified, science and technology requirements. To accomplish this, the Transition Office aligns and coordinates S&T Directorate technology transition with DHS components' requirements through the use of customer-led Capstone Integrated Product Teams (IPT). The Capstone IPTs consist of 11 functional homeland security areas: Information Sharing/Management, Cyber Security, People Screening, Border Security, Cargo Security, Chemical/Biological Defense, Maritime Security, Explosive Prevention, Infrastructure Protection and Incident Management consisting of Interoperability and Preparedness and Response.

In FY 2007, the program provided support and analysis as the customer-led IPTs developed prioritized science and technology capability gaps based on their experience and projected requirements. The Office of Transition then coordinated the development of Enabling Homeland Capabilities (EHCs) (i.e., solution sets) that close these identified capability gaps. Follow-on activities monitored EHC development for cost, schedule and capability to ensure technologies will effectively transition into acquisition and ultimately to Federal, State and local operating agencies. The IPT process is an ongoing and annually facilitated process that ensures the S&T Directorate's RDT&E activities are addressing the highest priority needs of the operational DHS components.

In FY 2008, the Office of Transition will mature the IPT process and conduct further analysis to appropriately align the S&T Directorate's advanced technology efforts to the Department's highest priority mission capability gaps. Additionally, the office will coordinate the development of product transition into component acquisition programs by working throughout the Department to establish an appropriate product development capability and process.

In FY 2009, the program plans to continue identifying appropriate support for and analyzing customer gaps through the IPT process as needs and missions change with time. Supporting activities include monitoring cost, schedule and technical maturity of products and forming detailed plans and agreements to ensure technologies effectively transition into component acquisition programs. The process will also include quarterly status updates and semi-annual program reviews. The Homeland Security Institute FFRDC authorization will expire in FY 2009 and a new FFRDC may be competed to replace HSI.

Technology transfer is another important activity carried out by the Office of Transition. The Technology Transfer Office leverages technology developed outside of DHS S&T and commercial industry to support First Responder, DHS Operational Components and Directorates technology requirements. This office coordinates with the Department of Defense and Department of Justice to support First Responders' technology needs. This office is responsible for the implementation of the DHS Research and Technology Applications effort. It also provides the personnel and processes to identify technology requirements to industry and facilitate the commercialization of technologies.

In FY 2007 and FY 2008 the program will continue to provide for the development of a robust Technology Transfer Office, including implementation of an Office of Research and Technology Applications (ORTA) that will serve as a one-stop-shop for managing patents and intellectual property identified during research efforts. The Technology Transfer Office also serves as a vehicle to promote partnerships and facilitate commercialization of the most promising technologies with industry to provide valuable homeland security technology applications to first responders and DHS component agencies.

The Technology Transfer Office will expand on the DOD Technology Transfer (1401) process for first responder technologies and better leverage developments from other agencies such as the Department of Justice, National Aeronautics and Space Administration and the Department of Energy to meet broader technology requirements.

In FY 2009, the Technology Transfer Office plans to improve incentives for the commercial sector to take on larger and more effective science and technology efforts through a targeted communications effort that addresses the business community's concerns.

*Homeland Security Resources Assessment* – In FY 2008, the S&T Directorate will initiate an independent review, as directed by Congress, to determine whether Federal resources are being adequately and efficiently used in DHS and other Federal agencies to address homeland security needs including the opportunity costs that may result from the increased prominence of homeland security.

***Homeland Security Institute (HSI)*** – FY 2008: \$5,000; FY 2009 estimate: \$5,000. HSI is a specialized studies and analysis FFRDC established by the Homeland Security Act of 2002. The Institute provides a unique source of in-depth knowledge of homeland security mission objectives, operational concepts and requirements, strategies, resources, systems and technologies. The Institute's mission is to assist the Department of Homeland Security and its operating elements in addressing important homeland security issues, particularly those requiring scientific, technical and analytical expertise. The research agenda covers the spectrum of homeland security issues and activities, including threat trends and adversarial perspectives, information sharing and communications interoperability, border and transportation security, law enforcement, infrastructure protection, preparedness, emergency response and training.

As the primary sponsor, the S&T Directorate provides core funding for this homeland security-focused FFRDC. Prior to FY 2008, the S&T Directorate funded HSI's core activities through its division budgets. In FY 2008, the S&T Directorate created a new program within the Transition Division to fund HSI.

HSI customers include all operational components of the Department—FEMA, CBP, TSA, USCG, National Operations Center, USSS, ICE, USCIS, OHA, DNDO, DHS Chief of Staff, Policy Directorate, National Preparedness and Protection Directorate (NPPD), Management Directorate, Intelligence and Analysis Directorate, and the Office of Counter-Narcotics.

Recent studies completed by HSI include: the National Response Framework, Nation Preparedness Response Guidance, Assessment of PI Readiness at Ports of Entry, Comprehensive Integrated Product Team Capability Gap Analysis, Validation of Interoperability Capability Gaps, CBP Operational Assessment, CBP Apprehensions at the Border, Biological Defense Net Assessment, Radicalization: An Overview, TSA RMAP Analysis, FAMS Risk Assessment, TSA General Aviation Risk Assessment, REAL ID Program Analysis, Independent Assessment of Cargo Security, Analysis of I&A Products and Processes, Risk Assessment Process for Informed Decision Making (RAPID), Homeland Security Mission Area Analysis, Homeland Security Strategic Planning Landscape, National Small Vessel Security, Pandemic Planning for the USCG, Detering Terrorist Attacks, National Incident Management System (NIMS) Doctrine, NIMS Five Year Training Plan, NPS 2.0: A National Planning Scenarios Maintenance and Management Process, Facilitating Collaboration on Innovation and the Future, Mass Egress Simulation and Modeling, Wide area Bio-Restoration, and many others.

In FY 2008 HSI will conduct studies and analysis for the Department and its components in support of their mission needs. In FY 2009 HSI will continue to support the DHS mission by performing studies and analysis for the Department. The authorization for HSI expires in April 2009.

***Technologies to Secure the Homeland and Advance Responder Effectiveness (Tech SHARE) Program*** – FY 2008: \$9,500; FY 2009 estimate: \$9,500. Consists of two projects: Tech Clearinghouse and Tech Solutions.

*Tech Clearinghouse Project* – Maintains a web-based central resource system of technical information to serve as a one-stop-shop for the dissemination of homeland security science and technology information to Federal, State, local and tribal agencies. The system and associated efforts encourage and support innovative solutions to enhance homeland security and also fulfill Section 313 of the *Homeland Security Act of 2002*. The goal is to provide: (1) government organizations with information to support procurement and grant guidance decisions; and (2) technology developers with requirements and operational information that can help them develop more useful tools.

In FY 2007, the S&T Directorate initiated development of a certified and accredited Version 1.0 of the Technology Clearinghouse, which is scheduled for release in FY 2008. The S&T Directorate will incorporate new functions or capabilities into the Technology Clearinghouse to meet users' requirements and make periodic system upgrades to keep information relevant. In FY 2008, the Tech Clearinghouse program will develop procurement decision support tools and advanced search mechanisms. This will include expanding content topics, developing communities-of-interest and launching professional discussion boards.

In FY 2008, the Tech Clearinghouse program will also develop a one-stop-shop portal to showcase other DHS programs that provide services to First Responders such as the Responder Knowledge Base and Tech Solutions. Within this portal, a tool will be developed that will enable the dissemination of technology information to Federal, State, local and tribal agencies.

In FY 2009, the program plans to establish a technology transfer community database, integrating content from other existing government agency databases such as the CDC) and FEMA.

*TechSolutions Project* – Rapidly addresses technology gaps identified by Federal, State, local, and tribal first responders. The goals of the program are to field prototypical solutions within 12 months; establish a cost that is commensurate with the proposal but equal to or less than one million per project; and develop a solution that meets 80 percent or more of the identified requirement. First responders are able to submit gaps to the program through the web site, [www.dhs.gov/TechSolutions](http://www.dhs.gov/TechSolutions).

In FY 2007, TechSolutions commenced the development of a web-based system capable of electronically collecting and managing capability gaps submitted by the first responder community. TechSolutions also initiated activities with the USDA to eradicate Carrizo cane, a highly invasive, non-native weed that is a major impediment to Customs and Border Protection operations on the international border between Laredo and Del Rio Texas. With no natural predators in the United States, Carrizo cane growth is unchecked, overrunning border access roads, reducing visibility, and providing dense cover for illegal activities. TechSolutions and USDA are evaluating natural predators (e.g., a wasp or a fly) of Carrizo cane from Europe for possible introduction into the United States.

In FY 2008, the program will demonstrate an enhanced 3D-locator prototype capable of locating first responders within three feet of their exact proximity; initiate prototype development activities for a stand-off patient triage device capable of acquiring vital sign readings from

individuals injured at a mass casualty scene; and evaluate a next-generation Self Contained Breathing Apparatus (SCBA) that is lighter and smaller than current systems to increase first responder effectiveness. The program will continue work on interoperable communication devices capable of working across all frequency spectrums used by the first response community to facilitate on-scene coordination for mass casualty incidents and complete prototype development activities for a fire ground compass to orient firefighters at an emergency scene, thereby reducing the possibility of the firefighter becoming lost, trapped injured or killed. The program will also integrate new capabilities into a hand-held biometric device used by the U.S. Coast Guard. Lastly, as a result of the outbreak of wildfires in southern California during the fall of 2007, the program will investigate technologies that mitigate risks posed by wildfire-prone regions under an initiative called the Secure Against Fires and Embers (SAFE). The program will also investigate technologies that can mitigate the risks associated with the after-effects of wildfires such as soil erosion and mudslides.

In FY 2009, the program plans to develop a prototype for improved fire truck seatbelt safety and initiate prototype development for a vehicle-mounted chemical and biological sensor. TechSolutions will pursue additional projects as it collects capability gaps through the website. TechSolutions will validate that capability gaps are first responder priorities by working with the Inter-Agency Board (which comprises over 1,000 leaders from fire, police, EMS throughout the United States). The gaps addressed must also meet the established criteria (i.e., 12 months or less, \$1 million or less, and meeting 80 percent or more of the identified high priority first responder requirement).

| <b>2009 Current Services</b> |                     |            | <b>49,297</b>    |
| 2009 Program Change          |                     |            | (5,527)          |
| <b>2009 Request</b>          |                     |            | <b>43,770</b>    |
| Total Change 2008-2009       |                     |            | (5,527)          |

The Science and Technology Directorate requests \$43.770 million for this activity, of this amount \$1.095 million supports the SBIR Program. This is a decrease of \$5.527 million below FY 2008. The Directorate adjusted funding in FY 2009 to support high priority customer-identified needs in other Divisions, while maintaining COE funding in University Programs.

**CURRENT SERVICES PROGRAM DESCRIPTION**

University Programs engages the academic community to conduct research and analyses to address high priority homeland security issues, and to provide education and training programs to enhance homeland security capabilities. The program brings together the best scientific talent and resources from diverse academic institutions to help solve complex and technologically challenging homeland security problems. The program also focuses on building homeland security expertise in the academic community, creating strategic partnerships among universities and public agencies, and developing a new and representative scientific workforce of homeland security experts.

This program invests in three areas:

- A coordinated university-based system of DHS Centers of Excellence (COEs);
- DHS Educational Programs (scholars and fellows); and
- Minority Serving Institutions.

**Centers of Excellence Thrust Area** – FY 2008: \$32,176; FY 2009 estimate: \$32,700. Conducts multidisciplinary research in priority DHS mission areas and is aligned to the S&T Directorate’s divisions and their customers. COEs improve understanding of the causes, elements, and consequences of a range of threats from terrorists and natural disasters. The COEs also support countermeasures and mitigation and prevention approaches based on both technologies and on human behavior. To accomplish this, the centers have assembled a powerful group of academic experts, researchers and educators in fields relevant to homeland security.

Primarily funded through research grants, the COEs are building scientific leadership and core competencies in multi-disciplinary areas of importance to homeland security. The S&T Directorate awards COE grants to these centers on a competitive basis according to their ability to address DHS needs. Through FY 2007, established COEs addressed:

- Risk and economic analysis of terrorism;
- Food system protection and defense;
- Foreign animal and zoonotic disease defense;
- Social origins of and behavioral responses to terrorism;
- Preparedness and response to catastrophic events;
- Advanced microbial risk assessment;
- Discrete mathematics; and
- Visualization analytics.

In FY 2009, the program will establish additional COEs addressing the following areas:

- Explosives Detection, Mitigation and Response;
- Border Security and Immigration;
- Maritime, Island and Extreme/Remote Environment Security;
- Natural Disasters, Coastal Infrastructure and Emergency Management;
- Transportation Security, and
- Command, Control and Interoperability, which will replace the existing discrete mathematics and visualization analytics centers.

The COEs work with and complement other DHS research and development programs including Federal laboratories' homeland security research. The COEs take advantage of other related Federally-sponsored research, and provide outcomes useful to Federal, State and local government, private sector and international partners. Selection for awarding the COEs is highly competitive, peer-reviewed, and merit-based.

All COEs will be closely aligned to S&T Directorate's divisions.

The existing centers include:

- Center of Excellence for Risk and Economic Analysis of Terrorism Events (CREATE), based at the University of Southern California ([www.usc.edu/create](http://www.usc.edu/create))
- Center of Excellence for Food Protection and Defense (NCFPD), based at the University of Minnesota ([www.ncfpd.umn.edu](http://www.ncfpd.umn.edu))
- Center of Excellence for National Center for Foreign Animal and Zoonotic Disease Defense (FAZD), based at Texas A&M University ([www.fazd.tamu.edu](http://www.fazd.tamu.edu))
- Center of Excellence for National Consortium for the Study of Terrorism and Responses to Terrorism (START), based at the University of Maryland ([www.start.umd.edu](http://www.start.umd.edu))
- Center of Excellence for the Study of Preparedness and Catastrophic Event Response (PACER), based at Johns Hopkins University ([www.pacercenter.org](http://www.pacercenter.org))
- Center for Advancing Microbial Risk Assessment (CAMRA), based at Michigan State University, established jointly with the U.S. Environmental Protection Agency ([www.camra.msu.edu](http://www.camra.msu.edu))
- Discrete Science Centers (DSCs) led by Rutgers University in collaboration with Lawrence Livermore National Laboratory ([www.dydan.rutgers.edu](http://www.dydan.rutgers.edu))

Activities conducted through each of these centers are outlined below:

**CREATE** – This center’s research and development program cuts across all six S&T Directorate divisions’ missions, and coordinates activities with the S&T Directorate’s Operations Analysis office and the Homeland Security Institute (HSI). CREATE evaluates the risks, costs and consequences of terrorism, and helps guide economically viable investments in countermeasures that will make our Nation safer and more secure. Research in these areas can contribute significantly to the Department’s ability to identify and select options for enhancing national security and minimizing human and economic casualties in the face of a range of hazards.

In FY 2005 to FY 2007, CREATE:

- Developed a set of emergency response models for predicting fire spread, allocating medical supplies for disasters, and the consequence of floods and other catastrophic events;
- Developed a first-of-its-kind independent risk assessment tool that permits analysts to study the potential risk and consequences – including the economic impact – of a Man-Portable Air Defense Systems (MANPADS) attack; and
- Worked with the Office of Infrastructure Protection and the California Office of Homeland Security to develop risk-based approaches for allocating funds to protect critical infrastructures in California.
- Provided extensive support to the Chemical and Biological Division in development of the CBRNE risk assessment.
- Developed an innovative operations research model to randomize security patrols at ports, in use by several ports.

In FY 2008 to FY 2009 CREATE plans to:

- Develop and test new dynamic and adaptive risk-assessment tools to improve our ability to predict and prevent terrorist attacks;
- Develop advanced economic models with special emphasis on the effects of household, business, and market resilience to terrorism events;
- Improve the understanding of individual risk perceptions and risk management strategies for terrorism events (e.g., fear of flying) and develop strategies to improve resilience; and
- Integrate risk and economic models into an overall risk management model that provides support for specific countermeasure decisions, as well as major policy and resource allocation decisions in homeland security.

**NCFPD** –This center is aligned with the Chemical and Biological Division. Its mission is to defend the safety of the post-harvest food system by establishing best practices, developing new tools and attracting new researchers to manage and respond to food contamination events. NCFPD works in system-wide food security, including:

- Supply chain management;
- Food processing protection;
- Detection and diagnostics;
- Public health;

- Disposal and decontamination; and
- Economic impact assessment and risk communication.

This work helps the Department mitigate and counter threats to U.S. agriculture and food.

In FY 2005 to FY 2007, NCFPD:

- Partnered with Food and Drug Administration (FDA) to develop a food industry Consequence Management System (CMS), an advanced integrative tool that provides a visual model for predicting, tracking and assessing the economic and health consequences of a food system attack. This enables the National Protection and Programs Directorate to respond to a live event by accurately predicting the course of an outbreak within hours – from initial contamination to public health intervention.
- Initiated and led a multi-agency-food event response network (FoodShield) to communicate detected cases of food poisoning in real time to affected State health departments;
- Initiated and led an evaluation of the vulnerability of U.S. food supplies to imported foods and ingredients that have been accidentally or intentionally contaminated by chemical or biological agents; and
- Initiated, with the FAZD Center, a Chemical and Biological Division funded effort to model food transportation networks.

In FY 2007-2009, NCFPD plans to:

- Develop dynamic, real-world food-event models that can rapidly identify sources of contamination, food distribution and likely outbreak locations and model interventions and responses using actual food distribution data, consumer consumption data, epidemiological data and novel communication systems;
- Develop novel detection and decontamination technologies through research on the fundamental behavior of select agent/food complex;
- Establish innovative prevention, response & recovery strategies to minimize the probability and health/economic consequences of food-system attacks; and
- Fully assess the vulnerability of the U.S. food system to imported food products.
- Develop a comprehensive information system for biological threats and countermeasures

**FAZD** – This center is aligned with the S&T Directorate’s Chemical and Biological Division. FAZD’s mission is to protect against the introduction of high-consequence foreign animal and zoonotic diseases in the United States, with an emphasis on prevention, surveillance, intervention and recovery. These diseases could have staggering economic impacts and threaten human health. FAZD is developing a scientific basis for detecting and preventing exotic and zoonotic diseases, which is informing the Department’s development of countermeasures and effective control strategies.

In FY 2006 to FY 2007, FAZD:

- Developed rapid detection technologies for intentional zoonotic diseases, including Avian Influenza; and

- Developed vaccines and screening tools for models to predict the spread of Foot and Mouth Disease.
- Initiated, with the NCFPD a Chemical and Biological Division funded effort to model food transportation networks, and

In FY 2008 to FY 2009, FAZD plans to:

- Develop rapid and accurate methods for detecting and diagnosing biological agents that could threaten U.S. livestock and poultry, such as Rift Valley Fever (RVF), Avian Influenza (AI), and Foot and Mouth Disease;
- Develop vaccines, antiviral agents and means to increase resistance against threat diseases: FMD, RVF, Brucellosis and AI; and
- Develop effective decision support systems to assess the biological, economic and environmental consequences of all feasible options to prevent/curtail disease.

**START** – This center is aligned with the S&T Directorate’s Human Factors Division. START provides strategies for intervention of terrorists and terrorist groups, while strengthening the resilience of U.S. citizens to terrorist attacks. The START consortium uses advanced behavioral and social-science theories, methods and data to better understand the origins, dynamics, and impacts of terrorism. Applying this knowledge will provide guidance on how to disrupt terrorist networks, reduce the incidence of terrorism, and enhance the resilience of American society in the face of terrorist threats and natural disasters.

Program activities include providing the world’s largest open-source database of terrorist incidents – a Global Terrorism Database (GTD) – that enhances our understanding about the occurrences and impacts of terrorism. The GTD will be linked to a number of databases that will include data on terrorism using weapons of mass destruction, volatility around the world, and illegal acts committed by extremists in the United States. In FY 2006 and FY 2007, START developed the GTD, extending it to cover incidents from 1997 to the present, and participating in DHS radicalization initiatives, studying the motivation and intent of terrorism, and conducting surveys on community and citizens’ responses to terrorism attacks.

In FY 2007 and FY 2008, START will:

- Create, collect and organize the data needed by DHS to understand factors that influence the likelihood of terrorist attacks (or why terrorism occurs) and when and how groups decide to attack United States’ interests;
- Identify domestic and international sources of public support for terrorism; and
- Provide guidance on enhancing societal resilience to terrorist events at the individual, community, and national levels.

In FY 2009, START plans to:

- Use the GTD to explore factors that influence whether groups become engaged in terrorism, and deliver a report on why and how U.S. interests are targeted by terrorist groups;
- Analyze survey data to identify the factors that can encourage or deter individuals from supporting or working with terrorist groups; and
- Pilot, revise and refine a Community Assessment of Resilience Tool, conducting focus groups and interviews among diverse audiences regarding the impact of public communications about terrorist threats.

**PACER** – This center is aligned with the S&T Directorate’s Infrastructure and Geophysical Division. PACER focuses on optimizing our Nation’s preparedness in the event of a high-consequence natural or man-made disaster, and develops guidelines to best alleviate the effects of such an event. In the wake of the devastation inflicted by Hurricane Katrina, this center assumes even greater relevance and immediacy. The center is in the planning phase of investigating issues relevant to the theory and practice of emergency preparedness and response to terrorism incidents and natural disasters, including critical decision-making, regional integration of communication and response capabilities, surge capacity, informal and formal response networks, health systems integration, deterrence and prevention, infrastructure integrity, and sensor networks. DHS customers and end-users include OHA and the Preparedness Directorate, hospitals, health departments, and emergency responders.

PACER analyzes critical decision-making; studies formal and informal response networks; and investigates infrastructure integrity, health-system integration and surge capacity. In addition, PACER will engage in joint projects with other DHS University Centers.

In FY 2007 through FY 2009, PACER plans to:

- Develop metrics to measure surge capacity for preparedness relevant to planning and resource allocation;
- Determine the best means for formal networks (e.g., first responders) to harness the response and surge capacity of informal networks (e.g., volunteer groups);
- Identify and model decision-making approaches and decision support technologies that would improve catastrophic event response; and
- Focus on technologies and approaches to improve risk communications to the public and first responders.

**CAMRA** – This center is aligned with the S&T Directorate’s Chemical and Biological Division. The S&T Directorate established CAMRA jointly with the U.S. Environmental Protection Agency to fill critical gaps in the area of microbial risk assessments – answering the question, “How clean is safe?” Following the experience of the anthrax contamination events, the Federal government recognized the need to develop safe standards for cleanup of biological agents of concern (BACs). The CAMRA researchers are developing a scientific basis for such standards for BACs in different media – air, water, and on surfaces with which humans come in contact.

In FY 2007, CAMRA:

- Conducted studies on Exposure, Detection, Fate and Transportation of BACs;
- Developed infectious disease models for assessing microbial risk and developing Control Strategies, including a rapid-response risk assessment of tuberculosis exposure on aircraft for the DHS Office of Health Affairs;
- Conducted a comprehensive dose response assessment; and
- Developed risk communications and analysis, and information sharing platforms.

In FY 2007 to FY 2009, CAMRA plans to:

- Identify parameters that affect fate and transport of BACs, and develop new experimental protocol for the assessment of fate and transportation of BACs in aerosols and water distribution systems using BAC surrogates;
- Complete a single-object infectious-disease model with advice on sampling strategies, develop a single-venue intervention scenario using a single-venue model, develop multiple-venue intervention scenarios using the multiple-venue model, and complete the influenza model at the college campus level, and then use it to help redesign an intervention study;
- Develop dose-response information for exposure to Variola (smallpox), dose-response information for exposure to hemorrhagic viruses (e.g., Lassa, Marburg, Ebola) and novel dose-response models incorporating time to infection and physiological parameters and review of outbreak studies for validation data sets; and
- Develop new approaches to communicate risks.

***Discrete Sciences Centers (DSCs)*** – This group of centers is aligned with the S&T Directorate’s Command, Control and Interoperability Division. Awarded in August 2006, DSCs represent a collaborative effort with Rutgers University, the University of Southern California, the University of Illinois at Urbana-Champaign, and the University of Pittsburg and the national laboratories, including Lawrence Livermore National Laboratory. The DSCs will conduct coordinated research on advanced methods for information analysis and the development of computational technologies to protect the Nation.

In FY 2008, DSCs will:

- Conduct coordinated research on advanced methods for information analysis and the development of computational technologies to protect the Nation; and
- Investigate ways to use and present that data that are meaningful to analysts and decision makers.

In FY 2009 the activities of the DSCs will be transitioned to a new Command, Control, and Interoperability COE.

**Plans for New Centers are as follows:**

***Center of Excellence for Explosives Detection, Mitigation, and Response*** – The S&T Directorate awarded this COE in the fall of 2007. This COE will conduct research to enhance the Nation’s capabilities to prepare for, prevent, mitigate, respond to, and recover from terrorist

attacks involving explosives. The COE will also develop relevant educational curricula for undergraduates, graduate students and career professionals. The COE will collaborate with the S&T Directorate's Explosives Division, which manages a full-spectrum R&D program from fundamental research to applied technologies. This COE will provide basic research to advance the technical tools and information that S&T Directorate's customers will need in the future. DHS customers and end-users will include the Department's Preparedness Directorate, Chief Medical Officer (CMO), OIP, Policy Directorate, TSA, ICE, and State Homeland Security Agencies.

This COE will conduct basic and transformational research in explosive-related areas such as:

- The properties (e.g., chemical, physical, and material) and formulation of explosive materials (including precursors and homemade compounds), as well as materials and/or technologies to mitigate explosives effects (e.g., blast-resistant materials);
- Detection of explosives and explosive devices, including methods to screen people and containers and other potential conveyances of explosive materials;
- Unconventional approaches (e.g., alternative signatures) to identify indications of threats from explosives or bombers, to include algorithm development for improved detection and/or imaging capabilities and relevant human factors issues; and
- Other effective and efficient counter-measures, particularly ones that can be used or deployed in densely populated urban settings and transportation venues.

In FY 2008 through FY 2009, the COE plans to:

- Establish a network of premier academic research universities as partners, identify niche roles for each, and establish a portfolio of multidisciplinary research projects, subject to periodic review and revision;
- Develop the platform, characterization plan, and method for assessing scientific properties of a variety of home-made explosives and precursor compounds; and
- Conduct workshops, to help guide future research directions, on novel countermeasure concepts, human factors issues, and improved imaging algorithms.

***Center of Excellence for Border Security and Immigration*** – This COE will be awarded in early FY 2008. The center will be aligned with the S&T Directorate's Borders and Maritime Security Division. The center will provide fundamental research in support of DHS's goals of strengthening border security, interior immigration enforcement, and streamlining the immigration process. DHS, and its component agencies most protect and control our borders against terrorist threats, criminal endeavors, illegal immigration and contraband, while facilitating legal travelers and trade into the United States. DHS customers and end-users include ICE, U.S. Citizenship and Immigration Services, U.S. Coast Guard, and State and local agencies. The center will conduct scientific and engineering investigations that offer the prospect of high-payoff breakthroughs in detecting people and goods, be it legal or illegally, moving across our borders as part of a fully-integrated system-of-systems approach. The S&T Directorate expects this center to facilitate breakthroughs in the fundamental science needed to improve wide-area surveillance, screening and situational awareness along U.S. borders, particularly the northern forested and southwest desert borders.

In FY 2008 through FY 2009, the COE plans to:

- Establish a network of premier academic research universities as partners and establish a portfolio of interdisciplinary research projects;
- Develop a framework to inform DHS policymakers with empirical immigration research to increase the efficiency of immigration enforcement; and
- Based on insights from research successes, develop corresponding educational curriculum materials in topical areas of greatest promise for long-term research and enduring need.

***Center of Excellence for Maritime Island & Extreme/Remote Environmental Security*** – The S&T Directorate awarded this COE in early FY 2008. It will be aligned with the Border and Maritime Security Division. This COE will provide fundamental research to support DHS's and other agencies' maritime security goals, including improved interdiction capabilities, enhanced capacity to respond to catastrophic events, particularly for U.S. islands and extreme environments, and a more secure and efficient marine transportation system. DHS customers and end-users will include the NPP, CMO, DHS OIP, FEMA, USCG, and State Homeland Security Agencies. The center will conduct integrated policy, legal, scientific and engineering studies in detection, monitoring and control of people and goods moving through the U.S. maritime domain. It will also improve our ability to plan for and respond to natural and terrorist threats in the maritime realm. Finally, it will support long-term mitigation and recovery strategies for catastrophic events, particularly those that impact U.S. islands, territories and remote areas, as part of an integrated systems approach. DHS expects this new COE to develop meaningful courses of study for students both at the graduate and undergraduate levels, and for career professionals involved with these issues.

In FY 2008 through FY 2009, the COE plans to:

- Establish a network of premier academic research universities as partners; and
- Develop the platform and methods for technical assessments of maritime island and extreme/remote environment security issues.

***Center of Excellence for Natural Disasters, Coastal Infrastructure and Emergency Management*** – The S&T Directorate will award this COE in early FY 2008. This center will conduct research leading to profound and far-reaching improvements in the Nation's preparedness and ability to respond to, and recover from catastrophic natural events in coastal areas. DHS anticipates that this COE's discoveries will ultimately save American lives, property and economic activities, both regionally and nationally. This COE will conduct basic and transformational research in areas related to coastal region issues, including:

- Natural hazards of the coastal region (e.g., flooding from hurricanes or storm surges);
- Innovative, comprehensive, regional flood-water management, to include technical approaches/options for preventing, mitigating, or recovering from flooding incidents, and better understanding of land-water interactions;

- Approaches to securing public-sector coastal infrastructure and meeting other public-sector needs in crisis incidents; and
- Coastal region planning, governance, resilience, and unified comprehensive risk-based decision support tools, particularly for natural disasters warranting emergency measures.

In FY 2008 through FY 2009, the COE plans to:

- Establish a network of premier academic research universities as partners and identify niche roles for each;
- Develop the platform and methods for technical assessments of land-water interactions and coastal natural hazards; and
- Identify land use options and opportunities for integrated emergency response activities in coastal regional planning, in ways include of private- and public-sector institutions and that foster consensus-building.

***Center of Excellence for Transportation Security*** – This COE will be cut across all six S&T Divisions, but be responsive to the needs of TSA and its federal partners. This COE will need to develop a significant collaboration with the Transportation Security Laboratory. It will address the technology and research needs associated with securing the Nation’s infrastructure and protecting the people who use it. It will be an interdisciplinary COE involving seven institutions identified by Congress in FY 2007’s HR-1.

In FY 2008 through FY 2009, the COE will:

- Develop a detailed and thoroughly reviewed work plan;
- Initiate research projects in accordance with the completed work plan; and
- Develop extensive homeland security science, technology, engineering and mathematics (HS-STEM) curricula and research programs to train students in advanced science and technology related to transportation security.

***Center of Excellence for Command, Control and Interoperability*** – This COE will be aligned with the Command, Control and Interoperability Division (CID). It will address the problem of synthesizing information and deriving insight from massive, dynamic, ambiguous and possibly conflicting data sets. The goal of examining data is not merely to acquire information, but rather to be able to obtain understanding and inform decision-making. Driven by this problem, two new, interdisciplinary fields have emerged: one called *visual analytics* and a second known as *discrete sciences*. This new COE will focus its basic research in both of these areas.

This new center will merge activities of the Discrete Sciences Centers and the DHS Regional Visualization and Analytics Centers (RVAC). The RVACs research visually based mathematical methods and computational algorithms for handling diverse data and applying the resulting knowledge to anticipate terrorist incidents or catastrophic events. The five current RVACs include Stanford University, the University of Washington, Purdue University, Pennsylvania State University, the University of North Carolina at Charlotte, and the Georgia Institute of Technology. The RVACs are currently coordinating a number of projects with other COEs.

In FY 2008 the COE will:

- Work with the Port Authority of New York and New Jersey to improve analysis of its data on crimes and search for evidence of terrorist activity at the ports; and
- Provide a set of advanced analytical capabilities for use with the Global Terrorism Database produced and hosted by the START center.

In FY 2009, the COE plans to:

- Develop extensive homeland security science, technology, engineering and mathematics (HS-STEM) curricula and research programs to train students in advanced command, control and interoperability related research and analytical methods; and
- Develop strategy for integration of command, control and interoperability research and analysis with empirical data from other COEs and from DHS Components.

***Multi-Center Priority Program (formerly the Cooperative Agreement Initiative Program)*** – FY 2008: \$1,494; FY 2009 estimate: \$0. This program supports a strategic effort to link individual DHS University Centers with other COEs, national laboratories, and DHS programs into an organized university-based system that serves the most pressing and complex research needs of DHS. Program activities focus on strengthening communications and coordination of research among the DHS COEs, national laboratories and DHS components.

In FY 2007, DHS extended the reach of this collaboration by initiating a series of innovative workshops that bring university and laboratory researchers together with end users for three days to address complex multi-disciplinary research issues. In 2008, University Programs will hold two to three more workshops and follow up with competitions based on topical suggestions from all DHS organizational components, which will result in research projects in partnerships with any of the DHS COEs or other academic institutions and national laboratories. University Programs funded pilot studies, to evaluate industry sector vulnerability assessment tools, investigate measures of economic resilience, and conduct a multi-center study of catastrophic risk perception in the United States.

In FY 2008, the program will invest in cooperative research projects, like a project to improve risk communication and understanding of public emotional and behavioral response to catastrophic events. The results will help to shape DHS risk communication messages and responses to events.

In FY 2009, the program plans to:

- Develop a technology transition plan to accelerate the application of DHS University Centers' research results to operational use;
- Initiate additional cross-center and cross-agency research projects in advanced economic analysis, vulnerability assessment, risk communications, and terrorism modeling and prediction;

- Evaluate DHS University Programs and individual centers to determine effective future directions and further develop management systems to improve delivery of results to homeland security partners;
- Codify the process for selecting research areas of high priority to DHS; and
- Hold workshops on critical areas of research such as terrorism prediction, behavioral response to catastrophes/risk perception/risk communication, consequence impact modeling, economic resilience to disasters, and compilation of terrorism economic models.

**Educational Programs (formerly Fellowships) Thrust Area** – FY 2008: \$10,107; FY 2009 estimate: \$6,475. Invests in high-performing science and engineering students or professionals in the United States to develop the next generation of homeland security science and technology leaders. Students, scholars and faculty are drawn from postsecondary, graduate and professional levels of science and engineering disciplines that directly support the S&T Directorate’s divisions and the Department’s mission. Activities in this thrust area include Scholarships and Fellowships, National Research Council (NRC) Postdoctoral Associateship, the American Association for the Advancement of Science (AAAS) Fellows, and Visiting Scholars.

*Scholarships and Fellowships* – Provides scholarships for undergraduate and fellowships for graduate students pursuing degrees in fields relevant to homeland security. The purpose of the program is to provide educational support and relevant experiential learning opportunities to diverse and highly talented individuals in order to enhance the scientific leadership in areas important to DHS. This program focuses on building a high-quality and diverse talent pool of public-service-oriented scientists and engineers who will be committed to the Department’s mission and working on homeland security problems and challenges at all levels. The program competitively selects science, mathematics and engineering undergraduate and graduate students and scholars from six major disciplines and over 40 fields-of-study to participate. Program activities aim to increase participants’ understanding and commitment to the homeland security mission. Participants gain exposure to homeland security science and technology through their research experiences and a student and alumni web-based network. Specifically, student and scholar researchers perform work at more than 28 DHS-affiliated venues including DHS and national laboratories and DHS components such as the U.S. Coast Guard and the Office of Intelligence and Analysis (I&A).

In FY 2008 the project will initiate programs in one or two science and engineering disciplines and establish partnerships with several of the most mature COEs.

In addition, this thrust area includes an agreement with Naval Post Graduate School to establish a PhD program in homeland security science and technology disciplines. This program will build on the existing research strengths of NPS and its existing partnerships, as well as newly developed collaboration with the DHS COEs. The new program will provide opportunities for DHS and other Federal employees to pursue doctoral studies with a commitment to return their sponsoring Federal agency work in their chosen HS-STEM areas, and to take advantage of courses, certificates and research projects developed at the DHS COEs.

In FY 2009, the program plans to expand the number of well trained scientists and technologists dedicated to the Homeland Security science and technology research, development, demonstration, testing and evaluation mission through qualified curriculum development.

**Minority Serving Institutions (MSIs) Thrust Area** – FY 2008: \$4,288; FY 2009 estimate: \$3,500. Improves the capabilities of MSIs to conduct research in areas critical to homeland security and to develop a new generation of scientists capable of advancing homeland security goals. Competitive incentives will be used to integrate the MSI program with the COEs.

In FY 2008, University Programs will continue developing far-reaching and multi-faceted MSI programs that will incorporate MSIs into the COEs and develop homeland security research and training capabilities at the MSIs. In FY 2009, the program plans to expand the contribution of MSIs to the Homeland Security science and technology research, development, demonstration, testing and evaluation mission. The program plans also expand the professional opportunities for MSI graduates in the homeland security science, technology, engineering and mathematics (HS-STEM) workforce at DHS, State and local agencies, national laboratories and COEs by increasing the number of MSI students in HS-STEM fields. Finally, the program plans to develop internship and career opportunities at a variety of venues.

In FY 2009 the program plans to:

- Conduct a Summer Research Team Program for MSI that provides a 10-to-12 week summer research experience for teams, consisting of a faculty member and up to two students, to perform research at a DHS University Center that align with the DHS mission;
- Sponsor a Summer Workshop on Teaching Terrorism for faculty and graduate students at MSIs. The workshop will: (1) offer an intensive short-course on the fundamentals of terrorism; (2) introduce academics to new and innovative techniques used to teach terrorism; and (3) provide access to high-level officials working in the intelligence and counter-terrorism fields. It will also feature expert specialists from the COEs and integrate curriculum content from the COEs including material on the social-behavioral causes and consequences of terrorism, terrorism risk analysis, food security, zoonotic disease defense, and catastrophic event preparedness and response;
- Establish homeland security scientific leadership programs in areas critical to homeland security at MSIs. These programs provide MSIs with funds to support early career faculty to establish or expand education, research and training activities in HS-STEM areas. The program also provides scholarships for students of MSIs that will enable them to develop the necessary skills to become professionals in homeland security related fields; and
- Increase the profile and presence of MSIs in the network of COEs.

#### IV. Program Justification of Changes

**Department of Homeland Security  
Science and Technology Directorate

Description of Item

The FY 2009 program increase allows the division to develop additional technologies for specific high priority customer-identified needs identified during the S&T Directorate’s Capstone IPT process – specifically it will fund efforts in Maritime Security and Border Officer Tools and Safety.

Justification

The increase will allow for the development of technologies for advanced detection, identification, apprehension and enforcement capabilities along the maritime borders that support a framework that includes Coast Guard partners for rapid, coordinated responses to anomalies and threats. A science and technology investment in these areas will provide significant risk mitigation and be completely complimentary to proposed major acquisition efforts such as the Coast Guard’s Command 21 program. This increase will also provide tools and technologies to border security and law enforcement officers allowing for efficient, effective and safe vehicle and vessel inspections. These tools will improve Coast Guard boarding teams’ and Border Agents’ effectiveness and enhance officer/agent safety while searching vessels/vehicles.

Impact on Performance (Relationship of Increase to Strategic Goals)

The Borders and Maritime Security Division will continue to provide technologies and tools to the Department to meet customer requirements. The increases to maritime security and border officer tools and safety will allow the Division to meet the Secretary's goal to CONTINUE TO PROTECT OUR NATION FROM DANGEROUS PEOPLE.

**Program Change 2:** Chemical and Biological

Strategic Goal(s) & Objective(s): CONTINUE TO PROTECT OUR NATION FROM DANGEROUS GOODS - Objective 2.2 Biological

PPA: Chemical and Biological

Program Change: Positions \_\_\_\_ FTE \_\_\_\_ Dollars (\$7,612)

Funding Profile

|                        | FY 2007 EOY Actual |     |                  | FY 2008 Enacted |     |                  | FY 2009 Request |     |                  |

|                        | Pos                | FTE | Dollars (\$000)  | Pos             | FTE | Dollars (\$000)  | Pos             | FTE | Dollars (\$000)  |
| Current Services Level |                    |     |                  |                 |     |                  |                 |     | \$208,020        |
| Program Change         |                    |     |                  |                 |     |                  |                 |     | (7,612)          |
| <b>Total Request</b>   |                    |     | <b>\$348,348</b> |                 |     | <b>\$208,020</b> |                 |     | <b>\$200,408</b> |

Description of Item

This reduction is primarily a result of several projects coming to an end in the Surveillance and Detection R&D Program within the Biological Thrust Area and in the Detection Program within the Chemical Thrust Area. The decrease is also a result of decisions from the Technology Oversight Group (TOG), chaired by the Deputy Secretary.

Justification

The FY 2009 program decrease is in large part due to the BioWatch Gen 3 Detection Systems and Detect-to-Protect Triggers and Confirmers projects within the Surveillance and Detection R&D Program of the Biological Thrust area coming to an end in FY 2009. Also, the Autonomous Rapid Facility Chemical Agent Monitor (ARFCAM) and Low Vapor Pressure Chemicals Detection System (LVPCDS) projects in the Detection program of the Chemical Thrust area are ramping down to end in FY 2010. The decisions from the TOG eliminated the start up of the next generation of advanced detection systems to detect future threats, e.g., engineered agents.

Impact on Performance (Relationship of Increase to Strategic Goals)

The decrease is a result of both projects coming to an end and decisions from the Technology Oversight Group (TOG), chaired by the Deputy Secretary and does not impact the performance of achieving the Secretary's goal to CONTINUE TO PROTECT OUR NATION FROM DANGEROUS GOODS.

**Program Change 3:** Command, Control and Interoperability

Strategic Goal(s) & Objective(s): BUILD A NIMBLE, EFFECTIVE EMERGENCY RESPONSE SYSTEM AND A CULTURE OF PREPAREDNESS - Objective 4.1 Response and Recovery

PPA: Command, Control and Interoperability

Program Change: Positions \_\_\_\_ FTE \_\_\_\_ Dollars \$ 5,410

Funding Profile

Description of Item

The FY 2009 program increase allows the Division to develop additional technologies for specific high priority customer-identified needs identified during the S&T Directorate’s Capstone IPT process – specifically it will fund efforts in Internet-based Control System Protection – Supervisory Control and Data Acquisition (SCADA) and Process Control Systems (PCS).

Justification

The increase in Cyber Security R&D will allow the division to address SCADA and PCS security by increasing the protection and improving the resiliency of the electric distribution grid. It will proactively manage threats by identifying and responding to vulnerabilities and threats before they are maliciously exploited to significantly impact critical infrastructure. It will also provide autonomy of operation that can quickly respond to natural disasters and security events and address new vulnerabilities.

Impact on Performance (Relationship of Increase to Strategic Goals)

The Command, Control and Interoperability Division will continue to provide technologies and tools to the Department to meet customer requirements. The increases to Internet-based Control System Protection – Supervisory Control and Data Acquisition (SCADA) and Process Control Systems (PCS) will increase Cyber Security and allow the Division to meet the Secretary’s goal to BUILD A NIMBLE, EFFECTIVE EMERGENCY RESPONSE SYSTEM AND A CULTURE OF PREPAREDNESS.

**Program Change 4:** Explosives

Strategic Goal(s) & Objective(s): PROTECT CRITICAL INFRASTRUCTURE – Objective 3.1 Fixed Critical Infrastructure and Key Assets

PPA: Explosives

Program Change: Positions \_\_\_\_ FTE \_\_\_\_ Dollars \$18,495

Funding Profile

|                        | FY 2007 EOY Actual |     |                  | FY 2008 Enacted |     |                 | FY 2009 Request |     |                 |
|------------------------|--------------------|-----|------------------|-----------------|-----|-----------------|-----------------|-----|-----------------|

| Current Services Level |                    |     |                  |                 |     |                 |                 |     | \$77,654        |
| Program Change         |                    |     |                  |                 |     |                 |                 |     | 18,495          |
| <b>Total Request</b>   |                    |     | <b>\$121,584</b> |                 |     | <b>\$77,654</b> |                 |     | <b>\$96,149</b> |

Description of Item

The increase in FY 2009 supports Counter-IED Research, which includes Vehicle Borne Improvised Explosive Device/ Suicide Bomber Improvised Explosive Device (VBIED/SBIED) Program, the Render Safe Program, and the Detection and Neutralization Tools Program. The increase in funding in the Counter-IED Research will allow the Explosives division to improve large threat mass detection in such areas as the transit environment, special events and other large areas.

Justification

The implementation of HSPD-19 requires new technology solutions to address critical capability gaps in the areas of deterring, predicting, detecting, defeating, and mitigating the use of IEDs in the United States. The Office for Bombing Prevention (OBP) is currently assessing the nation's ability to address this threat and is developing a prioritized set of technology gaps. The S&T Directorate is working with OBP to develop technologies for the following kill chain:

- **Deter:** Intent-Based Deterrence; Motivation-Based Deterrence; Deterrence-based Indication & Warning
- **Predict:** IED Target Projections; IED Staging Area Projections; Anomalous Behavior Prediction; Suicide Bombing Prediction; Deceptive Behavior Screening; Multi-Modal Behavioral & Biometric Screening
- **Detect:** Suicide Bomb Detection; Technology Demonstration & System Integration; VBIED Detection; Canine R&D; Tagging R&D; Standards
- **Defeat:** Electronic Countermeasures; Robotics; Render Safe & Diagnostics; Directed Energy; Post Blast Forensics; Forensic Marking; Bomb Components; Outreach
- **Mitigate:** Blast Mitigation; Body Armor; Inerting

Impact on Performance (Relationship of Increase to Strategic Goals)

The Explosives Division will continue to provide technologies and tools to the Department to meet customer requirements. The increases to Counter-IED Research will allow the Division to meet the Secretary's goal to PROTECT CRITICAL INFRASTRUCTURE.

**Program Change 5:** Human Factors

Strategic Goal(s) & Objective(s): CONTINUE TO PROTECT OUR NATION FROM DANGEROUS PEOPLE- Objective 1.3 Strengthen Screening of Travelers and Workers

PPA: Human Factors

Program Change: Positions \_\_\_\_\_ FTE \_\_\_\_\_ Dollars (\$1,746)

Funding Profile

|                        | FY 2007 EOY Actual |     |                 | FY 2008 Enacted |     |                 | FY 2009 Request |     |                 |

|                        | Pos                | FTE | Dollars (\$000) | Pos             | FTE | Dollars (\$000) | Pos             | FTE | Dollars (\$000) |
| Current Services Level |                    |     |                 |                 |     |                 |                 |     | \$14,206        |
| Program Change         |                    |     |                 |                 |     |                 |                 |     | (1,746)         |
| <b>Total Request</b>   |                    |     | <b>\$6,501</b>  |                 |     | <b>\$14,206</b> |                 |     | <b>\$12,460</b> |

Description of Item

The decrease in FY 2009 reflects that the Human Factors Division is not requesting additional funds for the Institute for Homeland Security Solutions (IHSS), funded through the Research Triangle Institute. However, the Human Factors Division is increasing its efforts in Suspicious Behavior Detection and Personal Identification Systems.

Justification

In FY 2008, the Human Factors Division received funds for the IHSS to conduct applied technological and social science research. In FY 2009, the Human Factors Division is not requesting any funds for IHSS. The Division still intends to support efforts that address high-priority capability gaps identified by customers through the Capstone Integrated Product Team (IPT) for People Screening and the Technology Oversight Group (TOG), chaired by the Deputy Secretary. Two other Capstone IPTs, Border Security and Explosives Prevention, also identified Suspicious Behavior Detection as critical to meeting their respective high-priority capability gaps.

Impact on Performance (Relationship of Decrease to Strategic Goals)

The Human Factors Division will continue development efforts to provide an automated capability to augment screening of unknown threats prior to their entering the United States and increase throughput of travelers across the U.S. border through reduced false alarms. Suspicious Behavior Detection will also account for significant increases in intent detection skills of passenger screeners at air, land, and sea portals. The decrease will permit continued research, but slow progress in Group Violent Intent Modeling, Radicalization Deterrence, and Open

Source Modeling Applicability designed to support the Secretary 's goal to CONTINUE TO PROTECT OUR NATION FROM DANGEROUS PEOPLE.

**Program Change 6:** Infrastructure and Geophysical

Strategic Goal(s) & Objective(s): PROTECT CRITICAL INFRASTRUCTURE – Objective 3.1 Fixed Critical Infrastructure and Key Assets

PPA: Infrastructure and Geophysical

Program Change: Positions \_\_\_\_ FTE \_\_\_\_ Dollars (\$26,684)

Funding Profile

|                        | FY 2007 EOY Actual |     |                 | FY 2008 Enacted |     |                 | FY 2009 Request |     |                 |
|------------------------|--------------------|-----|-----------------|-----------------|-----|-----------------|-----------------|-----|-----------------|

| Current Services Level |                    |     |                 |                 |     |                 |                 |     | \$64,500        |
| Program Change         |                    |     |                 |                 |     |                 |                 |     | (\$26,684)      |
| <b>Total Request</b>   |                    |     | <b>\$91,807</b> |                 |     | <b>\$64,500</b> |                 |     | <b>\$37,816</b> |

Description of Item

The overall decrease in FY 2009 is due to efforts not funded such as Regional Technology Integration (RTI), Southeast Regional Research Initiative, and the Community Based CIP Institute. However, there are changes within base that will also fund several new program areas specifically identified by the customer, with efforts focused on high priority technology gaps in the areas of Infrastructure Protection and Emergency Incident Management.

Justification

In order to adequately fund programs that will address specific high priority capability gaps identified in the customer-led Infrastructure Protection and Incident Management Capstone IPTs, the S&T Directorate must increase Infrastructure and Geophysical Division program funding in FY 2009, excluding RTI, SERRI and Community Based CIP Institute. Funded efforts will improve the protection of our critical infrastructure by providing technologies for hardening these vital critical infrastructure assets and for rapid response and recovery for critical infrastructure assets to limit damage and consequences and allow for normal operations to be resumed more quickly than would otherwise be possible.

Impact on Performance (Relationship of Increase to Strategic Goals)

The Infrastructure and Geophysical Division will improve our critical infrastructure by providing technologies for hardening and rapid response and recovery for critical infrastructure assets. The increases to RTI and Infrastructure Protection will allow the Division to meet the Secretary’s goal to PROTECT CRITICAL INFRASTRUCTURE.

**Program Change 7:** Innovation

Strategic Goal(s) & Objective(s): BUILD A NIMBLE, EFFECTIVE EMERGENCY RESPONSE SYSTEM AND A CULTURE OF PREPAREDNESS - Objective 4.2 Preparedness

PPA: Innovation

Program Change: Positions \_\_\_\_ FTE \_\_\_\_ Dollars \$12,000

| Current Services Level |                    |     |                 |                 |     |                 |                 |     | \$33,000        |
| Program Change         |                    |     |                 |                 |     |                 |                 |     | 12,000          |
| <b>Total Request</b>   |                    |     | <b>\$21,945</b> |                 |     | <b>\$33,000</b> |                 |     | <b>\$45,000</b> |

Description of Item

The FY 2009 program increase reflects an increase in scope of existing programs as they mature and might allow for additional projects that would address gaps identified by the S&T Capstone IPT process.

Justification

The S&T Directorate intends to fund existing efforts whose scopes naturally increase as the efforts mature. These projects are high risk in nature but would dramatically increase capabilities in responding to threats posed by terrorism and natural disasters.

The high risk factor means that the Office of the Director of Innovation requires flexibility in the projects it funds. These projects will reach critical decision points to continue or stop. New projects are always under consideration, and the FY 2009 request will potentially fund new projects or current ones that justify further development based on results.

Impact on Performance (Relationship of Increase to Strategic Goals)

The increases will provide solutions where current ones are non-existent or inadequate and will allow the Office of the Director of Innovation to meet the Secretary's goal to BUILD A NIMBLE, EFFECTIVE EMERGENCY RESPONSE SYSTEM AND A CULTURE OF PREPAREDNESS.

**Program Change 8:** Laboratory Facilities

Strategic Goal(s) & Objective(s): BUILD A NIMBLE, EFFECTIVE EMERGENCY RESPONSE SYSTEM AND A CULTURE OF PREPAREDNESS - Objective 4.2 Preparedness

PPA: Laboratory Facilities

Program Change: Positions 124 FTE 124 Dollars \$29,126

| Current Services Level |                    |     |                 |                 |     |                  | 124             | 124        | \$117,814        |
| Program Change         |                    |     |                 |                 |     |                  |                 |            | 29,126           |
| <b>Total Request</b>   |                    |     | <b>\$72,230</b> |                 |     | <b>\$103,814</b> | <b>124</b>      | <b>124</b> | <b>\$146,940</b> |

Description of Item

The FY 2009 program increase reflects move-in and operational costs for the National Biodefense Analysis and Countermeasures Center (NBACC) and one-time cost for final cleanup of Environmental Measurements Laboratory (EML) space. The increase also reflects a transfer of funds from Management and Administration to the Laboratory Facilities PPA to pay for salaries and benefits of FTEs located at the laboratories.

Justification

The S&T Directorate intends to cover the FY 2009 operations and maintenance (O&M) start-up costs of the new NBACC facility. These costs include the installation and outfitting of portable laboratory equipment and furnishings and funding interim space lease. Also in FY 2009, the S&T Directorate intends to move the remaining functions of EML into much smaller office space in the same building or another General Services Administration (GSA) facility in New York area and pay for a one-time cost for final cleanup of EML space (e.g., final disposal of contaminated material, removal of fume hoods, large exhaust ducting, furnaces, and shielded spaces).

The increase also reflects a transfer of funds from Management and Administration to the Laboratory Facilities PPA to pay for salaries and benefits of FTEs located at the laboratories. All Homeland Security laboratory employees work on RDA&O products. The shift of laboratory FTEs into the RDA&O account better reflects the actual Science and Technology RDA&O program costs.

Impact on Performance (Relationship of Increase to Strategic Goals)

The increases to NBACC operations and EML cleanup will allow the Division to meet the Secretary's goal to BUILD A NIMBLE, EFFECTIVE EMERGENCY RESPONSE SYSTEM AND A CULTURE OF PREPAREDNESS.

**Program Change 9:** Test and Evaluation and Standards

Strategic Goal(s) & Objective(s): BUILD A NIMBLE, EFFECTIVE EMERGENCY RESPONSE SYSTEM AND A CULTURE OF PREPAREDNESS - Objective 4.2 Preparedness

PPA: Test and Evaluation and Standards

Program Change: Positions \_\_\_\_ FTE \_\_\_\_ Dollars (\$3,846)

Description of Item

The FY 2009 decrease represents that no additional funds are requested for the independent peer review program being initiated in FY 2008 and a reallocation of funds by the TOG during the Capstone IPT process.

Justification

The S&T Directorate will have initiated the independent peer review program and will not need additional funding for the program in FY 2009.

The S&T Directorate needs to adequately fund customer-requested projects in the main executing divisions: Borders/Maritime, Explosives, Human Factors, Command, Control, and Interoperability, Chemical and Biological, and Infrastructure/Geophysical Divisions.

Impact on Performance (Relationship of Increase to Strategic Goals)

The decrease to the independent peer review program and reallocation of funds by the TOG during the Capstone IPT process do not impact the performance of achieving the Secretary’s goal to BUILD A NIMBLE, EFFECTIVE EMERGENCY RESPONSE SYSTEM AND A CULTURE OF PREPAREDNESS.

**Program Change 10:**                      Transition

Description of Item

The FY 2009 program increase will support a DHS competition for a new Federally Funded Research and Development Center (FFRDC) contract.

Justification

As an FFRDC, HSI provides discreet, independent, and objective analysis to inform homeland security policies and programs. Given that HSI’s contract ends in April 2009, the S&T Directorate will use the increase to support competition for a new FFRDC contract to ensure continuity of FFRDC support.

Impact on Performance (Relationship of Increase to Strategic Goals)

The increase is a result of funding for continuity of FFRDC support through a competition for a new FFRDC. These efforts support meeting the Secretary’s goal to **BUILD A NIMBLE, EFFECTIVE EMERGENCY RESPONSE SYSTEM AND A CULTURE OF PREPAREDNESS.**

**Program Change 11:**                      University Programs

Strategic Goal(s) & Objective(s):    **BUILD A NIMBLE, EFFECTIVE EMERGENCY RESPONSE SYSTEM AND A CULTURE OF PREPAREDNESS - Objective 4.2 Preparedness**

PPA:    University Programs

Program Change:     Positions \_\_\_\_ FTE \_\_\_\_ Dollars (\$5,527)

Description of Item

The FY 2009 decrease represents no funding request for the Naval Post Graduate School and a reduction to the educational programs within S&T that fund scholars and fellows in homeland security related fields.

Justification

University Programs cultivates a homeland security culture within the academic community through research and educational programs that address current and future homeland security challenges. The decrease cannot support the current level of educational programs.

Impact on Performance (Relationship of Increase to Strategic Goals)

The decrease to University Programs will reduce the amount of grants for University Centers of Excellence to the lowest level while retaining productivity, and allow the Division to meet the Secretary’s goal to BUILD A NIMBLE, EFFECTIVE EMERGENCY RESPONSE SYSTEM AND A CULTURE OF PREPAREDNESS.

## **V. Exhibits and Other Supporting Materials**

### **A. Justification of Proposed Legislative Language**

#### PPA Mission Statement

The Border and Maritime Security Division develops and transitions tools and technologies that improve the security of our Nation's borders and waterways without impeding the flow of commerce and travelers. The division works closely with its operational customers to identify and generate the best technologies for securing U.S. borders including ports-of-entry as well as vast stretches of remote terrain and waterways – with the ultimate goal of stopping threats before they enter the United States.

#### Summary Justification and Explanation of Changes

|               | <b>2007<br/>EOY Actual</b> | <b>2008<br/>Enacted</b> | <b>2009<br/>Request</b> | <b>2008 to 2009<br/>Change</b> |
|---------------|----------------------------|-------------------------|-------------------------|--------------------------------|
| <b>Travel</b> | <b>\$118</b>               | <b>\$240</b>            | <b>\$240</b>            | <b>\$0</b>                     |

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations.

|   | <b>2007<br/>EOY Actual</b> | <b>2008<br/>Enacted</b> | <b>2009<br/>Request</b> | <b>2008 to 2009<br/>Change</b> |

**PPA Mission Statement**

The Chemical and Biological Division works to increase the Nation's preparedness against chemical and biological threats through improved threat awareness, advanced surveillance and detection, and protective countermeasures. The division carries out its activities through three thrust areas: Agriculture, Biological, and Chemical.

**PPA Mission Statement**

The Command, Control, and Interoperability (C2I) Division focuses on significantly improving operable and interoperable communications for emergency responders, the security and integrity of the Internet, and the development of automated capabilities that “connect the dots” to recognize potential threats. The division’s mission is to transform new and promising concepts into real operational capability through the judicious blending of new technologies and current capabilities. C2I receives its requirements from the following: partners in Federal, State, local, tribal emergency response; DHS operational components in planning for, detecting, and responding to all hazards; and private sector partners who own, operate, maintain, and use much of the Nation’s cyber infrastructure.

**Summary Justification and Explanation of Changes**

|               | <b>2007<br/>EOY Actual</b> | <b>2008<br/>Enacted</b> | <b>2009<br/>Request</b> | <b>2008 to 2009<br/>Change</b> |
|---------------|----------------------------|-------------------------|-------------------------|--------------------------------|
| <b>Travel</b> | <b>\$266</b>               | <b>\$275</b>            | <b>\$375</b>            | <b>\$100</b>                   |

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The \$100,000 increase is a result of the hiring of additional Federal employees and the management of additional R&D activities.

|   | <b>2007<br/>EOY Actual</b> | <b>2008<br/>Enacted</b> | <b>2009<br/>Request</b> | <b>2008 to 2009<br/>Change</b> |
|---|----------------------------|-------------------------|-------------------------|--------------------------------|
| <b>Advisory and Assistance Services</b> | <b>\$2,575</b>             | <b>\$2,690</b>          | <b>\$3,055</b>          | <b>\$365</b>                   |

Advisory and assistance provide funds for Intergovernmental Personnel Act (IPA) and consultants in management and professional support services and engineering and technical services. A program increase of \$365,000 is included to support additional R&D activities.

|                       | <b>2007</b>       | <b>2008</b>    | <b>2009</b>    | <b>2008 to 2009</b> |
|-----------------------|-------------------|----------------|----------------|---------------------|
|                       | <b>EOY Actual</b> | <b>Enacted</b> | <b>Request</b> | <b>Change</b>       |
| <b>Other Services</b> | \$15,874          | \$0            | \$0            | \$0                 |

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25.

|  | <b>2007</b>       | <b>2008</b>    | <b>2009</b>    | <b>2008 to 2009</b> |

**PPA Mission Statement**

The Explosives Division develops the technical capabilities to detect, interdict, and lessen the impacts of non-nuclear explosives used in terrorist attacks against mass transit, civil aviation and critical infrastructure. This includes passenger-, baggage-, and cargo-screening technologies; blast-resistant aircraft construction; and integrated protective systems for high-value facilities. The requested amount will help address Explosives' strategic challenges of detecting non-nuclear explosives and disrupting terrorist attacks.

**Summary Justification and Explanation of Changes**

|               | <b>2007<br/>EOY Actual</b> | <b>2008<br/>Enacted</b> | <b>2009<br/>Request</b> | <b>2008 to 2009<br/>Change</b> |

**PPA Mission Statement**

The Infrastructure and Geophysical Division's mission is to increase the Nation's preparedness for and response to natural and man-made threats through superior situational awareness, emergency response capabilities, and critical infrastructure protection. The division develops technical solutions and reach-back capabilities to improve State, local, tribal, and private sector preparedness for and response to all-hazards events impacting the U.S. population and critical infrastructure. The Division also models and simulates the Nation's critical infrastructures to determine how various scenarios will affect each sector, provide decision support tools to guide decision makers in identifying gaps and vulnerabilities, and develop predictive tools and methods to aid in preparing for and responding to various catastrophes.

**Summary Justification and Explanation of Changes**

|               | <b>2007</b>       | <b>2008</b>    | <b>2009</b>    | <b>2008 to 2009</b> |
|---------------|-------------------|----------------|----------------|---------------------|
|               | <b>EOY Actual</b> | <b>Enacted</b> | <b>Request</b> | <b>Change</b>       |
| <b>Travel</b> | <b>\$196</b>      | <b>\$492</b>   | <b>\$299</b>   | <b>(\$193)</b>      |

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The decrease of \$193,000 is for less travel associated with program decreases to RTI, SERRI and the Community Based CIP Institute.

|   | <b>2007</b>       | <b>2008</b>    | <b>2009</b>    | <b>2008 to 2009</b> |
|---|-------------------|----------------|----------------|---------------------|
|   | <b>EOY Actual</b> | <b>Enacted</b> | <b>Request</b> | <b>Change</b>       |
| <b>Advisory and Assistance Services</b> | <b>\$543</b>      | <b>\$3,254</b> | <b>\$1,886</b> | <b>(\$1,368)</b>    |

The decrease in the Advisory and Assistance Services object classification is a result of the reclassification of expenditures \$804,000 in activities that were classified as Other Services and Purchases from Government Accounts have been more accurately represented by the Advisory and Assistance Services object class. The decrease of \$1,368,000 is for less SETA support associated with program decreases such as RTI, SERRI and Community Based CIP Institute.

**PPA Mission Statement**

Established in FY 2007, the mission of the Innovation Office is to direct the design and delivery of prototype-level demonstrations of game-changing technologies in two to five years and provide proof-of-concept answers that could result in high-payoff technology breakthroughs. The nature of the research is high risk with the potential for significant gains in capabilities

**Summary Justification and Explanation of Changes**

|               | <b>2007<br/>EOY Actual</b> | <b>2008<br/>Enacted</b> | <b>2009<br/>Request</b> | <b>2008 to 2009<br/>Change</b> |
|---------------|----------------------------|-------------------------|-------------------------|--------------------------------|
| <b>Travel</b> | <b>\$61</b>                | <b>\$150</b>            | <b>\$200</b>            | <b>\$50</b>                    |

Travel includes all costs of S&T's personnel while in an authorized travel status, either directly or by reimbursing the traveler. The increase of \$50,000 is for travel associated with program increases.

|   | <b>2007<br/>EOY Actual</b> | <b>2008<br/>Enacted</b> | <b>2009<br/>Request</b> | <b>2008 to 2009<br/>Change</b> |
|---|----------------------------|-------------------------|-------------------------|--------------------------------|
| <b>Advisory and Assistance Services</b> | <b>\$97</b>                | <b>\$1,830</b>          | <b>\$2,500</b>          | <b>\$670</b>                   |

Advisory and assistance provide funds for Intergovernmental Personnel Act (IPA) and consultants in management and professional support services and engineering and technical services. The FY 2009 request reflects an increase of \$670,000 due to more contractual services required to support increased scope as projects mature.

|                       | <b>2007</b>       | <b>2008</b>    | <b>2009</b>    | <b>2008 to 2009</b> |
|-----------------------|-------------------|----------------|----------------|---------------------|

| <b>Other Services</b> | <b>\$1,317</b>    | <b>\$0</b>     | <b>\$0</b>     | <b>\$0</b>          |

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25.

|                                   | <b>2007</b>       | <b>2008</b>    | <b>2009</b>    | <b>2008 to 2009</b> |
|-----------------------------------|-------------------|----------------|----------------|---------------------|
|                                   | <b>EOY Actual</b> | <b>Enacted</b> | <b>Request</b> | <b>Change</b>       |
| <b>Purchase from Govt. Accts.</b> | <b>\$14,202</b>   | <b>\$0</b>     | <b>\$0</b>     | <b>\$0</b>          |

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified.

|                                 | <b>2007</b>       | <b>2008</b>     | <b>2009</b>     | <b>2008 to 2009</b> |
|---------------------------------|-------------------|-----------------|-----------------|---------------------|
|                                 | <b>EOY Actual</b> | <b>Enacted</b>  | <b>Request</b>  | <b>Change</b>       |
| <b>Research and Development</b> | <b>\$6,268</b>    | <b>\$31,020</b> | <b>\$42,300</b> | <b>\$11,280</b>     |

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The increase in the Research and Development object classification is a result of \$11,280,000 in program increases fund existing efforts whose scopes naturally increase as the efforts mature and may allow for additional projects that would address gaps identified by the S&T Capstone IPT process.

**PPA Mission Statement**

The mission of the Laboratory Facilities is to ensure that required infrastructure laboratory facilities support ongoing Science and Technology mission research and development activities. There are two primary thrust areas: construction of laboratory facilities and DHS-laboratory operations.

