8. Provide a brief summary and justification for this investment, including a brief description of how this closes in part or in whole an identified agency performance gap. [LIMIT: 2500 char]

The Security Technology Integrated Program (STIP) will be an agency wide system which enables TSA to move their established airport security system to the next generation of capability by connecting the myriad of transportation security equipment (TSE) to one network. STIP will establish a centralized enterprise data management system that will facilitate the exchange of information between TSE located at the nation's airports and the people who use, procure and service them. It will support new innovative approaches to exchanging information and servicing the equipment. STIP will assist managers in more effectively administering TSE, deploying personnel, and adapting to changing security needs.

Functions that are performed manually today, such as collecting and storing screener performance data, monitoring screening equipment status, and collecting checkpoint throughput and performance data, will be automated through this new system. The automated collection and analysis of this data will provide TSA managers with better information in a timelier manner and help them make more informed and effective decisions.