**Summary Justification and Explanation of Changes**

|                              | <b>2007<br/>EOY Proj. Actual</b> | <b>2008<br/>President's Budget</b> | <b>2009<br/>Request</b> | <b>2008 to 2009<br/>Change</b> |
|------------------------------|----------------------------------|------------------------------------|-------------------------|--------------------------------|
| <b>Salaries and Benefits</b> | <b>\$40</b>                      | <b>\$0</b>                         | <b>\$14,000</b>         | <b>\$14,000</b>                |

Salaries and Benefits includes costs for 124 FTEs located at DHS S&T-operated laboratories. The FY 2009 request includes an increase of \$14,000,000 reflecting a \$13,000,000 transfer of funds from Management and Administration and \$1,000,000 from other R&D.

|               | <b>2007</b>       | <b>2008</b>               | <b>2009</b>    | <b>2008 to 2009</b> |
|---------------|-------------------|---------------------------|----------------|---------------------|
|               | <b>EOY Actual</b> | <b>President's Budget</b> | <b>Request</b> | <b>Change</b>       |
| <b>Travel</b> | <b>\$342</b>      | <b>\$635</b>              | <b>\$635</b>   | <b>\$0</b>          |

Travel includes all costs of S&T's personnel while in an authorized travel status, either directly or by reimbursing the traveler. There is no change in projected costs for FY 2009 over FY 2008.

|                 | <b>2007</b>       | <b>2008</b>               | <b>2009</b>    | <b>2008 to 2009</b> |
|-----------------|-------------------|---------------------------|----------------|---------------------|
|                 | <b>EOY Actual</b> | <b>President's Budget</b> | <b>Request</b> | <b>Change</b>       |
| <b>GSA rent</b> | <b>\$1,784</b>    | <b>\$1,800</b>            | <b>\$1,800</b> | <b>\$0</b>          |

GSA Rent provides funding for rental space provided by General Services Administration (GSA). Spaces currently funded through GSA are the Environmental Measurements Laboratory (EML) facilities. There is no change in the projected costs for FY 2009 over FY 2008.

|   | <b>2007</b>       | <b>2008</b>               | <b>2009</b>     | <b>2008 to 2009</b> |
|---|-------------------|---------------------------|-----------------|---------------------|
|   | <b>EOY Actual</b> | <b>President's Budget</b> | <b>Request</b>  | <b>Change</b>       |
| <b>Communication, Utilities, and miscellaneous char</b> | <b>\$2,386</b>    | <b>\$10,687</b>           | <b>\$13,400</b> | <b>\$2,713</b>      |

Communications, Utilities, and Misc Charges provides funds for communications, utilities, and related charges at laboratories managed by ONL. The FY 2009 request reflects an increase over FY 2008 of \$2,713,000 to cover increases in the electricity costs at Plum Island Animal Disease Center (PIADC), Transportation Security Laboratories (TSL), and National Biodefense Analysis and Countermeasures Center (NBACC). However, most of the increase is due to the new NBACC facility becoming fully operational in the third quarter of FY 2009.

|   | <b>2007</b>       | <b>2008</b>               | <b>2009</b>     | <b>2008 to 2009</b> |
|---|-------------------|---------------------------|-----------------|---------------------|
|   | <b>EOY Actual</b> | <b>President's Budget</b> | <b>Request</b>  | <b>Change</b>       |
| <b>Advisory and Assistance Services</b> | <b>\$2,676</b>    | <b>\$21,567</b>           | <b>\$13,100</b> | <b>(\$8,467)</b>    |

Advisory and assistance provide funds for Intergovernmental Personnel Act and consultants in management and professional support services as well as engineering and technical services. The FY 2009 request reflects a decrease of \$8,467,000 from FY 2008 due to plans for more of NBAF's FY 2009 budget to fund actual construction activities versus activities such as environmental impact statements (EIS) or architecture and engineering (A&E).

|                       | <b>2007</b>       | <b>2008</b>               | <b>2009</b>    | <b>2008 to 2009</b> |
|-----------------------|-------------------|---------------------------|----------------|---------------------|
|                       | <b>EOY Actual</b> | <b>President's Budget</b> | <b>Request</b> | <b>Change</b>       |
| <b>Other Services</b> | <b>\$19,290</b>   | <b>\$300</b>              | <b>\$490</b>   | <b>\$190</b>        |

Other Services provide funds for mission essential training. FY 2009 request reflects an increase over FY 2008 of \$190,000 to reflect increased costs of training required at lab sites, including safety compliance training.

|  | <b>2007</b>       | <b>2008</b>               | <b>2009</b>    | <b>2008 to 2009</b> |
|--|-------------------|---------------------------|----------------|---------------------|
|  | <b>EOY Actual</b> | <b>President's Budget</b> | <b>Request</b> | <b>Change</b>       |
| <b>Purchase from Government Accounts</b> | <b>\$38,959</b>   | <b>\$3,725</b>            | <b>\$4,450</b> | <b>\$725</b>        |

Purchase from Government Accounts provides costs for administrative support, contracting support for construction, and rent for interim facilities that do not belong to GSA. The FY 2009 request reflects an increase over FY 2008 of \$725,000 as a result of increased fees paid to Federal Law Enforcement Training Center (FLETC), US Army Medical Research Institute for Infectious Diseases (USAMRID), other Department of Defense (DOD) organizations, and Federal Aviation Administration (FAA) for administrative/contract support and the use of non-GSA facilities.

|  | <b>2007</b>       | <b>2008</b>               | <b>2009</b>     | <b>2008 to 2009</b> |
|--|-------------------|---------------------------|-----------------|---------------------|
|  | <b>EOY Actual</b> | <b>President's Budget</b> | <b>Request</b>  | <b>Change</b>       |
| <b>Operation &amp; maintenance of facilities</b> | <b>\$486</b>      | <b>\$28,268</b>           | <b>\$39,150</b> | <b>\$10,882</b>     |

Operation and maintenance of facilities provides normal daily operations of PIADC, EML, TSL, and NBACC. The costs include maintenance and repair of building and land. The FY 2009 request reflects an increase over FY 2008 of \$10,882,000 due to NBACC becoming operational and increased costs at PIADC and TSL.

|                                   | <b>2007</b>       | <b>2008</b>               | <b>2009</b>    | <b>2008 to 2009</b> |
|-----------------------------------|-------------------|---------------------------|----------------|---------------------|
|                                   | <b>EOY Actual</b> | <b>President's Budget</b> | <b>Request</b> | <b>Change</b>       |
| <b>Research &amp; Development</b> | <b>\$5,245</b>    | <b>\$0</b>                | <b>\$0</b>     | <b>\$0</b>          |

Research and Development includes costs for contracts for the conduct of basic and applied research and development.

|   | <b>2007</b>       | <b>2008</b>               | <b>2009</b>    | <b>2008 to 2009</b> |
|---|-------------------|---------------------------|----------------|---------------------|
|   | <b>EOY Actual</b> | <b>President's Budget</b> | <b>Request</b> | <b>Change</b>       |
| <b>Operation &amp; Maintenance of equipment</b> | <b>\$0</b>        | <b>\$1,500</b>            | <b>\$1,500</b> | <b>\$0</b>          |

Operation and maintenance of equipment provides normal daily operations and maintenance of Plum Island, EML, TSL, and NBACC equipment. There is no change in projected costs for FY 2009 over FY 2008.

|                                 | <b>2007</b>       | <b>2008</b>               | <b>2009</b>    | <b>2008 to 2009</b> |
|---------------------------------|-------------------|---------------------------|----------------|---------------------|
|                                 | <b>EOY Actual</b> | <b>President's Budget</b> | <b>Request</b> | <b>Change</b>       |
| <b>Supplies &amp; materials</b> | <b>\$211</b>      | <b>\$4,026</b>            | <b>\$5,000</b> | <b>\$974</b>        |

Supplies and materials provides daily office supplies and fuel costs associated with the facilities. The FY 2009 request reflects an increase over FY 2008 of \$974,000 due to expected increases in the cost of fuel for Plum Island and additional supplies for NBACC operations.

|                  | <b>2007</b>       | <b>2008</b>               | <b>2009</b>    | <b>2008 to 2009</b> |
|------------------|-------------------|---------------------------|----------------|---------------------|
|                  | <b>EOY Actual</b> | <b>President's Budget</b> | <b>Request</b> | <b>Change</b>       |
| <b>Equipment</b> | <b>\$611</b>      | <b>\$2,987</b>            | <b>\$4,700</b> | <b>\$1,713</b>      |

Equipment provides costs for personal property, information technology hardware/software, includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2009 request reflects an increase over FY 2008 of \$1,713,000 reflecting increased equipment costs as NBACC becomes fully operational.

|                              | <b>2007</b>       | <b>2008</b>               | <b>2009</b>     | <b>2008 to 2009</b> |

| <b>Total, Test &amp; Evaluation and Standards</b> |                                | <b>\$24,910</b>            | <b>\$28,520</b>         | <b>\$24,674</b>         | <b>(\$3,846)</b>               |

**PPA Mission Statement**

The Testing & Evaluation and Standards program provides technical support and coordination to assist the Nation's emergency responders in the acquisition of equipment, procedures and mitigation processes that are safe, reliable and effective. The program carries out its activities through two thrust areas: Test & Evaluation (T&E) and Standards.

**Summary Justification and Explanation of Changes**

|               | <b>2007<br/>EOY Actual</b> | <b>2008<br/>Enacted</b> | <b>2009<br/>Request</b> | <b>2008 to 2009<br/>Change</b> |
|---------------|----------------------------|-------------------------|-------------------------|--------------------------------|
| <b>Travel</b> | <b>\$32</b>                | <b>\$50</b>             | <b>\$50</b>             | <b>\$0</b>                     |

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations.

|   | <b>2007<br/>EOY Actual</b> | <b>2008<br/>Enacted</b> | <b>2009<br/>Request</b> | <b>2008 to 2009<br/>Change</b> |
|---|----------------------------|-------------------------|-------------------------|--------------------------------|
| <b>Advisory and Assistance Services</b> | <b>\$563</b>               | <b>\$6,329</b>          | <b>\$3,491</b>          | <b>(\$2,838)</b>               |

Advisory and assistance provide funds for Intergovernmental Personnel Act (IPA) and consultants in management and professional support services and engineering and technical services. The decrease of \$2,838,000 in the Advisory and Assistance Services (A&AS) object classification is a result of the S&T Directorate requesting no funding for the independent peer review project in FY 2009, which was funded at \$3,000,000 in FY 2008. An increase of \$162,000 will support analysis of the peer reviews.

|                       | <b>2007</b>       | <b>2008</b>    | <b>2009</b>    | <b>2008 to 2009</b> |
|-----------------------|-------------------|----------------|----------------|---------------------|
|                       | <b>EOY Actual</b> | <b>Enacted</b> | <b>Request</b> | <b>Change</b>       |
| <b>Other Services</b> | <b>\$4,611</b>    | <b>\$1,350</b> | <b>\$1,350</b> | <b>\$0</b>          |

Other Services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25.

|  | <b>2007</b>       | <b>2008</b>    | <b>2009</b>    | <b>2008 to 2009</b> |
|--|-------------------|----------------|----------------|---------------------|
|  | <b>EOY Actual</b> | <b>Enacted</b> | <b>Request</b> | <b>Change</b>       |
| <b>Purchase from Government Accounts</b> | <b>\$12,318</b>   | <b>\$0</b>     | <b>\$0</b>     | <b>\$0</b>          |

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified.

|                                 | <b>2007</b>       | <b>2008</b>     | <b>2009</b>     | <b>2008 to 2009</b> |
|---------------------------------|-------------------|-----------------|-----------------|---------------------|
|                                 | <b>EOY Actual</b> | <b>Enacted</b>  | <b>Request</b>  | <b>Change</b>       |
| <b>Research and Development</b> | <b>\$7,386</b>    | <b>\$20,791</b> | <b>\$19,783</b> | <b>(\$1,008)</b>    |

Research and Development includes costs for contracts for the conduct of basic and applied research and development. A program decrease of \$1,008,000 reflects a reallocation of funds by the TOG during the Capstone IPT process.

|---------------------------------|-------------------|-----------------|-----------------|---------------------|
|                                 | <b>EOY Actual</b> | <b>Enacted</b>  | <b>Request</b>  | <b>Change</b>       |
| <b>Research and Development</b> | <b>\$4,209</b>    | <b>\$47,037</b> | <b>\$41,084</b> | <b>(\$5,953)</b>    |

Research and Development includes costs for contracts for the conduct of basic and applied research and development. A program decrease of \$5,953 is included. The FY 2009 decrease represents no funding requested for the Naval Post Graduate School and a reduction to the educational programs within S&T that fund scholars and fellows in homeland security related fields.

|                                       | <b>2007</b>       | <b>2008</b>    | <b>2009</b>    | <b>2008 to 2009</b> |
|---------------------------------------|-------------------|----------------|----------------|---------------------|
|                                       | <b>EOY Actual</b> | <b>Enacted</b> | <b>Request</b> | <b>Change</b>       |
| <b>Grants/Subsidies/Contributions</b> | <b>\$32,394</b>   | <b>\$0</b>     | <b>\$0</b>     | <b>\$0</b>          |

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects.

# I. STRATEGIC CONTEXT FOR THE FY 2009 BUDGET

## **A. Mission and Description of the Science & Technology Directorate**

The Science and Technology Directorate (S&T) is responsible for advising the Secretary on research and development efforts to support the Department's mission, and conducting basic and applied research, development, testing and evaluation (RDT&E) activities relevant to the Department through both intramural and extramural programs.

In fulfillment of the enabling and follow-on legislation, Secretary Chertoff articulated the following goals for the Department: protect the Nation from dangerous people; protect the Nation from dangerous goods; protect critical infrastructure; build a nimble and responsive emergency response system; build a culture of preparedness; and strengthen and unify DHS operations and management. This budget requests the resources needed to provide the technologies to meet these goals.

### **Mission Statement**

The S&T Directorate will improve homeland security by providing our customers, the operating components of DHS and state, local, tribal, and territorial emergency responders and officials, with state-of-the-art technology that helps them to accomplish their missions.

The S&T Directorate provides leadership for directing, funding, and conducting research, development, test, and evaluation (RDT&E), and procurement of technology and systems to prevent the importation of chemical, biological, and related weapons and material, and to protect against and respond to terrorist threats. The S&T Directorate partners and coordinates with Federal, state, and local government and private sector entities in conducting its activities. It establishes an efficient system to transfer homeland security developments and technologies to the operational elements of the Department to enhance their ability to execute all missions, now and in the future, and to meet the high priority homeland security RDT&E needs of the nation.

In leading the homeland security research enterprise outside of the S&T Directorate, we are proactively engaged with universities, research institutions, government laboratories, and private industry that conduct research and development in areas important to addressing our customers' homeland security requirements.

### **Description of Directorate**

The S&T Directorate accomplishes its mission through customer-focused and output-oriented research, development, testing and evaluation (RDT&E) programs that balance risk, cost, impact, and time to deliver. These RDT&E programs support the needs of the operational components of the Department and address cross-cutting areas such as standards and interoperability.

Over 50 percent of the S&T Directorate's investment will be in transition technologies – lower-risk projects dedicated to addressing a customer-defined capability need – within three years. Almost 10 percent of the S&T Directorate's investment will consist of higher risk innovative prototypical demonstrations, which, if successful, will place leap-ahead technology in the operating components' hands much more quickly than the incremental improvements typical of most acquisition programs. About 20 percent of the S&T Directorate's investment portfolio will be in long-term, basic research

conducted primarily in universities and laboratories in areas of enduring homeland security relevance that could lead to revolutionary changes in the way we approach homeland security challenges. This balanced portfolio ensures that the Directorate maintains a self-replenishing pipeline of future capabilities and products to transition to customers.

S&T's role extends beyond the execution of its own RDT&E activities. Other components often leverage S&T's expertise in program management, technical oversight, testing and evaluation, and systems engineering. These are developmental activities that are more technologically mature than the typical science and technology program such as testing new border security technologies for Customs and Border Protection (CBP) or leveraging existing advanced R&D to make spiral improvements to off-the-shelf infrastructure protection technologies.

The S&T Directorate's R&D functions are aligned into six technical divisions along enduring functional disciplines. This, along with additional offices, allows us to better meet the Department's strategic goals. These Divisions and disciplines for RDT&E programs are described below.

## **Six Divisions**

### Border and Maritime Security

The Border and Maritime Security Division develops and transitions tools and technologies that improve the security of our Nation's borders and waterways without impeding the flow of commerce and travelers.

### Chemical and Biological

The Chemical and Biological Division works to increase the Nation's preparedness against chemical and biological threats through improved threat awareness, advanced surveillance and detection, and protective countermeasures.

### Command, Control, and Interoperability

The Command, Control, and Interoperability Division develops interoperable communication standards and protocols for emergency responders; cyber security tools for protecting the integrity of the Internet; and automated capabilities to recognize and analyze potential threats.

### Explosives

The Explosives Division develops the technical capabilities to detect, interdict, and lessen the impacts of non-nuclear explosives used in terrorist attacks against mass transit, civil aviation, and critical infrastructure.

### Human Factors

The Human Factors Division applies the social and behavioral sciences to improve detection, analysis, and understanding of the threats posed by individuals, groups, and radical movements; it supports the preparedness, response, and recovery of communities impacted by catastrophic events; and it advances homeland security by integrating human factors into homeland security technologies.

### Infrastructure and Geophysical

The Infrastructure and Geophysical Division develops capabilities to increase the Nation's preparedness for and response to natural and man-made threats through superior situational awareness, emergency response capabilities, and critical infrastructure protection.

## **Additional Offices**

### Innovation

The activities within Innovation focus on homeland security R&D that could lead to significant technology breakthroughs that would greatly enhance DHS operations. The Office of the Director of Innovation oversees the Homeland Security Advanced Research Project Agency (HSARPA). HSARPA funds R&D of homeland security technologies to “support basic and applied homeland security research to promote revolutionary changes in technologies that would promote homeland security; advance the development, testing and evaluation, and deployment of critical homeland security technologies; and accelerate the prototyping and deployment of technologies that would address homeland security vulnerabilities.”

### Test & Evaluation and Standards

The Test & Evaluation and Standards programs provide technical support and coordination to assist the Nation’s emergency responders in the acquisition of equipment, procedures, and mitigation processes that are safe, reliable, and effective.

### Transition

The Transition Office focuses on delivering near-term products and technology enhancements by working with the Department’s components to expedite the technology transition process.

### Research - Laboratory Facilities

Laboratory Facilities programs are executed through the Office of National Laboratories (ONL). ONL provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations, and institutions, which can provide the knowledge and technology required to secure our homeland.

### Research - University Programs

University Programs engages the academic community to conduct research and analyses and provides education and training programs to support DHS priorities and enhance homeland security capabilities.

The six technical Divisions and additional offices are linked to three research and development investment portfolio directors in a “matrix management” structure. These three portfolio directors – Director of Research, Director of Transition, and Director of Innovation/Homeland Security Advanced Research Projects Agency (HSARPA) – provide cross-cutting coordination of their respective elements (or thrusts) of the investment strategy within the technical Divisions. The matrix structure allows the S&T Directorate to provide more comprehensive and integrated technology solutions to its customers by appropriately bringing all of the disciplines together in developing solutions.

## **B. Major Activities and Key Strategic Issues**

In FY 2007, the Directorate shifted its focus to a new strategic approach. This resulted in a realigned organization and research portfolio management strategy, both of which allow S&T to better identify, enable, and transition new capabilities to our customers to better protect the Nation. To that end, the S&T Directorate develops and manages an integrated program of science and technology, from basic research through technology product transition.

The S&T Directorate is customer-focused and delivers capabilities that DHS components can rely on to meet their operational needs. To accomplish this, we facilitated customer-led Capstone Integrated

Product Teams (IPTs) in 11 functional areas and charged each one with identifying functional capability requirements across the Department. The S&T Directorate uses the products of these IPTs to identify the highest priority needs and allocate resources to those programs that support the priorities established by the DHS customers. The S&T Directorate's new business model of structured Capstone IPTs ensures that product transition investments align to customer mission requirements.

Each Capstone IPT works to identify, validate, and prioritize capability requirements across the Department (within a functional area) that the S&T Directorate can address. The interaction of technologists and operators has improved the prioritization of efforts, and the focus on relevant, cost-effective solutions that make a significant difference. The S&T Directorate's product transition process ensures that appropriate technologies are harvested and integrated into the DHS acquisition system for our customers. Outputs from the IPTs drove considerable changes to programs in the FY 2009 budget request. As part of this process, the Homeland Security Institute provides capability gap analysis and quick-response studies on topics that arise during the S&T Directorate's capstone IPT process.

In executing its portfolio of investments, the S&T Directorate will draw upon the research and development capability across the public enterprise, private sector, and academia to locate and promote the best R&D possible. This consortium of capability is referred to as the Homeland Security Research Enterprise. With the authorities provided in the *Homeland Security Act of 2002*, the S&T Directorate has the organic ability to leverage not only DHS laboratories, the Homeland Security Institute, and the DHS Centers of Excellence, but also the Department of Energy (DOE) National Laboratories to meet homeland security research requirements.

The Nation's technical superiority in science and technology is a key factor in the effort to ensure a secure homeland. The fulfillment of the Department's mission requires a concerted effort to access, leverage, and enhance the vast resources and expertise of the Nation's public and private sectors, academic community, non-governmental organizations, and other scientific bodies. This effort is primarily the responsibility of the S&T Directorate. That responsibility requires that the Nation's homeland security R&D efforts are focused on meeting mission requirements, are adequately funded, and meet long-term, as well as near-term objectives. A significant portion of the S&T Directorate's programs directly support federally mandated homeland security priorities.

To perform its varied missions, the S&T Directorate received \$978.1 million in FY 2007 (Revised Enacted) and \$830.3 million in FY 2008 (Enacted). The S&T Directorate is requesting \$868.8 million in FY 2009. The following are a few examples of how the S&T Directorate has used its funds in FY 2007 and plans to use FY 2008 and FY 2009 funds to further enhance and enable homeland security capabilities:

#### ***Management and Administration*** –

With the FY 2007 appropriation of \$135.0 million, the S&T Directorate has implemented several efficiency initiatives to make better use of its resources. The Directorate plans to continue this trend with FY 2008 funds of \$138.6 million. In FY 2009, \$14 million and 124 FTE non-headquarters S&T federal employees will be realigned to support DHS organic laboratories including Plum Island Animal Disease Center, the Environmental Measurements Laboratory, and the Transportation Security Laboratory, which better accounts for program activity costs at the laboratories. This action brings the 2009 M&A budget request to \$132.1 million.

Overall, the S&T Directorate has:

- Reduced the Business Operations costs by more than 40 percent;
- Consolidated National Capital Region floor space to one location;
- Held each Division to managing their programs to less than 10 percent for Small Business Innovation Research (SBIR), contractor staff, travel, conferences, and Intergovernmental Personnel Agreements (IPA);
- Reduced the number of IPA employees by 20 percent;
- Reduced reliance on contractor staff; and
- Made plans to consolidate floor space at the Environmental Measurements Laboratory to decrease the rent and operations and maintenance costs (scheduled for FY 2009).

### ***Border and Maritime Security –***

FY 2007 appropriation of \$33.4 million:

- Developed a lightweight shipping container with embedded security features within its walls, doors and floor to detect intrusions. Shippers benefit from weight savings by allowing them to load more goods per container, encouraging the use of these more secure containers.
- Conducted a joint test of the Marine Asset Tag Tracking System (MATTS) with Japan. When fielded, MATTS will provide the ability to track shipping containers in near-real time from their origin to final destination using a remote global communications and tracking device interfaced with sensors that detect container breaching.

FY 2008 appropriation of \$25.5 million:

- Pilot a fiber optic tripwire that can locate activity anywhere along miles of fiber optic cable, enabling a single officer to effectively monitor the border. The Border Detection Grid provides a network of advanced sensors and detection, classification, and localization technologies to detect and classify cross-border movement (e.g., friendly forces, animals, weather, or illegal activity).
- Develop second small, low-cost Container Security Devices (CSDs). These devices detect and warn of opening or removal of container doors and provide a major increase in shipping container security.
- Support a Northern Border testbed demonstration in a northeast Border Patrol sector that will provide technology insertion and lessons learned to the Secure Border Initiative Network (SBInet). As part of BorderNet, the testbed is part of a wireless data network that will connect law enforcement officers in the field to real-time tactical scene awareness information using multi-sensor fusion and law enforcement data base query.

FY 2009 request of \$35.3 million:

- Complete field testing of the Advanced Container Security Device (ACSD) prototypes and conduct a large-scale operational test. The ACSD is a small unit that attaches to the inside of a container to monitor all six sides of the container, reporting any intrusion, door opening or presence of human cargo.
- Initiate capability enhancements to existing secondary non-intrusive inspection systems to detect or identify terrorist contraband items (e.g., drugs, money, illegal firearms) or humans. This project addresses an important capability gap to enhance cargo screening and examination systems through advanced non-intrusive inspection.
- Initiate a program to develop technologies for advanced detection identification, apprehension and enforcement capabilities along the maritime borders for rapid coordinated responses to anomalies and threats. Major investment areas include persistent wide-area surveillance in the

maritime environment, port and coastal sensor surveillance, and enhanced sensor/data fusion technologies for command center situational awareness.

### ***Chemical and Biological –***

FY 2007 appropriation of \$313.6 million:

- Completed the Project BioShield material threat determinations for all traditional biothreat agents of significant public health concern. Such determinations are required before the authorized use of the BioShield Special Reserve Fund to procure new medical countermeasures.
- Transitioned BioWatch Generation 1 and Generation 2 operations to the Office of Health Affairs (OHA).

FY 2008 appropriation of \$208.0 million:

- Transition final Gen 3 BioWatch system architecture design and deployment strategy to the Office of Health Affairs, which operates the BioWatch system. The Gen 3 BioWatch systems increase the number of agents detected, and reduce the maximum time between an event and warning to six hours. The Gen 3 system will be fully automated, and thus will significantly reduce operating costs.
- Validate forensic analytical methodologies for H-series blister agents, which are acid-forming compounds that damage skin and respiratory system, resulting burns and respiratory problems.. These analytical methodologies will provide enhanced capability for the Federal Bureau of Investigation (FBI) to identify attack sources.

FY 2009 request of \$200.4 million:

- Initiate a second round of Biodefense Net Assessments with a focus on developing a longer term strategic view of our and our adversaries' competitive strengths and tipping points. In response to HSPD-10, Biodefense Net Assessments (BNAs) provide "recommendations for re-balancing and refining investments among the pillars of our overall biodefense policy."
- Develop evaluated bioassays (fingerprint signatures of biological agents) that detectors and monitors use to recognize biological agents and trigger an alarm, which help to improve the ability to identify and characterize human or agriculture bioterrorism incidents. Complete development of and transition 10 bio threat assays to OHA for use in the Gen 2 BioWatch system and to establish the initial operational capability for the Public Health Actionable Assay process.
- Conduct bioforensics research in support of criminal investigative cases, with the ultimate goal of attribution, apprehension, and prosecution of the perpetrator, in fulfillment of the President's Biodefense for the 21st Century (HSPD-10). Complete validation at the National BioForensics and Analysis Center of forensic assays for the top thirty biological threat agents.
- Conduct biennial, end-to-end risk assessments on biological agents and conducts laboratory studies to close major scientific gaps that could significantly impact how the nation structures its defenses. The Biological Threat Characterization Center should close the remaining gaps on most of the classical, known agents by FY 2009, at which time attention will be increasingly focused on addressing future threats.
- Develop, exercise, and demonstrate decontamination methods and restoration system tools that include a coordinated systems approach to the restoration of wide urban areas, to include high traffic areas (transit/transportation facilities) and Department of Defense (DOD) infrastructures following the aerosol release of a biological agent.

### ***Command, Control and Interoperability –***

FY 2007 appropriation of \$62.6 million:

- Combined several government-funded testbeds to increase cyber security capabilities to create a realistic model of the internet on which to test cyber security technologies.
- Assisted states in identifying and implementing effective statewide technical interoperability solutions; conducted piloted programs to assess and demonstrate data and video technologies in real-world environment.

FY 2008 appropriation of \$57.0 million:

- Develop new capabilities to allow a mobile law enforcement official in a remote location to issue a single query that simultaneously accesses multiple databases across jurisdictions.
- Extend and apply pattern recognition tool to alert analysts to events that could be part of a developing, coordinated terrorist attack based on data from all-source intelligence leads and incident reports.

FY 2009 request of \$62.9 million:

- Initiate development of architecture for accessing and exchanging situational awareness information among the U.S. Coast Guard and its maritime, law enforcement, and intelligence partners.
- Launch a demonstration between Voice over Internet Protocol (VoIP) and P25 gateways. The project will also accelerate the development and testing of P25 IP-based interfaces for infrastructure inter-RF subsystems, console subsystems, and fixed base station subsystems.

### *Explosives –*

FY 2007 appropriation of \$110.2 million:

- Evaluated and tested commercial off-the-shelf systems capable of detecting homemade explosives to find the most effective existing technologies.
- Completed a system false alarm analysis of deployed check baggage technology and provided results to the Transportation Security Administration (TSA).

FY 2008 appropriation of \$77.7 million:

- Conduct demonstrations of promising new technologies to support their rapid prototyping and improve systems capable of detecting homemade explosives.
- Transition to Federal, State, and local responders a database of the mechanisms for defeating improvised explosive devices by means other than the current practice of detonating or manually disarming them.
- Begin pilot testing the most promising advanced air cargo screening systems for deployment in FY 2011.
- Transition to TSA advanced technologies that improve the effectiveness of existing checked baggage technologies.

FY 2009 request of \$97.6 million:

- Conduct detonation assessment tests to determine the impact, friction, and electrostatic discharge sensitivities of homemade explosives (HME) threats.
- Report on spectroscopic and trace technology research and development (R&D) for remote or standoff detection of Vehicle Borne Improvised Explosive Devices. These reports will establish the baseline and feasibility for employing explosives detection techniques as a means of vehicle-borne improvised explosive devices (VBIED) detection.

- Develop advanced capabilities to detect explosives and concealed weapons, including IEDs or HMEs that could be detonated in passenger cabins and weapons that could be used in the hostile takeover of mass transit. Introduce new standalone technologies or adjunct technologies, such as Computed Tomography (CT), to continue improving detection performance and the detection of novel explosives. Award a development contract for the detection of novel explosives in the next-generation checkpoint detection system.

### ***Human Factors –***

FY 2007 appropriation of \$6.8 million:

- Developed a database of public needs that were unmet during Hurricanes Katrina and Rita and made recommendations to address those needs during future emergencies.

FY 2008 appropriation of \$14.2 million:

- Refine an existing multi-modal (finger, face and iris) biometrics framework for test and evaluation activities. This leads to an identification tool that can accurately identify, without physical contact, known terrorists or criminals.
- Characterize screener-performance issues, propose new screener technologies and procedures, and develop training curricula to optimize security effectiveness and reduce human fatigue and injury, while reducing training requirements and overall cost.
- Improve the accuracy of risk assessments by incorporating a more comprehensive range of psychological, social, and indirect and long-term economic impacts of catastrophic events into the consequences aspect of DHS's risk assessments. Transition to TSA advanced technologies that improve the effectiveness of existing checked baggage technologies.

FY 2009 request of \$12.5 million:

- Initiate development of a contactless multi-modal biometrics identification prototype and create corresponding reference datasets. The datasets are key to system design and prototype delivery.
- Deliver modeling capabilities, content analysis for the computerized analytical framework focused on determining whether radical groups are likely to engage in violence and what ideological, organizational, and contextual factors may influence this decision or spark action.

### ***Infrastructure and Geophysical –***

FY 2007 appropriation of \$74.8 million:

- Developed a risk-informed decision support system. The system provides information for making critical infrastructure protection (CIP) decisions by considering all 17 critical infrastructure sectors and their primary interdependencies, and computing human health and safety, economic, public confidence, national security, and environmental impacts. Built out CIP-Decision Support System (DSS) to include cyber-disruptions, nuclear event, and physical/natural disaster disruption scenarios.
- Developed the system requirements and designs for a first responder 3D location system for tracking personnel that provide incident commanders situational awareness through accurate location and monitoring inside threatened buildings, collapsed buildings, and subterranean areas.

FY 2008 appropriation of \$64.5 million:

- Evaluate blast effects and mitigation measures for dams, tunnels and bridges that feeds into the development of suites of advanced materials, advanced materials, design procedures, and innovative construction methods that enable hardening of assets deemed most vital to the Nation.

- Conduct government testing of the 3D location system and conduct a functional test of the real-time, distributable standoff structure integrity monitoring system.
- Continue development of an automated training and exercise capability using advanced computer simulations and models, that will allow responders at all levels to affordably train and exercise for large and complex events in a virtual/constructive/live environment.

FY 2009 request of \$37.8 million:

- Start a project to provide a comprehensive and transparent disaster logistics tracking system across the entire area of responsibility of all disaster response partners, public and private. This system will allow the Federal Emergency Management Agency (FEMA) to more effectively manage critical resources and will enhance real-time coordination and situational awareness, setting the standard for all disaster response partners.
- Develop protective measures for tunnel protection by analyzing current measures; develop a design tool prototype for demonstration based on the new measures and conduct a field test.
- Develop advanced, automated, affordable underwater monitoring and surveillance technologies to detect underwater threats in harsh environments for extended periods that will be capable of being seamlessly and transparently integrated into infrastructure operations and operate in tandem and in support of law enforcement and other protective services/agencies.

### *Innovation –*

FY 2007 appropriation of \$38.0 million:

- Initiated Homeland Innovative Prototypical Solutions (HIPS) to deliver prototype-level demonstrations of game changing technologies in two to five years. These projects are moderate-to-high risk with high payoff potential.
- Started High Impact Technology Solutions (HITS) to provide proof-of-concept answers that could result in high technology breakthroughs. These projects have the potential to make significant gains in capability; however, there is a considerable risk of failure.
- Built upon the efforts in Explosives and demonstrated the ability of sensors based on a high altitude platform to detect launch of MANPADS.
- Investigated various technologies including probe systems to be installed on the cranes that on load and off load ship carried containers, sensors and container materials to improve the effectiveness and efficiency of the screening of cargo containers.

FY 2008 appropriation of \$33.0 million:

- Test an unmanned aircraft system with tunnel detection sensors and develop ground based technologies to increase tunnel detection accuracy and effectiveness.
- Conduct pilot demonstrations of wide-area surveillance and tracking technologies in lower Manhattan, including the high resolution optical sensor. This project will employ advanced, high-definition cameras as and possibly other sensor options, combined with small algorithms, to enhance surveillance of key infrastructure assets.

FY 2009 request of \$45.0 million:

- Use ultra-low-field Magnetic Resonance Imaging (MRI) technology to screen baggage for liquid explosives and demonstrate capability to detect liquid explosives within baggage.
- Develop a common operational picture tool that all levels of government can use to coordinate a synchronized response to natural disasters and acts of terrorism. Demonstrate and conduct a utility assessment of the Global Observer, high-altitude, long-endurance unmanned aircraft system and its situational awareness payload.

### ***Laboratory Facilities –***

FY 2007 appropriation of \$105.6 million:

- Managed the operations and maintenance of specialized DHS laboratories and infrastructure including the Plum Island Animal Disease Center (PIADC), portions of the National Biodefense Analysis and Countermeasures Center (NBACC), Chemical Security Analysis Center (CSAC), Transportation Security Laboratory (TSL), and the Environmental Measurements Laboratory (EML).
- Began operation of the NBACC facility as a Federally Funded Research and Development Center (FFRDC).
- Started construction of the Chemical Security Analysis Center (CSAC).
- Conducted the conceptual design of the National Bio Agro Defense Facility (NBAF), which will be an integrated animal, foreign animal, and zoonotic disease research, development, and testing facility that will support the complementary missions of DHS and U.S. Department of Agriculture (USDA). Down-selected potential sites for the NBAF.

FY 2008 appropriation of \$103.8 million:

- Continue construction of the NBACC facility.
- Complete construction of the CSAC as part of the Department of Defense's Sample Receipt Facility at the Edgewood Chemical Biological Center.
- Conduct an environmental impact statement (EIS) of the NBAF sites as part of the National Environmental Policy Act. The Department will use the EIS to determine site suitability, with final selection.

FY 2009 request of \$146.9 million:

- Complete construction of the NBACC.
- Conduct remaining cleanup activities at the Environmental Measurements Laboratory to return space to commercial use specifications.
- Initiate full CSAC operations in the state-of-the-art facility, which will be the premier facility with the capability to integrate knowledge across the full chemical threat spectrum.
- Begin a detailed design of the NBAF facility.
- \$14 million and 124 FTE non-headquarters S&T federal employees will be realigned to support DHS organic laboratories including Plum Island Animal Disease Center, the Environmental Measurements Laboratory, and the Transportation Security Laboratory.

### ***Test & Evaluation (T&E) and Standards –***

FY 2007 appropriation of \$25.4 million:

- Continued to develop standards for an integrated chemical, biological, radiological, nuclear, and explosive (CBRNE) sensor.
- Completed multi-modal biometrics standards, including standards for latent fingerprint analysis, rapid biometric evaluation, and biometric image and image feature quality.
- Developed performance standards for emergency responder locator communications in collapsed structures. These standards will apply to new signal processing technologies that allow amplification of weak signals through rubble from collapsed structures.

FY 2008 appropriation of \$28.5 million:

- Develop cargo security standards, working with CBP and other organizations, to include a review of existing standards, gap analysis and requirements gathering from users.
- Identify needed T&E infrastructure, involving participation in requirements development and test planning activities across DHS as well as evaluation of potential partner activities across the Federal government.
- Conduct performance testing and analysis to ensure new technologies and equipment meet the developing suite of biometric standards.
- Conduct an independent peer review of projects across DHS beginning with an evaluation of TSA's air cargo certified shipper program.

FY 2009 request of \$24.7 million:

- Draft standards for trace explosives detection using ion mobility and mass spectrometry; develop standards for high energy computed tomography beam energy; and develop a methodology and test kit for quality control and assurance of field-deployed equipment.
- Finalize standard test materials for Anthrax bacteria (*Bacillus anthracis*) and Ricin, release interim guidance for chemical and biological decontamination, and develop guidance for first-responder assessment of detection technology claims.
- Provide standards for image quality for biometric images of face, fingerprint and iris that can be used to enhance interoperability of US-VISIT and FBI Integrated Automated Fingerprint Identification System (IAFIS) fingerprint databases.
- Establish and issue policy and procedures as well as coordinate T&E resources to verify technical performance and operational effectiveness/suitability. Complete the Integrated DHS T&E Infrastructure Plan that will matrix the available domain of T&E capabilities to the DHS acquisition programs and the S&T Directorate's Capstone IPT projects.

### *Transition –*

FY 2007 appropriation of \$24.0 million:

- Aligned and coordinated the Directorate's transition effort with the Departmental component's requirements through the use of Capstone Integrated Product Teams (IPT) and provided support and analysis to the customer-led IPTs in developing prioritized science and technology capability gaps based on their experience and projected requirements.
- Conducted a Marine Asset Tag Tracking System (MATTS) test and workshop/conference on results with Japan and conducted a bi-national S&T exercise with Sweden to identify and describe transformational approaches to mitigating the effects of improvised explosive devices in mass transit systems

FY 2008 appropriation of \$30.3 million:

- Develop and implement an Office of Research and Technology Applications (ORTA) that will serve as the one-stop shop for managing patents and intellectual property identified during research efforts and promote partnerships to facilitate commercialization of the most promising technologies with industry to provide valuable homeland security technology applications to emergency responders and DHS component agencies.
- Build an "application wizard" to shorten the entire application process for companies seeking liability protection for candidate technologies under the SAFETY Act.

FY 2009 request of \$36.3 million:

- Establish a technology transfer community database, integrating content from other existing government agency databases such as the Center for Disease Control (CDC) and FEMA.

- Expand coordination with other Federal agencies to assist in the creation of Federal best practices, standards and guidelines and work with public and private consortiums/associations to identify promising technologies for prompt consideration under the SAFETY Act

***University Programs –***

FY 2007 appropriation of \$48.6 million:

- Established four new DHS Centers of Excellence (COE) and developed a number of efforts to improve the capabilities of Minority Serving Institutions (MSIs) to conduct research in areas critical to homeland security and to develop a new generation of scientists capable of advancing homeland security goals.
- Provided scholarships for undergraduate and fellowships for graduate students pursuing degrees in fields relevant to homeland security.

FY 2008 appropriation of \$49.3 million:

- Develop a far-reaching and multi-faceted MSI program that will incorporate MSIs into the Centers of Excellence and develop homeland security research and training capabilities at the MSIs.
- Continue cutting edge research such as developing adaptive risk assessment tools and rapid, accurate methods for detecting and diagnosing biological agents that could threaten U.S. livestock.

FY 2009 request of \$38.3 million:

- Establish a new DHS COE, the Center of Excellence for Command, Control and Interoperability, merging activities, of the Institute of Discrete Sciences University Affiliate Centers and the DHS Regional Visualization and Analytics Centers.

A more robust description of FY 2007 accomplishments, plans and projects for FY 2008 and 2009 respectively are discussed within the Budget request section of the FY 2009 Congressional Justification.

**C. Resources Requested, Performance Impact**

**Major Changes within the Base Level**

The proposed FY 2009 budget request of \$868,801,000 will maintain ongoing activities in science and technology research to detect and counter threats and attacks; to protect the Nation’s critical infrastructure, both physical and cyber; to analyze and assess threats and vulnerabilities; and to provide cutting edge technologies to operational end-users.

The S&T Directorate has planned and budgeted for its activities in FY 2009 by focusing and incorporating the Secretary’s priorities to: continue to protect our Nation from dangerous people, continue to protect our Nation from dangerous goods, protect critical infrastructure, and build a nimble, effective emergency response system and a culture of preparedness.

As noted earlier, the S&T Directorate made its decisions on FY 2009 funding based on the priorities and the requirements of the Department.

**Increments over Current Service Level**

The following projects represent increments over current service level by PPA:

- **Borders and Maritime Security:** The FY 2009 program increase of \$9.8 million funds technology development for specific high-priority, customer needs identified during the S&T Capstone IPT process; specifically, it will fund efforts in Maritime Security.
- **Chemical and Biological:** The FY 2009 reduction is primarily a result of several projects coming to an end in the Surveillance and Detection R&D Program within the Biological Countermeasures Thrust Area and in the Detection Program within the Chemical Countermeasures Thrust Area. The decrease is also a result of the S&T Capstone IPT process which shifted funds to high-priority programs.
- **Command, Control and Interoperability:** The FY 2009 increase of \$5.9 million allows the Command, Control, and Interoperability Division to develop additional technologies for specific high priority customer-identified needs identified during the S&T Capstone IPT process – specifically it will fund efforts in Internet-based Control System Protection – Supervisory Control and Data Acquisition (SCADA) and Process Control Systems (PCS).
- **Explosives:** The FY 2009 increase supports the Vehicle Borne Improvised Explosive Device/ Suicide Bomber Improvised Explosive Device (VBIED/SBIED) Program, the Render Safe Program, and the Detection and Neutralization Tools Program. The increase of \$20.0 million in funding for VBIED/SBIED will allow the Explosives division to improve large threat mass detection in such areas as the transit environment, special events and other large areas.
- **Human Factors:** The FY 2009 decrease reflects that the Human Factors Division is not requesting additional funds for the Institute for Homeland Security Solutions (IHSS), funded through the Research Triangle Institute. However, the Human Factors Division is increasing its efforts in Suspicious Behavior Detection and Personal Identification Systems.
- **Infrastructure and Geophysical:** The overall decrease in FY 2009 is due to efforts not funded such as Regional Technology Integration (RTI), Southeast Regional Research Initiative, and the Community Based CIP Institute. However, there are changes within base that will also fund several new program areas specifically identified by the customer, with efforts focused on high priority technology gaps in the areas of Infrastructure Protection and Emergency Incident Management.
- **Innovation:** The FY 2009 increase will fund existing programs whose scopes increase as they mature and might allow for additional projects that would address gaps identified by the S&T Capstone IPT process.
- **Laboratory Facilities:** The FY 2009 increase reflects the move-in and operations costs for the National Biodefense Analysis and Countermeasures Center (NBACC), and a one-time cost for final cleanup of the Environmental Measurements Laboratory (EML) space.
- **Test and Evaluation and Standards:** The FY 2009 decrease is a result of no request for funding for the independent peer review project and the S&T Capstone IPT, which shifted funds to higher priority projects.
- **Transition:** The FY 2009 increase provides additional funding for the Homeland Security Institute (HSI), whose contract ends in April 2009. The increase will also allow DHS to compete this Federally Funded Research and Development Center (FFRDC) contract.
- **University Programs:** The FY 2009 decrease is a result of no request for funding to support the creation of a Center of Excellence for the Transportation Security Agency and the Navy's Post Graduate School.

## **D. How Science and Technology Main Programs and Their Performance Goals Align to and Support the Secretary's Goals and Objectives.**

The following list of programs with their performance goals are followed by the DHS goals and objective they support.

Borders and Maritime Security program performance goal – Improve the capability of homeland security personnel to secure the Nation's land, maritime, and air borders.

**Goal 1** – Continue to protect our Nation from dangerous people

**Objective 1.1** – Achieve Effective Control of Our Borders

Chemical and Biological program performance goal – Improve the understanding, technologies, and systems necessary to protect against possible biological and chemical attacks on the Nation's population, agriculture, or infrastructure.

**Goal 2** – Continue to protect our Nation from dangerous goods

**Objective 2.2** – Biological

Explosives program performance goal – Improve explosives countermeasures technologies and procedures to prevent attacks on critical infrastructure, key assets, and the public.

**Goal 3** – Protect critical infrastructure

**Objective 3.1** – Fixed Critical Infrastructure and Key Assets

Human Factors program performance goal – Improve detection, analysis, and the understanding of threats posed by individuals, groups, and radical movements through the application of the social and behavioral sciences.

**Goal 1** – Continue to protect our Nation from dangerous people

**Objective 1.3** – Strengthen Screening of Travelers and Workers

Infrastructure and Geophysical program performance goal – Improve the capability for state, local, tribal, and private sector preparedness for and response to all hazardous events impacting the population and critical infrastructure.

**Goal 3** – Protect critical infrastructure

**Objective 3.1** – Fixed Critical Infrastructure and Key Assets

Command, Control and Interoperability program performance goal – Improve and develop operable and interoperable communications for emergency responders, develop tools to improve the security and integrity of the internet, and improve and develop automated capabilities to recognize potential threats.

**Goal 4** – Build a nimble, effective emergency response system and a culture of preparedness

**Objective 4.1** – Response and Recovery

Test & Evaluation and Standards program performance goal – Improve and develop standards and test and evaluation protocols for products, services, and systems used by the Department of Homeland Security and its partners to ensure consistent and verifiable effectiveness of equipment and tools.

**Goal 4** – Build a nimble, effective emergency response system and a culture of preparedness

**Objective 4.2** – Preparedness

Innovation program performance goal – Support significant technology breakthroughs that have the potential to greatly enhance DHS operations.

**Goal 4** – Build a nimble, effective emergency response system and a culture of preparedness  
**Objective 4.2** – Preparedness

Transition program performance goal – Deliver near-term products and technology enhancements.

**Goal 4** – Build a nimble, effective emergency response system and a culture of preparedness  
**Objective 4.2** – Preparedness

University Programs program performance goal – Improve university-based research, development and education systems to enhance the Nation's homeland security.

**Goal 4** – Build a nimble, effective emergency response system and a culture of preparedness  
**Objective 4.2** – Preparedness

Laboratory Facilities program performance goal – Improve the Nation's core of productive science, technology, and engineering laboratories, organizations, and institutions, which can develop the knowledge and technology required to secure our homeland.

**Goal 4** – Build a nimble, effective emergency response system and a culture of preparedness  
**Objective 4.2** – Preparedness

**E. Performance-Based Budget Highlights by Program**

|  |          |          |          |          |          |          |

|--|--|--|--|--|--|--|
| <b>Measure:</b> Percent of SAFETY Act applications that have been processed and feedback provided to applicant when package has been disapproved.  |  |  |  |  |  |  |
| <b>Description of Measure:</b> As part of the Homeland Security Act of 2002, Public Law 107 - 296, Congress enacted the SAFETY (Support Anti - Terrorism by Fostering Effective Technologies) Act to provide certain protections for sellers of qualified anti - terrorism technologies and others |  |  |  |  |  |  |

in the supply and distribution chain. Specifically, the SAFETY Act creates certain liability limitations for claims arising out of, relating to, or resulting from an act of terrorism where qualified anti - terrorism technologies have been deployed. This measure indicates the percentage of applications for which the Department granted liability protection out of all those evaluated. This liability protection helps to encourage the development of effective technologies aimed at preventing, detecting, identifying, or deterring acts of terrorism, or limiting the harm that such acts might otherwise cause.

1. Of the 112 positions, as of September 30, 2007, 91 positions were filled of which 49 FTE are DNDO employees.

### iii. Status of Congressionally Requested Studies and Reports

**Department of Homeland Security  
Domestic Nuclear Detection Office**

| <b>Fiscal Year</b> | <b>Due Date</b> | <b>Reference/Citation</b>                    | <b>Requirement</b>  | <b>Status</b>                                   |
|--------------------|-----------------|--|---|---|
| 2008               | 1/31/2008       | House Report 110-181, Title IV, p. 126       | The Committee directs DNDO to provide quarterly briefings, beginning in January 2008, on its assessments of these new technologies and its progress in deploying technologies to other vulnerable sites. These briefings should include information about the architecture necessary to deploy detection equipment at nontraditional ports of entry or seaports; the types of technologies being assessed; the strengths and weaknesses of these technologies; and the development timetable.   | Target delivery date to Congress is 01/31/2008. |
| 2008               | March 2008      | House Report 110-181, Title IV, p. 126       | DNDO is working with CBP to find ways to screen shipments and vessels coming to the United States for radiation at the foreign ports from which they depart. The Committee directs DNDO to report on the results of these efforts in conjunction with the quarterly threat assessment briefings, beginning with the next scheduled briefing.  | Target delivery date to Congress is March 2008. |
| 2008               | 5/26/2008       | House Report 110-181, Title IV, p. 127       | The Committee directs DNDO to report quarterly on red team exercises it has conducted, any vulnerabilities identified, and any changes that are being made to the system to address these vulnerabilities. The first report shall be submitted on January 1, 2008.  | Target delivery date to Congress is 05/26/2008. |
| 2008               | 5/26/2008       | House Report 110-181, Title IV, p. 129       | GAO recommends that DNDO (1) collect and maintain reports concerning all of the testing performed by the U.S. national laboratories; and (2) review the test reports in order to develop an information database on how PVTs perform in both laboratory and field tests on a variety of indicators, such as their ability to detect specific radiological and nuclear materials or how they are affected by different levels of background environmental radiation. The Committee concurs with GAO's recommendations and directs DNDO to report on its plan to collect and maintain an information database in a timely fashion. This report should be provided to the House Appropriations Committee no later than November 1, 2007. | Target delivery date to Congress is 05/26/2008. |
| 2008               | 5/26/2008       | Senate Report 110-84, Title IV, p. 119       | The Committee directs DNDO to submit a strategic plan for its phased deployment that: (1) prioritizes the cities to be covered by the program; (2) lays out a decision matrix on which routes will be covered into the city whether by land, sea or air; (3) addresses whether decoy detection systems would benefit the public good; (4) indicates what level of detection infrastructure makes sense for each city; (5) addresses whether any given deployment has a reasonable chance of success against an adversary with at least a moderate level of technological know-how; and (6) establishes a 5-year projected cost of the program.  | Target delivery date to Congress is 05/26/2008. |
| 2008               | 4/26/2008       | Senate Report 110-84, Title IV, p. 119       | The Committee directs DNDO to provide a classified briefing to the Committee on ways it plans to incorporate current intelligence into the structure and implementation of the Architecture by October 1, 2007.   | Target delivery date to Congress is 04/26/2008. |
| 2008               | 9/1/2008        | FY 2008 Omnibus PL 110-161, Title IV, p. 230 | None of the funds appropriated under this heading shall be obligated for full-scale procurement of Advanced Spectroscopic Portal Monitors until the Secretary of Homeland Security submits to the Committees on Appropriations of the Senate and the House of Representatives a report certifying that a significant increase in operational effectiveness will be achieved.  | Target delivery date to Congress is 09/01/2008. |

# BUDGET REQUEST AND SUPPORTING INFORMATION

## DOMESTIC NUCLEAR DETECTION OFFICE MANAGEMENT AND ADMINISTRATION

### I. Appropriation Overview

#### **A. Mission Statement for Management and Administration:**

The Domestic Nuclear Detection Office (DNDO) is the lead agency within the Department of Homeland Security to integrate efforts across the Department in combating the threat of nuclear attack, and the lead departmental representative for all interagency activities to coordinate the U.S. Government's (USG) nuclear defense posture. Key to the success of the Department of Homeland Security (DHS) is improving the ability to mitigate risks across the entire threat spectrum. In recognition of the catastrophic risk posed by the use of a nuclear weapon within the United States, the Department has integrated all nuclear detection research, development, test, evaluation, and operational support into a single office. DNDO is dedicated to both the development and enhancement of the global nuclear detection architecture; acquisition and deployment support for the domestic detection system; coordination of effective sharing of nuclear detection-related information; the coordination of nuclear detection research and development; the establishment of procedures and training for end users of nuclear detection equipment; and national-level integration, development, and advancement of an enduring national nuclear forensics capability.

The Management and Administration (M&A) appropriation provides for the management and administrative support to that goal. M&A includes all costs related to Federal personnel, including detailees from other organizations. In addition, M&A provides the material support for DNDO personnel, such as facilities, supplies and materials, and administrative needs such as information technology (IT) equipment and support. Finally, all DNDO contributions to the DHS Working Capital Fund (WCF) are included within the M&A request.

#### **B. Budget Activities:**

Management and Administration: As a jointly-staffed office, the DNDO staff presently consists of 130 DNDO Federal staff positions of which approximately 45 are detailees. Beginning in FY 2007, DNDO agreed to reimburse parent organizations for detailed staff. Additionally, the Management and Administration request includes all DNDO rent payments and contributions to the DHS Working Capital Fund (WCF).

#### **C. Budget Request Summary:**

The Domestic Nuclear Detection Office requests 144 positions, 137 FTE, and \$38,900,000 for FY 2009 Management and Administration. The total adjustments-to-base is \$6,001,000 and 9 FTE. The total program increase is 14 positions, 7 FTE, and \$1,399,000.

## II. Summary of FY 2009 Budget Estimates by Program/Project Activity (PPA)

| <b>2009 Request</b>          | <b>144</b>          | <b>137</b> | <b>\$38,900</b> |
| Total Change 2008-2009       | 14                  | 16         | \$7,400         |

DNDO requests 144 positions, 137 full time equivalents (FTE), \$38.900 million for FY 2009. This is an increase of \$6.001 million over FY 2008 for pay and non-pay inflation, annualization of (9) FY 2008 part year funding, annualization of FY 2008 increases, GSA rent, and Working Capital Fund adjustments. Additionally, a program increase to provide program management staff for increased research, development, and operations activities includes \$1.399 million for (7) FTE.

#### CURRENT SERVICES PROGRAM DESCRIPTION:

The Management and Administration (M&A) request provides for the execution of salaries, benefits, and expenses related to 144 positions and 137 FTE, an increase of 14 positions and 16 FTE over FY 2008 levels. Of the 16 additional FTE requested in FY 2009, nine (9) are associated with the annualization of 18 additional positions requested in FY 2008, originally requested at a 50% lapse rate. The remaining seven (7) FTE are associated with the request for an additional 14 positions over FY 2009, also at a 50% lapse rate.

In FY 2009, DNDO requests an additional 14 positions for programmatic areas. These requested positions will enhance current capabilities and subject matter expertise. This request addresses the increase in scope for areas such as the aviation, maritime and ports-of-entry vectors. The additional staff will augment DNDO's present hiring strategy to increase programmatic personnel to accommodate the increase in scope based upon the numerous facets of the nuclear threat.

The additional positions requested in FY 2009 are intended to provide a fully complimentary set of skills covering all DNDO functions as it expands into additional mission areas related to the radiological and nuclear threat. Of the 14 positions, one (1) will be dedicated to managing standards development, one (1) to systems development activities, one (1) to maturing red team activities, one (1) to providing advanced modeling and simulation capabilities, two (2) to expanding mission support functions (one each for Border Patrol activities and cross cutting initiatives), two (2) to meet rapidly

expanding testing and assessments requirements, one (1) for transformational research and development program management, and four (4) for support to expanding field operations through the DNDO Joint Analysis Center (JAC). In addition, one (1) additional position is requested to support DNDO's maturing role in technical nuclear forensics.

Additional positions requested in FY 2009 are principally associated with the new missions outlined above, as well as a need for more rigorous program management oversight of DNDO's large scale development and acquisition programs. As DNDO continues to mature research and development programs into acquisition programs, additional staff is required to ensure proper test and evaluation, program and contracts management, and deployment support. Additionally, as DNDO matures to meet its full mission requirement of supporting all domestic deployments of rad/nuc detection equipment, beyond current deployments to POEs, additional staff will be required to support the unique aspects of each of these deployment vectors, such as: general aviation, small maritime craft, land borders, etc.

As a jointly-staffed office, by FY 2009, the DNDO staff will be made up of approximately 45 to 50 detailees, in addition to the approximately 100 DNDO Federal staff positions. Beginning in FY 2007, DNDO agreed to reimburse parent organizations for detailed staff. Throughout FY 2007, DNDO entered into Memoranda of Understanding (MOUs) with partner agencies, which included obligations for partner agencies to provide staff to DNDO, as well as a reciprocal agreement for DNDO to reimburse parent agencies for all staff provided.

Beginning in late FY 2007, DNDO initiated an internal realignment of activities and personnel to better reflect its full range of missions and customers. The largest effect of this realignment was the formation of the Mission Management Directorate (MMD), which was established to ensure an optimum merger of user requirements with technology development. MMD will be responsible for the development of integrated program plans addressing each of the DNDO mission areas: ports of entry (POEs), aviation, maritime, and State and local (with a separate focus for the Securing the Cities initiative). MMD will interface directly with Federal, State, and local stakeholders to gather radiological and nuclear (rad/nuc) detection technology requirements, and will in turn provide these requirements to the transformational research and systems development activities within DNDO.

The M&A request provides the material support for DNDO personnel, such as facilities, supplies and materials, and administrative needs like information technology (IT) equipment and support. All DNDO contributions to the DHS Working Capital Fund (WCF) are included within the M&A request.

#### Description of Item

This request will provide funding the necessary staff to manage additional research and development programs to be initiated in FY 2009.

#### Justification

The Program Management Support increase provides for 14 additional positions needed to address critical DNDO staffing requirements.

By FY 2009, DNDO will have well-established research, development, testing, and deployment programs to address the broad challenges of detecting radiological or nuclear threats in containerized cargo. Therefore, throughout FY 2008 and into FY 2009, DNDO will be placing an increasing emphasis on non-containerized cargo security. As DNDO matures to meet its full mission requirement of supporting all domestic deployments of rad/nuc detection equipment, beyond current deployments to ports of entry (POEs) to scan cargo containers, additional staff will be required to support the unique aspects of each of these deployment vectors, such as: general aviation, small maritime craft, land borders, etc.

Additional positions requested in FY 2009 are principally associated with the new missions outlined above, as well as a need for more rigorous program management oversight of DNDO's large scale development and acquisition programs. As DNDO continues to mature research and development programs into acquisition programs, additional staff is required to ensure proper test and evaluation, program and contracts management, and deployment support.

The additional positions requested in FY 2009 are intended to provide a fully complimentary set of skills covering all DNDO functions as its expands into these additional mission areas. Of the 14 positions, one (1) will be dedicated to managing standards development, one (1) to systems

development activities, one (1) to maturing red team activities, one (1) to providing advanced modeling and simulation capabilities, two (2) to expanding mission support functions (one each for Border Patrol activities and cross cutting initiatives), two (2) to meet rapidly expanding testing and assessments requirements, one (1) for transformational research and development program management, and four (4) for support to expanding field operations through the DNDO Joint Analysis Center (JAC). In addition, one (1) additional position is requested to support DNDO's maturing role in technical nuclear forensics.

Impact on Performance (Relationship of Increase to Strategic Goals)

The \$1.399 million Program Management Support increase will directly improve the DNDO ability to meet Strategic Goal 2.1, "Continue to protect our Nation from dangerous goods – Nuclear/Radiological." Particularly, the increase will fund the staff necessary to support research and development programs to deliver radiation detection capabilities to an increasing array of operational end users.

## **V. Exhibits and Other Supporting Materials**

### **A. Justification of Proposed Legislative Language**

Department of Homeland Security  
Domestic Nuclear Detection Office  
Justification of Proposed Changes in Management and Administration  
Appropriation Language

For salaries and expenses of the Domestic Nuclear Detection Office and for management and administration of programs and activities, [\$34,000,000] *\$38,900,000*: Provided, That not to exceed \$3,000 shall be for official reception and representation expenses. (Department of Homeland Security Appropriations Act, 200[8] 9)

Explanation of Changes:

No substantive changes are proposed.

1. Of the 112 positions, as of September 30, 2007, 91 positions were filled of which 49 FTE are DNDO employees.

#### PPA Mission Statement

Under the direction of NSPD-43/HSPD-14, the mission of Domestic Nuclear Detection Office (DNDO) is to address the broad spectrum of radiological and nuclear protective measures through the development of the global nuclear detection architecture; the deployment of the domestic detection system to detect and to report attempts to import or to transport a nuclear device or fissile or radiological material intended for illicit use; the coordination of nuclear detection research and development on a government-wide scope; and the establishment of procedures and training for the end users of the deployed equipment.

The Management and Administration (M&A) appropriation provides for the management and administrative support of that goal. M&A includes all costs related to Federal personnel, including detailees from other organizations. The M&A appropriation accounts for the funding that assists in the achievement of DNDO's mission through the maintenance of an operations level that provides facilities, supplies and materials, IT equipment and administrative support. DNDO's contributions to the DHS Working Capital Fund (WCF) are included within the M&A request.

### Summary Justification and Explanation of Changes

|                              | FY 2007<br>Actual | FY 2008<br>Enacted | FY 2009<br>Request | 2008 to 2009<br>Change |
|------------------------------|-------------------|--------------------|--------------------|------------------------|
| <b>Salaries and Benefits</b> | \$7,440           | \$14,615           | \$17,875           | \$3,260                |

Salaries and Benefits in FY 2009 includes costs for 137 FTE. The FY 2009 request includes an increase of \$131,000 for the annualization of FY 2008 pay increases, \$319,000 for FY 2009 pay increases, \$2,026,000 for the annualization of prior year part year funding, and \$1,399,000 in program increases.

|               | FY 2007<br>Actual | FY 2008<br>Enacted | FY 2009<br>Request | 2008 to 2009<br>Change |
|---------------|-------------------|--------------------|--------------------|------------------------|
| <b>Travel</b> | \$1,436           | \$200              | \$331              | \$131                  |

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2009 request includes program increases of \$131,000 for annualization of prior year part year funding.

|                                 | FY 2007<br>Actual | FY 2008<br>Enacted | FY 2009<br>Request | 2008 to 2009<br>Change |
|---------------------------------|-------------------|--------------------|--------------------|------------------------|
| <b>Transportation of Things</b> | \$55              | \$31               | \$37               | \$6                    |

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. The FY 2009 request includes increases of \$6,000 in Working Capital Fund adjustments.

|                 | FY 2007<br>Actual | FY 2008<br>Enacted | FY 2009<br>Request | 2008 to 2009<br>Change |

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by

|   | <b>FY 2007<br/>Actual</b> | <b>FY 2008<br/>Enacted</b> | <b>FY 2009<br/>Request</b> | <b>2008 to 2009<br/>Change</b> |
|---|---------------------------|----------------------------|----------------------------|--------------------------------|
| <b>Operation &amp; Maintenance of equipment</b> | <b>\$61</b>               | <b>\$61</b>                | <b>\$61</b>                | <b>\$0</b>                     |

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account.

|                                 | <b>FY 2007<br/>Actual</b> | <b>FY 2008<br/>Enacted</b> | <b>FY 2009<br/>Request</b> | <b>2008 to 2009<br/>Change</b> |
|---------------------------------|---------------------------|----------------------------|----------------------------|--------------------------------|
| <b>Supplies &amp; materials</b> | <b>\$317</b>              | <b>\$317</b>               | <b>\$317</b>               | <b>\$0</b>                     |

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property.

|                  | <b>FY 2007<br/>Actual</b> | <b>FY 2008<br/>Enacted</b> | <b>FY 2009<br/>Request</b> | <b>2008 to 2009<br/>Change</b> |
|------------------|---------------------------|----------------------------|----------------------------|--------------------------------|
| <b>Equipment</b> | <b>\$2,512</b>            | <b>\$705</b>               | <b>\$832</b>               | <b>\$127</b>                   |

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2009 request includes increases of \$127,000 for annualization of prior year part year funding.

## I. Changes in FTE

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Management and Administration  
Changes in Full-Time Equivalents**

|   | FY 2007 | FY 2008 | FY 2009 |
|---|---------|---------|---------|
| Base: Year-end Actual from Prior Year   | 38      | 112     | 121     |
| <b>INCREASES</b>  |         |         |         |
| Increase #1:  | 74      |         |         |
| Description: The increase provided the initial staffing levels required upon DNDO formation.  |         |         |         |
| Increase #2:  |         | 9       | 9       |
| Description: The FY 2008 budget requested an additional 18 positions (9 FTE each in FY 2008 and FY 2009) to support increased program management requirements associated with contracts awarded in FY 2006 and FY 2007. |         |         |         |
| Increase #3:  |         |         | 7       |
| Description: The FY 2008 budget requested an additional 14 positions (7 FTE each in FY 2009 and FY 2010) to support increased program management requirements associated with contracts awarded in FY 2008 and FY 2009. |         |         |         |
| Increase #4:  |         |         |         |
| Description:  |         |         |         |
| Sub-Total Increases   | 74      | 9       | 16      |
| <b>DECREASES</b>  |         |         |         |
| Decrease #1:  |         |         |         |
| Description:  |         |         |         |
| Decrease #2:  |         |         |         |
| Description:  |         |         |         |
| Decrease #3:  |         |         |         |
| Description:  |         |         |         |
| Sub-Total Decreases   | 0       | 0       | 0       |
| Year-end Actual/Estimated FTEs  | 112     | 121     | 137     |
| Net Change from prior year base to Budget Year Estimate:  | 74      | 9       | 16      |

# BUDGET REQUEST AND SUPPORTING INFORMATION

## DOMESTIC NUCLEAR DETECTION OFFICE RESEARCH, DEVELOPMENT, AND OPERATIONS

### I. Appropriation Overview

**A. Mission Statement for Research, Development, and Operations:** The Domestic Nuclear Detection Office (DNDO) was established by National Security Presidential Directive (NSPD)-43 and Homeland Security Presidential Directive (HSPD)-14 to provide a focal point addressing nuclear and radiological preventive measures. DNDO is dedicated to both the development and enhancement of the global nuclear detection architecture; acquisition and deployment support for the domestic detection system; coordination of effective sharing of nuclear detection-related information; the coordination of nuclear detection research and development; the establishment of procedures and training for end users of nuclear detection equipment; and national-level integration, development, and advancement of an enduring national nuclear forensics capability.

The Research, Development, and Operations request provides resources required for the development and improvement of the global nuclear detection architecture, or strategy, as well as all research, development, test, and evaluation (RDT&E) necessary to meet the technical and operational requirements of the architecture. Near- and long-term research and development efforts are conducted through DNDO Systems Development and Transformational R&D programs, respectively. These programs include:

- Advanced Spectroscopic Portal (ASP) program, to improve the passive detection and identification of radiological and nuclear materials;
- Cargo Advanced Automated Radiography Systems (CAARS) program, to improve and automate the detection of dense materials in cargo that may be used to avoid passive detection means such as ASP systems;
- Advanced Technology Demonstrations (ATDs) of Intelligent Personal Radiation Locators (IPRL), to improve “pager”-sized radiation detectors used by a wide range of law enforcement and counterterrorism officials;
- ATD of Stand-off Radiation Detection Systems (SORDS), to drastically improve the range of passive radiation detection systems; and
- ATD of Shielded Special Nuclear Alarm Resolution (SNAR) to automate the direct detection of shielded SNM and the clearing of alarms.

Other research efforts include exploratory research and an Academic Research Initiative. In addition, rapid prototyping will be used to accelerate development of new capabilities on an as-needed basis. To ensure that all technologies developed through these activities are rigorously characterized prior to deployment and are assessed after implementation, the DNDO Assessments program has developed and maintains a robust evaluation capability, including developmental and operational test and evaluation, pilots, red teaming, and net assessments. Finally, the use of analytical modeling will be expanded to allow more detailed physics models as well as high fidelity systems models.

Detection technology acquisition alone will not adequately combat the threat of nuclear terrorism. Accordingly, the DNDO Operations Support program continues its efforts to ensure the availability of the people and infrastructure required to develop a fully integrated operating environment. This includes providing technical reachback support to Federal, State, local, and tribal operators, development of standardized training curricula, nuclear alarm response protocols, and a robust National situational awareness and analysis capability through the Joint Analysis Center (JAC). Finally, the National Technical Nuclear Forensics Center (NTNFC) provides the technical capability to determine the origin and nature of nuclear or radiological attacks, interdicted source materials / devices to aid legal prosecutions or other necessary U.S. Government (USG) actions.

## **B. Budget Activities:**

**Systems Engineering and Architecture:** DNDO Systems Engineering and Architecture programs are (1) developing an enhanced global nuclear detection architecture, including both domestic and international components, and (2) maintaining and supporting a disciplined systems engineering approach throughout DNDO. The global architecture comprises several key elements: a multi-layered structure of radiological/nuclear (rad/nuc) detection systems, deployed both domestically and overseas; a well-defined and carefully coordinated network of interrelationships among them; and a set of systems engineering-based principles and guidelines governing the architecture's design and evolution over time. From its initial stand-up, DNDO recognized the importance and need for the application of a systems engineering approach in achieving an integrated and balanced global nuclear detection system solution. Effective implementation and operation of detection systems begins with the design and development of reliable and maintainable systems, built to rigorous, established performance standards and specifications, while assessing total system performance and total ownership costs within the family of rad/nuc detection systems.

**Systems Development:** DNDO Systems Development and Acquisition programs serve as the rad/nuc detection systems research, development and acquisition component within DNDO. DNDO is responsible for the engineering development, production, and all developmental logistics products associated with the current and next generation of nuclear detection systems. Product lines include radiation portal monitors (and associated materials development and facilitation), radiography (which includes non-intrusive inspection (NII) systems, human-portable systems, and integration programs to address the needs of our operational customers (Federal, State, local, and tribal authorities).

**Transformational Research and Development:** DNDO has established a transformational research and development program to identify, explore, and develop scientific and technological approaches that will dramatically improve the performance of nuclear detection components and systems. Dramatic technological improvements may be defined in a number of ways: in system or component effectiveness and performance characteristics; in cost of acquisition or maintenance; or in ease of operation by users in the field. R&D investments are made based on competitive awards, with investigators in all sectors – government laboratories, academia, and private industry – encouraged to participate. This program takes advantage of the qualities and respective advantages of all three sectors to develop products, and will strongly encourage teaming among them.

**Assessments:** The DNDO research, development, and acquisition process is anchored by an independent assessment of DNDO-mission related programs as they are developed, deployed, and implemented, as well as a continual assessment of the global nuclear detection and reporting architecture, through a variety of means. Assessments programs include test and evaluation (T&E)

campaigns to characterize technologies and systems, execution of pilots with operational agencies to evaluate concepts of operation, red teaming assessments to deepen the understanding of adversary capabilities, and net assessments to identify the effectiveness of the planned and deployed global nuclear detection and reporting architecture.

**Operations Support:** DNDO Operations Support is responsible for supporting the situational awareness of the nuclear and radiological landscape and the global nuclear detection architecture, while directly facilitating the technical adjudication of rad/nuc incidents. Operations Support is responsible for supporting the situational awareness of the nuclear and radiological landscape and the global nuclear detection architecture, while directly facilitating the technical adjudication of rad/nuc incidents. Operations Support is the primary entity within DNDO that provides actionable analytical and intelligence assessment products for operational decision makers, and works directly with law enforcement and other Federal partners to determine indicators of nuclear terrorism and recommend possible response or interdiction. The capability of the JAC is the 24/7 DNDO information hub, and the essence of DNDO's rapid information reporting. Additionally, Operations Support develops training, exercises, information sharing capabilities, and analytical tools necessary to create a fully integrated operating environment to be used by Federal, State, tribal, and local law enforcement agencies, as well as the larger intelligence and counterterrorism communities.

**National Technical Nuclear Forensics Center:** DNDO provides national-level planning, integration, development, assessment, and readiness of an enduring national nuclear forensics capability—serving as the national “systems integrator” for USG nuclear forensics. This capability provides means for the collection, analysis, and evaluation of rad/nuc materials and associated evidence for the purpose of comprehensive and timely forensic analysis to contribute to attribution conclusions. The NTNFC's nuclear materials R&D program supports the assigned DHS mission as the national capability provider for technical nuclear forensics of rad/nuc materials interdicted before a detonation. These capabilities are essential to criminal terrorism investigations in that they can serve to deter terrorist attacks, or if a threatened or actual attack occurs, to support the identification and ultimately prosecution of those responsible. DNDO will develop the technical capability to rapidly, accurately, and credibly execute the technical forensic requirements supporting attribution conclusions about the origins and pathways of intercepted or collected materials, intact rad/nuc devices, radiological dispersal devices (RDDs) after detonation, and nuclear devices after nuclear yield. In addition, this capability will directly support decision makers with information necessary to determine appropriate national security responses.

**C. Budget Request Summary:** The Domestic Nuclear Detection Office requests \$334,200,000 for FY 2009 Research, Development, and Operations (RD&O). This includes a total of \$10.700 million in program increases over the FY 2008 RD&O funding.

## II. Summary of FY 2009 Budget Estimates by Program/Project Activity (PPA)

**Department of Homeland Security**  
**Domestic Nuclear Detection Office**

DNDO requests \$25.147 million for this activity. This is increase of \$2.7 million above FY 2008 Enacted.

#### CURRENT SERVICES PROGRAM DESCRIPTION:

**Systems Engineering and Architecture:** The DNDO Systems Engineering and Architecture programs are (1) enhancing the GNDA, including both domestic and international components, and (2) developing, implementing, and supporting a disciplined systems engineering approach throughout DNDO.

The global architecture comprises several key elements: a multi-layered structure of rad/nuc detection systems (deployed both domestically and overseas), a well-defined and carefully coordinated network of interrelationships among them, and a set of systems engineering based principles and guidelines governing the architecture's design and evolution over time. The architecture is developed with interagency and DHS partner input.

Systems Engineering is committed to the successful implementation of DNDO's founding principal of establishing and putting into practice a strong and disciplined systems engineering approach in achieving an integrated and balanced global nuclear detection solution. Systems Engineering Division (SED) is an integral support to program areas and establishes and documents clear and measurable rad/nuc detection and identification requirements. This program has the lead in the establishment of rad/nuc detection standards.

Systems Engineering utilizes a Systems Engineering Support Program (SESP) services provider. The SESP is a competitively awarded engineering services contract that provides the manpower and systems engineering expertise to assist in the development and institutionalization of the systems engineering process, as well as directly support DNDO projects and programs in the development of technical engineering deliverables. SED assists the programs to understand the established concepts of

operation (CONOPS) and to document the needs of the operators or “users” of the GNDA and to develop technical requirements for rad/nuc detection systems. Proceeding from high level critical operational issues, through the related, more detailed measures of effectiveness and performance, SED determines the capability metrics that form the backbone of the Systems Performance Specifications used to acquire next generation rad/nuc detection technologies. SED also ensures traceability of user requirements into the acquisition programs such that these systems possess the necessary critical characteristics of technical capability, interoperability, connectivity, reliability, availability, and maintainability required by the GNDA.

The SESP also assists T&E in the development and implementation of data acquisition and management systems to support multiple test campaigns in a wide variety of testing environments.

SED leads efforts to develop and maintain technology capability standards to provide performance metrics for rapidly evolving rad/nuc detection technologies. These standards can be in the form of national voluntary consensus standards developed by voluntary groups of private sector standards stakeholders with government assistance. Although these standards for preventive radiological and nuclear detection (PRND) technologies are developed with maximum private sector participation, system engineering facilitates the publication of these standards, to allow free access to stakeholders, and to facilitate the revision of voluntary consensus standards, when appropriate, due to changes in technological capability.

In matters where the use of voluntary consensus standards alone is impractical, as in the case when required technical capabilities are defined by classified nuclear design information, SED has been charged with collaborating with the National Institute of Standards and Technology (NIST) to develop and publish technical capability standards and recommended standard operating procedures for the use of non-intrusive imaging and radiation detection equipment in the U.S. These standards must take into account relevant standards and procedures utilized by other Federal departments and agencies as well as those developed by international bodies. This SED mission is in support of responsibilities assigned to the Secretary of Homeland Security in the Safety and Accountability for Every (SAFE) Port Act of 2006.

Significant accomplishments in FY 2007 include:

- Institutionalized a disciplined and documented DNDO-wide systems engineering process.
- Conducted engineering design reviews for all major acquisition programs.
- Completed the Congressionally-mandated radiography health physics study that was developed in conjunction with Customs Border Protection (CBP).
- Conducted modeling and simulation of ASP detector performance.
- Initiated a Technical Capabilities Standards Program for the support and development of rad/nuc detection-related technical capability standards.
- Developed system requirements for JAC procurement.

FY 2008 planned accomplishments include:

- Assist the programs in developing and documenting “user” needs and requirements for emerging programs such as general aviation, small maritime craft, on-dock rail, international rail, and interior programs.
- Continue the institutionalization of the systems engineering process throughout DNDO. Create a series of document templates to serve as guidelines for technical engineering deliverables.

- Develop threat-based “technical capability standards” for NII and other radiation detection equipment.
- Participate in the development of national and international standards for rad/nuc detection equipment.
- Develop requirements, CONOPs, and performance specifications, as required by the program areas, for a rad/nuc detection system for use in the general aviation, air cargo environment, the maritime environment, and small Northern Border land crossings. DNDO will determine if the optimum technical solution can be provided by commercially available equipment, next generation technologies such as ASP and Human Portable Radiation Detection Systems (HPRDS), or the development of rapid prototypes.
- Perform modeling analyses, as required by the programs, of alternative rad/nuc detection system deployment strategies.
- Conduct functional and physical configuration audits for the ASP SUV variant and HPRDS systems.

In FY 2009, as the GNDA continues to evolve along with technology advances and required capabilities of DNDO customers, the systems engineering program will be focused on the following objectives in support of emerging programs:

- Develop Mission Need Statements and CONOPs, and identify deployment requirements and critical operational issues for rad/nuc detection systems.
- Assist the programs by conducting analyses of alternatives of the operational effectiveness, suitability, and life-cycle cost of numerous conceptual solutions to the rad/nuc detection problem to identify the most promising options.
- Establish performance requirements for RDT&E of required systems.
- Provide systems engineering support to DNDO product lines.
- Participate in the development and maintenance of standards and analyses of alternatives for rad/nuc detection equipment.

In support of these objectives, the systems engineering program will continue to conduct engineering reviews and analyses of alternatives for all major acquisition programs. As technologies are deployed, systems engineering will utilize operational data to refine and reevaluate modeling analyses of alternative deployment strategies and continue to conduct trade studies of high-priority architectural enhancement options. With an increasing emphasis on improving overseas scanning capabilities, there is also a projected subsequent increase in needed engineering support to overseas initiatives, including international activities in support of the GNDA.

A major effort, beginning in FY 2009, will be to provide in-depth systems engineering support to assist in the transition of initial ATD products into disciplined acquisition programs. Accordingly, systems engineering will continue to provide engineering services to all planning, conduct, and data evaluation for T&E activities (including those beyond ATD evaluations).

#### Systems Architecture:

Systems Architecture develops time-phased plans, or strategies, for improving the probability of mission success, i.e., improving the chances of detecting and interdicting rad/nuc attacks. Plans are developed jointly with DNDO’s interagency partners and in close coordination with other DNDO offices such as Operations Support and State and local affairs. The time-phased plans are focused on addressing the most important gaps in the existing GNDA. Studies and analyses are performed to

characterize the gaps, identify options, evaluate the advantages and disadvantages of alternative solutions, and formulate time-phased plans for reducing risk. The time-phased aspect of the plans is important because it allows for the integration of current and near-term technologies and approaches, as well as longer-term options that may draw upon technologies that are currently in the R&D phase and that may not be available for implementation for several years.

The principal focus of DNDO's systems architecture efforts since FY 2006, when the initial baseline architecture analysis was completed, has been to identify ways to address the largest gaps in the border layer—namely, air, maritime, and land pathways between designated POEs—and gaps in the domestic interior layer. These efforts are summarized below in the accomplishments by fiscal year.

Significant accomplishments in FY 2007 include:

- Initiated tests and field evaluations of rad/nuc detection technologies and concepts of operations (CONOPs) in support of the Border Patrol.
- Developed options and recommendations for hardening blood and research irradiators.
- Provided architectural program assistance to implement rad/nuc detection for commercial vehicle inspection (CVI) in additional states, beyond those already engaged in such programs.
- Completed development of the PRND Program Management Handbook and the CVI module, and initiated development of the Small Maritime Craft module.
- Initiated planning for initial set of facilitated deliveries of the PRND Program Management Handbook Program Assistance to prioritized States. The program assistance is designed to use the Handbook and its module(s) as guides for the States in developing or enhancing their PRND programs, resulting in an actionable implementation plan to achieve their PRND program goals. Planned PRND handbook modules include: CVI, maritime, and special events.
- Collected FY 2007 data from federal agencies for the annual GNDA program and budget crosscut that reflects the investments of all Federal agencies involved in nuclear detection.
- Developed and documented regional nuclear detection strategies/architectures in Northeast Asia and North America.
- Began planning rigorous equipment evaluation to identify rad/nuc detection equipment to enhance CBP's operational capability in the international general aviation environment.
- Identified International Commercial Scheduled Passenger (ICSP) operations as the next element of civil aviation targeted for analysis and piloting of rad/nuc detection methods, equipment, and CONOPS.
- Commenced analysis of options for implementing rad/nuc detection in ICSP, in partnership with CBP, TSA and the Department of Energy (DOE), and other agency partners and stakeholders.

FY 2008 planned accomplishments include:

- Prepare the first Joint Annual Review of the GNDA, as required by Sec. 1103 of the "Implementing Recommendations of the 9/11 Commission Act of 2007."
- Analyze architectural options for 100% overseas scanning mandated by the "Implementing Recommendations of the 9/11 Commission Act of 2007."
- Provide technical support on information analysis and data fusion components of the Secure Freight Initiative (SFI) and 100% overseas scanning requirements.
- Provide rad/nuc risk assessment inputs to the Integrated All-CBRN risk assessment mandated by HSPD-18, "Medical Countermeasures against Weapons of Mass Destruction," dated January 31, 2007.

- Develop an initial draft of the global nuclear detection guidelines document in support of the Global Initiative to Combat Nuclear Terrorism (GI).
- Develop and document regional nuclear detection strategies/architectures in South Asia, the wider Caribbean region and the Great Lakes.
- Provide architectural program assistance to implement rad/nuc detection for CVI in additional states.
- Provide support to the Operations Support Directorate in conducting additional facilitated deliveries of the PRND Program Management Handbook program assistance to prioritized States. Delivery will include a focus on the CVI module, when applicable to the receiving State. After receiving the facilitated program assistance, States will have identified the people, programs and equipment needed to execute a fully functional PRND program, and developed an approved implementation plan to achieve their PRND program goals.
- Complete development of the Small Maritime Craft Module to the PRND Program Management Handbook, and initiate development of the Special Events module.
- Continue field evaluations of rad/nuc detection technologies and CONOPs to support the Border Patrol, and formulate recommendations on acquisition and deployment beginning in FY 2009.
- Facilitate source security recommendations for hardening blood and research irradiators containing cesium (Cs-137) sources.
- Complete the development of the interagency action plan for “Public Education” on RDDs, as called for by the Radiation Source Protection and Security Task Force established by the Energy Policy Act of 2005.
- Expand the maritime dimension of DNDO Program Assistance to provide additional support to states with major ports and navigable waterways (Miami, Florida and Los Angeles/Long Beach and San Francisco Bay Area, California).
- Complete a maritime background radiation study on small vessels to measure normal background and hull impact to onboard sources with various types of small vessels (less than 300 gross tons).
- Analyze and develop architecture options for bulk, break bulk, and tanker maritime vectors.
- Continue engagement with foreign (e.g., European, Central and South Asian, North Pacific Rim, North America, and Southeast Asian) partners on establishing regional rad/nuc detection architectures.
- Formulate a Joint Acquisition Strategy (JAS) with CBP (Air and Marine) that will achieve similar goals as the DNDO-USCG JAS, including a field evaluation of capabilities for CBP Air and Marine, as well as, the CBP Border Patrol riverine units.
- Complete evaluation of representative COTS and GOTS rad/nuc detection equipment to determine whether CBP’s detection capability in the international general aviation arena can be materially enhanced at an acceptable total cost by adoption of currently available technologies or modification of the manner of use of currently implemented technologies.
- Based on outcome of international general aviation equipment evaluation referenced above, design an acquisition plan to equip CBP more fully to perform the rad/nuc screening mission in the international general aviation environment.
- Plan and conduct a series of site visits to commercial airports to gather data required to plan pilot studies of rad/nuc screening of personnel (passengers and crew), carry-on bags, checked baggage, and the aircraft itself in the international commercial scheduled passenger (ICSP) environment.
- In cooperation with CBP, TSA, and other agency partners and stakeholders, plan and conduct joint activities with Canada and Mexico under the Security and Prosperity Partnership (SPP) to

enhance cooperation with respect to rad/nuc screening in the international general aviation and ICSP environments.

FY 2009 Planned Accomplishments include:

Systems Architecture will continue to work to enhance individual components (i.e., individual detection “layers” or threat pathways) of the initial baseline architecture. However, the principal focus of system architecture work in FY 2009 will shift. The emphasis will be to strengthen the architecture by addressing remaining challenges, beyond those addressed in FY 2007-2008.

Specific efforts will include:

- Foreign Borders and Ports:
  - Complete and publish GNDA model guidelines supporting the GI.
  - Continue to pursue implementation of an engagement strategy for regional rad/nuc architectures for key regions, such as South Asia/Black Sea.
  - Continue to strengthen U.S foreign maritime borders by completing the SPP North America Maritime Detection Architecture in partnership with Canada and Mexico. Finalize combined training & exercise plans, reachback, and information sharing agreements.
  - Provide architecture support for a bilateral rad/nuc detection capability-building program with Mexican Customs and other Mexican organizations, to include equipment, training, protocols, technical reachback, exercises, etc.
  - Continue engagement with foreign (e.g., European, Central and South Asian, North Pacific Rim, Wider Caribbean Region, and Southeast Asian) partners on establishing regional rad/nuc detection architectures. Launch combined training and exercise planning.
  
- Domestic Ports, Borders, and Interior Transportation Layer:
  - Develop long-term and transformational architecture options for land borders between POEs.
  - Facilitate source security technical assistance in additional cities, building on lessons learned.
  - Provide architectural assistance to implement CVI and other PRND Program Management Handbook modules in additional states.
  - Provide support to the Operations Support Directorate in conducting additional facilitated deliveries of the PRND Program Management Handbook program assistance to prioritized States. FY 2009 deliveries of the Program Management Handbook will also include delivery of the CVI module and the small maritime craft module, as applicable to the States receiving the program assistance.
  - Execute DNDO’s component of the multi-agency RDD Public Education program under the Radiation Source Protection and Security Task Force.
  - Continue support for the Radioactive Source Protection and Security Task Force and its Implementation Plan.

*Aviation:*

- Select, qualify, and acquire rad/nuc screening equipment (for transfer to CBP) to enable CBP more fully to perform the rad/nuc screening mission in the international general aviation environment.

- In close coordination with CBP, TSA and other operating agencies and stakeholders, conduct pilot studies of various rad/nuc screening equipment suites and CONOPS variants to introduce rad/nuc screening into the ICSP environment.
- Continue joint activities with Canada and Mexico under the SPP.

*Maritime:*

- Through DNDO Program Assistance, establish relationships with Federal, State, and local stakeholders in the ports of the Great Lakes System (Chicago, Detroit, Buffalo, and Alexandria Bay) and Galveston, Texas.
- Monitor existing relationships in the maritime sector, established through DNDO Program Assistance in FY 2007 and FY 2008, and continue to collect and share lessons learned.
- Continue to support the DNDO-USCG Joint Acquisition Strategy (JAS) and the DNDO-CBP Air and Marine JAS to provide next-generation rad/nuc detection equipment with greater capability.
- Improve partnership with TSA to build on pilot programs for passenger/vehicle ferries and cruise ships. Explore initiatives leading to possible JAS with TSA maritime program.
- Partner with the USCG to fully develop rad/nuc scenarios into the USCG Maritime Security Risk Analysis Model (MSRAM).
- Analyze and develop architecture options for various vectors, which may include: tug and barge, inland waterways, passenger/vehicle vessels, and cruise ships.

In addition, in FY 2009, DNDO will again update the annual GNDA program/budget crosscut and the Joint Annual Interagency Review of the GNDA.

| <b>2008 Enacted</b>          | ---                 | ---        | <b>\$118,100</b>  |
| 2009 Adjustments-to-Base     | ---                 | ---        | \$0               |
| <b>2009 Current Services</b> | ---                 | ---        | <b>\$118,100</b>  |
| 2009 Program Change          | ---                 | ---        | <b>(\$10,000)</b> |
| <b>2009 Request</b>          | ---                 | ---        | <b>\$108,100</b>  |
| Total Change 2008-2009       | ---                 | ---        | <b>(\$10,000)</b> |

DNDO requests \$108.100 million for this activity. This is a decrease of \$10.000 million below FY 2008 Enacted, reflecting one time additions in FY 2008 for new non-port of entry initiatives.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

**Systems Development:**

DNDO is responsible for ensuring that the Nation maintains a preeminent research and development program to address the technical challenges in radiation detection science and technology, while at the same time capitalizing on the benefits of integrating this program with larger acquisition efforts. In response, DNDO has implemented a consistent development methodology to address technical requirements arising from gaps in operational capabilities and to meet user requirements. An example of a current user requirement is for rad/nuc detection technology at POEs to integrate with the CBP network. Technical requirements cover areas such as improving passive rad/nuc detection and identification capabilities and providing the radiographic ability to automatically detect high-density “shielding” materials.

DNDO’s methodology begins with the competitive selection of multiple vendors to facilitate engineering development, with the resulting delivery of engineering development models (EDMs). EDM units are used for data collection, initial capability demonstration, and design refinement. Subsequent to EDM design efforts, manufacturers develop and provide Low Rate Initial Production (LRIP) units representative of the production design. LRIP units undergo developmental and operational T&E and field validation prior to entry into full rate production and deployment. Each system is delivered with appropriate training and logistics products as required by the end user. Cooperative efforts with customers ensure that response protocols are developed, deployed systems are operated properly, and alarms are appropriately resolved and reported.

*Radiation Portal Monitor (RPM) Program:* A critical component of the DNDO nuclear detection architecture is a passive Radiation Portal Monitor (RPM) suitable for examining cargo containers, trucks, and privately-owned vehicles. In FY 2007, DHS deployed passive RPMs at land and sea-based POEs. At each POE, RPMs are installed in a primary scanning location to survey cargo and vehicles. DHS installs additional RPMs and deploys handheld radioisotopic identification devices (RIIDs) into secondary scanning locations to further investigate primary alarms.

The first-generation RPMs currently operated by CBP detect radiation based on polyvinyl toluene (PVT) gamma-ray sensors and Helium-3 ( $^3\text{He}$ ) neutron sensors. DNDO is developing Advanced Spectroscopic Portal (ASP) systems, which utilize sodium iodide (NaI) or high-purity germanium (HPGe) gamma sensors and  $^3\text{He}$  neutron sensors. The ASP technology uses the gamma radiation spectrum from the inspected material to make a detection and identification decision. This ability to differentiate between threat material and naturally occurring radioactive material (NORM) reduces the number of alarms due to non-threat sources and dramatically improves the probability of correctly identifying and interdicting smuggled nuclear material.

DNDO initiated the ASP program with the development of a fixed cargo portal unit. An SUV-based detector based on ASP technology is also being developed for use by State and local law enforcement officials and potentially other users.

As the ASP program continues, DNDO continues to evaluate radioisotope identification algorithms to optimize system performance.

DNDO will continue to analyze concepts and options for radiation scanning of cargo containers, trucks, and privately-owned vehicles at low volume POEs and on-dock rail at seaports. Development efforts will respond to user requirements and will identify viable technology solutions (if any).

Significant accomplishments in FY 2007 include:

- Collaborated with CBP to refine operational requirements and began implementation of all necessary engineering changes for ASP cargo portal units for deployment in sole secondary scanning applications.
- Conducted significant development on the design of ASP cargo portal units.
- Completed initial performance and field validation testing and data collection of ASP cargo portal units at the Nevada Test Site (NTS), New York Container Terminal (NYCT), and several operational POEs.
- Completed initial developmental testing of ASP cargo portal units.
- Completed environmental testing of ASP cargo portal units at accredited laboratories and contractor facilities.
- Initiated a technology insertion program to evaluate and improve detection system algorithms.
- Initiated development efforts to design and procure an SUV-based ASP rad/nuc detection system to support the Securing the Cities (STC) initiative and the Southeast Transportation Corridor Pilot (SETCP).

FY 2008 planned accomplishments include:

- Complete peer review and threat testing for improved PVT RPM algorithms for use in primary scanning applications.

- Complete development, design, and testing of the ASP cargo portal unit production baseline for deployment in sole secondary scanning applications.
- Complete research, development, and testing of a SUV-based EDM ASP system in support of the STC initiative and SETCP.
- Continue ASP technology evaluations and improvements of radioisotope identification algorithms.
- Refine requirements and CONOPs for mobile passive rad/nuc detection systems.

By FY 2009, the ASP cargo unit is expected to be in full rate production and deployment for use in sole secondary scanning applications. Follow-on fixed ASP development will be conducted as a “block upgrade” to systems, to meet CBP requirements for primary scanning. This upgrade will be funded through acquisition funds, as all work will be done to improve an operational system.

Having developed the next-generation rad/nuc detection system by way of the fixed ASP portals in prior years, DNDO will focus FY 2009 systems development activities on existing challenges of the GNDA. These include international rail in the land border environment, on-dock rail in the seaport environment, and freight left on board in the maritime and aviation environments. Given the dynamic environment and the operational and technical challenges presented in these vectors, various technology solutions and CONOPs will be included in the analysis of alternatives. Based on these studies, development efforts will be initiated in response to stated user requirements and the identification of viable technology solutions.

In addition, DNDO will pursue feasible technology and operational solutions for low-volume POEs. Potential solutions may include mobile or human portable rad/nuc detection systems.

As determined by Architecture studies with the Border Patrol, DNDO will pursue feasible technology and operational solutions for rad/nuc scanning between ports of entry.

*Human Portable Radiation Detection Systems (HPRDS) Program:* The HPRDS program is structured to provide a wide variety of law enforcement and first-responder services with the capability to detect and identify terrorist nuclear explosive devices or RDDs. The program takes existing commercially available systems and tailors them to better meet the needs of operators, while at the same time, working to develop cutting-edge technology when current systems are demonstrated to be inadequate to meet customer requirements. Next-generation HPRDS provide key radiation detection, threat source identification, and notification capabilities to aid law enforcement officers in mitigating terrorist nuclear threats in both POE and non-POE environments.

These handheld, ‘relocatable’, and backpack systems are used as primary detection tools by Customs officers, Border Patrol agents and USCG personnel subsequent to interdiction. “Relocatable” systems refer to small detectors that are human portable, but not necessarily carried by the user during operation (systems would be put down for some period, then moved to another location for subsequent operations). Customs officers use this equipment as an additional inspection tool at POEs, while State and local law enforcement agencies and first responders use this equipment for queued search and secondary identification operations. HPRDS will also play a key role in initiatives to ensure that nuclear threat detection capabilities are afforded to newly emerging mission areas such as general aviation and maritime PRND early phased deployments.

The development of next generation handhelds, “relocatable”s, and backpacks is specifically focused on delivering significant improvements in the following areas: (1) improved system performance to find smaller amounts of threat material at greater distances, (2) improved radioisotope libraries to

accurately identify radioactive material, (3) improved computer algorithms for distinguishing between threat and non-threat materials with greater speed and accuracy, (4) reduced weight to make equipment easier to carry for extended periods, (5) improved displays to make the system easier to use, and (6) wireless connectivity for technical reachback to resolve alarms. HPRDS systems are being designed so as to easily facilitate phased improvements of early systems through the incorporation of these next-generation capabilities.

Significant accomplishments in FY 2007 include:

- Awarded five contracts for the HPRDS effort to one high-resolution sensor-technology vendor and four vendors who use medium-resolution scintillator technologies to incrementally improve systems in the near term.
- Initiated development of handheld and backpack units that have the potential to provide significant improvement in energy resolution, and, thus, the ability to more accurately identify threat materials along with a low false alarm rate.
- Initiated the standardization of the flow of raw sensor and algorithm-analyzed data to ensure rapid dispersal of spectra needing further validation as a threat or benign substance.. This supports the standardization of the data readers at CBP Laboratory Scientific Services (LSS) for rapid analysis and evaluation of spectra by more powerful algorithms than those deployed in the field.
- Initiated development of the human-factors-engineered standardized user interfaces and controls for handheld and backpack systems to be deployed in the next generation systems.
- Conducted two spectral data collection campaigns to support algorithm improvement.
- Developed improved algorithms to enhance utility of HPRDS devices in law enforcement operations.

FY 2008 planned accomplishments include:

- Conduct data analysis in support of a production decision for NaI-based systems. Continue system refinement for LaBr<sub>3</sub> systems to support a production decision in FY 2009.
- Conduct data analysis and requirements verification to allow DNDO to deliver the next-generation of production-ready HPGe-based handhelds.
- Conduct spectral data collection campaigns as needed to support algorithm improvement.
- Develop follow-on systems, including improved algorithms, optimized for non-POE operating environments and conduct a performance test to support production planning.
- Initiate rapid prototyping activities, if required, to meet non-POE requirements.
- Evaluate a small number of HPRDS Engineering Design Models (EDMs) in operationally relevant environments to assess and incorporate end-user feedback.

By FY 2009, the HPRDS development process will result in the delivery of the first production-ready handhelds utilizing LaBr<sub>3</sub> crystals. These systems will offer improved resolution as compared to current NaI-based systems, and thus will provide improved probability of correctly identifying detected radiation sources.

In support of all of these development activities, DNDO will also continue to improve the associated software utilized within the detectors. Based on additional data collection campaigns in FY 2008 and FY 2009, improvements will be made to the isotope libraries upon which these algorithms are built. Specifically, by FY 2009, DNDO will implement the next “block” of the isotope library to include multiple isotope combinations.

*Securing the Cities Initiative:* The Securing the Cities (STC) initiative seeks to design and implement an architecture for the coordinated and integrated detection and interdiction of illicit rad/nuc materials that may be used as a weapon within a major urban area. This initiative is a part of Secretary Chertoff's goal to "Continue to Protect Our Nation from Dangerous Goods." The initial STC engagement is being conducted with the New York City (NYC) region, which for the purposes of the STC initiative is defined as within 45 miles of the NYC border. STC stakeholders include NYC (New York Police Department, in particular), the counties proximate to NYC, the State of New York, the State of New Jersey, the State of Connecticut, the Port Authority of New York/New Jersey (PANY/NJ) and the Metropolitan Transportation Authority (MTA). State and local participation is incorporated into all aspects of the STC initiative through multi-jurisdictional working groups

RD&O funds provide for the RDT&E and limited demonstration of detection solutions to reduce risk along maritime and land pathways. Prior to significant implementation in FY 2008, DNDO will be discussing and analyzing, through studies and demonstrations, which PRND operation types will form the initial detection and reporting architecture. As operational costs tend to drive life-cycle costs, the program will initially focus on integrating detection capabilities into existing operations. Examples include, but are not limited to, fixed and mobile detection systems integrated into CVI activities, detection enabled law enforcement, and screening conducted for special events. Capabilities that may require additional operational costs include mobile teams sweeping areas of concern, chokepoint scanning at bridges and tunnels, roadway monitoring concepts, and options for reducing the risk posed by the small maritime vessel pathway. All operations will incorporate the means to characterize the nature of detection alarms, including mechanisms and procedures for referring alarm information to technical experts for adjudication.

Significant accomplishments in FY 2007 include:

- Assessed current PRND capabilities and needs of the NYC region.
- Provided subject matter experts (SMEs) for the development of CONOPs and Standard Operating Procedures (SOPs) for the region.
- Delivered rad/nuc detection training for State and local personnel.
- Conducted in-the-field operational workshops/exercises to evaluate CONOPs.
- Conducted operational assessment of the RadTruck mobile rad/nuc detection system, and generated unique requirements for the SUV-based ASP rad/nuc detection system.
- Developed mission needs, requirements, CONOPs, systems specifications, and related analysis of alternatives for fixed site detection system options.
- Began development of an initial supportability implementation plan. Development of the initial supportability plan was fully underway in FY 2007; however, completion of this initial plan is not currently anticipated until FY 2008.
- Began development and execution of a regional deployment strategy.
- Initiated a maritime PRND engagement in New York, New Jersey and Connecticut in support of the STC initiative.

FY 2008 planned accomplishments include:

- Develop and implement mechanisms to systematically document the regional architecture to allow for evaluation and improvement.
- Pending concept decision approval, initiate R&D of selected fixed site detection options, potentially as a rapid prototype.

- Complete development of the supportability implementation plan.
- Continue development and refinement of CONOPs and SOPs with assistance from SMEs.
- Conduct planning for a region-wide full-scale exercise.

In FY 2009, DNDO will complete the development and documentation of deployments to the NYC region. Additional DNDO activities will focus on operational T&E of the fixed site detection system, as well as the completion and implementation of a capability for detection system supportability. R&D of the fixed site system will be completed in FY 2009 to inform and enable the FY 2009 Acquisition effort. In addition, in FY 2009, DNDO will utilize the architecture analysis as documented in FY 2008 to assess the effectiveness of the regional architecture as implemented and to recommend options for future improvement.

The STC initiative will also undergo an independent assessment to evaluate the initial engagement with the NYC region. The results of this assessment will be utilized to inform DNDO, the DHS leadership, and the Congress as to the effectiveness of the STC approach in substantially enhancing the rad/nuc detection capability of a high-risk urban area. Should the assessment validate the STC engagement model and demonstrate a marked increase in rad/nuc detection capability, DNDO may consider additional engagements.

*Joint Integrated Non Intrusive Inspection (JINII) Program:* Fundamentally, detection of SNM is best accomplished with a combination of passive spectroscopic systems and advanced radiography systems. Together, these two technologies provide a capability to detect unshielded, lightly shielded and heavily shielded nuclear materials, components, and weapons that may be illicitly transported in cargo containers, air cargo bundles, or other conveyances.

While spectroscopic portals will provide a next generation capability to passively detect and identify unshielded or lightly shielded nuclear materials, no passive system can detect nuclear materials that are heavily or completely shielded. Radiography systems (using active imaging techniques) are a potential solution to the detection of this shielded material.

Current radiography systems, however, lack the ability to automatically detect shielded SNM. Current radiography devices, similar to two-dimensional x-ray devices used in a doctor's office, do not provide the capability to distinguish between innocent materials such as steel and aluminum, shielding materials such as lead, and threat materials, such as uranium or plutonium. Current radiography devices generally produce a simple gray-scale image that requires an operator to interpret. In the medical imaging field, successful use of simple x-ray radiography is made possible by the consistency of the expected outcome, and the extent to which deviations from this expected outcome indicate a problem (e.g. the dental x-ray of 'healthy' teeth is well understood; therefore, cavities are easily seen). Even in this simple case, each image might take a skilled professional several minutes to analyze. In the case of cargo inspection, the expected radiographic image is very uncertain. Given the seemingly infinite combination of items that may be loaded into a cargo container, two-dimensional radiographic inspection by CBP officers has proven to be quite time-consuming. While skilled CBP officers do find a variety of contraband (including guns, drugs, and people attempting to illegally enter the country), the existing radiography systems do not provide them with an appropriate tool to find shielded nuclear material quickly and consistently, as this material appears similar to many ordinary materials in a standard two-dimensional x-ray. In addition to the difficulty of finding shielded SNM in cargo because of its similarity to standard cargo, the labor intensive nature of the current machines inherently limits the number of scans which can be accomplished with the current staff of CBP officers.

Through the JINII program, DNDO and CBP will coordinate efforts to develop and acquire Non-Intrusive Inspection (NII) systems that perform the traditional contraband mission (i.e., drugs, explosives, money, etc.) as well or better than current systems and perform the shielded nuclear material mission with little or no impact on CBP operations. The JINII program has two main components. First, a test and evaluation campaign will be performed with currently deployed or soon to be deployed in FY08 NII systems to fully characterize their ability to manually detect shielded nuclear material. Simultaneously, a rapid research campaign will be performed to determine if simple methods are available to upgrade the currently deployed and soon to be deployed NII systems to incrementally improve shielded nuclear material detection performance. If methods are found, these methods will be fully developed and tested by DNDO.

Second, the JINII program will continue its development of the systems specifically designed to automatically detect shielded nuclear material at a high throughput rate. These systems, named Cargo Advanced Automated Radiography Systems (CAARS), will scan cargo containers or other conveyances of interest and provide an automated alert based upon the threat. The implemented technology will distinguish between low density non-threat materials such as aluminum and steel, and higher density materials such as lead, uranium, or plutonium. CAARS units will also be capable of the detection of traditional contraband such as high explosives and drugs, but may not do so with the same level of automation. Searches for traditional contraband will continue to require operator image analysis.

Significant accomplishments in FY 2007 include:

- Performed general NII capabilities study.
- Completed Preliminary Design Reviews (PDRs) for each of the three CAARS vendors.
- Began hardware and software development of approved CAARS prototypes.
- Conducted, in coordination with CBP, multiple analyses for CAARS, including the development of a preliminary joint CAARS production and deployment plan, a preliminary CAARS CBA, and a radiation health physics study.

FY 2008 planned accomplishments include:

- Initiate test campaign to fully characterize the ability of existing NII systems to manually detect shielded nuclear material.
- Perform study to determine if methods are available to upgrade existing NII systems to incrementally improve shielded nuclear material detection performance.
- Continue development of three prototype CAARS systems that are specially designed to automatically detect shielded nuclear material at high throughput rates.
- Complete Critical Design Reviews (CDRs) for each of the three CAARS vendors.
- Begin planning functions in preparation for an FY 2009 CAARS developmental test and evaluation campaign.
- Validation of NII test objects.
- Update the JINII health physics impact study.

The JINII program R&D phase will deliver three CAARS prototype systems in FY 2009. FY 2009 activities will focus on subjecting systems to an extensive test and evaluation program necessary to evaluate the technology. Prior to conducting the formal test, each of the three CAARS vendors will conduct a rigorous readiness test at their facility. The purpose of the readiness test is to verify that each of the prototype systems is functioning properly and will support the formal prototype test.

CAARS developmental test and evaluation (DT&E) will require a combination of conformity assessments to evaluate whether the systems meet the performance specification, as well as characterization of ultimate detection capability. The same methods used to characterize existing NII systems in FY 2008 will be used to characterize the CAARS prototypes.

The JINII program will also initiate a developmental campaign to upgrade existing NII systems in FY 2009, if warranted by the results of the FY 2008 research study.

The results of the CAARS DT&E will be compared to the results of the existing NII system T&E with and without incremental upgrades. The result of this study will be a cost benefit analysis (CBA) that will recommend one of the following based on the objectives of the JINII program: 1) Further acquisition of specific existing NII systems; 2) Acquisition of existing NII systems once upgrades are fully implemented; 3) Further development of the CAARS prototypes leading to acquisition and deployment; or 4) Some time sequence combination of the above. In FY 2009, DNDO will begin implementation of its recommendations, as applicable.

DNDO requests \$113.300 million for this activity. This is an increase of \$17.300 million above FY 2008.

CURRENT SERVICES PROGRAM DESCRIPTION:

**Transformational Research and Development:**

The evolving face of terrorism demands a long-term, continuous effort to improve our abilities to sense the presence of dangerous nuclear materials in the midst of deliberate shielding, masking, or other means of avoiding detection such as using lightly monitored border entry points. One of the primary motives for the establishment of DNDO was to create a mechanism for significant and sustained funding to seek innovative approaches in radiation detection technologies. DNDO has established a transformational R&D program to identify, explore, and develop scientific and technical approaches that will dramatically improve the performance of nuclear detection components and systems.

The DNDO transformational R&D mission is to identify, develop, and demonstrate technologies that fill major gaps in the GNDA. If a new technology performs successfully and the CBA is supportive, DNDO will inject the new technology into the field.

DNDO initiated one ATD in FY 2006 and another in FY 2007. As the requirements of the GNDA become better understood, DNDO is increasingly able to project a series of ATDs over the next decade to fulfill these requirements. A typical ATD is a multi-year effort. A number of programs are already identified and more will be added as technologies are conceived and developed:

- Intelligent Personal Radiation Locator (FY 2009 projected completion)
- Standoff Radiation Detection System (early FY 2010 projected completion)
- Shielded SNM Verification (early FY 2011 projected completion)
- Remote Emplaced Sensing (FY 2012 projected completion)

New ATD programs will be initiated based on successes in ongoing or future exploratory research, changes in the design threats, and changes in the architecture or advances made elsewhere in the community. These ATDs focus on capabilities that have been identified as necessary to improve or enable detection for critical threat pathways or scenarios, including small commercial maritime vessels, private maritime vessels, small commercial aircraft, private aircraft, non-POE land crossings, and State and local operations, as well as land, maritime, and aviation POEs. For instance, IPRL will have applications across State and local, maritime, and non-POE land crossing operations. Standoff detection will likely enable new operations in both maritime and State and local environments. Similarly, remote emplaced sensing may have applications in all of these venues.

Exploratory Research will be focused on potential techniques for closing gaps in the GNDA or substantially improving the performance or reducing the cost of rad/nuc detection capabilities. In addition, techniques to improve nuclear forensics will also be explored. Techniques will be explored to proof of concept (POC) phase. If the concept is proven to be successful, it is likely to be incorporated into a subsequent ATD. While not all Exploratory Research will proceed into development, the majority of these research projects will lay the foundation for important future exploratory work. Although many technical concepts will be addressed in Exploratory Research, the general areas that will be funded under the DNDO transformational R&D technology development roadmap will include:

- Semiconductor development;
- Microelectronics and Application Specific Integrated Circuits (ASICs);
- High resolution scintillators;
- High efficiency, low power replacements for photo-multiplier tubes;
- Large area imaging arrays;
- NII and active interrogation technologies (including nuclear resonance fluorescence; gamma and neutron induced fission, and advanced sources);
- Novel neutron detectors;
- Innovative materials;
- New signatures and unconventional methods of detection;
- Nuclear forensics tools to support the identification of individuals, locations, and materials after detection; and
- Advanced algorithms and predictive knowledge.

In addition to defining and executing the research programs previously described, transformational R&D is coordinated with other government agencies performing relevant R&D or with technology needs similar to those of DNDO. Examples of coordination include periodic technical working group meetings, evaluation teams that review proposals for one another's programs, and a signed formal R&D MOU between DNDO, DoD, DOE, and DNI. The agencies with whom DNDO coordinates include:

- DOE nonproliferation nuclear detection programs;
- DoD programs, including detection R&D programs at the Defense Threat Reduction Agency (DTRA);
- Department of State;
- Intelligence Community (IC);
- Transportation Security Administration (TSA);

- DHS Science and Technology Directorate (S&T) high-explosive detection technology programs; and
- National Science Foundation (NSF).

*Advanced Technology Demonstrations (ATDs):* The ATD program addresses a set of specific strategic goals with leading edge technology – in many cases with technology demonstrated conceptually under Exploratory Research – to develop a working prototype and conduct a realistic demonstration of capabilities. The results of the demonstration form the basis for a subsequent cost benefit analysis that is used to objectively determine whether the technology should transition to large scale commercial development. The ATD-to-CBA process allows for risk reduction in addressing technology developments early in the development phase. Each ATD effort is expected to last for a pre-defined period of time, usually from two to five years, depending on the maturity of the technology.

Significant FY 2007 accomplishments include:

- Continued the IPRL ATD, begun in FY 2006. Conducted the PDR in mid-FY 2007, following developmental testing and performance modeling activities throughout the year.
- Initiated a second ATD – Standoff Radiation Detection Systems (SORDS). Under this ATD, imaging techniques will be developed and evaluated for sensitivity, directional accuracy, and isotope identification accuracy, with a goal of extending the range of detection up to 100 meters, enabling a new class of airborne, land, and maritime applications.
- Announced a third ATD for Nuclear Alarm Resolution. A Request for Information was released in 2007, with the solicitation to follow in FY 2008.

FY 2008 planned accomplishments include:

- Continue the IPRL ATD. Conduct CDR in mid-FY 2008, and begin the final performance demonstration and test in late FY 2008.
- Continue the SORDS ATD. Conduct PDRs in early FY 2008 and CDRs in late FY 2008.
- Initiate a third ATD – SNAR. This ATD will develop and test systems to resolve alarms and definitively verify the presence of SNM in shielded and/or cluttered environment for: (1) future phased upgrades to NII and other screening systems; (2) rapid relocatable detection systems; and (3) human-portable detection systems.

Based on development concluded in FY 2008, the IPRL ATD will complete the demonstration and assessment phase late in FY 2009. A transition decision to enter into systems development is expected early in FY 2010. This ATD will result in devices that will have sufficient energy resolution and sensitivity to reliably discriminate between NORM, background, and potential threats. IPRL meets the stated needs of law enforcement, first responder, and counterterrorism officials, the IC, and others in routine activities and surveillance, maintaining constant vigilance at all defensive layers.

The SORDS ATD will allow DNDO to develop and evaluate key technologies such as gamma-ray imaging, advanced alarming algorithms, and sensor and data fusion techniques that may dramatically improve sensitivity and directional accuracy. Based on CDRs completed in late FY 2008, DNDO will begin a performance demonstration and assessment of this ATD in mid- to late-FY 2009. The demonstration and subsequent analysis will be completed by early FY 2010, with a transition decision expected in the second quarter of 2010.

The SNAR ATD, begun in FY 2008, will develop and test NII and other technologies to resolve alarms and definitively verify the present of SNM in shielded and/or cluttered environments. The program

has three principal applications as currently scoped: (1) future phased upgrades to NII screening and other radiography systems; (2) rapidly relocatable detection systems; and (3) human portable detection systems. Prototype development may include hand-portable, mobile, or fixed-gantry solutions utilizing low- and high-energy neutron sources, low-dose, monochromatic gamma-ray sources, and low-dose, hardened x-ray sources. PDRs will be conducted in early FY 2009, and CDRs will be held in the last quarter of the same year. Performance demonstrations are projected for FY 2010 with a transition decision in early FY 2011.

In FY 2009, DNDO will launch its fourth ATD – Remote Emplaced Sensors. This ATD will leverage advances in small, efficient directional detectors, devices and advanced distributed detection algorithms developed under the IPRL ATD and advances under the Exploratory Research program in innovative detection materials, as well as the results of the phenomenology studies characterizing the requirements for in-transit detection. This program will aim to significantly miniaturize technology, while still providing for a system that indicates isotopic identity of radiation sources. These sensors, when deployed, will develop distributed detection networks that are self-forming to facilitate use in remote locations with limited infrastructure, such as along the U.S. border between POEs. Preliminary design reviews are projected to be held in mid-FY 2009, with a final transition decision intended in mid-FY 2011.

*Exploratory Research:* This research program is principally designed to develop technologies needed to enable future ATDs, on both short and longer-term timescales. Projects are initially selected to address gaps in the GNDA. Innovative concepts that successfully complete every phase of development, including an initial feasibility evaluation, are typically brought to a PoC demonstration. A PoC demonstration is a laboratory test of a technological concept to demonstrate its potential and search for possible major technical barriers. This stage includes laboratory studies to experimentally validate analytical predictions from the feasibility study. In addition to efforts intended to foster ATDs, Exploratory Research will also provide capabilities to fundamental research requirements across the DNDO mission, to include performance modeling and improved algorithm development.

Significant FY 2007 accomplishments include:

- Continued the Exploratory Research program in support of future ATDs and via studies of physics-based phenomenology to understand and exploit the limits of physics for detection and identification of nuclear and radiological materials as well as enhanced detection mechanisms.
- Continued a total of 25 projects begun in FY 2006 at a total of \$24 million.
- Began a total of 18 new projects at a total of \$15 million.

FY 2008 planned accomplishments include:

- Continue the Exploratory Research program in support of future ATDs and via studies of physics-based phenomenology to understand and exploit the limits of physics for detection and identification of nuclear and radiological materials as well as enhanced detection mechanisms.
- Release a solicitation for new Exploratory Research projects with a primary focus on nuclear forensics, integrated multi-sensor detection techniques, and materials development.

Successful efforts in exploratory research will leverage gains in understanding from the FY 2007 and FY 2008 activities as the basis for the FY 2009 investigations. Projects will include both continuing efforts and new starts through a laboratory call for proposal and an industry Broad Agency Announcement. As solutions and concepts mature, technologies will transition either into enabling components for existing ATDs or will generate new ATD initiatives. Successful research originating

from the ARI will also transition to Exploratory Research or an ATD initiative. Material development is a central component of future detection systems and the search for new materials will remain a long-term priority. FY 2009 activities will see a focused effort on optimization of several promising radiation detection materials which have been discovered and developed over the last several years. Optimization includes characterization and fabrication efforts. The continuing search will include:

- Fusion of video and directional gamma detector images to allow for screening of vehicles at speed across multiple lanes of traffic;
- Experimental feasibility demonstrations of actively detecting SNM at distances greater than 100 meters;
- Particle accelerators configured to allow development of compact generators, to produce a agile photon sources as well as other particle beams such as muons;
- Distributed radiation detector systems to include data fusion and algorithm enhancements to enable high sensitive detection and tracking of radioactive sources;
- Pathway-related and proximity induced technologies for nuclear forensics analysis;
- Large x-ray detectors to enable volumetric imaging (e.g. Computed tomography) of large objects; and
- New high-resolution semiconductor detector materials that operate at room temperature and can be fabricated at large volume.

In addition, techniques will be examined for integrating explosives detection and metal detection with radiological and nuclear detection, achieving single system solutions.

*Academic Research Initiative (ARI):* The ARI is intended to engage the academic community in DNDO research goals, building a community dedicated to solving long-term, high-risk research issues. The ARI is also a key part of developing the next generation of researchers in nuclear detection technology. Through the FY 2007 NSF grant activity, 22 research teams were selected to begin research programs in areas such as next generation detection systems, nuclear forensics, detection material and detectors, and documenting key nuclear data while developing intellectual capital in relevant technical areas. The ARI is expected to grow as the academic community responds to this reliable, growing investment in nuclear related R&D by attracting more researchers and faculty from related disciplines in nuclear, particle, solid state, materials, accelerators, chemistry, plasma, astrophysics, etc, which in turn will attract more students and post-doctoral researchers.

Significant FY 2007 accomplishments include:

- Initiated the ARI with proposals solicited from colleges and universities through a dedicated research grant program with NSF.
- Made awards to 22 college and university research teams, totaling over \$8 million.

FY 2008 planned accomplishments include:

- Continue the ARI with proposals solicited from colleges and universities through a dedicated grant program with NSF.
- Conduct the first annual academic conference on nuclear radiation detection sciences and innovative techniques to detect illicit trafficking in radiological and nuclear materials.

It is anticipated that 11 of the 22 projects begun in FY 2007 will reach completion in FY 2009, producing 11 new graduates, as well as publications and theses on next generation neutron detection materials, high performing scintillators for passive gamma detection, and techniques for optimization strategies for sensor emplacement. An infusion of new scientists in nuclear detection and related fields are needed to generate creative, novel solutions and to replace our Nation's aging scientists in the National Laboratories and private industry. In addition to continuing the projects begun in FY 2007, additional projects will be selected by peer review to begin in FY 2008 and FY 2009, bringing the program into a stable steady state where new projects are added as older projects are completed. In FY 2009, the ARI will continue to expand to demonstrating long-term, stable funding to support new innovative ideas and nurturing the next generation of scientists.

| Total Change 2008-2009       | ---                 | ---        | <b>(\$5,500)</b> |

DNDO requests \$32.000 million for this activity. This is a decrease of \$5.500 million below FY 2008 Enacted. The decrease reflects the completion of construction of the Radiological and Nuclear Countermeasures Test and Evaluation Complex in Nevada.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

**Assessments:**

The research, development and acquisition process is anchored by an independent assessment through test and evaluation of technologies as they are developed, deployed, and operated. This approach is motivated by the requirement to thoroughly understand systems performance and potential vulnerabilities prior to deploying technologies, and to ensure an accurate awareness of systems' effectiveness once they are deployed.

Rigorous testing of detection systems against SNM in significant quantities and in realistic configurations is key. This capability will be improved by the completion of the Radiological/Nuclear Countermeasures Test and Evaluation Complex (Rad/NucCTEC). This facility provides a unique capability within the USG to bridge the gap between "bench-top testing" performed by developers and operational field-testing, including pilot deployments. Additionally, due to the unique challenges of scanning containers at intermodal seaports, the Port of Tacoma has been designated as the Rail Test Center for DNDO to evaluate operational protocols for radiation scanning without adversely impacting commerce, as required by the SAFE Port Act of 2006.

*Pilots:* A pilot program is an activity planned as a test or trial – a program that serves as a tentative model for future development. Through pilot programs, DNDO will conduct limited deployments of new or emerging rad/nuc detection technologies. Following a concise and predetermined trial period, DNDO will validate the ability of the equipment and/or system to support DNDO mission objectives and customer/stakeholder requirements, and, if proven to support or enhance existing capabilities, move into full implementation. Transfer to full implementation will focus not only on the transfer of

ownership to organizational stakeholders, but also the development of strategies and methods to enhance long-term supportability of the technology, post-pilot. Funds provide for limited R&D and robust T&E of pilot technologies, as well as associated deployment and assessment costs.

Significant accomplishments in FY 2007 include:

- Southeast Transportation Corridor Pilot (SETCP):
  - Conducted an initial technology demonstration of SETCP infrastructure, to include using Southeast Regional Reachback Centers and the JAC. This included successful detection of sources at several State sites, and communication of spectral data to State command centers, the JAC, and Regional Reachback centers.
  - Commenced installation and deployment of additional rad/nuc detection capabilities (fixed, mobile, and handheld) at weigh stations in Georgia, Kentucky, South Carolina, Tennessee, and Virginia under DNDO cooperative agreement awards. The additional detection capabilities augment existing capabilities in those States, and represented the first Cooperative Agreement awards made directly by DNDO.
  - Made awards of SETCP cooperative agreements to Alabama, the District of Columbia, Florida, Mississippi, and North Carolina, for rad/nuc detection capabilities, to include those using ASP technology. Modified SETCP cooperative agreement award with the Commonwealth of Virginia to provide an ASP SUV-based mobile system when available in FY 2008. These awards establish new capabilities in States that previously had minimal PRND capabilities.
  - Conducted a series of SETCP Workshops (in eight States, the District of Columbia, and Project SeaHawk) to strengthen individual State rad/nuc detection and alarm adjudication protocols. Documented State procedures, and ensured that they correlate to national protocols established by the JAC.
  - Identified State and local user requirements for the ASP SUV-based mobile system variant. Documented these requirements for the ASP system development effort.
- West Coast Maritime Preventative Rad/Nuc Detection (PRND) Pilot:
  - Initiated a 3-year West Coast Maritime Preventive Rad/Nuc Detection (PRND) Pilot for the Puget Sound and San Diego Region. This Pilot will provide early phased delivery of maritime PRND capabilities to stakeholders to gather lessons learned and improve effectiveness of wider deployment capability to other regions.

FY 2008 planned accomplishments include:

- Southeast Transportation Corridor Pilot (SETCP)
  - Complete the installation of new portal monitors at weigh stations in Georgia, Mississippi, North Carolina, South Carolina, and Virginia. Commission sites and train all personnel who will be involved in the operation and maintenance of equipment. Deliver COTS or next generation ASP mobile systems to Alabama, the District of Columbia, Florida, Kentucky, South Carolina, Tennessee, and Virginia.
  - Complete the development of regional detection and response protocols for the Southeast and conduct a Full Scale Exercise of SETCP infrastructure, to include using Southeast Regional Reachback Centers and the JAC. The Full Scale Exercise will include an evaluation of source detection within all SETCP-Member States; communication of spectral data to State command centers, the JAC, and Regional Reachback centers; and resolution of alarms.

- West Coast Maritime Preventative Rad/Nuc Detection (PRND) Pilot:
  - Baseline the existing PRND architectures for the Puget Sound and San Diego region for the West Coast Maritime PRND Pilot Project. Perform initial design activities to 1) assess geographic choke points and buffer zones to maximize opportunities to encounter, detect, and interdict rad/nuc threats, 2) develop initial deployment strategies and CONOPs, and 3) identify technology requirements (e.g. handheld/backpack, relocatable) and system integration approach.

FY 2009 planned accomplishments include:

- Southeast Transportation Corridor Pilot (SETCP):
  - Conduct retrofit installation of static scale portal monitors at weigh stations in Mississippi and North Carolina. As part of this effort, PVT portal monitor systems at the static scales will be replaced with certified ASP portal monitor systems to add identification capability to weigh station PRND capability.
  - Conduct a final Technology Demonstration of SETCP infrastructure, to include using Southeast Regional Reachback Centers and the JAC. The demonstration will include the detection of sources at retrofitted weigh station installations in Mississippi and North Carolina; communication of spectral data to State command centers, the JAC, and Regional Reachback centers; and successful resolution of alarms.
  - As part of the SETCP pilot exit strategy, finalize Best-of-Breed design package for weigh station portal monitor installations and package information for State and locals to use following completion of the pilot program. Design package will provide turn-key approach to planning, designing, installing and operating detection equipment at weigh stations and for States to develop means necessary to conduct PRND operations in a commercial vehicle inspection environment (to include coordinating resolution of alarms with the Federal Government).
- West Coast Maritime Preventative Rad/Nuc Detection (PRND) Pilot:
  - Building upon efforts conducted in FY 2008, DNDO will continue to support the West Coast Maritime PRND Pilot.
  - DNDO will complete the initial design and deployment of detection systems to the State and local maritime environment. Deployments may include commercially available or next-generation handheld or backpack units as well as mobile/fixed systems. An appropriate detection system may also be developed as a rapid prototype. These deployments will be used to conduct exercises to validate the CONOPs, procedures and protocols.
  - The pilot will include the development and implementation of a related training curriculum, as well as the initiation of a long-term supportability plan.

*Red Teaming and Net Assessments:* As part of the overall assessments mission of DNDO, continuous evaluation of overall effectiveness of implemented capabilities is required, including with adversary emulation, workshops, expert elicitation, modeling, vulnerability assessments, covert testing, analytical red teaming, and operational red teaming. These assessment tools are used to independently measure the effectiveness of our Nation's implemented PRND and reporting capabilities against a broad spectrum of validated adversary capabilities and intent. They can improve the effectiveness of our capabilities over time relative to the determined adversary. And they are used as part of a coordinated assessments cycle, using cooperative and adversarial approaches in assessing the effectiveness of implemented PRND capabilities. Assessments are tailored to meet the customers'

objectives and capability maturity levels and to provide an actionable set of recommendations for improvement.

The red teaming process tests the GNDA using only that information which would be available to the terrorist adversary. This emulation of the threat increases the probability that DNDO identifies and addresses weaknesses in the Nation's rad/nuc defenses and more importantly focuses on the effectiveness of these defenses against a resourceful and adaptive adversary. Analytical red teaming uses openly available information to develop realistic courses of action. Operational red teaming acts on these courses of action. Red teaming will contest the technologies, concepts, and approaches and provide insight into achieving a more robust capability. Covert testing, on the other hand, focuses on the performance of implemented capabilities by attempts to penetrate known defenses with material of interest. Both red teaming and covert testing are performed within the Red Teaming program.

The net assessments process measures the net effectiveness of implemented PRND capabilities and adversary capabilities. It tells us "how we are doing" against the adversary. This process incorporates findings and recommendations from a variety of assessment methods, including blue (or cooperative) assessment methods, surveys, modeling of probabilistic effectiveness, and expert elicitation, as well as from analytical and operational red teaming and covert testing.

When these various assessment tools are used in coordination, DNDO gains the benefits of both products by constantly refining defenses against the emerging operational environment. This continuous process will significantly improve global operational nuclear detection capabilities.

Significant accomplishments in FY 2007 include:

- Conducted red teaming of a State preventive rad/nuc detection program.
- Conducted red teaming planning and initial operations prior to a National-level exercise.
- Conducted joint red teaming with CBP Internal Affairs at the Top 22 seaports, addressing requirements outlined in the 2006 SAFE Port Act.
- Developed special nuclear material (SNM) surrogates for robust testing and assessments of the national reachback capability in its entirety.
- Coordinated with FBI and DOE to develop a framework for joint, no-notice operational testing of reachback functions and protocols and capability response mechanisms.
- Coordinated with other red teaming programs within DHS to share lessons learned and best practices, de-conflict operations, and develop a red teaming classification guide.
- Conducted a follow-on cooperative effectiveness assessment of national reachback capabilities, from the point of detection through alarm resolution.
- Conducted tailored surveys to provide an additional vehicle by which an independent and objective assessment of current and proposed training efforts can be evaluated.
- Developed a probabilistic model to evaluate the effectiveness of the threat to succeed.

FY 2008 planned accomplishments include:

- Continue joint assessments with CBP, completing red teaming and developing the strategy for follow-on testing, as per the requirements of the 2006 Safe Ports Act.
- Conduct adversarial assessments of both sea and land border POEs in coordination with CBP.
- Conduct two red team assessments in State venues, addressing detection capabilities and adjudication protocols.
- Complete an adversarial assessment of a national rad/nuc exercise.

- Provide a red team assessment of the maritime pathway, including USCG and TSA preventive rad/nuc detection capabilities.
- Conduct no-notice assessments measuring effectiveness of reachback and technical assistance programs.
- Evaluate effectiveness of the SETCP program.
- Partner with the National Security Agency (NSA) to assess classified DNDO IT networks, including existing and future pathways to the JAC.
- Develop methodologies for predicting potential adversary responses and reactions to the global implementation of rad/nuc countermeasures.
- Assess effectiveness of DNDO training efforts.
- Continue developing a probabilistic model to evaluate the effectiveness of the threat to succeed.
- Conduct global nuclear security environment assessment workshop for resourced net assessment development.

FY 2009 planned accomplishments include:

- Continue joint assessments with CBP
  - Implementing the strategy for follow-on testing as per the requirements of the 2006 Safe Ports Act
  - Conducting adversarial assessments of land border POEs
  - Conducting assessments of existing (non-POE) border rad/nuc security capabilities.
- Expand partnerships with DOE and FBI in the conduct of red teaming and operational assessments.
- Continue to develop and conduct red team assessments in State venues, addressing detection capabilities and adjudication protocols.
- Continue to develop models for predicting potential adversary responses and reactions to the global implementation of rad/nuc countermeasures, including the adversary's probability of success.
- Continue assessing effectiveness of DNDO training of State, county, and municipal law enforcement, first responders, and other preventive rad/nuc detection mission partners.
- Conduct joint Red Teaming assessments on Federal rad/nuc programs, with emphasis on maritime (USCG) and general aviation pathways (TSA).
- Conduct operational assessments of the Securing the Cities (STC) initiative.
- Conduct an international nuclear terrorism workshop for developing probabilistic models of adversary capabilities.
- Expand the scope of information developed in previous open-source studies and use improvised nuclear devices (IND)/RDD scenarios to conduct "no notice" exercises of various reachback and technical assistance programs.
- Develop a strategy and methodology for assessing the Nation's nuclear forensics capabilities.
- In conducting field operations, DNDO will provide continued support to CBP in completing Domestic Radiation Detection and Imaging requirements outlined in the SAFE Port Act of 2006 for the top 22 seaports by the first quarter of FY 2009. DNDO will use Red Teaming and other assessment tools to evaluate the effectiveness and the operational functions, plans, policy and training included in various DNDO programs, including STC, reachback, exercises and training, and nuclear forensics.
- DNDO will also develop and demonstrate an initial probabilistic effectiveness capability for evaluation and situational awareness of adversary capabilities, including the thread of adversary

decision making between intent and weapon delivery. As part of this, DNDO will conduct Nuclear Terrorism Workshops for developing this capability.

- Net Assessments will continue to evaluate the suitability of current and proposed operations. DNDO will assess the impact of adjustments made to the implemented PRND capabilities and provide insight for future consideration, while infusing the lessons learned from Red Teaming, Probabilistic Effectiveness Methodology, and other complementary assessments.

*Test and Evaluation (T&E):* T&E is committed to the independent and objective assessment of rad/nuc detection technologies, including systems developed by DNDO and Commercial Off-The Shelf (COTS) equipment. The T&E Division encourages multi-agency collaboration and peer review to ensure scientific integrity and to help support the rad/nuc detection needs of the entire US government. The T&E Division maintains relationships with subject matter experts within the DOE National Laboratory system and NIST to provide support in test design, analysis, and peer review.

The types of testing and evaluation support provided to DNDO include basic data collection to support system development and performance modeling, detector performance characterization, evaluations against performance specifications, evaluations to support DHS system acquisition milestones, and operational testing and field validation. The detection systems are evaluated against industrial, medical or naturally occurring radioactive material as well as SNM in significant quantities and in realistic configurations. The T&E Division establishes and maintains the necessary testing facilities and data acquisition infrastructure required to adequately and realistically test and evaluate the range of rad/nuc detection systems that encompass the global nuclear detection architecture. All testing activities will adhere to a disciplined approach of establishing testing objectives based on documented user requirements, detailed and peer-reviewed test plans, high standards of data quality, and above all, independent and objective evaluation of the test data.

As the number of programs has expanded within DNDO, the number of annual T&E testing campaigns has also increased. Beyond the ASP portal monitors and SUV mounted monitors, the HPRDS, International General Aviation, Maritime, and Non-intrusive Interrogation detection systems also require T&E. To perform rigorous evaluations for such diverse program mission areas, the T&E infrastructure expanded beyond the Nevada Test Site facilities and the Radiological/Nuclear Countermeasures Test and Evaluation Complex (Rad/NucCTEC). The T&E infrastructure now includes testing facilities at the L-Lake at SRNL for the maritime applications and the Port of Tacoma that has been designated as the Rail Test Center to evaluate scanning options at intermodal seaports, as required by the SAFE Port Act of 2006.

Significant accomplishments in FY 2007 include:

- In support of the ASP program, completed the most extensive test and evaluation campaign ever conducted for this type of rad/nuc detection system. Support included planning and executing tests, analyzing and reporting results, and establishing the infrastructure for the performance testing of ASP and PVT portal units at NTS and stream of commerce testing at NYCT.
- Completed plan and funding strategy for the Radiological / Nuclear Countermeasures Test and Evaluation Complex (Rad/NucCTEC) construction recovery effort.
- Finalized the DNDO "Test Site Selection Policy."
- Established the Laboratory Accreditation process, under the auspices of the NIST/National Voluntary Laboratory Accreditation Program (NVLAP), for laboratories seeking to test commercial rad/nuc detection equipment against standards.

- Initiated program to design the DNDO Central Information Repository that will enable archiving and retrieval of all DNDO Test and Evaluation campaign data.
- Finalized the Personal Radiation Detectors (PRDs) performance evaluation report for Federal, State and local responders.
- Began the development of comprehensive radiographic and active interrogation radiation emission signatures for the complete set of known or projected nuclear threats as part of the threat cataloguing activity.
- In accordance with the SAFE Port Act of 2006, establishes a Rail Test Center at the Port of Tacoma, Washington. The Rail Test Center will evaluate methods and systems to scan containers leaving a port by rail.
- Initiated the development of a multi-phased test strategy to assess CAARS capability to detect SNM and/or shielding materials, and the limitations of Large Scale Non-Intrusive Inspection (LS-NII) technique.
- Provided two test opportunities for HPRDS vendors to test their systems against medical, industrial, NORM and SNM sources at NTS.
- Continued to procure, develop, and maintain a supply of test articles, including threat-representative sources.

FY 2008 planned accomplishments include:

- Conduct planning and execution of at least seven (7) distinct data collection or test campaigns, including
  - Data collection, in collaboration with DOE, using updated ASP systems against bare SNM sources at LANL
  - Data collection using updated ASP systems at NTS to support injection studies
  - HPRDS test campaign
  - International General Aviation test campaign at Andrews Air Force Base
  - SUV Based ASP Variant L test campaign
  - Small maritime craft test campaign
  - ASP test campaign to support acquisition milestone decision for secondary screening application
- Collaborate with DOE to jointly perform threat injection studies to characterize the performance of the ASP and PVT portal monitors.
- Complete construction of the Rad/NucCTEC.
- Establish a maritime test bed.
- Continue to procure, develop, and maintain a supply of test articles, including threat-representative sources including weapon grade and reactor grade Plutonium.
- Implement the first phase of the Graduated Rad/Nuc Detector Evaluation and Reporting (GRaDER) program, for commercially driven and financed testing of COTS rad/nuc detection systems. DNDO will coordinate posting results with other DHS equipment lists, such as the Authorized Equipment List from the FEMA Grant Programs office.
- Collaborate with CBP in an effort to test the performance of Large Scale-NII systems for detecting both contraband and radiological/nuclear threats. Conduct an initial test campaign to characterize COTS LS-NII equipment for application to container scanning.
- Develop and deploy a Data Collection System (DCS) with the capability to archive and retrieve all DNDO T&E data.
- Continue evaluation of radiation scanning systems and protocol for intermodal rail ports.
- Develop a plan and capabilities for a rapid response test process.

In FY 2009, the DNDO T&E Division will continue to expand and provide a range of testing support services to DNDO development and acquisition programs, while also improving core T&E capabilities.

DNDO will begin nuclear operations at the Rad/NucCTEC in support of the DNDO mission. The staff and facilities at the Rad/NucCTEC will be available for use by other government agencies in coordination with DNDO. We will maintain the ability to respond to urgent test needs to support resolution of operational alarms, and we will complete the incorporation of T&E information from test campaigns conducted by other agencies (as agreed to by the partnering agencies) into the DNDO Central Information Repository to improve the ability of users to access and analyze the archived data.

Under the threat cataloging and analysis program, DNDO will continue to develop advanced computational techniques to generate the signatures for next generation active interrogation technologies applied to realistic target configurations. This analytic capability will enable DNDO to assemble objects suitable for active interrogation and advanced radiography tests. DNDO will continue to procure, develop, and maintain a supply of test articles, including high-fidelity (threat-representative) sources, and representations of stream-of-commerce NORM. This effort requires research into what generates alarms in the stream of commerce and then simulating with surrogates for testing.

DNDO will maintain and update the performance information of radiation detectors submitted by vendors to the GRaDER program. DNDO will coordinate the performance reports with other DHS equipment lists, such as the Authorized Equipment List from the FEMA Grant Programs office. By FY 2009, Phase I of the GRaDER will use the National Voluntary Laboratory Accredited Program (NVLAP) certified laboratories to test detectors' full compliance with the American National Standards Institute/IEEE Standards. If full compliance is met, vendors can apply for further testing against "Government Unique Standards" that incorporate detection requirements against SNM. The testing results will be reviewed by NIST and made available to the DHS Grants program and National Preparedness Directorate.

The rapid response testing process that was developed in FY 2008 will be exercised in FY 2009 to ensure the capability to respond quickly to urgent testing requests is adequate.

A number of developmental and operational T&E programs in support of system development and acquisition programs are planned for FY 2009. These will include ASP cargo and SUV-based variants, HPRDS, IPRL, SORD and JINII. The respective DNDO program offices will provide the funding for tests supporting these acquisition programs. There will be additional developmental and operational T&E campaigns to support detection systems suitable for the International General Aviation and Maritime Pilots.

T&E support for the LS-NII testing as part of the JINII Program will continue working with CBP testing more advanced LS-NII systems potentially capable of detecting SNM. Additionally, T&E will continue to support testing of dual beam high energy radiography systems as part of DNDO's Accelerated Technology Demonstration (ATD) efforts.

The FY 2009 transformational R&D program plan includes an initial ATD for the IPRL and SORDS programs. T&E will support this effort by providing realistic test sources and materials to use in government test campaigns for both the IPRL and SORDS.

PPA: OPERATIONS SUPPORT

|                              | Perm<br>Pos | FTE | Amount          |
|------------------------------|-------------|-----|-----------------|
| <b>2007 Actual</b>           | ---         | --- | <b>\$32,038</b> |
| <b>2008 Enacted</b>          | ---         | --- | <b>\$34,500</b> |
| 2009 Adjustments-to-Base     | ---         | --- | \$0             |
| <b>2009 Current Services</b> | ---         | --- | <b>\$34,500</b> |
| 2009 Program Change          | ---         | --- | <b>\$3,253</b>  |
| <b>2009 Request</b>          | ---         | --- | <b>\$37,753</b> |
| Total Change 2008-2009       | ---         | --- | \$3,253         |

DNDO requests \$37.753 million for this activity. This is an increase of \$3.253 million above FY 2008 enacted.

CURRENT SERVICES PROGRAM DESCRIPTION:

**Operations Support:**

While technology is a critical tool in combating the nuclear threat, it cannot be effectively overcome by this means alone. All detection and interdiction efforts must be conducted in coordination with Federal, State, local and tribal law enforcement agencies, as well as the larger intelligence and counterterrorism communities. Accordingly, while DNDO has initiated large-scale technology research, development, and acquisition programs, the Operations Support Directorate (OSD) is responsible for developing the information sharing and analytical tools necessary to create a fully integrated operating environment and establish additional protocols and procedures to ensure that the detection of unauthorized nuclear explosive devices, fissile material or radiological material is promptly reported to the Secretaries of Defense, Homeland Security and Energy and the Attorney General and other appropriate officials or their respective designees for appropriate action by law enforcement, military, emergency response or other authorities. DNDO must ultimately have the ability to integrate detection data and intelligence assessments in a near real-time environment to develop information that, as actionable knowledge, maintains an overall system and situational awareness. While this will require DNDO to closely interact with the IC as a developer of intelligence requirements and consumer of intelligence products, DNDO will not act as an intelligence collection agency. This integrated approach to detection and information analysis will ultimately provide a substantial improvement and efficiency in alarm resolution, threat assessments, data trend analysis, and, most importantly, overall probability of success.

To meet the Operations Support mission, DNDO has established the Joint Analysis Center (JAC). The JAC provides 24/7 capabilities to meet the Presidentially-directed objectives for rad/nuc defense as specified in NSPD-43/HSPD-14, "Domestic Nuclear Detection." The specific objectives are to:

- Maintain situational awareness of the Global Nuclear Detection Architecture (GNDA).
- Analyze information from the GNDA and share data with the Community of Interest to make the GNDA more effective.
- Ensure detection leads to an appropriate response.

To accomplish these objectives, the JAC provides situational awareness of the nuclear threat and detection activities through the sharing of information and databases with the IC, counterterrorism resources, Fusion Centers, FBI Joint Terrorism Task Forces (JTTFs), DOE, CBP, USCG, DoD, DOS, and other U.S. interagency partners, as well as State, local, and tribal law enforcement communities. The JAC also provides and coordinates technical support to Federal, State and local authorities to assist in the adjudication and resolution of rad/nuc detection alarms/alerts with a 24/7 operational support capability. JAC outreach to the Community of Interest, who are actual or potential users of radiation detection equipment or information, through systematic engagements and by expanding program development processes are critical steps in networking the entire GNDA.

The JAC Program consists of two major components:

- Analytical research and techniques and protocols that populate the knowledge base required to maintain situational awareness and facilitate alarm adjudication, while providing the 24/7 operational capability of the JAC; and
- The Joint Analysis Center Collaborative Information System (JACCIS), which provides the communication and information technology (IT) support, business process and adaptors in a Service Oriented Architecture (SOA) referenced adaptive framework to accomplish the mission of the JAC.

Two programs that are critical to the JAC mission are the Nuclear Assessment Program (NAP) and the Technical Reachback (TRB) Program. NAP, which was transferred from DOE to DHS as stated in Section 303(C) of the 2002 Homeland Security Act, provides rapid, accurate and actionable assessments of illicit nuclear trafficking events and the credibility of nuclear threat communications. TRB provides 24/7 regionally and nationally-based expertise to resolve alarms promptly and accurately. Both NAP and TRB are critical components of the Presidentially-approved alarm adjudication protocol, while contributing to and utilizing the information and communications infrastructure provided by the JAC.

The JACCIS provides the IT support for the JAC. When fully developed, the JACCIS will fuse and store data obtained by the GNDA, as well as all other pertinent data for use by the nuclear technical community, the nuclear policy community, and other members of the nuclear Community of Interest. The system will track detection events and provide alerts for events of interest, as well as the relevance to other known events. It will make available historical trends to refine protocols and search parameters and better inform the nuclear counterterrorism community. It is being designed to accomplish the mission using modular construction, such that additional features may be added as the GNDA and Community of Interest expand and adapt. This construct also facilitates the integration of requirements, both technical and operational, as the evolving characterization of the GNDA and its operational domains/pathways continue to be defined.

Significant accomplishments in FY 2007 include:

Joint Analysis Center (JAC):

- Accelerated and expanded upon the Proof of Concept effort toward developing the JACCIS, which integrate with new technology deployments such as ASP systems.

- Produced written, actionable analytical products related to nuclear/radiological detections and threats, nation-states and terrorist groups that could be associated with nuclear terrorism, and world-wide illicit nuclear trafficking and intelligence warnings for Federal, State, local, tribal, and other stakeholders.
- Continued development of the infrastructure required to meet the anticipated demand of State and local governments for rapid facilitation of radiation detector alarm adjudication and matured the real time connection between the National Operations Center (NOC), State and local fusion centers, and other radiation detection personnel and systems.

#### Nuclear Assessment Program (NAP):

- Continued providing rapid technical support of operational elements in the law enforcement, diplomatic, and intelligence communities.
- Completed approximately 150 written, formal assessment products.
- Provided 55 technical reports, training, and briefings to national and international audiences.

#### Technical Reachback (TRB):

- Continued operation of the National Reachback capability, supporting the radiation detection community with immediate spectral data analysis and reports for approximately 50 incidents.
- Integrated the DHS and DOE alarm resolution processes.
- Sustained two existing Regional Reachback networks, while enhancing the expertise of the technical personnel who support scalable capability through knowledge of equipment capabilities and limitations, intelligence situational awareness, and specific knowledge of end-user concepts of operations.

#### FY 2008 planned accomplishments include:

##### Joint Analysis Center:

- Deploy and beta test an initial operational automated system (the JACCIS) based upon the Proof-of Concept, including:
  - Comprehensive, accessible database on all deployed GNDA systems;
  - Real-time data links to existing networked detection systems;
  - Communications and situational awareness links to Federal operations and intelligence centers (a total of 48 data systems and 15 communications links);
  - Rapid and interactive links to technical reachback via an automated communication and data sharing system, linking first responders to regional and national-level technical experts;
  - Real-time automated radiation source license data verification and source tracking information to include automating and networking four agreement state license information under a pilot program with NRC and the Organization of Agreement States; and
  - Real-time access to intelligence, law enforcement, and detection event information in an integrated and collaborative environment.
- Maintain the 24/7 capability for coordination of information and technical support to the GNDA
- As State and local authorities become more involved in PRND activities, the JAC will coordinate with State and locals agencies on specific protocols and SOPs for alarm adjudication/resolution and develop the complimentary Federal procedures in support thereof.

##### Nuclear Assessment Program:

- Maintain a unique national capability designed to provide rapid assessments of nuclear threat communications, illicit nuclear trafficking events, and other nuclear terrorism indicators in order to assist DNDO, DHS, and other federal government decision makers.
- Maintain subject matter experts to analyze the technical feasibility, operational practicality, and behavioral resolve of communicated nuclear threats.
- Continue providing rapid technical support of operational elements in the law enforcement, diplomatic, and intelligence communities.
- Provide training and briefings to national and international audiences to include co-sponsoring the CIA University Nuclear Awareness Course.
- Provide daily reports of all-source information to enhance the situational awareness of the JAC and USG, including ongoing technical, operational, and behavioral analysis and evaluations of current cable and open source traffic.
- Present Nuclear Crimes Overview at 25 venues to educate over 600 participants from the International Law Enforcement Academy (ILEA) and CIA University.

#### Technical Reachback:

- Expanded operations of the National Reachback capability, supporting the radiation detection community with immediate spectral data analysis and reports for national level reachback request from DHS and State and local entities, while integrating the DHS and DOE alarm resolution processes.
- Sustain two existing Regional Reachback networks at four regional reachback centers, while enhancing the expertise of the technical personnel who support scalable capability through knowledge of equipment capabilities and limitations, intelligence situational awareness, and specific knowledge of end-user CONOPs.
- Develop analytical tools and conduct analysis for spectral adjudication, detector performance evaluations, data mining activities, and operational reports.
- Provide reachback tools and training to S&L radiation health professionals, assist S&L development of basic reachback capabilities, and integrate State experts into the national alarm adjudication protocol.

FY 2009 Operations Support programs will build upon the successes and progress of FY 2007 and FY 2008. OSD will embrace its responsibility to maintain and expand the NAP and TRB programs as the scientific foundations of the JAC. The engagements process will continue to develop a requirements data set from the State and local communities, through interactions and protocol development with both Tier I and II UASI cities. As these cities and other domestic regions implement PRND programs, OSD will provide an expanding and finer-tuned training and exercise regimen to develop these programs. Similarly, the growing GNDA will create and require additional expanded situational awareness. The JACCIS will be the IT solution to receive, manage, trend and report on the vast amount of radiation detection information that DNDO and its customers must process.

*Joint Analysis Center:* As rad/nuc detection technology is deployed across the Nation and in strategic areas around the world, the Federal government is committed to providing the necessary technical support to ensure that equipment is used effectively, alarms are resolved accurately, and the appropriate personnel are notified in the event of a legitimate detection of a threat. In recognition of this need, DNDO provides operational support services, including: 24/7 TRB support for alarm resolution, effective training and response protocols, and operational support coordination to ensure appropriate expertise is in place to support prompt resolution of rad/nuc detection alarms. The effective utilization of these services will assure that deployed equipment is properly used and alarm information is reported and escalated to response agencies when appropriate

The JACCIS Initial Operating Capability build-out will start in FY 2008 and will conclude with an operational capability milestone in FY 2009. This will allow for the effective sharing and use of rad/nuc detection information and intelligence from most, if not all, detection systems operated by DHS and Federal, State, and local partners to provide a greater situational awareness of the rad/nuc threat. By fusing the international and domestic detection streams and information generated by the intelligence and counterterrorism communities, the JAC will be able to provide a better informed decision making environment, enabling more effective alarm resolution, trend analysis, and threat awareness. Additionally, this information and analysis capability will be integrated with a detailed understanding of current and future detection system performance to increase our confidence in the global detection architecture. Furthermore, as the Operational Support program continues engagements to UASI cities, regional fusion centers, and JTTFs, and as the number and type of deployed detection systems increase, the need to update and enhance the JACCIS to accommodate the additional touch points is anticipated.

The JACCIS will enter “beta” testing during FY 2008, and reach initial operating capability in FY 2009, via a planned approach. Specifically, the JACCIS will provide the following major functionality:

- Radiation Events Management Component – This capability will enable requestors to submit a reachback request via a browser-based portal or through email. It will automate several key workflow tasks such as case routing, assignment, escalation, collaboration, and notification. It will also provide a single collaborative web environment for State and local operators, JAC operations support personnel, and technical reachback specialists to manage an event from initial request, through adjudication and resolution, to reporting. The interface will provide fully searchable historical information and metadata of each event to facilitate business process refinement, critique, and trend analysis. This component ensures that the JAC is well positioned to respond to the anticipated increase in call volumes for Federal reachback assistance as Federal, State, and local screening programs are introduced.
- Automated Technical Reachback Collaboration – The creation of this collaborative environment (contained within the Radiation Events Management Component) enables technical reachback specialists and JAC operations support personnel to efficiently manage reachback requests submitted by the community of interest. The system allows for management of key tasks such as the identification, prioritization, assignment, escalation, resolution, and notification of these reachback requests. This is a fundamental capability that ensures compliance with the timelines set forth in the Presidentially-approved alarm adjudication protocol.
- Nuclear Material Licensing Portal – Provides end-users critical assess to mission specific content.
  - NRC Category 1 and Category 2 Data Access – This information of planned shipments of licensed companies allows JAC operations support personnel to deconflict large-scale legitimate shipments with possible smuggling activities. JACCIS will allow search capability in this external database.
  - NRC Regulatory Database Access – The JACCIS user interface will contain content links to NRC information such as NRC Licensing Database and the NRC Seal Source Device Registry. These links will make information accessible through the JACCIS and will decrease time to adjudicate some alarms, and thus positively impact the throughput of commerce.
  - Agreement State Database Access – The JACCIS user interface will contain content links to Individual Agreement State Licensing Databases. These links will make information

accessible through the JACCIS and will decrease time to adjudicate some alarms, and thus positively impact the throughput of commerce.

- Global Incident Portal – The Global Incident Portal will be a key component of achieving situational awareness of the GNDA. This graphical interface will include user-defined views that will allow users to monitor events around the world and provide a closer view of specific events. The portal will leverage data feeds to display real time and historical data to complete situational picture. The Global Incident Portal will be the access point for:
  - State and Country Information – A mouse-enabled query to a map location will give varying types of historical and real-time information based upon user defined requests for that geographic location.
  - Radiation Detection Equipment Inventory – A mouse-enabled query to a map location will provide locations of specific radiation detection equipment. A State-wide map scaling will show all State equipment and its location, while a city-scaled map will bring up radiation detection equipment in the selected city’s environs.
  - Radiation Detection Equipment Status – As equipment is located via an inventory search described above, some equipment, such as radiation portals, will communicate with the JACCIS and report portal system health information.
  - Radiation Source Information:
    - On-line NORM in Commerce Information – NORM in Commerce reports are produced by the DHS Secondary Reachback Program. These reports alert the community of interest to the radiation characteristics of certain everyday products found in commerce. Making this information accessible through the JACCIS will decrease time to adjudicate some alarms thus positively impact throughput of commerce.
    - On-line Common Industrial Device Information – The JACCIS will provide the community of interest information on common equipment found in industry, such as well logging devices and radiography cameras. These products frequently are lost or stolen, and having information on their characteristics will help put the threat posed by this missing equipment in the proper context.
  - Real-time Intelligence Feeds – JACCIS will support and improve the effective sharing and use of appropriate information generated by the IC, law enforcement agencies, counterterrorism community, other government agencies and foreign governments to assist in defining a global nuclear materials situational awareness. The system shall fuse intelligence, law enforcement, and technical information to develop an overall picture of detection events, in accordance with ONDI-led Information Sharing Enterprise (ISE).
- Trend Analysis Tools – The system will provide tools that will allow trend analysis of nuclear detection assets, events, and the operating environments. These tools will enable intelligence, detection event information, geographic information and other factors to be processed for historical trends (e.g., operations modes, calibrations, thresholds, errors).
- Data Mining Tools – These tools will allow data discovery and fusion across a wide variety of Federal, State, and local systems. System information filtered by key word algorithms will be delivered to a web portal as soon as it is published, while filtering out unrelated data. The data mining function will connect to static sources (e.g. databases, documents) and dynamic sources (e.g. events, RSS feeds). The resulting information is integrated into a clear, comprehensive presentation that identifies data linkages of importance to the user.
- Data Storage Medium – The JACCIS will accept and store input from RPMs or other fixed detection equipment, gamma-ray spectra from radioisotope identifiers, readings from pagers or other handheld detection equipment, and radiography or ordinary visual images. This data will be search-capable and will access remotely available databases for shipping, trafficking, source

licensees, cosmic-ray fluxes, medical, commerce, nuclear, and radiological supply chain data, etc. The system will also provide for storage of fused data.

- Service Oriented Architecture (SOA) Approach – Designing and implementing an adaptive information framework based on SOA best serves the entire nuclear community of interest from the State and local responder in the field to the technical reachback specialist at the National Laboratories. This is done by leveraging existing information capabilities (re-use), as well as introducing new ones, where needed, and applying user-specific business intelligence, calling up the core services to accomplish the stated mission. User interfaces will be tailored for each particular user community, allowing access to only information and services needed to accomplish the mission.

Also anticipated in FY 2009 is a need to work with Agreement States for databasing of radioactive material licenses. This program will expand beyond the four initial States done under a pilot project in the initial JACCIS system with a goal of contacting and databasing radiation licenses in all 36 agreement States.

*Nuclear Assessment Program:* In FY 2009, NAP will continue its mission of assessing communicated nuclear threats and monitoring worldwide illicit trafficking in nuclear and radiological materials, and assessing illicit nuclear trafficking incidents and trends.

Specifically, NAP will:

- Expand the scientific assessor pool to meet the growing needs of State and local agencies
- Provide rapid formal assessments of communicated nuclear threats and smuggling cases to DHS, DOE, NRC, and the diplomatic, intelligence, and law enforcement communities.
- Provide daily reports of all-source information to enhance the situational awareness of the JAC and USG, including ongoing technical, operational and behavioral analysis and evaluations of current cable and open source traffic.
- Present “Nuclear Crimes Overview” at 25 venues to educate over 600 participants from the ILEA and the CIA University.
- Enhance the archival and retrieval capability of the historical data maintained by the NAP and integrating this data across the COI.

*Technical Reachback Program:* By FY 2009, the demands for 24/7 TRB assistance at the Federal, State, local, and international levels are projected to be significantly higher than in prior years. Anticipated expansion related to new mission responsibilities on the international side, e.g., the Secure Freight Initiative, and domestic State and local deployments, e.g., STC and SETCP, are likely to increase the number, complexity, and urgency of alarm adjudication requests. In addition to these adjudication requests, TRB will be responsible for maximizing operations by continuously refining inputs to the decision-making process and fielded equipment. TRB technical personnel who will support this enhanced capability will be required to develop further their expertise through knowledge of equipment capabilities and limitations, intelligence situational awareness, and specific knowledge of end-user concepts of operations. The maintenance and operation of two established regional reachback zones (Northeast and Southeast) will continue and be accelerated through the direct impact of increasing deployments and domestic capabilities. In addition to their being increasingly vital in alarm resolution, these regional nodes will assist DOE with the recruitment, training and development of first-rate spectroscopists.

*Training and Exercises Program:* The OSD Training and Exercises Program both develops and implements rad/nuc training and exercises for Federal, State and local law enforcement and emergency responders. The Training and Exercises Program’s main objectives are to increase operational

detection capabilities at the Federal, State and local levels; develop and exercise protocols and standards for effective use of radiation detection equipment and associated alarm resolution and reporting processes; and develop training curricula in support of emerging detection technologies. Additionally, the Training and Exercises Program supports National Security Special Events (NSSE), DHS Special Events and elevated threat conditions, as required.

Significant accomplishments in FY 2007 included:

- Trained over 2,000 State and local operators in Basic, Intermediate and Advanced PRND courses.
- Conducted SETCP rad/nuc alarm adjudication workshops for the nine SETCP States, the District of Columbia, and Project SeaHawk.
- Conducted the first phase of the SETCP technology demonstration.
- Participated in Ardent Sentry 07 and PINNACLE 07 Exercises.
- Supported DHS planning for and participated in the TOPOFF 4 Command Post Exercise (Spring 2007) and the TOPOFF 4 full-scale exercise (Fall 2007).
- Conducted operational rad/nuc detection exercises in New York and New Jersey.

FY 2008 planned accomplishments include:

- Train 2,400 additional Federal, State, and local participants in PRND operations.
- Conduct second and third phases of pilot courses of the Advanced Radiation Detection (ARD) curriculum and evaluate and modify, as required.
- Develop a State and local Spectroscopist Training course.
- Develop alternative training methods through a review of user needs and an analysis of delivery options.
- Integrate within the PRND training program FBI JTTF Executive Board and senior stakeholders in approximately 15 of the 45 Tier I and Tier II UASI areas.
- Conduct the second phase of the SETCP technology demonstration.
- Develop and lead the full-scale SETCP exercise.
- Support NSSEs (e.g., the Democratic and Republican National Conventions), DHS Special Events, and elevated threat conditions, as required.

In FY 2009, the Training and Exercises Program will continue its development, oversight and administration of the design, delivery, evaluation, and continual improvement of the PRND training curriculum. This training is directed by DNDO personnel and provided by contracted instructors in the vicinity of the requesting State or local agency and utilizes their own equipment. Additionally, the Training and Exercises Program will finalize development of a comprehensive Train-the-Trainer curriculum, including distribution of self-study courseware CDs to a wide spectrum of State and local law enforcement and emergency responder agencies. This indirect training will significantly increase the number, awareness and capabilities of PRND participants involved with the DNDO mission.

Operating within the previously established partnership with FEMA/NPD, DNDO will add its entire spectrum of training courses to the training curriculum within the Approved Federal Sponsored Course Catalog for the nationwide distribution of DNDO and FEMA/NPD-approved Federal courses.

Specifically in FY2009, the Training and Exercise Program plans to:

- Directly train 3,600 Federal State and local participants in PRND operations.

- Through the Train-the-Trainer courses and distribution of courseware indirectly train approximately 7,500 State and local participants.
- Develop and pilot a Reachback Course for State and local Radiation Health Officers.
- Continue integration within the PRND training program of FBI JTTF Executive Board Members and senior stakeholders in the remaining 30 Tier I and Tier II UASI areas.
- Participate in Workshops, Table Top Exercises (TTX), Drills and Full Scale exercises in support of DNDO regional pilot projects and programs for multiple domains (Aviation, Maritime, Interior, Ports of Entry and Securing the Cities (STC)).
- Participate in Workshops, TTXs, Drills and Full Scale exercises, including a Principal Level Exercise (PLE), in compliance with the Homeland Security Exercise and Evaluation Program (HSEEP) and as per the requests of federal, State and local agencies.
- Develop and lead seven (7) regional full-scale exercises
- Continue to support NSSEs, DHS Special Events, and elevated threat conditions, as required.

DNDO requests \$17.900 million for this activity. This is an increase of \$2.900 million above FY 2008 Enacted.

CURRENT SERVICES PROGRAM DESCRIPTION:

**National Technical Nuclear Forensics Center (NTNFC):**

DNDO’s NTNFC provides national-level planning, integration, development, advancement, assessment, and assured readiness of USG capabilities to conduct comprehensive and timely rad/nuc forensic analyses supporting attribution conclusions. The USG rad/nuc forensic capabilities include collection, processing, analysis, evaluation, and interpretation techniques, expertise, and equipment. In addition to its national nuclear forensics “systems integrator” mission, the NTNFC also leads DHS’s primary technical nuclear forensics mission to develop and sustain the national capability for nuclear forensics of pre-detonation rad/nuc materials. These capabilities are essential to terrorist and criminal investigations. Further, strategically communicated global awareness of U.S. capabilities can provide significant deterrence value to preventing such attacks, by deterring or dissuading nations that may wittingly or unwittingly provide nuclear materials or devices to a terrorist organization. If an attack is threatened or actually occurs, these capabilities will provide information essential to help prevent a follow-on attack, contribute to attribution, and ultimately prosecute those responsible.

The NTNFC is overseeing the development of technical capabilities to rapidly, accurately, and credibly conduct nuclear forensics to support the determination of the nature, origin, provenance, and pathways of:

- Interdicted or collected rad/nuc materials;
- Intact INDs, stolen nuclear weapons, and RDDs;
- RDDs after detonation; and
- Nuclear devices/weapons after detonation.

The NTNFC's overarching systems integrator mission provides centralized planning, evaluation, and stewardship for a comprehensive global capability that weaves together and leverages all relevant national agencies and capabilities, including DHS, DOE, DoD, FBI, DOS, and the Office of the Director of National Intelligence (ODNI).

The pre-detonation rad/nuc materials forensics mission is led by NTNFC as its primary R&D focus, which underpins the national-level stewardship and integration mission. This pre-detonation mission is focused on ensuring the capability to perform rad/nuc materials analysis, evaluation, and integration of all sources of technical information, including isotopic and chemical composition, physical structure, and material pathways; developing and sustaining pre-detonation concept of operations and technical capabilities to handle and analyze rad/nuc materials; and performing research and development to address gaps and shortfalls in the capabilities.

In sum, the NTNFC encompasses:

- R&D of rad/nuc materials collection, analysis, evaluation and interpretation techniques, tools, and capabilities;
- R&D of rad/nuc signatures, models, production processes, and evaluation tools;
- Research and development of the Nuclear Forensics Knowledge Management & Analysis System (KMAS) consisting of forensic information on rad/nuc materials, devices, signatures, processes and expertise, and tools for discovering, unlocking, linking, and managing the information;
- National-level program planning, integration and coordination, which covers activities prior to the use of a radiological or nuclear device to activities after its use, and for locations worldwide;
- Development of a spectrum of plans, quality assurance, evidentiary protocols, standards, training and exercises to assure readiness and to prevent atrophy of national capabilities; and
- Continuous review and assessment of NTNF requirements, capabilities, and gaps to focus and enhance national NTNF efforts and ensure they are fully integrated and ready.
- And, a critical new emphasis on evaluating nuclear forensics workforce and pipeline current health and prospects for the future, and fostering initiatives within academia and the national labs to assure a robust and enduring capability.

Significant FY 2007 accomplishments include:

- Established the NTNFC in DNDO as a national-level interagency office dedicated to advancing the Nation's nuclear forensic capabilities. Staffed the office with TNF experts from DHS, DoD, DOE, and the FBI.
- Evaluated and developed new isotopic, chemical, and physical forensic signatures that enhance the ability to characterize and discriminate radiological and nuclear materials.
- Initiated development of a Nuclear Forensics KMAS and demonstrated initial operating capability. This program aids discovery and use of diagnostic signatures of nuclear materials and related information, and includes the creation of nuclear fuel cycle process knowledge and analysis tools to rapidly link and interpret forensic measurements.
- In collaboration with partner agencies and laboratories, led and/or participated in field, laboratory, and senior policymaker table top exercises to validate and enhance NTNF capabilities.
- Enhanced NTNF capabilities through collaboration with DOS in support of cooperative international nuclear forensics activities, including GI, the International Technical Working

Group (ITWG) on Nuclear Smuggling & Forensics, and the international Nuclear Smuggling Outreach Initiative.

FY 2008 planned accomplishments include:

- Incorporate NTNF into national exercises, such as TOPOFF 4 and interagency homeland defense exercises, including Vigilant Shield and Ardent Sentry.
- Complete development of the interagency NTNF Playbook that describes NTNF capabilities, interagency coordination, and operation.
- Develop an NTNF Executive Course and outreach program that will provide senior government officials with a clear understanding of NTNF capabilities and operations.
- Conduct a senior executive-level tabletop exercise to improve awareness and enhance NTNF capabilities.
- Complete initial proof-of-concept signature experiments on oxygen isotopes, trace elements, and morphological features in uranium oxide materials.
- Continue collaboration with Canada and other foreign partners on rad/nuc signatures and cooperation, under the auspices of DOS.
- Develop and use nuclear material production timelines to: 1) link production processes and process changes with potential nuclear forensics signatures, and 2) capture nuclear material production process knowledge for future forensics scientists.
- Expand the use of the on-line collaborative environment, which uses a distributed architecture, by adding additional National Laboratories' forensic teams as nodes.
- Develop multivariate analysis methods for elucidating latent patterns and trends in disparate nuclear forensics data and information.
- Initiate an assessment of the health and prospects for an enduring nuclear forensics scientific workforce and pipeline which underpins the national capabilities. NTNFC will also begin fostering academic initiatives, outreach, and innovative projects in the nuclear forensics arena (e.g., radiochemistry courses of study, fellowships, and internships) to help build and sustain a robust and enduring national nuclear forensics work force and pipeline.
- Develop a consensus path forward on Reference Standards development for nuclear and radiological materials and continue capability development with the National Institute of Standards and Technology (NIST) and New Brunswick Laboratory (NBL).
- Determine path forward on high priority radiological materials signature development efforts, based on results of recent exercise and research results.
- Initiate a National Academy of Sciences assessment on nuclear forensics capabilities, infrastructure and workforce, with DNDO jointly sponsoring the effort with DOE, DoD, and FBI.

In FY 2009, DNDO will continue to manage and improve the NTNFC, while continuing to lead the development of the national capability for rad/nuc materials forensics. Plans for FY 2009 take into account the DNDO's focus for improving the national nuclear forensics expertise, as described below in the "NTNF Assessments and Exercises" section.

*Pre-detonation rad/nuc materials forensics:* NTNFC will continue to develop isotopic, chemical, and physical forensic signatures that enhance the ability to characterize and discriminate radiological and nuclear materials. Building upon ongoing activities the following efforts are planned:

- Begin development of predictive signatures for high-value trace elements.

- Initiate a capability for synthesizing uranium oxide materials under controlled conditions to develop and validate predictive signatures.
- Continue additional proof of concept experiments for developing high-value physical signatures of uranium oxide powders and provide a forensic capability for these signatures.
- Initiate the development of a capability to distinguish between new and established nuclear materials production programs based on materials analysis.
- Continue evaluation and validation of RDD materials comparative signatures that are useful when the radiological material has been removed from its original container and packaging.

*Nuclear Forensics Knowledge Management & Analysis System (KMAS):* The Nuclear Forensics KMAS will advance its capability and capacity to support rapid and credible interpretations of forensic data. The projected accomplishments include:

- Initial linking of foreign and domestic nuclear material production timeline information to determine the dominant processes that define or impact discriminating signatures;
- Demonstration of robust criteria for standard forensics data requirements for nuclear materials (e.g. enables data and information from illicit nuclear material trafficking events to be used in the prosecution of responsible individuals);
- Validation of the latest nuclear and radiological materials data and information to enable the delineation between domestic and foreign materials in forensics interpretations;
- Development of next generation multivariate pattern analysis tools and methods to articulate group membership or exclusion of nuclear forensic signatures;
- Deployment of confidence articulation methods in nuclear forensics interpretations;
- Deployment of the latest KMAS tools on the Homeland Security Data Network (HSDN);
- Expansion of the KMAS distributed network by adding additional DOE Laboratories as nodes; and
- Deployment of the latest KMAS interfaces (hardware/software) with the DNDO JAC and NAP, and the DOE NMIP.

*Cooperative International Nuclear Forensics Support:*

- In collaboration with the DOS and the DOJ, deliver NTNFC awareness and training to U.S. officials abroad who require an understanding of NTNFC capabilities and guidelines;
- Direct U.S. nuclear forensics efforts in support of the ITWG, including an international “round robin” nuclear forensics exercise;
- With DOS, expand the nuclear forensics partnerships and collaboration with allies and other countries.

In addition, beginning in FY 2009, DNDO will launch a dedicated effort to improve national nuclear forensics expertise and boost post-graduate fellowships in related fields at universities and National Labs. This will begin to re-supply the pipeline of nuclear forensics experts and maintain the Department’s ability to trace nuclear materials back to their origins.

*NTNFC Quality Assurance (QA):* DNDO will continue to support the FBI lead in developing and assessing an end-to-end quality assurance program to ensure that all laboratories supporting NTNFC capabilities meet established QA requirements. The NTNFC will collaborate with the FBI, DOE and DoD to enhance the program and to ensure continued preparedness among supporting laboratories. DNDO will support maintenance of the international Quality Assurance standards accreditation at the two primary “hub” laboratories – Savannah River National Laboratory (SRNL) and Lawrence

Livermore National Laboratory (LLNL). Additionally, the NTNFC will assess and report on NTNF partner laboratory efforts and compliance with QA requirements.

*NTNF Centralized Planning and Integration:* The NTNFC will review and update a detailed, interdepartmental playbook that describes NTNF capabilities, interagency coordination, and operation. The NTNF playbook will continue to serve as a ready guide and reference for senior government officials and agencies. It will support NTNF training and facilitate more efficient assessments of interagency readiness and performance. The NTNFC will also complete an interagency “Programs and Budget Crosscut” to ensure Departments’ priorities and programs are properly aligned. The NTNFC will also evaluate and update its NTNF Strategic Communications Plan.

*NTNF Training and Outreach:* The NTNFC will continue to develop and update its nuclear forensics awareness and training program that provides government officials with a clear understanding of NTNF capabilities and operations. Also, by partnering with DNDO’s Operations Support office, the NTNFC will expand its Nuclear Forensics Awareness Outreach training to State and local law enforcement officials. Additionally, NTNFC will continue the Outreach program in collaboration with the DOS and FBI to promote the NTNF program objectives in support of foreign allies. This effort will enhance the awareness of technical nuclear forensics operational capabilities and requirements to our diplomatic community overseas, and serve as a vehicle to raise awareness and foster cooperative activities that may be promoted via GI.

*NTNF Assessments and Exercises:* In its overarching capability stewardship role, NTNFC will complete an assessment of the health and prospects for an enduring nuclear forensics scientific workforce and pipeline which underpins the national capabilities. NTNFC will also continue fostering academic initiatives and innovative projects in the nuclear forensics arena (e.g., radiochemistry courses of study and internships) to help build and sustain a robust and enduring national nuclear forensics workforce and pipeline. DNDO’s efforts in this arena will be enhanced in FY 2009, which included funds to increase the number of post-graduate fellowships at universities and at National Labs in order to begin to re-supply the pipeline of nuclear forensics experts and maintain the Department’s ability to trace nuclear materials back to their origins.

NTNFC will continue to review and assess NTNF capabilities through a number of means. NTNFC will execute one large scale end-to-end field exercise annually. This Tier I Exercise will include all inter-agency governmental partners to include: DOJ, DOS, DoD, DHS, ODNI, DOE, and the National Laboratories. The training objectives will rehearse field sampling techniques, laboratory analysis and coordination, strategic communication flow and media output, law enforcement jurisdiction, assessment, adjudication, attribution protocols, and policy refinement. This Tier I Exercise will alternate between pre-detonation and post-detonation scenarios involving INDs and RDDs.

NTNFC will also conduct at least one Tier II Exercise annually. These policy and program training events will focus on the refinement of interactions between nuclear forensics stakeholders. The primary learning objectives will explore technical shortcomings, inter-agency gaps, and will pursue corrective actions based on After Action Reports and Lessons Learned. Tier III Exercises will be conducted annually between our partners to maximize didactic opportunities among our stakeholders. These events will take place in the form of senior level briefings, seminars, workshops, and informational exchanges.

Additionally, in its integration, oversight, and assessment role, NTNFC will continue to review and assess the capabilities of the other TNF provider agencies (for pre-detonation interdicted weapon and post-detonation debris) through active monitoring of the exercise programs of those agencies.

The NTNFC exercise program coordination is based on the planning and execution of an end-to-end exercise every two years. That exercise will be planned in the off years to ensure a schedule of leveraged and integrated building events that maximizes program efficiency and effectiveness. Common elements among the programs, such as lab analysis and data evaluation processes, will be exercised such that a single exercise meets the needs of multiple agencies/subordinate programs.

Importantly, NTNFC will continue supporting a National Academy of Sciences study on nuclear forensics capabilities, sponsored jointly by DOE, DoD, FBI, and DNDO to be completed in FY 2009.

Description of Item

This request will provide funding for the optimization of several promising radiation detection materials which have been discovered and developed over the last several years. Optimization includes characterization and fabrication efforts.

Justification

Exploratory efforts in radiation detection materials R&D over the last several years (with many of these efforts funded by DNDO) have yielded several very promising materials which would be significant improvements over the state of the art materials with respect to sensitivity, energy resolution, manufacturability, and cost. The current pace of development indicates that FY 2009 will require increased efforts on these materials to optimize compositions, and characterize and test these new materials adequately. However, these focused efforts should not dilute the ongoing efforts to find yet other new and maybe even more promising materials, utilizing and leveraging facilities which also have been developed over the last several years, many as a result of DNDO's investments. Hence, additional funding to move the existing efforts to the next level is required.

DNDO's exploratory efforts include discovery and development of high performing materials which would provide increased performance. Material requirements usually include high energy resolution, high stopping power, high detection efficiency, manageable growth, handling and cost, and lack of significant self-radioactivity. This usually translates into high density, high atomic number (Z), and includes, for scintillators, high light yield, high linearity, high transparency, and good material uniformity, while for semiconductors it includes appropriate bandgap, high resistivity, high charged carrier transport coefficients (e.g., high mu-tau), and again good material uniformity. It is clear that there are many requirements demanding to be satisfied simultaneously; hence the challenges of developing new materials are significant.

However, there are a number of new materials developed over the last several years which are now being shown to satisfy many of these requirements, in both scintillators and semiconductors. For example, scintillator materials are being demonstrated with higher light output than NaI or LaBr<sub>3</sub> (presently two of the best commonly used room temperature scintillator materials), and with linearity better than LaBr<sub>3</sub>. Also, semiconductor materials are being demonstrated with resistivities higher than CZT (presently one of the best room temperature semiconductors being used more and more often, but suffering from difficulty in manufacturing), and with charge transport coefficients and energy resolutions (e.g., 1%) approaching that of CZT. All of these materials have possibilities of further optimization and improvement, but this requires dedicated and focused efforts.

Just as important, many of these new and promising new candidate materials also promise to be more readily grown, and at lower cost, than their competitive state-of-the-art counterparts, such as LaBr<sub>3</sub> and CZT.

DNDO has defined a preliminary candidate list with strong contenders. This list is available if need be.

These materials involve several different programs at several different laboratories and industrial companies in collaboration with academic subcontracts.

Increased funding in FY 2009 will provide the required support for these focused efforts and will provide a high rate of return on past investments. The time intervening between now and FY 2009 will be used to allow preparation for the increased efforts. Thrust here would be to provide additional funds for both labor and equipment to support optimization of these materials. Much of the preliminary groundwork has been established for these promising materials, but the optimization is labor intensive. Some additional equipment expenses would further improve the efficiency of optimization.

There are two uses for these funds: labor and equipment:

- Labor:
  - Optimization is often a labor intensive activity, requiring many runs including setups, material preparation, data acquisition, and characterization. The labor force exists and is available for most if not all of the envisioned efforts.
- Equipment:
  - The intent would be to augment fabrication capabilities. DNDO prefers to emphasize the demonstration of feasibility and POC while minimizing capital equipment investments. This often is limiting in the optimization process for improving many materials. The thrust here would be to provide additional fabrication capabilities to a number of on-going programs whose labor force could support the additional capabilities since many of the facilities are automated (as necessitated by rigorous process control).

Finally, as part of the optimization process, the path forward to “real production” scenarios for a few selected candidate materials could be investigated. As is often the case, the path to real high volume production holds many unidentified challenges (e.g., cracking due to thermal stresses). The aim here would be to identify those production problems early in the R&D process, prior to transitioning the fabrication processes to actual mass production.

#### Impact on Performance (Relationship of Increase to Strategic Goals)

The FY 2009 funding request of \$10.000 million would directly improve DNDO’s ability to meet Strategic Goal 2: Prevention – Detect, deter, and mitigate threats to our homeland.

Particularly, the increase will fund the optimization and characterization of new materials which potentially will provide increased performance by enabling increased sensitivity for detection and increased ability to classify radiation sources via higher energy resolution. The intent is for these materials to ultimately be incorporated into future radiation detectors.

## **V. Exhibits and Other Supporting Materials**

### **A. Justification of Proposed Legislative Language**

Department of Homeland Security  
Domestic Nuclear Detection Office  
Justification of Proposed Changes in Research, Development, and Operations  
Appropriation Language

For necessary expenses for radiological and nuclear research, development, testing, evaluation and operations, [\$319,900,000] *\$334,200,000*, to remain available until expended. (Department of Homeland Security Appropriations Act, 200[8] 9)

#### Explanation of Changes:

No substantive changes are proposed.

### PPA Mission Statement

Systems Engineering and Architecture: DNDO Systems Engineering and Architecture programs are (1) developing an enhanced global nuclear detection architecture, including both domestic and international components, and (2) maintaining and supporting a disciplined systems engineering approach throughout DNDO. The global architecture comprises several key elements: a multi-layered structure of radiological/nuclear detection systems, deployed both domestically and overseas; a well-defined and carefully coordinated network of interrelationships among them; and a set of systems engineering-based principles and guidelines governing the architecture's design and evolution over time. From its initial stand-up, DNDO recognized the importance and need for the application of a systems engineering approach in achieving an integrated and balanced global nuclear detection system solution. Effective implementation and operation of detection systems begins with the design and development of reliable and maintainable systems, built to rigorous, established performance standards and specifications, while assessing total system performance and total ownership costs within the family of radiological/nuclear detection systems.

### Summary Justification and Explanation of Changes

|               | FY 2007<br>Actual | FY 2008<br>Enacted | FY 2009<br>Request | 2008 to 2009<br>Change |
|---------------|-------------------|--------------------|--------------------|------------------------|
| <b>Travel</b> | <b>\$132</b>      | <b>\$400</b>       | <b>\$405</b>       | <b>\$5</b>             |

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations.

|   | FY 2007<br>Actual | FY 2008<br>Enacted | FY 2009<br>Request | 2008 to 2009<br>Change |
|---|-------------------|--------------------|--------------------|------------------------|
| <b>Advisory and Assistance Services</b> | <b>\$2,796</b>    | <b>\$3,200</b>     | <b>\$3,264</b>     | <b>\$64</b>            |

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government.

|  | <b>FY 2007</b>  | <b>FY 2008</b> | <b>FY 2009</b> | <b>2008 to 2009</b> |
|--|-----------------|----------------|----------------|---------------------|
|  | <b>Actual</b>   | <b>Enacted</b> | <b>Request</b> | <b>Change</b>       |
| <b>Purchase from Government Accounts</b> | <b>\$10,207</b> | <b>\$6,320</b> | <b>\$7,385</b> | <b>\$1,065</b>      |

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified.

|                                 | <b>FY 2007</b>  | <b>FY 2008</b>  | <b>FY 2009</b>  | <b>2008 to 2009</b> |
|---------------------------------|-----------------|-----------------|-----------------|---------------------|
|                                 | <b>Actual</b>   | <b>Enacted</b>  | <b>Request</b>  | <b>Change</b>       |
| <b>Research and Development</b> | <b>\$17,037</b> | <b>\$12,480</b> | <b>\$14,046</b> | <b>\$1,566</b>      |

Research and Development includes costs for contracts for the conduct of basic and applied research and development.

**PPA Mission Statement**

Systems Development: DNDO Systems Development and Acquisition (SDA) programs serve as the radiological/nuclear detection systems research, development and acquisition component within DNDO. SDA is responsible for the engineering development, production, and all developmental logistics products associated with the current and next generation of nuclear detection systems. Product lines include radiation portal monitors (and associated materials development and facilitation), radiography (which includes non-intrusive inspection, or NII, systems such as the CAARS), human-portable systems, and integration programs to address the needs of our operational customers (Federal, State, local, and tribal authorities).

**Summary Justification and Explanation of Changes**

**PPA Mission Statement**

Transformational Research and Development: DNDO has established a transformational research and development program to identify, explore, and develop scientific and technological approaches that will dramatically improve the performance of nuclear detection components and systems. Dramatic technological improvements may be defined in a number of ways: in system or component effectiveness and performance characteristics; in cost of acquisition or maintenance; or in ease of operation by users in the field. R&D investments will be made based on competitive awards, with investigators in all sectors – government laboratories, academia, and private industry – encouraged to participate. This program will take advantage of the qualities and respective advantages of all three sectors to develop products, and will strongly encourage teaming among them.

**Summary Justification and Explanation of Changes**

|               | <b>FY 2007<br/>Actual</b> | <b>FY 2008<br/>Enacted</b> | <b>FY 2009<br/>Request</b> | <b>2008 to 2009<br/>Change</b> |

**PPA Mission Statement**

Assessments: The DNDO research, development, and acquisition process is anchored by an independent assessment of DNDO-mission related programs as they are developed, deployed, and implemented, as well as a continual assessment of the global nuclear detection and reporting architecture, through a variety of means. Assessments programs include test and evaluation (T&E) campaigns to characterize technologies and systems, execution of pilots with operational agencies to evaluate concepts of operation, red teaming assessments to deepen our understanding of adversary capabilities, and net assessments to identify the effectiveness of the planned and deployed global nuclear detection and reporting architecture.

**Summary Justification and Explanation of Changes**

**PPA Mission Statement**

Operations Support: DNDO Operations Support is responsible for supporting the situational awareness of the nuclear and radiological landscape and the global nuclear detection architecture, while directly facilitating the technical adjudication of rad/nuc incidents. Operations Support is responsible for supporting the situational awareness of the nuclear and radiological landscape and the global nuclear detection architecture, while directly facilitating the technical adjudication of rad/nuc incidents. Operations Support is the primary entity within DNDO that provides actionable analytical and intelligence assessment products for operational decision makers, and works directly with law enforcement and other Federal partners to determine indicators of nuclear terrorism and recommend possible response or interdiction. The capability of the JAC is the 24/7 DNDO information hub, and the essence of DNDO's rapid information reporting. Additionally, Operations Support develops training, exercises, information sharing capabilities, and analytical tools necessary to create a fully integrated operating environment to be used by Federal, State, tribal, and local law enforcement agencies, as well as the larger intelligence and counterterrorism communities.

**PPA Mission Statement**

National Technical Nuclear Forensics Center: DNDO provides national-level planning, integration, development, assessment, and readiness of an enduring national nuclear forensics capability—serving as the national “systems integrator” for USG nuclear forensics. This capability provides means for the collection, analysis, and evaluation of rad/nuc materials and associated evidence for the purpose of comprehensive and timely forensic analysis to contribute to attribution conclusions. The NTNFC’s nuclear materials R&D program supports the assigned DHS mission as the national capability provider for technical nuclear forensics of rad/nuc materials interdicted before a detonation. These capabilities are essential to criminal terrorism investigations in that they can serve to deter terrorist attacks, or if a threatened or actual attack occurs, to support the identification and ultimately prosecution of those responsible. DNDO will develop the technical capability to rapidly, accurately, and credibly execute the technical forensic requirements supporting attribution conclusions about the origins and pathways of intercepted or collected materials, intact rad/nuc devices, radiological dispersal devices (RDDs) after detonation, and nuclear devices after nuclear yield. In addition, this capability will directly support decision makers with information necessary to determine appropriate national security responses.

**Summary Justification and Explanation of Changes**

|               | <b>FY 2007<br/>Actual</b> | <b>FY 2008<br/>Enacted</b> | <b>FY 2009<br/>Request</b> | <b>2008 to 2009<br/>Change</b> |
|---------------|---------------------------|----------------------------|----------------------------|--------------------------------|
| <b>Travel</b> | <b>\$0</b>                | <b>\$200</b>               | <b>\$205</b>               | <b>\$5</b>                     |

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations.

| <b>Purchase from Government Accounts</b> | <b>\$9,603</b> | <b>\$13,509</b> | <b>\$16,313</b> | <b>\$2,804</b>      |

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The increase in funds from FY 2008 to FY 2009 is required to improve national nuclear forensics expertise by initiating post-graduate fellowships and related programs at universities and National Labs in order to begin to resupply the pipeline of nuclear forensics experts and assure an enduring nuclear forensics capability. The increase will also support more aggressive research and development of nuclear materials signatures required to trace the origins of those materials.

# BUDGET REQUEST AND SUPPORTING INFORMATION

## DOMESTIC NUCLEAR DETECTION OFFICE SYSTEMS ACQUISITION

### I. Appropriation Overview

**A. Mission Statement for Systems Acquisition:** The Domestic Nuclear Detection Office (DNDO) has management responsibility for all Department of Homeland Security (DHS) system procurement, deployment, and installation of the domestic nuclear detection architecture and systems to border crossings and seaports. This responsibility has since expanded to include acquisition equipment for other DHS components, including the U.S. Coast Guard (USCG), the Border Patrol, and Customs and Border Protection (CBP) officers at international general aviation airports. In addition, the DNDO acquisition program provides robust systems development, systems engineering, and test and evaluation programs. The methodology employed in this program ensures that acquired systems have been fully evaluated prior to any acquisition decisions, so that deployed systems are operated in a known and efficient manner. Deployed technologies will be accompanied by the appropriate training, exercises, and alarm response protocols. This will ensure that systems are operated properly, and alarms are immediately reported to the appropriate agencies and personnel.

### **B. Budget Activities:**

**Radiation Portal Monitor Program:** The Radiation Portal Monitor (RPM) Program was established at CBP in January 2002 with the objective of deploying RPMs at ports of entry (POEs) and providing the scientific and technical expertise to design, acquire, deploy, operate and maintain these systems. In 2005, DNDO assumed the responsibility of designing, acquiring and deploying the systems, and it has worked with CBP to establish a POE program to bring the latest technology to bear on the threat of illicit nuclear materials crossing our borders. A first generation of detector based on Polyvinyl-Toluene technology (PVT) has been developed and is being deployed.

A second generation of advanced radiation detection systems, known as Advanced Spectroscopic Portal (ASP) systems, is now being developed for CBP use at POEs. These efforts are part of the multi-layered strategy to keep U.S. POEs safe and secure by interdicting rad/nuc materials in five transport vectors: international mail and express consignment courier facilities (ECCFs), seaport terminals, international airports, land crossings, and rail crossings. The goal is to screen 100% of the cargo and privately owned vehicles entering the U.S. by FY 2014, while minimizing the impact on legitimate cargo.

**Securing the Cities (STC) Initiative:** The initiative seeks to design and implement a detection architecture to prevent illicit radiological or nuclear materials from being used as a weapon within a major urban area. This initiative is a part of Secretary Chertoff's goal to "Continue to Protect Our Nation from Dangerous Goods." The initial STC engagement is being conducted with the New York City (NYC) region, defined as within 45 miles of the NYC city limits. STC stakeholders include NYC (including the New York Police Department), the counties proximate to NYC, the State of New York, the State of New Jersey, the State of Connecticut, the Port Authority of New York/New Jersey (PANY/NJ) and the Metropolitan Transportation Authority (MTA). State and local participation has

been and will continue to be incorporated into all aspects of the STC initiative through working groups consisting of all relevant regional partners.

Human Portable Radiation Detection Systems (HPRDS) Program: The HPRDS program is structured to provide a wide variety of law enforcement and first-responder services with the capability to detect and identify terrorist nuclear explosive devices or radiological dispersal devices (RDDs). HPRDS provides key radiation detection, threat source identification, and notification capabilities to aid law enforcement officers in mitigating terrorist nuclear threats in both POE and non-POE locations. HPRDS fills existing shortfalls through either commercial-off-the-shelf (COTS) solutions tailored to existing concepts of operations (CONOPs) and operating environments or, where COTS systems are demonstrated to be inadequate, the development of cutting edge technology. These handheld, 'relocatable,' and backpack systems are used as primary detection tools by Customs officers, Border Patrol agents, and USCG personnel subsequent to interdiction. State and local law enforcement agencies and first responders use this equipment for queued search and secondary identification operations. HPRDS will also play a key role in initiatives to ensure that nuclear threat detection capabilities are afforded to newly emerging mission areas such as general aviation and maritime preventive rad/nuc detection early phased deployments.

**C. Budget Request Summary:** The Domestic Nuclear Detection Office requests \$190,700,000 for FY 2009 Systems Acquisition. DNDO is requesting an increase of \$60,950,000 over the FY 2008 Enacted amount of \$129,750,000.

## II. Summary of FY 2009 Budget Estimates by Program/Project Activity (PPA)

| 2009 Program Change          | ---                 | ---        | \$67,700         |
| <b>2009 Request</b>          | ---                 | ---        | <b>\$157,700</b> |
| Total Change 2008-2009       | ---                 | ---        | \$67,700         |

DNDO requests \$157.700 million for this activity. This is an increase of \$67.700 million over FY 2008 for the Radiation Portal Monitor Program. This request will provide funding for the procurement of additional Advanced Spectroscopic Portal fixed cargo units.

#### **CURRENT SERVICES PROGRAM DESCRIPTION:**

DNDO is responsible for the acquisition and deployment of rad/nuc detection systems within the U.S. These efforts include the procurement and installation of nuclear detection systems for border crossings and seaports. This responsibility has since expanded to include acquisition equipment for other DHS components, including the USCG, the Border Patrol, and CBP officers at international general aviation airports.

In FY 2009, DNDO will manage three principle acquisition programs – two of which are technology based, and one of which is user based. The RPM program and the HPRDS program seek to provide mature systems to a wide-range of users, including Customs officers, Border Patrol agents, and USCG personnel. The STC initiative seeks to build on these technology delivery programs, working with a targeted regional group of State and local officials in the New York region. The STC initiative will provide a range of technical solutions (potentially to include ASP, HPRDS, and commercially available systems) as a suite of technical and operational capabilities, adapted to meet the unique operational requirements of the State and local participants in the initiative.

All DNDO acquisition programs provide robust systems development, systems engineering, and test and evaluation (T&E) programs. The methodology employed in this program ensures that all acquired systems have been fully evaluated prior to any acquisition decisions, so that all deployed systems are operated in an appropriate and efficient manner. Additionally, all deployed technologies will be accompanied by the necessary training, exercise, and alarm response protocols.

Additional details on the missions, accomplishments, and projected plans for each acquisition program are included in the following sections.

Radiation Portal Monitor Program:

Under the RPM program, DNDO works closely with CBP to define and implement a multi-layered strategy to keep U.S. ports safe and secure by interdicting rad/nuc materials in five transport vectors: international mail and express consignment courier facilities (ECCFs), seaport terminals, international airports, land crossings, and rail crossings. DNDO and CBP, together, prioritize RPM deployments toward the largest and most immediate threats, and to ensure that the resulting technology is practical and workable in the field. DNDO, with CBP support and guidance, focused on deployments to the 22 largest seaports, the Northern border and the Southern Border. DNDO began deployment of RPMs to domestic airport ports of entry (APOEs). DNDO is ramping up efforts to deploy RPM along the Northern Border in order to accelerate the schedule by which we will scan 100% of all containerized cargo coming from Canada. Additionally we will accelerate the deployment of RPMs to lower-volume seaports.

DNDO performed testing and data collection of ASP cargo portal units at the Nevada Test Site (NTS), New York Container Terminal (NYCT), Pacific Northwest National Laboratory (PNNL) and eight field validation sites (at five ports of entry) as part of the ASP development effort. DNDO will begin deployment of ASP units for sole secondary screening applications at land, air, and sea POE upon receipt of Secretarial certification of ASP performance and assurance that the systems are ready for operational use.

In early FY 2008, the Secretary decided to more closely couple ASP certification with a larger production and deployment decision, representing Key Decision Point 3 (KDP-3) in DHS Management Directive (MD) 1400. Therefore, certification will now signify not only that the next-generation ASP systems demonstrate significant improvement in operational effectiveness, but that they also fully meet the functional requirements of the principal operator, CBP. DNDO has developed a detailed breakdown of the functional requirements that have been identified by CBP, and developed a joint approach to addressing these requirements throughout 2008. The ASP certification decision, now projected for late FY 2008, will provide a final decision point prior to both full scale procurement and the beginning of a broader deployment of systems.

DNDO procured and developed SUVs equipped with ASP detectors for the Securing the Cities initiative and the Southeast Transportation Corridor Program. These SUV systems are designed to be used for special events, choke point and weigh station scanning operations.

DNDO acquired Sodium Iodide crystals in sufficient quantities to support the initial build of ASP units once the decision is reached to begin production.

Going forward the RPM program will continue its deployment of PVT RPMS and complete the development of ASP so that the significant increase in performance can be deployed to the field when they are ready.

Significant FY 2007 accomplishments include:

- At the end of FY 2007 over 97% of all containerized cargo entering U.S. seaports is being scanned for radiation.

- Completed deployments of PVT RPMs along the Northern Border where we now scan 91% of all containerized cargo and 81% of all privately-operated vehicles entering the U.S. land POEs.
- Completed deployments of PVT RPMs along the Southern Border where we now scan 100% of all containerized cargo entering U.S. land POEs.
- Began deployment of PVT RPMs to domestic airports of entry (APOEs).
- Produced 76 LRIP ASP cargo portal units (procured using FY 2006 funds) necessary for testing and initial field validation trails. Not all units were used during testing and field validation; DNDO intends to upgrade 45 units for initial deployments for secondary scanning applications in FY 2008.
- Procured eight vehicle-mounted SUV-based radiation detection systems for the STC initiative and the Southeast Transportation Corridor Pilot (SETCP).

FY 2008 planned accomplishments include:

- By the end of 2008, DNDO will have completed deployments to scan 98% of all land and sea containerized cargo, and 96% of all privately-operated vehicles entering U.S. land POEs along the Northern Border.
- Complete development and evaluation (with consultation from the National Academy of Sciences) to support a Secretarial certification of ASP for sole secondary applications.
- Initiate deployment of PVT RPM units necessary for the rad/nuc screening of inbound international air cargo at two domestic APOEs.
- Expand the use of mobile-based RPM systems by incorporating new operational requirements.
- Subsequent to the Secretary's ASP Certification, DNDO will upgrade and deploy the 45 low rate initial production ASP units. Based on the availability of funds and the results of FY 2008 evaluations, DNDO also plans to make additional procurements of ASP systems in late FY 2008. Specific procurement amounts will be determined later in the fiscal year.
- Deploy the eight SUV-based ASP EDM units to support SETCP and STC users that were ordered in FY 2007.

FY 2009 planned accomplishments are discussed below:

- Deploy radiation portal units to low and high volume ports in accordance with the joint DNDO-CBP deployment strategy, including the deployment of ASP units for sole secondary screening applications into high volume ports of entry.
- After the receipt of anticipated Secretarial Certification, DNDO will procure and begin deploying the first full rate production allotment of 120 ASP fixed cargo portal units for sole secondary applications.

- Complete deployments to scan 100% of all containerized cargo and privately-operated vehicles entering U.S. land POEs along the Northern Border.
- Complete deployments to scan 99% of all containerized cargo at seaports.
- Continue deployment of PVT RPM and ASP units for the rad/nuc screening of inbound international air cargo to additional domestic APOEs.
- Initiate the upgrade of the ASP systems to provide interoperability with the CBP's national integration effort - the Port Radiation, Inspection, Detection, & Evaluation system (PRIDE).

DNDO requests \$20.000 million for this activity. This is a decrease of \$10.000 million from the FY 2008 enacted level.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

Securing the Cities (STC) Initiative: The Securing the Cities (STC) initiative seeks to design and implement an architecture for coordinated and integrated detection and interdiction of illicit radiological materials that may be used as a weapon within a major urban area. This initiative is a part of Secretary Chertoff’s goal to “Continue to Protect Our Nation from Dangerous Goods,” announced on December 14, 2006. The initial STC engagement is being conducted with the New York City (NYC) region, which for the purposes of the STC initiative is defined as within 45 miles of the NYC border. STC stakeholders include NYC (New York Police Department, in particular), the counties proximate to NYC, the State of New York, the State of New Jersey, the State of Connecticut, the Port Authority of New York/New Jersey (PANY/NJ) and the Metropolitan Transportation Authority (MTA). State and local participation is incorporated into all aspects of the STC initiative through multi-jurisdictional working groups.

Acquisition funds will be utilized to procure, integrate, deploy, test, evaluate, train, and exercise a multi-layer, multi-pathway, multi-jurisdiction preventive radiological and nuclear detection and reporting architecture for the NYC region. These funds will also be allocated to ensure detection capabilities are integrated with Federal, State, and local command, control, and situational awareness capabilities. State and local partners will provide in-kind resources through bearing operational costs. Funds will also be used for logistics, maintenance, and calibration costs as well as personnel costs to support the training necessary to operate detection equipment and conduct operational exercises. State and local partners will be provided with the information they need to appropriately budget for the long-term sustainability of capabilities implemented under this initiative. Regional stakeholders are aware that the U.S. Government (USG) will not fund operational costs or maintenance costs for systems after the three year engagement period.

In FY 2008, the first year of the STC Initiative, acquisition funding will be utilized to acquire basic and advanced capabilities for robust test and evaluation. Basic capabilities will involve the use of personal radiation detectors and the capabilities to resolve alarms from these detectors remotely, including associated training. Advanced capabilities will involve backpack and mobile detection systems, and associated training, capable of performing special event screening, sweeps of areas of interest, small

maritime vessel screening, and checkpoint operations. Regional information sharing protocols and automated information exchange capabilities will be developed.

In FY 2009, DNDO plans to complete the STC initiative with the procurement and deployment of equipment to the NYC region for final testing and evaluation as part of the initial STC engagement with the region. In addition, equipment purchases will assist State and local entities in carrying out jurisdiction-specific and regional CONOPs. Planned activities may include:

- Further expansion of basic and advanced detection set equipment and training.
- Provision of a regional logistics, maintenance, and calibration capability for all equipment purchased under the STC initiative.
- Procurement of a fixed site detection system in addition to the initial site. Fixed systems will be utilized as a part of operations on roadways leading into lower Manhattan.
- Completion of regional information sharing capabilities and protocols to enable all STC stakeholders to effectively execute region-wide CONOPs.
- Execution of one or more large-scale Federal, State, and local exercises to assess and improve developed capabilities.

PPA: HUMAN PORTABLE RADIATION DETECTION SYSTEMS

DNDO requests \$13.000 million for this activity. This is an increase of \$3.250 million over the FY 2008 enacted level.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

Human Portable Radiation Detection Systems (HPRDS) Program: Effective deterrence of terrorist nuclear threats to the U.S. requires DNDO to look beyond the official POEs; the HPRDS program is structured to provide a wide variety of law enforcement and first-responder services with the capability to detect and identify terrorist nuclear explosive devices or RDDs. HPRDS provides key radiation detection, threat source identification, and notification capabilities to aid law enforcement officers in mitigating terrorist nuclear threats in both POE and non-POE environments.

HPRDS fills existing material shortfalls through Commercial-Off-The-Shelf (COTS) solutions tailored to CONOPs and operating environments or development of cutting edge technology when commercially available systems are demonstrated to be inadequate to meet DHS requirements. These handheld, ‘relocatable,’ and backpack systems are used as primary detection tools by Customs officers, Border Patrol agents, and USCG personnel subsequent to interdiction. “Relocatable” systems refer to small detectors that are human portable, but not necessarily carried by the user during operation (systems would be put down for some period, and then moved to another location for subsequent operations). Customs officers use this equipment as an additional inspection tool at ports of entry, while State and local law enforcement agencies and first responders use this equipment for queued search and secondary identification operations. HPRDS will also play a key role in initiatives to ensure that nuclear threat detection capabilities are afforded to newly emerging mission areas such as general aviation and maritime preventive rad/nuc detection early phased deployments.

Users execute CONOPs unique to their operating environment; depending on the CONOPs to be addressed, different detection systems will be utilized and different resolution levels will be required. HPRDS systems are designed to meet a variety of operational requirements as defined by these environment-specific CONOPs. Accordingly, the HPRDS program is conducting an analysis of alternatives to identify the appropriate technologies for each user and each CONOP.

Significant FY 2007 accomplishments include:

- Delivered 249 COTS handhelds and 28 wide area search devices (backpacks) to the USCG to bring the USCG to full operational capability. By the end of FY 2007, the USCG had radiological and nuclear detection capability for all inspection/boarding teams.
- Procured 366 HPRDS Communication Packages for the USCG to enable boarding/inspection teams to send spectral data via wireless (satellite/cell phone) communications back to the reachback facility for analysis.
- Procured 171 handheld units for delivery to CBP for additional hand-held screening capability.

FY 2008 planned accomplishments include:

- Deploy the 366 HPRDS Communication Packages to the USCG. Procure and deliver additional HPRDS Communication Packages to the USCG.
- Procure advanced detection equipment (e.g. Handheld and Linear Radiation Monitors, HPGe Gamma Spectrometers, Gamma Ray Imaging Systems, etc) for the USCG Maritime Security Response Team to assist with meeting its Special Mission Unit requirements.
- Procure 145 LRIP handheld units and 22 LRIP backpack units and transfer them to CBP for an Operational Test and Evaluation (OT&E) campaign. Lessons learned and product improvements will be infused into the full-rate production system (first NaI-based, then LaBr3-based). OT&E will also be coordinated with the general aviation initiative in order to field detection capability appropriate for that mission area.
- Acquire human portable radiation detection systems for the ports of Seattle/Tacoma and San Diego as part of the West Coast Maritime Preventive Rad/Nuc Detection (PRND) Pilot program. Analysis of alternatives will be conducted with FY 2008 RD&O funding.

By FY 2009, DNDO will have developed acquisition strategies in partnership with each operational organization that will ultimately be responsible for implementing acquisition strategies. These include:

- Recapitalization of equipment for Customs Officers at ports of entry;
- Recapitalization of equipment for U.S. Coast Guard boarding teams;
- Initial procurements for Border Patrol agents;
- Additional procurements for the Puget Sound and San Diego regions as part of the West Coast Maritime PRND Pilot program; and
- Additional procurements for Customs Officers scanning general aviation flights.

HPRDS acquisition funding for FY 2009 provides approximately 200 NaI, LaBr3, and HPGe handheld units and 10 backpack units to CBP officers and 64 handhelds to the Border Patrol. In addition, DNDO will begin to recapitalize USCG handheld and backpack units at a rate of approximately 20% per year. These systems will be used as law enforcement tools in detecting, identifying, and initiating response actions against terrorist nuclear devices and RDDs.

Continuing an effort begun in FY 2008, the West Coast Maritime PRND Pilot program will acquire HPRDS systems for deployment to the ports of Seattle/Tacoma and San Diego. DNDO will continue to support the West Coast Maritime PRND Pilot Project in the Puget Sound, Washington and San Diego, California regions. This pilot will provide limited deployment of radiation detection systems into the State and local environment to validate detector performance in the maritime environment and develop interagency CONOPs for a regional maritime PRND Program. Documentation of lessons learned during this pilot will improve the effectiveness of a wider deployment of capability to other priority U.S. ports and strengthen the domestic detection architecture over time.

Based on an analysis of alternatives conducted in FY 2008, the West Coast Maritime PRND Pilot program will develop acquisition strategies for FY 2008 and FY 2009 efforts. In FY 2008, acquisition funding will be utilized to acquire a limited number of COTS human portable radiation detection systems and engineering development models from the DNDO HPRDS Program for various Federal, State, local, and tribal agencies participating in this Pilot. HPRDS procurement requirements are discussed in the justification below. Regional CONOPS, information sharing, alarm resolution, and adjudication will be developed to exploit choke points and buffer zones where possible.

In FY 2009, DNDO plans to complete the procurement and deployment of human portable radiation detection systems and procure mobile/fixed standoff radiation detection systems. These detection systems may include commercially available and/or next-generation radiation detection systems that may be developed as a rapid prototype. Operational test and evaluation will be conducted to validate detector performance in the maritime environment. Exercises will be conducted to validate the training, techniques, and procedures of the maritime stakeholders.

In addition, DNDO will accelerate the procurement of handheld detection systems for deployment to CBP Officers scanning arriving general aviation flights. Acquisition efforts will begin in FY 2008, based on the results of equipment evaluations and an analysis of alternatives. CBP Officers began the scanning of arriving flights in FY 2007 using equipment temporarily redeployed from CBP scanning operations at other ports of entry.

*Mobile Detection Deployment Program:* In FY 2007, DNDO also began the procurement of a national nuclear detection "surge" capability, a suite of mobile and re-locatable detection systems deployable to varying locations based upon heightened threat and security alert levels. This Federal asset will increase limited existing "surge" capacity of domestic deployments of radiation detection equipment to support special events, allow for wide-area detection in response to non-specific threats, and serve as a force multiplier for Nuclear Incident Response Teams (NIRT). The 2007 appropriation provided funding for the procurement of a mobile detection system to be deployed to provide increased security in specific areas in periods of heightened alert or if specific threats are identified. DNDO will procure a number of mobile (man-portable) and relocatable (vehicle-mounted) detection assets, as well as the accompanying communications and information infrastructure. These systems will provide a superior "preventive rad/nuc detection package" that can provide a Federal cache of equipment to a myriad of first responders. The system package will be Federally-owned, but operated in conjunction with State and local agencies.

Though this procurement program was funded only in FY 2007, program execution will be completed in FY 2008.

Significant FY 2007 accomplishments include:

- Collected requirements from end users and finalized specifications for Mobile Detection Deployment Program (MDDP) equipment suite.
- Equipment suite (detection and communications equipment) and mobile system to provide force multiplier to DOE and augment detection capacity to respond to heightened threat or intelligence driven events

FY 2008 planned accomplishments include:

- Complete the design and build-out of the initial MDDP system. The system is to be deployed at threat-driven and planned special events in FY 2008.
- Evaluate the MDDP system. If the MDDP concept is validated, and if DNDO users indicate a requirement for additional systems, DNDO will develop final design requirements for use in the creation of future MDDP systems.

| <b>Total Request</b>   | ---            | --- | <b>\$107,191</b> | ---             | --- | <b>\$90,000</b> | ---             | --- | <b>\$157,700</b> |

#### Description of Item

This request will provide funding for the procurement of additional Advanced Spectroscopic Portal fixed cargo units.

#### Justification

The Advanced Spectroscopic Portal Program increase provides for the procurement and deployment of an additional 87 ASP fixed cargo portals.

A critical component of the DNDO nuclear detection architecture is a passive RPM suitable for examining cargo containers, trucks, and privately-owned vehicles. Beginning in 2003, DHS deployed passive RPMs at land and sea-based POEs. At each POE, RPMs are typically installed in a primary screening location to survey cargo and vehicles. DHS installs additional RPMs and deploys handheld radioisotopic identification devices (RIIDs) into secondary screening locations to further investigate primary alarms.

The first-generation RPMs currently deployed by CBP are based on PVT gamma-ray sensors and Helium-3 (<sup>3</sup>He) neutron sensors. DNDO is developing ASP systems, which utilize sodium iodide (NaI) or high-purity germanium (HPGe) gamma sensors and <sup>3</sup>He neutron sensors. The ASP technology uses the gamma radiation spectrum from the inspected material to make a detection and identification decision. This ability to differentiate between threat material and naturally occurring radioactive material (NORM) reduces the number of alarms due to non-threat sources, and dramatically improves the probability of correctly identifying and interdicting smuggled nuclear material.

By FY 2009, DNDO projects to have completed Secretarial certification of ASP systems for use in secondary scanning operations. ASP systems will provide significant improvements in the ability to

resolve alarms generated by PVT-based RPMs in primary scanning (detection), when compared to handheld detection systems currently being used. The current DNDO-CBP Joint Deployment Strategy calls for the eventual deployment of ASP systems to all secondary scanning locations, resulting in a requirement of just over 400 ASP systems for this application.

Building on the ASP units included at the current services level and the 87 units procured and deployed with this program increase will accelerate improvements to the Nation's ability to identify radiological and nuclear threats in the stream of commerce quickly.

Impact on Performance (Relationship of Increase to Strategic Goals)

The \$67.700 million Radiation Portal Monitor Program increase will directly improve the DNDO ability to meet Strategic Goal 2.1, "Continue to protect our Nation from dangerous goods – Nuclear/Radiological." Particularly, the increase will fund the procurement and deployment of next-generation ASP systems to be operated at U.S. ports of entry.

Description of Item

This request will provide funding to procure, integrate, deploy, test, evaluate, train, and exercise a multi-layer, multi-pathway, multi-jurisdiction preventive radiological and nuclear detection and reporting architecture for the New York City (NYC) region.

Justification

In FY 2009, DNDO plans to complete the procurement and deployment of equipment to the NYC region begun in FY 2008. Between FY 2008 and FY 2009, DNDO will have provided \$50 million in rad/nuc detection equipment and training to the NYC region. Equipment purchases will continue to assist State and local entities in carrying out jurisdiction-specific and regional CONOPs. In addition to the procurement of systems, funding will support the training of State and local officials on the operation of provided equipment, the exercising of equipment. Finally, DNDO will work with NYC area partners to provide regional logistics, maintenance, and calibration capabilities for all equipment purchased under the STC initiative.

Impact on Performance (Relationship of Increase to Strategic Goals)

The FY 2009 funding request of \$20.000 million would directly improve DNDO's ability to meet Strategic Goal 2: Prevention – Detect, deter, and mitigate threats to our homeland. Particularly, FY 2009 funding will continue efforts begun in FY 2008 to prevent a rad/nuc attack on a high-risk urban area, the NYC region, by enhancing regional capabilities to detect and interdict radiological threats.

| Program Increase       |                |     |                 |                 |     |                 | ---             | --- | \$3,250         |
| <b>Total Request</b>   | ---            | --- | <b>\$6,317</b>  | ---             | --- | <b>\$9,750</b>  | ---             | --- | <b>\$13,000</b> |

Description of Item

This request will provide funding for accelerated procurement of commercial-of-the-shelf and next-generation radioisotope identification devices (RIIDs). This increase will support deployments to several operators, including Customs Officers at ports of entry (including general aviation airports of entry), Border Patrol agents, and U.S. Coast Guard boarding teams.

Justification

As DNDO has continued to grow and mature, efforts have been underway to ensure that efforts were aimed at preventing nuclear or radiological terrorism, regardless of the target, pathways, or source materials. The fact remains that the Nation faces an innovative and evolving threat. It is with this understanding that, beginning in FY 2006 and continuing through FY 2007, DNDO developed strategies to secure the Nation from threats originating not through official ports of entry, but by small maritime vessels, across our land borders, and through the aviation sector.

Because of the vastness of space that many of these challenges pose, these strategies are built around the concepts of mobility and unpredictability. Due to their small size and considerable capability, RIIDs serve as a critical tool in providing these capabilities. DNDO has developed or is developing acquisition strategies in partnership with each operational organization that will ultimately be responsible for implementing these strategies. Funds requested in this program increase will specifically fund the procurement of equipment for Customs officers to scan general aviation aircraft arriving in the U.S. Scanning of general aviation flights began in FY 2007 through the temporary redeployment of RIIDs from other ports of entry. In FY 2008, DNDO is conducting equipment evaluations and an analysis of alternatives to identify permanent technical solutions to meet this mission. This program increase will accelerate acquisition efforts resulting from these assessments that will begin in FY 2008 and continue into FY 2009.

Impact on Performance (Relationship of Increase to Strategic Goals)

The FY 2009 funding request of \$3.25 million would directly improve DNDO's ability to meet Strategic Goal 2: Prevention – Detect, deter, and mitigate threats to our homeland. Specifically, this request will accelerate the procurement of RIIDs for the DHS operator community.

## V. Exhibits and Other Supporting Materials

### A. Justification of Proposed Legislative Language

Department of Homeland Security  
Domestic Nuclear Detection Office  
Justification of Proposed Changes in Systems Acquisition  
Appropriation Language

For expenses for the Domestic Nuclear Detection Office acquisition and deployment of radiological detection systems in accordance with the global nuclear detection architecture, [\$129,750,000] \$190,700,000, to remain available until September 30, [2010]2011[: Provided, That none of the funds appropriated under this heading shall be obligated for full-scale procurement of Advanced Spectroscopic Portal Monitors until the Secretary of Homeland Security submits to the Committees on Appropriations of the Senate and the House of Representatives a report certifying that a significant increase in operational effectiveness will be achieved: Provided further, That the Secretary shall submit separate and distinct certifications prior to the procurement of Advanced Spectroscopic Portal Monitors for primary and secondary deployment that address the unique requirements for operational effectiveness of each type of deployment: Provided further, That the Secretary of Homeland Security shall consult with the National Academy of Sciences before making such certification: Provided further, That none of the funds appropriated under this heading shall be used for high-risk concurrent development and production of mutually dependent software and hardware]. (Department of Homeland Security Appropriations Act, 200[8]9.)

#### Explanation of Changes:

DNDO has presented a revised Advanced Spectroscopic Portal Monitors spend plan to Congress. By FY 2009, DNDO projects to have completed Secretarial certification of ASP systems for use in secondary scanning operations.

### PPA Mission Statement

Radiation Portal Monitor Program: The Radiation Portal Monitor (RPM) Program was established at CBP in January 2002 with the objective of deploying RPMs at ports of entry (POEs) and providing the scientific and technical expertise to design, acquire, deploy, operate and maintain these systems. In 2005, DNDO assumed the responsibility of designing, acquiring and deploying the systems, and it has established a Ports of Entry program to work with CBP to bring the latest technology to bear on the threat of illicit nuclear materials crossing our borders. A first generation of detector based on Polyvinyl-Toluene technology (PVT) has been developed and is being deployed.

A second generation of advanced radiation detection systems, known as Advanced Spectroscopic Portal (ASP) systems, is now being developed for CBP use at POEs. These efforts are part of the multi-layered strategy to keep U.S. ports safe and secure by interdicting rad/nuc materials in five transport vectors: international mail and express consignment courier facilities (ECCFs), seaport terminals, international airports, land crossings, and rail crossings. The goal is to screen 100% of the cargo and privately owned vehicles entering the U.S. by FY 2014, while minimizing the impact on legitimate cargo.

### Summary Justification and Explanation of Changes

|          | FY 2007<br>Actual | FY 2008<br>Enacted | FY 2009<br>Request | 2008 to 2009<br>Change |
|----------|-------------------|--------------------|--------------------|------------------------|
| GSA rent | \$50              | \$0                | \$0                | \$0                    |

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services.

|                                   | FY 2007<br>Actual | FY 2008<br>Enacted | FY 2009<br>Request | 2008 to 2009<br>Change |
|-----------------------------------|-------------------|--------------------|--------------------|------------------------|
| Purchase from government accounts | \$72,833          | \$72,200           | \$139,900          | \$67,700               |

Purchases from government accounts include costs for purchases from other Federal government agencies or accounts that are not otherwise classified.

|                          | FY 2007<br>Actual | FY 2008<br>Enacted | FY 2009<br>Request | 2008 to 2009<br>Change |
|--------------------------|-------------------|--------------------|--------------------|------------------------|
| Research and development | \$3,016           | \$0                | \$0                | \$0                    |

Research and development includes costs for contracts for the conduct of basic and applied research and development.

|           | FY 2007<br>Actual | FY 2008<br>Enacted | FY 2009<br>Request | 2008 to 2009<br>Change |
|-----------|-------------------|--------------------|--------------------|------------------------|
| Equipment | \$31,292          | \$17,800           | \$17,800           | \$0                    |

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract.

**PPA Mission Statement**

Securing the Cities (STC) Initiative: The initiative seeks to design and implement detection architecture to prevent illicit radiological materials from being used as a weapon within a major urban area. This initiative is a part of Secretary Chertoff's goal to "Continue to Protect Our Nation from Dangerous Goods." The initial STC engagement is being conducted with the New York City (NYC) region, defined as within 45 miles of the NYC city limits. STC stakeholders include NYC (especially the New York Police Department), the counties proximate to NYC, the State of New York, the State of New Jersey, the State of Connecticut, the Port Authority of New York/New Jersey (PANY/NJ) and the Metropolitan Transportation Authority (MTA). State and local participation has been and will continue to be incorporated into all aspects of the STC initiative through working groups consisting of all relevant regional partners.

**Summary Justification and Explanation of Changes**

|  | <b>FY 2007</b> | <b>FY 2008</b>  | <b>FY 2009</b> | <b>2008 to 2009</b> |
|--|----------------|-----------------|----------------|---------------------|
|  | <b>Actual</b>  | <b>Enacted</b>  | <b>Request</b> | <b>Change</b>       |
| <b>Purchase from government accounts</b> | <b>\$0</b>     | <b>\$12,000</b> | <b>\$8,000</b> | <b>(\$4,000)</b>    |

Purchases from government accounts include costs for purchases from other Federal government agencies or accounts that are not otherwise classified. This reduction, in conjunction with the (\$6,000) in Equipment, will result in up to 3200 State and local law enforcement officers not being equipped and trained to conduct the PRND mission. The ability of the 2009 independent assessment to then assess the effectiveness of the STC engagement model and ability of State and local personnel to take on the PRND mission will be reduced.

|   | <b>FY 2007</b> | <b>FY 2008</b> | <b>FY 2009</b> | <b>2008 to 2009</b> |
|---|----------------|----------------|----------------|---------------------|
|   | <b>Actual</b>  | <b>Enacted</b> | <b>Request</b> | <b>Change</b>       |
| <b>Operation &amp; maintenance of equipment</b> | <b>\$162</b>   | <b>\$0</b>     | <b>\$0</b>     | <b>\$0</b>          |

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. Depending upon the supportability concept implementation plan developed in 2008, some portion of Equipment funding may be move to this category to fund initial maintenance contracts.

|                  | <b>FY 2007</b> | <b>FY 2008</b>  | <b>FY 2009</b>  | <b>2008 to 2009</b> |

**PPA Mission Statement**

Human Portable Radiation Detection Systems (HPRDS) Program: The HPRDS program is structured to provide a wide variety of law enforcement and first-responder services with the capability to detect and identify terrorist nuclear explosive devices or radiation dispersal devices (RDDs). HPRDS provides key radiation detection, threat source identification, and notification capabilities to aid law enforcement officers in mitigating terrorist nuclear threats in both POE and non-POE locations. HPRDS fills existing shortfalls through either commercial-off-the-shelf (COTS) solutions tailored to existing concepts of operations (CONOPs) and operating environments or, in instance where COTS systems are demonstrated to be inadequate, the development of cutting edge technology. These handheld, 'relocatable', and backpack systems are used as primary detection tools by Customs officers, Border Patrol agents, and USCG personnel subsequent to interdiction. State and local law enforcement agencies and first responders use this equipment for queued search and secondary identification operations. HPRDS will also play a key role in initiatives to ensure that nuclear threat detection capabilities are afforded to newly emerging mission areas such as general aviation and maritime preventive rad/nuc detection early phased deployments.

**Summary Justification and Explanation of Changes**

|  | FY 2007        | FY 2008    | FY 2009    | 2008 to 2009 |

# I. STRATEGIC CONTEXT FOR THE FY 2009-2013 BUDGET

## A. Mission and Description of the Domestic Nuclear Detection Office (DNDO)

The Domestic Nuclear Detection Office (DNDO) is the lead agency within the Department of Homeland Security to integrate efforts across the Department in combating the threat of nuclear attack, and the lead Departmental representative for all interagency activities to coordinate the U.S. Government's (USG) nuclear defense posture. Key to the success of the Department of Homeland Security (DHS) is improving its ability to mitigate risks across the entire threat spectrum. In recognition of the catastrophic risk posed by the use of a nuclear weapon within the United States, all nuclear detection research, development, test, evaluation, and operational support has been consolidated into a single office. To this end, the DNDO has developed, and continues to improve, the global nuclear detection architecture and the domestic detection system, which detects and reports attempts to import or transport nuclear devices, fissile, and radiological materials intended for illicit use.

The DNDO will:

- Develop the global nuclear detection and reporting architecture;
- Develop, acquire, and support the domestic nuclear detection and reporting system;
- Fully characterize detector system performance before deployment;
- Establish situational awareness through information sharing and analysis;
- Establish operation protocols to ensure detection leads to effective response;
- Conduct a transformational research and development program; and
- Establish the National Technical Nuclear Forensics Center to provide centralized planning and integration of USG nuclear forensics programs.

To meet its diverse mission, the DNDO is jointly-staffed with representatives from the Department of Defense (DoD), Department of Energy (DOE), Department of Justice's (DOJ) Federal Bureau of Investigation (FBI), the State Department, the Nuclear Regulatory Commission (NRC), the Science and Technology Directorate, U.S. Customs and Border Protection, the Transportation Security Administration, and the U.S. Coast Guard. The seven major subdivisions of the DNDO are the Systems Architecture, Systems Engineering and Evaluation Directorate (SEED), Production and Acquisition Directorate (PAD), Transformational and Applied Research Directorate (TAR), the Operations Support Directorate (OS), Red Teaming and Net Assessments, and the National Technical Nuclear Forensics Center (NTNFC). Each of these subdivisions performs a unique and critical role within the DNDO.

The DNDO implements the technology development cycle across all of these subdivisions. The cornerstone of all effective systems development and deployment efforts must be well-defined systems architecture, implemented according to clear systems engineering practices. PAD and TAR develop technology solutions to meet requirements arising from these systems architecture analyses. TAR executes the long-range, higher risk research programs that are likely to deliver the highest payoff improvements in detection capabilities needed to address any critical capability gap

in the Nation's detection architecture. PAD pursues near-term, operationally-driven technology development programs, resulting in fully-tested, deployable systems within three years of the conclusion of TAR concept exploration and initial demonstration. SEED provides an independent assessment of technologies and capabilities developed through the research, development, and acquisition programs of PAD and TAR. OS must ensure that technologies that are developed by DNDO are deployed into an operational environment that is supported by information from the Nation's intelligence, counterterrorism, and law enforcement communities, and are operated according to standardized training and response protocols. Finally, the NTNFC provides technical capability to determine the origin and nature of nuclear or radiological attacks and interdicted source materials and devices, for the purpose of prosecution or other U.S. Government (USG) action.

## B. Major Activities and Key Strategic Issues

In FY 2009, the President's Budget Request included \$563.8 million for the activities of the DNDO. The largest portion of these funds, approximately \$157.7 million, is requested to continue the acquisition and deployment of radiation detection equipment. Using this funding, the DNDO will have completed the deployment of radiation portal monitors to all southern and major northern border crossings, a total of approximately 43 ports of entry (POEs), as well as high-volume seaports, providing the ability to scan approximately 98% of all containers entering the United States by land or sea for radiological and nuclear material by the end of 2008. Currently 92% of all cargo containers entering the U.S. at land and sea points of entry are scanned for radiation. FY 2009 deployments will focus on additional northern border land crossings, as well as international airports. Additionally, a total of \$30.0 million (\$10.0 million in Research, Development and Operations funding and \$20.0 million in Systems Acquisition funding) will continue to support the Securing the Cities (STC) Initiative in the New York City region. At the end of FY 2009, DNDO will conduct an assessment of the STC business model (costing approximately \$600,000) to determine its applicability in other urban areas.

The FY 2009 request provides \$108.1 million and \$113.3 million for Systems Development and Transformational Research and Development, respectively. These two programs conduct all short- and long-term radiation detection R&D within the Department, including the Advanced Spectroscopic Portal program, the Cargo Advanced Automated Radiography Systems Program, the Human Portable Radiation Detection Systems program, and Advanced Technology Demonstrations in Intelligent Personal Radiation Locators and Stand-off Radiation Detection, all of which were competitively awarded in 2006 and 2007. These activities address the problems of detecting shielded or unshielded radiological and nuclear materials. As part of this effort, the DNDO conducted an in-depth series of test campaigns in preparation for a full-rate production decision in the Advanced Spectroscopic Portal program. These campaigns included performance testing at the Nevada Test Site, operational testing at the New York Container Terminal, deployment readiness testing at the Pacific Northwest National Laboratory, and field validations at several ports of entry.

Detection technology acquisition alone will not adequately combat the threat of nuclear terrorism. The President's Budget Request also includes \$37.8 million for Operations Support to fuse detection data and intelligence assessments in a near real-time environment to maintain an overall system and situational awareness. This requires that the DNDO closely interact with the Intelligence Community as a developer of intelligence requirements and consumer of intelligence products. This integrated approach to detection and information analysis will ultimately provide substantial improvement in nuclear alarm resolution, threat assessments, data trend analysis, and

overall probability of mission success. DNDO conducted radiological and nuclear preventive training for over 400 State and local officials in FY 2006, and over 1,400 officials in FY 2007. DNDO plans to train another 2,400 personnel in FY 2008 and 3,600 personnel in FY 2009. Finally, the President's Budget Request includes approximately \$17.9 million to continue to activities of the NTFNC. In FY 2009, the NTFNC will continue to lead the development of the national capability for pre-detonation rad/nuc materials forensics, which provides the technical capabilities to rapidly, accurately, and credibly conduct nuclear forensics to support attribution conclusions about the origin, nature, and pathways of interdicted threats.

As with any integrated research, development, and acquisition program, there is some inherent technical risk regarding the successful development of projected capabilities. If technical solutions cannot be developed to meet performance requirements, acquisition programs face some subsequent risk – primarily schedule risk.

### C. Resources Requested and Performance Impact

Increments over current service level:

The proposed President's Budget includes 137 FTE and \$563.8 million for DNDO activities, an increase of 16 FTE and \$79.05 million in base funding over the FY 2008 Enacted. This funding includes a program increase of \$1.399 million in Management and Administration for an increase in staff of seven (7) FTE (included in the total of 16 additional FTE). This will maintain ongoing activities to develop the global nuclear detection architecture and the domestic detection system. The DNDO will continue to support the Department's strategic mission and goals by integrating efforts across DHS to combat the threat of nuclear attack.

In FY 2009, the President's Budget requests an incremental increase of \$67.7 million for the Radiation Portal Monitor Program's Advanced Spectroscopic Portal Program, which provides for the procurement and deployment of an additional 87 ASP fixed cargo portals.

By FY 2009, DNDO projects to have completed Secretarial certification of ASP systems for use in secondary scanning operations. ASP systems will provide significant improvements in the ability to resolve alarms generated by PVT-based RPMs in primary scanning (detection), when compared to handheld detection systems currently being used. The current DNDO-CBP Joint Deployment Strategy calls for the eventual deployment of ASP systems to all secondary scanning locations, resulting in a requirement of just over 400 ASP systems for this application.

Building on the ASP units included at the current services level and the 87 units procured and deployed with this program increase will accelerate improvements to the Nation's ability to identify radiological and nuclear threats in the stream of commerce quickly.

The President's Budget requests an incremental increase of \$10 million for exploratory efforts in radiation detection materials R&D. Over the last several years, with many of these efforts funded by DNDO, there have been several very promising materials, which would be significant improvements over the state of the art materials with respect to sensitivity, energy resolution, manufacturability, and cost. Increased funding in FY 2009 will provide the required support for these focused efforts and will provide a high rate of return on past investments. The time intervening between now and FY 2009 will be used to allow preparation for the increased efforts. Thrust here would be to provide additional funds for both labor and equipment to support

optimization of these materials. Much of the preliminary groundwork has been established for these promising materials, but the optimization is labor intensive. Some additional equipment expenses would further improve the efficiency of optimization.

D. How Domestic Nuclear Detection Office Programs and Their Performance Goals Align to and Support the DHS Strategic Plan Objectives.

The following list of programs with their performance goals are followed by the DHS goals and objectives they support.

Domestic Nuclear Detection program performance goal – Improve the Nation’s capability to detect and report unauthorized attempts to import, possess, store, develop, or transport radiological or nuclear material for use against the Nation.

Goal 2 – Continue to protect our Nation from dangerous goods.

Objective 2.1 – Nuclear/Radiological

E. Performance Based Budget Highlights by Program

For each major program, the performance goal, main performance measure/s, indicators, budget including allocation of non-programmatic overhead, and FTE are shown below. A complete listing of performance measures may be found on the OMB web site Expectmore.gov. In a few instances, program names in PARTweb may differ slightly from those used in the Performance Budget.

| <b>Program: Domestic Nuclear Detection</b>   |         |         |           |           |           |           |
|--|---------|---------|-----------|-----------|-----------|-----------|
| <b>Performance Goal:</b> Improve the Nations capability to detect and report unauthorized attempts to import, possess, store, develop, or transport radiological or nuclear material for use against the Nation. |         |         |           |           |           |           |
| <b>Fiscal Year:</b>  | FY 2004 | FY 2005 | FY 2006   | FY 2007   | FY 2008   | FY 2009   |
| <b>\$ Thousands</b>  | None    | None    | \$317,392 | \$398,320 | \$484,382 | \$563,800 |
| <b>FTE</b>   | None    | None    | 14        | 112       | 121       | 137       |

|  |         |         |         |         |         |         |
|--|---------|---------|---------|---------|---------|---------|
| <b>Measure:</b> Number of individual Urban Area Security Designs completed for the Securing the Cities Program.  |         |         |         |         |         |         |
| <b>Description of Measure:</b> This measure is one of several for informing the DNDO leadership of the reduction in risk to the interior layer of the global nuclear detection architecture. An Urban Area Security Design will consist of a strategy for encountering and identifying illicit radioactive or nuclear materials in or near high risk urban areas or regions. The design will provide an acquisition plan with types, quantities, and placements of radiation/nuclear materials detectors, and describe interfaces to other Federal systems that collectively will enhance the security of the interior layer against a terrorist attack. |         |         |         |         |         |         |
| <b>Fiscal Year:</b>  | FY 2004 | FY 2005 | FY 2006 | FY 2007 | FY 2008 | FY 2009 |
| <b>Target:</b>   | None    | None    | None    | 0       | 0       | 1       |
| <b>Actual:</b>   | None    | None    | None    | 0       | N/A     | N/A     |

|   |         |         |         |         |         |         |
|---|---------|---------|---------|---------|---------|---------|
| <b>Measure:</b> Percentage of cargo, by volume, that passes through radiation portal monitors upon entering the Nation.   |         |         |         |         |         |         |
| <b>Description of Measure:</b> The Domestic Nuclear Detection Office (DNDO) is responsible for acquiring all radiation detection equipment to be deployed to the Nation's ports of entry (POEs). Radiation portal monitors are one of the principle pieces of equipment used to meet this requirement. While Customs and Border Patrol (CBP) maintains the responsibility for operating the systems, this measure reflects the capability that DNDO provides to CBP in support of this mission. |         |         |         |         |         |         |
| <b>Fiscal Year:</b>   | FY 2004 | FY 2005 | FY 2006 | FY 2007 | FY 2008 | FY 2009 |
| <b>Target:</b>  | None    | None    | None    | 90%     | 98%     | 98%     |
| <b>Actual:</b>  | None    | None    | 85%     | 92%     | N/A     | N/A     |

<sup>1</sup> FY 2007 Actuals reflects expenditures incurred for CMO, NCRC, Faith-based, SLGC, NPIP, and Ready Campaign that transferred per the 872 reorganization effective April 1, 2007. Expenditures are through March 31, 2007. FY 2007 Actuals also include expenditures incurred for Biosurveillance, the program transferred to the Office of Health Affairs effective April 1, 2007. The Office of Emergency Communications, formed as a result of Title VI of the DHS 2007 Appropriation reflects only six months of expenditures.

<sup>1</sup> FY 2007 Actuals reflects expenditures incurred for CMO, NCRC, Faith-based, SLGC, NPPI, and Ready Campaign that transferred per the 872 reorganization effective April 1, 2007. Expenditures are through March 31, 2007. FY 2007 Actuals also include expenditures incurred for Biosurveillance, the program transferred to the Office of Health Affairs effective April 1, 2007. The Office of Emergency Communications, formed as a result of Title VI of the DHS 2007 Appropriation reflects only six months of expenditures.

<sup>1</sup> FY 2007 Actuals reflects expenditures incurred for CMO, NCRC, Faith-based, SLGC, NPIP, and Ready Campaign that transferred per the 872 reorganization effective April 1, 2007. Expenditures are through March 31, 2007. FY 2007 Actuals also include expenditures incurred for Biosurveillance, the program transferred to the Office of Health Affairs effective April 1, 2007. The Office of Emergency Communications, formed as a result of Title VI of the DHS 2007 Appropriation reflects only six months of expenditures.

<sup>2</sup> Cyber Security renamed to National Cyber Security Division in FY 2009

<sup>3</sup> NS/EP Telecommunications renamed to National Communications System in FY 2009

These reports should be provided no later than 30 days after the end of each quarter.  | Report is undergoing clearance.                                  |
| 2008 | April 26, 2008    | Reference: HR 2764<br>Citation: Title III, page 56              | The Assistant Secretary for Infrastructure Protection is directed to provide the Committees on Appropriations with semi-annual briefings on the progress of implementing NIPP.  |  |
| 2008 | December 26, 2008 | Reference: HR 2764 Citation:<br>Title III, page 56              | The Assistant Secretary for Infrastructure Protection is directed to provide the Committees on Appropriations with semi-annual briefings on the progress of implementing NIPP.  |  |
| 2008 | February 26, 2008 | Reference: HR 110-181<br>Citation: Title III, page 85           | <u>Within 60 days of enactment, the Committee directs the Assistant Secretary for Infrastructure Protection, in conjunction with the Department of Energy, to provide a report on the most critical, capacity-limited segments of the North American electricity transmission and distribution network, the disruption of which would generate a cascading effect on other critical infrastructure sectors.</u> Additionally, within one calendar year thereafter, the Assistant Secretary shall provide a companion report developed in conjunction with the Department of Energy that identifies system-level approaches to mitigate the highest risks of failure associated with the identified segments.  |  |
| 2008 | April 26, 2008    | Reference: HR 2764<br>Citation: Title III, page 58              | Briefing - The Congress has invested over \$400,000,000 since fiscal year 2002 in upgrading the nation's privately owned telephonic networks; DHS will largely complete the project with an additional \$50,000,000 investment in fiscal year 2008, which the Committee recommends. In addition to these resources, DHS has proposed \$52,064,000 for Next Generation Networks (NGN), an increase of more than 350 percent over the fiscal year 2007 enacted level. Because this extreme level of program growth does not appear justified at this time, the Committee recommends funding NGN at \$21,100,000 and directs the Assistant Secretary for Cyber Security and Communications to brief the Committee no later than December 1, 2007, on the planned expenditure of these funds. | NPPD believes this requirement has been met; DHS CFO to confirm. |
| 2008 | June 26, 2008     | Reference: Senate Report 110-84<br>Citation: Title III, page 85 | In addition, the Committee directs the Office for Bombing Prevention, within 180 days of the date of enactment of this act, to report to the Committee on the bombing prevention capabilities of all State and local bomb squads, SWAT, public safety dive teams, and explosives detection canine teams. Up to \$100,000 is provided for this purpose.  | Requested Justice take the lead.                                 |
| 2008 | May 26, 2008      | Reference: HR 2764<br>Citation: Title III, page 58              | Integrated Wireless Network - To avoid a repeat of the difficulties experienced with this program to date, the Committee directs the Department to respect the independence of OEC management of the IWN budget, and directs the Assistant Secretary of Cyber Security and Communications to report no later than October 1, 2007, on efforts to correct the shortcomings identified in the Office of Inspector General report.   | Component is completing report.                                  |

# **BUDGET REQUEST AND SUPPORTING INFORMATION**

## **National Protection and Programs Directorate Management and Administration**

### **I. Appropriation Overview**

National Protection and Program Directorate (NPPD) Management and Administration (M&A) directs and assists the Directorate's programs to enhance the protection of America's critical infrastructure and key resources. This appropriation supports activities associated with Directorate management, including the Office of the Under Secretary, Administration, Information Technology, and Information Management and Business Culture. Together these activities provide Directorate leadership, budgeting, financial execution, human capital, security, program review and evaluation, executive secretariat functions, information technology support, facilities build out, rent and security services.

The NPPD Management and Administration appropriation includes Intergovernmental Programs (IGP), which serves as the primary liaison between the Secretary, senior Department leadership and their counterparts across the Nation at the State, local, tribal and territorial levels. Intergovernmental Programs handles communications and coordination activities across the spectrum of issues confronting all agencies and components of the Department.

Additionally, NPPD Management and Administration appropriation includes the Office of Risk Management and Analysis (RMA). RMA leads the Department's efforts to establish a common framework to address the overall management and analysis of homeland security risk. RMA meets the following objectives:

- (1) Develop and embed a consistent, coordinated, and collaborative national approach to risk
- (2) Leverage risk expertise across DHS components and external stakeholders
- (3) Identify and develop DHS-level risk performance metrics
- (4) Develop the Department's Risk Communication Strategy

### **A. Mission Statement of the Management and Administration Appropriation**

The mission of the Management and Administration appropriation is to direct and assist the Offices within the Directorate to reduce the risk of attack against the Nation by protecting critical physical and cyber infrastructure, guarding against threats posed by foreign travelers to the country, and by standardizing the Department's approach to the analysis and management of potential risks to the Nation. This requires concerted leadership, coordination, outreach and partnerships among multiple Homeland Security agencies, the national preparedness and response community of Federal agencies, State and local governments, tribal organizations, the private sector, and the American public.

## **B. Budget Activities:**

The M&A appropriation major program activities include:

- Directorate Administration
- Intergovernmental Programs
- Risk Management and Analysis

**Directorate Administration:** NPPD Directorate Administration includes: Under Secretary front office staff, Administration Division, Information Management and Business Culture Division, Information Technology Division, and facilities activities and costs.

**Intergovernmental Programs:** Intergovernmental Programs (IGP) coordinates Department-wide plans and activities with those of State, local and tribal government partners and serves as a liaison with the Department for those partners. IGP engages with public and private sector partners to ensure effective information exchange, collaboration, and supervises the development of synchronized doctrines at the national and regional levels.

**Risk Management and Analysis:** RMA leads the Department's efforts to establish a common framework to address the overall management and analysis of homeland security risk.

## **C. Budget Request Summary:**

NPPD requests 106 positions, 94 FTE and \$54,600,000 in the FY 2009 request, an increase of 29 FTE and \$7,254,000 from FY 2008 Enacted of 65 FTE and \$47,346,000.

Program Enhancements / Decreases:

1. Program enhancement for \$4,980,000, 12 FTE and 24 positions to support additional personnel, retention and recruitment bonuses, and training for NPPD Directorate Administration.
2. Program enhancement for \$2,000,000, 17 FTE and 17 positions for Intergovernmental Programs. IGP is not a new start for DHS in FY 2009. IGP was funded in FEMA in FY 2007 and FY 2008 per the 872 Reorganization.

Adjustments-to-Base:

1. Pay increase of 3% for 2008 and 2.9% pay inflation for 2009: \$274,000.
2. Non-pay inflation of 2.0%: \$630,000.
3. Management and technology efficiencies of (\$630,000).

**II. Summary of FY 2009 Budget Estimates by Program/Project Activity (PPA)**

\* FY 2007 Actuals include expenses incurred for Intergovernmental Programs prior to 872 Reorganization.

The National Protection and Programs Directorate requests \$43,100,000, 78 positions and 66 FTE for Directorate Administration. The request represents an increase of \$5,166,000, 24 Positions and 12 FTE over FY 2008 Enacted. Adjustments-to-base include \$186,000 for pay inflation and \$630,000 for non-pay inflation offset by management and technology efficiencies. Program increases include \$4,980,000, 12 FTE and 24 positions to support the Office of the Under Secretary, Administration, Information Management and Business Culture, and the Information Technology Divisions, by providing additional staff, recruitment and retention bonuses and training for Directorate Administration personnel.

#### **CURRENT SERVICES PROGRAM DESCRIPTION:**

Directorate Administration currently consists of 54 positions, whose functions include:

- (1) The Office of the Under Secretary
- (2) Administration Division
- (3) Information Management and Business Culture Division
- (4) Information Technology Division
- (5) Rent, facilities build-out, and security costs
- (6) Appropriation contribution to the Department Working Capital Fund

### Office of the Under Secretary

The Office of the Under Secretary provides Directorate leadership and management; coordinates Directorate activities throughout the Department; and serves as an advocate for protection across all governmental sectors, protection stakeholders, and citizens. The Office of the Under Secretary consists of the Under Secretary, Deputy Under Secretary, Chief of Staff, Public Affairs, as well as legal and administrative support.

### Administration Division

The Administration Division provides support services to NPPD offices including budget formulation and financial management, contract and program management, human capital and training, and logistics.

Budget Formulation and Financial Management: The Financial Management branch consists of the Budget Execution, Budget Formulation and Program Review and Evaluation teams.

The Budget Formulation team is responsible for the creation and formulation of the congressional budget justification and briefings, cost estimation, allocation modeling for annual NPPD Working Capital Fund assessment, investment portfolio management, as well as performance management and measurement functions.

The Budget Execution team is responsible for the obligation and expenditure of enacted NPPD funding during the year of execution. Additionally, the Financial Execution branch is responsible for entering, validating and reconciling allocations in the accounting system, invoice tracking and the production of status of funds reports.

The Program Review and Evaluation (PR&E) team conducts program performance reviews, risk assessments and performance compliance evaluations.

Contract and Program Management: The Contract and Program Management branch is responsible for preparing and managing Management and Administration contracts. The branch is also responsible for enhancing program management capabilities across the Directorate by sharing regulations and requirements, Program Management best practices and training opportunities.

Human Capital and Training: The Human Capital and Training branch is responsible for maintaining records of NPPD personnel and tracking staff levels by office, as well as the coordination of training programs for the Directorate.

Logistics Branch: The Logistics Branch is responsible for facilities property and logistics support, security services, emergency preparedness and continuity of operations, and the Directorate exercise program.

The Property and Logistics Support team is responsible for NPPD facility space planning, rent, procurement and oversight of facilities support services.

The Security support team is responsible for implementing all of the National Security Information (NSI) programs, Controlled Unclassified Information (CUI), and Sensitive Security Information (SSI) programs. The Security Branch also procures the armed guards and escort services for NPPD facilities, physical access control and key control for NPPD facilities, and ensure NPPD facilities' intrusion detection systems and security access control mechanisms are maintained and up-to-date.

Emergency Plans and Continuity is responsible for the coordination of NPPD Continuity of Operations (COOP) plans.

The Directorate Exercise Program is responsible for planning exercises and coordinating NPPD participation in Departmental or government-wide exercises.

### **Information Management and Business Culture Division**

The Office of Information Management and Business Culture (IMBC) is responsible for improving internal and external communications for NPPD, enhancing the Directorate work environment and creating an employee advisory structure. Information Management and Business Culture comprises the Office of the Executive Secretariat, the Freedom of Information Act (FOIA)/Privacy Office, Audit Liaison Branch, Business Culture office and Communications Branch.

Executive Secretariat: The Office of the Executive Secretariat (OES) serves as the central processing point for formal documents and taskers sent to/from NPPD. As part of their daily function, OES staff members assign, monitor, review, edit and manage the disposition of correspondence, action and information memoranda, congressional reports, White House taskings, congressional questions for the record and other materials. OES plans, develops, and implements operating policies, procedures and guidelines for the preparation and routing of correspondence for signature by NPPD senior executives or Department officials. OES coordinates regularly with NPPD management officials to ensure the accuracy and appropriateness of correspondence and ensures timely review and completion of NPPD mandated reports to Congress. OES is also responsible for daily preparation of the Under Secretary's briefing book.

Freedom of Information Act (FOIA) Office: The FOIA Office is responsible for the development and implementation of effective Freedom of Information Act (FOIA) and Privacy Act (PA) programs for the Directorate. These responsibilities include review, analysis and recommendations on release/denial of information requests under FOIA/PA as mandated by statute; development and implementation of FOIA/PA policy within the Directorate; support for the Department Chief FOIA Officer; conduct FOIA/PA training; and provide guidance to Directorate personnel.

Privacy Office: The NPPD Privacy Office works in concert with the Department Privacy Office, which serves as the steward of Section 222 of the Homeland Security Act, the Privacy Act of 1974, the Freedom of Information Act, the E-Government Act of 2002 and the numerous laws, Executive Orders, court decisions and Departmental policies that protect the collection, use and disclosure of personal and Departmental information. The NPPD Privacy Office works to build privacy protections into NPPD programs and systems.

Audit Liaison Branch: The Audit Liaison branch serves as a liaison among external Departmental offices, the Government Accountability Office (GAO), Office of the Inspector General (OIG) and NPPD components for all audit activities undertaken by either the GAO or OIG. Activities include entrance/exit conferences, fieldwork, release of draft and final reports, and recommendation follow-up. The Audit Liaison Branch provides policies and procedures for NPPD for engaging the GAO/OIG during ongoing audits and for responding to and implementing recommendations in audit reports issued by the OIG and the GAO. The audit follow-up program is an integral part of sound program management and works to ensure that NPPD takes timely action in response to audit findings and recommendations from the OIG and GAO.

The Audit Liaison Office ensures and maintains the NPPD process for audit follow-up; works with NPPD components to determine final responses to audit recommendations; works with components to ensure follow-up activities are tracked and reported; and works with the Office of Financial Management to ensure it carries out its delegated responsibilities in audit follow-up.

Business Culture: The mission of the Office of Business Culture is to create and sustain processes and programs that promote employee satisfaction, morale, effective working condition and work efficiencies and promote open communications amongst all NPPD personnel. The Office's primary concern is employee needs in the workplace. The Business Culture Office is responsible for sharing the vision of Department and NPPD leadership, promoting acceptance and understanding of change, and listening to employee input and concerns.

Communications: The Communications Branch of the Office of Information Management and Business Culture is the center of communications for NPPD. The mission of the Communications Branch is to communicate information regarding NPPD—such as its programs, strategic issues and accomplishments—to Congress, federal government partners, NPPD employees, other stakeholders, and the American public. In addition, the Communications Branch sets communications policies for NPPD. The Communications Branch is responsible for Directorate-wide internal communications, producing both traditional and electronic publications for NPPD employees. The Branch is responsible for writing and/or clearing all testimony, talking points, and speeches at the executive level. The Communications Branch also manages the content of the NPPD website. The Communications Branch works closely with the Office of the Executive Secretariat to ensure consistent and accurate messaging for all internal and external stakeholders

### **Information Technology Division**

The Information Technology Division is responsible for developing, maintaining, and facilitating the implementation of sound and integrated information technology architecture. Responsibilities include: Enterprise Architecture alignment and planning; Capital Planning and Investment Control (CPIC) support; IT project management and engineering support services including engineering and liaison services; IT portfolio management; technical specification development; administration and use of Project Management Information Systems (PMIS); Integrated Project Team (IPT) customer support;

IT policy, governance and process development; and ensuring that performance based management principles are used for acquiring IT.

**Facilities Rent and Build-out**

Facilities Rent and Build-out includes GSA rent, non-GSA rent, and facilities build-out for NPPD facilities at the Nebraska Avenue Complex and sites along Glebe Road in Arlington, Virginia. Additionally, facilities and rent includes facility operations and maintenance, security services, parking, and guard and escort services. Facilities, Rent and Build-out also includes the rent and IT costs for the NPPD COOP location.

**PLANNED ACCOMPLISHMENTS**

**Office of the Under Secretary:**

- Continue to provide leadership and support to the components of NPPD.
- Continue to coordinate Directorate activities throughout the Department.
- Serve as the advocate for protection across all government sectors, protection stakeholders, and citizens.
- Increase strategic planning coordination activities with other Departmental entities.

**Administration Division:**

- Provide ongoing support to NPPD offices for budget formulation and execution, acquisition and procurement, asset management, facilities and security support.
- Continue efforts to strengthen the performance measures and performance management process. Collect and analyze data more effectively to inform corrective actions and program/activity changes that minimize risk.
- Continue to enhance investment portfolio management and prioritization through the development of and adherence to an NPPD Investment Review Process. Support investments by interpreting the Department’s investment review guidance, assisting in compliance, and facilitating investments through the Department’s Investment Review Process.
- Continue to strengthen the Directorate knowledge base of program management techniques to enhance status reporting and to reduce program/project risk.

- Continue to support long range facilities planning efforts, including participating in the planning efforts for the eventual move to the St. Elizabeth's campus.

#### **Information Management and Business Culture Division:**

- Assign, monitor, review, edit, and manage the disposition of correspondence, action and information memoranda, congressional reports, White House taskings, congressional questions for the record, and other materials.
- Plan, develop, and implement operating policies, procedures, and guidelines for the preparation and routing of correspondence for signature of NPPD senior executives or Department officials.
- Coordinate with NPPD management officials on a regular basis to ensure the accuracy and appropriateness of correspondence.
- Ensure timely review and completion of NPPD mandated reports to Congress.
- Receive and process FOIA requests submitted for information held by NPPD and provide guidance to NPPD personnel responsible for assisting with FOIA document and information requests.
- Continue working to build privacy protections into NPPD programs and systems.
- Provide policies and procedures for NPPD for responding to and implementing recommendations in audit reports issued by the Office of Inspector General (OIG) and the General Accounting Office (GAO).
- Promote open communications among all NPPD personnel.
- Manage agency-wide internal communications, producing both traditional and electronic publications for NPPD employees, and manage the content of the NPPD website.

#### **Information Technology Division:**

- Continue to deliver IT services via a Project Management Office in direct support of the NPPD mission, goals, objectives, and programs for major systems.
- Ensure project execution according to the standards of the System Development Lifecycle (SDLC) for all NPPD IT investments and projects, ensuring mission requirements are met and are cost-effective.
- Manage and ensure Earned Value periodic reporting for IT investments quarterly.
- Develop and maintain NPPD Enterprise Architecture (EA) alignment with the Department EA.
- Support NPPD IT transformation and investment funding prioritization and allocation by delivering advanced decision support to leadership.
- Manage and administer NPPD IT resources and assets.
- Develop and maintain a Directorate Information Security Program that is fully aligned with the Department, including development and enforcement of Security policy, COMSEC Management, DAA/ISSM/ISSO training.
- Implement a Scanning and Wireless Tool Kit and modernize other IT security operations.
- Perform Privacy Impact Assessments and Privacy Threshold Analyses.
- Ensure Directorate Section 508 compliance through review of all IT purchases and Section 508 grievances filed with the Civil Rights and Liberties Office. Additionally, ensure all new programs are Section 508 compliant.

\* Intergovernmental Programs was funded in FEMA in FY 2007 and FY 2008 per the 872 Reorganization.

The National Protection and Programs Directorate requests \$2,000,000, 17 Positions and 17 FTE for Intergovernmental Programs. The request represents an increase of \$2,000,000, 17 Positions and 17 FTE over FY 2008 Enacted. Program changes include an enhancement of \$2,000,000 and 17 FTE.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The mission of the Office of Intergovernmental Programs (IGP) as defined in the Homeland Security Act of 2002, is to act both as an advocate for State, local, tribal, and territorial officials within the Department and to operate as the primary liaison between those officials and the Secretary of Homeland Security as well as other senior Department leadership IGP facilitates an integrated national approach to homeland security by ensuring, coordinating, and advancing Federal interaction with State, local, tribal, and territorial governments.

The stakeholder community consists of over 500,000 non-Federal elected and appointed officials within the United States, including governors, mayors, county executives, State legislators, leadership of the 561 Federally recognized Indian tribes, law enforcement officials, emergency managers, and the national associations which represent these officials.

IGP manages communications and coordinates activities across the spectrum of issues confronting all 22 agencies and components of the Department. No other Departmental entity is charged with this Department-wide function.

The mission and functions of Intergovernmental Programs also include coordination with counterpart intergovernmental offices within the other Executive Branch agencies to provide for coordinated interaction with non-Federal governmental officials.

The Assistant Secretary for Intergovernmental Programs facilitates timely communication between Department headquarters and the State and local homeland security community, and serves as an advocate for the needs of State, local, tribal, and territorial officials.

## ACCOMPLISHMENTS

### **FY 2007**

- IGP was critical in building a coalition among border states to establish Enhanced Driver's Licenses (EDL), an initiative of the Western Hemisphere Travel Initiative (WHTI). IGP led discussions with Governors of Washington and Vermont and relevant Departmental components (Policy/Screening Coordinating Office) on this effort. Currently, the Department is negotiating with Arizona, New York, Michigan, Texas, and California for EDL production; and IGP is assisting in these efforts.
- IGP traveled to various locations on the Southwest Border to brief Border Patrol Sector Chiefs on the message that DHS would be disseminating to State and local officials regarding the border fence.
- The office has led consultations in conjunction with the REAL ID Program Office in sixteen (16) states and territories and with national associations on the REAL ID Act.
- Recently, IGP met with sixteen (16) Washington DC Governor representatives in order to address their questions and discuss their views on the REAL ID ACT.
- IGP has facilitated meetings and other outreach efforts to gain state insight on pending regulations.
- IGP investigated issues brought forth from the State, local, tribal, and territorial level and advises the Secretary with courses of action.
- IGP acquainted Department components with strategies, processes, and procedures for working with State, local, tribal, and territorial officials. IGP staff reviewed Departmental documents and policies providing input regarding the most advantageous methods for working with State, local, tribal, and territorial partners.
  - IGP guided the establishment of the Domestic Nuclear Detection Office's External Programs Office which has become a model of how to work with State, local, tribal and territorial governments.
- Numerous members of IGP were deployed during Hurricanes Katrina and Rita as well as during the 2004 DNC and RNC Conventions. IGP staff members served as liaisons between State and local officials during these events
- IGP is a member of The President's Task Force on Puerto Rico's Status, which was established by Presidential Order in 2000, to foster open dialogue between the President and the people of Puerto Rico regarding the future status of the territory. IGP was tasked to represent the department.
- IGP is constantly engaged with other cabinet agencies on a variety of issues:
  - IGP worked with the Department of Commerce to rollout the \$1 Billion Public Safety Interoperability Communication Grant Program (PSIC).
  - IGP worked in partnership with HHS when the President directed Pan Flu summits be hosted in all states and territories to ensure the nation was prepared for an influenza pandemic. IGP worked as a liaison with HHS to ensure proper representation at each summit.
  - IGP works with the State Department on a regular basis on various issues in which both agencies have a stake, including WHTI.
  - IGP has worked with the USDA in particular on a Foot and Mouth Disease incident this past summer, in which IGP was called to be part of the Department Crisis Action Team.
- IGP coordinated and participated in a meeting with the Secretary, the Governor of Arizona, and senior officials from CBP and DOD to discuss the various concerns that the Governor had on the Border with Operation Jump Start. Following this meeting IGP was tasked with putting

together a comprehensive briefing for the Governor on what is being done to address her concerns.

- IGP chaired a comprehensive briefing for the Mayors of Denver, Minneapolis and St. Paul regarding the role the Department plays in a National Special Security Event (NSSE).
- IGP orchestrated and participated in a meeting of Sheriff's from every Southwest Border County.

#### **FY 2008 and FY 2009 Planned Accomplishments**

- Continue to support the coalition among border states on the Western Hemisphere Travel Initiative (WHTI). IGP will continue discussions with Governors and leadership of border states.
- Continue to communicate the Department guidance on the border fence and the Real ID requirements.
- Advise the Department on strategies, processes, procedures at the State, local, tribal and territorial levels.
- Advocate for the policy positions taken by State, local, tribal and territorial officials and the resources needed to carry out Departmental policy decisions.
- Coordinate timely, consistent, and accurate communications to our State, local, tribal and territorial officials.

\* FY 2007 funded out of Infrastructure Protection \$2.316M; National Cyber Security Division \$1.158M; National Communications System \$1.158M; IPIS M&A \$0.509M for salaries and benefits for 8 FTE (4 FTE from IP, 2 FTE from National Cyber Security Division, 2 FTE from National Communications System); and OUS M&A \$0.178M for salaries and benefits for 3 FTE.

The National Protection and Programs Directorate requests \$9,500,000, 11 Positions and 11 FTE for Risk Management and Analysis (RMA). The FY 2009 Request represents an increase of \$88,000 from FY 2008 Enacted. The FY 2009 Request includes an adjustment-to-base of \$88,000 for pay inflation.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

On January 18, 2007, the Secretary directed organizational changes as a result of the Post-Katrina Emergency Management Reform Act passed as part of the FY 2007 DHS Appropriations Act. Included in the changes is the establishment of RMA and the office began its initial operational capability on April 1, 2007. The mission of RMA is to lead the Department's efforts to establish a common framework to address the overall management and analysis of homeland security risk. To accomplish this mission, the Secretary has established the following strategic objectives for the office:

- Develop and embed a consistent, coordinated, and collaborative national approach to risk
- Leverage risk expertise across DHS components and external stakeholders
- Identify and develop DHS-level risk performance metrics
- Develop the Department's Risk Communication Strategy

RMA ensures that all individual risk programs are synchronized and integrated, and that they use a common approach/lexicon. In addition, by leveraging and integrating risk expertise across the Department's components and external stakeholders, RMA will establish a common framework to address the overall analysis and management of homeland security risk.

The National Strategy for Homeland Security states that we must apply a risk-based framework across all homeland security efforts in order to identify and assess potential hazards (including their downstream effects), determine what levels of relative risk are acceptable, and prioritize and allocate resources among all homeland security partners, both public and private, to prevent, protect against,

and respond to and recover from all manner of incidents.<sup>1</sup> The Secretary of Homeland Security stated that risk management must guide our decision-making as we examine how we can best organize to prevent, respond and recover from an attack.<sup>2</sup> At its core, homeland security is therefore about managing risk as a Nation at the Federal, State, and local levels, to include the three levels of risk management: strategic, operational, and tactical.

RMA is broke out into four programs including Risk Policy, Risk Analysis, Risk Management and Risk Performance.

### **Risk Policy**

The objective of Risk Policy is to review, analyze and catalog all Department risk mitigation and management processes used to synchronize and refine the Department risk framework and risk management programs. This activity will lay the foundation for the development of a national risk policy, the development of an integrated strategic plan for risk management, and the development of training standards for risk analysis.

This activity also supports the administration and operation of a Department Risk Steering Committee (RSC). The Steering Committee is a cooperative body formed to ensure that risk management is carried out consistently throughout the Department. Chaired by the Under Secretary for National Protection and Programs Directorate and comprised of Departmental component heads and other identified personnel, the committee assists in the framing of processes and procedures for the Department's risk-management architecture, enabling collaboration and Department-wide agreement on risk management efforts.

### **Risk Analysis**

The objective of Risk Analysis is to understand the processes of quantification of probabilities and expected consequences including risk assessment and risk management alternatives performed to understand the nature of the process or hazard. One of the components required to achieve the objective for Risk Analysis is the development of a common risk lexicon. A common lexicon is essential to ensuring all stakeholders have the same understanding of risk programs. Another objective for this activity will be to continue the data collection on and the drafting of business practices for data collection and risk methodology. These business practices will ensure the establishment of a common frame of reference to better integrate and synchronize risk management and analysis programs.

### **Risk Management**

The objective of Risk Management is to achieve an acceptable level of risk at an acceptable cost by the recognition and assessment of risks; and the development, selection, and implementation of countermeasures. A required step for Management will be the data collection on risk reduction strategies and management techniques that are being used across the Department to measure the buying down of risk. The techniques will then be evaluated and prioritized to identify best practices and to identify the commonality and differences between existing methods.

A second objective for this activity will be the evaluation and development of communication capabilities to accurately explain the Department's risk programs. Effective risk communications will enhance the preparation and protection of cyber, human, and physical sectors through an improved

---

<sup>1</sup> The National Strategy for Homeland Security, October 2007, page 41.

<sup>2</sup> DHS Secretary Michael Chertoff prepared remarks at George Washington University Homeland Security Policy Institute (March 16, 2005)

understanding of the Department risk management practices. This objective will include the creation of presentations, documents, and brochures to describe, explain and socialize how the Department and/or national risk strategies, framework and methods are applied and why.

### **Risk Performance**

The objective of Risk Performance is to design criteria for risk performance scorecards to measure the effects of risk management programs within the Department. These measures will be an important tool in the development of a risk performance report which will be used to reflect the efficiency and effectiveness of programs in reducing risk.

### **MILESTONES:**

#### **FY 2007 Accomplishments**

- Established the office of Risk Management and Analysis.
- Created the Department Risk Steering Committee (RSC). RMA establish and maintains a risk committee to assist in the framing of processes and procedures for the Department risk management architecture. The committee membership includes three tiers; component principals (Tier I), sub-component principals (Tier II), and action officers (Tier III). There is also an Executive Committee for the RSC. The RSC process provides the framework for collaboration and Department-wide integration and agreement on risk management efforts.
- Established the process for development of a Department-wide risk comparison tool to help inform the Department resource allocation process. This was completed in coordination with S&T, Policy, and PA&E, and is known as the Risk Assessment Process for Informed Decision-making (RAPID).
- Formed a lexicon development team to begin the process of identifying common risk terminology.

#### **FY 2008 Planned Milestones**

- Implement a Department lexicon development program for risk.
- Prototype RAPID to inform the Future Year Homeland Security Program development process.
- Establish a Department risk management framework which threads together the National strategies and policies, statutory requirements, Secretary's goals and priorities, and National plans with the components' risk methodologies.
- Design and evaluate a regional risk assessment process.
- Begin the conceptual development and analysis for implementing an integrative incident-driven risk analysis process to inform operational decision making.
- Develop an integrative Risk Reduction Program. Identify public and private best practices and develop risk reduction measurement techniques including assisting Department components; developing consequence, threat, and vulnerability analysis modules as they pertain to risk reduction, develop a Departmental inventory of cost/benefit analysis methods and analyze differences within existing methodologies.
- Develop self-assessment tools for conducting risk management performance assessments.
- Develop a Department scorecard.

## **FY 2009 Planned Milestones**

### **Risk Policy**

- Maintain the Department's Risk Steering Committee (RSC).
- Development of a Department risk policy. The Department risk management processes will have to be reviewed, analyzed and cataloged annually by RMA. The cataloging will maintain the foundation used for synchronizing and refining a Department risk framework and risk management program. As this framework is developed, RMA will develop policies to support the risk management program.
- Further refine the process across the Department for building Homeland Security Grant Program guidance. This will include the development of a strategic national risk reduction road map to advance the grant allocation methodology. By emphasizing the principle of risk reduction, which assesses the likelihood that resources obtained via the grant program will address short falls in capability and reduce long-term risk, the Nation's resources will be best allocated to reduce the strategic risk.

### **Risk Analysis**

- Develop a common risk lexicon. Through the use of a collaborative Lexicon Working Group, draft, publish, and maintain a Lexicon Guide for the Department. This activity includes the development of the Department's process for staffing and adjudicating terms related to risk management to ensure all components' interests are considered and included. A common lexicon is essential to ensuring all stakeholders have the same understanding of risk programs which is a fundamental requirement for the development of the Department's risk architecture.
- Develop and prototype an integrative incident-driven risk analysis process to best inform the operational decision making process. Risk analysis is the process by which risks are identified and evaluated. The risk analysis during an incident is essential for addressing the variable descriptions and proxies that are used to derive threat, vulnerability, and consequence.

### **Risk Management:**

- Review the process and procedures for Homeland Security Special Events and implement improvements consistent with a risk-informed approach. This includes forming and leading work groups with other Federal Departments and Agencies and Department components to refine and improve the risk methodology for analyzing Special Events.
- Maintain data on risk reduction strategies and management techniques.
- Identify and promulgate best practices to assist Department risk programs.
- Evaluate risk reduction measurement techniques. Measurement techniques will be developed by identifying best practices used across other Federal agencies and the private sector that measure the reduction of risks through the application of countermeasures, programs and activities. These measurement techniques will be continually updated and refined.
- Revise the Risk Assessment Process for Informed Decision-making (RAPID) in accordance with the lessons learned from the prototype and implement an expanded prototype to inform Future Year Homeland Security Program development process. The primary focus of RAPID is to develop a Department-wide risk comparison tool to help inform the Department resource allocation process. The RAPID effort has resulted in a broader understanding of the complexities of assessing risk across multiple unrelated and interrelated threat areas spanning the breadth of the Department mission space.
- Further develop the national risk management strategy/policy by synchronizing and leveraging assets across the Department.

- Prototype a regional risk assessment capability. RMA, in coordination with the Office of National Capital Region (NCR) and Washington Council of Governments, framed a process for the development of a regional risk assessment program that would identify and prioritize hazards to the regional continuity.
- Evaluate and develop risk communication capabilities. RMA will develop an effective risk story to improve the understanding of the Department risk management practice. RMA will create presentations, documents, and brochures that describe, explain and socialize how the Department and/or national risk strategies, framework and methods are applied and why.

### **Risk Performance**

- Further development of criteria for risk performance scorecards. Development of a strategic system of individual performance scorecards (that support a system of measurement) to determine progress toward full implementation of risk reduction management strategies and capabilities. In order to accomplish the risk performance scorecard and the annual risk performance report, numerous measurement techniques will be developed in order to equitably, consistently and objectively measure results. These results could then be used by the Department for strategic operational planning.
- Further development of a “Risk Performance Report.” This will be an annual report on the progress that the Department is making towards maturing the risk management programs within the Department. The report will be an important tool for implementing and monitoring the progress of a national risk management program.

Description of Item

NPPD Directorate Administration aims to achieve a level of sustainment that will provide responsive, fully integrated processes across the Directorate. As NPPD analyzes its organizational needs to accomplish its goal, and is able to increase its federal staffing levels, it can begin to reduce its reliance on contract staff and promote employee satisfaction levels.

The requested positions will allow NPPD Directorate Administration to build institutional knowledge and expertise. In many critical business operations, information technology, and information management areas, the staff consists of one federal government employee supported by contractors. Additional FTE will provide a knowledgeable federal workforce that will ensure accurate and coordinated responses to key stakeholders, oversight agencies and Congress, as well as providing continuity of services, skills, and accountability.

NPPD requests twelve positions for the Administration Division. These positions will support the following administrative areas: budget formulation, budget execution, procurement, program management oversight, facilities, security, COOP, incident management, exercises, and program review and evaluation. As the budget and staff levels grow across the NPPD offices, increased support is needed to implement the program enhancements requested in the FY 2009 budget. Government

personnel are needed to provide increased procurement, program management, and budget formulation and execution functions. The Security Branch also requires additional Federal staff to oversee security at multiple NPPD sites.

NPPD requests six positions for Information Technology (IT) Division. The additional FTE will fulfill critical roles that are currently being performed by contract staff and ensure there is adequate institutional knowledge should key staff depart. The increase would support positions in areas of IT business planning, procurements, project management, security, requirements, and operations.

NPPD requests six positions for the Information Management and Business Culture Division. The additional positions will support development of the Information Sharing Office. The Information Sharing Office will serve as the mechanism to promote information sharing and collaboration, workplace efficiencies, and employee satisfaction. Information Sharing Office functions and mission are mirrored after the successful implementation of similar functions within the Transportation Security Administration (TSA). Functions of the Information Sharing Office include:

Employee Advisory Council: The Employee Advisory Council (EAC) comprises employees from throughout NPPD. The EAC's mission is to create and sustain processes and programs that promote employee satisfaction, morale, effective working conditions, and work efficiencies. The EAC serves in an advisory capacity to the Under Secretary, Assistant Secretaries and Directors, the Office of Information Management and Business Culture (IMBC), and the Human Capital and Training branch. EAC responsibilities include:

- Championing efforts to create an environment of collaboration and participation, including a system that provides NPPD employees an opportunity to share concerns and submit ideas to the EAC. The EAC will emphasize employee issues and concerns regarding NPPD work culture or work environment and recommend specific action plans for improvement.
- Coordinating the NPPD Annual Employee Recognition Program with IMBC and Human Capital.
- Developing a calendar of employee town hall meetings and recommend issues for the Under Secretary to address.
- Developing a calendar of employee activities (social events, blood drives, celebrations of federally recognized commemorations, such as Black History Month, Hispanic Heritage Month, etc.) and make recommendations for communicating and observing events.

InfoCenter:

The InfoCenter will be a central, online information repository for all NPPD programs. The collaboration tool will house the Directorate's strategic plans, policies, external documents, program information; and will be available, as appropriate, to all Directorate employees. The InfoCenter will continually gather cross-cutting information for each NPPD component office. By forging relationships and breaking down internal communication barriers, InfoCenter promotes information sharing and collaboration, and encourages efficient information management across NPPD.

IdeaFactory:

The IdeaFactory is an online forum for NPPD employees to openly and candidly share best practices and ideas for workplace innovation with Directorate leadership and other Directorate employees. IdeaFactory, which has already proven successful within TSA, will provide a secure

intranet restricted to registered users inside the Directorate that allows for the sharing of ideas to improve the workplace environment and strategies for achieving NPPD mission. Once employees submit ideas, other staff will have the ability to review and vote for those ideas they would like to see implemented. Ideas receiving a high level of votes are then reviewed by an implementation council for implementation. The forum forges relationships, breaks down internal communication barriers, and empowers employees to become a part of the Directorate's development process. Most importantly, it takes advantage of the wealth of knowledge and expertise of employees at all levels for the betterment of the entire Directorate.

Additionally, NPPD Directorate Administration would like to provide funding for retention and recruitment initiatives to slow the rate of turnover within the ranks of Federal staff, and to facilitate recruitment of talented personnel to fill critical positions. Such initiatives would include bonuses for retention of current employees, bonuses to competitively attract new personnel to fill vacant positions, participation and organization of job fairs, as well as internship programs and on-campus recruiting initiatives for recent college and masters program graduates. Recruitment and retention of employees would be facilitated by reimbursement programs for student loans and other professional certifications. Stabilization and fortification of the ranks of Federal staff within NPPD Directorate Administration will help to decrease reliance on contractors and facilitate conversion efforts currently underway.

This program change would also provide NPPD Administration the opportunity to provide greater training opportunities for its staff based on relevant functional areas within the office. Training opportunities would include Financial Management, Facilities Management, Human Capital, and Appropriations Law. Training efforts to enhance understanding of the various functions of NPPD Administration would benefit the front office, as well as Directorate offices that rely on NPPD Administration to provide guidance and support in numerous capacities.

## V. Exhibits and Other Supporting Materials

### A. Justification of Proposed Legislative Language

**Department of Homeland Security  
National Protection and Programs Directorate  
Management and Administration  
Appropriation Language**

For salaries and expenses of the Office of the Under Secretary for National Protection and Programs Directorate, [the National Protection Planning Office,] support for operations, information technology, ***Intergovernmental Programs***, and Risk Management and Analysis, [\$47,346,000]: ***\$54,600,000***. *Provided*, that not to exceed \$5,000 shall be for official reception and representation expenses. [*Provided further*, that of the total amount provided under this heading, \$5,000,000 shall not be obligated until the Committees on Appropriations of the Senate and the House of Representatives receive and approve an expenditure plan by program, project and activity.]

#### **Explanation of Changes:**

- 1) NPPD is requesting that the NPPO language be removed. No funding was received in FY 2008, nor are funds being requested for this office in FY 2009.
- 2) NPPD is requesting that Intergovernmental Programs be included in the Management & Administration appropriation.

### PPA Mission Statement

Directorate Administration provides support to the Directorate offices including the Under Secretary front office staff, Administration, Information Management and Business Culture, Information Technology, and facilities.

**Summary Justification and Explanation of Changes**

|                              | <b>2007<br/>Actuals*</b> | <b>2008<br/>Enacted</b> | <b>2009<br/>Request</b> | <b>2008 to 2009<br/>Change</b> |
|------------------------------|--------------------------|-------------------------|-------------------------|--------------------------------|
| <b>Salaries and Benefits</b> | \$6,261                  | \$6,400                 | \$10,334                | \$3,934                        |

Salaries and Benefits includes all personnel costs for 66 FTE. The FY 2009 Request represents a net increase of \$3,934,000 and 12 FTE for Administration. The FY 2009 Request includes program enhancements of \$2,748,000 and 12 FTE for Administration staff, \$1,000,000 for recruitment and retention, as well as adjustments-to-base of \$186,000 for pay inflation.

|               | <b>2007<br/>Actuals*</b> | <b>2008<br/>Enacted</b> | <b>2009<br/>Request</b> | <b>2008 to 2009<br/>Change</b> |
|---------------|--------------------------|-------------------------|-------------------------|--------------------------------|
| <b>Travel</b> | \$170                    | \$250                   | \$255                   | \$5                            |

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with federal travel regulations. In FY 2009, \$255,000 is requested for travel, and represents an adjustment-to-base of \$5,000 over FY 2008 for non-pay inflation.

|                 | <b>2007<br/>Actuals*</b> | <b>2008<br/>Enacted</b> | <b>2009<br/>Request</b> | <b>2008 to 2009<br/>Change</b> |
|-----------------|--------------------------|-------------------------|-------------------------|--------------------------------|
| <b>GSA rent</b> | \$0                      | \$2,626                 | \$2,588                 | (\$38)                         |

GSA Rent was funded out of the IPIS M&A appropriation in FY 2007. GSA Rent includes all payments to General Services Administration (GSA) for the spaces occupied at the Nebraska Avenue Complex. The FY 2009 request of \$2,588,000 for GSA rent represents a net \$38,000 decrease over FY2008. The GSA rent includes an increase of \$53,000 for non-pay inflation and an efficiency adjustment of \$91,000 for consolidation of several NPPD NAC locations.

|                   | <b>2007<br/>Actuals*</b> | <b>2008<br/>Enacted</b> | <b>2009<br/>Request</b> | <b>2008 to 2009<br/>Change</b> |
|-------------------|--------------------------|-------------------------|-------------------------|--------------------------------|
| <b>Other Rent</b> | \$0                      | \$7,017                 | \$7,445                 | \$428                          |

All Non-GSA rent was funded in IPIS M&A in FY 2007. Other Rent includes all Non-GSA facilities occupied by NPPD for the OUS and IPIS programs, and COOP-site rent. The FY 2009 request of \$7,445,000 represents a \$428,000 increase from FY 2008. This includes \$140,000 for non-pay inflation and \$288,000 for an enhancement to occupy additional space for new staff.

| <b>Advisory and Assistance Services</b> | \$5,075          | \$7,079         | \$7,904         | \$825                  |

Advisory and assistance services include services acquired by contract from non-federal sources for IT, Business Operations, and other administrative support. The FY 2009 Request represents a \$825,000 net increase over FY 2008. It includes \$944,000 program enhancement for training and retention programs, \$142,000 for non-pay inflation, \$261,000 efficiency adjustment for reductions to contract support.

|                       | 2007<br>Actuals* | 2008<br>Enacted | 2009<br>Request | 2008 to 2009<br>Change |
|-----------------------|------------------|-----------------|-----------------|------------------------|
| <b>Other Services</b> | \$1,773          | \$500           | \$510           | \$10                   |

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2009 Request of \$510,000 represents an increase of \$10,000 from FY 2008 Enacted for non-pay inflation.

|  | 2007<br>Actuals* | 2008<br>Enacted | 2009<br>Request | 2008 to 2009<br>Change |
|--|------------------|-----------------|-----------------|------------------------|
| <b>Purchase from Government Accounts</b> | \$4              | \$2,600         | \$2,570         | (\$30)                 |

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2009 request is a net reduction of \$30,000, and includes \$52,000 in non-pay inflation for DHS Working Capital Fund expenses and an efficiency adjustment of \$82,000 for reductions to detailees.

|  | 2007<br>Actuals* | 2008<br>Enacted | 2009<br>Request | 2008 to 2009<br>Change |
|--|------------------|-----------------|-----------------|------------------------|
| <b>Operation &amp; maintenance of facilities</b> | \$0              | \$11,457        | \$11,489        | \$32                   |

Operation and maintenance of facilities was funded in IPIS M&A in FY 2007. Operation and maintenance of facilities includes security, transit, parking, mail operations and facilities fit out for the Directorate. The FY 2009 request of \$11,489,000 represents a net change of \$32,000, which includes \$229,000 for non-pay inflation and \$197,000 efficiency adjustment for decreases to facilities ops and maintenance costs.

|                                 | 2007<br>Actuals* | 2008<br>Enacted | 2009<br>Request | 2008 to 2009<br>Change |
|---------------------------------|------------------|-----------------|-----------------|------------------------|
| <b>Supplies &amp; materials</b> | \$174            | \$5             | \$5             | \$0                    |

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2009 Request represents no change from FY 2008.

|                  | 2007<br>Actuals* | 2008<br>Enacted | 2009<br>Request | 2008 to 2009<br>Change |

# BUDGET REQUEST AND SUPPORTING INFORMATION

## National Protection and Programs Directorate Infrastructure Protection and Information Security

### I. Appropriation Overview

#### A. Mission Statement for Infrastructure Protection and Information Security:

##### Office of the Assistant Secretary for Infrastructure Protection:

The mission of Infrastructure Protection (IP) is based on the requirements of the Homeland Security Act of 2002, The Intelligence Reform and Terrorism Prevention Act of 2004, Homeland Security Presidential Directive (HSPD)-7, “Critical Infrastructure Identification, Prioritization, and Protection,” Section 550 of the Fiscal Year 2007 Homeland Security Appropriations Act, HSPD-19, “Combating Terrorist Use of Explosives in the United States,” and additional Executive Orders, HSPDs and National Security Presidential Directives. IP leads the coordinated national effort to reduce risk to our critical infrastructures and key resources (CIKR) posed by acts of terrorism and enables national preparedness, timely response, and rapid recovery in the event of an attack, natural disaster, or other emergency.

IP functions include:

- (1) Leading a robust organizational framework to facilitate the identification, prioritization, coordination, and protection of CIKR in support of Federal, State, local, territorial, and tribal governments, and the private sector, and facilitate information regarding threats, vulnerabilities, incidents, potential protective measures, and best practices that enhance protection, response, mitigation, and restoration activities;
- (2) Developing, maintaining, and implementing the National Infrastructure Protection Plan (NIPP) and mechanisms for enhancing CIKR-related protective and response capabilities under the National Response Framework (NRF) in order to provide operational support to government and private entities in response to significant threats and incidents;
- (3) Facilitating/conducting vulnerability assessments across all seventeen CIKR sectors in the United States and communicating standards to the infrastructure owners/operators and key stakeholders;
- (4) Ensuring the maintenance of a CIKR sector governance and information-sharing framework to facilitate coordination and collaboration for infrastructure protection, and serving as the designated Sector Specific Agency for five sectors: Dams, Emergency Services, Nuclear, Chemical and Commercial Facilities;
- (5) Collecting data and analyzing risk to CIKR and providing government and private sector stakeholders with a means to prioritize resource allocation and assistance, and assisting stakeholders in developing protection strategies, programs, training, and best practices activities that reduce vulnerability and coordinate the protection of CIKR;
- (6) Establishing and maintaining international programs and relationships that promote a global culture for the protection of CIKR; and
- (7) Establishing and enforcing a regulatory security framework for the Nation’s high risk chemical facilities; and

- (8) Ensuring the development and implementation of infrastructure protection programs and capabilities at the State and Local level to meet the unique requirements of local jurisdictions.

Office of the Assistant Secretary for Cyber Security and Communications:

The Office of Cyber Security and Communications reduces risk to the Nation's communications and information technology infrastructures, enables timely response and recovery under all circumstances, including both natural disaster and terrorist related disruptions, and coordinates the planning for and provision of national security and emergency preparedness communications for the Federal Government. Functions include:

- (1) Oversight of the development of a national telecommunications infrastructure that is responsive to national security and emergency preparedness needs of the Nation;
- (2) Ensuring the provision of a national cyber response system to prevent, detect, respond to and reconstitute rapidly from a cyber incident;
- (3) Ensuring the provision of an industry-Government coordinating center with capabilities to assist in the initiation, coordination, restoration and reconstitution of NS/EP telecommunications services or facilities under all conditions of crisis and emergency;
- (4) Coordinate with the private sector to reduce vulnerabilities and minimize the severity of cyber attacks and developing recommendations for telecommunications architecture to meet current and future national security and emergency preparedness telecommunications requirements;
- (5) Oversight of the development of procedures for the management, allocation, and use of federally owned or leased telecommunications assets under all conditions of crisis or emergency;
- (6) Ensuring the development of a national awareness program to include training and education to empower businesses, the general workforce and the general population to secure their portion of cyberspace;
- (7) Coordination with the intelligence and law enforcement communities to identify and reduce threats to cyberspace;
- (8) Provision of technical and analytical expertise and staff support to the National Security Telecommunications Advisory Committee responsible under Executive Order 12382 to provide information and advice to the President;
- (9) Oversight of the conduct of technical studies and, in partnership with the Science and Technology Directorate, coordination, research, review, and development efforts to support work in the telecommunications and cyber security arenas;
- (10) Ensuring the conduct of test and exercise programs in the telecommunications and cyber security area to evaluate incident management and recovery plans and programs;
- (11) Support and promote the ability of emergency response providers and Federal Officials to continue to communicate in the event of natural disasters, acts of terrorism, or other manmade disasters, and to ensure, accelerate, and attain interoperable emergency communications nation-wide.

**B. Budget Activities:**

Infrastructure Protection

**Infrastructure Protection (IP)** – The FY 2009 request for Infrastructure Protection is \$272,800,000. The IP budget structure is based on the requirements of the National Infrastructure Protection Plan (NIPP) and the Chemical Facilities Anti-Terrorism Standards (CFATS) regulatory framework as

described in the CFATS Interim Final Rule and accompanying Appendix A listing chemicals of interest and screening threshold quantities. The NIPP provides the coordinated approach to establish national CIKR protection priorities, goals, and requirements so that Federal funding and resources are applied in the most effective manner to reduce vulnerabilities, deter threats, and minimize the consequences of terrorist attacks, natural disasters, and other incidents. It provides an integrated, risk-based approach for the national CIKR protection program, to focus Federal grant assistance to State, local, and tribal entities, and to complement relevant private sector activities. It clearly identifies roles and responsibilities of all partners, and includes mechanisms to involve private sector partners in the planning process and supports collaboration among security partners to establish priorities, define requirements, share information, and maximize the use of finite resources. The NIPP serves as the unifying framework to ensure that CIKR investments are coordinated and address the highest priorities, based on risk, to achieve the homeland security mission and ensure continuity of the essential infrastructure and services that support the United States Government, economy, and way of life. Implementation of this coordinated approach ensures that limited resources are applied efficiently and effectively to address the Nation's most critical CIKR protection needs. Achieving the NIPP goals requires meeting a series of objectives that include understanding and sharing information about terrorist threats and other hazards, building security partnerships, implementing a long-term risk management program, and maximizing the efficient use of resources.

#### Cyber Security and Communications

**National Cyber Security Division (NCS) (formerly Cyber Security)** – FY 2008 Enacted was \$210,413,000 and the FY 2009 request is \$293,500,000. NCS funds are executed through a variety of programs intended to: 1) partner with the private sector, government, military and intelligence stakeholders in risk assessment and mitigation of vulnerabilities and threats to critical IT assets and activities that affect the operation of the critical infrastructures of the U.S.; and 2) provide cyber threat and vulnerability analysis, early warning, and incident response assistance for public and private sector constituents.

**National Communications System (NCS) (formerly NS/EP Telecommunications)** – National Communications System FY 2008 Enacted was \$136,021,000 and the FY 2009 request is \$236,600,000. These funds are used to provide mission-critical communications for Federal, State and local governments, and private industry through the following functions: (1) administering the National Coordinating Center for Telecommunications to facilitate the initiation, coordination, restoration and reconstitution of NS/EP Telecommunications services or facilities under all circumstances; (2) developing and ensuring the implementation of plans and programs that support telecommunications infrastructure hardiness, redundancy, mobility, connectivity and security; and (3) serving as the focal point for industry and government NS/EP telecommunications planning and partnerships and enhancing the use of cyber and telecommunications infrastructures by providing the information, concept of operations, and unified interoperable capabilities which enable governments to accomplish their command and coordination essential functions. The network centric approach will require continual capability enhancements. The Department, acting as Executive Agent, will undertake development of “enhanced” Long Range Navigation (eLORAN) as a backup for the Global Positioning System (GPS) in the Homeland. The United States Coast Guard will transfer \$34,500,000 to NCS in FY 2009 to oversee LORAN-C modernization as a first step toward providing back-up capability for critical infrastructure that depends on GPS for position, navigation and timing.

**Office of Emergency Communications (OEC)** – Department of Homeland Security Appropriations Act of 2007 established the OEC in FY 2007 and the FY 2009 request is \$38,300,000. Major

initiatives for the OEC in its first year include an initial stand-up and staffing of the office and completing the congressionally mandated Sufficiency of Resources Plan and National Baseline Assessment.

### **C. Budget Request Summary:**

Infrastructure Protection and Information Security requests 725 positions, 636 FTE, and \$841,200,000 for FY 2009, an increase of 139 FTE and an increase of \$186,470,000 over the FY 2008 enacted budget of 497 FTE and \$654,730,000. Within this total, NPPD and the Department have identified critical enhancements to existing programs through transfers or program increases/decreases, and have prioritized new undertakings to accomplish the NPPD mission. The summaries of changes are:

#### Adjustments-to-Base

1. Pay factors include 3.5% inflation for 2008 and 2.9% for 2009.
2. Includes annualization of 54 FTE and \$7,713,000 (12 Infrastructure Security Compliance personnel, 18 OEC personnel, 1 NCCC personnel, and 23 US-CERT personnel).
3. Includes a transfer of \$34,500,000 from the United States Coast Guard for LORAN.

#### Program Enhancements

4. Infrastructure Protection includes a program enhancement of \$12,857,000, 50 FTE and 100 positions for Mitigation Programs.
5. NCS includes a program enhancement of \$79,896,000, 23 FTE and 45 positions for US-CERT.
6. NCS includes a program enhancement of \$5,751,000 for Strategic Initiatives.
7. NCS includes a program enhancement of \$34,900,000 for Next Generation Networks.
8. NCS also includes a program enhancement of \$57,037,000, 7 FTE and 14 positions for National Command and Coordination Capability (NCCC).
9. The Office of Emergency Communications (OEC) includes a program enhancement of 5 FTE and 10 positions to enhance OEC State and local outreach efforts.

#### Program Reductions

10. Infrastructure Protection includes a program reduction of \$552,000 for Identification and Analysis.
11. Infrastructure Protection also includes a program reduction of \$15,484,000 for Coordination and Information Sharing.
12. NCS includes a program reduction of \$5,920,000 for Information Sharing and Collaboration for higher priority initiatives.
13. NCS includes program reductions of \$18,978,000 for Priority Telecommunications Program, \$4,947,000 for Critical Infrastructure Programs, \$996,000 for Programs to Study and enhance Telecommunications, and \$1,421,000 for Industry-Government and Interagency Processes.

## II. Summary of FY 2009 Budget Estimates by Program/Project Activity (PPA)

**Department of Homeland Security**

<sup>1</sup> FY 2007 Actuals include expenditures incurred for Biosurveillance, the program transferred to the Office of Health Affairs effective April 1, 2007. The Office of Emergency Communications, formed as a result of Title VI of the DHS 2007 Appropriation reflects only six months of expenditures.

<sup>2</sup> Cyber Security was renamed to National Cyber Security Division in FY 2009.

<sup>3</sup> NS/EP Telecommunications was renamed to National Communications System in FY 2009.

### III. Current Services Program Description by PPA

| <b>2009 Request</b>          | <b>440</b> | <b>386</b> | <b>\$272,800</b> |
| Total Change 2008-2009       | 100        | 62         | \$204            |

The National Protection and Programs Directorate (NPPD) requests \$272,800,000 for Infrastructure Protection. The adjustments-to-base of \$3,383,000 include the annualization of 12 FTE received for Infrastructure Security Compliance and pay inflation. The program changes include an increase of 45 FTE (90 positions) for Infrastructure Security Compliance and 5 additional FTE (10 positions) for Protective Security Advisors (PSA). The Infrastructure Protection program is defined by three mission areas: Identification and Analysis, Coordination and Information Sharing, and Mitigation Programs.

| IP Mission Areas                     | FY 2008 Enacted      | FY 2009 Request      |
|--------------------------------------|----------------------|----------------------|
| Identification and Analysis          | \$69,522,000         | \$77,326,000         |
| Coordination and Information Sharing | \$68,821,000         | \$45,644,000         |
| Mitigation Programs                  | \$134,253,000        | \$149,830,000        |
| <b>Total IP</b>                      | <b>\$272,596,000</b> | <b>\$272,800,000</b> |

#### **CURRENT SERVICES PROGRAM DESCRIPTION:**

##### **Identification and Analysis**

| Identification and Analysis | FY 2008 Enacted     | FY 2009 Request     |
|-----------------------------|---------------------|---------------------|
| <b>Total</b>                | <b>\$69,522,000</b> | <b>\$77,326,000</b> |
| Personnel Costs             | <b>\$9,495,000</b>  | <b>\$11,127,000</b> |
| Program Costs               | <b>\$60,027,000</b> | <b>\$66,199,000</b> |

The National Protection and Programs Directorate (NPPD) requests \$77,326,000 for Identification and Analysis. Identification and Analysis consists of IP projects that support the capability to identify the Nation's CIKR, assess CIKR vulnerabilities and consequences, prioritize assets and systems, and analyze and reduce risk. These efforts support IP's capabilities to provide a comprehensive inventory

of the Nation’s CIKR assets, and to collect the vulnerability and consequence information required to conduct incident management and response activities and produce comprehensive asset and system risk analyses. It also supports CIKR protection strategic and tactical risk analysis, simulation and modeling, and intelligence fusion with information from practical field assessments to enable interdependencies and cascading effects analysis. Identification and Analysis is divided into three projects: *Vulnerability Assessments, Infrastructure Sector Analysis and Infrastructure Information Collection and Visualization.*

The Vulnerability Assessments (VA) project is a Department/IP-led, Federal, State, local, and private sector collaborative effort to identify vulnerabilities and enhance the security of the Nation’s Tier One and Tier Two CIKR. In addition to supporting Homeland Security Presidential Directive 7 by integrating and coordinating implementation of efforts among Federal departments and agencies, state and local governments, and the private sector to protect the Nation’s CIKR, the VA project supports the implementation of the NIPP and the NRF. Current ongoing efforts cover the complete spectrum of assessing vulnerability from local constituencies conducting Buffer Zone Protection Plans (BZP) and federal field teams conducting single Site Assist Visits (SAVs), to larger scale assessments of collections of assets or subsectors via Comprehensive Reviews (CRs). In addition, new requirements associated with new commercial nuclear facilities licensing factor into resource planning. As required under the Energy Policy Act of 2005, IP will be responsible for performing the departmental security consultation and assessment for new nuclear reactor license applications received by the Nuclear Regulatory Commission (NRC). This effort started in FY 2008 and will continue through until FY 2011. This additional requirement is currently in the assessment methodology development, report template development, and coordination stage with the NRC to conduct these consultations.

High-Risk Infrastructure Cluster vulnerability assessment efforts base CIKR risk mitigation on a regional approach. The regional, rather than an individual asset-based approach will enable CIKR vulnerability assessments and security planning activities to be conducted across multiple sectors within high-risk regions and will facilitate multi-jurisdictional planning and information sharing with State and local governments and the private sector. The approach focuses on Urban Area Security Initiative (UASI) jurisdictions to identify Tier One and Tier Two CIKR and the interdependent infrastructure within those jurisdictions. The resulting High-Risk Infrastructure Cluster assessment will identify both vulnerabilities of assets and the security gaps of Local Law Enforcement (LLE) and first responders in the corresponding jurisdiction. The mitigation strategy will include targeting UASI and other grants to mitigate these vulnerabilities and fill security gaps through protective measures to reduce the risk of a successful terrorist attack and all-hazard events.

## Project Milestone/Schedules:

### FY 2007 Accomplishments

- Completed 110 SAVs with conjunction with Federal, State, local, and private-sector stakeholders
- Completed remaining 28 Nuclear CRs (65 total Nuclear Power Plants)
- Completed remaining 5 Regional Chemical CRs (6 total high-risk chemical regions)
- Provided assessments that guided \$25 million dollars of BZPP grant funds for increased LLE capability to protect the buffer zones around high-risk chemical facilities as identified through the Chemical CR
- Completed 200 Buffer Zone Plans, leading to the provision of \$50 million in BZPP grant funds for increased LLE capabilities
- Completed 130 Soft Target Awareness Courses to LLE and private sector security managers
- Completed 50 Surveillance Detection Courses to LLE protecting the Nation's CIKR

### FY 2008 Planned Accomplishments

- Develop a scalable assessment methodology to execute SAVs, Buffer Zone Plans (BZP), CRs, and High-Risk Infrastructure Cluster Assessments. This represents an important step in working with other SSAs to standardize assessment methodologies while fulfilling bombing prevention requirements, providing accessibility to State and local partners through ACAMS, and allowing PSA-led assessment teams to coordinate and report on vulnerability assessments in the field
- Integrate 10 National Guard teams into the VA Project and conduct approximately 300 vulnerability assessments on Tier 1/2 CIKR. The National Guard will test, evaluate, and calibrate the new methodology
- Conduct the high-risk cluster assessment pilot on 72 assets in the Lower Manhattan Security Initiative and 24 assets in the District of Columbia Metroplex Initiative. These assessments will allow IP to evaluate and enhance the methodology to conduct full scale High-Risk Infrastructure Cluster assessments in following years
- Expand the CR effort to conduct assessments for high-consequence sectors such as liquefied natural gas
- Conduct the first CR on an infrastructure system. The California Water System CR will be developed and executed in conjunction with Federal, State, and local government partners and integrated with the BZP to align protective measures to gaps identified in the CR
- Establish a Protective Measures Section within IP to track Federal, State, and local government and private sector assessments and protective actions. This section will collect and analyze information to evaluate and verify the effectiveness of assessments, protective measures implemented, and grant funding provided to high-priority CIKR
- Develop and conduct security assessments on proposed new nuclear reactor facilities. In collaboration with the Nuclear Regulatory Commission, Homeland Infrastructure Threat and Analysis Center (HITRAC), and IP's Sector Specific Agency Emergency Management Office (SSA EMO), the VA Project will assess the security considerations of building new reactors at existing and proposed "greenfield" commercial nuclear power plant facilities. The VA Project will conduct approximately 30 of these security assessments over a three-year period
- Conduct recurring assessments, as required, in additional high-consequence sectors, such as Energy, Water, and Transportation, with particular focus on high concentrations of Tier 1/2 CIKR

FY 2009 Planned Accomplishments

- Develop a protective measures tool that will track and electronically visualize risk reduction based on empirical data gathered from protective measures and mitigation strategies implemented at Tier 1/2 CIKR
- Conduct approximately 315 vulnerability assessments on Tier 1/2 CIKR, utilizing the National Guard in coordination and collaboration with Federal, State, local, and private sector partners
- Conduct between 3-5 High-Risk Infrastructure Cluster assessments in UASI jurisdictions to identify vulnerabilities and security gaps.

The Infrastructure Sector Analysis project provides the integrated capability to conduct comprehensive, timely, actionable, and risk-informed assessments, modeling and simulation, and analysis of CIKR to advance the Nation’s understanding of the dynamic risk landscape impacting the Nation’s CIKR. This capability is provided through the development and deployment of the methodologies, tools, and technologies required to enable implementation of the NIPP at the Federal, State, local, tribal, and Territorial government levels. This integrated capability provides common, consistent, and robust information and analysis of the Nation’s infrastructure; facilitates efficient and effective information sharing to public and private sector partners; provides standardized risk assessment methodologies for use by Federal, State, and local governments; enables focused, timely, and effective preparedness and response decisions; and provides a cost-effective solution through the use of consolidated technology and efforts.

The Infrastructure Sector Analysis project, through the Homeland Infrastructure Threat and Risk Analysis Center (HITRAC) and the National Infrastructure Simulation and Analysis Center (NISAC), analyzes and monitors risks to the Nation’s infrastructure, and allows Infrastructure Protection (IP) to provide Department decision-makers and external customers with immediate, actionable analysis and recommendations to manage risk. In addition, the Infrastructure Sector Analysis Project supports the Science and Technology (S&T) Directorate’s Integrated Product Team (IPT) program in the analysis and application of millions of dollars in annual funding to new technology transition projects related to CIKR protection. This effort includes monitoring and supporting the full range of S&T Capstone IPTs while assisting IP in leading the Infrastructure Protection IPT, Chemical-Biological IPT, and Counter-Improvised Explosive Device IPT. Drawing upon expertise across IP and S&T, the Infrastructure Sector Analysis project will examine new technologies and methodologies that support CIKR-related risk reduction efforts throughout the Nation to ensure critical infrastructure requirements feed the IPT process and are effectively being addressed through research and development (R&D) programs. Similar actions will be taken to address modeling, simulation, and analysis collection requirements.

The Infrastructure Sector Analysis project mission area directly supports departmental Strategic Goals to identify and understand threats, assess vulnerabilities, determine potential impacts and disseminate timely information to our homeland security partners and the American public. The Infrastructure Sector Analysis project's budget requests support its ability to develop products and work broadly with its partners on the Federal, State, local, tribal, Territorial, and private sector levels. This capability is essential to effective implementation of the NIPP.

Homeland Infrastructure Threat and Risk Analysis Center (HITRAC):

HITRAC, a jointly operated and funded infrastructure-intelligence fusion center with the Office of Intelligence and Analysis (OI&A), develops analytical products by combining intelligence expertise based on all-source information, threat assessments, and trend analysis with practical business and CIKR operational expertise informed by current infrastructure status, operations information, and NISAC analysis. This comprehensive analysis provides an understanding of the threat, CIKR vulnerabilities, the potential consequences of attacks, and the effects of risk-mitigation actions. This combination of intelligence and infrastructure knowledge allows HITRAC to provide CIKR risk assessment products that contain strategically relevant and actionable information.

HITRAC conducts strategic risk analysis of all 17 CIKR and develops products and briefings at various classification levels for dissemination to Federal, State, local, tribal, Territorial, and private sector partners. Since March 2006, HITRAC has released approximately 140 products to include joint homeland security assessments with the Federal Bureau of Investigation and State threat assessments for all 56 States and Territories. These State threat assessments, along with the Tier 1/Tier 2 lists which identify the approximately 3,000 nationally significant CIKR assets and systems across the Nation, help to inform UASI, State Homeland Security, and Buffer Zone Protection (BZP) grant programs. HITRAC has also achieved the Government Accountability Office (GAO) performance expectation to identify and assess threats and vulnerabilities for critical infrastructure through its Strategic Homeland Infrastructure Risk Assessment (SHIRA) program. The SHIRA program develops a methodology for comparing and prioritizing risk across all 17 CIKR sectors, and the analysis derived from this methodology serves as the National CIKR Risk Profile in the National CIKR Protection Annual Report. Finally, HITRAC provides support to the Committee on Foreign Investment in the United States (CFIUS) by developing written threat and risk assessments of foreign direct investment in the United States. In 2007, HITRAC provided support to 150 CFIUS cases.

National Infrastructure Simulation and Analysis Center (NISAC):

NISAC was established to provide a comprehensive capability to assess the national system of interdependent infrastructures through advanced simulation and modeling. NISAC conducts analyses of technical, economic, and national security implications of CIKR protection, mitigation, response, and recovery options. To do this, NISAC conducts gap analysis using modeling and simulation to predict the performance of infrastructure under abnormal conditions (e.g., natural and manmade incidents), the effects of interdependencies, and the dynamics of their interconnections.

NISAC consistently meets customer requests for modeling and simulation analysis. Recent products include hurricane swath analyses that simulated hurricane scenarios and analyzed their impacts to populations and CIKR assets and systems, as well as a report conducted in support of the President's National Strategy for Pandemic Influenza that models, simulates, and analyzes the potential impacts of a pandemic influenza on the population, infrastructure, and economy of the Nation. These products have been disseminated to a variety of customers and posted on numerous information portals, to include: Homeland Security Information Network (HSIN); National Infrastructure Coordinating Center (NICC) tactical portals; State and Local Fusion Centers; Homeland Security Advisors; Principal

Federal Officials; and the Federal Emergency Management Agency (FEMA). NISAC analysis has also been disseminated through support to homeland security-related exercises.

### **Project Milestones/Schedules**

#### **FY 2007 Accomplishments**

- Developed national- and sector-level CIKR risk profiles for inclusion in the National CIKR Protection Annual Report
- Developed 2007 Tier 1 and Tier 2 lists of CIKR with the greatest consequences in collaboration with State governments and federal partners
- Worked with various sectors, including the Federal Sector Specific Agencies (SSAs) and the Government and Sector Coordinating Councils to develop unique sector-specific criteria to determine the criticality of assets and systems
- Developed geographic impact models of a variety of hurricane scenarios and disseminated them to the CIKR sectors through HSIN preceding the last and current hurricane seasons
- Developed tailored strategic assessments of the threats and risks posed to each infrastructure sector
- Completed a study of the impacts of pandemic influenza on the Nation's CIKR.
- Provided analytical products in support of Hurricane Preparedness Top Officials Exercise (TOPOFF) 4, Vigilant Shield, and Arden Sentry exercises
- Developed over 140 threat and risk assessments for dissemination to Federal, State, local, tribal, Territorial, and private sector partners

#### **FY 2008 Planned Accomplishments**

- Enhance CIKR information collection and analytical efforts to improve the ability to provide timely and actionable risk-informed analytical products at multiple infrastructure levels to security partners
- Work with IP partners to improve the identification and tracking of the effects of risk mitigation across all levels of CIKR
- Leverage Sector CIKR Protection Annual Report inputs in FY 2008 NISAC work plan development—completing the first iteration of a new requirements-driven analysis program.
- Collaborate on a sector requirements process/capability gap prioritization process with other analytic partners
- Leverage Sector CIKR Protection Annual Reports and the National CIKR Protection Annual Report to support and lead identification and development of new programs accomplished under the IP, Chemical-Biological IPTs, and Counter-IED IPTs, and assist in other capstone IPTs to address high risks to US CIKR
- Expand piloting activities with specialized simulation, modeling, and analysis centers

#### **FY 2009 Planned Accomplishments**

- Complete the development of IP's core risk-based product lines and coordinate with security partners and stakeholders to identify new areas of focus such as forecasting and trend analysis.
- Leverage Sector CIKR Protection Annual Report inputs in FY 2008 NISAC work plan development, and weigh ability to complete sector requirements while also completing exercise and real-world analysis requirements
- Publish a bi-annual Hurricane and/or Incident Analysis book with updated hurricane and other all-hazard analyses. NISAC will also collaborate to improve the level of detailed analyses

provided to select localities. Key portions of this analysis will be available on HSIN or other electronic sharing mechanism for wider promulgation to approved government agencies and sectors

\* PCII was realigned in FY 2009 from the IP Coordination and Information Sharing Mission Area. The amount transferred was \$6,723,000 for activity costs and \$1,341,000 for salaries and benefits for 10 FTE/Positions.

As directed by the Homeland Security Act of 2002 and HSPD-7, the Department is responsible for identifying, prioritizing, and protecting the Nation’s infrastructure. A crucial component of this responsibility is the need to collect, protect, manage, and share infrastructure data to inform sector-specific and cross-sector risk identification and analysis and incident management and response activities, which will ultimately enhance infrastructure protection. The Infrastructure Information Collection and Visualization (IICV) project achieves this need through developing and deploying integrated methodologies, tools, and technologies to identify and inventory assets, systems, networks, and functions; protect infrastructure information; and provide geospatial services to enable and enhance infrastructure protection programs and capabilities. This project enables the identification, assessment, and prioritization of CIKR at all levels of government and within the private sector through these three activities; Integrated Common Analytical Viewer (iCAV), Infrastructure Information Collection Program (IICP), and Protected Critical Infrastructure Information (PCII).

Additionally, IP will leverage the NIPP partnership framework to gain valuable insight to ensure it is developing value-added capabilities, programs, and plans that support infrastructure protection at all levels of government and the private sector. Specific focus will be given to ensure that IP meets the requirements of its diverse stakeholders to:

- Identify and warehouse data regarding the Nation’s infrastructure
- Enable near real-time persistent awareness of the Nation’s infrastructure status
- Inform CIKR incident management planning and operations
- Afford protection to infrastructure information
- Enhance cross-sector and cross-jurisdictional infrastructure protection planning and other related infrastructure protection activities
- Access geospatial and information management tools

In addition, the integrated national IICV project will provide protected access to common and consistent infrastructure information to all homeland security partners. IP will also establish technical

standards for integrating various sector, State, and local tools and technologies already in place to ensure the widest collaboration, communication, and sharing of resources and information through IICV.

#### Integrated Common Analytical Viewer (iCAV):

ICAV is the Department's Geospatial Enterprise Solution for geospatial mapping, analysis, and sorting of the Nation's CIKR. Leveraging existing geospatial capabilities and technology that are operating at the National Geospatial-Intelligence Agency, the iCAV system spatially displays and maps information contained in the Infrastructure Data Warehouse (IDW), the NICC's Infrastructure Mega Situational Awareness log and Watch technology called INSight, and the National Operations Center's Common Operational Picture. Additionally, iCAV will assist in merging the capability to identify and assess threats to the homeland and map those threats against infrastructures and vulnerabilities. When fully operational, iCAV will assist in maintaining operational, situational, and strategic awareness of the Nation's infrastructure on multiple security level networks. The iCAV system's multi-level viewing options provide users with the ability to view information at the national, regional, local, or urban level with a set of analytical tools.

#### Infrastructure Information Collection Program (IICP):

IICP provides a standardized information collection management capability to provide quantifiable, risk-related infrastructure information; data standards to provide common and consistent information to enable efficient information sharing; a common information collection, maintenance, and update process; and a processing capability to fuse and disseminate information to infrastructure protection partners internal and external to the Department. This will initiate the development of new programmatic efforts and development of an integrated collection process that focuses collection of information on vetted and prioritized requirements from Federal, State, local, territorial, and tribal stakeholders as well as private sector entities. The collection strategy will decrease reliance on the long-term purchase or licensing of commercial data, and focus on utilizing a distributed architecture to integrate existing government-owned information that can be used long-term. The integration of existing government-owned information greatly decreases out-year data costs.

IICP will serve as an integrating collection program by integrating the following existing tools:

- Automated Critical Assessment Management System (ACAMS): Web-based tool enabling collection of infrastructure and risk information from owners/operators, law enforcement and first responders at the State and Local level.
- Infrastructure Data Warehouse (IDW): Partial functions of the previously existing National Asset Database (NADB) will combine with new advanced capabilities and integrate into the IDW. The IDW will establish a distributed IT architecture to integrate existing data sets from Federal, State and commercial sources through a rapid ingest capability that will improve data collection time/cost efficiencies. This architecture will reduce duplication of effort and improve robustness of existing information, while facilitating data maintenance and verification by numerous partners and entities with the homeland security community.
- Methodology Technical Implementation (MTI): The technical implementation of defined CIKR risk and vulnerability methodologies, to include the Risk Analysis and Methodology of Critical Asset Protection (RAMCAP), the Vulnerability Identification and Self-Assessment Tool (VISAT), and other NIPP-compliant methods into the user interface. This will allow users, private sector owners and operators, or State and Local entities to assess infrastructure using common metrics and methods and provide comparative results within and across sectors or jurisdictions.

These integrated tools will be geospatially enabled using iCAV and the data collected will reside in an integrated data warehouse that will provide role-based access to all of our Federal, State, local, and tribal government partners and the private sector.

#### Protected Critical Infrastructure Information (PCII):

The PCII project was created pursuant to the Critical Infrastructure Information (CII) Act of 2002. The PCII Program Office was established to implement this Act through an interim rule on February 20, 2004. On September 1, 2006, the Department issued the Final Rule, *Procedures for Handling Critical Infrastructure Information*, which finalizes the procedures for the PCII Program in governing the receipt, validation, handling, storage, marking and use of critical infrastructure information voluntarily submitted to the Department.

The project encourages the private sector to voluntarily submit sensitive and vital information about the Nation's critical infrastructure by offering protection from public disclosure through the Freedom of Information Act (FOIA), State and local sunshine laws and through civil litigation. Pursuant to the CII Act of 2002, the project is designed to help government analysts, emergency responders and other homeland security professionals gain access to important data about the facilities and systems upon which the country depends.

### **Project Milestones/Schedules**

#### FY 2007 Accomplishments

- Achieved initial operating capability of iCAV system to provide situational awareness within the National Operations Center
- Achieved initial operating capability of Information Data Management Subsystem on Secret LAN
- Completed FY 2007 Tier 2 Data Call for infrastructure information from States and SSAs
- Publish FY 2007 IICD Data Collection Standards (IP Taxonomy, National Information Exchange Mechanism (NIEM) Unique Infrastructure Identifier Matrix, and IDS Data Dictionary)
- C/ACAMS successfully completed 13 training sessions to include 600 new users
- Completed development of sector-specific methodologies for Drinking Water/Wastewater Treatment facilities, and Conventional Dams and Navigational Locks
- Increased PCII program outreach and effectiveness of various information-sharing partnerships through its accreditation program and relationships with the US Chamber of Commerce, Federal, State and local government agencies, and other programs
- Trained 88 Federal and State officials on how to establish PCII Programs in their respective entities (this figure includes officers and deputies)
- Trained approximately 1,258 potential users of PCII

#### FY 2008 Planned Accomplishments

- Develop and implement a systematic process for the collection and management of CIKR information to ensure that information requirements enable internal and external partners to execute their preparedness, response, and recovery missions
- Develop an integrated Infrastructure Data Warehouse (IDW) with raw infrastructure-related asset information and completed CIKR information products
- Develop and implement a robust communications and marketing plan to gain insight and advocacy on the part of State and local government and private sector partners

- Establish the initial capability for an IICP system to integrate information management, assessment, and geospatial capabilities and tools
- Continue assistance with the technical implementation of the tool for use in the collection and assessment of sector-level CIKR.
- Integrate sector tools into the IICP
- Employ a Train-the-Trainer program for ACAMS to enable State and local partners to expeditiously continue program deployment and national rollout
- Leverage the National Guard to provide ACAMS training to State and local partners, including training in the new scalable methodology developed within the VA project
- Implement automated tools for Protected Critical Infrastructure Information (PCII) to support submitters (CIKR stakeholders) and other authorized users
- Expand the number of accredited entities that can handle PCII, and continue to integrate PCII protections with other automated collection tools (e.g., ACAMS and HSIN-CS)

#### FY 2009 Planned Accomplishments

- Employ a Train-the-Trainer program for iCAV and MTI to enable Sector and Critical Infrastructure Protection (CIP) partners to expeditiously continue program deployment and national rollout.
- Provide the functionality to more efficiently and effectively conduct analysis for the Tier 1 and Tier 2 program, and facilitate information exchange, verification, and maintenance with State and sector partners.
- Expand the number of accredited entities that can handle PCII, and further integrate PCII protections with other automated collection tools (e.g., ACAMS and HSIN-CS).

**CURRENT SERVICES PROGRAM DESCRIPTION:**

**Coordination and Information Sharing**

| <b>Coordination and Information Sharing</b> | <b>FY 2008 Enacted</b> | <b>FY 2009 Request</b> |
|---|------------------------|------------------------|
| <b>Total</b>                                | <b>\$68,821,000</b>    | <b>\$45,644,000</b>    |
| <b>Personnel Costs</b>                      | <b>12,097,000</b>      | <b>\$9,064,000</b>     |
| <b>Program Costs</b>                        | <b>56,724,000</b>      | <b>\$36,580,000</b>    |

The National Protection and Programs Directorate (NPPD) requests \$45,644,000 for Coordination and Information Sharing. Coordination and Information Sharing includes IP projects that enhance situational awareness and maximize the ability of government and private sector CIKR security partners at all levels to assess risks, coordinate programs and processes, and execute risk-mitigation programs and activities. In support of security partner coordination, IP leads, integrates, and coordinates the execution of the NIPP, in part by acting as a central clearinghouse for the information sharing and coordination of the individual sector governance structures and by facilitating the development and ongoing support of these security partner governance and coordination structures or models. Building security partnerships represents the foundation of the coordination and information sharing efforts and is divided into four projects: *CIKR Information Sharing, NIPP Management, CIKR Partnerships, and Management, Planning, and Administration.*

\* *PCII was realigned in FY 2009 to the IP Identification and Analysis Mission Area. The amount transferred was \$6,723,000 for activity costs and \$1,341,000 for salaries and benefits for 10 FTE/Positions.*

In its recommendations, the 9/11 Commission Report emphasized the improvement of information sharing and analysis. IP continues to address and outreach, awareness, communication, and coordination through the CIKR Information Sharing project. Information is a critical enabler for the risk management activities that strengthen the security and resiliency of the Nation’s CIKR. An effective and robust environment that promotes a free flow of information will consist of an effective governance structure allowing for consensus-built policy and strategy; a comprehensive set of mechanisms and processes that provide useful and actionable content; efficient mechanisms and processes to engage and exchange information; trusted relationships among the stakeholders who must utilize the information to take action; and an effective and trusted set of information sharing risk mitigation mechanisms and processes, uniquely tailored to enable communication with the private

sector. The CIKR Information Sharing project is organized through these two activities: Homeland Security Information Network for Critical Sectors (HSIN-CS) and Critical Infrastructure Warning Information Network (CWIN).

The resourcing of this project will ensure that the path forward for information sharing can be successfully conducted, accessible, and usable. Future funding is essential to evolve information sharing from a national sector-centric basis to the formal adoption of the CIKR ISE as the private sector component of the national ISE. The ISE places emphasis on the role of State, local, tribal, and territorial governments as another cornerstone of information sharing, specifically through the establishment and operation of State fusion centers. Other components leading to the formal adoption of the CIKR ISE include developing guidelines for standardizing private sector handling and sharing of classified information, implementing and sharing CIKR network tools, and improving overall information sharing processes for better and more efficient information transferal.

An Information Sharing Environment (ISE) provides CIKR partners with comprehensive risk, threat and hazard information to enhance their ability to assess risks to CIKR assets, make prudent security investments, and take appropriate protective actions. The National Program Manager ISE (PM-ISE) designated IP as the Executive Agent for integrating the private sector into the ISE.

The NIPP defines protection as activities to enhance security and resiliency of the Nation's CIKR. These outcomes drive information sharing for the CIKR. The information sharing mechanisms and tools of the NIPP provide the structure and processes within which public and private sector security partners share vital information. The CIKR ISE supports three levels of decision making and action: 1) strategic planning and investment; 2) situational awareness and preparedness; and 3) operational planning and response. It provides for policy, governance, planning, and coordination of information sharing, as well as forums for identifying and developing effective, tailored forms and types of information necessary for security partners to make appropriate decisions and take necessary actions for effective risk management.

The CIKR ISE also encompasses a number of mechanisms which facilitate the flow of information, mitigate obstacles to voluntary information sharing by CIKR owners and operators, and provide feedback and continuous improvement for structures and processes. It accommodates a broad range of sector cultures, operations, and risk management approaches and recognizes the unique policy and legal challenges for full two-way sharing of information between the CIKR owners and operators and government, and their unique requirements for efficient operational processes. This project provides for the coordination and implementation of this environment and coordinates its compliance with the requirements of the national ISE. The ISE program also provides tailored cross sector and sector specific CIKR terrorism and infrastructure protection information over the HSIN-CS network.

Homeland Security Information Network for Critical Systems (HSIN-CS):

HSIN-CS is a robust information sharing capability that supports each of the 17 CIKR sectors both in the NIPP-related steady state CIKR protection and NRF-related incident management activities requiring coordination and communication. It also provides the information-sharing processes that form the bridge between these two critical homeland security mission areas. Providing a common platform, HSIN-CS supports intra-and cross-sector two-way information sharing with the Department and the SSAs HSIN-CS was planned specifically to be tailored according to the operating requirements unique to each sector through working groups created under the auspices of the CIKR Sector Partnership. To be sustainable, information sharing processes need to be constructed expanding upon accepted and established processes developed by each sector to implement preparedness,

protection, response and recovery within an all-hazards environment. HSIN-CS also supports the State, Local, Tribal and Territorial Government Coordinating Council (SLTTGCC) as a means for implementing its communication and coordination processes with the rest of the State, local, tribal and territorial government leadership responsible for overseeing CIKR policy, strategy, and programs within their respective jurisdictions. IP develops and deploys HSIN-CS, currently utilizing the HSIN portal and network platform operated by the Operations Directorate within the Department.

#### Critical Infrastructure Warning Information Network (CWIN):

CWIN, part of the broader HSIN framework, is the critical, survivable network connecting the Department with vital sectors partners that are essential in restoring the Nation's core infrastructure. CWIN connects the Department with the vital sector partners (including Federal, State, private sector, Canada and the United Kingdom) that are essential in restoring the Nation's infrastructure during incidents of national significance. These sectors include the Electricity, Information Technology and Telecommunications industries; private sector partners in other critical sectors; the states' homeland security advisors; and the sector-specific agencies and resources for each of the critical infrastructure sectors. CWIN provides voice and data connectivity using Voice over Internet Protocol (VIP) phones and thin client computing devices. CWIN connects the emergency operations centers of the fifty states and the District of Columbia to the Department's National Operations Center (NOC). CWIN's backbone is used by HSIN-SECRET (HSIN-S) to provide classified connectivity and video conferencing between the Department and the states. In a circumstance where all or a major part of telecommunications and Internet connectivity are lost, CWIN provides a survivable "out of band" communications and information sharing capability to coordinate and support their restoration. CWIN is unique among the Department's connectivity tools as a separate, non-public network-dependent means of communicating with Federal, State and private sector entities. It has been operational since 2003 and operated through the Northeast Power Blackout in 2003 and subsequent hurricane seasons. There have been two membership-wide Forums, with participation from a variety of CWIN members each time; these meetings provided a valuable opportunity for the Department leadership to brief CWIN members on plans and the role that CWIN plays within the Department's communications tools.

#### **Project Milestones/Schedules:**

##### FY 2007 Accomplishments

- Information Sharing Council and PM-ISE adopted CIKR ISE as the private sector component of the ISE through formal interagency issuance of the Department CIKR Information Sharing Environment strategy paper
- The CIKR Sector Partnership Framework was adopted as the mechanism to execute the responsibilities of the Private Sector Sub-Committee of the Federal Information Sharing Council (ISC) to support the development of policies and strategies for the ISE relating to private sector; this Sub-Committee delivered a set of formal recommendations on the draft Guideline for Controlled Unclassified Information to the PM-ISE
- Nine CIKR sectors or major sub-sectors signed Memorandums of Understanding with the Department to utilize HSIN-CS for sector wide information sharing
- A "system of record" provided for the secure dissemination of SBU/FOUO information products from intelligence components of the Department to CIKR representatives via the National Infrastructure Coordinating Center (NICC)'s use of HSIN-CS as a primary dissemination tool
- Concept of operations and standard operating procedures to support the CIKR user environment, including training and outreach, was completed and is being implemented

- Began sector-wide registration process in the Nuclear, Oil and Gas, and Chemical Sectors to clearly identify all owners and operators
- Constructed an information-sharing environment between the public and private sector, including the development, creation, and implementation of an e-submission process

#### FY 2008 Planned Accomplishments

- Utilizing input from FY 2007 from the CIKR sectors, jointly develop principles and guidelines for standardizing private sector handling of Controlled Unclassified Information and jointly develop and institutionalize efficiency and effectiveness metrics for information sharing
- Finalize and document criteria for the sharing of classified information with CIKR owners and operators; and, working with other members of the ISE, streamline procedures for declassifying classified threat information for broader distribution
- Jointly assess high value information sharing content for CIKR stakeholders that will enhance decision making and implement strategy for access; identify gaps in content; and prioritize for implementation
- Implement a requirements-driven and reliable operating network platform for CIKR stakeholder participation that satisfies the majority of their functional requirements to access and use departmental information sharing tools such as HSIN-Critical Sectors (CS) and Critical Infrastructure Warning Information Network (CWIN); expand participation throughout the CIKR sectors in utilizing these tools within both the government and the private sector
- Improve existing standard processes for steady-state communication and coordination among the key relationship managers (sector specialists, PSAs, SSAs, and the NICC) within departmental and key external partners to enhance situational awareness
- Define the intersection of the CIKR protection mission, including the NICC's specific value-added role, and the mission of State fusion centers
- Work with States and private sector partners to build a robust CIKR protection mission area capability into fusion center design and operations
- Identify joint CIKR information sharing needs and processes, and implement them with international partners
- Expand the security clearance program to support increased public/private sector information sharing

#### FY 2009 Planned Accomplishments

- Jointly implement the agreed-upon policy and strategy for private sector handling of controlled unclassified information through outreach and education initiatives via the NIPP partnership framework
- Building upon the consensus identified gaps from FY 2008, work with CIKR sectors to build and execute a process to collect requirements for additional information sharing content tailored to each sector
- Expand the number of CIKR sectors utilizing the Homeland Security Information Network for Critical Sectors (HSIN-CS) operationally to 100 percent; complete integration of CWIN into the HSIN platform to more fully and efficiently utilize installed network resources
- Develop standard operating procedures to guide interactions among HITRAC, the NICC, and State fusion centers
- Incorporate State, local, tribal, and territorial government and regional stakeholders into an information sharing framework for CIKR planning, situational awareness, and response coordination

- Identify and resolve critical policy and legal issues related to information sharing with international partners
- Establish and complete an operating environment fully compliant with requirements set by the Federal Information Security Oversight Office for the private sector security clearance program.
- Identify and evaluate liability and antitrust issues as required by the November 2006 ISE Implementation Plan, to identify and implement potential solutions

\* Sector Partnerships and NIAC are requested under CIKR Partnerships in FY 2009.

The National Infrastructure Protection Plan (NIPP) provides the coordinated approach for establishing national priorities, goals, and requirements for CIKR protection. Following this approach ensures that Federal funding and resources are applied in the most effective manner to reduce vulnerability, deter threats, and minimize the consequences of attacks and other incidents. The NIPP establishes the overarching concepts relevant to the 17 CIKR sectors identified in HSPD-7 and addresses the physical, cyber, and human considerations required for effective implementation of comprehensive programs. In addition to HSPD-7, the NIPP traces its origin to the Homeland Security Act of 2002, which provides the basis for the Department's responsibilities in protecting CIKR, and the National Strategy for Homeland Security, which established the national vision for CIKR protection.

Ensuring that the NIPP and the supporting Sector-Specific Plans (SSPs) effectively guide and direct national CIKR protection efforts requires executing the roles and responsibilities set forth in the NIPP for Infrastructure Protection (IP) and the NIPP Program Office. This national coordination effort is executed through activities: NIPP Program Management and NIPP Sector-Specific Agency (SSA) Support.

NIPP Program Management:

IP has the responsibility to coordinate with a multitude of public and private entities to continuously enhance CIKR protection across a growing number of sector partners. This includes identifying nationally critical assets, systems, networks, and functions as threats change, businesses evolve, and protective measures are implemented to reduce risk. The implementation of the NIPP across all sectors provides the framework for collaborating on the development, implementation, and maintenance of a

national strategy for CIKR protection. The 2007 release of the 17 CIKR SSPs enables continued implementation and leveraging of this framework and creates a broader forum for awareness of sector-specific and cross-sector information sharing and CIKR protection efforts.

The NIPP and SSPs are dynamic in nature and reflect growth in an ever-changing operating environment and risk landscape. This includes the quantity and nature of the sectors as designated in HSPD-7; evolving threats, vulnerabilities, and consequences; increased engagement and leadership from the private sector; increased state and local participation; regional and geographic-based risk management approaches; and changes in the regulatory environment.

The status of risk management efforts performed under the NIPP, and the progress made in managing risk to the Nation's CIKR from terrorist attacks and other hazards will be measured to support development of the National and Sector CIKR Protection Annual Reports. The results will influence national and sector-level CIKR risk management decisions. IP's national and sector-specific CIKR measurement and analysis (metrics) process will provide an overall picture of the health and effectiveness of national CIKR protection efforts and help drive future investments and resource decisions. This process corresponds to the feedback loop designated in the NIPP risk management framework, which involves providing continuous information on the performance and progress of CIKR protection programs.

The NIPP and SSPs call for the implementation of a comprehensive national awareness program that supports the sustainability of CIKR protection measures, security investments, and public and private sector understanding of the CIKR all-hazards risk environment. IP supports outreach and training efforts of the individual sectors through a variety of activities that include, but not limited to, providing classroom and Web-based training materials; providing informational collateral materials including brochures, videos, newsletters, fact sheets, frequently asked questions, and adaptable templates; coordinating the development and delivery of training courses for government and private sector security partners, coordinating with academia and the professional community on guidelines and practices; developing toolkits, briefing packets and other hardcopy, electronic and online resources; conducting workshops and providing information and support at sector-based conferences and other events; providing venues to share effective practices, concepts, and core messages. Collectively, these efforts help to ensure the implementation of an effective and efficient awareness program to protect the Nation's CIKR over the long term.

Through the NIPP framework, IP will continue to lead the identification of CIKR protection efforts nationwide; determine the priorities and requirements driving these efforts; and initiate guidance and methodologies to measure their effectiveness. To further the NIPP mission, IP will engage with SSAs; State, local, tribal, territorial governments, and the private sector. While these functions remain constant, IP efforts will continue to evolve and improve CIKR protection efforts nationwide.

#### NIPP Sector Specific Agency Support:

NIPP implementation requires an unprecedented level coordination and support to ensure consistent and integrated execution by each of the 17 SSAs and the State, Local, Territorial and Tribal Government Coordinating Council (SLTTGCC). The Department/IP provides support to each SSA to ensure continuity, consistency, and coordination throughout all stages of NIPP planning, development, execution, and monitoring. This support includes:

- Provide direct NIPP program support and subject matter expertise (SME) to the 17 CIKR sectors for the development and coordination of their Sector CIKR Protection Annual Reports
- Provide support and SME to the SLTTGCC for coordination and integration of State, local, territorial, and tribal requirements into the individual SSPs, Sector Annual Reports, and the National Annual Report
- Support SSAs in identifying the sector-specific needs, potential requirements, and impacts on their sectors to ensure consistent implementation CIKR protection, reporting, and monitoring guidance issued by the Department
- Provide support for developing and coordinating the Sector Annual Research and Development Report; Sector Modeling, Simulation, and Analysis Requirements Report; and the Annual CIKR Protection Information Requirements Report
- Support compliance with and execution of requirements identified in departmental guidance and support for the cross-sector collaboration process

The Department assigned IP the responsibility to identify and address high-priority and high-risk multi-sector and cross-sector protection program requirements that the Sector Specific Agencies (SSAs) can not address. IP will lead and coordinate the identification of multi-sector and cross-sector risks and gaps in protection programs and work jointly with the SSAs and the State, local, territorial and tribal governments (SLTT) to prioritize and implement pilot programs to mitigate those gaps. When successfully piloted or proof of concept is completed, IP will work jointly with the SSAs and the SLTTs for their full deployment, and eventual evolution to the relevant SSAs and their sector security partners.

As required by the NIPP and Homeland Security Presidential Directive 7 (HSPD-7), each of the 17 SSAs is required to submit a Sector CIKR Protection Annual Report (Sector Annual Report) to DHS that identifies goals and priorities, describes the current status of sector-specific CIKR protection efforts, and provide a snapshot of existing protective programs and resources to address those CIKR requirements. Each of the 17 sectors also developed Sector-Specific Plans (SSP) that outline how the sector will apply the NIPP risk management framework to their sector and its assets, systems, networks, and functions. The intent of the Cross-Sector and Cross-Cutting initiative is to address those critical shortfalls, gaps, or significant requirements in CIKR protection efforts that fall between and/or across the sectors that cannot be addressed in the short term by a sector or sectors. Conducting this type of analysis at the outset accelerates the actions required to mitigate the risks associated with cross-sector interdependencies as well as make more efficient the implementation of protection programs common to multiple sectors. This process enables IP to aggregate the risks and gaps identified and summarize them in the National CIKR Protection Annual Report—responsible for identifying risks, addressing gaps, and mitigating risk to the Nation’s CIKR through the development and implementation of CIKR protection programs that cross multiple and interdependent sectors.

**Project Milestone/Schedules:**

FY 2007 Accomplishments

- Published the NIPP 17 CIKR SSPs
- Participated in international relationships and obligations, with emphasis on cross-border CIKR vulnerability assessments and information sharing in accordance with NIPP objectives
- Completed the 2007 National and Sector CIKR Protection Annual Reports in accordance with the NIPP

- Developed IP Annual Report, which identified the accomplishments, performance measures, and path forward as the national coordinator for the NIPP
- Released the NIPP Online Training Module through FEMA/EMI to kickoff the NIPP and SSP national education, outreach and awareness campaign
- Participated in numerous sector-specific conferences and distributed over 8,000 NIPP outreach and awareness packets to SSAs, IP Protective Security Advisors and conference attendee
- Initiated and completed the 2007 NIPP CIKR Protection Core Metrics Initiative to include NIPP and IP implementation actions
- Reviewed the Sector Annual Reports and the National CIKR Protection Annual Report (National Annual Report) for specific cross-sector requirements (in collaboration with the SSAs).
- Began review of cross-cutting needs from the SSPs and coordinated them with the National Annual Report; intent was to determine if further evaluation was needed, or if the risks are acceptable if identified deficiencies are not mitigated
- Delineated requirements resulting from the top-down national risk profiles, which drove sectors to identify areas not addressed in FY 2007

#### FY 2008 Planned Accomplishments

- Sustain implementation of the NIPP and fully initiate implementation of all SSPs; develop education and outreach plans for long-term awareness initiatives and actions
- Complete assessments of Sector CIKR Protection Annual Reports and State plans to enhance development of the National CIKR Protection Annual Report and to better inform the budget process
- Collaborate with the 17 SSAs to expand the CIKR measurement and analysis process; address gaps in CIKR protection programs that are revealed from increasingly mature SSPs and National and Sector CIKR Protection Annual Reports
- Enhance sector-level CIKR measurement and analysis processes to effectively measure the state of CIKR protection, track how resources are being used to protect CIKR by all SSAs, and develop a feedback mechanism in coordination with SSAs to ensure continuous improvement
- Initiate education and outreach efforts across all sectors with increased emphasis on State, local, tribal, and territorial governments and the private sector
- Deepen and increase CIKR owner and operator participation in CIKR Sector Partnership projects through the expansion of communication channels through the SLTTGCC
- Jointly establish and implement standards and metrics for the Sector Partnership Model with the SCCs and GCCs
- Complete assessment of previous year's information developed in each of the Sector CIKR Protection Annual Reports due July 1st annually
- Complete protection status and requirements assessments of individual State Program and Capabilities Enhancement Plans reported to FEMA's National Preparedness Directorate, in addition to assessments on gaps and duplication in protection programs and initiatives within and across all 17 CIKR sectors
- Aggregate assessments of Sector CIKR Protection Annual Reports and State plans for summarization and incorporation into a National CIKR Protection Annual Report to be submitted during the fall budget formulation process
- Identify and prioritize gaps, in coordination with the SSAs and the State, local, tribal, and territorial governments, that are common across multiple sectors and/or interdependent sectors that require accelerated investment and resolution

- Identify resource requirements and develop pilots in coordination with other government partners that address the highest priority common risks and interdependencies. Common technology requirements will be assessed in partnership with S&T through the IPT process. NISAC and other national lab programs will also coordinate with IP and S&T to develop pilot programs.
- Leverage expertise at analysis centers nationwide to conduct CIKR modeling, simulation, and analysis

FY 2009 Planned Accomplishments

- Implement regional partnership model in selected areas with high-concentration/ high-consequence CIKR assets
- Track NIPP implementation metrics for all sectors and provide assistance in developing refined metrics to selected high risk CIKR sectors
- Track NIPP program metrics for all sectors and provide assistance in developing partnership standards and metrics to selected high risk sectors
- Develop and coordinate the NIPP National and Sector Annual Reports;
- Conduct gap and requirements analysis of NIPP National and Sector Annual Reports for selected high risk sectors
- Support Sector Specific Plan implementation activity for selected high risk sectors

\* Sector Partnerships and NIAC are enacted in NIPP Management in FY 2008.

**CIKR Partnerships:**

Sector Partnerships, comprised of Federal, State, local, tribal governments, and CIKR private sector partners, are the primary organizational components that coordinate CIKR projects. The partners work in tandem to create and execute a coordinated national framework for CIKR protection under the NIPP framework within and across sectors. Sector Coordinating Councils (SCCs), Government Coordinating Councils (GCCs), and Cross Sector Councils (NIPP Federal Senior Leadership Council [NIPPSLC], Partnership for Critical Infrastructure Security [PCIS], State, Local, Tribal and Territorial Government Coordinating Council [SLTTGCC]) provide the organizing framework for the CIKR Sector Partnership. The SLTTGCC, the newest of the Councils provides a unique, consensus-built voice for state homeland security directors or their equivalents from state, local, county, tribal and territorial government into national CIKR policy, programs, and issues. The SCCs represent each sector’s owners and operators, and the GCCs consist of representatives from relevant Federal state, local and tribal agencies. The Department provides program support to the individual SCCs, GCCs, PCIS, NIPPSLC and SLTTGCC for sector specific and cross sector projects, strategies, policies, and issues. Complementing and enhancing the existing CIKR sector partnership framework, which is a

critical foundation for the NIPP, are CIKR relevant regional coalitions that are cross-sector in nature, or have a region-specific expertise, providing a local or region-specific or cross-border or international perspective. The Department provides a structure and mechanisms for effective coordination and communication channels among these regional and international coalitions with the CIKR Sector Partnership. Successful implementation of the NIPP requires an interlocking, well coordinated network of mutually supportive partnerships containing all these elements.

National Infrastructure Advisory Council:

The National Infrastructure Advisory Council (NIAC) is a Presidential advisory council consisting of thirty (30) chief executive officers representing CIKR sectors and their counterpart equivalents from academia, state and local government. The Department is the executive agent for the NIAC and provides executive secretariat, subject matter experts and logistical support to the Council. Support includes:

- Meeting Management
- Member Management
- Study and Working Group Writing and Coordination for four to six studies a year
- Federal Advisory Committee Act (FACA) and other Government regulatory compliance

The NIAC bases its recommendations on well-researched studies, the data from which is normally published in the Council's reports along with its final recommendations. It usually convenes a wide range of subject matter experts from government, private sector and academia, obtaining multiple perspectives, to accomplish its studies. Studies conducted by the NIAC include:

- Public-Private Sector Intelligence Coordination
- Government Intervention Best Practices
- Cyber and Physical Convergence
- Chemical Biological and Radiological Events and the Critical Infrastructure Workforce
- Pandemic Flu Prioritization of CIKR Work Force
- CIKR Sector Interdependencies
- Hardening the Internet

## **Project Milestones/Schedules**

### **FY 2007 Accomplishments**

- All SCCs/GCCs became operational.
- The SLTTGCC established full operations with 27 + members and 3 working groups-(1) Review of SSPs, the National Annual Report and the CIKR Annex of the National CIKR Annual Report (2) Communication with rest of SLTT; (3) Regional and local information sharing related to CIKR
- The partnership with the National Association of Regulatory Utility Commissioners (NARUC), a member of the Sector Partnership delivered:
  - Five training workshops on security investment cost recovery and the NIPP to a total of 120 state utility regulatory commissioners and commission staff
  - A curriculum and two webcasts to "train" the trainers among commissioners and their staff to train others in their regions on role of commissions in CIKR protection
- A DHS partnership with the Conference Board delivered three executive level reports to Fortune 500 companies on security risk management, and a major business security research study as a

foundation for identifying the needs of, and measuring the progress of security investments and activity in private sector, particularly among mid-level sized companies

- NIAC completed a major study and recommendations to the President on public and private sector intelligence coordination
- NIAC completed a study and recommendations on the potential consequences of physical and cyber convergence of critical infrastructure
- NIAC completed a short-time frame study and recommendations, jointly requested by the Secretaries of the Department and Health and Human Services (HHS), on pandemic flu CIKR Work Force prioritization; results became a basis for strategy development and implementation by HHS to address CIKR-related issues in pandemic planning
- NIAC Secretariat provided efficient and effective administrative and logistics support for the operations of the council and working group meetings

#### FY 2008 Planned Accomplishments

- CIKR Sectors (SCC/GCC/CIPAC/NIAC/Sector Specialists): Develop processes to encourage broader participation of CIKR owners and operators in the activities of their SCCs; communicate and educate stakeholders on standards and metrics for partnership; sustain effective and efficient operations and coordination for all coordinating councils, including roadmap support for each council to identify and set NIPP implementation goals and priorities; complete the stand-up of the mechanisms, processes, and procedures related to Sector Specialist activities
- Other Federal Agencies (FSLC, functional agencies): Identify and formally establish partnerships with CIKR functional support agencies (such as the FBI) and SSAs (such as the Treasury Department which sponsor regional organizations such as Chicago First) to jointly sponsor CIKR-related programs and partnerships (such as InfraGard); complete institutionalization of national planning structures and processes that engage SSAs and other Federal government NIPP signatories; work with SSAs to enhance planning and reporting processes to improve efficiency and effectiveness
- State, Local, Tribal, and Territorial Government Coordinating Council (SLTTGCC): Based on the 2007 SLTTGCC study recommendations, implement pilots with regional and State CIKR coalitions identified by the SLTTGCC to establish formal channels of coordination with the national Sector Partnership; complete implementation of structures and processes for communication and coordination with the SLTTGCC on CIKR issues; complete integration of the SLTTGCC and local and regional CIKR partners into the full cycle of NIPP planning and reporting
- Regional: Identify established and effective regional partnerships with subject matter or sector-specific expertise, and build them into the NIPP partnership framework; implement NIPP-focused coordination or partnership relationships, as appropriate
- International: Establish a federal government policy, structure, and process for engagement with other nations and international organizations to foster international CIKR protection, specifically clarifying agency roles/responsibilities and prioritization criteria/process for engagement for use in supply chain analyses, critical asset identification, and risk assessments

#### FY 2009 Planned Accomplishments

- CIKR Sectors (SCC/GCC/CIPAC/NIAC/Sector Specialists): Enhance the operations of the councils based on feedback resulting from full deployment of the partnership as a primary forum for addressing CIKR issues; update and fully deploy partnership standards and metrics; fully implement cross-sector coordination within the Sector Partnership structure and include full integration of the SLTTGCC into CIPAC and cross-sector deliberations

- Other Federal Agencies (FSLC, functional agencies): Implement processes and incentives for cross-sector coordination and problem solving; sustain efficient and effective operations of the FSLC; continue to implement partnerships with CIKR functional agencies and their CIKR partners to support joint programs regionally and locally
- State, Local, Tribal, and Territorial Governments (SLTTGCC): Continue integration of sector partnership structures and processes with the State and regional cross-sector stakeholders; fully deploy strategy for engagement to implement the NIPP at the local level
- Regional: Establish processes and mechanisms to support effective coordination and communication among regional CIKR-relevant coalitions, federal agencies, and special focus coalitions with subject matter or sector-specific expertise
- International: Undertake independent or joint risk assessments of identified CIKR with international governments, organizations, and CIKR owners and operators; build clear understanding with identified priority international partners on productive mutual risk mitigation issues and programs, and address them through appropriate international forums such as bilaterals and multi-laterals.

The Management, Planning and Administration (MPA) project is a key enabler of all of IP’s programmatic actions. This project supports effective management of IP senior leadership and the Infrastructure Protection mission area. It encompasses a number of disparate planning, policy, and programmatic areas, including:

- human resource management
- professional development
- investment planning
- budget formulation, implementation, and execution
- acquisition strategy
- personnel and facility security
- logistics and executive secretariat support
- GAO and DHS IG facilitation and support
- policy development and evaluation
- legislative analysis
- IP International Partnership Coordination

Integrating these activities on a strategic-, organizational-, and project-level represents a core competency for IP. The MPA Project focuses on maturing and improving IP strategic planning, business, and administrative processes to support project management and execution and on instituting long-term investment planning and decision making for efficient and effective project execution. An

integrated planning and performance capability ensures that IP's planning and communication and outreach efforts include on Federal, State, local, tribal, and territorial governments; the private sector; and international security partners, thereby facilitating both greater transparency and a sense of community.

#### International CIKR Protection:

Through the MPA Project, IP addresses the international implications of the CIKR global risk environment by working with DHS components, federal agencies, and security partners to develop and implement specific strategic guidance and policies for US international CIKR protection. The protection of our national CIKR necessitates addressing protection from a global risk standpoint. The destruction or disruption of domestic or shared transnational CIKR and the key global systems and networks that underpin them have the potential to significantly hinder the functioning of our government and economy. The total global risk environment is taken into account in order to provide a complete protective architecture for CIKR as required by IP mandate. The MPA Project ensures IP's capability to participate in international relationships and interagency security. International CIKR protection efforts emphasize cross-border CIKR vulnerability assessments and information sharing in accordance with NIPP objectives. IP works with the DHS Office of International Affairs to engage in multilateral and bilateral discussions to further international CIKR security awareness and policy development. Working in partnership with DHS components allows IP to provide leadership and expertise in multilateral and regional forums, including the Group of Eight Industrialized Nations; Organization of American States; North Atlantic Treaty Organization; Asia-Pacific Economic Cooperation; European Union; and Security and Prosperity Partnership of North America. IP also provides guidance and supporting capabilities to other US government agencies in their efforts to address international implications and requirements related to CIKR protection.

#### Interagency Security Committee (ISC):

Executive Order 12977 was issued in 1995 to improve government-wide coordination of security initiatives. The Order established the Interagency Security Committee (ISC) to enhance the quality and effectiveness of security and protection of federal buildings and facilities. The ISC is responsible for establishing policies and standards for federal facility security. The ISC also oversees the implementation of federal facility security measures. On October 1, 2007, IP assumed the lead and functional responsibility for the ISC.

Looking forward, the ISC will raise the visibility of federal physical security issues nationwide; harmonize the activities of the ISC and the Government Facilities GCC; ensure focus on funding and resources for physical security functions; improve the ISC's ability to interact with senior officials throughout the Federal Government; and ensure that federal physical security policies and standards are coordinated and implemented consistently. The ISC will focus its efforts on three primary objectives: improving security program management; enhancing guidance and standards for security operations; and improving coordination of security and protection initiatives.

### **Project Milestones/Schedules**

#### FY 2007 Accomplishments

- Issued the FY 2008 to FY 2013 IP Strategic Plan
- Held two IP Leadership Offsite Workshops to discuss mid and long term CIP organizational and programmatic issues, and to establish guidance going forward

- Led a resources management transformation effort which grouped 44 programmatic functions into 15 key infrastructure protection capabilities (projects) eliminating duplication and saving program support costs
- Developed an Integrated Performance Management approach to ensure compliance with all documentation requirements
- Developed and implemented the Human Capital Module of the Visual Performance Suite
- Developed the Program, Management, and Planning Module of the Visual Performance Suite
- Finalized IP expansion and reorganization, and aligned it with a new Table of Organization
- Established a robust Employee Recognition Program

#### FY 2008 Planned Accomplishments

- Institute a comprehensive communications and awareness strategy to ensure that efficient and effective interaction takes place both internally and externally throughout all levels of IP's management structure
- Continue the implementation of a comprehensive governance processes and supporting documents are mature, operational, and communicated to IP staff at all levels to enable long-term strategic planning, facilitate decision making, reduce redundancy, and maximize return on investments
- Realize a functional, streamlined, and transparent human capital recruitment and retention activity that integrates with the DHS and NPPD leadership
- Implement the Program, Management, and Planning Module of the Visual Performance Suite, to aid in completing required documentation more efficiently
- Begin implementation of the redefined CIKR protection goals under the revised Security and Prosperity Partnership of North America
- Work in conjunction with the National Infrastructure Institute's Center for Infrastructure Expertise to initiate a beta cross-border initiative on CIKR-related risk management and incident management with the state of Michigan and Canadian federal, local, and provincial authorities
- Identify and prioritize a list of international security partners for incorporation into the TRIPwire program
- Work with the Department's Office of International Affairs and the government of the United Kingdom on initial implementation of the Joint Contact Group Critical Infrastructure Protection work proposal
- Present a sector-prioritized CIKR protection work proposal to the Group of Eight for adoption and implementation
- Engage in risk assessments of the Paraguayan-Brazilian Friendship Bridge and the Itaipú hydroelectric dam, following bilateral discussions within the Organization of American States; participate in security efforts involved with the Panama Canal expansion; and engage with the International Commission on Large Dams to establish a committee on dam security
- Work jointly with the Department Attaché to the European Union to develop coordination and collaboration mechanisms to participate in CIKR protection efforts within the European Union
- Work jointly with the DHS military liaison to develop coordination and collaboration mechanisms to better integrate departmental international CIKR protection efforts with the efforts of the US Northern Command (NORTHCOM)
- Issue guidance on the use of performance measures for Federal facility security programs, allocating resources using risk principles and the strategic management of human capital
- Develop guidance on construction standards for shelter-in-place locations
- Develop physical security standards for childcare facilities and land ports of entry

- Update the physical security standards for existing buildings (replaces the 1995 *Department of Justice Vulnerability Assessment of Federal Facilities Report*)
- Develop guidance for safe mail handling, and issue revised guidance for law enforcement access to Federal facilities

#### FY 2009 Planned Accomplishments

- Initiate a Professional Development program that defines educational levels and training requirements for IP staff at all levels
- Fully implement an integrated performance management structure
- Provide an integrated and comprehensive suite of processes, procedures, and methods related to all procurements and financial activities
- Complete the beta cross-border initiative on CIKR-related risk management and incident management with the state of Michigan and Canadian Federal, local, and provincial authorities
- Expand the TRIPwire program by incorporating prioritized international security partners (as identified in FY 2008)
- Continue implementation of the sector prioritized CIKR protection work proposal within the Group of Eight
- Promote the leveraging of technology for use in facility security operations
- Develop minimum standards for the use, training, and certification of contract security guards
- Improve ISC marketing and communication with agencies and security partners

**CURRENT SERVICES PROGRAM DESCRIPTION:**

**Mitigation Programs**

| Mitigation Programs  | FY 2008 Enacted      | FY 2009 Request      |
|----------------------|----------------------|----------------------|
| <b>Total</b>         | <b>\$134,253,000</b> | <b>\$149,830,000</b> |
| <b>Personnel</b>     | <b>\$23,451,000</b>  | <b>\$30,938,000</b>  |
| <b>Program Costs</b> | <b>\$110,802,000</b> | <b>\$118,892,000</b> |

NPPD requests \$149,830,000 for Mitigation Programs. Mitigation Programs utilizes measures designed to prevent, deter, and mitigate threat to CIKR, and reduce and enable timely, efficient response and restoration in a post-event situation for all hazards.

Mitigation Programs utilize measures designed to prevent, deter, and mitigate threat to CIKR, and reduce and enable timely, efficient response and restoration in a post-event situation for all hazards. Mitigation programs facilitate security partners to identify and mitigate vulnerabilities, implement protective measures, and increase preparedness for facilities, systems, and surrounding communities. They also support public awareness efforts and facilitate the sharing of CIKR protection-related best practices and lessons learned. Additionally, they enable IP planning, readiness and incident management capabilities. Mitigation Programs is divided into seven projects: *Infrastructure Coordination and Incident Management, Contingency Planning, Readiness, Infrastructure Security Compliance, Protective Security Advisors, SSA Management, and Bombing Prevention.*

Guided by the NIPP and the NRF, the Infrastructure Coordination and Incident Management project provides the structures and mechanisms needed to execute a coordinated, interoperable, CIKR-focused response to emerging and no-notice incidents. The project is the means for IP leadership to operationalize relationships, maintain situational awareness, share information, analyze data, process requests for information and assistance, contribute to national reporting, and distribute key products. There are three activities of the Infrastructure Coordination and Incident Management project: Incident Management Cell (IMC), the National Incident Coordination Center (NICC), and Continuity of Operation programs (COOP).

#### IP Incident Management:

The Incident Management activity provides IP with the capability for incident management coordination during steady-state and incident activities. The project was established after the 2005 Hurricane Season, which clearly demonstrated the requirement for an IP incident management capability to enable CIKR protection, response and recovery efforts. Incident management provides a centralized information flow for the Infrastructure Liaison and CIKR support staff located in the Joint Field Office under the NRF.

The IP incident management suite of plans and their execution is in accordance with the policies and procedures described in the National Incident Management System (NIMS), NRF, and NIPP, and derives its authority from Title II of the Homeland Security Act of 2002, and HSPD-7. The NRF and NIPP provide an integrated approach to addressing the Nation's homeland security mission to prevent terrorist attacks, reduce vulnerabilities and respond to incidents.

#### National Infrastructure Coordination Center (NICC):

The Infrastructure Coordination and Incident Management project operates the NICC; a 24x7 watch designated in the NRF and NIPP as one of five core elements of the DHS National Operations Center (NOC). As the CIKR-focused element of the NOC, the NICC synthesizes CIKR reporting from the 17 Sector-Specific Agencies, IP elements, and other CIKR stakeholders to provide the CIKR elements of the consolidated national reports as well as a range of internally produced reporting detailing impacts and potential impacts to CIKR. The NICC also coordinates readiness activities and provides direct personnel to support IP's Joint Field Office (JFO) Infrastructure Liaison (IL) support teams. As the focal point for IP's incident outreach and information-sharing with private sector CIKR partners, the NICC provides situational awareness through teleconferences, the IP Executive Notification Service, and HSIN Critical Sectors (HSIN-CS). The NICC coordinates responses to CIKR-related requests for information and assistance across CIKR stakeholders in government and industry. As the Department's hub for CIKR information sharing, the NICC disseminates a range of departmental, interagency, and other threat, warning, and CIKR protection products to the private sector and government entities. Additionally, the NICC receives and validates incidents of suspicious activities provided by CIKR owner/operators and reports these to intelligence and law enforcement, and when appropriate, to State and Local Fusion Centers.

#### Continuity of Operations Programs (COOP):

The COOP activity mandated by Presidential Decision Directive (PDD)-67, and Federal Preparedness Circular (FPC)-65, and now replaced with Homeland Security Presidential Directive 20 (HSPD 20) and the National Continuity Policy (NCD 1) requires departments and agencies (D/A) to have plans in place to continue their mission at alternate facilities if their primary facilities become uninhabitable for an extended period. The goal of the Continuity program is to improve the overall readiness, operations and execution of targeted capabilities of IP by conducting continuity operations to include Enduring Constitutional Government (ECD), and Continuity of Government (COG) operations, and exercising national and IP plans and procedures. The plan is designed to ensure the uninterrupted continuation of IP Primary Mission Essential functions (PMEFs) throughout any adverse situation. It also establishes the framework to ensure all IP staff members are trained to work continuity operations during an all-hazards event or incident in accordance with the NRF, NIMS, and NIPP, thus ensuring that IP can continue Mission Critical Functions.

The IP continuity program provides guidance for the organization, its key leaders, and all assigned staff, and facilitates preparation of site and activity specific plans and procedures regarding their required actions should IP be directed to operate from a COOP posture. The IP COOP Implementation

Plan identifies the essential functions of each IP division, the order of succession for IP leadership, Emergency Relocation Group and Advance Relocation team members, mission critical systems, vital records and databases, and required communications for the Emergency Relocation Site (ERS). The program supports IP's ability to develop plans, processes and procedures to meet specific threats to CIKR identified in each targeted planning scenario. The continuity program fulfills its mandate to enhance effective and efficient coordination of incident management operations to prepare, protect, mitigate and restore the Nation's CIKR.

### **Project Milestones/Schedules:**

#### FY 2007 Accomplishments

- Participated in numerous exercises and training sessions to institutionalize IP operations across Divisions
- Conducted a full gap analysis of NICC SOPs to ensure preparedness for the 2007 hurricane season
- Trained SSAs on the Department's reporting processes, and initiated monthly reporting drills
- Developed & documented a comprehensive watch stander training & qualification program
- Executed plans to integrate INSight with the Homeland Security Information Network – Critical Sectors (HSIN-CS) and the Integrated Common Asset Viewer (iCAV)
- Establish an NICC watch desk in the FEMA National Response Coordiantion Center (NRCC) to coordinate incident-specific CIKR information
- Conducted a 24-hour COOP relocation to an alternate facility without significant operational impact
- Establishment of a Joint Field Office support team coordination office
- Established the Infrastructure Protection Continuity Working Group
- Updated and published IP Mission Essential Functions
- Incorporated Pandemic Influenza planning into the Implementation Plan
- Incorporated and expanded Telework options for assigned personnel
- Established weekly "Communicator" testing for emergency personnel
- Executed Mission Essential Functions during Exercise Pinnacle 07

#### FY 2008 Planned Accomplishments

- Integrate the incident management efforts of IP with NPPD and departmental components and continue the phased integration of State, local, tribal, and territorial government and private sector partners into operational efforts, including fusion of incident information
- Increased incorporation of CIKR related plans, processes, and procedures to reinforce linkage to NRP and NIPP
- On an annual basis, participate in IP training, exercise, and qualifications, and incorporate best practices into contingency plans and procedures to ensure that IP staff and security partners are capable of performing incident response functions
- Increased numbers of exercises and training participation, including the implementation of lessons learned and other continued improvement processes
- On an annual basis, ensure Infrastructure Liaisons and CIKR Support Staff are equipped and trained on incident management roles and responsibilities to effectively support the Principal Federal Official (PFO) and the Federal Coordinating Officer
- Increased procedural documentation of IL procedural documents including Incident Management SOP and Infrastructure Liaison SOP

- Provide orientation sessions to all components of IP on IL and IL Support Team State, local, tribal, and territorial government and private sector partners
- Participate in TOPOFF 4 (T4) National Level Exercise Series and other appropriately identified national and regional exercises and training opportunities
- Enhance collaborative working relationship between NICC and the State and Local Fusion Centers
- Initiate rollout of NICC's INSight information management system to key operational partners
- Initiate the design phase of a Maritime Domain Awareness (MDA) cell to support a future role as the Enterprise Hub for infrastructure in the MDA Concept of Operations (CONOPS)
- Continue to engage the SSAs in training and drills on the national-level reporting process
- Complete overhaul and rewrite of the COOP Implementation Plan
- Develop and document a quarterly exercise and training qualification program
- Deploy full-time staff to the Alternate Relocation Site
- Strengthen IT and communications between ART and ERG members
- Establish a program and pamphlets to help personnel prepare their families for contingencies
- Develop a comprehensive COOP-Pandemic Influenza training and exercise program
- Develop a multi-year strategy and program management plan to better define essential functions and resources, short and long-term goals and objectives, budgetary requirements and staffing while anticipating and addressing issues and potential obstacles

#### FY 2009 Planned Accomplishments

- Develop outreach strategies to orient State, local, tribal, and territorial government and private sector partners on IL roles and responsibilities
- Enhance data exchange capabilities between IP divisions that provide senior leadership with a summary of reports and modeling to develop preemptive response actions
- Codify methodology to capture/disseminate relevant, timely, accurate CIKR data to internal and external stakeholders
- Enhance the incident management partnership between IP, NPPD, other departmental components, Federal, State, local, tribal, and territorial government and private sector partners; continue to expand IP's partnerships
- Fully implement all logistical, technical, and knowledge management aspects of the Infrastructure Liaison and the CIKR Support Staff
- Improve national coordination and situational awareness between the NICC and NORTHCOM J34
- Refine, expand and upgrade COOP capabilities to ensure execution and recovery in an "all hazards environment"

The Contingency Planning project provides IP contingency planning capabilities for all-hazard incidents in the United States as well as important incident management situational awareness and support in accordance with the NRF and NIMS. It contribute to DHS' preparedness through the development of contingency plans to address specified threat scenarios with coordinated preparedness, response and recovery activities that are relevant to critical infrastructure and key resources (CIKR) issues. The Contingency Planning project was established to address IP's planning requirements in support of inter-agency planning for National Special Security Events (NSSEs) and other special events.

The project involves the development of specific contingency plans to address vital CIKR and IP requirements and actions to prepare for, respond to, and recover from the situations described in the National Planning Scenarios. IP will develop contingency plans as needed but projected at a rate of three to four each year. In addition to the National Planning Scenarios, scenario specific plans will be developed. Scenario-specific plans are prioritized for drafting according to the order in which the federal interagency Incident Management Planning Team (IMPT) addresses each scenario. Currently, the Contingency Planning project provides liaisons to IMPT and the operational planning unit of the NRCC. Such cooperation and coordination is indicative of the level of internal communications between components that is vital to the success of CIKR protection.

Each year, the Contingency Planning project will incorporate best practices and lessons learned during the previous year’s exercises, incidents, and events into existing plans. In FY 2008, IP will continue to refine existing plans and incident management products and institutionalize them among security partners as appropriate. In FY 2009, the Contingency Planning project will examine the provision of liaisons to other planning elements, such as those within fusion centers. In FY 2010 and beyond, IP will progressively integrate security partners into plans that are in revision, consistently with their levels of participation in the Infrastructure Coordination and Incident Management project. By FY 2013, IP contingency plans will incorporate recognized, formalized doctrine, addressing all planning scenarios and will be included in CIKR-focused annexes to all major partners’ security plans. Consistent with the efforts and approach put forth in IP’s Readiness project, the Contingency Planning project maintains ongoing pre-event relationships with security partners and monitors ongoing activities to assist them with their efforts.

**Project Milestones/Schedules**

FY 2007 Accomplishments

- Completed the IP Suite of Plans, which includes the IP Base Plan, IP Incident Management Standard Operating Procedures, and the Infrastructure Liaison Standard Operating Procedures to ensure coordinated IP preparedness and response to incident management
- Supported the establishment of the IMPT and the finalization of four National Planning Scenario documents by providing full-time CIKR subject matter representatives to the Team
- Participated in the Joint Field Office Table-top Exercise to ensure IP’s incident management documentation accurately reflect divisional roles and responsibilities
- Worked with the National Protection and Programs Directorate on the development of their concept of operations and incident management documentation

- On behalf of IP, coordinating with the USCG Deployable Operations Group and the DHS Operations Coordination Group on an inter-agency effort to support a DHS enhanced security protection effort

#### FY 2008 Planned Accomplishments

- Build consensus across all IP divisions by institutionalizing contingency plans and incident management products, supporting their use in exercises, and capturing the processes for generating and disseminating them
- Fulfill our commitment to support the National Operations Center by providing liaison personnel to the IMPT and its role in developing plans and CIKR annexes addressing the National Planning Scenarios
- Utilize the DHS National Planning and Execution System (NPES) during the identification and development of plans and planning requirements, and support NPES training across IP to ensure a consistent methodology is used during national and contingency planning efforts
- In conjunction with NPPD, support the development and institutionalization of incident management planning and readiness efforts across the Directorate
- Develop approximately three or four contingency plans per year, as dictated by the IMPT schedule
- On an annual basis, support and facilitate required maintenance on national-level plans and IP contingency plans (including the IP Base Plan, Incident Management Standard Operating Procedures, and the Infrastructure Liaison Standard Operating Procedures) to ensure current roles, responsibilities and relationships are accurately reflected and updated as necessary
- On an annual basis, develop and publicize a Contingency Plans Development and Maintenance Schedule

#### FY 2009 Planned Accomplishments

- Establish and annually refine contingency planning metrics and continue to execute and measure effectiveness of internal Contingency Planning Program
- Ensure national-level and contingency plans continue to evolve to include expanded government and private sector CIKR security partners, including regional fusion centers, in support of continued information sharing and incident management efforts
- Support the cross-divisional effort to socialize the IP incident management plans with State, local, and industry partners, as appropriate
- Ensure Contingency Planning program staff are trained on incident management efforts to make certain IP and NPPD planning efforts remain highly-visible and essential elements to effective incident management

The Readiness project develops and implements exercise and raining programs to test, evaluate, and enhance the IP’s overall readiness to respond to incidents affecting the Nation’s CIKR. Training and exercise programs are fully compliant with the Homeland Security Exercise and Evaluation Program (HSEEP). Readiness training provides seminars and workshops to support incident management training. Using proven Instructional Systems Design (ISD) methodologies, the section creates highly specialized training modules for executives and staff members in public and private arenas. The training staff conducts “needs analyses,” and designs, develops, implements, and evaluates training courses related to CIKR incident management. IP incident management training efforts are comprehensive and designed to meet the needs of the target audience. A primary goal is to complete the development of a comprehensive CIKR Incident Management Qualifications training curriculum for IP Watch Officers, CIKR analysts, and Infrastructure Liaisons. The Readiness project designs, develops, and facilitates IP participation in national level Functional Exercises and Full-Scale Exercises. It successfully employed the Preparedness Exercise Series process to prepare for participation in Exercise Ardent Sentry – Northern Edge 2007, and continues to apply the process in preparation for the upcoming Top Officials 4 (TOPOFF 4) exercise in October, 2007.

The Readiness project conducts its own IP exercise program designated as the CIKR Preparedness Exercise Series. The IP program focuses on incident management efforts to protect and restore CIKR; validate IP roles and responsibilities; and interact with key response partners. The readiness exercise efforts are a high priority for IP. Exercises test IP’s communications and IT capabilities; processes and tools for sharing information; data analysis; and the timely development of models and reports. During exercises, participants have an opportunity to clarify roles and responsibilities, improve individual performance, and enhance interagency coordination and communications.

**Project Milestones/Schedules**

FY 2007 Accomplishments

- Initiated and led the IP Exercise Working Group with representatives from each of the IP Divisions
- Provided an organized and managed approach to exercises in accordance with the HSEEP methodology in support of the National Strategy for Infrastructure Protection and the National Infrastructure Protection Plan
- Coordinated and provided IP support to DOD Vigilant Shield exercise
- Coordinated IP participation in Hurricane Preparedness 07 exercises
- Led IP participation in the Exercise Series for Ardent Sentry-Northern Edge: Seminar, Table Top Exercise (TTX) and, Full Scale Exercise

- Planned and executed the Seminar, Plans Workshop, and Table Top Exercises for the Top Officials IV Exercise

FY 2008 Planned Accomplishments

- Plan and execute the IP Preparedness Exercise Series for the 2008 Hurricane Season and National Scenario Plans
- Develop a schedule of required training for CIKR-related incident management activities and effective use of simulations to improve and enhance risk assessments
- Align programs with recruiting efforts, budgeting decisions, and mission performance, establishing an integrated capability to enhance and maximize CIKR readiness
- Support the design and development of internal exercises designed to test IP internal operational processes
- Ensures that lessons learned, best practices, and issues requiring remedial action are identified and documented in after-action reviews and remedial action plans

FY 2009 Planned Accomplishments

- Readiness will coordinate IP participation in national, State, and local training events and exercises. Readiness will also support the development of internal intra-IP exercises to meet specific training objectives for IP and CIKR partners
- Build collaborative relationships with the Emergency Management Institute (EMI) and their support training development staff, Simulation Cell, and Media Support subject matter experts
- Readiness will also continue to build and strengthen planning efforts to ensure IP has a robust and viable incident management regime able to effectively respond to all hazard incidents
- The IP training program curriculum will be distributed to all organizations within IP and customer critique forms will be forwarded to IP leadership following training events

The Infrastructure Security Compliance (ISC) project implements 6 CFR Part 27 and Public Law 109-295, which grants DHS the authority to regulate the Nation’s high-risk chemical facilities. This effort implements the Chemical Facility Anti-Terrorism Standards (CFATS), balancing regulatory authority and the need to secure the Nation’s highest-risk chemical facilities with the sustained economic vitality of the Nation’s Chemical Sector. During FY 2009, this project, in its third year of existence, will complete implementation of its initial phase of activities to aggressively assess high-risk chemical facilities, promote collaborative security planning, and ensure high-risk facilities meet risk-based performance standards through the execution of a cyclical compliance inspection and audit cycle for the highest-risk facilities. As stated in the preamble to the Announcement of Proposed Rule Making,

published in the Federal Register on December 28, 2006 that ISC will: “[F]ill a significant security gap in the country’s anti-terrorism efforts.”

A key portion of the ISC effort involves ongoing construction, improvement, and utilization of the Chemical Security Assessment Tool (CSAT) to enable the Department to identify and then define chemical facilities according to risk-based tiers (Tier 1 being the highest risk and Tier 4 being lowest risk). This system also enables the Department to conduct ongoing analysis of a facility’s risk profile using a consequence-based tier scheme, conduct vulnerability assessments, develop site security plans, and maintain results in a case management system. FY 2009 funding will provide for significant upgrading of capability to include starting to implement a “what if” capability to provide flexible and in-depth site security planning, creating a personnel surety/background screening tool, and maintaining the extensive analytical capability.

Implementation of CFATS also requires robust staffing of the Infrastructure Security Inspector cadre and the national program office to ensure the required level of collaboration and partnership with organizations internal to IP and the Department and external to the Department, including other federal agencies; State, local, and tribal governments; and the private sector. IP will collaborate with the Transportation Security Administration, United States Coast Guard, and Environmental Protection Agency, which have regulatory authorities over segments of the chemical sector not encompassed by authorities granted under P.L. 109-295, Section 550, to ensure a coordinated and informed effort to enhance the security of the chemical sector. Additionally, industry compliance with the performance standards of the CFATS program requires IP to facilitate close coordination at the State and local levels, with focus on interactions with State Homeland Security Advisors, State regulatory agencies, and law enforcement entities with high-risk chemical facilities within their jurisdictions.

Funding for FY 2009 is requested to continue the hiring, training, and nationwide deployment of an IP Infrastructure Security Inspector cadre and support staff (thereby completing the transition from detailee Infrastructure Security Inspectors). Infrastructure Security Inspectors, located in up to 10 primary field offices across the Nation, will inspect and ensure regulatory compliance at facilities covered by the CFATS regulation, including site security plan approval and maintaining respective inspection and audit schedule. Creating a fully functional cadre will require not just recruiting and training staff, but also procurement of communications and IT equipment (laptops, blackberries, etc.) to facilitate work efforts while conducting inspections and traveling, but also the acquisition of office space and equipment, government vehicles, support staff, safety equipment and clothing, and support for frequent travel.

Funding for FY 2009 is also requested to develop a permanent adjudications capability (requiring additional FTE) that is responsible for evaluating and handling all requests for relief, reconsideration, and appeals under the regulation. This office must receive, make a determination on, and respond to all requests for reconsideration that are filed with the Department. With Tier 3 and 4 facilities becoming a greater focus in FY 2009, the number of such requests received is expected to increase sharply.

Funding to develop and execute an economic model of the chemical sector is also included in the FY 2009 request. This is an essential step in identifying and validating the economic risks, chokepoints, and bottlenecks in the chemical sector. Economically, critical chemicals are those that (1) are essential to one or more critical infrastructure sectors or the national/regional economy; (2) are produced at a limited number of locations in the US; (3) have no direct or functional substitutes and; (4) cannot be imported. During the initial phase of program execution, economically critical chemical data will be collected through the screening process, however, the capability to analyze and model that data for the

purpose of tiering decisions will not yet exist. The requirement to identify chemicals that are of economic significance to the Nation (e.g., a material essential to the continued operation of an economically important activity, such as power generation, water treatment, steel fabrication, durable goods manufacturing, etc.) informs tiering and evaluation of facilities against the risk-based performance standards that underpin the program.

### **Project Milestones/Schedules:**

#### FY 2007 Accomplishments

Because the Department was granted chemical facility regulatory authority through P.L. 109-295 on October 4, 2007, FY 2007 represents the first year of existence for the ISC. During FY 2007, the project's focus was on establishing an initial operating capability with immediate focus on the highest-risk facilities and initiating the framework for a cyclical inspection and audit cycle of high-risk facilities.

- Published Interim Final Regulations (6 CFR Part 27) on April 9, 2007 that implements Section 550 of P.L. 195-295
- Deployed the Chemical Security Assessment Tool Top-Screen prior to the effective date of the Interim Final Regulations, June 8, 2007
- Established an initial core inspection capability with Federal Protective Service employees.
- Began initial site assistance visits of expected Tier 1 chemical facilities to assist with Top-Screen efforts

#### FY 2008 Planned Accomplishments

- Assist in security plan development and complete initial inspections of Phase 1 facilities for compliance with risk-based performance standards
- Develop requirements for version 2.0 of the Chemical Security Assessment Tool (CSAT), which will provide an interactive risk management tool for high-risk facilities and a system for comprehensive analysis and review of key data and documents received from chemical facilities
- Initiate Phase 2 of the CFATS program, which includes conducting initial pilot inspections of a selection of Tier 1 and 2 facilities and begin receiving/reviewing vulnerability assessment and security plan submission packages
- The Department OGC will engage with and align the chemical sector regulatory program with other departmental regulatory authorities with IP assistance
- Begin hiring and training an IP Infrastructure Security Inspector cadre to transition from a detailee Infrastructure Security Inspector cadre
- Engage with local officials and chemical facilities to plan, train, and exercise activities related to delay and response performance standards
- The Department OGC will implement an adjudication and appeals function with IP assistance.
- Publish Appendix A of 6 CFR Part 27 in the Federal Register

#### FY 2009 Planned Accomplishments

- Continue development and pilot implementation of CSAT version 2.0, providing chemical facilities with the ability to conduct "what if" analyses based on their risk assessments and a personnel surety capability
- Provide ongoing technical support to chemical facility sites and local authorities
- Continue the transition from a detailee Infrastructure Security Inspector cadre to a fully trained and equipped IP Infrastructure Security Inspector cadre, ultimately over 229 Infrastructure

Security Inspectors are expected to be located in at least 10 primary field offices around the Nation

- Ensure that the Adjudication Office is able to meet established deadlines for DHS decisions and rulings
- Complete initial pilot inspections of a selection of Tier 1-4 facilities, and begin the second round of inspections of Tier 1 facilities. Continue inspections of Tier 1 and 2 facilities and begin inspections on lower tier facilities
- Develop and implement an economic model for chemical sector security. This is an essential step in identifying and validating the economic risks, chokepoints, and bottlenecks in the chemical sector
- DHS OGC will lead an effort to harmonize departmental regulatory authorities related to the chemical sector with IP assistance

The Department of Homeland Security cannot protect and reduce the risk to the Nation’s CIKR from Washington DC. To better partner with State governments, local communities, and owners and operators of critical infrastructure, the Department established the Protective Security Advisor (PSA) Program in 2004 as stated in the Fiscal Year 2004 House Report 108-812, which placed PSAs in local communities throughout the country to assist with local efforts to protect critical assets as part of the DHS mission to develop, implement, and maintain a unified national approach to infrastructure protection through an unprecedented public-private sector partnership as outlined in the Homeland Security Act of 2002 and Homeland Security Presidential Directive 7. PSAs were deployed to provide a local perspective to the national risk picture and serve as the Department’s on-site critical infrastructure and vulnerability assessment specialists, and as a vital channel of communication for officials and private sector owners and operators of CIKR assets seeking to communicate with the Department. As IP’s representatives in the field, PSAs regularly interact with State Homeland Security Advisors (HSAs), Emergency Management Directors, Federal Bureau of Investigation (FBI) special agents, and other private sector, Federal, State, territorial, local, and tribal entities. As a result of their locations throughout the United States, PSAs are often the first Department personnel to respond to incidents. Consequently, PSAs are uniquely able to provide early situational awareness to the Department and IP leadership during an incident, often performing duties as the Infrastructure Liaison (IL) at the Joint Field Office (JFO) in support of the Principal Federal Official (PFO). PSAs also coordinate requests from CIKR asset owners and operators for services and resources to include Surveillance Detection (SD) and Soft Target Awareness Course (STAC) training, scheduling of Site Assistance Visits (SAVs), Buffer Zone Plans (BZPs), Comprehensive Reviews (CRs), and verification and technical assistance visits.

The PSA program receives strong Congressional support and was specifically noted in the FY 2007 House Report 109-476, accompanying the FY 2007 DHS Appropriations Bill. The Committee on Appropriations stated that it “is pleased with ongoing training and deployment of Protective Security Advisors (PSAs)... These individuals are essential for carrying out the Department’s nationwide critical infrastructure protection efforts.” There is high demand for PSAs in the field to provide support to State, territorial, local, tribal, private sector representatives, and International partners regarding cross-border interdependencies. The Fy 2009 budget requests resources to support an additional 10 PSA in States that do not currently have a dedicated PSA assigned

Project Milestones/Schedules:

#### FY 2007 Accomplishments

- Supervisory PSAs Gulf Coast Area and Southwest Area and PSAs Little Rock, AR; Baton Rouge, LA; Jackson, MS; Oklahoma City, OK; Nashville, TN; El Paso, TX; Houston, TX; and San Antonio, TX provided support to the State of Louisiana, State of Missouri, State of Texas, city of Galveston, and city of Houston, EOCs, the JFO in Baton Rouge, LA, and the JFO in Texas when identified, in support of preparation and response efforts for Hurricane Dean.
- Conducted over 5,655 liaison visits to local jurisdictions and facilities
- Provided support to over 110 SAVs, 214 BZPs, and 28 CRs
- Conducted numerous tabletop, counterterrorism, and training exercises attended and/or supported such as:
  - Jamestown 2007 Commemoration; 8-13 May (Mid-Atlantic Area and Richmond, VA)
  - Ardent Sentry JFO Full-Scale Exercise; 29 April – 18 May 2007; (Anchorage, AK; Denver, CO; New Haven, CT; Great Lakes Area; Headquarters; Chicago, IL; Indianapolis, IN; Boston, MA; Northeast Area; Northwest Area; Buffalo, NY; Cleveland, OH; and Milwaukee, WI)
  - Presidential State of the Union Address; Supervisory PSA and PSA, serving as the IL and Deputy IL, provided support to the PFO and JFO; 23 January 2007 (Washington, DC and Mid-Atlantic Area)
- Provided support and situational awareness provided to officials during special events and exercises such as:
  - PSA New York, NY provided situational awareness to the Department/RMD regarding a small plane crash into a Manhattan high-rise building on 11 October 2006
  - PSA Richmond, VA provided situational awareness and support to the Virginia State Fusion Center and the Department/PSCD during the Virginia Tech shootings from 16-20 April 2007
  - Supervisory PSA Northeast Area and PSAs New York, NY provided situational awareness to State and local officials and to the Department/PSCD during the John F. Kennedy Airport terrorist plot from 2-6 June 2007
- Provided support provided to state and local officials during incidents and contingencies such as:
  - PSA Honolulu, HI provided situational awareness and support to State and local officials at the City and County of Honolulu’s County EOC during the 6.7 Kiholo Bay earthquake off the Island of Hawaii from 15-27 October 2006
  - PSAs Miami, FL; Jacksonville, FL; and Mobile, AL provided situational awareness and support to the Department/PSCD and State and local officials at the Florida State EOC during the severe storms throughout Florida from 2-5 February 2007

- PSAs Jacksonville, FL and Tampa, FL provided situational awareness and support to the Florida State EOC and to the Department/PSCD during the Florida wildfires from 17 April to 6 June 2007

#### FY 2008 Planned Accomplishments

- Lead departmental efforts in the verification and validation of the Nation's Tier 1/2 CIKR. PSAs will also serve as a knowledge base for all high-priority CIKR and corresponding interdependencies in the PSA's State or district and will assist in collecting and verifying information related to these CIKR facilities
- Support development of the national risk profile by identifying, assessing, monitoring, and helping to minimize risk to high-risk CIKR at the local level
- Train and qualify 40 percent of PSAs to perform Infrastructure Liaison duties in a JFO in support of the PFO and ESF lead agencies, and to serve, when needed, as the "on-scene" IP representative within State and local EOCs coordinating the response to potential or suspected terrorist attacks or other incidents
- Support officials responsible for special events planning and exercises in their districts by providing local knowledge of high-risk CIKR and a reach-back capability to DHS and other Federal government resources
- Coordinate IP support for the Vulnerability Assessment program, to include SAVs, BZPs, CRs, and Computer-Based Assessment Tool assessments, as well as support for Surveillance Detection and Soft Target Awareness Training
- Determine and approve training courses, structure, and development of curriculum for the PSA certification program

#### FY 2009 Planned Accomplishments

- Deploy 10 additional PSAs. Assign 10 to States that currently do not have a PSA located within their boundaries
- Ensure that 75 percent of PSAs achieve certification, and 15 percent achieve master certification.
- Train and qualify 70 percent of PSAs to perform Infrastructure Liaison duties in a JFO in support of the PFO and ESF lead agencies

Within IP, the SSA Management project has been established to consolidate and leverage the efforts of five of the 17 Sector Specific Agencies (SSAs): Chemical, Commercial Facilities, Dams, Emergency Services, and Commercial Nuclear Reactors, Materials, and Waste (Nuclear). The SSA Management project supports these five sectors in fulfilling their core mission as the primary Federal entities responsible for coordinating the unified effort to protect against and mitigate the effects of natural or man-made events against critical infrastructure and key resources within those sectors.

The SSA Management project's core mission processes enable systematic NIPP implementation; targeted and consistent messaging; critical relationships leveraged at the right times; the development of subject matter expertise for the effective assessment of risk and the development of strategic protective program strategies; the ability to determine the relative importance of tactical activities; and demonstrable, outcome-oriented results in sector-wide risk reduction.

The Sector Specific Agency (SSA) construct, as conceived in HSPD-7 and implemented through the NIPP, represents a new capability for the Federal government. The SSA's fundamental purpose is to build, maintain and leverage inclusive and robust relationships with all sector security partners in order to achieve coordinated risk reduction within each CIKR sector.

The high-level functions of the SSAs are codified in the Homeland Security Act of 2002, which tasks the Department with protecting the Nation's critical infrastructure and key resources, and further defined in HSPD-7. HSPD-7 requires Sector Specific Agencies (SSAs) to collaborate with all relevant federal departments and agencies, State and local governments, and the private sector, including with key persons and entities in their infrastructure sector in order to encourage the development and implementation of risk management strategies to protect against and mitigate the effects of attacks against critical infrastructure and key resources.

- The NIPP is the implementing framework for HSPD-7 and levies more than 150 requirements on each SSA. The role of the SSA in securing the sector extends across the entire spectrum of critical infrastructure protection, from preparedness, protection, response, recovery and mitigation. The projects of the SSA are captured in a set of core mission processes, outlined below: Establish and enhance sector security goals
- Continuously refine Sector-Specific Plans
- Identify sector CIKR
- Develop sector-specific risk methodologies and tools
- Assess sector risk (Threat, Vulnerability, Consequence)
- Establish a risk baseline for the sector
- Prioritize identified CIKR assets based on risk
- Develop and implement protective programs to reduce and manage sector risk
- Develop and implement sector-specific training and exercise programs
- Measure performance and continuous improvement

The SSA Management project serves as the *only* entity that can build and leverage robust relationships with state, local, tribal, territorial, Federal and private sector security partners to align competing sector interests and achieve meaningful, measurable risk reduction in the Chemical, Commercial Facilities, Dams, Emergency Services and Nuclear sectors.

In order to ensure that the scope and nature all SSA responsibilities are fully understood and effectively addressed, the SSA Management project has developed and is implementing a comprehensive resource requirements study and an operating concept that describes the integrated processes and steps required to enable each of the five SSAs meet their mandate. Through the development and management of sector-specific information sharing and risk reduction efforts and mechanisms, the SSA Management project will achieve its vision of becoming the recognized national and international leader for the coordination of security and protection efforts within the Chemical, Commercial Facilities, Dams, Emergency Services, and Nuclear sectors to better prepare and protect our Nation in an all-hazards context.

The following sections describe the core attributes of each of the sectors contained in the SSA Management project.

- Chemical Sector: includes all commercial chemical facilities, chemical industry, and federal partners. Information is exchanged with the sector via the Chemical Sector Coordinating Council (SCC), Chemical Government Coordinating Council (GCC), Chemical Information Sharing and Analysis Center (ISAC), and coordinating routine threat-related briefings for industry. The Chemical Sector extends well beyond any single regulatory program and covers approximately half a million assets.
- Nuclear Sector: includes commercial nuclear power plants, research and test reactors, nuclear fuel cycle facilities, radioactive waste management, nuclear materials transport, deactivated nuclear facilities, radioactive material users, and radioactive source production and distribution facilities. The Nuclear Sector does not address U.S. Department of Defense (DOD) and U.S. Department of Energy (DOE) nuclear facilities or radioactive materials associated with defense related activities.
- Emergency Services Sector (ESS): includes all of the nation's first responder community comprised of law enforcement, fire/rescue, hazardous materials, search & rescue, emergency medical services, emergency management, bomb squads and special weapons and tactics (SWAT)/tactical operations teams. The ESS SSA is committed to protecting the protectors in communities nationwide by bringing together information and resources through sustainable programs.
- Dams Sector: includes all dams, locks and levees either owned or operated by the federal, state, and local government, public utilities or privately held.
- Commercial Facilities Sector: comprises of diverse private organizations whose livelihood affects public confidence, safety and economic security. Commercial Facilities include, but are not limited to, commercial centers; sports leagues; theme and amusement parks; academic facilities; stadiums, arenas and convention centers; hospitality and entertainment facilities; commercial office facilities; multi-family facilities; and industrial facilities.

## **Project Milestones/Schedules:**

### FY 2007 Accomplishments

#### Program Integration:

- The SSA Management project developed an operating concept that: effectively links to and implements the NIPP Sector Partnership Model and risk management framework, ensuring that all SSA activities are in alignment with overarching goals, objectives, and implementing frameworks; facilitates collaboration and information sharing across IP internal divisions and other DHS components; establishes and leverages robust relationships between IP and its security partners; promotes a clear understanding of the roles and responsibilities of all security partners; and provides a solid foundation for a reproducible risk reduction and management processes.
- The SSA Management project commissioned a study to determine the personnel requirements and associated funding necessary for the SSAs to fulfill their responsibilities under HSPD-7, as implemented through the NIPP and the SSA concept of operations. The study was independently conducted and validated by a Federally Funded Research and Development Center.

#### Chemical Sector:

- Conducted bi-monthly chemical security and threat briefing teleconferences with the industry
- Conducted bi-annual classified briefings for the industry
- Met every six weeks with Chemical Sector Coordinating Council
- Completed the remaining Chemical Comprehensive Reviews at the six regions
- Finalized web-based Chemical Security Awareness Training and scheduled early 2008 rollout
- Developed a rough program plan for a Voluntary Security Recognition Program to acknowledge facilities that voluntarily take measures to improve security
- Organized tours of chemical facilities that provide policy makers, Intelligence Analysts, congressional staff, and other DHS Security partners the opportunity to gain firsthand knowledge of various chemical processes and security concerns
- Executed first annual Chemical Sector Security Summit, cosponsored by the Chemical Sector Coordinating Council
- Conducted a study to determine the vulnerability of cyber Process Control Systems in the Chemical Sector
- Revised SSA incident response plan based on lessons learned from Ardent Sentry exercise
- Coordinated a cross-sector and interagency effort to conduct Comprehensive Reviews (CR) of select CIKR in six regions and nine states. The CR initiative reviews existing security practices and capabilities at all levels across multiple sectors, including the Chemical Sector. The CR process for each region culminated in a one day facilitated scenario-based discussion in which chemical facilities, first responders, and State and local officials identified existing security capabilities to prevent and respond to a chemical incident as well as gaps in capabilities

#### Emergency Services Sector:

- Coordinated joint Emergency Services Sector GCC/SCC Meeting
- Provided appropriate outreach and representation at national level meetings and conferences
- Developed the Emergency Services Asset Screening Methodology (ESASM) to identify CIKR in the ESS
- Developed the Emergency Services Regional Assessment Process (ESRAP) as the primary risk assessment for the ESS. ESRAP supports the implementation of protective measures and

response capability enhancements in regions identified by DHS that contain groupings of potential high-consequence facilities

- Expanded the current capabilities of the National Capabilities Analysis Database (NCAD), which contains crucial information for Federal and State planning efforts to provide a sound method for the allocation of funds
- Conducted annual classified threat briefing for the sector

#### Dams Sector:

- Completed report for risk assessment methodology comparison study
- Performed numerical simulations to evaluate embankment cratering model performance
- Distributed “Security Awareness Handbook for Dams Owners/Operators” and conduct training sessions
- Performed numerical studies to predict aircraft impact damage on concrete dams
- Conducted Dams GCC and Dams Joint Workgroup meetings
- Promoted Dams Sector awareness by participating at various Dams Sector conferences and workshops

#### Commercial Facilities Sector:

- Developed additional Protective Measures Guides for other subsectors
- Refined and performed validation process of the NASCAR Mass Evacuation Template at one (large/small) NASCAR facility
- Enhanced the analytical features of HSIN-CFS to enable real-time analysis of data
- Engaged additional private sector and public sector entities

#### Nuclear Sector:

- Maintained scheduled field activities related to Nuclear Power Plant Comprehensive Reviews. All such onsite visits were completed as scheduled by the end of calendar year 2007
- Continued outreach and follow through for CROWN. The purposes of CROWN are to determine the status of the gaps and potential enhancements identified by the Comprehensive Review (CR) team and to continue the open and candid dialogue among the Government, industry, and State and local organizations
- Participated, with NRC and other federal partners, in subgroups associated with The Radiation Source Protection and Security Task Force Report in order to meet the requirements of the Energy Policy Act of 2005
- Performed in-depth analyses of the complete life cycle of radioactive sources used in the nuclear sector and identified security gaps that currently exist. Specific recommendations for improving security controls were included to address each gap. These recommendations were vetted with other agencies and the private sector through the Nuclear Sector Coordinating Council and Government Coordinating Council. These results were presented to the Secretary of Homeland Security and addressed by him in a letter to the Nuclear Regulatory Commission Chairman. The Nuclear SSA continues to monitor and track the completion of these actions through the NSCC/GCC structure

#### FY 2008 Planned Accomplishments:

- Sector-Specific Metrics – In close collaboration with the NIPP Program Management Office (PMO), the SSA Management project will develop sector-specific metrics that both augment and

inform the NIPP core metrics development process. Metrics results will be a critical tool in determining the effectiveness of risk-reduction strategies

- Science & Technology Integrated Project Teams (S&T) (IPT) – The SSA Management project, as part of its role in coordinating sector-specific research and development for the enhancement of CIKR protection efforts
- Sector Annual Report (SAR) - Prepare and deliver the SAR per the guidance established by the NIPP PMO, as required by HSPD-7 and the NIPP
- Sector Specific Planning – Conduct ongoing evaluations of strategic and tactical activities to ensure that risk-reduction, protective program, and information sharing strategies are developed, implemented, and evaluated to enhance and achieve the shared goals of the sector
- Tier 1 and 2 Reviews – Evaluate assets in the Infrastructure Data Warehouse (IDW) for accuracy and currency
- Biannual Classified Threat Briefings – Conduct and host biannual classified brief for the sectors to ensure that security partners are synchronized with the evolving risk environment
- Exercise Development, Participation, and Evaluation – Participate in relevant National exercises (i.e., TOPOFF) as resources allow. Develop sector-specific exercise programs to address gaps in security
- Review and identify the SSA requirements under HSPD-7 and the NIPP and map those requirements to the NIPP risk management framework. Identify the necessary processes for the five IP sectors to effectively carry out the SSA Management roles and responsibilities and share this information and lessons with other non-IP SSAs
- Provide SSAs with the first-generation SSA CONOPS and associated resource requirements. Both the SSA and NIPP frameworks are fundamentally new constructs. As such, SSA EMO will work with the SSAs to tailor the concept to the unique landscape of each sector, which will serve as the foundation for future continuous improvement activities
- Refine the NIPP risk management framework to address the unique characteristics and risk landscapes for each of the five sectors for which IP is the designated SSA. These fine-tuned frameworks will guide CIKR protection programs and mitigation efforts
- Refine effective information-sharing processes and protocols among security partners. These relationships are essential for obtaining information during an incident. Fine-tuned information-sharing processes and procedures will build trust among security partners and allow SSA Management to leverage CIKR security expertise, coordinate mitigation efforts, and build lasting relationships within the sector that encourage the timely sharing of critical information for national protection
- Promote sector-wide CIKR information sharing through education, training and exercises
- Ensure staff is properly trained to carry out risk reduction efforts

#### FY 2009 Planned Accomplishments:

- Sector-specific Metrics – The effectiveness of Metrics will be evaluated for continuous improvement. Data validity issues will be addressed
- Research and Development – The SSA Management project will continue to engage S&T's Capstone IPT's and will develop formal procedures for gathering and evaluating sector-specific requirements
- Sector Annual Report (SAR) - Prepare and deliver the SAR per the guidance established by the NIPP PMO, as required by HSPD-7 and the NIPP
- Triennial Review – SSPs should undergo significant revisions as a result of lessons learned from newly integrated SSAs. Plans should reflect evolutionary program strategies and more

granularity with respect to tactical programs that comprise risk-reduction and information sharing strategies. Metrics should be significantly enhanced

- Tier 1 and 2 Reviews – Evaluate assets in the Infrastructure Data Warehouse (IDW) for accuracy and currency
- Exercise Development, Participation, and Evaluation – Participate in relevant National exercises (i.e., TOPOFF) as resources allow. Develop sector-specific exercise programs to address gaps in security
- Prioritize protection of sector-wide CIKR. Using the established risk management framework to identify, prioritize, and coordinate the protection of sector-level CIKR with a particular focus on the highest risk CIKR
- Implement sector-specific mitigation efforts. Based on the security gaps identified by the SSA, specific targeted activities will be developed and implemented to reduce the risks of those security gaps within each CIKR Sector
- Vigorously support the sector’s use of HSIN-CS by private and public sector security partners in all five IP sectors. SSA staff will encourage sector use through active posting of alerts, warnings, and other information to sector portals, work with HSIN development teams to create the most effective HSIN portals, and publicly promote HSIN use at sector related events
- Revalidate the SSA Management CONOPS, and revise it, as necessary, as the SSAs mature

#### FY 2008-2009 Sector-Specific Milestones:

##### Representative Chemical Sector Milestones:

- Increase security awareness in chemical facilities nationwide via the Web-based Chemical Security Awareness Training Program, with the goal of reaching approximately 400,000 employees directly involved in the manufacture, transportation, and storage of chemicals. The training is designed for all facility employees, not just those traditionally involved in security
- Develop a Vehicle-Borne Improvised Explosive Device detection training program to train chemical plant security officers, using a train-the-trainer approach, on how to effectively and efficiently search incoming vehicles for signs of IED
- Develop a Voluntary Security Recognition Program to acknowledge facilities-that are not covered by the recent DHS chemical facility security regulations- that voluntarily take measures to improve security. These measures include activities such as vulnerability assessments and training
- Sponsor a cyber vulnerability study to identify common cyber vulnerabilities in process control systems and develop recommendations for cyber-related protective programs
- Improve information sharing and outreach efforts via the HSIN-Chemical portal; biweekly teleconferences with industry regarding reports of suspicious activity and cyber threats; annual Chemical Sector Security Summit; classified threat briefings to industry; regular SCC and GCC meetings; and SSA representatives speaking at various conferences and industry meetings throughout the country

##### Representative Commercial Facilities Sector Milestones:

- Partner with the Sports League Subcouncil to develop and distribute a protective measures guide to incorporate protective measures used by sports leagues into a single document. This guide will be used as a template to develop protective measures guides for the other seven Commercial Facilities subsectors
- Coordinate the participation of private sector partners in regional and national level training and exercises

- Improve information sharing and outreach efforts via the following channels: the HSIN Commercial Facilities portal; teleconferences with industry regarding reports of suspicious activity and cyber threats; classified threat briefings to industry; regular SCC and GCC meetings; and SSA representatives speaking at various conferences and industry meetings throughout the country
- Work with National Association for Stock Car Auto Racing (NASCAR) representatives and selected State and local emergency services to develop a template that can be used by facilities to develop plans and procedures to protect fans during an incident during a NASCAR-sponsored event
- Partner with IP's Bombing Prevention Project, the FBI, and the Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF) to compile a list of hazardous materials for use by subsector members to identify potential situations in which terrorists are accumulating material that could be used to make IEDs. The goal of the program is to develop an awareness tool that can be used at the lowest level of the retail industry, as well as provide a point of contact if action is necessary

#### Representative Dams Sector Milestones:

- Publish and distribute three dams-specific reference documents to the owners and operators of the more than 79,000 dams in the U.S. The first document is the Security Awareness Handbook which provides useful information on identifying security concerns, methodologies for addressing them and steps to establishing effective partnerships with local law enforcement. The second document is the Protective Measures Handbook will assist owners and operators in selecting protective measures to close security gaps and includes recommendations for developing site security plans. The third document is the Crisis Management Handbook, which will provide owners and operators with sector-specific technical information related to emergency response and preparedness issues
- Establish a "Levees" Sub-Sector which will provide additional focus to the security and protection perspectives required to properly address the security and resiliency of the Nation's levees
- Coordinate with the Department of the Interior's Bureau of Reclamation and NISAC to develop appropriate methodologies and tools to generate direct and indirect economic impacts that would result from dam failure  
Develop and update Comprehensive Facility Reports (CFRs) for the most critical Dams Sector assets. These CFRs will enable rapid situational awareness and quick regional evaluation regarding any potential threats affecting any of these critical assets from an all-hazards perspective

#### Representative Emergency Services Sector (ESS) Milestones:

- Develop security guidelines for first responders that correspond to DHS' color-coded Homeland Security Advisory System mirrored after FEMA's Fire and Emergency Services Preparedness Guide for the Homeland Security Advisory System (January 2004). These security and protective action guidelines will provide clear steps for all ESS disciplines to protect the Nation's first responder community
- Participate in national, State, and local emergency preparedness exercises, including the TOPOFF IV exercise, hurricane preparedness exercises, pandemic planning exercises, and Ardent Sentry. Also facilitate the involvement of Federal, State, and local officials in regional and national-level exercises in order to improve the national response capability

- Ensure that sector assets and capabilities are included in the CRs conducted in other CIKR sectors. The results of the CRs will be used to enhance the security posture of the sector's assets, as well as that of community responders
- Facilitate the process by which the ESS determines the regions that are of the highest significance nationally for maintaining the mission essential tasks and services of the sector. This information will be used to determine Tier 1 and Tier 2 CIKR and facilitate the implementation of sector risk assessment methodologies
- Work with sector partners to develop a coordinated program to increase awareness of cyber security issues impacting ESS infrastructure and encourage sharing and implementation of cyber security programs and lessons learned
- Improve information sharing and outreach via HSIN-CS; bi-weekly teleconferences with the SCC Chairman and Emergency Management and Response – Information Sharing and Analysis Center (EMR-ISAC); regular SCC and GCC meetings; and SSA representatives speaking at sector-specific conferences

#### Representative Nuclear Sector Milestones:

- Evaluate the possibility of establishing prompt emergency notification capabilities at all commercial nuclear power plants. This effort is based upon the positive results obtained during the trial of an improved emergency telecommunication system that would provide simultaneous notification of an attack on a nuclear power plant in the U.S. to both the Nuclear Regulatory Commission (NRC) and the NICC
- Improve information sharing and outreach efforts via the HSIN-Nuclear portal; teleconferences with industry regarding reports of suspicious activity and cyber threats; classified threat briefings to industry; regular SCC and GCC meetings; and SSA representatives speaking at various conferences and industry meetings throughout the country
- Lead the interagency effort, called the Comprehensive Review Outcomes Working Network (CROWN), to facilitate the reduction and/or closure of gaps identified during the Nuclear Comprehensive Reviews. Address potential enhancements that require collaboration of Federal, State, local, and private industry stakeholders, funding, or additional research and development action; and coordinate with FEMA's Office of Grants and Training to identify grant programs available to communities to address gaps
- Coordinate with the Radioisotope Subcouncil to develop a Web-based security self assessment and training tool for irradiator users and other users of radioactive materials. Use the Department of Energy security toolkit as a model
- Participate in site assistance visits to university research and test reactors conducted by the Department of Energy and the NRC.
- Integrate radioactive material security efforts with those of the NRC's Radiation Source Protection and Security Task Force and collaborate on projects to ensure the security of radioactive material in the U.S. Coordinate private sector input into the development of regulations and practices. The purpose of these efforts is to ensure that radioactive material does not become available for use in a weapon of mass destruction

The Bombing Prevention (BP) project enhances and synchronizes the Nation’s ability to detect, deter, prevent, and respond to terrorist explosive devices. BP serves as DHS’ lead agent for strategic planning, coordination, improving capabilities, and information-sharing element to improve bombing prevention efforts throughout State and local jurisdictions and the Federal government. Specifically, BP is responsible for:

- Coordination of national and intergovernmental bombing prevention efforts, to include leadership of the DHS Improvised Explosive Device (IED) Working Group;
- Requirements, capabilities and gap analysis in support of the nation’s bombing prevention and response community; and
- Information sharing and bombing prevention awareness

In FY 2009, BP will coordinate and streamline national bombing prevention efforts through the full execution and implementation of the Congressionally mandated National Strategy for Improvised Explosive Devices (NSIED) and Homeland Security Presidential Directive 19 (HSPD-19).

It will facilitate effective partnerships at the regional and local levels through Multi-Jurisdiction IED Security Planning (MJIEDSP). MJIEDSP assists high-risk urban areas and other vital locations to develop thorough bombing prevention and response plans that efficiently integrate assets and capabilities from multiple jurisdictions and emergency service sectors. Capabilities assessments for public safety bomb squads, explosives detection canine teams, and public safety dive teams will continue to be incorporated into the National Capability Asset Database. The database is an outreach-based analysis effort geared toward assessing unit-level capabilities (personnel, equipment, training and assets, including K9 and the ability to respond to chemical/biological/radiological incidents) and integrates the findings into a comprehensive database.

BP intends to expand the user base and content of the TRIPwire system. An online, collaborative, information-sharing resource, provided via a secure, restricted access internet portal free of charge to qualified bombing prevention and law enforcement personnel, TRIPwire was designed to provide critical information relative to the evolution in terrorist tactics, techniques, procedures, and technologies to State and local law enforcement officials.

BP also intends to expand its Bomb-making Materials Awareness Program (BMAP) following the completion of the scheduled FY2008 pilots. This outreach program increases Local Law Enforcement (LLE), and private sector awareness of homemade explosives (HME), a common terrorist IED tactic. Additionally, BMAP will educate private sector suppliers of commonly available precursor materials

used in the manufacture and construction of IEDs about the potential risks associated with the sale or theft of those products.

### **Project Milestone/Schedules:**

#### FY 2007 Accomplishments

- Led the Congressionally mandated NSIED, successfully partnered with DOJ to implement HSPD-19, and develop the Report and National Strategy on Combating Terrorist Use of Explosives within the United States
- TRIPwire membership expanded to over 2000 users representing 40 Federal departments and agencies, 28 military units, 365 State and local agencies, and 35 private sector organizations
- Conducted 41 on-site IED awareness-level education workshops to State and municipal leadership
- Assisted over 100 State and local jurisdictions in developing Underwater Terrorism Prevention Plans for 16 high risk ports
- NCAD conducted 175 onsite assessments and 300 online surveys of public safety bomb squads, and 12 onsite assessments of public safety dive teams. These bomb squads protect or respond to 1,009 Tier One and Tier Two CIKR assets
- Conducted 17 security plan development sessions for high risk port facilities around the country

#### FY 2008 Planned Accomplishments

- Coordinate the implementation of DHS and IP objectives required by HSPD-19 and NSIED through the DHS IED Working Group. These objectives include conducting annual technology and capability gap analyses and working in partnership with the Departments of Justice and Defense on information sharing and R&D requirements
- Develop four Multi-Jurisdiction IED Security Plans in high-risk areas to promote cross-sector and cross-jurisdictional coordination and enhance capabilities to protect CIKR from IED attacks.
- Complete capabilities analyses of 50 percent of public safety bomb squads and 10 percent of dive teams, and begin analyses of explosive detection canine teams to develop a baseline assessment of current national IED security capabilities through the National Capabilities Analysis Database
- Provide IED subject matter expert support to approximately 265 vulnerability assessments per year
- Fully operationalize the TRIPwire system in all 56 states and territories. IP will focus on continuing to expand the TRIPwire user base among bomb squad, law enforcement, and other emergency response personnel through additional outreach and media events
- Conduct six National Bombing Prevention and Awareness Campaign events annually in high-risk areas
- Design outreach materials and launch a BMAP pilot in three high-risk areas
- Assess and identify requirements for explosives detection canine standards

#### FY 2009 Planned Accomplishments

- Continue to support the implementation of the NSIED and HSPD-19 by leading the DHS IED Working Group and interagency partnerships
- Develop four Multi-Jurisdiction IED Security Plans in high-risk areas
- Continue to assess national IED security capabilities in high-risk areas through NCAD
- Continue to provide IED subject matter expertise to support approximately 315 vulnerability assessments per year

- Enhance TRIPwire capability, and expand the number of users to include select private sector security partners
- Conduct six National Bombing Prevention and Awareness Campaign events in high-risk areas
- Incorporate lessons learned from the BMAP pilot, and implement BMAP in five additional high-risk areas
- Develop and begin the implementation of canine explosives detection standards

The National Protection and Programs Directorate requests \$293,500,000 for the National Cyber Security Division (NCSD) in FY 2009. Program enhancements include \$79,896,000 for US-CERT and \$5,751,000 for Strategic Initiatives Control Systems activities. Program decreases include \$5,920,000 for Information Sharing and Collaboration.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

NCSD includes the following branches:

- United States Computer Emergency Readiness Team (US-CERT)
- Strategic Initiatives (SI)
- Outreach and Awareness (O&A)
- Planning and Programs (P&P)

**US-CERT:**

| <i>[WCF]</i>   |           |           | [180]            |           |           | [5,499]          |           |           |                 |
| <i>Production</i>  |           |           | \$6,067          |           |           | \$6,509          |           |           | \$442           |
| <i>[WCF]</i>   |           |           | [300]            |           |           | [204]            |           |           |                 |
| <b>Activity Costs</b>                                      |           |           | <b>\$155,142</b> |           |           | <b>\$231,640</b> |           |           | <b>\$76,498</b> |
| <b>Total</b>   | <b>30</b> | <b>53</b> | <b>\$159,282</b> | <b>76</b> | <b>98</b> | <b>\$242,424</b> | <b>46</b> | <b>45</b> | <b>\$83,142</b> |

The \$159,282,000 shown above as the FY 2008 Enacted includes a \$115,000,000 budget amendment enacted as an adjustment to the base funding of \$44,282,000 provided by the FY 2008 Department of Homeland Security (DHS) appropriation. The \$115,000,000 provided funding for US-CERT to ramp up intrusion detection capabilities. The intrusion detection funding supports an upgraded Situational Awareness capability that will greatly increase the detection of intrusions of .gov networks, complemented by increased resources for Incident Handling and Analysis.

The US-CERT has primary responsibility for the National Cyberspace Security Response System to prevent, detect, respond to, and reconstitute rapidly after cyber incidents. The programmatic components of this responsibility include: Incident Handling, Analysis (Malicious Code), Strategic Operations, Situational Awareness, and Production.

### Incident Handling

The Incident Handling Program addresses cyber security incidents that may pose a threat at the national level. The US-CERT maintains a 24x7x365 incident handling capability that receives, identifies, correlates, triages, and responds to incidents impacting the Nation's critical assets. The Incident Handling Program coordinates the dissemination of cyber threat warning information via the National Cyber Alert System to warn the federal, state, and local governments, and associated critical infrastructure components of viruses, vulnerabilities, attacks, malicious code, impending threats, and weaknesses.

The US-CERT Incident Handling program covers the security of cross-agency information technology assets and services as well as assurance of essential citizen services. The 24x7 Secure Operations Center delivers these services by facilitating collaboration across Federal civilian government agencies to resolve information security weaknesses – many of which have been identified by US-CERT, the Office of Management and Budget, and the Congress. The center also services our partners in state, local and tribal governments as well as critical infrastructures and home users.

US-CERT is the primary federal agency handling American cybersecurity incidents and preventing future attacks. Through its 24x7 center, the Incident Handling program helps secure the Nation's critical infrastructure and reduces cyberspace security vulnerabilities by gathering, correlating, and disseminating information to prevent attacks and by responding to cybersecurity incidents.

Incident Handling provides US-CERT the ability to detect and mitigate targeted attacks against the Federal Government. US-CERT Incident Handling and Analysis provide the Government Forum of Incident Response and Security Teams (GFIRST) community, state, local and tribal governments, and critical infrastructure with unclassified situational awareness reports to help detect these attacks.

### FY 2007 Accomplishments

- Drafted US-CERT Private Sector Concept of Operations (CONOPS).
- Standardized incident reporting across the government utilizing US-CERT's new Incident Tracking mechanism.
- Refined Standard Operating Procedures (SOPs) so they are consistent with US-CERT CONOPS.
- Developed a phased US-CERT Portal integration into the Homeland Security Information Network (HSIN).
- Updated and implemented US-CERT CONOPS with the White House Policy Coordination Committee to define Personal Identifiable Information (PII) reporting requirements.
- Built initial capacity to detect, analyze and respond to cyber events.

- Responded to 37,213 cyber security incidents, an increase of more than 50 percent over the previous year.
- Responded with a coordinated national system to major cyber and communications disruptions to restore essential communications.
- Established an integrated joint operations center comprised of public and private sector members consisting of IT and communications organizations.
- Co-located US-CERT and National Coordinating Center for Telecommunications (NCC) watch operations to facilitate the sharing of critical cyber and communications information.
- Engaged with the Partnership for Critical Infrastructure Security (PCIS) and Information and Analysis Center (ISAC) Council to develop a Concept of Operations (CONOPS) and associated plans for coordinated watch and warning and incident response.

#### FY 2008 Planned Milestones

- Standardize incident reporting across the government utilizing US-CERT's new Incident Tracking mechanism.
- Develop a phased US-CERT Portal integration into the Homeland Security Information Network (HSIN).
- Update and implement US-CERT Concept of Operations (CONOPS) with the White House Policy Coordination Committee to define Personal Identifiable Information (PII) reporting requirements.
- Refine assets to further detect, analyze and respond to cyber events.
- Increase staffing for the 24x7 Secure Operations Center to provide the capability for in-depth incident tracking, detection, and mitigation.
- Continue to respond with a coordinated national system to major cyber and communications disruptions to restore essential communications.
- Continue to develop an integrated joint operations center comprised of public and private sector members consisting of IT and communications organizations.

#### FY 2009 Planned Milestones

- Establish cyber incident response capabilities within the US-CERT/NCC Operations Center that routinely incorporate international information sharing and collaboration.
- Build initial capacity to detect, analyze and respond to cyber events.
- Refine assets to further detect, analyze and respond to cyber events.
- Increase staffing for the 24x7 Secure Operations Center to provide the capability for in-depth incident tracking, detection, and mitigation.
- Continue to respond with a coordinated national system to major cyber and communications disruptions to restore essential communications.
- Continue to develop an integrated joint operations center comprised of public and private sector members consisting of IT and communications organizations.

#### Analysis

The United States Computer Emergency Readiness Team (US-CERT) Analysis program's objective is to correlate cyber threat data and disseminate actionable information. The program consists of four components: Network Analysis, Malware Analysis, Digital Media Analysis, and Critical Infrastructure and ISAC Partnership:

- Network Analysis Component - correlates network data (e.g., flow data) to identify emerging threats, ongoing trends, and intrusions that have already occurred. Network analysts work in a continuous feedback loop with all US-CERT constituents to identify and respond to cyber incidents.
- Malware Analysis Component - focuses on analyzing malicious code samples. Malicious code (e.g. viruses, worms, Trojan horses and rootkits) and other attack tools exploit vulnerabilities, presenting a real and present danger to the security of U.S. information systems. These samples come from a variety of sources, such as anonymous submissions, incidents discovered by other components of the Analysis Program, or malicious code reported to US-CERT through the Incident Handling Program.

Additionally, the Analysis program is developing a single homeland security catalogue of malicious code. The program's analysts use hardware/software technologies to analyze malicious code and vulnerabilities in an incubator facility. This facility, or malware laboratory, provides a controlled environment to conduct detailed analysis on computer hardware and software infected with malware. It affords analysts the capability to identify and reverse engineer malicious code on infected computers. The malware laboratory provides value to partners in industry and state, local, and tribal governments that are also seeking protection against damaging computer attacks.

- Digital Media Analysis Component - works with compromised digital media (e.g., hard drives and thumb drives) provided to US-CERT by Federal and state agencies for analysis. Digital Media analysts provide a depth of knowledge that many agencies and organizations do not have the means to support.
- The Critical Infrastructure and ISAC Partnership Component - reaches out to critical private sector entities to enhance operational relationships between US-CERT and those entities. These relationships provide valuable operational data, which aids the other three areas of the Analysis program in correlation and dissemination.

The Analysis program continually strives to maintain an in-house capability to analyze various types of data to improve overall understanding of current or emerging cyber threats. US-CERT will secure critical infrastructure and the Internet through timely analysis and production of actionable information to aid incident response efforts. The Analysis program works closely with cyber security experts in the federal government, state/local governments, intelligence community, critical infrastructure owners/operators, and other public and private sector organizations.

#### FY 2007 Accomplishments

- Consistent with the National Infrastructure Protection Plan (NIPP) Risk Management Framework, identified, assessed, and prioritized risks to the IT and Communications infrastructure, by analyzing threat, vulnerability, and consequence information.
- Continued to expand the National Vulnerability Database (NVD) to help establish a national baseline of specific standards to enable automated vulnerability management, measurement, and policy compliance evaluation (e.g., Federal Information Security Management Act (FISMA) compliance).
- Facilitated development and dissemination of IT and cyber threat assessments in coordination with the intelligence community.

- Provided ability to detect, respond to, and send notice of cyber incidents using analysis tools such as the Internet Health Service (IHS) and the Einstein capability.
- Provided the Federal Government technical information to detect targeted cyber attacks against Federal agencies.
- Provided outreach to the seventeen sector operators; this provided situational awareness for analysis across the Federal government, critical infrastructure, and the private sector, and allowed the US-CERT Analysis program to correlate significant cyber incidents.
- Maintained a streamlined capability to produce immediate actionable information, allowing for more detail as additional facts emerged.
- Encouraged and supported public and private sector partnerships, as well as international partnerships, to enable security partners to work together to promote secure, resilient IT and communications infrastructure.
- Continued to establish collaborative relationships and ongoing cooperation with key allies to address international vulnerabilities and global dependencies and interdependencies.

#### FY 2008 Planned Milestones

- Continue to work with International Partnerships, to enable security partners to work together to promote secure, resilient IT and communications infrastructure.
- Continue to identify, assess, and prioritize risks to the IT and communications infrastructure, by analyzing threat, vulnerability, and consequence information.
- Continue to expand the National Vulnerability Database (NVD) to help establish a national baseline of specific standards to enable automated vulnerability management, measurement, and policy compliance evaluation (e.g., FISMA compliance).
- Produce detailed reports of analysis activity for the purpose of informing and educating response personnel.
- Continue to facilitate development and dissemination of IT and cyber threat assessments in coordination with the intelligence community.
- Provide the ability to detect, respond to, and send notice of cyber incidents using analysis tools such as the Internet Health Service (IHS) and the Einstein capability.
- Outreach to the seventeen sector operators; this provides situational awareness for analysis across the Federal government, critical infrastructure, and the private sector. This allows the US-CERT Analysis Program to correlate significant cyber incidents.
- Maintain a streamlined capability to produce immediate actionable information, allowing for more detail as additional facts emerge.
- Increase manpower to fulfill the 24X7 responsibility to analyze, which will provide the capability for in-depth fusion analysis to support all US-CERT constituents.
- Produce detailed reports of analysis activity for the purpose of informing and educating response personnel.
- Continue to prepare and deter against catastrophic incidents by achieving a collaborative risk management and deterrence capability with a mature information sharing partnership(s) between Government and the private sector.

#### FY 2009 Planned Milestones

- Continue to work with International Partnerships, to enable security partners to work together to promote secure, resilient IT and communications infrastructure.
- Continue to identify, assess, and prioritize risks to the IT and communications infrastructure, by analyzing threat, vulnerability, and consequence information.

- Continue to expand the National Vulnerability Database (NVD) to help establish a national baseline of specific standards to enable automated vulnerability management, measurement, and policy compliance evaluation (e.g., FISMA compliance).
- Continue to produce detailed reports of analysis activity for the purpose of informing and educating response personnel.
- Continue to facilitate development and dissemination of IT and cyber threat assessments in coordination with the intelligence community.
- Provide the ability to detect, respond to and send notice of cyber incidents utilizing analysis tools such as the Internet Health Service (IHS) and the Einstein capability.
- Increase manpower to fulfill the 24x7 responsibility to analyze, which will provide the capability for in-depth fusion analysis to support all US-CERT constituents.
- Continue to prepare and deter against catastrophic incidents by achieving a collaborative risk management and deterrence capability with a mature information sharing partnership(s) between Government and the private sector.

### Strategic Operations

The Strategic Operations program's mission is to build critical interagency information sharing and incident response collaboration. It supports the US-CERT's and National Cyber Security Division's (NCSA) cyber incident response planning and coordination activities. The program's planning and coordination efforts have substantially increased the need for greater outreach and information sharing among public and private cyber security stakeholders. The expanding environment of cyber security requires broader and higher level planning to facilitate interagency information sharing for cyber readiness and response efforts. Enhanced coordination capacity is needed to plan effectively and implement fully integrated US-CERT responses to cyber incidents.

US-CERT must combine the right mix of well-trained people, processes and technology to produce a sufficient level of technological expertise in order to instantly and accurately analyze new or evolving security events. The success or failure of the US-CERT Strategic Operations program depends significantly on how accurately the US-CERT security analysts judge the severity as security events emerge. US-CERT is staffed through multiple contracting agencies and government employees. Moreover, the US-CERT Strategic Operations program maintains active partnerships with key organizations that can provide the necessary cyber security expertise to assist US-CERT personnel. The US-CERT Strategic Operations program has been comprised of two sub-programs, the Government Forum for Incident Response and Security Teams (GFIRST) and the Chief Information Security Officers' (CISO) Forum, and two activities are planned for FY 2009, as described below:

- Chief Information Security Officers' (CISO) Forum: The CISO Forum fosters interagency information sharing and collaboration among federal agency CISOs in support of cyber security. The CISO Forum is one of two key federal coordination programs established by NCSA to facilitate interagency information sharing and cooperation for readiness and response efforts. The CISO Forum brings together Cabinet-level officials responsible for the information security of their agencies and provides a trusted venue for them to collaborate; leverage one another's experiences, lessons learned, capabilities, and programs; and address and discuss particularly problematic or challenging areas.
- Government Forum of Incident Response and Security Teams (GFIRST): GFIRST is a group of technical and tactical security response practitioners, responsible for securing government information technology systems. Its members work together to understand and handle computer security incidents and to encourage proactive and preventative security practices.

GFIRST assists in securing Federal cyberspace, by fostering interagency information sharing and collaboration among Federal agency incident response security teams in support of cyber security. In addition, it provides members with technical information, tools, methods, assistance, and guidance. It coordinates proactive liaison activities and analytical support, furthers the development of quality products and services for the Federal government, shares specific technical details regarding incidents within a trusted U.S. Government environment on a peer-to-peer basis, and improves incident response operations.

Included in this expanding role is the requirement to develop a planning and response capability to support implementation of the National Response Plan (NRP) Cyber Annex and the National Coordinating Center (NCC) with deployable personnel upon implementation of the Emergency Support Function (ESF) #2 of the NRP. US-CERT will equip and train fly-away ESF #2 support teams for incident response operations. The ESF #2 teams will support major, short-term IT reconstitution efforts by providing services such as assessing equipment damage and any resulting equipment needs following a disaster. This upgraded strategic and operational planning role requires US-CERT to partner with an ever growing number of Federal, private, state and local agencies.

US-CERT's Strategic Operations is requesting FY 2009 funding for activities that will collaborate and integrate with existing National Cyber Security Division activities. The two Strategic Operations activities are:

- **Cyber Education & Expertise:**  
The objective of this project will be to improve the national and government posture for cyber readiness through enhanced human capital. In FY 2008, the project will outline a plan to baseline current cyber educational capabilities for civilian agencies, the Department of Defense and the Intelligence Community, academia, and industry. Requirements from other cyber initiatives will be identified and incorporated, and the desired cyber education end state will be identified. Also, a collective U.S. Government (USG) plan to strengthen and expand cyber educational and training programs will be developed. In FY 2009, the project will complete a cyber education and training program gap analysis; expand and improve Federal Cyber Service Programs; develop public/private training certification standards, accreditation, and performance testing; and identify desired cyber educational curriculum concepts, including K-12.
- **Supply Chain Risk Management:**  
The objective of this project will be to develop a broad approach to address the risks stemming from the globalization of the commercial information and communications technologies (ICT) marketplace. This globalization increases the opportunities to penetrate the U.S. Government supply chain for the purpose of gaining unauthorized access to data, altering data, or interrupting communications. Risk stemming from the global ICT supply chain must be managed in a strategic and comprehensive way over the entire life cycle of ICT products and services. In FY 2009, the project will implement acquisition policy, develop and implement life cycle acquisition processes and guidance, and examine mechanisms for utilizing supply chain risk information within Federal acquisitions.

### FY 2007 Accomplishments

- Prepared for and deterred catastrophic incidents by achieving a collaborative risk management and deterrence capability with a mature information sharing partnership(s) between Government and the private sector.
- Promoted strategies and protective programs to mitigate risk to the IT, communications, and cyber infrastructures.
- Fostered enhanced and improved agency information systems security across the Federal Enterprise.
- Hosted Chief Information Security Officers (CISO) meetings to facilitate lessons learned, FISMA Score Improvement Strategies, and Cyber Protection strategies.
- Promoted the CISO Forum to become the recognized expert body by the Chief Information Officer (CIO) Council with responsibilities and authorities supported by government policy.
- Held annual conferences for the GFIRST community to convene Government incident response teams. The focus of this event is to educate this community on various levels, from senior managers to junior analysts, regarding incident response activities.
- Conducted unannounced quarterly test calls for this community with a goal of 90 percent participation for its constituents.
- Facilitated meetings for the Assistant Secretary (A/S) with civilian agencies CIO's and CISO's.
- Provided content and moderating support to the GFIRST portal.
- Sponsored monthly meetings of the GFIRST members to improve information sharing and collaboration among Federal departments and agencies.

### FY 2008 Planned Milestones

- Continue to prepare for and deter catastrophic incidents by achieving a collaborative risk management and deterrence capability with a mature information sharing partnership(s) between Government and the private sector.
- Continue to promote strategies and protective programs to mitigate risk to the IT, communications, and cyber infrastructures.
- Continue to foster enhanced and improved agency information systems security across the Federal Enterprise.
- Continue to host Chief Information Security Officers (CISO) meetings to facilitate lessons learned, FISMA Score Improvement Strategies, and Cyber Protection strategies.
- Continue to promote the CISO Forum to become the recognized expert body by the Chief Information Officers (CIO) Council with responsibilities and authorities supported by government policy.
- Continue to hold annual conferences for the GFIRST community to convene Government incident response teams. The focus of this event is to educate this community on various levels, from senior managers to junior analysts, regarding incident response activities.
- Continue to conduct unannounced quarterly test calls for this community with a goal of 90 percent participation for its constituents.
- Continue to facilitate meetings for the Assistant Secretary (A/S) with civilian agencies CIO's and CISO's.
- Continue to provide content and moderating support to the GFIRST portal.
- Continue to sponsor monthly meetings of the GFIRST members to improve information sharing and collaboration among Federal departments and agencies.
- Outline a plan to baseline current cyber educational capabilities for civilian agencies, the Department of Defense and the Intelligence Community, academia, and industry.

- Identify and incorporate requirements from other cyber initiatives.
- Identify the desired cyber education end state.
- Develop a collective U.S. Government (USG) plan to strengthen and expand cyber educational and training programs.

#### FY 2009 Planned Milestones

- Continue to prepare for and deter catastrophic incidents by achieving a collaborative risk management and deterrence capability with a mature information sharing partnership(s) between Government and the private sector.
- Continue to promote strategies and protective programs to mitigate risk to the IT, communications, and cyber infrastructures.
- Continue to foster enhanced and improved agency information systems security across the Federal Enterprise.
- Continue to host Chief Information Security Officers (CISO) meetings to facilitate lessons learned, FISMA Score Improvement Strategies, and Cyber Protection strategies.
- Continue to promote the CISO Forum to become the recognized expert body by the Chief Information Officers (CIO) Council with responsibilities and authorities supported by government policy.
- Continue to hold annual conferences for the GFIRST community to convene Government incident response teams. The focus of this event is to educate this community on various levels, from senior managers to junior analysts, regarding incident response activities.
- Continue to conduct unannounced quarterly test calls for this community with a goal of 90 percent participation for its constituents.
- Continue to facilitate meetings for the Assistant Secretary (A/S) with civilian agencies CIO's and CISO's.
- Continue to provide content and moderating support to the GFIRST portal.
- Continue to sponsor monthly meetings of the GFIRST members to improve information sharing and collaboration among Federal departments and agencies.
- Complete a cyber education and training program gap analysis.
- Expand and improve Federal Cyber Service Programs.
- Develop public/private training certification standards, accreditation, and performance testing.
- Identify desired cyber educational curriculum concepts, including K-12.
- Identify, document, and distribute best practices.
- Draft and coordinate acquisition policy regarding use of supply chain risk in Federal procurement.

#### Situational Awareness

The objective of the US-CERT Situational Awareness program is to identify, analyze, and comprehend broad network activity and to support incident handling and analysis of cyber security trends for Federal agencies so that they may increase their own situational awareness and reduce cyber threats and vulnerabilities.

Situational Awareness consists of the following elements:

- Mission Operating Environment (MOE) – A collection of hardware and software that provides an operating platform that is sequestered from the Internet, separate from the DHS Local Area Network, and supports US-CERT cyber security operations. The MOE provides US-CERT with the capability to conduct incident handling, analysis, and information sharing safely and securely

without infecting computing infrastructure that supports DHS operations.

- US-CERT deals with sensitive and dangerous code on a regular basis. It needs a reliable and current operating environment that is capable of handling such malicious code. US-CERT needs a secure collaboration capacity to allow government and industry cyber experts to address threats to our cyber infrastructure in a collaborative manner in real time.
- Einstein – A collection of hardware and software that supports an automated process to collect, correlate, analyze, and share cyber security information across Federal government networks. Einstein collects data flows in real time from participating Federal agency Internet connections and provides an enhanced view and analysis of the health of critical cyber networks across the U.S. Government. The program provides a knowledge base for improving network security, resulting in increased resiliency of critical electronically delivered government services.
  - US-CERT serves as the central point for addressing cyber security incidents within the Federal government. To ensure that it has the ability to gather threat data and respond to Federal government computer security incidents, US-CERT needs real-time collection of data. Without real-time data collection as well as a way to share data across the computer incident response community, it would be difficult to gather relevant cyber-based threat and risk data. Further, the collection of data relevant to cyber network defense into a centralized repository will allow US-CERT to catalogue, index, and prioritize events to ensure that the federal community benefits from the aggregated analysis.
  - Einstein has emerged as a very successful program that partners with Federal agencies to collect and analyze network flows. In August 2007, the White House tasked US-CERT with developing an Einstein Deployment Plan that would roll out Einstein to all Cabinet-level agencies, while concurrently evolving the architecture to Einstein ‘Next Generation’. Situational Awareness’ Front End System I is being expanded to include 50 upgraded Einstein sensors and their accompanying hardware and software. In FY 2009, Situational Awareness plans to expand these Einstein activities and to implement the Front End System II, a new version of the Einstein system.
  - Situational Awareness has also started the process to develop a new data center function in FY 2008 to support the Trusted Internet Connections activities, and plans for an enhanced data center capacity with off-site storage in FY 2009. In addition, FY 2008 activities call for a facility to house current and new US-CERT and contractor personnel. The facility is planned to be expanded in FY 2009 to accommodate more personnel and equipment as well as a SCIFed component.
- Trusted Internet Connections - US-CERT’s Situational Awareness program plays a critical role by leading remote access defense across the Federal network enterprise. The Trusted Internet Connections (TIC) Initiative is a multifaceted Office of Management and Budget plan for improving the Federal government’s security posture through the reduction of external connections, including its Internet points of presence, from a current number of several thousand to a target of 50. This reduction facilitates improvement of the Federal government’s security posture by providing a more robust security monitoring capability and standardized security measures and mechanisms. Specific components of the TIC include:

- Monitoring, incident notification, and response support leveraging standardized and optimized portals by US-CERT using the Einstein intrusion detection technology and supporting processes;
- Continuing agency and trusted service provider network and security operations including defense-in-depth, incident response, and directional support; and
- Ensuring performance –based security and service level agreements between all parties.

This effort will provide oversight and compliance of .gov internet access point aggregation and implementation of sound information security measures. Situational Awareness is working to achieve a baseline of the .gov network configuration, that is, an understanding of key network characteristics and what security measures are in place.

- National Computer Forensics Institute (NCFI) – NCFI is an advanced, modern training facility operated by the U.S. Secret Service (USSS) for electronic crime investigators in Hoover, Alabama. The training is modeled on the current USSS Electronic Crimes Special Agent Program (ESCAP) curriculum, and provides training in three major areas of electronic crimes: Level I Basic Electronic Crimes Investigation Program (BICEP); Level II Network Intrusion Investigation (NITRO); and Level III Computer Forensics (CF). NCSD has a Memorandum of Understanding with USSS for the transfer of funding for state and local law enforcement officers to attend training at NCFI. NCSD will provide \$4 million to support the NCFI in FY09.

#### FY 2007 Accomplishments

- Expanded the Einstein Program to an overall total of 12 Federal agency sites.
- Addressed identified vulnerabilities within Einstein and resolved items.
- Promoted innovation to address next generation requirements and enhance cyber and communications infrastructure protection.
- Expanded modeling and analysis supporting next generation National Security/Emergency Preparedness (NS/EP) services, Internet resiliency, mitigation and response planning, and infrastructure protection.
- Expanded analytic capabilities and data sets to reflect increasing technological diversity and globalization of the infrastructure.
- Supported NCFI start-up.

#### FY 2008 Planned Milestones

- Address identified vulnerabilities within Einstein and resolve items, as necessary.
- Deploy Einstein to remaining Cabinet level Departments.
- Design, initiate and test Einstein ‘Next Generation’ architecture.
- Initiate pilot with participating Einstein partner agency to prove success for next generation.
- Install upgraded incident handling (Remedy) software on MOE.
- Increase situational awareness capability with two additional external data feeds for the Internet Health Service.
- Promote innovation to address next generation requirements and enhance cyber and communications infrastructure protection.
- Expand modeling and analysis supporting next generation NS/EP services, Internet resiliency, mitigation and response planning, and infrastructure protection.
- Expand analytic capabilities and data sets to reflect increasing technological diversity and globalization of the infrastructure.

- Develop a data center capacity to support increased storage needs from Einstein deployments.
- Plan and procure facility to house current and new US-CERT and contractor personnel to match expanded Einstein activities.
- Expand Front End System I to include 50 upgraded Einstein sensors and their accompanying hardware and software.
- Continue support of NCFI to provide training of state and local law enforcement officials.

#### FY 2009 Planned Milestones

- Address identified vulnerabilities within Einstein and resolve items, as necessary.
- Continue to upgrade incident handling with (Remedy) software on MOE.
- Expand data storage capacity to support program and team growth.
- Initiate migration of existing Einstein customer base to 'Next Generation' architecture.
- Develop and test increased analytic toolset to increase Einstein capabilities.
- Promote innovation to address next generation requirements and enhance cyber and communications infrastructure protection.
- Expand modeling and analysis supporting next generation national security/emergency preparedness (NS/EP) services, Internet resiliency, mitigation and response planning, and infrastructure protection.
- Expand analytic capabilities and data sets to reflect increasing technological diversity and globalization of the infrastructure.
- Implement Front End System II with new versions of Einstein sensors.

#### Production

US-CERT serves as the Federal government's cornerstone for protecting the nation's Internet infrastructure by coordinating defense against and response to cyber attacks. As such, US-CERT is charged with analyzing cyber threats, and publishing alerts and notices to promote awareness and network defense. The Production program plays a key role in accomplishing this mission by collaborating with both public and private sectors (Federal agencies, industry, the research community, state, local, and tribal governments, private citizens, et al.) to share and disseminate reasoned and actionable cyber security information. This information spans all levels of users in an effort to protect networks, information, assets, and critical infrastructures. The Production program delivers information through a variety of distribution mechanisms:

- Public US-CERT website - is an information source for citizens, private enterprise, IT professionals, control systems operators, and federal agencies. The website features regularly updated summaries of cybersecurity incidents and issues. This information is automatically disseminated to users through really simple syndication (RSS) feeds and subscribed mailing lists. The program also runs the National Cyber Alert System, which provides valuable cyber security information in the form of Technical Cyber Security Alerts, Cyber Security Alerts, Cyber Security Bulletins and Cyber Security Tips. Additional information products include Current Activity, Vulnerability Notes, the Vulnerability KnowledgeBase and Quarterly Trends and Analysis Reports.
- US-CERT Secure Portal - provides a secure channel for disseminating and sharing For Official Use Only (FOUO) related cybersecurity information to Information Sharing and Analysis Centers (ISACs), the Government Forum of Incident Response and Security Teams (GFIRST) and other vetted key stakeholders. The program creates and publishes information products for its secure portal constituents, including Situational Awareness Reports, Technical Information

Papers, Federal Information Notices, Critical Infrastructure Information Notices, Quarterly Trends Reports and other important additional alerts.

- SECRET (DHS-Homeland Secure Data Network) US-CERT website- is an information source located on the Department of Homeland Security's Homeland Secure Data Network (HSDN) to alert individuals within the classified community of current cybersecurity incidents and issues. The website is a combination of both the public website and secure portal in that it contains current activity information, notable vulnerability notes, and recent information products such as Situational Awareness Reports, Technical Information Papers, Federal Information Notices, Critical Infrastructure Information Notices, and Quarterly Trends Reports.

#### FY 2007 Accomplishments

- Strived to increase overall public awareness by improving mechanisms and procedures for information sharing on cyber threats, vulnerabilities, and threat assessments (e.g., technical and non-technical alerts, threat assessments, methodologies, and guidance).
- Created a website on the Homeland Secure Data Network (HSDN) to distribute classified information to constituents within the intelligence community.
- Created a quarterly Trends and Analysis Report to inform the public of activity reported and analyzed by US-CERT.
- Increased the number of reports being produced and distributed to federal, state and local governments, the private sector, and international constituents.
- Created a new and improved Incident Reporting Form to encourage accurate and timely reporting to comply with OMB and National Institute of Standards and Technology (NIST) requirements and guidelines.
- Increased awareness by contributing information and articles to be published in constituent newsletters such as the NCSA Newsletter, and the Department of Defense's Information Assurance Technology Analysis Center's (IATAC) *IAnewsletter*.
- Created a new alert system to notify the public of Current Activity, a section on our website that provides up-to-date information about high-impact types of security activity affecting the community at large.
- Implemented US-CERT Secure Portal enhancements to better protect and share information across sectors (reorganized folders, began to utilize the Alert feature, etc.).
- Worked with the Government Forum of Incident Response and Security Teams (GFIRST) to support their needs for the portal and annual GFIRST Conference.
- Annually verified, updated and confirmed the Standard Operating Procedures (SOPs) for US-CERT Operations.
- Provided the appropriate operational and technical guidance to stakeholders to protect and secure data to ensure the integrity, availability, and confidentiality of the information.

#### FY 2008 Planned Milestones

- Enhance the frequency and quantity of the information being published to the National Cyber Alert System and to the Current Activity RSS feeds and mailing list.
- Redesign the US-CERT website to allow users to navigate and find information more easily.
- Create a hardcopy of a newsletter or quarterly trends report for physical distribution.
- Continue to enhance the Incident Reporting Form to allow agencies to report incidents with greater ease.
- Provide graphic interface on the website to illustrate cyber security trends.

- Establish new relationships to publish information through new channels, i.e., constituent newsletters, websites, and reports.
- Enhance US-CERT Portal features to offer additional tools for situational awareness.
- Begin planning phases to create a US-CERT website on the Joint Worldwide Intelligence Communications System (JWICS) to distribute Top Secret/SCI classified information to constituents within the intelligence community.
- Create new information products specific to the intelligence community to be published on the Homeland Secure Data Network (HSDN) website and eventually, the JWICS website.
- Work with and support the Einstein Program's initiatives by creating reports and new information products as the program scales to new agencies.
- Continue to support the Government Forum of Incident Response and Security Teams (GFIRST) to support their needs for the portal and annual GFIRST Conference.
- Establish new technologies for creating a more robust infrastructure for supporting and securing the US-CERT website.
- Create and improve mechanisms for delivering information to various stakeholders in the event that key Internet/network functions are not available.
- Annually verify, update and confirm the alert systems and Standard Operating Procedures (SOPs) for US-CERT operations.
- Partner with additional private entities to market live feeds to new subscriber bases.
- Continue to provide the appropriate operational and technical guidance to stakeholders to protect and secure data to ensure the integrity, availability, and confidentiality of the information.
- Strive to increase overall public awareness by improving mechanisms and procedures for information sharing on cyber threats, vulnerabilities, and threat assessments (e.g., technical and non-technical alerts, threat assessments, methodologies, and guidance).

#### FY 2009 Planned Milestones

- Create a US-CERT website on the Joint Worldwide Intelligence Communications System (JWICS) to distribute Top Secret/SCI classified information to constituents within the intelligence community.
- Create and/or enhance classified information products to be published to JWICS and the Homeland Secure Data Network (HSDN).
- Update and reorganize the public website to accommodate growth and new communications technologies for disseminating information.
- Establish new working guidelines to better collaborate with US-CERT analysts in order to produce more information products for all constituents.
- Work with and support the Einstein Program's initiatives by creating reports and new information products as the program scales to new agencies.
- Establish new procedures and refine product classification as reporting needs increase with the overall mission and deployment of Einstein.
- Create a scalable means for producing and disseminating federal reports in a more timely, secure, and effective way.
- Continue to work with other NCSID initiatives (Strategic Initiatives/Software Assurance) to support their mission via the public website or secure portal.
- Continue to evaluate options for creating a more robust and secure infrastructure for the US-CERT website.
- Continue to support the Government Forum of Incident Response and Security Teams (GFIRST) to support their needs for the portal and annual GFIRST Conference.

- Continue to enhance US-CERT Portal features to offer additional tools for situational awareness.
- Annually verify, update and confirm the alert systems and Standard Operating Procedures (SOPs) for US-CERT operations.
- Continue to provide graphic interface on the website to illustrate cybersecurity trends.
- Create and improve upon mechanisms for delivering information to various stakeholders in the event that key Internet/network functions are not available.
- Continue to work with the private sector to increase awareness and educate home users.
- Enhance the frequency and quantity of the information being published to the National Cyber Alert System and to the RSS feeds.
- Continue to provide the appropriate operational and technical guidance to stakeholders to protect and secure data to ensure the integrity, availability, and confidentiality of the information.

The NCSD Strategic Initiatives (SI) Branch has primary responsibility for NCSD’s goals to work with the public and private sectors to reduce vulnerabilities and minimize the severity of cyber attacks to the critical infrastructure across the sectors and to the IT Sector. NCSD’s Strategic Initiative activities support Critical Infrastructure Protection-Cyber Security, Training and Education, Software Assurance, Cyber Exercises, Standards and Best Practices, Control Systems Security Program, and ISS Line of Business.

Critical Infrastructure Protection – Cyber Security

The Critical Infrastructure Protection - Cyber Security (CIP-CS) Program strengthens preparedness by partnering with the public and private sectors to improve the security of the Information Technology (IT) Sector and cyber assets across the Nation’s critical infrastructures. CIP-CS facilitates risk management activities that reduce cyber vulnerabilities and minimize the severity of cyber attacks.

The program includes responsibilities for the development and implementation of the National Infrastructure Protection Plan (NIPP) IT Sector Specific Plan (SSP); for cross-sector cyber support to Sector Specific Agencies (SSAs) as they develop their SSPs and reduce cyber risk to their sectors; and for support to the NIPP Program Management Office and the National Critical Infrastructure and Key Resources (CI/KR) Annual Report. The CIP-CS Program also facilitates activities and partnerships to improve the resiliency of the Internet through the Internet Disruption Working Group (IDWG). The IDWG was established by NCSA in partnership with the National Communications System, in response to security concerns surrounding the growing dependency of critical infrastructures and national security and emergency preparedness users on the Internet for communications, operational functions, and essential services.

#### FY 2007 Accomplishments – IT Sector

- Cataloged IT Sector protective measures for nationally critical IT Sector infrastructure to mitigate threats, vulnerabilities, and consequences.
- Developed, in partnership with the IT Sector Coordinating Council (SCC) and IT Government Coordinating Council (GCC), the first joint public-private sector IT SSP.
- Met with the IT SCC regularly to develop the IT SSP and begin implementation of the actions contained therein.
- Developed IT Sector-specific metrics.
- Developed IT Sector risk assessment methodology framework.
- Established IT SSP implementation groups comprised of SCC and GCC representatives.
- Identified critical IT Sector functions.
- Developed IT Sector Annual Report.
- Developed quarterly implementation schedule and work breakdown structure for IT SSP action items.

#### FY 2007 Accomplishments - Cross-Sector Cyber Security

- Provided guidance documents, technical assistance, and feedback to SSAs on the development of cyber security concepts and methodologies in their SSPs.
- Developed and refined cross sector risk guidance and methodologies (e.g., cyber security vulnerability assessment and asset identification methodologies) and provided cyber security content for risk and vulnerability assessment methodologies within the Risk Analysis and Management for Critical Asset Protection (RAMCAP), the Chemical Sector Comprehensive Review, and the Chemical Security Assessment Tool.
- Collaborated with the Intelligence Community (IC) and the Homeland Infrastructure Threat and Risk Analysis Center (HITRAC) to develop the Strategic Homeland Infrastructure Risk Assessment (SHIRA).
- Provided a “Cyber 101” briefing to the SHIRA Interagency Working Group and provided comments and conducted further technical assistance sessions on cyber issues for the respective sectors’ risk assessments.
- Analyzed and commented on cyber components of Sector Annual Reports.
- Identified cross-sector cyber security research and development (R&D) requirements from across the SSPs and provided them for incorporation into the DHS Science and Technology Directorate’s R&D efforts.
- Established the Cross Sector Cyber Security Working Group (CSCSWG) to address cross sector cyber risk assessment and interdependencies. The CSCSWG will serve as a forum for bringing the government and the private sector together to address common cyber security challenges and opportunities across the CI/KR sectors. Convened group and held first meeting.

### FY 2008 Planned Milestones

- Convene threat product working group with HITRAC and sector security partners to ensure the incorporation of cyber security expertise into products and briefings (as appropriate) and facilitate the dissemination of high quality analytical and threat/warning products to IT Sector and other critical infrastructure/key resources (CI/KR) sector cyber stakeholders.
- Provide classified briefings to cleared IT Sector stakeholders on a broad spectrum of threats to the IT infrastructure in collaboration with HITRAC and other intelligence community partners.
- Chair quarterly IT GCC meeting and develop an agenda, meeting materials, and meeting summaries to ensure the coordination of IT GCC activities.
- Meet with IT SCC and GCC representatives regularly to implement the IT SSP and address other CI/KR protection initiatives involving the IT Sector.
- Identify critical IT sector sub-functions and elements of those sub-functions to prepare to identify and assess vulnerabilities and risks to these critical functions.
- Develop a consequence assessment framework for the sector.
- Develop measures and consequence, vulnerability, and threat thresholds.
- Identify threats to the sector and map them against the critical IT Sector functions.
- Complete IT Sector risk assessment methodology.
- Provide IT Sector perspective to DHS pandemic influenza contingency planning efforts by adding content (as appropriate) to DHS documentation.
- Develop baseline IT Sector risk assessment (identify and assess vulnerabilities, threats, and consequences) and overall IT sector risk profile.
- Identify additional protective measures for nationally critical IT sector infrastructure.
- Develop and finalize IT Sector Annual CI/KR Report, as required by the NIPP.
- Develop and convene IT sector R&D workshop.
- Support CSCSWG activities related to systemic risk to the cyber infrastructure of all 17 CI/KR sectors, including completion of the review of cyber content in the 2007 SSP and next steps for the Internet Disruption Working Group.
- Refine cross sector risk guidance and methodologies (e.g., cyber security vulnerability assessment and asset identification methodologies) and provide cyber security content for risk and vulnerability assessment methodologies to at least one additional sector.
- Automate cyber security vulnerability assessment methodology for use across the CI/KR sectors.
- Collaborate with the HITRAC to assist other SSAs in the SHIRA on an annual basis.
- Review, comment and provide guidance, as well as technical assistance, on cyber components of first-year revisions to the SSPs.
- Review, comment and provide guidance on cyber components of Sector Annual Reports. Participate in the writing team for the 2008 National Annual Report.
- Identify and engage appropriate international stakeholders for involvement in the implementation of the IT SSP.
- Encourage and facilitate private IT Sector participation in bilateral and multilateral international activities involving NCSD.

### FY 2009 Planned Milestones

- Review critical IT sector functions to determine if technological and environmental changes have occurred to alter the set of functions or their descriptions.
- Conduct joint discussions with the Communications Sector on risk and protective program effectiveness and requirements for new protective programs.

- Convene full IT Sector Research & Development (R&D) Workshop and share results with R&D public and private sector security partners.
- Support development of the 2009 SHIRA.
- Work with HITRAC to incorporate lessons learned and best practices into development of cyber components of the SHIRA.
- Continue to update the IT SSP, in close collaboration with the IT GCC and the IT SCC to reflect changes in the IT Sector and the state of security.
- Continue to implement with the IT GCC and IT SCC IT SSP long-term actions to manage risk, identify protective programs, enhance information sharing, set the IT Sector research and development agenda, and track progress.
- Collaborate with the IT SCC to facilitate the coordination of policy development, CI/KR protection planning, and SSP implementation activities.
- Chair quarterly IT GCC meeting and develop an agenda, meeting materials, and meeting summaries to ensure the coordination of IT GCC activities.
- Distribute the automated cyber security vulnerability assessment methodology for use across the CI/KR sectors.
- Continue to refine cross sector risk guidance and methodologies (e.g., cyber security vulnerability assessment and asset identification methodologies) and provide cyber security content for risk and vulnerability assessment methodologies to develop and refine cross sector risk guidance and methodologies (e.g., cyber security vulnerability assessment questionnaire and asset identification).
- Continue to identify and engage appropriate international stakeholders for involvement in the implementation of the IT SSP.

#### Training and Education

The Training and Education program provides resources and activities to improve the training, education, and workforce development of Information Technology (IT) security professionals within the Federal government and private industry. NCSA recognizes the overarching goal of ensuring that the IT security workforce is prepared to meet the security challenges that exist today and in the future. By focusing resources on improved cyber security education for IT professionals, increasing the efficiency of existing cyber security training programs, and promoting widely-recognized, vendor-neutral cyber security certifications, NCSA is actively working to improve the Nation's pool of educated information assurance and computer security professionals.

FY 2008 activities include further development, evaluation and implementation of the "Community Cyber Security Maturity Model" (CCSMM) training curriculum, a structured approach to preparing state and local officials for possible cyber attacks, that was developed by the Center for Infrastructure Assurance at the University of Texas at San Antonio. These activities also include delivery of training to at least three states, selected on a competitive basis, to improve their cyber security response capabilities.

#### FY 2007 Accomplishments

- Continued support and collaboration with colleges and universities to enhance and strengthen the Centers of Academic Excellence in Information Assurance Education (CAEIAE) program in an on-going partnership with the National Security Agency (NSA).
- Co-sponsored the Annual CAEIAE representatives meeting.
- Designated additional CAEIAEs, working towards the goal of having at least one CAEIAE in each state.

- Co-sponsored the annual National Collegiate Cyber Defense Competition and encouraged CAEIAE participation.
- Continued collaborating with colleges and universities to provide program administration of the Scholarship for Service (SFS) Program in partnership with the National Science Foundation (NSF).
- Co-sponsored with NSF, the Office of Personnel Management (OPM), and the Federal CIO Council, an annual symposium/job fair to facilitate increased placement of SFS students in Federal jobs and summer internships.
- Conducted agency briefings to provide SFS program overview and placement guidance, marketing the program throughout the Federal government to facilitate improved student placement rates.
- Co-chaired the SFS Interagency Coordinating Committee (ICC) with NSF and collaborated with SFS schools on developing future program improvements.
- Developed the draft Essential Body of Knowledge (EBK), leveraging key resources, including the Committee on National Security Systems (CNSS) training standards, the National Institute for Standards and Technology (NIST) 800 Series documents, and the results of the Department of Defense Information Assurance (IA) Workforce Improvement Program's job task analysis.
- Conducted working groups to review and validate the EBK framework.
- Vetted the draft EBK through role-specific focus/working groups, industry conference presentations and other required activities on skills standards, processes, governance, and goals to validate the IT Security EBK for industry, academia, and government.
- Published the EBK in the Federal Register for public comment.
- Developed and implemented a marketing/messaging campaign to initiate and promote industry-wide acceptance/adoption of the IT Security EBK through workshops and professional conferences.
- Represented DHS/NCSD on the Federal Chief Information Officers (CIO) Council's IT Workforce Committee, including attendance at monthly meetings, and participation in annual special events.
- Functioned as the ISS-LOB Tier 2 Role-Based (Specialized) Training (T2T) Working Group leader for monthly and ad hoc meetings, events, activities.
- Implemented pilot activities with the George Mason University (GMU) School of Management graduate program, including simulations, lectures, and discussions of major business continuity and cyber issues.
- Represented DHS on the CNSS Awareness Working Group to develop informational briefings for the CIO Council, Chief Acquisition Officers Council, acquisition/contracting officials, and others, as appropriate, on supply chain risk and risk management policies and tools.

#### FY 2008 Planned Milestones

- Maintain a partnership with NSA to continue support and collaboration with colleges and universities to enhance and strengthen the CAEIAE program.
- Co-sponsor the Annual CAEIAE representatives meeting.
- Participate in annual review to designate additional CAEIAEs, working towards the goal of having at least one CAEIAE in each state.
- Co-sponsor the annual National Collegiate Cyber Defense Competition, encouraging CAEIAE participation.
- Continue a partnership with NSF, collaborating with colleges and universities to provide program administration of the SFS Program.

- Co-sponsor with NSF, OPM, and the Federal CIO Council, an annual symposium/job fair to facilitate increased placement of SFS students in Federal jobs and summer internships.
- Conduct agency briefings to provide SFS program overview and placement guidance, marketing the program throughout Federal government to facilitate improved student placement rates.
- Continue to co-chair the SFS Interagency Coordinating Committee (ICC) with NSF and collaborate with SFS schools on developing future program improvements.
- Proceed with the development and implementation of a marketing/messaging campaign to initiate and promote industry-wide acceptance/adoption of the IT Security EBK through workshops and professional conferences.
- Continue to refine the content of the EBK and determine ways to leverage it with other IT security industry initiatives.
- Develop a process for maintenance and currency of the IT Security EBK.
- Continue to represent DHS/NCSD on the Federal CIO Council's IT Workforce Committee, including attendance at monthly meetings and participation in annual special events.
- Function as the ISS-LOB Tier 2 Role-Based (Specialized) Training (T2T) Working Group Leader for monthly and ad hoc meetings, events, and activities.
- Continue to represent DHS on the CNSS Awareness Working Group to develop informational briefings for the CIO Council, Chief Acquisition Officers Council, acquisition/contracting officials, and others, as appropriate, on supply chain risk and risk management policies and tools.
- Develop, evaluate and implement the CCSMM training curriculum.
- Deliver CCSMM training to at least three states selected on a competitive basis.

#### FY 2009 Planned Milestones

- Continue co-sponsorship of the CAEIAE program with NSA to enhance and strengthen the program to establish at least one CAEIAE in each state.
- Continue co-sponsoring the Annual CAEIAE representatives meeting.
- Continue designating additional CAEIAEs, working towards the goal of having at least one CAEIAE in each state.
- Co-sponsor the annual National Collegiate Cyber Defense Competition, encouraging CAEIAE participation.
- Continue partnership with NSF, collaborating with colleges and universities to provide program administration of the SFS Program.
- Co-sponsor with NSF, OPM, and the Federal CIO Council, an annual symposium/job fair to facilitate increased placement of SFS students in Federal jobs and summer internships.
- Continue to conduct agency briefings to provide SFS program overview and placement guidance, marketing the program widely throughout Federal government to facilitate improved student placement rates.
- Continue co-chairing the SFS Interagency Coordinating Committee (ICC) with NSF, collaborating with SFS schools on developing future program improvements.
- Promulgate the IT Security EBK and promote its influence on workforce development training products and resources throughout private sector, government and academia.
- Develop an assessment program to evaluate the effective utilization of the IT Security EBK throughout government, industry and academia.
- Continue to represent DHS/NCSD on the Federal CIO Council's IT Workforce Committee, including attendance at monthly meetings, and participation in annual special events.

## Software Assurance

The Software Assurance program serves as a focal point for partnering with private industry, academia, other Federal agencies, and international entities to improve software development and acquisition processes by facilitating forums, hosting working group sessions, and collaborating with partners to publish best practices and methodologies. The Program seeks to reduce software vulnerabilities, minimize exploitation, and address a means to improve capabilities to routinely develop and deploy trustworthy software products – enabling more resilient assets within the critical infrastructure.

### FY 2007 Accomplishments

- Created key components to add increased functionality to the “Build Security In” Portal, which is a web-based repository of best practices and practical guidance for the software development community.
- Revised the Common Body of Knowledge and Developer’s Guide with industry, academia, and government and released a final draft through the Federal Register for public comment.
- Developed a pilot software assurance training/education curriculum consistent with Software Assurance Common Body of Knowledge in conjunction with early adopters.
- Disseminated curriculum guidance, starting with Centers of Academic Excellence in Information Assurance Education and other early adopters.
- Held Working Group sessions with industry, academia, and government addressing topics such as workforce training and development, acquisition, processes and practices, and tools, technology, and product evaluation.
- Conducted two semi-annual Software Assurance Forums for other Federal agencies, private industry, academia and international entities to facilitate the ongoing collaboration to identify methods for improving processes and practices throughout the software development lifecycle.
- Published Software Security Measurement Guide.
- Developed and published an Acquisition Manager’s Desktop Guide to include due-diligence questionnaires, templates for acquisition language, sample statements of work, templates for procurement and outsourcing, and software assurance criteria for evaluating capabilities of software suppliers.
- Developed a Quick Reference Guide to practical measurement activities with the acquisition process.
- Cross-matrixed and incorporated community-accepted Software Assurance Principles into the Common Body of Knowledge.
- Conducted a security measurement validation and update to practical Software & Systems Measurement by hosting a workshop.
- Developed a business case analysis to support lifecycle use of security best practices.
- Provided materials to organizations providing acquisition training and education.
- Offered constructive updates to relevant standards to better address software assurance.
- Developed a pilot course curriculum based on the Acquisition Manager’s Desktop Guide.
- Collaborated with NIST to inventory software assurance tools, measure effectiveness, identify gaps and conflicts, and develop a plan to eliminate those gaps and conflicts.

### FY 2008 Planned Milestones

- Continue to update the "Build Security In" web portal consistent with stakeholder needs in software assurance sound practices for development, acquisition, and sustainment.

- Continue to conduct semi-annual Software Assurance Forum for other federal agencies, private industry, academia and international entities to facilitate the ongoing collaboration to identify methods for improving processes and practices throughout the software development lifecycle.
- Continue to develop a pilot course curriculum based on the Software Assurance (SwA) Acquisition Guide.
- Continue to update the SwA Acquisition Guide to include due-diligence questionnaires, templates for acquisition language, sample statements of work, templates for procurement and outsourcing, and software assurance criteria for evaluating capabilities of software suppliers.
- Continue to update the Software Assurance Common Body of Knowledge, along with awareness materials and FAQs, to inform and educate other federal agencies, private industry, academia and international entities.
- Continue collaboration with NIST; provide final base-line source code security analysis tool specification document, NIST SP 500-268, and test plan document covering capabilities, weaknesses, and false positive rate, NIST SP 500-270.
- Maintain collaboration with NIST; provide SAMATE Reference Dataset (SRD) test suite repository.
- Continue collaboration with NIST; provide Test Case Generator (TCG) using highly formalized descriptions from the Common Weakness Enumeration (CWE), encoded in the standards-based OMG Semantic Business Vocabulary and Rules (SBVR) language, to generate thousands of small test programs embodying the weaknesses described in SBVR.
- Maintain collaboration with NIST; provide Web Application Scanner Tool Functional Spec and Test Suite (NIST SP 500-269).

#### FY 2009 Planned Milestones

- Continue to update the "Build Security In" web portal consistent with stakeholder needs in software assurance sound practices for development, acquisition, and sustainment.
- Continue to conduct semi-annual Software Assurance Forum for other federal agencies, private industry, academia and international entities to facilitate the ongoing collaboration to identify methods for improving processes and practices throughout the software development lifecycle.
- Continue to develop a pilot course curriculum based on the SwA Acquisition Guide.
- Continue to update SwA Acquisition Guide to include due-diligence questionnaires, templates for acquisition language, sample statements of work, templates for procurement and outsourcing, and software assurance criteria for evaluating capabilities of software suppliers.
- Continue to update the Software Assurance Common Body of Knowledge, along with awareness materials and FAQs, to inform and educate other federal agencies, private industry, academia and international entities.
- Continue collaboration with NIST; provide final base-line source code security analysis tool specification document, NIST SP 500-268, and test plan document covering capabilities, weaknesses, and false positive rate, NIST SP 500-270.
- Maintain collaboration with NIST; provide SAMATE Reference Dataset (SRD) test suite repository.
- Continue collaboration with NIST; provide Test Case Generator (TCG) using highly formalized descriptions from the CWE, encoded in the standards-based OMG Semantic Business Vocabulary and Rules (SBVR) language, to generate thousands of small test programs embodying the weaknesses described in SBVR.
- Maintain collaboration with NIST; provide Web Application Scanner Tool Functional Spec and Test Suite (NIST SP 500-269).

## Cyber Exercises

The Cyber Exercises program plans, coordinates, and conducts cyber-focused exercises in order to develop, evaluate, improve, and refine the capabilities of the Department of Homeland Security (DHS) to prevent, protect, respond to and recover from incidents affecting cyber components (information, hardware, software, data, and networks) of the Nation's critical infrastructure. Through participation in and sponsorship of different types of exercises - tabletop, functional, and full-scale - NCSD establishes partnerships and cooperation mechanisms for information sharing with other government entities (local, state, federal, and international), as well as the private sector. CEP provides an opportunity to strengthen the government and private sector partners using exercises, especially through the planning process. NCSD recognizes the importance of fully involving stakeholders who share similar interests in the national cyber security mission and vision as an integral part of the planning process: from the development of the initial stage of formulating higher level exercise objectives, to deciding on exercise design and culminating in actual exercise participation. Through developing and established partnerships, NCSD hopes to further promote cyber security awareness within the U.S. critical infrastructure sectors.

## FY 2007 Accomplishments

- Conducted several tabletop exercises (TTX) to provide the National Cyber Response Coordination Group (NCRCG) and Interagency Advisory Council with a foundation to operationalize interagency coordination and prepare for Cyber Storm.
- Co-sponsored execution of the Multi-State Information Sharing and Analysis Center (MS-ISAC) cyber TTX.
- Planned and coordinated participation by NCSD and the NCRCG in government-wide Exercise Pinnacle (Continuity of Operations exercise).
- Conducted TTX for the Internet Disruption Working Group with representatives from the Federal Government and the private sector to examine communications, information sharing, and roles/responsibilities in the event of a major Internet disruption affecting both the private and public sectors.
- Co-sponsored the National Collegiate Cyber Defense Competition to foster the education and growth of professionals in the cyber field.
- Sponsored a regional exercise (Cyber Tempest) in New York with the New York State Office of Cyber Security and Critical Infrastructure Coordination.
- Assisted the State of Delaware in conducting their annual cyber exercise by providing cyber and exercise subject matter expertise.
- Initiated planning for Cyber Storm II, including conducting the Concept Development Conference and Initial Planning Conference.
- Initiated planning and coordination efforts with the DHS Federal Emergency Management Agency (FEMA) and each of the Top Officials 4 (T4) exercise venues to include cyber in their exercise efforts.
- Sponsored and conducted cyber TTX for the Usual 5 (Australia, New Zealand, Canada, the United Kingdom, and the United States) to finalize their current draft Standard Operating Procedures in continued preparation for Cyber Storm II.
- Sponsored, coordinated, and executed a cyber workshop/TTX in Guam for the T4 Exercise in close collaboration with DHS's Federal Emergency Management Agency (FEMA).
- Initiated planning for regional TTXs in Chicago with ChicagoFIRST by conducting an Initial Planning Conference.

### FY 2008 Planned Milestones

- Plan and execute national and regional cyber exercises including Top Officials 4 (T4) and Cyber Storm II. Coordinate with the DHS Science and Technology Directorate (S&T) on the testing and deployment of the Exercise Modeling Tool.
- Facilitate the Cyber Storm II Final Planning Conference.
- Conduct the National Cyber Exercise, Cyber Storm II.
- Sponsor, plan, and coordinate appropriate cyber security scenario content in the T4 Full-scale exercise (FSE) through the Cyber Working Group in close collaboration with the Office of Grants and Training (G&T).
- Extrapolate lessons learned from the Top Officials venues and integrate these threads into the main scenario of the T4 FSE.
- Apply Top Officials After Action Reports to future exercises to ensure that cyber weaknesses and deficiencies are addressed by public and private partners.
- Support the State of Vermont in the planning and execution of a cyber exercise.
- Support the State of Massachusetts in the planning and execution of a cyber exercise.
- Provide technical cyber exercise guidance in the reviewing and planning stages of the exercise tool with DHS S&T.
- Consult with DHS S&T on the Vermont and Massachusetts beta test sites during the planning stages of the Exercise Scenario Modeling Tool (ESMT).
- Consult with DHS S&T pertaining to ESMT certification and test and deploy the ESMT.
- Continue to develop and execute an exercise plan to facilitate operational interaction with the Usual 5.
- Continue to provide technical exercise assistance to the Usual 5.
- Collaborate with the Department of Energy (DOE) as it relates to the Top Officials exercise and the operational use of the Cyber Exercise Range (during T6).

### FY 2009 Planned Milestones

- Continue to develop regional exercises with our State and local partners and work with the State government exercise programs, including State Fusion Centers, to enhance their preparedness and response capabilities. CEP is engaged with these stakeholders in testing interdependencies among the various stakeholders.
- Begin prototyping the Cyber Exercise Range, which will provide the capability to execute technical level cyber exercises for departments and agencies in future exercises. The Pacific National Laboratory and other government departments and agencies will support this effort.
- Publish and disseminate the Cyber Storm II After Action Report and recommendations for improvement.
- Initiate planning for Cyber Storm III.
- Continue to sponsor, coordinate, and execute future Top Officials exercises.
- Continue to sponsor, coordinate, and execute State, local and regional exercises.
- Continue to develop and execute an exercise plan to facilitate operational interaction with the Usual 5.
- Continue to provide technical exercise assistance to Usual 5 countries.
- Continue to collaborate with public and private sector partners and include them in the development, coordination, and execution of cyber exercises.
- Continue to collaborate with the Department of Energy (DOE) as it relates to the Top Officials exercise and the operational use of the Cyber Exercise Range (during T6).
- Continue developing the Cyber Exercise Range.

## Standards and Best Practices

The Standards and Best Practices (SBP) program promotes and sponsors the development of standards, guidance documents, metrics, and tools that raise awareness and provide technical guidance for the implementation of cyber security controls. In addition, the program identifies, develops, and prioritizes cyber security research and development (R&D) requirements, in coordination with the DHS Science and Technology (S&T) Directorate and the National Communications System (NCS), and the Office of Cybersecurity and Communications (CS&C) Chief Technical Officer (CTO) to encourage cyber technological innovation and R&D investment.

## FY 2007 Accomplishments

- Developed FY 2007 cyber security R&D requirements in coordination with the NCS and S&T by identifying gaps and requirements for cyber R&D innovation.
- Finalized the Common Information Technology and Telecommunications Capability to be included in the Target Capabilities List (TCL); a companion to the National Preparedness Goal.
- Developed the Information Technology and Telecommunications capability component, for the Target Capabilities List.
- Co-sponsored development and maintenance of the National Vulnerability Database (NVD), which integrates all publicly available US Government IT vulnerability resources and is currently being accessed at a rate of 48 million hits per year - an increase in the projected rate (in June 2006) of 24 million hits per year. Additionally, the payment card industry (PCI), which includes Visa and MasterCard, required the use of NVD data to secure payment systems (effective June 30, 2007).
- Promoted the use of common naming conventions for vulnerability identification by sponsoring the Common Vulnerabilities and Exposures (CVE) program and Open Vulnerability and Assessment Language (OVAL). The CVE repository currently contains approximately 25,064 unique identifiers of common information security issues, up from 321, when it began in 1991. The continual adoption of CVE as a naming convention in enterprise security, world wide, is evidenced by its use in public watch lists such as the SANS Top 20 Most Critical Internet Security Vulnerabilities and the Open Web Application Security Project (OWASP) Top 10 Web Application Security Issues.
- Co-chaired meetings of the White House Office of Science and Technology Policy-sponsored Cyber Security and Information Assurance Interagency Working Group (CSIA IWG).
- Participated in the Committee on National Security Systems (CNSS) Working Groups on Certification and Accreditation and IT Globalization by providing technical expertise in the development of the draft consolidated cyber security requirements document. This document combines DOD, NIST and Intelligence organization requirements.
- Developed draft requirements catalog of security standards for control systems.
- Participated in the DHS Standards Council, as the lead for the Cyber Security Standards Working Group.
- Developed performance measures to meet OMB and DHS reporting requirements, which will be used for Program Assessment Rating Tools (PART) reporting.
- Sponsored the Center for Internet Security (CIS) Security Benchmarks and CIS Scoring Tools. CIS benchmarks have been developed by a global consensus of hundreds of security professionals as recommendations for minimum due care and defined best-practice security configurations. SBP's sponsorship provides the entire Federal government with the licenses to use these products.

### FY 2008 Planned Milestones

- Participate on and provide technical input to standards committees and procurement review panels that require NCSA Program expertise.
- Conduct detailed technical documentation reviews and make recommendations that address disconnects or inconsistencies in existing cyber security/best practice guidance (e.g., NIST SP 800 series documents, CNSS cyber security guidance) which contrast with the national IT management approach - as articulated in the National Infrastructure Protection Plan (NIPP).
- Continue to co-sponsor the development and maintenance of the National Vulnerability Database (NVD)
- Promote the use of common naming conventions for vulnerability identification by sponsoring the Common Vulnerabilities and Exposures (CVE) program and Open Vulnerability and Assessment Language (OVAL).
- Continue to co-chair meetings of the White House Office of Science and Technology Policy-sponsored Cyber Security and Information Assurance Interagency Working Group (CSIA IWG).
- Maintain participation in the Committee on National Security Systems (CNSS) Working Groups on Certification and Accreditation and IT Globalization.
- Maintain participation in the DHS Standards Council, as the lead for the Cyber Security Standards Working Group.
- Finalize the draft Catalog of Security Requirements for Control Systems document and facilitate a private-sector review.

### FY 2009 Planned Milestones

- Support the DHS R&D mission by identifying gaps in cyber R&D innovation, and by developing cyber security R&D requirements in coordination with other Government agencies, the private sector, and international entities.
- Participate on and provide technical input to standards committees and procurement review panels that require Cyber Security Program expertise.
- In collaboration with state and local governments and the private sector; assist in state and local government standard development, and coordinate to assess the common Information Technology and Telecommunications (IT&T) capability that is included in the Target Capabilities List (TCL).
- Promote the use of common naming conventions for vulnerability identification by sponsoring the Common Vulnerabilities and Exposures (CVE) program and Open Vulnerability and Assessment Language (OVAL). The continual adoption of CVE as a naming convention in enterprise security, world wide, is evidenced by its use in public watch lists such as the SANS Top 20 Most Critical Internet Security Vulnerabilities and the Open Web Application Security Project (OWASP) Top 10 Web Application Security Issues.
- Continue to co-sponsor the development and maintenance of the National Vulnerability Database (NVD).
- Continue to promote common naming conventions for vulnerabilities by sponsoring, with the MITRE Corp., the Common Vulnerabilities and Exposures (CVE) program and Open Vulnerability and Assessment Language (OVAL) to improve the standardization of information across security advisories, tools, databases, and services.
- Continue to co-chair meetings of the White House Office of Science and Technology Policy-sponsored Cyber Security and Information Assurance Interagency Working Group (CSIA IWG).

- Maintain participation in the Committee on National Security Systems (CNSS) Working Groups on Certification and Accreditation and IT Globalization.
- Maintain participation in the DHS Standards Council, as the lead for the Cyber Security Standards Working Group.

### Control Systems

NCSD established the Control Systems Security Program (CSSP) to increase the resilience of control systems by identifying cyber security vulnerabilities, developing vulnerability mitigation recommendations and strategies, and coordinating government and industry activities for improving the security posture within the Nation's critical infrastructure. The goal of the CSSP is to guide a cohesive effort between government and industry to reduce the risk to critical infrastructure and key resource (CIKR) control systems.

### FY 2007 Accomplishments

- Managed the Process Control Systems Forum (PCSF), the major outreach and awareness mechanism for control systems cyber security. The PCSF was formed to accelerate the design, development and deployment of more secure control and legacy systems. PCSF participants include international stakeholders from government; academia; industry users, owner/operators, and systems integrators; and the vendor community. The PCSF's Annual Meeting was attended by 200 people and convened multiple communities of interest in order to share solutions. PCSF was selected in July as a Standing Committee of the Cross Sector Cyber Security Working Group, established with the Partnership for Critical Infrastructure Security (PCIS) and the Federal Senior Leadership Council under the auspices of the Critical Infrastructure Partnership Advisory Council (CIPAC).
- Contributed to the Cyber Security Procurement Language for Control Systems project, an initiative that CSSP sponsored with the Multi-State Information Sharing and Analysis Center and private industry. The purpose of the project is to summarize security principles that should be considered when designing and procuring control systems products and provide example language to incorporate into procurement specifications. The language has been used by asset owners procuring new control system equipment.
- Worked with the control systems vendor community to create the Control Systems Cyber Security Vendor Forum. The Vendor Forum started in 2006 as DHS-hosted monthly teleconference meetings with control systems vendors to provide a forum for the vendors to share information and common concerns, and to discuss control system security needs for legacy and next generation products. Approximately 30 vendors, representing 90 percent of control system manufacturers and most of the sectors using control systems, are participating in the calls. At the most recent PCSF Annual Meeting, the vendors held their first, face-to-face meeting. In September 2007, the Vendor Forum elected to become an organized Working Group under the PCSF.
- Coordinated with security partners (e.g., Federal departments and agencies and Sector Coordinating Councils) to identify vulnerabilities and develop and initiate mitigation plans for asset owners and operators of CIKR. Conducted outreach to international partners and control systems vendors to raise awareness about vulnerabilities and mitigations.
- Performed cyber vulnerability assessments on vendor control systems and provided solutions to vulnerabilities and recommendations to protect against cyber threats.
- Supported the United States Computer Emergency Readiness Team (US-CERT) by providing a control systems analyst who worked directly with the control systems community to secure control systems, through the production and dissemination of timely, situational awareness

information for control systems security and through the identification, analysis, and reduction of risk to control systems.

- Sponsored training and awareness workshops with industry to increase awareness among control systems owners and operators of potential cyber incident impacts and vulnerabilities. The CSSP conducted a week-long, advanced control systems cyber security workshop, aimed at increasing international cooperation and coordination in control system cyber security. Representatives from the United States, United Kingdom, Canada, Australia, and New Zealand participated in a successful exchange of views, issues, and ideas about securing control systems.
- Continued the development of and pilot-tested the beta version of the Control Systems Cyber Security Self Assessment Tool (CS2SAT) for use by the control systems community to qualitatively measure the cyber security posture of their control systems environment.
- Worked with academia to develop curriculum guidance at the undergraduate and graduate level for incorporation into university information security degree programs, focusing on the cyber security aspects of control systems.
- Reviewed control systems content in Sector-Specific Plans and identified opportunities for collaboration and partnership with the sectors to reduce risk.
- Completed and released an initial draft of the Federal Coordination Strategy for Securing Control Systems, in collaboration with Federal agencies, a document which will serve as a central framework for coordinating pertinent federal activities concerning control systems cyber security. Held a Federal Partners Working Group (FPWG) meeting and worked with stakeholders to coordinate the Government's effort to secure the Nation's control systems.
- Expanded awareness among the control systems community of the Protected Critical Infrastructure Information (PCII) Program during outreach activities.
- Provided guidance to industry on improving cyber security procurement language, including control systems. Published a final version of the Procurement Language for Control Systems Security.
- Participated in the Department of Energy Office of Electricity Delivery and Energy Reliability (OE) annual program review and strategic planning session. CSSP's participation aids in the coordination of control systems security projects and program initiatives across government.
- Developed test scenarios and tested prevalent control systems vendor products for vulnerabilities and worked with vendors to develop mitigations, appropriate to proactively enhance product security and reduce system risks.
- Provided subject-matter expert support to the Department of Defense Technical Support Working Group (TSWG) for the development of a prototype, control systems attack early warning system.
- Continued to engage the international partners identified in the National Infrastructure Protection Plan, such as the United Kingdom, Canada, Mexico, and the North Atlantic Treaty Organization (NATO), to share best practices and enhance ongoing programs and initiatives.
- Worked with the DHS Science & Technology (S&T) Directorate's Integrated Process Team (IPT) to develop research requirements for cyber security products in the control system environment and met with S&T, via the Cyber Security IPT, at least annually.

#### FY 2008 Planned Milestones

- Operate PCSF, positioning it as the clearinghouse for information and resources on control systems security. Hold PCSF Annual Meeting. Synchronize meeting schedule with other key control systems security stakeholders such as Project LOGIIC (Linking the Oil and Gas Industry to Improve Cyber Security) and the Institute for Information Infrastructure Protection

(I3P). Update the CSCSWG on PCSF activities and review CSSP recommended practices and papers in the control systems working group. Host a strategy and planning meeting with Federal stakeholders including representatives from national laboratories, the Department of Energy, the Federal Bureau of Investigation, the TSWG, LOGIIC, and I3P. The meeting's objectives are to coordinate Federal activities using PCSF as a clearinghouse for sharing information about multiple efforts to secure control systems.

- Publish Procurement Language for Control Systems Security Guide. This document provides guidance to industry on improving cyber security procurement language, including control systems.
- Integrate the Control Systems Cyber Security Vendor Forum within the Process Control Systems Forum. The Vendor Forum is an industry information exchange, primarily via a monthly conference call to discuss issues affecting control systems security and to disseminate sensitive vulnerability information.
- Identify vulnerabilities and develop mitigation plans in coordination with security partners for CI/KR asset owners and operators. Outreach will include raising awareness about vulnerabilities and mitigations with international partners and control systems vendors.
- Test and assess vendor control systems for cyber vulnerabilities and recommend solutions to protect against cyber threats.
- Support US-CERT with a control systems security analyst who produces and distributes situational awareness information for control systems security through identification and analysis.
- Engage the Cross Sector Cyber Security Working Group (CSCSWG) and Sector Coordinating Councils (SCCs) on the Federal Coordination Strategy for Securing Control Systems. Obtain feedback from the private sector to identify gaps in the baseline of Federal activities to secure control systems, and define a comprehensive strategy in collaboration with the private sector and participating agencies.
- Release the Control Systems Cyber Security Assessment Tool (CS2SAT) licensed under an agreement with a cross-sector control systems industry organization. Work with other distributors and licensees as needed to provide distribution avenues for all control systems security stakeholders.
- On a quarterly basis, provide control systems security training and awareness to government security partners. Train control systems program managers, control system engineers, IT security professionals, and critical infrastructure protection specialists from asset owning and operating organizations at the 2008 Supervisory Control and Data Acquisition (SCADA) and Control System Security Summit. Instructor-led training will focus on how to increase the cyber security posture of control systems networks. Identify potential partners to transfer select control systems training. Hold advanced control systems and SCADA security training for international partners.
- Release draft Strategy to Secure Control Systems. This document defines roles and responsibilities for public and private asset owners and operators as well as the Federal Government in securing control systems.
- Publish the initial CSSP "situational awareness" resource list and processes. This includes key personnel, organizations, subscribed data sources, and aggregated test and assessment resources for use in support of CSSP and US CERT response planning.
- Using the PCII Program, appropriately safeguard and share sensitive information resulting from coordination with the private sector.

- Develop an Advanced Vulnerability Discovery and scenario development capability that includes a process for coordination and release of vulnerabilities and their respective mitigations.
- Analyze open source threat information for relevance to unique control systems security vulnerabilities.
- Assist international standards organizations in developing cyber security standards for control systems.
- Provide fly-away tools needed to equip an incident response team to support control systems security events.
- Develop test scenarios and test prevalent control systems vendor products for vulnerabilities and work with vendors to develop appropriate mitigations to proactively enhance product security and reduce system risks.
- Continue to engage with international partners to share best practices and enhance ongoing programs and initiatives.
- Collect Research and Development (R&D) requirements through the PCSF, the Federal Partners Working Group (FPWG), the Institute for Information Infrastructure Protection (I3P), the Vendor Forum, user communities, and other CSSP outreach activities.
- Hold FPWG meeting and work with government stakeholders to coordinate the Government's effort to secure the Nation's control system. Release Phase II of the Federal Coordination Strategy for Securing Control Systems. Post the report on the PCSF website as a resource for information sharing. This website will include a feature that enables representatives from Federal agencies to electronically update information.
- Participate in the TSWG annual requirements meeting.
- Increase information sharing with control systems owners, operators, and the vendor community to reduce vulnerabilities and enhance response capabilities and provide the training and fly-away tools needed to equip an incident response team to support control systems-related events.
- Work with international partners to convene international training and develop cyber security control systems best practices. Hold annual international control systems and Supervisory Control and Data Acquisition (SCADA) security training.
- Continue analyzing physical and cyber threat scenarios, including terrorist attacks and all-hazards events affecting cyber and communications infrastructures, using advanced modeling tools. Develop an Advanced Vulnerability Discovery and scenario development capability that includes a process for the coordination and release of vulnerabilities and their respective mitigations.
- Work with the S&T Directorate's Integrated Process Team (IPT) to develop research requirements for cyber security products in the control system environment and meet with S&T, via the Cyber Security IPT, at least annually.

#### FY 2009 Planned Milestones

- Continue to operate PCSF, positioning it as the clearinghouse for information and resources on control systems security. Hold PCSF Annual Meeting. Synchronize meeting schedule with other key control systems security stakeholders such as LOGIIC and I3P. Continue to update the CSCSWG on PCSF activities and review CSSP recommended practices and papers in the control systems working group. Host a strategy and planning meeting with federal stakeholders including representatives from national laboratories, DOE, FBI, TSWG, LOGIIC, and I3P. The meeting's objectives are to coordinate federal activities using PCSF as a clearing house for

sharing information about multiple efforts to secure control systems. Continue to operate the Control Systems Cyber Security Vendor Forum within the Process Control Systems Forum.

- Continue to identify vulnerabilities and develop mitigation plans in coordination with security partners for CI/KR asset owners and operators. Outreach will include raising awareness about vulnerabilities and mitigations with international partners and control systems vendors.
- Continue to test and assess vendor control systems for cyber vulnerabilities and recommend solutions to protect against cyber threats.
- Maintain support to US-CERT with a control systems security analyst who produces and distributes situational awareness information for control systems security through identification and analysis.
- Continue to engage the Cross Sector Cyber Security Working Group (CSCSWG) and Sector Coordinating Councils (SCCs) on the Federal Coordination Strategy for Securing Control Systems. Obtain feedback from the private sector to identify gaps in the baseline of Federal activities to secure control systems, and define a comprehensive strategy in collaboration with the private sector and participating agencies.
- Update the Control Systems Cyber Security Assessment Tool (CS2SAT) licensed under an agreement with a cross-sector control systems industry organization.
- Enhance the awareness among the control systems community of the PCII Program during outreach activities.
- Maintain attendance in the TSWG annual requirements meeting.
- Continue to engage with international partners to share best practices and enhance ongoing programs and initiatives.
- Collect R&D requirements through the PCSF, the FPWG, I3P, the Vendor Forum, user communities, and other CSSP outreach activities.
- Assist international standards organizations in developing their cyber security standards for control systems.
- Work with international partners to convene international training and develop cyber security control systems best practices. Hold annual international control systems and SCADA security training.
- Continue to increase information sharing with control systems owners, operators, and the vendor community to reduce vulnerabilities and enhance response capabilities and provide the training and fly-away tools needed to equip an incident response team to support control systems-related events.

#### Information Systems Security Line of Business

In partnership with the Office of Management and Budget (OMB), the Department of Homeland Security (DHS) National Cyber Security Division (NCSA) established the Information Systems Security Line of Business (ISS LOB) to provide leadership and direction for improving information systems security services across the Federal government. The objective of the ISS LOB is to achieve more consistent security management processes and controls across government. This will be accomplished through the reuse of proven best practices and by promoting savings through reduced duplication and economies of scale for common hardware, software, and shared services.

NCSA created an ISS LOB Program Management Office (PMO) with the goal of ensuring that the government's information technology security programs include comprehensive and consistently implemented risk-based, cost-effective controls. These will enable and support vulnerability reduction through end-to-end shared services, business improvement solutions, and common and repeatable tools

and processes.

#### FY 2007 Accomplishments

- Draft/submit recommendations report to the Federal Systems Security Governance Board (FSSGB) for Tier II (specialized/role-based required under the Federal Information Security Management Act [FISMA]) training and situational awareness and incident response (SAIR)
- Develop Statement of Capability (SCO) templates for Tier II Training and SAIR.
- Submit work group recommendations report to FSSGB for system certification.
- Develop baseline requirements for system certification.
- Submit FY 2009 Joint Business Case.
- Developed and submitted FY 2008 joint business case to Office of Management and Budget (OMB) for the ISS LOB.
- Completed guidelines for implementing the ISS LOB.
- Established the Program Management Office.
- Created an interagency Implementation Work Group.
- Established the Federal Systems Security Governance Board (FSSGB).
- Created interagency review/evaluation teams for the Training and FISMA reporting areas.
- Completed Customer Agency Guidelines.
- Completed review/evaluation of agency capability statements.
- Completed final recommendations report.
- Announced selection of Shared Service Centers (SSC) for Security Awareness Training and FISMA Reporting.
- Provided template for SSC Service Level Agreement.
- Established four interagency work groups.

#### FY 2008 Planned Milestones

- Begin delivery of Tier 1 SSCs for security awareness training programs that meet Federal Information Security Management Act (FISMA) requirements (Tier 1 training is the annual security awareness training required under FISMA).
- Implement SSCs for FISMA Reporting.
- Conduct agency evaluation and recommendations report for SSCs on Tier II training.
- Develop a SCO template for system certification.
- Conduct an agency evaluation and recommendations report for SAIR.
- Complete an agency evaluation and recommendations report for SSCs for systems certification.
- Initiate a joint business case.
- Submit FY 2010 joint business case.

#### FY 2009 Planned Milestones

- Issue a request for SCO for Security Awareness Training (new submissions).
- Conduct a review/analysis of common requirements.
- Submit FY 2011 joint business case.

Outreach and Awareness (O&A) builds and sustains partnerships, and information sharing mechanisms among Federal departments and agencies, state, local, and tribal governments, the private sector, academia and international organizations for cyber and communications infrastructure protection across all sectors.

Stakeholder Outreach, Communications and Coordination (SOCC):

The SOCC program is organized into three functional areas:

- Communications and Messaging: focuses on development of both internal (i.e., DHS components) and external communications (e.g., other Federal agencies, private industry, associations, local and State governments, the law enforcement and intelligence communities, educational institutions, home computer users, international entities, and the general public).
- Coordination: works to ensure collaboration on events and activities across the National Cyber Security Division (NCSD) and with DHS colleagues across the Department, including public affairs, legislative affairs, the private sector office, and other entities as appropriate.
- Stakeholder Outreach and Engagement: builds and maintains trusted relationships among and between industry, government, and academia to raise cyber security awareness and effectively secure cyberspace.

FY 2007 Accomplishments

- Continued to refine and expand upon its planned programmatic accomplishments for FY 2007 to coordinate and develop internal and external communications; ensure consistent cyber security messaging; ensure collaboration on internal and external NCSD events; and build and maintain trusted relationships among and between industry, government, and academia to raise cyber security awareness and effectively secure cyberspace.
- Enhanced the awareness program to reach the general public through continued partnerships with awareness groups, including the National Cyber Security Alliance (NCSA) and the Multi-State Sharing and Analysis Centers, and targeted programs to the home user, K-12, small business, and higher education audiences.
- Developed key messages, talking points, speeches, and presentations for the Director of NCSD and other NCSD and DHS leadership as appropriate.
- Developed tailored communication and engagement with stakeholder segments (private sector, government, international, etc.)

- Continued to coordinate and provide appropriate content and strategy for all media requests, interviews, press releases, DHS branding, and other media or public activities and events with the DHS Office of Public Affairs.
- Maintained the developed process for NCSA Speaker's Bureau functions including external events and activities and ensure requisite vetting.
- Coordinated NCSA's input for External Affairs initiatives, including the Communication Plan.
- Provided updated and pertinent information on DHS Cyber Security Initiatives to be posted on available DHS public websites and the DHS intranet to support outreach efforts to stakeholders and target audiences.
- Assisted in building relationships with Federal Government agencies for cyber security efforts.
- Distributed electronic newsletter to Stakeholders and partners providing current information on DHS Cyber Security initiatives and cyber issues.
- Refined and updated strategy for Stakeholder Engagement and Partnership to reflect current activity and future objectives.
- Developed and updated Stakeholder relationship management database tool for managing and leveraging CS&C Stakeholder data.
- Further developed working relationship with Multi-State Information Sharing and Analysis Center (MS-ISAC).
- Worked with the MS-ISAC to maintain and continue outreach to all fifty states and the District of Columbia. Conducted outreach to the five territories to become members.
- Facilitated a process such that the Cyber Security contact in each State establishes a solid working relationship with the MS-ISAC Homeland Security counterparts.
- Developed and refined products, services and partnerships for K-12 audience.
- Coordinated National Cyber Security Awareness Month – October 2006: Satellite Media and Radio Tour, Satellite Distribution, Audio News Releases, Small Business Awareness, K-12 Program, and Higher Education.

#### FY 2008 Planned Milestones

- Implement Situational Awareness/Incident Response and Security Solutions/Life Cycle Shared Service Centers of the Information Systems Security Line of Business.
- Host Chief Information Security Officers (CISO) meetings to facilitate lessons learned, FISMA Score Improvement Strategies, and Cyber Protection strategies.
- Develop key messages, talking points, speeches, and presentations for the Director of NCSA and other NCSA and DHS leadership as appropriate.
- Develop tailored communication and engagement with stakeholder segments (private sector, government, international, etc.).
- Continue to coordinate and provide appropriate content and strategy for all media requests, interviews, press releases, DHS branding, and other media or public activities and events with the DHS Office of Public Affairs.
- Maintain the developed process for NCSA Speaker's Bureau functions including external events and activities and ensure requisite vetting.
- Coordinate NCSA's input for External Affairs initiatives, including the Communication Plan.
- Provide updated and pertinent information on DHS Cyber Security Initiatives to be posted on available DHS public websites and the DHS intranet to support outreach efforts to stakeholders and target audiences.
- Assist in building relationships with Federal Government agencies for cyber security efforts.

- Distribute electronic newsletter to Stakeholders and partners providing current information on DHS Cyber Security initiatives and cyber issues.
- Refine and update strategy for Stakeholder Engagement and Partnership to reflect current activity and future objectives.
- Develop and update Stakeholder relationship management database tool for managing and leveraging CS&T Stakeholder data.
- Further develop working relationship with Multi-State Information Sharing and Analysis Center (MS-ISAC).
- Work with the MS-ISAC to maintain and continue outreach to all fifty states, the District of Columbia. Conduct outreach to the five territories.
- Facilitate a process such that the Cyber Security contact in each state establishes a solid working relationship with the MS-ISAC Homeland Security counterparts.
- Develop and refine products, services and partnerships for K-12 audience.
- Coordinate National Cyber Security Awareness Month – October 2007: Satellite Media and Radio Tour, Satellite Distribution, Audio News Releases, Small Business Awareness, K-12 Program, and Higher Education

#### FY 2009 Planned Milestones

- Develop key messages, talking points, speeches, and presentations for the Director of NCSD and other NCSD and DHS leadership as appropriate.
- Develop tailored communication and engagement with stakeholder segments (private sector, government, international, etc.)
- Continue to coordinate and provide appropriate content and strategy for all media requests, interviews, press releases, DHS branding, and other media or public activities and events with the DHS Office of Public Affairs.
- Maintain the developed process for NCSD Speaker's Bureau functions including external events and activities and ensure requisite vetting.
- Coordinate NCSD's input for External Affairs initiatives, including the Communication Plan.
- Provide updated and pertinent information on DHS Cyber Security Initiatives to be posted on available DHS public websites and the DHS intranet to support outreach efforts to stakeholders and target audiences.
- Assist in building relationships with Federal Government agencies for cyber security efforts.
- Distribute electronic newsletter to Stakeholders and partners providing current information on DHS Cyber Security initiatives and cyber issues.
- Refine and update strategy for Stakeholder Engagement and Partnership to reflect current activity and future objectives.
- Develop and update Stakeholder relationship management database tool for managing and leveraging CS&T Stakeholder data.
- Further develop working relationship with Multi-State Information Sharing and Analysis Center (MS-ISAC).
- Work with the MS-ISAC to maintain and continue outreach to all fifty states and the District of Columbia. Conduct outreach to the five territories.
- Facilitate a process such that the Cyber Security contact in each state establishes a solid working relationship with the MS-ISAC Homeland Security counterparts.
- Develop and refine products, services and partnerships for K-12 audience.

- National Cyber Security Awareness Month – October 2008: Satellite Media and Radio Tour, Satellite Distribution, Audio News Releases, Small Business Awareness, K-12 Program, and Higher Education Program.
- Government Official Outreach: Continue to work with key associations, corporations and government agencies to ensure cyber security, safety and ethics curricula are taught in schools across the country, and revamp and add to the Government’s guide to holding awareness events. Educate home users and small businesses on basic vulnerabilities and threats that exist in cyberspace, as well as methods to minimize these vulnerabilities and threats.
- Change consumer and small business behavior by raising the understanding of computer users.

### International Affairs and Public Policy

The International Affairs program conducts international outreach and facilitates collaboration, cooperation, planning, and policy development on global cyber security issues. International Affairs develops and engages in collaborative efforts with countries to improve watch, warning, and incident response, policy coordination, and law enforcement collaboration; seeks to develop and enhance relationships and international structures to facilitate information sharing that enhances global situational awareness; and exchanges expertise and best practices internationally to promote awareness and assist nations in building and enhancing their own cyber security capabilities. International Affairs also manages engagements in various international forums and coordinates across NCSD to ensure relevant subject matter expertise is applied and experts are engaged. International cooperation in cyber security promotes a global culture of security and improves the Nation’s overall cyber preparedness and response posture. Due to the global nature of cyberspace, building international relationships is imperative for protecting and recovering critical IT Sector functions.

The Public Policy program provides consistent messaging and comprehensive coordination and response with respect to all Congressional and other policy activities focused on cyber security, including collaboration with DHS components and external stakeholders. Public Policy also ensures consistent dissemination of key messages and a strategic focus for all communications to decision makers.

### FY 2007 Accomplishments – International Affairs

- Furthered efforts in the Usual 5 group of countries (Australia, Canada, New Zealand, United Kingdom, and United States):
  - Continued development of the Terms of Reference to outline a framework/structure for the Usual 5;
  - Developed the Usual 5 Standard Operating Procedure for operational information sharing and coordination among the countries;
  - Developed the Memorandum of Understanding to formalize the group and enhance collaboration and information sharing for cyber incident response, watch, and warning;
  - Developed Usual 5 objectives for Cyber Storm II; and
  - Hosted interim Usual 5 meeting to facilitate discussion on current joint activities and prepare for biannual meeting.
- Led efforts to further the International Watch and Warning Network (IWWN), including: implemented IWWN portal enhancements, management, and maintenance activities; generated and promoted concept for IWWN Observer Program in Cyber Storm II for government representatives of IWWN countries; contributed to development of the IWWN Charter to further cooperative relationships and improve information sharing among cyber security policy, operational, and law enforcement government officials; contributed to the development of the

agenda of the May 2007 Conference and developed presentations and talking points supporting U.S. participation.

- In coordination with the U.S. interagency group, developed the International Telecommunication Union's (ITU) Development Sector Report on "Best Practices for a National Approach to Cybersecurity: A Management Framework for Organizing Cybersecurity Efforts." NCSA contributed to the overall effort and drafted the sections on "Creating a National Incident Management Organization" and "Establishing a National Industry-Government Partnership," and contributed to sections on a "Culture of Security" and "National Strategy". NCSA also coordinated IT Sector input to the report.
- Developed proposal in coordination with the Department of State to host a workshop on conducting cyber exercises in the Asia-Pacific Economic Cooperation Telecommunications and Information Working Group (APEC-TEL).
- Participated in the International Task Force of the National Security Telecommunications Advisory Committee (NSTAC) process and contributed to the NSTAC Report.
- Provided support to Department of State for participation in Working Party on Information Security and Privacy of the Organization for Economic Cooperation and Development (OECD), including drafting talking points and input to specific OECD products, such as the paper on Malware. Provided input regarding the scoping of the U.S. position on the security component of the upcoming OECD Ministerial.
- Led coordination and preparation for the U.S.-Japan Bilateral on cyber security, including: development of Bilateral agenda; facilitating interagency and internal coordination; conducting outreach to private sector; planning and coordination of Bilateral logistics; development of Bilateral deliverable in coordination with government of Japan; and development of background briefing materials.
- Participated in the Meridian Program Committee for the Meridian Process and assisted with strategic planning for the Meridian Conference to be hosted by Sweden.
- Continued to implement goals and objectives of the Security and Prosperity Partnership with Canada.

#### FY 2007 Accomplishments – Public Policy

- Collaborated with DHS components in the development of a pilot program for a national emergency technology guard (NET Guard), including: contribution to development of NET Guard Concept plan; outreach to private sector partners regarding engagement in the NET Guard working group; and preparation of materials on the NET Guard initiative for internal use.
- Provided consistent messaging in response to Congressional requests for information, including Congressional letters and questions for the record; preparation for hearings, including written and oral testimony preparation and briefing materials; coordination of responses to Government Accountability Office (GAO) inquiries; and any other related communications about NCSA programs and activities.
- Identified and addressed key public policy issues and coordinated related efforts with other DHS components and stakeholders.
- Developed a tracking system to monitor responses to Congress, GAO, the Office of Inspector General (OIG), and other constituents, and worked with NCSA branches to maintain currency.

#### FY 2008 Planned Milestones – International Affairs

- Coordinate after action activities related to the U.S.-Japan Bilateral on cyber security.

- Advance and contribute to future iterations of the Report on “Best Practices for a National Approach to Cybersecurity: A Management Framework for Organizing Cybersecurity Efforts” in the ITU, and facilitate a workshop on Public-Private Partnerships and Incident Management at the ITU meeting in September 2008.
- Finalize the Usual 5 Terms of Reference.
- Finalize the Usual 5 Standard Operating Procedure.
- Further develop and finalize the Usual 5 Memorandum of Understanding.
- Develop a paper on the value of cyber exercises based on the case studies presented at the APEC Tel 36 workshop on cyber security exercises.
- Engage in planning and preparatory activities for the 2008 Meridian Conference.
- Advance and finalize the IWWN Charter.
- Design and implement the IWWN Cyber Storm II Observer Program.
- Initiate and finalize the IWWN Standard Operating Procedure/Concept of Operations.
- Prepare for and participate in the Organization for Economic Cooperation and Development (OECD) Ministerial.

#### FY 2008 Planned Milestones – Public Policy

- Collaborate with DHS stakeholders and private industry in the development of a pilot program for a national emergency technology guard (NET Guard).
- Provide subject matter expertise to NET Guard pilot program development in coordination with the DHS Office of Policy.
- Provide consistent messaging in response to Congressional requests for information, including Congressional letters; questions for the record; preparation for hearings, including written and oral testimony preparation and briefing materials; coordination and response to General Accountability Office (GAO) inquiries; and any other related communications about NCS D programs and activities.
- Identify and address key public policy issues as they arise, and coordinate related efforts with other DHS components and stakeholders.
